**Background:** In October 2015, the Emergent Procedures Workgroup identified 34 services that have 60 minutes of pre-service clinical staff time in the facility-only setting. The Emergent Procedures Workgroup referred these issues to the RAW to review as potentially misvalued. Specialty societies should submit action plans addressing the appropriateness of site of service, global period, and dominant specialty for these services. The RAW will review the action plans in January 2016. The Workgroup had a robust discussion on these codes and determined that the 090 day global period is correct and an efficient bundling of the required services as well as share the same global period for all fracture care services. The Workgroup agreed with the specialty societies that the appropriate providers (emergency medicine and orthopaedic surgery) are reporting these services. The Workgroup noted that the emergency physicians are appropriately appending modifier -54. The specialty societies indicated that for these services that require anesthesia, it is unlikely that some of the specialties indicated in the Medicare utilization data actually perform the service under general anesthesia or regional block. The Workgroup agreed and recommends that the specialty societies develop a CPT Assistant article to reinforce correct coding and modifier use for all fracture codes and guidance on the meaning of "requiring anesthesia" and "with anesthesia" as it relates to restorative fracture care. The CPT Assistant article should also address the issue of restorative care for closed treatment without manipulation. The Workgroup determined that the Practice Expense Subcommittee are revising codes clinical staff time in the facility-only setting pre-time from 60 minutes and implementing a standard change to 20 minutes. The Workgroup refers these 34 emergent procedure codes identified back to the PE Subcommittee to apply this new standard. The Workgroup noted that for these low volume services any additional aberrations will be identified in future screens if applicable and the Workgroup does not need to examine these services further at this time. In April 2016, the PE Subcommittee reviewed this service and recommends 20 minutes of clinical staff pre-service time.

The RAW will review the action plans in January 2016. The Workgroup had a robust discussion on these codes and determined that the 090 day global period is correct and an efficient bundling of the required services as well as share the same global period for all fracture care services. The Workgroup agreed with the specialty societies that the appropriate providers (emergency medicine and orthopaedic surgery) are reporting these services. The Workgroup noted that the emergency physicians are appropriately appending modifier -54. The specialty societies indicated that for these services that require anesthesia, it is unlikely that some of the specialties indicated in the Medicare utilization data actually perform the service under general anesthesia or regional block. The Workgroup agreed and recommends that the specialty societies develop a CPT Assistant article to reinforce correct coding and modifier use for all fracture codes and guidance on the meaning of "requiring anesthesia" and "with anesthesia" as it relates to restorative fracture care. The CPT Assistant article should also address the issue of restorative care for closed treatment without manipulation. The Workgroup determined that the Practice Expense Subcommittee are revising codes clinical staff time in the facility-only setting pre-time from 60 minutes and implementing a standard change to 20 minutes. The Workgroup refers these 34 emergent procedure codes identified back to the PE Subcommittee to apply this new standard. The Workgroup noted that for these low volume services any additional aberrations will be identified in future screens if applicable and the Workgroup does not need to examine these services further at this time. In April 2016, the PE Subcommittee reviewed this service and recommends 20 minutes of clinical staff pre-service time.

36511	<b>Therapeutic apheresis; for white blood cells</b>	<u>Screen:</u> CMS Request - Final Rule for 2016	<u>RUC Meeting:</u> January 2017	<u>RUC Rec:</u> 2.00. Refer to CPT Assistant.	<u>Specialty Society:</u> CAP, RPA	<u>CPT Asst Status:</u>
-------	---	---	-------------------------------------	--	---------------------------------------	-------------------------

**Background:** In September 2016, the CPT Editorial Panel deleted 36515 and revised 36516 to include immunoabsorption. CPT codes 36511-36514 and 36522 were added as part of this family of services. In January 2017, the PE Subcommittee discussed the direct practice expense inputs proposed by the specialty societies and determined that there was duplication between the clinical staff tasks of the pre-service period and the pre-service portion of the service period. The Subcommittee reduced the pre-service time from 18 to 8 minutes. The Subcommittee discussed the significant time needed for the staff to assist physician in performing procedure in the service period and agreed with the specialties that this service is one-on-one with the patient and the RN/LPN (L042A) is not able to multitask during this time. The Subcommittee discussed the significant increase in time for Prepare room, equipment, supplies over how it was valued just a few years ago. The specialty explained that although Pathology is the dominant provider, they were not included in the survey when these services were previously reviewed and they do not feel that the clinical staff time was valued accurately at that time. The PE Subcommittee also discussed that much of the time requested in the post-service time was duplicative of the monitoring time and removed most of that time while maintaining the specialty recommended 10 minutes for monitoring in the service period. Additionally the PE Subcommittee reduced the time for Clean room/equipment by physician staff; remove disposables from machine from 7 in 36514 and 36516 and 5 in 36522 to the standard 3. The Subcommittee discussed the possibility that some of the supply items are separately reportable. The Subcommittee found that albumin saline (SH004) which is 5% albumin is separately reportable and new supply item calcium gluconate is separately reportable with J code J0610 per 10 ml for the drug along with CPT code 96365 to mix the bag. The Subcommittee deleted the two supply items and recommends that the specialty societies prepare a CPT assistant article regarding how to report separately for these supplies. The RUC reviewed and approved the direct practice expense inputs with modifications as approved by the Practice Expense Subcommittee.

The Subcommittee reduced the pre-service time from 18 to 8 minutes. The Subcommittee discussed the significant time needed for the staff to Assist physician in performing procedure in the service period and agreed with the specialties that this service is one-on-one with the patient and the RN/LPN (L042A) is not able to multitask during this time. The Subcommittee discussed the significant increase in time for Prepare room, equipment, supplies over how it was valued just a few years ago. The specialty explained that although Pathology is the dominant provider, they were not included in the survey when these services were previously reviewed and they do not feel that the clinical staff time was valued accurately at that time. The PE Subcommittee also discussed that much of the time requested in the post-service time was duplicative of the monitoring time and removed most of that time while maintaining the specialty recommended 10 minutes for monitoring in the service period. Additionally the PE Subcommittee reduced the time for Clean room/equipment by physician staff; remove disposables from machine from 7 in 36514 and 36516 and 5 in 36522 to the standard 3. The Subcommittee discussed the possibility that some of the supply items are separately reportable. The Subcommittee found that albumin saline (SH004) which is 5% albumin is separately reportable and new supply item calcium gluconate is separately reportable with J code J0610 per 10 ml for the drug along with CPT code 96365 to mix the bag. The Subcommittee deleted the two supply items and recommends that the specialty societies prepare a CPT assistant article regarding how to report separately for these supplies. The RUC reviewed and approved the direct practice expense inputs with modifications as approved by the Practice Expense Subcommittee.

### **36513 Therapeutic apheresis; for platelets**

#### **Screen:**

CMS Request - Final Rule for 2016

#### **RUC Meeting:**

January 2017

#### **RUC Rec:**

2.00. Refer to CPT Assistant.

#### **Specialty Society:**

CAP, RPA

#### **CPT Asst Status:**

**Background:** In September 2016, the CPT Editorial Panel deleted 36515 and revised 36516 to include immunoabsorption. CPT codes 36511-36514 and 36522 were added as part of this family of services. In January 2017, the PE Subcommittee discussed the direct practice expense inputs proposed by the specialty societies and determined that there was duplication between the clinical staff tasks of the pre-service period and the pre-service portion of the service period. The Subcommittee reduced the pre-service time from 18 to 8 minutes. The Subcommittee discussed the significant time needed for the staff to Assist physician in performing procedure in the service period and agreed with the specialties that this service is one-on-one with the patient and the RN/LPN (L042A) is not able to multitask during this time. The Subcommittee discussed the significant increase in time for Prepare room, equipment, supplies over how it was valued just a few years ago. 81241	F5 (coagulation factor V) (eg, hereditary hypercoagulability) gene analysis, Leiden variant	Apr 2011	Molecular Pathology Test - Tier 1	15	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81243	FMR1 (fragile X mental retardation 1) (eg, fragile X mental retardation) gene analysis; evaluation to detect abnormal (eg, expanded) alleles	Apr 2011	Molecular Pathology - Tier 1	15	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81244	FMR1 (Fragile X mental retardation 1) (eg, fragile X mental retardation) gene analysis; characterization of alleles (eg, expanded size and methylation status)	Apr 2011	Molecular Pathology - Tier 1	15	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81245	FLT3 (fms-related tyrosine kinase 3) (eg, acute myeloid leukemia), gene analysis; internal tandem duplication (ITD) variants (ie, exons 14, 15)	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑

<i><b>CPT Code</b></i>	<i><b>2016 Descriptor</b></i>	<i><b>RUC Meeting</b></i>	<i><b>Issue</b></i>	<i><b>Tab</b></i>	<i><b>CPT Year</b></i>	<i><b>Date to Re-Review</b></i>	<i><b>RUC Rec</b></i>	<i><b>Complete</b></i>
81252	GJB2 (gap junction protein, beta 2, 26kDa, connexin 26) (eg, nonsyndromic hearing loss) gene analysis; full gene sequence	Sep 2011	Molecular Pathology Test - Tier 1	09	CPT 2013	October 2016	Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81253	GJB2 (gap junction protein, beta 2, 26kDa, connexin 26) (eg, nonsyndromic hearing loss) gene analysis; known familial variants	Sep 2011	Molecular Pathology Test - Tier 1	09	CPT 2013	October 2016	Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81254	GJB6 (gap junction protein, beta 6, 30kDa, connexin 30) (eg, nonsyndromic hearing loss) gene analysis, common variants (eg, 309kb [del(GJB6-D13S1830)] and 232kb [del(GJB6-D13S1854)])	Sep 2011	Molecular Pathology Test - Tier 1	09	CPT 2013	October 2016	Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81256	HFE (hemochromatosis) (eg, hereditary hemochromatosis) gene analysis, common variants (eg, C282Y, H63D)	Apr 2011	Molecular Pathology - Tier 1	15	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81257	HBA1/HBA2 (alpha globin 1 and alpha globin 2) (eg, alpha thalassemia, Hb Bart hydrops fetalis syndrome, HbH disease), gene analysis, for common deletions or variant (eg, Southeast Asian, Thai, Filipino, Mediterranean, alpha3.7, alpha4.2, alpha20.5, and Constant Spring)	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81261	IGH@ (Immunoglobulin heavy chain locus) (eg, leukemias and lymphomas, B-cell), gene rearrangement analysis to detect abnormal clonal population(s); amplified methodology (eg, polymerase chain reaction)	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑

<i><b>CPT Code</b></i>	<i><b>2016 Descriptor</b></i>	<i><b>RUC Meeting</b></i>	<i><b>Issue</b></i>	<i><b>Tab</b></i>	<i><b>CPT Year</b></i>	<i><b>Date to Re-Review</b></i>	<i><b>RUC Rec</b></i>	<i><b>Complete</b></i>
81262	IGH@ (Immunoglobulin heavy chain locus) (eg, leukemias and lymphomas, B-cell), gene rearrangement analysis to detect abnormal clonal population(s); direct probe methodology (eg, Southern blot)	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81263	IGH@ (Immunoglobulin heavy chain locus) (eg, leukemia and lymphoma, B-cell), variable region somatic mutation analysis	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81264	IGK@ (Immunoglobulin kappa light chain locus) (eg, leukemia and lymphoma, B-cell), gene rearrangement analysis, evaluation to detect abnormal clonal population(s)	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81265	Comparative analysis using Short Tandem Repeat (STR) markers; patient and comparative specimen (eg, pre-transplant recipient and donor germline testing, post-transplant non-hematopoietic recipient germline [eg, buccal swab or other germline tissue sample] and donor testing, twin zygosity testing, or maternal cell contamination of fetal cells)	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81266	Comparative analysis using Short Tandem Repeat (STR) markers; each additional specimen (eg, additional cord blood donor, additional fetal samples from different cultures, or additional zygosity in multiple birth pregnancies) (List separately in addition to code for primary procedure)	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012	October 2015	Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑

<i><b>CPT Code</b></i>	<i><b>2016 Descriptor</b></i>	<i><b>RUC Meeting</b></i>	<i><b>Issue</b></i>	<i><b>Tab</b></i>	<i><b>CPT Year</b></i>	<i><b>Date to Re-Review</b></i>	<i><b>RUC Rec</b></i>	<i><b>Complete</b></i>
81267	Chimerism (engraftment) analysis, post transplantation specimen (eg, hematopoietic stem cell), includes comparison to previously performed baseline analyses; without cell selection	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81268	Chimerism (engraftment) analysis, post transplantation specimen (eg, hematopoietic stem cell), includes comparison to previously performed baseline analyses; with cell selection (eg, CD3, CD33), each cell type	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81270	JAK2 (Janus kinase 2) (eg, myeloproliferative disorder) gene analysis, p.Val617Phe (V617F) variant	Apr 2011	Molecular Pathology - Tier 1	15	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81275	KRAS (Kirsten rat sarcoma viral oncogene homolog) (eg, carcinoma) gene analysis; variants in exon 2 (eg, codons 12 and 13)	Apr 2011	Molecular Pathology - Tier 1	15	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81291	MTHFR (5,10-methylenetetrahydrofolate reductase) (eg, hereditary hypercoagulability) gene analysis, common variants (eg, 677T, 1298C)	Apr 2011	Molecular Pathology - Tier 1	15	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81292	MLH1 (mutL homolog 1, colon cancer, nonpolyposis type 2) (eg, hereditary non-polyposis colorectal cancer, Lynch syndrome) gene analysis; full sequence analysis	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑

<i><b>CPT Code</b></i>	<i><b>2016 Descriptor</b></i>	<i><b>RUC Meeting</b></i>	<i><b>Issue</b></i>	<i><b>Tab</b></i>	<i><b>CPT Year</b></i>	<i><b>Date to Re-Review</b></i>	<i><b>RUC Rec</b></i>	<i><b>Complete</b></i>
81293	MLH1 (mutL homolog 1, colon cancer, nonpolyposis type 2) (eg, hereditary non-polyposis colorectal cancer, Lynch syndrome) gene analysis; known familial variants	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81294	MLH1 (mutL homolog 1, colon cancer, nonpolyposis type 2) (eg, hereditary non-polyposis colorectal cancer, Lynch syndrome) gene analysis; duplication/deletion variants	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81295	MSH2 (mutS homolog 2, colon cancer, nonpolyposis type 1) (eg, hereditary non-polyposis colorectal cancer, Lynch syndrome) gene analysis; full sequence analysis	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81296	MSH2 (mutS homolog 2, colon cancer, nonpolyposis type 1) (eg, hereditary non-polyposis colorectal cancer, Lynch syndrome) gene analysis; known familial variants	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81297	MSH2 (mutS homolog 2, colon cancer, nonpolyposis type 1) (eg, hereditary non-polyposis colorectal cancer, Lynch syndrome) gene analysis; duplication/deletion variants	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81298	MSH6 (mutS homolog 6 [E. coli]) (eg, hereditary non-polyposis colorectal cancer, Lynch syndrome) gene analysis; full sequence analysis	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑

<i>CPT Code</i>	<i>2016 Descriptor</i>	<i>RUC Meeting</i>	<i>Issue</i>	<i>Tab</i>	<i>CPT Year</i>	<i>Date to Re-Review</i>	<i>RUC Rec</i>	<i>Complete</i>
81299	MSH6 (mutS homolog 6 [E. coli]) (eg, hereditary non-polyposis colorectal cancer, Lynch syndrome) gene analysis; known familial variants	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81300	MSH6 (mutS homolog 6 [E. coli]) (eg, hereditary non-polyposis colorectal cancer, Lynch syndrome) gene analysis; duplication/deletion variants	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012	October 2015	Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81301	Microsatellite instability analysis (eg, hereditary non-polyposis colorectal cancer, Lynch syndrome) of markers for mismatch repair deficiency (eg, BAT25, BAT26), includes comparison of neoplastic and normal tissue, if performed	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81302	MECP2 (methyl CpG binding protein 2) (eg, Rett syndrome) gene analysis; full sequence analysis	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81303	MECP2 (methyl CpG binding protein 2) (eg, Rett syndrome) gene analysis; known familial variant	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81304	MECP2 (methyl CpG binding protein 2) (eg, Rett syndrome) gene analysis; duplication/deletion variants	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑

81315	PML/RARalpha, (t(15;17)), (promyelocytic leukemia/retinoic acid receptor alpha) (eg, promyelocytic leukemia) translocation analysis; common breakpoints (eg, intron 3 and intron 6), qualitative or quantitative	Apr 2011	Molecular Pathology - Tier 1	15	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81316	PML/RARalpha, (t(15;17)), (promyelocytic leukemia/retinoic acid receptor alpha) (eg, promyelocytic leukemia) translocation analysis; single breakpoint (eg, intron 3, intron 6 or exon 6), qualitative or quantitative	Apr 2011	Molecular Pathology - Tier 1	15	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81317	PMS2 (postmeiotic segregation increased 2 [S. cerevisiae]) (eg, hereditary non-polyposis colorectal cancer, Lynch syndrome) gene analysis; full sequence analysis	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81318	PMS2 (postmeiotic segregation increased 2 [S. cerevisiae]) (eg, hereditary non-polyposis colorectal cancer, Lynch syndrome) gene analysis; known familial variants	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81319	PMS2 (postmeiotic segregation increased 2 [S. cerevisiae]) (eg, hereditary non-polyposis colorectal cancer, Lynch syndrome) gene analysis; duplication/deletion variants	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81321	PTEN (phosphatase and tensin homolog) (eg, Cowden syndrome, PTEN hamartoma tumor syndrome) gene analysis; full sequence analysis	Sep 2011	Molecular Pathology Test - Tier 1	09	CPT 2013	October 2016	Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑

<i><b>CPT Code</b></i>	<i><b>2016 Descriptor</b></i>	<i><b>RUC Meeting</b></i>	<i><b>Issue</b></i>	<i><b>Tab</b></i>	<i><b>CPT Year</b></i>	<i><b>Date to Re-Review</b></i>	<i><b>RUC Rec</b></i>	<i><b>Complete</b></i>
81322	PTEN (phosphatase and tensin homolog) (eg, Cowden syndrome, PTEN hamartoma tumor syndrome) gene analysis; known familial variant	Sep 2011	Molecular Pathology Test - Tier 1	09	CPT 2013	October 2016	Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81323	PTEN (phosphatase and tensin homolog) (eg, Cowden syndrome, PTEN hamartoma tumor syndrome) gene analysis; duplication/deletion variant	Sep 2011	Molecular Pathology Test - Tier 1	09	CPT 2013	October 2016	Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81331	SNRPN/UBE3A (small nuclear ribonucleoprotein polypeptide N and ubiquitin protein ligase E3A) (eg, Prader-Willi syndrome and/or Angelman syndrome), methylation analysis	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81332	SERPINA1 (serpin peptidase inhibitor, clade A, alpha-1 antiproteinase, antitrypsin, member 1) (eg, alpha-1-antitrypsin deficiency), gene analysis, common variants (eg, *S and *Z)	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81340	TRB@ (T cell antigen receptor, beta) (eg, leukemia and lymphoma), gene rearrangement analysis to detect abnormal clonal population(s); using amplification methodology (eg, polymerase chain reaction)	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81341	TRB@ (T cell antigen receptor, beta) (eg, leukemia and lymphoma), gene rearrangement analysis to detect abnormal clonal population(s); using direct probe methodology (eg, Southern blot)	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑

<i><b>CPT Code</b></i>	<i><b>2016 Descriptor</b></i>	<i><b>RUC Meeting</b></i>	<i><b>Issue</b></i>	<i><b>Tab</b></i>	<i><b>CPT Year</b></i>	<i><b>Date to Re-Review</b></i>	<i><b>RUC Rec</b></i>	<i><b>Complete</b></i>
81342	TRG@ (T cell antigen receptor, gamma) (eg, leukemia and lymphoma), gene rearrangement analysis, evaluation to detect abnormal clonal population(s)	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81350	UGT1A1 (UDP glucuronosyltransferase 1 family, polypeptide A1) (eg, irinotecan metabolism), gene analysis, common variants (eg, *28, *36, *37)	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81355	VKORC1 (vitamin K epoxide reductase complex, subunit 1) (eg, warfarin metabolism), gene analysis, common variant(s) (eg, -1639G>A, c.173+1000C>T)	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81370	HLA Class I and II typing, low resolution (eg, antigen equivalents); HLA-A, -B, -C, -DRB1/3/4/5, and -DQB1	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81371	HLA Class I and II typing, low resolution (eg, antigen equivalents); HLA-A, -B, and -DRB1 (eg, verification typing)	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81372	HLA Class I typing, low resolution (eg, antigen equivalents); complete (ie, HLA-A, -B, and -C)	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑

The Workgroup recommended that these services be reviewed in 2 year after additional utilization data is available (October 2018).	<input type="checkbox"/>
G0507		Jan 2017	Psychiatric Collaborative Care Management Services	20	CPT 2018	October 2021		<input type="checkbox"/>

## New Technology/Services Timeline

1. Code is identified as a new technology/service at the RUC meeting in which it is initially reviewed.
2. Code is flagged in the next version of the RUC database with date to be reviewed
3. Code will be reviewed in 5 years (depending on what meeting in the CPT/RUC cycle it is initially reviewed) after at least three years of data are available.

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
**\*CMS Request - Final Rule for 2016\***

January 2017

**Anesthesia for GI Procedures**

In the Final Rule for 2016, CMS stated that the anesthesia procedure codes 00740 *Anesthesia for procedure on gastrointestinal tract using an endoscope* and 00810 *Anesthesia for procedure on lower intestine using an endoscope* are used for anesthesia furnished in conjunction with lower GI procedures. In reviewing Medicare claims data, CMS noted that a separate anesthesia service is now reported more than 50 percent of the time when several types of colonoscopy procedures are reported. Given the significant change in the relative frequency with which anesthesia codes are reported with colonoscopy services, CMS believes the base units of the anesthesia services should be reexamined. Therefore, CMS identified CPT codes 00740 and 00810 as potentially misvalued.

