Therefore, the joint panel recommends that the CMS physician work and time values for all 4 codes be maintained as interim for three years after which, the APA, AACAP, AAFP, ACP, AGS, and any other interested society will conduct another survey of all 4 codes.

### Recommendations

In summary, **we recommend the CMS RVW and times of 1.53 with 0 minutes pre, 36 minutes intra, and 0 minutes post, with a total time of 36 minutes for 99493.**

---

### HISTORY/BACKGROUND

The Psychiatric Collaborative Care Services codes were developed following a request by CMS in the proposed rule for the CY 2016 Medicare Physician Fee Schedule to create a payment structure to describe a specific model of collaborative care services for patients with common behavioral health conditions. CMS referred to the Collaborative Care Model described by the University of Washington’s AIMS Center (<http://aims.uw.edu>) in which a Primary Care Practitioner (PCP)/treating physician and Behavioral Health Care Manager (BHCM) collaborate with a Psychiatric Consultant to provide behavioral healthcare to a population of patients to help ensure the patients are improving, and

to make treatment adjustments as necessary in an effort to ensure the patients reach established treatment goals. Most of the collaboration between the Psychiatric Consultant and the BHCM is non-face-to-face over the phone, through regular caseload reviews with additional contact as needed. There are instances where the PCP and Psychiatric Consultant communicate directly about specific patients, either by phone or in person, but that is not typical. Importantly, although much of the contact between the Psychiatric Consultant and the BHCM is non-face-to-face, there is also face-to-face and non-face-to-face contact between the BHCM and the patient. The face-to-face contact between the BHCM and the patient typically consists of office visits where the BHCM evaluates the patient, provides brief therapeutic interventions, and/or communicates /educates the patient regarding changes to the care plan.

As stated in the CPT coding guidelines:

- The PCP/treating physician directs the Behavioral Health Care Manager and continues to oversee the patient's care, including prescribing medications, providing treatments for medical conditions and making referrals to specialty care.
- The Behavioral Health Care Manager is a clinical staff person with a masters/doctoral-level education or specialized training in behavioral health who provides care management services as well as an assessment of behavioral health needs including the administration of validated rating scales, the development of a care plan, provision of brief interventions, ongoing collaboration with the treating physician (which includes communicating treatment recommendations/adjustments from the Psychiatric Consultant), and maintenance of a registry, all in consultation with a Psychiatric Consultant. The services provided to the patient are both face-to-face and non-face-to-face.
- The Psychiatric Consultant (e.g., MD, DO, PA, APRN) refers to a medical professional trained in psychiatry and qualified to prescribe the full range of medications. The consultant advises and makes recommendations as needed for psychiatric and other medical care, including psychiatric and other medical diagnoses, treatment strategies including appropriate therapies, medication management and medical management of complications associated with treatment of psychiatric disorders, and referral for specialty care services, that are communicated to the treating physician, typically through the Behavioral Health Care Manager. The Psychiatric Consultant does not typically see the patient face-to-face.

Three new CPT codes were proposed and approved by the CPT Editorial Panel at its February 2016 meeting. There is one code (99492) for the initial calendar month of services within the collaborative care program, one code for each subsequent calendar month of services, and an add-on code for additional time that can be reported in addition to the other two codes.

The new code set describes the work of two medical professionals, only one of whom submits the bill, and a clinical staff person working together collaboratively to manage a population of patients. The codes are similar to other care management codes (99487 and 99490) in that they are billed per calendar month based on the Behavioral Health Care Manager's time and they include the work of the PCP. HOWEVER, the new codes also include the work of the Psychiatric Consultant. In the model described by these codes, the Psychiatric Consultant is paid directly by the primary care practice and does not bill for his/her time using a separate CPT code.

### **RUC Process**

The AMA RUC Research Subcommittee set up a workgroup, (Ad Hoc Psychiatric Collaborative Care Management Workgroup), to assist in the modification of the standard survey tool to accommodate these new codes, as well as review the vignettes, reference service lists and survey pool. The Research Subcommittee reviewed and approved our request to do a targeted survey for CPT codes 99492- 99494. The targeted pool of participants included those PCPs and Psychiatric Consultants who have practiced in the Collaborative Care Model or who have been educated/trained in the model. In order to expand the targeted pool, each participant was asked to identify others who have worked in the model (past and present) as well as anyone who has had training in the model. The Research Subcommittee also approved two separate reference services lists (one for the PCP and one for the Psychiatric Consultant) as well as the vignettes. They also approved a modified survey tool which asked respondents to value their work with their typical patient within the "total service period" which encompassed the monthly timeframe.

After all the above work was completed, CMS finalized coding, coverage, and payment (effective January 1, 2017) for these services in the Final Rule for the CY 2017 Medicare Physician Fee Schedule.

#### G0502-G0503 (99492-99494)

CMS created three G codes, adopting the language of the CPT codes, and finalized relative value units for physician work (RVWs) (1.70, 1.53, and 0.82 RVWs respectively), physician times (40, 36, and 18 minutes respectively), and clinical labor times (70, 60, and 30 minutes respectively) as well as a clinical labor type for the Behavioral Health Care Manager. CMS assigned temporary G Codes (G0502, G0503, G0504) for use until the CPT codes go into effect on January 1, 2018.

According to CMS: “To value HCPCS codes G0502, G0503, and G0504, we proposed to base the portion of the work RVU that accounts for the work of the treating physician or other qualified health care professional on a direct crosswalk to the proposed work values for the complex CCM codes, CPT codes 99487 and 99489...Therefore, in allocating a differential portion of the work RVU to each practitioner, we believe the work RVU associated with the billing practitioner should be greater than the work RVU associated with the Psychiatric Consultant. After considering these comments, we are finalizing total work RVUs of 1.70 for G0502, 1.53 for G0503, and 0.82 for G0504. These RVUs include 0.52 for the Psychiatric Consultant based on a crosswalk to the work per minute of a level three established patient office visit [and an CMS estimate of 10 minutes of Psychiatric Consultant time per patient per month]...Since the Behavioral Health Care Manager in the services described by HCPCS codes G0502, G0503, and G0504 should have specialized training in behavioral health, we proposed a new clinical labor type for the Behavioral Health Care Manager, L057B, at \$0.57 per minute, based on the rates for genetic counselors in the direct PE input database.”

#### 99484

CMS also finalized payment for an additional care management code, 99484, Care management services for behavioral health conditions, at least 20 minutes of clinical staff time, directed by a physician or other qualified health care professional, per calendar month, (99484) which describes care management for beneficiaries with behavioral health conditions under models of care other than the collaborative care model describe above. This service may be furnished when the beneficiary has a psychiatric or behavioral health condition(s) that in the PCP/treating physician clinical judgment, requires a behavioral health care assessment, behavioral health care planning, and provision of interventions. And per CMS includes “an initial assessment or follow-up monitoring, including the use of applicable validated rating scales; Behavioral health care planning in relation to behavioral/psychiatric health problems, including revision for patients who are not progressing or whose status changes; Facilitating and coordinating treatment such as psychotherapy, pharmacotherapy, counseling and/or psychiatric consultation; and Continuity of care with a designated member of the care team.”

CMS finalized relative value units for physician RVWs (0.61 RVWs), physician time (15 minutes), and clinical labor times (20 minutes) as well as a clinical labor type for the care manager that is the same (L057B, at \$0.57 per minute) as that for the collaborative care codes discussed above.

### SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) NA

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Primay Care                      How often? Sometimes

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period? 252000

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. General U.S. population is approximately seven times the Medicare population

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 36,000 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This approximates the number of claims for patients seen for subsequent care for an episode of care

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Do many physicians perform this service across the United States? No

## Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Evaluation Management

BETOS Sub-classification:

BETOS Sub-classification Level II:

---

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 99487

## AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS SUMMARY OF RECOMMENDATION

CPT Code: 99494      Tracking Number    A3

Original Specialty Recommended RVU: **0.82**Presented Recommended RVU: **0.82**

Global Period: ZZZ

RUC Recommended RVU: **0.82**

CPT Descriptor: Initial or subsequent psychiatric collaborative care management, each additional 30 minutes in a calendar month of behavioral health care manager activities, in consultation with a psychiatric consultant, and directed by the treating physician or other qualified health care professional (List separately in addition to code for primary procedure)

(Use 994X3 in conjunction with 994X1, 994X2)

### CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: Adult: A 50-year-old man has been feeling fatigued and has a lack of interest in outside interests since suffering a heart attack 6 months ago. He is accompanied by his wife who reports that he has been drinking more alcohol during this time. The patient is diagnosed as having a behavioral health disorder and the primary care physician recommends that the patient be enrolled or continue in the psychiatric collaborative care management services program. (Use 994X3 in conjunction with 994X1, 994X2)

Child/Adolescent: A 12-year-old child is brought in by a parent who states that she was found with marijuana in her room, has been truant from school, and has refused to take her insulin on several occasions. Her mother believes she may be sexually active. Her parents separated 6 months ago. The patient is diagnosed as having a behavioral health disorder and the primary care physician recommends that the patient be enrolled or continue in the psychiatric collaborative care management services program. (Use 994X3 in conjunction with 994X1, 994X2)

Percentage of Survey Respondents who found Vignette to be Typical: 92%

### Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: NA

Description of Intra-Service Work: Primary Care Physician/Treating Physician: Directs and provides general supervision of the behavioral health care manager (BHCM) and continues to provide or oversee the management and/or coordination of services, as needed, for all medical conditions, psychosocial needs, and activities of daily living. Reviews treatment recommendations from the psychiatric consultant with the BHCM and implements as appropriate. Ensures services are documented appropriately.

Psychiatric Consultant: Reviews new patient information or established patient progress with the BHCM soliciting and analyzing clinical information provided by the BHCM and/or in the patient record. Provides ongoing advice and treatment recommendations, as needed (based on the data) for psychiatric and other medical care, including treatment strategies such as appropriate therapies, medication management, medical management of complications associated with treatment of psychiatric disorders and referral for specialty care services which are communicated to the PCP/treating physician through the BHCM.

Description of Post-Service Work: NA

**Modifier -51 Exempt Status**

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

**New Technology/Service:**

Is this new/revised procedure considered to be a new technology or service? Yes

**TOP KEY REFERENCE SERVICE:**

<u>Key CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
99213	XXX	0.97	RUC Time

CPT Descriptor Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: An expanded problem focused history; An expanded problem focused examination; Medical decision making of low complexity. Usually, the presenting problem(s) are of low to moderate severity. Typically, 15 minutes are spent face-to-face with the patient and/or family.

**SECOND HIGHEST KEY REFERENCE SERVICE:**

<u>Key CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
99213	XXX	0.97	RUC Time

CPT Descriptor Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: An expanded problem focused history; An expanded problem focused examination; Medical decision making of low complexity. Usually, the presenting problem(s) are of low to moderate severity. Typically, 15 minutes are spent face-to-face with the patient and/or family.

**KEY MPC COMPARISON CODES:**

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

<u>MPC CPT Code 1</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>	<u>Medicare Utilization</u>
64484	XXX	1.00	RUC Time	467,888

CPT Descriptor 1 Injection(s), anesthetic agent and/or steroid, transforaminal epidural, with imaging guidance (fluoroscopy or CT); lumbar or sacral, each additional level (List separately in addition to code for primary procedure)

<u>MPC CPT Code 2</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>	<u>Medicare Utilization</u>
51797	ZZZ	0.80	RUC Time	128,931

CPT Descriptor 2 Voiding pressure studies, intra-abdominal (ie, rectal, gastric, intraperitoneal) (List separately in addition to code for primary procedure)

<u>Other Reference CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
93565	ZZZ	0.86	RUC Time

CPT Descriptor Injection procedure during cardiac catheterization including imaging supervision, interpretation, and report; for selective left ventricular or left atrial angiography (List separately in addition to code for primary procedure)

### **RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:**

Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by the mean) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

**Number of respondents who choose Top Key Reference Code: 7      % of respondents: 8.8 %**

**Number of respondents who choose 2<sup>nd</sup> Key Reference Code: 10      % of respondents: 12.6 %**

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

The American Geriatrics Society (AGS), American College of Physicians (ACP), American Academy of Family Physicians (AAFP), American Academy of Child and Adolescent Psychiatry (AACAP), and American Psychiatric Association (APA), conducted joint targeted surveys of their memberships in November 2016 for CPT codes 99492, 99493, and 99494 as well as a targeted and random survey for CMS created code 99484. A joint AGS, ACP, AAFP, AACAP, and APA RVS expert panel ("joint panel") consisting of physician advisors and specialty experts reviewed the survey work and time data and developed recommendations through participation in conference calls and e-mail discussions. Please note that the societies also conducted a survey of Behavioral Health Care Managers (BHCMS) that was only used to develop recommendations for practice expenses.

For code 99492, there were 84 responses (25 primary care physicians (PCP), 59 Psychiatric Consultants [Psych]) to the survey request with a median performance rate of 20 (PCP 10, Psych 40); 96% of the survey respondents found the vignette to be typical. For 99493, there were 80 response (23 PCP, 57 Psych) responses with a median performance rate of 20 (PCP 10, Psych 30); 94% of the respondents found the vignette to be typical. For code 99494, there were 79 responses (22 PCP, 57 Psych) with a median performance rate of 10 (PCP 4, Psych 15); 92% of the respondents found the vignette to be typical. For 99484, there were 161 responses (23 PCP targeted, 53 PCP random, 51 Psych targeted, 34 Psych random) with a median performance rate of 12 (PCP T 5, PCP R 15, Psych T 10, Psych R 15); 87% of the respondents found the vignette to be typical. The RUC summary contains a breakout of PCP participants, Psychiatric Consultant participants, and BHCMS.

The joint panel kept in mind that 99492, 99493, and 99494 are unlike any other services in CPT, because they include the work of two different physicians or other qualified health care professionals, but only one of those individuals reports the service. The joint panel agreed that, in order for the survey data to be credible, there had to be a sufficient number of responses from both PCPs and Psychiatric Consultants and that those respondents value only the time and work effort of

their individual portion of the service (e.g., PCPs should value only the time and work for the PCP portion of the service). The joint panel agreed that, because the PCP is the billing provider, it was particularly crucial for PCP responses to meet the RUC minimum threshold for number of survey responses.

With respect to the number of respondents, unfortunately, even after extending the survey and after repeated reminders and adding new participants identified by other participants, the end result of the targeted survey was that there were fewer than 30 PCP responses for each code. This does not reach the RUC minimum requirement. While the total number of respondents was more than 75 for each code, the joint panel agreed that the number of responses from each physician type (PCP, Psych) needed to meet the minimum threshold (30), because each type was performing separate, distinct work. Therefore, the joint panel was very concerned about the validity of the PCP data given the small numbers and in light of the fact that this is a new service and that the work of the PCP is essential to the service.

After noting these concerns, the expert panel reviewed the targeted survey data for 99492, 99493, and 99494 as well as the targeted and random survey data for 99484.

### **Physician Time Discussion**

The joint panel noted that these services do not include any pre and post service time, because they describe care furnished over a calendar month. Therefore, the reliability of the intra-service time data is critical to appropriately valuing the service. The joint panel also reviewed the survey instrument, which clearly stated that the respondent was to value “their” portion of the work - not the work of the entire service. This meant that the intent of the survey was to “sum” the times reported by PCPs and by the Psychiatric Consultants to arrive at a total physician time.

The joint panel then reviewed the time data for 99492. It noted that the PCPs reported a median intra-service time of 40 minutes while Psychiatric Consultant respondents reported a median intra-service time of 30 minutes. When the expert panel summed these times, the resulting value of 70 minutes was judged by the joint panel to not be credible. Specifically, the panel noted the following: (1) the vast majority of PCP and Psychiatric Consultant time is spent interacting with the BHCM, (2) if the total physician time was 70 minutes that would mean that virtually all the BHCM time (70 minutes minimum for 99492) was spent with the PCP and Psychiatric Consultant. This is not the case, as much BHCM time is spent interacting directly with the patient. The joint panel then looked at the individual times and concluded that given the requirements of the code, the Psychiatric Consultant time of 30 minutes was much more credible than the PCP time of 40 minutes and that both were high, given that the BHCM is a Masters or PhD level clinical staff person, or a clinical staff person with specialized training, experience, and expertise in managing behavioral health problems. Based on its review, the joint panel agreed that it was very possible that respondents valued the time required for the entire service, not just “their portion” of the service. If such was the case, this would mean that the median intra-service (and total) time when all survey responses were combined (combined group), (30 minutes) could represent the time of the entire service. However, for a number of reasons, the panel concluded it would be completely inappropriate to develop recommendations using this approach. For example, the panel had no idea if this reading of the data was actually the case, and second, if this reading of the data was correct, the panel had serious concerns that PCPs could accurately estimate the time spent by Psychiatric Consultant, and vice versa. Therefore, the panel did not pursue this approach further.

Next, the joint panel reviewed the time data for 99493. This review revealed the same problem as that identified for 99492. PCPs reported a median intra-service time of 40 minutes and Psychiatric Consultant respondents reported a median of 20 minutes. Based on its review, the joint panel concluded that a total time of 60 minutes was not credible. Further, the panel was concerned that PCPs were reporting the same time for 99493 as for 99492 whereas 99493 should take less time given that the patient was already receiving, as opposed to being new to, collaborative care. As with 99492, the summed time of 60 minutes would mean that all the BHCM time (60 minutes minimum) was spent with the PCP and Psychiatric Consultant, which, as with 99492, is not true. As with 99492, and using the same reasoning (described above), the panel concluded that it had serious concerns that the combined intra-service median time (20 minutes) bore any relation to the actual combined median intra-service time for both physicians. The panel’s review of 99494 led to similar conclusions. PCPs and Psychiatric Consultants both reported median times of 15 minutes, which meant that the entire 30 minutes of required BHCM time would be spent with the physicians. As with 99492 and 99493, and using the same reasoning (described above), the panel concluded that it had serious

concerns that the combined intra-service median time (15 minutes) bore any relation to the actual combined median intra-service time for both physicians.

Lastly, the panel reviewed the physician time for 99484. This is a code that was created by CMS and reported based on clinical staff time, and the panel was not sure whether respondents would be familiar with it. The societies surveyed both the targeted group who were surveyed for 99492, 99493, and 99494 as well as a random group. The targeted PCPs and Psychiatric Consultants reported median intra-service times of 20 and 15 minutes, respectively, while the random PCPs and Psychiatric Consultants reported median times of 30 and 60 minutes, respectively. Given these wildly disparate times and that the service requires only 20 minutes of clinical staff time, the panel concluded these times were not reliable or usable. As with 99492, 99493, and 99494, and using the same reasoning (described above), the panel concluded that it had serious concerns that the combined intra-service median time (30 minutes), of all 4 groups of respondents, bore any relation to the actual median intra-service time for both physicians.

In summary, the joint panel concluded that the physician time data for 99492, 99493, 99494, and 99484 could not be used to develop a recommendation for the RUC. Aside from the issue of the small numbers of PCP respondents, the panel concluded that it appeared that the respondents had not understood the survey questions, had difficulty determining the time of “their portion” of the service (e.g., because it is spread out over a calendar month in very small increments), and/or tried to estimate the time of the entire service. Whatever the reason, the joint panel concluded the data was not reliable.

### Physician Work Discussion

Next, the joint panel reviewed the work RVW data. As with time, the joint panel noted that the intent of the survey was for PCPs and Psychiatric Consultants to value “their own” work, not the work of the entire service. This meant the total RVW should be the sum of the PCP and Psychiatric Consultant RVWs.

First, the panel reviewed the RVW data for 99492. The median work RVW for PCPs and Psychiatric Consultant was 2.00 and 2.75, respectively, with a summed RVW of 4.75. Assuming the median times were also summed, for a total of 70 minutes, the joint panel agreed this was not credible or presentable to the RUC. For example, 99291, *Critical care, first hour*, which is a face-to-face service and is considered the most intense E/M service, has a work RVW of 4.50 with times of (15/40/15, total 70.) Further, 4.75, for a non-face-to-face physician service, even with 70 minutes of time, would create rank order anomalies with the reference services and with all the other non-face-to-face services recently valued by the RUC. Based on its review, the joint panel agreed that it was very possible that the respondents valued the work required for the entire service, not just “their portion” of the service. If such was the case, this would mean that the median RVW for the combined group (2.50) could represent the work of the entire service. However, for a number of reasons, the panel concluded it would be completely inappropriate to develop recommendations using this approach. Aside from the fact that this would dramatically depart from the intent of the survey (i.e., to sum the RVW’s from each group), the panel had no idea whether this supposition was true, and second, if it was true, the panel had serious concerns that PCPs could accurately estimate the work of Psychiatric Consultants, and vice versa. Therefore, the panel did not pursue this approach further.

When the joint panel did review the PCP and Psychiatric Consultant work data, individually, the panel noted that the PCP and Psychiatric Consultant medians were very different. The Psychiatric Consultant work values were much higher than those of the PCPs with a much lower intra-service time. This disparity was notable and resulted in very different work intensities, which led the panel to believe that, whether the respondents were valuing the entire service or just “their portion” of the work, PCPs and Psychiatric Consultants may have very different concepts of what this service is - in spite of the fact that the vignette was considered typical by both groups. The panel concluded that, for 99492, this disparity cast even more doubt on the validity of the survey data.

The analyses for 99493, 99494, and 99484 were very similar.

For 99493, the sum of the PCP survey median RVW (1.50) and the Psychiatric Consultant survey median (1.50) was 3.00, which, even with a summed time of 60 minutes, yielded rank order anomalies with face-to-face and non-face-to-face E/M services. As with 99492, the joint panel agreed that it was very possible that respondents valued the work required for the entire service, not just “their portion” of the service. If this was the case, it would mean that the median RVW for the combined group (1.50) could represent the work of the entire service. However, for a number of reasons, as with 99492, the panel concluded it would be completely inappropriate to develop recommendations using

this approach. Aside from the fact that this would dramatically depart from the intent of the survey (i.e., to sum the RVW's from each group), the panel had no idea whether this supposition was true, and second, if it was true, the panel had serious concerns that PCPs could accurately estimate the work of Psychiatric Consultants, and vice versa. Therefore, the panel did not pursue this approach further.

For 99494, sum of the median work RVW for PCPs (1.50) and the median work RVW for Psychiatric Consultants (1.00) was 2.50, which, even with an assumed summed time of 30 minutes, was not credible. For example, 99292, *Critical care, additional 30 minutes*, has a work RVW of 2.25 with a total time of 30 minutes (all intra-service). As with 99492 and 99493, the joint panel agreed that it was very possible that the respondents valued the work required for the entire service, not just "their portion" of the service. If this was the case, it would mean that the median RVW for the combined group (1.00) could represent the work of the entire service. However, for a number of reasons, as with 99492 and 99493, the panel concluded it would be completely inappropriate to develop recommendations using this approach. Aside from the fact that this would dramatically depart from the intent of the survey (i.e., to sum the RVW's from each group), the panel had no idea whether this supposition was true, and second, if it was true, the panel had serious concerns that PCPs could accurately estimate the work of Psychiatric Consultants, and vice versa. Therefore, the panel did not pursue this approach further.

Lastly, the panel reviewed the work values for 99484, and the same problems were identified. Irrespective of which PCP and Psychiatric Consultant work RVWs were used, the sum of the PCP and Psychiatric Consultant RVWs was not credible. Further, the disparity between the targeted and random groups was so great that the panel concluded the various groups of respondents appeared to have very different ideas as to what the service involves. As with 99492, 99493, and 99494, the joint panel agreed that it was very possible that the respondents valued the work required for the entire service, not just "their portion" of the service. If this was the case, it would mean that the median RVW for the combined group could represent the work of the entire service. However, for the reasons described above, the panel concluded it would be completely inappropriate to develop recommendations using this approach. Aside from the fact that this would dramatically depart from the intent of the survey (i.e., to sum the RVW's from each group), the panel had no idea whether this supposition was true, and second, if it was true, the panel had serious concerns that PCPs could accurately estimate the work of Psychiatric Consultants, and vice versa. Therefore, the panel did not pursue this approach further.

In order to develop a recommendation to bring to the RUC, the joint panel did an extensive search of the RUC database for recently RUC reviewed codes with XXX globals (and ZZZ globals for 99494). In order to do the search, the joint panel had to decide what intra-service time parameters to use. For 99492 and 99493, the panel searched a range of codes between 20 and 40 minutes of intra-service time in order to account for the disparity of time in the survey data. For 99494, the search included codes with intra-service times in the 15-20 minute range (also to take into account the range of survey data).

The expert panel found that there were a number of potential crosswalk codes that supported the CMS values for work. Specifically, there were many codes in the 70000 series with similar intra-service and total times that supported the CMS valuation. For example, 70554 (*Functional MRI by tech*) has 15/35/10 (total 60) minutes with a work RVW of 2.11 which supports the CMS value for 99492. 74170 (*CT abdomen*) has 5/18/5 (total 28) minutes with a work RVW of 1.40 that supports the CMS value for 99493. There are numerous ZZZ globals with intra-times of 15 to 20 minutes with work RVWs of 0.80 to 1.00.

Furthermore, the values for 99487 (*Cmplx chron care*) are 26 minutes of intra-time and a work RVW of 1.00. This fits nicely between the CMS times and values for 99493 and 99494. The panel also noted that the MPC codes 99239 (*Hospital discharge day*) with times of 10/30/15 (total 55) minutes and a work RVW of 1.90 and 99309 (*Nursing fac care subseq*) with times of 10/25/10 (total 45) minutes and a work RVW of 1.55 also supports the CMS values for 99492 and 99493.

Therefore, even though it has reservations about the CMS methodology for establishing work RVWs for 99492, 99493, and 99494, the joint panel recommends that the CMS values be maintained as interim for three years until such time as members from the surveying specialties gain experience using these codes, at which time the specialties will conduct another survey. As we have learned from this survey, it will be important to ensure that survey participants only report time and value work for "their portion" rather than estimating time and work the entire service.

For 99484, the specialties also recommend that the CMS values be maintained as interim until another survey can be performed in three years. CMS modeled this code after 99490 (*Chron care mgmt svc 20 min*) (times of 0/15/0 minutes, work RVW of 0.61), and cross-walked the work RVW from 99490. Given that there does not appear to be a clear, and consistent understanding of what this service entails, the joint panel believes maintaining the CMS value on an interim basis is appropriate.

### Summary

In summary, the joint panel believes that the survey data for physician work and time is simply not credible. That said, the joint panel and the societies agree that a lot has been learned by going through the survey process. This series of codes is the first of its kind that involves the work of two different physicians that is reported by only one of the two. The joint panel and the societies think that the societies can work together to create a new survey that is modified to take into account the lessons from the current survey (e.g., to better ensure that respondents only value the work and time of “their portion” of the service and to “ignore the portion of the service performed by the....”). Further, at that point, more physicians in the field will have experience using the codes, which increases the likelihood of gaining sufficient survey respondents, especially PCPs.

Therefore, the joint panel recommends that the CMS physician work and time values for all 4 codes be maintained as interim for three years after which, the APA, AACAP, AAFP, ACP, AGS, and any other interested society will conduct another survey of all 4 codes.

### Recommendations

In summary, **we recommend the CMS RVW and times of 0.82 with 0 minutes pre, 18 minutes intra, and 0 minutes post, with a total time of 18 minutes for 99494.**

---

### HISTORY/BACKGROUND

The Psychiatric Collaborative Care Services codes were developed following a request by CMS in the proposed rule for the CY 2016 Medicare Physician Fee Schedule to create a payment structure to describe a specific model of collaborative care services for patients with common behavioral health conditions. CMS referred to the Collaborative Care Model described by the University of Washington’s AIMS Center (<http://aims.uw.edu>) in which a Primary Care Practitioner (PCP)/treating physician and Behavioral Health Care Manager (BHCM) collaborate with a Psychiatric Consultant to provide behavioral healthcare to a population of patients to help ensure the patients are improving, and to make treatment adjustments as necessary in an effort to ensure the patients reach established treatment goals. Most of the collaboration between the Psychiatric Consultant and the BCHM is non-face-to-face over the phone, through regular caseload reviews with additional contact as needed. There are instances where the PCP and Psychiatric Consultant communicate directly about specific patients, either by phone or in person, but that is not typical. Importantly, although much of the contact between the Psychiatric Consultant and the BCHM is non-face-to-face, there is also face-to-face and non-face-to-face contact between the BCHM and the patient. The face-to-face contact between the BCHM and the patient typically consists of office visits where the BCHM evaluates the patient, provides brief therapeutic interventions, and/or communicates /educates the patient regarding changes to the care plan.

As stated in the CPT coding guidelines:

- The PCP/treating physician directs the Behavioral Health Care Manager and continues to oversee the patient’s care, including prescribing medications, providing treatments for medical conditions and making referrals to specialty care.
- The Behavioral Health Care Manager is a clinical staff person with a masters/doctoral-level education or specialized training in behavioral health who provides care management services as well as an assessment of behavioral health needs including the administration of validated rating scales, the development of a care plan, provision of brief interventions, ongoing collaboration with the treating physician (which includes communicating treatment recommendations/adjustments from the Psychiatric Consultant), and maintenance of a registry, all in consultation with a Psychiatric Consultant. The services provided to the patient are both face-to-face and non-face-to-face.

- The Psychiatric Consultant (e.g., MD, DO, PA, APRN) refers to a medical professional trained in psychiatry and qualified to prescribe the full range of medications. The consultant advises and makes recommendations as needed for psychiatric and other medical care, including psychiatric and other medical diagnoses, treatment strategies including appropriate therapies, medication management and medical management of complications associated with treatment of psychiatric disorders, and referral for specialty care services, that are communicated to the treating physician, typically through the Behavioral Health Care Manager. The Psychiatric Consultant does not typically see the patient face-to-face.

Three new CPT codes were proposed and approved by the CPT Editorial Panel at its February 2016 meeting. There is one code (99492) for the initial calendar month of services within the collaborative care program, one code for each subsequent calendar month of services, and an add-on code for additional time that can be reported in addition to the other two codes.

The new code set describes the work of two medical professionals, only one of whom submits the bill, and a clinical staff person working together collaboratively to manage a population of patients. The codes are similar to other care management codes (99487 and 99490) in that they are billed per calendar month based on the Behavioral Health Care Manager's time and they include the work of the PCP. HOWEVER, the new codes also include the work of the Psychiatric Consultant. In the model described by these codes, the Psychiatric Consultant is paid directly by the primary care practice and does not bill for his/her time using a separate CPT code.

### **RUC Process**

The AMA RUC Research Subcommittee set up a workgroup, (Ad Hoc Psychiatric Collaborative Care Management Workgroup), to assist in the modification of the standard survey tool to accommodate these new codes, as well as review the vignettes, reference service lists and survey pool. The Research Subcommittee reviewed and approved our request to do a targeted survey for CPT codes 99492- 99494. The targeted pool of participants included those PCPs and Psychiatric Consultants who have practiced in the Collaborative Care Model or who have been educated/trained in the model. In order to expand the targeted pool, each participant was asked to identify others who have worked in the model (past and present) as well as anyone who has had training in the model. The Research Subcommittee also approved two separate reference services lists (one for the PCP and one for the Psychiatric Consultant) as well as the vignettes. They also approved a modified survey tool which asked respondents to value their work with their typical patient within the "total service period" which encompassed the monthly timeframe.

### **CMS Final Rule on the CY 2017 Medicare Physician Fee Schedule**

After all the above work was completed, CMS finalized coding, coverage, and payment (effective January 1, 2017) for these services in the Final Rule for the CY 2017 Medicare Physician Fee Schedule.

#### **G0502-G0503 (99492-99494)**

CMS created three G codes, adopting the language of the CPT codes, and finalized relative value units for physician work (RVUs) (1.70, 1.53, and 0.82 RVUs respectively), physician times (40, 36, and 18 minutes respectively), and clinical labor times (70, 60, and 30 minutes respectively) as well as a clinical labor type for the Behavioral Health Care Manager. CMS assigned temporary G Codes (G0502, G0503, G0504) for use until the CPT codes go into effect on January 1, 2018.

According to CMS: "To value HCPCS codes G0502, G0503, and G0504, we proposed to base the portion of the work RVU that accounts for the work of the treating physician or other qualified health care professional on a direct crosswalk to the proposed work values for the complex CCM codes, CPT codes 99487 and 99489...Therefore, in allocating a differential portion of the work RVU to each practitioner, we believe the work RVU associated with the billing practitioner should be greater than the work RVU associated with the Psychiatric Consultant. After considering these comments, we are finalizing total work RVUs of 1.70 for G0502, 1.53 for G0503, and 0.82 for G0504. These RVUs include 0.52 for the Psychiatric Consultant based on a crosswalk to the work per minute of a level three established patient office visit [and an CMS estimate of 10 minutes of Psychiatric Consultant time per patient per month]...Since the Behavioral Health Care Manager in the services described by HCPCS codes G0502, G0503, and G0504 should have specialized training in behavioral health, we proposed a new clinical labor type for the Behavioral Health Care Manager, L057B, at \$0.57 per minute, based on the rates for genetic counselors in the direct PE input database."

CMS finalized relative value units for physician RVWs (0.61 RVWs), physician time (15 minutes), and clinical labor times (20 minutes) as well as a clinical labor type for the care manager that is the same (L057B, at \$0.57 per minute) as that for the collaborative care codes discussed above.

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. General U.S. population is approximately seven times the Medicare population

Specialty	Frequency 0	Percentage 0.00 %
Specialty	Frequency 0	Percentage 0.00 %
Specialty	Frequency	Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?  
 14,000 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty.  
 Please explain the rationale for this estimate. This approximates the number of claims for patients seen for initial or subsequent care for an episode of care

Specialty	Frequency 0	Percentage 0.00 %
Specialty	Frequency 0	Percentage 0.00 %
Specialty	Frequency 0	Percentage 0.00 %

Do many physicians perform this service across the United States? No

### **Berenson-Eggers Type of Service (BETOS) Assignment**

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:  
 Evaluation Management

BETOS Sub-classification:

BETOS Sub-classification Level II:

### **Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 99489

Non Facility Direct Inputs**

CPT Long Descriptor:

**Initial psychiatric collaborative care management**, first 70 minutes in the first calendar month of behavioral health care manager activities, in consultation with a psychiatric consultant, and directed by the treating physician or other qualified health care professional, with the following required elements:

- outreach to and engagement in treatment of a patient directed by the treating physician or other qualified health care professional;
- initial assessment of the patient, including administration of validated rating scales, with the development of an individualized treatment plan;
- review by the psychiatric consultant with modifications of the plan if recommended;
- entering patient in a registry and tracking patient follow-up and progress using the registry, with appropriate documentation, and participation in weekly caseload consultation with the psychiatric consultant; and
- provision of brief interventions using evidence-based techniques such as behavioral activation, motivational interviewing, and other focused treatment strategies.

Global Period: XXX Meeting Date: January 2017 Revised 1/12/17

NOTE: Services are per patient, per calendar month

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:

A consensus panel of experts from the surveying societies met by phone and email to develop the inputs.

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale:

The specialties believe the values finalized by the Centers for Medicare and Medicaid Services (CMS) for code 99492 should be used as a starting point. The specialties note that the Centers for Medicare & Medicaid Services (CMS) also used a crosswalk to 99487 in their valuation. Like CMS, the specialties agree that the typical staff type for 99492 is L057B, which is the labor type for behavioral health care manager.

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence: **The specialties recommend increasing the CMS clinical staff time input from 70 minutes to 85 minutes. The survey of BHCM's (which primarily asked about time) indicate that the median time for this service is 90 minutes. The 90 minutes was reduced by the expert panel to 85 minutes, taking into account the ability to bill the add-on code when time is greater than 85 minutes (86 minutes or more) per the CPT time rule. A detailed table of the codes and the time rule are available in the CPT book.**

5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities: NA

Intra-Service Clinical Labor Activities:

As described in the code descriptor care management activities include: Outreach to and engagement in treatment of a patient, typically weekly, face-to-face or by telephone, ; Conducts an initial assessment of the patient, including administration and scoring of validated rating scales, with the development of an individualized care plan; Provides education related to the diagnoses and information about the collaborative care model; Participates in weekly caseload consultation and ad hoc consultations as needed with the psychiatric consultant providing information on patient progress and other relevant data ; Reviews patient information with the psychiatric consultant; Reviews progress and recommendations for changes in treatment, as indicated, with the PCP/Treating physician based on recommendations provided by the psychiatric consultant; Enters patient data in a registry and tracks patient follow-up and progress using the registry; Conducts brief interventions using evidence-based techniques such as behavioral activation, motivational interviewing, and other focused treatment strategies to engage patient in care; Documents services in the patient's medical record.

Post-Service Clinical Labor Activities: NA

#### Supplies and Equipment

Patient education booklet (2 items): Patient's receive two separate booklets. One booklet (typically 5 pages) describing psychiatric collaborative care management services which includes information such as an overview of the model, including information on the role of each team member, the services provided, and impact on the patient's course of illness. One patient education booklet (typically 25 pages) specific to the patient's diagnosis which includes information on the diagnosis, symptoms, course of the disease, typical treatments, possible side effects/impacts.

Assessment and monitoring instruments (4 items): Administration of standardized screening instruments is a required element. These tools are used weekly and can be done in person or over the phone with responses recorded on the tool. These are used to track patient progress and help to identify those requiring further follow-up.

Tissues (0.05 items): Patients are seen face to face over the course of the month to assess progress, provide brief interventions. Patients typically require tissues due to current mental health status and/or nature of the discussion. This input is equivalent to the psychotherapy codes (90832, 90833, 90834, 90836, 90837, 90838).

One couch/two chairs (1 item): Patient's are typically seen face to face by behavioral health care managers 45% of the time over the course of the month. Patient's are typically seen in a therapy office within the practice due to the confidential nature of the discussion. The minutes of equipment usage are based on the time of the behavioral health care manger. For this code it is 38 minutes.

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
\*CMS High Expenditure Procedures\*

January 2017

**CT Soft Tissue Neck**

In the Final Rule for 2016, CMS re-ran the high expenditure services across specialties with Medicare allowed charges of \$10 million or more. CMS identified the top 20 codes by specialty in terms of allowed charges, excluding 010 and 090-day global services, anesthesia and Evaluation and Management services and services reviewed since CY 2010. CPT code 70491 was identified on the CMS high expenditure screen of potentially misvalued codes. CPT codes 70490 and 70492 were added as part of the family of services for CT of the neck.

**Compelling Evidence**

The specialty societies presented compelling evidence for CPT code 70492 *Computed tomography, soft tissue neck; without contrast material followed by contrast material(s) and further section*, that the original valuation was based on flawed methodology and there has been a change in technique and the patient population. The specialty societies stated that a flawed methodology was used in the previous valuation for this service as the code has a CMS/Other designation. As the RUC has noted previously during review of other services, codes with the CMS/Other designation were never surveyed by the RUC or any other stakeholder; the physician time and work were assigned by CMS in rulemaking over 20 years ago using an unknown methodology. Thus, CPT code 70492 does not have RUC validated survey times, or rationale available to validate the currently assigned work RVU.

Two different factors have worked concomitantly regarding a change in the typical patient for CPT code 70492 resulting in an overall increase in patient complexity. Firstly, the increased awareness of radiation dose and inefficient imaging has led to an increased scrutiny of indications for performing a single setting double CT such as CT neck with and without contrast. This is reflected in the Medicare claims data which shows a 24% reduction in the numbers of such CT scans being performed since 2009. This contraction in numbers has left a more complex patient population often having complex masses, prior surgeries, or infection. Additionally, in 2006, the 4D parathyroid CT scan, a multiphase CT scan, was first described for localization of parathyroid adenomas. It has become widely used, and is one of the most common protocols for this service. The former most common use for CPT code 70492 was to characterize a palpable mass simply by performing CT neck without contrast followed by contrast to determine whether the lesion was cystic or solid. CT parathyroid imaging requires a pre-contrast CT of the neck followed by CT neck with contrast performed in at least 2 different phases (often late arterial and delayed venous), essentially increasing the imaging volume by 33%. Surgeons have increasingly ordered this exam to assist in preoperative planning. Therefore, the patient population for CPT code 70492 has dramatically changed over the past decade following the development of this new technique. Interrogation of the acquired images for parathyroid adenoma also requires more skill than evaluating a palpable mass as the location of the adenoma is unknown.

The RUC accepted that there is compelling evidence that both patient complexity and technique have changed and, therefore, the amount of physician work involved in performing CPT code 70492 has increased. Further, that a flawed methodology was utilized when 70492 was originally valued.

**70490 *Computed tomography, soft tissue neck; without contrast material***

The RUC reviewed the survey results from 52 radiologists and neuroradiologists and determined that it was appropriate to maintain the current work RVU of 1.28, which is supported by the survey and is less than the 25th percentile of 1.30. The RUC recommends 5 minutes pre-service time, 15 minutes intra-service time, and 5 minutes post-service time. The specialty societies clarified that the description of pre-service work correctly includes a determination of the appropriate CT protocol for the examination and that this protocol is performed by the physician.

The RUC compared the surveyed code to the top key reference service CPT code 70540 *Magnetic resonance (eg, proton) imaging, orbit, face, and/or neck; without contrast material(s)* (work RVU = 1.35, intra-service time of 19 minutes) and determined that CPT code 70540 requires more physician work, intra-service time and is slightly more intense and complex than the surveyed code. The surveyed code CT of the neck has a higher spatial resolution and thinner slices compared to MR of the neck. However, the top key reference code 70540, MRI has higher contrast resolution and requires more skill to interpret, therefore making it more intense. For additional support the RUC compared the surveyed code to the multi-specialty point of comparison CPT code 70470 *Computed tomography, head or brain; without contrast material, followed by contrast material(s) and further sections* (work RVU = 1.27, intra-service time of 15 minutes) and noted that both services have similar physician work and identical intra-service times and should be valued similarly. The RUC concluded that the key reference code and comparable MPC code support maintaining the current value for the surveyed code. **The RUC recommends a work RVU of 1.28 for CPT code 70490.**

**70491 *Computed tomography, soft tissue neck; with contrast material(s)***

The RUC reviewed the survey results from 52 radiologists and neuroradiologists and determined that it was appropriate to maintain the current work RVU of 1.38, which is supported by the survey and is below the 25th percentile of 1.46. The RUC recommends 5 minutes pre-service time, 17 minutes intra-service time, and 5 minutes post-service time.

The RUC compared the surveyed code to the top key reference service CPT code 70542 *Magnetic resonance (eg, proton) imaging, orbit, face, and/or neck; with contrast material(s)* (work RVU = 1.62, intra-service time of 20 minutes) and determined that the surveyed code requires slightly less physician time, less physician work and was indicated by the survey respondents as less intense and complex.. For additional support the RUC compared the surveyed code to the multi-specialty point of comparison CPT code 74170 *Computed tomography, abdomen; without contrast material, followed by contrast material(s) and further sections* (work RVU = 1.40, intra-service time of 18 minutes) and noted that both services have similar physician work and intra-service times and should be valued similarly. The RUC concluded that the key reference code and comparable MPC code support maintaining the current value for the surveyed code. **The RUC recommends a work RVU of 1.38 for CPT code 70491.**

**70492 Computed tomography, soft tissue neck; without contrast material followed by contrast material(s) and further sections**

The RUC reviewed the survey results from 52 radiologists and neuroradiologists and recommends the survey 25<sup>th</sup> percentile work RVU of 1.62. The RUC recommends 5 minutes pre-service time, 20 minutes intra-service time, and 5 minutes post-service time.

The RUC compared the surveyed code to the top key reference service CPT code 70543 *Magnetic resonance (eg, proton) imaging, orbit, face, and/or neck; without contrast material(s), followed by contrast material(s) and further sequences* (work RVU = 2.15, intra-service time of 25 minutes). The RUC noted that the key reference service involves a lengthier intra-service time and is more intense and complex, therefore appropriately valued higher than the surveyed code. The slightly lower intensity and complexity for 70492 is supported by the survey respondents reporting slightly less technical skill for 70492 compared to 70543, but reporting otherwise similar intensity and complexity measures. The RUC also reviewed the multi-specialty point of comparison CPT code 74176 *Computed tomography, abdomen and pelvis; without contrast material* (work RVU= 1.74, intra-service time of 22 minutes) and agreed that this comparison code supports a work RVU of 1.62 for the surveyed code. The recommendation is compared to the MPC code which demonstrates 2 minutes more of intra-service time and similar intensity and complexity to perform. Finally, for additional support, the RUC compared the surveyed code to CPT code 78072 *Parathyroid planar imaging (including subtraction, when performed); with tomographic (SPECT), and concurrently acquired computed tomography (CT) for anatomical localization* (work RVU = 1.60, intra-service time of 20 minutes), which requires similar physician work and time and thus valued the similarly.

As stated in the aforementioned rationale for compelling evidence, the RUC examined the survey 25<sup>th</sup> percentile work RVU of 1.62 and agreed that this value appropriately accounts for the physician work required to perform CPT code 70492. The RUC confirmed that the relativity for these three CT of the neck codes and across the larger family of CT codes is appropriate. **The RUC recommends a work RVU of 1.62 for CPT code 70492.**

**Practice Expense**

The RUC recommends the direct practice expense inputs as approved by the Practice Expense Subcommittee.

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
70490	Computed tomography, soft tissue neck; without contrast material	XXX	1.28 (No Change)

70491	with contrast material(s)	XXX	1.38 (No Change)
70492	without contrast material followed by contrast material(s) and further sections	XXX	1.62

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 70490	Tracking Number	Original Specialty Recommended RVU: <b>1.28</b>
		Presented Recommended RVU: <b>1.28</b>
Global Period: XXX		RUC Recommended RVU: <b>1.28</b>
CPT Descriptor: Computed tomography, soft tissue neck; without contrast material		

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: An elderly person with chronic renal failure presents with a palpable left neck mass and a CT neck without IV contrast is performed.

Percentage of Survey Respondents who found Vignette to be Typical: 100%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 2%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: Review the reason for the examination and any pertinent clinical history. Review any prior imaging studies. Determine the appropriate CT protocol for the examination, confirm that noncontrast-only images are indicated. Communicate protocol to the CT technologists.

Description of Intra-Service Work: Review initial and subsequent series of CT image data to assure adequacy of anatomic coverage and assess need for repeat sections. Interpret triplanar images of the neck. Interpret the images and evaluate the parotid glands, submandibular glands, thyroid gland, paranasal sinuses, orbits (globes, orbital fat, extraocular muscles, lacrimal glands, optic nerves), nasal cavity, nasopharynx, oropharynx, oral cavity, hypopharynx and larynx. Evaluate parapharyngeal, retropharyngeal and carotid spaces, neck muscles, and lymph nodes. Evaluate the vasculature for stenosis, occlusion or thrombosis. Evaluate cervical spine, facial bones, skull base, and visualized brain. Evaluate for etiologies of patient's symptoms such as swelling, mass, pain, difficulty swallowing, painful swallowing, cranial nerve palsies and visual abnormalities. Count and measure masses and/or enlarged lymph nodes. Compare the current imaging to all pertinent available prior studies. Dictate a report.

Description of Post-Service Work: Review, edit, and sign report for the medical record. Communicate the findings with referring provider and/or patient as needed.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUR analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Background**

CPT code 70491 (*Computed tomography, soft tissue neck; with contrast material(s)*) was identified on the CMS high expenditure screen of potentially misvalued codes. The American College of Radiology (ACR) and American Society of Neuroradiology (ASNR) surveyed 70491, as well as the two other codes in the family, 70490 (*Computed tomography, soft tissue neck; without contrast material*) and 70492 (*Computed tomography, soft tissue neck; without contrast material followed by contrast material(s) and further sections*) and convened an expert panel of physicians familiar with the services to review the survey data.

**Work RVU Recommendations**

The expert panel recommends maintaining value for 70490 and 70491, which are less than the survey 25<sup>th</sup> percentile, and increasing value for 70492 to the 25<sup>th</sup> percentile survey value.

**Pre, Intra, and Post Service Times**

The panel recommends the median survey service period times for all three codes. Our work and service period times are summarized in the following table:

CPT	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUR
70490	CT neck w/o contrast	1.28	25	5	15	5	0.070
70491	CT neck w/contrast	1.38	27	5	17	5	0.068
70492	CT neck w/o and w/contrast	1.62	30	5	20	5	0.070

**Compelling Evidence**

The panel recommends an increase in value in only one code in the family, 70492 based on change in patient population as compelling evidence.

### *Flawed Methodology*

70492 currently has no RUC validated survey times, and is listed as a CMS/other code in the RUC Physician Time database. No RUC rationale is available to validate the currently assigned wRVU.

### *Change in Patient Population*

Two different factors have worked concomitantly on changing the typical patient for 70492 resulting in an overall increase in patient complexity. Firstly, the increased awareness of radiation dose and inefficient imaging has led to an increased scrutiny of indications for performing a single setting double CT such as CT neck with and without contrast. This is reflected in the CMS claims data which shows a 24% reduction in the numbers of such CT scans being performed since 2009. This contraction in numbers has left a more complex patient population often having complex masses, prior surgeries, or infection. Additionally, in 2006, the 4D parathyroid CT scan, a multiphase CT scan, was first described by Rodgers, et al, for localization of parathyroid adenomas. It has become widely used, and is one of the most common protocols for CPT code 70492 (*Computed tomography, soft tissue neck; without contrast material followed by contrast material(s) and further sections*). The scan is considered to be an important tool in the preoperative planning for parathyroidectomies to reduce morbidity and length of surgery because it allows for acquisition of high resolution images of the parathyroid adenoma, which leads to a more precise localization compared to the other imaging modalities such as ultrasound of the neck and parathyroid scintigraphy. The acquired images require careful scrutiny for potentially small (including less than 5 mm) lesions that are only differentiated from normal tissues, such as lymph nodes, by the non-contrast appearance and enhancement characteristically seen in an early and late contrast phase. The evaluation for these lesions can be technically challenging because of their location at the same level of the shoulders and contrast bolus, which can lead to artifacts on CT. The former most common use for CPT code 70492 was to characterize a palpable mass simply by performing CT neck without contrast followed by contrast to determine whether the lesion was cystic or solid. CT parathyroid imaging requires a pre-contrast CT of the neck followed by CT neck with contrast performed in at least 2 different phases (often late arterial and delayed venous), essentially increasing the imaging volume by 33%. Interrogation of the acquired images for parathyroid adenoma also requires more skill than evaluating a palpable mass as the location of the adenoma is unknown. Parathyroid adenomas can assume ectopic locations buried in the pyriform sinus, lateral esophageal wall, or mediastinum in addition to the standard locations making interpretation of these studies challenging. Finally, parathyroid adenomas and parathyroid hypertrophy can have similar appearances, therefore searching for multiple enlarged parathyroid glands is imperative. This study has become widespread as surgeons have increasingly ordered this exam to assist in preoperative planning. Therefore, the patient population for 70492 has dramatically changed over the past decade following the development of this new technique.

<b>70553</b>	Magnetic resonance (eg, proton) imaging, brain (including brain stem); without contrast material, followed by contrast material(s) and further sequences	2.29	XXX	5	25	7	37	0.081	RUC	Jan-13

Our expert panel recommends maintaining the current value of 70490 at 1.28 RVU, which is less than the survey 25<sup>th</sup> percentile, with median service period times of 5, 15, and 5 minutes.

CPT code 70490 (*Computed tomography, soft tissue neck without contrast material*) is an invaluable tool in investigating a diverse set of pathologies, which range from minor to life threatening. It is an important tool in investigating neck pain, swelling, masses, dysphagia/odynophagia, orbital pathologies as well as the location/type/extent of a known infectious/inflammatory/neoplastic process involving the neck. Not only is a positive result significant, a negative result is also pertinent in patient management, in relieving patient anxiety, and in providing assurance to ordering physicians. A combination of its utility (as a positive and negative predictor of pathology), intensity, and the amount of technical training necessary to accurately interpret led us to believe that this procedure is appropriately valued as above.

#### *Comparison to Key Reference Services for 70490*

Our recommended work RVU of 1.28 is compared to the most commonly chosen key reference service of 70540 (*Magnetic resonance (eg proton) imaging, orbit, face, and/or neck; without contrast material(s)*). 70540 has a higher work RVU of 1.35, more intra-service time, and a lower IWPUT. CT of the neck has a higher spatial resolution and thinner slices compared to MR of the neck; however, MRI has higher contrast resolution and requires more skill to interpret. In the Intensity/Complexity survey results, 70490 scored similar on all categories except for technical skill. Both these studies are typically outpatient procedures; however, CT neck without contrast does have greater utilization in the inpatient and emergency room setting. One would expect these codes to be valued proportionally. The IWPUT differences are not proportional; however, IWPUT of 0.059 for 70540 is a rank order anomaly in the MRI neuro family without contrast, which typically have IWPUTs on the order of 0.063 to 0.070 (when excluding 70540), suggesting 70540 is undervalued, and not an ideal IWPUT comparison.

CPT Code	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
<b>70490</b>	<b>CT neck w/o contrast</b>	<b>1.28</b>	<b>25</b>	<b>5</b>	<b>15</b>	<b>5</b>	<b>0.070</b>
70540	MRI orbit, face, and/or neck w/o contrast	1.35	29	5	19	5	0.059
70551	MRI brain (including brain stem) w/o contrast	1.48	28	5	18	5	0.070
72141	MRI spine cervical w/o contrast	1.48	30	5	20	5	0.063

Typical neuro CT codes without contrast have IWPUT ranging from 0.065 to 0.072. Therefore, the specialties feel the existing value for 70490 is adequate.

CPT Code	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
70450	CT head w/o contrast	0.85	19	4	10	5	0.065
70486	CT maxillofacial w/o contrast	0.85	16	3	10	3	0.072
<b>70490</b>	<b>CT neck w/o contrast</b>	<b>1.28</b>	<b>25</b>	<b>5</b>	<b>15</b>	<b>5</b>	<b>0.070</b>

The comparison to the second most chosen KRS, 74176 (*Computed tomography, abdomen and pelvis without contrast material*), reveals a proportional decrease in RVU for survey code 70490 based upon the total and intra-service time differences of 7 minutes, and leading to a nearly identical IWPUT, supporting the proper evaluation of the survey code at the existing value.

CPT Code	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
<b>70490</b>	<b>CT neck w/o contrast</b>	<b>1.28</b>	<b>25</b>	<b>5</b>	<b>15</b>	<b>5</b>	<b>0.070</b>
74176	CT abdomen & pelvis w/o contrast	1.74	32	5	22	5	0.069

*MPC Code for 70490*

Our recommendation is compared to MPC code 70470, which has identical service times, place of service, and IWPUT. Therefore, the nearly identical RVUs is appropriate.

CPT Code	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
70470	CT head w/contrast	1.27	25	5	15	5	0.070
<b>70490</b>	<b>CT neck w/o contrast</b>	<b>1.28</b>	<b>25</b>	<b>5</b>	<b>15</b>	<b>5</b>	<b>0.070</b>

## Summary:

In summary, our expert panel recommends maintaining the current value of 70490 at 1.28 RVUs, with median service period times of 5, 15, and 5 minutes. We believe this compares favorably with the second most commonly chosen key reference service, 74176, as well as MPC code 70470. Relativity is also appropriate across the 3 codes for CT of the neck and across the larger family of codes.

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

- Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

**FREQUENCY INFORMATION**

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 70490

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology                      How often? Commonly

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period? 204051

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by code 70490 provided nationally in a one-year period is estimated to be 204,051.

Specialty Diagnostic Radiology	Frequency 192238	Percentage 94.21 %
--------------------------------	------------------	--------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 68,017 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The 2015 Medicare data estimates that CPT code 70490 is billed approximately 68,017 times in total for Medicare patients nationally in a one-year period.

Specialty Diagnostic Radiology	Frequency 64079	Percentage 94.21 %
--------------------------------	-----------------	--------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Do many physicians perform this service across the United States? Yes

### Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Imaging

BETOS Sub-classification:

Advanced imaging

BETOS Sub-classification Level II:

CAT/CT/CTA: Brain/Head/Neck

### Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 70490

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A middle-aged person presents with dysphagia and a right neck mass. A CT neck with IV contrast is performed.

Percentage of Survey Respondents who found Vignette to be Typical: 98%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 6%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

**Description of Pre-Service Work:** Review the reason for the exam and any pertinent clinical history including history of contrast allergy, renal insufficiency, or other contraindication to IV contrast. Adjust the contrast product and amount to be injected. Discuss the nature and risks of contrast reaction to the patient and obtains informed consent where applicable. Review any prior imaging studies. Determine the appropriate CT protocol for the examination and communicate that protocol to the CT technologists. Supervise the IV placement

**Description of Intra-Service Work:** Interpret scout views of area to be imaged. Supervise administration of intravenous contrast. Review initial and subsequent series of CT image data to assure adequacy of anatomic coverage and assess need for repeat sections. Interpret triplanar post contrast images of the neck. Interpret the images and evaluate the parotid glands, submandibular glands, thyroid gland, paranasal sinuses, orbits (globes, orbital fat, extraocular muscles, lacrimal glands, optic nerves), nasal cavity, nasopharynx, oropharynx, oral cavity, hypopharynx and larynx. Evaluate parapharyngeal, retropharyngeal and carotid spaces, neck muscles, and lymph nodes. Evaluate the vasculature for stenosis, occlusion or thrombosis. Evaluate cervical spine, facial bones, skull base, and visualized brain. Evaluate for etiologies of patient's symptoms such as swelling, mass, pain, difficulty swallowing, painful swallowing, cranial nerve palsies and visual abnormalities. Count and measure masses and/or enlarged lymph nodes. Compare the current imaging to all pertinent available prior studies. Dictate a report.

**Description of Post-Service Work:** Confirm lack of complication from contrast agent such as allergic reaction or extravasation of contrast. Review, edit, and sign final report for the medical record. Communicate the findings with the referring physician and/or patient.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUR analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Background**

CPT code 70491 (*Computed tomography, soft tissue neck; with contrast material(s)*) was identified on the CMS high expenditure screen of potentially misvalued codes. The American College of Radiology (ACR) and American Society of Neuroradiology (ASNR) surveyed 70491, as well as the two other codes in the family, 70490 (*Computed tomography, soft tissue neck; without contrast material*) and 70492 (*Computed tomography, soft tissue neck; without contrast material followed by contrast material(s) and further sections*) and convened an expert panel of physicians familiar with the services to review the survey data.

**Work RVU Recommendations**

The expert panel recommends maintaining value for 70490 and 70491, which are less than the survey 25<sup>th</sup> percentile, and increasing value for 70492 to the 25<sup>th</sup> percentile survey value.

**Pre, Intra, and Post Service Times**

The panel recommends the median survey service period times for all three codes. Our work and service period times are summarized in the following table:

CPT	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUR
70490	CT neck w/o contrast	1.28	25	5	15	5	0.070
70491	CT neck w/contrast	1.38	27	5	17	5	0.068
70492	CT neck w/o and w/contrast	1.62	30	5	20	5	0.070

**Compelling Evidence**

The panel recommends an increase in value in only one code in the family, 70492 based on change in patient population as compelling evidence.

#### *Flawed Methodology*

70492 currently has no RUC validated survey times, and is listed as a CMS/other code in the RUC Physician Time database. No RUC rationale is available to validate the currently assigned wRVU.

#### *Change in Patient Population*

Two different factors have worked concomitantly on changing the typical patient for 70492 resulting in an overall increase in patient complexity. Firstly, the increased awareness of radiation dose and inefficient imaging has led to an increased scrutiny of indications for performing a single setting double CT such as CT neck with and without contrast. This is reflected in the CMS claims data which shows a 24% reduction in the numbers of such CT scans being performed since 2009. This contraction in numbers has left a more complex patient population often having complex masses, prior surgeries, or infection. Additionally, in 2006, the 4D parathyroid CT scan, a multiphase CT scan, was first described by Rodgers, et al, for localization of parathyroid adenomas. It has become widely used, and is one of the most common protocols for CPT code 70492 (*Computed tomography, soft tissue neck; without contrast material followed by contrast material(s) and further sections*). The scan is considered to be an important tool in the preoperative planning for parathyroidectomies to reduce morbidity and length of surgery because it allows for acquisition of high resolution images of the parathyroid adenoma, which leads to a more precise localization compared to the other imaging modalities such as ultrasound of the neck and parathyroid scintigraphy. The acquired images require careful scrutiny for potentially small (including less than 5 mm) lesions that are only differentiated from normal tissues, such as lymph nodes, by the non-contrast appearance and enhancement characteristically seen in an early and late contrast phase. The evaluation for these lesions can be technically challenging because of their location at the same level of the shoulders and contrast bolus, which can lead to artifacts on CT. The former most common use for CPT code 70492 was to characterize a palpable mass simply by performing CT neck without contrast followed by contrast to determine whether the lesion was cystic or solid. CT parathyroid imaging requires a pre-contrast CT of the neck followed by CT neck with contrast performed in at least 2 different phases (often late arterial and delayed venous), essentially increasing the imaging volume by 33%. Interrogation of the acquired images for parathyroid adenoma also requires more skill than evaluating a palpable mass as the location of the adenoma is unknown. Parathyroid adenomas can assume ectopic locations buried in the pyriform sinus, lateral esophageal wall, or mediastinum in addition to the standard locations making interpretation of these studies challenging. Finally, parathyroid adenomas and parathyroid hypertrophy can have similar appearances, therefore searching for multiple enlarged parathyroid glands is imperative. This study has become widespread as surgeons have increasingly ordered this exam to assist in preoperative planning. Therefore, the patient population for 70492 has dramatically changed over the past decade following the development of this new technique.

**Summary of Recommendation for CPT Code 70491** (*Computed tomography, soft tissue neck; with contrast materials(s)*)

Our expert panel recommends maintaining the current value of 70491 at 1.38 RVU, which is less than the survey 25<sup>th</sup> percentile, with median service period times of 5, 17, and 5 minutes.

CPT code 70491 (*Computed tomography, soft tissue neck; with contrast material(s)*) is an invaluable tool in investigating a diverse set of pathologies, which range from minor to life threatening. It is an important tool in investigating neck pain, swelling, masses, dysphagia/odynophagia, orbital pathologies as well as the location/type/extent of a known infectious/inflammatory/neoplastic process involving the neck. Not only is a positive result significant, a negative result is also pertinent in patient management, in relieving patient anxiety, and in providing assurance to ordering physicians. A combination of its utility (as a positive and negative predictor of pathology), intensity, and the amount of technical training necessary to accurately interpret led us to believe that this procedure is appropriately valued as above.

*Comparison to Key Reference Services for 70491*

Our recommended work RVU of 1.38 compares favorably to the most commonly chosen key reference service of 70542 (*Magnetic resonance (eg, proton) imaging, orbit, face, and/or neck; with contrast material(s)*). 70542 has more intra-service time and similar IWPUT, with the RVU difference depicted as proportional. In the Intensity/Complexity survey results, 70491 scored similar on all categories except survey respondents reported slightly less technical skill, which is reflected in the slightly reduced IWPUT for the surveyed code.

CPT Code	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
<b>70491</b>	<b>CT neck w/contrast</b>	<b>1.38</b>	<b>27</b>	<b>5</b>	<b>17</b>	<b>5</b>	<b>0.068</b>
70542	MRI orbit, face, neck w/contrast	1.62	30	5	20	5	0.070

Our recommendation is compared to the MPC code, 74170 (*Computed tomography, abdomen; without contrast material, followed by contrast material(s) and further sections*), which has a similar service time and IWPUT, supporting the similar RVU.

CPT Code	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
<b>70491</b>	<b>CT neck w/contrast</b>	<b>1.38</b>	<b>27</b>	<b>5</b>	<b>17</b>	<b>5</b>	<b>0.068</b>
74170	CT abdomen w/o contrast and w/contrast	1.40	28	5	18	5	0.065

#### Summary:

In summary, our expert panel recommends maintaining the value of 70491 at 1.38 RVU, with median service period times of 5, 17, and 5 minutes. We believe this compares favorably with the most commonly chosen key reference service, 70542, as well as MPC code 74170. Relativity is also appropriate across the 3 codes for CT of the neck and across the larger family of CT codes.

---

### SERVICES REPORTED WITH MULTIPLE CPT CODES

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

- Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

---

### FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 70491

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology                      How often? Commonly

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period? 715065

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by code 70491 provided nationally in a one-year period is estimated to be 715,065.

Specialty Diagnostic Radiology	Frequency 675695	Percentage 94.49 %
--------------------------------	------------------	--------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?  
238,355 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The 2015 Medicare data estimates that CPT code 70491 is billed approximately 238,355 times in total for Medicare patients nationally in a one-year period.

Specialty Diagnostic Radiology	Frequency 225232	Percentage 94.49 %
--------------------------------	------------------	--------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Do many physicians perform this service across the United States? Yes

---

### **Berenson-Eggers Type of Service (BETOS) Assignment**

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Imaging

BETOS Sub-classification:

Advanced imaging

BETOS Sub-classification Level II:

CAT/CT/CTA: Brain/Head/Neck

---

### **Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 70491

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A middle-aged person presents with hyperparathyroidism. A CT neck without and with IV contrast is performed.

Percentage of Survey Respondents who found Vignette to be Typical: 96%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 4%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: Review the reason for the exam and any pertinent clinical history including history of contrast allergy, renal insufficiency, or other contraindication to IV contrast. Adjust the contrast product and amount to be injected. Discuss the nature and risks of contrast reaction to the patient and obtains informed consent where applicable. Review any prior imaging studies. Determine the appropriate CT protocol for the examination and communicate that protocol to the CT technologists. Supervise the IV placement.

