Center for Medicare
Centers for Medicare and Medicaid Services
7500 Security Boulevard
Baltimore, MD 21244-1850

Subject: RUC Recommendations

Dear Mr. Cavanaugh:

The American Medical Association (AMA)/Specialty Society RVS Update Committee (RUC) submits the enclosed recommendations for work relative values and direct practice expense inputs to the Centers for Medicare and Medicaid Services (CMS). These recommendations relate to new and revised codes for *CPT 2017*, as well as to existing services identified by the RUC's Relativity Assessment Workgroup and CMS.

Enclosed are the RUC recommendations for all the CPT codes reviewed at the January 13-17, 2016 RUC meeting. The recommendations related to the October 1-3, 2015 meeting were submitted on October 29, 2015. These two submissions represent the RUC's recommendations for the 2017 Medicare Physician Payment Schedule. We understand CMS will publish consideration of these submissions in the June/July 2016 Proposed Rule.

CPT 2017 New and Revised Codes – *January 2016 RUC Submission*

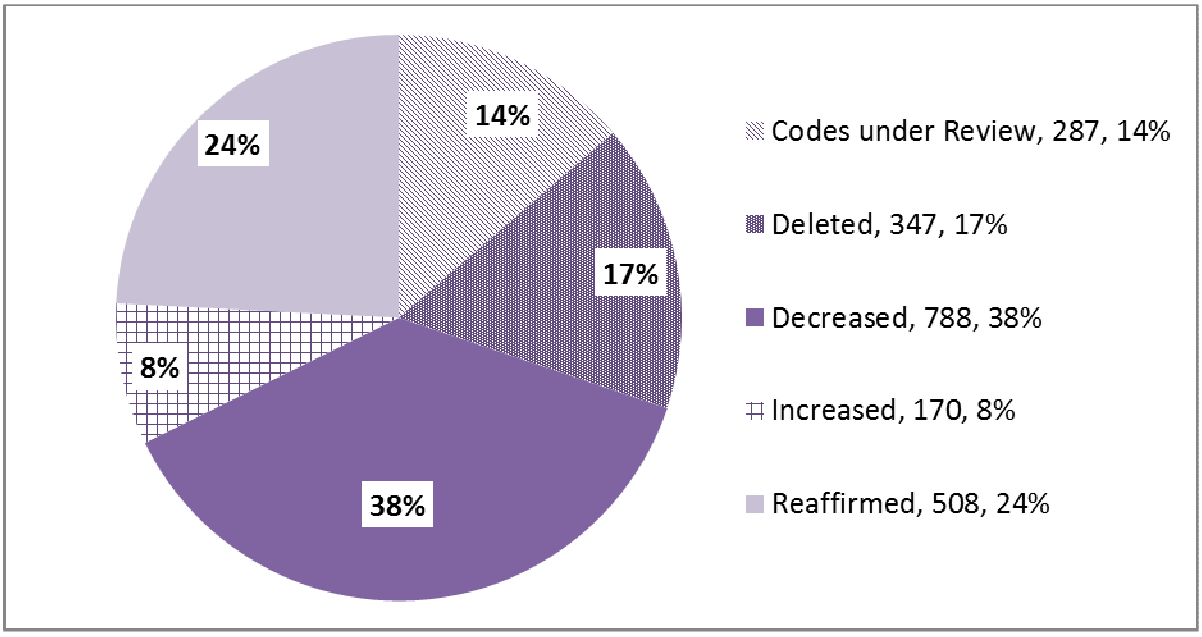
The enclosed binder contains RUC recommendations, including those for new and revised CPT codes. The RUC considered 79 new/revised/related family CPT codes at the January 2016 meeting. The RUC submits work value and/or practice expense inputs for 79 new/ revised/related family CPT codes from the January meeting.

CPT 2017 New and Revised Codes – *Entire CPT 2017 Cycle*

The total number of coding changes for entire *CPT 2017 cycle* is 310, including 147 additions, 54 revisions, and 96 deletions. In addition, 11 new codes were identified as part of the family for review in relationship to the new/revised codes. The 214 new/revised/related family CPT codes are summarized as follows:

- 90 services are not payable on the RBRVS or do not require physician work at this time (eg, laboratory services and vaccines), and accordingly, the RUC does not submit any information on these codes.
- The HCPAC submits recommendations for 8 new CPT codes.

The RUC submits work value and/or practice expense inputs for 116 new/ revised/related family CPT codes for the 2017 Medicare Physician Payment Schedule.



Existing Services Identified by RUC and CMS for Review

In addition to the new/revised CPT code submission, the RUC submits recommendations for 72 services identified by the RUC or CMS as potentially misvalued and reviewed at the January 2016 RUC meeting. The RUC recommends work relative values for 43 codes; direct practice expense inputs only for 2 codes; interim base unit recommendations for 2 codes; and refer 25 codes to the CPT Editorial Panel. These recommendations are in addition to the 4 recommendations for existing services submitted to CMS following the RUC's October 2015 meeting.

RUC Progress in Identifying and Reviewing Potentially Misvalued Codes

Since 2006, the RUC has identified 2,100 potentially misvalued services through objective screening criteria and has completed review of 1,813 of these services. The RUC has recommended that over half of the services identified be decreased or deleted (Figure 1). The RUC has worked vigorously over the past several years to identify and address misvaluations in the RBRVS through provision of revised physician time data and resource recommendations to CMS. The RUC looks forward to working with CMS on a concerted effort to address potentially misvalued services. *A detailed report of the RUC's progress is appended to this letter.*

Figure 1: AMA/Specialty Society RVS Update Committee (RUC) Potentially Misvalued Services Project

Source: American Medical Association

RUC Notification to CMS – Inappropriate Reporting of 95831

At the January 2016 Relativity Assessment Workgroup meeting, the Workgroup reviewed CPT code 95831 *Muscle testing, manual (separate procedure) with report; extremity (excluding hand) or trunk* as it was identified via the High Volume Growth screen (services with total Medicare utilization of 10,000 or more that have increased by at least 100% from 2008 through 2013). The Workgroup reviewed action plans explaining the high volume growth and noted that the specialty societies identified possible inappropriate claims for this service. The claims for this service grew by 106% in the last five years. **The RUC is notifying CMS that is appears there have been inappropriate claims for CPT code 95831 in Texas by two providers which account for 38% of the claims for this service. The RUC requests that CMS investigate the reporting of CPT code 95831.** The RUC will review the volume growth of this service in October 2018 to see if it has dropped appropriately. *The action plan that was submitted to the RUC in January 2016 is appended to this letter for additional information.*

Surgical Global Package

At the January 2016 RUC meeting, the RUC Surgical Global Workgroup discussed the CMS published questions for the January 20th conference call entitled *Collecting Data on Global Surgery as Required by MACRA Listening Session*. Following this meeting, the final report was forwarded to CMS officials and the content of the report was provided verbally on the call by Workgroup members. To ensure the Agency receives these important recommendations, the final Surgical Global Workgroup report is attached. Furthermore, in an effort to identify services which are likely to yield a representative sample for data collection purposes, the RUC identified 235 codes which meet the following three criteria: Medicare utilization over 10,000, allowed charges totaling $10 million or more, and performed by more than 100 physicians nationwide. This list should form the basis for the Agency's identification of services for which to collect data for purposes of identifying the physician work and supplies that go into the surgical global package.

Practice Expense Subcommittee

Flexible Laryngoscopy
(31575, 31576, 31577, 31578, 315X1, 315X2, 315X3, 31579)

At the Practice Expense Subcommittee CMS brought up the issue that the scopes and video equipment listed in practice expense spreadsheets are inaccurate as the equipment is no longer compatible. Included with this submission in the Practice Expense materials is a revised PE spreadsheet that CMS requested for the Flexible Laryngology family reviewed at the October 2015 meeting. The specialty society has created new scope system packages, modeled after the GI inputs that have been created for endoscopy and colonoscopy – which as you know, were all recently reviewed. The specialty society has updated the technology consistent with what their experts believe is typically used by the laryngology community. The changes required the specialty society to add equipment item *endoscope disinfector, rigid or fiberoptic, w-cart* (ES005), as there are regulatory requirements that these types of scopes be cleaned in a very specific manner. The attachments included in the PE Subcommittee folder are the proposed package summary (word document), a revised PE spreadsheet (new equipment is highlighted and old equipment has strikethroughs), as well as invoices and quotes from various centers across the United States.

The new scope system packages have also been applied to the *Laryngoplasty* (31580, 31584, 31587, 315X1-315X6) services reviewed at the January 2016 RUC meeting. The specialty society has updated the technology consistent with what their experts believe is typically used by the laryngology community. The changes required the specialty society to add equipment item *endoscope disinfector, rigid or fiberoptic, w-cart* (ES005), as there are regulatory requirements that these types of scopes be cleaned in a very specific manner. The attachments for this recommendation have been revised based on information provided to the RUC following the January meeting and include the proposed package summary (word document), a revised PE spreadsheet (new equipment is highlighted and old equipment has strikethroughs), as well as invoices and quotes from various centers across the United States.

Emergent Procedures Pre-Service Clinical Staff Time

At the January 2016 RUC meeting the PE Subcommittee discussed 14 90 day globals and 1 000 day global with various dominant specialties. The PE Subcommittee reviewed the recommendations submitted by the specialties. For the majority of the 15 codes the specialties recommended 20 minutes of pre-service clinical staff time in the facility setting. The 20 minutes is divided in the following breakdown of clinical staff time.

	Description of Clinical Activities - 090	Time allocation		
		Standard	**Current**	**Recommended**
1	Complete pre-service diagnostic and referral forms	5	5	5
2	Coordinate pre-service surgery services	20	20	7
3	Schedule space and equipment in facility	8	8	4
4	Provide pre-service education/obtain consent	20	20	0
5	Follow-up phone call and prescriptions	7	7	4
6	Other Clinical Activity	0	0	0
	TOTAL	**60**	**60**	**20**

The PE Subcommittee applied the new 20 minute standard to all 14 90 day globals with the exception of CPT code 35207 *Repair blood vessel, direct; hand, finger.* The specialty recommended 60 minutes of pre-service clinical staff time in the facility for this service. The specialty argued that this code is not really an emergent procedure and that the typical patient requiring repair of a blood vessel in the hand or finger is typically not Medicare-aged. The typical patient, instead, is a healthy younger patient who sustains a laceration at work (eg, chef, baker, mechanic) or at home (kitchen knife). In addition, for most patients, laceration of a blood vessel in the hand does not require immediate repair. As a result the codes only had 18 "unique occurrences", this is very low volume and in this situation errant records are magnified when data is used that has a low number of occurrences. The PE Subcommittee agreed with the specialty that this is not an emergent procedure and may be an anomaly in the data caused by the low volume of the service. The PE Subcommittee recommends maintaining the pre-service time in the facility setting of 60 minutes.

In addition the PE Subcommittee discussed 1 000 day global, CPT code 54220 *Irrigation of corpora cavernosa for priapism.* 54220 is a Harvard valued code with very low volume. There currently is pre-service time of 30 minutes of pre-service time in the facility setting. Although, the standard clinical staff time in a facility for a 0- and 10-day global period code is zero, the specialty recommended that this service be allocated 15 minutes of pre-service clinical staff time consistent with the PE Subcommittee standards for minimal use of clinical staff. The PE Subcommittee agreed that the clinical staff in the office is performing work for the service. The PE Subcommittee recommends reducing the pre-service time in the facility setting to 15 minutes.

Enclosed Recommendations and Supporting Materials:

Included in these binders and on the enclosed CD are:

- RUC Recommendation Status Report for New and Revised Codes
- RUC Recommendation Status Report for 2,100 services identified to date by the Relativity Assessment Workgroup and CMS as potentially misvalued. In addition, a spreadsheet containing the codes specific to this submission is included.
- RUC Referrals to the CPT Editorial Panel – both for CPT nomenclature revisions and *CPT Assistant* articles.
- Physician Time File: A list of the physician time data for each of the CPT codes reviewed at the January 2016 RUC meeting.
- Pre-Service and Post-Service Time Packages Definitions: The RUC developed physician pre-service and post-service time packages which have been incorporated into these recommendations. The intent of these packages is to streamline the RUC review process as well as create standard pre-service and post-service time data for all codes reviewed by the RUC.
- PLI Crosswalk Table: The RUC has committed to selecting appropriate professional liability insurance crosswalks for new and revised codes and existing codes under review. We have provided a PLI Crosswalk Table listing the reviewed code and its crosswalk code for easy reference. We hope that the provision of this table will assist CMS in reviewing and implementing the RUC recommendations.
- BETOS Assignment Table: The RUC, for each meeting, provides CMS with suggested BETOS classification assignments for new/revised codes. Furthermore, if an existing service is reviewed and the specialty believes the current assignment is incorrect, this table will reflect the desired change. Starting for the February 2016 submission, the RUC will now include a separate BETOS assignment table to better assist the Agency in assigning these important classifications, based off clinical input.
- Source Code Utilization Crosswalk Table: A table estimating the flow of claims data from existing codes to the new/revised codes. This information is used to project the work relative value savings to be included in the 2017 conversion factor increase.
- New Technology List and Flow Chart: In April 2006, the RUC adopted a process to identify and review codes that represent new technology or services that have the potential to change in value. To date, the RUC has identified 504 of these procedures through the review of new CPT codes. A table of these codes identified as new technology services and the date of review is enclosed, as well as a flow chart providing a detailed description of the process to be utilized to review these services.

We appreciate your consideration of these RUC recommendations. If you have any questions regarding the attached materials, please contact Sherry Smith at (312) 464-5604.

Sincerely,

Peter K. Smith, MD

Action Plan for Review of Potentially Misvalued Services
January 2016

CPT	Long Descriptor	RVW	GLOB
95831	Muscle testing, manual (separate procedure) with report; extremity (excluding hand) or trunk	0.28	XXX

Screen: Services with total Medicare utilization of 10,000 or more that have increased by at least 100% from 2008 through 2013.