The RUC reviewed CPT codes 00740 and 00810 in January 2016 and recommended:

1. An interim base unit of 5 for code 00740 and 00810 and notes the comparison to the RUC recommended values for moderate sedation, 99156 and 99157, results in a work RVU equivalent that is only slightly higher than moderate sedation service of the same number of minutes.
2. Referral to the Research Subcommittee for review of the vignettes and to develop a method on how to review the survey data to value these services. The RUC recommended that the specialty societies revise the vignette for the typical patient receiving anesthesia for an EGD for 00740 and for a patient receiving anesthesia for a colonoscopy (45378) for 00810.
3. Resurvey 00740 and 00810 for the April 2016 RUC meeting.

In April 2016, an Ad Hoc Anesthesia Workgroup was formed to discuss the issues surrounding these services. The specialty society requested and the Workgroup agreed that CPT codes 00740 and 00810 are too broad in the range of endoscopic procedures covered under each code and should be referred to the CPT Editorial Panel September 2016 meeting to request a new family of anesthesia codes to describe anesthesia for GI endoscopic procedures. The revised codes will specifically identify those patients undergoing both upper and lower gastrointestinal endoscopic procedures. The RUC recommends CPT codes 00740 and 00810 be referred to CPT to better define these services. The Anesthesia Workgroup also recommended an educational presentation be provided to the RUC on the existing survey and valuation process for anesthesia services since it has not been validated or used for a survey since 2007, including a specific example of how the data from a survey are used to value an anesthesia service.

In September 2016 the CPT Editorial Panel deleted two codes 00740 and 00810 and created two new codes for upper, two new codes for lower and one new code for upper and lower endoscopic procedures.

In January 2017, ASA provided an overview of the anesthesia payment system. The three main points discussed were that payment for anesthesia services are based on a different relative system, time is not a factor in establishing base unit value and payments for anesthesia services use a different formula.

*Payments for anesthesia services are based on a different relative system.*

The rank order of anesthesia codes is independent of the intra-service times for the anesthesia procedures (or the underlying surgical procedures). Base units range from a low of 3 units to a high of 30 base units with the exception of three add-on codes. Noting that anesthesia base and time units include a combination of work, practice expense and professional liability. For 2017, the percentage of the anesthesia units allocated to physician work is 78.6%

*Time is not a factor in establishing base unit value.*

Unlike other services valued under RBRVS, the intra-service time is not a factor that is considered when determining a base unit value. The base unit value reflects three major components of the anesthesia service: (1) the intensity and complexity of the intra-service anesthesia care (but not the length of time of that care); (2) the amount of pre-anesthesia service work (pre-anesthesia evaluation and preparation of equipment and medications); and (3) the amount of post-anesthesia service. Hence, two anesthesia CPT codes can have the same or similar base unit values but very different intra-service anesthesia times. The similarity of base unit values indicates that the two codes have similar intra-service intensity/complexity, pre-anesthesia work, and post-anesthesia work. Differences in intra-service anesthesia times are accounted for by reporting the actual time for each procedure, not through differences in base unit values. Similarly, two anesthesia CPT codes may have very different base unit values but similar intra-services times.

*Payments for anesthesia services use a different formula.*

Anesthesia services are valued based on the base unit value and time. For each anesthesia claim, time is separately calculated and is submitted in actual minutes. CMS converts reported minutes into time units when determining payment. Per CMS, 15 minutes equal 1 time unit. To determine the total number of time units, the reported number of minutes is divided by 15 and taken out to one decimal place. Although CMS uses a 15-minute time unit, CMS does not pay in 15-minute increments, but pays by the minute (divides minutes by 15 to determine the number of units to 1 decimal place). [Anesthesia Base Units + Time Units] x Anesthesia Conversion Factor. The 2017 Anesthesia Conversion Factor is \$22.0454.

***00731 Anesthesia for upper gastrointestinal endoscopic procedures, endoscope introduced proximal to duodenum; not otherwise specified***

The RUC reviewed the survey results from 86 anesthesiologists and determined that the median base unit of 5 appropriately accounts for the work required to administer anesthesia for these services. This new code is projected to represent about 89% of the utilization of the old 00740 service. The specialty society noted that 78% of the respondents felt that the vignette was typical. The survey respondents indicated that the intensity and complexity measures for 00731 are equal or slightly more than those for the key reference service 00320 *Anesthesia for all procedures on esophagus, thyroid, larynx, trachea and lymphatic system of neck; not otherwise specified, age 1 year or older* (base unit = 6), which supports the base unit recommendation. The specialty society also compared the surveyed service 25 minutes of intra-service (induction period and post-

induction period) to the moderate sedation codes as this is a clinically comparable service to anesthesia (see table below). The specialty society indicated that anesthesia services have higher intensity and work than moderate sedation services. Therefore, choosing the median base unit of 5 appropriately values this service. If the 25<sup>th</sup> percentile 4 base units value is used, then the anesthesia service would be valued less than the moderate sedation services (2.76 vs. 2.90) and would cause a rank order anomaly. The recommended median base unit value maintains relativity of values across the entire fee schedule. Lastly, the specialty society indicated and the RUC agreed that a base unit value of 5 for 00731 is in the appropriate rank order compared to what is recommended for 00732. **The RUC recommends a base unit of 5 for CPT code 00731.**

*Conversion of Anesthesia Units for Median Intra-service Time to Work RVUs (wRVUs)*

<b>00731, Anesthesia for upper gastrointestinal endoscopic procedures, endoscope introduced proximal to duodenum; not otherwise specified</b>					
<b>Base Unit</b>	<b>Anesthesia Time*</b>	<b>Time Units**</b>	<b>Total Anesthesia Units</b>	<b>wAnesthesia Units***</b>	<b>wRVU Equivalent</b>
3	25	1.7	4.7	3.7	2.27
4	25	1.7	5.7	4.5	2.76
<b>5</b>	<b>25</b>	<b>1.7</b>	<b>6.7</b>	<b>5.2</b>	<b>3.26</b>
6	25	1.7	7.7	6.0	3.75
7	25	1.7	8.7	6.8	4.18

\*Median survey for induction and post-induction time which equals intra-service time for anesthesia care

\*\* Time Units = anesthesia time/15 to one decimal place

\*\*\* wAnesthesia Units = Total Anesthesia Units \* 0.786

The moderate sedation service median intra-service times are shown in the following table.

*Moderate Sedation Services wRVUs*

<b>Moderate Sedation for 25 min over age 5, different physician</b>	<b>wRVUs</b>
99156 x 1	1.65
99157 x 1	1.25
<b>Total</b>	<b>2.90</b>

**00732 Anesthesia for upper gastrointestinal endoscopic procedures, endoscope introduced proximal to duodenum; endoscopic retrograde cholangiopancreatography (ERCP)**

The RUC reviewed the survey results from 63 anesthesiologists and determined that the median base unit of 6 appropriately accounts for the work required to administer anesthesia for these services. This new code is projected to represent about 11% of the utilization of the old 00740 service. The specialty society noted that 81% of the respondents felt that the vignette was typical. The survey respondents indicated that the intensity and complexity measures for 00732 are equal or slightly more than those for the top two key reference services 00320 *Anesthesia for all procedures on esophagus, thyroid, larynx, trachea and lymphatic system of neck; not otherwise specified, age 1 year or older* (base unit = 6) and 00840 *Anesthesia for intraperitoneal procedures in lower abdomen including laparoscopy; not otherwise specified* (base unit= 6), which supports the base unit recommendation. The specialty society also compared the surveyed service 65 minutes of intra-service (induction period and post-induction period) to the moderate sedation codes as this is a clinically comparable service to anesthesia (see table below). Recommending the median base units of 6 values this anesthesia service less than the moderate sedation services (4.98 to 5.40 work RVUs). However, recommending the 75<sup>th</sup> percentile base unit of 7 would not maintain the relativity compared to the key reference services and would not maintain the proper rank order with 00731. The specialty society indicated that the post-induction period procedure anesthesia (PIPPA) intensity is the highest for this service compared to the other four anesthesia services that have a base unit of 6. The specialty societies indicated that CPT code 00732 is the most intense compared to those services and is therefore valued appropriately at 6 base units. The RUC agreed that the anesthesia work for ERCP is more intense than 00731. **The RUC recommends a base unit of 6 for CPT code 00732.**

Conversion of Anesthesia Units for Median Intra-service Time to Work RVUs (wRVUs)

<b>00732, Anesthesia for upper gastrointestinal endoscopic procedures, endoscope introduced proximal to duodenum; endoscopic retrograde cholangiopancreatography (ERCP)</b>					
<b>Base Unit</b>	<b>Anesthesia Time*</b>	<b>Time Units**</b>	<b>Total Anesthesia Units</b>	<b>wAnesthesia Units***</b>	<b>wRVU Equivalent</b>
5	65	4.3	9.3	7.3	4.48
<b>6</b>	<b>65</b>	<b>4.3</b>	<b>10.3</b>	<b>8.1</b>	<b>4.98</b>
7	65	4.3	11.3	8.9	5.47
8	65	4.3	12.3	9.7	5.96

\*Median survey for induction and post-induction time which equals intra-service time for anesthesia care

\*\* Time Units = anesthesia time/15 to one decimal place

\*\*\* wAnesthesia Units = Total Anesthesia Units \* 0.786

\*\*\*\* \$ Paid CMS = wAnesthesia Units \* Anesthesia CF

The moderate sedation service median intra-service times are shown in the following table.

*Moderate Sedation Services wRVUs*

<b>Moderate Sedation for 65 min over age 5, different physician</b>	<b>wRVUs</b>
99156 x 1	1.65
99157 x 3	3.75
<b>Total</b>	<b>5.40</b>

**00811 Anesthesia for lower intestinal endoscopic procedures, endoscope introduced distal to duodenum; not otherwise specified**

The RUC reviewed the survey results from 53 anesthesiologists and determined that the survey 25<sup>th</sup> percentile base unit of 4 appropriately accounts for the work required to administer anesthesia for these services. The RUC noted that this service will typically be reported 1,205,000 times for Medicare patients and therefore did not meet the threshold of 75 surveys. The recommend value for this service will be interim and the specialty society will need to resurvey for the April 2017 RUC meeting.

This new code represents about 70% of the Medicare utilization of the old 00810 service. The specialty society noted that 87% of the respondents felt that the vignette was typical. The survey respondents indicated that the intensity and complexity measures for 00811 are equal or slightly more than those for the top two key reference services 00914 *Anesthesia for transurethral procedures (including urethrocystoscopy); transurethral resection of prostate* (base unit = 5) and 00830 *Anesthesia for hernia repairs in lower abdomen; not otherwise specified* (base unit = 4), which supports the base unit recommendation. The RUC noted that the overall intensity for the lower GI anesthesia services is less than the upper GI services 00731 and 00732. Therefore, the survey 25<sup>th</sup> percentile and median base unit of 4 is more appropriate than the initial specialty society recommendation of 5 base units, the survey 75% percentile. **The RUC recommends an interim base unit of 4 for CPT code 00811. The specialty society will resurvey and present for April 2017.**

**00812 Anesthesia for lower intestinal endoscopic procedures, endoscope introduced distal to duodenum; screening colonoscopy**

The RUC reviewed the survey results from 47 anesthesiologists and determined that the survey median base unit of 4 appropriately accounts for the work required to administer anesthesia for these services. The RUC noted that this service will typically be reported 515,000 and therefore did not meet the threshold of 50 surveys. The recommend value for this service will be interim and the specialty society will need to resurvey for the April 2017 RUC meeting.

This new code represents about 30% of the Medicare utilization of the old 00810 service. The specialty society noted that 90% of the respondents felt that the vignette was typical. The survey respondents indicated that the intensity and complexity measures for 00812 are slightly less intense than those for the top two key reference services 00910 *Anesthesia for transurethral procedures (including urethrocystoscopy); not otherwise*

*specified* (base unit = 3) and 00914 *Anesthesia for transurethral procedures (including urethrocystoscopy); transurethral resection of prostate* (base unit = 5), which supports the base unit recommendation. Based on the RUC reviewer comments, screening colonoscopies typically may be less intense than the diagnostic or procedural colonoscopy, therefore are recommending 4 base units. Additionally, the survey respondents indicated that the PIPPA for 00812 is higher/more intense for this service than the other two anesthesia services with a base unit of 4, thus supporting the value. The RUC agreed that this service should be valued lower than the anesthesia for upper GI services CPT codes 00731 and 00732 and thus is valued appropriately. **The RUC recommends an interim base unit of 4 for CPT code 00812. The specialty society will resurvey and present for April 2017.**

***00813 Anesthesia for combined upper and lower gastrointestinal endoscopic procedures, endoscope introduced both proximal to and distal to the duodenum***

The RUC reviewed the survey results from 47 anesthesiologists and determined that the survey median base unit of 5 appropriately accounts for the work required to administer anesthesia for these services. This new code represents less than 1% of the old 00810 service. The specialty society noted that 85% of the respondents felt that the vignette was typical. The survey respondents indicated that the intensity and complexity measures for 00813 are equal or slightly more than those for the top two key reference services 00320 *Anesthesia for all procedures on esophagus, thyroid, larynx, trachea and lymphatic system of neck; not otherwise specified, age 1 year or older* (base unit = 6) and 00830 *Anesthesia for hernia repairs in lower abdomen; not otherwise specified* (base unit = 4), which supports the base unit recommendation. The RUC noted that this service includes anesthesia for the combined upper and lower GI procedures, codes 00731 and 00811. Therefore, a base unit of 5 places this service in the proper rank order with this family of services. **The RUC recommends a base unit of 5 for CPT code 00813.**

**Practice Expense**

The specialty society requested the standard 8 minutes of colorectal service time as is consistent for all anesthesia codes. The RUC recommends the direct practice expense inputs as submitted by the specialty society.

**Work Neutrality:**

The RUC's recommendation for these codes will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

CPT Code	Tracking Number	CPT Descriptor	Global Period	Base Unit Recommendation
<b>Anesthesia Upper Abdomen</b>				
<b>D 00740</b>	-	<del>Anesthesia for upper gastrointestinal endoscopic procedures, endoscope introduced proximal to duodenum</del>  (00740 has been deleted. To report, see 00731, 00732)	-	5
●00731	N1	Anesthesia for upper gastrointestinal endoscopic procedures, endoscope introduced proximal to duodenum; not otherwise specified	XXX	5

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
ANESTHESIA SUMMARY OF RECOMMENDATION**

CPT Code:00731      Tracking Number: N1      Original Specialty Recommended Base Unit Value: **5**  
    Presented Recommended Base Unit Value: **5**  
 Global Period:XXX      RUC Recommended Base Unit Value: **5**

CPT Descriptor: Anesthesia for upper gastrointestinal endoscopic procedures, endoscope introduced proximal to duodenum; not otherwise specified

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 63-year-old patient with abdominal pain and persistent dyspepsia undergoes EGD. Evaluation of the upper GI track is performed and multiple biopsies are taken for histology and Helicobacter pylori (H. pylori) rapid urease test.

Percentage of Survey Respondents who found Vignette to be Typical: 77.91%

Description of Pre-Service Work: Obtain a detailed medical history with special attention to patient's comorbidities, medications, allergies, and cardiac and pulmonary status. Perform an expanded problem focused physical examination, including a thorough airway examination, auscultation of the heart and lungs and musculoskeletal and neurologic examinations if appropriate. Review pertinent laboratory data along with results from electrocardiogram (ECG), chest X rays, and other tests that may be significant in this patient population. Discuss anesthesia care including anxiolysis, analgesia, general anesthesia, and possible intubation with patient and/or family. Prepare anesthesia equipment and medications. Review and assess patient's medical record and any other interim data as necessary. Discuss possible risks from anesthesia and obtain informed consent.

Description of Intra-Service Work: Start a peripheral intravenous catheter, administer an anxiolytic, and transport patient to the procedure room (operating room (OR) or GI suite). In the procedure room, confirm placement of standard monitors (ECG, pulse oximetry, noninvasive blood pressure [NIBP], end-tidal CO2 [carbon dioxide]). Participate in pre-surgical review, confirming correct patient and procedure. Place nasal cannula or facemask on patient to provide supplemental oxygen (O2) during the procedure. Induce or start anesthesia care. If medically indicated, place an artificial airway (may range from oral or nasal airway to intubation) to maintain ventilation. A GI bite block (mouth guard) is placed between the teeth to prevent patient from biting on the endoscope. Position patient initially in the left lateral position, but during procedure, may need to assist in positioning the patient in supine, right lateral, or prone as determined by the physician performing the procedure. If the patient is in the lateral position, ensure pressure points such as behind the dependent shoulder, the dependent eye and ear are protected. The resulting position along with the presence of the endoscope may compromise access to the airway should it be necessary to assist ventilation during the procedure. Provide anesthesia care titrating medications and monitoring and reassessing the patient throughout the procedure. At the end of the procedure, emerge the patient and then transfer patient to the post-anesthetic care unit and provide a post-anesthetic report to the recovery room nursing staff. During the anesthesia care, personally document anesthesia care in the anesthesia record including vital signs (at least every 5 minutes), positioning, anesthesia procedures, medications, and significant events.

Description of Post-Service Work: Order appropriate analgesic and/or anti-emetic for postprocedure discomfort as necessary. Dispose of anesthesia equipment and medications. Make a postoperative evaluation in the postanesthesia care unit to determine satisfactory recovery from anesthetic care and determine whether any anesthetic-related complications have occurred. Provide any post-anesthesia care as needed in the PACU. Discharge patient from the unit.

**ADDITIONAL RATIONALE**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

**Background**

Anesthesia procedure codes 00740 *Anesthesia for procedure on gastrointestinal tract using an endoscope* and 00810 *Anesthesia for procedure on lower intestine using an endoscope* are used when anesthesia is furnished in conjunction with upper and lower GI procedures respectively. In the 2016 Final Rule, CMS identified these codes as potentially misvalued. The RUC added CPT codes 00740 and 00810 to the list of potentially misvalued services to review for the January 2016 meeting.

In January 2016, ASA presented survey data supporting the current base unit values of these two codes. The RUC determined that the vignettes on the surveys for these codes did not describe the typical patient for the procedures in which these anesthesia services were administered. The RUC recommended maintaining the

existing values of 5 base units for both codes; referral to the Research Subcommittee for review of the vignettes and development of a method on how to review the survey data to value these services; and a resurvey of both 00740 and 00810.

Following the January 2016 RUC meeting, ASA re-examined CPT codes 00740 and 00810 and determined that the descriptors of these codes are too broad to reflect the range of endoscopic procedures covered under each code and made the decision to go to the CPT Editorial Panel to request a new family of anesthesia codes to describe anesthesia services provided during GI endoscopic procedures. At the October 2016 CPT Editorial Panel meeting the following family of codes were established for CPT 2018:

- 00731 Anesthesia for upper gastrointestinal endoscopic procedures, endoscope introduced proximal to duodenum; not otherwise specified
- 00732 Anesthesia for upper gastrointestinal endoscopic procedures, endoscope introduced proximal to duodenum; endoscopic retrograde cholangiopancreatography (ERCP)
- 00811 Anesthesia for lower intestinal endoscopic procedures, endoscope introduced distal to duodenum; not otherwise specified
- 00812 Anesthesia for lower intestinal endoscopic procedures, endoscope introduced distal to duodenum; screening colonoscopy
- 00813 Anesthesia for combined upper and lower gastrointestinal endoscopic procedures, endoscope introduced both proximal to and distal to the duodenum

### **Overview of Anesthesia Base Unit Methodology**

As a reminder, payment for anesthesia services is different than for RBRVS codes.

*Payment for anesthesia services is based on a different relative system.*

Attached is a spreadsheet with all anesthesia CPT codes, their code descriptors and base unit values. The first worksheet has the codes in numerical order, demonstrating how these codes are organized on the basis of anatomical regions. The second worksheet rank orders all anesthesia codes by increasing base unit values. As explained below, the rank order of anesthesia codes is independent of the intra-service times for the anesthesia procedures (or the underlying surgical procedures). Base units range from a low of 3 units to a high of 30 base units with the exception of three add-on codes. Note that anesthesia base and time units include a combination of work, practice expense and professional liability. The work component of each anesthesia base or time unit is 0.7860.

*Time is not a factor in establishing base unit value.*

Unlike other services valued under RBRVS, the intra-service time is not a factor that is considered when determining a base unit value. The base unit value reflects three major components of the anesthesia service: (1) the intensity and complexity of the intra-service anesthesia care (but not the length of time of that care); (2) the amount of pre-anesthesia service work (pre-anesthesia evaluation and preparation of equipment and medications); and (3) the amount of post-anesthesia service. Hence, two anesthesia CPT codes can have the same or similar base unit values but very different intra-service anesthesia times. The similarity of base unit values indicates that the two codes have similar intra-service intensity/complexity, pre-anesthesia work, and post-anesthesia work. Differences in intra-service anesthesia times are accounted for by reporting the actual time for each procedure, not through differences in base unit values. Similarly, two anesthesia CPT codes may have very different base unit values but similar intra-services times.

*Payments for anesthesia services use a different formula.*

Anesthesia services are valued based on the base unit value and time. For each anesthesia claim, time is separately calculated and is submitted in actual minutes. CMS converts reported minutes into time units when determining payment. Per CMS, 15 minutes equal 1 time unit. To determine the total number of time units, the reported number of minutes is divided by 15 and taken out to one decimal place. Although CMS uses a 15-minute time unit, CMS does not pay in 15-minute increments, but pays by the minute (divides minutes by 15 to determine the number of units to 1 decimal place).

