Research

AMA partnered with the RAND Corporation to learn about the motivators, facilitators and barriers to BHI from physician practices with firsthand experience.

“We found that behavioral health integration is possible in a wide variety of medical practices, not just in primary care,” said Dr. Peggy G. Chen, co-author of the study and a physician researcher at RAND, a nonprofit research organization. “The key factor in the success of behavioral health integration was adaptation to each practice’s needs and resources.”