Description of Intra-Service Work: Interpret scout views of area to be imaged. Review non-contrast CT images to ensure proper anatomic coverage prior to contrast administration. Supervise administration of intravenous contrast. Review initial and subsequent series of CT image data to assure adequacy of anatomic coverage and assess need for repeat sections. Supervise reconstructions in coronal and/or sagittal plane images. Interpret triplanar pre contrast and multiphase post-contrast images of the neck. Interpret the images and evaluate the parotid glands, submandibular glands, thyroid gland, paranasal sinuses, orbits (globes, orbital fat, extraocular muscles, lacrimal glands, optic nerves), nasal cavity, nasopharynx, oropharynx, oral cavity, hypopharynx and larynx. Evaluate parapharyngeal, retropharyngeal and carotid spaces, neck muscles, and lymph nodes. Evaluate the vasculature for stenosis, occlusion or thrombosis. Evaluate cervical spine, facial bones, skull base, and visualized brain Evaluate for etiologies of patient's symptoms such as swelling, mass, pain, difficulty swallowing, painful swallowing, cranial nerve palsies and visual abnormalities. Count and measure masses and/or enlarged lymph nodes. Compare the current imaging to all pertinent available prior studies. Dictate a report.

Description of Post-Service Work: Confirm lack of complication from contrast agent such as allergic reaction or extravasation of contrast. Review, edit, and sign final report for the medical record. Communicate the findings with the referring physician and/or patient.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUR analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Background**

CPT code 70491 (*Computed tomography, soft tissue neck; with contrast material(s)*) was identified on the CMS high expenditure screen of potentially misvalued codes. The American College of Radiology (ACR) and American Society of Neuroradiology (ASNR) surveyed 70491, as well as the two other codes in the family, 70490 (*Computed tomography, soft tissue neck; without contrast material*) and 70492 (*Computed tomography, soft tissue neck; without contrast material followed by contrast material(s) and further sections*) and convened an expert panel of physicians familiar with the services to review the survey data.

**Work RVU Recommendations**

The expert panel recommends maintaining value for 70490 and 70491, which are less than the survey 25<sup>th</sup> percentile, and increasing value for 70492 to the 25<sup>th</sup> percentile survey value.

**Pre, Intra, and Post Service Times**

The panel recommends the median survey service period times for all three codes. Our work and service period times are summarized in the following table:

CPT	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUR
70490	CT neck w/o contrast	1.28	25	5	15	5	0.070
70491	CT neck w/contrast	1.38	27	5	17	5	0.068
70492	CT neck w/o and w/contrast	1.62	30	5	20	5	0.070

**Compelling Evidence**

The panel recommends an increase in value in only one code in the family, 70492 based on change in patient population as compelling evidence.

### *Flawed Methodology*

70492 currently has no RUC validated survey times, and is listed as a CMS/other code in the RUC Physician Time database. No RUC rationale is available to validate the currently assigned wRVU.

### *Change in Patient Population*

Two different factors have worked concomitantly on changing the typical patient for 70492 resulting in an overall increase in patient complexity. Firstly, the increased awareness of radiation dose and inefficient imaging has led to an increased scrutiny of indications for performing a single setting double CT such as CT neck with and without contrast. This is reflected in the CMS claims data which shows a 24% reduction in the numbers of such CT scans being performed since 2009. This contraction in numbers has left a more complex patient population often having complex masses, prior surgeries, or infection. Additionally, in 2006, the 4D parathyroid CT scan, a multiphase CT scan, was first described by Rodgers, et al, for localization of parathyroid adenomas. It has become widely used, and is one of the most common protocols for CPT code 70492 (*Computed tomography, soft tissue neck; without contrast material followed by contrast material(s) and further sections*). The scan is considered to be an important tool in the preoperative planning for parathyroidectomies to reduce morbidity and length of surgery because it allows for acquisition of high resolution images of the parathyroid adenoma, which leads to a more precise localization compared to the other imaging modalities such as ultrasound of the neck and parathyroid scintigraphy. The acquired images require careful scrutiny for potentially small (including less than 5 mm) lesions that are only differentiated from normal tissues, such as lymph nodes, by the non-contrast appearance and enhancement characteristically seen in an early and late contrast phase. The evaluation for these lesions can be technically challenging because of their location at the same level of the shoulders and contrast bolus, which can lead to artifacts on CT. The former most common use for CPT code 70492 was to characterize a palpable mass simply by performing CT neck without contrast followed by contrast to determine whether the lesion was cystic or solid. CT parathyroid imaging requires a pre-contrast CT of the neck followed by CT neck with contrast performed in at least 2 different phases (often late arterial and delayed venous), essentially increasing the imaging volume by 33%. Interrogation of the acquired images for parathyroid adenoma also requires more skill than evaluating a palpable mass as the location of the adenoma is unknown. Parathyroid adenomas can assume ectopic locations buried in the pyriform sinus, lateral esophageal wall, or mediastinum in addition to the standard locations making interpretation of these studies challenging. Finally, parathyroid adenomas and parathyroid hypertrophy can have similar appearances, therefore searching for multiple enlarged parathyroid glands is imperative. This study has become widespread as surgeons have increasingly ordered this exam to assist in preoperative planning. Therefore, the patient population for 70492 has dramatically changed over the past decade following the development of this new technique.

Rodgers SE, Hunter GJ, Hamberg LM, et al. Improved preoperative planning for directed parathyroidectomy with 4-dimensional computed tomography. *Surgery* 2006;140(6):932–940; discussion 940–941

Our recommendations are consistent with the RUC-reviewed reference services detailed below and maintain relativity across the family.

**Summary of Recommendation for CPT Code 70492 (*Computed tomography, soft tissue neck; without contrast material followed by contrast material(s) and further sections*)**

Our expert panel recommends increasing the current value of 70492 to 1.62 RVU, the survey 25<sup>th</sup> percentile, with median service period times of 5, 20, and 5 minutes.

CPT code 70492 (*Computed tomography, soft tissue neck; without contrast material followed by contrast material(s) and further sections*) is primarily used as a tool in the preoperative evaluation of parathyroid adenomas or carcinomas. A combination of its utility (as a positive and negative predictor of pathology), intensity, and the amount of technical training necessary to accurately interpret led us to believe that this procedure is appropriately valued as above.

*Comparison to Key Reference Services for 70492*

Our recommended work RVU of 1.62 is less than the most commonly chosen key reference service of 70543 (*Magnetic resonance (eg, proton) imaging, orbit, face, and/or neck; without contrast material(s), followed by contrast material(s) and further sequences*). 70492 has 5 minutes less intra-service time, with a slightly lower IWPUT. The slightly lower IWPUT is supported by the survey respondents reporting slightly less technical skill for 70492 compared to 70543, but reporting otherwise similar intensity and complexity measures. The RVU differences between 70492 and 70543 appear reasonable given these differences in time and IWPUT.

CPT Code	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
<b>70492</b>	<b>CT neck w/o and w/ contrast</b>	<b>1.62</b>	<b>30</b>	<b>5</b>	<b>20</b>	<b>5</b>	<b>0.070</b>
70543	MRI orbit, face, neck w/o and w/contrast	2.15	35	5	25	5	0.077

Our recommendation is compared to the MPC code, 74176 (*Computed tomography, abdomen and pelvis; without contrast material*), which demonstrates 2 minutes more of intra-service time and near identical IWP/UT to the surveyed code. The RVU difference appears proportional.

CPT Code	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWP/UT
<b>70492</b>	<b>CT neck w/o and w/ contrast</b>	<b>1.62</b>	<b>30</b>	<b>5</b>	<b>20</b>	<b>5</b>	<b>0.070</b>
74176	CT abdomen & pelvis w/o contrast	1.74	32	5	22	5	0.069

Summary:

In summary, our expert panel recommends increasing the current value of 70492 to 1.62 RVU, with median service period times of 5, 20, and 5 minutes. We believe this compares favorably with the most commonly chosen key reference service, 70543, as well as MPC code 74176. Relativity is also appropriate across the 3 codes for CT of the neck and across the larger family of CT codes.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

- Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 70492

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology

How often? Commonly

Specialty

How often?

Specialty

How often?

Estimate the number of times this service might be provided nationally in a one-year period? 74337

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by code 70492 provided nationally in a one-year period is estimated to be 74,337.

Specialty Diagnostic Radiology	Frequency 68166	Percentage 91.69 %
--------------------------------	-----------------	--------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 24,779 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The 2015 Medicare data estimates that CPT code 70492 is billed approximately 24,779 times in total for Medicare patients nationally in a one-year period.

Specialty Diagnostic Radiology	Frequency 22722	Percentage 91.69 %
--------------------------------	-----------------	--------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Do many physicians perform this service across the United States? Yes

CPT Long Descriptor:

<b>70490</b>	Computed tomography, soft tissue neck; without contrast material
<b>70491</b>	Computed tomography, soft tissue neck; with contrast material(s)
<b>70492</b>	Computed tomography, soft tissue neck; without contrast material followed by contrast material(s) and further sections

Global Period: XXX Meeting Date: January 2017

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:

The American College of Radiology (ACR) and American Society of Neuroradiology (ASNR) convened a consensus panel to finalize the practice expense data for the CT soft tissue of neck code family, CPT codes 70490, 70491, and 70492.

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale:

The societies included the existing PE inputs for codes 70490, 70491, and 70492 on the spreadsheet to serve as a reference.

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:

- **Prepare room, equipment, supplies** – 2 minutes is the standard for most exams; however, we are requesting 4 minutes for 70491 and 70492 to allow additional time for the technologist to set up the contrast injector and prepare the contrast materials for injection.
- **Prepare and position patient/ monitor patient/ set up IV-** 2 minutes is standard for non-contrast codes and consistent with prior CT exams. We recommended 5 minutes for the codes involving contrast (70491 and 70492) to allow for time for positioning the patient with the IV, connecting the patient to the contrast injector, and ensuring there are no impediments to table motion during the exam.

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:

- **Availability of prior images confirmed** - CMS finalized a standard of 2 minutes as per Table 5 “Clinical Labor Tasks Associated With Digital Technology” in the CY 2017 MPFS Final Rule.
- **Patient clinical information and questionnaire reviewed by technologist, order from physician confirmed and exam protocolled by radiologist** - CMS finalized a standard of 2 minutes as per Table 5 “Clinical Labor Tasks Associated With Digital Technology” in the CY 2017 MPFS Final Rule.

- **Technologist QC's images in PACS, checking for all images, reformats, and dose page** – CMS finalized a standard of 3 minutes for services involving CTs which are considered “intermediate” in the CY 2017 MPFS Final Rule.
- **Review examination with interpreting MD** - CMS finalized a standard of 2 minutes as per Table 5 “Clinical Labor Tasks Associated With Digital Technology” in the CY 2017 MPFS Final Rule.
- **Exam documents scanned into PACS. Exam completed in RIS system to generate billing process and to populate images into Radiologist work queue** - CMS finalized a standard of 1 minute as per Table 5 “Clinical Labor Tasks Associated With Digital Technology” in the CY 2017 MPFS Final Rule.
- **PACS Professional Workstation (ED053)** - CMS finalized an equipment time for the PACS Professional Workstation which is equal to the sum of half of the physician work pre-service time and all of the physician intra-service time in the CY 2017 MPFS Final Rule.

5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

- Availability of prior images confirmed
- Patient clinical information and questionnaire reviewed by technologist, order from physician confirmed and exam protocolled by radiologist

Intra-Service Clinical Labor Activities:

- Greet patient, provide gowning, ensure appropriate medical records are available
- Provide pre-service education/obtain consent
- Prepare room, equipment, supplies/ Enter patient demographic information into scanner
- Prepare and position patient/ monitor patient/ set up IV
- Acquire Images
- Clean room/equipment by physician staff
- Technologist QC's images in PACS, checking for all images, reformats, and dose page
- Review examination with interpreting MD
- Exam documents scanned into PACS. Exam completed in RIS system to generate billing process and to populate images into Radiologist work queue

Post-Service Clinical Labor Activities:

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
*New Technology*

January 2017

**Ultrasound of Extremity**

In February 2010, the CPT Editorial Panel created CPT codes 76881 *Ultrasound, extremity, nonvascular, real-time with image documentation; complete* and 76882 *Ultrasound, extremity, nonvascular, real-time with image documentation; limited, anatomic specific*. In April 2010, the RUC recommended a CPT Assistant article be written to ensure the proper reporting of these two services. It was noted by the RUC that these services should not typically be reported more than once per day. This service was flagged as New Technology/New Services and reviewed by the Relativity Assessment Workgroup (RAW) in January 2015. The Workgroup recommended that the specialty societies develop a CPT Assistant article to define the proper coding of extremity ultrasound, particularly as it applies to the elements necessary to report a complete study and that the Workgroup should review in October 2016 after two years of additional Medicare utilization data are available. This coding clarification was published in the September 2016 CPT Assistant.

In October 2016, the specialty society noted and the Workgroup agreed that there are two different dominant specialties providing the complete and the limited ultrasound of extremity services, causing variation in the typical practice expense inputs for each code. The RUC recommended to 1) Refer CPT codes 76881 and 76882 to the Practice Expense Subcommittee for review of the direct practice expense inputs for January 2017; 2) Refer to the CPT Editorial Panel to clarify the introductory language regarding the reference to one joint in the complete ultrasound; and 3) Review again in 3 years (October 2019) at the Relativity Assessment Workgroup.

At the 2017 January RUC meeting the Practice Expense Subcommittee reviewed the direct practice inputs for CPT codes 76881 and 76882 and reduced the time for the *Technologist QC's images in PACS, checking for all images, reformats, and dose page* and *Review examination with interpreting MD* clinical activity input from 2 to 0 for 76881 only. Additionally, the supply input *pillow case; SB037* was reduced from 1 to 0 for both services.

Following the meeting the specialty societies submitted a letter to the CPT Editorial Panel to clarify the introductory language regarding the reference to one joint in the complete ultrasound.

**The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.**

**New Technology**

These services will remain on the New Technology list and be re-reviewed by the RUC in three years to ensure correct valuation and utilization assumptions.

<b>76882</b>	Ultrasound, extremity, nonvascular, real-time with image documentation; limited, anatomic specific

Global Period: XXX Meeting Date: January 2017

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:

The American College of Radiology (ACR), American Academy of Orthopaedic Surgeons (AAOS), American College of Rheumatology (ACRh), and American Podiatric Medical Association (APMA) convened a consensus panel to finalize the practice expense data for the ultrasound extremity code family, CPT codes 76881 and 76882.

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale:

The societies included the existing PE inputs for codes 76881 and 76882 on the spreadsheet to serve as a reference.

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:

- **Patient clinical information and questionnaire reviewed by technologist, order from physician confirmed and exam protocolled by radiologist** - CMS finalized a standard of 2 minutes as per Table 5 “Clinical Labor Tasks Associated With Digital Technology” in the CY 2017 MPFS Final Rule.
- **Provide pre-service education/obtain consent** – The patient needs to be informed of the nature of this procedure and consent must be given to the physician staff; this is the standard of care.
- **Acquire Images (76882)** - Change in provider.
- **Technologist QC's images in PACS, checking for all images, reformats, and dose page** – CMS finalized 2 minutes as the standard for the typical procedure involving imaging in the CY 2017 MPFS Final Rule. Subcommittee finalized 2 minutes for 76882 only
- **Review examination with interpreting MD** - CMS finalized a standard of 2 minutes as per Table 5 “Clinical Labor Tasks Associated With Digital Technology” in the CY 2017 MPFS Final Rule. Subcommittee finalized 2 minutes for 76882 only

- **Exam documents scanned into PACS. Exam completed in RIS system to generate billing process and to populate images into Radiologist work queue** - CMS finalized a standard of 1 minute as per Table 5 “Clinical Labor Tasks Associated With Digital Technology” in the CY 2017 MPFS Final Rule.
- **PACS Workstation Proxy (ED050)** – Change in provider. The current formula for the PACS Workstation Proxy is equivalent to the total service period clinical labor time which is reflected for 76882.
- **Professional PACS Workstation (ED053)** – Change in provider. Equal to the physician work intra-service time and half of the physician work pre-service time for 76881.
- **Table, power (EF031)** – Change in provider. The specialties marked this equipment time as equivalent to the total service period clinical labor time.
- **Room, ultrasound, general (EL015)** - Change in provider.
- **Ultrasound unit, portable (EQ250)** - Change in provider. The specialties marked this equipment time as equivalent to the total service period clinical labor time.

5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

- Availability of prior images confirmed
- Patient clinical information and questionnaire reviewed by technologist, order from physician confirmed and exam protocolled by radiologist

Intra-Service Clinical Labor Activities:

- Greet patient, provide gowning, ensure appropriate medical records are available
- Provide pre-service education/obtain consent
- Prepare room, equipment, supplies
- Prepare and position patient/ monitor patient/ set up IV
- Acquire images
- Clean room/equipment by physician staff
- Technologist QC's images in PACS, checking for all images, reformats, and dose page
- Review examination with interpreting MD
- Exam documents scanned into PACS. Exam completed in RIS system to generate billing process and to populate images into Radiologist work queue

Post-Service Clinical Labor Activities:

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
**\*CMS High Expenditure Procedures\***

January 2017

**Cardiac Electrophysiology Device Monitoring Services**

In the Final Rule for 2016 CMS re-ran the high expenditure services across specialties with Medicare allowed charges of \$10 million or more. CMS identified the top 20 codes by specialty in terms of allowed charges, excluding 010 and 090-day global services, anesthesia and Evaluation and Management services and services reviewed since CY 2010. The specialty societies surveyed 93278-93292 at the October 2016 meeting. The specialty societies indicated that the survey respondents may have been unclear and responded per transmission instead of per 30-90 days for all transmissions. The RUC requested that the remote cardiac device monitoring codes 93293-93298 be resurveyed for January 2017 with specific direction that the service includes all transmissions for 30 or 90 days.

The specialty societies surveyed these remote cardiac monitoring services twice and the intra-service times were similar with each survey. The specialties noted and the RUC confirmed that the current intra-service times for these services were not survey times but were extrapolated from other codes in the family and should not be used to compare the time required to perform these services. Comparing the incorrect existing times demonstrate an artificial decrease in time.

***93293 Transtelephonic rhythm strip pacemaker evaluation(s) single, dual, or multiple lead pacemaker system, includes recording with and without magnet application with analysis, review and report(s) by a physician or other qualified health care professional, up to 90 days***

The RUC reviewed the survey responses from 55 cardiologists and determined that the survey 25<sup>th</sup> percentile work RVU of 0.31 appropriately accounts for the work required to perform this service. The RUC recommends 3 minutes pre-service, 5 minutes intra-service and 5 minutes immediate post-service time. The RUC had previously derived at an appropriate work RVU and time by taking the frequency of reporting this service multiplied by the work RVU for 93010, therefore the previous work and time should not be used as a comparison.

The RUC compared the surveyed code to the top key reference code 93224 *External electrocardiographic recording up to 48 hours by continuous rhythm recording and storage; includes recording, scanning analysis with report, review and interpretation by a physician or other qualified health care professional* (work RVU = 0.52 and 15 minutes intra-service time) and agreed with the survey respondents that the surveyed code is slightly more intense and complex to perform, however code 93224 requires 10 more minutes intra-service time and thus is appropriately valued higher. The RUC also compared the surveyed code to the second top key reference service 93018 *Cardiovascular stress test using maximal or submaximal treadmill or bicycle exercise, continuous electrocardiographic monitoring, and/or pharmacological stress; interpretation and report only* (work RVU = 0.30 and 5 minutes intra-service time) and noted that these services require similar intensity and complexity, physician time

and work to perform and are valued similarly. For additional support the RUC referenced MPC codes 72114 *Radiologic examination, spine, lumbosacral; complete, including bending views, minimum of 6 views* (work RVU = 0.32 and 5 minutes intra-service time) and 92081 *Visual field examination, unilateral or bilateral, with interpretation and report; limited examination (eg, tangent screen, Autoplot, arc perimeter, or single stimulus level automated test, such as Octopus 3 or 7 equivalent)* (work RVU = 0.30 and 7 minutes intra-service time), which provide a good comparison relative to services in the Medicare physician payment schedule. **The RUC recommends a work RVU of 0.31 for CPT code 93293.**

***93294 Interrogation device evaluation(s) (remote), up to 90 days; single, dual, or multiple lead pacemaker system with interim analysis, review(s) and report(s) by a physician or other qualified health care professional***

The RUC reviewed the survey responses from 64 cardiologists and determined that the survey 25<sup>th</sup> percentile work RVU of 0.60, below the current value, appropriately accounts for the work required to perform this service. The RUC recommends 5 minutes pre-service, 10 minutes intra-service and 5 minutes immediate post-service time. The RUC had previously derived at an appropriate work RVU and time by taking the frequency of reporting this service multiplied by the work RVU for 93288, therefore the previous work and time should not be used as a comparison.

The RUC compared the surveyed code to the top key reference code 93224 *External electrocardiographic recording up to 48 hours by continuous rhythm recording and storage; includes recording, scanning analysis with report, review and interpretation by a physician or other qualified health care professional* (work RVU = 0.52 and 15 minutes intra-service time) and agreed with the survey respondents that the surveyed code is slightly more intense and complex to perform, thus is appropriately valued higher. For additional support the RUC referenced similar MPC codes 76815 *Ultrasound, pregnant uterus, real time with image documentation, limited (eg, fetal heart beat, placental location, fetal position and/or qualitative amniotic fluid volume), 1 or more fetuses* (work RVU = 0.65 and 5.5 minutes intra-service time) and 69210 *Removal impacted cerumen requiring instrumentation, unilateral* (work RVU = 0.61 and 10 minutes intra-service time), which provide a good comparison relative to services in the Medicare physician payment schedule. **The RUC recommends a work RVU of 0.60 for CPT code 93294.**

***93295 Interrogation device evaluation(s) (remote), up to 90 days; single, dual, or multiple lead implantable defibrillator system with interim analysis, review(s) and report(s) by a physician or other qualified health care professional***

The RUC reviewed the survey responses from 64 cardiologists and determined that the survey 25<sup>th</sup> percentile work RVU of 0.69 and median work RVU of 0.95 did not appropriately account for the work required to perform this service. Based on the RUC pre-facilitation comments, the specialty society and the RUC recommends a direct crosswalk to CPT code 76770 *Ultrasound, retroperitoneal (eg, renal, aorta, nodes), real time with image documentation; complete* (work RVU = 0.74 and 10 minutes intra-service time). The RUC recommends 5 minutes pre-service, 10 minutes intra-service and 5 minutes immediate post-service time. The RUC noted that although 93294 and 93295 require the same physician time, there is an increased intensity and amount of information considered when reading ICD interrogations (93295) versus pacemaker interrogations (93294) and thus are valued differently. The RUC noted that the current intra-time of 22.5 minutes is an extrapolated calculation from that of the times of 93289, additionally the April 2008 survey times are incorrect in the RUC database. The April 2008 survey times were 5 minutes pre/15 minutes intra/5 minutes immediate post-service time and the 25<sup>th</sup> percentile work RVU of 0.78. The RUC confirmed that the previous times and work RVU calculations could not be used as comparison as they reflect an artificial decrease in physician time.

The RUC compared the surveyed code to the top key reference code 93224 *External electrocardiographic recording up to 48 hours by continuous rhythm recording and storage; includes recording, scanning analysis with report, review and interpretation by a physician or other qualified health care professional* (work RVU = 0.52 and 15 minutes intra-service time) and agreed with the survey respondents that the surveyed code is more intense and complex to perform, thus is appropriately valued higher. For additional support the RUC referenced similar MPC codes 99213 *Office or other outpatient visit for the evaluation and management of an established patient*, (work RVU = 0.97 and 15 minutes intra-service time) and 78306 *Bone and/or joint imaging; whole body* (work RVU = 0.86 and 8 minutes intra-service time), which provide a good comparison relative to services in the Medicare physician payment schedule. **The RUC recommends a work RVU of 0.74 for CPT code 93295.**

**93297 Interrogation device evaluation(s), (remote) up to 30 days; implantable cardiovascular monitor system, including analysis of 1 or more recorded physiologic cardiovascular data elements from all internal and external sensors, analysis, review(s) and report(s) by a physician or other qualified health care professional**

The RUC reviewed the survey responses from 56 cardiologists and determined that the current work RVU of 0.52, below the survey 25<sup>th</sup> percentile, appropriately accounts for the work required to perform this service. The RUC recommends 5 minutes pre-service, 6 minutes intra-service and 5 minutes immediate post-service time. The RUC noted that the current intra-time of 24 minutes is an extrapolated calculation from that of the times of 93290, additionally the April 2008 survey times are incorrect in the RUC database. The April 2008 survey times were 5 minutes pre/12 minutes intra/8 minutes immediate post-service time. The RUC confirmed that the previous times and work RVU calculations could not be used as comparison as they reflect an artificial decrease in physician time.

The RUC compared the surveyed code to the top key reference code 93224 *External electrocardiographic recording up to 48 hours by continuous rhythm recording and storage; includes recording, scanning analysis with report, review and interpretation by a physician or other qualified health care professional* (work RVU = 0.52 and 15 minutes intra-service time) and agreed with the survey respondents that the surveyed code is more intense and complex to perform and requires less physician time. For additional support the RUC referenced similar MPC codes 76536 *Ultrasound, soft tissues of head and neck (eg, thyroid, parathyroid, parotid), real time with image documentation* (work RVU = 0.56 and 10 minutes intra-service time) and 76857 *Ultrasound, pelvic (nonobstetric), real time with image documentation; limited or follow-up (eg, for follicles)* (work RVU = 0.50 and 7 minutes intra-service time), which provide a good comparison relative to services in the Medicare physician payment schedule. For additional support the RUC reference 92136 *Ophthalmic biometry by partial coherence interferometry with intraocular lens power calculation* (work RVU = 0.54 and 5 minutes intra-service time). **The RUC recommends a work RVU of 0.52 for CPT code 93297.**

**93298 Interrogation device evaluation(s), (remote) up to 30 days; implantable loop recorder system, including analysis of recorded heart rhythm data, analysis, review(s) and report(s) by a physician or other qualified health care professional**

The RUC reviewed the survey responses from 64 cardiologists and determined that the current work RVU of 0.52, which is also the survey 25<sup>th</sup> percentile, appropriately accounts for the work required to perform this service. The RUC recommends 5 minutes pre-service, 7 minutes intra-service and 5 minutes immediate post-service time. The RUC noted that the current intra-time of 24 minutes is an extrapolated calculation from

that of the times of 93290, additionally the April 2008 survey times are incorrect in the RUC database. The April 2008 survey times were 5 minutes pre/10 minutes intra/5 minutes immediate post-service time. The RUC confirmed that the previous times and work RVU calculations could not be used as comparison as they reflect an artificial decrease in physician time.

The RUC compared the surveyed code to the top key reference code 93224 *External electrocardiographic recording up to 48 hours by continuous rhythm recording and storage; includes recording, scanning analysis with report, review and interpretation by a physician or other qualified health care professional* (work RVU = 0.52 and 15 minutes intra-service time) and agreed with the survey respondents that the surveyed code is more intense and complex to perform and requires less physician time. For additional support the RUC referenced similar MPC codes 76536 *Ultrasound, soft tissues of head and neck (eg, thyroid, parathyroid, parotid), real time with image documentation* (work RVU = 0.56 and 10 minutes intra-service time) and 76857 *Ultrasound, pelvic (nonobstetric), real time with image documentation; limited or follow-up (eg, for follicles)* (work RVU = 0.50 and 7 minutes intra-service time), which provide a good comparison relative to services in the Medicare physician payment schedule. For additional support the RUC reference 92136 *Ophthalmic biometry by partial coherence interferometry with intraocular lens power calculation* (work RVU = 0.54 and 5 minutes intra-service time). **The RUC recommends a work RVU of 0.52 for CPT code 93298.**

#### **Affirmation of RUC Recommendations**

The RUC affirmed the recent RUC recommendations for CPT codes 93279-93292, previously submitted for the same *CPT 2018* cycle. The relativity within the family remains correct.

#### **Practice Expense**

The RUC reviewed the direct practice expense inputs for this entire family at the October 2016 RUC meeting and are attached to this recommendation.

#### **Work Neutrality**

The RUC's recommendation for these codes will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

<b>CPT Code</b>	<b>CPT Descriptor</b>	<b>Global Period</b>	<b>Work RVU Recommendation</b>
93279 (f)	Programming device evaluation (in person) with iterative adjustment of the implantable device to test the function of the device and select optimal permanent programmed values with analysis, review and report by a physician or	XXX	0.65 (No Change)

	other qualified health care professional; single lead pacemaker system		(Affirmed Oct 2016 RUC Recommendation)
93280	Programming device evaluation (in person) with iterative adjustment of the implantable device to test the function of the device and select optimal permanent programmed values with analysis, review and report by a physician or other qualified health care professional; dual lead pacemaker system	XXX	0.77 (No Change)  (Affirmed Oct 2016 RUC Recommendation)

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

---

CPT Code: 93293      Tracking Number

Original Specialty Recommended RVU: **0.32**Presented Recommended RVU: **0.31**

Global Period: XXX

RUC Recommended RVU: **0.31**

CPT Descriptor: Transtelephonic rhythm strip pacemaker evaluation(s) single, dual, or multiple lead pacemaker system, includes recording with and without magnet application with analysis, review and report(s) by a physician or other qualified health care professional, up to 90 days

---

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 69-year-old patient with complete heart block has a six-year old DC-PM that is being monitored for battery depletion with transtelephonic rhythm strip pacemaker evaluations. (Note: this service includes all evaluations received within a 90-day period.)

Percentage of Survey Respondents who found Vignette to be Typical: 93%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

---

Description of Pre-Service Work: Review patient records to identify the indication for pacemaker therapy, manufacturer and model of the implanted pacemaker and leads, history of pacemaker dependency, and atrial and ventricular arrhythmias. Review prior records of pacing parameters and compare to prior remote and in-person interrogations.

Description of Intra-Service Work: Record rhythm strip for 30 seconds and evaluate for heart rate, capture and sensing of each of the leads, and atrial or ventricular arrhythmias. Record a second rhythm strip with a magnet located over the pacemaker and evaluate for capture and sensing of each of the leads, for atrial or ventricular arrhythmias, and for the magnet response including paced rate. Physician review of above data produces an assessment of the adequacy of each lead's sensing and capture and battery function.

Description of Post-Service Work: Inform patient of the test results. Prepare a final report that is reviewed by the attending physician and amend as necessary. Approve, sign, and distribute report to patient's record, the referring and primary physicians, and the attending physician.

**Modifier -51 Exempt Status**

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

**New Technology/Service:**

Is this new/revised procedure considered to be a new technology or service? No

**TOP KEY REFERENCE SERVICE:**

Key CPT Code	Global	Work RVU	Time Source
93224	XXX	0.52	RUC Time

CPT Descriptor External electrocardiographic recording up to 48 hours by continuous rhythm recording and storage; includes recording, scanning analysis with report, review and interpretation by a physician or other qualified health care professional

**SECOND HIGHEST KEY REFERENCE SERVICE:**

Key CPT Code	Global	Work RVU	Time Source
93018	XXX	0.30	RUC Time

CPT Descriptor Cardiovascular stress test using maximal or submaximal treadmill or bicycle exercise, continuous electrocardiographic monitoring, and/or pharmacological stress; interpretation and report only

**KEY MPC COMPARISON CODES:**

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
72114	XXX	0.32	RUC Time	94,995

CPT Descriptor 1 Radiologic examination, spine, lumbosacral; complete, including bending views, minimum of 6 views

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
92081	XXX	0.30	RUC Time	102,308

CPT Descriptor 2 Visual field examination, unilateral or bilateral, with interpretation and report; limited examination (eg, tangent screen, Autoplot, arc perimeter, or single stimulus level automated test, such as Octopus 3 or 7 equivalent)

Other Reference CPT Code	Global	Work RVU	Time Source
11720	000	0.32	RUC Time

CPT Descriptor Debridement of nail(s) by any method(s); 1 to 5

**RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:**

Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by the mean) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

**Number of respondents who choose Top Key Reference Code: 16      % of respondents: 29.0 %**

**Number of respondents who choose 2<sup>nd</sup> Key Reference Code: 13      % of respondents: 23.6 %**

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

CMS identified several cardiac device monitoring services in CY 2016 PFS rulemaking—93280, 93288, 93293, 93294, 93295, and 93296—as potentially misvalued on its high-expenditure screen. Consistent with RUC policy, the societies expanded the review to include the entire family of cardiac device monitoring codes—19 codes with work and PE and 2 PE-only codes. The RUC finalized recommendations on most of those codes at the October 2016 meeting. The times for five codes that we are grouping as “remote EP device monitoring services” did not align with the rest of the code family. It was not clear if the survey participants accounted for the global period associated with the remote services. After consultation with a prefacilitation committee, we proposed, and RUC agreed, that it may make more sense to resurvey those five codes for the January 2017 meeting. That is the sub-family before the RUC in Tab 23.

We worked with the Research Subcommittee to revise vignettes and to add survey language in an attempt to prompt survey respondents to consider the entirety of the 30- or 90-day billing period when performing these services. As you can see in the summary spreadsheet, these steps did not significantly change the survey results. Times continue to be less than we anticipated. These services describe remotes version of services that are also provided with the patient in the office, but data is collected and interpreted on average more than once per billing period. Regardless, values are fairly consistent for four of the five codes. After surveying twice, we’ve built work RVU recommendations around the survey times. We highlight to the RUC that that the current times were extrapolated from other codes in the family. We are not making a compelling evidence argument for these codes, but note that after surveying these codes twice it seems correct to accept these times as more accurate than the current, calculated times.

92393 describes the work of reading transtelephonic rhythm strip pacemaker evaluation(s) during a period of as much as 90 days. Transtelephonic technology transmits fewer data elements than more modern remote interrogation. Utilization is declining and will continue to do so, as implanted pacemakers no longer rely on the technology. A random survey of 1000 ACC and HRS members was executed with 55 completed surveys.

The key reference service was selected by 16 respondents. Respondents who selected 48-hour EKG (93224) as the key reference service found 93293 to be identical or somewhat more intense, as shown in the table and intensity-complexity addendum. With shorter times from the survey, the IWP/UT for 93293 is in fact slightly higher, so this comparison seems reasonable. The second key reference service was selected by 13 respondents. Respondents who selected stress-test interpretation and report only (93018) as the key reference service found 93293 to be slightly more intense in most

measures. While IWPUs don't demonstrate that increased intensity, the two services have similar times and values, and the comparison is reasonable in that regard.

Reflecting the January and October surveys, **we recommend the current work RVU of 0.32 with times of 3 minutes preservice, 5 minutes intraservice, and 5 minutes postservice.** This value is less than the October survey 25<sup>th</sup>-percentile value and one one-hundredth higher than the January survey 25<sup>th</sup>-percentile value. As shown in the summary spreadsheet, we identified MPC codes and one additional comparator code with similar intraservice times, total times, and RVUs to support the recommendation.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 93293

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty cardiology                      How often? Commonly

Specialty cardiac electrophysiology                      How often? Commonly

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period? 512000

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Assuming roughly even split of Medicare & non-Medicare, this number is double the Medicare estimate below.

Specialty cardiology                      Frequency 280000                      Percentage 54.68 %

Specialty cardiac electrophysiology                      Frequency 12000                      Percentage 2.34 %

Specialty other                      Frequency 112000                      Percentage 21.87 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?  
256,000 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty.  
Please explain the rationale for this estimate. Based on 2015 Medicare data in RUC database.

Specialty cardiology                      Frequency 140000                      Percentage 54.68 %

Specialty cardiac electrophysiology                      Frequency 60000                      Percentage 23.43 %

Specialty other                      Frequency 56000                      Percentage 21.87 %

Do many physicians perform this service across the United States? Yes

### **Berenson-Eggers Type of Service (BETOS) Assignment**

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Tests

BETOS Sub-classification:

Other tests

BETOS Sub-classification Level II:

Other

### **Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 93293

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 93294

Tracking Number

Original Specialty Recommended RVU: **0.65**Presented Recommended RVU: **0.60**

Global Period: XXX

RUC Recommended RVU: **0.60**

CPT Descriptor: Interrogation device evaluation(s) (remote), up to 90 days; single, dual, or multiple lead pacemaker system with interim analysis, review(s) and report(s) by a physician or other qualified health care professional

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 74-year-old patient underwent pacemaker implant 3 months ago for symptomatic sinus node dysfunction. The patient is followed now by wireless remote monitoring which constantly checks both device function and arrhythmias, and sends alerts for any issues, which are then reviewed. (Note: this service includes all evaluations received within a 90-day period.)

Percentage of Survey Respondents who found Vignette to be Typical: 95%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review patient records to identify the indication for pacemaker therapy, manufacturer and model of the implanted pacemaker and leads, history of pacemaker dependency, and atrial and ventricular arrhythmias. Review prior records of pacing parameters and compare to prior remote and in-person interrogations.

Description of Intra-Service Work: Interrogate information from the pacemaker by telemetric communication and either print out for review or review on the programmer or computer monitor. Perform critical review of interrogated data with assessment of the pacemaker's function, safety of current programmed parameters, and determination of whether device function is normal. Data review includes the following items. (1) Presenting EGMs for appropriateness or presence of arrhythmia and appropriate sensing and capture. (2) Review stored episodes of data for appropriate sensing, capture, and appropriate magnet reversion and noise reversions. (3) Alerts generated from the pacemaker device. (4) Battery voltage and impedance, pacing lead impedance, and sensed electrogram voltage amplitude for each lead. (5) Counters of paced and sensed events from each chamber for which there are leads located. (6) Stored episodes of sensed events including arrhythmias, ectopic beats, nonsustained and sustained atrial and ventricular arrhythmias, and, when appropriate, mode switch episodes. Note the frequency, rate, and duration. (7) Heart rate response during activities, rate histograms, and indicators of patient activity level.

Description of Post-Service Work: Prepare final report that is reviewed by attending physician and amend as necessary. Approve, sign, and distribute report to patient's record, the referring and primary physicians, and the attending physician.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

92394 describes the work of reading pacemaker device interrogation(s) during a period of as much as 90 days. A random survey of 1000 ACC and HRS members was executed with 64 completed surveys.

The key reference service was selected by 25 respondents. Most respondents who selected 48-hour EKG (93224) as the key reference service found 93294 to be somewhat more intense, as shown in the table and intensity-complexity addendum. The second key reference service was selected by 8 respondents. Respondents who selected VAD interrogation (93750) as the key reference service found 93294 to be of similar intensity in most measures.

Reflecting the January and October surveys, **we recommend the current work RVU of 0.65 with times of 5 minutes preservice, 10 minutes intraservice, and 5 minutes postservice.** This value is between the survey 25<sup>th</sup>-percentile and median values from both the October survey the January survey 25<sup>th</sup>-percentile value. As shown in the summary spreadsheet, we identified MPC codes with similar intraservice times, total times, and RVUs to support the recommendation.

---

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.

☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 93294

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty cardiology                      How often? Commonly

Specialty cardiac electrophysiology                      How often? Commonly

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period? 1260000

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Assuming roughly even split of Medicare & non-Medicare, this number is double the Medicare estimate below.

Specialty cardiology                      Frequency 680000                      Percentage 53.96 %

Specialty cardiac electrophysiology                      Frequency 470000                      Percentage 37.30 %

Specialty other                      Frequency 110000                      Percentage 8.73 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 630,000 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on 2015 Medicare data in RUC database.

Specialty cardiology                      Frequency 340000                      Percentage 53.96 %

Specialty cardiac electrophysiology                      Frequency 235000                      Percentage 37.30 %

Specialty other                      Frequency 55000                      Percentage 8.73 %

Do many physicians perform this service across the United States? Yes

## Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Tests

BETOS Sub-classification:

Other tests

BETOS Sub-classification Level II:  
Other

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 93294

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

---

CPT Code: 93295

Tracking Number

Original Specialty Recommended RVU: **0.95**Presented Recommended RVU: **0.74**

Global Period: XXX

RUC Recommended RVU: **0.74**

CPT Descriptor: Interrogation device evaluation(s) (remote), up to 90 days; single, dual, or multiple lead implantable defibrillator system with interim analysis, review(s) and report(s) by a physician or other qualified health care professional

---

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 66-year old patient with coronary artery disease and severely reduced left ventricular function underwent ICD implant 3 months ago for primary prevention of sudden cardiac death. The patient is followed now by wireless remote monitoring which constantly checks both device function and arrhythmias, and sends alerts for any issues, which are then reviewed. (Note: this service includes all evaluations received within a 90-day period.)

Percentage of Survey Respondents who found Vignette to be Typical: 95%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

---

Description of Pre-Service Work: Review history to identify the indication for ICD therapy. Review records to identify the manufacturer and model of the ICD generator and lead(s). Review prior records of the implanted ICD generator and lead hardware and the programmed parameters as well as the presence or absence of pacemaker dependence. Review prior assessments of capture thresholds, sensing thresholds, and arrhythmia therapies (if any) from prior remote and in-person interrogations. Review patient's arrhythmia history including any recent clinical events. Query changes in antiarrhythmic medications since the last device evaluation.

Description of Intra-Service Work: Interrogate information from the ICD by telemetric communication and either print out for review or review on the programmer or computer monitor. Perform a critical review of the interrogated data with assessment of the appropriateness of the function of ICD, safety of the current programmed pacing and antitachycardia parameters, and assessment of device function. Data reviewed include the following items: (1) Presenting EGMs for appropriateness of pacing and sensing. (2) Review stored episodes of data. (3) Alerts generated from the device. (4) Battery voltage and impedance, pacing and shocking lead impedance, and sensed electrogram voltage amplitude for each lead. (5) Histogram and/or counters of paced and sensed events from each chamber. (6) Note stored episodes of sensed arrhythmia events including the type, frequency, rate and duration. (7) Evaluate adequacy of heart rate response.

Description of Post-Service Work: After physician review of above data, make a decision as to the adequacy of the programmed parameters including the appropriate data collection set-up and the interval for the next scheduled programming or interrogation evaluation. Inform of test results. Prepare final summary report of the interrogation evaluations performed every 90 days. Prepare final report that is reviewed by the attending physician and amend as necessary. Approve, sign, and distribute report to patient's record, the referring and primary physicians, and the attending physician.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

92395 describes the work of reading implanted defibrillator device interrogation(s) during a period of as much as 90 days. A random survey of 1000 ACC and HRS members was executed with 64 completed surveys.

The key reference service was selected by 17 respondents. Most respondents who selected 48-hour EKG (93224) as the key reference service found 93295 to be much more intense, as shown in the table and intensity-complexity addendum. The second key reference service was selected by 8 respondents. Respondents who selected VAD interrogation (93750) as the key reference service found 93295 to be of slightly higher intensity in most measures.

Reflecting the January and October surveys, **we recommend the survey median work RVU of 0.95 with times of 5 minutes preservice, 10 minutes intraservice, and 5 minutes postservice.** While survey times for this code are identical to 93294, we do not believe a value at the 25<sup>th</sup>-percentile appropriately captures the increased intensity and amount of information considered when reading ICD interrogations versus pacemaker interrogations. As shown in the summary spreadsheet, we identified MPC codes and one additional comparator code with similar intraservice times, total times, and RVUs to support the recommendation.

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 93295

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty cardiology                      How often? Commonly

Specialty cardiac electrophysiology                      How often? Commonly

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period? 884000

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Assuming roughly even split of Medicare & non-Medicare, this number is double the Medicare estimate below.

Specialty cardiology                      Frequency 400000                      Percentage 45.24 %

Specialty cardiac electrophysiology                      Frequency 410000                      Percentage 46.38 %

Specialty other                      Frequency 74000                      Percentage 8.37 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 442,000 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on 2015 Medicare data in RUC database.

Specialty cardiology                      Frequency 200000                      Percentage 45.24 %

Specialty cardiac electrophysiology                      Frequency 205000                      Percentage 46.38 %

Specialty other                      Frequency 37000                      Percentage 8.37 %

Do many physicians perform this service across the United States? Yes

## Berenson-Eggers Type of Service (BETOS) Assignment

### **Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 93295

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 93297

Tracking Number

Original Specialty Recommended RVU: **0.52**Presented Recommended RVU: **0.52**

Global Period: XXX

RUC Recommended RVU: **0.52**

CPT Descriptor: Interrogation device evaluation(s), (remote) up to 30 days; implantable cardiovascular monitor system, including analysis of 1 or more recorded physiologic cardiovascular data elements from all internal and external sensors, analysis, review(s) and report(s) by a physician or other qualified health care professional

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 71-year-old man with ischemic cardiomyopathy and symptomatic systolic congestive heart failure has undergone implantation of a physiologic monitor to aide in the titration of heart failure therapies. The patient is followed now by wireless remote monitoring which constantly checks both device function and arrhythmias. (Note: this includes all such services within a 30-day period.)

Percentage of Survey Respondents who found Vignette to be Typical: 0%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review patient records to identify the indication for ICM monitoring and therapy, manufacturer and model of the ICM, and leads and sensors (both internal and external) as appropriate. Review prior records of ICM parameters and compare to prior remote and in-person interrogations.

Description of Intra-Service Work: Interrogate information from the ICM by telemetric communication and either print out for review or review on the programmer or computer monitor. Perform a critical review of the interrogated data with assessment of the appropriateness of the ICM's function and appropriateness of the current programmed parameters. Data reviewed may include, but are not limited to: (1) weight; (2) systemic blood pressure; (3) right atrial, right ventricular, left atrial, left ventricular, and pulmonary arterial pressures; (4) intrathoracic impedance measurements; and (5) other measures of physiologic parameters.

In addition, review stored episodes of data to assess the history and trends identified by any of the collected data. Also review alerts generated from the ICM along with battery voltage and sensor information to validate the integrity of the ICM system.

Description of Post-Service Work: After physician review of above data, make a decision as to the adequacy of the programmed parameters including the appropriate data collection set-up and the interval for the next scheduled interrogation evaluation. Modify patient's medical regimen as appropriate. Inform patient of test results. Prepare a final report that is reviewed by the attending physician and amend as necessary. Approve, sign, and distribute report to patient's record, the referring and primary physicians, and the attending physician.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

93297 describes the work of reading implanted loop recorder device interrogation(s) during a period of as much as 30 days. A random survey of 1000 ACC and HRS members was executed with 56 completed surveys.

The key reference service was selected by 15 respondents. Most respondents who selected 48-hour EKG (93224) as the key reference service found 93297 to be somewhat more intense, as shown in the table and intensity-complexity addendum. The second key reference service was selected by 7 respondents. Respondents who selected VAD interrogation (93750) as the key reference service found 93297 to be of slightly higher or slightly lower intensity, and overall rather similar.

Reflecting the January and October surveys, **we recommend the current work RVU of 0.52 with times of 5 minutes preservice, 6 minutes intraservice, and 5 minutes postservice.** This value is below the 25<sup>th</sup>-percentile of both the October and January surveys. As shown in the summary spreadsheet, we identified MPC codes and one additional comparator code with similar intraservice times, total times, and RVUs to support the recommendation.

---

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.

- ☐ Historical precedents.  
☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 93297

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
 If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty cardiology                      How often? Commonly

Specialty cardiac electrophysiology                      How often? Commonly

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period? 464000

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Assuming roughly even split of Medicare & non-Medicare, this number is double the Medicare estimate below.

Specialty cardiology                      Frequency 250000                      Percentage 53.87 %

Specialty cardiac electrophysiology                      Frequency 164000                      Percentage 35.34 %

Specialty other                      Frequency 50000                      Percentage 10.77 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 232,000 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on 2015 Medicare data in RUC database.

Specialty cardiology                      Frequency 125000                      Percentage 53.87 %

Specialty cardiac electrophysiology                      Frequency 82000                      Percentage 35.34 %

Specialty other                      Frequency 25000                      Percentage 10.77 %

Do many physicians perform this service across the United States? Yes

---

Description of Pre-Service Work: Review history for cardiac rhythm monitoring indications and for changes in, or the development of, new symptoms. Review programmed parameters and results of prior ILR interrogations and remote monitoring.

Description of Intra-Service Work: The following data is analyzed:

1. Initial interrogation is reviewed to determine if any alert conditions have occurred and if electrograms have been stored.
2. Current interrogation results are compared to historical values and previous trends.
  - a. Battery status
  - b. Appropriate sensing
3. Alert conditions are then reviewed in detail
  - a. Stored arrhythmic episodes are reviewed to determine if the arrhythmia was accurately identified by the ILR.
  - b. Compare arrhythmia to historical events to determine if it is clinically significant and requires further investigation and/or treatment.

Description of Post-Service Work: Prepare a final report that is reviewed by the attending physician and amend as necessary. Approve, sign, and distribute report to the patient's record, the referring and primary physicians, and the attending physician. Prepare communication to patient (letter) informing them of the status of their ILR (e.g. normal battery function, no arrhythmias detected). If abnormality is detected on remote interrogation, contact patient to discuss management strategy and document discussion.

Key CPT Code	Global	Work RVU	Time Source
93018	XXX	0.30	RUC Time

CPT Descriptor Cardiovascular stress test using maximal or submaximal treadmill or bicycle exercise, continuous electrocardiographic monitoring, and/or pharmacological stress; interpretation and report only

**KEY MPC COMPARISON CODES:**

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
76536	XXX	0.56	RUC Time	798,297

CPT Descriptor 1 Ultrasound, soft tissues of head and neck (eg, thyroid, parathyroid, parotid), real time with image documentation

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
76857	XXX	0.50	RUC Time	223,865

CPT Descriptor 2 Ultrasound, pelvic (nonobstetric), real time with image documentation; limited or follow-up (eg, for follicles)

Other Reference CPT Code	Global	Work RVU	Time Source
92136	XXX	0.54	RUC Time

CPT Descriptor Ophthalmic biometry by partial coherence interferometry with intraocular lens power calculation

**RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:**

Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by the mean) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

**Number of respondents who choose Top Key Reference Code: 35      % of respondents: 54.6 %**

**Number of respondents who choose 2<sup>nd</sup> Key Reference Code: 6      % of respondents: 9.3 %**

**TIME ESTIMATES (Median)**

	<b>CPT Code: <u>93298</u></b>	<b>Top Key Reference CPT Code: <u>93224</u></b>	<b>2nd Key Reference CPT Code: <u>93018</u></b>
Median Pre-Service Time	5.00	2.00	2.00
Median Intra-Service Time	7.00	15.00	5.00
Median Immediate Post-service Time	5.00	7.00	4.00
Median Critical Care Time	0.0	0.00	0.00
Median Other Hospital Visit Time	0.0	0.00	0.00
Median Discharge Day Management Time	0.0	0.00	0.00
Median Office Visit Time	0.0	0.00	0.00
Prolonged Services Time	0.0	0.00	0.00
Median Subsequent Observation Care Time	0.0	0.00	0.00
<b>Median Total Time</b>	<b>17.00</b>	<b>24.00</b>	<b>11.00</b>
<b>Other time if appropriate</b>			

**INTENSITY/COMPLEXITY MEASURES**

*(of those that selected Key Reference codes)*

*Survey respondents are rating the survey code relative to the key reference code.*

**Intensity & Complexity Rating Scale:** (much less= -2.00, somewhat less= -1.00, identical= 0.00, somewhat more= 1.00, much more= 2.00)

	<b><u>Top Key Ref Code</u></b>	<b><u>2<sup>nd</sup> Key Ref Code</u></b>
--	------------------------------------	---

**Mental Effort and Judgment (Mean)**

The number of possible diagnosis and/or the number of management options that must be considered	0.29	-0.17
The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed	0.40	-0.17
Urgency of medical decision making	0.31	0.17

**Technical Skill/Physical Effort (Mean)**

Technical skill required	0.49	0.33
Physical effort required	0.11	-0.67

**Psychological Stress (Mean)**

The risk of significant complications, morbidity and/or mortality	0.17	0.17
Outcome depends on the skill and judgment of physician	0.40	0.17
Estimated risk of malpractice suit with poor outcome	0.40	-0.33

Ref Code****Time Segment (Mean)**

Overall intensity/complexity	0.46	-0.17
------------------------------	------	-------

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

92398 describes the work of reading implanted cardiac device monitor interrogation(s) during a period of as much as 30 days. A random survey of 1000 ACC and HRS members was executed with 64 completed surveys.

The key reference service was selected by 35 respondents. Most respondents who selected 48-hour EKG (93224) as the key reference service found 93298 to be identical or somewhat more intense, as shown in the table and intensity-complexity addendum. The second key reference service was selected by 6 respondents. Respondents who selected stress test interpretation and report (93018) as the key reference service found 93298 to be of slightly higher or slightly lower intensity, and overall very rather similar.

Reflecting the January and October surveys, **we recommend the current work RVU of 0.52 with times of 5 minutes preservice, 7 minutes intraservice, and 5 minutes postservice.** This value is also the 25<sup>th</sup>-percentile of both the October and January surveys. As shown in the summary spreadsheet, we identified MPC codes and one additional comparator code with similar intraservice times, total times, and RVUs to support the recommendation.

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.

☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 93298

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty cardiology                      How often? Commonly

Specialty cardiac electrophysiology                      How often? Commonly

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period? 300000

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Assuming roughly even split of Medicare & non-Medicare, this number is double the Medicare estimate below.

Specialty cardiology                      Frequency 150000                      Percentage 50.00 %

Specialty cardiac electrophysiology                      Frequency 120000                      Percentage 40.00 %

Specialty other                      Frequency 30000                      Percentage 10.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 150,000 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on 2015 Medicare data in RUC database.

Specialty cardiology                      Frequency 75000                      Percentage 50.00 %

Specialty cardiac electrophysiology                      Frequency 60000                      Percentage 40.00 %

Specialty other                      Frequency 15000                      Percentage 10.00 %

Do many physicians perform this service across the United States?

## Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Tests

BETOS Sub-classification:

Other tests

BETOS Sub-classification Level II:  
Other

---

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 93298

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/Specialty Society Update Process  
Practice Expense Summary of Recommendation  
Non Facility Direct Inputs**

CPT Long Descriptor:

Global Period: XXX Meeting Date: January 2017

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee: **The ACC/HRS reviewer panel has provided the PE inputs approved for these codes at the October meeting in our submission materials. We have no additional materials or recommendations.**
2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale:
3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:
4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:
5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

Intra-Service Clinical Labor Activities:

Post-Service Clinical Labor Activities:

**AMA/Specialty Society Update Process  
Practice Expense Summary of Recommendation  
Non Facility Direct Inputs**

CPT Long Descriptor:

93293 Transtelephonic rhythm strip pacemaker evaluation(s) single, dual, or multiple lead pacemaker system, includes recording with and without magnet application with analysis, review and report(s) by a physician or other qualified health care professional, up to 90 days

Global Period: XXX Meeting Date: October 2016

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee: The ACC and HRS utilized a consensus panel process to develop recommended inputs.
2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale: Current PE Inputs
3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:
4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:
5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

Intra-Service Clinical Labor Activities:

Electrodiagnostic tech receives and reviews remote transmissions, prepares report and distribution of results.

RN/LPN/MTA enrolls patient, educates patient on use of device/service; physician notification

Post-Service Clinical Labor Activities:

**AMA/Specialty Society Update Process  
Practice Expense Summary of Recommendation  
Non Facility Direct Inputs**

CPT Long Descriptor:

93296 Interrogation device evaluation(s), (remote), per 90 days, pacemaker or implantable cardioverter defibrillator, remote data acquisitions), receipt of transmissions and technician review, technical support and distribution of results

93299 Interrogation device evaluation(s), (remote), per 30 days, implantable cardiovascular monitor or implantable loop recorder, remote data acquisition(s), receipt of transmissions and technician review, technical support and distribution of results

Global Period: XXX Meeting Date: October 2016

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee: The ACC and HRS utilized a consensus panel process to develop recommended inputs.
2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale: Current PE Inputs
3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:
4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence: Code 93299 is carrier priced. We propose to crosswalk inputs from 93296 to 93299.
5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

Intra-Service Clinical Labor Activities:

| Electrodiagnostic tech enrolls patient, educates patient on use of device/service, receives and reviews remote transmissions, prepares report and distribution of results.

| ~~RN/LPN/MTA enrolls patient, educates patient on use of device/service; physician notification~~

Post-Service Clinical Labor Activities:

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

---

CPT Code:93293

Tracking Number

Original Specialty Recommended RVU: **0.32**Presented Recommended RVU: **0.31**

Global Period: XXX

RUC Recommended RVU: **0.31**

CPT Descriptor: Transtelephonic rhythm strip pacemaker evaluation(s) single, dual, or multiple lead pacemaker system, includes recording with and without magnet application with analysis, review and report(s) by a physician or other qualified health care professional, up to 90 days

---

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 69-year-old patient with complete heart block has a six-year old DC-PM that is being monitored for battery depletion with transtelephonic rhythm strip pacemaker evaluations. (Note: this service includes all evaluations received within a 90-day period.)

Percentage of Survey Respondents who found Vignette to be Typical: 93%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

---

Description of Pre-Service Work: Review patient records to identify the indication for pacemaker therapy, manufacturer and model of the implanted pacemaker and leads, history of pacemaker dependency, and atrial and ventricular arrhythmias. Review prior records of pacing parameters and compare to prior remote and in-person interrogations.

Description of Intra-Service Work: Record rhythm strip for 30 seconds and evaluate for heart rate, capture and sensing of each of the leads, and atrial or ventricular arrhythmias. Record a second rhythm strip with a magnet located over the pacemaker and evaluate for capture and sensing of each of the leads, for atrial or ventricular arrhythmias, and for the magnet response including paced rate. Physician review of above data produces an assessment of the adequacy of each lead's sensing and capture and battery function.

Description of Post-Service Work: Inform patient of the test results. Prepare a final report that is reviewed by the attending physician and amend as necessary. Approve, sign, and distribute report to patient's record, the referring and primary physicians, and the attending physician.

**Modifier -51 Exempt Status**

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

**New Technology/Service:**

Is this new/revised procedure considered to be a new technology or service? No

**TOP KEY REFERENCE SERVICE:**

Key CPT Code	Global	Work RVU	Time Source
93224	XXX	0.52	RUC Time

CPT Descriptor External electrocardiographic recording up to 48 hours by continuous rhythm recording and storage; includes recording, scanning analysis with report, review and interpretation by a physician or other qualified health care professional

**SECOND HIGHEST KEY REFERENCE SERVICE:**

Key CPT Code	Global	Work RVU	Time Source
93018	XXX	0.30	RUC Time

CPT Descriptor Cardiovascular stress test using maximal or submaximal treadmill or bicycle exercise, continuous electrocardiographic monitoring, and/or pharmacological stress; interpretation and report only

**KEY MPC COMPARISON CODES:**

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
72114	XXX	0.32	RUC Time	94,995

CPT Descriptor 1 Radiologic examination, spine, lumbosacral; complete, including bending views, minimum of 6 views

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
92081	XXX	0.30	RUC Time	102,308

CPT Descriptor 2 Visual field examination, unilateral or bilateral, with interpretation and report; limited examination (eg, tangent screen, Autoplot, arc perimeter, or single stimulus level automated test, such as Octopus 3 or 7 equivalent)

Other Reference CPT Code	Global	Work RVU	Time Source
11720	000	0.32	RUC Time

CPT Descriptor Debridement of nail(s) by any method(s); 1 to 5

**RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:**

Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by the mean) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

**Number of respondents who choose Top Key Reference Code: 16      % of respondents: 29.0 %**

**Number of respondents who choose 2<sup>nd</sup> Key Reference Code: 13      % of respondents: 23.6 %**

------------------------------	------	------

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

CMS identified several cardiac device monitoring services in CY 2016 PFS rulemaking—93280, 93288, 93293, 93294, 93295, and 93296—as potentially misvalued on its high-expenditure screen. Consistent with RUC policy, the societies expanded the review to include the entire family of cardiac device monitoring codes—19 codes with work and PE and 2 PE-only codes. The RUC finalized recommendations on most of those codes at the October 2016 meeting. The times for five codes that we are grouping as “remote EP device monitoring services” did not align with the rest of the code family. It was not clear if the survey participants accounted for the global period associated with the remote services. After consultation with a prefacilitation committee, we proposed, and RUC agreed, that it may make more sense to resurvey those five codes for the January 2017 meeting. That is the sub-family before the RUC in Tab 23.

We worked with the Research Subcommittee to revise vignettes and to add survey language in an attempt to prompt survey respondents to consider the entirety of the 30- or 90-day billing period when performing these services. As you can see in the summary spreadsheet, these steps did not significantly change the survey results. Times continue to be less than we anticipated. These services describe remotes version of services that are also provided with the patient in the office, but data is collected and interpreted on average more than once per billing period. Regardless, values are fairly consistent for four of the five codes. After surveying twice, we’ve built work RVU recommendations around the survey times. We highlight to the RUC that that the current times were extrapolated from other codes in the family. We are not making a compelling evidence argument for these codes, but note that after surveying these codes twice it seems correct to accept these times as more accurate than the current, calculated times.

92393 describes the work of reading transtelephonic rhythm strip pacemaker evaluation(s) during a period of as much as 90 days. Transtelephonic technology transmits fewer data elements than more modern remote interrogation. Utilization is declining and will continue to do so, as implanted pacemakers no longer rely on the technology. A random survey of 1000 ACC and HRS members was executed with 55 completed surveys.

The key reference service was selected by 16 respondents. Respondents who selected 48-hour EKG (93224) as the key reference service found 93293 to be identical or somewhat more intense, as shown in the table and intensity-complexity addendum. With shorter times from the survey, the IWP/UT for 93293 is in fact slightly higher, so this comparison seems reasonable. The second key reference service was selected by 13 respondents. Respondents who selected stress-test interpretation and report only (93018) as the key reference service found 93293 to be slightly more intense in most

measures. While IWPUs don't demonstrate that increased intensity, the two services have similar times and values, and the comparison is reasonable in that regard.

Reflecting the January and October surveys, **we recommend the current work RVU of 0.32 with times of 3 minutes preservice, 5 minutes intraservice, and 5 minutes postservice.** This value is less than the October survey 25<sup>th</sup>-percentile value and one one-hundredth higher than the January survey 25<sup>th</sup>-percentile value. As shown in the summary spreadsheet, we identified MPC codes and one additional comparator code with similar intraservice times, total times, and RVUs to support the recommendation.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 93293

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty cardiology                      How often? Commonly

Specialty cardiac electrophysiology                      How often? Commonly

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period? 512000

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Assuming roughly even split of Medicare & non-Medicare, this number is double the Medicare estimate below.

Specialty cardiology                      Frequency 280000                      Percentage 54.68 %

Specialty cardiac electrophysiology                      Frequency 12000                      Percentage 2.34 %

Specialty other                      Frequency 112000                      Percentage 21.87 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?  
256,000 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty.  
Please explain the rationale for this estimate. Based on 2015 Medicare data in RUC database.

Specialty cardiology                      Frequency 140000                      Percentage 54.68 %

Specialty cardiac electrophysiology                      Frequency 60000                      Percentage 23.43 %

Specialty other                      Frequency 56000                      Percentage 21.87 %

Do many physicians perform this service across the United States? Yes

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 93294

Tracking Number

Original Specialty Recommended RVU: **0.65**Presented Recommended RVU: **0.60**

Global Period: XXX

RUC Recommended RVU: **0.60**

CPT Descriptor: Interrogation device evaluation(s) (remote), up to 90 days; single, dual, or multiple lead pacemaker system with interim analysis, review(s) and report(s) by a physician or other qualified health care professional

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 74-year-old patient underwent pacemaker implant 3 months ago for symptomatic sinus node dysfunction. The patient is followed now by wireless remote monitoring which constantly checks both device function and arrhythmias, and sends alerts for any issues, which are then reviewed. (Note: this service includes all evaluations received within a 90-day period.)

Percentage of Survey Respondents who found Vignette to be Typical: 95%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review patient records to identify the indication for pacemaker therapy, manufacturer and model of the implanted pacemaker and leads, history of pacemaker dependency, and atrial and ventricular arrhythmias. Review prior records of pacing parameters and compare to prior remote and in-person interrogations.

Description of Intra-Service Work: Interrogate information from the pacemaker by telemetric communication and either print out for review or review on the programmer or computer monitor. Perform critical review of interrogated data with assessment of the pacemaker's function, safety of current programmed parameters, and determination of whether device function is normal. Data review includes the following items. (1) Presenting EGMs for appropriateness or presence of arrhythmia and appropriate sensing and capture. (2) Review stored episodes of data for appropriate sensing, capture, and appropriate magnet reversion and noise reversions. (3) Alerts generated from the pacemaker device. (4) Battery voltage and impedance, pacing lead impedance, and sensed electrogram voltage amplitude for each lead. (5) Counters of paced and sensed events from each chamber for which there are leads located. (6) Stored episodes of sensed events including arrhythmias, ectopic beats, nonsustained and sustained atrial and ventricular arrhythmias, and, when appropriate, mode switch episodes. Note the frequency, rate, and duration. (7) Heart rate response during activities, rate histograms, and indicators of patient activity level.

Description of Post-Service Work: Prepare final report that is reviewed by attending physician and amend as necessary. Approve, sign, and distribute report to patient's record, the referring and primary physicians, and the attending physician.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

92394 describes the work of reading pacemaker device interrogation(s) during a period of as much as 90 days. A random survey of 1000 ACC and HRS members was executed with 64 completed surveys.