- [Anesthesia Base Units + Time Units] x Anesthesia Conversion Factor

*The anesthesia conversion factor is different than the RBRVS conversion factor.*

- 2017 RBRVS Conversion Factor = \$35.8887
- 2017 Anesthesia Conversion Factor = \$22.0454

#### *Example Payment Calculation for Anesthesia Procedure Code*

Anesthesia CPT code 00740 currently has 5 base units. If the reported anesthesia time is 35 minutes, this is converted to 2.3 time units ( $35/15 = 2.3$ ) and the payment calculation would be (5 base units + 2.3 time units) x \$22.0454 per unit =  $7.3 \times \$22.0454 = \$160.93$ . This includes work, practice expense and professional liability.

#### **January 2017 RUC Work Survey and ASA Recommendation**

ASA surveyed 00731 for the January 2017 RUC meeting. A total of 86 responses were received from a random sample of 3,190 ASA members (2.7% response rate). ASA convened an Expert Panel to review the survey data. *ASA is recommending the median value of 5 base units for 00731.*

#### **Rationale for Recommendation**

ASA is basing its recommendation of the median value of 5 base units for code 00731 on the following factors:

- comparison to key reference services
- comparison to moderate sedation services
- appropriate rank order within the family

#### *Comparison to Key Reference Services*

Survey respondents chose the following key reference services:

	<b>Code Number</b>	<b>Description</b>	<b>Base Unit</b>
Top Key Code	00320	Anesthesia for all procedures on esophagus, thyroid, larynx, trachea and lymphatic system of neck; not otherwise specified, age 1 year or older	6
2 <sup>nd</sup> Key Code	00910	Anesthesia for transurethral procedures (including urethrocystoscopy); not otherwise specified	3

Survey respondents found 00731 to be near or slightly more intense than anesthesia procedure code 00320, with intensity ratings ranging from -0.3 to .47. They also found 00731 to be more intense than 00910, with intensity ratings ranging from 0.19 to 0.75.

It is the opinion of our Expert Panel that these ratings of the intensity factors among 00731 and the key reference services fall appropriately in-line and they support the recommended median value of 5 base units.

#### *Comparison to Moderate Sedation Services*

When following the RUC's methodology of establishing values that are consistent with relative comparisons, it is impossible to use the RUC database to compare anesthesia base unit values to other wRVUs since time is reported separately for anesthesia services. In addition, since anesthesia units are paid using a different conversion factor than the conversion factor used for RBRVS services, a direct comparison of units is not

possible. On the other hand, ASA's Expert Panel feels that comparison to moderate sedation services, which the RUC recently reviewed and valued, has a clinical rationale. In addition, the ASA Expert Panel feels that rank order should be maintained since moderate sedation services (where the patient is responsive to verbal stimuli) is less work and less intense than anesthesia care. Because the anesthesia base units are not equal to wRVUs and time is reported separately for anesthesia services, the comparison cannot be done by searching the RUC database as RUC members usually do. Instead, the comparison is made by comparing the equivalent wRVUs for the anesthesia service using the median intra-service time (survey time) to moderate sedation services using the same intra-service time.

To convert anesthesia base units to wRVUs, ASA used the **AMA RUC formula** (*Medicare RBRVS: The Physicians' Guide*). The first step is to determine the total anesthesia units that would be reported for a "typical patient" by determining the time units. The median survey intra-service time is the sum of induction and post-induction time. The total anesthesia units are determined by the sum of the base unit value and the time units. Because the anesthesia unit is made up of work, practice expense, and liability, only the work portion should be used in any comparison to wRVUs. For 2017, the work portion of one anesthesia unit is 0.786. The total anesthesia units are multiplied by 0.786 to determine the wAnesthesia unit. The wAnesthesia is then multiplied by the anesthesia CF to calculate the work component of payment by CMS. This amount is divided by the RBRVS CF to determine the equivalent wRVUs. For the moderate sedation services, the intra-service time (median by survey data) was used to determine the number of units of 99156 and 99157 that would be reported (using CPT 2017 edition tables).

<b>wRVUs vs Anesthesia Base Units</b>	
<b>2017 RBRVS CF/ RVU</b>	\$35.8887
<b>2017 Anesthesia CF/ ASA unit</b>	\$22.0454
<b>% Base Units that is work</b>	0.786

<b>Moderate Sedation Services</b>	
<b>Code</b>	<b>wRVUs</b>
99156 (initial 15 min, 5 and older)	1.65
99157 (subsequent 15)	1.25

ASA provides this conversion to wRVUs for *different possible base units* and median survey time for 00731 in the table that follows.

Conversion of Anesthesia Units for Median Intra-service Time to Work RVUs (wRVUs)

<b>00731, Anesthesia for upper gastrointestinal endoscopic procedures, endoscope introduced proximal to duodenum; not otherwise specified</b>						
<b>Base Unit</b>	<b>Anesthesia Time*</b>	<b>Time Units**</b>	<b>Total Anesthesia Units</b>	<b>wAnesthesia Units***</b>	<b>\$ Paid CMS****</b>	<b>wRVU Equivalent</b>
3	25	1.7	4.7	3.7	\$81.57	2.27
4	25	1.7	5.7	4.5	\$99.20	2.76
<b>5</b>	<b>25</b>	<b>1.7</b>	<b>6.7</b>	<b>5.2</b>	<b>\$116.84</b>	<b>3.26</b>
6	25	1.7	7.7	6.0	\$134.48	3.75
7	25	1.7	8.7	6.8	\$149.91	4.18

\*Median survey for induction and post-induction time which equals intra-service time for anesthesia care

\*\* Time Units = anesthesia time/15 to one decimal place

\*\*\* wAnesthesia Units = Total Anesthesia Units \* 0.786

\*\*\*\* \$ Paid CMS = wAnesthesia Units \* Anesthesia CF

\*\*\*\*\*wRVU Equivalent = \$ Paid CMS/RBRVS CF

The moderate sedation service median intra-service times are shown in the following table.

*Moderate Sedation Services wRVUs*

<b>Moderate Sedation for 25 min over age 5, different physician</b>	<b>wRVUs</b>
99156 x 1	1.65
99157 x 1	1.25
<b>Total</b>	<b>2.90</b>

Using this analysis, if the 25th percentile for base unit value is used, then the anesthesia service would be valued LESS than the moderate sedation services (2.76 vs. 2.90). Because anesthesia services have higher intensity and work than moderate sedation services, choosing the 25th percentile would cause a rank order anomaly. The recommended median base unit value maintains relativity of values across the entire fee schedule and is consistent with the other two methodologies for determining value of base unit (comparison to key reference codes and appropriate rank order within the family). Therefore, the ASA recommends the median value of 5 base units and feels the comparison to moderate sedation services supports the median value.

*Appropriate Rank Order in the Family*

Based on the recommended values, 00731 is less than 00732 which describes anesthesia for ERCP. The intensity/complexity and pre/post work is greater for 00732. Therefore Expert Panel believes that the value of 5 base units for 00731 is appropriate.

		<b>00731</b>	<b>00732</b>	<b>00811</b>	<b>00812</b>	<b>00813**</b>
		Anesth upper GI NOS	Anesth upper GI ERCP	Anesth lower NOS	Anesth lower screen colonoscopy	Anesth upper and lower

<b>Response Rate</b>		2.7%	2.0%	1.7%	1.5%	1.5%
<b>Base Units</b>	<b>Low</b>	1	2	3	3	3
	<b>25th</b>	4	5	4	3	4
	<b>Med.</b>	5*	6*	4	4*	5
	<b>75th</b>	6	7	5*	5	7
	<b>High</b>	8	18	15	8	10

\*Recommended value

\*\* Recommended value for 00813 is 6 base units

The current codes, 00740 and 00810, have a value of 5 base units. For this new family of codes, ASA is recommending decreases, increases as well as maintaining value. Overall, budget neutrality within the family is maintained and in fact there is an estimated savings of 361,267 base units.

**ASA's Recommendations for 00731 in the Anesthesia for GI Procedure Family**

ASA recommends a value of 5 base units for anesthesia procedure code 00731, *Anesthesia for upper gastrointestinal endoscopic procedures, endoscope introduced proximal to duodenum; not otherwise specified.*

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

1. Is this new/revised code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this new/revised code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 00740

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Anesthesiology How often? Commonly

Specialty CRNA How often? Commonly

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 3,534,000

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. National frequency is 3X the Medicare frequency.

Specialty Anesthesiology	Frequency 1,767,000	Percentage	50%
--------------------------	---------------------	------------	-----

Specialty CRNA	Frequency 1,767,000	Percentage	50.00%
----------------	---------------------	------------	--------

Specialty	Frequency	Percentage
-----------	-----------	------------

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,178,000 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC Database

Specialty Anesthesia	Frequency 589,000	Percentage	50.00%
----------------------	-------------------	------------	--------

Specialty CRNA	Frequency 589,000	Percentage	50.00%
----------------	-------------------	------------	--------

Specialty	Frequency	Percentage
-----------	-----------	------------

Do many physicians perform this service across the United States? Yes

CPT Descriptor: Anesthesia for upper gastrointestinal endoscopic procedures, endoscope introduced proximal to duodenum; endoscopic retrograde cholangiopancreatography (ERCP)

Vignette Used in Survey: A 68-year-old patient presents with abdominal pain and abnormal laboratory tests (AST, ALT, alkaline phosphatase, total bilirubin, amylase). Imaging studies show an apparent retained common bile duct stone. Therapeutic ERCP with stone removal is performed.

Description of Pre-Service Work: Obtain a detailed medical history with special attention to patient's comorbidities, medications, allergies, and cardiac and pulmonary status. Perform an expanded problem focused physical examination, including a thorough airway examination, auscultation of the heart and lungs and musculoskeletal and neurologic examinations if appropriate. Review pertinent laboratory data along with results from electrocardiogram (ECG), chest X rays, and other tests that may be significant in this patient population. Discuss anesthesia care including anxiolysis, analgesia, general anesthesia, and intubation with patient and/or family. Prepare anesthesia equipment and medications. Review and assess patient's medical record and any other interim data as necessary. Discuss possible risks from anesthesia and obtain informed consent.

**Description of Intra-Service Work:** Start a peripheral intravenous catheter, administer an anxiolytic, and transport patient to the procedure room (operating room (OR), radiology suite or GI suite). In the procedure room, confirm placement of standard monitors (ECG, pulse oximetry, noninvasive blood pressure [NIBP], and end-tidal CO<sub>2</sub> [carbon dioxide]). Participate in pre-surgical review, confirming correct patient and correct procedure. Preoxygenate the patient and then induce and intubate the patient. After the airway is secured, place the GI bite block (mouth guard) between the teeth to prevent patient from biting on the endoscope. Place the patient in the prone position, place a pillow under their right chest for slight tilt, ensure neck extension is neutral with head toward right shoulder and pressure points are padded (e.g., head on foam or towel ring to prevent pressure on down orbit, nose, ear, or mouth). Since fluoroscopy is generally used during this procedure, confirm that necessary x-ray protection is placed on the patient. Provide anesthesia care titrating medications and monitoring and reassessing the patient throughout. At the end of the procedure, turn patient supine, emerge the patient and extubate when medically appropriate. Then transfer patient to the post-anesthetic care unit and provide a post-anesthetic report to recovery room nursing staff. During the anesthesia care, personally document anesthesia care in the anesthesia record including vital signs (at least every 5 minutes), positioning, anesthesia procedures, medications, and significant events.

Description of Post-Service Work: Order appropriate analgesic and/or anti-emetic for postprocedure discomfort as necessary. Dispose of anesthesia equipment and medications. Make a postoperative evaluation in the postanesthesia care unit to determine satisfactory recovery from anesthetic care and determine whether any anesthetic-related complications have occurred. Provide any post-anesthesia care as needed in the PACU. Discharge patient from the unit.

**ADDITIONAL RATIONALE**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

**Background**

Anesthesia procedure codes 00740 *Anesthesia for procedure on gastrointestinal tract using an endoscope* and 00810 *Anesthesia for procedure on lower intestine using an endoscope* are used when anesthesia is furnished in conjunction with upper and lower GI procedures respectively. In the 2016 Final Rule, CMS identified these codes as potentially misvalued. The RUC added CPT codes 00740 and 00810 to the list of potentially misvalued services to review for the January 2016 meeting.

In January 2016, ASA presented survey data supporting the current base unit values of these two codes. The RUC determined that the vignettes on the surveys for these codes did not describe the typical patient for the procedures in which these anesthesia services were administered. The RUC recommended maintaining the existing values of 5 base units for both codes; referral to the Research Subcommittee for review of the vignettes and development of a method on how to review the survey data to value these services; and a resurvey of both 00740 and 00810.

Following the January 2016 RUC meeting, ASA re-examined CPT codes 00740 and 00810 and determined that the descriptors of these codes are too broad to reflect the range of endoscopic procedures covered under each code and made the decision to go to the CPT Editorial Panel to request a new family of anesthesia codes to describe anesthesia services provided during GI endoscopic procedures. At the October 2016 CPT Editorial Panel meeting the following family of codes were established for CPT 2018:

- 00731 Anesthesia for upper gastrointestinal endoscopic procedures, endoscope introduced proximal to duodenum; not otherwise specified
- 00732 Anesthesia for upper gastrointestinal endoscopic procedures, endoscope introduced proximal to duodenum; endoscopic retrograde cholangiopancreatography (ERCP)
- 00811 Anesthesia for lower intestinal endoscopic procedures, endoscope introduced distal to duodenum; not otherwise specified
- 00812 Anesthesia for lower intestinal endoscopic procedures, endoscope introduced distal to duodenum; screening colonoscopy
- 00813 Anesthesia for combined upper and lower gastrointestinal endoscopic procedures, endoscope introduced both proximal to and distal to the duodenum

### **Overview of Anesthesia Base Unit Methodology**

As a reminder, payment for anesthesia services is different than for RBRVS codes.

*Payment for anesthesia services is based on a different relative system.*

Attached is a spreadsheet with all anesthesia CPT codes, their code descriptors and base unit values. The first worksheet has the codes in numerical order, demonstrating how these codes are organized on the basis of anatomical regions. The second worksheet rank orders all anesthesia codes by increasing base unit values. As explained below, the rank order of anesthesia codes is independent of the intra-service times for the anesthesia procedures (or the underlying surgical procedures). Base units range from a low of 3 units to a high of 30 base units with the exception of three add-on codes. Note that anesthesia base and time units include a combination of work, practice expense and professional liability. The work component of each anesthesia base or time unit is 0.7860.

*Time is not a factor in establishing base unit value.*

Unlike other services valued under RBRVS, the intra-service time is not a factor that is considered when determining a base unit value. The base unit value reflects three major components of the anesthesia service: (1) the intensity and complexity of the intra-service anesthesia care (but not the length of time of that care); (2) the amount of pre-anesthesia service work (pre-anesthesia evaluation and preparation of equipment and medications); and (3) the amount of post-anesthesia service. Hence, two anesthesia CPT codes can have the same or similar base unit values but very different intra-service anesthesia times. The similarity of base unit values indicate that the two codes have similar intra-service intensity/complexity, pre-anesthesia work, and post-anesthesia work. Differences in intra-service anesthesia times are accounted for by reporting the actual time for each procedure, not through differences in base unit values. Similarly, two anesthesia CPT codes may have very different base unit values but similar intra-services times.

*Payments for anesthesia services use a different formula.*

Anesthesia services are valued based on the base unit value and time. For each anesthesia claim, time is separately calculated and is submitted in actual minutes. CMS converts reported minutes into time units when determining payment. Per CMS, 15 minutes equal 1 time unit. To determine the total number of time units, the

reported number of minutes is divided by 15 and taken out to one decimal place. Although CMS uses a 15-minute time unit, CMS does not pay in 15-minute increments, but pays by the minute (divides minutes by 15 to determine the number of units to 1 decimal place).

- [Anesthesia Base Units + Time Units] x Anesthesia Conversion Factor

*The anesthesia conversion factor is different than the RBRVS conversion factor.*

- 2017 RBRVS Conversion Factor = \$35.8887
- 2017 Anesthesia Conversion Factor = \$22.0454

#### *Example Payment Calculation for Anesthesia Procedure Code*

Anesthesia CPT code 00740 currently has 5 base units. If the reported anesthesia time is 35 minutes, this is converted to 2.3 time units ( $35/15 = 2.3$ ) and the payment calculation would be (5 base units + 2.3 time units) x \$22.0454 per unit =  $7.3 \times \$22.0454 = \$160.93$ . This includes work, practice expense and professional liability.

#### **January 2017 RUC Work Survey and ASA Recommendation**

ASA surveyed 00732 for the January 2017 RUC meeting. A total of 63 responses were received from a random sample of 3,195 ASA members (2.0% response rate). ASA convened an Expert Panel to review the survey data. *ASA is recommending the median value of 6 base units for 00732.*

#### **Rationale for Recommendation**

ASA is basing its recommendation of the median value of 6 base units for code 00732 on the following factors:

- comparison to key reference services
- comparison to moderate sedation services
- appropriate rank order within the family

#### *Comparison to Key Reference Services*

Survey respondents chose the following key reference services:

	<b>Code Number</b>	<b>Description</b>	<b>Base Unit</b>
Top Key Code	00320	Anesthesia for all procedures on esophagus, thyroid, larynx, trachea and lymphatic system of neck; not otherwise specified, age 1 year or older	6
2 <sup>nd</sup> Key Code	00840	Anesthesia for intraperitoneal procedures in lower abdomen including laparoscopy; not otherwise specified	6

Survey respondents found 00732 to be near or slightly more intense than anesthesia procedure code 00320, with intensity ratings ranging from 0.15 to 0.60. They also found 00732 to be more intense than 00840, with intensity ratings ranging from 0.46 to 0.85.

It is the opinion of our Expert Panel that these ratings of the intensity factors among 00732 and the key reference services fall appropriately in-line and supports the recommended median value of 6 base units.

#### *Comparison to Moderate Sedation Services*

When following the RUC's methodology of establishing values that are consistent with relative comparisons, it is impossible to use the RUC database to compare anesthesia base unit values to other wRVUs since time is

reported separately for anesthesia services. In addition, since anesthesia units are paid using a different conversion factor than the conversion factor used for RBRVS services, a direct comparison of units is not possible. On the other hand, ASA's Expert Panel feels that comparison to moderate sedation services, which the RUC recently reviewed and valued, has a clinical rationale. In addition, the ASA Expert Panel feels that rank order should be maintained since moderate sedation services (where the patient is responsive to verbal stimuli) is less work and less intense than anesthesia care. Because the anesthesia base units are not equal to wRVUs and time is reported separately for anesthesia services, the comparison cannot be done by searching the RUC database as RUC members usually do. Instead, the comparison is made by comparing the equivalent wRVUs for the anesthesia service using the median intra-service time (survey time) to moderate sedation services of the same intra-service time.

To convert anesthesia base units to wRVUs, ASA **used the AMA RUC formula** (*Medicare RBRVS: The Physicians' Guide*). The first step is to determine the total anesthesia units that would be reported for a "typical patient" by determining the time units. The median survey intra-service time is the sum of induction and post-induction time. The total anesthesia units are determined by the sum of the base unit value and the time units. Because the anesthesia unit is made up of work, practice expense, and liability, only the work portion should be used in any comparison to wRVUs. For 2017, the work portion of one anesthesia unit is 0.786. The total anesthesia units are multiplied by 0.786 to determine the wAnesthesia unit. The wAnesthesia is then multiplied by the anesthesia CF to calculate the work component of payment by CMS. This amount is divided by the RBRVS CF to determine the equivalent wRVUs. For the moderate sedation services, the intra-service time (median by survey data) was used to determine the number of units of 99156 and 99157 that would be reported (using CPT 2017 edition tables).

<b>wRVUs vs Anesthesia Base Units</b>	
<b>2017 RBRVS CF/ RVU</b>	\$35.8887
<b>2017 Anesthesia CF/ ASA unit</b>	\$22.0454
<b>% Base Units that is work</b>	0.786

<b>Moderate Sedation Services</b>	
<b>Code</b>	<b>wRVUs</b>
99156 (initial 15 min, 5 and older)	1.65
99157 (subsequent 15)	1.25

ASA provides this conversion to wRVUs for different possible base units and median survey time for 00732 in the table that follows.

Conversion of Anesthesia Units for Median Intra-service Time to Work RVUs (wRVUs)

<b>00732, Anesthesia for upper gastrointestinal endoscopic procedures, endoscope introduced proximal to duodenum; endoscopic retrograde cholangiopancreatography (ERCP)</b>						
<b>Base Unit</b>	<b>Anesthesia Time*</b>	<b>Time Units**</b>	<b>Total Anesthesia Units</b>	<b>wAnesthesia Units***</b>	<b>\$ Paid CMS****</b>	<b>wRVU Equivalent</b>
5	65	4.3	9.3	7.3	\$160.93	4.48
<b>6</b>	<b>65</b>	<b>4.3</b>	<b>10.3</b>	<b>8.1</b>	<b>\$178.57</b>	<b>4.98</b>
7	65	4.3	11.3	8.9	\$196.20	5.47
8	65	4.3	12.3	9.7	\$213.84	5.96

\*Median survey for induction and post-induction time which equals intra-service time for anesthesia care

\*\* Time Units = anesthesia time/15 to one decimal place

\*\*\* wAnesthesia Units = Total Anesthesia Units \* 0.786

\*\*\*\* \$ Paid CMS = wAnesthesia Units \* Anesthesia CF

\*\*\*\*\*wRVU Equivalent = \$ Paid CMS/RBRVS CF

The moderate sedation service median intra-service times are shown in the following table.

