Subject: RUC Recommendations

Dear Ms. Blackford:

The American Medical Association (AMA)/Specialty Society RVS Update Committee (RUC) submits the enclosed recommendations for work relative values and direct practice expense inputs to the Centers for Medicare and Medicaid Services (CMS). These recommendations relate to new and revised codes for *CPT 2018*, as well as to existing services identified by the RUC's Relativity Assessment Workgroup and CMS.

Enclosed are the RUC recommendations for all the CPT codes reviewed at the January 11-14, 2017 RUC meeting.

*CPT 2018 New and Revised Codes – January 2017 RUC Submission*

The enclosed binder contains RUC recommendations, including those for new and revised CPT codes. The RUC considered 108 new/revised/related family CPT codes at the January 2017 meeting. The RUC submits work value and/or practice expense inputs for 108 new/revised/related family CPT codes from the January meeting.

*CPT 2018 New and Revised Codes – Entire CPT 2018 Cycle*

The total number of coding changes for the entire *CPT 2018 cycle* is 349, including 151 additions, 63 revisions, and 97 deletions. In addition, 38 new codes were identified as part of the family for review in relationship to the new/revised codes. The 260 new/revised/related family CPT codes are summarized as follows:

- 93 services are not payable on the RBRVS or do not require physician work at this time (eg, laboratory services and vaccines), and accordingly, the RUC does not submit any information on these codes.
- The HCPAC submits recommendations for 4 new/revised CPT codes.

The RUC submits work value and/or practice expense inputs for 155 new/revised/related family CPT codes for the 2018 Medicare Physician Payment Schedule.

#### Existing Services Identified by RUC and CMS for Review

In addition to the new/revised CPT code submission, the RUC submits recommendations for 21 services identified by the RUC or CMS as potentially misvalued and reviewed at the January 2017 RUC meeting. The RUC recommends work relative values for 19 codes and direct practice expense inputs only for 2 codes. These recommendations are in addition to the 99 recommendations for existing services submitted to CMS following the RUC's April and October 2016 meetings.

#### RUC Progress in Identifying and Reviewing Potentially Misvalued Codes

Since 2006, the RUC has identified 2,246 potentially misvalued services through objective screening criteria and has completed review of 2,098 of these services. The RUC has recommended that over half of the services identified be decreased or deleted (Figure 1). The RUC has worked vigorously over the past several years to identify and address misvaluations in the RBRVS through provision of revised physician time data and resource recommendations to CMS. The RUC looks forward to working with CMS on a concerted effort to address potentially misvalued services. *A detailed report of the RUC's progress is appended to this letter.*

*Figure 1: AMA/Specialty Society RVS Update Committee (RUC) Potentially Misvalued Services Project*

#### CMS 000-Day Global Services Reported with an E/M with Modifier 25

In the NPRM for 2017 CMS identified 83 services with a 000-day global period billed with an E/M 50 percent of the time or more, on the same day of service, same patient, by the same physician, that have not been reviewed in the last five years with Medicare utilization greater than 20,000.

The RUC commented that it appreciated CMS' identification of an objective screen and reasonable query. However, based on further analysis of the codes identified, it appears only 19 services met the criteria for

this screen and have not been reviewed to specifically address an E/M performed on the same date. There were 38 codes that did not meet the screen criteria; they were either reviewed in the last 5 years and/or are not typically reported with an E/M. For 26 codes, the summary of recommendation (SOR), RUC rationale or practice expense inputs submitted specifically states that an E/M is typically reported with these services and the RUC accounted for this in its valuation.

The RUC requested that CMS remove 64 services that did not meet the screen criteria or which have already been valued as typically being reported with an E/M service. The RUC requested that CMS condense and finalize the list of services for this screen to the 19 remaining services.

In the Final Rule for 2017, CMS did finalize the list of 000-day global services reported with an E/M to the 19 services that truly met the criteria.

In January 2017, AAOS, ASSH and APMA noticed that the RUC database did not have the vignette shown for CPT code 20612, but instead the intra-service work was inserted in the vignette cell. Upon review of the summary of recommendation for 20612, and in addition code 20526 which was also on the CMS list, both presented at the April 2002 meeting, the specialty societies discovered that in fact an E/M as typical was considered in the survey process; the survey vignettes had a "note" directing the survey respondents to NOT include E/M work when completing the survey. **The specialty societies recommend and the RUC agreed that CPT codes 20612 and 20526 should be removed from this screen since the valuation for these services already excludes any E/M with this service. The RUC recommends that CMS remove codes 20612 and 20526 from this screen and the RUC database be revised to include the correct vignettes for codes 20612 and 20526.** *The original summary of recommendation forms are attached to this letter.*

**The RUC will review the remaining 17 services for the 2019 Medicare Physician Payment Schedule.**

#### Practice Expense Subcommittee

The attached materials include direct practice expense input (clinical staff time, supplies and equipment) recommendations for each code reviewed. In addition to recommendations related to the specific CPT codes under review, the RUC is submitting products of the Scope Equipment and Supplies Workgroup, including analysis of all scope equipment and supplies included in the 2016 direct practice expense inputs. A Workgroup of the Practice Expense (PE) Subcommittee was formed to review the proposed pricing structure that separated out the components for scopes, scope video systems, and scope accessories as outlined by CMS in the Proposed Rule for CY2017. CMS finalized the proposal, without offering to delay pending input from the Workgroup, so the Workgroup is simply sharing the analysis at this time. The RUC is also submitting a recommendation regarding extended monitoring equipment and oxygen as a supply item. A workgroup of the Practice Expense (PE) Subcommittee was formed to review the standard equipment related to non-moderate sedation post-procedure monitoring. The Workgroup also discussed the issue of the proper allocation of oxygen for services done with moderate sedation. There are a very limited number of services with oxygen as a supply item; however the stand alone moderate sedation codes do not include oxygen in the supplies. The Workgroup identified 26 services that include oxygen. The recommended equipment items as well as a table listing the 26 codes that include oxygen and the rationale for maintenance or deletion is included in this submission.

#### Separate Payment for High Cost Medical Supplies

The RUC has repeatedly called on CMS to separately identify and pay for high cost disposable supplies using distinct J codes, rather than bundle into the service described by CPT so that these expenses may be monitored closely and paid appropriately. There are approximately 33 supply items that CMS has priced in excess of \$1,000, for example. **The RUC urges CMS to establish J codes for high cost supplies. The pricing of these supplies should be based on a transparent process, where items are annually reviewed and updated.**

*Enclosed Recommendations and Supporting Materials:*

Included in these binders and on the enclosed CD are:

- RUC Recommendation Status Report for New and Revised Codes
- RUC Recommendation Status Report for 2,246 services identified to date by the Relativity Assessment Workgroup and CMS as potentially misvalued. In addition, a spreadsheet containing the codes specific to this submission is included.
- RUC Referrals to the CPT Editorial Panel – both for CPT nomenclature revisions and *CPT Assistant* articles.
- Physician Time File: A list of the physician time data for each of the CPT codes reviewed at the January 2017 RUC meeting.
- Pre-Service and Post-Service Time Packages Definitions: The RUC developed physician pre-service and post-service time packages which have been incorporated into these recommendations. The intent of these packages is to streamline the RUC review process as well as create standard pre-service and post-service time data for all codes reviewed by the RUC.
- PLI Crosswalk Table: The RUC has committed to selecting appropriate professional liability insurance crosswalks for new and revised codes and existing codes under review. We have provided a PLI Crosswalk Table listing the reviewed code and its crosswalk code for easy reference. We hope that the provision of this table will assist CMS in reviewing and implementing the RUC recommendations.
- BETOS Assignment Table: The RUC, for each meeting, provides CMS with suggested BETOS classification assignments for new/revised codes. Furthermore, if an existing service is reviewed and the specialty believes the current assignment is incorrect, this table will reflect the desired change.
- Source Code Utilization Crosswalk Table: A table estimating the flow of claims data from existing codes to the new/revised codes. This information is used to project the work relative value savings to be included in the 2018 conversion factor increase.

- New Technology List and Flow Chart: In April 2006, the RUC adopted a process to identify and review codes that represent new technology or services that have the potential to change in value. To date, the RUC has identified 541 of these procedures through the review of new CPT codes. A table of these codes identified as new technology services and the date of review is enclosed, as well as a flow chart providing a detailed description of the process to be utilized to review these services.

We appreciate your consideration of these RUC recommendations. If you have any questions regarding the attached materials, please contact Sherry Smith at (312) 464-5604.

Sincerely,

Peter K. Smith, MD

Dear Ms. Blackford:

The RUC Health Care Professionals Advisory Committee (HCPAC) Review Board submits the enclosed recommendation to the Centers for Medicare and Medicaid Services (CMS). At the January 2017 meeting, the HCPAC reviewed five issues

- Cognitive Function Intervention (97X11)
- Psychological and Neuropsychological Testing (96105, 96125, 963X0, 963X3, 963X5)
- Physical Medicine and Rehabilitation Services (97010, 97012, 97014, 97016, 97018, 97022, 97032-35, 97110, 97112, 97113, 97116, 97140, 97530, 97533, 97535, 97537, 97542, G0283)
- Orthotic Management and Prosthetic Training (97760-61, 977X1),
- Application of Surface Neurostimulator (64550).