Include codes from family (please list all): N/A

Please check all recommended actions that apply:
(If necessary, please clearly mark and attach all supplemental information)
❑ **Survey**
❑ **Refer to CPT/CPT Assistant**
☒ **Maintain**
☒ **Other Action (please describe):** Mark screen complete. Refer to CMS for investigation.

Rationale for Recommended Action:

The utilization for code 95831 had remained quite stable for many years. The increase in utilization appears to have started in 2012, with subsequent significant annual increases that could not be explained by an aging population alone. Another confounding factor was the high utilization by ophthalmologists that suddenly appeared.

To assist with our review of code 95831, we analyzed the Medicare data using the Physician/Supplier Procedure Summary Master File[1] (PSPS) for years 1999, 2012, 2013, and 2014. This review indicated that claims in Texas accounted for almost the entire recent increase in utilization. The table below summarizes the findings from the master file.

Year	CARRIER	Alwd Charges	Alwd Freq	% of total	Notes
1999	**Total**	**$745,713**	**34,419**		In 1999, Texas utilization was 14% of total utilization.
	00590 (Texas)	*$110,111*	*4,762*	*14%*	
2011	**Total**	**$1,264,881**	**44,415**		In 2011, total utilization had started to increase and the percentage of claims from Texas increased to 59%.
	04402 (Texas)	*$731,290*	*26,146*	*59%*	
2013	**Total**	**$2,582,406**	**92,538**		In 2013, total utilization doubled from 2011 and the percentage of claims from Texas increased to 74%. In addition, in 2013, utilization by ophthalmology appeared. The 2013 PSPS file indicated that 100% of the 9,953 claims from ophthalmology specialty all came from Texas.
	04412 (Texas)	*$1,889,634*	*68,274*	*74%*	

Year	CARRIER	Alwd Charges	Alwd Freq	% of total	Notes
2014	**Total**	**$3,095,095**	**116,500**		In 2014, total utilization increased again and the percentage of claims from Texas increased to 80%. In addition, once again, 100% of the 10,300 claims from ophthalmology specialty all came from Texas.
	04412 (Texas)	*$2,477,228*	*93,778*	*80%*	

Further investigation into utilization of code 95831 in Texas resulted in discovery of (at least) two providers that were disciplined and fined on May 19, 2015 by the Texas Commissioner of Workers' Compensation for submitting claims for 95831 (and 95832) without having provided the service. These two provider profiles on the Medicare payments website indicate they submitted 34,880 claims for 95831 in 2013. This represented 38% of the total number of claims for this code and almost 100% of the claims submitted to Medicare for these two providers. We were not able to locate who was submitting claims using an ophthalmologist's NPI and suggest that the RUC refer this issue to CMS to investigate.

Without claims from these two providers and other errant claims in Texas, code 95831 would not have been screened as high growth. We request that this code be removed from the screen and marked complete. We also request that whatever decreases in utilization occur after the Agency's investigation be considered as savings that are applied to the target for reduced expenditures.

Timeline (please list expected CPT/RUC meetings as applicable):

Mark screen complete at January 2016 meeting.

[1] This file is a 100% summary of all Part B Carrier and DMERC Claims processed through the Common Working File and stored in the National Claims History Repository. The file is arrayed by carrier, pricing locality, Healthcare Common Procedure Coding (HCPC), modifier 1, modifier 2, specialty, type of service and place of service. The summarized fields are total submitted services and charges, total allowed services and charges, total denied services and charges, and total payment amounts. This file is produced annually in addition to the existing annual PSPS file.

AMA/Specialty Society RVS Update Committee **Tab 59**
Surgical Global Workgroup Meeting
January 15, 2016

Members Present: George Williams, MD (Chair); Walt Larimore, MD (Vice Chair); Amr Abouleish, Allan Anderson, MD; Robert Dale Blasier, MD; William Donovan, MD; David Hitzeman, DO; Mollie MacCormack, MD; Christopher Senkowski, MD, FACS; Matthew Sideman, MD; Holly Stanley, MD;

I. Discuss Recent Developments Surrounding CMS Open Forum Call

The Chair briefly explained that in mid-December, CMS announced that they would be holding an open forum call on January 20th entitled *Collecting Data on Global Surgery as Required by MACRA Listening Session*. The purpose of this call is to solicit comments so that RAND, which has been hired by CMS to construct the Agency's collection process, can hear feedback from the physician community on the legislative mandate the Agency has to collect data related to the work performed in the post-operative period of surgical services.

II. Review Published Questions – Assemble Workgroup Comments/Ideas

The Workgroup went through each of the five questions that CMS is seeking input on.

1) Mechanisms for capturing the types of services typically furnished during the global period

The Workgroup members discussed that the use of CPT code 99024 *Postoperative follow-up visit, normally included in the surgical package, to indicate that an evaluation and management service was performed during a postoperative period for a reason(s) related to the original procedure* is currently being reported in many large hospital-based physician group practices, and in other employed practices using facility based billing. Given that claims systems have generally been setup to accept this service for reporting purposes, requiring the inclusion of this code would represent the best option for a claims-based approach to acquire the number of post-operative visits being performed in the global period. It would avoid having to develop other systems to approach capture of these visits that have the great potential to disrupt established coding, billing, and claims adjudication systems used both by practices as well as carriers.

However, this approach would not address the level of E/M visit. The Workgroup discussed this issue and noted that the current level of E/M visits in the physician time file shows that nearly 98% of all the visits are either 99212 or 99213.

CPT Code	2014 Global Surgical E/M Utilization Percentage (All codes)
99211	0.38%
99212	57.08%
99213	41.29%
99214	1.22%
99215	0.03%
TOTALS	100.00%

Given this information, the amount of time and effort generated towards collecting this information would be unlikely to generate any different data points than currently assumed.

Furthermore, the RUC has already looked at services with outlier post-operative visits and will be addressing these services over the next few meetings.

If the Agency still believes it is in their mandate to collect the level of visits, the Workgroup offered several recommendations:

- A modified survey could be completed by the representative sample that would indicate what level of visit they performed for the typical patient for a given service.
- CMS could create a separate portal that could collect this information.
- Either of these options would remove the onerous nature of creating new claims systems that may be rejected by claims scrubbers in billing departments across the nation.

Additionally, several Workgroup members suggested that the issue of incident-to be considered. The members were specifically concerned that data on who performs the post-operative visits be collected. Specifically, is it a physician or a physician extender?

Finally, the Workgroup reiterated that the Agency should not use a claims-based collection mechanism to determine the additional physician work and practice expense involved in the global period. The current direct practice expense inputs are extremely granular and have the advantage of having direct Agency participation at the RUC. Again, the Agency should consider the above mechanisms described above (e.g. modified survey and/or a separate portal) to collect this information.

CMS should make all data collected available and transparent.

2) <u>Determining the representative sample for the claims-based data collection</u>

The Workgroup reiterated that the representative sample must include medium and small practices and not just the large hospital-based practices that often represent modified practice patterns than the majority of the practicing physicians in suburban and rural areas.

The Workgroup also discussed the growing number of registries that may be used to determine the sample. However, each registry is different and would need to be assessed prior to use.

3) <u>Determining whether CMS should collect data on all surgical services or which services should be sampled</u>

The Workgroup discussed that according to 2014 Medicare utilization, there are only 108 010-day global and 152 090-day global codes performed more than 10,000 times. Given this, the collection process should not include all services, as many surgical globals are low volume and would be difficult to find a meaningful sample.

The Workgroup noted that the RUC is in a position to review the Medicare data to determine a set of services which are representative to the spectrum of specialties who perform surgical services. AMA staff can array the surgical services by total specialty volume as well as the number of individual surgeons performing the service. Additionally, allowed charges should be included, as the Agency often uses this data point in their analysis.

AMA staff conducted an analysis of all surgical global codes and noted that there are only 235 surgical global codes in which 100 or more physicians from across the country are performing. This list of codes should be the base-line set of codes to be considered, to ensure an appropriate sample can be obtained.

4) Potential for designing data collection elements to interface with existing infrastructure used to track follow-up visits within the global period

   The Medicare Part A files currently allow for CMS to review Medicare Part A claims data to determine the length of post-operative stay in the hospital facility setting. These data can be matched to the post-operative visits (eg, recorded as 99024) from Part B facility-based practices to give the Agency reasonable data to determine if the number of post-operative visits is appropriate for individual services.

5) The law allows Medicare to withhold 5% of a physician payment until the request information is furnished

   The Workgroup discussed that the specific language of the law that indicates the Agency "may" withhold 5% of a physician's payment if the information is not furnished. The RUC would oppose any application of a penalty. However, if the Agency decides to move forward with the penalty, there needs to be an appeals process in place to allow physicians with hardships and/or who are making a good faith effort to report, exempt from the penalty.

III. Further Business

AMA staff will take this report and past RUC comments and collate the RUC's official response for the call. Workgroup members who are available to be on the call should notify AMA staff and the RUC comments will be divided amongst several physicians who can speak to these issues on the open forum call.

Emergent Procedures Pre-Service Clinical Staff Time Review

At the January 2016 RUC meeting the PE Subcommittee discussed the following list of 14 90 day globals and 1 000 day global with various dominant specialties. The RUC recommendations to CMS are listed below:

CPT Code	Code Descriptor	Global	Pre-Service Clinical Staff Time in the Facility Setting Recommendation
27253	Open treatment of hip dislocation, traumatic, without internal fixation	090	20
27602	Decompression fasciotomy, leg; anterior and/or lateral, and posterior compartment(s)	090	20
35082	Direct repair of aneurysm, pseudoaneurysm, or excision (partial or total) and graft insertion, with or without patch graft; for ruptured aneurysm, abal aorta	090	20
35207	Repair blood vessel, direct; hand, finger	090	60
43840	Gastrorrhaphy, suture of perforated duodenal or gastric ulcer, wound, or injury	090	20
44950	Appendectomy;	090	20
44960	Appendectomy; for ruptured appendix with abscess or generalized peritonitis	090	20
44970	Laparoscopy, surgical, appendectomy	090	20
49553	Repair initial femoral hernia, any age; incarcerated or strangulated	090	20
61313	Craniectomy or craniotomy for evacuation of hematoma, supratentorial; intracerebral	090	20
61315	Craniectomy or craniotomy for evacuation of hematoma, infratentorial; intracerebellar	090	20
63744	Replacement, irrigation or revision of lumbosubarachnoid shunt	090	20
54220	Irrigation of corpora cavernosa for priapism	000	15
54437	Repair of traumatic corporeal tear(s)	090	20
54438	Replantation, penis, complete amputation including urethral repair	090	20

The PE Subcommittee reviewed the recommendations submitted by the specialties. For the majority of the 15 codes the specialties recommended 20 minutes of pre-service clinical staff time in the facility setting. The 20 minutes is divided in the following breakdown of clinical staff time.

	Description of Clinical Activities - 090	Time allocation		
		Standard	**Current**	**Recommended**
1	Complete pre-service diagnostic and referral forms	5	5	5
2	Coordinate pre-service surgery services	20	20	7
3	Schedule space and equipment in facility	8	8	4
4	Provide pre-service education/obtain consent	20	20	0
5	Follow-up phone call and prescriptions	7	7	4
6	Other Clinical Activity	0	0	0
	TOTAL	**60**	**60**	**20**

The specialties recommended pre-service clinical staff time in the facility setting other than 20 minutes for 6 of the 15 codes that were presented to the PE Subcommittee. These services and the specialty rationale for the recommendation as well as the recommendation of the PE Subcommittee is outline below:

27602 ***Decompression fasciotomy, leg; anterior and/or lateral, and posterior compartment(s)***
The dominant specialty for this service in the Medicare population is vascular surgery however orthopaedic surgeons developed the recommendation and argued that the typical patient undergoing 27602 will not be a Medicare-age patient and instead is an elective case for chronic exertional compartment syndrome (CECS). This syndrome most commonly occurs in young adult recreational runners, elite athletes, and military recruits. The population that vascular surgery serves reflected in the Medicare data is the Medicare-age population and the vascular surgeons confirmed that when they perform the services it is typically emergent. It became clear that this is the same procedure with very different PE. The presenters did discuss that the closure for this service is different dependent on the patient's age. The PE Subcommittee determined that it was not appropriate to maintain the 60 minutes of pre-service time as the PE Subcommittee can only utilize the data available, which is for the Medicare population. The Subcommittee did acknowledge that the specialty may choose to take the code to the CPT Editorial Panel to separate the service into two codes in order to capture the different work involved with the closure for each patient population. **The PE Subcommittee recommends reducing the pre-service time in the facility setting to 20 minutes.**

35207 ***Repair blood vessel, direct; hand, finger***
The specialty recommended 60 minutes of pre-service clinical staff time in the facility for this services. The specialty argued that this code is not really an emergent procedure and that the typical patient requiring repair of a blood vessel in the hand or finger is typically not Medicare-aged. The typical patient, instead, is a healthy younger patient who sustains a laceration at work (eg, chef, baker, mechanic) or at home (kitchen knife). In addition, for most patients, laceration of a blood vessel in the hand does not require immediate repair. As a result the codes only had 18 "unique occurrences", this is very low volume and in this situation errant records are magnified when data is used that has a low number of occurrences. The PE Subcommittee agreed with the specialty that this is not an emergent procedure and may be an anomaly in the data caused by the low volume of the service. **The PE Subcommittee recommends maintaining the pre-service time in the facility setting of 60 minutes.**