The key reference service was selected by 25 respondents. Most respondents who selected 48-hour EKG (93224) as the key reference service found 93294 to be somewhat more intense, as shown in the table and intensity-complexity addendum. The second key reference service was selected by 8 respondents. Respondents who selected VAD interrogation (93750) as the key reference service found 93294 to be of similar intensity in most measures.

Reflecting the January and October surveys, **we recommend the current work RVU of 0.65 with times of 5 minutes preservice, 10 minutes intraservice, and 5 minutes postservice.** This value is between the survey 25<sup>th</sup>-percentile and median values from both the October survey the January survey 25<sup>th</sup>-percentile value. As shown in the summary spreadsheet, we identified MPC codes with similar intraservice times, total times, and RVUs to support the recommendation.

---

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.

☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 93294

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty cardiology                      How often? Commonly

Specialty cardiac electrophysiology                      How often? Commonly

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period? 1260000

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Assuming roughly even split of Medicare & non-Medicare, this number is double the Medicare estimate below.

Specialty cardiology                      Frequency 680000                      Percentage 53.96 %

Specialty cardiac electrophysiology                      Frequency 470000                      Percentage 37.30 %

Specialty other                      Frequency 110000                      Percentage 8.73 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 630,000 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on 2015 Medicare data in RUC database.

Specialty cardiology                      Frequency 340000                      Percentage 53.96 %

Specialty cardiac electrophysiology                      Frequency 235000                      Percentage 37.30 %

Specialty other                      Frequency 55000                      Percentage 8.73 %

Do many physicians perform this service across the United States? Yes

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 66-year old patient with coronary artery disease and severely reduced left ventricular function underwent ICD implant 3 months ago for primary prevention of sudden cardiac death. The patient is followed now by wireless remote monitoring which constantly checks both device function and arrhythmias, and sends alerts for any issues, which are then reviewed. (Note: this service includes all evaluations received within a 90-day period.)

Percentage of Survey Respondents who found Vignette to be Typical: 95%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review history to identify the indication for ICD therapy. Review records to identify the manufacturer and model of the ICD generator and lead(s). Review prior records of the implanted ICD generator and lead hardware and the programmed parameters as well as the presence or absence of pacemaker dependence. Review prior assessments of capture thresholds, sensing thresholds, and arrhythmia therapies (if any) from prior remote and in-person interrogations. Review patient's arrhythmia history including any recent clinical events. Query changes in antiarrhythmic medications since the last device evaluation.

Description of Intra-Service Work: Interrogate information from the ICD by telemetric communication and either print out for review or review on the programmer or computer monitor. Perform a critical review of the interrogated data with assessment of the appropriateness of the function of ICD, safety of the current programmed pacing and antitachycardia parameters, and assessment of device function. Data reviewed include the following items: (1) Presenting EGMs for appropriateness of pacing and sensing. (2) Review stored episodes of data. (3) Alerts generated from the device. (4) Battery voltage and impedance, pacing and shocking lead impedance, and sensed electrogram voltage amplitude for each lead. (5) Histogram and/or counters of paced and sensed events from each chamber. (6) Note stored episodes of sensed arrhythmia events including the type, frequency, rate and duration. (7) Evaluate adequacy of heart rate response.

Description of Post-Service Work: After physician review of above data, make a decision as to the adequacy of the programmed parameters including the appropriate data collection set-up and the interval for the next scheduled programming or interrogation evaluation. Inform of test results. Prepare final summary report of the interrogation evaluations performed every 90 days. Prepare final report that is reviewed by the attending physician and amend as necessary. Approve, sign, and distribute report to patient's record, the referring and primary physicians, and the attending physician.

**Modifier -51 Exempt Status**

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

**New Technology/Service:**

Is this new/revised procedure considered to be a new technology or service? No

**TOP KEY REFERENCE SERVICE:**

Key CPT Code	Global	Work RVU	Time Source
93224	XXX	0.52	RUC Time

CPT Descriptor External electrocardiographic recording up to 48 hours by continuous rhythm recording and storage; includes recording, scanning analysis with report, review and interpretation by a physician or other qualified health care professional

**SECOND HIGHEST KEY REFERENCE SERVICE:**

Key CPT Code	Global	Work RVU	Time Source
93750	XXX	0.92	RUC Time

CPT Descriptor Interrogation of ventricular assist device (VAD), in person, with physician or other qualified health care professional analysis of device parameters (eg, drivelines, alarms, power surges), review of device function (eg, flow and volume status, septum status, recovery), with programming, if performed, and report

**KEY MPC COMPARISON CODES:**

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
99213	XXX	0.97	RUC Time	99,675,084

CPT Descriptor 1 Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: An expanded problem focused history; An expanded problem focused examination; Medical decision making of low complexity. Counseling and coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of low to moderate severity. Typically, 15 minutes are spent face-to-face with the patient and/or family.

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
78306	XXX	0.86	RUC Time	293,063

CPT Descriptor 2 Bone and/or joint imaging; whole body

Other Reference CPT Code	Global	Work RVU	Time Source
78472	XXX	0.98	RUC Time

CPT Descriptor Cardiac blood pool imaging, gated equilibrium; planar, single study at rest or stress (exercise and/or pharmacologic), wall motion study plus ejection fraction, with or without additional quantitative processing

### **RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:**

Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by the mean) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

**Number of respondents who choose Top Key Reference Code: 15      % of respondents: 0.0 %**

**Number of respondents who choose 2<sup>nd</sup> Key Reference Code: 7      % of respondents: 0.0 %**

### **TIME ESTIMATES (Median)**

Ref Code****2<sup>nd</sup> Key  
Ref Code****Time Segment (Mean)**

Overall intensity/complexity	1.18	0.25
------------------------------	------	------

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

92395 describes the work of reading implanted defibrillator device interrogation(s) during a period of as much as 90 days. A random survey of 1000 ACC and HRS members was executed with 64 completed surveys.

The key reference service was selected by 17 respondents. Most respondents who selected 48-hour EKG (93224) as the key reference service found 93295 to be much more intense, as shown in the table and intensity-complexity addendum. The second key reference service was selected by 8 respondents. Respondents who selected VAD interrogation (93750) as the key reference service found 93295 to be of slightly higher intensity in most measures.

Reflecting the January and October surveys, **we recommend the survey median work RVU of 0.95 with times of 5 minutes preservice, 10 minutes intraservice, and 5 minutes postservice.** While survey times for this code are identical to 93294, we do not believe a value at the 25<sup>th</sup>-percentile appropriately captures the increased intensity and amount of information considered when reading ICD interrogations versus pacemaker interrogations. As shown in the summary spreadsheet, we identified MPC codes and one additional comparator code with similar intraservice times, total times, and RVUs to support the recommendation.

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 93295

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty cardiology                      How often? Commonly

Specialty cardiac electrophysiology                      How often? Commonly

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period? 884000

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Assuming roughly even split of Medicare & non-Medicare, this number is double the Medicare estimate below.

Specialty cardiology                      Frequency 400000                      Percentage 45.24 %

Specialty cardiac electrophysiology                      Frequency 410000                      Percentage 46.38 %

Specialty other                      Frequency 74000                      Percentage 8.37 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 442,000 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on 2015 Medicare data in RUC database.

Specialty cardiology                      Frequency 200000                      Percentage 45.24 %

Specialty cardiac electrophysiology                      Frequency 205000                      Percentage 46.38 %

Specialty other                      Frequency 37000                      Percentage 8.37 %

Do many physicians perform this service across the United States? Yes

## Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Tests

BETOS Sub-classification:

Other tests

BETOS Sub-classification Level II:

Other

---

### **Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 93295

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

---

CPT Code: 93297      Tracking Number

Original Specialty Recommended RVU: **0.52**Presented Recommended RVU: **0.52**

Global Period: XXX

RUC Recommended RVU: **0.52**

CPT Descriptor: Interrogation device evaluation(s), (remote) up to 30 days; implantable cardiovascular monitor system, including analysis of 1 or more recorded physiologic cardiovascular data elements from all internal and external sensors, analysis, review(s) and report(s) by a physician or other qualified health care professional

---

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 71-year-old man with ischemic cardiomyopathy and symptomatic systolic congestive heart failure has undergone implantation of a physiologic monitor to aide in the titration of heart failure therapies. The patient is followed now by wireless remote monitoring which constantly checks both device function and arrhythmias. (Note: this includes all such services within a 30-day period.)

Percentage of Survey Respondents who found Vignette to be Typical: 0%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

---

Description of Pre-Service Work: Review patient records to identify the indication for ICM monitoring and therapy, manufacturer and model of the ICM, and leads and sensors (both internal and external) as appropriate. Review prior records of ICM parameters and compare to prior remote and in-person interrogations.

Description of Intra-Service Work: Interrogate information from the ICM by telemetric communication and either print out for review or review on the programmer or computer monitor. Perform a critical review of the interrogated data with assessment of the appropriateness of the ICM's function and appropriateness of the current programmed parameters. Data reviewed may include, but are not limited to: (1) weight; (2) systemic blood pressure; (3) right atrial, right ventricular, left atrial, left ventricular, and pulmonary arterial pressures; (4) intrathoracic impedance measurements; and (5) other measures of physiologic parameters.

In addition, review stored episodes of data to assess the history and trends identified by any of the collected data. Also review alerts generated from the ICM along with battery voltage and sensor information to validate the integrity of the ICM system.

Description of Post-Service Work: After physician review of above data, make a decision as to the adequacy of the programmed parameters including the appropriate data collection set-up and the interval for the next scheduled interrogation evaluation. Modify patient's medical regimen as appropriate. Inform patient of test results. Prepare a final report that is reviewed by the attending physician and amend as necessary. Approve, sign, and distribute report to patient's record, the referring and primary physicians, and the attending physician.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

93297 describes the work of reading implanted loop recorder device interrogation(s) during a period of as much as 30 days. A random survey of 1000 ACC and HRS members was executed with 56 completed surveys.

The key reference service was selected by 15 respondents. Most respondents who selected 48-hour EKG (93224) as the key reference service found 93297 to be somewhat more intense, as shown in the table and intensity-complexity addendum. The second key reference service was selected by 7 respondents. Respondents who selected VAD interrogation (93750) as the key reference service found 93297 to be of slightly higher or slightly lower intensity, and overall rather similar.

Reflecting the January and October surveys, **we recommend the current work RVU of 0.52 with times of 5 minutes preservice, 6 minutes intraservice, and 5 minutes postservice.** This value is below the 25<sup>th</sup>-percentile of both the October and January surveys. As shown in the summary spreadsheet, we identified MPC codes and one additional comparator code with similar intraservice times, total times, and RVUs to support the recommendation.

---

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.

- ☐ Historical precedents.  
☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 93297

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
 If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty cardiology                      How often? Commonly

Specialty cardiac electrophysiology                      How often? Commonly

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period? 464000

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Assuming roughly even split of Medicare & non-Medicare, this number is double the Medicare estimate below.

Specialty cardiology                      Frequency 250000                      Percentage 53.87 %

Specialty cardiac electrophysiology                      Frequency 164000                      Percentage 35.34 %

Specialty other                      Frequency 50000                      Percentage 10.77 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 232,000 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on 2015 Medicare data in RUC database.

Specialty cardiology                      Frequency 125000                      Percentage 53.87 %

Specialty cardiac electrophysiology                      Frequency 82000                      Percentage 35.34 %

Specialty other                      Frequency 25000                      Percentage 10.77 %

Do many physicians perform this service across the United States? Yes

## Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Tests

BETOS Sub-classification:

Other tests

BETOS Sub-classification Level II:

Other

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 93297

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

---

CPT Code: 93298      Tracking Number

Original Specialty Recommended RVU: **0.52**Presented Recommended RVU: **0.52**

Global Period: XXX

RUC Recommended RVU: **0.52**

CPT Descriptor: Interrogation device evaluation(s), (remote) up to 30 days; implantable loop recorder system, including analysis of recorded heart rhythm data, analysis, review(s) and report(s) by a physician or other qualified health care professional

---

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 41-year-old patient with unexplained recurrent traumatic syncope underwent implantable loop recorder placement 1 month ago. The device is sensing the intrinsic rhythm. The patient is followed now by wireless remote monitoring which constantly checks both device function and arrhythmias, and sends alerts for any issues, which are then reviewed. (Note: this service includes all evaluations received within a 30-day period.)

Percentage of Survey Respondents who found Vignette to be Typical: 97%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

---

Description of Pre-Service Work: Review history for cardiac rhythm monitoring indications and for changes in, or the development of, new symptoms. Review programmed parameters and results of prior ILR interrogations and remote monitoring.

Description of Intra-Service Work: The following data is analyzed:

1. Initial interrogation is reviewed to determine if any alert conditions have occurred and if electrograms have been stored.
2. Current interrogation results are compared to historical values and previous trends.
  - a. Battery status
  - b. Appropriate sensing
3. Alert conditions are then reviewed in detail
  - a. Stored arrhythmic episodes are reviewed to determine if the arrhythmia was accurately identified by the ILR.
  - b. Compare arrhythmia to historical events to determine if it is clinically significant and requires further investigation and/or treatment.

Description of Post-Service Work: Prepare a final report that is reviewed by the attending physician and amend as necessary. Approve, sign, and distribute report to the patient's record, the referring and primary physicians, and the attending physician. Prepare communication to patient (letter) informing them of the status of their ILR (e.g. normal battery function, no arrhythmias detected). If abnormality is detected on remote interrogation, contact patient to discuss management strategy and document discussion.

---

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

92398 describes the work of reading implanted cardiac device monitor interrogation(s) during a period of as much as 30 days. A random survey of 1000 ACC and HRS members was executed with 64 completed surveys.

The key reference service was selected by 35 respondents. Most respondents who selected 48-hour EKG (93224) as the key reference service found 93298 to be identical or somewhat more intense, as shown in the table and intensity-complexity addendum. The second key reference service was selected by 6 respondents. Respondents who selected stress test interpretation and report (93018) as the key reference service found 93298 to be of slightly higher or slightly lower intensity, and overall very rather similar.

Reflecting the January and October surveys, **we recommend the current work RVU of 0.52 with times of 5 minutes preservice, 7 minutes intraservice, and 5 minutes postservice.** This value is also the 25<sup>th</sup>-percentile of both the October and January surveys. As shown in the summary spreadsheet, we identified MPC codes and one additional comparator code with similar intraservice times, total times, and RVUs to support the recommendation.

---

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.

☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 93298

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty cardiology                      How often? Commonly

Specialty cardiac electrophysiology                      How often? Commonly

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period? 300000

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Assuming roughly even split of Medicare & non-Medicare, this number is double the Medicare estimate below.

Specialty cardiology                      Frequency 150000                      Percentage 50.00 %

Specialty cardiac electrophysiology                      Frequency 120000                      Percentage 40.00 %

Specialty other                      Frequency 30000                      Percentage 10.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 150,000 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on 2015 Medicare data in RUC database.

Specialty cardiology                      Frequency 75000                      Percentage 50.00 %

Specialty cardiac electrophysiology                      Frequency 60000                      Percentage 40.00 %

Specialty other                      Frequency 15000                      Percentage 10.00 %

Do many physicians perform this service across the United States?

### Attestation Statement

This form needs to be completed by any **RUC Advisor** whose specialty society is developing a recommendation to be reviewed by the RUC.

As a RUC Advisor, I attest that the integrity of the RUC survey, summary of recommendation forms and practice expense recommendations are based on accurate and complete data to the best of my knowledge. As a RUC advisor, I acknowledge that violations would be addressed by the executive committee (i.e., RUC Chair , AMA Representative and Alternate AMA Representative.)

**AMA/Specialty Society Update Process  
Practice Expense Summary of Recommendation  
Non Facility Direct Inputs**

CPT Long Descriptor:

Global Period: XXX Meeting Date: January 2017

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee: **The ACC/HRS reviewer panel has provided the PE inputs approved for these codes at the October meeting in our submission materials. We have no additional materials or recommendations.**
2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale:
3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:
4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:
5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

Intra-Service Clinical Labor Activities:

Post-Service Clinical Labor Activities:

**AMA/Specialty Society Update Process  
Practice Expense Summary of Recommendation  
Non Facility Direct Inputs**

CPT Long Descriptor:

93293 Transtelephonic rhythm strip pacemaker evaluation(s) single, dual, or multiple lead pacemaker system, includes recording with and without magnet application with analysis, review and report(s) by a physician or other qualified health care professional, up to 90 days

Global Period: XXX Meeting Date: October 2016

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee: The ACC and HRS utilized a consensus panel process to develop recommended inputs.
2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale: Current PE Inputs
3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:
4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:
5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

Intra-Service Clinical Labor Activities:

Electrodiagnostic tech receives and reviews remote transmissions, prepares report and distribution of results.

RN/LPN/MTA enrolls patient, educates patient on use of device/service; physician notification

Post-Service Clinical Labor Activities:

**AMA/Specialty Society Update Process  
Practice Expense Summary of Recommendation  
Non Facility Direct Inputs**

CPT Long Descriptor:

93296 Interrogation device evaluation(s), (remote), per 90 days, pacemaker or implantable cardioverter defibrillator, remote data acquisitions), receipt of transmissions and technician review, technical support and distribution of results

93299 Interrogation device evaluation(s), (remote), per 30 days, implantable cardiovascular monitor or implantable loop recorder, remote data acquisition(s), receipt of transmissions and technician review, technical support and distribution of results

Global Period: XXX Meeting Date: October 2016

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee: The ACC and HRS utilized a consensus panel process to develop recommended inputs.
2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale: Current PE Inputs
3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:
4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence: Code 93299 is carrier priced. We propose to crosswalk inputs from 93296 to 93299.
5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

Intra-Service Clinical Labor Activities:

| Electrodiagnostic tech enrolls patient, educates patient on use of device/service, receives and reviews remote transmissions, prepares report and distribution of results.

| ~~RN/LPN/MTA enrolls patient, educates patient on use of device/service; physician notification~~

Post-Service Clinical Labor Activities:

\*Please note: If a supply has a purchase price of \$100 or more please bold the item name and CMS code.

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
**\*CMS High Expenditure Procedures\***

January 2017

**Intracardiac 3D Mapping Add-On**

In the NPRM for 2016 CMS re-ran the high expenditure services across specialties with Medicare allowed charges of \$10 million or more. CMS identified the top 20 codes by specialty in terms of allowed charges, excluding 010 and 090-day global services, anesthesia and Evaluation and Management services and services reviewed since CY 2010. In the comment letter the RUC noted that it was scheduled to review the utilization and collect data under new bundled codes in October 2016. However, in the Final Rule for 2016 CMS indicated that the work and practice expense for this service should be reviewed.

**93613 Intracardiac electrophysiologic 3-dimensional mapping (List separately in addition to code for primary procedure)**

The RUC reviewed the survey results from 47 cardiologists and determined that the survey 25<sup>th</sup> percentile work RVU of 5.23 appropriately accounts for the work required to perform this service. The RUC recommends 90 minutes intra-service time. The RUC determined that the decrease in the recommended work RVU appropriately corresponds to the decrease in intra-service work. The RUC edited the description of work to delete “remove the catheter and obtaining hemostasis” as this is associated with the primary procedure. The RUC compared the surveyed code to the top key reference service 93609 *Intraventricular and/or intra-atrial mapping of tachycardia site(s) with catheter manipulation to record from multiple sites to identify origin of tachycardia (List separately in addition to code for primary procedure)* (PC work RVU = 4.99 and 90 minutes intra-service time) and determined that this service was slightly more intense and complex on all measures examined. The RUC also compared the surveyed code to the second top key reference code 93655 *Intracardiac catheter ablation of a discrete mechanism of arrhythmia which is distinct from the primary ablated mechanism, including repeat diagnostic maneuvers, to treat a spontaneous or induced arrhythmia (List separately in addition to code for primary procedure)* (work RVU = 7.50 and 90 minutes intra-service time) and determined that code 93655 is more intense than the surveyed code because it entails the initiation and prolonged observation (to allow for mapping, the surveyed code) of arrhythmias that are potentially dangerous and/or hemodynamically unstable with increased risk to the patient and thereafter requires ablation which in and of itself carries precision and risk- it requires greater intensity to perform the complex initiation of arrhythmias and to manage such patients while these arrhythmias are being mapped in order to allow for the subsequent ablation. In addition, any patient who has more than one arrhythmia focus becomes exponentially complex. The diagnostic maneuvers, mapping and ablation skills needed to successfully treat a second focus are significant. Not all arrhythmia foci are created equally. Patients who have more than one focus tend to have significant scar tissue. Mapping the circuit of the arrhythmia is particularly challenging because distinguishing between partly viable tissue and complete scar requires a very dense map (meaning many data points must be acquired and correctly interpreted and annotated on the map).

For additional support the RUC referenced MPC code 57267 *Insertion of mesh or other prosthesis for repair of pelvic floor defect, each site (anterior, posterior compartment), vaginal approach (List separately in addition to code for primary procedure)* (work RVU = 4.88 and 45 minutes intra-service time) and noted that the MPC code is much more intense and requires half the intra-service time. **The RUC recommends a work RVU of 5.23 for CPT code 93613.**

#### Practice Expense

There are no direct practice expense inputs for this service.

#### Work Neutrality

The RUC's recommendation for these codes will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

SUMMARY OF RECOMMENDATION**

CPT Code: 93613      Tracking Number

Original Specialty Recommended RVU: **5.23**Presented Recommended RVU: **5.23**

Global Period: ZZZ

RUC Recommended RVU: **5.23**

CPT Descriptor: Intracardiac electrophysiologic 3-dimensional mapping (List separately in addition to code for primary procedure)

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 71-year-old female is undergoing radiofrequency ablation (reported separately) to treat atrial tachycardia. Atrial tachycardia is induced, with a morphology similar to the tachycardia that had been documented clinically. 3D mapping is indicated.

Percentage of Survey Respondents who found Vignette to be Typical: 96%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: n/a

Description of Intra-Service Work: During the course of an electrophysiology procedure, induce an arrhythmia that requires use of an advanced three-dimensional (3D) computer-assisted mapping system to localize the arrhythmia origin. Place the mapping system in the cardiac chamber of interest using standard percutaneous techniques. Calibrate the system and make recordings during sinus rhythm to identify normal activation and location of scar during each distinct tachycardia. Display the computer-generated map, make modifications in the computer parameters and display, and identify the tachycardia origin. Move the ablation catheter to the point of early activation localized by the mapping system to identify a mid-diastolic potential, Kent potential, and/or similar paced maps. When a re-entrant circuit is identified, perform entrainment mapping studies and evaluated them to confirm the catheter location is within the re-entrant circuit. Make additional mappings to confirm arrhythmia origin and study additional arrhythmias at the conclusion of the procedure. Prepare a final report and include the mapping procedure and findings.

Description of Post-Service Work: n/a

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

93613 is an add-on code used with several cardiac electrophysiology evaluation and/or ablation services. It describes the work of placing the mapping system inside the heart and creating a map of the chamber to aid performance of the underlying service.

CMS identified 93613 in CY 2016 rulemaking as potentially misvalued through its high-expenditure screen. A random survey of 500 ACC and HRS members was executed with 47 completed surveys. The information obtained is used to develop the survey results in the SOR and the summary spreadsheet.

The key reference service was selected by 26 respondents. Respondents who selected atrial tachycardia mapping code 93609 as the key reference code found 93613 to be more intense/complex in every factor, as shown in the above table and the attached addendum. This comparison is reasonable, since the median survey time of 90 minutes equals the 90-minute survey time for 93609, yet respondents estimated 93613 to be more work.

At this RVU level, no comparable ZZZ MPC codes exist. The two highest MPC ZZZ codes—57267 for insertion of vaginal mesh or prosthesis for repair of pelvic floor defect and 63048 for vertebra laminectomy—are included on the SOR and summary spreadsheet. We note that both of those half as much intraservice time (45 minutes). We searched the RUC database for additional comparators and found only nine other RUC-reviewed ZZZ code with a time of 90 minutes. The lowest valued of those, 22851, describes application of intervertebral biomechanical devices and has a work RVU of 6.70.

Reflecting a robust survey, and given the reduction in intraservice time for 93613, we **recommend the survey 25<sup>th</sup>-percentile work RVU of 5.23 with times of 0 minutes preservice, 90 minutes intraservice, and 0 minutes postservice.** This value is 25% lower than the current value proportionately captures the 25% reduction in time, as demonstrated by the constant IWP/UT.

---

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 93613

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty cardiac electrophysiology                      How often? Commonly

Specialty cardiology                      How often? Sometimes

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?

50,654 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. 2015 FFS utilization form RUC database.

Specialty cardiac electrophysiology	Frequency 33654	Percentage 66.43 %
-------------------------------------	-----------------	--------------------

Specialty cardiology	Frequency 15500	Percentage 30.59 %
----------------------	-----------------	--------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Do many physicians perform this service across the United States? Yes

**Berenson-Eggers Type of Service (BETOS) Assignment**

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Imaging

BETOS Sub-classification:

Imaging/procedure

BETOS Sub-classification Level II:

Heart inc. Cardiac Catheter

---

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 93613

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/Specialty Society Update Process  
Practice Expense Summary of Recommendation  
Facility Direct Inputs**

CPT Long Descriptor: Intracardiac electrophysiologic 3-dimensional mapping (List separately in addition to code for primary procedure)

Global Period: ZZZ Meeting Date: January 2017

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee: The reviewer panel utilized a consensus panel process to develop recommended inputs. **No clinical staff time, supplies, or equipment are recommended for this facility-based ZZZ code.**
2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale: Existing 93613.
3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time: n/a
4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence: n/a
5. Please describe in detail the clinical activities of your staff: n/a

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
*\*CMS High Expenditure Procedures\**

January 2017

**IV Hydration**

In the NPRM for 2016 CMS re-ran the high expenditure services across specialties with Medicare allowed charges of \$10 million or more. CMS identified the top 20 codes by specialty in terms of allowed charges, excluding 010 and 090-day global services, anesthesia and Evaluation and Management (E/M) services and services reviewed since CY 2010. CPT code 96360 was part of that list to be surveyed and CPT code 96361 was added as part of the family. This two code IV Hydration family was previously surveyed and reviewed by the RUC as part a 20-code project conducted by a multispecialty coalition at the October 2004 RUC meeting.

The RUC discussion recalled that, as part of the October 2004 undertaking, the twenty codes were considered in context and a hierarchy was created through the work RVUs that started with the presumption that the lowest service was hydration and that it should not be valued lower than CPT code 99211. CMS provided further history and emphasized that there are certain E/M expectations with the hydration codes. These services are not just supervision codes in the sense that CMS is expecting that, since there is some evaluation and management value included, physicians will assess the patient when necessary and make course corrections. Further, there was a statutory provision that talked about the fact that certain evaluation services would be included and that has been reflected in the Level I (99211) office visit that was included in the work for these codes.

***96360 Intravenous infusion, hydration; initial, 31 minutes to 1 hour***

The RUC reviewed the survey results from 52 medical oncologists and hematologists and determined that it was appropriate to maintain the current work RVU of 0.17, which is supported by the survey and is less than the 25<sup>th</sup> percentile of 0.21. The RUC recommends 2 minutes pre-service time, 3 minutes intra-service time, and 2 minutes post-service time. The RUC compared the surveyed code to the top key reference service 96365 *Intravenous infusion, for therapy, prophylaxis, or diagnosis (specify substance or drug); initial, up to 1 hour* (work RVU = 0.21, intra-service time of 5 minutes). The intensity/complexity measures of the surveyed code were similar to the ratings assigned to the reference code. Given the similarity in times and the minimal difference in the intensity/complexity measures, the survey data supports maintenance of the current value of 0.17. The RUC agreed with the consensus of the specialty societies that the physician work of this service and time involved has not fundamentally changed since 2004 which would not justify a substantial increase from the current level and therefore recommends the current times and work RVU be maintained.

To provide further support, the RUC compared the surveyed code to both the multi-specialty point of comparison CPT code 73120 *Radiologic examination, hand; 2 views* (work RVU = 0.16, intra-service time of 3 minutes) and CPT code 99211 *Office or other outpatient visit for the evaluation and management of an established patient, that may not require the presence of a physician or other qualified health care professional. Usually, the presenting problem(s) are minimal. Typically, 5 minutes are spent performing or supervising these services* (work RVU = 0.18, intra-service time of 5 minutes). The RUC considered the time and intensity associated with the surveyed code to be comparable to that of these similar services and determined the current RVW places this code in appropriate rank order to those services in terms of physician work. The RUC recommends maintaining the current work RVU of 0.17, which is consistent with the conclusion that there have not been fundamental changes to the physician work and continues to align with CPT code 99211 per the 2004 rationale. **The RUC recommends a work RVU of 0.17 for CPT code 96360.**

**96361 Intravenous infusion, hydration; each additional hour (List separately in addition to code for primary procedure)**

The RUC reviewed the survey results from 50 medical oncologists and hematologists and determined that it was appropriate to maintain the current work RVU of 0.09, which is supported by the survey and is less than the 25<sup>th</sup> percentile of 0.19. The RUC recommends 3 minutes of intra-service time for this add-on (ZZZ) code. The survey median intra-service time was 10 minutes and the 25<sup>th</sup> percentile intra time was 5 minutes; the current intra-service time assigned is 3 minutes. The RUC agreed with the consensus of the specialty societies that the physician work of this service has not fundamentally changed since 2004 and recommends that the current time and work RVU be maintained as they are similar with the 25<sup>th</sup> percentile from the recent survey. The RUC compared the surveyed code to the top key reference service 96367 *Intravenous infusion, for therapy, prophylaxis, or diagnosis (specify substance or drug); additional sequential infusion of a new drug/substance, up to 1 hour (List separately in addition to code for primary procedure)* (work RVU = 0.19, intra-service time of 5 minutes). The intensity/complexity measures for the surveyed code were rated similar, however since the service has not changed, the RUC would agree with the specialty societies and not recommend an increase in value.

For additional support, the RUC compared the surveyed code to both the multi-specialty point of comparison CPT code 95165 *Professional services for the supervision of preparation and provision of antigens for allergen immunotherapy; single or multiple antigens (specify number of doses)* (work RVU = 0.06, intra-service time of 3 minutes) and CPT code 96153 *Health and behavior intervention, each 15 minutes, face-to-face; group (2 or more patients)* (work RVU = 0.10, intra-service time of 3 minutes). The surveyed code is the second hour of hydration, and there would be a need for some nurse/physician interaction. The specialties reaffirmed that the work related to this code was about half of the work associated with 96360 (as similarly noted by the RUC for codes 90760 and 90761, in the RUC rationale from the October 2004 survey).

The RUC recommends maintaining the current RVW of 0.09, which is consistent with the conclusion that there have not been fundamental changes to the physician work and there is no compelling evidence for an increase in the work value. **The RUC recommends a work RVU of 0.09 for CPT code 96361.**

**Practice Expense**

Modifications were made to the direct practice expense inputs including the elimination of all duplicative clinical staff time with the E/M. The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.

<b>CPT Code</b>	<b>CPT Descriptor</b>	<b>Global Period</b>	<b>Work RVU Recommendation</b>

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 49-year-old female has a diagnosis of viral gastroenteritis. IV hydration is prescribed. A peripheral IV line needs to be established.

Percentage of Survey Respondents who found Vignette to be Typical: 60%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is;  
Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Provide and confirm orders. Interact and review plan with staff.

Description of Intra-Service Work: Physician or other qualified health care professional directly supervises the service ensure their immediate availability to the staff in the office and periodically assesses the patient and the patient's response to treatment, typically through communication with nurse.

Description of Post-Service Work: Provide appropriate instructions regarding immediate care. Provide minimal instruction regarding ongoing care. Conduct appropriate interactions with staff regarding patient monitoring.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

<b>Services Reported Together</b>	96360	96361	99214
Global Period	XXX	ZZZ	XXX
RVU	0.17	0.09	1.50
Pre-/Intra-/Post- Time	2/3/2	0/3/0	5/25/1 0

**Background**

In the NPRM for 2016, CMS re-ran the high expenditure services across specialties with Medicare allowed charges of \$10 million or more. CMS identified the top 20 codes by specialty in terms of allowed charges, excluding 010 and 090-day global services, anesthesia and Evaluation and Management services and services reviewed since CY 2010. CPT 96360 was part of that list to be surveyed and CPT 96361 was added as part of the family. **In June 2016, the specialty societies indicated that they would not proceed with a coding change proposal and moved to survey for January 2017 RUC.** This two code IV Hydration family was previously surveyed and reviewed by the RUC as part a 20-code project conducted by a multispecialty coalition at the October 2004 RUC meeting.

**96360 Survey Results & Recommendations:**

The American Society of Clinical Oncology (ASCO) and the American Society of Hematology (ASH), conducted a joint random survey of their members in October-November 2016. Physician advisors and specialty experts participated by conference calls and over e-mail discussion to review the survey work data and develop recommendations. The ASCO and ASH, RVS joint consensus panel reviewed and discussed the work survey results. For CPT code 96360, there were 52 responses to the survey request with a median performance rate of 50, lending support that the survey participants were familiar with the service. 60% of the survey respondents found the vignette to be typical.

**Time Discussion**

The joint panel reviewed the survey median times (10 pre, 10 intra, 5 post) and compared it to the current time of 2 minutes pre, 3 minutes intra and 2 minutes' post time. The 25<sup>th</sup> percentile times of the survey are (5 pre, 5 intra and 5 post.) The consensus of the joint panel is that the physician work of this service has not fundamentally changed since 2004 which would not justify a substantial increase in time from the current level. We are therefore recommending the current times be maintained as they are similar with the 25<sup>th</sup> percentile times from the recent survey. We recognize that participants often think in terms of 5 minute increments, which we believe demonstrates the 25<sup>th</sup> percentile time values and we find to be not specific enough for use. The current times that are benchmarked against CPT 99211 (as they were by the RUC in the 2004 survey) are a better comparison.

### Work Discussion

The joint panel reviewed the survey median work (RVW 0.26) as well as the 25<sup>th</sup> percentile (RVW 0.21) compared to the current value (RVW 0.17). The panel recommends maintaining the current RVW of 0.17, which is consistent with our conclusion that there have not been fundamental changes the physician work and there is no compelling evidence for an increase in the work value.

The key reference service code 1 chosen by the survey respondents, CPT 96365 *Intravenous infusion, for therapy, prophylaxis, or diagnosis (specify substance or drug); initial, up to 1 hour*, is assigned an RVW 0.21 with pre, intra and post time of 2, 5 and 2 minutes. The intensity/complexity measures of the surveyed code were similar than the ratings assigned to the reference code. Given the similarity in times and the minimal difference in the intensity/complexity measures, we therefore believe the survey data supports maintenance of the current value of 0.17.

To provide further support, the joint panel compared code 96360 to two MPC codes and other services listed in the table below:

**TABLE 1 REVIEW OF COMPARATOR SERVICES**

CPT Code	Short Description	RVW	Pre	Intra	Post	Total
<b>73120 (MPC)</b>	X-ray exam of hand	<b>0.16</b>	<b>1</b>	<b>3</b>	<b>1</b>	<b>5</b>
<b>93010</b>	Electrocardiogram report	<b>0.17</b>	<b>0</b>	<b>5</b>	<b>1</b>	<b>6</b>
<b>96360</b> Survey Code	Hydration iv infusion init	<b>0.17</b>	<b>2</b>	<b>3</b>	<b>2</b>	<b>7</b>
<b>99211 (MPC)</b>	Office/outpatient visit est (five minutes)	<b>0.18</b>	<b>0</b>	<b>5</b>	<b>2</b>	<b>7</b>

The panel considers the time and intensity associated with the surveyed infusion code to be comparable to that of the other comparator services and believes the current RVW places this code in appropriate rank order to those services in terms of physician work.

**In summary, we recommend a RVW of 0.17 (which is the current value for 96360) with a pre-service time 2 minutes, intra service time 3 minutes, and post time 2 minutes for a total time 7 minutes.**

### SERVICES REPORTED WITH MULTIPLE CPT CODES

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.

- ☐ Historical precedents.
- ☒ Other reason (please explain) This code is billed with an E/M code 50% of the time in addition to CPT code 96361.

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. See above in the "Additional Rationale and Comments" section.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 96360

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Hematology/Oncology                      How often? Commonly

Specialty Medical Oncology                      How often? Commonly

Specialty Internal Medicine                      How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 698094

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. 2015 Medicare claims data times 3.

Specialty Hematology/Oncology	Frequency 340181	Percentage 48.72 %
Specialty Medical Oncology	Frequency 92986	Percentage 13.31 %
Specialty Internal Medicine	Frequency 78117	Percentage 11.19 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 232,698 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This is 2015 Medicare claims data from the RUC database.

Specialty Hematology/Oncology	Frequency 112114	Percentage 48.18 %
Specialty Medical Oncology	Frequency 32159	Percentage 13.82 %
Specialty Internal Medicine	Frequency 26900	Percentage 11.56 %

Do many physicians perform this service across the United States? Yes

## Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 96361      Tracking Number

Original Specialty Recommended RVU: **0.09**Presented Recommended RVU: **0.09**

Global Period: ZZZ

RUC Recommended RVU: **0.09**

CPT Descriptor: Intravenous infusion, hydration; each additional hour (List separately in addition to code for primary procedure)

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 49-year-old female with a diagnosis of viral gastroenteritis has two liters of IV hydration prescribed. At the end of the first hour, another 1500 cc remain to be infused and the infusion is continued. (Note: Code 96361 is an add-on code. Code 96360 includes IV discontinuation, flush, and discharge process.)

Percentage of Survey Respondents who found Vignette to be Typical: 60%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is;  
Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: N/A

Description of Intra-Service Work: Physician or other qualified health care professional directly supervises the service, ensures their immediate availability to the staff in the office and periodically assesses the patient and the patient's response to treatment, typically through communication with the nurse.

Description of Post-Service Work: N/A

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

<b>Services Reported Together</b>	96361	96360
Global Period	ZZZ	XXX
RVU	.09	.17
Pre-/Intra-/Post- Time	0/3/0	2/3/2

**Background**

In the NPRM for 2016, CMS re-ran the high expenditure services across specialties with Medicare allowed charges of \$10 million or more. CMS identified the top 20 codes by specialty in terms of allowed charges, excluding 010 and 090-day global services, anesthesia and Evaluation and Management services and services reviewed since CY 2010. CPT 96360 was part of that list to be surveyed and CPT 96361 was added as part of the family. **In June 2016, the specialty societies indicated that they would not proceed with a coding change proposal and moved to survey for January 2017 RUC.** This two code IV Hydration family was previously surveyed and reviewed by the RUC as part a 20-code project conducted by a multispecialty coalition at the October 2004 RUC meeting.

**96361 Survey Results & Recommendations:**

The American Society of Clinical Oncology (ASCO) and the American Society of Hematology (ASH), conducted a joint random survey of their members in October-November 2016. Physician advisors and specialty experts participated by conference calls and over e-mail discussion to review the survey work data and develop recommendations. The ASCO and ASH, RVS joint consensus panel reviewed and discussed the work survey results. For CPT code 96361, there were 50 responses to the survey request with a median performance rate of 50, lending support that the survey participants were familiar with the service. 60% of the survey respondents found the vignette to be typical.

**Time Discussion**

We did not survey for pre and post time since this is an add-on (ZZZ) code. The survey median intra service time was 10 minutes and the 25<sup>th</sup> percentile intra time 5 minutes. The current intra time assigned is 3 minutes. The consensus of the joint panel is that the physician work of this service has not fundamentally changed since 2004. We are therefore recommending that the current time be maintained and as they are similar with the 25<sup>th</sup> percentile time from the recent survey. We believe even the 25<sup>th</sup> time values are not specific enough for use and that the current time is representative of the appropriate time.

### Work Discussion

Code 96361 is currently assigned an RVW of 0.09. The median survey RVW was 0.20 and the 25<sup>th</sup> percentile was 0.19. The joint panel agreed that there was no compelling evidence to support a higher RVU and recommends that the current RVW of 0.09 be maintained. The reference code most frequently selected for this survey is code 96367, *Intravenous infusion, for therapy, prophylaxis, or diagnosis (specify substance or drug); additional sequential infusion of a new drug/substance, up to 1 hour (List separately in addition to code for primary procedure)*, which is assigned an RVW of 0.19, and 1 minute of pre service and 5 minutes of intra time. The intensity/complexity measures for the surveyed code were ranked similar, however since the service has not changed the expert panel would not recommend an increase in value.

To provide further support for our recommendation, the joint panel compared code 96361 to two MPC codes and other services listed in the table below:

**TABLE 1 REVIEW OF COMPARATOR SERVICES**

CPT Code	Short Description	RVW	Pre	Intra	Post	Total
<b>95165 (MPC)</b>	Antigen therapy services (Single and multiple)	<b>0.06</b>	<b>0</b>	<b>3</b>	<b>0</b>	<b>0</b>
<b>95144</b>	Antigen therapy services (single)	<b>0.06</b>	<b>0</b>	<b>3</b>	<b>0</b>	<b>3</b>
<b>96361</b> Survey Code	Hydrate iv infusion add-on	<b>0.09</b>	<b>0</b>	<b>3</b>	<b>0</b>	<b>3</b>
<b>96153 (MPC)</b>	Intervene hlth/behave group	<b>0.10</b>	<b>1</b>	<b>3</b>	<b>1</b>	<b>5</b>
<b>96368 (MPC)</b>	Ther/diag concurrent inf	<b>0.17</b>	<b>1</b>	<b>5</b>	<b>0</b>	<b>6</b>

Code 96361 is the second hour of hydration, and there would be a need for some nurse/physician interaction. The panel reaffirmed that the work related to 90761 was about half of the work associated with 90760 as noted by the RUC, in the rationale from the RUC data base, during the October 2004 survey rationale.

**In summary, we recommend a RVW of 0.09 (which is the current value for 96361) with a pre service time of 0 minutes, intra service time of 3 minutes, and post time of 0 minutes for a total time 3 minutes.**

### SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. See above in the "Additional Rationale and Comments" section.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 96361

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Hematology/Oncology                      How often? Commonly

Specialty Medical Oncology                      How often? Commonly

Specialty Internal Medicine                      How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 1602120

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Medicare 2015 claims data multiplied by 3.

Specialty Hematology/Oncology              Frequency 982740                      Percentage 61.34 %

Specialty Medical Oncology                      Frequency 276846                      Percentage 17.28 %

Specialty Internal Medicine                      Frequency 107342                      Percentage 6.70 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 534,040 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This information is the 2015 Medicare Claims information from the RUC database

Specialty Hematology/Oncology              Frequency 321919                      Percentage 60.27 %

Specialty Oncology                      Frequency 91161                      Percentage 17.07 %

Specialty Internal Medicine                      Frequency 37703                      Percentage 7.05 %

Do many physicians perform this service across the United States? Yes

**AMA/Specialty Society Update Process**  
**Practice Expense Summary of Recommendation**  
**Non Facility Direct Inputs**

CPT Long Descriptor: Intravenous infusion, hydration; initial, 31 minutes to 1 hour

Global Period: XXX Meeting Date: January 2017- **Revised 1/12/17**

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee: The specialty society advisors and staff from ASCO and ASH held a meeting via conference call to discuss the Practice Expense. The inputs were developed with involvement from physicians, specialty society staff, and clinical staff from a variety of settings.

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale: For CPT Code 96360, there are two reference codes. Reference code 1 are the current PE inputs for CPT code 96360. Reference code 2 are the PE inputs for CPT code 99214. CPT code 96360 is reported with an E/M code approximately 50% of the time, about 23% of the time with E/M code 99214.

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time: There are 3 minutes of pre-service time in CPT code 96360 (the current standard is 0 minutes), which accounts for the following work: Coordinating with physician on the infusion, confirming drugs to be infused and the dosage, obtaining an update on the patient's condition, and ensuring the appropriate lab work is ordered. Recent increases in documentation and insurance requirements continue to support the need for these minutes in the pre-service time.

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:

Line 23- Obtain Vital Signs. We are adding **5 minutes** (an increase from **3 minutes**) for obtaining the vital signs, in compliance with the new standards. Five vitals are obtained: blood pressure, respiration, pulse, temperature, and weight. Five vitals equal five minutes according to the standard.

5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

Line 13- Coordinate pre-surgery services- **0 minutes**

The clinical staff coordinates with the physician on the infusion, confirms drugs to be infused and the dosage, obtains an update on the patient's condition, and ensures appropriate lab work is ordered.

**Line 13 was decreased from 3 minutes to 0 minutes as it is reported with an E/M code 50% of the time.**

Pre-Service Time Total: **0 minutes**

Intra-Service Clinical Labor Activities:

Line 21- Greet patient, provide gowning, ensure appropriate medical records are available- **0 minutes**  
Clinical staff greets patient and escorts them to the infusion suite/medical recliner. Gowning is provided to the patient. Clinical staff then settles patient in the medical recliner.

Line 21 was decreased from 2 minutes to 0 minutes due as it is reported with an E/M service 50% of the time.

Line 22- Review charts/obtain medical history- **0 minutes**  
Clinical staff verifies patient information. Reviews the patient's history and complications from the medical record, which includes verifying allergies and previous reactions/side effects. Clinical staff reviews lab values, including a complete blood count and chemistry.

Line 21 was decreased from 2 minutes to 0 minutes due as it is reported with an E/M service 50% of the time.

Line 23- Obtain vital signs- **3 minutes**  
Clinical staff obtains five vital signs: blood pressure, respiration, pulse, temperature, and weight.

Line 23 remained at the current 3 minutes, rather than the suggested increase to 5, due to the service being reported with an E/M service 50% of the time.

Line 24- Provide pre-service education/obtain consent- **2 minutes**  
Clinical staff explains the nature and purpose of the medication to be infused and obtains the patient's consent to receive the infusion.

Line 25- Prepare room, equipment, and supplies- **2 minutes**  
Clinical staff gathers supplies for the infusion and personal protective equipment.

Line 27- Prepare and position patient/monitor patient/set up IV- **2 minutes**  
Clinical staff prepares and positions patient. Ensures the chair is positioned and clear of any obstacles for safety of patient. Ensures patient is prepared for the infusion.

Line 31- Clinical staff performs procedure- **5 minutes**  
The clinical staff accesses IV/implanted port or IV catheter/implantable device and begins the infusion. During the infusion, clinical staff regulates the rate, monitors solutions, and assesses the patient's response/tolerance to the infusion. Interventions are conducted as needed. An IV access site assessment is performed. The IV catheter/implanted port is then flushed, and the IV is discontinued. The device is removed. Post procedure care of site is performed. The clinical staff conducts another assessment of the IV insertion site. Documentation of procedure, patient status and other relative clinical information is done.

Line 31 was decreased from 10 minutes to 5 minutes, as the PE Subcommittee did not feel it would take clinical staff 10 minutes to perform the procedure.

Line 33- Monitor patient following procedure/check tubes, monitors, drains, multitasking 1:4- **2 minutes**  
Clinical staff monitors patient for adverse reactions.

Line 35- Clean room/equipment by physician staff- **0 minutes**

Nurse disconnects pump and removes tubing from pump. The pump and infusion chair are disinfected. The area is cleaned and materials are disposed of in a hazardous waste container.

Line 35 was decreased from 2 minutes to 0 minutes due to the service being reported with an E/M service 50% of the time.

Line 38- Complete diagnostic forms, lab & X-ray requisitions- **0 minutes**

The clinical staff completes medical record documentation, diagnostic forms, and lab and x-ray requisitions.

Line 38 was decreased from 2 minutes to 0 minutes due to the service being reported with an E/M service 50% of the time.

Line 40- Check dressings and wound/home care instructions/coordinate office visits and prescriptions- **0 minutes**. Nurse reviews with patient medication side effects. Advises how to contact the practice or organization, who should be called in specific circumstances, and which symptoms should trigger a call to the physician/practice. Instructions are provided to the patient on IV site and PICC/vascular access device (VAD) care. Prescriptions are discussed with patient. Nurse verifies a follow up visit/appointments.

Line 40 was decreased from 3 minutes to 0 minutes due to the service being reported with an E/M service 50% of the time.

Total Intra-Service Time: **16 minutes**

Post-Service Clinical Labor Activities:

Line 48- Conduct phone calls/call in prescriptions- **0 minutes**

Clinical staff conducts phone calls and calls in prescriptions.

Line 48 was decreased from 2 minutes to 0 minutes due to the service being reported with an E/M service 50% of the time.

Total Post-Service Time: **0 minutes**

**AMA/Specialty Society Update Process  
Practice Expense Summary of Recommendation  
Non Facility Direct Inputs**

CPT Long Descriptor: Intravenous infusion, hydration; each additional hour (List separately in addition to code for primary procedure)

Global Period: XXX Meeting Date: **January 2017- Revised 1/17/2017**

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee: The specialty society advisors and staff from ASCO and ASH held a meeting via conference call to discuss the Practice Expense. The inputs were developed with involvement from physicians, specialty society staff, and clinical staff from a variety of settings.

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale. For CPT Code 96361, we are using the current PE inputs for 96361 as a reference.

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time: (not applicable)

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:

Line 23- Obtain Vital Signs. We are adding **5** minutes (an increase from **3** minutes) for obtaining the vital signs, in compliance with the new standards. Four vitals are obtained: blood pressure, respiration, pulse, and temperature. Four vitals equal five minutes.

5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

(not applicable)

Intra-Service Clinical Labor Activities:

Line 23- Obtain vital signs- **3 minutes**

The clinical staff obtains four vitals: blood pressure, pulse, Temperature, and Respiration (4 vitals= 5 minutes)

**Line 23- The number of vitals was decreased to 3 minutes from the suggested 5 minutes to bring it in line with CPT code 96360.**

Line 31- Clinical staff performs procedure- **4 minutes**

The clinical staff continues to assess the patient and IV access. This is additional hour so the time value for starting the IV would be in 96361). During the infusion, clinical staff regulates the rate, monitors

**CPT Code: 96361**  
**Specialty Society('s): ASCO, ASH**

solutions, and assesses the patient's response/tolerance to the infusion. Interventions are conducted as needed. Documentation of procedure, patient status and other relative clinical information is done.

Line 31 was decreased from 7 minutes to 4 minutes, following the decrease in clinical staff time for 96360.

Total Intra-Service Time: **7 minutes**

Post-Service Clinical Labor Activities:

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
*\*CMS High Expenditure Procedures\**

January 2017

**Application of On-body Injector with Subcutaneous Injection**

At the October 2015 panel meeting the CPT Editorial Panel created a new code, CPT code 96377 *Application of on-body injector (includes cannula insertion) for timed subcutaneous injection*, for the administration of neupogen following chemotherapy. The manufacturer of the on-body injector that administers the medication submitted the code proposal and presented to the Panel. Although the specialty society did not develop the code proposal they are strongly supportive of the application. The drug cannot be administered until 24 hours after chemotherapy and patients are often required to return to the office for administration. This is a considerable burden for patients who live in rural areas and may have to travel hundreds of miles for such treatment and the specialty supports the service as it is an important method of administration for this drug.

As the specialty societies prepared to survey CPT code 96377, it was determined that a targeted sample was necessary to appropriately survey this code. This type of survey needs to be approved by the Research Subcommittee; however, the deadline for approval had already passed. In a letter to the RUC the specialty societies requested that the survey be delayed to the April 2016 RUC meeting. Subsequent to that letter being submitted the specialty determined there are other injection/ IV push codes part of the same family as the new codes (96372, 96374, 96375) and that the codes should be surveyed together. The other injection services in the family (96372, 96374, and 96375) are high volume and were been identified by the Relativity Assessment Workgroup for survey and review by the RUC at the October 2016 RUC meeting. It will be necessary to gain involvement from other specialty societies that perform injection services. The societies that perform these services will review potential changes to the overall family of injection/ IV push codes and provide revised introductory material for the CPT book. The specialty societies planned to survey the entire family of injection/IV push services for the October 2016 RUC meeting.

The RUC considered the recommendation of the specialty societies and agreed that the new service along with three other codes in the family, CPT codes 96372, 96374 and 96375 should be surveyed for the October 2016 RUC meeting. The RUC also agreed with the recommendation that the new service 96377 should be carrier priced for 2017. The RUC recommended survey of CPT codes 96372, 96374, 96375 and 96377 for review at the October 2016 RUC meeting and recommended to carrier price CPT code 96377 for 2017. The CPT Editorial Panel questioned whether physician work is involved in 96377 or if it is practice expense only. In June 2016, the specialty societies indicated that they would not proceed with a coding change proposal and would survey for January 2017.

**96372 Therapeutic, prophylactic, or diagnostic injection (specify substance or drug); subcutaneous or intramuscular**

The RUC reviewed surveys from 110 physicians and determined that the current work RVU of 0.17 appropriately accounts for the work required to perform this service. The RUC recommends 2 minutes pre-service evaluation time, 3 minutes intra-service time and 2 minutes immediate post service time. Although the survey 25<sup>th</sup> percentile and median work values and time components were all higher, the specialty societies indicated that the work and time for this service has not fundamentally changed. The RUC noted that 96372 is typically performed with an Evaluation and Management service (52% of the time), and the pre-service time, post-service time and practice expense inputs do not include any duplication.

The RUC compared the surveyed code to the top two key reference services CPT code 96365 *Intravenous infusion, for therapy, prophylaxis, or diagnosis (specify substance or drug); initial, up to 1 hour* (work RVU = 0.21 and 5 minutes intra-service time) and 96413 *Chemotherapy administration, intravenous infusion technique; up to 1 hour, single or initial substance/drug* (work RVU = 0.28 and 7 minutes intra-service time) and noted that the respondents indicated that the surveyed code is less intense and complex on almost all measures examined. For additional support, the RUC referenced MPC codes 73120 *Radiologic examination, hand; 2 views* (work RVU = 0.16 and 3 minutes intra-service time) and 99211 *Office or other outpatient visit for the evaluation and management of an established patient* (work RVU = 0.18 and 7 minutes total time), which provide better references regarding the relativity for physician work and time across the payment schedule. **The RUC recommends a work RVU of 0.17 for CPT code 96372.**

**96374 Therapeutic, prophylactic, or diagnostic injection (specify substance or drug); intravenous push, single or initial substance/drug**

The RUC reviewed surveys from 80 physicians and determined that the current work RVU of 0.18 appropriately accounts for the work required to perform this service. The RUC recommends 2 minutes pre-service evaluation time, 5 minutes intra-service time and 2 minutes immediate post service time. Although the survey 25<sup>th</sup> percentile and median work values and time components were all higher, the specialty societies indicated that the work and time for this service has not fundamentally changed. The RUC compared the surveyed code to the top two key reference services CPT code 96365 *Intravenous infusion, for therapy, prophylaxis, or diagnosis (specify substance or drug); initial, up to 1 hour* (work RVU = 0.21 and 5 minutes intra-service time) and 96413 *Chemotherapy administration, intravenous infusion technique; up to 1 hour, single or initial substance/drug* (work RVU = 0.28 and 7 minutes intra-service time) and noted that the respondents indicated that the surveyed code is slightly more intense and complex on almost all measures examined. For additional support the RUC referenced MPC codes 51741 *Complex uroflowmetry (eg, calibrated electronic equipment)* (work RVU = 0.17 and 7 minutes total time) and 99211 *Office or other outpatient visit for the evaluation and management of an established patient* (work RVU = 0.18 and 7 minutes total time), which provide better references regarding the relativity for physician work and time across the payment schedule. **The RUC recommends a work RVU of 0.18 for CPT code 96374.**

**96375 Therapeutic, prophylactic, or diagnostic injection (specify substance or drug); each additional sequential intravenous push of a new substance/drug (List separately in addition to code for primary procedure)**

The RUC reviewed surveys from 77 physicians and determined that the current work RVU of 0.10 appropriately accounts for the work required to perform this service. The RUC recommends 4 minutes intra-service time. Although the survey 25<sup>th</sup> percentile and median work values and time components were all higher, the specialty societies indicated that the work and time for this service has not fundamentally changed. The RUC compared the surveyed code to the top two key reference services CPT code 96417 *Chemotherapy administration, intravenous infusion technique; each additional sequential infusion (different substance/drug), up to 1 hour (List separately in addition to code for primary procedure)* (work RVU = 0.21 and 6 minutes intra-service time) and 96367 *Intravenous infusion, for therapy, prophylaxis, or diagnosis (specify substance or drug); additional sequential infusion of a new drug/substance, up to 1 hour (List separately in addition to code for primary procedure)* (work RVU = 0.19 and 5 minutes intra-service time) and noted that the respondents indicated that overall the surveyed code is slightly less intense and complex than 96417 and slightly more intense and complex than 96367. For additional support the RUC referenced MPC codes 95165 *Professional services for the supervision of preparation and provision of antigens for allergen immunotherapy; single or multiple antigens (specify number of doses)* (work RVU = 0.06 and 3 minutes intra-service) and 96153 *Health and behavior intervention, each 15 minutes, face-to-face; group (2 or more patients)* (work RVU = 0.10 and 3 minutes intra-service time), which provide better references regarding the relativity for physician work and time across the payment schedule. **The RUC recommends a work RVU of 0.10 for CPT code 96375.**

**96377 Application of on-body injector (includes cannula insertion) for timed subcutaneous injection**

The RUC reviewed surveys from 60 physicians and determined that a work RVU of 0.17, slightly below the survey 25<sup>th</sup> percentile, appropriately accounts for the work required to perform this service. The RUC recommends 2 minutes pre-service evaluation time, 5 minutes intra-service time and 2 minutes immediate post service time. The specialty society clarified that this service is typically reported on the same day as chemotherapy administration. A RUC member questioned how many injections and cycles are typical, the specialty societies indicated that the patient is injected once per cycle and there are typically 4-6 cycles.

The RUC compared the surveyed code to the top two key reference services CPT code 96365 *Intravenous infusion, for therapy, prophylaxis, or diagnosis (specify substance or drug); initial, up to 1 hour* (work RVU = 0.21 and 5 minutes intra-service time) and 36410 *Venipuncture, age 3 years or older, necessitating the skill of a physician or other qualified health care professional (separate procedure), for diagnostic or therapeutic purposes (not to be used for routine venipuncture)* (work RVU = 0.18 and 5 minutes intra-service time) and noted that the respondents indicated that the surveyed code is overall less intense and complex. However, the specialty societies did not agree. The specialties societies indicated that the service provided in 96377 was more closely related to 96372 rather than 96374 when considering the intensity and complexity of the patient, risk of complications, and likelihood that that the physician would be asked to intervene. The specialty society recommends to maintaining relativity between the services. Therefore, the work RVUs for CPT code 96377 should be slightly less physician work than 96374 and more similar to 96372.

Using magnitude estimation, the specialty societies compared 96377 to similar services 51741 *Complex uroflowmetry (eg, calibrated electronic equipment)* (work RVU = 0.17 and 5 minutes intra-service time), 77086 *Vertebral fracture assessment via dual-energy X-ray absorptiometry (DXA)* (work RVU = 0.17 and 5 minutes intra-service time), and 93050 *Arterial pressure waveform analysis for assessment of central arterial pressures, includes obtaining waveform(s), digitization and application of nonlinear mathematical transformations to determine central arterial pressures and augmentation index, with interpretation and report, upper extremity artery, non-invasive* (work RVU = 0.17 and 5 minutes intra-service time), which provide better references regarding the relativity for physician work and time across the payment schedule. **The RUC recommends a work RVU of 0.17 for CPT code 96377.**

The RUC noted that CMS has assigned CPT code 96377 a status of “I”, Invalid. **The RUC requests that CMS consider the RUC recommendation for immediate implementation and communicate the change in coverage to physicians.**

### Practice Expense

The Practice Expense Subcommittee modified the direct practice expense inputs by eliminating any duplicative E/M services, minor adjustments to some supplies, adjusted equipment due to changes in clinical staff time. The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
96372	Therapeutic, prophylactic, or diagnostic injection (specify substance or drug); subcutaneous or intramuscular	XXX	0.17 (No Change)

### CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 70 year old female diagnosed with pneumonia, receives an intramuscular injection of antibiotic (e.g. rocephin).

Percentage of Survey Respondents who found Vignette to be Typical: 74%

#### Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

---

Description of Pre-Service Work: Physician or other qualified health care professional provides and confirms orders for the infusion, and interacts and reviews the infusion plan with the staff.

Description of Intra-Service Work: Physician or other qualified health care professional directly supervises the service, ensures their immediate availability to the staff in the office and periodically assesses the patient and the patient's response to treatment.

Description of Post-Service Work: Physician or other qualified health care professional provides appropriate instructions regarding immediate care, provides minimal instructions regarding ongoing care, and conducts appropriate interaction with staff regarding patient monitoring.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

<b>Services Reported Together</b>	96372	99214
Global Period	XXX	XXX
RVU	0.17	1.50
Pre-/Intra-/Post- Time	2/3/2	5/25/10

**Background**

In the Notice of Proposed Rulemaking for 2016, CMS ran the high expenditure services across specialties with Medicare allowed charges of \$10 million or more. CMS identified the top 20 codes by specialty in terms of allowed charges, excluding 010 and 090-day global services, anesthesia and Evaluation and Management services and services reviewed since CY 2010. CPT codes 96372, 96374, and 96375 were part of that list to be surveyed. CPT code 96377 is new for 2017. This code was approved by the CPT Editorial Panel in October 2015 and is currently carrier priced. **In June 2016, the specialty societies indicated that they would not proceed with a coding change proposal that might have impacted these codes and moved to survey Tabs 25, 26 and 27 for the January 2017 RUC meeting.** These codes were surveyed and reviewed by the RUC as part a 20-code project conducted by a multispecialty coalition at the October 2004 RUC meeting.

**96372 Survey Results & Recommendations:**

The American Society of Clinical Oncology (ASCO), the American Society of Hematology (ASH), the American Academy of Family Physicians (AAFP), and the American College of Rheumatology (ACRrh) conducted a joint random survey of their members in October-November 2016. Physician advisors and specialty experts participated by conference calls and over e-mail discussion to review the survey work data and develop recommendations. The ASCO, ASH, AAFP, and ACRrh RVS consensus panel reviewed and discussed the physician work survey results. For CPT code 96372, there were 110 responses to the survey request with a median performance rate of 30, lending support that the survey participants were familiar with the service. 74% of the survey respondents found the vignette to be typical.

## Time Discussion

The joint panel reviewed the survey median times (10 pre, 5 intra, 5 post) and compared it to the current time of 2 minutes pre, 3 minutes intra and 2 minutes' post time. The 25<sup>th</sup> percentile times of the survey are (5 pre, 2 intra, and 4 post). The consensus of the joint panel is that the physician work of this service has not fundamentally changed since 2004, which would not justify a substantial increase in time from the current level. We are, therefore, recommending the current times be maintained as they are similar to the 25<sup>th</sup> percentile times from the recent survey.

## Work Discussion

The joint panel reviewed the survey median work (RVW 0.22), as well as the 25<sup>th</sup> percentile (RVW 0.20) compared to the current value (RVW 0.17). The panel recommends maintaining the current RVW of 0.17, which is consistent with our conclusion that there have not been fundamental changes in the nature of the physician work and there is no compelling evidence for an increase in the work value.

The key reference service code 1 chosen by the survey respondents, CPT 96365 *Intravenous infusion, for therapy, prophylaxis, or diagnosis (specify substance or drug); initial, up to 1 hour*, is assigned an RVW 0.21 with pre, intra and post time of 2, 5, and 2 minutes. The intensity/complexity measures of the surveyed code were similar to the ratings assigned to the reference code. Given the similarity in times and the minimal difference in the intensity/complexity measures, we believe the survey data supports maintenance of the current value of 0.17.

To provide further support for our recommendations, the joint panel compared code 96372 to two MPC codes and other services listed in the table below:

**TABLE 1 REVIEW OF COMPARATOR SERVICES**

CPT Code	Short Description	RVW	Pre	Intra	Post	Total
<b>73120 (MPC)</b>	X-ray exam of hand	<b>0.16</b>	<b>1</b>	<b>3</b>	<b>1</b>	<b>5</b>

<b>96372</b> Survey Code	Ther/proph/diag inj sc/im	<b>0.17</b>	<b>2</b>	<b>3</b>	<b>2</b>	<b>7</b>
<b>99211 (MPC)</b>	Office/outpatient visit est (five minutes)	<b>0.18</b>	<b>0</b>	<b>5</b>	<b>2</b>	<b>7</b>

The panel considers the time and intensity associated with the surveyed injection code to be comparable to that of the other comparator services and believes the current RVW places this code in appropriate rank order to those services in terms of physician work.

**In summary, we recommend a RVW of 0.17 (which is the current value for 96372) with a pre-service time of 2 minutes, an intra service time of 3 minutes, and a post time of 2 minutes for a total time 7 minutes.**

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.

Historical precedents.

Other reason (please explain) CPT code 96372 is billed 52% of the time with an E/M code.

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. See above in the "Additional Rationale and Comments" section.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 96372

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
 If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Family Medicine                      How often? Commonly

Specialty Internal Medicine                      How often? Commonly

Specialty Oncology                      How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 27382047

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. 2015 Medicare claims data times 3.

Specialty Family Medicine	Frequency 7787454	Percentage 28.43 %
---------------------------	-------------------	--------------------

Specialty Internal Medicine	Frequency 6703125	Percentage 24.47 %
-----------------------------	-------------------	--------------------

Specialty Hematology/Oncology	Frequency 3239296	Percentage 11.82 %
-------------------------------	-------------------	--------------------

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?