The RUC and HCPAC are fully committed to this ongoing effort to improve relativity in the work, practice expense, and professional liability insurance values. The HCPAC appreciates the opportunity to provide recommendations related to the 2018 Medicare Physician Payment Schedule. If you have any questions regarding this submission, please contact Samantha Ashley (ph: 312-464-4720; email: [samantha.ashley@ama-assn.org](mailto:samantha.ashley@ama-assn.org)) at the AMA for clarification regarding these recommendations.

Sincerely,

Michael D. Bishop, MD

## The RUC Relativity Assessment Workgroup Progress Report

In 2006, the AMA/Specialty Society RVS Update Committee (RUC) established the Five-Year Identification Workgroup (now referred to as the Relativity Assessment Workgroup) to identify potentially misvalued services using objective mechanisms for reevaluation prior to the next Five-Year Review. Since the inception of the Relativity Assessment Workgroup, the Workgroup and the Centers for Medicare and Medicaid Services (CMS) have identified 2,246 services through 17 different screening criteria for further review by the RUC. Additionally, the RUC charged the Workgroup with maintaining the “new technology” list of services that will be re-reviewed by the RUC as reporting and cost data become available.

To provide Medicare with reliable data on how physician work has changed over time, the RUC, with more than 300 experts in medicine and research, are examining over 2,200 potentially misvalued services accounting for \$43 billion in Medicare spending. The update committee has recommended reductions and deletions to 1,298 services, redistributing nearly \$4.5 billion. Here are the outcomes for the committee’s review of 2,246 codes:

### Potentially Misvalued Services Project

Source: American Medical Association

### New Technology

As the RUC identifies new technology services that should be re-reviewed, a list of these services is maintained and forwarded to CMS. Currently, codes are identified as new technology based on recommendations from the appropriate specialty society and consensus among RUC members at the time of the RUC review for these services. RUC members consider several factors to evaluate potential new technology services, including: recent FDA-approval, newness or novelty of the service, use of an existing service in a new or novel way, and migration of the service from a Category III to Category I CPT® code. The Relativity Assessment Workgroup maintains and develops all standards and procedures associated with the list, which currently contains 541 services. In September 2010, the re-review cycle began and since then the RUC has recommended 35 services to be re-examined. The remaining services

are rarely performed (i.e., less than 500 times per year in the Medicare population) and will not be further examined. The Workgroup will continue to review the remaining 228 services every September after three years of Medicare claims data is available for each service.

### **Methodology Improvements**

The RUC implemented process improvements to methodology following its October 2013 meeting. The process improvements are designed to strengthen the RUC's primary mission of providing the final RVS update recommendations to the Centers for Medicare and Medicaid Services.

In the area of methodology, the RUC is continuously improving its processes to ensure that it is best utilizing reliable, extant data. At its most recent meeting, the RUC increased the minimum number of respondents required for each survey of commonly performed codes:

- For services performed 1 million or more times per year in the Medicare population, at least 75 physicians must complete the survey.
- For services performed from 100,000 to 999,999 times annually, at least 50 physicians will be required.

Further strengthening its methodology, the RUC also announced that specialty societies will move to a centralized online survey process, which will be coordinated by the AMA and will utilize external expertise to ensure survey and reporting improvements.

### **Site of Service Anomalies**

The Workgroup initiated its effort by reviewing services with anomalous sites of service when compared to Medicare utilization data. Specifically, these services are performed less than 50% of the time in the inpatient setting, yet include inpatient hospital Evaluation and Management services within their global period.

The RUC identified 194 services through the site of service anomaly screen. The RUC required the specialties to resurvey 129 services to capture the appropriate physician work involved. These services were reviewed by the RUC between April 2008 and February 2011. CMS implemented 124 of these recommendations in the 2009, 2010 and 2011 Medicare Physician Payment Schedules. The RUC submitted another five recommendations as well as re-reviewed and submitted 44 recommendations to previously reviewed site of service identified codes to CMS for the 2012 Medicare Physician Payment Schedule.

Of the remaining 65 services that were not re-surveyed, the RUC modified the discharge day management for 46 services, maintained three codes and removed two codes from the screen as the typical patient was not a Medicare beneficiary and would be an inpatient. The CPT® Editorial Panel deleted 14 codes. The RUC completed review of services under this initial screen.

During this review, the RUC uncovered several services that are reported in the outpatient setting, yet, according to several expert panels and survey data from physicians who perform the procedure, the service, typically requires a hospital stay of greater than 23 hours. The RUC maintains that physician work that is typically performed, such as visits on the date of service and discharge work the following day, should be included within the overall valuation. Subsequent observation day visits and discharge day management service are appropriate proxies for this work.

The RUC will reassess the data each year going forward to determine if any new site of service anomalies arise. In 2015, the RUC identified three services in which the Medicare data from 2011-2013 indicated it was performed less than 50% of the time in the inpatient setting, yet included inpatient hospital Evaluation and Management services within the global period. These services were referred to CPT and will be reviewed by the RUC for the 2018 Medicare Physician Payment Schedule.

In 2016, the RUC identified one site of service anomaly CPT code which will be reviewed by the RUC for the 2019 Medicare Physician Payment Schedule.

### **High Volume Growth**

The Workgroup assembled a list of all services with a total Medicare utilization of 1,000 or more that have increased by at least 100% from 2004 through 2006. The query initially resulted in the identification of 81 services, but was expanded by 16 services to include the family of services, totaling 97 services. Specialty societies submitted comments to the Workgroup in April 2008 to provide rationales for the growth in reporting. Following this review, the RUC required the specialties to survey 35 services to capture the appropriate work effort and/or direct practice expense inputs. These services were reviewed by the RUC between February 2009 and April 2010.

The RUC recommended removing 15 services from the screen as the volume growth did not impact the resources required to provide these services. The CPT® Editorial Panel deleted 34 codes. The RUC submitted 44 recommendations to CMS for services for the 2012-2017 Medicare Physician Payment Schedules. In September 2011, the RUC began review of services after two years of utilization data were collected. The RUC will continue to review the remaining four services after additional utilization data is available.

In April 2013, the RUC assembled a list of all services with a total Medicare utilization of 10,000 or more that have increased by at least 100% from 2006 through 2011. The query resulted in the identification of 40 services and expanded to 57 services to include the appropriate family of services. The RUC recommended removing three services from the screen as the volume growth did not impact the resources required to provide these services. The RUC recommended review of five services after an additional two years of utilization data is collected. The CPT® Editorial Panel deleted eight codes and the RUC submitted recommendations for 41 services for the 2015-2018 Medicare Physician Payment Schedule.

In October 2015, the RUC ran this screen again for services based on Medicare utilization of 10,000 or more that have increased by at least 100% from 2008 through 2013. The query resulted in the identification of 19 services and expanded to 26 services to include the appropriate family of services. The RUC recommended removing one service from the screen as the volume growth did not impact the resources required to provide these services. The RUC referred two services to the CPT Editorial Panel for revisions and recommended the review of seven services after an additional two years of utilization data is collected. The CPT Editorial Panel deleted three codes and the RUC submitted recommendations for six services for the 2017 and 2018 Medicare Physician Payment Schedules. The RUC will review the remaining seven services for the 2019 Medicare Physician Payment Schedule.

In October 2016, the RUC ran this screen again and the query resulted in the identification of 12 services, which the RUC will assess and provide recommendations for in the 2019 Medicare Physician Payment Schedule.

### **CMS Fastest Growing**

In 2008, CMS developed the Fastest Growing Screen to identify all services with growth of at least 10% per year over the course of three years from 2005-2007. Through this screen, CMS identified 114 fastest growing services and the RUC added 69 services to include the family of services, totaling 183. The RUC required the specialties to survey 72 services to capture the appropriate work effort and/or direct practice expense inputs. These services were reviewed by the RUC from February 2008 through April 2010 and submitted to CMS for the Medicare Physician Payment Schedule.

The RUC recommended removing 39 services from the screen as the volume growth did not impact the resources required to provide the service. The CPT<sup>®</sup> Editorial Panel deleted 34 codes. The RUC submitted 33 recommendations to CMS for the 2012-2016 Medicare Physician Payment Schedules. The RUC will review the remaining five services after additional utilization data is available.

### **High IWPOT**

The Workgroup assembled a list of all services with a total Medicare utilization of 1,000 or more that have an intra-service work per unit of time (IWPOT) calculation greater than 0.14, indicating an outlier intensity. The query resulted in identification of 32 services. Specialty societies submitted comments to the Workgroup in April 2008 for these services. As a result of this screen, the RUC has reviewed and submitted recommendations to CMS for 28 codes, removing four services from the screen as the IWPOT was considered appropriate. The RUC completed review of services under this screen.