61313 ***Craniectomy or craniotomy for evacuation of hematoma, supratentorial; intracerebral***
61315 ***Craniectomy or craniotomy for evacuation of hematoma, infratentorial; intracerebellar***
For 61313 and 61315 the specialty recommended 60 minutes of pre-service clinical staff time in the facility setting. The specialty currently has 75 minutes which is standard for many neurosurgery 090 day global codes. The specialty argued that the codes are low volume, so although they have been identified as emergent this is likely an anomaly cause by the low volume. The specialty added that many of these patients will typically be admitted to the ICU and require imaging (angiography, MRI) and labs, and in all patients' efforts will be made to contact family members for medical information and to obtain informed consent. This is a heterogeneous patient population where the clinical picture and the choice of operative intervention may not be simple. The surgeon's clinical staff will schedule the case with the OR; confirm availability of instrumentation; obtain medical records from other treating physicians; and as it is unlikely the patient will be able to provide consent, family members will need to be contacted. Medicare-aged patients are typically on anticoagulation, so ascertaining the type of anticoagulation in a patient unable to provide their own history will require contacting the patient's primary care or other treating physician. The PE Subcommittee did not find this argument compelling and determined that although the clinical staff in the office is performing work for the service it is not greater than the 20 minutes allocated to the other services identified in this review. **The PE Subcommittee recommends reducing the pre-service time in the facility setting to 20 minutes for both codes.**

63744 ***Craniectomy or craniotomy for evacuation of hematoma, infratentorial; intracerebellar***
For 63744 the specialty recommended maintaining the current time of 60 minutes of pre-service clinical staff time in the facility setting. The specialty argued that the codes are low volume, so although they have been identified as emergent this is likely an anomaly cause by the low volume. The PE Subcommittee did not find this argument compelling and determined that although the clinical staff in the office is performing work for the service it is not greater than the 20 minutes allocated to the other services identified in this review. **The PE Subcommittee recommends reducing the pre-service time in the facility setting to 20 minutes.**

54220 ***Irrigation of corpora cavernosa for priapism***
CPT code 54220 is a Harvard valued code with very low volume. There currently is pre-service time of 30 minutes of pre-service time in the facility setting. Although, the standard clinical staff time in a facility for a 0- and 10-day global period code is zero, the specialty recommended that this service be allocated 15 minutes of pre-service clinical staff time consistent with the PE Subcommittee standards for minimal use of clinical staff. The PE Subcommittee agreed that the clinical staff in the office is performing work for the service. **The PE Subcommittee recommends reducing the pre-service time in the facility setting to 15 minutes.**

Subject: HCPAC Recommendations

Dear Mr. Cavanaugh:

The RUC Health Care Professionals Advisory Committee (HCPAC) Review Board submits the enclosed recommendation to the Centers for Medicare and Medicaid Services (CMS). At the January 2016 meeting, the HCPAC reviewed two issues, Removal of Nail Plate (CPT code 11730) and Psychological and Neuropsychological Testing (CPT codes 96101-96103, 96116, 96118-96120, 96125). These recommendations relate to new and revised codes for *CPT 2017*.

The RUC and HCPAC are fully committed to this ongoing effort to improve relativity in the work, practice expense, and professional liability insurance values. The HCPAC appreciates the opportunity to provide recommendations related to the 2017 Medicare Physician Payment Schedule. If you have any questions regarding this submission, please contact Kristina Finney (ph: 312-464-5020; email: Kristina.finney@ama-aassn.org) at the AMA for clarification regarding these recommendations.

Sincerely,

Michael D. Bishop, MD
HCPAC Chair

Jane V. White, PhD, RD, FADA, LDN
HCPAC Co-Chair

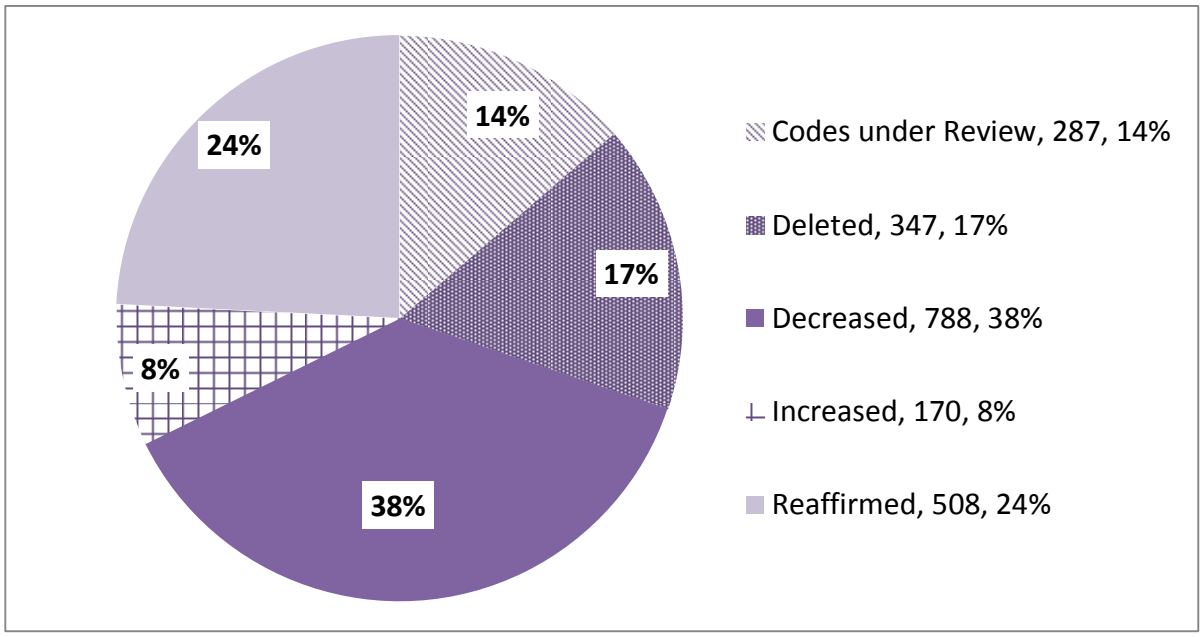
RUC Recommendations for CMS Requests & Relativity Assessment Identified Codes January 2016					
CPT	**2016 Long Descriptor**	**RUC Recommendation**	**CMS High Expenditure Procedural Codes**	**CMS Request - Final Rule for 2016**	**High Volume Growth**
00740	Anesthesia for upper gastrointestinal endoscopic procedures, endoscope introduced proximal to duodenum	5.0 Interim and resurvey for April 2016		X	
00810	Anesthesia for lower intestinal endoscopic procedures, endoscope introduced distal to duodenum	5.0 Interim and resurvey for April 2016		X	
11100	Biopsy of skin, subcutaneous tissue and/or mucous membrane (including simple closure), unless otherwise listed; single lesion	Refer to CPT	X		
11101	Biopsy of skin, subcutaneous tissue and/or mucous membrane (including simple closure), unless otherwise listed; each separate/additional lesion (List separately in addition to code for primary procedure)	Refer to CPT	X		
11730	Avulsion of nail plate, partial or complete, simple; single	1.10 (HCPAC)	X		
20550	Injection(s); single tendon sheath, or ligament, aponeurosis (eg, plantar "fascia")	0.75	X		
20552	Injection(s); single or multiple trigger point(s), 1 or 2 muscle(s)	0.66	X		
20553	Injection(s); single or multiple trigger point(s), 3 or more muscles	0.75	X		
31500	Intubation, endotracheal, emergency procedure	3.00 and Refer to CPT Assistant	X		
36620	Arterial catheterization or cannulation for sampling, monitoring or transfusion (separate procedure); percutaneous	Survey October 2016	X		
38220	Bone marrow; aspiration only	Refer to CPT	X		
38221	Bone marrow; biopsy, needle or trocar	Refer to CPT	X		
51700	Bladder irrigation, simple, lavage and/or instillation	0.60	X		
51701	Insertion of non-indwelling bladder catheter (eg, straight catheterization for residual urine)	0.50	X		
51702	Insertion of temporary indwelling bladder catheter; simple (eg, Foley)	0.50	X		
51703	Insertion of temporary indwelling bladder catheter; complicated (eg, altered anatomy, fractured catheter/balloon)	1.47	X		
51720	Bladder instillation of anticarcinogenic agent (including retention time)	0.87	X		
51784	Electromyography studies (EMG) of anal or urethral sphincter, other than needle, any technique	0.75	X		
52000	Cystourethroscopy (separate procedure)	1.75	X		
55700	Biopsy, prostate; needle or punch, single or multiple, any approach	2.50	X		
58555	Hysteroscopy, diagnostic (separate procedure)	3.07	X		
58558	Hysteroscopy, surgical; with sampling (biopsy) of endometrium and/or polypectomy, with or without D & C	4.37	X		
58559	Hysteroscopy, surgical; with lysis of intrauterine adhesions (any method)	5.54	X		
58560	Hysteroscopy, surgical; with division or resection of intrauterine septum (any method)	6.15	X		
58561	Hysteroscopy, surgical; with removal of leiomyomata	7.00	X		
58562	Hysteroscopy, surgical; with removal of impacted foreign body	4.17	X		
58563	Hysteroscopy, surgical; with endometrial ablation (eg, endometrial resection, electrosurgical ablation, thermoablation)	4.62	X		

RUC Recommendations for CMS Requests & Relativity Assessment Identified Codes January 2016					
CPT	**2016 Long Descriptor**	**RUC Recommendation**	**CMS High Expenditure Procedural Codes**	**CMS Request - Final Rule for 2016**	**High Volume Growth**
61640	Balloon dilatation of intracranial vasospasm, percutaneous; initial vessel	13.00	Identified as part of New & Revised Issue (but not related to the family). Carried over from October 2015		
61641	Balloon dilatation of intracranial vasospasm, percutaneous; each additional vessel in same vascular family (List separately in addition to code for primary procedure)	4.33	Identified as part of New & Revised Issue (but not related to the family). Carried over from October 2015		
61642	Balloon dilatation of intracranial vasospasm, percutaneous; each additional vessel in different vascular family (List separately in addition to code for primary procedure)	6.50	Identified as part of New & Revised Issue (but not related to the family). Carried over from October 2015		
70540	Magnetic resonance (eg, proton) imaging, orbit, face, and/or neck; without contrast material(s)	1.35	X		
70542	Magnetic resonance (eg, proton) imaging, orbit, face, and/or neck; with contrast material(s)	1.62	X		
70543	Magnetic resonance (eg, proton) imaging, orbit, face, and/or neck; without contrast material(s), followed by contrast material(s) and further sequences	2.15	X		
77332	Treatment devices, design and construction; simple (simple block, simple bolus)	0.54	X		
77333	Treatment devices, design and construction; intermediate (multiple blocks, stents, bite blocks, special bolus)	0.84	X		
77334	Treatment devices, design and construction; complex (irregular blocks, special shields, compensators, wedges, molds or casts)	1.24	X		
77470	Special treatment procedure (eg, total body irradiation, hemibody radiation, per oral or endocavitary irradiation)	2.03	X		
88184	Flow cytometry, cell surface, cytoplasmic, or nuclear marker, technical component only; first marker	New PE Inputs	X		
88185	Flow cytometry, cell surface, cytoplasmic, or nuclear marker, technical component only; each additional marker (List separately in addition to code for first marker)	New PE Inputs	X		
88187	Flow cytometry, interpretation; 2 to 8 markers	0.74	X		
88188	Flow cytometry, interpretation; 9 to 15 markers	1.40	X		
88189	Flow cytometry, interpretation; 16 or more markers	1.70	X		
88321	Consultation and report on referred slides prepared elsewhere	1.63	X		
88323	Consultation and report on referred material requiring preparation of slides	1.83	X		
88325	Consultation, comprehensive, with review of records and specimens, with report on referred material	2.85	X		
91110	Gastrointestinal tract imaging, intraluminal (eg, capsule endoscopy), esophagus through ileum, with interpretation and report	2.49	X		
91111	Gastrointestinal tract imaging, intraluminal (eg, capsule endoscopy), esophagus with interpretation and report	1.00	X		
92250	Fundus photography with interpretation and report	0.40	X		
92275	Electroretinography with interpretation and report	Refer to CPT	X		
93965	Noninvasive physiologic studies of extremity veins, complete bilateral study (eg, Doppler waveform analysis with responses to compression and other maneuvers, phleborheography, impedance plethysmography)	Refer to CPT for deletion	X		

RUC Recommendations for CMS Requests & Relativity Assessment Identified Codes January 2016					
CPT	**2016 Long Descriptor**	**RUC Recommendation**	**CMS High Expenditure Procedural Codes**	**CMS Request - Final Rule for 2016**	**High Volume Growth**
94620	Pulmonary stress testing; simple (eg, 6-minute walk test, prolonged exercise test for bronchospasm with pre- and post-spirometry and oximetry)	Refer to CPT	X		
94621	Pulmonary stress testing; complex (including measurements of CO2 production, O2 uptake, and electrocardiographic recordings)	Refer to CPT	X		
95144	Professional services for the supervision of preparation and provision of antigens for allergen immunotherapy, single dose vial(s) (specify number of vials)	0.06	X		
95165	Professional services for the supervision of preparation and provision of antigens for allergen immunotherapy; single or multiple antigens (specify number of doses)	0.06	X		
95812	Electroencephalogram (EEG) extended monitoring; 41-60 minutes	1.08		X	
95813	Electroencephalogram (EEG) extended monitoring; greater than 1 hour	1.63		X	
95957	Digital analysis of electroencephalogram (EEG) (eg, for epileptic spike analysis)	1.98	X		
95970	Electronic analysis of implanted neurostimulator pulse generator system (eg, rate, pulse amplitude, pulse duration, configuration of wave form, battery status, electrode selectability, output modulation, cycling, impedance and patient compliance measurements); simple or complex brain, spinal cord, or peripheral (ie, cranial nerve, peripheral nerve, sacral nerve, neuromuscular) neurostimulator pulse generator/transmitter, without reprogramming	Refer to CPT		X	X
95974	Electronic analysis of implanted neurostimulator pulse generator system (eg, rate, pulse amplitude, pulse duration, configuration of wave form, battery status, electrode selectability, output modulation, cycling, impedance and patient compliance measurements); complex cranial nerve neurostimulator pulse generator/transmitter, with intraoperative or subsequent programming, with or without nerve interface testing, first hour	Refer to CPT		X	
95975	Electronic analysis of implanted neurostimulator pulse generator system (eg, rate, pulse amplitude, pulse duration, configuration of wave form, battery status, electrode selectability, output modulation, cycling, impedance and patient compliance measurements); complex cranial nerve neurostimulator pulse generator/transmitter, with intraoperative or subsequent programming, each additional 30 minutes after first hour (List separately in addition to code for primary procedure)	Refer to CPT		X	
95978	Electronic analysis of implanted neurostimulator pulse generator system (eg, rate, pulse amplitude and duration, battery status, electrode selectability and polarity, impedance and patient compliance measurements), complex deep brain neurostimulator pulse generator/transmitter, with initial or subsequent programming; first hour	Refer to CPT		X	