*Moderate Sedation Services wRVUs*

<b>Moderate Sedation for 65 min over age 5, different physician</b>	<b>wRVUs</b>
99156 x 1	1.65
99157 x 3	3.75
<b>Total</b>	<b>5.40</b>

Using this analysis, if the median value (6 base units) from the survey was used, the anesthesia service would be valued LESS than the moderate sedation services (4.98 to 5.40 work RVUs). The ASA's Expert Panel felt that recommending the 75th percentile for base unit would keep relativity as compared to moderate sedation services, but did not feel it would be consistent with the other two methods in determining value of the base unit (comparison to key reference codes and appropriate rank order within the family). Therefore, ASA recommends the median value of 6 anesthesia base units and feels the comparison to moderate sedation services supports an even higher value.

*Appropriate Rank Order in the Family*

Compared to the other code for 00731, anesthesia for upper endoscopy, the ASA Expert Panel believes that 00732 should have a higher base unit value than 00731. The intra-anesthesia intensity and complexity is greater for this anesthetic than for anesthesia services described under 00731. Also, the pre-anesthesia and post-anesthesia work is greater for services described by 00732 than for those described by 00731. This procedure is typically performed in the prone position, making access to the airway more difficult than it is in 00731. The recommended median value of 6 base units establishes appropriate rank order in the family.

		<b>00731</b>	<b>00732</b>	<b>00811</b>	<b>00812</b>	<b>00813**</b>

	<b>75th</b>	6	7	5*	5	7
	<b>High</b>	8	18	15	8	10

\*Recommended value

\*\* Recommended value for 00813 is 6 base units

The current codes, 00740 and 00810, have a value of 5 base units. For this new family of codes, ASA is recommending decreases, increases as well as maintaining value. Overall, budget neutrality within the family is maintained and in fact there is an estimated savings of 361,267 base units.

**ASA's Recommendations for 00732 in the Anesthesia for GI Procedure Family**

ASA recommends the median value of 6 base units for anesthesia procedure code 00732, *Anesthesia for upper gastrointestinal endoscopic procedures, endoscope introduced proximal to duodenum; endoscopic retrograde cholangiopancreatography (ERCP)*.

1. Is this new/revised code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this new/revised code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 00740

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Anesthesiology How often? Commonly

Specialty CRNA How often? Commonly

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 429,000

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. National frequency is 3X the Medicare frequency.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
ANESTHESIA SUMMARY OF RECOMMENDATION**

CPT Code:00811	Tracking Number: N3	Original Specialty Recommended Base Unit Value: <b>5</b>
		Presented Recommended Base Unit Value: <b>5</b>
Global Period:XXX		RUC Recommended Base Unit Value: <b>4</b>

CPT Descriptor: Anesthesia for lower intestinal endoscopic procedures, endoscope introduced distal to duodenum; not otherwise specified

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 66-year-old patient presents with diarrhea, anemia, and intermittent rectal bleeding. Colonoscopy with biopsies of a lesion is performed.

Percentage of Survey Respondents who found Vignette to be Typical: 86.79%

Description of Pre-Service Work: Obtain a detailed medical history with special attention to patient's comorbidities, medications, allergies, and cardiac and pulmonary status. Perform an expanded problem focused physical examination, including a thorough airway examination, auscultation of the heart and lungs and musculoskeletal and neurologic examinations if appropriate. Review pertinent laboratory data along with results from electrocardiogram (ECG), chest X rays, and other tests that may be significant in this patient population. Discuss anesthesia care including anxiolysis, analgesia, general anesthesia, and possible intubation with patient and/or family. Prepare anesthesia equipment and medications. Review and assess patient's medical record and any other interim data as necessary. Discuss possible risks from anesthesia and obtain informed consent.

Description of Intra-Service Work: Start a peripheral intravenous catheter, administer an anxiolytic, and transport patient to the procedure room (operating room (OR) or GI suite). Administer fluids to counteract volume changes as a result of bowel prep, medications and underlying comorbidities. In the procedure room, confirm placement of standard monitors (ECG, pulse oximetry, noninvasive blood pressure [NIBP], end-tidal CO2 [carbon dioxide]). Participate in pre-surgical review, confirming correct patient and procedure. Place nasal cannula or facemask on patient to provide supplemental oxygen (O2) during the procedure. Induce or start anesthesia care. If medically indicated, place an artificial airway (may range from oral or nasal airway to intubation) to maintain ventilation. Position patient initially in the left lateral position, but during procedure, may need to assist in positioning the patient in supine, right lateral, or prone as determined by the physician performing the procedure. If the patient is in the lateral position, ensure pressure points such as behind the dependent shoulder, the dependent eye and ear are protected. Provide anesthesia care titrating medications and monitoring and reassessing the patient throughout the procedure. Administer medications to counter physiologic changes such as hypotension and tachycardia resulting from a combination of bowel prep, medications, and underlying comorbidities. At the end of the procedure, emerge the patient and then transfer patient to the post-anesthetic care unit and provide a post-anesthetic report to recovery room nursing staff. During the anesthesia care, personally document anesthesia care in the anesthesia record including vital signs (at least every 5 minutes), positioning, anesthesia procedures, medications, and significant events.

Description of Post-Service Work: Order appropriate analgesic and/or anti-emetic for postprocedure discomfort as necessary. Dispose of anesthesia equipment and medications. Make a postoperative evaluation in the postanesthesia care unit to determine satisfactory recovery from anesthetic care and determine whether any anesthetic-related complications have occurred. Provide any post-anesthesia care as needed in the PACU. Discharge patient from the unit.

**ADDITIONAL RATIONALE**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

**Background**

Anesthesia procedure codes 00740 *Anesthesia for procedure on gastrointestinal tract using an endoscope* and 00810 *Anesthesia for procedure on lower intestine using an endoscope* are used when anesthesia is furnished in conjunction with upper and lower GI procedures respectively. In the 2016 Final Rule, CMS identified these codes as potentially misvalued. The RUC added CPT codes 00740 and 00810 to the list of potentially misvalued services to review for the January 2016 meeting.

In January 2016, ASA presented survey data supporting the current base unit values of these two codes. The RUC determined that the vignettes on the surveys for these codes did not describe the typical patient for the

procedures in which these anesthesia services were administered. The RUC recommended maintaining the existing values of 5 base units for both codes; referral to the Research Subcommittee for review of the vignettes and development of a method on how to review the survey data to value these services; and a resurvey of both 00740 and 00810.

Following the January 2016 RUC meeting, ASA re-examined CPT codes 00740 and 00810 and determined that the descriptors of these codes are too broad to reflect the range of endoscopic procedures covered under each code and made the decision to go to the CPT Editorial Panel to request a new family of anesthesia codes to describe anesthesia services provided during GI endoscopic procedures. At the October 2016 CPT Editorial Panel meeting the following family of codes were established for CPT 2018:

- 00731 Anesthesia for upper gastrointestinal endoscopic procedures, endoscope introduced proximal to duodenum; not otherwise specified
- 00732 Anesthesia for upper gastrointestinal endoscopic procedures, endoscope introduced proximal to duodenum; endoscopic retrograde cholangiopancreatography (ERCP)
- 00811 Anesthesia for lower intestinal endoscopic procedures, endoscope introduced distal to duodenum; not otherwise specified
- 00812 Anesthesia for lower intestinal endoscopic procedures, endoscope introduced distal to duodenum; screening colonoscopy
- 00813 Anesthesia for combined upper and lower gastrointestinal endoscopic procedures, endoscope introduced both proximal to and distal to the duodenum

### **Overview of Anesthesia Base Unit Methodology**

As a reminder, payment for anesthesia services is different than for RBRVS codes.

*Payment for anesthesia services is based on a different relative system.*

Attached is a spreadsheet with all anesthesia CPT codes, their code descriptors and base unit values. The first worksheet has the codes in numerical order, demonstrating how these codes are organized on the basis of anatomical regions. The second worksheet rank orders all anesthesia codes by increasing base unit values. As explained below, the rank order of anesthesia codes is independent of the intra-service times for the anesthesia procedures (or the underlying surgical procedures). Base units range from a low of 3 units to a high of 30 base units with the exception of three add-on codes. Note that anesthesia base and time units include a combination of work, practice expense and professional liability. The work component of each anesthesia base or time unit is 0.7860.

*Time is not a factor in establishing base unit value.*

Unlike other services valued under RBRVS, the intra-service time is not a factor that is considered when determining a base unit value. The base unit value reflects three major components of the anesthesia service: (1) the intensity and complexity of the intra-service anesthesia care (but not the length of time of that care); (2) the amount of pre-anesthesia service work (pre-anesthesia evaluation and preparation of equipment and medications); and (3) the amount of post-anesthesia service. Hence, two anesthesia CPT codes can have the same or similar base unit values but very different intra-service anesthesia times. The similarity of base unit values indicates that the two codes have similar intra-service intensity/complexity, pre-anesthesia work, and post-anesthesia work. Differences in intra-service anesthesia times are accounted for by reporting the actual time for each procedure, not through differences in base unit values. Similarly, two anesthesia CPT codes may have very different base unit values but similar intra-services times.

*Payments for anesthesia services use a different formula.*

Anesthesia services are valued based on the base unit value and time. For each anesthesia claim, time is separately calculated and is submitted in actual minutes. CMS converts reported minutes into time units when determining payment. Per CMS, 15 minutes equal 1 time unit. To determine the total number of time units, the reported number of minutes is divided by 15 and taken out to one decimal place. Although CMS uses a 15-

minute time unit, CMS does not pay in 15-minute increments, but pays by the minute (divides minutes by 15 to determine the number of units to 1 decimal place).

- [Anesthesia Base Units + Time Units] x Anesthesia Conversion Factor

*The anesthesia conversion factor is different than the RBRVS conversion factor.*

- 2017 RBRVS Conversion Factor = \$35.8887
- 2017 Anesthesia Conversion Factor = \$22.0454

#### *Example Payment Calculation for Anesthesia Procedure Code*

Anesthesia CPT code 00740 currently has 5 base units. If the reported anesthesia time is 35 minutes, this is converted to 2.3 time units ( $35/15 = 2.3$ ) and the payment calculation would be (5 base units + 2.3 time units) x \$22.0454 per unit =  $7.3 \times \$22.0454 = \$160.93$ . This includes work, practice expense and professional liability.

#### **January 2017 RUC Work Survey and ASA Recommendation**

ASA surveyed 00811 for the January 2017 RUC meeting. A total of 53 responses were received from a random sample of 3,197 ASA members (1.7% response rate). ASA convened an expert panel to review the survey data. *ASA is recommending the 75<sup>th</sup> percentile of 5 base units.*

#### **Rationale for Recommendation**

ASA is basing its recommendation of the 75<sup>th</sup> percentile value of 5 base units for code 00811 on the following factors:

- comparison to key reference services
- comparison to moderate sedation services
- appropriate rank order within the family

#### **Comparison to Key Reference Services**

Survey respondents chose the following key reference services:

	<b>Code Number</b>	<b>Description</b>	<b>Base Unit</b>
Top Key Code	00914	Anesthesia for transurethral procedures (including urethrocystoscopy); transurethral resection of prostate	5
2 <sup>nd</sup> Key Code	00830	Anesthesia for hernia repairs in lower abdomen; not otherwise specified	4

Survey respondents found 00811 to be near or slightly more complex/intense than anesthesia procedure code 00914 (ratings ranging from 0.10 to 0.40) and 00830 (ratings ranging from 0.10 to 0.30).

It is the opinion of our expert panel that these ratings of the intensity factors among 00811 and the key reference services fall appropriately in-line and they support the recommended 75<sup>th</sup> percentile value of 5 base units.

#### *Comparison to Moderate Sedation Services*

When following the RUC's methodology of establishing values that are consistent with relative comparisons, it is impossible to use the RUC database to compare anesthesia base unit values to other wRVUs since time is reported separately for anesthesia services. In addition, since anesthesia units are paid using a different conversion factor than the conversion factor used for RBRVS services, a direct comparison of units is not possible. On the other hand, ASA's Expert Panel feels that comparison to moderate sedation services, which the RUC recently reviewed and valued, has a clinical rationale. In addition, the ASA Expert Panel feels that

rank order should be maintained since moderate sedation services (where the patient is responsive to verbal stimuli) is less work and less intense than anesthesia care. Because the anesthesia base units are not equal to wRVUs and time is reported separately for anesthesia services, the comparison cannot be done by searching the RUC database as RUC members usually do. Instead, the comparison is made by comparing the equivalent wRVUs for the anesthesia service using the median intra-service time (survey time) to moderate sedation services of the same intra-service time.

To convert anesthesia base units to wRVUs, ASA **used the AMA RUC formula** (*Medicare RBRVS: The Physicians' Guide*). The first step is to determine the total anesthesia units that would be reported for a "typical patient" by determining the time units. The median survey intra-service time is the sum of induction and post-induction time. The total anesthesia units are determined by the sum of the base unit value and the time units. Because the anesthesia unit is made up of work, practice expense, and liability, only the work portion should be used in any comparison to wRVUs. For 2017, the work portion of one anesthesia unit is 0.786. The total anesthesia units are multiplied by 0.786 to determine the wAnesthesia unit. The wAnesthesia is then multiplied by the anesthesia CF to calculate the work component of payment by CMS. This amount is divided by the RBRVS CF to determine the equivalent wRVUs. For the moderate sedation services, the intra-service time (median by survey data) was used to determine the number of units of 99156 and 99157 that would be reported (using CPT 2017 edition tables).

<b>wRVUs vs Anesthesia Base Units</b>	
<b>2017 RBRVS CF/ RVU</b>	\$35.8887
<b>2017 Anesthesia CF/ ASA unit</b>	\$22.0454
<b>% Base Units that is work</b>	0.786

<b>Moderate Sedation Services</b>	
<b>Code</b>	<b>wRVUs</b>
99156 (initial 15 min, 5 and older)	1.65
99157 (subsequent 15)	1.25

ASA provides this conversion to wRVUs for different possible base units and median survey time for 00811 in the table that follows.

Conversion of Anesthesia Units for Median Intra-service Time to Work RVUs ( wRVUs)

<b>00811, Anesthesia for lower intestinal endoscopic procedures, endoscope introduced distal to duodenum; not otherwise specified</b>						
<b>Base Unit</b>	<b>Anesthesia Time*</b>	<b>Time Units**</b>	<b>Total Anesthesia Units</b>	<b>wAnesthesia Units***</b>	<b>\$ Paid CMS****</b>	<b>wRVU Equivalent</b>
3	25	1.7	4.7	3.7	\$ 81.57	2.27
4	25	1.7	5.7	4.5	\$ 99.20	2.76
<b>5</b>	<b>25</b>	<b>1.7</b>	<b>6.7</b>	<b>5.3</b>	<b>\$ 116.84</b>	<b>3.26</b>
6	25	1.7	7.7	6.1	\$ 134.48	3.75
7	25	1.7	8.7	6.8	\$ 149.91	4.18

\*Median survey for induction and post-induction time which equals intra-service time for anesthesia care

\*\* Time Units = anesthesia time/15 to one decimal place

\*\*\* wAnesthesia Units = Total Anesthesia Units \* 0.786

\*\*\*\* \$ Paid CMS = wAnesthesia Units \* Anesthesia CF

\*\*\*\*\*wRVU Equivalent = \$ Paid CMS/RBRVS CF

The moderate sedation service median intra-service times are shown in the following table.

*Moderate Sedation Services wRVUs*

Moderate Sedation for 25 min over age 5, different physician	wRVUs
99156 x 1	1.65
99157 x 1	1.25
<b>Total</b>	<b>2.90</b>

Using this analysis, if the median value for base unit value is used, then the anesthesia service would be valued LESS than the moderate sedation services (2.76 vs. 2.90). Because anesthesia services have higher intensity and work than moderate sedation services, choosing the median value would cause a rank order anomaly. The recommended 75<sup>th</sup> percentile base unit value maintains relativity of values across the entire fee schedule and is consistent with the other two methodologies for determining value of base unit (comparison to key reference codes and appropriate rank order within the family). Therefore, the ASA recommends the 75<sup>th</sup> percentile value of 5 anesthesia base units and feels the comparison to moderate sedation services supports the median value.

#### *Appropriate Rank Order in the Family*

Within this new family of anesthesia for GI endoscopic procedures, 00811 should be valued at the same level as 00731, but not as much as 00732. When compared to 00731, there are more instances in which there may be unanticipated stimulation due to intermittent insufflation and possible tissue excision during the procedures. The 75<sup>th</sup> percentile base unit value maintains appropriate rank order within the entire family of anesthesia for GI endoscopic procedure codes.

		00731	00732	00811	00812	00813**
		Anesth upper GI NOS	Anesth upper GI ERCP	Anesth lower NOS	Anesth lower screen colonoscopy	Anesth upper and lower

<b>Total Sent</b>		3190	3195	3197	3197	3197
<b>Response Rate</b>		2.7%	2.0%	1.7%	1.5%	1.5%
<b>Base Units</b>	<b>Low</b>	1	2	3	3	3
	<b>25th</b>	4	5	4	3	4
	<b>Med.</b>	5*	6*	4	4*	5
	<b>75th</b>	6	7	5*	5	7
	<b>High</b>	8	18	15	8	10

\*Recommended value

\*\*Recommended value for 00813 is 6 base units

The current codes, 00740 and 00810, have a value of 5 base units. For this new family of codes, ASA is recommending decreases, increases as well as maintaining value. Overall, budget neutrality within the family is maintained and in fact there is an estimated savings of 361,267 base units.

#### **ASA's Recommendations for 00811 in the Anesthesia for GI Procedure Family**

ASA recommends the 75<sup>th</sup> percentile value of 5 base units for anesthesia procedure code 00811, *Anesthesia for lower intestinal endoscopic procedures, endoscope introduced distal to duodenum; not otherwise specified.*

#### **SERVICES REPORTED WITH MULTIPLE CPT CODES**

1. Is this new/revised code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this new/revised code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 00810

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

**ADDITIONAL RATIONALE**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

**Background**

Anesthesia procedure codes 00740 *Anesthesia for procedure on gastrointestinal tract using an endoscope* and 00810 *Anesthesia for procedure on lower intestine using an endoscope* are used when anesthesia is furnished in conjunction with upper and lower GI procedures respectively. In the 2016 Final Rule, CMS identified these codes as potentially misvalued. The RUC added CPT codes 00740 and 00810 to the list of potentially misvalued services to review for the January 2016 meeting.

In January 2016, ASA presented survey data supporting the current base unit values of these two codes. The RUC determined that the vignettes on the surveys for these codes did not describe the typical patient for the procedures in which these anesthesia services were administered. The RUC recommended maintaining the

existing values of 5 base units for both codes; referral to the Research Subcommittee for review of the vignettes and development of a method on how to review the survey data to value these services; and a resurvey of both 00740 and 00810.

Following the January 2016 RUC meeting, ASA re-examined CPT codes 00740 and 00810 and determined that the descriptors of these codes are too broad to reflect the range of endoscopic procedures covered under each code and made the decision to go to the CPT Editorial Panel to request a new family of anesthesia codes to describe anesthesia services provided during GI endoscopic procedures. At the October 2016 CPT Editorial Panel meeting the following family of codes were established for CPT 2018:

- 00731 Anesthesia for upper gastrointestinal endoscopic procedures, endoscope introduced proximal to duodenum; not otherwise specified
- 00732 Anesthesia for upper gastrointestinal endoscopic procedures, endoscope introduced proximal to duodenum; endoscopic retrograde cholangiopancreatography (ERCP)
- 00811 Anesthesia for lower intestinal endoscopic procedures, endoscope introduced distal to duodenum; not otherwise specified
- 00812 Anesthesia for lower intestinal endoscopic procedures, endoscope introduced distal to duodenum; screening colonoscopy
- 00813 Anesthesia for combined upper and lower gastrointestinal endoscopic procedures, endoscope introduced both proximal to and distal to the duodenum

### **Overview of Anesthesia Base Unit Methodology**

As a reminder, payment for anesthesia services is different than for RBRVS codes.

*Payment for anesthesia services is based on a different relative system.*

Attached is a spreadsheet with all anesthesia CPT codes, their code descriptors and base unit values. The first worksheet has the codes in numerical order, demonstrating how these codes are organized on the basis of anatomical regions. The second worksheet rank orders all anesthesia codes by increasing base unit values. As explained below, the rank order of anesthesia codes is independent of the intra-service times for the anesthesia procedures (or the underlying surgical procedures). Base units range from a low of 3 units to a high of 30 base units with the exception of three add-on codes. Note that anesthesia base and time units include a combination of work, practice expense and professional liability. The work component of each anesthesia base or time unit is 0.7860.

*Time is not a factor in establishing base unit value.*

Unlike other services valued under RBRVS, the intra-service time is not a factor that is considered when determining a base unit value. The base unit value reflects three major components of the anesthesia service: (1) the intensity and complexity of the intra-service anesthesia care (but not the length of time of that care); (2) the amount of pre-anesthesia service work (pre-anesthesia evaluation and preparation of equipment and medications); and (3) the amount of post-anesthesia service. Hence, two anesthesia CPT codes can have the same or similar base unit values but very different intra-service anesthesia times. The similarity of base unit values indicates that the two codes have similar intra-service intensity/complexity, pre-anesthesia work, and post-anesthesia work. Differences in intra-service anesthesia times are accounted for by reporting the actual time for each procedure, not through differences in base unit values. Similarly, two anesthesia CPT codes may have very different base unit values but similar intra-services times.