### **Services Surveyed by One Specialty – Now Performed by a Different Specialty**

In October 2009, services that were originally surveyed by one specialty, but now performed predominantly by other specialties were identified and reviewed. The RUC identified 21 services by this screen, adding 19 services to address various families of codes. The majority of these services required clarification within CPT<sup>®</sup>. The CPT<sup>®</sup> Editorial Panel deleted 18 codes. The RUC submitted 22 recommendations for physician work and practice expense to CMS for the 2011-2014 Medicare Physician Payment Schedules. The RUC completed review of services under this screen.

In April 2013, the RUC queried the top two dominant specialties performing services based on Medicare utilization more than 1,000 and compared it to who originally surveyed the service. Two services were identified and the RUC recommended that one be removed from the screen since the specialty societies currently performing this service indicated that the service is appropriate and recommended that the other code be referred to CPT<sup>®</sup> to be revised. The RUC completed review of services under this screen.

### **Harvard Valued**

#### *Utilization over 1 Million*

CMS requested that the RUC pay specific attention to Harvard valued codes that have a high utilization. The RUC identified nine Harvard valued services with high utilization (performed over 1 million times per year). The RUC also incorporated an additional 12 Harvard valued codes within the initial family of services identified. The CPT<sup>®</sup> Editorial Panel deleted one code. The RUC submitted 20 relative value work recommendations to CMS for the 2011 and 2012 Medicare Physician Payment Schedules. The RUC completed review of services under this screen.

#### *Utilization over 100,000*

The RUC continued to review Harvard valued codes with significant utilization. The Relativity Assessment Workgroup expanded the review of Harvard codes to those with utilization over 100,000 which totaled 38 services. The RUC expanded this screen by 101 codes to include the family of services, totaling 139 services. The CPT<sup>®</sup> Editorial Panel deleted 27 codes. The RUC submitted 112 recommendations to CMS for the 2011-2014 Medicare Physician Payment Schedules. The RUC completed review of services under this screen.

#### *Utilization over 30,000*

In April 2011, the RUC continued to identify Harvard valued codes with utilization over 30,000, based on 2009 Medicare claims data. The RUC determined that the specialty societies should survey the remaining 36 Harvard codes with utilization over 30,000 for September 2011. The RUC expanded the screen to include the family of services, totaling 65 services. The CPT<sup>®</sup> Editorial Panel deleted 12 codes. The RUC submitted recommendations for 53 services for the 2013-2014 Medicare Physician Payment Schedules. The RUC completed review of services under this screen.

### *Medicare Allowed Charges >\$10 million*

In June 2012, CMS identified 16 services that were Harvard valued with annual allowed charges (2011 data) > \$10 million. The RUC expanded this screen to 33 services to include the proper family of services. The RUC removed two services from review as the allowed charges are approximately \$1 million and did not meet the screen criteria. The CPT® Editorial Panel deleted one service. The RUC submitted recommendations for 30 services for the 2013-2017 Medicare Physician Payment Schedules. The RUC completed review of services under this screen.

### **CMS/Other**

#### *Utilization over 500,000*

In April 2011, the RUC identified 410 codes with a source of “CMS/Other.” CMS/Other codes are services which were not reviewed by the Harvard studies or the RUC and were either gap filled, most often via crosswalk by CMS or were part of a radiology fee schedule. “CMS/Other” source codes would not have been flagged in the Harvard only screens, therefore the RUC recommended that a list of all CMS/Other codes be developed and reviewed. The RUC established the threshold for CMS/Other source codes with Medicare utilization of 500,000 or more, which resulted in 19 codes. The RUC expanded this screen to 21 services to include the proper family of services. The CPT® Editorial Panel deleted three services. The RUC submitted recommendations for 16 services for the 2013-2015 Medicare Physician Payment Schedules. The RUC removed one service from the screen and will review one service after additional utilization data is available.

#### *Utilization over 250,000*

In April 2013, the RUC lowered the threshold to the CMS/Other source codes with Medicare utilization of 250,000 or more, which resulted in 26 services and was expanded to 52 services to include the family of services. The CPT Editorial Panel deleted 11 codes identified under this screen. The RUC referred one service to the CPT® Editorial Panel, removed nine services and submitted 31 recommendations to CMS for the 2015-2018 Medicare Physician Payment Schedules. The RUC will review one service for the 2019 Medicare Physician Payment Schedule.

#### *Utilization over 100,000*

In October 2016, the RUC lowered the threshold to the CMS/Other source codes with Medicare utilization of 100,000 or more, which resulted in 27 services and was expanded to 39 services to include the family of services. The RUC will review these services for the 2019 Medicare Physician Payment Schedule.

### **Bundled CPT® Services**

#### *Reported 95% or More Together*

The Relativity Assessment Workgroup solicited data from CMS regarding services inherently performed by the same physician on the same date of service (95% of the time) in an attempt to identify pairings of services that should be bundled together. The CPT® Editorial Panel deleted 31 individual component codes and replaced them with 53 new codes that describe bundles of services. The RUC then surveyed and reviewed work and practice costs associated with these services to account for any efficiencies achieved through the bundling. The RUC completed review of all services under this screen.

#### *Reported 75% or More Together*

In February 2010, the Workgroup continued review of services provided on the same day by the same provider, this time lowering the threshold to 75% or more together. The Relativity Assessment Workgroup again analyzed the Medicare claims data and found 151 code pairs which met the threshold. The Workgroup then collected these code pairs into similar “groups” to ensure that the entire family of services would be coordinated under one code bundling proposal. The grouping effort resulted in 20 code

groups, totaling 80 codes, and were sent to specialty societies to solicit action plans for consideration at the April 2010 RUC meeting. Resulting from the Relativity Assessment Workgroup review, 81 additional codes were added for review as part of the family of services to ensure duplication of work and practice expense was mitigated throughout the entire set of services. Of the 161 total codes under review, the CPT® Editorial Panel deleted 35 individual component codes and replaced the component coding with 125 new and/or revised codes that described the bundles of services. The CPT® Editorial Panel and the RUC are currently working on four services and expect review two services after additional utilization data is available.

In August 2011, the Joint CPT®/RUC Workgroup on Codes Reported Together Frequently reconvened to perform its third cycle of analysis of code pairs reported together with 75% or greater frequency. The Workgroup reviewed 30 code pair groups and recommended code bundling for 64 individual codes. In October 2012, the CPT® Editorial Panel started the review of code bundling solutions. Of the 149 total codes under review, the CPT® Editorial Panel deleted 49 services and is scheduled to review one code in the 2019 cycle. The RUC has submitted 100 code recommendations for the 2014-2018 Medicare Physician Payment Schedules.

In January and April 2015, the Joint CPT/RUC Workgroup on Codes Reported Together Frequently reconvened to perform its fourth cycle analysis of code pairs reported together with 75% or greater frequency. The Workgroup reviewed 8 code pair groups and recommended code bundling for 18 individual codes. In October 2015, the CPT Editorial Panel started review of the code bundling solutions. Of the 75 total codes under review, the CPT Editorial Panel deleted 26 services. The RUC submitted 49 code recommendations for the 2017-2018 Medicare Physician Payment Schedules.

#### **Low Value/Billed in Multiple Units**

CMS has requested that services with low work RVUs that are commonly billed with multiple units in a single encounter be reviewed. CMS identified services that are reported in multiples of five or more per day, with work RVUs of less than or equal to 0.50 RVUs.

In October 2010, the Workgroup reviewed 12 CMS identified services and determined that six of the codes were improperly identified as the services were either not reported in multiple units or were reported in a few units and that was considered in the original valuation. The RUC submitted recommendations for the remaining six services for the 2012 Medicare Physician Payment Schedule. The RUC completed review of services under this screen.

#### **Low Value/High Volume Codes**

CMS has requested that services with low work RVUs and high utilization be reviewed. CMS has requested that the RUC review 24 services that have low work RVUs (less than or equal to 0.25) and high utilization. The RUC questioned the criteria CMS used to identify these services as it appeared some codes were missing from the screen criteria indicated. The RUC identified codes with a work RVU ranging from 0.01 - 0.50 and Medicare utilization greater than one million. In February 2011, the RUC reviewed the codes identified by this criteria and added 5 codes, totaling 29. The RUC submitted 24 recommendations to CMS for the 2012 Medicare Physician Payment Schedule and five recommendations to CMS for the 2013 Medicare Physician Payment Schedule. The RUC completed review of services under this screen.

#### **Multi-Specialty Points of Comparison List**

CMS requested that services on the Multi-Specialty Points of Comparison (MPC) list should be reviewed. CMS prioritized the review of the MPC list to 33 codes, ranking the codes by allowed service units and charges based on CY 2009 claims data as well as those services reviewed by the RUC more than six years ago. The RUC expanded the list to 182 services to include additional codes as part of a family (over 100

of these codes are part of the review of GI endoscopy codes). The CPT® Editorial Panel deleted 25 codes. The RUC submitted recommendations for 157 codes for the 2012-2015 Medicare Physician Payment Schedules. The RUC completed review of services under this screen.