RUC Recommendations for CMS Requests & Relativity Assessment Identified Codes January 2016					
CPT	**2016 Long Descriptor**	**RUC Recommendation**	**CMS High Expenditure Procedural Codes**	**CMS Request - Final Rule for 2016**	**High Volume Growth**
95979	Electronic analysis of implanted neurostimulator pulse generator system (eg, rate, pulse amplitude and duration, battery status, electrode selectability and polarity, impedance and patient compliance measurements), complex deep brain neurostimulator pulse generator/transmitter, with initial or subsequent programming; each additional 30 minutes after first hour (List separately in addition to code for primary procedure)	Refer to CPT		X	
95980	Electronic analysis of implanted neurostimulator pulse generator system (eg, rate, pulse amplitude and duration, configuration of wave form, battery status, electrode selectability, output modulation, cycling, impedance and patient measurements) gastric neurostimulator pulse generator/transmitter; intraoperative, with programming	Refer to CPT		X	
95981	Electronic analysis of implanted neurostimulator pulse generator system (eg, rate, pulse amplitude and duration, configuration of wave form, battery status, electrode selectability, output modulation, cycling, impedance and patient measurements) gastric neurostimulator pulse generator/transmitter; subsequent, without reprogramming	Refer to CPT		X	
95982	Electronic analysis of implanted neurostimulator pulse generator system (eg, rate, pulse amplitude and duration, configuration of wave form, battery status, electrode selectability, output modulation, cycling, impedance and patient measurements) gastric neurostimulator pulse generator/transmitter; subsequent, with reprogramming	Refer to CPT		X	
96101	Psychological testing (includes psychodiagnostic assessment of emotionality, intellectual abilities, personality and psychopathology, eg, MMPI, Rorschach, WAIS), per hour of the psychologist's or physician's time, both face-to-face time administering tests to the patient and time interpreting these test results and preparing the report	Refer to CPT	X		
96102	Psychological testing (includes psychodiagnostic assessment of emotionality, intellectual abilities, personality and psychopathology, eg, MMPI and WAIS), with qualified health care professional interpretation and report, administered by technician, per hour of technician time, face-to-face	Refer to CPT	X		
96103	Psychological testing (includes psychodiagnostic assessment of emotionality, intellectual abilities, personality and psychopathology, eg, MMPI), administered by a computer, with qualified health care professional interpretation and report	Refer to CPT	X		
96116	Neurobehavioral status exam (clinical assessment of thinking, reasoning and judgment, eg, acquired knowledge, attention, language, memory, planning and problem solving, and visual spatial abilities), per hour of the psychologist's or physician's time, both face-to-face time with the patient and time interpreting test results and preparing the report	Refer to CPT	X		



RUC Recommendations for CMS Requests & Relativity Assessment Identified Codes January 2016					
CPT	**2016 Long Descriptor**	**RUC Recommendation**	**CMS High Expenditure Procedural Codes**	**CMS Request - Final Rule for 2016**	**High Volume Growth**
96118	Neuropsychological testing (eg, Halstead-Reitan Neuropsychological Battery, Wechsler Memory Scales and Wisconsin Card Sorting Test), per hour of the psychologist's or physician's time, both face-to-face time administering tests to the patient and time interpreting these test results and preparing the report	Refer to CPT	X		
96119	Neuropsychological testing (eg, Halstead-Reitan Neuropsychological Battery, Wechsler Memory Scales and Wisconsin Card Sorting Test), with qualified health care professional interpretation and report, administered by technician, per hour of technician time, face-to-face	Refer to CPT	X		
96120	Neuropsychological testing (eg, Wisconsin Card Sorting Test), administered by a computer, with qualified health care professional interpretation and report	Refer to CPT	X		
96125	Standardized cognitive performance testing (eg, Ross Information Processing Assessment) per hour of a qualified health care professional's time, both face-to-face time administering tests to the patient and time interpreting these test results and preparing the report	Refer to CPT	X		
G0364	Bone marrow aspiration performed with bone marrow biopsy through the same incision on the same date of service	Refer to CPT	X		

The RUC Relativity Assessment Workgroup Progress Report

In 2006, the AMA/Specialty Society RVS Update Committee (RUC) established the Five-Year Identification Workgroup (now referred to as the Relativity Assessment Workgroup) to identify potentially misvalued services using objective mechanisms for reevaluation prior to the next Five-Year Review. Since the inception of the Relativity Assessment Workgroup, the Workgroup and the Centers for Medicare and Medicaid Services (CMS) have identified 2,100 services through 16 different screening criteria for further review by the RUC. Additionally, the RUC charged the Workgroup with maintaining the "new technology" list of services that will be re-reviewed by the RUC as reporting and cost data become available.

To provide Medicare with reliable data on how physician work has changed over time, the RUC, with more than 300 experts in medicine and research, are examining 2,100 potentially misvalued services accounting for $39 billion in Medicare spending. The update committee has recommended reductions and deletions to 1,135 services, redistributing nearly $4 billion. Here are the outcomes for the committee's review of 2,100 codes:

Potentially Misvalued Services Project

Source: American Medical Association

New Technology

As the RUC identifies new technology services that should be re-reviewed, a list of these services is maintained and forwarded to CMS. Currently, codes are identified as new technology based on recommendations from the appropriate specialty society and consensus among RUC members at the time of the RUC review for these services. RUC members consider several factors to evaluate potential new technology services, including: recent FDA-approval, newness or novelty of the service, use of an existing service in a new or novel way, and migration of the service from a Category III to Category I CPT® code. The Relativity Assessment Workgroup maintains and develops all standards and procedures associated with the list, which currently contains 526 services. In September 2010, the re-review cycle began and since then the RUC has recommended 25 services to be re-examined. The remaining services

are rarely performed (i.e., less than 500 times per year in the Medicare population) and will not be further examined. The Workgroup will continue to review the remaining 237 services every September after three years of Medicare claims data is available for each service.

Methodology Improvements
The RUC recently announced process improvements to methodology following its October 2013 meeting. The process improvements are designed to strengthen the RUC's primary mission of providing the final RVS update recommendations to the Centers for Medicare and Medicaid Services.

In the area of methodology, the RUC is continuously improving its processes to ensure that it is best utilizing reliable, extant data. At its most recent meeting, the RUC increased the minimum number of respondents required for each survey of commonly performed codes:

- For services performed 1 million or more times per year in the Medicare population, at least 75 physicians must complete the survey.
- For services performed from 100,000 to 999,999 times annually, at least 50 physicians will be required.

Further strengthening its methodology, the RUC also announced that specialty societies will move to a centralized online survey process, which will be coordinated by the AMA and will utilize external expertise to ensure survey and reporting improvements.

Site of Service Anomalies
The Workgroup initiated its effort by reviewing services with anomalous sites of service when compared to Medicare utilization data. Specifically, these services are performed less than 50% of the time in the inpatient setting, yet include inpatient hospital Evaluation and Management services within their global period.

The RUC identified 194 services through the site of service anomaly screen. The RUC required the specialties to resurvey 129 services to capture the appropriate physician work involved. These services were reviewed by the RUC between April 2008 and February 2011. CMS implemented 124 of these recommendations in the 2009, 2010 and 2011 Medicare Physician Payment Schedules. The RUC submitted another five recommendations as well as re-reviewed and submitted 44 recommendations to previously reviewed site of service identified codes to CMS for the 2012 Medicare Physician Payment Schedule.

Of the remaining 65 services that were not re-surveyed, the RUC modified the discharge day management for 46 services, maintained three codes and removed two codes from the screen as the typical patient was not a Medicare beneficiary and would be an inpatient. The CPT® Editorial Panel deleted 13 codes and the RUC will re-review two services in the CPT® 2019 cycle after more data is available.

During this review, the RUC uncovered several services that are reported in the outpatient setting, yet, according to several expert panels and survey data from physicians who perform the procedure, the service, typically requires a hospital stay of greater than 23 hours. The RUC maintains that physician work that is typically performed, such as visits on the date of service and discharge work the following day, should be included within the overall valuation. Subsequent observation day visits and discharge day management service are appropriate proxies for this work.

The RUC will reassess the data each year going forward to determine if any new site of service anomalies arise. In 2015, the RUC identified three services in which the Medicare data from 2011-2013 indicated it was performed less than 50% of the time in the inpatient setting, yet included inpatient hospital Evaluation and Management services within the global period. These three services will be reviewed by the RUC for the 2018 Medicare Physician Payment Schedule.

High Volume Growth
The Workgroup assembled a list of all services with a total Medicare utilization of 1,000 or more that have increased by at least 100% from 2004 through 2006. The query initially resulted in the identification of 81 services, but was expanded by 16 services to include the family of services, totaling 97 services. Specialty societies submitted comments to the Workgroup in April 2008 to provide rationales for the growth in reporting. Following this review, the RUC required the specialties to survey 35 services to capture the appropriate work effort and/or direct practice expense inputs. These services were reviewed by the RUC between February 2009 and April 2010.

The RUC recommended removing 22 services from the screen as the volume growth did not impact the resources required to provide these services. The CPT® Editorial Panel deleted 23 codes. The RUC submitted 49 recommendations to CMS for services for the 2012-2015 Medicare Physician Payment Schedules. In September 2011, the RUC began review of services after two years of utilization data were collected. The RUC will continue to review the remaining three services after additional utilization data is available.

In April 2013, the RUC assembled a list of all services with a total Medicare utilization of 10,000 or more that have increased by at least 100% from 2006 through 2011. The query resulted in the identification of 40 services and expanded to 58 services to include the appropriate family of services. The RUC recommended removing three services from the screen as the volume growth did not impact the resources required to provide these services. The RUC referred seven services to the CPT® Editorial Panel for revision and recommended review of five services after an additional two years of utilization data is collected. The CPT® Editorial Panel deleted six codes and the RUC submitted recommendations for 43 services for the 2015-2016 Medicare Physician Payment Schedule.

In October 2015, the RUC ran this screen again for services based on Medicare utilization of 10,000 or more that have increased by at least 100% from 2008 through 2013. The query resulted in the identification of 19 services and expanded to 21 services to include the appropriate family of services. The RUC recommended removing two services from the screen as the volume growth did not impact the resources required to provide these services. The RUC referred eight services to the CPT Editorial Panel for revision and recommended the review of four services after an additional two years of utilization data is collected. The CPT Editorial Panel deleted one code and the RUC submitted recommendations for two services for the 2017. The RUC will continue to review the remaining four services after additional utilization data is available.

CMS Fastest Growing
In 2008, CMS developed the Fastest Growing Screen to identify all services with growth of at least 10% per year over the course of three years from 2005-2007. Through this screen, CMS identified 114 fastest growing services and the RUC added 69 services to include the family of services, totaling 183. The RUC required the specialties to survey 72 services to capture the appropriate work effort and/or direct practice expense inputs. These services were reviewed by the RUC from February 2008 through April 2010 and submitted to CMS for the Medicare Physician Payment Schedule.

The RUC recommended removing 39 services from the screen as the volume growth did not impact the resources required to provide the service. The CPT® Editorial Panel deleted 34 codes. The RUC submitted 33 recommendations to CMS for the 2012-2016 Medicare Physician Payment Schedules. The RUC will review the remaining five services after additional utilization data is available.

High IWPUT
The Workgroup assembled a list of all services with a total Medicare utilization of 1,000 or more that have an intra-service work per unit of time (IWPUT) calculation greater than 0.14, indicating an outlier

intensity. The query resulted in identification of 32 services. Specialty societies submitted comments to the Workgroup in April 2008 for these services. As a result of this screen, the RUC has reviewed and submitted recommendations to CMS for 28 codes, removing four services from the screen as the IWPUT was considered appropriate. The RUC completed review of services under this screen.

Services Surveyed by One Specialty – Now Performed by a Different Specialty
In October 2009, services that were originally surveyed by one specialty, but now performed predominantly by other specialties were identified and reviewed. The RUC identified 21 services by this screen, adding 19 services to address various families of codes. The majority of these services required clarification within CPT®. The CPT® Editorial Panel deleted 18 codes. The RUC submitted 22 recommendations for physician work and practice expense to CMS for the 2011-2014 Medicare Physician Payment Schedules. The RUC completed review of services under this screen.

In April 2013, the RUC queried the top two dominant specialties performing services based on Medicare utilization more than 1,000 and compared it to who originally surveyed the service. Two services were identified and the RUC recommended that one be removed from the screen since the specialty societies currently performing this service indicated that the service is appropriate and recommended that the other code be referred to CPT® to be revised. The RUC completed review of services under this screen.

Harvard Valued
Utilization over 1 Million
CMS requested that the RUC pay specific attention to Harvard valued codes that have a high utilization. The RUC identified nine Harvard valued services with high utilization (performed over 1 million times per year). The RUC also incorporated an additional 12 Harvard valued codes within the initial family of services identified. The CPT® Editorial Panel deleted one code. The RUC submitted 20 relative value work recommendations to CMS for the 2011 and 2012 Medicare Physician Payment Schedules. The RUC completed review of services under this screen.

