WHAT YOU SHOULD KNOW ABOUT PREDIABETES

Pre-diabetes means a person’s blood glucose (sugar) level is higher than normal, but not high enough yet to be diagnosed as diabetes. If you have pre-diabetes, you are at increased risk for developing serious health problems such as type 2 diabetes, stroke, and heart disease. The sooner people find out they have pre-diabetes and take action, the better their chances of preventing type 2 diabetes.

WHY YOU SHOULD ACT – TODAY

The Centers for Disease Control and Prevention (CDC) and the American Medical Association (AMA) are calling on Americans to take action because pre-diabetes is a serious condition. When people find out they have pre-diabetes and take action, they can improve their health and reduce their risk of developing type 2 diabetes.