### **CMS High Expenditure Procedural Codes**

In the Proposed Rule for 2012, CMS requested that the RUC review a list of 70 high Medicare Physician Payment Schedule expenditure procedural codes representing services furnished by an array of specialties. CMS selected these codes since they have not been reviewed for at least 6 years, and in many cases the last review occurred more than 10 years ago.

The RUC reviewed the 70 services identified and expanded the list to 145 services to include additional codes as part of the family. The CPT® Editorial Panel deleted 20 codes. The RUC submitted 123 recommendations to CMS for the 2013-2018 Medicare Physician Payment Schedules will review utilization data for two services after additional data is available.

In the Final Rule for 2016, CMS requested that the RUC review a list of 103 high Medicare Physician Payment Schedule high expenditure services across specialties with Medicare allowed charges of \$10 million or more. CMS identified the top 20 codes by specialty in terms of allowed charges, excluding 010 and 090-day global services, anesthesia and Evaluation and Management services and services reviewed since CY 2010.

The RUC expanded the list of services to 208 services to include additional codes as part of the family. The CPT Editorial Panel deleted 15 codes and will review 45 codes for the 2019 cycle. The RUC submitted 148 recommendations to CMS for the 2017-2018 Medicare Physician Payment Schedules and will review the remaining services for the 2019 cycle.

### **Services with Stand-Alone PE Procedure Time**

In June 2012, CMS proposed adjustments to services with stand-alone procedure time assumptions used in developing non-facility PE RVUs. These assumptions are not based on physician time assumptions. CMS prioritized CPT® codes that have annual Medicare allowed charges of \$100,000 or more, include direct equipment inputs that amount to \$100 or more, and have PE procedure times greater than five minutes for review. The RUC reviewed 27 services identified through this screen and expanded to 29 services to include additional codes as part of the family. The CPT® Editorial Panel deleted 11 codes. The RUC submitted 18 recommendations for the 2014-2015 Medicare Physician Payment Schedules. The RUC completed review of services under this screen.

### **Pre-Time Analysis**

In January 2014, the RUC reviewed codes that were RUC reviewed prior to April 2008, with pre-time greater than pre-time package 4 *Facility - Difficult Patient/Difficult Procedure* (63 minutes) for services with 2012 Medicare Utilization over 10,000. The screen identified 19 services with more pre-service time than the longest standardized pre-service package and was expanded to 24 to include additional codes as part of the family. The RUC reviewed these services and referred three services to the CPT® Editorial Panel for revision. The CPT Editorial Panel deleted one service and will review three services for CPT 2018. The RUC reviewed 18 services and noted that they were all originally valued by magnitude estimation and therefore readjustments in pre-service time categories did not alter the work values. Additionally, crosswalk references for each service were presented validating the pre-time adjustments. The RUC noted that this screen was useful, however did not reveal any large outliers and therefore the utilization threshold does not need to be lowered to identify more services. The RUC submitted 20 recommendations for the 2016 Medicare Physician Payment Schedule.

## **Post-Operative Visits**

### *010-Day Global Codes*

In January 2014, the RUC reviewed all 477, 010-day global codes to determine any outliers. Many 010-day global period services only include one post-operative office visit. The Relativity Assessment Workgroup pared down the list to 19 services with >1.5 office visits and 2012 Medicare utilization > 1,000. The RUC reviewed the 19 services, which was expanded to 21 services for additional codes in the family of services, identified via this screen. The RUC referred two codes to the CPT Editorial Panel for revision. The RUC submitted recommendations for 21 services for the 2015-2017 Medicare Physician Payment Schedule. The RUC has completed review of the services under this screen.

### *090-Day Global Codes*

In January 2014, the RUC reviewed all 3,788, 090-day global codes to determine any outliers. Based on 2012 Medicare utilization data, 10 services were identified, that were reported at least 1,000 times per year and included more than six office visits. The RUC expanded the services identified in this screen to 38 to include additional codes as part of the family. The CPT® Editorial Panel deleted 8 services. The RUC submitted recommendations for 30 services for the 2015-2017 Medicare Physician Payment Schedule. The RUC has completed review of the services under this screen.

## **High Level E/M in Global Period**

In October 2015, the RUC reviewed all services with Medicare utilization greater than 10,000 that have a level 4 (99214) or level 5 (99215) office visit included in the global period. There were no codes with volume greater than 10,000 that had a level 5 office visits included. Seven services were identified that have a level 4 office visit included. The RUC expanded the list of services to 11 services to include additional codes as part of the family. The RUC confirmed that the level 4 post-operative visits were appropriate and well-defined for four services. The CPT Editorial Panel deleted one code. The RUC submitted recommendations for 10 services for the 2017-2018 Medicare Physician Payment Schedules. The RUC noted that this screen will be complete after these services are reviewed because the RUC has more rigorously questioned level 4 office visits in the global period in recent years and will continue this process going forward. The RUC has completed review of the services under this screen.

## **000-Day Global Services Reported with an E/M with Modifier 25**

In the NPRM for 2017 CMS identified 83 services with a 000-day global period billed with an E/M 50 percent of the time or more, on the same day of service, same patient, by the same physician, that have not been reviewed in the last five years with Medicare utilization greater than 20,000.

The RUC commented that it appreciated CMS' identification of an objective screen and reasonable query. However, based on further analysis of the codes identified, it appears only 19 services met the criteria for this screen and have not been reviewed to specifically address an E/M performed on the same date. There were 38 codes that did not meet the screen criteria; they were either reviewed in the last 5 years and/or are not typically reported with an E/M. For 26 codes, the summary of recommendation (SOR), RUC rationale or practice expense inputs submitted specifically states that an E/M is typically reported with these services and the RUC accounted for this in its valuation.

The RUC requested that CMS remove 64 services that did not meet the screen criteria or which have already been valued as typically being reported with an E/M service. The RUC requested that CMS condense and finalize the list of services for this screen to the 19 remaining services.

In the Final Rule for 2017, CMS did finalize the list of 000-day global services reported with an E/M to the 19 services that truly met the criteria. The RUC recommended that two additional codes be removed from this screen as the specialty societies discovered that in fact an E/M as typical was considered in the survey process. The RUC will review the remaining 17 services for the 2019 Medicare Physician Payment Schedule.

### **Public Comment Requests**

In 2011, CMS announced that due to the ongoing identification of potentially misvalued services by CMS and the RUC, the Agency will no longer conduct a separate Five-Year Review. CMS will now call for public comments on an annual basis as part of the comment process on the Final Rule each year.

#### *Final Rule for 2013*

In the Final Rule for the 2013 Medicare Physician Payment Schedule, the public and CMS identified 35 potentially misvalued services, which was expanded to 38 services to include the entire code family. The RUC reviewed these services and recommended that eight services be removed from review as two G-codes lacked specialty society interest and six services are not potentially misvalued since there is no reliable way to determine an incremental difference from open thoracotomy to thorascopic procedures. The RUC submitted recommendations for 28 services for the 2014-2017 Medicare Physician Payment Schedules. The RUC will review two services after additional utilization data is available.

#### *Final Rule for 2014*

CMS did not receive any publicly nominated potentially misvalued codes for inclusion in the Proposed Rule for 2014. To broaden participation in the process of identifying potentially misvalued codes, CMS sought the input of Medicare contractor medical directors (CMDs). The CMDs have identified over a dozen services which CMS is proposing as potentially misvalued. The RUC reviewed these services and appropriate families, totaling 91 services. The CPT® Editorial Panel deleted 10 services. The RUC submitted recommendations to CMS for 80 services for the 2015-2018 Medicare Physician Payment Schedules and will review one service after additional data is available.

#### *Final Rule for 2015*

In the Final Rule for 2015 the public and CMS nominated 26 services as potentially misvalued, which the RUC expanded to 46 services to include additional codes as part of this family. The CPT Editorial Panel deleted 14 services. The RUC submitted 30 recommendations for the 2016-2018 Medicare Physician Payment Schedules and will submit one recommendation for the 2019 Medicare Physician Payment Schedule.

#### *Final Rule for 2016*

In the Final Rule for 2016 the public and CMS nominated 25 services as potentially misvalued, which the RUC expanded to 40 services to include an additional code as part of the family. The CPT Editorial Panel deleted 3 services. The RUC submitted 30 recommendations for the 2017-2018 Medicare Physician Payment Schedules and will review the remaining seven services for the 2019 Medicare Physician Payment Schedule.

### **Other Issues**

In addition to the above screening criteria, the Relativity Assessment Workgroup performed an exhaustive search of the RUC database for services indicated by the RUC to be re-reviewed at a later date. Three codes were found that had not yet been re-reviewed. The RUC recommended a work RVU decrease for two codes and to maintain the work RVU for another code.

CMS also identified 72 services that required further practice expense review. The RUC submitted practice expense recommendations on 67 services and the CPT<sup>®</sup> Editorial Panel deleted 5 services. The RUC also reviewed special requests for 19 audiology and speech-language pathology services. The RUC submitted recommendations for 10 services for the 2010 Medicare Physician Payment Schedule and the remaining nine services for the 2011 Medicare Physician Payment Schedule.