Utilization over 100,000
The RUC continued to review Harvard valued codes with significant utilization. The Relativity Assessment Workgroup expanded the review of Harvard codes to those with utilization over 100,000 which totaled 38 services. The RUC expanded this screen by 101 codes to include the family of services, totaling 139 services. The CPT® Editorial Panel deleted 27 codes. The RUC submitted 112 recommendations to CMS for the 2011-2014 Medicare Physician Payment Schedules. The RUC completed review of services under this screen.

Utilization over 30,000
In April 2011, the RUC continued to identify Harvard valued codes with utilization over 30,000, based on 2009 Medicare claims data. The RUC determined that the specialty societies should survey the remaining 36 Harvard codes with utilization over 30,000 for September 2011. The RUC expanded the screen to include the family of services, totaling 65 services. The CPT® Editorial Panel deleted 12 codes. The RUC submitted recommendations for 53 services for the 2013-2014 Medicare Physician Payment Schedules. The RUC completed review of services under this screen.

Medicare Allowed Charges >$10 million
In June 2012, CMS identified 16 services that were Harvard valued with annual allowed charges (2011 data) > $10 million. The RUC expanded this screen to 33 services to include the proper family of services. The RUC removed two services from review as the allowed charges are approximately $1 million and did not meet the screen criteria. The CPT® Editorial Panel deleted one service. The RUC submitted recommendations for 29 services for the 2013-2015 Medicare Physician Payment Schedules. The RUC will review one remaining service for the 2017 Medicare Physician Payment Schedule.

CMS/Other

Utilization over 500,000

In April 2011, the RUC identified 410 codes with a source of "CMS/Other." CMS/Other codes are services which were not reviewed by the Harvard studies or the RUC and were either gap filled, most often via crosswalk by CMS or were part of a radiology fee schedule. "CMS/Other" source codes would not have been flagged in the Harvard only screens, therefore the RUC recommended that a list of all CMS/Other codes be developed and reviewed. The RUC established the threshold for CMS/Other source codes with Medicare utilization of 500,000 or more, which resulted in 19 codes. The RUC expanded this screen to 21 services to include the proper family of services. The CPT® Editorial Panel deleted three services. The RUC submitted recommendations for 16 services for the 2013-2015 Medicare Physician Payment Schedules. The RUC removed one service from the screen and will review one service after additional utilization data is available.

Utilization over 250,000

In April 2013, the RUC lowered the threshold to the CMS/Other source codes with Medicare utilization of 250,000 or more, which resulted in 26 services and was expanded to 49 services to include the family of services. The CPT Editorial Panel deleted 11 codes identified under this screen. The RUC referred two services to the CPT® Editorial Panel and submitted 28 recommendations to CMS for the 2015 and 2016 Medicare Physician Payment Schedules. The RUC will review eight services for the 2017 Medicare Physician Payment Schedule.

Bundled CPT® Services

Reported 95% or More Together

The Relativity Assessment Workgroup solicited data from CMS regarding services inherently performed by the same physician on the same date of service (95% of the time) in an attempt to identify pairings of services that should be bundled together. The CPT® Editorial Panel deleted 31 individual component codes and replaced them with 53 new codes that describe bundles of services. The RUC then surveyed and reviewed work and practice costs associated with these services to account for any efficiencies achieved through the bundling. The RUC completed review of all services under this screen.

Reported 75% or More Together

In February 2010, the Workgroup continued review of services provided on the same day by the same provider, this time lowering the threshold to 75% or more together. The Relativity Assessment Workgroup again analyzed the Medicare claims data and found 151 code pairs which met the threshold. The Workgroup then collected these code pairs into similar "groups" to ensure that the entire family of services would be coordinated under one code bundling proposal. The grouping effort resulted in 20 code groups, totaling 80 codes, and were sent to specialty societies to solicit action plans for consideration at the April 2010 RUC meeting. Resulting from the Relativity Assessment Workgroup review, 81 additional codes were added for review as part of the family of services to ensure duplication of work and practice expense was mitigated throughout the entire set of services. Of the 161 total codes under review, the CPT® Editorial Panel deleted 35 individual component codes and replaced the component coding with 125 new and/or revised codes that described the bundles of services. The CPT® Editorial Panel and the RUC are currently working on one service and expect to complete this screen for final implementation in the 2017 Medicare Physician Payment Schedule.

In August 2011, the Joint CPT®/RUC Workgroup on Codes Reported Together Frequently reconvened to perform its third cycle of analysis of code pairs reported together with 75% or greater frequency. The Workgroup reviewed 30 code pair groups and recommended code bundling for 64 individual codes. In October 2012, the CPT® Editorial Panel started the review of code bundling solutions. Of the 161 total codes under review, the CPT® Editorial Panel deleted 49 services and is scheduled to review 14 codes in

the 2018 cycle. The RUC has submitted 98 code recommendations for the 2014-2017 Medicare Physician Payment Schedules.

In January and April 2015, the Joint CPT/RUC Workgroup on Codes Reported Together Frequently reconvened to perform its fourth cycle analysis of code pairs reported together with 75% or greater frequency. The Workgroup reviewed 8 code pair groups and recommended code bundling for 18 individual codes. In October 2015, the CPT Editorial Panel started review of the code bundling solutions. Of the 37 total codes under review, the CPT Editorial Panel deleted 12 services and is scheduled to review nine codes in the 2018 cycle. The RUC has submitted 16 code recommendations for the 2017 Medicare Physician Payment Schedule.

Low Value/Billed in Multiple Units
CMS has requested that services with low work RVUs that are commonly billed with multiple units in a single encounter be reviewed. CMS identified services that are reported in multiples of five or more per day, with work RVUs of less than or equal to 0.50 RVUs.

In October 2010, the Workgroup reviewed 12 CMS identified services and determined that six of the codes were improperly identified as the services were either not reported in multiple units or were reported in a few units and that was considered in the original valuation. The RUC submitted recommendations for the remaining six services for the 2012 Medicare Physician Payment Schedule. The RUC completed review of services under this screen.

Low Value/High Volume Codes
CMS has requested that services with low work RVUs and high utilization be reviewed. CMS has requested that the RUC review 24 services that have low work RVUs (less than or equal to 0.25) and high utilization. The RUC questioned the criteria CMS used to identify these services as it appeared some codes were missing from the screen criteria indicated. The RUC identified codes with a work RVU ranging from 0.01 - 0.50 and Medicare utilization greater than one million. In February 2011, the RUC reviewed the codes identified by this criteria and added 5 codes, totaling 29. The RUC submitted 24 recommendations to CMS for the 2012 Medicare Physician Payment Schedule and five recommendations to CMS for the 2013 Medicare Physician Payment Schedule. The RUC completed review of services under this screen.

Multi-Specialty Points of Comparison List
CMS requested that services on the Multi-Specialty Points of Comparison (MPC) list should be reviewed. CMS prioritized the review of the MPC list to 33 codes, ranking the codes by allowed service units and charges based on CY 2009 claims data as well as those services reviewed by the RUC more than six years ago. The RUC expanded the list to 182 services to include additional codes as part of a family (over 100 of these codes are part of the review of GI endoscopy codes). The CPT® Editorial Panel deleted 25 codes. The RUC submitted recommendations for 157 codes for the 2012-2015 Medicare Physician Payment Schedules. The RUC completed review of services under this screen.

CMS High Expenditure Procedural Codes
In the Proposed Rule for 2012, CMS requested that the RUC review a list of 70 high Medicare Physician Payment Schedule expenditure procedural codes representing services furnished by an array of specialties. CMS selected these codes since they have not been reviewed for at least 6 years, and in many cases the last review occurred more than 10 years ago.

The RUC reviewed the 70 services identified and expanded the list to 145 services to include additional codes as part of the family. The CPT® Editorial Panel deleted 20 codes and will review four codes for the

2017 cycle. The RUC submitted 120 recommendations to CMS for the 2013-2017 Medicare Physician Payment Schedules will review utilization data for one service after additional data is available.

In the Proposed Rule for 2016, CMS requested that the RUC review a list of 118 high Medicare Physician Payment Schedule high expenditure services across specialties with Medicare allowed charges of $10 million or more. CMS identified the top 20 codes by specialty in terms of allowed charges, excluding 010 and 090-day global services, anesthesia and Evaluation and Management services and services reviewed since CY 2010. The RUC expanded the list of services to 207 services to include additional codes as part of the family. The RUC requested that 29 of these services be removed because they have been recently reviewed or do not meet the query criteria.

The CPT Editorial Panel deleted 1 code and will review 19 codes for the 2018 cycle. The RUC submitted 46 recommendations to CMS for the 2017 Medicare Physician Payment Schedule and will review the remaining services for 2018.

Services with Stand-Alone PE Procedure Time
In June 2012, CMS proposed adjustments to services with stand-alone procedure time assumptions used in developing non-facility PE RVUs. These assumptions are not based on physician time assumptions. CMS prioritized CPT® codes that have annual Medicare allowed charges of $100,000 or more, include direct equipment inputs that amount to $100 or more, and have PE procedure times greater than five minutes for review. The RUC reviewed 27 services identified through this screen and expanded to 29 services to include additional codes as part of the family. The CPT® Editorial Panel deleted 11 codes. The RUC submitted 18 recommendations for the 2014-2015 Medicare Physician Payment Schedules. The RUC completed review of services under this screen.

Pre-Time Analysis
In January 2014, the RUC reviewed codes that were RUC reviewed prior to April 2008, with pre-time greater than pre-time package 4 *Facility - Difficult Patient/Difficult Procedure* (63 minutes) for services with 2012 Medicare Utilization over 10,000. The screen identified 19 services with more pre-service time than the longest standardized pre-service package and was expanded to 24 to include additional codes as part of the family. The RUC reviewed these services and referred three services to the CPT® Editorial Panel for revision. The CPT Editorial Panel deleted one service and will review three services for CPT 2018. The RUC reviewed 18 services and noted that they were all originally valued by magnitude estimation and therefore readjustments in pre-service time categories did not alter the work values. Additionally, crosswalk references for each service were presented validating the pre-time adjustments. The RUC noted that this screen was useful, however did not reveal any large outliers and therefore the utilization threshold does not need to be lowered to identify more services. The RUC submitted 20 recommendations for the 2016 Medicare Physician Payment Schedule.

Post-Operative Visits
010-Day Global Codes
In January 2014, the RUC reviewed all 477, 010-day global codes to determine any outliers. Many 010-day global period services only include one post-operative office visit. The Relativity Assessment Workgroup pared down the list to 19 services with >1.5 office visits and 2012 Medicare utilization > 1,000. The RUC reviewed the 19 services, which was expanded to 21 services for additional codes in the family of services, identified via this screen. The RUC referred two codes to the CPT Editorial Panel for revision. The RUC submitted recommendations for 21 services for the 2015-2017 Medicare Physician Payment Schedule. The RUC has completed review of the services under this screen.

090-Day Global Codes
In January 2014, the RUC reviewed all 3,788, 090-day global codes to determine any outliers. Based on 2012 Medicare utilization data, 10 services were identified, that were reported at least 1,000 times per year and included more than six office visits. The RUC expanded the services identified in this screen to 38 to include additional codes as part of the family. The CPT® Editorial Panel deleted 8 services. The RUC submitted recommendations for 30 services for the 2015-2017 Medicare Physician Payment Schedule. The RUC has completed review of the services under this screen.

High Level E/M in Global Period
In October 2015, the RUC reviewed all services with Medicare utilization greater than 10,000 that have a level 4 (99214) or level 5 (99215) office visit included in the global period. There were no codes with volume greater than 10,000 that had a level 5 office visits included. Seven services were identified that have a level 4 office visit included. The RUC expanded the list of services to nine services to include additional codes as part of the family. The RUC confirmed that the level 4 post-operative visits were appropriate and well-defined for four services. The RUC will review the remaining five services for the 2018 Medicare Physician Payment Schedule. The RUC noted that this screen will be complete after these services are reviewed because the RUC has more rigorously questioned level 4 office visits in the global period in recent years and will continue this process going forward.

Public Comment Requests
In 2011, CMS announced that due to the ongoing identification of potentially misvalued services by CMS and the RUC, the Agency will no longer conduct a separate Five-Year Review. CMS will now call for public comments on an annual basis as part of the comment process on the Final Rule each year.

Final Rule for 2013
In the Final Rule for the 2013 Medicare Physician Payment Schedule, the public and CMS identified 35 potentially misvalued services, which was expanded to 38 services to include the entire code family. The RUC reviewed these services and recommended that eight services be removed from review as two G-codes lacked specialty society interest and six services are not potentially misvalued since there is no reliable way to determine an incremental difference from open thoracotomy to thorascopic procedures. The RUC submitted recommendations for 28 services for the 2014-2017 Medicare Physician Payment Schedules. The RUC will review two services after additional utilization data is available.

Final Rule for 2014
CMS did not receive any publicly nominated potentially misvalued codes for inclusion in the Proposed Rule for 2014. To broaden participation in the process of identifying potentially misvalued codes, CMS sought the input of Medicare contractor medical directors (CMDs). The CMDs have identified over a dozen services which CMS is proposing as potentially misvalued. The RUC reviewed these services and appropriate families, totaling 91 services. The CPT® Editorial Panel deleted 10 services and will review one service for CPT 2018. The RUC submitted recommendations to CMS for 79 services for the 2015-2017 Medicare Physician Payment Schedules and will review one service after additional data is available.

Final Rule for 2015
In the Final Rule for 2015 the public and CMS nominated 26 services as potentially misvalued, which the RUC expanded to 44 services to include additional codes as part of this family. The CPT Editorial Panel deleted 13 services and will review three additional services. The RUC submitted 28 recommendations for the 2016-2017 Medicare Physician Payment Schedules.

