Screen, test, act-today

84 million American adults have prediabetes.

Nine out of 10 people with prediabetes don’t know they have it.

WHAT YOU SHOULD KNOW ABOUT PREDIABETES

Preabetes means a person’s blood glucose (sugar) level is higher than normal, but not high enough yet to be diagnosed as diabetes. If you have preabetes, your risk for developing serious health problems such as type 2 diabetes, stroke, and heart disease increases. So if you have preabetes, take action to lower your chances of developing type 2 diabetes.

WHY YOU SHOULD ACT – TODAY

The Centers for Disease Control and Prevention (CDC) and the American Medical Association (AMA) are sounding an alarm about preabetes because it is a national crisis—by everyone from physicians to employers to patients to community organizations—is required to prevent type 2 diabetes in the United States. In addition to focusing on the people with preabetes or diabetes, we also must engage the systems and communities where people live, work, and play. We can Act – Today.
The American Medical Association and the Centers for Disease Control and Prevention are sounding an alarm about prediabetes. Preventing type 2 diabetes requires a national effort with involvement from physicians to employers to patients to the community.