## Status Report: CMS Requests and Relativity Assessment Issues

97166	Occupational therapy evaluation, moderate complexity, requiring these components: An occupational profile and medical and therapy history, which includes an expanded review of medical and/or therapy records and additional review of physical, cognitive, or psychosocial history related to current functional performance; An assessment(s) that identifies 3-5 performance deficits (ie, relating to physical, cognitive, or psychosocial skills) that result in activity limitations and/or participation restrictions; and Clinical decision making of moderate analytic complexity, which includes an analysis of the occupational profile, analysis of data from detailed assessment(s), and consideration of several treatment options. Patient may present with comorbidities that affect occupational performance. Minimal to moderate modification of tasks or assistance (eg, physical or verbal) with assessment(s) is necessary to enable patient to complete evaluation component. Typically, 45 minutes are spent face-to-face with the patient and/or family. ## ***RUC Referrals to CPT Editorial Panel - Incomplete Issues***

10021	<b>Fine needle aspiration; without imaging guidance</b>	<a href="#"><u>Screen</u></a> CMS Request - Final Rule for 2016	<a href="#"><u>RUC Meeting</u></a> April 2016	<a href="#"><u>Specialty Society:</u></a> AAACE, ASBS, ASC, CAP, ES, AAOHNS, ACS	<a href="#"><u>CPT Meeting</u></a> June 2017
-------	---	--	--	--	---

**Background:** The specialty societies gave two reasons why these codes need to be referred to the CPT Editorial Panel prior to receiving a RUC survey. First, both codes need clarifying language stating that they should be reported per lesion rather than for every pass on the same lesion. Second, CPT code 10022 is reported with 76942 Ultrasonic guidance for needle placement (eg, biopsy, aspiration, injection, localization device), imaging supervision and interpretation more than 75% of the time together and a bundled code solution will be developed. The specialty societies also requested that these two codes be moved to the 2019 CPT cycle, due to the high workload currently involving the societies.

10022	<b>Fine needle aspiration; with imaging guidance</b>	<a href="#"><u>Screen</u></a> CMS Fastest Growing / CMS High Expenditure Procedural Codes2 / CMS Request - Final Rule for 2016	<a href="#"><u>RUC Meeting</u></a> April 2016	<a href="#"><u>Specialty Society:</u></a> AAACE, ASBS, ASC, CAP, ES, ACR, SIR	<a href="#"><u>CPT Meeting</u></a> June 2017
-------	--	---	--	---	---

**Background:** The specialty societies gave two reasons why these codes need to be referred to the CPT Editorial Panel prior to receiving a RUC survey. First, both codes need clarifying language stating that they should be reported per lesion rather than for every pass on the same lesion. Second, CPT code 10022 is reported with 76942 Ultrasonic guidance for needle placement (eg, biopsy, aspiration, injection, localization device), imaging supervision and interpretation more than 75% of the time together and a bundled code solution will be developed. The specialty societies also requested that these two codes be moved to the 2019 CPT cycle, due to the high workload currently involving the societies.

11100	<b>Biopsy of skin, subcutaneous tissue and/or mucous membrane (including simple closure), unless otherwise listed; single lesion</b>	<a href="#"><u>Screen</u></a> MPC List / CMS High Expenditure Procedural Codes2	<a href="#"><u>RUC Meeting</u></a> January 2016	<a href="#"><u>Specialty Society:</u></a> AAD	<a href="#"><u>CPT Meeting</u></a> February 2017
-------	--	---	--	--	---

**Background:** Prior to the January 2016 RUC meeting, the specialty society notified the RUC that their survey data displayed a bimodal distribution of responses with more outliers than usual. The specialty explained that the code descriptions do not distinguish between different types of biopsies and thus they would like to bring the biopsy of skin lesion codes back to the CPT Editorial Panel in May 2016 for refinement of the codes. The RUC recommends referring CPT codes 11100 and 11101 to the CPT Editorial Panel. At the May CPT meeting the Editorial Panel requested that the specialty society resubmit a new CCP for September 2016. In September 2016, the Editorial Panel again postponed this issue until February 2017 and requested that the specialty society specifically address the type of biopsy (punch, shave, incisional), introductory language regarding specific conditions (inflammatory and neoplastic) and differentiate between partial and full-thickness biopsies.

11101	<b>Biopsy of skin, subcutaneous tissue and/or mucous membrane (including simple closure), unless otherwise listed; each separate/additional lesion (List separately in addition to code for primary procedure)</b>	<a href="#"><u>Screen</u></a> Low Value Billed in Multiple Units / CMS High Expenditure Procedural Codes2	<a href="#"><u>RUC Meeting</u></a> January 2016	<a href="#"><u>Specialty Society:</u></a> AAD	<a href="#"><u>CPT Meeting</u></a> February 2017
-------	--	---	--	--	---

**Background:** Prior to the January 2016 RUC meeting, the specialty society notified the RUC that their survey data displayed a bimodal distribution of responses with more outliers than usual. The specialty explained that the code descriptions do not distinguish between different types of biopsies and thus they would like to bring the biopsy of skin lesion codes back to the CPT Editorial Panel in May 2016 for refinement of the codes. The RUC recommends referring CPT codes 11100 and 11101 to the CPT Editorial Panel. In September 2016, the Editorial Panel again postponed this issue until February 2017 and requested that the specialty society specifically address the type of biopsy (punch, shave, incisional), introductory language regarding specific conditions (inflammatory and neoplastic) and differentiate between partial and full-thickness biopsies.

## ***RUC Referrals to CPT Editorial Panel - Incomplete Issues***

<b>27370 Injection of contrast for knee arthrography</b>	<u><a href="#">Screen</a></u> High Volume Growth1 / CMS Fastest Growing / High Volume Growth2 / Harvard Valued - Utilization Over 30,000-Part2 / High Volume Growth3 / CMS High Expenditure Procedural Codes2	<u><a href="#">RUC Meeting</a></u> October 2016	<u><a href="#">Specialty Society:</a></u> AAPMR, ACR	<u><a href="#">CPT Meeting</a></u> June 2017
--	--	--	---	---

**Background:** In October 2016, the RUC went through the long history of trying to address this potentially misvalued service. The specialty societies explained that the high volume growth for this procedure is likely due to its being reported incorrectly as arthrocentesis or aspiration. The correct reporting of those services is CPT code 20610 Arthrocentesis, aspiration and/or injection, major joint or bursa (eg, shoulder, hip, knee, subacromial bursa); without ultrasound guidance (work RVU= 0.79). The RUC extensively discussed the appropriate options to address the rising inappropriate utilization of this procedure. The RUC noted that deleting this code and then bundling it into the arthrography base procedures would not be ideal because it would involve edits to over 70 codes. The RUC also discussed that this procedure could become an add-on code. However, the RUC came to agreement that this code should be referred to CPT for deletion and replacement of a new code. The members agreed that this is the most efficient way to stem the rising inappropriate volume. The RUC recommends that CPT code 27370 be referred to the CPT Editorial Panel for deletion and be replaced with a new code.

<b>36568 Insertion of peripherally inserted central venous catheter (PICC), without subcutaneous port or pump; younger than 5 years of age</b>	<u><a href="#">Screen</a></u> Identified in RUC review of other services	<u><a href="#">RUC Meeting</a></u> October 2016	<u><a href="#">Specialty Society:</a></u> ACR, SIR	<u><a href="#">CPT Meeting</a></u> June 2017
--	---	--	---	---

**Background:** In October 2016, The RUC noted that CPT code 36569 is typically reported with codes 76937 Ultrasound guidance for vascular access requiring ultrasound evaluation of potential access sites, documentation of selected vessel patency, concurrent realtime ultrasound visualization of vascular needle entry, with permanent recording and reporting (work RVU= 0.30) and 77001 Fluoroscopic guidance for central venous access device placement, replacement (catheter only or complete), or removal (includes fluoroscopic guidance for vascular access and catheter manipulation, any necessary contrast injections through access site or catheter with related venography radiologic supervision and interpretation, and radiographic documentation of final catheter position) (work RVU= 0.38). These codes are commonly reported together because the current code contains a bimodal clinical scenario. The first scenario is when a clinical staff member performs the procedure without imaging. The second scenario is when a radiologist performs the procedure with imaging guidance. Therefore, CPT code 36569 should be referred to the CPT Editorial Panel to have the two common imaging codes bundled into the code. The current coding language should remain for clinical staff, but a new bundled code should be created. CMS also noted two family codes should be added to the CCA: (36568 Insertion of peripherally inserted central venous catheter (PICC), without subcutaneous port or pump; younger than 5 years of age and 36584 Replacement, complete, of a peripherally inserted central venous catheter (PICC), without subcutaneous port or pump, through same venous access). The RUC recommends CPT codes 36569, 36568 and 36584 be referred to the CPT Editorial Panel.