Final Rule for 2016
In the Final Rule for 2016 the public and CMS nominated 25 services as potentially misvalued, which the RUC expanded to 26 services to include an additional code as part of the family. The RUC will review these services for the 2018 Medicare Physician Payment Schedule

Other Issues
In addition to the above screening criteria, the Relativity Assessment Workgroup performed an exhaustive search of the RUC database for services indicated by the RUC to be re-reviewed at a later date. Three codes were found that had not yet been re-reviewed. The RUC recommended a work RVU decrease for two codes and to maintain the work RVU for another code.

CMS also identified 72 services that required further practice expense review. The RUC submitted practice expense recommendations on 67 services and the CPT® Editorial Panel deleted 5 services. The RUC also reviewed special requests for 19 audiology and speech-language pathology services. The RUC submitted recommendations for 10 services for the 2010 Medicare Physician Payment Schedule and the remaining nine services for the 2011 Medicare Physician Payment Schedule.

CMS Requests and RUC Relativity Assessment Workgroup Code Status

Total Number of Codes Identified*	**2,100**
Codes Completed	**1,813**
Work and PE Maintained	508

RUC to Review April and October 2016	188
RUC future review after additional data obtained	44

**The total number of codes identified will not equal the number of codes from each screen as some codes have been identified in more than one screen.*

The RUC's efforts for 2009-2015 have resulted nearly $4 billion for redistribution within the Medicare Physician Payment Schedule.

Status Report: CMS Requests and Relativity Assessment Issues

00740 **Anesthesia for upper gastrointestinal endoscopic procedures, endoscope introduced proximal to duodenum**

Global: XXX **Issue:** Anesthesia for Intestingal Endoscopic Procedures **Screen:** CMS Request - Final Rule for 2016 **Complete?** No

Most Recent RUC Meeting: January 2016 **Tab** 25 **Specialty Developing Recommendation:** ASA **First Identified:** July 2015 **2014 Medicare Utilization:** 1,302,402

RUC Recommendation: 1.50, Review in October 2017

CPT Action (if applicable):

Result:

Referred to CPT Asst ☑ **Published in CPT Asst:** Dec 2011 & Apr 20

Status Report: CMS Requests and Relativity Assessment Issues

64448 **Injection, anesthetic agent; femoral nerve, continuous infusion by catheter (including catheter placement)**

Global: 000 **Issue:** Anesthetic Agent Nerve Injection **Screen:** Site of Service Anomaly / High Volume Growth1 / CMS Fastest Growing / High Volume Growth2 **Complete?** Yes

Most Recent RUC Meeting: October 2013 **Tab** 18 **Specialty Developing Recommendation:** ASA **First Identified:** February 2008 **2014 Medicare Utilization:** 47,181

2007 Work RVU: 3.36 **2016 Work RVU:** 1.63
2007 NF PE RVU: NA **2016 NF PE RVU:** NA
2007 Fac PE RVU: 0.73 **2016 Fac PE RVU:** 0.32

RUC Recommendation: Remove from screen. 1.63 **CPT Action (if applicable):** February 2008 **Result:** Decrease

Referred to CPT Asst ☐ **Published in CPT Asst:**

64449 **Injection, anesthetic agent; lumbar plexus, posterior approach, continuous infusion by catheter (including catheter placement)**

Global: 000 **Issue:** Anesthetic Agent Nerve Injection **Screen:** Site of Service Anomaly **Complete?** Yes

Most Recent RUC Meeting: April 2008 **Tab** 19 **Specialty Developing Recommendation:** ASA **First Identified:** September 2007 **2014 Medicare Utilization:** 3,954

2007 Work RVU: 3.24 **2016 Work RVU:** 1.81
2007 NF PE RVU: NA **2016 NF PE RVU:** NA
2007 Fac PE RVU: 0.84 **2016 Fac PE RVU:** 0.47

RUC Recommendation: 1.81 **CPT Action (if applicable):** February 2008 **Result:** Decrease

Referred to CPT Asst ☐ **Published in CPT Asst:**

64450 **Injection, anesthetic agent; other peripheral nerve or branch**

Global: 000 **Issue:** Injection - Anesthetic Agent **Screen:** Harvard Valued - Utilization over 100,000 / Harvard-Valued Annual Allowed Charges Greater than $10 million **Complete?** Yes

Most Recent RUC Meeting: September 2011 **Tab** 24 **Specialty Developing Recommendation:** ASA, AAPM, APMA, ASIPP **First Identified:** October 2009 **2014 Medicare Utilization:** 708,932

2007 Work RVU: 1.27 **2016 Work RVU:** 0.75
2007 NF PE RVU: 1.25 **2016 NF PE RVU:** 1.46
2007 Fac PE RVU: 0.49 **2016 Fac PE RVU:** 0.50

RUC Recommendation: 0.75 **CPT Action (if applicable):** **Result:** Decrease

Referred to CPT Asst ☑ **Published in CPT Asst:** Jan 2013

Status Report: CMS Requests and Relativity Assessment Issues

64461 **Paravertebral block (PVB) (paraspinous block), thoracic; single injection site (includes imaging guidance, when performed)**

Global: **Issue:** Paravertebral Block Injection **Screen:** New code for CPT 2016. **Complete?** No

Most Recent RUC Meeting: April 2015 **Tab** 10 **Specialty Developing Recommendation:** **First Identified:** April 2015 **2014 Medicare Utilization:**

RUC Referrals to CPT Editoral Panel - Incomplete Issues

		Screen	RUC Meeting	Specialty Society:	CPT Meeting	CPT Tab
11100	**Biopsy of skin, subcutaneous tissue and/or mucous membrane (including simple closure), unless otherwise listed; single lesion**	MPC List / CMS High Expenditure Procedural Codes2	January 2016	AAD	May 2016	

Background: Prior to the January 2016 RUC meeting, the specialty society notified the RUC that their survey data displayed a bimodal distribution of responses with more outliers than usual. The specialty explained that the code descriptions do not distinguish between different types of biopsies and thus they would like to bring the biopsy of skin lesion codes back to the CPT Editorial Panel in May 2016 for refinement of the codes. The RUC recommends referring CPT codes 11100 and 11101 to the CPT Editorial Panel.

		Screen	RUC Meeting	Specialty Society:	CPT Meeting	CPT Tab
11101	**Biopsy of skin, subcutaneous tissue and/or mucous membrane (including simple closure), unless otherwise listed; each separate/additional lesion (List separately in addition to code for primary procedure)**	Low Value Billed in Multiple Units / CMS High Expenditure Procedural Codes2	January 2016	AAD	May 2016	

Background: Prior to the January 2016 RUC meeting, the specialty society notified the RUC that their survey data displayed a bimodal distribution of responses with more outliers than usual. The specialty explained that the code descriptions do not distinguish between different types of biopsies and thus they would like to bring the biopsy of skin lesion codes back to the CPT Editorial Panel in May 2016 for refinement of the codes. The RUC recommends referring CPT codes 11100 and 11101 to the CPT Editorial Panel.

		Screen	RUC Meeting	Specialty Society:	CPT Meeting	CPT Tab
17250	**Chemical cauterization of granulation tissue (proud flesh, sinus or fistula)**	High Volume Growth3	January 2016		October 2016	

Background: In January 2016, the Relativity Assessment Workgroup recommends refer to CPT to revise the descriptor or include a parenthetical regarding appropriately reporting 17250 or 97597 and 97598. Refer to CPT Assistant to describe when to appropriately report 17250 or 97597 and 97598. The Workgroup should review utilization data and who is providing this service in October 2019.

		Screen	RUC Meeting	Specialty Society:	CPT Meeting	CPT Tab
22305	**Closed treatment of vertebral process fracture(s)**	CMS Request - Final Rule for 2014	April 2015	AANS/CNS, NASS	May 2016	

Background: In October 2013, AAOS and NASS indicated that 22305 be referred to CPT for deletion. There are multiple ways to report this service or report as an Evaluation and Management service. In November 2014, AAOS notified AMA staff that they do not want 22305 deleted. This service was to be surveyed for April 2015. In April 2015 the specialties noted that deletion is appropriate for 22851 and indicated they plan to present a CPT Code Change Proposal at the October 2015 CPT Editorial Panel meeting. The specialties requested and the RUC recommends that the 22305 and the Application of Intervertebral Device family of services be referred to CPT for revision.

		Screen	RUC Meeting	Specialty Society:	CPT Meeting	CPT Tab
34812	**Open femoral artery exposure for delivery of endovascular prosthesis, by groin incision, unilateral**	Pre-Time Analysis	April 2014	ACR, SCAI, SIR, SVS	May 2016	

Background: Referred to CPT for revision

		Screen	RUC Meeting	Specialty Society:	CPT Meeting	CPT Tab
34825	**Placement of proximal or distal extension prosthesis for endovascular repair of infrarenal abdominal aortic or iliac aneurysm, false aneurysm, or dissection; initial vessel**	Pre-Time Analysis	April 2014	ACR, SCAI, SIR, SVS	May 2016	

Background: Referred to CPT for revision

		Screen	RUC Meeting	Specialty Society:	CPT Meeting	CPT Tab
63090	**Vertebral corpectomy (vertebral body resection), partial or complete, transperitoneal or retroperitoneal approach with decompression of spinal cord, cauda equina or nerve root(s), lower thoracic, lumbar, or sacral; single segment**	Codes Reported Together 75% or More-Part3			May 2016	

Background: In January 2015 the Joint CPT/RUC Workgroup accepted the specialty socitey's bundling solution for codes 22558 and 63090.

		Screen	RUC Meeting	Specialty Society:	CPT Meeting	CPT Tab
64553	**Percutaneous implantation of neurostimulator electrode array; cranial nerve**	Final Rule for 2015	April 2015	AANS/CNS, AAPMR, ASA, NASS	May 2016	

Background: The RUC discussed the confusion that survey respondents experienced valuing this service. The description only states the nerve that the neurostimulaor is implanted in, and most respondents completed the survey as if it is performed in the facility setting. The Medicare data conflicts with this site of service, reporting that 65% of the time this service is performed in the physician's office. Additionally the supplies and equipment may be different for the temporary and permanent implantation. The RUC recommends referring CPT code 64553 to the CPT Editorial Panel to better define this service, such as having one code to describe temporary or testing implantation and another code to describe permanent implantation.

		Screen	RUC Meeting	Specialty Society:	CPT Meeting	CPT Tab
64555	**Percutaneous implantation of neurostimulator electrode array; peripheral nerve (excludes sacral nerve)**	High Volume Growth1 / CMS Fastest Growing / Final Rule for 2015	April 2015	AANS/CNS, AAPMR, ASA, NASS	May 2016	

Background: The RUC discussed the confusion that survey respondents experienced valuing this service. The description only states the nerve that the neurostimulaor is implanted in, and most respondents completed the survey as if it is performed in the facility setting. The Medicare data conflicts with this site of service, reporting that 68% of the time this service is performed in the physician's office. In the Medicaid data it is even higher reporting that 92% of the time it is performed in the physician's office. Additionally the supplies and equipment may be different for the temporary and permanent implantation. The RUC recommends referring CPT code 64555 to the CPT Editorial Panel to better define this service, such as having one code to describe temporary or testing implantation and another code to describe permanent implantation.

		Screen	RUC Meeting	Specialty Society:	CPT Meeting	CPT Tab
75894	**Transcatheter therapy, embolization, any method, radiological supervision and interpretation**	Codes Reported Together 75% or More-Part1	January 2013	ACC, ACR, SIR, SVS		

Background: The Workgroup accepts the specialties' recommendation to submit a code change proposal that would address any duplication when this service is reported with 37201 on the same date by the same physician. Previous notes indicated that ACC submitted a CCP for October 2012 CPT related to 75894, creating a new code for a particular cardiac procedure that is currently reported using that code. At the January 2013 RUC meeting the RUC recommended that 75894 be referred to CPT for revision.

		Screen	RUC Meeting	Specialty Society:	CPT Meeting	CPT Tab
75984	**Change of percutaneous tube or drainage catheter with contrast monitoring (eg, genitourinary system, abscess), radiological supervision and interpretation**	Codes Reported Together 75% or More-Part2	October 2012	ACR, SIR		

Background: The Joint Workgroup recommends bundling 50392 and 74475, 50393 and 74480, 50394 and 74425, 50398 and 75984 and 50392 by the CPT 2016 cycle.

		Screen	RUC Meeting	Specialty Society:	CPT Meeting	CPT Tab
77014	**Computed tomography guidance for placement of radiation therapy fields**	CMS Request - Practice Expense Review / CMS-Other - Utilization over 500,000 / CMS High Expenditure Procedural Codes1 / High Volume Growth3	January 2016	ASTRO, ACR		

Background: Revise based on CMS input regarding the radiation oncology services.

		Screen	RUC Meeting	Specialty Society:	CPT Meeting	CPT Tab
92140	**Provocative tests for glaucoma, with interpretation and report, without tonography**	Harvard Valued - Utilization over 30,000-Part2	October 2015		May 2016	

Background: AAO recommends to delete code 92140.

		Screen	RUC Meeting	Specialty Society:	CPT Meeting	CPT Tab
92275	**Electroretinography with interpretation and report**	CMS High Expenditure Procedural Codes2	January 2016	AAO, ASRS, AOA (optometry)	October 2016	

Background: In January 2016, the specialty society noted that they became aware of inappropriate use of this code for a less intensive version of this test for diagnosis and indications that are not clinically proven and for which less expensive and less intensive tests already exist. The utilization of CPT code 99275 was appropriately low until 2013 when it suddenly increased by 300%. CPT changes are necessary to ensure that the service for which 92275 was intended is clearly described as well as an accurate vignette and work descriptor is developed. The RUC recommends CPT code 92275 be referred to the CPT Editorial Panel.