*Payments for anesthesia services use a different formula.*

Anesthesia services are valued based on the base unit value and time. For each anesthesia claim, time is separately calculated and is submitted in actual minutes. CMS converts reported minutes into time units when determining payment. Per CMS, 15 minutes equal 1 time unit. To determine the total number of time units, the reported number of minutes is divided by 15 and taken out to one decimal place. Although CMS uses a 15-minute time unit, CMS does not pay in 15-minute increments, but pays by the minute (divides minutes by 15 to determine the number of units to 1 decimal place).

- $[\text{Anesthesia Base Units} + \text{Time Units}] \times \text{Anesthesia Conversion Factor}$

*The anesthesia conversion factor is different than the RBRVS conversion factor.*

- 2017 RBRVS Conversion Factor = \$35.8887
- 2017 Anesthesia Conversion Factor = \$22.0454

*Example payment calculation for anesthesia procedure code.*

Anesthesia CPT code 00740 currently has 5 base units. If the reported anesthesia time is 35 minutes, this is converted to 2.3 time units ( $35/15 = 2.3$ ) and the payment calculation would be (5 base units + 2.3 time units)  $\times$  \$22.0454 per unit =  $7.3 \times \$22.0454 = \$160.93$ . This includes work, practice expense and professional liability.

### **January 2017 RUC Work Survey and ASA Recommendation**

ASA surveyed 00812 for the January 2017 RUC meeting. A total of 47 responses were received from a random sample of 3,197 ASA members (1.5% response rate). ASA convened an Expert Panel to review the survey data. *ASA is recommending the median of 4 base units for 00812.*

### **Rationale for Recommendation**

ASA is basing its recommendation of the median value of 4 base units for code 00812 on the following factors:

- comparison to key reference services
- comparison to moderate sedation services
- appropriate rank order within the family

#### *Comparison to Key Reference Services*

Survey respondents chose the following key reference services:

	<b>Code Number</b>	<b>Description</b>	<b>Base Unit</b>
Top Key Code	00910	Anesthesia for transurethral procedures (including urethrocystoscopy); not otherwise specified	3
2 <sup>nd</sup> Key Code	00914	Anesthesia for transurethral procedures (including urethrocystoscopy); transurethral resection of prostate	5

Survey respondents found 00812 to be around the same complexity/intensity than key reference code 00910 (ratings range from -0.18 to 0.09) and 00914 (ratings from -0.29 to 0.29). It is the opinion of our Expert Panel that these ratings of the intensity factors among 00812 and the key reference services fall appropriately in-line and they support the recommended median value of 4 base units.

#### *Comparison to Moderate Sedation Services*

When following the RUC's methodology of establishing values that are consistent with relative comparisons, it is impossible to use the RUC database to compare anesthesia base unit values to other wRVUs since time is reported separately for anesthesia services. In addition, since anesthesia units are paid using a different conversion factor than the conversion factor used for RBRVS services, a direct comparison of units is not possible. On the other hand, ASA's Expert Panel feels that comparison to moderate sedation services, which the RUC recently reviewed and valued, has a clinical rationale. In addition, the ASA Expert Panel feels that rank order should be maintained since moderate sedation services (where the patient is responsive to verbal stimuli) is less work and less intense than anesthesia care. Because the anesthesia base units are not equal to wRVUs and time is reported separately for anesthesia services, the comparison cannot be done by searching

the RUC database as RUC members usually do. Instead, the comparison is made by comparing the equivalent wRVUs for the anesthesia service using the median intra-service time (survey time) to moderate sedation services of the same intra-service time.

To convert anesthesia base units to wRVUs, ASA used the **AMA RUC formula** (*Medicare RBRVS: The Physicians' Guide*). The first step is to determine the total anesthesia units that would be reported for a "typical patient" by determining the time units. The median survey intra-service time is the sum of induction and post-induction time. The total anesthesia units are determined by the sum of the base unit value and the time units. Because the anesthesia unit is made up of work, practice expense, and liability, only the work portion should be used in any comparison to wRVUs. For 2017, the work portion of one anesthesia unit is 0.786. The total anesthesia units are multiplied by 0.786 to determine the wAnesthesia unit. The wAnesthesia is then multiplied by the anesthesia CF to calculate the work component of payment by CMS. This amount is divided by the RBRVS CF to determine the equivalent wRVUs. For the moderate sedation services, the intra-service time (median by survey data) was used to determine the number of units of 99156 and 99157 that would be reported (using CPT 2017 edition tables).

<b>wRVUs vs Anesthesia Base Units</b>	
<b>2017 RBRVS CF/ RVU</b>	\$35.8887
<b>2017 Anesthesia CF/ ASA unit</b>	\$22.0454
<b>% Base Units that is work</b>	0.786

<b>Moderate Sedation Services</b>	
<b>Code</b>	<b>wRVUs</b>
99156 (initial 15 min, 5 and older)	1.65
99157 (subsequent 15)	1.25

ASA provides this conversion to wRVUs for different possible base units and median survey time for 00812 in the table that follows.

Conversion of Anesthesia Units for Median Intra-service Time to Work RVUs ( wRVUs)

<b>00812, Anesthesia for lower intestinal endoscopic procedures, endoscope introduced distal to duodenum; screening colonoscopy</b>						
<b>Base Unit</b>	<b>Anesthesia Time*</b>	<b>Time Units**</b>	<b>Total Anesthesia Units</b>	<b>wAnesthesia Units***</b>	<b>\$ Paid CMS****</b>	<b>wRVU Equivalent</b>
3	25	1.7	4.7	3.7	\$ 81.57	2.27
<b>4</b>	<b>25</b>	<b>1.7</b>	<b>5.7</b>	<b>4.5</b>	<b>\$ 99.20</b>	<b>2.76</b>
5	25	1.7	6.7	5.3	\$ 116.84	3.26
6	25	1.7	7.7	6.1	\$ 134.48	3.75
7	25	1.7	8.7	6.8	\$ 149.91	4.18

\*Median survey for induction and post-induction time which equals intra-service time for anesthesia care

\*\* Time Units = anesthesia time/15 to one decimal place

\*\*\* wAnesthesia Units = Total Anesthesia Units \* 0.786

\*\*\*\* \$ Paid CMS = wAnesthesia Units \* Anesthesia CF

\*\*\*\*\*wRVU Equivalent = \$ Paid CMS/RBRVS CF

The moderate sedation service median intra-service times are shown in the following table.

*Moderate Sedation Services wRVUs*

<b>Moderate Sedation for 25 min over age 5, different physician</b>	<b>wRVUs</b>
99156 x 1	1.65

99157 x 1	1.25
<b>Total</b>	<b>2.90</b>

If the median value (4 base units) from the survey is used, the anesthesia service would be valued LESS than the moderate sedation services (2.76 vs. 2.90 work RVUs). The ASA expert panel felt that recommending the 75<sup>th</sup> percentile for base unit would keep relativity as compared to moderate sedation, but did not feel it would be consistent with the other two methods in determining the value of the base unit (comparison to key reference codes and appropriate rank order within the family). Therefore, ASA is recommending the median value of 6 anesthesia units and feels the comparison to moderate sedation services supports an even higher value.

#### *Appropriate Rank Order in the Family*

Within this new family of anesthesia for lower GI procedures, ASA's Expert Panel believes the 00812 base unit should have a lower value than 00811. The Expert Panel decision is based on the fact that the typical patient presenting for screening colonoscopy requires less preoperative and postoperative work. The median value of 4 base units for this procedure maintains appropriate rank order within this family of anesthesia codes.

		<b>00731</b>	<b>00732</b>	<b>00811</b>	<b>00812</b>	<b>00813**</b>
		Anesth upper GI NOS	Anesth upper GI ERCP	Anesth lower NOS	Anesth lower screen colonoscopy	Anesth upper and lower

<b>Response Rate</b>		2.7%	2.0%	1.7%	1.5%	1.5%
<b>Base Units</b>	<b>Low</b>	1	2	3	3	3
	<b>25th</b>	4	5	4	3	4
	<b>Med.</b>	5*	6*	4	4*	5
	<b>75th</b>	6	7	5*	5	7
	<b>High</b>	8	18	15	8	10

\*Recommended value

\*\* Recommended value for 00813 is 6 base units

The current codes, 00740 and 00810, have a value of 5 base units. For this new family of codes, ASA is recommending decreases, increases as well as maintaining value. Overall, budget neutrality within the family is maintained and in fact there is an estimated savings of 361,267 base units.

#### **ASA's Recommendations for 00812 in the Anesthesia for GI Procedure Family**

Although this creates a rank order anomaly compared to moderate sedation for the same intra-anesthesia time, ASA recommends the median value of 4 base units for anesthesia procedure code 00812, *Anesthesia for lower intestinal endoscopic procedures, endoscope introduced distal to duodenum; screening colonoscopy*.

#### **SERVICES REPORTED WITH MULTIPLE CPT CODES**

1. Is this new/revised code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.

- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.  
☐ Multiple codes are used to maintain consistency with similar codes.  
☐ Historical precedents.  
☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this new/revised code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 00810

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
 If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Anesthesiology How often? Commonly

Specialty CRNA How often? Commonly

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 1,545,000

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. National frequency is 3X the Medicare frequency.

Specialty Anesthesiology	Frequency 772,500	Percentage	50%
--------------------------	-------------------	------------	-----

Specialty CRNA	Frequency 772,500	Percentage	50.00%
----------------	-------------------	------------	--------

Specialty	Frequency	Percentage
-----------	-----------	------------

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?  
 515000 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty.  
 Please explain the rationale for this estimate. RUC Database

Specialty Anesthesia	Frequency 257500	Percentage	50.00%
----------------------	------------------	------------	--------

Specialty CRNA	Frequency 257500	Percentage	50.00%
----------------	------------------	------------	--------

Specialty	Frequency	Percentage
-----------	-----------	------------

Do many physicians perform this service across the United States? Yes

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
ANESTHESIA SUMMARY OF RECOMMENDATION**

CPT Code:00813	Tracking Number: N5	Original Specialty Recommended Base Unit Value: <b>6</b>
		Presented Recommended Base Unit Value: <b>5</b>
Global Period:XXX		RUC Recommended Base Unit Value: <b>5</b>

CPT Descriptor: Anesthesia for combined upper and lower gastrointestinal endoscopic procedures, endoscope introduced both proximal to and distal to the duodenum

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 68 year-old patient with persistent abdominal pain, positive fecal blood tests and mild anemia on lab exam presents for upper and lower GI endoscopic procedures to determine cause of occult bleeding.

Percentage of Survey Respondents who found Vignette to be Typical: 85.11%

Description of Pre-Service Work: Obtain a detailed medical history with special attention to patient's comorbidities, medications, allergies, and cardiac and pulmonary status. Perform an expanded problem focused physical examination, including a thorough airway examination, auscultation of the heart and lungs and musculoskeletal and neurologic examinations if appropriate. Review pertinent laboratory data along with results from electrocardiogram (ECG), chest X rays, and other tests that may be significant in this patient population. Discuss anesthesia care including anxiolysis, analgesia, general anesthesia, and possible intubation with patient and/or family. Prepare anesthesia equipment and medications. Review and assess patient's medical record and any other interim data as necessary. Discuss possible risks from anesthesia and obtain informed consent.

Description of Intra-Service Work: Start a peripheral intravenous catheter, administer an anxiolytic, and transport patient to the procedure room (operating room (OR) or GI suite). Administer fluids to counteract volume changes as a result of bowel prep, medications and underlying comorbidities. In the procedure room, confirm placement of standard monitors (ECG, pulse oximetry, noninvasive blood pressure [NIBP], end-tidal CO2 [carbon dioxide]). Participate in pre-surgical review, confirming correct patient and procedure. Place nasal cannula or facemask on patient to provide supplemental oxygen (O2) during the procedure. Induce or start anesthesia care. If medically indicated, place an artificial airway (may range from oral or nasal airway to intubation) to maintain ventilation. A GI bite block (mouth guard) is placed between the teeth to prevent patient from biting on the endoscope. Position patient initially in the left lateral position, but during procedure, may need to assist in positioning the patient in supine, right lateral, or prone as determined by the physician performing the procedure. If the patient is in the lateral position, ensure pressure points such as behind the dependent shoulder, the dependent eye and ear are protected. The resulting position along with the presence of the endoscope may compromise access to the airway should it be necessary to assist ventilation during the procedure. Provide anesthesia care titrating medications and monitoring and reassessing the patient throughout the procedure. Administer medications to counter physiologic changes such as hypotension and tachycardia resulting from a combination of bowel prep, medications, and underlying comorbidities. At the end of the upper endoscopy procedure, the patient's stretcher is turned 180 degrees. After the turning the bed, the patient's ventilation is reevaluated. Monitors and intravenous access are assessed. Although the initial position for the lower endoscopic procedure is the left lateral position, during procedure, may need to assist in positioning the patient in supine, right lateral, or prone as determined by the physician performing the procedure. At the end of the procedure, emerge the patient and then transfer patient to the post-anesthetic care unit and provide a post-anesthetic report to recovery room nursing staff. During the anesthesia care, personally document anesthesia care in the anesthesia record including vital signs (at least every 5 minutes), positioning, anesthesia procedures, medications, and significant events.

Description of Post-Service Work: Order appropriate analgesic and/or anti-emetic for postprocedure discomfort as necessary. Dispose of anesthesia equipment and medications. Make a postoperative evaluation in the post-anesthesia care unit to determine satisfactory recovery from anesthetic care and determine whether any anesthetic-related complications have occurred. Provide any post-anesthesia care as needed in the PACU. Discharge patient from the unit.

**ADDITIONAL RATIONALE**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

**Background**

Anesthesia procedure codes 00740 *Anesthesia for procedure on gastrointestinal tract using an endoscope* and 00810 *Anesthesia for procedure on lower intestine using an endoscope* are used when anesthesia is furnished in conjunction with upper and lower GI procedures respectively. In the 2016 Final Rule, CMS identified these codes as potentially misvalued. The RUC added CPT codes 00740 and 00810 to the list of potentially misvalued services to review for the January 2016 meeting.

In January 2016, ASA presented survey data supporting the current base unit values of these two codes. The RUC determined that the vignettes on the surveys for these codes did not describe the typical patient for the procedures in which these anesthesia services were administered. The RUC recommended maintaining the

existing values of 5 base units for both codes; referral to the Research Subcommittee for review of the vignettes and development of a method on how to review the survey data to value these services; and a resurvey of both 00740 and 00810.

Following the January 2016 RUC meeting, ASA re-examined CPT codes 00740 and 00810 and determined that the descriptors of these codes are too broad to reflect the range of endoscopic procedures covered under each code and made the decision to go to the CPT Editorial Panel to request a new family of anesthesia codes to describe anesthesia services provided during GI endoscopic procedures. At the October 2016 CPT Editorial Panel meeting the following family of codes were established for CPT 2018:

- 00731 Anesthesia for upper gastrointestinal endoscopic procedures, endoscope introduced proximal to duodenum; not otherwise specified
- 00732 Anesthesia for upper gastrointestinal endoscopic procedures, endoscope introduced proximal to duodenum; endoscopic retrograde cholangiopancreatography (ERCP)
- 00811 Anesthesia for lower intestinal endoscopic procedures, endoscope introduced distal to duodenum; not otherwise specified
- 00812 Anesthesia for lower intestinal endoscopic procedures, endoscope introduced distal to duodenum; screening colonoscopy
- 00813 Anesthesia for combined upper and lower gastrointestinal endoscopic procedures, endoscope introduced both proximal to and distal to the duodenum

### **Overview of Anesthesia Base Unit Methodology**

As a reminder, payment for anesthesia services is different than for RBRVS codes.

*Payment for anesthesia services is based on a different relative system.*

Attached is a spreadsheet with all anesthesia CPT codes, their code descriptors and base unit values. The first worksheet has the codes in numerical order, demonstrating how these codes are organized on the basis of anatomical regions. The second worksheet rank orders all anesthesia codes by increasing base unit values. As explained below, the rank order of anesthesia codes is independent of the intra-service times for the anesthesia procedures (or the underlying surgical procedures). Base units range from a low of 3 units to a high of 30 base units with the exception of three add-on codes. Note that anesthesia base and time units include a combination of work, practice expense and professional liability. The work component of each anesthesia base or time unit is 0.7860.

*Time is not a factor in establishing base unit value.*

Unlike other services valued under RBRVS, the intra-service time is not a factor that is considered when determining a base unit value. The base unit value reflects three major components of the anesthesia service: (1) the intensity and complexity of the intra-service anesthesia care (but not the length of time of that care); (2) the amount of pre-anesthesia service work (pre-anesthesia evaluation and preparation of equipment and medications); and (3) the amount of post-anesthesia service. Hence, two anesthesia CPT codes can have the same or similar base unit values but very different intra-service anesthesia times. The similarity of base unit values indicates that the two codes have similar intra-service intensity/complexity, pre-anesthesia work, and post-anesthesia work. Differences in intra-service anesthesia times are accounted for by reporting the actual time for each procedure, not through differences in base unit values. Similarly, two anesthesia CPT codes may have very different base unit values but similar intra-services times.

*Payments for anesthesia services use a different formula.*

Anesthesia services are valued based on the base unit value and time. For each anesthesia claim, time is separately calculated and is submitted in actual minutes. CMS converts reported minutes into time units when determining payment. Per CMS, 15 minutes equal 1 time unit. To determine the total number of time units, the reported number of minutes is divided by 15 and taken out to one decimal place. Although CMS uses a 15-minute time unit, CMS does not pay in 15-minute increments, but pays by the minute (divides minutes by 15 to determine the number of units to 1 decimal place).

- [Anesthesia Base Units + Time Units] x Anesthesia Conversion Factor

*The anesthesia conversion factor is different than the RBRVS conversion factor.*

- 2017 RBRVS Conversion Factor = \$35.8887
- 2017 Anesthesia Conversion Factor = \$22.0454

#### *Example Payment Calculation for Anesthesia Procedure Code*

Anesthesia CPT code 00740 currently has 5 base units. If the reported anesthesia time is 35 minutes, this is converted to 2.3 time units ( $35/15 = 2.3$ ) and the payment calculation would be (5 base units + 2.3 time units) x \$22.0454 per unit =  $7.3 \times \$22.0454 = \$160.93$ . This includes work, practice expense and professional liability.

#### **January 2017 RUC Work Survey and ASA Recommendation**

ASA surveyed 00813 for the January 2017 RUC meeting. Anesthesia procedure code 00813 describes patients undergoing both upper and lower gastrointestinal endoscopic procedures sequentially on the same day. This code includes the additional anesthesia work during a combined procedure, such as repositioning, responding to physiologic changes when reinserting the scope into a different location, and other non-duplicative work involved in the additional procedure.

A total of 47 responses were received from a random sample of 3,197 ASA members (1.5% response rate). ASA convened an Expert Panel to review the survey data. ***ASA is recommending a value of 6 base units for 00813.***

#### **Rationale for Recommendation**

ASA is basing its recommendation of 6 base units for code 00813 on the following factors:

- comparison to key reference services
- comparison to moderate sedation services
- appropriate rank order within the family

#### *Comparison to Key Reference Services*

Survey respondents chose the following key reference services:

	<b>Code Number</b>	<b>Description</b>	<b>Base Unit</b>
Top Key Code	00320	Anesthesia for all procedures on esophagus, thyroid, larynx, trachea and lymphatic system of neck; not otherwise specified, age 1 year or older	6
2 <sup>nd</sup> Key Code	00830	Anesthesia for hernia repairs in lower abdomen; not otherwise specified	4

Survey respondents found 00813 to be a little more complex/intense than anesthesia procedure code 00320 (ratings ranging from 0.25 to 0.58) and anesthesia procedure code 00830 (ratings ranging from 0.25 to 0.50).

It is the opinion of our Expert Panel that these ratings of the intensity factors among 00813 and the key reference services fall appropriately in-line and they support the recommended value of 6 base units.

#### *Comparison to Moderate Sedation Services*

When following the RUC's methodology of establishing values that are consistent with relative comparisons, it is impossible to use the RUC database to compare anesthesia base unit values to other wRVUs since time is reported separately for anesthesia services. In addition, since anesthesia units are paid using a different

conversion factor than the conversion factor used for RBRVS services, a direct comparison of units is not possible. On the other hand, ASA's Expert Panel feels that comparison to moderate sedation services, which the RUC recently reviewed and valued, has a clinical rationale. In addition, the ASA Expert Panel feels that rank order should be maintained since moderate sedation services (where the patient is responsive to verbal stimuli) is less work and less intense than anesthesia care. Because the anesthesia base units are not equal to wRVUs and time is reported separately for anesthesia services, the comparison cannot be done by searching the RUC database as RUC members usually do. Instead, the comparison is made by comparing the equivalent wRVUs for the anesthesia service using the median intra-service time (survey time) to moderate sedation services of the same intra-service time.

To convert anesthesia base units to wRVUs, ASA **used the AMA RUC formula** (*Medicare RBRVS: The Physicians' Guide*). The first step is to determine the total anesthesia units that would be reported for a "typical patient" by determining the time units. The median survey intra-service time is the sum of induction and post-induction time. The total anesthesia units are determined by the sum of the base unit value and the time units. Because the anesthesia unit is made up of work, practice expense, and liability, only the work portion should be used in any comparison to wRVUs. For 2017, the work portion of one anesthesia unit is 0.786. The total anesthesia units are multiplied by 0.786 to determine the wAnesthesia unit. The wAnesthesia is then multiplied by the anesthesia CF to calculate the work component of payment by CMS. This amount is divided by the RBRVS CF to determine the equivalent wRVUs. For the moderate sedation services, the intra-service time (median by survey data) was used to determine the number of units of 99156 and 99157 that would be reported (using CPT 2017 edition tables).