<b>36569 Insertion of peripherally inserted central venous catheter (PICC), without subcutaneous port or pump; age 5 years or older</b>	<u><a href="#">Screen</a></u> CMS High Expenditure Procedural Codes2	<u><a href="#">RUC Meeting</a></u> October 2016	<u><a href="#">Specialty Society:</a></u> ACR, SIR	<u><a href="#">CPT Meeting</a></u> June 2017
---	---	--	---	---

**Background:** In October 2016, The RUC noted that CPT code 36569 is typically reported with codes 76937 Ultrasound guidance for vascular access requiring ultrasound evaluation of potential access sites, documentation of selected vessel patency, concurrent realtime ultrasound visualization of vascular needle entry, with permanent recording and reporting (work RVU= 0.30) and 77001 Fluoroscopic guidance for central venous access device placement, replacement (catheter only or complete), or removal (includes fluoroscopic guidance for vascular access and catheter manipulation, any necessary contrast injections through access site or catheter with related venography radiologic supervision and interpretation, and radiographic documentation of final catheter position) (work RVU= 0.38). These codes are commonly reported together because the current code contains a bimodal clinical scenario. The first scenario is when a clinical staff member performs the procedure without imaging. The second scenario is when a radiologist performs the procedure with imaging guidance. Therefore, CPT code 36569 should be referred to the CPT Editorial Panel to have the two common imaging codes bundled into the code. The current coding language should remain for clinical staff, but a new bundled code should be created. CMS also noted two family codes should be added to the CCA: (36568 Insertion of peripherally inserted central venous catheter (PICC), without subcutaneous port or pump; younger than 5 years of age and 36584 Replacement, complete, of a peripherally inserted central venous catheter (PICC), without subcutaneous port or pump, through same venous access). The RUC recommends CPT codes 36569, 36568 and 36584 be referred to the CPT Editorial Panel.

The second scenario is when a radiologist performs the procedure with imaging guidance. Therefore, CPT code 36569 should be referred to the CPT Editorial Panel to have the two common imaging codes bundled into the code. The current coding language should remain for clinical staff, but a new bundled code should be created. CMS also noted two family codes should be added to the CCA: (36568 Insertion of peripherally inserted central venous catheter (PICC), without subcutaneous port or pump; younger than 5 years of age and 36584 Replacement, complete, of a peripherally inserted central venous catheter (PICC), without subcutaneous port or pump, through same venous access). The RUC recommends CPT codes 36569, 36568 and 36584 be referred to the CPT Editorial Panel.

<b>50395</b>	<b>Introduction of guide into renal pelvis and/or ureter with dilation to establish nephrostomy tract, percutaneous</b>	<u><a href="#">Screen</a></u> Codes Reported Together 75% or More-Part2	<u><a href="#">RUC Meeting</a></u> January 2015	<u><a href="#">Specialty Society:</a></u> ACR, SIR	<u><a href="#">CPT Meeting</a></u>
--------------	---	--	--	---	------------------------------------

**Background:** In January 2015, the specialties indicated that CPT code 50395 Introduction of guide into renal pelvis and/or ureter with dilation to establish nephrostomy tract, percutaneous, which was identified as part of the family, will be referred to the CPT Editorial Panel to clear up any confusion with overlap in physician work with 50432. The RUC recommends CPT code 50395 be referred to the CPT Editorial Panel.

<b>64550</b>	<b>Application of surface (transcutaneous) neurostimulator</b>	<u><a href="#">Screen</a></u> Final Rule for 2015	<u><a href="#">RUC Meeting</a></u> January 2017	<u><a href="#">Specialty Society:</a></u> AANS, CNS, AOTA	<u><a href="#">CPT Meeting</a></u> June 2017
--------------	--	--	--	--	---

**Background:** In September 2016, the CPT Editorial Panel deleted code 64565 to report percutaneous placement of a neuromuscular neurostimulator electrode, and added parenthetical notes to direct users to report the appropriate codes for TENS, PENS, and PNT services throughout the family of codes. Transcutaneous electrical nerve stimulator (TENS) is an electronic device that applies electrical stimulation to the surface of the skin at the site of pain and has been used to relieve chronic intractable pain, post-surgical pain, and pain associated with active or post-trauma injury unresponsive to other standard pain therapies. TENS consist of an electrical pulse generator, usually battery operated, connected by wire to two or more electrodes, which are applied to the surface of the skin at the site of the pain. Occupational Therapy has been identified as the dominant provider of CPT code 64550, however occupational therapy practitioners indicated it is not the best practice for TENS to be used for occupational therapy interventions and as such do not have evidence base in the profession. Occasionally a trial of TENS is done in the clinic over 1-2 therapy visits and, if the patient has had a favorable response, the patient can usually be taught to use a TENS unit in the home for pain control (TENS units are available in drug stores for purchase). Consequently, it is unnecessary for a patient to continue treatment for pain with a TENS unit in the clinic setting. Use of this code would seldom fall under a therapy plan of treatment. The occupational therapy specialty believes that occupational therapists have reported CPT code 64550 in error. Two other codes exist that relate to electric stimulation and are more frequently reported by occupational therapy and are valued the same as 64550:

1. CPT 97014/G0283, supervised electric stimulation and
2. CPT 97032, attended manual electric stimulation.

CPT 97014/G0283 is appropriate for pad-based e-stimulation, which requires supervision only. CPT code 97014 Application of a modality to one or more areas; electrical stimulation (unattended) is an invalid code for Medicare which requires that G0283 be reported. CPT 97032 can only be used when stimulation is manually applied. The requirement for constant attendance is derived from the manual-application requirement and is based on different stimulation frequencies necessitating one-on-one supervision. Additionally, CPT codes 64550 and 97032 each have an identical work value of 0.18 RVU which indicates that both codes have been identified as requiring the same amount of therapist work.

The AMA RUC Health Care Professionals Advisory Committee (HCPAC) refers CPT code 64550 to the CPT Editorial Panel and recommends that the code be deleted. Additionally, the HCPAC recommends that instructions following the deleted code 64550 should direct users to instead report 97032 for electrical stimulation requiring constant attendance or 97014 for electrical stimulation requiring supervision only.

## ***RUC Referrals to CPT Editorial Panel - Incomplete Issues***

76881	<b>Ultrasound, extremity, nonvascular, real-time with image documentation; complete</b>	<a href="#"><u>Screen</u></a> CMS Fastest Growing / New Technology/New Services	<a href="#"><u>RUC Meeting</u></a> January 2017	<a href="#"><u>Specialty Society:</u></a> AAOS, ACR, ACRh, APMA	<a href="#"><u>CPT Meeting</u></a> February 2017
-------	---	--	--	--	---

**Background:** In February 2010, the CPT Editorial Panel created this code after deleting 76880. April 2010, the RUC recommended a CPT Assistant article be written to ensure the proper reporting of these two services. It was noted by the RUC that these services should not typically be reported more than once per day. RUC recommended 0.72. This service was flagged as New Technology/New Services and reviewed by the Relativity Assessment Workgroup in January 2015. The Workgroup recommended that the specialty societies develop a CPT Assistant article to define the proper coding of extremity ultrasound, particularly as it applies to the elements necessary to report a complete study. RAW to review in October 2016 after two years of additional Medicare utilization data. In October 2016, the specialty society noted and the Workgroup agreed that the dominant specialties providing the complete versus the limited ultrasound of extremity services are different. Thus, causing variation in what the typical practice expense inputs. The Workgroup recommends to 1) Refer CPT codes 76881 and 76882 to the Practice Expense Subcommittee for review of the direct practice expense inputs; 2) Refer to the CPT Editorial Panel to clarify the introductory language regarding the reference to one joint in the complete ultrasound; and 3) Review again in 3 years (October 2019).

76882	<b>Ultrasound, extremity, nonvascular, real-time with image documentation; limited, anatomic specific</b>	<a href="#"><u>Screen</u></a> CMS Fastest Growing / New Technology/New Services	<a href="#"><u>RUC Meeting</u></a> January 2017	<a href="#"><u>Specialty Society:</u></a> AAOS, ACR, ACRh, APMA	<a href="#"><u>CPT Meeting</u></a> February 2017

77014	<b>Computed tomography guidance for placement of radiation therapy fields</b>	<a href="#"><u>Screen</u></a> CMS Request - Practice Expense Review / CMS-Other - Utilization over 500,000 / CMS High Expenditure Procedural Codes1 / High Volume Growth3	<a href="#"><u>RUC Meeting</u></a> January 2016	<a href="#"><u>Specialty Society:</u></a> ASTRO, ACR	<a href="#"><u>CPT Meeting</u></a> September 2017
-------	---	--	--	---	--

**Background:** Revise based on CMS input regarding the radiation oncology services.

77058	<b>Magnetic resonance imaging, breast, without and/or with contrast material(s); unilateral</b>	<a href="#"><u>Screen</u></a> CMS High Expenditure Procedural Codes2	<a href="#"><u>RUC Meeting</u></a> October 2016	<a href="#"><u>Specialty Society:</u></a> ACR	<a href="#"><u>CPT Meeting</u></a> June 2017
-------	---	---	--	--	---

**Background:** In preparation to survey CPT codes 77058 and 77059, the specialty societies noted that these codes do not parallel the structure of other breast imaging families. For instance, the unilateral and bilateral coding language is not in alignment. Also, both procedures should include computer-aided detection (CAD). The Code Change Application (CCA) has been submitted for the upcoming February 2017 CPT Editorial Panel meeting. The RUC recommends CPT code 77058 and 77059 be referred to the CPT Editorial Panel.

