Screen, test, act-today

84 million American adults have prediabetes.

Nine out of 10 people with prediabetes don’t know they have it.

WHAT YOU SHOULD KNOW ABOUT PREDIABETES

Prediabetes means a person’s fasting glucose level is higher than normal, but not high enough yet to be diagnosed as diabetes. If you have prediabetes, you are at increased risk for developing serious health problems such as type 2 diabetes, stroke, and heart disease. The sooner people find out they have prediabetes and take action, the better their chances of preventing type 2 diabetes.

YOU SHOULD ACT – TODAY

The Centers for Disease Control and Prevention (CDC) and the American Medical Association (AMA) are sounding an alarm about prediabetes because it is a national effort—by everyone from physicians to employers to patients to community organizations—on the path to prevent type 2 diabetes in the United States. In addition to focusing on the person with prediabetes or diabetes, we also must engage the systems and communities where people live, work, and play. We can all Act – Today.
The American Medical Association and the Centers for Disease Control and Prevention are sounding an alarm about prediabetes. Preventing type 2 diabetes requires a national effort with involvement from physicians to employers to patients to the community.