		Screen	RUC Meeting	Specialty Society:	CPT Meeting	CPT Tab
93965	**Noninvasive physiologic studies of extremity veins, complete bilateral study (eg, Doppler waveform analysis with responses to compression and other maneuvers, phleborheography, impedance plethysmography)**	CMS High Expenditure Procedural Codes2	January 2016	ACC, ACR, SCAI, SVS	May 2016	

Background: In January 2016, the specialty societies explained that CPT code 93965 is a physiologic noninvasive vascular test, and the Introductory Comments in the Noninvasive Vascular Diagnostics portion of the CPT Manual clearly state that physiologic studies must be performed on instruments other than a duplex ultrasound scanner. Previously, this service could have been appropriately used in two ways. However, each indication is now obsolete. In the 2000s a test to detect lower extremity deep venous thrombosis employed an instrument called an Impedance Plethysmograph, or IPG. In the 2000s, IPG was replaced by a better test, duplex ultrasound (CPT code 93970). Additionally, duplex scanning has also replaced air plethysmography, which was previously used to test patients for chronic venous insufficiency.

Given the removal of these two indications, the specialty societies explained that they cannot identify a valid indication for the use of CPT code 93965. It is possible that clinicians are using the code to report the additional work of assessing venous valve function when duplex ultrasound is used to assess patients for chronic venous insufficiency. Under this scenario, CPT codes 93970 and 93965 would be used in conjunction on the same date of service, which is the case 50% of the time, according to the Medicare 5% sample file. However, this coding practice is inappropriate if a duplex scanner is used exclusively to perform the test.

The RUC recommends that CPT code 93965 be referred to the CPT Editorial Panel for deletion. In accordance with this deletion, no current CPT code will be used to report this service. Furthermore, CMS should consider a payment policy which removes this service from active status and redistributes the savings for CY 2017.

		Screen	RUC Meeting	Specialty Society:	CPT Meeting	CPT Tab
95930	**Visual evoked potential (VEP) testing central nervous system, checkerboard or flash**	High Volume Growth3	January 2016		May 2016	

Background: In January 2016, the RUC recommended to refer to CPT for May 2016 meeting to define a more specific delineation of test strategy relative to the clinical indication for the study. Specialty societies indicated they may recommend the elevation of Category III code 0333T to Category I as well.

		Screen	RUC Meeting	Specialty Society:	CPT Meeting	CPT Tab
95970	**Electronic analysis of implanted neurostimulator pulse generator system (eg, rate, pulse amplitude, pulse duration, configuration of wave form, battery status, electrode selectability, output modulation, cycling, impedance and patient compliance measurements); simple or complex brain, spinal cord, or peripheral (ie, cranial nerve, peripheral nerve, sacral nerve, neuromuscular) neurostimulator pulse generator/transmitter, without reprogramming**	Harvard Valued - Utilization over 100,000 / CMS Request - Final Rule for 2016 / High Volume Growth3	January 2016	AAN, AAPM, NASS, ACO, ACNS, ISIS, AAPMR	May 2016	

Background: In January 2016, the specialty societies indicated they have actively worked with the CPT Assistant Editorial Board to alleviate incorrect reporting of these services, however, confusion remains giving the existing code language. The specialty societies indicated that they will revise the code language to more clearly define what is required for one of the parameters to be considered "changed" as well as correct the reporting of simple programming for cranial neurostimulators. The RUC refers 95970 and 95974-95982 to the CPT Editorial Panel for revision.

		Screen	RUC Meeting	Specialty Society:	CPT Meeting	CPT Tab
95974	**Electronic analysis of implanted neurostimulator pulse generator system (eg, rate, pulse amplitude, pulse duration, configuration of wave form, battery status, electrode selectability, output modulation, cycling, impedance and patient compliance measurements); complex cranial nerve neurostimulator pulse generator/transmitter, with intraoperative or subsequent programming, with or without nerve interface testing, first hour**	CMS Request - Final Rule for 2016	January 2016	AAN	May 2016	

Background: In January 2016, the specialty societies indicated they have actively worked with the CPT Assistant Editorial Board to alleviate incorrect reporting of these services, however, confusion remains giving the existing code language. The specialty societies indicated that they will revise the code language to more clearly define what is required for one of the parameters to be considered "changed" as well as correct the reporting of simple programming for cranial neurostimulators. The RUC refers 95970 and 95974-95982 to the CPT Editorial Panel for revision.

		Screen	RUC Meeting	Specialty Society:	CPT Meeting	CPT Tab
95975	**Electronic analysis of implanted neurostimulator pulse generator system (eg, rate, pulse amplitude, pulse duration, configuration of wave form, battery status, electrode selectability, output modulation, cycling, impedance and patient compliance measurements); complex cranial nerve neurostimulator pulse generator/transmitter, with intraoperative or subsequent programming, each additional 30 minutes after first hour (List separately in addition to code for primary procedure)**	CMS Request - Final Rule for 2016	January 2016	AAN	May 2016

RUC Recommendations to Develop CPT Assistant Articles - Incomplete Issues

		Screen:	RUC Meeting:	RUC Rec:	Specialty Society:	CPT Asst Status:
13120	**Repair, complex, scalp, arms, and/or legs; 1.1 cm to 2.5 cm**	CMS Fastest Growing / CPT Assistant Analysis	October 2015	Refer to CPT Assistant. 3.23	AAD, AAO-HNS, ASPS	1st article: May 2011; 2nd article needed

Background: The Workgroup believed that 13120, 13121 and 13122 were regularly performed at the same time as excision of lesion services and may need to be referred to CPT to create bundled services. However, the SS provided analysis of utilization data showing that this family of codes is not typically reported by the same physician at the time of any excision codes. The WG recommends that this service be reviewed again in 2 years. The WG recommends that the SS develop a CPT Asst article to provide correct coding instructions. Prior to this identification screen, AAD submitted a CPT Assistant article on this issue in Aug 2006. The Workgroup reviewed the 2006 article and determined that it did not sufficiently address the current issue or have any impact on Medicare utilization. The Workgroup recommends that another CPT Assistant article be written to address this issue, specifically focusing on the complex repair of the scalp, arms and/or legs, codes 13120-13122. SS submitted article. However, at the Feb 2010 CPT Asst Board requested clarification/more information from specialty society. Sept 2011 RUC rec resurvey with entire family as requested by CMS in the Proposed Rule for the 4th Five-Year Review. In April 2015, the RAW reviewed services in which the RUC recommended that a CPT Assistant article be developed. The Workgroup requested that the specialty societies develop an action plan to address the increase in utilization and the effectiveness of the CPT Assistant article. At the October 2015 meeting, the RUC recommended that the specialty societies submit another CPT Assistant article to educate providers on the clinical requirements for reporting these services, addressing the performance requirements and typical uses of all the codes in the family, as well as for the intermediate repair codes (12031-12037). Articles should include detailed descriptions of procedures, including how to differentiate between complex and intermediate repairs. Re-review in 2017.

		Screen:	RUC Meeting:	RUC Rec:	Specialty Society:	CPT Asst Status:
13121	**Repair, complex, scalp, arms, and/or legs; 2.6 cm to 7.5 cm**	CMS Fastest Growing / CPT Assistant Analysis	October 2015	Refer to CPT Assistant. 4.00	AAD, AAO-HNS, ASPS	1st article: May 2011; 2nd article needed

17250	**Chemical cauterization of granulation tissue (proud flesh, sinus or fistula)**	High Volume Growth3	January 2016	Refer to CPT Editorial Panel and CPT Assistant.		Article Needed

Background: In October 2015, AMA Staff assembled a list of all services with total Medicare utilization of 10,000 or more that have increased by at least 100% from 2008 through 2013. The RUC review this list and recommends that the specialty societies submit an action plan for January 2016 explaining the high volume growth. In January 2016, the Relativity Assessment Workgroup recommends refer to CPT to revise the descriptor or include a parenthetical regarding appropriately reporting 17250 or 97597 and 97598. Refer to CPT Assistant to describe when to appropriately report 17250 or 97597 and 97598. The Workgroup should review utilization data and who is providing this service in October 2019.

21820	**Closed treatment of sternum fracture**	CMS Request - Final Rule for 2014 / Emergent Procedures	January 2016	Refer to CPT Assistant and PE Subcommittee	STS, ACS	Article Needed

Background: Added as part of 21800 family for Final Rule issue. In October 2015, the Emergent Procedures Workgroup identified 34 services that have 60 minutes pf pre-service clinical staff time in the facility-only setting. The Emergent Procedures Workgroup referred these issues to the RAW to review as potentially misvalued. Specialty societies should submit action plans addressing the appropriateness of site of service, global period, and dominiant specialty for these services. The RAW will review the action plans in January 2016. The Workgroup had a robust discussion on these codes and determined that the 090 day global period is correct and an efficient bundling of the required services as well as share the same global period for all fracture care services. The Workgroup agreed with the specialty societies that the appropriate providers (emergency medicine and orthopaedic surgery) are reporting these services. The Workgroup noted that the emergency physicians are appropriately appending modifier -54. The specialty societies indicated that for these services that require anesthesia, it is unlikely that some of the specialties indicated in the Medicare utilization data actually perform the service under general anesthesia or regional block. The Workgroup agreed and recommends that the specialty societies develop a CPT Assistant article to reinforce correct coding and modifier use for all fracture codes and guidance on the meaning of “requiring anesthesia” and “with anesthesia” as it relates to restorative fracture care. The CPT Assistant article should also address the issue of restorative care for closed treatment without manipulation. The Workgroup determined that the Practice Expense Subcommittee are revising codes clinical staff time in the facility-only setting pre-time from 60 minutes and implementing a standard change to 20 minutes. The Workgroup refers these 34 emergent procedure codes identified back to the PE Subcommittee to apply this new standard. The Workgroup noted that for these low volume services any additional aberrations will be identified in future screens if applicable and the Workgroup does not need to examine these services further at this time.

The Emergent Procedures Workgroup referred these issues to the RAW to review as potentially misvalued. Specialty societies should submit action plans addressing the appropriateness of site of service, global period, and dominiant specialty for these services. The RAW will review the action plans in January 2016.The Workgroup had a robust discussion on these codes and determined that the 090 day global period is correct and an efficient bundling of the required services as well as share the same global period for all fracture care services. The Workgroup agreed with the specialty societies that the appropriate providers (emergency medicine and orthopaedic surgery) are reporting these services. The Workgroup noted that the emergency physicians are appropriately appending modifier -54. The specialty societies indicated that for these services that require anesthesia, it is unlikely that some of the specialties indicated in the Medicare utilization data actually perform the service under general anesthesia or regional block. The Workgroup agreed and recommends that the specialty societies develop a CPT Assistant article to reinforce correct coding and modifier use for all fracture codes and guidance on the meaning of “requiring anesthesia” and “with anesthesia” as it relates to restorative fracture care. The CPT Assistant article should also address the issue of restorative care for closed treatment without manipulation. The Workgroup determined that the Practice Expense Subcommittee are revising codes clinical staff time in the facility-only setting pre-time from 60 minutes and implementing a standard change to 20 minutes. The Workgroup refers these 34 emergent procedure codes identified back to the PE Subcommittee to apply this new standard. The Workgroup noted that for these low volume services any additional aberrations will be identified in future screens if applicable and the Workgroup does not need to examine these services further at this time.

31500	**Intubation, endotracheal, emergency procedure**	CMS High Expenditure Procedural Codes2	January 2016	3.00 and Refer to CPT Assistant	ACEP, ASA	Article Needed

Background: In the NPRM for 2016 CMS re-ran the high expenditure services across specialties with Medicare allowed charges of $10 million or more. CMS identified the top 20 codes by specialty in terms of allowed charges, excluding 010 and 090-day global services, anesthesia and Evaluation and Management services and services reviewed since CY 2010. In January 2016, the RUC discussed the unique patient population treated with CPT code 31500. The specialty described that typically the same physician will report this on the same day as a critical care code (>50% of the time) but that this will not impact critical care code reporting. The specialty explained that underlying medical issues which caused the need for a patient to receive the intubation of CPT code 31500 and communication with family around the care of these issues is categorized within critical care time but time spent on this intubation would not count toward the critical care time. Given that you need at least 30 minutes for proper coding of critical care for patients, the RUC recommends that the specialty societies develop a CPT Assistant article to clarify when to report this service. The article will help ensure providers understand the times for these two services do not overlap.

64555	**Percutaneous implantation of neurostimulator electrode array; peripheral nerve (excludes sacral nerve)**	High Volume Growth1 / CMS Fastest Growing / Final Rule for 2015	April 2015	Refer to CPT. Develop CPT Assistant article.Review September 2017.	AANS/CNS, AAPMR, ASA, NASS	Article Needed

Background: Referral to CPT for deletion, clarification, or revision. This may also include the development of a CPT Assistant article or review of the impact of previous CPT Assistant articles on volume. Article published in August 2009. Sept 2011 - RAW recommends another CPT Assistant article to advise the correct reporting of PTNS and re-review in 3 years (Sept 2014). Additional article was not published. Sept 2014 - Develop CPT Assistant article to clarify the appropriate use of the code and stabilize its utilization. Review in 3 years (Sept 2017).A stakeholder raised questions regarding whether codes 64553 and 64555 included the appropriate direct PE inputs when furnished in the non-facility setting. It appears that these inputs have not been evaluated recently and therefore CMS are nominating these codes as potentially misvalued for the purpose of ascertaining whether or not there are non-facility direct PE inputs that are not included in the direct PE inputs that are typical supply costs for these services. Sept 2014-Review PE only January 2015. In the Final Rule for 2015 CMS requested that the work and PE be reviewed. The specialties indicated they will survey and present at the April 2015 meeting. The RUC discussed the confusion that survey respondents experienced valuing this service. The description only states the nerve that the neurostimulaor is implanted in, and most respondents completed the survey as if it is performed in the facility setting. The Medicare data conflicts with this site of service, reporting that 68% of the time this service is performed in the physician's office. In the Medicaid data it is even higher reporting that 92% of the time it is performed in the physician's office. Additionally the supplies and equipment may be different for the temporary and permanent implantation. The RUC recommends referring CPT code 64555 to the CPT Editorial Panel to better define this service, such as having one code to describe temporary or testing implantation and another code to describe permanent implantation. The RUC recognized that it needed to establish an interim value for 64555 until this service could be clarified by CPT. The RUC recommends maintaining the current work value of 2.32, as interim for CPT code 64555 and referral to the CPT Editorial Panel.