## ***RUC Referrals to CPT Editorial Panel - Incomplete Issues***

77059	<b>Magnetic resonance imaging, breast, without and/or with contrast material(s); bilateral</b>	<a href="#"><u>Screen</u></a> CMS High Expenditure Procedural Codes2	<a href="#"><u>RUC Meeting</u></a> October 2016	<a href="#"><u>Specialty Society:</u></a> ACR	<a href="#"><u>CPT Meeting</u></a> June 2017
-------	--	---	--	--	---

For instance, the unilateral and bilateral coding language is not in alignment. Also, both procedures should include computer-aided detection (CAD). The Code Change Application (CCA) has been submitted for the upcoming February 2017 CPT Editorial Panel meeting. The RUC recommends CPT code 77058 and 77059 be referred to the CPT Editorial Panel.

78492	<b>Myocardial imaging, positron emission tomography (PET), perfusion; multiple studies at rest and/or stress</b>	<a href="#"><u>Screen</u></a> High Volume Growth4	<a href="#"><u>RUC Meeting</u></a> January 2017	<a href="#"><u>Specialty Society:</u></a>	<a href="#"><u>CPT Meeting</u></a> June 2017
-------	--	--	--	---	---

**Background:** This service was identified by the High Volume Growth screen, with total Medicare utilization of 10,000 or more that have increased by at least 100% from 2009 through 2014. The Relativity Assessment Workgroup requested action plans for these services for the January 2017 meeting. In January 2017, the RUC recommended to refer this code to CPT Editorial Panel to undergo substantive descriptor changes to reflect newer technology aspects such as wall motion, ejection fraction, flow reserve, and technology updates for hardware and software. CPT 2019 cycle.

92275	<b>Electroretinography with interpretation and report</b>	<a href="#"><u>Screen</u></a> CMS High Expenditure Procedural Codes2	<a href="#"><u>RUC Meeting</u></a> January 2016	<a href="#"><u>Specialty Society:</u></a> AAO, ASRS, AOA (optometry)	<a href="#"><u>CPT Meeting</u></a> February 2017
-------	---	---	--	---	---

**Background:** In January 2016, the specialty society noted that they became aware of inappropriate use of this code for a less intensive version of this test for diagnosis and indications that are not clinically proven and for which less expensive and less intensive tests already exist. The utilization of CPT code 92275 was appropriately low until 2013 when it suddenly increased by 300%. CPT changes are necessary to ensure that the service for which 92275 was intended is clearly described as well as an accurate vignette and work descriptor is developed. The RUC recommends CPT code 92275 be referred to the CPT Editorial Panel. In May 2016 this issue was postponed until September 2016. In September 2016 the CPT Editorial Panel postponed this issue was postponed until Feb 2017 to with a request for the specialty societies to submit literature for all codes and utilize the regular code change application.

93279	<b>Programming device evaluation (in person) with iterative adjustment of the implantable device to test the function of the device and select optimal permanent programmed values with analysis, review and report by a physician or other qualified health care professional; single lead pacemaker system</b>	<a href="#"><u>Screen</u></a> CMS High Expenditure Procedural Codes2	<a href="#"><u>RUC Meeting</u></a> October 2016	<a href="#"><u>Specialty Society:</u></a> ACC, HRS	<a href="#"><u>CPT Meeting</u></a> February 2017
-------	--	---	--	---	---

**Background:** In the NPRM for 2016 CMS re-ran the high expenditure services across specialties with Medicare allowed charges of \$10 million or more. CMS identified the top 20 codes by specialty in terms of allowed charges, excluding 010 and 090-day global services, anesthesia and Evaluation and Management services and services reviewed since CY 2010. In October 2016 the RUC PE Subcommittee discussed a vendor issue that with all of the implanted defibrillator and pacemaker devices where there are circumstances vendor sends a technician in to interpret the devices and in those cases the practice is not bearing the cost. Also in some cases the vendor technician even brings in the device itself and interprets and the practice is not bearing these costs as well. The Subcommittee discussed this may be addressed by a modified -26 and just report the professional interpretation or a -52 modifier and represent a reduced service. However, neither modifier addresses the issue properly. Reporting the professional service only (-26) doesn't cover the physicians expenses of exam table, office and clinical staff for vital signs and the reduced modifier (-52) does not provide a good proxy. The RUC recommends that this issue will be referred to the CPT Editorial Panel to determine how to appropriately report these cases.

In October 2016 the RUC PE Subcommittee discussed a vendor issue that with all of the implanted defibrillator and pacemaker devices where there are circumstances vendor sends a technician in to interpret the devices and in those cases the practice is not bearing the cost. Also in some cases the vendor technician even brings in the device itself and interprets and the practice is not bearing these costs as well. The Subcommittee discussed this may be addressed by a modified -26 and just report the professional interpretation or a -52 modifier and represent a reduced service. However, neither modifier addresses the issue properly. Reporting the professional service only (-26) doesn't cover the physicians expenses of exam table, office and clinical staff for vital signs and the reduced modifier (-52) does not provide a good proxy. The RUC recommends that this issue will be referred to the CPT Editorial Panel to determine how to appropriately report these cases.

95251	<b>Ambulatory continuous glucose monitoring of interstitial tissue fluid via a subcutaneous sensor for a minimum of 72 hours; interpretation and report</b>	<a href="#"><u>Screen</u></a> High Volume Growth	<a href="#"><u>RUC Meeting</u></a> October 2016	<a href="#"><u>Specialty Society:</u></a> AACE, ES	<a href="#"><u>CPT Meeting</u></a> February 2017
-------	---	---	--	---	---

**Background:** In October 2016, at the Practice Expense Subcommittee, there was extensive discussion around the issue of what codes are appropriate to report when the patient owns the equipment versus when the practice owns the equipment. The specialties clarified that CPT code 95250 Ambulatory continuous glucose monitoring of interstitial tissue fluid via a subcutaneous sensor for a minimum of 72 hours; sensor placement, hook-up, calibration of monitor, patient training, removal of sensor, and printout of recording, since it is a PE-only code, should not be reported when the equipment is owned by the patient. In this scenario, only CPT code 95251 Ambulatory continuous glucose monitoring of interstitial tissue fluid via a subcutaneous sensor for a minimum of 72 hours; interpretation and report would be reported. The RUC agreed with the Subcommittee that it is important that either education or a CPT parenthetical be created to clarify the appropriate reporting of these services. The RUC recommends this service be referred to the CPT Editorial Panel Executive Committee to provide a solution to ensure correct coding occurs.

## *RUC Referrals to CPT Editorial Panel - Incomplete Issues*

95951	<b>Monitoring for localization of cerebral seizure focus by cable or radio, 16 or more channel telemetry, combined electroencephalographic (EEG) and video recording and interpretation (eg, for presurgical localization), each 24 hours</b>	<u><a href="#">Screen</a></u> High Volume Growth4	<u><a href="#">RUC Meeting</a></u> January 2017	<u><a href="#">Specialty Society:</a></u>	<u><a href="#">CPT Meeting</a></u> June 2017
-------	---	--	--	---	---

**Background:** This service was identified by the High Volume Growth screen, with total Medicare utilization of 10,000 or more that have increased by at least 100% from 2009 through 2014. The Relativity Assessment Workgroup requested action plans for these services for the January 2017 meeting. In January 2017, the RUC recommended that this service be referred to the CPT Editorial Panel June 2017/RUC Oct 2017 for needed changes, including code deletions, revision of code descriptors, and the addition of new codes to this family. Revisions to this family of codes are needed to recognize that video is now an element of most long term EEG monitoring tests and to better differentiate inpatient and ambulatory monitoring services.

95970	<b>Electronic analysis of implanted neurostimulator pulse generator system (eg, rate, pulse amplitude, pulse duration, configuration of wave form, battery status, electrode selectability, output modulation, cycling, impedance and patient compliance measurements); simple or complex brain, spinal cord, or peripheral (ie, cranial nerve, peripheral nerve, sacral nerve, neuromuscular) neurostimulator pulse generator/transmitter, without reprogramming</b>	<u><a href="#">Screen</a></u> Harvard Valued - Utilization over 100,000 / CMS Request - Final Rule for 2016 / High Volume Growth3	<u><a href="#">RUC Meeting</a></u> January 2016	<u><a href="#">Specialty Society:</a></u> AAN, AAPM, NASS, ACO, ACNS, ISIS, AAPMR	<u><a href="#">CPT Meeting</a></u> June 2017
-------	---	--	--	--	---

**Background:** In January 2016, the specialty societies indicated they have actively worked with the CPT Assistant Editorial Board to alleviate incorrect reporting of these services, however, confusion remains giving the existing code language. The specialty societies indicated that they will revise the code language to more clearly define what is required for one of the parameters to be considered "changed" as well as correct the reporting of simple programming for cranial neurostimulators. The RUC refers 95970 and 95974-95982 to the CPT Editorial Panel for revision. At the May 2016 CPT meeting the Editorial postponed this issue until September 2016. This issue was postponed again until the February 2017 CPT meeting after additional literature is submitted. This issue was postponed again for June 2017 CPT meeting based on the specialty society withdrawing to define.