<b>wRVUs vs Anesthesia Base Units</b>	
<b>2017 RBRVS CF/ RVU</b>	\$35.8887
<b>2017 Anesthesia CF/ ASA unit</b>	\$22.0454
<b>% Base Units that is work</b>	0.786

<b>Moderate Sedation Services</b>	
<b>Code</b>	<b>wRVUs</b>
99156 (initial 15 min, 5 and older)	1.65
99157 (subsequent 15)	1.25

ASA provides this conversion to wRVUs for different possible base units and median survey time for 00813 in the table that follows.

*Conversion of Anesthesia Units for Median Intra-service Time to Work RVUs (wRVUs)*

<b>00813</b> , Anesthesia for combined upper and lower gastrointestinal endoscopic procedures, endoscope introduced both proximal to and distal to the duodenum						
<b>Base Unit</b>	<b>Anesthesia Time*</b>	<b>Time Units**</b>	<b>Total Anesthesia Units</b>	<b>wAnesthesia Units***</b>	<b>\$ Paid CMS****</b>	<b>wRVU Equivalent</b>
5	40	2.7	7.7	6.1	\$ 134.48	3.75
<b>6</b>	<b>40</b>	<b>2.7</b>	<b>8.7</b>	<b>6.8</b>	<b>\$ 149.91</b>	<b>4.18</b>
7	40	2.7	9.7	7.6	\$ 167.55	4.67
8	40	2.7	10.7	8.4	\$ 185.18	5.16

\*Median survey for induction and post-induction time which equals intra-service time for anesthesia care

\*\* Time Units = anesthesia time/15 to one decimal place

\*\*\* wAnesthesia Units = Total Anesthesia Units \* 0.786

\*\*\*\* \$ Paid CMS = wAnesthesia Units \* Anesthesia CF

\*\*\*\*\*wRVU Equivalent = \$ Paid CMS/RBRVS CF

The moderate sedation service median intra-service times are shown in the following table.

*Moderate Sedation Services wRVUs*

<b>Moderate Sedation for 40 min over age 5, different physician</b>	<b>wRVUs</b>
99156 x 1	1.65
99157 x 2	2.50
<b>Total</b>	<b>4.15</b>

Using this analysis, if the median value (5 base units) from the survey is used, the anesthesia service would be valued LESS than the moderate sedation services (3.75 vs. 4.15 work RVUs). The ASA Expert Panel felt that recommending the 75<sup>th</sup> percentile value of 7 units for base unit would keep relativity as compared to moderate sedation, but did not feel it would be consistent with the other two methods in determining the value of the base unit (comparison to key reference codes and appropriate rank order within the family). The Expert Panel felt that the base value between the median and 75<sup>th</sup> percentile of 6 base units was consistent with moderate sedation comparison (higher work RVU value) and with the other two methods in determining base unit value. Therefore, ASA is recommending a base unit value of 6 units and feels the comparison to moderate sedation services supports this value.

*Appropriate Rank Order in the Family*

Within this new family of anesthesia for GI procedures, 00813 should not be valued any less than either 00731 or 00811. Since 00813 is a combination of these two services, it is reasonable to expect that it would have a value that is slightly greater than either of the two individual services. A value of 6 base units produces just that result and establishes the appropriate rank order in the family.

		<b>00731</b>	<b>00732</b>	<b>00811</b>	<b>00812</b>	<b>00813**</b>
		Anesth upper GI NOS	Anesth upper GI ERCP	Anesth lower NOS	Anesth lower screen colonoscopy	Anesth upper and lower

	<b>75th</b>	6	7	5*	5	7
	<b>High</b>	8	18	15	8	10

\*Recommended value

\*\* Recommended value for 00813 is 6 base units

The current codes, 00740 and 00810, have a value of 5 base units. For this new family of codes, ASA is recommending decreases, increases as well as maintaining value. Overall, budget neutrality within the family is maintained and in fact there is an estimated savings of 361,267 base units.

**ASA's Recommendations for 00813 in the Anesthesia for GI Procedure Family**

ASA recommends a value of 6 base units for anesthesia procedure code *00813, Anesthesia for combined upper and lower gastrointestinal endoscopic procedures, endoscope introduced both proximal to and distal to the duodenum.*

1. Is this new/revised code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this new/revised code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 00810

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Anesthesiology How often? Sometimes

Specialty CRNA How often? Sometimes

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 30,000

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. National frequency is 3X the Medicare frequency.

Specialty Anesthesiology	Frequency 15,000	Percentage	50%
--------------------------	------------------	------------	-----

Specialty CRNA	Frequency 15,000	Percentage	50.00%
----------------	------------------	------------	--------

Specialty	Frequency	Percentage
-----------	-----------	------------

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 10,000 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC Database

Specialty Anesthesia	Frequency 5,000	Percentage	50.00%
----------------------	-----------------	------------	--------

Specialty CRNA	Frequency 5,000	Percentage	50.00%
----------------	-----------------	------------	--------

Specialty	Frequency	Percentage
-----------	-----------	------------

Do many physicians perform this service across the United States? Yes

**AMA/Specialty Society Update Process  
Practice Expense Summary of Recommendation  
Non Facility Direct Inputs**

CPT Long Descriptor:

00731	Anesthesia for upper gastrointestinal endoscopic procedures, endoscope introduced proximal to duodenum; not otherwise specified
00732	Anesthesia for upper gastrointestinal endoscopic procedures, endoscope introduced proximal to duodenum; endoscopic retrograde cholangiopancreatography (ERCP)
00811	Anesthesia for lower intestinal endoscopic procedures, endoscope introduced distal to duodenum; not otherwise specified
00812	Anesthesia for lower intestinal endoscopic procedures, endoscope introduced distal to duodenum; screening colonoscopy
00813	Anesthesia for combined upper and lower gastrointestinal endoscopic procedures, endoscope introduced both proximal to and distal to the duodenum

Global Period: XXX Meeting Date: January 2017

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:

**We are requesting the standard anesthesia PE package.**

*CMS requested the PERC discuss the appropriateness of direct practice expense of clinical labor employed by the physician as a cost in the facility setting. The PERC carefully discussed the recommendation by the American Society of Anesthesiology of 11 minutes and agreed that this was a direct practice expense however 8 minutes of clinical labor time was more appropriate. The PERC recommends 8 minutes of clinical labor time for all anesthesia codes consisting of 3 minutes of anesthesia scheduling and 5 minutes of case assignment, scheduling coordination, and completion of forms.*

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale:

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:

5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

**3 minutes – anesthesia scheduling**

**5 minutes – case assignment, scheduling coordination, and completion of forms**

**CPT Code:** 00731, 00732, 00811, 00812, 00813

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
*\*High Level E/M in Global Period\**

January 2017

**Muscle Flap**

CPT Codes 15732 and 15736 were identified via the High Level E/M in Global Period screen. The RUC identified that a 99214 office visit is included for 15732 and 15736 but not included in the other codes in this family.

In April 2016 the RUC reviewed code 15732 and the specialty society explained that just like the three previous surveys for this procedure, the results indicate the typical patient will have inpatient status (72%) and the typical length of stay will be four days. As in the past, this conflicts with the Medicare utilization data that shows the primary place of service as outpatient hospital. Therefore, the specialty society determined that the code needs to be referred to the CPT Editorial Panel to better differentiate and describe the work of large flaps performed on patients with head and neck cancer who will have inpatient status and be similar to the other procedures in this family. This is in contrast to smaller flaps that may be accomplished in an office or outpatient setting and would be best coded by the adjacent tissue transfer codes. In addition, during the discussion, CMS requested that CPT code 15731 be added to the family of codes for the subsequent RUC review. The RUC recommended referral of CPT code 15732 to the CPT Editorial Panel. In September 2016, the CPT Editorial Panel deleted code 15732 and created two codes to specify the types of flaps associated with head and neck defect repairs. Codes 15731, 15734, 15736 and 15738 were added as part of this family of services for review. CPT codes 15734, 15736 and 15738 were recently reviewed at the April 2016 RUC meeting.

***15731 Forehead flap with preservation of vascular pedicle (eg, axial pattern flap, paramedian forehead flap)***

The top performing specialty for 15731, plastic surgery, explained that they do not consider this service as part of the same family of codes. The myocutaneous family is intended to describe the large, more difficult flaps that are used for bigger defects and would typically be performed only in a hospital or ASC. Code 15731 was previously developed out of the concerns with site of service that has historically been seen with 15732. They noted that the creation of 15731 was because the described procedure, a paramedian forehead flap used in nasal reconstruction, is quite dissimilar to the types of muscle, myocutaneous, and fasciocutaneous flaps that are coded within the original family. In fact, it is much closer in technique, usage, site of service, and work as the many other codes within the CPT system that describe specific flap reconstruction of the eyelid (e.g. 67973 [eyelid reconstruction with a tarso-conjunctival flap from other eyelid] or mouth (e.g. 40761 [Abbe cross-lip flap])).

Thus, despite the historical origin and placement within the CPT code set, the specialty society asserted that 15731 is notably different than the 15732, 15734, 15736, and 15738 codes. It is the opinion of American Society of Plastic Surgeons (ASPS) that new code 15733 should remain as part of the family with 15734, 15736, and 15738. Code 15730 might best belong with the other codes focused on peri-orbital reconstruction.

**15730 Midface flap (ie, zygomaticofacial flap) with preservation of vascular pedicle(s)**

The RUC reviewed the survey results from 58 ophthalmologists and agreed on the following physician time components: 40 minutes of pre-service evaluation time, 3 minutes of pre-service positioning, 15 minutes of pre-service scrub/dress/wait, intra-service time of 90 minutes, immediate post-time of 17.5 minutes, one half discharge day management (0.5 x 99238), 3 x 99212 post-op office visits and 1x 99213 post-op office visit. The 99213 office visit is associated with removal of the sutures and the drains.

The RUC reviewed the survey 25<sup>th</sup> percentile work RVU of 14.50 and agreed with the specialty that the survey respondents somewhat overvalued the physician work involved in performing this service. To find an appropriate work RVU crosswalk for CPT code 15730, the RUC reviewed CPT code 36832 *Revision, open, arteriovenous fistula; without thrombectomy, autogenous or nonautogenous dialysis graft (separate procedure)* (work RVU of 13.50, intra-service time of 90 minutes, total time of 276 minutes) and agreed that since both services have 90 minutes intra-service times, both are outpatient procedures, and both have similar post-discharge work, that both services should be valued the same. Therefore, the RUC recommends a direct work RVU crosswalk from code 36832 to code 15730. To further support a work RVU of 13.50, the RUC referenced code 53440 *Sling operation for correction of male urinary incontinence (eg, fascia or synthetic)* (work RVU = 13.36, intra-time = 90 minutes, total time = 248 minutes) and code 22867 *Insertion of interlaminar/interspinous process stabilization/distraction device, without fusion, including image guidance when performed, with open decompression, lumbar; single level* (work RVU = 13.50, intra-time = 90 minutes, total time = 271 minutes). **The RUC recommends a work RVU of 13.50 for CPT code 15730.**

**15733 Muscle, myocutaneous, or fasciocutaneous flap; head and neck with named vascular pedicle (ie, buccinators, genioglossus, temporalis, masseter, sternocleidomastoid, levator scapulae)**

The RUC reviewed the survey results from 34 plastic surgeons and agreed on the following physician time components: pre-service evaluation time of 40 minutes, pre-service positioning of 3 minutes, pre-service scrub/dress/wait time of 15 minutes, intra-service time of 120 minutes, immediate post time of 30 minutes, one-half discharge day management (0.5 x 99238), 2 x 99212 visits and 1 x 99213 visit. The physician work performed in the three postoperative office visits include removal of sutures, evaluation of periodic imaging, pathology, and laboratory reports, as needed; and antibiotic and pain medication adjustments.

The RUC reviewed the survey median work RVU of 15.68 work RVUs and agreed that this value appropriately accounts for the physician work involved. To justify a work RVU of 15.68, the RUC compared the survey code to 2<sup>nd</sup> key reference and MPC code 60500 *Parathyroidectomy or exploration of parathyroid(s)*; (work RVU 15.60, intra-service time 120 minutes, total time 313 minutes) and noted that both services have identical intra-service times and similar total times. The RUC agreed with the specialty that the survey code involves moderately more intense physician work. To further support a work RVU of 15.68, the RUC referenced code 58544 *Laparoscopy, surgical, supracervical hysterectomy, for uterus greater than 250 g; with removal of tube(s) and/or ovary(s)* (work RVU = 15.60, intra-time = 120 minutes, total time = 271 minutes) and code 29827 *Arthroscopy, shoulder, surgical; with rotator cuff repair* (work RVU = 15.59, intra-time = 120 minutes, total time = 334 minutes). **The RUC recommends a work RVU of 15.68 for CPT code 15733.**

### Affirmation of RUC Recommendations

The RUC affirmed the recent RUC recommendations for CPT codes 15734, 15736, 15738 previously submitted to CMS after review in this coding cycle. The relativity within the family remains correct.

### Practice Expense

The PE Subcommittee reviewed the direct practice expense inputs for these services and adjusted the inputs to reflect that CPT code 15733 is only performed in the facility setting. The Subcommittee also noted that the equipment item *exam light* (EQ168), is only needed for the 99213 post-operative visits, which is reflected in the equipment time. The RUC reviewed and approved the direct practice expense inputs as approved by the PE Subcommittee.

### Work Neutrality

The RUC's recommendation for these codes will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 15730      Tracking Number    02

Original Specialty Recommended RVU: **13.50**Presented Recommended RVU: **13.50**

Global Period: 090

RUC Recommended RVU: **13.50**

CPT Descriptor: Midface flap (i.e. zygomaticofacial) with preservation of vascular pedicle(s)

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 62 year old female has an inferiorly displaced lower eyelid and cicatricial lagophthalmos three months after excision of a carcinoma with primary rotational flap closure. A midface zygomaticofacial myocutaneous flap is performed to allow for adequate lid closure.

Percentage of Survey Respondents who found Vignette to be Typical: 95%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 33% , In the ASC 66%, In the office 2%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 84% , Overnight stay-less than 24 hours 11% , Overnight stay-more than 24 hours 5%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 50%

Description of Pre-Service Work: Obtain and review current patient history, prescriptions, imaging and laboratory studies. Meet with patient and/or the patient's family to review planned procedure. Review and have patient sign informed consent. Coordinate with other health care professionals, order preoperative antibiotics. Supervise positioning, prep/draping of patient and ensuring that the necessary surgical instruments/supplies are present and available in the operative suite. Perform surgical time out with operating surgical and anesthesia team. After general anesthesia is induced in the supine position, assist with patient positioning with shoulder roll, head rotation, and stabilization. Assist with stabilization of endotracheal (ET) tube to allow for movement of head during procedure. Assist adjusting the OR table and anesthesia lines so operative site is accessible. Re-assess position of the extremities and head, adjust as needed. Administer local anesthesia. Perform surgical scrub and gown. Perform second surgical time out with operating surgical and anesthesia team.

Description of Intra-Service Work: The fixed tissue defect is identified and a flap design marked based on surrounding eyelid and mid-facial tissue that can be mobilized and remains well vascularized by facial, infraorbital and zygomaticofacial arteries. The facial nerve branches may be identified with a nerve stimulator and marked. A lateral canthotomy is extended along the zygomatic arch with inferior cantholysis to the orbital rim. A total sub-periosteal release of the anterior malar face includes dissection of the anterior half of the zygomatic arch down to the pre-masseteric fascia laterally, deep to the gingival sulcus inferiorly and to the nasal ala medially with care to identify and preserve all neurovascular bundles and vascular pedicles. When the flap is adequately released it is mobilized. A drain is placed and the flap is anchored to the deep temporalis fascia, with fixation screws to the orbital rim and lateral nasal wall.

Description of Post-Service Work: Monitor patient stabilization in the recovery room. Discuss postoperative care with recovery room nursing staff. Communicate with the patient and/or family regarding surgery, postoperative regimen and continuing care needs. Communicate (written, oral reports and orders) with health care professionals and dictate the operative report. Provide prescriptions for antibiotics and pain medication.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

CPT 15730 is a new code created to address a site of service discrepancy with 15732, *Muscle, myocutaneous, or fasciocutaneous flap; head and neck (eg, temporalis, masseter muscle, sternocleidomastoid, levator scapulae)*. The post-service work description for the existing CPT 15732 is for an inpatient procedure, while the post-operative visits are all valued as outpatient office visits and claims data shows that only 18.71% are performed on hospital inpatients. CPT 15730 describes creation of a deep midface flap to repair cicatricial lagophthalmos in patients who have developed scarring after excision of a carcinoma, leaving them with inadequate lid closure and exposure of the globe. This procedure is typically done as an outpatient in the facility under general anesthesia.

A random survey of American Academy of Ophthalmology and American Society of Ophthalmic Plastic and Reconstructive Surgeons (ASOPRS) members had 58 respondents, 95% of whom found the vignette to be typical. The median WRVU was 16.00 and the 25<sup>th</sup> percentile was 14.50. The median IST was 90 minutes. The survey showed one 99212 and three 99213 postoperative visits. The current value of 15732 is 16.38, with an IST of 120 minutes and one 99212, two 99213 and one 99214 postoperative visits. The primary reference service chosen was CPT 15731, *Forehead flap with preservation of vascular pedicle (eg, axial pattern flap, paramedian forehead flap)* (RUC 2006), with a WRVU of 14.38, an IST of 120 minutes, and five postoperative visits. Intensity and complexity metrics were higher for the surveyed code than for the reference code. There is significant risk of loss of the eye associated with exposure of the globe.

The expert panel of the AAO and ASOPRS, which is familiar with the procedure and the RUC process, reviewed the survey findings. The panel agreed with the median IST of 90 minutes and the survey findings of four postoperative visits. However, the panel felt that rather than one 99212 and three 99213 visits as suggested by the survey, three 99212 and one 99213 visits more accurately reflected the work done in the postoperative period, with the level 3 visit representing the work associated with removal of sutures and drains.

We chose pre-service package 4 with a total of 63 minutes of pre-service time, which is less than the survey median of 77 minutes. The survey post-time median of 17.5 minutes seemed atypically short to the panel, suggesting that some respondents did not fully understand that portion of the survey. Although the expert panel felt that the post-service package 9B time (33 minutes) was more appropriate for this service, we reduced it by RUC convention to match the survey value of 17.5 minutes. Total time for the procedure is therefore 260.5 minutes, with an IST of 90 minutes. **We recommend 13.50 WRVU, which is below the survey's 25<sup>th</sup> percentile value.**

This value is supported by CPT 36832, *Revision, open, arteriovenous fistula; without thrombectomy, autogenous or nonautogenous dialysis graft (separate procedure)* (RUC 2013), with 13.50 WRVU, 90 minutes IST, and 266 minutes total time. It is also supported by CPT 58571, *Laparoscopy, surgical, with total hysterectomy, for uterus 250 g or less; with removal of tube(s) and/or ovary(s)* (RUC 2014), with 15.00 WRVU, 90 minutes IST, and 241 minutes total time.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 15732

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Ophthalmology                      How often? Sometimes

Specialty Plastic Surgery                      How often? Rarely

Specialty ENTs                      How often? Rarely

Estimate the number of times this service might be provided nationally in a one-year period? 13800

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Estimation Only

Specialty Ophthalmology	Frequency 10500	Percentage 76.08 %
Specialty Plastic Surgery	Frequency 2700	Percentage 19.56 %
Specialty ENT	Frequency 600	Percentage 4.34 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 9,200  
 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Estimation Only

Specialty Ophthalmology	Frequency 6900	Percentage 75.00 %
Specialty Plastic Surgery	Frequency 1850	Percentage 20.10 %
Specialty ENTs	Frequency 450	Percentage 4.89 %

Do many physicians perform this service across the United States? Yes

### Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Procedures

BETOS Sub-classification:

Eye procedure

BETOS Sub-classification Level II:

Other

### Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number N/A

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 15822

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 15733      Tracking Number    03

Original Specialty Recommended RVU: **15.68**Presented Recommended RVU: **15.68**

Global Period: 090

RUC Recommended RVU: **15.68**

CPT Descriptor: Muscle, myocutaneous, or fasciocutaneous flap; head and neck with named vascular pedicle (ie, buccinators, genioglossus, temporalis, masseter, sternocleidomastoid, levator

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 79-year-old man presents with a large defect in the upper cheek from excision of an invasive squamous cell carcinoma. In addition to the defect of the skin and subcutaneous tissue, there is exposed bone of malar eminence that cannot be covered with the adjacent skin.

Percentage of Survey Respondents who found Vignette to be Typical: 97.06%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 88.24% , In the ASC 11.76%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 10% , Overnight stay-less than 24 hours 46.67% , Overnight stay-more than 24 hours 43.33%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 48.15%

Description of Pre-Service Work: Review laboratory and imaging studies. Consult with the referring physician, if necessary, and other health care professionals. Meet with patient and/or the patient's family to review planned procedure and postoperative management. Review and have patient sign informed consent. Review length and type of anesthesia with anesthesiologist. Verify that all required instruments and supplies are available. Verify areas surrounding skin incisions to be prepared and draped. Scrub and gown. Perform surgical time out with operating surgical team and anesthesia team. After induction of anesthesia in supine position, assist with patient positioning with shoulder roll, head rotation, and stabilization. Assist with stabilization of endotracheal (ET) tube to allow for movement of head during procedure. Assist with adjusting the OR table and anesthesia lines so operative site is accessible. Re-assess position of the extremities and head, adjust as needed.