9,127,349 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This information is the 2015 Medicare claims data from the RUC database

Specialty Family Medicine	Frequency 2582127	Percentage 28.28 %
---------------------------	-------------------	--------------------

Specialty Internal Medicine	Frequency 2265408	Percentage 24.81 %
-----------------------------	-------------------	--------------------

Specialty Hematology/Oncology	Frequency 1126315	Percentage 12.34 %
-------------------------------	-------------------	--------------------

Do many physicians perform this service across the United States? Yes

## Berenson-Eggers Type of Service (BETOS) Assignment

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Background**

In the Notice of Proposed Rulemaking for 2016, CMS ran the high expenditure services across specialties with Medicare allowed charges of \$10 million or more. CMS identified the top 20 codes by specialty in terms of allowed charges, excluding 010 and 090-day global services, anesthesia and Evaluation and Management services and services reviewed since CY 2010. CPT codes 96372, 96374, and 96375 were part of that list to be surveyed. CPT code 96377 is new for 2017. This code was approved by the CPT Editorial Panel in October 2015 and is currently carrier priced. **In June 2016, the specialty societies indicated that they would not proceed with a coding change proposal that might have impacted these codes and moved to survey Tabs 25, 26 and 27 for the January 2017 RUC meeting.** These codes were surveyed and reviewed by the RUC as part a 20-code project conducted by a multispecialty coalition at the October 2004 RUC meeting.

**96374 Survey Results & Recommendations:**

The American Society of Clinical Oncology (ASCO) the American Society of Hematology (ASH), and the American College of Rheumatology (ACR) conducted a joint random survey of their members in October-November 2016. Physician advisors and specialty experts participated by conference calls and over e-mail discussion to review the survey work data and develop recommendations. The ASCO, ASH, and ACR RVS consensus panel reviewed and discussed the work survey results. For CPT code 96374, there were 80 responses to the survey request with a median performance rate of 44, lending support that the survey participants were familiar with the service. 78% of the survey respondents found the vignette to be typical.

**Time Discussion**

The joint panel reviewed the survey median times (10 pre, 5 intra, 5 post) and compared it to the current time of 2 minutes pre, 5 minutes intra and 2 minutes' post time. The 25<sup>th</sup> percentile times of the survey are (10 pre, 4 intra and 5 post.) The consensus of the joint panel is that the physician work of this service has not fundamentally changed since

2004 which would not justify an increase in time from the current level. We are, therefore, recommending the current times be maintained.

### Work Discussion

The joint panel reviewed the survey median work (RVW 0.26) as well as the 25<sup>th</sup> percentile (RVW 0.21) compared to the current value (RVW 0.18). The panel recommends maintaining the current RVW of 0.18 which is consistent with our conclusion that there has not been fundamental changes in the nature of the physician work and there is no compelling evidence for an increase in the work value.

The key reference service code 1 chosen by the survey respondents, CPT 96413 *Chemotherapy administration, intravenous infusion technique; up to 1 hour, single or initial substance/drug*, is assigned an RVW 0.28 with pre, intra and post time of 4, 7 and 2 minutes. The intensity/complexity measures of the surveyed code were rated as similar by the survey respondents. The joint expert panel did not agree with the survey respondents' observation of the key reference 1 to the survey code CPT 96374.

To provide additional support to maintain the current value, the joint panel compared code 96374 to two MPC codes and other services listed in the table below:

**TABLE 1 REVIEW OF COMPARATOR SERVICES**

CPT Code	Short Description	RVW	Pre	Intra	Post	Total
<b>51741 (MPC)</b>	Electro-uroflowmetry first	<b>0.17</b>	<b>5</b>	<b>5</b>	<b>2</b>	<b>12</b>
<b>92504</b>	Ear microscopy examination	<b>.18</b>	<b>2</b>	<b>5</b>	<b>2</b>	<b>9</b>
<b>96374</b> Survey Code	Ther/proph/diag inj iv push	<b>0.18</b>	<b>2</b>	<b>5</b>	<b>2</b>	<b>9</b>
<b>99211 (MPC)</b>	Office/outpatient visit est (five minutes)	<b>0.18</b>	<b>0</b>	<b>5</b>	<b>2</b>	<b>7</b>
<b>96367(MPC)</b> <b>ZZZ</b>	Tx/proph/dg addl seq iv inf	<b>0.19</b>	<b>1</b>	<b>5</b>	<b>0</b>	<b>6</b>

**In summary, we recommend a RVW of 0.18 (which is the current value for 96374) with a pre-service time of 2 minutes, an intra service time of 5 minutes, and a post time of 2 minutes for a total time 9 minutes.**

### SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

---

------------------------------	-------	------

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

<b>Services Reported Together</b>	96375	96367	96413
Global Period	ZZZ	ZZZ	XXX
RVU	.10	.19	.28
Pre-/Intra-/Post- Time	1/3/0	1/5/0	4/7/2

**Background**

In the Notice of Proposed Rulemaking for 2016, CMS ran the high expenditure services across specialties with Medicare allowed charges of \$10 million or more. CMS identified the top 20 codes by specialty in terms of allowed charges, excluding 010 and 090-day global services, anesthesia and Evaluation and Management services and services reviewed since CY 2010. CPT codes 96372, 96374, and 96375 were part of that list to be surveyed. CPT code 96377 is new for 2017. This code was approved by the CPT Editorial Panel in October 2015 and is currently carrier priced. **In June 2016, the specialty societies indicated that they would not proceed with a coding change proposal that might have impacted these codes and moved to survey Tabs 25, 26 and 27 for the January 2017 RUC meeting.** These codes were surveyed and reviewed by the RUC as part a 20-code project conducted by a multispecialty coalition at the October 2004 RUC meeting.

**96375 Survey Results & Recommendations:**

The American Society of Clinical Oncology (ASCO), the American Society of Hematology (ASH), and the American College of Rheumatology (ACR) conducted a joint random survey of their members in October-November 2016. Physician advisors and specialty experts participated by conference calls and over e-mail discussion to review the survey work data and develop recommendations. The ASCO, ASH, and ACR RVS consensus panel reviewed and discussed the work survey results. For CPT code 96375, there were 77 responses to the survey request with a median performance rate of 100, lending support that the survey participants were quite familiar with the service. 78% of the survey respondents found the vignette to be typical.

## Time Discussion

We did not survey for pre and post time since this is an add-on (ZZZ) code. The survey median intra service time was 5 minutes and the 25<sup>th</sup> percentile intra time 2 minutes. The current intra time assigned is 3 minutes with one minute of pre-time for a total time of 4 minutes. The consensus of the joint panel is that the physician work of this service has not fundamentally changed since 2004. We are therefore recommending that the current time be maintained with the allocation of the 1 minute of pre-time to 3 minutes of intra time for a total intra service time of 4 minutes.

## Work Discussion

The joint panel reviewed the survey median work (RVW 0.25) as well as the 25<sup>th</sup> percentile (RVW 0.19) compared to the current value (RVW 0.10). The panel recommends maintaining the current RVW of 0.10 consistent with our conclusion that there has not been fundamental changes in the nature of the work and there is no compelling evidence for an increase in the work value.

The key reference service code 1 chosen by the survey respondents, CPT 96417 *Chemotherapy administration, intravenous infusion technique; each additional sequential infusion (different substance/drug), up to 1 hour (List separately in addition to code for primary procedure)*, is assigned an RVW 0.21 with pre, intra and post time of 2, 6 and 0 minutes. The intensity/complexity measures of the surveyed code were similar to the ratings assigned to the reference code 96417. The joint expert panel did not agree with this comparison and recommends maintaining the current value of 0.17.

To provide support for the expert panel recommendation, we compared code 96375 to two MPC codes and other services listed in the table below:

**TABLE 1 REVIEW OF COMPARATOR SERVICES**

CPT Code	Short Description	RVW	Pre	Intra	Post	Total
<b>95165 (MPC)</b>	Antigen therapy services (Single and multiple)	<b>0.06</b>	<b>0</b>	<b>3</b>	<b>0</b>	<b>3</b>
<b>95144</b>	Antigen therapy services (single)	<b>0.06</b>	<b>0</b>	<b>3</b>	<b>0</b>	<b>3</b>
<b>96375</b> Survey Code	Tx/pro/dx inj new drug add-on	<b>0.10</b>	<b>0</b>	<b>4</b>	<b>0</b>	<b>4</b>
<b>96153 (MPC)</b>	Intervene hlth/behav group	<b>0.10</b>	<b>1</b>	<b>3</b>	<b>1</b>	<b>5</b>
<b>96368 (MPC)</b>	Ther/diag concurrent inf	<b>0.17</b>	<b>1</b>	<b>5</b>	<b>0</b>	<b>6</b>

**In summary, we recommend a RVW of 0.10 (which is the current value for 96375) with an intra service time of 3 minutes, for a total time of 3 minutes.**

## SERVICES REPORTED WITH MULTIPLE CPT CODES

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. See above in the "Additional Rationale and Comments" section.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 96375

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Hematology/Oncology                      How often? Commonly

Specialty Medical Oncology                      How often? Commonly

Specialty Rheumatology                      How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 4412214

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. 2015 Medicare claims data times 3

Specialty Hematology/Oncology	Frequency 2677773	Percentage 60.69 %
-------------------------------	-------------------	--------------------

Specialty Medical Oncology	Frequency 814936	Percentage 18.47 %
----------------------------	------------------	--------------------

Specialty Rheumatology	Frequency 168105	Percentage 3.80 %
------------------------	------------------	-------------------

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,470,738 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This is 2015 Medicare claims data from the RUC database

Specialty Hematology/Oncology	Frequency 892591	Percentage 60.69 %
-------------------------------	------------------	--------------------

Specialty Medical Oncology	Frequency 271645	Percentage 18.46 %
----------------------------	------------------	--------------------

Specialty Rheumatology	Frequency 56035	Percentage 3.80 %
------------------------	-----------------	-------------------

Do many physicians perform this service across the United States? Yes

## Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Other

BETOS Sub-classification:

Other drugs

BETOS Sub-classification Level II:

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 96375

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

Global Period: XXX		RUC Recommended RVU: <b>0.17</b>

CPT Descriptor: Application of on-body injector (includes cannula insertion) for timed subcutaneous injection

---

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 43-year-old female was diagnosed with stage IIB triple-negative invasive ductal carcinoma of the left breast and had left modified radical mastectomy and left axillary node dissection. Following adequate recovery, she and her oncologist agreed to a treatment plan that consisted of adjuvant chemotherapy.

Percentage of Survey Respondents who found Vignette to be Typical: 98%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is;  
Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

---

Description of Pre-Service Work: Physician or other qualified health care professional provides and confirms orders for the infusion, and interacts and reviews the infusion plan with the staff.

Description of Intra-Service Work: Physician or other qualified health care professional directly supervises the service, ensures their immediate availability to the staff in the office and periodically assesses the patient and the patient's response to treatment.

Description of Post-Service Work: Physician or other qualified health care professional provides appropriate instructions regarding immediate care, provides minimal instructions regarding ongoing care, and conducts appropriate interaction with staff regarding patient monitoring.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**96377 Background**

At the October 2015 panel meeting the CPT Editorial Panel created a new code, CPT code 96377 (*application of on-body injector (includes cannula insertion) for timed subcutaneous injection*), for the administration of neupogen following chemotherapy. The manufacturer of the on-body injector submitted the code change proposal and presented it to the Panel. Although ASCO and ASH did not develop the code proposal, they were supportive of the application. Neulasta cannot be administered until 24 hours after chemotherapy, often requiring patients to return to the office the day after chemotherapy administration. This is a considerable burden for those who live in rural areas and may have to travel hundreds of miles for such treatment. ASCO and ASH support the service as it is an important method of administration for this drug.

As the specialty society prepared to survey CPT code 96377 in early 2016, the specialty societies considered sending the survey to a targeted sample, since the device was relatively new. There was concern that the specialty society members may not be utilizing it yet in high numbers. In a letter to the RUC, ASCO and ASH requested that the survey be delayed to the April 2016 RUC meeting. Subsequent to the letter being submitted, ASCO and ASH determined that it would be appropriate to survey 96377 with the other injection and IV push codes coming up for review... A targeted sample would not be necessary as the use of the device became more common in practice.

The RUC considered the recommendation of the specialty and agreed that the new service along with three other codes in the family (96372, 96374, and 96375), should be surveyed together. The RUC also agreed with the recommendation that the 96377 should be carrier priced for 2017. **In June 2016, the specialty societies indicated that they would not proceed with a coding change proposal and will survey for January 2017.** It should be noted the CPT Editorial Panel questioned the amount of physician work involved in 96377, or if it is practice expense only.

**96377 Survey Results & Recommendations:**

The American Society of Clinical Oncology (ASCO) and the American Society of Hematology (ASH), conducted a joint random survey of their members in October-November 2016. Physician advisors and specialty experts participated by conference calls and over e-mail discussion to review the survey work data and develop recommendations. The ASCO

and ASH RVS consensus panel reviewed and discussed the work survey results. For CPT code 96377, there were 60 responses to the survey request with a median performance rate of 20. Since this is new service, the consensus panel also reviewed the 25<sup>th</sup> percentile performance rate, which was 4. We were pleased performance rates indicated our survey participants were familiar with the service, however, the volume of responses is lower than the other services in this family at present. 98% of the survey respondents found the vignette to be typical.

### Time Discussion

The survey median intra service time was 5 minutes and the 25<sup>th</sup> percentile intra time was 1 minute. The expert panel agreed the intra-service time is closer to the median time of 5 minutes to perform this service. In hindsight, the expert panel might have utilized an alternate survey tool that captured pre or post time (if applicable). In the end, the expert panel reviewed magnitude estimation services to benchmark for this new service as noted in the table below.

### Work Discussion

The joint panel reviewed the survey median work (RVW 0.25) as well as the 25<sup>th</sup> percentile (RVW 0.18) and assessed 96377 compared to 96374 at (RVW 0.18). After discussing the differences between the codes, the expert panel agreed that the service provided in 96377 was more closely related to 96372 rather than 96374 when considering the intensity and complexity of the patient, risk of complications, and likelihood that the physician would be asked to intervene. The expert panel decided that to maintain relativity between the services. Therefore, the work RVUs for this 96377 would be slightly less work than 96374 and more similar to 96372. The expert panel reviewed other services provided in the table below and believe magnitude estimation with CPT 72170 (RVW 0.17) with 1 minute of pre time, 4 minutes of intra time and 2 minutes of post time, would maintain the appropriate relativity in the family for this service.

The key reference service code 1 chosen by the survey respondents, CPT 96365 *Intravenous infusion, for therapy, prophylaxis, or diagnosis (specify substance or drug); initial, up to 1 hour*, is assigned an RVW 0.21 with pre, intra and post times of 2, 5 and 2 minutes. The intensity/complexity measures of the surveyed code were similar to the ratings assigned to the reference code 96365. The expert panel did not agree with the survey respondents.

To provide support for the expert panel recommendation, we compared code 96377 to two MPC codes and other services listed in the table below:

**TABLE 1 REVIEW OF COMPARATOR SERVICES**

CPT Code	Short Description	RVW	Pre	Intra	Post	Total
<b>73120 (MPC)</b>	X-ray exam of hand	<b>0.16</b>	<b>1</b>	<b>3</b>	<b>1</b>	<b>5</b>
<b>93010</b>	Electrocardiogram report	<b>0.17</b>	<b>0</b>	<b>5</b>	<b>1</b>	<b>6</b>
<b>96377</b> Survey Code	Application of on-body injector (includes cannula insertion) for timed subcutaneous injection	<b>0.17</b>	<b>2</b>	<b>5</b>	<b>2</b>	<b>7</b>
<b>72170</b> Mag. Est.	X-ray exam of pelvis	<b>0.17</b>	<b>1</b>	<b>4</b>	<b>2</b>	<b>7</b>
<b>99211 (MPC)</b>	Office/outpatient visit est (five minutes)	<b>0.18</b>	<b>0</b>	<b>5</b>	<b>2</b>	<b>7</b>

In summary, we recommend an RVW of 0.17 with a pre-service time of 1 minute, an intra service time of 4 minutes, and a post service time of 2 minutes, for a total time of 7 minutes.

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 96372

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Hematology/Oncology                      How often? Commonly

Specialty Medical Oncology                      How often? Commonly

Specialty Internal Medicine                      How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 120000

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. This number is a estimate from Amgen's October 2015 CPT proposal. We are assuming that the top two specialties performing this service will be Hematology/Oncology and Medical Oncology.

Specialty Hematology/Oncology                      Frequency 84876                      Percentage 70.73 %

Specialty Medical Oncology                      Frequency 24720                      Percentage 20.60 %

Specialty Internal Medicine                      Frequency 4512                      Percentage 3.76 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?

40,000 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This number is derived from the 120,000 divided by three. We are assuming that the top two specialties performing this service will be Hematology/Oncology and Medical Oncology.

Specialty Hematology/Oncology                      Frequency 28292                      Percentage 70.73 %

Specialty Medical Oncology                      Frequency 8240                      Percentage 20.60 %

Specialty Internal Medicine                      Frequency 1504                      Percentage 3.76 %

Do many physicians perform this service across the United States? Yes

**Berenson-Eggers Type of Service (BETOS) Assignment**

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Other

BETOS Sub-classification:

Other drugs

BETOS Sub-classification Level II:

---

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 96409

### Attestation Statement

This form needs to be completed by any **RUC Advisor** whose specialty society is developing a recommendation to be reviewed by the RUC.

As a RUC Advisor, I attest that the integrity of the RUC survey, summary of recommendation forms and practice expense recommendations are based on accurate and complete data to the best of my knowledge. As a RUC advisor, I acknowledge that violations would be addressed by the executive committee (i.e., RUC Chair, AMA Representative and Alternate AMA Representative.)

**AMA/Specialty Society Update Process  
Practice Expense Summary of Recommendation  
Non Facility Direct Inputs**

CPT Long Descriptor: Therapeutic, prophylactic, or diagnostic injection (specify substance or drug); subcutaneous or intramuscular

Global Period: XXX Meeting Date: January 2017- **Revised 1/17/2017**

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee: The Specialty Society Advisors and Staff from ASCO, ASH, AAFP, and ACRh held a meeting via conference call to discuss the Practice Expense. The inputs were developed with input from physicians, specialty society staff, and clinical staff from a variety of settings.
2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale: For CPT code 96372, we have two reference codes. Reference code 1 are the current PE inputs for 96372. Reference code 2 is CPT code 99214. CPT code 97372 is reported with an E/M code approximately 52% of the time, about 23% of the time with CPT code 99214.
3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time: (not applicable)
4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence: (not applicable)
5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

(None)

Intra-Service Clinical Labor Activities:

Line 24- Provide pre-service education/obtain consent- **2 minutes**

Clinical staff explains the nature and purpose of the medication to be injected and obtains the patient's consent to receive the injection.

Line 25- Prepare room, equipment, and supplies- **2 minutes**

Clinical staff gathers the necessary supplies (i.e. medication, syringe with needle, alcohol swab, and bandage strip) and lays them out in the exam room. As needed, clinical staff draws the medication into the syringe.

**CPT Code: 96372**  
**Specialty Society(s): AAFP, ACRh, ASCO, ASH**

Line 27- Prepare and position patient/monitor patient/set up IV- **2 minutes**

Clinical staff confirms with patient where patient wants to receive the injection (e.g. which arm) and assists patient, as needed (e.g. in rolling up sleeve). Clinical staff swabs planned injection site with alcohol swab.

Line 31- Verify medication interaction- **1 minute**

Clinical staff verifies any current medications being taken by patient to ensure there are no negative interactions with medication to be administered by the injection.

Line 32- Verify orders- **1 minute**

Clinical staff verifies physician's order for injection and confirms correct medication has been gathered, consistent with the physician's order.

Line 35- Document lot # and expiration date- **1 minute**

Clinical staff documents lot # and expiration date of medication to be injected in the patient's medical record and other places as needed.

Line 37- Maintain MSDS (OSHA Requirement)- **0 minutes**

Clinical staff maintains Material Safety Data Sheets, per OSHA requirements.

**Line 37- The 1 minute for maintaining MSDS was removed as this isn't a typical task for 96372.**

Line 41- Clinical staff performs the service- **1 minute**

Clinical staff administers the injection.

Line 45- Clean room/equipment by physician staff- **0 minutes**

Clinical staff safely disposes of used needle and syringe in sharps container. Clinical staff also cleans up and disposes of other byproducts of procedure (e.g. used alcohol swab).

**Line 45 was decreased from 1 to 0 as is it duplicative of the work performed in the E/M Service.**

Line 49- Complete medical record documentation- **1 minute**

Clinical staff documents the injection in the patient's medical record and notes anything else pertinent to the procedure (e.g. adverse reaction, if one occurs).

**Line 49- This line was decreased from 2 minutes to 1 minute as it is duplicative of the work provided in a E/M service, which is performed 50% of the time with 96372.**

Line 51- Check dressings & wound/ home care instructions/coordinate office visits /prescriptions- **0 minutes**

Staff applies bandage strip to injection site and advises patient of any "do's and don'ts" when the patient gets home as well as signs of adverse reaction to which the patient should be attuned and what to do if he or she observes such signs.

**Line 51- This line was decreased from 3 minutes to 0 minutes as it is duplicative of the work provided in a E/M service, which is performed 50% of the time with 96372.**

Total Intra-Service Time: **11 minutes**

Post-Service Clinical Labor Activities:

**CPT Code: 96372**  
**Specialty Society(s): AAFP, ACRh, ASCO, ASH**

(None)

**AMA/Specialty Society Update Process  
Practice Expense Summary of Recommendation  
Non Facility Direct Inputs**

CPT Long Descriptor: Therapeutic, prophylactic, or diagnostic injection (specify substance or drug); intravenous push, single or initial substance/drug

Global Period: XXX Meeting Date: January 2017- **Revised 1/12/17**

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee: The specialty society advisors and staff from ASCO, ASH, ACRh held a meeting via conference call to discuss the Practice Expense. The inputs were developed with involvement from physicians, specialty society staff, and clinical staff from a variety of settings.

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale: The reference code for CPT code 96374 are the current PE inputs for 96374.

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time: There are **3** minutes of pre-service time in CPT code 96374 (the current standard is **0** minutes), which accounts for the following work: Coordinating with physician on the infusion, confirming drugs to be infused and the dosage, obtaining an update on the patient's condition, and ensuring the appropriate lab work is ordered. Recent increases in documentation and insurance requirements continue to support the need for these minutes in the pre-service time.

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:

Line 21- Greet patient, provide gowning, ensure appropriate medical records are available. We are adding **1** minute to the current **2** minutes to comply with the **3**-minute standard, for a total of **3** minutes.

Line 23- Obtain vital signs. We are adding **2** minutes to the current **3** minutes for obtaining the vital signs, in compliance with the new standards, for a total of **5** minutes. Four vitals are obtained: blood pressure, respiration, pulse, and temperature. Four vitals equal five minutes.

5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

Line 12- Coordinate pre-surgery services- **0 minutes**

The clinical staff coordinates with the physician on the IV push, confirms drugs to be infused and the dosage, obtains an update on the patient's condition, and ensures appropriate lab work is ordered.

**Line 12 was decreased from 3 minutes to 0 minutes. As 96374 is frequently billed with other services (over 50%), the work is considered duplicative.**

Total Pre-Service Time: **0 minutes**

Intra-Service Clinical Labor Activities:

Line 21- Greet patient, providing gowning, ensure appropriate medical records are available- **0 minutes**  
Clinical staff greets patient and escorts them to the infusion suite/medical recliner. Gowning is provided to the patient. Clinical staff then settles patient in the medical recliner.

Line 21 was decreased from 2 minutes to 0 minutes. As 96374 is frequently billed with other services (over 50%), the work is considered duplicative.

Line 22- Clinical staff obtains medical history- **0 minutes**  
Clinical staff verifies patient information. Reviews the patient's history and complications from medical record, which includes verifying allergies, previous reactions/side effects, and treatment related toxicities. Clinical staff reviews lab values that include a complete blood count and chemistry. Assesses and documents psycho-social concerns and need for support.

Line 22 was decreased from 2 minutes to 0 minutes. As 96374 is frequently billed with other services (over 50%), the work is considered duplicative.

Line 23- Obtain vital signs- **0 minutes**  
Clinical staff obtains four vitals: blood pressure, respiration, pulse, and temperature. Four vitals equal five minutes.

Line 23 was decreased from 3 minutes to 0 minutes. As 96374 is frequently billed with other services (over 50%), the work is considered duplicative.

Line 24- Provide pre-service education/obtain consent- **2 minutes**  
Clinical staff explains the nature and purpose of the medication to be infused and obtains the patient's consent to receive the IV push.

Line 25- Prepare room, equipment, and supplies- **2 minutes**  
Clinical staff gathers supplies for the IV push and personal protective equipment.

Line 27- Prepare and position patient/monitor patient/set up IV- **2 minutes**  
Clinical staff prepares and positions patient. Ensures the chair is positioned and clears are of any obstacles for safety of patient. Ensures patient is prepared.

Line 31- Verify medication interaction- **1 minute**  
Clinical staff verifies any current medications being taken by patient to ensure there are no negative interactions with medication to be administered by the IV push.

Line 32- Verify orders- **1 minute**

**CPT Code: 96374**  
**Specialty Society('s) ASCO, ASH, ACRh**

Clinical staff verifies physician's order for injection and confirms correct medication has been gathered, consistent with the physician's order.

Line 33- Assemble supplies- **1 minute**

The clinical staff gathers the appropriate supplies for preparing the drug.

Line 34- Prep labels- **1 minute**

Line 36- Reconstitute drug- **1 minute**

Line 41- Clinical staff performs procedure- **8 minutes**

Clinical staff assesses patient status, educate patient re: medication and prepares injection site. Clinical staff injects the drug. Clinical staff monitor patient for reactions.

Line 43- Monitor patient following procedure/check tubes, monitors, drains, multitasking 1:4- **3 minutes**  
Clinical staff monitors patient for adverse reactions.

Line 49- Complete medical record documentation- **1 minute**

Clinical staff completes medical record documentation, such as start and stop times of the administration, documentation of procedure, patient status and other relative clinical information is done.

Line 49 was decreased from 2 minutes to 1 minutes. As 96374 is frequently billed with other services (over 50%), the work is considered duplicative.

Total Intra-Service Time: **23 minutes**

Post-Service Clinical Labor Activities:

Line 59- Conduct phone calls/call in prescriptions- **3 minutes**

Clinical staff conducts phone calls and calls in prescriptions.

Total Post-Service Time: **3 minutes**

**AMA/Specialty Society Update Process  
Practice Expense Summary of Recommendation  
Non Facility Direct Inputs**

CPT Long Descriptor: Therapeutic, prophylactic, or diagnostic injection (specify substance or drug); each additional sequential intravenous push of a new substance/drug (List separately in addition to code for primary procedure)

Global Period: ZZZ Meeting Date: January 2017- **Revised 1/12/17**

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee: The specialty society advisors and staff from ASCO, ASH, ACRh held a meeting via conference call to discuss the Practice Expense. The inputs were developed with involvement from physicians, specialty society staff, and clinical staff from a variety of settings.
2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale: The reference code for CPT code 96375 are the current PE inputs for 96375.
3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time: (not applicable)
4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:

Line 23- Obtain vital signs. **0 minutes**. Four vitals are obtained: blood pressure, respiration, pulse, and temperature.

Line 23- As 96375 is a ZZZ code and frequently performed with other services, the work of obtaining vital signs is considered duplicative.

Line 49- Complete medical record documentation. We are requesting **1** minutes (an increase from **0** minutes) to account for the documentation of a new drug.

5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

(not applicable)

Intra-Service Clinical Labor Activities:

Line 23- Obtain vital signs- **0 minutes**

**Line 23- As 96375 is a ZZZ code and frequently performed with other services, the work of obtaining vital signs is considered duplicative.**

Clinical staff obtains four vital signs: blood pressure, respiration, pulse, and temperature. Four vitals equals five minutes.

**Line 31- Verify medication interaction- 1 minute**

Clinical staff verifies any current medications being taken by patient to assure no negative interactions with medication to be administered by the IV push.

**Line 32- Verify orders- 1 minute**

Clinical staff verifies physician's order for the IV push and confirms correct medication has been gathered, consistent with the physician's order.

**Line 33- Assemble supplies- 1 minute**

The clinical staff gathers the appropriate supplies for preparing the drug.

**Line 34- Prep labels- 1 minute**

**Line 36- Reconstitute drug- 1 minute**

**Line 41- Clinical staff performs procedure- 4 minutes**

The clinical staff accesses the IV/implanted port or IV catheter/implantable device and begins the IV push. Clinical staff assesses the patient's response/tolerance to the push. Interventions are conducted as needed. An IV access site assessment is performed. The IV catheter/ implanted port is then flushed, and the IV is discontinued. The device is removed. The clinical staff conducts another assessment of the IV insertion site/implanted port site.

**Line 43- Monitor patient following procedure/check tubes, monitors, drains, multitasking 1:4- 2 minutes**

Clinical staff monitors patient for adverse reactions

**Line 49- Complete medical record documentation- 1 minute**

Clinical staff documents that a new drug was administered to the patient, as well as the IV push start and stop times.

**Line 49- One minute was added to account for the documentation of a new drug.**

**Total Intra-Service Time: 12 minutes**

Post-Service Clinical Labor Activities:

(not applicable)

**AMA/Specialty Society Update Process  
Practice Expense Summary of Recommendation  
Non Facility Direct Inputs**

CPT Long Descriptor: Application of on-body injector (includes cannula insertion) for timed subcutaneous injection

Global Period: XXX Meeting Date: January 2017- **Revised 1/12/17**

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee: The Specialty Society Advisors and Staff from ASCO and ASH held a meeting via conference call to discuss the Practice Expense. The inputs were developed with input from physicians, specialty society staff, and clinical staff from a variety of settings.
2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale: CPT code 96377 is a new code. We are using the other XXX CPT codes in this PE spreadsheet (96372, 96374) as references.
3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time: We are requesting **2** minutes of pre-service time for this CPT code. The **2** minutes accounts for the clinical staff completing the necessary paperwork and determining how much additional time is needed for the patient.
4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence: (not applicable)
5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

Line 12- Complete pre-service diagnostic and referral forms- **0 minutes**

The completion of pre-service diagnostic forms is typically on performed on the first visit, amortized over 6 cycles. The business office of a chemo practice must determine how much additional time is needed for the patient.

**Line 12 was decreased to 0 minutes from 2 minutes. This service will frequently be performed with other services, possibly resulting in duplicative work.**

Total Pre-Service Time: **0 minutes**

Intra-Service Clinical Labor Activities:

Line 24- Provide pre-service education/obtain consent- **2 minutes**

Clinical staff explains the nature and purpose of the medication to be injected and obtains the patient's consent to receive the injection. Clinical staff provides instruction on how the device operates. This instruction is provided over 6 cycles, 2 minutes for each cycle.

Line 24 was decreased from 3 minute to 2 minutes, as patients may not need as much education after the initial cycle.

Line 27- Prepare and position patient/monitor patient/set up IV- **2 minutes**

Clinical staff prepares and positions patient for the administration of the on body injector.

Line 31- Verify medication interaction- **1 minute**

Clinical staff verifies any current medications being taken by patient to assure no negative interactions with medication to be administered by the injection.

Line 32- Verify orders- **1 minute**

Clinical staff verifies physician's order for injection and confirms correct medication has been gathered, consistent with the physician's order.

Line 33- Assemble supplies- **1 minute**

Clinical staff gathers the necessary supplies for the application. The kit includes a pre-filled syringe and an on-body injector.

Line 38- Insert drug into device- **1 minute**

Syringe contents are completely emptied into the medicine port. Using blue needle cover to avoid bending the needle and spilling medicine, insert syringe at 90 degrees all the way into medicine port. Slowly empty entire syringe content. Check to see if the on-body injector is full. Note- the on body injector will deploy in 3 minutes, even if not applied to patient. Remove syringe from port and pull down needle safety guard over the exposed needle. Remove blue needle cover from the back of the on body injector. Peel away white adhesive backing from the back of the on body injector.

Line 41- Clinical staff performs procedure- **3 minutes**

Clinical staff chooses an area on the patient larger than the adhesive pad. Area is cleaned with alcohol swab. Clinical staff attaches the on body injector to the back of the patient's arm or abdomen. Clinical staff ensures the entire adhesive pad is securely attached to the patient.

Line 49- Complete medical record documentation- **1 minute**

Clinical staff completes medical record documentation, such as start and stop times of the application.

Line 49 was decreased from 2 minutes to 1 minute, as this will be frequently be reported with other services.

Total Intra-Service Time: **12 minutes**

Post-Service Clinical Labor Activities:

(not applicable)

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
*\*CMS High Expenditure Procedures\**

January 2017

**Chemotherapy Administration**

In the NPRM for 2016 CMS re-ran the high expenditure services across specialties with Medicare allowed charges of \$10 million or more. CMS identified the top 20 codes by specialty in terms of allowed charges, excluding 010 and 090-day global services, anesthesia and Evaluation and Management services and services reviewed since CY 2010. In June 2016, the specialty societies indicated that they would not proceed with a coding change proposal as originally intended and will survey for January 2017.

A RUC member questioned if the chemotherapy substance is divided into aliquots and given multiple injections. The specialty societies indicated that it is not typical and it is confirmed by CPT introductory language that the substance injection is reported once and would not be able to be reported multiple times even if it was divided. Based on the preliminary reviewer comments, a RUC member questioned if these services were reported together multiple times and the reported together Medicare claims data for the same patient/same physician/same day showed that the chemotherapy administration codes are performed a median of one time (same day, same provider for the same beneficiary).

**96401 *Chemotherapy administration, subcutaneous or intramuscular; non-hormonal anti-neoplastic***

The RUC reviewed surveys from 66 physicians and determined that the current work RVU of 0.21, which is also the survey 25<sup>th</sup> percentile, appropriately accounts for the work required to perform this service. The RUC recommends maintaining the current times of 4 minutes pre-service evaluation time, 3 minutes intra-service time and 2 minutes immediate post service time. The specialty societies indicated the physician work and time has not fundamentally changed since 2004, which would not justify a substantial increase in time from the current level. Therefore, recommend the current times be maintained as they are similar to the 25<sup>th</sup> percentile times from the recent survey.

The RUC compared the surveyed code to the top two key reference services CPT code 96413 *Chemotherapy administration, intravenous infusion technique; up to 1 hour, single or initial substance/drug* (work RVU = 0.28 and 7 minutes intra-service time) and 96365 *Intravenous infusion, for therapy, prophylaxis, or diagnosis (specify substance or drug); initial, up to 1 hour* (work RVU = 0.21 and 5 minutes intra-service time) and noted similar intensity and complexity for these services. Given the similarity in physician times and the minimal difference in the intensity/complexity measures, the RUC determined that the survey data supports maintenance of the current value of 0.21.

For additional support the RUC referenced MPC code 92567 *Tympanometry (impedance testing)* (work RVU = 0.20 and 4 minutes intra-service time) and 96417 *Office or other outpatient visit for the evaluation and management of an established patient Chemotherapy administration, intravenous infusion technique; each additional sequential infusion (different substance/drug), up to 1 hour (List separately in addition to code for primary procedure)* (work RVU = 0.21 and 6 intra-service time), which demonstrate appropriate relativity for physician work and time across the payment schedule. **The RUC recommends a work RVU of 0.21 for CPT code 96401.**

**96402 Chemotherapy administration, subcutaneous or intramuscular; hormonal anti-neoplastic**

The RUC reviewed surveys from 118 physicians and determined that the current work RVU of 0.19, which is slightly below the survey 25<sup>th</sup> percentile, appropriately accounts for the work required to perform this service. The RUC recommends maintaining the current times of 4 minutes pre-service evaluation time, 3 minutes intra-service time and 2 minutes immediate post service time. The specialty societies indicated the physician work and time has not fundamentally changed since 2004, which would not justify a substantial increase in time from the current level. Therefore, recommend the current times be maintained as they are similar to the 25<sup>th</sup> percentile times from the recent survey. The RUC noted that this service is reported with an Evaluation and Management service 65% of the time and confirmed no duplication in the pre- and post-service time.

The RUC compared the surveyed code to the top two key reference services CPT code 96413 *Chemotherapy administration, intravenous infusion technique; up to 1 hour, single or initial substance/drug* (work RVU = 0.28 and 7 minutes intra-service time) and 96365 *Intravenous infusion, for therapy, prophylaxis, or diagnosis (specify substance or drug); initial, up to 1 hour* (work RVU = 0.21 and 5 minutes intra-service time) and noted similar intensity and complexity for these services. Given the similarity in physician times and the minimal difference in the intensity/complexity measures, the RUC determined that the survey data supports maintenance of the current value of 0.19.

For additional support the RUC referenced MPC code 92567 *Tympanometry (impedance testing)* (work RVU = 0.20 and 4 minutes intra-service time) and 96367 *Intravenous infusion, for therapy, prophylaxis, or diagnosis (specify substance or drug); additional sequential infusion of a new drug/substance, up to 1 hour (List separately in addition to code for primary procedure)* (work RVU = 0.19 and 5 minutes intra-service time), which demonstrate appropriate relativity for physician work and time across the payment schedule. **The RUC recommends a work RVU of 0.19 for CPT code 96402.**

**96409 Chemotherapy administration; intravenous, push technique, single or initial substance/drug**

The RUC reviewed surveys from 59 physicians and determined that the current work RVU of 0.24, which is slightly below the survey 25<sup>th</sup> percentile, appropriately accounts for the work required to perform this service. The RUC recommends maintaining the current times of 4 minutes pre-service evaluation time, 5 minutes intra-service time and 2 minutes immediate post service time. The specialty societies indicated the physician work and time has not fundamentally changed since 2004, which would not justify a substantial increase in time from the current level. Therefore, recommend the current times be maintained as they are similar to the 25<sup>th</sup> percentile times from the recent survey.

The RUC compared the surveyed code to the top key reference service CPT code 96413 *Chemotherapy administration, intravenous infusion technique; up to 1 hour, single or initial substance/drug* (work RVU = 0.28 and 7 minutes intra-service time) and noted similar intensity and complexity for these services. Given the similarity in physician times and the minimal difference in the intensity/complexity measures, the RUC determined that the survey data supports maintenance of the current value of 0.24.

For additional support the RUC referenced MPC codes 71020 *Radiologic examination, chest, 2 views, frontal and lateral*; (work RVU = 0.22 and 3 minutes intra-service time) and 93922 *Limited bilateral noninvasive physiologic studies of upper or lower extremity arteries...* (work RVU = 0.25 and 5 minutes intra-service time), which demonstrate appropriate relativity for physician work and time across the payment schedule. The RUC questioned why 96409 and 96411 require more physician work than 96401 and 96402. The specialty society indicated that when chemotherapy administration is given via intravenous push there is an increased risk of side effects and problems that can relate to it, such as chest pain and vasospasms from specific IV push drugs. **The RUC recommends a work RVU of 0.24 for CPT code 96409.**

***96411 Chemotherapy administration; intravenous, push technique, each additional substance/drug (List separately in addition to code for primary procedure)***

The RUC reviewed surveys from 57 physicians and determined that the current work RVU of 0.20, which is slightly below the survey 25<sup>th</sup> percentile, appropriately accounts for the work required to perform this service. The RUC recommends maintaining the current time 3 minutes pre-service time and 4 minutes intra-service time. The specialty societies indicated the physician work and time has not fundamentally changed since 2004, which would not justify a substantial increase in time from the current level. Therefore, recommend the current times be maintained as they are similar to the 25<sup>th</sup> percentile times from the recent survey. The RUC noted that this service is reported with an Evaluation and Management (E/M) service 58% of the time and confirmed no duplication in the pre- and post-service time.

CMS questioned what the physician work involves, outside of supervision of clinical staff, and was concerned with any overlap with E/M services provided. The specialty societies indicated that E/M visits are separate and distinct from this service and focus on disease management, review imaging and inform patient of status of cancer. Whereas, this service is the supervision of the infusion and frequent assessment, addressing of medication reactions and interaction with clinical staff.

The RUC compared the surveyed code to the top two key reference services CPT code 96417 *Chemotherapy administration, intravenous infusion technique; each additional sequential infusion (different substance/drug), up to 1 hour (List separately in addition to code for primary procedure)* (work RVU = 0.21 and 6 minutes intra-service time) and CPT code 96367 *Intravenous infusion, for therapy, prophylaxis, or diagnosis (specify substance or drug); additional sequential infusion of a new drug/substance, up to 1 hour (List separately in addition to code for primary procedure)* (work RVU = 0.19 and 5 minutes intra-service time) and noted slightly higher intensity and complexity for the surveyed service. Given the similarity in physician times and the minimal difference in the intensity/complexity measures, the RUC determined that the survey data supports maintenance of the current value of 0.20.

For additional support the RUC referenced codes 77080 *Radiologic examination, chest, 2 views, frontal and lateral*; (work RVU = 0.20 and 5 minutes intra-service time) and 71100 *Radiologic examination, ribs, unilateral; 2 views* (work RVU = 0.22 and 4 minutes intra-service time), which demonstrate appropriate relativity for physician work and time across the payment schedule. The RUC questioned why 96409 and 96411 require more physician work than 96401 and 96402. The specialty society indicated that when chemotherapy administration is given via intravenous push there is an increased risk of side effects and problems that can relate to it, such as chest pain and vasospasms from specific IV push drugs. **The RUC recommends a work RVU of 0.20 for CPT code 96411.**

### Practice Expense

The Practice Expense Subcommittee made minor modifications to the clinical staff time, supplies and eliminated any overlap with duplicative services if reported with an Evaluation and Management service in accordance with the standards. CMS questioned if the time per clinical staff activity, such calculating the body surface area (BSA), calculating the dose, etc. is appropriate. The specialty society indicated that chemotherapy can be quite toxic and definitely requires careful calculations for each time the patient receives these services. The patient changes frequently, and their weight and height must be measured each time to insure accuracy. A 10% weight change could impact the appropriate dose. The RUC recommends the direct practice expense inputs as approved with modifications by the PE Subcommittee.

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
96401	Chemotherapy administration, subcutaneous or intramuscular; non-hormonal anti-neoplastic	XXX	0.21 (No Change)

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 70 year-old patient with cancer presents with the appropriate indications for chemotherapy.

Percentage of Survey Respondents who found Vignette to be Typical: 85%

**Site of Service (Complete for 010 and 090 Globals Only)**

---

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is;  
Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

---

Description of Pre-Service Work: Provide and confirm orders. Interact and review plan with staff. Confirm and review laboratory results as necessary.

Description of Intra-Service Work: Physician or other qualified health care professional provides direct supervision, ensures their immediate availability to the staff in the office and periodically assesses the patient and the patient's response to treatment.

Description of Post-Service Work: Provide appropriate instructions regarding immediate care. Provide minimal instruction regarding ongoing care. Conduct appropriate interactions with staff regarding patient monitoring.

**INTENSITY/COMPLEXITY MEASURES**

*(of those that selected Key Reference codes)*

Survey respondents are rating the survey code relative to the key reference code.

	<b><u>Top Key Ref Code</u></b>	<b><u>2<sup>nd</sup> Key Ref Code</u></b>
<b><u>Mental Effort and Judgment (Mean)</u></b>		
The number of possible diagnosis and/or the number of management options that must be considered	-0.04	-0.50
The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed	0.17	-0.10
Urgency of medical decision making	0.08	-0.40

**Technical Skill/Physical Effort (Mean)**

Technical skill required	-0.17	-0.30
Physical effort required	-0.21	-0.20

**Psychological Stress (Mean)**

The risk of significant complications, morbidity and/or mortality	0.08	-0.40
Outcome depends on the skill and judgment of physician	0.33	-0.20
Estimated risk of malpractice suit with poor outcome	0.08	-0.30

**INTENSITY/COMPLEXITY MEASURES****Top Key  
Ref Code****2<sup>nd</sup> Key  
Ref Code****Time Segment (Mean)**

Overall intensity/complexity	0.08	-0.50
------------------------------	------	-------

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Background**

In the NPRM for 2016, CMS ran the high expenditure services across specialties with Medicare allowed charges of \$10 million or more. CMS identified the top 20 codes by specialty in terms of allowed charges, excluding 010 and 090-day global services, anesthesia and Evaluation and Management services and services reviewed since CY 2010. CPT codes 96401, 96402, 96409 and 96411 were part of the list to be surveyed. In June 2016, the specialty societies indicated they would not proceed with a coding change proposal that might have impacted these codes and moved to survey Tabs 25, 26 and 27 for January 2017 RUC. CPT codes 96401, 96402, 96409, and 96411 were surveyed and reviewed by the RUC as part a 20-code project conducted by a multispecialty coalition at the October 2004 RUC meeting.

**96401 Survey Results & Recommendations:**

The American Society of Clinical Oncology (ASCO), the American Society of Hematology (ASH), American Society for Blood and Marrow Transplantation (ASBMT), and the American College of Rheumatology (ACR) conducted a joint random survey of their members in October-November 2016. Physician advisors and specialty experts participated by conference calls and over e-mail discussion to review the survey work data and develop recommendations. The ASCO, ASH, ASBMT, and ACR joint consensus panel reviewed and discussed the work survey results. For CPT code 96401, there were 66 responses to the survey request with a median performance rate of 50, lending support that the survey participants were familiar with the service. 85% of the survey respondents found the vignette to be typical.

**Time Discussion**

The joint panel reviewed the survey median times (10 pre, 10 intra, 10 post) and compared it to the current time of 4 minutes pre-time, 3 minutes of intra-time and 2 minutes of post time. The 25<sup>th</sup> percentile times of the survey are (5 pre, 5 intra and 5 post.) The consensus of the joint panel is that the physician work of this service has not fundamentally changed since 2004 which would not justify a substantial increase in time from the current level. We are therefore recommending the current times be maintained as they are similar to the 25<sup>th</sup> percentile times from the recent survey.

## Work Discussion

The joint panel reviewed the survey median work (RVW 0.28) as well as the 25<sup>th</sup> percentile (RVW 0.21) compared to the current value (RVW 0.21). The panel recommends maintaining the current RVW of 0.21 which is consistent with our conclusion that there has not been fundamental change in the nature of the physician work and there is no compelling evidence for an increase in the work value.

The key reference service code 2 chosen by the survey respondents, CPT 96365 *Intravenous infusion, for therapy, prophylaxis, or diagnosis (specify substance or drug); initial, up to 1 hour*, is assigned an RVW 0.21 with pre, intra and post time of 2, 5 and 2 minutes. The intensity/complexity measures of the surveyed code were similar to the ratings assigned to the reference code. Given the similarity in times and the minimal difference in the intensity/complexity measures, we believe the survey data supports maintenance of the current value of 0.21.

To provide further support, the joint panel compared code 96401 to two MPC codes and other services listed in the table below:

**TABLE 1 REVIEW OF COMPARATOR SERVICES**

CPT Code	Short Description	RVW	Pre	Intra	Post	Total
<b>92567 (MPC)</b>	Tympanometry	<b>0.20</b>	<b>1</b>	<b>4</b>	<b>1</b>	<b>6</b>
<b>77080</b>	Dxa bone density axial	<b>0.20</b>	<b>2</b>	<b>5</b>	<b>2</b>	<b>9</b>
<b>96401</b> Survey Code	Chemo anti-neopl sq/im	<b>0.21</b>	<b>4</b>	<b>3</b>	<b>2</b>	<b>9</b>
<b>96417</b>	Chemo iv infus each addl seq	<b>0.21</b>	<b>2</b>	<b>6</b>	<b>0</b>	<b>8</b>
<b>72100 (MPC)</b>	X-ray exam l-s spine 2/3 vws	<b>0.22</b>	<b>1</b>	<b>3</b>	<b>2</b>	<b>6</b>

**In summary, we recommend a RVW of 0.21 (which is the current value for 96401) with a pre-service time 4 minutes, intra service time 3 minutes, and post time 2 minutes for a total time 9 minutes.**

## SERVICES REPORTED WITH MULTIPLE CPT CODES

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

- Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 96401

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Hematology/Oncology                      How often? Commonly

Specialty Rheumatology                      How often? Commonly

Specialty Medical Oncology                      How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 2308056

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. 2015 Medicare Claims Data times three.

Specialty Hematology/Oncology	Frequency 820052	Percentage 35.52 %
-------------------------------	------------------	--------------------

Specialty Rheumatology	Frequency 535007	Percentage 23.17 %
------------------------	------------------	--------------------

Specialty Medical Oncology	Frequency 221112	Percentage 9.58 %
----------------------------	------------------	-------------------

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 769,352 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This information is from the 2015 Medicare Claims Data, on the RUC database.

Specialty Hematology/Oncology	Frequency 273351	Percentage 35.53 %
-------------------------------	------------------	--------------------

Specialty Rheumatology	Frequency 178336	Percentage 23.18 %
------------------------	------------------	--------------------

Specialty Medical Oncology	Frequency 73319	Percentage 9.52 %
----------------------------	-----------------	-------------------

Do many physicians perform this service across the United States? Yes

### **Berenson-Eggers Type of Service (BETOS) Assignment**

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Other

BETOS Sub-classification:

Chemotherapy

BETOS Sub-classification Level II:

### **Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 96401

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. N/A

**INTENSITY/COMPLEXITY MEASURES**

*(of those that selected Key Reference codes)*

Survey respondents are rating the survey code relative to the key reference code.

	<b><u>Top Key Ref Code</u></b>	<b><u>2<sup>nd</sup> Key Ref Code</u></b>
<b><u>Mental Effort and Judgment (Mean)</u></b>		
The number of possible diagnosis and/or the number of management options that must be considered	-0.16	-0.13
The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed	-0.08	0.13
Urgency of medical decision making	0.04	-0.08

**Technical Skill/Physical Effort (Mean)**

Technical skill required	-0.24	-0.13
Physical effort required	-0.24	-0.08

**Psychological Stress (Mean)**

The risk of significant complications, morbidity and/or mortality	-0.32	-0.08
Outcome depends on the skill and judgment of physician	0.16	0.00
Estimated risk of malpractice suit with poor outcome	-0.16	0.08

**INTENSITY/COMPLEXITY MEASURES****Top Key  
Ref Code****2<sup>nd</sup> Key  
Ref Code****Time Segment (Mean)**

Overall intensity/complexity	-0.40	0.08
------------------------------	-------	------

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

<b>Services Reported Together</b>	96402	99213
Global Period	XXX	XXX
RVU	.19	.97
Pre-/Intra-/Post- Time	4/3/2	3/15/5

**Background**

In the NPRM for 2016, CMS ran the high expenditure services across specialties with Medicare allowed charges of \$10 million or more. CMS identified the top 20 codes by specialty in terms of allowed charges, excluding 010 and 090-day global services, anesthesia and Evaluation and Management services and services reviewed since CY 2010. CPT codes 96401, 96402, 96409 and 96411 were part of the list to be surveyed. In June 2016, the specialty societies indicated they would not proceed with a coding change proposal that might have impacted these codes and moved to survey Tabs 25, 26 and 27 for January 2017 RUC. CPT codes 96401, 96402, 96409, and 96411 were surveyed and reviewed by the RUC as part a 20-code project conducted by a multispecialty coalition at the October 2004 RUC meeting.

**96402 Survey Results & Recommendations:**

The American Society of Clinical Oncology (ASCO), the American Society of Hematology (ASH), and the American Urological Association (AUA) conducted a joint random survey of their members in October-November 2016. Physician advisors and specialty experts participated by conference calls and over e-mail discussion to review the survey work data and develop recommendations. The ASCO, ASH, and AUA RVS joint consensus panel reviewed and discussed the work survey results. For CPT code 96402, there were 118 responses to the survey request with a median performance rate of 50, lending support that the survey participants were familiar with the service. 94% of the survey respondents found the vignette to be typical.

**Time Discussion**

The joint panel reviewed the survey median times (10 pre, 5 intra, 15 post) and compared it to the current time of 4 minutes pre, 3 minutes intra and 2 minutes' post time. The 25<sup>th</sup> percentile times of the survey are (5 pre, 5 intra and 8 post.) The consensus of the joint panel is that the physician work of this service has not fundamentally changed since 2004, which would not justify an increase in time from the current level. We are, therefore, recommending the current times be maintained.

### Work Discussion

The joint panel reviewed the survey median work (RVW 0.28) as well as the 25<sup>th</sup> percentile (RVW 0.20) compared to the current value (RVW 0.19). The panel recommends maintaining the current RVW of 0.19 which is consistent with our conclusion that there has not been fundamental changes in the nature of the physician work and there is no compelling evidence for an increase in the work value.

The key reference service code 1 chosen by the survey respondents, CPT 96413 *Chemotherapy administration, intravenous infusion technique; up to 1 hour, single or initial substance/drug*, is assigned an RVW 0.28 with pre, intra and post times of 4, 7 and 2 minutes. The intensity/complexity measures of the surveyed code were rated as similar by the survey respondents. The joint expert panel did not agree with the survey respondents' observation of the key reference 1 to the survey code CPT 96402, as the value of reference code 1 (.28) is higher than 96402 (.19).

To provide additional support to maintain the current value, the joint panel compared code 96402 to two MPC codes and other services listed in the table below:

**TABLE 1 REVIEW OF COMPARATOR SERVICES**

CPT Code	Short Description	RVW	Pre	Intra	Post	Total
<b>71010 (MPC)</b>	Chest x-ray 1 view frontal	<b>.18</b>	<b>1</b>	<b>3</b>	<b>1</b>	<b>5</b>
<b>92504</b>	Ear microscopy examination	<b>0.18</b>	<b>2</b>	<b>5</b>	<b>2</b>	<b>9</b>
<b>96402</b> Survey Code	Chemo hormon antineopl sq/im	<b>0.19</b>	<b>4</b>	<b>3</b>	<b>2</b>	<b>9</b>
<b>96367 (MPC)</b> <b>ZZZ</b>	Tx/proph/dg addl seq iv inf	<b>0.19</b>	<b>1</b>	<b>5</b>	<b>0</b>	<b>6</b>
<b>92567 (MPC)</b>	Tympanometry	<b>0.20</b>	<b>1</b>	<b>4</b>	<b>1</b>	<b>6</b>

**In summary, we recommend a RVW of 0.19 (which is the current value for 96402) with a pre-service time 4 minutes, intra service time 3 minutes, and post time 2 minutes for a total time 9 minutes.**

### SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☒ Other reason (please explain) Information available from billed together files.

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these

data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. See above in the "Additional Rationale and Comments" section.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 96402

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Urology                      How often? Commonly

Specialty Hematology/Oncology                      How often? Commonly

Specialty Medical Oncology                      How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 1157745

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. 2015 Medicare Claims data times 3

Specialty Urology	Frequency 679712	Percentage 58.70 %
Specialty Hematology/Oncology	Frequency 309813	Percentage 26.76 %
Specialty Medical Oncology	Frequency 100724	Percentage 8.70 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 385,915 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This is 2015 Medicare claims data from the RUC database.

Specialty Urology	Frequency 226571	Percentage 58.71 %
Specialty Hematology/Oncology	Frequency 103271	Percentage 26.76 %
Specialty Medical Oncology	Frequency 33613	Percentage 8.70 %

Do many physicians perform this service across the United States? Yes

## Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Other

BETOS Sub-classification:

Chemotherapy

BETOS Sub-classification Level II:

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 96402

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. N/A

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

<b>Services Reported Together</b>	96409	96367
Global Period	XXX	ZZZ
RVU	.24	.19
Pre-/Intra-/Post- Time	4/5/2	1/5/6

**Background**

In the NPRM for 2016, CMS ran the high expenditure services across specialties with Medicare allowed charges of \$10 million or more. CMS identified the top 20 codes by specialty in terms of allowed charges, excluding 010 and 090-day global services, anesthesia and Evaluation and Management services and services reviewed since CY 2010. CPT codes 96401, 96402, 96409 and 96411 were part of the list to be surveyed. In June 2016, the specialty societies indicated they would not proceed with a coding change proposal that might have impacted these codes and moved to survey Tabs 25, 26 and 27 for January 2017 RUC. CPT codes 96401, 96402, 96409, and 96411 were surveyed and reviewed by the RUC as part a 20-code project conducted by a multispecialty coalition at the October 2004 RUC meeting.

**96409 Survey Results & Recommendations:**

The American Society of Clinical Oncology (ASCO), the American Society of Hematology (ASH), and the American Society for Blood and Marrow Transplantation (ASBMT) conducted a joint random survey of their members in October-November 2016. Physician advisors and specialty experts participated by conference calls and over e-mail discussion to review the survey work data and develop recommendations. The ASCO, ASH and ASBMT RVS joint consensus panel reviewed and discussed the work survey results. For CPT code 96409, there were 59 responses to the survey request with a median performance rate of 100, lending support that the survey participants were familiar with the service. 81% of the survey respondents found the vignette to be typical.

**Time Discussion**

The joint panel reviewed the survey median times (15 pre, 10 intra, 15 post) and compared it to the current time of 4 minutes pre, 5 minutes intra and 2 minutes' post time. The 25<sup>th</sup> percentile times of the survey are (10 pre, 8 intra and 5 post.) The consensus of the joint panel is that the physician work of this service has not fundamentally changed since 2004 which would not justify an increase in time from the current level. We are, therefore, recommending the current times be maintained.

### Work Discussion

The joint panel reviewed the survey median work (RVW 0.30) as well as the 25<sup>th</sup> percentile (RVW 0.26) compared to the current value (RVW 0.24). The panel recommends maintaining the current RVW of 0.24 which is consistent with our conclusion that there has not been fundamental changes in the nature of the physician work and there is no compelling evidence for an increase in the work value.

The key reference service code 1 chosen by the survey respondents, CPT 96413 *Chemotherapy administration, intravenous infusion technique; up to 1 hour, single or initial substance/drug*, is assigned an RVW 0.28 with pre, intra and post time of 4, 7 and 2 minutes. The intensity/complexity measures of the surveyed code were rated as similar by the survey respondents. The expert panel did agree with the survey respondents observation of the key reference 1 is similar to the survey CPT code 96409.

To provide additional support to maintain the current value, the joint panel compared code 96409 to two MPC codes and other services listed in the table below:

**TABLE 1 REVIEW OF COMPARATOR SERVICES**

CPT Code	Short Description	RVW	Pre	Intra	Post	Total
<b>71020 (MPC)</b>	Chest x-ray 2vw frontal&latl	<b>0.22</b>	<b>1</b>	<b>3</b>	<b>1</b>	<b>6</b>
<b>73564</b>	X-ray exam knee 4 or more	<b>0.22</b>	<b>1</b>	<b>5</b>	<b>1</b>	<b>7</b>
<b>96409</b> Survey Code	Chemo iv push sngl drug	<b>0.24</b>	<b>4</b>	<b>5</b>	<b>2</b>	<b>11</b>
<b>93922 (MPC)</b>	Upr/l xtremity art 2 levels	<b>0.25</b>	<b>3</b>	<b>5</b>	<b>2</b>	<b>10</b>
<b>92545</b>	Oscillating tracking test	<b>0.25</b>	<b>3</b>	<b>5</b>	<b>3</b>	<b>11</b>

**In summary, we recommend a RVW of 0.24 (which is the current value for 96409) with a pre-service time of 4 minutes, intra service time of 5 minutes, and post time of 2 minutes for a total time 11 minutes.**

### SERVICES REPORTED WITH MULTIPLE CPT CODES

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

- Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is

involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. See above in the "Additional Comments and Rationale Section."

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 96409

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Hematology/Oncology                      How often? Commonly

Specialty Medical Oncology                      How often? Commonly

Specialty Internal Medicine                      How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 430905

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. 2015 Medicare Claims data times three.

Specialty Hematology/Oncology	Frequency 304779	Percentage 70.72 %
-------------------------------	------------------	--------------------

Specialty Medical Oncology	Frequency 88766	Percentage 20.59 %
----------------------------	-----------------	--------------------

Specialty Internal Medicine	Frequency 16202	Percentage 3.75 %
-----------------------------	-----------------	-------------------

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?

143,635 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. 2015 Medicare Claims data from RUC database.

Specialty Hematology/Oncology	Frequency 101593	Percentage 70.72 %
-------------------------------	------------------	--------------------

Specialty Medical Oncology	Frequency 29589	Percentage 20.60 %
----------------------------	-----------------	--------------------

Specialty Internal Medicine	Frequency 5401	Percentage 3.76 %
-----------------------------	----------------	-------------------

Do many physicians perform this service across the United States? Yes

## Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Other

BETOS Sub-classification:

Chemotherapy

BETOS Sub-classification Level II:

## Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 96409

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. N/A

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

---

CPT Code: 96411      Tracking Number

Original Specialty Recommended RVU: **0.20**Presented Recommended RVU: **0.20**

Global Period: ZZZ

RUC Recommended RVU: **0.20**

CPT Descriptor: Chemotherapy administration; intravenous, push technique, each additional substance/drug (List separately in addition to code for primary procedure)

---

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 67-year-old male with bladder cancer is to receive the second drug for that day's treatment. The patient has just finished receiving an IV push of a first drug (reported separately under code 96409) as part of the chemotherapy course. (Note: CPT code 96411 is an add-on code. Code 96409 includes IV discontinuation, flush, and discharge process.)

Percentage of Survey Respondents who found Vignette to be Typical: 86%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

---

Description of Pre-Service Work: N/A

Description of Intra-Service Work: Provide and confirm orders. Calculate dose. Provide direct supervision and make sure of immediate availability in office. Assess patient response to treatment.

Description of Post-Service Work: N/A

Ref Code****2<sup>nd</sup> Key  
Ref Code****Time Segment (Mean)**

Overall intensity/complexity	0.63	0.62
------------------------------	------	------

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

<b>Services Reported Together</b>	96411	99214	96367	96375	96413	96415
Global Period	ZZZ	XXX	ZZZ	ZZZ	XXX	ZZZ
RVU	.20	1.50	.19	.10	.28	.19
Pre-/Intra-/Post- Time	3/4/7	5/25/10	1/5/6	1/3/4	4/7/2	0/5/0

**Background**

In the NPRM for 2016, CMS ran the high expenditure services across specialties with Medicare allowed charges of \$10 million or more. CMS identified the top 20 codes by specialty in terms of allowed charges, excluding 010 and 090-day global services, anesthesia and Evaluation and Management services and services reviewed since CY 2010. CPT codes 96401, 96402, 96409 and 96411 were part of the list to be surveyed. In June 2016, the specialty societies indicated they would not proceed with a coding change proposal that might have impacted these codes and moved to survey Tabs 25, 26 and 27 for January 2017 RUC. CPT codes 96401, 96402, 96409, and 96411 were surveyed and reviewed by the RUC as part a 20-code project conducted by a multispecialty coalition at the October 2004 RUC meeting.

**96411 Survey Results & Recommendations:**

The American Society of Clinical Oncology (ASCO), the American Society of Hematology (ASH), and the American Society for Blood and Marrow Transplantation (ASBMT) conducted a joint random survey of their members in October-November 2016. Physician advisors and specialty experts participated by conference calls and over e-mail discussion to review the survey work data and develop recommendations. The ASCO, ASH and ASBMT RVS consensus panel reviewed and discussed the work survey results. For CPT code 96411, there were 57 responses to the survey request with a median performance rate of 125, lending support that the survey participants were familiar with the service. 86% of the survey respondents found the vignette to be typical.

**Time Discussion**

We did not survey for pre and post time since this is an add-on (ZZZ) code. The survey median intra service time was 15 minutes and the 25<sup>th</sup> percentile intra time 5 minutes. The joint expert panel agreed the intra-service time is closer to the 25<sup>th</sup> percentile at a time of 5 minutes to perform this service. The consensus of the joint panel is that the physician work of this service has not fundamentally changed since 2004 which would not justify an increase in time from the current level. We are recommending, however, that the 3 minutes of pre-service time is deleted, and allocate 1 minute of pre-service to the intra-service, for a times of 0 minutes of pre-service, 5 minutes of intra-service (an increase from 4 minutes), and 0 minutes of post-service.

## Work Discussion

The joint panel reviewed the survey median work (RVW 0.40) as well as the 25<sup>th</sup> percentile (RVW 0.21) compared to the current value (RVW 0.20). The panel recommends maintaining the current RVW of 0.20 which is consistent with our conclusion that there has not been fundamental changes in the nature of the physician work and there is no compelling evidence for an increase in the work value.

The key reference service code 1 chosen by the survey respondents, CPT 96417 *Chemotherapy administration, intravenous infusion technique; each additional sequential infusion (different substance/drug), up to 1 hour (List separately in addition to code for primary procedure)*, is assigned an RVW 0.21 with pre, intra and post times of 2, 6 and 0 minutes. The intensity/complexity measures of the surveyed code were rated as similar to slightly higher by the survey respondents. The joint expert panel did not agree with the survey respondents observation of the key reference 1 to the survey code CPT 96411 as they agreed it was similar, but not slightly higher.