95974	<b>Electronic analysis of implanted neurostimulator pulse generator system (eg, rate, pulse amplitude, pulse duration, configuration of wave form, battery status, electrode selectability, output modulation, cycling, impedance and patient compliance measurements); complex cranial nerve neurostimulator pulse generator/transmitter, with intraoperative or subsequent programming, with or without nerve interface testing, first hour</b>	<u><a href="#">Screen</a></u> CMS Request - Final Rule for 2016	<u><a href="#">RUC Meeting</a></u> January 2016	<u><a href="#">Specialty Society:</a></u> AAN	<u><a href="#">CPT Meeting</a></u> June 2017

## ***RUC Referrals to CPT Editorial Panel - Incomplete Issues***

---

96101	<b>Psychological testing (includes psychodiagnostic assessment of emotionality, intellectual abilities, personality and psychopathology, eg, MMPI, Rorschach, WAIS), per hour of the psychologist's or physician's time, both face-to-face time administering tests to the patient and time interpreting these test results and preparing the report</b>	<u><b>Screen</b></u> CMS High Expenditure Procedural Codes2	<u><b>RUC Meeting</b></u> January 2017	<u><b>Specialty Society:</b></u> APA (psychology)	<u><b>CPT Meeting</b></u> June 2017
-------	--	--	---	--	--

**Background:** In the July 2015 Proposed Rule and November 2015 Final Rule, CMS identified high expenditure services for review, include codes related to psychological and neuropsychological testing. In January 2016, the specialty societies requested that the entire family of psychological and neuropsychological testing codes be referred to the CPT Editorial Panel to be revised. The testing practice has been significantly altered by the growth and availability of technology, including computerized testing. The current codes do not reflect the multiple standards of practice and therefore result in confusion about how to report the codes. The RUC recommended that the entire psychological and neuropsychological testing codes be referred to the CPT Editorial Panel for revision. CMS also requested that CPT code 96125 and 96127 be added to this family of services for revision/review. In September 2016, the CPT Editorial Panel created seven codes to differentiate technician administration of psychological testing and neuropsychological testing from physician/ psychologist administration and assessment of testing; and deleted codes 96101-96103, 96111, 96118, 96119, 96120.

Organizations representing psychiatry, psychology, neurology, pediatrics and speech pathologists conducted a survey for the January 2017 RUC and HCPAC Review Board meetings. During this effort, it became apparent that further CPT revisions are required. Survey respondents were unable to articulate the work at the 60 or 30 minute coding increments and there is significant concern regarding the duplication of pre and post work as several units of service would be reported. Therefore, the organizations submitted a letter to the CPT Editorial Panel and the RUC to rescind the coding changes summarized below for CPT 2018. The organizations will submit a new coding proposal for consideration at the June 2017 CPT Editorial Panel meeting for CPT 2019. The RUC supports referral to CPT.

The testing practice has been significantly altered by the growth and availability of technology, including computerized testing. The current codes do not reflect the multiple standards of practice and therefore result in confusion about how to report the codes. The RUC recommended that the entire psychological and neuropsychological testing codes be referred to the CPT Editorial Panel for revision. CMS also requested that CPT code 96125 and 96127 be added to this family of services for revision/review. In September 2016, the CPT Editorial Panel created seven codes to differentiate technician administration of psychological testing and neuropsychological testing from physician/ psychologist administration and assessment of testing; and deleted codes 96101-96103, 96111, 96118, 96119, 96120.

Organizations representing psychiatry, psychology, neurology, pediatrics and speech pathologists conducted a survey for the January 2017 RUC and HCPAC Review Board meetings. During this effort, it became apparent that further CPT revisions are required. Survey respondents were unable to articulate the work at the 60 or 30 minute coding increments and there is significant concern regarding the duplication of pre and post work as several units of service would be reported. Therefore, the organizations submitted a letter to the CPT Editorial Panel and the RUC to rescind the coding changes summarized below for CPT 2018. The organizations will submit a new coding proposal for consideration at the June 2017 CPT Editorial Panel meeting for CPT 2019. The RUC supports referral to CPT.

## *RUC Recommendations to Develop CPT Assistant Articles - Incomplete Issues*

21820	<b>Closed treatment of sternum fracture</b>	<u>Screen:</u> CMS Request - Final Rule for 2014 / Emergent Procedures	<u>RUC Meeting:</u> April 2016	<u>RUC Rec:</u> PE Clinical staff pre- time revised	<u>Specialty Society:</u> AAOS, ACEP, and orthopaedic subspecialties	<u>CPT Asst Status:</u> Apr 2017
-------	---	--	-----------------------------------	---	---	-------------------------------------

**Background:** Added as part of 21800 family for Final Rule issue. In October 2015, the Emergent Procedures Workgroup identified 34 services that have 60 minutes of pre-service clinical staff time in the facility-only setting. The Emergent Procedures Workgroup referred these issues to the RAW to review as potentially misvalued. Specialty societies should submit action plans addressing the appropriateness of site of service, global period, and dominant specialty for these services. The RAW will review the action plans in January 2016. The Workgroup had a robust discussion on these codes and determined that the 090 day global period is correct and an efficient bundling of the required services as well as share the same global period for all fracture care services. The Workgroup agreed with the specialty societies that the appropriate providers (emergency medicine and orthopaedic surgery) are reporting these services. The Workgroup noted that the emergency physicians are appropriately appending modifier -54. The specialty societies indicated that for these services that require anesthesia, it is unlikely that some of the specialties indicated in the Medicare utilization data actually perform the service under general anesthesia or regional block. The Workgroup agreed and recommends that the specialty societies develop a CPT Assistant article to reinforce correct coding and modifier use for all fracture codes and guidance on the meaning of "requiring anesthesia" and "with anesthesia" as it relates to restorative fracture care. The CPT Assistant article should also address the issue of restorative care for closed treatment without manipulation. The Workgroup determined that the Practice Expense Subcommittee are revising codes clinical staff time in the facility-only setting pre-time from 60 minutes and implementing a standard change to 20 minutes. The Workgroup refers these 34 emergent procedure codes identified back to the PE Subcommittee to apply this new standard. The Workgroup noted that for these low volume services any additional aberrations will be identified in future screens if applicable and the Workgroup does not need to examine these services further at this time. In April 2016, the PE Subcommittee reviewed this service and recommends 20 minutes of clinical staff pre-service time.

In April 2016, the PE Subcommittee reviewed this service and recommends 20 minutes of clinical staff pre-service time.

## ***RUC Recommendations to Develop CPT Assistant Articles - Incomplete Issues***

23655	<b>Closed treatment of shoulder dislocation, with manipulation; requiring anesthesia</b>	<u><b>Screen:</b></u> Emergent Procedures	<u><b>RUC Meeting:</b></u> April 2016	<u><b>RUC Rec:</b></u> PE Clinical staff pre-time revised	<u><b>Specialty Society:</b></u> AAOS, ACEP, and orthopaedic subspecialties	<u><b>CPT Asst Status:</b></u> Apr 2017
-------	--	--	--	--	--	--

**Background:** In October 2015, the Emergent Procedures Workgroup identified 34 services that have 60 minutes of pre-service clinical staff time in the facility-only setting. The Emergent Procedures Workgroup referred these issues to the RAW to review as potentially misvalued. Specialty societies should submit action plans addressing the appropriateness of site of service, global period, and dominant specialty for these services. The RAW will review the action plans in January 2016. The Workgroup had a robust discussion on these codes and determined that the 090 day global period is correct and an efficient bundling of the required services as well as share the same global period for all fracture care services. The Workgroup agreed with the specialty societies that the appropriate providers (emergency medicine and orthopaedic surgery) are reporting these services. The Workgroup noted that the emergency physicians are appropriately appending modifier -54. The specialty societies indicated that for these services that require anesthesia, it is unlikely that some of the specialties indicated in the Medicare utilization data actually perform the service under general anesthesia or regional block. The Workgroup agreed and recommends that the specialty societies develop a CPT Assistant article to reinforce correct coding and modifier use for all fracture codes and guidance on the meaning of "requiring anesthesia" and "with anesthesia" as it relates to restorative fracture care. The CPT Assistant article should also address the issue of restorative care for closed treatment without manipulation. The Workgroup determined that the Practice Expense Subcommittee are revising codes clinical staff time in the facility-only setting pre-time from 60 minutes and implementing a standard change to 20 minutes. The Workgroup refers these 34 emergent procedure codes identified back to the PE Subcommittee to apply this new standard. The Workgroup noted that for these low volume services any additional aberrations will be identified in future screens if applicable and the Workgroup does not need to examine these services further at this time. In April 2016, the PE Subcommittee reviewed this service and recommends 20 minutes of clinical staff pre-service time.
