Adrienne Boissy, MD, MA, on health care technology & the human connection
On June 24, 2021, the AMA held a webinar in the AMA STEPS Forward™ series: “Health care technology & the human connection.”

Empathy and the human touch are crucial parts of caring for patients, but many fear that these core aspects that drive strong patient-physician relationships will be lost as we transition into a more digitized health care system.

This webinar explored how physicians can not only maintain that same empathy and human “touch” within a digital environment, but benefit from this mode of care delivery to improve outcomes and access, and enhance experiences.
