

### Vital Signs for Community-Acquired Bacterial Pneumonia

---

*This measure is to be reported once for **each occurrence**<sup>1</sup> of community-acquired bacterial pneumonia during the reporting period for all patients aged 18 years and older.*

#### Measure description

Percentage of patients aged 18 years and older with a diagnosis of community-acquired bacterial pneumonia with vital signs documented and reviewed

#### What will you need to report for each occurrence of community-acquired bacterial pneumonia for this measure?

If you select this measure for reporting, you will report:

- Whether or not you documented and reviewed<sup>2</sup> the vital signs (temperature, pulse, respiratory rate, and blood pressure)

#### What if this process or outcome of care is not appropriate for your patient?

Some measures provide an opportunity for the physician or non-physician provider to document when a process or outcome of care is not appropriate for a given patient (also called performance exclusions). Because this measure is applicable to most if not all patients, there are no allowable performance exclusions.

<sup>1</sup>Each unique occurrence is defined as a 45-day period from onset of community-acquired bacterial pneumonia. Claims data will be analyzed to determine unique occurrences.

<sup>2</sup>Medical record may include one of the following: clinician documentation that vital signs were reviewed, dictation by the clinician including vital signs, clinician initials in the chart that vital signs were reviewed, or other indication that vital signs had been acknowledged by the clinician.