To provide additional support to maintain the current value, the joint panel compared code 96411 to two MPC codes and other services listed in the table below:

**TABLE 1 REVIEW OF COMPARATOR SERVICES**

CPT Code	Short Description	RVW	Pre	Intra	Post	Total
<b>96367 zzz</b> (MPC)	Tx/proph/dg addl seq iv inf	<b>0.19</b>	<b>1</b>	<b>5</b>	<b>0</b>	<b>6</b>
<b>99211 xxx</b> (MPC)	Office/outpatient visit est (five minutes)	<b>0.18</b>	<b>0</b>	<b>5</b>	<b>2</b>	<b>7</b>
<b>77080 xxx</b>	Dxa bone density axial	<b>0.20</b>	<b>2</b>	<b>5</b>	<b>2</b>	<b>9</b>
<b>96411 zzz</b> Survey Code	Chemo iv push addl drug	<b>0.20</b>	<b>0</b>	<b>5</b>	<b>0</b>	<b>5</b>
<b>71100 xxx</b> (MPC)	X-ray exam ribs uni 2 views	<b>0.22</b>	<b>1</b>	<b>4</b>	<b>1</b>	<b>6</b>
<b>95874 zzz</b> (MPC)	Guide nerv destr needle emg	<b>0.37</b>	<b>0</b>	<b>20</b>	<b>0</b>	<b>20</b>

**In summary, we recommend a RVW of 0.20 with a pre-service time 0, intra service time of 5 minutes, and post time 0 minutes for a total time 5 minutes.**

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.

- ☐ Multiple codes are used to maintain consistency with similar codes.  
☐ Historical precedents.  
☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. See above in the "Additional Rationale and Comments" section.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 96411

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
 If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Hematology/Oncology                      How often? Commonly

Specialty Medical Oncology                      How often? Commonly

Specialty Internal Medicine                      How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 604797

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. 2015 Medicare Claims Data times three.

Specialty Hematology/Oncology	Frequency 424991	Percentage 70.27 %
Specialty Medical Oncology	Frequency 130515	Percentage 21.57 %
Specialty Internal Medicine	Frequency 22982	Percentage 3.79 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 201,599 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. 2015 Medicare Claims Data from RUC database

Specialty Hematology/Oncology	Frequency 141664	Percentage 70.27 %
Specialty Medical Oncology	Frequency 43525	Percentage 21.58 %
Specialty Internal Medicine	Frequency 7661	Percentage 3.80 %

Do many physicians perform this service across the United States? Yes

## Berenson-Eggers Type of Service (BETOS) Assignment

CPT Code: 96401

Specialty Society(s): ASCO, ASH, ACRh, ASBMT  
**AMA/Specialty Society Update Process**  
**Practice Expense Summary of Recommendation**  
**Non Facility Direct Inputs**

CPT Long Descriptor: Chemotherapy administration, subcutaneous or intramuscular; non-hormonal anti-neoplastic

Global Period: XXX Meeting Date: January 2017- Revised 1/17/17

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee: The specialty society advisors and staff from ASCO, ASH, ACRh, and ASBMT held a meeting via conference call to discuss the Practice Expense. The inputs were developed with involvement from physicians, specialty society staff, and clinical staff from a variety of settings.

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale: For CPT code 96401, we are using the current PE inputs for 96401 as a reference.

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time: There are **6** minutes of pre-service time for CPT code 96401, which is above the PE standard of **0** minutes. This accounts for the following work: Coordinating with the physician on the injection, confirming drugs to administered and the dosage, obtaining an update on patient's condition, and ensuring appropriate labwork is ordered. Recent increases in documentation and insurance requirements continue to support the need for these minutes in the pre-service time.

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:

Line 22- Obtain vital signs. We are adding **5** minutes (an increase from **3** minutes) for obtaining the vital signs, in compliance with the new standards. Five vitals are obtained: blood pressure, respiration, pulse, temperature, and weight. Five vitals equals five minutes.

In the following lines, we are requesting increases based on the 2004 NIOSH Alert: Preventing Occupational Exposure to Antineoplastic and Other Hazardous Drugs. These standards, along with the OSHA Technical manual: Controlling Occupational Exposure to Hazardous Drugs revised in 1995, are "the most often referred to guidelines in the United States."

(<http://www.cdc.gov/niosh/topics/antineoplastic/pubs.html>) The 2004 NIOSH alert was not available when these codes were originally implemented. The alert is included with the submission, and we have inserted the page numbers as a reference.

Line 37- Assemble and don personal protective equipment. We are adding **1** minute for "assembling and donning personal protective equipment"

"Wear chemotherapy gloves [ASTM in press], protective clothing, and eye protection when opening containers to unpack hazardous drugs. Such PPE protects workers and helps prevent contamination from spreading if damaged containers are found." (Page 12)

**Specialty Society(s): ASCO, ASH, ACRh, ASBMT**

“Wear protective gloves and gowns if you are involved in preparation activities such as opening drug packaging, handling vials or finished products, labeling hazardous drug containers, or disposing of waste. (Page 12)

Wear PPE (including double gloves and protective gowns) while reconstituting and admixing drugs.” (page 13)

Line 45- Assemble and don personal protective equipment. We are adding **1** minute for “assembling and donning personal protective equipment” per the NIOSH safety standards, which state, “Wear PPE (including double gloves, goggles, and protective gowns) for all activities associated with drug administration—opening the outer bag, assembling the delivery system, delivering the drug to the patient, and disposing of all equipment used to administer drugs.” (Page 14)

Line 46- Patient and medication verification before administration (two verifications by two different RNs). We are adding **1** minute for this task in compliance with ASCO/ONS safety standards, which were updated in 2016. The American Society of Clinical Oncology (ASCO) and the Oncology Nursing Society (ONS) are engaged in an ongoing collaborative project to use a rigorous, consensus-based process to develop standards for safe administration of chemotherapy. Current ASCO/ONS standards address safety of all routes of chemotherapy administration to adult patients in the outpatient setting and inpatient setting. The ASCO/ONS chemotherapy safety standards are intended to reduce the risk of errors when providing adult patients with chemotherapy, and to provide a framework for best practices in cancer care. Specifically, they can inform practice policies and procedures, internal quality assessment, and external quality monitoring. (<http://www.institutequality.org/qcp/asco-ons-safety-standards>) The updated guidelines have been included with this submission, and we have inserted the page and section numbers as a reference.

“3.11.3 Before each chemotherapy administration, at least two practitioners approved by the health care setting to administer or prepare chemotherapy verify and document the accuracy of the following elements:

- 3.11.3.1. Drug name.
- 3.11.3.2. Drug dose.
- 3.11.3.3. Infusion volume or drug volume when prepared in a syringe.
- 3.11.3.4. Rate of administration.
- 3.11.3.5. Route of administration.
- 3.11.3.6. Expiration dates and/or times.
- 3.11.3.7. Appearance and physical integrity of the drugs.
- 3.11.3.8. Rate set on infusion pump, when used.” (Page 6)

5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

Line 12- Complete pre-service diagnostic and referral forms- **3 minutes**

Line 13- Coordinate pre-surgery services- **3 minutes**

The clinical staff coordinates with the physician on the injection, confirms drugs to be infused and the dosage, obtains an update on the patient's condition, and ensures appropriate lab work is ordered.

Total Pre-Service Time- **6 minutes**

Intra-Service Clinical Labor Activities:

Line 21- Greet patient, provide gowning, ensure appropriate medical records are available- **2 minutes**  
Clinical staff greets patient and escorts them to the exam room. Gowning is provided to the patient.

Line 22- Review charts by chemo nurse regarding course of treatment and obtain chemotherapy-related medical history- **4 minutes**  
The clinical staff verifies patient information and reviews current course of treatment and diagnosis (verifies the treatment cycle day and treatment schedule). Reviews patient and treatment history and looks for any complications or treatment related toxicities noted in medical record. Verifies allergies and any previous reactions or side effects. The clinical staff reviews the list of prescribed medications and reviews lab values/tests that were previously ordered (in pre-service). These include the complete blood count chemistries and imaging studies.

Line 23- Obtain vital signs- **5 minutes**  
The clinical staff obtains five vital signs: blood pressure, respiration, pulse, temperature, and weight. Five vitals equal five minutes.

Line 24- Provide pre-service education/obtain consent (initial education of 1 hr amortized over average of 6 cycles). Includes a psych assessment and a review of medication list.- **5 minutes**  
The clinical staff reviews the treatment plan established by the physician and patient. Patient is educated about the regimen prescribed, the drug-specific toxicities and potential hypersensitivities, and reactions that require immediate attention. Verifies patient consent.

Line 25- Prepare room, equipment, and supplies- **2 minutes**  
Clinical staff gathers the necessary supplies (i.e. medication, syringe with needle, alcohol swab, and bandage strip) and lays them out in the exam room.

Line 27- Prepare and position patient/monitor patient/set up IV- **2 minutes**  
Clinical staff prepares and positions patient. Ensures patient is prepared for the injection.

*Mix Chemotherapy*

Line 31- Verify medication interaction- **1 minute**  
Clinical staff verifies any current medications being taken by patient to assure no negative interactions with medication to be administered by the injection.

Line 32- Verify orders- **1 minute**  
Clinical staff verifies physician's order for injection and confirms correct medication has been gathered, consistent with the physician's order.

Line 33- Calculate dose- **1 minute**

Line 34- Maximum and cumulative dose- **1 minute**  
Clinical staff confirms cumulative dose of chemotherapy agents associated with risk of cumulative toxicity.

Line 35- Calculate BSA- **1 minute**

Line 36- Second verification of orders (performed by another nurse or technician)- **1 minute**  
Orders are reviewed and verified by a second independent practitioner, per ASCO/ONS guidelines

Line 37- Assemble supplies- **1 minute**  
Clinical staff gathers supplies for mixing chemotherapy.

Line 38- Assemble and don personal protective equipment- **1 minute**  
Clinical staff dons personal protective equipment per NIOSH guidelines.

Line 39- Prep Labels- **1 minute**

Line 40- Document lot # and expiration date- **1 minute**  
Clinical staff documents lot # and expiration date of medication to be injected in the patient's medical record and other places as needed.

Line 41- Clean hood- **1 minute**  
The biohazard hood is cleaned by clinical staff.

Line 42- Reconstitute drug- **2 minutes**

Line 43- Maintain MSDS- **0 minute**  
Clinical staff maintains Material Safety Data Sheets, per OSHA requirements.

Line 42 was decreased from 1 minute to 0 minutes.

Line 46- Assemble and don personal protective equipment- **1 minute (increase from 0 minutes)**  
Clinical staff dons personal protective equipment (ex. gown, gloves) per NIOSH guidelines.

Line 47- Patient and medication verification before administration (two verifications by two different RNs)- **1 minute (increase from 0 minutes)**  
Clinical staff conducts a patient and medication verification prior to the procedure, as required by ASCO/ONS safety guidelines. The verifications are performed by two different RNs.

Line 48- Clinical staff performs procedure-**1 minute**  
Clinical staff educate patient re: medication and prepares site cleans site where medication will be injected. Clinical staff injects the drug. Clinical staff monitor staff for reactions and documents encounter.

Line 50- Monitor pt. following procedure/check tubes, monitors, drains, multitasking 1:4- **5 minutes**  
Clinical staff monitors patient for adverse reactions.

Line 52- Clean room/equipment by physician staff- **3 minutes**  
Clinical staff safely disposes of used needle and syringe in sharps container. Clinical staff also cleans up and disposes of other byproducts of procedure (e.g. used alcohol swab).

Line 55- Complete diagnostic forms, lab & X-ray requisitions, and documentation- **3 minutes**  
Clinical staff completes documentation which includes: drug/dose, solution/volumes, and cumulative dose. Lab orders required for interim care and next treatment are prepared. The patient's vital signs and tolerance of treatment are documented. Instructions provided to patient are noted, along with the level of patient understanding. Clinical staff documents prescriptions provided.

**Specialty Society(s): ASCO, ASH, ACRh, ASBMT**

Line 57- Check dressings & wound/ individualized education and home care instructions / side effects for which the patient should call office/Safe handling of hazardous body fluids/coordinate office visits /prescriptions/ documentation of educational materials provided to the patient and/or caregiver.- **5 minutes**

Clinical staff reviews with patient drug related toxicities and medication side effects. Advises how to contact the practice or organization and who should be called in specific circumstances. Clinical staff provides overview of symptom management (disease, fever, reactions, nausea) and which symptoms should trigger a call to the physician/practice. Instructions are provided to the patient regarding injection site care. Prescriptions are discussed with patient. Clinical staff provides family education and verifies a follow up visit/appointments. Clinical staff determines need for home health care services.

Total Intra-Service Time: **52 minutes**

Post-Service Clinical Labor Activities:

Line 65- Conduct phone calls/call in prescriptions- **3 minutes**

Clinical staff conducts follow up phone calls to assess level of toxicity of chemo regimen, need for intervention, offer emotional support and also calls in prescriptions.

Total Post Service Time: **3 minutes**

CPT Code: 96402  
Specialty Society(s): AUA, ASCO, ASH

**AMA/Specialty Society Update Process  
Practice Expense Summary of Recommendation  
Non Facility Direct Inputs**

CPT Long Descriptor: Chemotherapy administration, subcutaneous or intramuscular; hormonal anti-neoplastic

Global Period: XXX Meeting Date: January 2017

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee: The Specialty Society Advisors and Staff from AUA, ASCO, ASH held a meeting via conference call to discuss the Practice Expense. The inputs were developed with input from physicians, specialty society staff, and clinical staff from a variety of settings.
2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale: There are two reference codes for CPT code 96402. Reference code 1 are the current PE inputs for CPT code 96402. Reference code 2 are the PE inputs for 99213. CPT code 96402 is billed 64% of the time with an E/M code, 30% with 99213.
3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time: There are 3 minutes of pre-service time for CPT code 96402, which is above the PE standard. This accounts for the following work: Coordinating with the physician on the injection, confirming drugs to administered and the dosage, obtaining an update on patient's condition, and ensuring appropriate labwork is ordered. Recent increases in documentation and insurance requirements continue to support the need for these minutes in the pre-service time.
4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:

In the following lines, we are requesting increases based on the 2004 NIOSH Alert: Preventing Occupational Exposure to Antineoplastic and Other Hazardous Drugs. These standards, along with the OSHA Technical manual: Controlling Occupational Exposure to Hazardous Drugs revised in 1995, are “the most often referred to guidelines in the United States.” (<http://www.cdc.gov/niosh/topics/antineoplastic/pubs.html>) The 2004 NIOSH alert was not available when these codes were originally implemented. The alert is included with the submission, and we have inserted the page numbers as a reference.

Line 37- Assemble and don personal protective equipment. We are adding 1 minute for “assembling and donning personal protective equipment” per the NIOSH safety standards:

“Wear chemotherapy gloves [ASTM in press], protective clothing, and eye protection when opening containers to unpack hazardous drugs. Such PPE protects workers and helps prevent contamination from spreading if damaged containers are found.” (Page 12)

**Specialty Society(s): AUA, ASCO, ASH**

“Wear protective gloves and gowns if you are involved in preparation activities such as opening drug packaging, handling vials or finished products, labeling hazardous drug containers, or disposing of waste. (Page 12)

Wear PPE (including double gloves and protective gowns) while reconstituting and admixing drugs.” (page 13)

Line 39- Document lot # and expiration date. We are adding **1** minute (an increase from **0** minutes) to make it consistent with the other chemotherapy codes.

Line 40- Clean hood- We are adding **1** minute (an increase from **0** minutes) as we are now including a biohazard hood in the equipment list. NIOSH standards state, “Use a ventilated cabinet designed to reduce worker exposures while preparing hazardous drugs.” (Page 12)

Line 45- Assemble and don personal protective equipment. We are adding **1** minute for “assembling and donning personal protective equipment” per the NIOSH safety standards, which state, “Wear PPE (including double gloves, goggles, and protective gowns) for all activities associated with drug administration—opening the outer bag, assembling the delivery system, delivering the drug to the patient, and disposing of all equipment used to administer drugs.” (Page 14)

Line 46- Patient and medication verification before administration (two verifications by two different RNs). We are requesting 1 minute for this task in compliance with ASCO/ONS safety standards, which were updated in 2016. The American Society of Clinical Oncology (ASCO) and the Oncology Nursing Society (ONS) are engaged in an ongoing collaborative project to use a rigorous, consensus-based process to develop standards for safe administration of chemotherapy. Current ASCO/ONS standards address safety of all routes of chemotherapy administration to adult patients in the outpatient setting and inpatient setting. The ASCO/ONS chemotherapy safety standards are intended to reduce the risk of errors when providing adult patients with chemotherapy, and to provide a framework for best practices in cancer care. Specifically, they can inform practice policies and procedures, internal quality assessment, and external quality monitoring. (<http://www.institutequality.org/qcp/asco-ons-safety-standards>) The updated guidelines have been included with this submission, and we have inserted the page and section numbers as a reference.

“3.11.3 Before each chemotherapy administration, at least two practitioners approved by the health care setting to administer or prepare chemotherapy verify and document the accuracy of the following elements:

3.11.3.1. Drug name.

3.11.3.2. Drug dose.

3.11.3.3. Infusion volume or drug volume when prepared in a syringe.

3.11.3.4. Rate of administration.

3.11.3.5. Route of administration.

3.11.3.6. Expiration dates and/or times.

3.11.3.7. Appearance and physical integrity of the drugs.

3.11.3.8. Rate set on infusion pump, when used.” (Page 6)

5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

Line 13- Coordinate pre-surgery services- **3 minutes**

Total Pre-Service Time- **3 minutes**

Intra-Service Clinical Labor Activities:

Line 22- Review charts by chemo nurse regarding course of treatment and obtain chemotherapy-related medical history- **0 minutes**

Line 22 was decreased from 2 minutes to 0, as this service is frequently reported with an E/M 64% of the time. In addition, this is now combined with line 22.

Line 23- Obtain vital signs- **2 minutes**

Clinical staff obtains five vital signs: blood pressure, respiration, pulse, temperature, and weight. Five vitals equals five minutes. CPT code 99213 includes 3 minutes for obtaining vitals.

Line 24- Provide pre-service education/obtain consent (initial education of 1 hr amortized over average of 6 cycles). Includes a psych assessment and a review of medication list- **5 minutes**

The clinical staff reviews the treatment plan established by the physician and patient. Patient is educated about the regimen prescribed, the drug-specific toxicities and potential hypersensitivities, and reactions that require immediate attention. Clinical staff confirms with the patient the duration of the infusion for each drug. Verifies patient consent.

Line 25- Prepare room, equipment, and supplies- **2 minutes**

Clinical staff gathers the necessary supplies (i.e. medication, syringe with needle, alcohol swab, and bandage strip) and lays them out in the exam room.

Line 27- Prepare and position patient/monitor patient/set up IV- **1 minute**

Clinical staff prepares and positions patient. Ensures patient is prepared for the injection.

*Mix Chemotherapy*

Line 31- Verify medication interaction- **1 minute**

Clinical staff verifies any current medications being taken by patient to assure no negative interactions with medication to be administered by the injection.

Line 32- Verify orders- **1 minute**

Clinical staff verifies physician's order for injection and confirms correct medication has been gathered, consistent with the physician's order.

Line 33- Calculate dose- **1 minute**

Nurse confirms cumulative dose of chemotherapy agents associated with risk of cumulative toxicity.

Line 37- Assemble supplies- **1 minute**

Clinical staff gathers supplies for mixing chemotherapy.

Line 38- Assemble and don personal protective equipment- **1 minute**

Clinical staff dons personal protective equipment per NIOSH guidelines.

Line 39- Prep Labels- **1 minute**

Line 40- Document lot # and expiration date- **1 minute** (increase from 0)

Clinical staff documents lot # and expiration date of medication to be injected in the patient's medical record and other places as needed.

Line 41- Clean hood- **1 minute** (increase from 0)  
The biohazard hood is cleaned by clinical staff.

Line 42- Reconstitute drug- **2 minutes**

Line 43- Maintain MSDS (OSHA requirement)- **0 minutes**  
Clinical staff maintains Material Safety Data Sheets, per OSHA requirements.

**Line 43 was decreased from 1 minute to 0 minutes as this is not typical for this procedure.**

Line 46- Assemble and don personal protective equipment- **1 minute (increase from 0 minutes)**

Line 47- Patient and medication verification before administration (two verifications by two different RNs)- **1 minute (increase from 0 minutes)**  
Clinical staff conducts a patient and medication verification prior to the procedure, as required by ASCO/ONS safety guidelines. The verifications are performed by two different RNs.

Line 48- Clinical staff performs procedure-**1 minute**  
Clinical staff educate patient re: medication and prepares site cleans site where medication will be injected. Clinical staff injects the drug. Clinical staff monitor staff for reactions and documents encounter.

Line 52- Clean room/equipment by physician staff- **1 minute**  
Clinical staff safely disposes of used needle and syringe in sharps container. Clinical staff also cleans up and disposes of other byproducts of procedure (e.g. used alcohol swab).

Line 55- Complete diagnostic forms, lab & X-ray requisitions, and documentation- **3 minutes**  
Clinical staff completes documentation which includes: drug/dose, solution/volumes, and cumulative dose. Lab orders required for interim care and next treatment are prepared. The patient's vital signs and tolerance of treatment are documented. Instructions provided to patient are noted, along with the level of patient understanding. Clinical staff documents prescriptions provided.

Line 57- Check dressings & wound/ individualized education and home care instructions / side effects for which the patient should call office/Safe handling of hazardous body fluids/coordinate office visits /prescriptions/ documentation of educational materials provided to the patient and/or caregiver.- **5 minutes**

Clinical staff reviews with patient drug related toxicities and medication side effects. Advises how to contact the practice or organization and who should be called in specific circumstances. Clinical staff provides overview of symptom management (disease, fever, reactions, nausea) and which symptoms should trigger a call to the physician/practice. Instructions are provided to the patient regarding injection site care. Prescriptions are discussed with patient. Clinical staff provides family education and verifies a follow up visit/appointments. Clinical staff determines need for home health care services.

Total Intra-Service Time: **34 minutes**

Post-Service Clinical Labor Activities:

**CPT Code: 96402**  
**Specialty Society('s): AUA, ASCO, ASH**

(not applicable)

**CPT Code: 96409**

**Specialty Society(s): ASCO, ASH, ASBMT**

**AMA/Specialty Society Update Process**

**Practice Expense Summary of Recommendation**

**Non Facility Direct Inputs**

CPT Long Descriptor: Chemotherapy administration; intravenous, push technique, single or initial substance/drug

Global Period: XXX Meeting Date: January 2017- **Revised 1/12/17**

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee: The Specialty Society Advisors and Staff from ASCO, ASH, and ASBMT held a meeting via conference call to discuss the Practice Expense. The inputs were developed with input from physicians, specialty society staff, and clinical staff from a variety of settings.
2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale: For CPT code 96409, we are using the current PE inputs for 96409 as a reference.
3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time: There are **6** minutes of pre-service time for CPT code 96409. This accounts for the following work: Coordinating with the physician on the injection, confirming drugs to administered and the dosage, obtaining an update on patient's condition, and ensuring appropriate labwork is ordered. Recent increases in documentation and insurance requirements continue to support the need for these minutes in the pre-service time.
4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:

Line 22- Obtain vital signs. We are adding **5** minutes (an increase from **3** minutes) for obtaining the vital signs, in compliance with the new standards. Five vitals are obtained: blood pressure, respiration, pulse, temperature, and weight. Five vitals equals five minutes.

In the following lines, we are requesting increases based on the 2004 NIOSH Alert: Preventing Occupational Exposure to Antineoplastic and Other Hazardous Drugs. These standards, along with the OSHA Technical manual: Controlling Occupational Exposure to Hazardous Drugs revised in 1995, are "the most often referred to guidelines in the United States."

(<http://www.cdc.gov/niosh/topics/antineoplastic/pubs.html>) The 2004 NIOSH alert was not available when these codes were originally implemented. The alert is included with the submission, and we have inserted the page numbers as a reference.

Line 37- Assemble and don personal protective equipment. We are adding **1** minute for "assembling and donning personal protective equipment" per the NIOSH safety standards, which are as follows:

"Wear chemotherapy gloves [ASTM in press], protective clothing, and eye protection when opening containers to unpack hazardous drugs. Such PPE protects workers and helps prevent contamination from spreading if damaged containers are found." (Page 12)

**Specialty Society(s): ASCO, ASH, ASBMT**

“Wear protective gloves and gowns if you are involved in preparation activities such as opening drug packaging, handling vials or finished products, labeling hazardous drug containers, or disposing of waste. (Page 12)

Wear PPE (including double gloves and protective gowns) while reconstituting and admixing drugs.” (page 13)

Line 45- Assemble and don personal protective equipment. We are adding **1** minute for “assembling and donning personal protective equipment” per the NIOSH safety standards, which state, “Wear PPE (including double gloves, goggles, and protective gowns) for all activities associated with drug administration—opening the outer bag, assembling the delivery system, delivering the drug to the patient, and disposing of all equipment used to administer drugs.” (Page 14)

Line 46- Patient and medication verification before administration (two verifications by two different RNs). We are adding **1** minute for this task in compliance with ASCO/ONS safety standards, which were updated in 2016. The American Society of Clinical Oncology (ASCO) and the Oncology Nursing Society (ONS) are engaged in an ongoing collaborative project to use a rigorous, consensus-based process to develop standards for safe administration of chemotherapy. Current ASCO/ONS standards address safety of all routes of chemotherapy administration to adult patients in the outpatient setting and inpatient setting. The ASCO/ONS chemotherapy safety standards are intended to reduce the risk of errors when providing adult patients with chemotherapy, and to provide a framework for best practices in cancer care. Specifically, they can inform practice policies and procedures, internal quality assessment, and external quality monitoring. (<http://www.institutequality.org/qcp/asco-ons-safety-standards>) The updated guidelines have been included with this submission, and we have inserted the page and section numbers as a reference.

“3.11.3 Before each chemotherapy administration, at least two practitioners approved by the health care setting to administer or prepare chemotherapy verify and document the accuracy of the following elements:

- 3.11.3.1. Drug name.
- 3.11.3.2. Drug dose.
- 3.11.3.3. Infusion volume or drug volume when prepared in a syringe.
- 3.11.3.4. Rate of administration.
- 3.11.3.5. Route of administration.
- 3.11.3.6. Expiration dates and/or times.
- 3.11.3.7. Appearance and physical integrity of the drugs.
- 3.11.3.8. Rate set on infusion pump, when used.” (Page 6)

5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

Line 12- Complete pre-service diagnostic and referral forms- **3 minutes**

Line 13- Coordinate pre-surgery services- **3 minutes**

The clinical staff coordinates with the physician on the injection, confirms drugs to be infused and the dosage, obtains an update on the patient's condition, and ensures appropriate lab work is ordered.

Total Pre-Service Time- **6 minutes**

Intra-Service Clinical Labor Activities:

Line 21- Greet patient, provide gowning, ensure appropriate medical records are available- **2 minutes**  
Clinical staff greets patient and escorts them to the infusion suite/medical recliner. Gowning is provided to the patient. Clinical staff then settles patient in the medical recliner.

Line 22- Review charts by chemo nurse regarding course of treatment and obtain chemotherapy-related medical history- **4 minutes**

The clinical staff verifies patient information and reviews current course of treatment and diagnosis (verifies the treatment cycle day and treatment schedule). Reviews patient and treatment history and looks for any complications or treatment related toxicities noted in medical record. Verifies allergies and any previous reactions or side effects. The clinical staff reviews the list of prescribed medications and reviews lab values/tests that were previously ordered (in pre-service). These include the complete blood count chemistries and imaging studies.

**Lines 20 and 21 are now combined for a total of 6 minutes per RUC instruction.**

Line 23- Obtain vital signs- **5 minutes**

The clinical staff obtains five vital signs: blood pressure, respiration, pulse, temperature, and weight. Five vitals equals five minutes.

Line 24- Provide pre-service education/obtain consent (initial education of 1 hr amortized over average of 6 cycles). Includes a psych assessment and a review of medication list.- **5 minutes**

The clinical staff reviews the treatment plan established by the physician and patient. Patient is educated about the regimen prescribed, the drug-specific toxicities and potential hypersensitivities, and reactions that require immediate attention. Verifies patient consent.

Line 25- Prepare room, equipment, and supplies- **2 minutes**

Clinical staff gathers supplies for drug infusion and personal protective equipment.

Line 27- Prepare and position patient/monitor patient/set up IV- **2 minutes**

*Mix Chemotherapy*

Line 31- Verify medication interaction- **2 minutes**

Clinical staff verifies any current medications being taken by patient to assure no negative interactions with medication to be administered by IV push.

Line 32- Verify orders- **1 minute**

Clinical staff verifies physician's order for injection and confirms correct medication has been gathered, consistent with the physician's order.

Line 33- Calculate dose- **1 minute**

Line 34- Maximum and cumulative dose- **2 minutes**

Clinical staff confirms cumulative dose of chemotherapy agents associated with risk of cumulative toxicity.

Line 35- Calculate BSA- **1 minute**

Line 36- Second verification of orders (performed by another nurse or technician)- **1 minute**  
Orders are reviewed and verified by a second independent practitioner, per ASCO/ONS guidelines

Line 37- Assemble supplies- **1 minute**  
Clinical staff gathers supplies for mixing chemotherapy.

Line 38- Assemble and don personal protective equipment- **1 minute (increase from 0 minutes)**  
Clinical staff dons personal protective equipment per NIOSH guidelines.

Line 39- Prep Labels- **1 minute**

Line 40- Document lot # and expiration date- **1 minute**  
Clinical staff documents lot # and expiration date of medication to be administered in the patient's medical record and other places as needed.

Line 41- Clean hood- **1 minute**  
Clinical staff cleans biohazard hood.

Line 42- Reconstitute drug- **6 minutes**

Line 43- Maintain MSDS- **0 minutes**  
Clinical staff maintains Material Safety Data Sheets, per OSHA requirements.

Line 43 was decreased from 1 minute to 0 minutes.

Line 46- Assemble and don personal protective equipment- **1 minute (increase from 0 minutes)**  
Clinical staff dons personal protective equipment (ex. gown, gloves) per NIOSH guidelines.

Line 47- Patient and medication verification before administration (two verifications by two different RNs)- **1 minute (increase from 0 minutes)**  
Clinical staff conducts a patient and medication verification prior to the procedure, as required by ASCO/ONS safety guidelines. The verifications are performed by two different RNs.

Line 47- Clinical staff performs procedure-**15 minutes**  
The clinical staff accesses the IV and begins the IV push. Clinical staff and assesses the patient's response/tolerance to the push. Interventions are conducted as needed. An IV site assessment is performed. The IV catheter/implanted port or IV catheter/implantable device is then flushed, and the IV is discontinued. The device is removed. The site of the IV access is covered and pressure is maintained. The clinical staff conducts another assessment of the IV site.

Line 48- Monitor pt. following procedure/check tubes, monitors, drains, multitasking 1:4- **5 minutes**  
Clinical staff monitors patient for adverse reactions.

Line 52- Clean room/equipment by physician staff- **3 minutes**  
Clinical staff safely disposes of used items sharps container. Clinical staff also cleans up and disposes of other byproducts of procedure (e.g. used alcohol swab).

Line 55- Complete diagnostic forms, lab & X-ray requisitions, and documentation- **3 minutes**  
Clinical staff completes documentation which includes: drug/dose, solution/volumes, and cumulative dose. Lab orders required for interim care and next treatment are prepared. The patient's vital signs and tolerance of treatment are documented. Instructions provided to patient are noted, along with the level of

patient understanding. Clinical staff documents prescriptions provided. The IV push start and stop times are documented.

Line 57- Check dressings & wound/ individualized education and home care instructions / side effects for which the patient should call office/Safe handling of hazardous body fluids/coordinate office visits /prescriptions/ documentation of educational materials provided to the patient and/or caregiver.- **5 minutes**

Clinical staff reviews with patient drug related toxicities and medication side effects. Advises how to contact the practice or organization and who should be called in specific circumstances. Clinical staff provides overview of symptom management (disease, fever, reactions, nausea) and which symptoms should trigger a call to the physician/practice. Instructions are provided to the patient regarding injection site care. Prescriptions are discussed with patient. Clinical staff provides family education and verifies a follow up visit/appointments. Clinical staff determines need for home health care services.

Total Intra-Service Time: **72 minutes**

Post-Service Clinical Labor Activities:

Line 65- Conduct phone calls/call in prescriptions- **3 minutes**

Clinical staff conducts follow up phone calls to assess level of toxicity of chemo regimen, need for intervention, offer emotional support and also calls in prescriptions.

Total Post Service Time: **3 minutes**

**Note: The PE Subcommittee recommended the exam table be used for this procedure as opposed to the medical recliner.**

CPT Code: 96411

Specialty Society(s): ASCO, ASH, ASBMT  
**AMA/Specialty Society Update Process**  
**Practice Expense Summary of Recommendation**  
**Non Facility Direct Inputs**

CPT Long Descriptor: Chemotherapy administration; intravenous, push technique, each additional substance/drug (List separately in addition to code for primary procedure)

Global Period: ZZZ Meeting Date: January 2017

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee: The Specialty Society Advisors and Staff from ASCO, ASH, and ASBMT held a meeting via conference call to discuss the Practice Expense. The inputs were developed with input from physicians, specialty society staff, and clinical staff from a variety of settings.
2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. There are two reference codes. Reference code 1: For CPT code 96411, we are using the current PE inputs for 96411 as a reference. Reference code 2 is CPT code 99214, which is reported with an E/M code approximately 52% of the time, 23% with 99214.
3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time: N/A
4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:

In the following lines, we are requesting increases based on the 2004 NIOSH Alert: Preventing Occupational Exposure to Antineoplastic and Other Hazardous Drugs. These standards, along with the OSHA Technical manual: Controlling Occupational Exposure to Hazardous Drugs revised in 1995, are “the most often referred to guidelines in the United States.”

(<http://www.cdc.gov/niosh/topics/antineoplastic/pubs.html>) The 2004 NIOSH alert was not available when these codes were originally implemented. The alert is included with the submission, and we have inserted the page numbers as a reference.

Line 37- Assemble and don personal protective equipment. We are adding 1 minute for “assembling and donning personal protective equipment” per the NIOSH safety standards, which are as follows:

“Wear chemotherapy gloves [ASTM in press], protective clothing, and eye protection when opening containers to unpack hazardous drugs. Such PPE protects workers and helps prevent contamination from spreading if damaged containers are found.” (Page 12)

**Specialty Society(s): ASCO, ASH, ASBMT**

“Wear protective gloves and gowns if you are involved in preparation activities such as opening drug packaging, handling vials or finished products, labeling hazardous drug containers, or disposing of waste. (Page 12)

Wear PPE (including double gloves and protective gowns) while reconstituting and admixing drugs.” (page 13)

Line 45- Assemble and don personal protective equipment. We are adding **1** minute for “assembling and donning personal protective equipment” per the NIOSH safety standards, which state, “Wear PPE (including double gloves, goggles, and protective gowns) for all activities associated with drug administration—opening the outer bag, assembling the delivery system, delivering the drug to the patient, and disposing of all equipment used to administer drugs.” (Page 14)

Line 46- Patient and medication verification before administration (two verifications by two different RNs). We are adding **1** minute for this task in compliance with ASCO/ONS safety standards, which were updated in 2016. The American Society of Clinical Oncology (ASCO) and the Oncology Nursing Society (ONS) are engaged in an ongoing collaborative project to use a rigorous, consensus-based process to develop standards for safe administration of chemotherapy. Current ASCO/ONS standards address safety of all routes of chemotherapy administration to adult patients in the outpatient setting and inpatient setting. The ASCO/ONS chemotherapy safety standards are intended to reduce the risk of errors when providing adult patients with chemotherapy, and to provide a framework for best practices in cancer care. Specifically, they can inform practice policies and procedures, internal quality assessment, and external quality monitoring. (<http://www.institutequality.org/qcp/asco-ons-safety-standards>) The updated guidelines have been included with this submission, and we have inserted the page and section numbers as a reference.

“3.11.3 Before each chemotherapy administration, at least two practitioners approved by the health care setting to administer or prepare chemotherapy verify and document the accuracy of the following elements:

- 3.11.3.1. Drug name.
- 3.11.3.2. Drug dose.
- 3.11.3.3. Infusion volume or drug volume when prepared in a syringe.
- 3.11.3.4. Rate of administration.
- 3.11.3.5. Route of administration.
- 3.11.3.6. Expiration dates and/or times.
- 3.11.3.7. Appearance and physical integrity of the drugs.
- 3.11.3.8. Rate set on infusion pump, when used.” (Page 6)

5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

(not applicable)

Intra-Service Clinical Labor Activities:

Line 24- Provide pre-service education/obtain consent (initial education of 1 hr amortized over average of 6 cycles). Includes a psych assessment and a review of medication list.- **2 minutes**

The clinical staff reviews the treatment plan established by the physician and patient. Patient is educated about the drug-specific toxicities and potential hypersensitivities, and reactions that require immediate attention. Verifies patient consent.

*Mix Chemotherapy*

Line 31- Verify medication interaction- **2 minutes**

Clinical staff verifies any current medications being taken by patient to assure no negative interactions with medication to be administered by IV push.

Line 32- Verify orders- **1 minute**

Clinical staff verifies physician's order for injection and confirms correct medication has been gathered, consistent with the physician's order.

Line 33- Calculate dose- **1 minute**

Line 34- Maximum and cumulative dose- **2 minutes**

Clinical staff confirms cumulative dose of chemotherapy agents associated with risk of cumulative toxicity.

Line 35- Calculate BSA- **1 minute**

Line 36- Second verification of orders (performed by another nurse or technician)- **1 minute**

Orders are reviewed and verified by a second independent practitioner, per ASCO/ONS guidelines

Line 37- Assemble supplies- **1 minute**

Clinical staff gathers supplies for mixing chemotherapy.

Line 38- Assemble and don personal protective equipment- **1 minute (increase from 0 minutes)**

Clinical staff dons personal protective equipment per NIOSH guidelines.

Line 39- Prep Labels- **1 minute**

Line 39- Document lot # and expiration date- **1 minute**

Clinical staff documents lot # and expiration date of medication to be administered in the patient's medical record and other places as needed.

Line 40- Clean hood- **1 minute**

Clinical staff cleans biohazard hood.

Line 41- Reconstitute drug- **6 minutes**

Line 42- Maintain MSDS- **0 minutes**

Clinical staff maintains Material Safety Data Sheets, per OSHA requirements.

Line 42 was decreased from 1 minute to 0 minutes.

Line 46- Assemble and don personal protective equipment- **1 minute (increase from 0 minutes)**  
Clinical staff dons personal protective equipment (ex. gown, gloves) per NIOSH guidelines.

Line 47- Patient and medication verification before administration (two verifications by two different RNs)-  
**1 minute (increase from 0 minutes)**  
ASCO/ONS safety guidelines. The verifications are performed by two different RNs.

Line 48- Clinical staff performs procedure-**15 minutes**  
The clinical staff accesses the IV and begins the IV push. Clinical staff and assesses the patient's response/tolerance to the push. Interventions are conducted as needed. An IV site assessment is performed. The IV catheter implanted port is then flushed, and the IV is discontinued. The device is removed. The site of the IV access is covered and pressure is maintained. The clinical staff conducts another assessment of the IV site.

Line 50- Monitor pt. following procedure/check tubes, monitors, drains, multitasking 1:4- **2 minutes**  
Clinical staff monitors patient for adverse reactions.

Line 55- Complete diagnostic forms, lab & X-ray requisitions, and documentation- **2 minutes**  
Documentation of procedure, patient status and other relative clinical information is done. This includes drug/dose, solution/volumes, and cumulative dose. The patient's vital signs and tolerance of treatment are documented. Instructions provided to patient are noted, along with the level of patient understanding.

Total Intra-Service Time: **42 minutes**

Post-Service Clinical Labor Activities:

(not applicable)

**Note: The PE Subcommittee felt the exam table was the more appropriate equipment rather than the medical recliner.**

**AMA/Specialty Society RVS Update Committee  
Practice Expense Subcommittee  
Scope Systems and Endoscopes Workgroup**

In the Proposed Rule for CY2017, CMS outlined a pricing structure that separated out the components for scopes, scope video systems, and scope accessories. CMS also requested comment on the appropriate endoscopic equipment and supplies for endoscopic procedures. Because of the complexity of the issues CMS raised, and the need to incorporate input from all specialty societies, the RUC submitted comments to CMS that the best approach to this issue is to form a Workgroup and review the Agency's issues. The Scope Systems and Endoscopes Workgroup was formed at the October 2016 RUC meeting and met via conference call on November 2, 2016 to discuss the Centers for Medicare and Medicaid Services (CMS) request for standardization within the description of scope equipment and supplies. In advance of the conference call, AMA staff prepared an analysis of all scope equipment and supplies included in the current direct practice expense inputs. The CMS Final Rule with a proposed structure was released after the conference call and CMS finalized the proposal, without offering to delay pending input from the Workgroup.

During the conference call Steve Phurrough, MD represented CMS explained that as CMS has reviewed codes with scopes over the past few years they noted inconsistency in the methods of determining which equipment is utilized. Prospectively, CMS would like the supply descriptions for endoscopic services to be more specific. The following categories were proposed and finalized by CMS:

Scopes

CMS proposed to identify for each anatomical application: (1) a rigid scope; (2) a semi-rigid scope; (3) a non-video flexible scope; (4) a nonchanneled flexible video scope; and (5) a channeled flexible video scope.

System Used to Operate the Scopes

CMS proposed to include the following components to be included in a scope system – Endoscopy video system equipment item (ES031):

- Monitor
- Processor
- Form of Digital Capture
- Printer
- Cart
- Light

Scope Accessories

These items should continue to be described as justified per each individual procedure

**Given that the CMS proposal was finalized in the final rule for 2017 no further action is required of the Workgroup at this time.**

**AMA/Specialty Society RVS Update Committee  
Practice Expense Subcommittee  
Scope Equipment and Supplies Workgroup  
November 2, 2016 Conference Call Report**

Members Present: Gregory Barkley, MD (Chair), Mollie MacCormack, and Steve Sentovic participated on a conference call on November 2, 2016 to discuss the Centers for Medicare and Medicaid Services (CMS) request for standardization with in the description of scope equipment and supplies. In advance of the conference call, AMA staff prepared an analysis of all scope equipment and supplies included in the current direct practice expense inputs. A spreadsheet with these data is attached to this report. A number of RUC participants and CMS staff attended the conference call.

Steve Phurrough, MD explained that as CMS has reviewed codes with scopes over the past few years they noted inconsistency in the methods of determining which equipment is utilized. CMS has expressed in rulemaking that they desire standardization within the scope equipment. CMS suggested that the supply descriptors are not always clear regarding whether the supplies are related to the scope or not. Prospectively, CMS would like the supply descriptions for endoscopic services to be more specific. The Workgroup decided to begin their discussions surrounding the CMS request to standardize scope equipment.

CMS has suggested discussion regarding the following categories:

Scopes

CMS has proposed to identify for each anatomical application: (1) a rigid scope; (2) a semi-rigid scope; (3) a non-video flexible scope; (4) a nonchanneled flexible video scope; and (5) a channeled flexible video scope.

System Used to Operate the Scopes

CMS has proposed to include the following components to be included in a scope system –

Endoscopy video system equipment item (ES031). :

- Monitor
- Processor
- Form of Digital Capture
- Printer
- Cart
- Light

Scope Accessories

These items should continue to be described as justified per each individual procedure

The Workgroup agreed to review the CMS proposed structure. The CMS Final Rule with a proposed structure was released after the conference call. The CMS proposal, articulated in the Final Rule is appended to this report.

Practice Expense Subcommittee Workgroup Recommendations**

**I. Standard Equipment Related to Non-Moderate Sedation Post-Procedure Monitoring**

The Standard Equipment Related to Non-Moderate Sedation Post-Procedure Monitoring Workgroup met via conference call on October 20, 2016, to discuss post-procedure monitoring that continues to be necessary even as moderate sedation is now a separately billable service. The Workgroup also discussed the issue of the proper allocation of oxygen for services done with moderate sedation. There are a very limited number of services with oxygen as a supply item; however the stand alone moderate sedation codes do not include oxygen in the supplies.

The Workgroup agreed that when a specialty society is able to persuade the PE Subcommittee and RUC that extended monitoring time is required for a code, standardized equipment should be identified. Post-procedure monitoring time following a procedure with sedation has been established to be 60 minutes. Any monitoring time that extends beyond this time would require the continued use of the stretcher only. If the patient is being monitored for an extended period of time to ensure no bleeding, an IV infusion pump and ECG may also be needed.

**The Workgroup recommends that prospectively when extended monitoring beyond one hour for a procedure with moderate sedation is necessary; a stretcher (EF018) should be allocated. When extended monitoring beyond the procedure time is necessary due to concerns regarding bleeding; an ECG, 3-channel (with SpO2, NIBP, temp, resp) (EQ011), IV infusion pump (EQ032) and a stretcher (EF018) should be allocated. Additionally all services that include oxygen and the rationale for its maintenance or deletion is included in the table below:**

<b>CPT Code</b>	<b>CPT Long Descriptor</b>	<b>Rationale for inclusion of oxygen in procedure code</b>
31622	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; diagnostic, with cell washing, when performed (separate procedure)	No rationale beyond moderate sedation – delete as duplicative
31625	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with bronchial or endobronchial biopsy(s), single or multiple sites	No rationale beyond moderate sedation – delete as duplicative
31626	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with placement of fiducial markers, single or multiple	No rationale beyond moderate sedation – delete as duplicative
31627	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with computer-assisted, image-guided navigation (List separately in addition to code for primary procedure[s])	No rationale beyond moderate sedation – delete as duplicative
31628	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with transbronchial lung biopsy(s), single lobe	No rationale beyond moderate sedation – delete as duplicative

31629	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with transbronchial needle aspiration biopsy(s), trachea, main stem and/or lobar bronchus(i)	No rationale beyond moderate sedation – delete as duplicative
31632	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with transbronchial lung biopsy(s), each additional lobe (List separately in addition to code for primary procedure)	No rationale beyond moderate sedation – delete as duplicative
31633	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with transbronchial needle aspiration biopsy(s), each additional lobe (List separately in addition to code for primary procedure)	No rationale beyond moderate sedation – delete as duplicative
31645	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed with therapeutic aspiration of tracheobronchial tree, initial	No rationale beyond moderate sedation – delete as duplicative
31646	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed with therapeutic aspiration of tracheobronchial tree, subsequent, same hospital stay	No rationale beyond moderate sedation – delete as duplicative
31652	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with endobronchial ultrasound (EBUS) guided transtracheal and/or transbronchial sampling (eg, aspiration[s]/biopsy[ies]), one or two mediastinal and/or hilar lymph node stations or structures	No rationale beyond moderate sedation – delete as duplicative
31653	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with endobronchial ultrasound (EBUS) guided transtracheal and/or transbronchial sampling (eg, aspiration[s]/biopsy[ies]), 3 or more mediastinal and/or hilar lymph node stations or structures	No rationale beyond moderate sedation – delete as duplicative
31654	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with transendoscopic endobronchial ultrasound (EBUS) during bronchoscopic diagnostic or therapeutic intervention(s) for peripheral lesion(s) (List separately in addition to code for primary procedure[s])	No rationale beyond moderate sedation – delete as duplicative
52647	Laser coagulation of prostate, including control of postoperative bleeding, complete (vasectomy, meatotomy, cystourethroscopy, urethral calibration and/or dilation, and internal urethrotomy are included if performed)	Specialty – delete oxygen

52648	Laser vaporization of prostate, including control of postoperative bleeding, complete (vasectomy, meatotomy, cystourethroscopy, urethral calibration and/or dilation, internal urethrotomy and transurethral resection of prostate are included if performed)	Specialty – delete oxygen
77373	Stereotactic body radiation therapy, treatment delivery, per fraction to 1 or more lesions, including image guidance, entire course not to exceed 5 fractions	No moderate sedation Related to procedure - Retain
90865	Narcosynthesis for psychiatric diagnostic and therapeutic purposes (eg, sodium amobarbital (Amytal) interview)	Specialty - procedure that is rarely done and if done is more likely to be done in an inpatient/ER setting.  O2 is needed as a precaution – “if you use too much Amytal, you may suppress respiration and need O2.”
90870	Electroconvulsive therapy (includes necessary monitoring)	Rare to be performed in an office setting as the standard of practice is to have an anesthesia provider at hand. Monitoring for ECT, no matter the setting will include EKG, EEG, and pulse oximetry. In addition there is usually a motion sensor which tracks the motor seizure as well as clinical monitoring of motor activity.  Treat similar to other codes that would be rarely performed in the office and if performed, require anesthesia. Remove the oxygen and IV infusion set. Anesthesia expense issue to be handled globally with CPT discussion of separate code.
92950	Cardiopulmonary resuscitation (eg, in cardiac arrest)	No moderate sedation Related to procedure - Retain
94453	High altitude simulation test (HAST), with interpretation and report by a physician or other qualified health care professional; with supplemental oxygen titration	No moderate sedation Related to procedure - Retain
94726	Plethysmography for determination of lung volumes and, when performed, airway resistance	No moderate sedation Related to procedure - Retain

94727	Gas dilution or washout for determination of lung volumes and, when performed, distribution of ventilation and closing volumes	No moderate sedation Related to procedure - Retain
94750	Pulmonary compliance study (eg, plethysmography, volume and pressure measurements)	No moderate sedation Related to procedure - Retain
99291	Critical care, evaluation and management of the critically ill or critically injured patient; first 30-74 minutes	No moderate sedation Related to procedure - Retain
99292	Critical care, evaluation and management of the critically ill or critically injured patient; each additional 30 minutes (List separately in addition to code for primary service)	No moderate sedation Related to procedure - Retain
G0277	Hyperbaric oxygen under pressure, full body chamber, per 30 minute interval	No moderate sedation Related to procedure - Retain

**AMA/Specialty Society RVS Update Committee  
Practice Expense Subcommittee  
Extended Monitoring Equipment and Oxygen as a Supply Item Workgroup  
October 20, 2016 Conference Call Report**

Members Present: Neal H. Cohen, MD (Chair), Joseph Cleveland, MD, Zeke Silva, MD and Bryan Sims, DNP, APRN-BC, FNP

**I. Extended Monitoring Equipment**

The workgroup agreed that when a specialty society is able to persuade the PE Subcommittee and RUC that extended monitoring time is required for a code, standardized equipment should be identified. Post-procedure monitoring time following a procedure with sedation has been established to be 60 minutes. Any monitoring time that extends beyond this time would require the continued use of the stretcher only. If the patient is being monitored for an extended period of time to ensure no bleeding, an IV infusion pump and ECG may also be needed.

**Recommendation:**

Extended monitoring beyond one hour for procedure with moderate sedation:

EF018 stretcher

Extended monitoring beyond procedure due to concerns regarding bleeding:

EQ011 ECG, 3-channel (with SpO2, NIBP, temp, resp)

EQ032 IV infusion pump

EF018 stretcher

**All extended monitoring time must be approved to justify increasing clinical staff and equipment beyond standard time.**

**II. Oxygen as a supply item**

Moderate sedation codes include the following supply item related to oxygen:

SD084 gas, oxygen      0.003/liter    200 liters    = Total cost \$0.60

The quantity was computed using a standard of 5 liters per minute with an assumed typical time of 40 minutes.

The following CPT codes also currently include moderate sedation:

<b>CPT Code</b>	<b>CPT Long Descriptor</b>	<b>Rationale for inclusion of oxygen in procedure code</b>
31622	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; diagnostic, with cell washing, when performed (separate procedure)	No rationale beyond moderate sedation – delete as duplicative

31625	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with bronchial or endobronchial biopsy(s), single or multiple sites	No rationale beyond moderate sedation – delete as duplicative
31626	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with placement of fiducial markers, single or multiple	No rationale beyond moderate sedation – delete as duplicative
31627	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with computer-assisted, image-guided navigation (List separately in addition to code for primary procedure[s])	No rationale beyond moderate sedation – delete as duplicative
31628	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with transbronchial lung biopsy(s), single lobe	No rationale beyond moderate sedation – delete as duplicative
31629	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with transbronchial needle aspiration biopsy(s), trachea, main stem and/or lobar bronchus(i)	No rationale beyond moderate sedation – delete as duplicative
31632	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with transbronchial lung biopsy(s), each additional lobe (List separately in addition to code for primary procedure)	No rationale beyond moderate sedation – delete as duplicative
31633	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with transbronchial needle aspiration biopsy(s), each additional lobe (List separately in addition to code for primary procedure)	No rationale beyond moderate sedation – delete as duplicative
31645	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed with therapeutic aspiration of tracheobronchial tree, initial	No rationale beyond moderate sedation – delete as duplicative
31646	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed with therapeutic aspiration of tracheobronchial tree, subsequent, same hospital stay	No rationale beyond moderate sedation – delete as duplicative
31652	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with endobronchial ultrasound (EBUS) guided transtracheal and/or transbronchial sampling (eg, aspiration[s]/biopsy[ies]), one or two mediastinal and/or hilar lymph node stations or structures	No rationale beyond moderate sedation – delete as duplicative

31653	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with endobronchial ultrasound (EBUS) guided transtracheal and/or transbronchial sampling (eg, aspiration[s]/biopsy[ies]), 3 or more mediastinal and/or hilar lymph node stations or structures	No rationale beyond moderate sedation – delete as duplicative
31654	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with transendoscopic endobronchial ultrasound (EBUS) during bronchoscopic diagnostic or therapeutic intervention(s) for peripheral lesion(s) (List separately in addition to code for primary procedure[s])	No rationale beyond moderate sedation – delete as duplicative
52647	Laser coagulation of prostate, including control of postoperative bleeding, complete (vasectomy, meatotomy, cystourethroscopy, urethral calibration and/or dilation, and internal urethrotomy are included if performed)	Specialty – delete oxygen
52648	Laser vaporization of prostate, including control of postoperative bleeding, complete (vasectomy, meatotomy, cystourethroscopy, urethral calibration and/or dilation, internal urethrotomy and transurethral resection of prostate are included if performed)	Specialty – delete oxygen
77373	Stereotactic body radiation therapy, treatment delivery, per fraction to 1 or more lesions, including image guidance, entire course not to exceed 5 fractions	No moderate sedation Related to procedure - Retain
90865	Narcosynthesis for psychiatric diagnostic and therapeutic purposes (eg, sodium amobarbital (Amytal) interview)	Specialty - procedure that is rarely done and if done is more likely to be done in an inpatient/ER setting.  O2 is needed as a precaution – “if you use too much Amytal, you may suppress respiration and need O2.”

90870	Electroconvulsive therapy (includes necessary monitoring)	<p>Rare to be performed in an office setting as the standard of practice is to have an anesthesia provider at hand. Monitoring for ECT, no matter the setting will include EKG, EEG, and pulse oximetry. In addition there is usually a motion sensor which tracks the motor seizure as well as clinical monitoring of motor activity.</p> <p>Treat similar to other codes that would be rarely performed in the office and if performed, require anesthesia. 99292	Critical care, evaluation and management of the critically ill or critically injured patient; each additional 30 minutes (List separately in addition to code for primary service)	No moderate sedation Related to procedure - Retain
G0277	Hyperbaric oxygen under pressure, full body chamber, per 30 minute interval	No moderate sedation Related to procedure - Retain

## CPT Codes with Oxygen

SD084 gas, oxygen liter 0.003

CPT Code	Long Desc
31622	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; diagnostic, with cell washing, when performed (separate procedure)
31625	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with bronchial or endobronchial biopsy(s), single or multiple sites
31626	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with placement of fiducial markers, single or multiple
31627	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with computer-assisted, image-guided navigation (List separately in addition to code for primary procedure)
31628	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with transbronchial lung biopsy(s), single lobe
31629	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with transbronchial needle aspiration biopsy(s), trachea, main stem and/or lobar bronchus(i)
31632	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with transbronchial lung biopsy(s), each additional lobe (List separately in addition to code for primary procedure)
31633	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with transbronchial needle aspiration biopsy(s), each additional lobe (List separately in addition to code for primary procedure)
31645	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed with therapeutic aspiration of tracheobronchial tree, initial
31646	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed with therapeutic aspiration of tracheobronchial tree, subsequent, same hospital stay
31652	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with endobronchial ultrasound (EBUS) guided transtracheal and/or transbronchial sampling (eg, biopsy)
31653	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with endobronchial ultrasound (EBUS) guided transtracheal and/or transbronchial sampling (eg, biopsy)
31654	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with transendoscopic endobronchial ultrasound (EBUS) during bronchoscopic diagnostic or therapeutic procedure
52647	Laser coagulation of prostate, including control of postoperative bleeding, complete (vasectomy, meatotomy, cystourethroscopy, urethral calibration and/or dilation, and internal urethrotomy)
52648	Laser vaporization of prostate, including control of postoperative bleeding, complete (vasectomy, meatotomy, cystourethroscopy, urethral calibration and/or dilation, internal urethrotomy)
77373	Stereotactic body radiation therapy, treatment delivery, per fraction to 1 or more lesions, including image guidance, entire course not to exceed 5 fractions
90865	Narcosynthesis for psychiatric diagnostic and therapeutic purposes (eg, sodium amobarbital (Amytal) interview)
90870	Electroconvulsive therapy (includes necessary monitoring)
92950	Cardiopulmonary resuscitation (eg, in cardiac arrest)
94453	High altitude simulation test (HAST), with interpretation and report by a physician or other qualified health care professional; with supplemental oxygen titration
94726	Plethysmography for determination of lung volumes and, when performed, airway resistance
94727	Gas dilution or washout for determination of lung volumes and, when performed, distribution of ventilation and closing volumes
94750	Pulmonary compliance study (eg, plethysmography, volume and pressure measurements)
99291	Critical care, evaluation and management of the critically ill or critically injured patient; first 30-74 minutes
99292	Critical care, evaluation and management of the critically ill or critically injured patient; each additional 30 minutes (List separately in addition to code for primary service)
G0277	Hyperbaric oxygen under pressure, full body chamber, per 30 minute interval

**Note - Only the Bronchoscopy Codes were included in Appendix G (ie, moderate sedation inherent). The use of oxygen in all non-bronchoscopy codes**

RUC HCPAC Review Board Summary of Recommendations  
*High Volume Growth*

January 2017

**Cognitive Function Intervention**

CPT code 97532 *Development of cognitive skills to improve attention, memory, problem solving (includes compensatory training), direct (one-on-one) patient contact, each 15 minutes* was identified in October 2013 through the High Volume Growth screen. At that time the RUC recommended to maintain the current value as the entire Physical Medicine and Rehabilitation (PM&R) code section is under revision. In October 2015, AMA Staff assembled a list of all services with total Medicare utilization of 10,000 or more that have increased by at least 100% from 2008 through 2013. The RUC reviewed this list and recommended that the specialty societies submit an action plan for January 2016 explaining the high volume growth. In January 2016, the RAW indicated that this service is part of the CPT PM&R Workgroup under revision and the code was removed from screen. In April 2016 the Relativity Assessment Workgroup reviewed the action plan time line and recommended that the service be referred to CPT for revision to reflect current practice. At the September 2016 CPT Editorial Panel Meeting the panel deleted 97532 and created CPT code 97127 *Therapeutic interventions that focus on cognitive function (eg, attention, memory, reasoning, executive function, problem solving, and/or pragmatic functioning) and compensatory strategies to manage the performance of an activity (eg, managing time or schedules, initiating, organizing and sequencing tasks, direct (one-on-one) patient contact* to describe therapeutic interventions.

CPT code 97127 will replace former code 97532 (work RVU = 0.44), a service that was reported in increments of 15 minutes and typically reported with 4 units of service. The HCPAC reviewed the survey results from 160 speech-language pathologists and psychologists and agreed with the societies on the following time components: a pre-service time of 5 minutes, an intra-service time of 60 minutes and a post-service time of 10 minutes.

The Review Board reviewed the specialty societies recommended work RVU of 1.76, between the 25<sup>th</sup> and 50<sup>th</sup> percentile and disagreed with the specialty societies that it was an appropriate value for the work involved in this service. The Review Board then looked at the survey 25<sup>th</sup> percentile work RVU of 1.31 and determined that it undervalued the work involved in performing this service. The Review Board determined that a direct crosswalk to CPT code 92522 *Evaluation of speech sound production (eg, articulation, phonological process, apraxia, dysarthria)* (work RVU=1.50 and pre-service time of 5, intra-service time of 60 and post-service time of 20) as both of these service require similar time and work to complete. For additional support the HCPAC compared the surveyed service to the top key reference code 92507 *Treatment of speech, language, voice, communication, and/or auditory processing disorder; individual* (work RVU=1.30, intra-service time of 50 minutes, total time of 60 minutes) and noted that the surveyed service has more intra-service time, is more intense to perform and is appropriately valued higher. **The HCPAC recommends a work value of 1.50 for CPT code 97127.**

### Practice Expense

There is no clinical staff time related to this service. The only inputs are for supplies and equipment for the health care professional's use. 60 minutes of equipment time for the table, instrument, mobile (EF027) and notebook (Dell Latitude D600) (ED038) reflect the work intra-service time. The Review Board approved the practice expense inputs as reviewed and modified by the PE Subcommittee.

## AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS SUMMARY OF RECOMMENDATION

---

CPT Code: 97127      Tracking Number    BB1

Original Specialty Recommended RVU: **1.76**  
Presented Recommended RVU: **1.76**

Global Period: XXX

RUC Recommended RVU: **1.50**

CPT Descriptor: Therapeutic interventions that focus on cognitive function (eg, attention, memory, reasoning, executive function, problem solving, and/or pragmatic functioning) and compensatory strategies to manage the performance of an activity (eg, managing time or schedules, initiating, organizing and sequencing tasks, direct (one-on-one) patient contact (do not report 97127 in conjunction with 0364T, 0365T, 0368T, 0369T) (report 97127 only once per day)

---

### CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 30-year-old male presents with traumatic brain injury sustained in a vehicular accident resulting in memory problems, distractibility, depression, inappropriate social interaction, inability to self-monitor, and impaired organizational skills for executive function. He is seen for treatment.

Percentage of Survey Respondents who found Vignette to be Typical: 81%

#### Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

---

Description of Pre-Service Work: The clinician reviews the treatment plan and prepares for the session, including selection and set up of materials for therapy, as well as selection of materials and activities and tasks for completion between treatment sessions.

Description of Intra-Service Work: The clinician implements therapeutic activities that may include: attention tasks (eg, gradually increasing levels of distracting background noise); memory tasks (eg, visualization, mnemonics, environmental adaptations); problem solving activities (eg, techniques to define a problem, set a goal, and organize an action); and pragmatic activities to improve social communication skills and increase self-awareness of limitations and disabilities (eg, use of internal dialogue). Tools (eg, technology-assisted activities, role-playing activities) and compensatory strategies (eg, memory log) may be used to accomplish functional outcomes.

Description of Post-Service Work: The clinician reviews session results and progress toward functional goals with the patient and/or caregiver. The clinician also explains, demonstrates, and instructs the patient and/or caregiver in activities and tasks for completion between treatment sessions.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Reason for Survey:**

At the April 2016 meeting of the Relativity Assessment Workgroup (RAW), CPT 97532—Development of cognitive skills to improve attention, memory, problem solving (includes compensatory training), direct (one-on-one) patient contact, each 15 minutes—was referred back to the CPT Editorial Panel for update to reflect current practice as part of the larger family of physical medicine and rehabilitation (PM&R) codes (97101-97799). At its October 2016 meeting, the CPT Editorial Panel approved revisions to the descriptor to more clearly describe the therapeutic interventions for cognitive skills captured in this code, based on current practice, and to remove the 15-minute time element associated with 97532. The service is also being assigned a new code number in order to avoid potential confusion, since the revised code is no longer time-based.

**Survey Sample:**

The survey data and recommendations are based upon random samples of applicable subsets of the APA and ASHA memberships. Specifically, the random samples were drawn from established specialty society member sections from APA and ASHA. The total sample size was 6436 with 160 responses. Of those responses, 134 were provided by speech-language pathologists and 26 by psychologists.

**Expert Panel Recommendations:**

A panel of psychologists and speech-language pathologists was convened to consider the survey data and provide recommendations regarding appropriate times and professional work values, as outlined below.

**Qualified Healthcare Provider Time:**

The expert panel recommends a **pre-service time of 5 minutes, an intra-service time of 60 minutes, and a post-service time of 5 minutes for a total of 75 minutes.**

### *Pre-Service Time*

The expert panel reviewed the pre-service times and concluded that the survey median time of 15 minutes should be decreased. Therefore, **the expert panel recommends a reduced pre-service time of 5 minutes.**

### *Intra-Service Time*

The expert panel agreed with the survey respondents regarding the median intra-service time and therefore **recommends an intra-service time of 60 minutes.** The expert panel believes that 60 minutes reflects current clinical practice.

### *Post-Service Time*

The expert panel concluded that the median post-service time of 15 minutes should also be reduced and **recommends a post-service time of 10 minutes.** The expert panel believes that 10 minutes is appropriate due to the complexity of communicating information and instructions to cognitively-impaired patients and their caregivers.

### **RVW**

Upon review of the survey results, the expert panel did not agree with the median RVW of 2.00 and **recommends an RVW of 1.76.**

### *RVW Rationale*

Survey code 97127 (cognitive function intervention) is currently being reported using CPT code 97532 (cognitive skills development). 97532 is a 15-minute, time-based code valued at 0.44 RVW. However, survey code 97127 is an untimed code with a median intra-service time of 60 minutes, which equates to four (4) 15-minute units of 97532 at a total RVW of 1.76. This total RVW calculation for 97532 is significantly lower than the median survey RVW of 2.00. The expert panel did not feel that there is compelling evidence to justify such an increase in work value and believes that decreasing the recommended RVW to 1.76 reflects current practice and represents a fair valuation for cognitive function intervention.