767X1		Final Rule for 2015	October 2015	0.55 and refer to CPT Assistant	ACR, SIR, SVS	Article Needed

Background: When Medicare began paying for abdominal aortic aneurysm (AAA) ultrasound screening in CY 2007, CMS created HCPCS code G0389 and set the RVUs at the same level as CPT code 76775. CMS noted in the CY 2007 final rule with comment period that CPT code 76775 was used to report the service when furnished as a diagnostic test and that we believed the service reflected by G0389 used equivalent resources and work intensity to those contained in CPT code 76775. In the CY 2014 proposed rule, based on a RUC recommendation, we proposed to replace the ultrasound room included as a direct PE input for CPT code 76775 with a portable ultrasound unit. Since all the RVUs (including the PE RVUs) for G0389 were crosswalked from CPT code76775, the proposed PE RVUs for G0389 in the CY 2014 proposed rule were reduced significantly as a result of this change to the direct PE inputs for 76775. However, CMS did not discuss the applicability of this change to G0389 in the proposed rule's preamble and did not receive any comments on G0389 in response to the proposed rule. CMS finalized the change to CPT code 76775 in the CY 2014 final rule with comment period and the corresponding PE RVUs for G0389 were also reduced. Subsequent to the publication of the CY 2014 final rule, a stakeholder suggested that the reduction in the RVUs for G0389 did not accurately reflect the resources involved in furnishing the service and asked that CMS consider using an alternative crosswalk. Specifically, the stakeholder stated that the type of equipment typically used in furnishing G0389 is different than that used for CPT code 76775, the time involved in furnishing G0389 is greater than that of CPT code 76775, and the specialty that typically furnishes G0389 is different than the one that typically furnishes CPT code 76775. The stakeholder suggested an alternative crosswalk of CPT code 76705. after considering the issue, CMS are proposing G0389 as a potentially misvalued code and seeking recommendations regarding the appropriate inputs that should be used to develop RVUs for this code. CMS has not reviewed the inputs used to develop RVUs for this code since it was established in CY 2007 and the RVUs were directly crosswalked from 76705. Based on the issues raised by stakeholders, CMS believes that it should value this code through the standard methodologies, including the full PE RVU methodology. In order to do so, CMS are proposing to include this code on our list of proposed potentially misvalued codes and seek input from the public and other stakeholders, including the RUC, regarding the appropriate work RVU, time, and direct PE inputs that reflect the typical resources involved in furnishing the service. In September 2014 the RUC refered G0389 to CPT to transition this code to a Category I code for the 2016 cycle. In October 2015, the RUC raised concerns that the practice expense recommendation was prepared by specialty societies that are not the dominant provider of this service according to Medicare claims data. The presenters explained that this is likely due to increased use of G code G0389 for a handheld device, which is not the intended use of the CPT code that is currently used as a crosswalk for the G code. The presenters explained and the RUC agreed that this is likely an issue of miscoding. The RUC recommends that the specialty develop a CPT Assistant article to clarify appropriate use of the new CPT code 767X1 that will replace the G code G0389.

78070	**Parathyroid planar imaging (including subtraction, when performed);**	Harvard Valued - Utilization over 30,000 / CPT 2013 Utilization Review	January 2016	0.80. Refer to CPT Assistant and review 2 years after article is published.	ACR, ACNM, SNM	Article Needed

Background: In April 2011, CPT Code 78007, Thyroid imaging, with uptake; multiple determinations was identified in the Harvard Valued-Utilization over 30,000 screen. As part of the review of the entire endocrine family, the specialty societies determined that revisions to the parathyroid imaging procedures were necessary to reflect current bundling policies, guideline changes and new technology. AMA Staff reviewed the work neutrality impacts for codes reviewed in the CPT 2013 cycle. It appeared that was only one issue where there was a large growth in utilization in the first year. For CPT 2013 the Parathyroid Imaging codes were not work neutral, and it was initially estimated as a savings overall. It appears that there was 40% increase from what was projected. The specialty societies submitted an action plan indicating that literature supporting parathyroid scintigraphy as an effective diagnostic study for parathyroid disease has recently emerged and supports the clinical utility thus increasing utilization. Secondly, the availability of SPECT/CT cameras has increased and is greater than initially predicted, allowing for a higher utilization. The Workgroup agreed and also noted that these services are conducted on patients who are referred to the radiologists or nuclear medicine physicians. The physicians providing these services do not control the number of patients referred to them who receive these services. The Workgroup recommends that the specialty societies develop a CPT Assistant article to address potential current use of 78803 rather than the new codes 78071 and 78072. The Workgroup noted that these services are on the new technology list for review later this year and should be postponed and reviewed in 2 years after the CPT Assistant article is published.

The Workgroup agreed and also noted that these services are conducted on patients who are referred to the radiologists or nuclear medicine physicians. The physicians providing these services do not control the number of patients referred to them who receive these services. The Workgroup recommends that the specialty societies develop a CPT Assistant article to address potential current use of 78803 rather than the new codes 78071 and 78072. The Workgroup noted that these services are on the new technology list for review later this year and should be postponed and reviewed in 2 years after the CPT Assistant article is published.

95970	**Electronic analysis of implanted neurostimulator pulse generator system (eg, rate, pulse amplitude, pulse duration, configuration of wave form, battery status, electrode selectability, output modulation, cycling, impedance and patient compliance measurements); simple or complex brain, spinal cord, or peripheral (ie, cranial nerve, peripheral nerve, sacral nerve, neuromuscular) neurostimulator pulse generator/transmitter, without reprogramming**	Harvard Valued - Utilization over 100,000 / CMS Request - Final Rule for 2016 / High Volume Growth3	January 2016	Refer to CPT May 2016	AAN, AAPM, NASS, ACO, ACNS, ISIS, AAPMR	Article Needed

Background: This code was identified as part of the family of services of 95971 for review in April 2010 Five-Year Review Workgroup meeting. April 2010, refer to CPT Editorial panel to address neurostimulator programming for incontinence as a separate new code. In addition, the Committee may wish to consider the number of channels as a determinant of code clarification between 95971/95972 rather than simple and complex. Feb 2011 CPT, editorial revision to include the term "pulse" duration. In the NPRM for 2016 CPT codes 95971-95973 were noted as recently reviewed for CY 2015. Due to significant time changes in the base codes, CMS requests that the entire family should be considered as potentially misvalued and reviewed in a manner consistent with review of CPT codes 95971, 95972 and 95973. The RUC will add CPT codes 95970 and 95974-95982 to the list of potentially misvalued services to survey for January 2016 In October 2015, this service was also identified under the High Volume screen for services with total Medicare utilization of 10,000 or more that have increased by at least 100% from 2008 through 2013. CPT codes 95971-95973 were recently reviewed for CY 2015. Due to significant time changes in the base codes, CMS requests that the entire family should be considered as potentially misvalued and reviewed in a manner consistent with review of CPT codes 95971, 95972 and 95973. The RUC will add CPT codes 95970 and 95974-95982 to the list of potentially misvalued services to review. In January 2016, the specialty societies indicated they have actively worked with the CPT Assistant Editorial Board to alleviate incorrect reporting of these services, however, confusion remains giving the existing code language. The specialty societies indicated that they will revise the code language to more clearly define what is required for one of the parameters to be considered “changed” as well as correct the reporting of simple programming for cranial neurostimulators. The RUC refers 95970 and 95974-95982 to the CPT Editorial Panel for revision.

95974 **Electronic analysis of implanted neurostimulator pulse generator system (eg, rate, pulse amplitude, pulse duration, configuration of wave form, battery status, electrode selectability, output modulation, cycling, impedance and patient compliance measurements); complex cranial nerve neurostimulator pulse generator/transmitter, with intraoperative or subsequent programming, with or without nerve interface testing, first hour**

96920	**Laser treatment for inflammatory skin disease (psoriasis); total area less than 250 sq cm**	CMS Fastest Growing / CPT Assistant Analysis / High Volume Growth3	October 2015	Refer to CPT Assistant. 1.15.	AAD	Jun 2012 (May 2013?)

Background: The Workgroup agreed that 96920, 96921, 96922 should be assessed again in two years. Sept 2011-resurvey for January 2012 and develop CPT Assistant article to address the incorrect reporting when using handheld devices. Article published June 2012. In April 2015, the RAW reviewed services in which the RUC recommended that a CPT Assistant article be developed. The Workgroup requested that the specialty societies develop an action plan to address the increase in utilization and effectiveness of CPT Assistant article. In October 2017 the RUC recommended that the specialty societies develop a CPT Assistant article to ensure the codes are being used correctly. The May 2013 article was limited to a question of treating a scar using the laser codes 96920-96922, stating that would not be appropriate, and that 96999, Unlisted special dermatological service or procedure, should be used instead. A comprehensive article, with examples, on the use of the use of the three laser codes is needed. Review again in 2017 after article has taken effect. The RUC noted that this service was also identified under the high volume growth screen. The RUC noted to review the growth as well in 2017.

G0389	**Ultrasound b-scan and/or real time with image documentation; for abdominal aortic aneurysm (AAA) screening**	Final Rule for 2015	October 2015	Refer to CPT Assistant.	ACC, ACP, ACR, SCAI, SVS	Article Needed

Background: When Medicare began paying for abdominal aortic aneurysm (AAA) ultrasound screening in CY 2007, CMS created HCPCS code G0389 and set the RVUs at the same level as CPT code 76775. CMS noted in the CY 2007 final rule with comment period that CPT code 76775 was used to report the service when furnished as a diagnostic test and that we believed the service reflected by G0389 used equivalent resources and work intensity to those contained in CPT code 76775. In the CY 2014 proposed rule, based on a RUC recommendation, we proposed to replace the ultrasound room included as a direct PE input for CPT code 76775 with a portable ultrasound unit. Since all the RVUs (including the PE RVUs) for G0389 were crosswalked from CPT code76775, the proposed PE RVUs for G0389 in the CY 2014 proposed rule were reduced significantly as a result of this change to the direct PE inputs for 76775. However, CMS did not discuss the applicability of this change to G0389 in the proposed rule's preamble and did not receive any comments on G0389 in response to the proposed rule. CMS finalized the change to CPT code 76775 in the CY 2014 final rule with comment period and the corresponding PE RVUs for G0389 were also reduced. Subsequent to the publication of the CY 2014 final rule, a stakeholder suggested that the reduction in the RVUs for G0389 did not accurately reflect the resources involved in furnishing the service and asked that CMS consider using an alternative crosswalk. Specifically, the stakeholder stated that the type of equipment typically used in furnishing G0389 is different than that used for CPT code 76775, the time involved in furnishing G0389 is greater than that of CPT code 76775, and the specialty that typically furnishes G0389 is different than the one that typically furnishes CPT code 76775. The stakeholder suggested an alternative crosswalk of CPT code 76705. after considering the issue, CMS are proposing G0389 as a potentially misvalued code and seeking recommendations regarding the appropriate inputs that should be used to develop RVUs for this code. CMS has not reviewed the inputs used to develop RVUs for this code since it was established in CY 2007 and the RVUs were directly crosswalked from 76705. Based on the issues raised by stakeholders, CMS believes that it should value this code through the standard methodologies, including the full PE RVU methodology. In order to do so, CMS are proposing to include this code on our list of proposed potentially misvalued codes and seek input from the public and other stakeholders, including the RUC, regarding the appropriate work RVU, time, and direct PE inputs that reflect the typical resources involved in furnishing the service. In September 2014 the RUC refered G0389 to CPT to transition this code to a Category I code for the 2016 cycle. In October 2015, the RUC raised concerns that the practice expense recommendation was prepared by specialty societies that are not the dominant provider of this service according to Medicare claims data. The presenters explained that this is likely due to increased use of G code G0389 for a handheld device, which is not the intended use of the CPT code that is currently used as a crosswalk for the G code. The presenters explained and the RUC agreed that this is likely an issue of miscoding. The RUC recommends that the specialty develop a CPT Assistant article to clarify appropriate use of the new CPT code 767X1 that will replace the G code G0389.

78071	Parathyroid planar imaging (including subtraction, when performed); with tomographic (SPECT)	Apr 2012	Parathyroid Imaging	23	CPT 2013	September 2018	In April 2011, CPT Code 78007, Thyroid imaging, with uptake; multiple determinations was identified in the Harvard Valued-Utilization over 30,000 screen. As part of the review of the entire endocrine family, the specialty societies determined that revisions to the parathyroid imaging procedures were necessary to reflect current bundling policies, guideline changes and new technology. AMA Staff reviewed the work neutrality impacts for codes reviewed in the CPT 2013 cycle. It appeared that was only one issue where there was a large growth in utilization in the first year. For CPT 2013 the Parathyroid Imaging codes were not work neutral, and it was initially estimated as a savings overall. It appears that there was 40% increase from what was projected. The specialty societies submitted an action plan indicating that literature supporting	☐

							parathyroid scintigraphy as an effective diagnostic study for parathyroid disease has recently emerged and supports the clinical utility thus increasing utilization. Secondly, the availability of SPECT/CT cameras has increased and is greater than initially predicted, allowing for a higher utilization. The Workgroup agreed and also noted that these services are conducted on patients who are referred to the radiologists or nuclear medicine physicians. The physicians providing these services do not control the number of patients referred to them who receive these services. The Workgroup recommends that the specialty societies develop a CPT Assistant article to address potential current use of 78803 rather than the new codes 78071 and 78072. The Workgroup noted that these services are on the new technology list for review later this year and should be