Description of Intra-Service Work: After the ablative part of procedure has been completed, obtain the appropriate measurements of defect and plan for size of flap. Make incision over ipsilateral temporalis muscle. Carry dissection down through the superficial temporal fascia, which is elevated off the muscle. Expose anterior, superior, and posterior borders of the muscle, divide muscle fascia attachments to the skull, and elevate muscle from the skull down to the zygomatic arch. Determine location of facial nerve for flap planning to avoid damaging the nerve. Make a subcutaneous tunnel between defect and incision overlying the temporalis muscle. Maintain a superficial level of dissection to prevent damage to frontal branch of the facial nerve. Adjust size of tunnel to allow for passage of muscle flap without excessive pressure on the flap, and pass flap through tunnel and into cheek defect. Inset flap into edge of defect with sutures. Place drains beneath the flap and in the donor defect and suture into position. Assess muscle for venous congestion and adjust subcutaneous tunnel as necessary. Close donor site superficial temporal fascia. Close skin in layers. Perform a skin graft, which is reported separately. Apply sterile dressings to flap.

Description of Post-Service Work: Monitor patient stabilization in the recovery room. Discuss postoperative care with recovery room nursing staff. Communicate with the patient and/or family regarding surgery and postoperative regimen. Communicate (written and oral reports and orders) with health care professionals, and dictate operative report. Postoperative work includes all hospital visits and services performed by surgeon, including monitoring the vascularity of

the flap, the donor-site incision, and care of the incision; monitoring, care, and removal of drains, if used; and antibiotic and pain medication as well as examination of the patient, discussion of hospital stay, instructions for continuing care, and preparation of discharge records. In addition, all post-discharge office visits for 90 days after the day of the operation are considered part of the postoperative work, including removal of sutures; evaluation of periodic imaging, pathology, and laboratory reports, if needed; and antibiotic and pain medication adjustments.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

CPT 15733 is one of two new codes created to address several issues inherent in code 15732, Muscle, myocutaneous or fasciocutaneous flap; head and neck).

Previous five-year reviews indicated the typical site of service was in flux, with increased utilization by multiple specialties. By 2007, a new code was created to address axial pattern forehead flaps. In 2010, during the 4<sup>th</sup> 5-year review, site of service was still an issue. The use of 99214 in the post-op period was also identified.

The entire family was surveyed in early 2016, with only ASPS members participating in the review of code 15732. Similar to previous surveys, the results indicated the typical patient will have inpatient status, with a typical length of stay greater than 2 days. The survey intraoperative time did not change from previous surveys; however total time increased by 137 minutes. Discussions at the RUC led to an agreement to refer this to CPT to refine the codes for these procedures and address concerns with site of service.

At the CPT meeting, a collaborative effort was made to define the coding for the range of procedures that were coded (and miscoded) with the old 15732. By adding "i.e" and a list of specific list of flaps, 15733 was developed as restricted version of the old 15732 to the larger, more technically difficult pedicled flaps similar to 15734, 15736, and 15738. The typical patient is a head/neck cancer patient with multiple co-morbidities requiring surgery in a hospital setting. Clarification was made to those procedures which are most appropriately coded with the adjacent tissue transfer family. This left the midface flap as being a procedure performed that does not meet the refined definition in 15733, and thus 15730 was created in CPT to address this procedure.

Previous surveys were conducted on a different, less narrowly defined CPT code. An expert panel of ASPS members familiar with the procedure and the RUC process reviewed the current survey findings, and noted that intra service time for 15733 is greater than either Key Reference Code, but lower than the existing code and lower than that identified in the early 2016 survey. As such, we **recommend 15.68 WRVU, which is the median value**, which is below the value of the existing code and continues to preserves the integrity of the family of muscle flap codes.

While some surveyees did not indicate the patient stayed more than 24 hours, the expert panel recognize the inconsistency in possible visits in the inpatient setting and have adjusted hospital stays accordingly. They believe correct usage of this code will, in the future, indicate a more appropriate site of service and length of stay.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 15732

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Plastics                      How often? Commonly

Specialty Otolaryngology                      How often? Sometimes

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. National Utilization data not available.

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 8,300

If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate.

Specialty Plastics	Frequency 6640	Percentage 80.00 %
--------------------	----------------	--------------------

Specialty Otolaryngology                      Frequency 1660                      Percentage 20.00 %

Specialty                      Frequency 0                      Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

### **Berenson-Eggers Type of Service (BETOS) Assignment**

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Procedures

BETOS Sub-classification:

BETOS Sub-classification Level II:

Other

### Attestation Statement

This form needs to be completed by any **RUC Advisor** whose specialty society is developing a recommendation to be reviewed by the RUC.

As a RUC Advisor, I attest that the integrity of the RUC survey and summary of recommendation forms are based on accurate and complete data to the best of my knowledge. As a RUC advisor, I acknowledge that violations would be addressed by the executive committee (i.e., RUC Chair, AMA Representative and Alternate AMA Representative.)

**AMA/Specialty Society Update Process  
Practice Expense Summary of Recommendation  
Facility Direct Inputs**

CPT Long Descriptor: Midface flap (i.e. zygomaticofacial) with preservation of vascular pedicle(s)

Global Period: 90 Days Meeting Date: January, 2017

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:

The Academy convenes a consensus subcommittee utilizing the appropriate subspecialty representatives who sit on our Health Policy Committee that oversees our activities at RUC and CPT. Additionally, we queried other physicians who have the appropriate expertise for this code. The consensus committee considered the survey data and PE details in order to determine clinical time and applicable standard packages were also applied. The physicians on the consensus panel familiar with the service provided input on whether or not any changes were needed for the existing supplies and equipment.

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale:

Reference code is 15732. CPT 15730 is a new code created to address a site of service discrepancy with 15732, *Muscle, myocutaneous, or fasciocutaneous flap; head and neck (eg, temporalis, masseter muscle, sternocleidomastoid, levator scapulae)*. CPT 15730 describes creation of a deep midface flap to repair cicatricial lagophthalmos in patients who have developed scarring after excision of a carcinoma, leaving them with inadequate lid closure and exposure of the globe, and is typically done as an outpatient in the facility under general anesthesia.

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:

N/A

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:

Line 96 is felt to have been an oversight in the prior reviews, and was updated to reflect RUC-approved standard times and correct usage of equipment. The patient is examined in an ophthalmic lane for each post-op visit, including ocular and ocular adnexa examinations. Although dilation is performed often in the post-operative period, we have chosen the ophthalmology visit pack (no dilation) and screening lane (without a direct ophthalmoscope) as typical.

5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

- Complete pre-service diagnostic & referral forms: **5 min.**
  - Technician takes the standard amount of time to complete pre-service referral forms.
- Coordinate pre-surgery services: **20 min.**

- Standard time is taken coordinating the pre-surgery services.
- Schedule space and equipment in facility: **8 min.**
  - Standard time is taken to schedule space and equipment in the facility for the procedure to occur.
- Provide pre-service education/obtain consent: **10 min.**
  - **This time is used to educate the patient regarding the procedure, prepare the paperwork of the consent, and answer questions. This is reduced from the standard time of 20 minutes because the physician actually has the patient sign the consent.**
- Follow-up phone calls & prescriptions: **7 min.**
  - Pre-operative prescriptions are prepared, communicated to patient, and submitted to the pharmacy. Follow-up phone calls to ensure proper pre-operative preparations and clearance are performed with the standard time.

Intra-Service Clinical Labor Activities:

- Discharge management same day (0.5 x 99238). Standard time is taken for discharge management.

Post-Service Clinical Labor Activities:

- Four post-operative visits are typically performed, at one day, one week, one month, and three months. Standard times are applied based on the typical level of these visits.

Comments regarding supplies:

- **Kling bandages, Telfa dressings, and sterile gauze are used both during the surgical period (at the end of the case) and in the post-operative periods (when surgical wounds are examined and when sutures are removed). The numbers in the prior code 15732 were felt to be a clerical error and these numbers were reversed to reflect correct practice and CMS standards for supplies in the facility and the non-facility settings.**
- **Bacitracin is placed on the wound at the end of the case and prior to placing bandages. It is again re-applied in the post-operative period prior to placing new bandages and dressings.**
- **Our expert panel reports that one surgical plate and four screws are typically and necessarily used in this surgery, to counteract the significant adverse forces involved in the healing process. Without the assistance of the anchor, this flap will typically scar inferior to its intended post-operative position, therefore pulling the lid away from the eye, leaving the eye at substantial risk. This eyelid malposition that occurs without an anchor results from the weight of the heavy flap, the scarring from the current as well as prior surgeries, and the previous and/or subsequent radiation of the operative site. The plate and screws used as an anchor supports the flap to overcome these forces to maintain proper eyelid position and function which is critical to the health of the ocular surface. These supplies are of course covered by the facility, and not listed in column G.**

Comments regarding equipment:

- **A camera is utilized to photograph the flap at each of the four post-operative visits to follow the healing process closely, given the risks as listed above. We have reduced the times significantly to reflect more accurate usage times.**

**AMA/Specialty Society Update Process**  
**Practice Expense Summary of Recommendation**  
**Non Facility Direct Inputs**

CPT Long Descriptor: Midface flap (i.e. zygomaticofacial) with preservation of vascular pedicle(s)

Global Period: 90 Days Meeting Date: January, 2017

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:

The Academy convenes a consensus subcommittee utilizing the appropriate subspecialty representatives who sit on our Health Policy Committee that oversees our activities at RUC and CPT. Additionally, we queried other physicians who have the appropriate expertise for this code. The consensus committee considered the survey data and PE details in order to determine clinical time and applicable standard packages were also applied. The physicians on the consensus panel familiar with the service provided input on whether or not any changes were needed for the existing supplies and equipment.

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale:

Reference code is 15732. CPT 15730 is a new code created to address a site of service discrepancy with 15732, *Muscle, myocutaneous, or fasciocutaneous flap; head and neck (eg, temporalis, masseter muscle, sternocleidomastoid, levator scapulae)*. CPT 15730 describes creation of a deep midface flap to repair cicatricial lagophthalmos in patients who have developed scarring after excision of a carcinoma, leaving them with inadequate lid closure and exposure of the globe, and is typically done as an outpatient in the facility under general anesthesia.

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:

N/A

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:

Lines 27, 36, 93 and 96 are felt to have been oversights in the prior reviews, and were updated to reflect RUC-approved standard times and correct usage of equipment. Line 27: anesthesia is required to perform this surgery and two minutes is the standard time to apply the anesthesia. Line 36 and 93: Standard cleaning time is performed for the surgical instrument package. Given the delicate nature of the anatomy in this facial reconstructive surgery and its complexity, and the need for specific instrumentation, the medium package is required. Line 96: The patient is examined in an ophthalmic lane for each post-op visit, including ocular and ocular adnexa examinations. Although dilation is performed often in the post-operative period, we have chosen the ophthalmology visit pack (no dilation) and screening lane (without a direct ophthalmoscope) as typical. Lines 85 and 86 have been added as these heavy flaps are typically anchored with a flexible plate and self-tapping screws.

5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

- Complete pre-service diagnostic & referral forms: **5 min**
  - Technician takes the standard amount of time to complete pre-service referral forms.

- Coordinate pre-surgery services: **10 min**
  - Standard time is taken coordinating the pre-surgery services.
- Provide pre-service education/obtain consent: **5 min**
  - **This time is used to educate the patient regarding the procedure, prepare the paperwork of the consent, and answer questions. This is reduced from the standard time of 10 minutes because the physician actually has the patient sign the consent.**
- Follow-up phone calls & prescriptions: **10 min**
  - Pre-operative prescriptions are prepared, communicated to patient, and submitted to the pharmacy. Follow-up phone calls to ensure proper pre-operative preparations and clearance are performed with the standard time.

Intra-Service Clinical Labor Activities:

- Greet patient, provide gowning, ensure appropriate medical records are available: **3 min.**
  - Standard time is taken to greet and gown patient and ensure medical records are available.
- Obtain vital signs: **3 min**
  - Level 1 vitals are taken in standard time.
- Prepare room, equipment, supplies: **2 min**
  - Standard time is taken to prepare room and equipment for this complex surgical case.
- Prepare and position patient/monitor patient/set up IV: **2 min**
  - Standard time is taken to position patient and set up IV access.
- Sedate/apply anesthesia: **2 min**
  - Anesthesia is applied prior to this invasive procedure.
- Assist physician in performing procedure: **90 min**
  - The technician assists the physician through each step of the surgery. The technician's intra-service time is determined by the physician's intra-service time, as documented in our survey.
- Clean room/equipment by physician staff: **3 min**
  - Standard time is used to clean the room after this invasive surgery.
- Clean surgical instrument package: **15 min**
  - Standard time is used to clean, sterilize and store the instruments for future use following this invasive surgery. Medium surgical packs are typically used given the delicate nature of the anatomy in this facial reconstructive surgery.
- Complete diagnostic forms, lab & X-ray requisitions: **2 min**
  - Two minutes are taken to complete diagnostic forms
- Review/read X-ray, lab, and pathology reports: **2 min**
  - Pathology reports are reviewed prior to surgery to assist the physician in ensuring the case is appropriately managed.
- Check dressings & wound/home care instructions/coordinate office visits/prescriptions: **10 min.**
  - Dressings and wound are inspected at the end of the case. Home care instructions are reviewed with the patient. Office visit follow-up is reviewed with the patient. Prescriptions are dispensed to and reviewed with the patient.

Post-Service Clinical Labor Activities:

- Four post-operative visits are typically performed, at one day, one week, one month, and three months. Standard times are applied based on the typical level of these visits.

Comments regarding supplies:

- **Kling bandages, Telfa dressings, and sterile gauze are used both during the surgical period (at the end of the case) and in the post-operative periods (when surgical wounds are examined and when sutures are removed). The numbers**

in the prior code 15732 were felt to be a clerical error and these numbers were reversed to reflect correct practice and CMS standards for supplies in the facility and the non-facility settings.

- Both bupivacaine and lidocaine with epinephrine are used in this code. Lidocaine with epinephrine is used primarily for hemostasis during surgery, and bupivacaine for long-acting analgesia in the perioperative period. One of the two 10cc syringes can be reused to inject the full 20cc of lidocaine with epinephrine.
- Bacitracin is placed on the wound at the end of the case and prior to placing bandages. It is again re-applied in the post-operative period prior to placing new bandages and dressings.
- Small drains are typically placed in these wounds, and the 4 inch penrose drain listed on the spreadsheet best reflects the type of drain typically used.
- Our expert panel reports that one surgical plate and four screws are typically and necessarily used in this surgery, to counteract the significant adverse forces involved in the healing process. Without the assistance of the anchor, this flap will typically scar inferior to its intended post-operative position, therefore pulling the lid away from the eye, leaving the eye at substantial risk. This eyelid malposition that occurs without an anchor results from the weight of the heavy flap, the scarring from the current as well as prior surgeries, and the previous and/or subsequent radiation of the operative site. The plate and screws used as an anchor supports the flap to overcome these forces to maintain proper eyelid position and function which is critical to the health of the ocular surface.

Comments regarding equipment:

- A camera is utilized to photograph the flap at each of the four post-operative visits to follow the healing process closely, given the risks as listed above. We have reduced the times significantly to reflect more accurate usage times.

## AMA/Specialty Society Update Process Practice Expense Summary of Recommendation Facility Direct Inputs

<b>15733</b>	Muscle, myocutaneous, or fasciocutaneous flap; head and neck with named vascular pedicle (ie, buccinators, genioglossus, temporalis, masseter, sternocleidomastoid, levator)
--------------	--

Global Period: 090      Meeting Date: January 2017

**1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:** ASPS convened a panel of experts to review practice expense items.

**2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison. You must provide an explanation for the selection of reference codes. Reference Code Rationale:** N/A

**3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:**

**4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:**

	Supply	QTY	
POV #1	kit, suture removal	1	remove drain
	bandage, Kling	1	Flap
	gloves, sterile	1	Flap & donor site
	dressing, 5in x 9in (Xeroform)	1	Flap & donor site
	gauze, sterile 4in x 4in	6	Flap
	Hydrogen peroxide (10ml)	1	Flap
	Bacitracin Ointment	1	Flap & donor site
	tape, surgical paper 1in (Micropore)	6"	Flap
POV# 2	gloves, sterile	1	Flap & donor site
	Kit, suture removal	1	Remove drain
	Hydrogen peroxide (10ml)	1	Flap

AMERICAN ACADEMY<sup>™</sup>  
OF OPHTHALMOLOGY

Dear Colleague:

Working together, the Academy and the American Society of Ophthalmic Plastic and Reconstructive Surgery are preparing to make recommendations to the AMA Relative-value Update Committee (RUC). You have been selected to participate in a *survey to recommend physician work value for the new Mid Face flap CPT code: 157X1 Midface flap (i.e., zygomaticofacial flap) with preservation of vascular pedicle(s)*. This new code was created to identify midface flap defect repair. CPT code **15732; Muscle, myocutaneous, or fasciocutaneous flap; head and neck** will be **deleted and no longer used** for this service. Please complete the survey. The survey and the corresponding reference service list are included with this email. Printing the list prior to starting can aid your responses.

The survey data will be used to recommend the appropriate work values assigned for this code to the RUC and subsequently to CMS to determine Medicare reimbursement. Your timely completion of this task is **CRITICAL** and is supported by the Academy and the American Society of Ophthalmic Plastic and Reconstructive Surgery. It is *very important* that you complete the survey by the deadline.

*Please submit your completed survey online by November 15, 2016.* The e-mail you received contains the access password and login for the survey. Please contact Ms. Sarah Cartagena to let her know if you will be unable to complete the survey or if you are passing it on to a colleague to complete. If you are having a colleague complete the survey, please give Ms. Cartagena that person's name and e-mail address. **A significant response is needed to validate our recommendations.**

The survey is to be completed *independently without coaching or assistance*, with the exception of clarification from specialty society staff. If you are inappropriately contacted regarding this survey, please notify specialty society staff immediately. Ms. Cartagena can answer any questions you have about the survey instrument via email at [scartagena@aao.org](mailto:scartagena@aao.org)

Thank you for your assistance with this important effort.

David W. Parke, II, M.D., Academy E.V.P and C.E.O.

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
*\*High Level E/M in Global Period\**

April 2016

**Muscle Flaps**

In October 2015, CPT codes 15732 and 15734 were identified under the High Level E/M screen for services with Medicare utilization greater than 10,000 that has a 99214 included in the global period. The RAW requested that the specialty societies submit an action plan to justify the 99214 visit and review if the family of services also have a 99214 included in the global periods. The RUC noted that a 99214 office visit is included for 15732 and 15736 but not included in the other codes in this family.

**15732 Muscle, myocutaneous, or fasciocutaneous flap; head and neck (eg, temporalis, masseter muscle, sternocleidomastoid, levator scapulae)**  
The specialty societies explained that, as also indicated by the three previous surveys for this procedure, the new survey results indicate the typical patient will have inpatient status (72%) and the typical length of stay will be four days. As in the past, this conflicts with the Medicare utilization data that shows the primary place of service as the outpatient hospital setting. Therefore, the specialty societies determined that the code needs to be referred to the CPT Editorial Panel to better differentiate and describe the work of large flaps performed on patients with head and neck cancer who will have inpatient status. This is in contrast to smaller flaps that may be accomplished in an office or outpatient setting and to differentiate from procedures that would be best coded by the adjacent tissue transfer codes. In addition, during the discussion, CMS requested that CPT code 15731 be added to the family of codes for the subsequent RUC review. **The RUC recommends referral of CPT code 15732 to the CPT Editorial Panel. Additionally, CPT code 15731 will be added as part of the family for review.**

**15734 Muscle, myocutaneous, or fasciocutaneous flap; trunk**

Prior to reviewing the survey data for this procedure, the RUC considered compelling evidence that the current work RVU of 19.86 may be incorrect. The specialty societies detailed two compelling evidence arguments. First, a flawed methodology was used in the previous valuation. During the last valuation at the third Five-Year Review, plastic surgery was the only specialty to conduct a survey, and only 21 responses were collected. At that time, plastic surgery represented approximately 80% of the total utilization of CPT code 15734. Currently, 2015 Medicare utilization shows plastic surgery and general surgery as equally performing this service (43% and 42%, respectively). Furthermore, accounting for other specialties similar to general surgery (colorectal, surgical oncology, vascular, etc), who are performing the procedure for the same indications, the dominant provider has shifted. Second, the patient population and technique has changed. General surgeons are now performing this procedure to close large, complex abdominal defects that cannot be closed primarily. This is a new surgical procedure that was not performed at the time of the last review. During the previous valuation, plastic surgeons were primarily using this procedure to repair chest wall defects. Given this information, the RUC approved compelling evidence that the current work value for CPT code 15734 may be incorrect.

The RUC reviewed the survey results from 41 general and plastic surgeons and recommends the following physician time components: pre-service time of 75 minutes, intra-service time of 180 minutes and immediate post-service time of 30 minutes. The RUC agreed to add 12 minutes of positioning time above the standard package because the typical patient undergoing a latissimus muscle flap will be positioned supine, then lateral as the procedure progresses. The typical patient undergoing a rectus abdominis flap will require additional time related to a vacuum assisted dressing in place that will need to be taken down. The RUC also recommend the following post-operative visits: four hospital visits (1 x 99233, 2 x 99232, 1 x 99231), one discharge day management service 99238, and five office visits (1 x 99214, 2 x 99213, 2 x 99212). The RUC discussed the need for a higher level Evaluation and Management service (99214) for the first post-operative visit and agreed it was appropriate. The patient has an extensive dressing (for both the flap and the donor site) that has to be taken down. The process is complex and intense due to concern about not disturbing the blood supply to the flap, as well as not disturbing the skin graft. Finally the RUC noted the increase to two 99232 hospital visits in the global period and confirmed that this visit is in fact typical and was captured, by the survey respondents, as performed in the post-operative period and not on the same day of the surgery.