The recommendation for a 1.76 RVW is further supported by a comparison to the key reference code—CPT 92507 (speech/language treatment)—at 1.30 RVW. CPT 92507 includes voice, fluency, speech sound production, and language treatment. Patients requiring cognitive function intervention often have more than one comorbidity, including underlying psychological, speech and/or language impairments.

Of the 107 survey respondents who chose CPT 92507 as the reference service, 61% indicated that the cognitive intervention code was higher in overall intensity/complexity than the reference code across all measures, and most significantly in

- the amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed;
- technical skill required;
- an outcome that is dependent on the skill and judgement of the clinician; and
- overall intensity/complexity.

Given the higher intensity/complexity and intra-service time of 97127, as indicated by survey respondents, the IWP/UT based on the recommended RVW of 1.76 with a pre, intra, and post-service times of 5, 60, and 10 minutes, results in an appropriate rank order when compared to the primary reference service, as illustrated below.

### *Comparison to key reference service*

CPT Code	Descriptor	RVW	IWP/UT	Total Time	PRE	INTRA	POST	Note
----------	------------	-----	--------	------------	-----	-------	------	------

CPT Code	Descriptor	RVW	IWPUT	Total Time	PRE	INTRA	POST	Note
92507	Treatment of speech, language, voice, communication, and/or auditory processing disorder; individual	1.30	0.0215	60	5	50	5	Key reference service
97127	Cognitive function intervention	1.76	0.0240	75	5	60	10	Survey code

The tables on the following page provide other RUC or HCPAC valued services, including MPC reference codes, to illustrate appropriate rank order and further support the requested values for time and professional work for 97127. The expert panel noted that CPT code 92640 (diagnostic analysis with programming of auditory brainstem implant) provides further support for the recommended value of 97127, with an identical RVW of 1.76 and pre, intra, and post-service times of 4, 60, and 5 minutes, resulting in an IWPUT of 0.0260 as compared to the survey code IWPUT of 0.0240.

### *Comparison to MPC codes*

CPT Code	Descriptor	RVW	IWPUT	Total Time	PRE	INTRA	POST	Note
90832	Psychotherapy, 30 minutes with patient	1.50	0.0388	45	5	30	10	HCPAC MPC
97127	Cognitive function intervention	1.76	0.0240	75	5	60	10	Survey code
92004	Ophthalmological services: medical examination and evaluation with initiation of diagnostic and treatment program; comprehensive, new patient, 1 or more visits	1.82	0.0594	40	5	25	10	HCPAC MPC

### *Comparison to additional reference codes (RVW order)*

CPT Code	Descriptor	RVW	IWPUT	Total Time	PRE	INTRA	POST	Note
90853	Group psychotherapy (other than of a multiple-family group)	0.59	0.0261	24	2	14	8	Similar IWPUT for 14 minutes of intra-service time
92526	Treatment of swallowing dysfunction and/or oral function for feeding	1.34	0.0248	55	5	45	5	
97127	Cognitive function intervention	1.76	0.0240	75	5	60	10	Survey code
92640	Diagnostic analysis with programming of auditory brainstem implant, per hour	1.76	0.0260	69	4	60	5	Similar in time, RVW, and IWPUT
92607	Evaluation for prescription for speech-generating augmentative and alternative communication device, face-to-face with the patient; first hour	1.85	0.0196	90	10	60	20	
90847	Family psychotherapy (conjoint psychotherapy) (with patient present)	2.50	0.0384	76	5	50	21	

## **SERVICES REPORTED WITH MULTIPLE CPT CODES**

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. N/A

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) This service was previously reported using CPT code 97532 (cognitive skills development, each 15 minutes).

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Psychology                      How often? Commonly

Specialty Speech-language pathology                      How often? Commonly

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period? 1176781  
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. We used the 2015 Medicare utilization and 2012 Medicaid utilization from the RUC database for CPT code 97532 (4,707,123). Since 97532 is per 15-minutes, we estimate that the typical service, based on our survey, is 60 minutes. As such, we divided the combined utilization data by four to estimate the number of same-day sessions provided to Medicare and Medicaid patients on an annual basis. Percentage of utilization is also based on the RUC database information for 97532.

Specialty Psychology                      Frequency 576034                      Percentage 48.94 %

Specialty Speech-language pathology                      Frequency 506016                      Percentage 43.00 %

Specialty                      Frequency 0                      Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 77,090 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. We used the 2015 utilization from the RUC database for CPT code 97532 (308,359). Since 97532 is per 15-minutes, we estimate that the typical service, based on our survey, is 60 minutes. As such, we divided current utilization by four to estimate the number of same-day sessions provided to Medicare patients on an annual basis. Percentage of utilization is also based on the RUC database information for 97532.

Specialty Psychology                      Frequency 37741                      Percentage 48.95 %

Specialty Speech-language pathology                      Frequency 33149                      Percentage 43.00 %

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Do many physicians perform this service across the United States? Yes

**97127**  
**AMA/Specialty Society Update Process**  
**Practice Expense Summary of Recommendation**  
**Non Facility Direct Inputs**

CPT Long Descriptor: Therapeutic interventions that focus on cognitive function (eg, attention, memory, reasoning, executive function, problem solving, and/or pragmatic functioning) and compensatory strategies to manage the performance of an activity (eg, managing time or schedules, initiating, organizing and sequencing tasks, direct (one-on-one) patient contact

(Do not report 97127 in conjunction with 0364T, 0365T, 0368T, 0369T)

(Report 97127 only once per day)

Global Period: **XXX** Meeting Date: **January 2017**

**1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:**

The practice expense elements were determined by a consensus panel of speech-language pathologists and psychologists. The panel drew upon the current practice expense information from the RUC database for CPT code 97532 (cognitive skills development), which is being replaced by survey code 97127

**2. You must provide reference code(s) for comparison on your spreadsheet. *If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.* You must provide an explanation for the selection of reference codes.**

**Reference Code Rationale:**

CPT code 97532—Development of cognitive skills to improve attention, memory, problem solving (includes compensatory training), direct (one-on-one) patient contact, each 15 minutes—is used as the reference code because it is the previously-reported code that will be replaced by 97127.

**3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time: N/A**

**4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:**

**Compelling Evidence:** PE for current CPT code 97532 includes clinical labor and equipment that are related more typically to physical and occupational therapy practice (PT Aid and OT therapy table), but are not typical for psychology or speech-language pathology. The recommended adjustments to inputs are based on typical practice for psychology and speech-language pathology, the dominant billers of cognitive intervention services. Following on the next page is discussion of the specific recommendations from the consensus panel:

The consensus panel recommends the following adjustments to PE:

- *Clinical labor time: Physical Therapy (L023A) - **Remove***
- *Supply Item: Kit, activity-crafts (SA001) – **Retain (1)***
- *Supply Item: Patient education booklet (SK062) – **Add (1)***
- *Equipment: Computer, desktop, w-monitor (ED021) – **Add (60 minutes)***
- *Equipment: Table, for seated OT therapy (EF025) – **Remove (5 minutes)***
- *Equipment: Table, treatment, hi-lo (EF033) – **Add (60 minutes)***
- *Equipment: Set of 8 Chairs (EF043) – **Add 0.375 = 3 chairs (60 minutes)***

All minutes related to equipment usage were based on the survey median intra-service time of 60 minutes. The consensus panel determined that the clinician is face-to-face with the patient using the equipment in the room 100% of the 60 minutes of total median intra-service time.

***Clinical Labor Time: PT Aid (L023A)***

The consensus panel recommends removing the clinical labor time, as a PT Aid is not typical for cognitive intervention.

***Supply Item: Kit, activity-crafts (SA001)***

The consensus panel recommends retaining this item. The activity kit is used during intervention to work with the patient on specific tasks, such as problem solving, sequencing, and following multi-step commands.

***Supply Item: Patient education booklet (SK062)***

The consensus panel recommends adding this item. A patient education booklet is used during therapy for various purposes, depending on the needs of the patient. For example, it may be used as a memory log for patients who have difficulty recalling the steps for an activity of daily living, such as safe transfer to or from a wheel chair. It can also be used to provide the patient/caregiver with continued tasks and assignments to complete between treatment sessions.

***Equipment: Computer, desktop, w-monitor (ED021)***

The consensus panel recommends adding a desktop computer with monitor available for use in the room for during the treatment session (based on the survey median intra-service time of 60 minutes). A key component of cognitive intervention is working with the patient on tasks necessary for daily functioning, or to allow return to work or school. The computer—technology available in every-day life—is a common part of intervention as a tool to help the patient master activities of daily living or learn compensatory strategies (eg, using a to-do list or calendar as a memory aid).

***Equipment: Table, for seated OT therapy (EF025)***

The consensus panel recommends removing this piece of equipment, as it is not typical for cognitive intervention.

***Equipment: Table, treatment, hi-lo (EF033)***

The consensus panel recommends replacing the table for seated OT therapy with a hi-lo treatment table for 60 minutes of use during the treatment session (based on the survey median intra-service time of 60 minutes). Cognitive function intervention involves a variety of activities and tasks that require a work surface (eg, writing, working with the activity kit and/or other compensatory tools). An adjustable hi-lo mechanism is critical to accommodate patients in wheel chairs.

***Equipment: Set of 8 chairs (EF043)***

The consensus panel recommends the addition of 3 chairs needed for seating for the clinician, patient, and a caregiver for the duration of the treatment session (60 minutes, based on the survey median intra-service time). The consensus panel recommends a quantity of 0.375, which equals 3 chairs out of the set of 8 chairs.

**5. Please describe in detail the clinical activities of your staff:**

This does not apply as we are recommending removal of existing clinical labor time.

Pre-Service Clinical Labor Activities: N/A

Intra-Service Clinical Labor Activities: N/A

Post-Service Clinical Labor Activities: N/A

RUC HCPAC Review Board Summary of Recommendations  
*\*CMS High Expenditure Procedural Codes\**

January 2017

**Psychological and Neuropsychological Testing – Tab 18**

In the July 2015 Proposed Rule and November 2015 Final Rule, CMS identified high expenditure services for review, including codes related to psychological and neuropsychological testing. In January 2016, the specialty societies requested that the entire family of psychological and neuropsychological testing codes be referred to the CPT Editorial Panel to be revised. The testing practice has been significantly altered by the growth and availability of technology, including computerized testing. The current codes do not reflect the multiple standards of practice and therefore result in confusion about how to report the codes. The RUC recommended that the entire psychological and neuropsychological testing codes be referred to the CPT Editorial Panel for revision. CMS also requested that CPT code 96125 and 96127 be added to this family of services for revision/review. In September 2016, the CPT Editorial Panel created seven codes to differentiate technician administration of psychological testing and neuropsychological testing from physician/ psychologist administration and assessment of testing; and deleted codes 96101-96103, 96111, 96118, 96119, 96120.

Organizations representing psychiatry, psychology, neurology, pediatrics and speech pathologists conducted a survey for the January 2017 RUC and HCPAC Review Board meetings. During this effort, it became apparent that further CPT revisions are required. Survey respondents were unable to articulate the work at the 60 or 30 minute coding increments and there is significant concern regarding the duplication of pre and post work as several units of service would be reported. Therefore, the organizations submitted a letter to the CPT Editorial Panel and the RUC to rescind the coding changes summarized below for *CPT 2018*. The organizations will submit a new coding proposal for consideration at the June 2017 CPT Editorial Panel meeting for *CPT 2019*. **The RUC HCPAC Review Board supports referral to CPT.**

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
<b>Psychiatry</b>				
<b>Functional Brain Mapping</b>				
96020		<i>Neurofunctional testing selection and administration during noninvasive imaging functional brain mapping, with test administered entirely by a physician or other qualified health care professional (ie, psychologist), with review of test results and report</i>		

*(For functional magnetic resonance imaging [fMRI], brain, use 70555)*

*(Do not report 96020 in conjunction with ~~96101-96103~~, 96116-~~96120~~, 96130-96135)*

*(Do not report 96020 in conjunction with 70554)*

*(Evaluation and Management services codes should not be reported on the same day as 96020)*

**Central Nervous System Assessments/Tests (eg, Neuro-Cognitive, Mental Status, Speech Testing)**

The following codes are used to report the services provided during testing of ~~the cognitive~~ psychological, neuropsychological and cognitive function of the central nervous system. The testing of cognitive processes, including but not limited to visual motor responses, memory, and abstractive reasoning/problem-solving abilities is accomplished by the combination of several types of testing procedures. It is expected that the administration of these tests will generate material that will be formulated into a report. A minimum of 31 minutes must be provided to report any per hour code. ~~Services 96101, 96116, 96118, and 96125 report time as face to face time with the patient and the time spent evaluating, interpreting and preparing the report.~~

*(For development of cognitive skills, see 97532, 97533)*

*(For cognitive performance assessment performed by a physician, see **Evaluation and Management** services codes)*

*(Do not report ~~96101-96125, 96125, 96105, 96110, 96116, 96125~~, 96130-96135 in conjunction with 0364T, 0365T, 0366T, 0367T, 0373T, 0374T)*

Psychological evaluation services in the testing context may include record review, integration of test results with other sources of clinical data, interpretation, clinical decision making, treatment planning and report. Evaluation domains may include emotional and interpersonal functioning, intellectual abilities, thought processes, personality and psychopathology.

Psychological test battery administration is performed via multiple, individually administered paper/pencil test instruments, technical apparatus, and/or interactive electronic platforms.

Neuropsychological evaluation services may include record review, integration of test battery results with other sources of clinical data, interpretation, diagnostic decision making, treatment planning and report. The relevant domains for neuropsychological evaluation include intellectual function, attention, executive function, language and communication, memory, visual-spatial function, sensorimotor function, emotional and personality features, and adaptive behavior.

Neuropsychological test battery administration is performed via multiple, individually administered paper/pencil test instruments, technical apparatus, and/or interactive electronic platforms.

Cognitive performance testing (96125) assesses the patient's ability to complete specific functional tasks applicable to the patient's environment in order to identify or quantify specific cognitive deficits. The results are used to determine impairments and develop therapeutic goals and objectives.

Do not report psychological or neuropsychological testing in conjunction with 96125 for the same service.

~~Neuropsychological test battery administration is performed via multiple, individually administered paper/pencil test instruments, technical apparatus, and/or interactive electronic platforms.~~

Interactive feedback is used to convey the implications of psychological or neuropsychological test findings and diagnostic formulation. Based on patient-specific cognitive and emotional strengths and weaknesses, interactive feedback may include promoting adherence to medical and/or psychological treatment plans, educating and engaging the patient about his/her condition to maximize patient collaboration in their care, addressing safety issues, facilitating psychological coping, coordinating care, and engaging the patient in planning given the expected course of illness or condition when preformed.

<b>D 96101</b>	-	Psychological testing (includes psychodiagnostic assessment of emotionality, intellectual abilities, personality and psychopathology, eg, MMPI, Rorschach, WAIS), per hour of the psychologist's or physician's time, both face to face time administering tests to the patient and time interpreting these test results and preparing the report  (96101 is also used in those circumstances when additional time is necessary to integrate other sources of clinical data, including previously completed and reported technician and computer administered tests)  (Do not report 96101 for the interpretation and report of 96102, 96103)	-	1.86
<b>D 96102</b>	-	Psychological testing (includes psychodiagnostic assessment of emotionality, intellectual abilities, personality and psychopathology, eg, MMPI and WAIS), with qualified health care professional interpretation and report, administered by technician, per hour of technician time, face-to-face	-	0.50

<b>D</b> 96103	-	<del>Psychological testing (includes psychodiagnostic assessment of emotionality, intellectual abilities, personality and psychopathology, eg, MMPI), administered by a computer, with qualified health care professional interpretation and report</del>	-	0.51
(96101-96103 have been deleted. To report psychological testing services, see 96130, 96132, 96133, 96134, 96135)				
<b>(f)</b> 96105	DD1	Assessment of aphasia (includes assessment of expressive and receptive speech and language function, language comprehension, speech production ability, reading, spelling, writing, eg, by Boston Diagnostic Aphasia Examination) with interpretation and report, per hour	XXX	REFER TO CPT (as part of family, no coding changes expected)  (2017: 1.75) HCPAC

**RE: Tab 18/29, Psychological and Neuropsychological Evaluation and Testing**

Dear Dr. Smith:

The American Academy of Neurology (AAN), the American Academy of Pediatrics (AAP), the American Psychological Association (APA), the American Psychiatric Association (APA), and the American Speech-Language-Hearing Association (ASHA) are writing you today regarding Tab 18/29, Psychological Evaluation and Testing which is on the agenda for the January 2017 RUC meeting. This tab is made up of the following codes (96105, 96110, 96116, 96125, 96127, and 963X0-X6). We would like to inform the RUC that we have made a request to the CPT Editorial Panel that this code family be referred back to the Panel and as such we would like to request that the RUC remove this issue from the agenda of the January 2017 RUC meeting. The societies will be submitting a Code Change Proposal by the March 1, 2017 deadline for the May/June 2017 CPT Editorial Panel meeting.

Tab 18 is made up of codes that describe psychological and neuropsychological evaluation and testing; developmental testing; aphasia testing; and cognitive testing. They were identified on the CMS High Expenditure Procedural Codes screen and were reviewed at the October 2016 CPT Editorial Panel meeting. The current psychological testing and neuropsychological testing codes were last revised in 2006. Since that time, there have been significant changes in testing practice – particularly concerning the growth of computerized testing. The developmental testing code was surveyed for work relative value units in 2003. Testing had been performed before that year, but 2004 was the first year the service could be tracked.

The societies attempted to survey the codes for the January 2017 RUC meeting. While an adequate number of responses were received, the expert panel of reviewers found the survey results to be quite flawed for a majority of the codes in the tab, which is believed to be a result of survey respondents' confusion about the coding structure of the new family of codes. The family of codes is made up of individual 60-minute and 30-minute codes that will typically be reported multiple times for a battery of tests. These tests and associated pre- and post-work may be provided over multiple days. The high recommended work RVUs and time (pre, intra and post) of the survey results indicated to the expert panel that some survey respondents were not valuing the individual codes but the entire episode of care.

We would note that we did not experience this problem with the two aphasia and cognitive testing codes (96105 and 96125) that are also a part of this tab. While their data were not problematic and we do not believe they need to go back to CPT Editorial Panel, we do believe

December 13, 2016

Peter Smith, MD

Page 2

that to avoid rank order within the family and other issues, it is important that the family of codes is valued together. Therefore we have included them as part of this larger request to the RUC and CPT Editorial Panel.

The table below summarizes the RUC survey data for CPT code 963X3 (*Psychological or neuropsychological test administration and scoring by physician, or other qualified health care professional two or more tests any method, per 30 minutes*) and exemplifies the type of problematic data that we encountered with this survey.

		No.	Work RVU			Pre-Service			Intra-Service			Post-Service			Key Ref. Code		Second Ref.	
			25th	Med.	75th	25th	Med.	75th	25th	Med.	75th	25th	Med.	75th	Code	Work RVU	Code	Work RVU
963X3	Test admin & scoring, per 30 min (professional)	149	2.1	3	3.5	15	30	30	45	180	300	15	45	90	99205	3.17	90791	3

As you can see the survey times did not correspond to the code which is defined per 30 minutes. As a result it was unclear to us if respondents were recommending work RVU values for the entire episode of care or for the 30 minutes. We experienced similar intra, pre and post service survey problems with the other per hour and per half hour codes.

In addition to concerns regarding intra-service time, a primary RUC-related concern emerged during the review of the survey data: while these services do contain pre and post time, these codes are reported multiple times, the current survey responses reflect redundant pre- and post-time, because these codes are reported in multiple units. The typical scenario of reporting multiple units of the codes will result in what is often described as “double-dipping” at the RUC. We believe this problem cannot be addressed by just resurveying the codes. The coding structure of the family must be revised to better reflect the actual process of care. The participating societies have already discussed potential alternatives to the coding structure.

We are keenly aware that there is great interest by the Centers for Medicare and Medicaid Services (CMS) and the RUC for these codes to be reviewed and revalued. We agree that these codes are outdated (excepting codes 96105 and 96125) and must be revised; this request is not an attempt to delay their revision. This code family represents significant and critical services provided by not just psychologists but also neurologists, pediatricians and speech-language-hearing specialists and could have a significant impact on the access to these important services. We believe that this compels us to ensure that these codes are appropriately designed and valued.

We appreciate your consideration of our request. Please contact us if you have any questions.

Sincerely,

Marianna Spanaki, MD, PhD

**RE: Tab 82, Psychological and Neuropsychological Evaluation and Testing (October 2016 CPT Editorial Panel meeting)**

Dear Dr. Brin:

The American Academy of Neurology (AAN), the American Academy of Pediatrics (AAP), the American Psychological Association (APA), the American Psychiatric Association (APA), and the American Speech-Language-Hearing Association (ASHA) are writing you today regarding Tab 82, Psychological Evaluation and Testing which was reviewed and approved at the October 2016 CPT Editorial Panel meeting. A set of new and revised codes are scheduled to be published in the 2018 CPT book. We would like to request the CPT Editorial Panel that these approved codes be rescinded and that this code family is referred back to the Panel. This code family is also on the agenda for the January 2017 RUC meeting (Tab 18) and we have also submitted a letter to the RUC asking to remove this tab from the agenda of the January 2017 RUC meeting. The codes on the agenda at the RUC meeting are: 96105, 96110, 96116, 96125, 96127, and 963X0-X6. The societies will be submitting a Code Change Proposal by the March 1, 2017 deadline for the May/June 2017 CPT Editorial Panel meeting. We would note that this issue (Tab 40) is on the agenda for the February 2017 CPT meeting for some editorial clean-up. Approval of this request would also result in removing this agenda item from the February 2017 meeting.

We would note that the CPT codes 96105 and 96125 which while part of this family and are on the agenda for the upcoming RUC meeting did not go through the recent CPT Editorial Panel review and are not part of the request to go back to the Panel.

Tab 82 from the October 2016 CPT Editorial Panel meeting is made up of codes that describe psychological and neuropsychological evaluation and testing; developmental testing; and cognitive testing. They were identified on the CMS High Expenditure Procedural Codes screen and were reviewed at the October 2016 CPT Editorial Panel meeting (CPT codes 96105 and 96125 are low volume codes that were not captured by this screen). The current psychological testing and neuropsychological testing codes were last revised in 2006. Since that time, there have been significant changes in testing practice – particularly concerning the growth of computerized testing. The developmental testing code was surveyed for work relative value units in 2003. Testing had been performed before that year, but 2004 was the first year the service could be tracked.

The societies attempted to survey the codes for the January 2017 RUC meeting. While an adequate number of responses were received, the expert panel of reviewers found the survey results to be quite flawed for the majority of codes in the tab, which is believed to be a result of survey respondents' confusion about the coding structure of the new family of codes.. The family of codes is made up of individual 60 minute and 30 minute codes that will typically be reported multiple times for a battery of tests. These tests and associated pre- and post-work may be provided over multiple days. The high recommended work RVUs and time (pre, intra and post) of the survey results indicated to the expert panel that some survey respondents were not valuing the individual codes but the entire episode of care.

We would note that we did not experience this problem with the two aphasia and cognitive testing codes (96105 and 96125) that are also a part of this tab. While their data were not problematic and we do not believe they need to go back to CPT Editorial Panel, we do believe that to avoid rank order within the family and other issues, it is important that the family of codes is valued together. Therefore we have included them as part of this larger request to the RUC and CPT Editorial Panel.

The table below summarizes the RUC survey data for CPT code 963X3 (*Psychological or neuropsychological test administration and scoring by physician, or other qualified health care professional two or more tests any method, per 30 minutes*) and exemplifies the type of problematic data that we encountered with this survey.

		No.	Work RVU			Pre-Service			Intra-Service			Post-Service			Key Ref. Code		Second Ref.	
			25th	Med.	75th	25th	Med.	75th	25th	Med.	75th	25th	Med.	75th	Code	Work RVU	Code	Work RVU
963X3	Test admin & scoring, per 30 min (professional)	149	2.1	3	3.5	15	30	30	45	180	300	15	45	90	99205	3.17	90791	3

As you can see the survey times did not correspond to the code which is defined per 30 minutes. As a result it was unclear to us if respondents were recommending work RVU values for the entire episode of care or for the 30 minutes. We experienced similar intra, pre and post service survey problems with the other per hour and per half hour codes.

In addition to concerns regarding intra-service time, a primary RUC-related concern emerged during the review of the survey data is that while these services do contain pre- and post- time, since these codes are reported multiple times, the current survey responses reflect redundant pre- and post-time and the typical scenario of reporting multiple instances of the codes will result in what is often described as “double-dipping” at the RUC. We believe this problem cannot be addressed by just resurveying the codes. The coding structure of the family must be revised to better reflect the actual process of care. The participating societies have already discussed potential alternatives to the coding structure.

We are keenly aware that there is great interest by the Centers for Medicare and Medicaid Services (CMS), the CPT Editorial Panel and the RUC for these codes to be reviewed and revalued. We agree that these codes are outdated and must be revised and this request is not an attempt to delay their revision. This code family represents significant and critical services provided by not just psychologists but also neurologists, pediatricians and speech-language-

hearing specialists, and could have a significant impact on the access to these important services. We believe that this compels us to ensure that these codes are appropriately designed and valued.

We appreciate your consideration of our request. Please contact us if you have any questions.

RUC HCPAC Review Board Summary of Recommendations  
*Physical Medicine and Rehabilitation Services – Identified by Multiple CMS and RUC Screens*

January 2017

**Physical Medicine and Rehabilitation Services**

In February 2010, some of the physical medicine and rehabilitation services were identified through the RUC's High Volume Growth screen. Subsequently, some services were identified via the Codes Reported Together 75% of the Time screen and then by CMS via the High Expenditure screen. A CPT Workgroup was formed to address coding for these services, but after several years it was determined by CMS that a new structure was not preferred.

In the NPRM for 2017, CMS indicated that a review of the valuation should move forward for the following codes: 97032, 97035, 97110, 97112, 97113, 97116, 97140, 97530, 97535 and G0283. Eleven codes were added as part of this family of services and were reviewed for work and practice expense at the January 2017 RUC HCPAC Review Board meeting.

For both work and practice expense presentation and discussion, the 19 codes that were surveyed were divided into four categories of similar services: supervised modalities (97012, 97014, 97016, 97018, 97022); attended modalities (97032, 97033, 97034, 97035); therapeutic procedures (97110, 97112, 97113, 97116, 97140); and ADL (97530, 97533, 97535, 97537, 97542). CPT code 97010 was not surveyed and was referred to CPT. HCPCS code G0283 was not surveyed and was instead crosswalked to a similar service.

A survey was conducted that resulted in 50 to 350 responses from physical therapists and occupational therapists to individual codes. In general, both the survey 25<sup>th</sup> percentile and median work relative value unit (RVU) were higher than the current work RVU. Although the specialties provided written compelling evidence for code groups, at the RUC HCPAC Review Board meeting, the RUC HCPAC Review Board required compelling evidence to be presented on a code-by-code basis. In most cases, the RUC HCPAC Review Board recommends the current work value.

In addition to considering compelling evidence for some of the codes, the RUC HCPAC Review Board also considered the typical number of services reported per session. CMS has previously provided data to that indicated a mean of 3.5 codes are reported per session. This mean value of 3.5 units is similar to data APTA provided to CMS in 2010 that showed a median value of 3.0 units based on a review of approximately 3.3 million claims for both Medicare and non-Medicare patient encounters from various practice settings. In developing its recommendations, the RUC HCPAC Review Board considered this information from CMS and the specialties that the typical patient would be scheduled for either a 45 minute or one hour session and typically 3 to 4 codes would be reported. For example, a patient may receive 2 units of 97110 *Therapeutic Exercise* and one modality. The RUC HCPAC Review Board used this information to ensure there was no duplication in the recommended pre or post service time for each individual code.

In most cases, the RUC HCPAC recommends the current work RVU. However, the RUC HCPAC Review Board accepted compelling evidence for some codes to recommend an increase to the survey 25<sup>th</sup> percentile.

### **Supervised Modalities**

#### ***97010 Application of a modality to 1 or more areas; hot or cold packs***

CMS considers 97010 a bundled service and does not make a separate payment for the service. The organizations surveying this family indicated that they are considering deletion or revision of the code. **The RUC HCPAC Review Board recommends that 97010 be referred to the CPT Editorial Panel.**

#### ***97012 Application of a modality to 1 or more areas; traction, mechanical***

Survey responses from 95 physical therapists resulted in a 25<sup>th</sup> percentile work RVU of 0.39 and a median of 0.48. No compelling evidence was presented for this code. The RUC HCPAC Review Board recommends the current work RVU of 0.25, which is slightly less work than 97150 *Therapeutic procedure(s), group (2 or more individuals)* (work RVU = 0.29, total time = 10 minutes) and the same work as 29550 *Strapping; toes* (work RVU = 0.25, total time = 11 minutes). The HCPAC Review Board did not agree that the current total time of 15 minutes or the survey time of 25 minutes to be credible. The HCPAC Review Board recommends that minimal pre and post time of 1 minute each (current time) is appropriate. The RUC HCPAC Review Board recommends the survey 25<sup>th</sup> percentile of 10 minutes intra-service time. The total time of 12 minutes aligns with the total time of 10 minutes for the key reference service 97150 and the corresponding work RVU of 0.25. **The RUC HCPAC Review Board recommends a work RVU of 0.25 and time (1/10/1) for 97012.**

#### ***97014 Application of a modality to 1 or more areas; electrical stimulation (unattended)***

Survey responses from 102 physical therapists resulted in a 25<sup>th</sup> percentile work RVU of 0.23 and a median of 0.30. No compelling evidence was presented for this code. The RUC HCPAC Review Board recommends the current work RVU of 0.18, which is the same work as 99211 *Office visit, established patient* (work RVU = 0.18, total time = 7 minutes). The RUC HCPAC Review Board did not agree that the current total time of 13 minutes or the survey time of 25 minutes to be credible. The RUC HCPAC Review Board recommends that minimal pre and post time of 1 minute each (current time) is required. The RUC HCPAC Review Board recommends the 25<sup>th</sup> percentile of 7 minutes intra-service time. The total time of 9 minutes aligns with the total time of 7 minutes for the key reference service 99211 and the corresponding work RVU of 0.18. **The RUC HCPAC Review Board recommends a work RVU of 0.18 and time (1/7/1) for 97014.**

#### ***97016 Application of a modality to 1 or more areas; vasopneumatic devices***

Survey responses from 50 physical therapists and occupational therapists resulted in a 25<sup>th</sup> percentile work RVU of 0.25 and a median of 0.30. No compelling evidence was presented for this code. The RUC HCPAC Review Board recommends the current work RVU of 0.18, which is the same as 99211 *Office visit, established patient* (work RVU = 0.18, total time = 7 minutes). The RUC HCPAC Review Board did not agree that the

current total time of 18 minutes or the survey time of 24 minutes to be credible. The RUC HCPAC Review Board recommends that minimal pre and post time of 1 minute each (current time) is required. The RUC HCPAC Review Board recommends the 25<sup>th</sup> percentile of 8 minutes intra-service time. The total time of 10 minutes aligns with the total time of 7 minutes for the key reference service 99211 and the corresponding work RVU of 0.18. **The RUC HCPAC Review Board recommends a work RVU of 0.18 and time (1/8/1) for 97016.**

***97018 Application of a modality to 1 or more areas; paraffin bath***

Survey responses from 108 physical therapists and occupational therapists resulted in a 25<sup>th</sup> percentile work RVU of 0.20 and a median of 0.30. No compelling evidence was presented for this code. The HCPAC Review Board recommends the current work RVU of 0.06, which is less work than any of the unattended modality codes and significantly less than 99211 *Office visit, established patient* (work RVU = 0.18, total time = 7 minutes). The RUC HCPAC Review Board did not agree that the current total time of 13 minutes or the survey time of 22 minutes to be credible. The RUC HCPAC Review Board recommends that minimal pre and post time of 1 minute each (current time) is required. The RUC HCPAC Review Board recommends the 25<sup>th</sup> percentile of 8 minutes intra-service time. **The RUC HCPAC Review Board recommends a work RVU of 0.06 and time (1/8/1) for 97018.**

***97022 Application of a modality to 1 or more areas; whirlpool***

Survey responses from 62 physical therapists and occupational therapists resulted in a 25<sup>th</sup> percentile work RVU of 0.29 and a median of 0.35. No compelling evidence was presented for this code. The RUC HCPAC Review Board recommends the current work RVU of 0.17, which is similar to 99211 *Office visit, established patient* (work RVU = 0.18, total time = 7 minutes). The RUC HCPAC Review Board did not agree that the current total time of 15 minutes or the survey time of 25 minutes to be credible. The RUC HCPAC Review Board recommends that minimal pre and post time of 1 minute each (current time) is required. The RUC HCPAC Review Board recommends the 25<sup>th</sup> percentile of 12 minutes intra-service time. The total time of 14 minutes aligns with the total time of 12 minutes for 11719 *Trimming of nondystrophic nails, any number* and work RVU of 0.17. **The RUC HCPAC Review Board recommends a work RVU of 0.17 and time (1/12/1) for 97022.**

**Attended Modalities**

***97032 Application of a modality to 1 or more areas; electrical stimulation (manual), each 15 minutes***

Survey responses from 77 physical therapists resulted in a 25<sup>th</sup> percentile work RVU of 0.40 and a median of 0.48. No compelling evidence was presented for this code. The RUC HCPAC Review Board recommends the current work RVU of 0.25, which accounts for more work and time than 99211 *Office visit, established patient* (work RVU = 0.18, total time = 7 minutes). The code describes 15 minutes of attendance, therefore, the survey intra-time of 15 minutes is credible. The RUC HCPAC Review Board recommends minimal pre-time of 1 minute and post-time of 2 minutes to ensure no duplication when reported with other services. To justify the work RVU of 0.26, the RUC HCPAC Review Board referenced CPT code 97598 *Debridement (eg, high pressure waterjet with/without suction, sharp selective debridement with scissors, scalpel and forceps), open wound, (eg, fibrin, devitalized epidermis and/or dermis, exudate, debris, biofilm), including topical application(s), wound assessment, use of a whirlpool, when performed and instruction(s) for ongoing care, per session, total wound(s) surface area; each additional 20 sq cm, or part*

thereof (List separately in addition to code for primary procedure) (work RVU=0.24, total time = 14 minutes) and code 29550 *Strapping; toes* (work RVU = 0.25, total time = 11 minutes). **The RUC HCPAC Review Board recommends a work RVU of 0.25 and time (1/15/2) for 97032.**

**97033 *Application of a modality to 1 or more areas; iontophoresis, each 15 minutes***

Survey responses from 87 physical therapists resulted in a 25<sup>th</sup> percentile work RVU of 0.27 and a median of 0.37. No compelling evidence was presented for this code. The HCPAC Review Board recommends the current value of 0.26, which is more work than 99211 *Office visit, established patient* (work RVU = 0.18, total time = 7 minutes). The code describes 15 minutes of attendance, therefore, the survey intra-time of 12 minutes is credible. The RUC HCPAC Review Board recommends minimal pre-time of 1 minute and post-time of 2 minutes to ensure no duplication when reported with other services. To justify the work RVU of 0.26, the RUC HCPAC Review Board referenced CPT code 97598 *Debridement (eg, high pressure waterjet with/without suction, sharp selective debridement with scissors, scalpel and forceps), open wound, (eg, fibrin, devitalized epidermis and/or dermis, exudate, debris, biofilm), including topical application(s), wound assessment, use of a whirlpool, when performed and instruction(s) for ongoing care, per session, total wound(s) surface area; each additional 20 sq cm, or part thereof (List separately in addition to code for primary procedure)* (work RVU=0.24, total time = 14 minutes) and code 29550 *Strapping; toes* (work RVU = 0.25, total time = 11 minutes). **The RUC HCPAC Review Board recommends a work RVU of 0.26 and time (1/12/2) for 97033.**

**97034 *Application of a modality to 1 or more areas; contrast baths, each 15 minutes***

Survey responses from 64 physical therapists and occupational therapists resulted in a 25<sup>th</sup> percentile work RVU of 0.25 and a median of 0.33. No compelling evidence was presented for this code. The RUC HCPAC Review Board recommends the current value of 0.21, which is more work than 99211 *Office visit, established patient* (work RVU = 0.18, total time = 7 minutes). The code describes 15 minutes of attendance, therefore, the survey intra-time of 15 minutes is credible. The HCPAC Review Board recommends minimal pre-time of 1 minute and post-time of 2 minutes to ensure no duplication when reported with other services. The service is similar in work to 29550 *Strapping; toes* (work RVU = 0.25, total time = 11 minutes). **The RUC HCPAC Review Board recommends a work RVU of 0.21 and time (1/15/2) for 97034.**

**97035 *Application of a modality to 1 or more areas; ultrasound, each 15 minutes***

Survey responses from 105 physical therapists resulted in a 25<sup>th</sup> percentile work RVU of 0.30 and a median of 0.35. No compelling evidence was presented for this code. The RUC HCPAC Review Board recommends the current value of 0.21, which is more work than 99211 *Office visit, established patient* (work RVU = 0.18, total time = 7 minutes). The code describes 15 minutes of attendance, therefore, the survey intra-time of 10 minutes is credible. The RUC HCPAC Review Board recommends minimal pre-time of 1 minute and post-time of 2 minutes to ensure no duplication when reported with other services. The service is similar in work to 29550 *Strapping; toes* (work RVU = 0.25, total time = 11 minutes). **The RUC HCPAC Review Board recommends a work RVU of 0.21 and time (1/10/2) for 97035.**

## **Therapeutic Procedures**

### ***97110 Therapeutic procedure, 1 or more areas, each 15 minutes; therapeutic exercises to develop strength and endurance, range of motion and flexibility***

Survey responses from 352 physical therapists and occupational therapists resulted in a 25<sup>th</sup> percentile work RVU of 0.45 and a median of 0.50. The specialties did not ask for an increase in work RVU, therefore no compelling evidence was presented for this code. The HCPAC Review Board recommends the current work RVU of 0.45, which is also the survey 25<sup>th</sup> percentile. The code describes 15 minutes of direct one-on-one therapeutic exercise, therefore the survey intra-time of 15 minutes is credible. The RUC HCPAC Review Board reduced the specialty recommended pre- and post-time to a minimal pre-time of 2 minutes and post-time of 2 minutes to ensure no duplication when reported with other services. The RUC HCPAC Review Board determined that code 97110 was less work than key reference code 99212 *Office visit, established patient* (work RVU = 0.48, 2 minutes pre-service time, 10 minutes intra-service time and 4 minutes post-service time). To justify a work RVU of 0.45, the RUC HCPAC Review Board referenced code 97803 *Medical nutrition therapy; re-assessment and intervention, individual, face-to-face with the patient, each 15 minutes* (work RVU = 0.45, total time = 17). **The RUC HCPAC Review Board recommends a work RVU of 0.45 and time (2/15/2) for 97110.**

### ***97112 Therapeutic procedure, 1 or more areas, each 15 minutes; neuromuscular reeducation of movement, balance, coordination, kinesthetic sense, posture, and/or proprioception for sitting and/or standing activities***

The RUC HCPAC Review Board agreed that compelling evidence had been met to consider an increase work RVU for this service. To summarize compelling evidence: Patients are referred to physical therapy earlier and are therefore more acute. Patient expectation for a quick and complete recovery has increased in the past decade. The knowledge requirements have increased (eg, Doctoral degree is now required for physical therapy) in concert with an expansion in technology.

Survey responses from 330 physical therapists and occupational therapists resulted in a 25<sup>th</sup> percentile work RVU of 0.50 and a median of 0.60. The RUC HCPAC Review Board recommends a work RVU of 0.50, which is the survey 25<sup>th</sup> percentile. The code describes 15 minutes of direct one-on-one therapeutic neuromuscular reeducation, therefore the survey intra-time of 15 minutes is credible. The RUC HCPAC Review Board reduced the specialty recommended pre- and post-time to a minimal pre-time of 2 minutes and post-time of 2 minutes to ensure no duplication when reported with other services. The RUC HCPAC Review Board determined that code 97112 is service is similar in work to 99212 *Office visit, established patient* (work RVU = 0.48, 2 minutes pre-service time, 10 minutes intra-service time, and 4 minutes post-service time); and code 99407 *Smoking and tobacco use cessation counseling visit; intensive, greater than 10 minutes* (work RVU = 0.50, total time = 15 minutes); and 97112 is also similar in work to 29125 *Application of short arm splint (forearm to hand); static* (work RVU = 0.50, 5 minutes pre-service time, 15 minutes intra-service time and 3 minutes post-service time). **The RUC HCPAC Review Board recommends a work RVU of 0.50 and time (2/15/2) for 97112.**

**97113 Therapeutic procedure, 1 or more areas, each 15 minutes; aquatic therapy with therapeutic exercises**

The RUC HCPAC Review Board agreed that compelling evidence had been met to consider an increase work RVU for this service. To summarize compelling evidence: Patients are referred to physical therapy earlier and are therefore more acute. Patient expectation for a quick and complete recovery has increased in the past decade. The knowledge requirements have increased (eg, Doctoral degree is now required for physical therapy) in concert with an expansion in technology. Risk of falls and water safety also make the service more intense relative to other therapeutic procedures.

Survey responses from 76 physical therapists resulted in a 25<sup>th</sup> percentile work RVU of 0.48 and a median of 0.52. The HCPAC recommends a work RVU of 0.48, which is the 25<sup>th</sup> percentile of this survey. The code describes 15 minutes of direct one-on-one aquatic therapy with therapeutic exercise, therefore the survey intra-time of 15 minutes is credible. The RUC HCPAC Review Board reduced the specialty recommended pre- and post-time to a minimal pre-time of 2 minutes and post-time of 2 minutes to ensure no duplication when reported with other services. The RUC HCPAC Review Board determined that 97113 is similar in work to 99212 *Office visit, established patient* (work RVU = 0.48, time = 2 minutes pre-service time, 10 minutes intra-service time and 4 minutes post-service time) and CPT code 99201 *Office visit, new patient* (work RVU = 0.48, total time = 17 minutes); and code 92542 *Positional nystagmus test, minimum of 4 positions, with recording* (work RVU = 0.48, total time = 16 minutes). 97113 is also similar in work to 29125 *Application of short arm splint (forearm to hand); static* (work RVU = 0.50, 5 minutes pre-service time, 15 minutes intra-service time, 3 minutes post-service time). **The RUC HCPAC Review Board recommends a work RVU of 0.48 and time (2/15/2) for 97113.**

**97116 Therapeutic procedure, 1 or more areas, each 15 minutes; gait training (includes stair climbing)**

The RUC HCPAC Review Board agreed that compelling evidence had been met to consider an increase work RVU for this service. To summarize compelling evidence: Patients are referred to physical therapy earlier and are therefore more acute. Patient expectation for a quick and complete recovery has increased in the past decade. The knowledge requirements have increased (eg, Doctoral degree is now required for physical therapy) in concert with an expansion in technology.

Survey responses from 168 physical therapists resulted in a 25<sup>th</sup> percentile work RVU of 0.48 and a median of 0.52. The HCPAC did not agree with the specialty's recommendation of 0.48 and instead recommends a work RVU of 0.45, which is less than the 25<sup>th</sup> percentile of the survey and equal to the recommendation for 97110. The code describes 15 minutes of direct one-on-one gait training, therefore the survey intra-time of 15 minutes is credible. The RUC HCPAC Review Board reduced the specialty recommended pre- and post-time to a minimal pre-time of 2 minutes and post-time of 2 minutes to ensure no duplication when reported with other services. The RUC HCPAC Review Board determined code 97116 should be valued slightly less than key reference code 99212 *Office visit, established patient* (work RVU = 0.48, total time = 16 minutes). To justify a work RVU of 0.45, the RUC HCPAC Review Board referenced code 97803 *Medical nutrition therapy; re-assessment and intervention, individual, face-to-face with the patient, each 15 minutes* (work RVU = 0.45, total time = 17 minutes). 97116 is also similar in work to 29125 *Application of short arm splint (forearm to hand); static* (work RVU = 0.50, 5 minutes pre-service time, 15 minutes intra-service time and 3 minutes post-service time). The RUC HCPAC Review Board recommends that 97116 be valued the same as 97110 and determined that a

crosswalked to CPT code 93016 *Cardiovascular stress test using maximal or submaximal treadmill or bicycle exercise, continuous electrocardiographic monitoring, and/or pharmacological stress; supervision only, without interpretation and report* (work RVU = 0.45; 2 minutes pre-service time, 15 minutes intra-service time, 2 minutes post-service time) was acceptable. **The RUC HCPAC Review Board recommends a work RVU of 0.45 and time (2/15/2) for 97116.**

***97140 Manual therapy techniques (eg, mobilization/ manipulation, manual lymphatic drainage, manual traction), 1 or more regions, each 15 minutes***

Survey responses from 284 physical therapists and occupational therapists resulted in a 25<sup>th</sup> percentile work RVU of 0.50 and a median of 0.67. The RUC HCPAC Review Board did not accept compelling evidence to increase the value of the code. The RUC HCPAC Review Board recommends the current work RVU of 0.43 be retained. The code describes 15 minutes of direct one-on-one manual therapy techniques, therefore the survey intra-time of 15 minutes is credible. The RUC HCPAC Review Board reduced the specialty recommended pre- and post-time to a minimal pre-time of 2 minutes and post-time of 2 minutes to ensure no duplication when reported with other services. The service is similar in work to 99212 *Office visit, established patient* (work RVU = 0.48, 2 minutes pre-service time, 10 minutes intra-service time and 4 minutes post-service time). **The RUC HCPAC Review Board recommends a work RVU of 0.43 and time (2/15/2) for 97140.**

**ADL**

***97530 Therapeutic activities, direct (one-on-one) patient contact (use of dynamic activities to improve functional performance), each 15 minutes***

Survey responses from 347 physical therapists and occupational therapists resulted in a 25<sup>th</sup> percentile work RVU of 0.48 and a median of 0.55. The RUC HCPAC Review Board did not accept compelling evidence to increase the value of the code. The HCPAC Review Board recommends the current value of 0.44 be retained. The code describes 15 minutes of direct one-on-one therapeutic activities, therefore the survey intra-time of 15 minutes is credible. The RUC HCPAC Review Board reduced the specialty recommended pre- and post-time to a minimal pre-time of 2 minutes and post-time of 2 minutes to ensure no duplication when reported with other services. The service is similar in work to 99212 *Office visit, established patient* (work RVU = 0.48, 2 minutes pre-service time, 10 minutes intra-service time and 4 minutes post-service time). **The RUC HCPAC Review Board recommends a work RVU of 0.44 and time (2/15/2) for 97530.**

***97533 Sensory integrative techniques to enhance sensory processing and promote adaptive responses to environmental demands, direct (one-on-one) patient contact, each 15 minutes***

The RUC HCPAC Review Board agreed that compelling evidence had been met to consider an increase work RVU for this service. To summarize compelling evidence: Patients are referred to physical therapy earlier and are therefore more acute. The typical patient for this service is a child and as children are being identified at a much younger age, the intensity and complexity of the work has increased, along with additional therapists education requirements.

Survey responses from 136 physical therapists and occupational therapists resulted in a 25<sup>th</sup> percentile work RVU of 0.48 and a median of 0.55. The RUC HCPAC recommends a value of 0.48, which is the 25<sup>th</sup> percentile of this survey. The code describes 15 minutes of direct one-on-one sensory integrative therapy, therefore the recommended intra-time of 15 minutes is credible. Code 97533 is typically reported with 2 units as the therapist will typically spend 30 minutes with the child. The survey indicated that the session would include pre-service time of 6 minutes; intra-time service time of 30 minutes; and post-service time of 10 minutes. The RUC HCPAC Review Board recommends 3 minutes pre-service time, 15 minutes intra-service time and 5 minutes post-service time as the appropriate time per unit of service as two units are typically reported. A single unit of 97533 is similar in work to 99212 *Office visit, established patient* (work RVU = 0.48, 2 minutes pre-service time, 10 minutes intra-service time and 4 minutes post-service time). To justify a work RVU of 0.48, the RUC HCPAC Review Board referenced code 96151 *Health and behavior assessment (eg, health-focused clinical interview, behavioral observations, psychophysiological monitoring, health-oriented questionnaires), each 15 minutes face-to-face with the patient; re-assessment* (work RVU = 0.48, total time = 24 minutes); and code 97533 is also similar in work to 29125 *Application of short arm splint (forearm to hand); static* (work RVU = 0.50, 5 minutes pre-service time, 15 minutes intra-service time and 3 minutes post-service time). **The RUC HCPAC Review Board recommends a work RVU of 0.48 and time (3/15/5) for 97533.**

***97535 Self-care/home management training (eg, activities of daily living (ADL) and compensatory training, meal preparation, safety procedures, and instructions in use of assistive technology devices/adaptive equipment) direct one-on-one contact, each 15 minutes***

Survey responses from 242 physical therapists and occupational therapists resulted in a 25<sup>th</sup> percentile work RVU of 0.48 and a median of 0.55. The RUC HCPAC Review Board did not accept compelling evidence to increase the value of the code. The RUC HCPAC Review Board recommends the current value of 0.45 be retained. The code describes 15 minutes of direct one-on-one self-care/home management training, therefore the recommended intra-time of 15 minutes is credible. The HCPAC Review Board recommends minimal pre-time of 2.5 minutes and post-time of 4 minutes to ensure no duplication when reported with other services. The typical patient for this service is not a Medicare beneficiary. Two units of service is typically reported, therefore the survey time of 5 minutes pre and 8 minutes post were appropriately divided by two units. The service is similar in work to 99212 *Office visit, established patient* (work RVU = 0.48, 2 minutes pre-service time, 10 minutes intra-service time and 4 minutes post-service time). **The RUC HCPAC Review Board recommends a work RVU of 0.45 and time (2.5/15/4) for 97535.**

***97537 Community/work reintegration training (eg, shopping, transportation, money management, avocational activities and/or work environment/modification analysis, work task analysis, use of assistive technology device/adaptive equipment), direct one-on-one contact, each 15 minutes***

The RUC HCPAC Review Board agreed that compelling evidence had been met to consider an increase work RVU for this service. To summarize compelling evidence: Patients are referred to physical therapy earlier and are therefore more acute. Patient expectation for a quick and complete recovery has increased in the past decade. Patients expect to remain independent in their home instead of being cared for at a facility.

Survey responses from 127 physical therapists and occupational therapists resulted in a 25<sup>th</sup> percentile work RVU of 0.48 and a median of 0.55. The RUC HCPAC Review Board recommends a value of 0.48, which is the 25<sup>th</sup> percentile of this survey. The code describes 15 minutes of community/work reintegration training, therefore, the survey intra-time of 15 minutes is credible. Code 97537 is typically reported with 2 units as the therapist typically spends 30 minutes with the patient. The survey indicated that the session would be pre-service time of 10 minutes; intra-service time of 30 minutes; and post-service time of 10 minutes. The RUC HCPAC Review Board recommends 5 minutes pre-service time, 15 minutes intra-service time and 5 minutes post-service time as the appropriate time per unit of service as two units are typically reported. One unit of the service is similar in work to 99212 *Office visit, established patient* (work RVU = 0.48, 2 minutes pre-service time, 10 minutes intra-service time and 4 minutes post-service time). To justify a work RVU of 0.48, the HCPAC Review Board referenced code 96151 *Health and behavior assessment (eg, health-focused clinical interview, behavioral observations, psychophysiological monitoring, health-oriented questionnaires), each 15 minutes face-to-face with the patient; re-assessment* (work RVU = 0.48, total time = 24 minutes); and code 29125 *Application of short arm splint (forearm to hand); static* (work RVU = 0.50, 5 minutes pre-service time, 15 minutes intra-service time and 3 minutes post-service time). **The RUC HCPAC Review Board recommends a work RVU of 0.48 and time (5/15/5) for 97537.**

**97542 Wheelchair management (eg, assessment, fitting, training), each 15 minutes**

The HCPAC Review Board agreed that compelling evidence had been met to increase the value for these services as the equipment has dramatically changed over the past decade. Medicare documentation of medical necessity requirements increased substantially, requiring that mobility related activities of daily living and the patient be thoroughly assessed and documented to justify every component of a complex wheelchair. This has resulted in more intense and complex therapist work.

Survey responses from 149 physical therapists and occupational therapists resulted in a 25<sup>th</sup> percentile work RVU of 0.48 and a median of 0.60. The HCPAC Review Board recommends a work RVU of 0.48, which is the survey 25<sup>th</sup> percentile. The code describes 15 minutes of direct one-on-one wheelchair management, therefore, the survey intra-time of 15 minutes is credible. Code 97542 is typically reported with 2 units as the therapist typically spends 30 minutes with the patient. The survey indicated that the session would include pre-service time of 6 minutes and post-service time of 10 minutes. The HCPAC Review Board recommends 3 minutes pre-service time, 15 minutes intra-service time and 5 minutes post-service time (one-half the survey time) as the appropriate pre and post-time per unit of service. The service is similar in work to 99212 *Office visit, established patient* (work RVU = 0.48, 2 minutes pre-service time, 10 minutes intra-service time and 4 minutes post-service time). 97533 is also similar in work to 29125 *Application of short arm splint (forearm to hand); static* (work RVU = 0.50, 5 minutes pre-service time, 15 minutes intra-service time and 3 minutes post-service time). **The RUC HCPAC Review Board recommends a work RVU of 0.48 and time (3/15/5) for 97542.**

**G0283 Electrical stimulation (unattended), to one or more areas for indication(s) other than wound care, as part of a therapy plan of care**

The specialties indicated that CMS generated code G0283 to track a new benefit to report electrical stimulation that is utilized for wounds versus non-wound treatment (reported with code 97014). When CMS created code G0283, they crosswalked the work value and PE details from code 97014. The HCPAC Review Board agrees with the specialties that this relationship is correct and should be maintained. **The RUC HCPAC**

**Review Board recommends a work RVU of 0.18 and time (1/7/1) for G0283, which is crosswalked from the HCPAC Review Board recommendation for 97014.**

### **Practice Expense**

The practice expense inputs were reviewed with the understanding that the multiple procedure payment reduction (MPPR) of 50% is in place for the practice expense component for the second and subsequent reporting of a physical medicine and rehabilitation service on the same date of service. The organizations confirmed that it is typical to bill two units of these services in one session. The PE Subcommittee adjusted the clinical staff time where appropriate to account for the MPPR reduction that would occur when two or more units were reported so that clinical staff time was not over-reported or under-reported. The supplies were reviewed in great detail to ensure accuracy and were adjusted to account for the typical units billed and MPPR reductions in a similar fashion to the clinical staff time recommendations. The equipment time was updated to conform to the CMS formula and standards.

### **RUC Database Notation**

The supervised modalities will be marked "Do not use to validate for work" as the current database time and survey time estimates were not accepted by the RUC HCPAC Review Board as credible. The note will be appended to CPT codes 97012, 97014, 97016, 97018 and 97022 in the RUC database.

<b>CPT Code</b>	<b>CPT Descriptor</b>	<b>Global Period</b>	<b>Work RVU Recommendation</b>
(f) 97010	Application of a modality to 1 or more areas; hot or cold packs	XXX	Refer to CPT
(f) 97012	Application of a modality to 1 or more areas; traction, mechanical	XXX	0.25 (No Change)
(f) 97014	Application of a modality to 1 or more areas; electrical stimulation (unattended)	XXX	0.18 (No Change)

(f) 97016	Application of a modality to 1 or more areas; vasopneumatic devices	XXX	0.18 (No Change)
(f) 97018	Application of a modality to 1 or more areas; paraffin bath	XXX	0.06 (No Change)
(f) 97022	Application of a modality to 1 or more areas; whirlpool	XXX	0.17 (No Change)
97032	Application of a modality to 1 or more areas; electrical stimulation (manual), each 15 minutes	XXX	0.25 (No Change)
(f) 97033	Application of a modality to 1 or more areas; iontophoresis, each 15 minutes	XXX	0.26 (No Change)
(f) 97034	Application of a modality to 1 or more areas; contrast baths, each 15 minutes	XXX	0.21 (No Change)
97035	Application of a modality to 1 or more areas; ultrasound, each 15 minutes	XXX	0.21 (No Change)
97110	Therapeutic procedure, 1 or more areas, each 15 minutes; therapeutic exercises to develop strength and endurance, range of motion and flexibility	XXX	0.45 (No Change)
97112	Therapeutic procedure, 1 or more areas, each 15 minutes; neuromuscular reeducation of movement, balance, coordination, kinesthetic sense, posture, and/or proprioception for sitting and/or standing activities	XXX	0.50

97113	Therapeutic procedure, 1 or more areas, each 15 minutes; aquatic therapy with therapeutic exercises	XXX	0.48
97116	Therapeutic procedure, 1 or more areas, each 15 minutes; gait training (includes stair climbing)	XXX	0.45
97140	Manual therapy techniques (eg, mobilization/ manipulation, manual lymphatic drainage, manual traction), 1 or more regions, each 15 minutes	XXX	0.43 (No Change)
97530	Therapeutic activities, direct (one-on-one) patient contact (use of dynamic activities to improve functional performance), each 15 minutes	XXX	0.44 (No Change)

**Subject:** Updated Compelling Evidence for Work RVW - Tab 29

---

### **Compelling Evidence**

The American Occupational Therapy Association (AOTA) and American Physical Therapy Association (APTA) submit the following **updated** compelling evidence to support the increase in work values for the following Physical Medicine and Rehabilitation codes. These codes were valued in 1994 (97110, 97112, 97113, 97530), 1995 (97116, 97535, 97537, 97542), 1996 (97760, 97761), or 1998 (97140) and have not been revalued. Since then there has been significant advances in research related to practice, as exemplified by evidence-based Practice Guidelines, increased use of electronic tools, and increased public health awareness of the effects of cognitive and psychosocial problems on individual daily functioning. As multidisciplinary research and evidence evolved, the educational requirements for occupational and physical therapists have increased. All of these factors have resulted in amplified intensity and complexity of the therapeutic services provided by occupational and physical therapists, resulting in increased work RVUs.

**We present the following arguments for compelling evidence for increases in the work value of codes 97110, 97112, 97113, 97116, 97140, 97530, 97535 and 97537 based on:**

- **Advances in educational and professional standards**
- **Advances in technology**
- **Increased complexity of patient population**
- **Physician (provider) time**
- **Advances in research and practice**

Since the last valuation of these codes, the healthcare landscape has evolved. The change in educational requirements for physical and occupational therapists and the movement to electronic health records are two significant factors impacting the work valuation of these codes. Physical therapists and occupational therapists are more highly trained, educated, and skilled providers based on educational requirements and the profile of the patient's being served. For example, effective January 1, 2016, all physical therapy programs are now at the clinical

doctorate level. The distinct difference in competency is primarily in the area of imaging and pharmacology. Therapists are better able to analyze the impact of the findings noted in radiology studies, incorporating this information into their clinical assessment and utilizing it when developing a plan of care. Health professionals are dealing with many patients presenting with issues of polypharmacy representing more complex clinical assessment, decision making, and factoring in a greater risk for complications associated with the interactions of multiple medications and therapeutic interventions. New OT practitioners are now educated in occupational science and are held to higher educational and practice standards than when these codes were developed.

The second influencing factor is the movement to electronic health records. Although PTs and OTs are not yet required or incentivized to adopt EHR systems for such initiatives as Medicare's Meaningful Use Program, or for MIPS moving forward, physicians and facilities included in these programs expect the therapists with whom they share patients to use compatible ER systems. The rapid movement in the US healthcare system toward effective coordination of care based on access to longitudinal information that follows health care consumers requires adoption of electronic medical records by occupational therapists and physical therapists. The amount of relevant clinical content that EHRs make available to therapists to read, interpret and make clinical decisions on for patient care has increased the work associated with therapy services.

The combined increased level of knowledge of the therapist and the access to, and utilization of, more real time information in the clinical decision making process increases the demand on the therapist while providing a higher level of clinical care to the patient's being served. The enhanced expectations for clinical documentation associated with a number of Medicare regulatory requirements contribute to this increased demand.

Over the years, changes in both systems and practice, as well as changes in patient profiles and characteristics, have had a distinct impact on therapy practice.

Since these codes were first approved, there have been great strides in fields including occupational science, psychology, vision, cognition, neuropsychology and others. Evidence has come from such areas as brain imaging, neurobiological sciences, and interdisciplinary research in critical areas such as cognition, performance, function and participation. These scientific developments, such as the evidence produced by the Well Elderly Study,<sup>1</sup> have resulted in a

<sup>1</sup> Clark, F., Jackson, J., Carlson, M., Chou, C., Cherry, B.J., Jordan-Marsh, M., Knight, B.G., Lai, M., White, B., Hay, J., Lam, Claudia, Marterella, A. & Azen, S.P. (2011). Effectiveness of a lifestyle intervention in promoting the well-being of independently living older people: results of the Well Elderly 2 Randomised Controlled Trial. *Journal of Epidemiology and Community Health*, doi:10.1136/jech.2009.099754; Clark, F., Azen, S. P., Zemke, R., Jackson, J., Carlson, M., Mandel, D. & Lipson, L. (1997). Occupational therapy for independent-living older adults: A randomized controlled trial. *JAMA*, 278(16), 1321-1326.

broader scope of inquiry in occupational therapy interventions. The broad clinical input and multidisciplinary physiological data must be analyzed and considered in the course of providing therapy services to a patient. As a result, more work is required to deliver therapy services.

Therapy practitioners are now working with a patient population that is increasingly medically and culturally diverse, living with more chronic comorbidities, living to an older age, and choosing to remain in the home as long as possible and “age in place”, accessing outpatient services with higher levels of need because of the effects of reduced inpatient acute and rehabilitation stays.<sup>2</sup> Although an aging population and increased lifespan has had a widespread effect on all practitioners, therapy practice has been significantly more complex due to increases of clients with cognitive impairments, psychosocial impairments and multiple chronic conditions.

### *Patients with Cognitive Impairments*

According to the Centers for Disease Control and Prevention, the number of persons living with Alzheimer’s disease, the most well-known form of cognitive impairment may rise to over 13 million by 2050.<sup>3</sup> Therapists consider and treat clients for many of the common symptoms of functional cognitive impairment cited by this article (e.g., memory loss, trouble exercising judgment, changes in mood or behavior, difficult planning and carry out tasks, such as following a recipe or keeping track of monthly bills). These conditions and comorbidities require more time and therapist effort during therapy treatment.

Working with a patient with cognitive deficits of any kind presents inherent challenges. The increasing prevalence of older adults with mild to severe cognitive deficits directly impacts the complexity of OT and PT interventions. For instance, when engaging in ADL retraining (meal prep, dressing, grooming, bathing, toileting), patients may need more intense and/or variable strategies of communication and cuing (verbal, non-verbal, tactile, proprioceptive) in order to participate appropriately in the clinical session. Further, patients may have poor impulse control resulting in inter-personal and social deficits and critical deficits in safety awareness (leaning on a hot burner, leaving an electrical device near a full tub of water). Patients may experience poor attention, lack of task initiation, challenges in sequencing, issues with task completion that require more complex and intense intervention from the therapist to not only complete the intervention and create a strategy in which the patient can improve their functional independence through-out the plan of care, but also to protect themselves and the patient in

<sup>3</sup> Centers for Disease Control. Cognitive Impairment: A Call to Action, Now! Feb. 2011, retrieved Sept. 2015); Herbert LE, Scherr PA, Bienias JL, Bennett DA, Evans DA. Alzheimer’s disease in the U.S. population: Prevalence estimates using the 2000 census. Archives of Neurology 2003;60:1119–1122.

unsafe situations.

For instance, a patient with cognitive deficits can disconnect themselves from their portable oxygen source to use the bathroom could have had serious complications from de-saturation and fall risk. Another example could be where a patient who did not have an identified pre-morbid cognitive impairment suffers a hip fracture. Upon assessment, the therapist noted a decline in functional cognition, especially in safety and judgement during the performance of any dynamic ADL's in standing. While the therapist worked to integrate dressing equipment and toileting adaptations for the home environment, the client's decreased insight into potential risks, more intense services are required to ensure that the client was able to build upon prior routines to incorporate the equipment and maximize ability to participate in self-care.

#### *Patients with Psychosocial and Mental Impairments*

According to a survey from the Substance Abuse and Mental Health Services Administration, 45.6 million adults in the US had a diagnosable mental illness in 2011<sup>4</sup>. The most common of these conditions are depressive and anxiety disorders. When a mental health condition exists, it must be addressed in addition to the other conditions that may need therapy intervention, adding to the clinician work involved in the interventions.

#### *Patients with Multiple Chronic Conditions*

Studies demonstrate that the presence of multiple chronic conditions (MCC), relating to both physical and mental health, adds a layer of complexity to disease management and careprovision; recently the U.S. Department of Health and Human Services established a strategic framework for improving the health of this population.<sup>5</sup> Between 1999–2000 and 2009–2010, the percentage of adults aged 45–64 and 65 and over with two or more of nine selected chronic conditions increased for both men and women, all racial and ethnic groups examined, and most income groups.<sup>6</sup> During the intervening 10-year period, the percentage of adults aged 65 and over with both hypertension and diabetes increased from 9% to 15%; prevalence of hypertension and heart disease increased from 18% to 21%; and prevalence of hypertension and cancer increased from 8% to 11%.

Occupational and physical therapy practice has become more work and time intensive as a result of the impact of these changes in MCCs. Further because these patients are more complex there

are many more performance factors to address in MCC patients. For instance, therapists spend more time with MCC patients because fatigue – both mental and physical--is a frequent limiting factor. Therapists must spend time incorporating energy conservation strategies into treatment plans. Additionally, more intensive monitoring of response to care is required with this patient population.

### *Administrative Changes*

Over the past decades, therapists have been subject to increased documentation requirements, partially due to changes in legislation and regulation as well as to reflect an emphasis on quality of care, outcomes-focused management, and accountability. This has increased the work for both the therapist and the therapy clinical staff.

### **Sensory Integrative Techniques (97533)**

In addition to the changes reviewed above, outcome measures are more complex requiring increased costs for purchase of tests and training needed to evaluate outcomes. The diagnostic criteria for autism changed in 2013, contributing to increase in prevalence. Due to this change, more children are diagnosed earlier, adding complexity in early interventions for ages 0-3. Additionally, opening the diagnostic criteria led to an increased emphasis on spectrum. Therefore, therapists are treating a wide range of children, from those who are severely impaired in performance skills all the way to those who are less impaired, but have severe interpersonal and communication deficits. The intervention must be more targeted.

A measure of Fidelity for the provision of sensory integration in OT has been established which states the need for a large space and specialized equipment. Additional costs associated with increases in rent and materials are reflected. In addition, the training component requires additional education. Occupational therapists delivering sensory integration intervention require a Master's degree and post-professional training in occupational therapy and certification in sensory integration. Finally, there is an increased prevalence of children with ASD (1 in 68) and sensory needs are now recognized as being a core feature of autism (DSM-5), making this a population that requires the expertise of occupational therapy. Moreover, children with autism often have complex physical, communication and psychosocial needs. As a result of the enhanced educational requirements, the application of sophisticated, evidenced based, outcomes and more complex patients, the work required to provide therapy services has increased

### **Wheelchair Management Training (CPT 97542)**

This intervention is used when training the patient with continued assessment is used when training and continued assessment for components of a wheelchair, the most appropriate seating system, the most appropriate maneuvering system.

In addition to the changes reviewed above, there is compelling evidence for increases to work values for the wheelchair management and training code. CPT code 97542 was last in 2001. Since then many advances have been made related to a wheelchair assessment. According to CPT Changes 2006 – An Insider’s View, a wheelchair assessment may include but is not limited to the patient’s strength, endurance, living situation, and ability to transfer in and out of the chair, level of independence, weight, skin integrity, muscle tone, and sitting balance. Following verification of the patient’s need, measurements are taken prior to ordering the equipment. This measurement occasionally involves testing the patient’s abilities with various chair functions including propulsion, transferring from the chair to other surfaces (bed, toilet, car), and use of the chair’s locking mechanism on various types of equipment for optimal determination of the appropriate equipment by the patient and caregiver. Over a decade ago, Medicare program documentation of medical necessity requirements increased substantially, requiring that mobility related activities of daily living (MRADLs) be assessed to identify how the equipment will impact the client’s life. Medicare requires that documentation be specific, with justification for every component of a complex wheelchair recorded. Medicare documentation for a skilled wheelchair assessment often includes the following:

*\*What recent event prompted the need for a skilled wheelchair assessment;*

*\*What previous wheelchair assessments have been completed, such as during a Part A SNF stay;*

*\*Most recent prior functional level;*

*\*What intervention was tried by nursing staff, caregivers or the patient themselves;*

*\*Functional deficit due to poor seating or positioning;*

*\*Objective assessments of applicable impairments such as range of motion (ROM), strength, sitting balance, skin integrity, sensation and tone.*

*\*Documentation must relate the training to expected functional goals that are attainable by the patient and/or caregiver.*

*\*The response of the patient to the instruction or fitting*

*\*The cognitive ability of the client to use a complex chair.*

The work involved in the wheelchair training component has only increased as the diversity and complexity of wheelchair technology, both manual and motorized, has evolved substantially. Technology now necessitates that therapists consider the use of augmentative communication and environmental control systems that clients will be using in order to select a complex wheelchair that will be compatible with those devices. From the selection of wheelchair

cushions to augmentative communication devices, environmental control systems and tie-down systems for safety in driving and community mobility; all these factors must be considered when selecting the appropriate mobility device. In addition, patients present with multiple chronic conditions, cognitive and psychosocial impairments; the Medicare population is living longer. Patients whose only means of independent mobility is a wheelchair need to learn how to manipulate the wheelchair parts, including adapting to new technology, propel and maneuver a wheelchair on different types of surfaces including ramps and uneven terrain, curbs and stairs. The training in wheelchair management is often extensive. Technological advances have greatly increased the demands on therapists who address wheelchair evaluation and management.

In May 2005, through the National Coverage Determination (NCD) process, CMS issued function-based criteria for Mobility Assistive Equipment (MAE), including wheelchairs, an algorithmic process called the Clinical Criteria for MAE Coverage. This work intensive and complex assessment process increased the work of 97542 because it expanded the types of health professionals who may order certain types of PMDs and required a face-to-face examination by occupational therapists and physical therapists. Clinician must demonstrate that MAE is reasonable and necessary for beneficiaries who have a personal mobility deficit sufficient to impair their participation in mobility-related activities of daily living (MRADLs) such as toileting, feeding, dressing, grooming, and bathing in customary locations within the home.

The Clinical Criteria for MAE Coverage NCD has a complex flow chart that requires the following questions be asked to make the above determination:

*\*Does the beneficiary have a mobility limitation that significantly impairs his/her ability to participate in one or more MRADLs in the home? A mobility limitation is on that:*

*\*Are there other conditions that limit the beneficiary's ability to participate in MRADLs at home?*

*\*If these other limitations exist, can they be ameliorated or compensated sufficiently such that the additional provision of MAE will be reasonably expected to significantly improve the beneficiary's ability to perform or obtain assistance to participate in MRADLs in the home?*

*\*Does the beneficiary or caregiver demonstrate the capability and the willingness to consistently operate the MAE safely?*

*\*Can the functional mobility deficit be sufficiently resolved by the prescription of a cane or walker?*

*\*Does the beneficiary's typical environment support the use of wheelchairs including scooters/power-operated vehicles (POVs)?*

*\*Does the beneficiary have sufficient upper extremity function to propel a manual wheelchair in the home to participate in MRADLs during a typical day? The manual wheelchair should be optimally configured (seating options, wheelbase, device weight, and other appropriate accessories) for this determination.*

*\*Does the beneficiary have sufficient strength and postural stability to operate a POV/scooter?<sup>78</sup>*

### **Orthotics Management and Training and Prosthetic Training Codes (97760, 97761, 9776X1)**

In addition to the changes reviewed above, there is compelling evidence for increases to work values for the orthotic management and training and prosthetic training codes. First, many orthotics and prosthetics require increasingly complex and critical adjustments based on changes in the status of a post-operative client. For example, a client who underwent a joint replacement procedure of their hand will require an orthotic re-fitting as swelling is reduced, and re-adjustment of angles of pull from external outrigger structures. This could require a great deal of time and expertise on the part of the therapist. In addition, pre-fabricated orthotic devices that are dynamic in nature (versus static) and used for enhancing proper movement of a weakened hand after a stroke or other nerve injury will need regular adjustments to ensure that fit and angles are correct. Orthotics and prosthetics management and training technology has grown since these codes were last valued, adding to the complexity of the required specialized training of the therapist. For instance, some devices now have embedded electrical components that facilitate muscle contractions of limbs weakened by stroke. These devices require expert knowledge of the clinician and time to ensure that the electrodes are in the proper place to work effectively.

Subject: Physical Medicine and Rehabilitation Codes

---

The American Occupational Therapy Association (AOTA) and American Physical Therapy Association (APTA) provide the following information about codes 97010 and G0283 that were not surveyed.

Code 97010 has a bundled status and is not paid by CMS. Given its non-payment, this code was not identified as potentially misvalued by CMS. APTA believes code 97010 may be sent to CPT for revision or deletion or be left to CMS discretion for change in payment status.

Code G0283 is a CMS generated code developed to track a new benefit for when electrical stimulation is utilized for wounds versus non-wound treatment. APTA believes the work related to code G0283 is identical to code 97014 and as such, our recommendation for 97014 (both work and practice expense) should be cross-walked to CPT code 97014.

APTA surveyed all the codes in this tab. AOTA used two criteria to select codes for survey. First, the overall specialty utilization was reviewed and codes were selected where occupational therapy showed a utilization of 10% or more and/or codes with a high absolute utilization (ie, even if the percentage utilization by occupational therapists was low, the absolute utilization was significant.)

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 97012      Tracking Number

Original Specialty Recommended RVU: **0.25**  
Presented Recommended RVU: **0.25**  
RUC Recommended RVU: **0.25**

Global Period: XXX

CPT Descriptor: Application of a modality to 1 or more areas; traction, mechanical

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A patient presents with lumbar radiculopathy. Traction is applied.

Percentage of Survey Respondents who found Vignette to be Typical: 85%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&amp;M service later on the same day 0%

Description of Pre-Service Work: Review medical record, including any communications from referring physician or other qualified health care provider(s). Prepare to see patient.

Description of Intra-Service Work: Perform status check of patient's pain levels, sensory distribution, and muscle guarding. Patient is positioned and traction apparatus is applied. Treatment settings are determined including time, intensity, type, and angle of traction. At end of treatment, patient removed from traction apparatus and post treatment status check of patient's pain levels, sensory distribution, and muscle guarding is performed.

Description of Post-Service Work: Document treatment in the medical record. Communicate with referring physician, other health care provider(s), and patient/caregiver, as required.

99212	XXX	0.48	RUC Time

CPT Descriptor Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A problem focused history; A problem focused examination; Straightforward medical decision making. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are self limited or minor. Typically, 10 minutes are spent face-to-face with the patient and/or family.

**SECOND HIGHEST KEY REFERENCE SERVICE:**

<u>Key CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
97150	XXX	0.29	RUC Time

CPT Descriptor Therapeutic procedure(s), group (2 or more individuals)**KEY MPC COMPARISON CODES:**

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Work RVU**

The expert panel does not have compelling evidence that the work for the modality services have changed. We recommend maintaining the current work RVU for all nine modality codes.

**Intra-service Time**

Given the robust number of responses to these surveys, we recommend the survey median intra-service time as an accurate current reflection of the therapist time for these modality services.

**Pre-service and Post-service Time**

Our expert panel believes that the respondents overestimated the pre/post time required for a modality which is likely to be performed ancillary to a therapeutic intervention. We believe this was discussed during the last review of these codes where the survey pre- and post-time data were five minutes or greater. At that time, the specialties and the HCPAC agreed that a minimal amount of time would be required related to the modality. Specifically, one minute of pre-service and one minute of post-service for supervised modalities and one minute of pre-service and two minutes of post-service for attended direct one-on-one modalities. The rationale for an additional minute of post-service time for the attended modalities is related to removing the patient after the modality (eg, removing gels, electrodes), post-service monitoring, and educating the patient about possible side effects to be aware of from the modality service.

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☒ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. A modality may be performed before or after a therapeutic or manual therapy.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 97012

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty physical therapy                      How often? Commonly

Specialty occupational therapy                      How often? Rarely

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. national frequency is not known

### **Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 97012

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 97014      Tracking Number

Original Specialty Recommended RVU: **0.18**

Global Period: XXX

Presented Recommended RVU: **0.18**RUC Recommended RVU: **0.18**

CPT Descriptor: Application of a modality to 1 or more areas; electrical stimulation (unattended)

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A patient presents with a sprain of the lateral ankle. Electrical stimulation is applied.

Percentage of Survey Respondents who found Vignette to be Typical: 72%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&amp;M service later on the same day 0%

Description of Pre-Service Work: Review medical record, including any communications from referring physician or other qualified health care provider(s). Prepare to see patient.

Description of Intra-Service Work: Perform status check of patient's pain levels, swelling, and range of motion. Patient is positioned and electric stimulation electrodes applied as appropriate. Stimulation treatment settings are made and patient status is checked on periodically during treatment. At end of treatment electrodes are removed and post treatment status check of patient's pain levels, swelling, and range of motion is performed.

Description of Post-Service Work: Document treatment in the medical record. Communicate with referring physician, other health care provider(s), and patient/caregiver, as required.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Work RVU**

The expert panel does not have compelling evidence that the work for the modality services have changed. We recommend maintaining the current work RVU for all nine modality codes.

**Intra-service Time**

Given the robust number of responses to these surveys, we recommend the survey median intra-service time as an accurate current reflection of the therapist time for these modality services.

**Pre-service and Post-service Time**

Our expert panel believes that the respondents overestimated the pre/post time required for a modality which is likely to be performed ancillary to a therapeutic intervention. We believe this was discussed during the last review of these codes where the survey pre- and post-time data were five minutes or greater. At that time, the specialties and the HCPAC agreed that a minimal amount of time would be required related to the modality. Specifically, one minute of pre-service and one minute of post-service for supervised modalities and one minute of pre-service and two minutes of post-service for attended direct one-on-one modalities. The rationale for an additional minute of post-service time for the attended modalities is related to removing the patient after the modality (eg, removing gels, electrodes), post-service monitoring, and educating the patient about possible side effects to be aware of from the modality service.

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☒ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. A modality may be performed before or after a therapeutic or manual therapy.

**Modifier -51 Exempt Status**

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

**New Technology/Service:**

Is this new/revised procedure considered to be a new technology or service? No

**TOP KEY REFERENCE SERVICE:**

<u>Key CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
99211	XXX	0.18	RUC Time

CPT Descriptor Office or other outpatient visit for the evaluation and management of an established patient, that may not require the presence of a physician or other qualified health care professional. Usually, the presenting problem(s) are minimal. Typically, 5 minutes are spent performing or supervising these services.

**SECOND HIGHEST KEY REFERENCE SERVICE:**

<u>Key CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
99212	XXX	0.48	RUC Time

CPT Descriptor Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A problem focused history; A problem focused examination; Straightforward medical decision making. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are self limited or minor. Typically, 10 minutes are spent face-to-face with the patient and/or family.

**KEY MPC COMPARISON CODES:**

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Work RVU**

The expert panel does not have compelling evidence that the work for the modality services have changed. We recommend maintaining the current work RVU for all nine modality codes.

**Intra-service Time**

Given the robust number of responses to these surveys, we recommend the survey median intra-service time as an accurate current reflection of the therapist time for these modality services.

**Pre-service and Post-service Time**

Our expert panel believes that the respondents overestimated the pre/post time required for a modality which is likely to be performed ancillary to a therapeutic intervention. We believe this was discussed during the last review of these codes where the survey pre- and post-time data were five minutes or greater. At that time, the specialties and the HCPAC agreed that a minimal amount of time would be required related to the modality. Specifically, one minute of pre-service and one minute of post-service for supervised modalities and one minute of pre-service and two minutes of post-service for attended direct one-on-one modalities. The rationale for an additional minute of post-service time for the attended modalities is related to removing the patient after the modality (eg, removing gels, electrodes), post-service monitoring, and educating the patient about possible side effects to be aware of from the modality service.

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.  
☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.  
☒ Multiple codes allow flexibility to describe exactly what components the procedure included.  
☐ Multiple codes are used to maintain consistency with similar codes.  
☐ Historical precedents.  
☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. A modality may be performed before or after a therapeutic or manual therapy.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 97016

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty physical therapy                      How often? Commonly

Specialty occupational therapy                      How often? Sometimes

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. national frequency is not known

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?

480,543 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC database

Specialty physical therapy	Frequency 434171	Percentage 90.35 %
----------------------------	------------------	--------------------

Specialty occupational therapy	Frequency 12879	Percentage 2.68 %
--------------------------------	-----------------	-------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Do many physicians perform this service across the United States? Yes

## Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:  
Other

BETOS Sub-classification:

BETOS Sub-classification Level II:  
Other

---

### **Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 97016

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 97018      Tracking Number

Original Specialty Recommended RVU: **0.06**

Global Period: XXX

Presented Recommended RVU: **0.06**RUC Recommended RVU: **0.06**

CPT Descriptor: Application of a modality to 1 or more areas; paraffin bath

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A patient presents status post fracture dislocation of the proximal interphalangeal (PIP) joints of the index and middle fingers. A paraffin wrap is applied.

Percentage of Survey Respondents who found Vignette to be Typical: 62%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review medical record, including any communications from referring physician or other qualified health care provider(s). Prepare to see patient.

Description of Intra-Service Work: Perform status checks of patient's pain levels and range of motion. Patients skin is prepared for paraffin application. Patient is instructed in application of paraffin and area of application is then wrapped and positioned appropriately. At the end of the treatment time, wraps and paraffin is removed and post treatment status check of patient's pain levels and range of motion is performed.

Description of Post-Service Work: Document treatment in the medical record. Communicate with referring physician, other health care provider(s), and patient/caregiver, as required.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Work RVU**

The expert panel does not have compelling evidence that the work for the modality services have changed. We recommend maintaining the current work RVU for all nine modality codes.

**Intra-service Time**

Given the robust number of responses to these surveys, we recommend the survey median intra-service time as an accurate current reflection of the therapist time for these modality services.

**Pre-service and Post-service Time**

Our expert panel believes that the respondents overestimated the pre/post time required for a modality which is likely to be performed ancillary to a therapeutic intervention. We believe this was discussed during the last review of these codes where the survey pre- and post-time data were five minutes or greater. At that time, the specialties and the HCPAC agreed that a minimal amount of time would be required related to the modality. Specifically, one minute of pre-service and one minute of post-service for supervised modalities and one minute of pre-service and two minutes of post-service for attended direct one-on-one modalities. The rationale for an additional minute of post-service time for the attended modalities is related to removing the patient after the modality (eg, removing gels, electrodes), post-service monitoring, and educating the patient about possible side effects to be aware of from the modality service.

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☒ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. A modality may be performed before or after a therapeutic or manual therapy.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 97018

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty physical therapy                      How often? Sometimes

Specialty occupational therapy                      How often? Sometimes

Do many physicians perform this service across the United States? Yes

## Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:  
Other

BETOS Sub-classification:

BETOS Sub-classification Level II:  
Other

---

### **Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 97018

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

---

CPT Code: 97022      Tracking Number

Original Specialty Recommended RVU: **0.17**  
Presented Recommended RVU: **0.17**  
RUC Recommended RVU: **0.17**

Global Period: XXX

CPT Descriptor: Application of a modality to 1 or more areas; whirlpool

---

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A patient presents with a right Colles fracture and recent cast removal. Upper extremity whirlpool treatment is applied.

Percentage of Survey Respondents who found Vignette to be Typical: 69%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

---

Description of Pre-Service Work: Review medical record, including any communications from referring physician or other qualified health care provider(s). Prepare to see patient.

Description of Intra-Service Work: Perform status checks of patient's pain levels and range of motion. Patient's upper extremity from elbow to hand is placed into whirlpool. Agitation of water is adjusted appropriately. At the end of the treatment time, patient's upper extremity is removed from whirlpool and dried and post treatment status check of patient's pain levels and range of motion is performed.

Description of Post-Service Work: Document treatment in the medical record. Communicate with referring physician, other health care provider(s), and patient/caregiver, as required.

**Modifier -51 Exempt Status**

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

**New Technology/Service:**

Is this new/revised procedure considered to be a new technology or service? No

**TOP KEY REFERENCE SERVICE:**

<u>Key CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
97610	XXX	0.35	RUC Time

CPT Descriptor Low frequency, non-contact, non-thermal ultrasound, including topical application(s), when performed, wound assessment, and instruction(s) for ongoing care, per day

**SECOND HIGHEST KEY REFERENCE SERVICE:**

<u>Key CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
97597	000	0.51	RUC Time

CPT Descriptor Debridement (eg, high pressure waterjet with/without suction, sharp selective debridement with scissors, scalpel and forceps), open wound, (eg, fibrin, devitalized epidermis and/or dermis, exudate, debris, biofilm), including topical application(s), wound assessment, use of a whirlpool, when performed and instruction(s) for ongoing care, per session, total wound(s) surface area; first 20 sq cm or less

**KEY MPC COMPARISON CODES:**

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

<u>MPC CPT Code 1</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>	<u>Most Recent Medicare Utilization</u>
93040	XXX	0.15	RUC Time	119,439
<u>CPT Descriptor 1</u> Rhythm ECG, 1-3 leads; with interpretation and report				
<u>MPC CPT Code 2</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>	<u>Most Recent Medicare Utilization</u>
99211	XXX	0.18	RUC Time	4,853,590

CPT Descriptor 2 may not require the presence of a physician or other qualified health care professional. Usually, the presenting problem(s) are minimal. Typically, 5 minutes are spent performing or supervising these services.

<u>Other Reference CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
		0.00	

CPT Descriptor

**RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:**

Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by the mean) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

**Number of respondents who choose Top Key Reference Code: 19      % of respondents: 30.6 %**

**Number of respondents who choose 2<sup>nd</sup> Key Reference Code: 15      % of respondents: 24.1 %**

**TIME ESTIMATES (Median)**

Overall intensity/complexity	-0.47	0.13
------------------------------	-------	------

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Work RVU**

The expert panel does not have compelling evidence that the work for the modality services have changed. We recommend maintaining the current work RVU for all nine modality codes.

**Intra-service Time**

Given the robust number of responses to these surveys, we recommend the survey median intra-service time as an accurate current reflection of the therapist time for these modality services.

**Pre-service and Post-service Time**

Our expert panel believes that the respondents overestimated the pre/post time required for a modality which is likely to be performed ancillary to a therapeutic intervention. We believe this was discussed during the last review of these codes where the survey pre- and post-time data were five minutes or greater. At that time, the specialties and the HCPAC agreed that a minimal amount of time would be required related to the modality. Specifically, one minute of pre-service and one minute of post-service for supervised modalities and one minute of pre-service and two minutes of post-service for attended direct one-on-one modalities. The rationale for an additional minute of post-service time for the attended modalities is related to removing the patient after the modality (eg, removing gels, electrodes), post-service monitoring, and educating the patient about possible side effects to be aware of from the modality service.

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.  
☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.  
☒ Multiple codes allow flexibility to describe exactly what components the procedure included.  
☐ Multiple codes are used to maintain consistency with similar codes.  
☐ Historical precedents.  
☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. A modality may be performed before or after a therapeutic or manual therapy.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 97022

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty physical therapy                      How often? Sometimes

Specialty occupational therapy                      How often? Sometimes

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. national frequency is not known

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?

176,554 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC database

Specialty physical therapy	Frequency 49329	Percentage 27.93 %
----------------------------	-----------------	--------------------

Specialty occupational therapy	Frequency 82769	Percentage 46.88 %
--------------------------------	-----------------	--------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Do many physicians perform this service across the United States? Yes

## Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:  
Other

BETOS Sub-classification:

BETOS Sub-classification Level II:  
Other

### **Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 97022

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 97032      Tracking Number

Original Specialty Recommended RVU: **0.25**  
Presented Recommended RVU: **0.25**  
RUC Recommended RVU: **0.25**

Global Period: XXX

CPT Descriptor: Application of a modality to 1 or more areas; electrical stimulation (manual), each 15 minutes

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A patient presents after a reconstruction procedure for patellofemoral dysfunction. Electrical stimulation is applied.

Percentage of Survey Respondents who found Vignette to be Typical: 75%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review medical record, including any communications from referring physician or other qualified health care provider(s). Prepare to see patient.

Description of Intra-Service Work: Perform a status check of patient's sensation, skin integrity, and range of motion. Patient positioned and use of direct contact techniques are performed, including manual probe stimulation to find motor points of quadriceps to obtain effective muscle contraction. Post treatment status check of patient's pain levels, and active assistive range of motion is performed.

Description of Post-Service Work: Remove patient from modality, monitor patient and provide education about possible side effects to be aware of from the modality service. Document treatment in the medical record. Communicate with referring physician, other health care provider(s), and patient/caregiver, as required.

**Modifier -51 Exempt Status**

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

**New Technology/Service:**

Is this new/revised procedure considered to be a new technology or service? No

**TOP KEY REFERENCE SERVICE:**

<u>Key CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
99212	XXX	0.48	RUC Time

CPT Descriptor Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A problem focused history; A problem focused examination; Straightforward medical decision making. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are self limited or minor. Typically, 10 minutes are spent face-to-face with the patient and/or family.

**SECOND HIGHEST KEY REFERENCE SERVICE:**

<u>Key CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
97610	XXX	0.35	RUC Time

CPT Descriptor Low frequency, non-contact, non-thermal ultrasound, including topical application(s), when performed, wound assessment, and instruction(s) for ongoing care, per day

**KEY MPC COMPARISON CODES:**

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Work RVU**

The expert panel does not have compelling evidence that the work for the modality services have changed. We recommend maintaining the current work RVU for all nine modality codes.

**Intra-service Time**

Given the robust number of responses to these surveys, we recommend the survey median intra-service time as an accurate current reflection of the therapist time for these modality services.

**Pre-service and Post-service Time**

Our expert panel believes that the respondents overestimated the pre/post time required for a modality which is likely to be performed ancillary to a therapeutic intervention. We believe this was discussed during the last review of these codes where the survey pre- and post-time data were five minutes or greater. At that time, the specialties and the HCPAC agreed that a minimal amount of time would be required related to the modality. Specifically, one minute of pre-service and one minute of post-service for supervised modalities and one minute of pre-service and two minutes of post-service for attended direct one-on-one modalities. The rationale for an additional minute of post-service time for the attended modalities is related to removing the patient after the modality (eg, removing gels, electrodes), post-service monitoring, and educating the patient about possible side effects to be aware of from the modality service.

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.  
☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.  
☒ Multiple codes allow flexibility to describe exactly what components the procedure included.  
☐ Multiple codes are used to maintain consistency with similar codes.  
☐ Historical precedents.  
☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. A modality may be performed before or after a therapeutic or manual therapy.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 97032

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
 If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty physical therapy                      How often? Commonly

Specialty occupational therapy                      How often? Sometimes

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. national frequency is not known

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,149,079 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC database

Specialty physical therapy	Frequency 675314	Percentage 58.77 %
----------------------------	------------------	--------------------

Specialty occupational therapy	Frequency 30795	Percentage 2.67 %
--------------------------------	-----------------	-------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Do many physicians perform this service across the United States? Yes

## Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Other

BETOS Sub-classification:

BETOS Sub-classification Level II:

### **Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 97032

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 97033      Tracking Number

Original Specialty Recommended RVU: **0.26**

Global Period: XXX

Presented Recommended RVU: **0.26**RUC Recommended RVU: **0.26**

CPT Descriptor: Application of a modality to 1 or more areas; iontophoresis, each 15 minutes

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A patient presents with non-resolving lateral epicondylitis. Iontophoresis is applied.

Percentage of Survey Respondents who found Vignette to be Typical: 89%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&amp;M service later on the same day 0%

Description of Pre-Service Work: Review medical record, including any communications from referring physician or other qualified health care provider(s). Prepare to see patient.

Description of Intra-Service Work: Perform a status check of patient's skin integrity, sensation, ROM, strength and pain levels. Clean and prepare the skin over the area and place the electrodes appropriately. Use appropriate ionic compounds with a disposable electrode. Using direct contact techniques begin treatment by setting the unit for correct sensory input and recheck the patient after several minutes to monitor adverse skin reactions. Adjust unit settings at appropriate time for desired outcome. At end of treatment remove electrodes and perform post treatment status check of patient's skin integrity, sensation, pain levels, range of motion and strength.

Description of Post-Service Work: Remove patient from modality, monitor patient and provide education about possible side effects to be aware of from the modality service. Document treatment in the medical record. Communicate with referring physician, other health care provider(s), and patient/caregiver, as required.

**Modifier -51 Exempt Status**

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

**New Technology/Service:**

Is this new/revised procedure considered to be a new technology or service? No

**TOP KEY REFERENCE SERVICE:**

<u>Key CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
99212	XXX	0.48	RUC Time

CPT Descriptor Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A problem focused history; A problem focused examination; Straightforward medical decision making. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are self limited or minor. Typically, 10 minutes are spent face-to-face with the patient and/or family.

**SECOND HIGHEST KEY REFERENCE SERVICE:**

<u>Key CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
97610	XXX	0.35	RUC Time

CPT Descriptor Low frequency, non-contact, non-thermal ultrasound, including topical application(s), when performed, wound assessment, and instruction(s) for ongoing care, per day

**KEY MPC COMPARISON CODES:**

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

<u>MPC CPT Code 1</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>	<u>Most Recent Medicare Utilization</u>
97804	XXX	0.20	RUC Time	5,528

CPT Descriptor 1 Medical nutrition therapy; group (2 or more individual(s)), each 30 minutes

<u>MPC CPT Code 2</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>	<u>Most Recent Medicare Utilization</u>
92568	XXX	0.29	RUC Time	8,899

CPT Descriptor 2 Acoustic reflex testing, threshold

<u>Other Reference CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
97150	XXX	0.29	RUC Time

CPT Descriptor Therapeutic procedure(s), group (2 or more individuals)

**RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:**

Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by the mean) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

**Number of respondents who choose Top Key Reference Code: 27      % of respondents: 31.0 %**

**Number of respondents who choose 2<sup>nd</sup> Key Reference Code: 17      % of respondents: 19.5 %**

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Work RVU**

The expert panel does not have compelling evidence that the work for the modality services have changed. We recommend maintaining the current work RVU for all nine modality codes.

**Intra-service Time**

Given the robust number of responses to these surveys, we recommend the survey median intra-service time as an accurate current reflection of the therapist time for these modality services.

**Pre-service and Post-service Time**

Our expert panel believes that the respondents overestimated the pre/post time required for a modality which is likely to be performed ancillary to a therapeutic intervention. We believe this was discussed during the last review of these codes where the survey pre- and post-time data were five minutes or greater. At that time, the specialties and the HCPAC agreed that a minimal amount of time would be required related to the modality. Specifically, one minute of pre-service and one minute of post-service for supervised modalities and one minute of pre-service and two minutes of post-service for attended direct one-on-one modalities. The rationale for an additional minute of post-service time for the attended modalities is related to removing the patient after the modality (eg, removing gels, electrodes), post-service monitoring, and educating the patient about possible side effects to be aware of from the modality service.

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☒ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. A modality may be performed before or after a therapeutic or manual therapy.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 97033

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty physical therapy                      How often? Sometimes

Specialty occupational therapy                      How often? Rarely

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. national frequency is not known

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 97034      Tracking Number

Original Specialty Recommended RVU: **0.21**  
Presented Recommended RVU: **0.21**  
RUC Recommended RVU: **0.21**

Global Period: XXX

CPT Descriptor: Application of a modality to 1 or more areas; contrast baths, each 15 minutes

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A patient presents for conservative management of ongoing carpal tunnel symptoms. Contrast bath is applied.

Percentage of Survey Respondents who found Vignette to be Typical: 56%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review medical record, including any communications from referring physician or other qualified health care provider(s). Prepare to see patient.

Description of Intra-Service Work: Perform a status check of patient's skin integrity, sensation, pain levels, edema and range of motion. Using direct contact techniques, patient is positioned in front of two receptacles of water (one hot, one cold) and is instructed to immerse his/her foot and ankle first in hot water for several minutes, then cold for several minutes, and to continue in this manner until the desired effects are achieved. At end of treatment the foot is dried and post treatment status check of patient's skin integrity, pain levels, edema and range of motion is performed.

Description of Post-Service Work: Remove patient from modality, monitor patient and provide education about possible side effects to be aware of from the modality service. Document treatment in the medical record. Communicate with referring physician, other health care provider(s), and patient/caregiver, as required.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Work RVU**

The expert panel does not have compelling evidence that the work for the modality services have changed. We recommend maintaining the current work RVU for all nine modality codes.

**Intra-service Time**

Given the robust number of responses to these surveys, we recommend the survey median intra-service time as an accurate current reflection of the therapist time for these modality services.

**Pre-service and Post-service Time**

Our expert panel believes that the respondents overestimated the pre/post time required for a modality which is likely to be performed ancillary to a therapeutic intervention. We believe this was discussed during the last review of these codes where the survey pre- and post-time data were five minutes or greater. At that time, the specialties and the HCPAC agreed that a minimal amount of time would be required related to the modality. Specifically, one minute of pre-service and one minute of post-service for supervised modalities and one minute of pre-service and two minutes of post-service for attended direct one-on-one modalities. The rationale for an additional minute of post-service time for the attended modalities is related to removing the patient after the modality (eg, removing gels, electrodes), post-service monitoring, and educating the patient about possible side effects to be aware of from the modality service.

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.

- ☒ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. A modality may be performed before or after a therapeutic or manual therapy.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 97034

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty physical therapy                      How often? Rarely

Specialty occupational therapy                      How often? Rarely

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. national frequency is not known

Specialty	Frequency	Percentage	%
Specialty	Frequency	Percentage	%
Specialty	Frequency	Percentage	%

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 7,932

If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC database

Specialty physical therapy	Frequency 5090	Percentage 64.17 %
Specialty occupational therapy	Frequency 1480	Percentage 18.65 %
Specialty	Frequency 0	Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

## Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Other

BETOS Sub-classification:

BETOS Sub-classification Level II:

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 97034

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code:97035      Tracking Number

Original Specialty Recommended RVU: **0.21**  
Presented Recommended RVU: **0.21**  
RUC Recommended RVU: **0.21**

Global Period: XXX

CPT Descriptor: Application of a modality to 1 or more areas; ultrasound, each 15 minutes

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A patient presents with acute shoulder adhesive capsulitis. Ultrasound is applied.

Percentage of Survey Respondents who found Vignette to be Typical: 71%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&amp;M service later on the same day 0%

Description of Pre-Service Work: Review medical record, including any communications from referring physician or other qualified health care provider(s). Prepare to see patient.

Description of Intra-Service Work: Perform a status check of patient's skin integrity, sensation, pain and range of motion. Patient is positioned and ultrasound is applied, using a coupling gel, first to anterior joint capsule and then to the inferior joint capsule using direct contact techniques. The provider is with patient for the entire time. At end of treatment ultrasound gel is removed and post treatment status check of patient's skin integrity, sensation, pain and range of motion is performed.

Description of Post-Service Work: Remove patient from modality, monitor patient and provide education about possible side effects to be aware of from the modality service. Document treatment in the medical record. Communicate with referring physician, other health care provider(s), and patient/caregiver, as required.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Work RVU**

The expert panel does not have compelling evidence that the work for the modality services have changed. We recommend maintaining the current work RVU for all nine modality codes.

**Intra-service Time**

Given the robust number of responses to these surveys, we recommend the survey median intra-service time as an accurate current reflection of the therapist time for these modality services.

**Pre-service and Post-service Time**

Our expert panel believes that the respondents overestimated the pre/post time required for a modality which is likely to be performed ancillary to a therapeutic intervention. We believe this was discussed during the last review of these codes where the survey pre- and post-time data were five minutes or greater. At that time, the specialties and the HCPAC agreed that a minimal amount of time would be required related to the modality. Specifically, one minute of pre-service and one minute of post-service for supervised modalities and one minute of pre-service and two minutes of post-service for attended direct one-on-one modalities. The rationale for an additional minute of post-service time for the attended modalities is related to removing the patient after the modality (eg, removing gels, electrodes), post-service monitoring, and educating the patient about possible side effects to be aware of from the modality service.

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☒ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. A modality may be performed before or after a therapeutic or manual therapy.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 97035

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty physical therapy                      How often? Commonly

Specialty occupational therapy                      How often? Commonly

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. national frequency is not known

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A patient presents after repair of torn rotator cuff resulting in decreased functional use of the arm and shoulder. Direct one-on-one therapeutic exercises are provided.

Percentage of Survey Respondents who found Vignette to be Typical: 86%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review medical record, including any communications from referring physician or other qualified health care provider(s). Prepare to see patient.

Description of Intra-Service Work: Perform status check of patient's pain, range of motion and muscle strength and functional use of upper extremity. Using direct contact (one on one) techniques, initiate and modify as needed, therapeutic exercises including active-assistive range of motion and manual progressive resistive exercises. Instruct patient in performance of select exercises to be continued at home requiring return demonstration to ensure patient safety.

Description of Post-Service Work: Document treatment in the medical record. Communicate with referring physician, other health care provider(s), and patient/caregiver, as required.

**Modifier -51 Exempt Status**

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

**New Technology/Service:**

Is this new/revised procedure considered to be a new technology or service? No

**TOP KEY REFERENCE SERVICE:**

<u>Key CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
99212	XXX	0.48	RUC Time

CPT Descriptor Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A problem focused history; A problem focused examination; Straightforward medical decision making. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are self limited or minor. Typically, 10 minutes are spent face-to-face with the patient and/or family.

**SECOND HIGHEST KEY REFERENCE SERVICE:**

<u>Key CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
97150	XXX	0.29	RUC Time

CPT Descriptor Therapeutic procedure(s), group (2 or more individuals)**KEY MPC COMPARISON CODES:**

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

<u>MPC CPT Code 1</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>	<u>Most Recent Medicare Utilization</u>
29530	000	0.39	RUC Time	47,196
<u>CPT Descriptor 1</u> Strapping; knee				

<u>MPC CPT Code 2</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>	<u>Most Recent Medicare Utilization</u>
96152	XXX	0.46	RUC Time	133,653

CPT Descriptor 2 Health and behavior intervention, each 15 minutes, face-to-face; individual

<u>Other Reference CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
98925	000	0.46	RUC Time

CPT Descriptor Osteopathic manipulative treatment (OMT); 1-2 body regions involved**RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:**

Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by the mean) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

**Number of respondents who choose Top Key Reference Code:** 137      **% of respondents:** 40.6 %

**Number of respondents who choose 2<sup>nd</sup> Key Reference Code:** 77      **% of respondents:** 22.8 %

**TIME ESTIMATES (Median)**

	<b>CPT Code:</b> <b><u>97110</u></b>	<b>Top Key Reference CPT Code:</b> <b><u>99212</u></b>	<b>2nd Key Reference CPT Code:</b> <b><u>97150</u></b>

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**The American Physical Therapy Association and the American Occupational Therapy Association surveyed a random sample of members who perform this procedure. These survey results were thoroughly and exhaustively reviewed by an expert panel.**

**The 25<sup>th</sup> percentile survey data support selection of the 0.45 RVW, which is representative of the current RVW. The median intra-service time, based on survey results, is reflective of current RVW and practice. However, we are requesting 2.5 minutes for pre- and post-service time which is an increase in current time which is pre-service 1 minute and post-service, 2 minutes. This code is typically reported at least twice per visit per patient. The survey median for pre- and post-service time is 5 minutes, however, we recommend 2.5 minutes as appropriate. The survey median supports an intra-service time of 15 minutes.**

**As there is no compelling evidence to increase the value of this code, the specialty society recommends the current RVU value of 0.45. The calculated IWP/UT for 97110 is 0.023.**

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☒ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. A modality may be performed before or after a therapeutic or manual therapy.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 97110

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty physical therapy                      How often? Commonly

Specialty occupational therapy                      How often? Commonly

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. national frequency is not known

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 49,007,989 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC database

Specialty physical therapy	Frequency 43122130	Percentage 87.99 %
----------------------------	--------------------	--------------------

Specialty occupational therapy	Frequency 2538614	Percentage 5.18 %
--------------------------------	-------------------	-------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Do many physicians perform this service across the United States? Yes

## Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Other

BETOS Sub-classification:

BETOS Sub-classification Level II:

Other

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 97110

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 97112      Tracking Number

Original Specialty Recommended RVU: **0.50**  
Presented Recommended RVU: **0.50**  
RUC Recommended RVU: **0.50**

Global Period: XXX

CPT Descriptor: Therapeutic procedure, 1 or more areas, each 15 minutes; neuromuscular reeducation of movement, balance, coordination, kinesthetic sense, posture, and/or proprioception for sitting and/or standing activities

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A patient presents status post right CVA resulting in left spastic hemiplegia with trunk instability, decreased sitting and standing balance, and functional limitations. Direct one-on-one therapeutic services are provided.

Percentage of Survey Respondents who found Vignette to be Typical: 71%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review medical record, including any communications from referring physician or other qualified health care provider(s). Prepare to see patient.

Description of Intra-Service Work: Perform status check of patient's muscle tone, sensation, and active tight and left upper extremity movement patterns. Using direct contact (one on one), initiate and modify as needed, neuromuscular re-education techniques including proprioceptive neuromuscular facilitation to upper extremity. Instruct patient in performance of select exercises to be continued at home, requiring return demonstration to ensure patient safety.

Description of Post-Service Work: Document treatment in the medical record. Communicate with referring physician, other health care provider(s), and patient/caregiver, as required.

------------------------------	------	------

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**The American Physical Therapy Association and the American Occupational Therapy Association surveyed a random sample of members who perform this procedure. These survey results were thoroughly and exhaustively reviewed by an expert panel.**

**The 25<sup>th</sup> percentile survey data support selection of the recommended 0.50 RVW, which is an increase of current RVW, 0.45. The median intra-service time, based on survey results, is reflective of current RVW and practice. However, we are requesting 2.5 minutes for pre- and post-service time which is an increase in current time which is pre-service 1 minute and post-service, 2 minutes. The survey median for pre- and post-service time is 5 minutes, however, we recommend 2.5 minutes as appropriate. The survey median supports an intra-service time of 15 minutes.**

**The compelling evidence to increase the value of this code reflects changes in technology and provider knowledge. (see separate compelling evidence document). The specialty society recommends the RVU value of 0.50. The calculated IWP/UT for 97112 is 0.026.**

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☒ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. A modality may be performed before or after a therapeutic or manual therapy.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 97112

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty physical therapy                      How often? Commonly

Specialty occupational therapy                      How often? Commonly

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. national frequency is not known

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 9,838,766 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC database

Specialty physical therapy	Frequency 8901132	Percentage 90.47 %
----------------------------	-------------------	--------------------

Specialty occupational therapy	Frequency 518503	Percentage 5.27 %
--------------------------------	------------------	-------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Do many physicians perform this service across the United States? Yes

## Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Other

BETOS Sub-classification:

BETOS Sub-classification Level II:

Other

### **Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 97112

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 97113      Tracking Number

Original Specialty Recommended RVU: **0.48**

Global Period: XXX

Presented Recommended RVU: **0.48**RUC Recommended RVU: **0.48**

CPT Descriptor: Therapeutic procedure, 1 or more areas, each 15 minutes; aquatic therapy with therapeutic exercises

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A patient presents with a diagnosis of rheumatoid arthritis affecting all extremities resulting in pain, restricted movement, and difficulty tolerating land-based exercise. Direct one-on-one aquatic therapy services are provided.

Percentage of Survey Respondents who found Vignette to be Typical: 89%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review medical record, including any communications from referring physician or other qualified health care provider(s). Prepare to see patient.

Description of Intra-Service Work: Perform status check of patient's pain, range of motion, muscle strength, and weight bearing tolerance. Using direct contact (one on one) techniques, initiate and modify as needed, therapeutic exercise in the pool including use of resistance of water and manual contact to improve strength, and range of motion of involved soft tissues. Instruct patient in performance of select exercises to be continued at home requiring return demonstration to ensure patient safety.

Description of Post-Service Work: Document treatment in the medical record. Communicate with referring physician, other health care provider(s), and patient/caregiver, as required.

------------------------------	------	------

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPOT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**The American Physical Therapy Association surveyed a random sample of members who perform this procedure. These survey results were thoroughly and exhaustively reviewed by an expert panel.**

**The 25<sup>th</sup> percentile survey data support selection of the recommended 0.48 RVW, which is an increase of current RVW, 0.44. The median intra-service time, based on survey results, is reflective of current RVW and practice. However, we are requesting 2.5 minutes for pre- and post-service time which is an increase in current time which is pre-service 1 minute and post-service, 2 minutes. The survey median for pre- and post-service time is 5 minutes, however, we recommend 2.5 minutes as appropriate. The survey median supports an intra-service time of 15 minutes.**

**The compelling evidence to increase the value of this code reflects changes in technology and provider work (see separate compelling evidence document). The specialty society recommends the RVU value of 0.48. The calculated IWPOT for 97113 is 0.025.**

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☒ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. A modality may be performed before or after a therapeutic or manual therapy.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 97113

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty physical therapy                      How often? Commonly

Specialty occupational therapy                      How often? Sometimes

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. national frequency is not known

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 97116      Tracking Number

Original Specialty Recommended RVU: **0.48**

Global Period: XXX

Presented Recommended RVU: **0.48**RUC Recommended RVU: **0.45**

CPT Descriptor: Therapeutic procedure, 1 or more areas, each 15 minutes; gait training (includes stair climbing)

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A patient presents after an ACL repair resulting in difficulty with ambulation. Direct one-on-one gait training is provided.

Percentage of Survey Respondents who found Vignette to be Typical: 86%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review medical record, including any communications from referring physician or other qualified health care provider(s). Prepare to see patient.

Description of Intra-Service Work: Perform status check of patient's weight bearing, gait patterns, muscle strength, and range of motion. Using direct contact (one on one) techniques, initiate and modify as needed, gait training including weight shifting, resistive strength techniques to recruit muscle action to correct for gait deviations. Instruct patient in performance of select training techniques to be continued at home requiring return demonstration to ensure patient safety.

Description of Post-Service Work: Document treatment in the medical record. Communicate with referring physician, other health care provider(s), and patient/caregiver, as required.

Key CPT Code	Global	Work RVU	Time Source
99212	XXX	0.48	RUC Time

CPT Descriptor Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A problem focused history; A problem focused examination; Straightforward medical decision making. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are self limited or minor. Typically, 10 minutes are spent face-to-face with the patient and/or family.

**SECOND HIGHEST KEY REFERENCE SERVICE:**

Key CPT Code	Global	Work RVU	Time Source
95992	XXX	0.75	RUC Time

CPT Descriptor Canalith repositioning procedure(s) (eg, Epley maneuver, Semont maneuver), per day

**KEY MPC COMPARISON CODES:**

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
96152	XXX	0.46	RUC Time	133,653
<u>CPT Descriptor 1</u> Health and behavior intervention, each 15 minutes, face-to-face; individual				
MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
76882	XXX	0.49	RUC Time	242,285

CPT Descriptor 2 Ultrasound, extremity, nonvascular, real-time with image documentation; limited, anatomic specific

Other Reference CPT Code	Global	Work RVU	Time Source
		0.00	

CPT Descriptor

**RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:**

Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by the mean) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

**Number of respondents who choose Top Key Reference Code: 77      % of respondents: 45.8 %**

**Number of respondents who choose 2<sup>nd</sup> Key Reference Code: 24      % of respondents: 14.2 %**

**TIME ESTIMATES (Median)**

	CPT Code: <u>97116</u>	Top Key Reference CPT Code: <u>99212</u>	2nd Key Reference CPT Code: <u>95992</u>

------------------------------	------	------

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**The American Physical Therapy Association surveyed a random sample of members who perform this procedure. These survey results were thoroughly and exhaustively reviewed by an expert panel.**

**The 25<sup>th</sup> percentile survey data support selection of the recommended 0.48 RVW, which is an increase of current RVW, 0.40. The median intra-service time, based on survey results, has an increase from 13 minutes to 15 minutes. We are requesting 2.5 minutes for pre- and post-service time which is an increase in current time which is pre-service 1 minute and post-service, 2 minutes. The survey median for pre- and post-service time is 5 minutes, however, we recommend 2.5 minutes as appropriate. The survey median data supports an intra-service time of 15 minutes.**

**The compelling evidence to increase the value of this code reflects changes in technology and provider work (see separate compelling evidence document). The specialty society recommends the RVU value of 0.48. The calculated IWP/UT for 97116 is 0.025.**

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☒ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.

☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. A modality may be performed before or after a therapeutic or manual therapy.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 97116

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty physical therapy                      How often? Commonly

Specialty occupational therapy                      How often? Rarely

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. national frequency is not known

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,879,655 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC database

Specialty physical therapy	Frequency 1835107	Percentage 97.62 %
----------------------------	-------------------	--------------------

Specialty occupational therapy	Frequency 4323	Percentage 0.22 %
--------------------------------	----------------	-------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Do many physicians perform this service across the United States? Yes

## Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Other

BETOS Sub-classification:

BETOS Sub-classification Level II:

Other

---

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 97116

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 97140      Tracking Number

Original Specialty Recommended RVU: **0.50**  
Presented Recommended RVU: **0.50**  
RUC Recommended RVU: **0.43**

Global Period: XXX

CPT Descriptor: Manual therapy techniques (eg, mobilization/ manipulation, manual lymphatic drainage, manual traction), 1 or more regions, each 15 minutes

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A patient presents with two month history of pain in neck, shoulder, and upper back with soft tissue tightness and hypo-mobility in the cervical and upper thoracic spine. Direct one-on-one manual therapy services are provided.

Percentage of Survey Respondents who found Vignette to be Typical: 88%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review medical record, including any communications from referring physician or other qualified health care provider(s). Prepare to see patient.

Description of Intra-Service Work: Perform status check of patient's pain, soft tissue extensibility, range of motion (joint and capsular), and strength. Using direct contact (one on one) techniques, initiate and modify as needed, manual therapy techniques involving both soft tissue and joint structures after identifying level and type of restrictions. Instruct patient in performance of select training techniques to be continued at home requiring return demonstration to ensure patient safety.

Description of Post-Service Work: Document treatment in the medical record. Communicate with referring physician, other health care provider(s), and patient/caregiver, as required.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**The American Physical Therapy Association and the American Occupational Therapy Association surveyed a random sample of members who perform this procedure. These survey results were thoroughly and exhaustively reviewed by an expert panel.**

**The 25<sup>th</sup> percentile survey data support selection of the recommended 0.50 RVW, which is an increase of current RVW, 0.43. The median intra-service time, based on survey results, reflects a slight increase from 14 minutes to 15 minutes. We are requesting 2.5 minutes for pre- and post-service time which is an increase in current time which is pre-service 2 minutes and post-service, 2 minutes. The survey median for pre- and post-service time is 5 minutes, however, we recommend 2.5 minutes as appropriate. The survey median supports an intra-service time of 15 minutes.**

**The compelling evidence to increase the value of this code reflects changes in technology and provider work (see separate compelling evidence document). The specialty society recommends the RVU value of 0.50. The calculated IWP/UT for 97140 is 0.026.**

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☒ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. A modality may be performed before or after a therapeutic or manual therapy.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 97140

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty physical therapy                      How often? Commonly

Specialty occupational therapy                      How often? Commonly

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. national frequency is not known

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 23,114,335 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC database

Specialty physical therapy	Frequency 20802902	Percentage 90.00 %
----------------------------	--------------------	--------------------

Specialty occupational therapy	Frequency 1116422	Percentage 4.82 %

### **Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 97140

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 97530      Tracking Number

Original Specialty Recommended RVU: **0.48**Presented Recommended RVU: **0.48**

Global Period: XXX

RUC Recommended RVU: **0.44**

CPT Descriptor: Therapeutic activities, direct (one-on-one) patient contact (use of dynamic activities to improve functional performance), each 15 minutes

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A patient presents with multiple traumatic injuries including bilateral wrist fractures and a left ankle fracture with decreased upper extremity strength and coordination, and poor weight bearing tolerance during task performance. Direct one-on-one dynamic activities are provided.

Percentage of Survey Respondents who found Vignette to be Typical: 77%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review medical record, including any communications from referring physician or other qualified health care provider(s). Prepare to see patient.

Description of Intra-Service Work: Perform status check of patient's muscle strength, weight bearing tolerance, balance, and functional level, including if appropriate cognitive function status.

Using direct contact (one on one) techniques, design, initiate and modify as needed, activity-based interventions for optimal functional performance. Focus of treatment is dynamic function to improve independence and/or performance of patient. Grading of activity is provided to enhance remediation of skills and/or development of compensatory strategies. Return demonstration performed to ensure patient safety in conducting activities. Instruct patient in performance of select techniques to be continued at home

Description of Post-Service Work: Document treatment in the medical record. Communicate with referring physician, other health care provider(s), and patient/caregiver, as required.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

CPT code 97530 is currently valued at 0.44 WRVUs, with 1 min pre-service, 15 min intra-service and 2 min immediate post-service time.

The primary selected reference service was 99212 which has 0.48 WRVUs with 10 min of intra-service work and the secondary selected reference service was 97150 which has 0.29 WRVUs with 10 min of intra-service work. Both reference services have intra-service times that are lower than the median of 15 min for the surveyed code.

The recommended WRVU is 0.48 which corresponds to the median WRVU of the top reference code and the 25<sup>th</sup> percentile of the surveyed code

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☒ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

- Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in

the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. A modality may be performed before or after a therapeutic or manual therapy.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 97530

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty physical therapy                      How often? Commonly

Specialty occupational therapy                      How often? Commonly

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. national frequency is not known

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 9,559,035 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC database

Specialty physical therapy	Frequency 7935911	Percentage 83.02 %
----------------------------	-------------------	--------------------

Specialty occupational therapy	Frequency 1316279	Percentage 13.76 %
--------------------------------	-------------------	--------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Do many physicians perform this service across the United States? Yes

## Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Other

BETOS Sub-classification:

BETOS Sub-classification Level II:

Other

## Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 97530

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 97533      Tracking Number

Original Specialty Recommended RVU: **0.48**Presented Recommended RVU: **0.48**

Global Period: XXX

RUC Recommended RVU: **0.48**

CPT Descriptor: Sensory integrative techniques to enhance sensory processing and promote adaptive responses to environmental demands, direct (one-on-one) patient contact, each 15 minutes

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A patient who startles easily at unexpected noises presents with poor balance and difficulty organizing simple tasks. Direct one-on-one sensory integrative services are provided.

Percentage of Survey Respondents who found Vignette to be Typical: 86%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review medical record, including any communications from referring physician or other qualified health care provider(s). Prepare to see patient.

Description of Intra-Service Work: Perform status check of patient's response to stimuli, distractibility, reflex testing, balance, test/measure pre-treatment/movement observation.

Using direct contact (one on one) techniques, treatment may include work on task organization; appropriate response to and use of sensory opportunities that include varied vestibular, tactile, and proprioceptive sensations; activities to promote movement through physical obstacles; performance of motor sequencing tasks; and use of controlled sensory inputs to elicit an adaptive response. Ongoing sequencing and grading of interventions provided to enable continuing but gradual success.

Provide progressing changes to stimulation and activities as patient is able to tolerate extended time and increased environmental stimulation while regulating adaptive response. Instruct patient in performance of select techniques to be continued at home and requires return demonstration to ensure patient safety.

Description of Post-Service Work: Review medical record, including any communications from referring physician or other qualified health care provider(s). Prepare to see patient.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

97533 is currently valued at 0.44 WRVUs, with 1 min pre-service, 20 min intra-service and 2 min immediate post-service time.

The primary selected reference service was 99212 which has 0.48 WRVUs with 10 min of intra-service work and the secondary selected reference service was 95992 which has 0.75 WRVUs with 20 min of intra-service work. Both reference services have intra-service times that are lower than the median of 30 min for the surveyed 97533.

The recommended WRVU is 0.48 which corresponds to the median WRVU of the top reference code and the 25<sup>th</sup> percentile of the surveyed code.

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☒ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

- Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and

accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. A modality may be performed before or after a therapeutic or manual therapy.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 97533

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty physical therapy                      How often? Rarely

Specialty occupational therapy                      How often? Rarely

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. national frequency is not known

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 9,270

If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC database

Specialty physical therapy	Frequency 3594	Percentage 38.77 %
----------------------------	----------------	--------------------

Specialty occupational therapy	Frequency 4168	Percentage 44.96 %
--------------------------------	----------------	--------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Do many physicians perform this service across the United States? Yes

## Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Other

BETOS Sub-classification:

BETOS Sub-classification Level II:

Other

## Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 97533

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

## AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS SUMMARY OF RECOMMENDATION

CPT Code: 97535      Tracking Number

Original Specialty Recommended RVU: **0.48**  
Presented Recommended RVU: **0.48**  
RUC Recommended RVU: **0.45**

Global Period: XXX

CPT Descriptor: Self-care/home management training (eg, activities of daily living (ADL) and compensatory training, meal preparation, safety procedures, and instructions in use of assistive technology devices/adaptive equipment) direct one-on-one contact, each 15 minutes

### CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A patient presents with right hemiparesis and visual/perceptual deficits that resulted from a CVA. Direct one-on-one services are provided for self-care management of activities of daily living.

Percentage of Survey Respondents who found Vignette to be Typical: 76%

#### Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review medical record, including any communications from referring physician or other qualified health care provider(s). Prepare to see patient.

Description of Intra-Service Work: Perform status check of patient's health status and functional level including functional cognition.

Using direct contact (one on one) techniques, provide training to enable completion of daily life activities which may include safety instruction; identification and implementation of compensatory techniques for proper sequencing, following directions, and safe activity completion; graded interventions focusing on motor, process and other skills that affect activity performance; problem solving approaches to adapt to unusual tasks; environmental adaptation training. Ongoing use of visual or verbal cueing, memory devices (e.g., picture lists), sequenced directions or other approaches to enable completion of activities; selection of and training in use of equipment or assistive devices for self-care/home management. Return demonstration by the patient of activity or task performance required to ensure safety and efficient completion.

Instruct patient in performance of select training techniques to be continued at home and requires return demonstration to ensure patient safety.

Description of Post-Service Work: Document treatment in the medical record. Communicate with referring physician, other health care provider(s), and patient/caregiver, as required.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

CPT code 97535 is currently valued at 0.45 WRVUs, with 1 min pre-service, 15 min intra-service and 2 min immediate post-service time.

The primary selected reference service was 99212 which has 0.48 WRVUs with 10 min of intra-service work and the secondary selected reference service was 97150 which has 0.29 WRVUs with 10 min of intra-service work. Both reference services have intra-service times that are lower than the median of 25 min for the surveyed code.

The recommended WRVU is 0.48 which corresponds to the median WRVU of the top reference code and the 25<sup>th</sup> percentile of the surveyed code

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☒ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

- Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in

the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. A modality may be performed before or after a therapeutic or manual therapy.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 97535

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty physical therapy                      How often? Commonly

Specialty occupational therapy                      How often? Commonly

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. national frequency is not known

## Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 97535

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

## AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS SUMMARY OF RECOMMENDATION

CPT Code: 97537      Tracking Number

Original Specialty Recommended RVU: **0.48**Presented Recommended RVU: **0.48**

Global Period: XXX

RUC Recommended RVU: **0.48**

CPT Descriptor: Community/work reintegration training (eg, shopping, transportation, money management, avocational activities and/or work environment/ modification analysis, work task analysis, use of assistive technology device/adaptive equipment), direct one-on-one contact, each 15 minutes

### CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A patient presents post traumatic brain injury that resulted in decreased coordination, weakness, limited endurance, and visual coordination problems. Direct one-on-one services are provided to facilitate community and work activities.

Percentage of Survey Respondents who found Vignette to be Typical: 84%

#### Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review medical record, including any communications from referring physician or other qualified health care provider(s). Prepare to see patient.

Description of Intra-Service Work: Perform status check of patient's health status, and functional level including functional cognition.

Using direct contact (one on one) techniques provide training to perform key components of community or work demands relevant to patient current ability; identify, demonstrate and train in modified or compensatory techniques to accomplish functional tasks safely and effectively (eg, modifications for completion of shopping, community mobility training, driving adaptive techniques or equipment); provide cueing or other devices to enable successful completion of activities.

Instruct patient in performance of select techniques to be continued at home and in community and requires return demonstration to ensure patient safety.

Description of Post-Service Work: Document treatment in the medical record. Communicate with referring physician, other health care provider(s), and patient/caregiver, as required.

<u>Key CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
99212	XXX	0.48	RUC Time

CPT Descriptor Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A problem focused history; A problem focused examination; Straightforward medical decision making. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are self limited or minor. Typically, 10 minutes are spent face-to-face with the patient and/or family.

**SECOND HIGHEST KEY REFERENCE SERVICE:**

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

CPT code 97537 is currently valued at 0.45 WRVUs, with 1 min pre-service, 15 min intra-service and 2 min immediate post-service time.

The primary selected reference service was 99212 which has 0.48 WRVUs with 10 min of intra-service work and the secondary selected reference service was 97150 which has 0.29 WRVUs with 10 min of intra-service work. Both reference services have intra-service times that are lower than the median of 30 min for the surveyed code.

The recommended WRVU is 0.48 which corresponds to the median WRVU of the top reference code and the 25<sup>th</sup> percentile of the surveyed code

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☒ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

- Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in

the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. A modality may be performed before or after a therapeutic or manual therapy.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 97537

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty physical therapy                      How often? Rarely

Specialty occupational therapy                      How often? Rarely

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. national frequency is not known

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 4,398

If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC database

Specialty physical therapy	Frequency 762	Percentage 17.32 %
----------------------------	---------------	--------------------

Specialty occupational therapy	Frequency 3615	Percentage 82.19 %
--------------------------------	----------------	--------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Do many physicians perform this service across the United States? Yes

## Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 97537

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 97542      Tracking Number

Original Specialty Recommended RVU: **0.48**

Global Period: XXX

Presented Recommended RVU: **0.48**RUC Recommended RVU: **0.48**

CPT Descriptor: Wheelchair management (eg, assessment, fitting, training), each 15 minutes

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A patient presents with continuing effects from a CVA. Direct one-on-one services are provided to train the patient in the safe operation and management of a new wheelchair.

Percentage of Survey Respondents who found Vignette to be Typical: 89%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review medical record, including any communications from referring physician or other qualified health care provider(s). Prepare to see patient.

Description of Intra-Service Work: Perform status check of current areas of pressure and fit of current chair/equipment as well as ability to safely complete activities and tasks while in the wheelchair.

Using direct contact (one on one) techniques, analysis of and training in appropriate safe operating techniques to achieve independent mobility including maneuverability skills; assessing patient propulsion patterns to limit UE risk and prevent UE injury; adjustments to assure appropriate fit for seating and other components (eg, armrests, steering device) to prevent injury or other problems; training in self-adjustment of seating or operation of other components of the wheelchair; training in maintaining balance and compensating for challenges; training in problem solving real-life situations for work, home, and/or recreation areas.

Instruct patient in performance of select techniques to be continued at home and requires return demonstration to ensure patient safety.

Description of Post-Service Work: Document treatment in the medical record. Communicate with referring physician, other health care provider(s), and patient/caregiver, as required.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

97542 is currently valued at 0.44 WRVUs, with 1 min pre-service, 15 min intra-service and 2 min immediate post-service time.

The primary selected reference service was 99212 which has 0.48 WRVUs with 10 min of intra-service work and the secondary selected reference service was 95992 which has 0.75 WRVUs with 20 min of intra-service work. 99212 has an intra-service time that is lower than the median of 20 min for the surveyed 97542. 95992 has an intra-service time equal to the 20 minutes of the surveyed code.

The recommended WRVU is 0.48 which corresponds to the median WRVU of the top reference code and the 25<sup>th</sup> percentile of the surveyed code.

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☒ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

- Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and

accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. A modality may be performed before or after a therapeutic or manual therapy.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 97542

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty physical therapy                      How often? Sometimes

Specialty occupational therapy                      How often? Sometimes

**AMA/Specialty Society Update Process  
Practice Expense Summary of Recommendation  
Non Facility Direct Inputs**

CPT Long Descriptor:

**97032 Application of a modality to 1 or more areas; electrical stimulation (manual), each 15 minutes**

**97033 iontophoresis, each 15 minutes**

**97034 contrast baths, each 15 minutes**

**97035 ultrasound, each 15 minutes**

Global Period: XXX Meeting Date: January 2017

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:

**In preparation for the January 2017 RUC meeting, the expert panel consisting of physical and occupational therapists, were consulted through a series of conference calls and face-to-face meetings. The expert panel reviewed the existing PE direct input values and compared them to current practice environments. The recommendations reflect decreases in clinical labor, equipment and supply requirements. These inputs were further refined by the individuals who perform these services.**

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale:

**These codes are existing codes, therefore the expert panel used the current PE direct inputs as reference.**

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:

**No recommendations greater than PE Subcommittee standards.**

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:

**No increases in current inputs in clinical staff time, supplies, or equipment. The inputs reflect decreases in clinical staff time.**

5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

**No clinical labor activities**

Intra-Service Clinical Labor Activities:

**PT Aide:**

- **The PT Aide greets patient and provides either a gown or shorts/shirt, as the patient may be wearing a dress or skirt which would impede the PT's ability to perform therapeutic procedures. The Aide will ensure that all records are available to the PT for this visit**
- **PT Aide will be required to prepare and position patients.**

**PT Assistant:**

**No clinical labor activities**

Post-Service Clinical Labor Activities:

**The PT Aide will clean all equipment surfaces and tools**

**AMA/Specialty Society Update Process  
Practice Expense Summary of Recommendation  
Non Facility Direct Inputs**

CPT Long Descriptor:

**97012** Application of a modality to 1 or more areas; traction, mechanical

**97014** electrical stimulation (unattended)

**97016** vasopneumatic devices

**97018** paraffin bath

**97022** whirlpool

Non Facility Direct Inputs**

CPT Long Descriptor:

**97110** Therapeutic procedure, 1 or more areas, each 15 minutes; therapeutic exercises to develop strength and endurance, range of motion and flexibility

**97112** neuromuscular reeducation of movement, balance, coordination, kinesthetic sense, posture, and/or proprioception for sitting and/or standing activities

**97113** aquatic therapy with therapeutic exercises

**97116** gait training (includes stair climbing)

**97140** Manual therapy techniques (eg, mobilization/manipulation, manual lymphatic drainage, manual traction), 1 or more regions, each 15 minutes

Global Period: XXX Meeting Date: January 2017

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:

**In preparation for the January 2017 RUC meeting, the expert panel consisting of physical and occupational therapists, were consulted through a series of conference calls and face-to-face meetings. The expert panel reviewed the existing PE direct input values and compared them to current practice environments. The recommendations reflect changes in clinical labor, equipment and supply requirements. These inputs were further refined by the individuals who perform these services.**

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale:

**These codes are existing codes, therefore the expert panel used the current PE direct inputs as reference.**

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:

**No recommendations greater than PE Subcommittee standards.**

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:

**There is an increase in clinical staff time to reflect the work performed by the PT Aide. The PT Aide assist with patients of greater complexity who are unstable and limited mobility.**

5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

**No clinical labor activities**

Intra-Service Clinical Labor Activities:

**PT Aide:**

- The PT Aide greets patient and provides either a gown or shorts/shirt, as the patient may be wearing a dress or skirt which would impede the PT's ability to perform therapeutic procedures. The Aide will ensure that all records are available to the PT for this visit.
- Based on instructions from the PT and/or PT Assistant, the PT Aide will ensure necessary supplies, such as goniometer, belts, k-bands, weights, and evaluation/testing forms are available. PT Aide will also ensure availability of equipment such as, hi lo table, rehab and testing system, stairs, and treadmill.
- PT Aide will be required to prepare and position patients for therapeutic intervention.

**PT Assistant:**

- The PT Assistant will take vital signs including blood pressure, height, and weight.
- PT Assistant helps position the patient, for the procedures by the PT and assists with taking and recording the patient's range of motion and strength. PT Assistant also assists with various transfers in and out of chairs, up and down on treatment table and in the safe assessment of use of stairs, and other functional activities.

Post-Service Clinical Labor Activities:

**PT Aide:**

- The PT Aide will clean all equipment surfaces and tools, including the hi-lo table, rehab and testing system, stairs, and treadmill.

**PT Assistant:**

- Patient leaves PT office with home instructions and exercises. It is very common for a patient/family member/caregiver to contact the PT office with questions about these instructions and questions about medications for post-evaluation pain/soreness.

**AMA/Specialty Society Update Process**  
**Practice Expense Summary of Recommendation**  
**Non Facility Direct Inputs**

CPT Long Descriptor:

**97530:** Therapeutic activities, direct (one-on-one) patient contact (use of dynamic activities to improve functional performance), each 15 minutes

**97533:** Sensory integrative techniques to enhance sensory processing and promote adaptive responses to environmental demands, direct (one-on-one) patient contact, each 15 minutes

**97535:** Self-care/home management training (eg, activities of daily living (ADL) and compensatory training, meal preparation, safety procedures, and instructions in use of assistive technology devices/adaptive equipment) direct one-on-one contact, each 15 minutes

**97537:** Community/work reintegration training (eg, shopping, transportation, money management, avocational activities and/or work environment/modification analysis, work task analysis, use of assistive technology device/adaptive equipment), direct one-on-one contact, each 15 minutes

**97760:** Orthotic(s) management and training (including assessment and fitting when not otherwise reported), upper extremity(s), lower extremity(s) and/or trunk, each 15 minutes

**97761:** Prosthetic training, upper and/or lower extremity(s), each 15 minutes

**977X1:** Orthotic(s)/prosthetic(s) management and/or training, upper extremity(ies), lower extremity(ies), and/or trunk subsequent orthotic(s)/prosthetic(s) encounter, each 15 minutes

Global Period: XXX

Meeting Date: January 2017

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:

In preparation for the January 2017 RUC meeting, the expert panel consisting of physical and occupational therapists, were consulted through a series of conference calls and face-to-face meetings. The expert panel reviewed the existing PE direct input values and compared them to current practice environments. The recommendations reflect changes in clinical labor, equipment and supply requirements. These inputs were further refined by the individuals who perform these services.

A selection of occupational therapists and physical therapists reviewed the current direct inputs for 97530, 97533, 97535, 97537, 97760, 97761, and 97762, and used their clinical experience and those inputs to guide development of recommendations for direct inputs for 97530, 97533, 97535, 97537, 97760, 97761, and 977X1.

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale:

**CPT Code: 97530, 97533, 97535, 97537, 97760, 97761, 977X1**  
**Specialty Society('s): AOTA, APTA**

- Current code 97530 is used to develop 97530 recommendations.
- Current code 97533 is used to develop 97533 recommendations.
- Current code 97535 is used to develop 97535 recommendations.
- Current code 97537 is used to develop 97537 recommendations.
- Current code 97760 is used to develop 97760 recommendations.
- Current code 97761 is used to develop 97761 recommendations.
- Current code 97762 is used to develop 977X1 recommendations.

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:

**No recommendations greater than PE Subcommittee standards.**

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:

The increased times proposed directly reflect times identified in standardized packages set forth by the PE Subcommittee, which did not exist when these codes were first valued. AOTA and APTA believe that our respective therapies meet the standards prescribe by the PE subcommittee in these packages

In addition, AOTA and APTA believe there is compelling evidence that the clinical staff time for occupational and physical therapy services have changed since previous reviews. Specifically, there is an increase in clinical staff time to reflect the use of aides and assistants in contemporary occupational and physical therapy practice. Physical and occupational therapy practice now make use of ancillary staff based on the patients' needs, making use of aides and assistants. Also, patients often have greater complexities which require the use of aides and assistants. For instance, increasing prevalence of older adults with severe cognitive deficits impacts the complexity of our intervention directly. When engaging in ADL retraining (meal prep, dressing, grooming, bathing, toileting) patients may need more intense and/or variable strategies of communication and cuing (verbal, non-verbal, tactile, proprioceptive) in order to participate appropriately. Patients may experience poor attention, lack of task initiation, challenges in sequencing, issues with task completion that require more complex and intense intervention from both the therapist and aide to not only complete the intervention and create a strategy in which the patient can improve their functional independence through-out the plan of care, but also to protect themselves and the patient in unsafe situations.

Also, there is an increase in clinical staff time to reflect the work performed by the OT & PT Aide. The OT& PT Aide assists with patients of greater complexity.

## **ADL Tab**

### Clinical Staff Time

Columns E, G, I, K, M, Row 25: We recommend the standard amount of time of 3 minutes to greet patient, provide gowning, and ensure appropriate medical records are available.

Columns E, G, I, K, M, Row 26: We recommend the standard amount of time of 3 minutes to obtain 3 vital signs.

**CPT Code: 97530, 97533, 97535, 97537, 97760, 97761, 977X1**  
**Specialty Society('s): AOTA, APTA**

Columns E, G, I, K, M, Row 29: We recommend the standard amount of time of 2 minutes to prepare the room, equipment, supplies.

Columns E, G, I, K, M, Row 30: We recommend the standard amount of time of 2 minutes to prepare and position patient.

In each description of work, the method in which the patient approaches the environment is essential to a successful intervention. The patient is positioned in the environment to provide additional challenges and to work to generalize the intervention techniques. For example, a patient with inattention or homonymous hemianopsia who is working to generalize visual scanning in the environment may be setup specifically so that key needed items are outside of visual field to promote the generalization of scanning. A patient with cognitive deficits may be setup to determine if they are able to predict a potential safety hazard and utilize compensatory strategies to safely navigate the hazards throughout intervention.

Columns E, G, I, K, M, Row 36: We recommend the standard amount of time of 3 minutes to clean the room/equipment by physician staff.

Columns E, G, I, K, M, Row 37: We recommend the standard 3 minutes to check dressings & wound/ home care instructions /coordinate visits/ medications.

#### Supplies

Columns E, G, I, Row 54: We recommend adding 1 pair of SB022 glove, non-sterile to account for supplies needed for clinical staff to clean equipment.

Columns E, G, I, Row 55: We recommend adding 5ml of SM012 disinfectant spray (Transeptic) to account for supplies needed for clinical staff to clean equipment.

Columns E, G, I, Row 56: We recommend adding 4 units of SK082 towel, paper (Bounty) (per sheet) to account for supplies needed for clinical staff to clean equipment.

Column K and M Row 54: We recommend adding 1 pair of SB022 glove, non-sterile to account for supplies needed for clinical staff to clean equipment.

Column K and M Row 55: We recommend adding 2 ml of SM012 disinfectant spray (Transeptic) to account for supplies needed for clinical staff to clean equipment.

Column K and M Row 56: We recommend adding 2 units of SK082 towel, paper (Bounty) (per sheet) to account for supplies needed for clinical staff to clean equipment.

#### Equipment

The equipment listed on the PE spreadsheet directly relates to the typical patient vignette and therefore includes only some items in a much larger range of standard equipment that would be found in an occupational or physical therapy setting.

Column E, Row 62: We recommend reducing EQ219 rehab and testing system (BTE primus) to 3 minutes to align with our recommended intraservice time of 15 minutes.

**CPT Code: 97530, 97533, 97535, 97537, 97760, 97761, 977X1**  
**Specialty Society('s): AOTA, APTA**

Column I, Row 68: We recommend 15 minutes for the use of EQ143 kit, ADL (currently at 16 minutes) to align with our recommended intraservice time of 15 minutes.

Column K, Rows 69 and 70: We recommend 7.5 minutes for the use of EQ147 kit, ergonomic (office) and EL001 environmental module – car, for CPT code 97537 to align with our recommended intraservice time of 15 minutes for 97537.

**O&P Tab**

Clinical Labor Time

Columns E, G, I, Row 25: We recommend the standard amount of time of 3 minutes to greet patient, provide gowning, and ensure appropriate medical records are available.

Columns E, G, I, Row 26: We recommend the standard amount of time of 3 minutes to obtain 3 vital signs.

Columns E, G, I, Row 29: We recommend the standard amount of time of 2 minutes to prepare the room, equipment, supplies.

Columns E, G, I, Row 30: We recommend the standard amount of time of 2 minutes to prepare and position patient.

Positioning is key in the initial and subsequent visits related to orthotics and prosthetics. The clinician must consider both the anatomical and functional alignment to assess, modify, and train the patient with the orthotic or prosthetic. For example, the clinician must be able to stabilize joints following surgical intervention to promote sustained functional use of the joints as well as promote soft tissue healing.

Columns E and I, Row 33: We recommend 5 minutes for the Aide.

The current code includes 7.5 minutes of assistant time. In current practice, the majority of this time (5 minutes) could be completed by an aide in conjunction with the therapist.

Column G, Row 33: We recommend 10 minutes for the Aide.

When training a patient on the use of a prosthetic, an aide is required to keep hands on the patient for safety while the therapist adjusts and challenges the patient with the lower extremity prosthetic.

Columns E, G, I, Row 36: We recommend the standard amount of time of 3 minutes to clean the room/equipment by physician staff.

Columns E, G, I, Row 37: We recommend 5 minutes to check dressings & wound/ home care instructions /coordinate visits/ medications.

Clinical expertise consistent with the training of the PT/OT assistant is needed to check dressings & wound, home care instructions, and coordinate visits. Typical patients must be able to complete wound care, monitor skin integrity, and maintain consistent visits with an orthotic or prosthetic.

Columns E, G, I, Row 42: We recommend 3 minutes to conduct phone calls/call in prescriptions.

**CPT Code: 97530, 97533, 97535, 97537, 97760, 97761, 977X1**  
**Specialty Society('s): AOTA, APTA**

Phone calls following the visit are used for coordination and consultation with other health care providers (e.g., surgeon, primary care physician)

Supplies

Columns G and I, Row 54: We recommend adding 1 unit of SB026 gown, patient. Fitting and reviewing use of a lower extremity prosthetic will require the patient to wear a gown due to the positioning of the prosthetic.

Columns E, G, I, Row 66: We recommend adding 1 pair of SB022 glove, non-sterile to account for supplies needed for clinical staff to clean equipment.

Columns E, G, I, Row 67: We recommend adding 5ml of SM012 disinfectant spray (Transeptic) to account for supplies needed for clinical staff to clean equipment.

Columns E, G, I, Row 68: We recommend adding 4 units of SK082 towel, paper (Bounty) (per sheet) to account for supplies needed for clinical staff to clean equipment.

Equipment

The equipment listed on the PE spreadsheet directly relates to the typical patient vignette and therefore includes only some items in a much larger range of standard equipment that would be found in an occupational or physical therapy setting.

Column I, Row 74: We recommend 15 minutes for the use of EF033 table, treatment, hi-lo (currently at 16 minutes) to align with our recommended intraservice time of 15 minutes.

5. Please describe in detail the clinical activities of your staff:

**Occupational Therapy Assistant:** An OTA must graduate with an associate degree (two years, usually five semesters) from an accredited OTA program at a technical or community college, college, or university. Graduates must pass the national examination for licensing/certification/regulation in all states to be eligible to work. OTAs work under the direction of an occupational therapist (OT). Licensure or certification is required in each state in which an OTA works and must be renewed on a regular basis, with a majority of states requiring continuing education as a requirement for renewal. The OTA scope of work and supervision requirements are defined by the occupational therapy practice act in each state as well as by payer policy.

**Occupational Therapy Aide:** Training for this position is often gained on the job or through technical education programs.

Activity	Staff Type	Notes
<b>SERVICE PERIOD</b>		
<b>Start: When patient enters office/facility for surgery/procedure:</b>		
Greet patient, provide gowning, ensure appropriate medical records are available	PT/OT Aide (L023A)	The PT/OT Aide will greet the patient and family and collect items provided or gather items needed for an evaluation. The Aide may also need to assist the patient with preparing materials, initiating or completing paperwork, and locating the area with the evaluation will start. The Aide will ensure that all records are available for

**CPT Code: 97530, 97533, 97535, 97537, 97760, 97761, 977X1**  
**Specialty Society('s): AOTA, APTA**

		this visit.
Obtain vital signs	PT/OT Assistant (L039B)	The Assistant will take vital signs including BP, height, weight, pulse, respiration rate, and measurements related to underlying impairments and reason for intervention.
Prepare room, equipment, supplies	PT/OT Aide (L023A)	Based on instructions from the clinician the Aide will ensure necessary supplies, such as sensory integration equipment, modules, and/or kits. The Aid will prep the kitchen and bathroom modules to ensure that all equipment needed for the individualized evaluation is available and setup. Standard 2 minutes is recommended.
Prepare and position patient/ monitor patient/ set up IV	PT/OT Aide (L023A)	The Aide will assist with positioning the patient in the module, on the hi-low table, or at the equipment such as BTEas indicated by the clinician.
<b>Intra-service</b>		
Assist physician in performing procedure (15%)	PT/OT Assistant (L039B)	<p>The OT Assistant will assist the clinician with the exam / evaluation which includes obtaining and recording measures. The standardized 67% of intra-time is higher than clinically appropriate. The recommended times are 50% of the intra-service time for 97533, 97535, 97537, 97542. The recommended times are 25% for Assistant and 25% for Aide for 97530 and 97542. The recommended times for 97660 and 977X1 are 16% for Assistant and 33% for Aide. For 97761, the times are 33% for Assistant and 75% for Aide.</p> <p>The Assistant will provide assistance and support for the evaluation. This may include recording performance data, physical facilitation with the patient, grading challenges in environment , and other clinical assistance throughout the portion of the intervention. An assistant provides clinical expertise consistent with training to grade tasks and the environment for the patient and provides the clinically appropriate assistance for the patient as the therapist facilitates the performance in self-care, community re-integration, and sensory.</p> <p>For 97530 and 97542, the assistant provides clinically appropriate assistance for 3.75 minutes while the hands on assistance for the remaining 3.75 minutes can be appropriately provided by the training consistent of the Aide.</p> <p>For 97760 and 977X1, the clinical expertise consistent with an Assistant are only required for 2.5 minutes to assist with orthotic (and/or prosthetic for 977X1) adjustment and training in functional use of orthotic and/or prosthetic. Training consistant with an Aide is required for 5 minutes for stabilization at the direction of the clinician.</p> <p>For 97761, the initial prosthetic training requires additional clinical expertise consistent with an Assistant and additional hands</p>

**CPT Code: 97530, 97533, 97535, 97537, 97760, 97761, 977X1**  
**Specialty Society('s): AOTA, APTA**

		on assistance under the direction of the clinician consistent with training of an Aide. During initial prosthetic training, the patient's balance is typically severely impaired and there are safety concerns with shifting balance and weight bearing using the prosthetic.
<b>Post-Service</b>		
Clean room/equipment by physician staff	PT/OT Aide (L023A)	The Aide will clean all equipment surfaces and tools. Standard 3 minutes is recommended.
Check dressings & wound/home care instructions /coordinate office visits /prescriptions	PT/OT Assistant (L039B)	Before patients leave the office, the clinician will have updated home and community activity programs to facilitate self-management skill development. The Assistant will review the instructions and answer questions with the patients prior to the patient leaving the office.
<b>POST-SERVICE Period- Patient leaves office</b>		
Conduct phone calls/call in prescriptions	PT/OT Assistant (L039B)	When patients leave the office, they will have home and community activity programs to facilitate self-management skill development. It is very common for patients/family/caregivers to contact the office with questions after leaving the office. To account for at least one phone call, we recommend standard time.

RUC HCPAC Review Board Summary of Recommendations  
*\*Physical Medicine and Rehabilitation Services – Identified by Numerous Screens\**

January 2017

**Orthotic Management and Prosthetic Training**

CPT Codes 97760-97761, describing orthotic and prosthetic management and training, were identified as part of the larger family of physical medicine and rehabilitation services to be reviewed as potentially misvalued services due to high expenditure and high volume growth screens. The physical and occupational therapists requested coding revisions to these codes to differentiate more properly between the initial and subsequent encounters and to better describe the ongoing management and/or training that is involved with subsequent encounters.

***97760 Orthotic(s) management and training (including assessment and fitting when not otherwise reported), upper extremity(ies), lower extremity(ies) and/or trunk, initial orthotic(s) encounter, each 15 minutes***

The HCPAC reviewed the survey results from more than 100 respondents and recommends the survey 25<sup>th</sup> percentile work RVU of 0.50 for CPT code 97760. The respondents, however, appeared to respond to the time questions by considering the entirety of the visit (10 minutes pre-time, 30 minutes intra-service time and 10 minutes immediate post-service time) for two units of service. The HCPAC agreed that the appropriate time for the code should be divided by two and reflect 5 minutes pre-time, 15 minutes intra-service time and 5 minutes immediate post-service time, for each unit of service. The HCPAC approved compelling evidence to increase the current value of CPT code 97760 from 0.45 to the 25<sup>th</sup> percentile of 0.50, as the orthotics have become more dynamic and customized (new technology) since the previous evaluation. The HCPAC determined that CPT code 97760 is equivalent in work to CPT Code 29125 *Application of short arm splint (forearm to hand); static* (work RVU = 0.50 and 5 minutes pre-time, 15 minutes intra-service time and 3 minutes immediate post-service time). **The RUC HCPAC Review Board recommends a work RVU of 0.50 and time (5/15/5) for CPT code 97760.**

***97761 Prosthetic(s) training, upper and/or lower extremity(ies), initial prosthetic(s) encounter, each 15 minutes***

The HCPAC reviewed the survey results from more than 50 respondents and recommends the survey 25<sup>th</sup> percentile work RVU of 0.50 for CPT code 97761. The respondents, however, appeared to respond to the time questions by considering the entirety of the visit (10 minutes pre-time, 30 minutes intra-service time and 10 minutes immediate post-service time), for two units of service. The HCPAC agreed that the appropriate time for the code should be divided by two and reflect 5 minutes pre-time, 15 minutes intra-service time and 5 minutes immediate post-service time, for each unit of service. The HCPAC approved compelling evidence to increase the current value of CPT code 97761 from 0.45 to the 25<sup>th</sup> percentile of 0.50, as the orthotics have become more dynamic and customized (new technology) since the previous evaluation. Patient expectation has also greatly increased over the past decade. The HCPAC determined that CPT code 97761 is equivalent in work to CPT Code 29125 *Application of short arm splint (forearm to hand); static* (work RVU = 0.50 and 5 minutes pre-time, 15 minutes intra-service time and 3 minutes immediate post-service time). **The RUC HCPAC Review Board recommends a work RVU and time (5/15/5) of 0.50 for CPT code 97761.**

**97763 Orthotic(s)/prosthetic(s) management and/or training, upper extremity(ies), lower extremity(ies), and/or trunk, subsequent orthotic(s)/prosthetic(s) encounter, each 15 minutes**

The HCPAC reviewed the survey results from nearly 90 respondents and recommends the 25<sup>th</sup> percentile work RVU of 0.48 for CPT code 97763. The respondents, however, appeared to respond to the time questions by considering the entirety of the visit (5 minutes pre-time, 20 minutes intra-service time and 10 minutes immediate post-service time), for two units of service. The HCPAC agreed that the appropriate time for the code should be divided by two for pre/post and reflect 15 minutes for intra-service time, which aligns with the code descriptor. The HCPAC recommends 2.5 minutes pre-service time, 15 minutes intra-service time and 5 minutes immediate post-service time, for each unit of service. The HCPAC approved compelling evidence to increase the current value of the deleted code 97762 from 0.25 to the 25<sup>th</sup> percentile of 0.48, as the orthotics and prosthetics have become more dynamic and customized (new technology) since the previous evaluation. Additionally, patients are treated much earlier and are more acute. The HCPAC noted that CPT code 97763 is similar in work to CPT code 29125 *Application of short arm splint (forearm to hand); static* (work RVU = 0.50, 5 minutes pre-time, 15 minutes intra-service time and 3 minutes immediate post-service time). The HCPAC agreed that the subsequent visit is very similar in work to the initial visit as the orthotics and prosthetics are now customized. The previous code 97762 described a simple re-check of a static orthotic/prosthetic. **The RUC HCPAC Review Board recommends a work RVU and time (2.5/15/5) of 0.48 for CPT code 97763.**

**Practice Expense**

The practice expense inputs were reviewed with the understanding that the multiple procedure payment reduction of 50% is in place for the practice expense component for the second and subsequent reporting of a physical medicine and rehabilitation service on the same date of service. The specialty society confirmed that it is typical to bill for two units of these services. The clinical staff time for 97760, 97761 and 97763 have all been reduced from the current inputs. The supplies were reviewed in great detail to ensure accuracy and were adjusted to account for the typical units billed. The equipment time has been updated to conform to the proper formula and standards.

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
<b>Physical Medicine and Rehabilitation Orthotic Management and Training and Prosthetic Management-Training</b>				
▲97760	CC1	Orthotic(s) management and training (including assessment and fitting when not otherwise reported), upper extremity(ies), lower extremity(ies) and/or trunk, <u>initial orthotic(s) encounter</u> , each 15 minutes  (Code 97760 should not be reported with 97116 for the same extremity[ies])	XXX	0.50

▲97761	CC2	Prosthetic(s) training, upper and/or lower extremity(ies), <u>initial prosthetic(s) encounter</u> , each 15 minutes	XXX	0.50

**Subject:** Updated Compelling Evidence for Work RVW - Tab 29

---

### **Compelling Evidence**

The American Occupational Therapy Association (AOTA) and American Physical Therapy Association (APTA) submit the following **updated** compelling evidence to support the increase in work values for the following Physical Medicine and Rehabilitation codes. These codes were valued in 1994 (97110, 97112, 97113, 97530), 1995 (97116, 97535, 97537, 97542), 1996 (97760, 97761), or 1998 (97140) and have not been revalued. Since then there has been significant advances in research related to practice, as exemplified by evidence-based Practice Guidelines, increased use of electronic tools, and increased public health awareness of the effects of cognitive and psychosocial problems on individual daily functioning. As multidisciplinary research and evidence evolved, the educational requirements for occupational and physical therapists have increased. All of these factors have resulted in amplified intensity and complexity of the therapeutic services provided by occupational and physical therapists, resulting in increased work RVUs.

**We present the following arguments for compelling evidence for increases in the work value of codes 97110, 97112, 97113, 97116, 97140, 97530, 97535 and 97537 based on:**

- **Advances in educational and professional standards**
- **Advances in technology**
- **Increased complexity of patient population**
- **Physician (provider) time**
- **Advances in research and practice**

Since the last valuation of these codes, the healthcare landscape has evolved. The change in educational requirements for physical and occupational therapists and the movement to electronic health records are two significant factors impacting the work valuation of these codes. Physical therapists and occupational therapists are more highly trained, educated, and skilled providers based on educational requirements and the profile of the patient's being served. For example, effective January 1, 2016, all physical therapy programs are now at the clinical

doctorate level. The distinct difference in competency is primarily in the area of imaging and pharmacology. Therapists are better able to analyze the impact of the findings noted in radiology studies, incorporating this information into their clinical assessment and utilizing it when developing a plan of care. Health professionals are dealing with many patients presenting with issues of polypharmacy representing more complex clinical assessment, decision making, and factoring in a greater risk for complications associated with the interactions of multiple medications and therapeutic interventions. New OT practitioners are now educated in occupational science and are held to higher educational and practice standards than when these codes were developed.

The second influencing factor is the movement to electronic health records. Although PTs and OTs are not yet required or incentivized to adopt EHR systems for such initiatives as Medicare's Meaningful Use Program, or for MIPS moving forward, physicians and facilities included in these programs expect the therapists with whom they share patients to use compatible ER systems. The rapid movement in the US healthcare system toward effective coordination of care based on access to longitudinal information that follows health care consumers requires adoption of electronic medical records by occupational therapists and physical therapists. The amount of relevant clinical content that EHRs make available to therapists to read, interpret and make clinical decisions on for patient care has increased the work associated with therapy services.

The combined increased level of knowledge of the therapist and the access to, and utilization of, more real time information in the clinical decision making process increases the demand on the therapist while providing a higher level of clinical care to the patient's being served. The enhanced expectations for clinical documentation associated with a number of Medicare regulatory requirements contribute to this increased demand.

Over the years, changes in both systems and practice, as well as changes in patient profiles and characteristics, have had a distinct impact on therapy practice.

Since these codes were first approved, there have been great strides in fields including occupational science, psychology, vision, cognition, neuropsychology and others. Evidence has come from such areas as brain imaging, neurobiological sciences, and interdisciplinary research in critical areas such as cognition, performance, function and participation. These scientific developments, such as the evidence produced by the Well Elderly Study,<sup>1</sup> have resulted in a

---

<sup>1</sup> Clark, F., Jackson, J., Carlson, M., Chou, C., Cherry, B.J., Jordan-Marsh, M., Knight, B.G., Lai, M., White, B., Hay, J., Lam, Claudia, Marterella, A. & Azen, S.P. (2011). Effectiveness of a lifestyle intervention in promoting the well-being of independently living older people: results of the Well Elderly 2 Randomised Controlled Trial. *Journal of Epidemiology and Community Health*, doi:10.1136/jech.2009.099754; Clark, F., Azen, S. P., Zemke, R., Jackson, J., Carlson, M., Mandel, D. & Lipson, L. (1997). Occupational therapy for independent-living older adults: A randomized controlled trial. *JAMA*, 278(16), 1321-1326.

broader scope of inquiry in occupational therapy interventions. The broad clinical input and multidisciplinary physiological data must be analyzed and considered in the course of providing therapy services to a patient. As a result, more work is required to deliver therapy services.

Therapy practitioners are now working with a patient population that is increasingly medically and culturally diverse, living with more chronic comorbidities, living to an older age, and choosing to remain in the home as long as possible and “age in place”, accessing outpatient services with higher levels of need because of the effects of reduced inpatient acute and rehabilitation stays.<sup>2</sup> Although an aging population and increased lifespan has had a widespread effect on all practitioners, therapy practice has been significantly more complex due to increases of clients with cognitive impairments, psychosocial impairments and multiple chronic conditions.

### *Patients with Cognitive Impairments*

According to the Centers for Disease Control and Prevention, the number of persons living with Alzheimer’s disease, the most well-known form of cognitive impairment may rise to over 13 million by 2050.<sup>3</sup> Therapists consider and treat clients for many of the common symptoms of functional cognitive impairment cited by this article (e.g., memory loss, trouble exercising judgment, changes in mood or behavior, difficult planning and carry out tasks, such as following a recipe or keeping track of monthly bills). These conditions and comorbidities require more time and therapist effort during therapy treatment.

Working with a patient with cognitive deficits of any kind presents inherent challenges. The increasing prevalence of older adults with mild to severe cognitive deficits directly impacts the complexity of OT and PT interventions. For instance, when engaging in ADL retraining (meal prep, dressing, grooming, bathing, toileting), patients may need more intense and/or variable strategies of communication and cuing (verbal, non-verbal, tactile, proprioceptive) in order to participate appropriately in the clinical session. Further, patients may have poor impulse control resulting in inter-personal and social deficits and critical deficits in safety awareness (leaning on a hot burner, leaving an electrical device near a full tub of water). Patients may experience poor attention, lack of task initiation, challenges in sequencing, issues with task completion that require more complex and intense intervention from the therapist to not only complete the intervention and create a strategy in which the patient can improve their functional independence through-out the plan of care, but also to protect themselves and the patient in

<sup>3</sup> Centers for Disease Control. Cognitive Impairment: A Call to Action, Now! Feb. 2011, retrieved Sept. 2015); Herbert LE, Scherr PA, Bienias JL, Bennett DA, Evans DA. Alzheimer’s disease in the U.S. population: Prevalence estimates using the 2000 census. Archives of Neurology 2003;60:1119–1122.

unsafe situations.

For instance, a patient with cognitive deficits can disconnect themselves from their portable oxygen source to use the bathroom could have had serious complications from de-saturation and fall risk. Another example could be where a patient who did not have an identified pre-morbid cognitive impairment suffers a hip fracture. Upon assessment, the therapist noted a decline in functional cognition, especially in safety and judgement during the performance of any dynamic ADL's in standing. While the therapist worked to integrate dressing equipment and toileting adaptations for the home environment, the client's decreased insight into potential risks, more intense services are required to ensure that the client was able to build upon prior routines to incorporate the equipment and maximize ability to participate in self-care.

#### *Patients with Psychosocial and Mental Impairments*

According to a survey from the Substance Abuse and Mental Health Services Administration, 45.6 million adults in the US had a diagnosable mental illness in 2011<sup>4</sup>. The most common of these conditions are depressive and anxiety disorders. When a mental health condition exists, it must be addressed in addition to the other conditions that may need therapy intervention, adding to the clinician work involved in the interventions.

#### *Patients with Multiple Chronic Conditions*

Studies demonstrate that the presence of multiple chronic conditions (MCC), relating to both physical and mental health, adds a layer of complexity to disease management and careprovision; recently the U.S. Department of Health and Human Services established a strategic framework for improving the health of this population.<sup>5</sup> Between 1999–2000 and 2009–2010, the percentage of adults aged 45–64 and 65 and over with two or more of nine selected chronic conditions increased for both men and women, all racial and ethnic groups examined, and most income groups.<sup>6</sup> During the intervening 10-year period, the percentage of adults aged 65 and over with both hypertension and diabetes increased from 9% to 15%; prevalence of hypertension and heart disease increased from 18% to 21%; and prevalence of hypertension and cancer increased from 8% to 11%.

Occupational and physical therapy practice has become more work and time intensive as a result of the impact of these changes in MCCs. Further because these patients are more complex there

are many more performance factors to address in MCC patients. For instance, therapists spend more time with MCC patients because fatigue – both mental and physical--is a frequent limiting factor. Therapists must spend time incorporating energy conservation strategies into treatment plans. Additionally, more intensive monitoring of response to care is required with this patient population.

### *Administrative Changes*

Over the past decades, therapists have been subject to increased documentation requirements, partially due to changes in legislation and regulation as well as to reflect an emphasis on quality of care, outcomes-focused management, and accountability. This has increased the work for both the therapist and the therapy clinical staff.

### **Sensory Integrative Techniques (97533)**

In addition to the changes reviewed above, outcome measures are more complex requiring increased costs for purchase of tests and training needed to evaluate outcomes. The diagnostic criteria for autism changed in 2013, contributing to increase in prevalence. Due to this change, more children are diagnosed earlier, adding complexity in early interventions for ages 0-3. Additionally, opening the diagnostic criteria led to an increased emphasis on spectrum. Therefore, therapists are treating a wide range of children, from those who are severely impaired in performance skills all the way to those who are less impaired, but have severe interpersonal and communication deficits. The intervention must be more targeted.

A measure of Fidelity for the provision of sensory integration in OT has been established which states the need for a large space and specialized equipment. Additional costs associated with increases in rent and materials are reflected. In addition, the training component requires additional education. Occupational therapists delivering sensory integration intervention require a Master's degree and post-professional training in occupational therapy and certification in sensory integration. Finally, there is an increased prevalence of children with ASD (1 in 68) and sensory needs are now recognized as being a core feature of autism (DSM-5), making this a population that requires the expertise of occupational therapy. Moreover, children with autism often have complex physical, communication and psychosocial needs. As a result of the enhanced educational requirements, the application of sophisticated, evidenced based, outcomes and more complex patients, the work required to provide therapy services has increased

### **Wheelchair Management Training (CPT 97542)**

This intervention is used when training the patient with continued assessment is used when training and continued assessment for components of a wheelchair, the most appropriate seating system, the most appropriate maneuvering system.

In addition to the changes reviewed above, there is compelling evidence for increases to work values for the wheelchair management and training code. CPT code 97542 was last in 2001. Since then many advances have been made related to a wheelchair assessment. According to CPT Changes 2006 – An Insider’s View, a wheelchair assessment may include but is not limited to the patient’s strength, endurance, living situation, and ability to transfer in and out of the chair, level of independence, weight, skin integrity, muscle tone, and sitting balance. Following verification of the patient’s need, measurements are taken prior to ordering the equipment. This measurement occasionally involves testing the patient’s abilities with various chair functions including propulsion, transferring from the chair to other surfaces (bed, toilet, car), and use of the chair’s locking mechanism on various types of equipment for optimal determination of the appropriate equipment by the patient and caregiver. Over a decade ago, Medicare program documentation of medical necessity requirements increased substantially, requiring that mobility related activities of daily living (MRADLs) be assessed to identify how the equipment will impact the client’s life. Medicare requires that documentation be specific, with justification for every component of a complex wheelchair recorded. Medicare documentation for a skilled wheelchair assessment often includes the following:

*\*What recent event prompted the need for a skilled wheelchair assessment;*

*\*What previous wheelchair assessments have been completed, such as during a Part A SNF stay;*

*\*Most recent prior functional level;*

*\*What intervention was tried by nursing staff, caregivers or the patient themselves;*

*\*Functional deficit due to poor seating or positioning;*

*\*Objective assessments of applicable impairments such as range of motion (ROM), strength, sitting balance, skin integrity, sensation and tone.*

*\*Documentation must relate the training to expected functional goals that are attainable by the patient and/or caregiver.*

*\*The response of the patient to the instruction or fitting*

*\*The cognitive ability of the client to use a complex chair.*

The work involved in the wheelchair training component has only increased as the diversity and complexity of wheelchair technology, both manual and motorized, has evolved substantially. Technology now necessitates that therapists consider the use of augmentative communication and environmental control systems that clients will be using in order to select a complex wheelchair that will be compatible with those devices. From the selection of wheelchair

cushions to augmentative communication devices, environmental control systems and tie-down systems for safety in driving and community mobility; all these factors must be considered when selecting the appropriate mobility device. In addition, patients present with multiple chronic conditions, cognitive and psychosocial impairments; the Medicare population is living longer. Patients whose only means of independent mobility is a wheelchair need to learn how to manipulate the wheelchair parts, including adapting to new technology, propel and maneuver a wheelchair on different types of surfaces including ramps and uneven terrain, curbs and stairs. The training in wheelchair management is often extensive. Technological advances have greatly increased the demands on therapists who address wheelchair evaluation and management.

In May 2005, through the National Coverage Determination (NCD) process, CMS issued function-based criteria for Mobility Assistive Equipment (MAE), including wheelchairs, an algorithmic process called the Clinical Criteria for MAE Coverage. This work intensive and complex assessment process increased the work of 97542 because it expanded the types of health professionals who may order certain types of PMDs and required a face-to-face examination by occupational therapists and physical therapists. Clinician must demonstrate that MAE is reasonable and necessary for beneficiaries who have a personal mobility deficit sufficient to impair their participation in mobility-related activities of daily living (MRADLs) such as toileting, feeding, dressing, grooming, and bathing in customary locations within the home.

The Clinical Criteria for MAE Coverage NCD has a complex flow chart that requires the following questions be asked to make the above determination:

*\*Does the beneficiary have a mobility limitation that significantly impairs his/her ability to participate in one or more MRADLs in the home? A mobility limitation is on that:*

*\*Are there other conditions that limit the beneficiary's ability to participate in MRADLs at home?*

*\*If these other limitations exist, can they be ameliorated or compensated sufficiently such that the additional provision of MAE will be reasonably expected to significantly improve the beneficiary's ability to perform or obtain assistance to participate in MRADLs in the home?*

*\*Does the beneficiary or caregiver demonstrate the capability and the willingness to consistently operate the MAE safely?*

*\*Can the functional mobility deficit be sufficiently resolved by the prescription of a cane or walker?*

*\*Does the beneficiary's typical environment support the use of wheelchairs including scooters/power-operated vehicles (POVs)?*

*\*Does the beneficiary have sufficient upper extremity function to propel a manual wheelchair in the home to participate in MRADLs during a typical day? The manual wheelchair should be optimally configured (seating options, wheelbase, device weight, and other appropriate accessories) for this determination.*

*\*Does the beneficiary have sufficient strength and postural stability to operate a POV/scooter?<sup>78</sup>*

### **Orthotics Management and Training and Prosthetic Training Codes (97760, 97761, 9776X1)**

In addition to the changes reviewed above, there is compelling evidence for increases to work values for the orthotic management and training and prosthetic training codes. First, many orthotics and prosthetics require increasingly complex and critical adjustments based on changes in the status of a post-operative client. For example, a client who underwent a joint replacement procedure of their hand will require an orthotic re-fitting as swelling is reduced, and re-adjustment of angles of pull from external outrigger structures. This could require a great deal of time and expertise on the part of the therapist. In addition, pre-fabricated orthotic devices that are dynamic in nature (versus static) and used for enhancing proper movement of a weakened hand after a stroke or other nerve injury will need regular adjustments to ensure that fit and angles are correct. Orthotics and prosthetics management and training technology has grown since these codes were last valued, adding to the complexity of the required specialized training of the therapist. For instance, some devices now have embedded electrical components that facilitate muscle contractions of limbs weakened by stroke. These devices require expert knowledge of the clinician and time to ensure that the electrodes are in the proper place to work effectively.

## AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS SUMMARY OF RECOMMENDATION

---

CPT Code: 97760      Tracking Number    CC1

Original Specialty Recommended RVU: **0.50**  
Presented Recommended RVU: **0.50**

Global Period: XXX

RUC Recommended RVU: **0.50**

CPT Descriptor: Orthotic(s) management and training (including assessment and fitting when not otherwise reported), upper extremity(ies), lower extremity(ies) and/or trunk, initial orthotic(s) encounter, each 15 minutes

---

### CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A patient presents with a median nerve injury. Direct one-on-one services are provided to design, fit, and instruct in the use of an orthosis.

Percentage of Survey Respondents who found Vignette to be Typical: 68%

### Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

---

Description of Pre-Service Work: Review medical record, including any communications from referring physician or other qualified health care provider(s). Prepare to see patient.

Description of Intra-Service Work: Perform status check of skin integrity, sensation, fit of orthotic, observation of movement

Using direct contact (one on one) techniques, e assess client for proper orthotic including proper fit and function (optimal components/position); complete necessary modifications to orthotic; train patient in proper use of orthotic, wearing schedule, care and precautions; assess how the patient is tolerating orthotic and making necessary modifications; instruct the patient in adaptive functional activities while wearing orthotic to assure safety and competence.

Instruct patient in performance of skin checking for pressure points at regular intervals, wearing schedule, exercises to be performed at home.

Description of Post-Service Work: Document treatment in the medical record. Communicate with referring physician, other health care provider(s), and patient/caregiver, as required.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

97760 is currently valued at 0.45 WRVUs, with 2 min pre-service, 14 min intra-service and 2 min immediate post-service time.

The primary selected reference service was 29125 which has 0.50 WRVUs with 15 min of intra-service work and the secondary selected reference service was 29126 which has 0.68 WRVUs with 30 min of intra-service work. Both reference services have intra-service times that equal to or lower than the median of 30 min for the surveyed 97760.

The recommended WRVU is 0.50 which corresponds to the median WRVU of the top reference code and the 25<sup>th</sup> percentile of the surveyed code.

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☒ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. A modality may be performed before or after a therapeutic or manual therapy.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 97660

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty physical therapy                      How often? Sometimes

Specialty occupational therapy                      How often? Sometimes

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?  
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. national frequency is not known

Specialty	Frequency	Percentage	%
Specialty	Frequency	Percentage	%
Specialty	Frequency	Percentage	%

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 57,165 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC database

Specialty physical therapy	Frequency 15126	Percentage 26.46 %
Specialty occupational therapy	Frequency 29503	Percentage 51.61 %
Specialty	Frequency 0	Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

## Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Other

BETOS Sub-classification:

BETOS Sub-classification Level II:

Other

### **Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 97760

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

---

CPT Code: 97761      Tracking Number    CC2

Original Specialty Recommended RVU: **0.50**  
Presented Recommended RVU: **0.50**

Global Period: XXX

RUC Recommended RVU: **0.50**CPT Descriptor: Prosthetic(s) training, upper and/or lower extremity(ies), initial prosthetic(s) encounter, each 15 minutes

---

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A patient presents for prosthetic training following a below knee amputation for use and care of a below knee prosthesis with molded socket and solid ankle cushion heel (SACH) foot

Percentage of Survey Respondents who found Vignette to be Typical: 81%

**Site of Service (Complete for 010 and 090 Globals Only)**

---

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

---

Description of Pre-Service Work: Review medical record, including any communications from referring physician or other qualified health care provider(s). Prepare to see patient.

Description of Intra-Service Work: Perform status check of skin integrity, wound changes or abnormalities of incision, sensation, fit of prosthetic, observation of movement. The clinician may focus the intervention on instruction in the use and purpose of the components of the prosthetic and checking prosthetic fit; instructing patient in care of prosthetic characteristics, precautions and durations of wear; assessing level of function, posture, and gait while wearing prosthetic; instructing in home program based on education and functional task training techniques learned in clinic. Instruct patient in performance of skin checks and skin care; residual limb shrinkage causing pistoning, wearing schedule, care for prosthetic components, exercises for muscle strengthening and flexibility.

Description of Post-Service Work: Document treatment in the medical record. Communicate with referring physician, other health care provider(s), and patient/caregiver, as required.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

The 25<sup>th</sup> percentile survey data support selection of the recommended 0.50 RVW, which is an increase of current RVW, 0.45. The median intra-service time, based on survey results, reflects a slight increase from 14 minutes to 15 minutes. We are requesting 5 minutes for pre- and post-service time which is an increase in current time which is pre-service 2 minutes and post-service, 2 minutes. The survey median for pre- and post-service time is 10 minutes, however, we recommend 5 minutes as appropriate. The survey median supports an intra-service time of 15 minutes.

**The compelling evidence to increase the value of this code reflects changes in technology and provider work (see separate compelling evidence document). The specialty society recommends the RVU value of 0.50. The calculated IWP/UT for 97761 is 0.018.**

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☒ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. A modality may be performed before or after a therapeutic or manual therapy.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 97761

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

## AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS SUMMARY OF RECOMMENDATION

---

CPT Code: 97763      Tracking Number    CC3

Original Specialty Recommended RVU: **0.48**  
Presented Recommended RVU: **0.48**

Global Period: XXX

RUC Recommended RVU: **0.48**

CPT Descriptor: Orthotic(s)/prosthetic(s) management and/or training, upper extremity(ies), lower extremity(ies), and/or trunk subsequent orthotic(s)/prosthetic(s) encounter, each 15 minutes

---

### CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A patient presents following a metacarpal phalangeal (MP) flexible implant arthroplasty with increased edema. The postop orthosis causes pressure on the ulnar styloid. Direct one-on-one services are provided to make adjustments to the previously fitted orthosis.

Percentage of Survey Respondents who found Vignette to be Typical: 80%

### Site of Service (Complete for 010 and 090 Globals Only)

---

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

---

Description of Pre-Service Work: Review medical record, including any communications from referring physician or other qualified health care provider(s). Prepare to see patient.

Description of Intra-Service Work: Perform status check of skin integrity, wound changes or abnormalities of incision, sensation, fit of prosthetic/orthotic, observation of movement, edema observation.

The clinician may focus the intervention on assessing upper and/or lower quadrant for any potential problems; integumentary concerns, assistive range of motion; sensation; pain; assessing orthotic for alignment and fit; modifying/adjusting/repairing components of orthotic/prosthetic; adding/deleting/padding; reinstruct patient regarding wearing schedule, application, and care of orthotic/prosthetic; and ensuring patient practices proper technique.

Instruct patient in performance of skin checks and skin care; proper care of orthotic, exercises to perform at home throughout the day.

Description of Post-Service Work: Document treatment in the medical record. Communicate with referring physician, other health care provider(s), and patient/caregiver, as required.

**Modifier -51 Exempt Status**

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

**New Technology/Service:**

Is this new/revised procedure considered to be a new technology or service? No

**TOP KEY REFERENCE SERVICE:**

<u>Key CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
29125	000	0.50	RUC Time

CPT Descriptor Application of short arm splint (forearm to hand); static**SECOND HIGHEST KEY REFERENCE SERVICE:**

<u>Key CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
99212	XXX	0.48	RUC Time

CPT Descriptor Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A problem focused history; A problem focused examination; Straightforward medical decision making. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are self limited or minor. Typically, 10 minutes are spent face-to-face with the patient and/or family.

**KEY MPC COMPARISON CODES:**

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

<u>MPC CPT Code 1</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>	<u>Most Recent Medicare Utilization</u>

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

97763 is a new code, revised from the previous CPT code 97762 which was valued at 0.25 WRVUs, with 2 min pre-service, 14 min intra-service and 2 min immediate post-service time.

The primary selected reference service was 29125 which has 0.50 WRVUs with 15 min of intra-service work and the secondary selected reference service was 99212 which has 0.48 WRVUs with 10 min of intra-service work. Both reference services have intra-service times lower than the median of 20 min for the surveyed 97763.

The recommended WRVU is 0.48 which corresponds to the median WRVU of the top reference code and the 25<sup>th</sup> percentile of the surveyed code.

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☒ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. A modality may be performed before or after a therapeutic or manual therapy.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 97762

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty physical therapy                      How often? Rarely

Specialty occupational therapy                      How often? Rarely

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?  
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. national frequency is not known

Specialty	Frequency	Percentage	%
Specialty	Frequency	Percentage	%
Specialty	Frequency	Percentage	%

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 14,278 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC database for 97762

Specialty physical therapy	Frequency 3535	Percentage 24.75 %
Specialty occupational therapy	Frequency 7128	Percentage 49.92 %
Specialty	Frequency 0	Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

## Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Other

BETOS Sub-classification:

BETOS Sub-classification Level II:

Other

---

### **Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 97762

Global Period: XXX

Meeting Date: January 2017

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:

In preparation for the January 2017 RUC meeting, the expert panel consisting of physical and occupational therapists, were consulted through a series of conference calls and face-to-face meetings. The expert panel reviewed the existing PE direct input values and compared them to current practice environments. The recommendations reflect changes in clinical labor, equipment and supply requirements. These inputs were further refined by the individuals who perform these services.

A selection of occupational therapists and physical therapists reviewed the current direct inputs for 97530, 97533, 97535, 97537, 97760, 97761, and 97762, and used their clinical experience and those inputs to guide development of recommendations for direct inputs for 97530, 97533, 97535, 97537, 97760, 97761, and 977X1.

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale:

**CPT Code: 97530, 97533, 97535, 97537, 97760, 97761, 977X1**  
**Specialty Society('s): AOTA, APTA**

- Current code 97530 is used to develop 97530 recommendations.
- Current code 97533 is used to develop 97533 recommendations.
- Current code 97535 is used to develop 97535 recommendations.
- Current code 97537 is used to develop 97537 recommendations.
- Current code 97760 is used to develop 97760 recommendations.
- Current code 97761 is used to develop 97761 recommendations.
- Current code 97762 is used to develop 977X1 recommendations.

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:

**No recommendations greater than PE Subcommittee standards.**

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:

The increased times proposed directly reflect times identified in standardized packages set forth by the PE Subcommittee, which did not exist when these codes were first valued. AOTA and APTA believe that our respective therapies meet the standards prescribe by the PE subcommittee in these packages

In addition, AOTA and APTA believe there is compelling evidence that the clinical staff time for occupational and physical therapy services have changed since previous reviews. Specifically, there is an increase in clinical staff time to reflect the use of aides and assistants in contemporary occupational and physical therapy practice. Physical and occupational therapy practice now make use of ancillary staff based on the patients' needs, making use of aides and assistants. Also, patients often have greater complexities which require the use of aides and assistants. For instance, increasing prevalence of older adults with severe cognitive deficits impacts the complexity of our intervention directly. When engaging in ADL retraining (meal prep, dressing, grooming, bathing, toileting) patients may need more intense and/or variable strategies of communication and cuing (verbal, non-verbal, tactile, proprioceptive) in order to participate appropriately. Patients may experience poor attention, lack of task initiation, challenges in sequencing, issues with task completion that require more complex and intense intervention from both the therapist and aide to not only complete the intervention and create a strategy in which the patient can improve their functional independence through-out the plan of care, but also to protect themselves and the patient in unsafe situations.

Also, there is an increase in clinical staff time to reflect the work performed by the OT & PT Aide. The OT& PT Aide assists with patients of greater complexity.

## **ADL Tab**

### Clinical Staff Time

Columns E, G, I, K, M, Row 25: We recommend the standard amount of time of 3 minutes to greet patient, provide gowning, and ensure appropriate medical records are available.

Columns E, G, I, K, M, Row 26: We recommend the standard amount of time of 3 minutes to obtain 3 vital signs.

**CPT Code: 97530, 97533, 97535, 97537, 97760, 97761, 977X1**  
**Specialty Society('s): AOTA, APTA**

Columns E, G, I, K, M, Row 29: We recommend the standard amount of time of 2 minutes to prepare the room, equipment, supplies.

Columns E, G, I, K, M, Row 30: We recommend the standard amount of time of 2 minutes to prepare and position patient.

In each description of work, the method in which the patient approaches the environment is essential to a successful intervention. The patient is positioned in the environment to provide additional challenges and to work to generalize the intervention techniques. For example, a patient with inattention or homonymous hemianopsia who is working to generalize visual scanning in the environment may be setup specifically so that key needed items are outside of visual field to promote the generalization of scanning. A patient with cognitive deficits may be setup to determine if they are able to predict a potential safety hazard and utilize compensatory strategies to safely navigate the hazards throughout intervention.

Columns E, G, I, K, M, Row 36: We recommend the standard amount of time of 3 minutes to clean the room/equipment by physician staff.

Columns E, G, I, K, M, Row 37: We recommend the standard 3 minutes to check dressings & wound/ home care instructions /coordinate visits/ medications.

Supplies

Columns E, G, I, Row 54: We recommend adding 1 pair of SB022 glove, non-sterile to account for supplies needed for clinical staff to clean equipment.

Columns E, G, I, Row 55: We recommend adding 5ml of SM012 disinfectant spray (Transeptic) to account for supplies needed for clinical staff to clean equipment.

Columns E, G, I, Row 56: We recommend adding 4 units of SK082 towel, paper (Bounty) (per sheet) to account for supplies needed for clinical staff to clean equipment.

Column K and M Row 54: We recommend adding 1 pair of SB022 glove, non-sterile to account for supplies needed for clinical staff to clean equipment.

Column K and M Row 55: We recommend adding 2 ml of SM012 disinfectant spray (Transeptic) to account for supplies needed for clinical staff to clean equipment.

Column K and M Row 56: We recommend adding 2 units of SK082 towel, paper (Bounty) (per sheet) to account for supplies needed for clinical staff to clean equipment.

Equipment

The equipment listed on the PE spreadsheet directly relates to the typical patient vignette and therefore includes only some items in a much larger range of standard equipment that would be found in an occupational or physical therapy setting.

Column E, Row 62: We recommend reducing EQ219 rehab and testing system (BTE primus) to 3 minutes to align with our recommended intraservice time of 15 minutes.

**CPT Code: 97530, 97533, 97535, 97537, 97760, 97761, 977X1**  
**Specialty Society('s): AOTA, APTA**

Column I, Row 68: We recommend 15 minutes for the use of EQ143 kit, ADL (currently at 16 minutes) to align with our recommended intraservice time of 15 minutes.

Column K, Rows 69 and 70: We recommend 7.5 minutes for the use of EQ147 kit, ergonomic (office) and EL001 environmental module – car, for CPT code 97537 to align with our recommended intraservice time of 15 minutes for 97537.

**O&P Tab**

Clinical Labor Time

Columns E, G, I, Row 25: We recommend the standard amount of time of 3 minutes to greet patient, provide gowning, and ensure appropriate medical records are available.

Columns E, G, I, Row 26: We recommend the standard amount of time of 3 minutes to obtain 3 vital signs.

Columns E, G, I, Row 29: We recommend the standard amount of time of 2 minutes to prepare the room, equipment, supplies.

Columns E, G, I, Row 30: We recommend the standard amount of time of 2 minutes to prepare and position patient.

Positioning is key in the initial and subsequent visits related to orthotics and prosthetics. The clinician must consider both the anatomical and functional alignment to assess, modify, and train the patient with the orthotic or prosthetic. For example, the clinician must be able to stabilize joints following surgical intervention to promote sustained functional use of the joints as well as promote soft tissue healing.

Columns E and I, Row 33: We recommend 5 minutes for the Aide.

The current code includes 7.5 minutes of assistant time. In current practice, the majority of this time (5 minutes) could be completed by an aide in conjunction with the therapist.

Column G, Row 33: We recommend 10 minutes for the Aide.

When training a patient on the use of a prosthetic, an aide is required to keep hands on the patient for safety while the therapist adjusts and challenges the patient with the lower extremity prosthetic.

Columns E, G, I, Row 36: We recommend the standard amount of time of 3 minutes to clean the room/equipment by physician staff.

Columns E, G, I, Row 37: We recommend 5 minutes to check dressings & wound/ home care instructions /coordinate visits/ medications.

Clinical expertise consistent with the training of the PT/OT assistant is needed to check dressings & wound, home care instructions, and coordinate visits. Typical patients must be able to complete wound care, monitor skin integrity, and maintain consistent visits with an orthotic or prosthetic.

Columns E, G, I, Row 42: We recommend 3 minutes to conduct phone calls/call in prescriptions.

**CPT Code: 97530, 97533, 97535, 97537, 97760, 97761, 977X1**  
**Specialty Society('s): AOTA, APTA**

Phone calls following the visit are used for coordination and consultation with other health care providers (e.g., surgeon, primary care physician)

Supplies

Columns G and I, Row 54: We recommend adding 1 unit of SB026 gown, patient. Fitting and reviewing use of a lower extremity prosthetic will require the patient to wear a gown due to the positioning of the prosthetic.

Columns E, G, I, Row 66: We recommend adding 1 pair of SB022 glove, non-sterile to account for supplies needed for clinical staff to clean equipment.

Columns E, G, I, Row 67: We recommend adding 5ml of SM012 disinfectant spray (Transeptic) to account for supplies needed for clinical staff to clean equipment.

Columns E, G, I, Row 68: We recommend adding 4 units of SK082 towel, paper (Bounty) (per sheet) to account for supplies needed for clinical staff to clean equipment.

Equipment

The equipment listed on the PE spreadsheet directly relates to the typical patient vignette and therefore includes only some items in a much larger range of standard equipment that would be found in an occupational or physical therapy setting.

Column I, Row 74: We recommend 15 minutes for the use of EF033 table, treatment, hi-lo (currently at 16 minutes) to align with our recommended intraservice time of 15 minutes.

5. Please describe in detail the clinical activities of your staff:

**Occupational Therapy Assistant:** An OTA must graduate with an associate degree (two years, usually five semesters) from an accredited OTA program at a technical or community college, college, or university. Graduates must pass the national examination for licensing/certification/regulation in all states to be eligible to work. OTAs work under the direction of an occupational therapist (OT). Licensure or certification is required in each state in which an OTA works and must be renewed on a regular basis, with a majority of states requiring continuing education as a requirement for renewal. The OTA scope of work and supervision requirements are defined by the occupational therapy practice act in each state as well as by payer policy.

**Occupational Therapy Aide:** Training for this position is often gained on the job or through technical education programs.

Activity	Staff Type	Notes
<b>SERVICE PERIOD</b>		
<b>Start: When patient enters office/facility for surgery/procedure:</b>		
Greet patient, provide gowning, ensure appropriate medical records are available	PT/OT Aide (L023A)	The PT/OT Aide will greet the patient and family and collect items provided or gather items needed for an evaluation. The Aide may also need to assist the patient with preparing materials, initiating or completing paperwork, and locating the area with the evaluation will start. The Aide will ensure that all records are available for

**CPT Code: 97530, 97533, 97535, 97537, 97760, 97761, 977X1**  
**Specialty Society('s): AOTA, APTA**

		this visit.
Obtain vital signs	PT/OT Assistant (L039B)	The Assistant will take vital signs including BP, height, weight, pulse, respiration rate, and measurements related to underlying impairments and reason for intervention.
Prepare room, equipment, supplies	PT/OT Aide (L023A)	Based on instructions from the clinician the Aide will ensure necessary supplies, such as sensory integration equipment, modules, and/or kits. The Aid will prep the kitchen and bathroom modules to ensure that all equipment needed for the individualized evaluation is available and setup. Standard 2 minutes is recommended.
Prepare and position patient/ monitor patient/ set up IV	PT/OT Aide (L023A)	The Aide will assist with positioning the patient in the module, on the hi-low table, or at the equipment such as BTEas indicated by the clinician.
<b>Intra-service</b>		
Assist physician in performing procedure (15%)	PT/OT Assistant (L039B)	<p>The OT Assistant will assist the clinician with the exam / evaluation which includes obtaining and recording measures. The standardized 67% of intra-time is higher than clinically appropriate. The recommended times are 50% of the intra-service time for 97533, 97535, 97537, 97542. The recommended times are 25% for Assistant and 25% for Aide for 97530 and 97542. The recommended times for 97660 and 977X1 are 16% for Assistant and 33% for Aide. For 97761, the times are 33% for Assistant and 75% for Aide.</p> <p>The Assistant will provide assistance and support for the evaluation. This may include recording performance data, physical facilitation with the patient, grading challenges in environment , and other clinical assistance throughout the portion of the intervention. An assistant provides clinical expertise consistent with training to grade tasks and the environment for the patient and provides the clinically appropriate assistance for the patient as the therapist facilitates the performance in self-care, community re-integration, and sensory.</p> <p>For 97530 and 97542, the assistant provides clinically appropriate assistance for 3.75 minutes while the hands on assistance for the remaining 3.75 minutes can be appropriately provided by the training consistent of the Aide.</p> <p>For 97760 and 977X1, the clinical expertise consistent with an Assistant are only required for 2.5 minutes to assist with orthotic (and/or prosthetic for 977X1) adjustment and training in functional use of orthotic and/or prosthetic. Training consistant with an Aide is required for 5 minutes for stabilization at the direction of the clinician.</p> <p>For 97761, the initial prosthetic training requires additional clinical expertise consistent with an Assistant and additional hands</p>

**CPT Code: 97530, 97533, 97535, 97537, 97760, 97761, 977X1**  
**Specialty Society('s): AOTA, APTA**

		on assistance under the direction of the clinician consistent with training of an Aide. During initial prosthetic training, the patient's balance is typically severely impaired and there are safety concerns with shifting balance and weight bearing using the prosthetic.
<b>Post-Service</b>		
Clean room/equipment by physician staff	PT/OT Aide (L023A)	The Aide will clean all equipment surfaces and tools. Standard 3 minutes is recommended.
Check dressings & wound/home care instructions /coordinate office visits /prescriptions	PT/OT Assistant (L039B)	Before patients leave the office, the clinician will have updated home and community activity programs to facilitate self-management skill development. The Assistant will review the instructions and answer questions with the patients prior to the patient leaving the office.
<b>POST-SERVICE Period- Patient leaves office</b>		
Conduct phone calls/call in prescriptions	PT/OT Assistant (L039B)	When patients leave the office, they will have home and community activity programs to facilitate self-management skill development. It is very common for patients/family/caregivers to contact the office with questions after leaving the office. To account for at least one phone call, we recommend standard time.

RUC HCPAC Review Board Summary of Recommendations  
*Final Rule for 2015*

January 2017

**Application of Surface Neurostimulator**

In September 2016, the CPT Editorial Panel deleted code 64565 to report percutaneous placement of a neuromuscular neurostimulator electrode, and added parenthetical notes to direct users to report the appropriate codes for TENS, PENS, and PNT services throughout the family of codes. Transcutaneous electrical nerve stimulator (TENS) is an electronic device that applies electrical stimulation to the surface of the skin at the site of pain and has been used to relieve chronic intractable pain, post-surgical pain, and pain associated with active or post-trauma injury unresponsive to other standard pain therapies. TENS consist of an electrical pulse generator, usually battery operated, connected by wire to two or more electrodes, which are applied to the surface of the skin at the site of the pain. Occupational Therapy has been identified as the dominant provider of CPT code 64550, however occupational therapy practitioners indicated it is not the best practice for TENS to be used for occupational therapy interventions and as such do not have evidence base in the profession. Occasionally a trial of TENS is done in the clinic over 1-2 therapy visits and, if the patient has had a favorable response, the patient can usually be taught to use a TENS unit in the home for pain control (TENS units are available in drug stores for purchase). Consequently, it is unnecessary for a patient to continue treatment for pain with a TENS unit in the clinic setting. Use of this code would seldom fall under a therapy plan of treatment. The occupational therapy specialty believes that occupational therapists have reported CPT code 64550 in error. Two other codes exist that relate to electric stimulation and are more frequently reported by occupational therapy and are valued the same as 64550:

1. CPT 97014/G0283, supervised electric stimulation and
2. CPT 97032, attended manual electric stimulation.

CPT 97014/G0283 is appropriate for pad-based e-stimulation, which requires supervision only. CPT code 97014 Application of a modality to one or more areas; electrical stimulation (unattended) is an invalid code for Medicare which requires that G0283 be reported. CPT 97032 can only be used when stimulation is manually applied. The requirement for constant attendance is derived from the manual-application requirement and is based on different stimulation frequencies necessitating one-on-one supervision. Additionally, CPT codes 64550 and 97032 each have an identical work value of 0.18 RVU which indicates that both codes have been identified as requiring the same amount of therapist work.

**The AMA RUC Health Care Professionals Advisory Committee (HCPAC) refers CPT code 64550 to the CPT Editorial Panel and recommends that the code be deleted. Additionally, the HCPAC recommends that instructions following the deleted code 64550 should direct users to instead report 97032 for electrical stimulation requiring constant attendance or 97014 for electrical stimulation requiring supervision only.**

## MEMORANDUM

**To:** American Medical Association (AMA) RUC/HCPAC

**From:** Katie Jordan, OTD, OTR/L – Alternate RUC/HCPAC Advisor, American Occupational Therapy Association (AOTA)

**Date:** December 13, 2016

**RE:** Transcutaneous Electrical Nerve Stimulator (CPT Code 64550)

---

Transcutaneous electrical nerve stimulator (TENS) is an electronic device that applies electrical stimulation to the surface of the skin at the site of pain and has been used to relieve chronic intractable pain, post-surgical pain, and pain associated with active or post-trauma injury unresponsive to other standard pain therapies. TENS consist of an electrical pulse generator, usually battery operated, connected by wire to two or more electrodes, which are applied to the surface of the skin at the site of the pain.

Occupational Therapy has been identified as the primary user of CPT code 64550 in the AMA RUC database (occupational therapy 43.67%, physical therapy 22.67%, orthopedic surgery 4.81%, family practice 4.29%, nurse practitioners 3.99%). AOTA chose not to survey this code because TENS is not viewed as an appropriate occupational therapy intervention in the majority of cases and does not have a recognized evidence base in the profession. Occasionally a trial of TENS is done in the clinic over 1-2 therapy visits and, if the patient has had a favorable response, the patient can usually be taught to use a TENS unit in the home for pain control (TENS units are available in drug stores for purchase). Consequently, it is unnecessary for a patient to continue treatment for pain with a TENS unit in the clinic setting. Use of this code would seldom fall under a therapy plan of treatment.

Occupational therapy practitioners do not view use of TENS to be best practice for occupational therapy interventions. AOTA believes that occupational therapists have billed CPT code 64550 in error. Two other codes exist that relate to electric stimulation and are more frequently billed by occupational therapy and are valued the same as 64550:

1. **CPT 97014/G0283**, supervised electric stimulation and
2. **CPT 97032**, attended manual electric stimulation.

CPT 97014/G0283 is appropriate for pad-based e-stimulation, which requires supervision only. CPT code 97014 Application of a modality to one or more areas; electrical stimulation (unattended) is an invalid code for Medicare which requires that G0283 be reported.

CPT 97032 can only be used when stimulation is manually applied. The requirement for constant attendance is derived from the manual-application requirement and is based on different stimulation frequencies necessitating one-on-one supervision. Additionally, CPT codes 64550 and 97032 each have an identical work value of 0.18 RVU which indicates that both codes have been identified as requiring the same amount of therapist work.

Therefore, AOTA proposes that the AMA RUC HCPAC recommend that the CPT Editorial Panel delete CPT code 64550. Instructions following the old code 64550 should direct users to instead report 97032 for electrical stimulation requiring constant attendance or 97014 for electrical stimulation requiring supervision only.