The RUC reviewed the specialty societies' recommendation and agreed that the survey median work RVU of 23.00 reflects the additional intra-operative time and additional postoperative hospital work for CPT code 15734. To justify a work RVU of 23.00, the RUC compared the surveyed code to the primary key reference code 22905 *Radical resection of tumor (eg, sarcoma), soft tissue of abdominal wall; 5 cm or greater* (work RVU= 21.58, intra time= 150 minutes) and determined that code 15734 is similar in time and intensity. The RUC also considered the second key reference service 27364 *Radical resection of tumor (eg, sarcoma), soft tissue of thigh or knee area; 5 cm or greater* (work RVU= 24.49, intra time= 180 minutes) and agreed that CPT code 15734 is more work and should be valued higher. Finally, the RUC noted that the increase in work RVUs is further substantiated by the increase in intra-service time, from 163 minutes to 180 minutes, and total time, from 524 minutes to 596 minutes. **The RUC recommends a work RVU of 23.00 for CPT code 15734.**

### **15736 Muscle, myocutaneous, or fasciocutaneous flap; upper extremity**

The RUC reviewed the survey results from 46 practicing general, plastic, and hand surgeons and recommends the following physician time components: pre-service time of 72 minutes, intra-service time of 150 minutes and immediate post-service time of 30 minutes. The RUC agreed to add 9 minutes of positioning time above the standard package to monitor and/or assist with patient positioning, including padding of bony prominences, application of thermal regulation drapes, assessing position of extremities and head and adjusting as needed, positioning the patient's arm on the hand surgery table, applying a sterile tourniquet to the proximal arm, elevating the arm and exsanguinating the arm, and inflating the pneumatic tourniquet. The RUC noted that total positioning time of 12 minutes is consistent with many other recently reviewed upper extremity procedures. The RUC also recommend the following post-operative visits: one-half discharge day management service 99238 that is consistent with outpatient facility status and five office visits (1 x 99214, 3 x 99213, 1 x 99212). The RUC discussed the need for a higher level Evaluation and Management service (99214) for the first post-operative visit and agreed it was appropriate. The patient's comfort and adherence to the postoperative regimen is discussed. The extremity edema, circulation, sensation and motor function are assessed. The splint is removed, but the arm is supported. The superficial dressing is removed. The viability of the flap is assessed. The wound is checked for any sign of infection. The non-stick dressing covering the skin graft is very carefully separated from the graft while protecting the graft with cotton swabs. A new non-stick dressing is

applied to the flap. A new dressing is applied to the arm. The donor site is evaluated and redressed. Pain is assessed and adjustments to medications are made as needed. The patient care plan is reviewed with the patient and family. Communication with the referring physician is completed. The medical record is completed. It is typical for this visit to take upwards of one hour.

The RUC reviewed the specialty societies' recommendation and agreed that the current work RVU of 17.04, which is between the survey's 25<sup>th</sup> percentile and median work values, is appropriate. The RUC agreed with the specialties that the work and total time has not changed; the intra-operative time is the same and the facility work has shifted to higher level office work. To justify a work RVU of 17.04, the RUC compared the surveyed code to the primary key reference code 24160 *Removal of prosthesis, includes debridement and synovectomy when performed; humeral and ulnar components* (work RVU= 18.63, intra time= 120 minutes) and agreed that while code 15736 has 30 additional minutes of intra-service time, the reference code has more post-operative visits and is a more intense procedure. Therefore, the surveyed code is valued appropriately slightly less than the key reference service. Additionally, the RUC reviewed a broad range of 090 day global outpatient procedures recently reviewed by the RUC and agreed that the current work RVU of 17.04 appropriately fits in this range. Specifically, CPT codes 49655 *Laparoscopy, surgical, repair, incisional hernia (includes mesh insertion, when performed); incarcerated or strangulated* (work RVU= 16.84, intra time= 150 minutes) and 42415 *Excision of parotid tumor or parotid gland; lateral lobe, with dissection and preservation of facial nerve* (work RVU= 17.16, intra time= 150 minutes) offer appropriate brackets around the recommended value. **The RUC recommends a work RVU of 17.04 for CPT code 15736.**

#### **15738 Muscle, myocutaneous, or fasciocutaneous flap; lower extremity**

The specialties presented compelling evidence of a flawed methodology in the previous survey. The specialties indicated that the survey instrument in 1995 requested total hospital time and number of visits, but not level of visits. Then, when level of visits was necessary for the first five-year review of practice expense, a CMS contractor transformed the postoperative time into visit levels using an algorithm based on intra-service time. This resulted in all low level hospital and office visits being assigned to code 15738. The current survey indicates that the hospital and office visit work was underestimated and that increases in the value for E/M codes over the years were not correctly incorporated in the global code value for 15738. The RUC rejected this compelling evidence citing that the RUC survey has evolved over time and that an old RUC survey instrument is not compelling evidence of a flawed methodology.

The RUC reviewed the survey results from 39 plastic surgeons and recommends the following physician time components: pre-service time of 70 minutes, intra-service time of 150 minutes and immediate post-service time of 30 minutes. The RUC agreed to add 12 minutes of positioning time above the standard package to adequately position the patient with the leg extended lateral or the patient positioned prone. In addition, these patients will require a significant amount of effort to transfer from the hospital bed to the operating room bed because there is commonly a vacuum-assisted dressing in place that will need to be taken down. The RUC also recommend the following post-operative visits: four hospital visits (2 x 99232, 2 x 99231), one discharge day management service (99238), five office visits (4 x 99213, 1 x 99212).

The RUC reviewed the survey respondents' estimated physician work values and noted that the current work RVU of 19.04, slightly above the 25<sup>th</sup> percentile work RVU of 19.00 should be maintained since compelling evidence was not accepted. The RUC compared the surveyed code to the second key reference code 22905 *Radical resection of tumor (eg, sarcoma), soft tissue of abdominal wall; 5 cm or greater* (work RVU= 21.58, intra time= 150 minutes) and agreed that while both services have identical intra-service time, the reference code has less total time, but may be more intense. **The RUC recommends a work RVU of 19.04 for CPT code 15738.**

**Practice Expense:**

The large amounts of supplies (eg, gauze, etc. were reviewed). However, the specialties explained that the wounds are large and complex for these patients and the large quantities of supplies are appropriate. The specialties provided details of quantities required on a visit by visit basis. The RUC approved the direct practice expense inputs as submitted by the specialty without modification and reviewed and approved by the PE Subcommittee.

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
15731(f)	Forehead flap with preservation of vascular pedicle (eg, axial pattern flap, paramedian forehead flap)	090	Refer to CPT Sept 2016
15732	Muscle, myocutaneous, or fasciocutaneous flap; head and neck (eg, temporalis, masseter muscle, sternocleidomastoid, levator scapulae)	090	Refer to CPT Sept 2016
15734	Muscle, myocutaneous, or fasciocutaneous flap; trunk	090	23.00
15736 (f)	Muscle, myocutaneous, or fasciocutaneous flap; upper extremity	090	17.04 (No Change)
15738 (f)	Muscle, myocutaneous, or fasciocutaneous flap; lower extremity	090	19.04 (No Change)

April 5, 2015

Chicago, IL 60611

**Subject: Tab 14 – CPT Code 15732**

Dear Dr. Smith:

On behalf of the American Society of Plastic Surgeons (ASPS), I am writing in regards to code 15732 *Muscle, myocutaneous, or fasciocutaneous flap; head and neck (eg, temporalis, masseter muscle, sternocleidomastoid, levator scapulae)* included in Tab 14 (Muscle and Skin Graft) for the April 2016 RUC meeting.

**Background**

In 1995, for the first five-year review, codes 15732-15738 were identified by the CMDs as potentially misvalued. The ASPS and American Academy of Otolaryngology - Head and Neck Surgery (AAOHNS) conducted a RUC survey that resulted in data indicating that the typical patient was in the hospital for 5 days (ie, inpatient). The RUC and CMS accepted the survey results.

In 2005, for the third five-year review, code 15732 was identified as potentially misvalued because the service had been valued as an inpatient service and Medicare data indicated it was performed as an outpatient service. After a survey by ASPS and AAOHNS, and RUC discussion, it became apparent that this code described two disparate procedures, allowing both superficial repairs and repair of more serious cancer defects to be reported with 15732. The societies reported that these patient populations require different work, one group of patients are typically provided the service in the inpatient setting and the other group are treated in the outpatient setting. The RUC directed plastic surgery to coordinate with otolaryngology and ophthalmology to develop a coding proposal to specifically identify these different services as new CPT codes. Code 15732 was referred to the CPT Editorial Panel.

For CPT 2007, new code 15731 was created to describe axial pattern forehead flaps, which previously were billed using 15732 and are commonly outpatient procedures. With this revision, the outpatient percentage was expected decrease for 15732 in future claims data (2007 and beyond). The ASPS recommended that the hospital inpatient visits and discharge day be retained until further data is collected for 15732. The RUC agreed to maintain the visits and re-review when three years of utilization data were available.

In 2010, for the fourth five-year review, code 15732 was again identified by CMS as potentially misvalued through the Site of Service Anomaly screen. The ASPS and AAOHNS conducted another survey and 79% of the survey respondents indicated that 15732 is an inpatient service. The societies indicated that the typical patient is unstable and may even

require critical care services. The societies also indicated that this service should not be performed in the outpatient setting and miscoding is the cause for the outpatient claims. The RUC and specialties agreed that additional coding education needs to take place and agreed to develop a CPT Assistant article. In addition, another separate CPT code may be required. It was noted that ophthalmologists would need to lead the CPT education/proposal efforts. The RUC recommended maintaining the inpatient visits and reduced the work RVU slightly to the survey median. CMS disagreed with this recommendation and removed the inpatient visits and work RVUs using reverse building block and assigned 0.5 x 99238 for discharge management. The work RVU was reduced by 18% from 19.90 to 16.38.

More recently, the RAW identified that a 99214 office visit is included in the work of 15732 and 15736 but not included in the other codes in this family. The RAW recommended that the specialty societies survey the entire family (15732-15738) for April 2016.

### **Survey Results for 15732**

For the current survey of 15732, although ophthalmology and otolaryngology comprise 50% of the utilization, only ASPS indicated an interest to survey. A survey was conducted by ASPS and 47 responses were received (see attached RUC Summary Excel file). Similar to the three previous RUC surveys, the results indicate the typical patient will have inpatient status (72%) and the typical length of stay will be four days. The survey intraoperative time of 150 minutes has also not changed from the previous three surveys. The ASPS believes that this is the correct time and visit information related to 15732 when it is correctly reported.

### **Recommendation for 15732**

The ASPS expert panel discussed the survey results and determined that they cannot present the same time and visit data to the RUC that has been presented during the past three reviews. We believe code 15732 needs to be referred to CPT to better differentiate and describe the work of large flaps performed on patients with head and neck cancer who will have inpatient status and be similar to the other procedures in this family. This is in contrast to smaller flaps that may be accomplished in an office or outpatient setting and would be best coded by the adjacent tissue transfer codes. We request that the RUC refer this code to CPT to accomplish these goals.

I look forward to answering any RUC member questions at the upcoming meeting.

Sincerely,

A handwritten signature in black ink, appearing to read 'Mark Villa', with a stylized flourish at the end.

Mark Villa, MD  
ASPS RUC Advisor

Global Period: 090		RUC Recommended RVU: <b>23.00</b>
CPT Descriptor: Muscle, myocutaneous, or fasciocutaneous flap; trunk		

### CLINICAL DESCRIPTION OF SERVICE:

#### Vignette Used in Survey:

Vignette 1: A patient with a history of radiation therapy develops a large open wound of the chest with exposure of several ribs resulting in a defect that is too large to close with a complex repair or adjacent tissue transfer. The defect is reconstructed with a pedicled muscle flap (eg, latissimus).

Vignette 2: A trauma patient with multiple injuries initially undergoes a damage-control laparotomy with hemorrhage control, bowel resection and temporary abdominal closure. At the time of definitive closure of the abdomen, a wide gap between the opposing fascial edges in the abdominal wall has developed. A pedicled muscle flap (eg, rectus abdominis) is elevated and transposed to close the defect.

Percentage of Survey Respondents who found Vignette to be Typical: 83%

#### Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 100% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 28% , Overnight stay-more than 24 hours 72%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 62%

#### Moderate Sedation

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: Select and order the appropriate antibiotic(s) and confirm timing and administration. Assure appropriate selection, timing, and administration of deep vein thrombosis (DVT) prophylaxis. Write orders for preoperative medications including beta blockers if indicated. Review results of admission testing and imaging. Meet with patient and family to review planned procedure and postoperative management. Mark site and side of proposed skin incision and confirm with patient. Review and obtain informed consent with patient, including witness. Review length and type of anesthesia with anesthesiologist. Verify that all required instruments and supplies are available. Assist in transfer of patient from gurney to operating table. Verify areas surrounding skin incisions to be prepared and draped. Scrub and gown. Perform surgical time out with operating surgical team and anesthesia team.

Description of Intra-Service Work: Pedicled latissimus muscle flap: After the extirpative part of procedure has been completed, further dissection is performed through the defect into the axilla to identify and confirm the patency of the thoracodorsal pedicled. Any necessary tunnel between the defect and the axilla is created. The appropriate measurements of the defect are obtained and a plan for size of flap is confirmed. A sterile dressing is placed over the chest wall defect (this portion of the procedure is typically performed in a supine position). The drapes are removed and the patient is then reposition in a lateral decubitus position to allow for access to the back donor site. Make incision over latissimus muscle.

Carry dissection down to fascia, which is elevated off the muscle. Expose anterior and posterior borders of muscle and continue dissection inferiorly until enough length is obtained to reach the defect. Then divide inferior portion of the muscle, elevate muscle off the chest wall, and isolate on thoracodorsal vascular pedicle. Enlarge the tunnel to accommodate muscle flap. Transpose the flap from the back to the chest and re-assess the vascular pedicle. Inset flap into the chest-wall defect and suture in place after placement of a closed suction drain. Close donor site primarily over suction drains. [Wound coverage is completed with an appropriate skin graft that is separately reported.

**Pedicled rectus abdominis muscle flap:** The temporary abdominal dressing is removed and the extent of necessary additional mobilization to achieve closure is determined. After determining the extent of the rectus abdominis flap necessary to close the defect, a skin flap is raised from the costal margin to the inguinal ligament and posterolaterally to the anterior axillary line taking care to preserve perforating vessels and nerves. The external oblique aponeurosis is incised as a myofascial release is completed the entire length of the rectus muscle lateral to the linea semilunaris. The release is carried up over the costal margin and the fascia is incised onto the ribs. The plane between the internal and external oblique muscles is dissected with blunt dissection to mobilize the flap along the length of the myofascial release taking care not to injure any nerves to the muscular flap or compromise the blood supply. An additional release may be needed in the posterior rectus sheath allowing additional advancement as required. The rectus muscles are then re-approximated at the midline with running suture. (If mesh is placed for reinforcement, this is reported separately) Drains are placed beneath the skin flaps and are sutured in position. After assuring hemostasis and viability of the rectus muscle flap, the skin edges are re-approximated at the midline in layers.

**Description of Post-Service Work:** Through discharge from recovery: Apply sterile dressings. Monitor patient during reversal of anesthesia, protecting the wound with a hand so that wound disruption does not occur with an unrestrained cough. Assist in transfer of patient from operating table to gurney. Monitor transport of patient from the OR to the recovery room. Discuss postoperative recovery care with anesthesia and nursing staff. Instruct nursing staff in care of drains, tubes, and other devices. Review postoperative laboratory results. Discuss procedure and outcome with family in waiting area. Write brief operative note. Write postoperative note in recovery room. Dictate operative report and copy referring physician(s). Call referring physician(s). Discharge patient from recovery room to surgical ward. Write patient-care orders and discuss floor care with nursing staff.

**Inpatient visits:** Review interval chart notes. Talk with patient and family. Take down dressings. Evaluate flaps for viability and wound for infection. Assess drain output. Redress wound. For latissimus flap, assess extremity for edema, circulation, sensation and motor function. For rectus abdominis flap, assess bowel function, advance diet as appropriate. Assess pain score and order medications, as required. Continue prophylaxis for DVT. Assess need for beta blockers, order as required. Assess need for antibiotics, order as required. Write orders for patient activity. Chart patient progress notes. Answer patient and family questions. Answer nursing and/or other staff questions.

**Discharge management:** Review interval chart notes. Talk with patient and family. Take down dressings. Evaluate flaps for viability and wound for infection. Assess drain output. Redress wound. For latissimus flap, assess extremity for edema, circulation, sensation and motor function. For rectus abdominis flap, assess bowel function. Assess pain score and order medications, as required. Assess need for beta blockers, order as required. Assess need for antibiotics, order as required. Discuss home restrictions (ie, diet, activity, bathing) and care of drain with patient and family members. Medications are reconciled and orders for discharge medications are written. Complete all appropriate medical records, including day of discharge progress notes, discharge summary, discharge instructions, and insurance forms.

**Office visits:** Talk with patient and family. Take down dressings. Evaluate flaps for viability and wound for infection. Assess drain output and remove when appropriate. Remove staples/sutures when appropriate. Redress wound. For latissimus flap, assess extremity for edema, circulation, sensation and motor function. Order therapy, as required. Review with patient and family the need for post-mastectomy reconstructive procedures. For rectus abdominis flap, assess bowel function. Assess pain score and order medications, as required. Answer patient and family questions and reinforce instructions on wound care, activity, and bathing. Enter progress notes into medical record. Discuss progress with PCP.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Background**

Code 15734 was identified through a screen for services with Medicare utilization greater than 10,000 that include a 99214 in the global period.

**Compelling Evidence**

Flawed methodology - previous survey was conducted by one specialty to obtain a value, but in actuality that service is currently provided primarily by physicians from a different specialty according to utilization data.

Code 15734 was identified by CMS as a high volume Harvard-valued code that was potentially misvalued as part of the third five-year review in 2005. The 2003 Medicare data indicated plastic surgery as the dominant provider at approximately 80%, followed by general surgery, otolaryngology, and cardiothoracic surgery in small percentages. ASPS agreed to survey 15734 and a vignette was developed for a non-Medicare aged patient with a history of breast cancer treated with mastectomy followed by radiation therapy resulting in a large nonhealing radiation ulcer of the left lateral chest that was reconstructed with a pedicled latissimus muscle flap. The survey conducted by ASPS resulted in 21 responses (ie, less than 30) with an indication on the survey that work had not changed. The survey data from the 21 respondents was accepted as similar to Harvard data and the work RVU was maintained. Current information for code 15734 indicates a shift in the surgeons who provide the service. Specifically, plastic surgeons and general surgeons currently have almost equal utilization as more general surgeons perform muscle flaps to close large abdominal defects that cannot close primarily. **We believe that utilization changes in the typical provider meets compelling evidence that 15734 may not be correctly valued.**

**Survey Process**

**For CPT code 15734, please select one of the typical patients described below.** When completing this survey, consider the physician work related to the typical patient you have chosen.

- ☐ **Patient 1:** A patient with a history of radiation therapy develops a large open wound of the chest with exposure of several ribs resulting in a defect that is too large to close with a complex repair or adjacent tissue transfer. The defect is reconstructed with a pedicled muscle flap (eg, latissimus).
- ☐ **Patient 2:** A trauma patient with multiple injuries initially undergoes a damage-control laparotomy with hemorrhage control, bowel resection and temporary abdominal closure. At the time of definitive closure of the abdomen, a wide gap between the opposing fascial edges in the abdominal wall has developed. A pedicled muscle flap (eg, rectus abdominis) is elevated and transposed to close the defect

**Is your typical patient for 15734 similar to the typical patient described above?**

- ☐ Yes
- ☐ No. If no, please describe your typical patient for this service:

Muscle flaps on the trunk can involve the chest, the back, and/or the abdomen. Therefore, the ASPS and ACS recommended that two different typical patient vignettes be included in the survey instrument to accommodate a survey by both plastic surgeons and general surgeons who have almost equal utilization of the code. The Research Subcommittee approved the use of two vignettes for the survey process, one for a latissimus muscle flap and one for a rectus abdominis flap. The ASPS and ACS indicated that they believed the physician work for these vignettes were essentially equivalent and would allow survey participation by both specialties. The "typical patient" question on the survey instrument was modified as shown below to allow the survey respondent to choose a vignette for completion of the survey:

A survey request was sent to a random selection of 1,087 surgeons from the ASPS (reconstructive plastic surgeons) and ACS (general surgeons) membership databases. Forty-one responses were received with 26 respondents choosing vignette 1 and 15 respondents choosing vignette 2. The split in GS/PS for vignette 1 was 25% / 75% and for vignette 2 was approximately 50% / 50%. The RUC Summary Excel file shows combined data and data grouped by vignette.

### Recommendation

**We recommend the survey median work RVU of 23.00 for code 15734.** This work RVU which is slightly greater than the current value reflects the increased intra-service time and increased inpatient hospital work compared with the time and visit data from the previous review of 21 plastic surgeons.

### Pre-time Package 4

We recommend pre-time package 4 (*Difficult Patient/Difficult Procedure*). **Recommended times for the preservice categories are 40/15/20.** An additional 12 minutes has been added for positioning for a total of 15 minutes positioning time. This is consistent with the current survey data and the previous survey data. The typical patient undergoing a latissimus muscle flap will be positioned supine, then lateral as the procedure progresses. The typical patient undergoing a rectus abdominis flap will require a significant amount of effort to transfer from the hospital bed to the OR bed because there is commonly a vacuum assisted dressing in place that will need to be taken down. There may also be additional dressings or other management issues involved in transferring a multisystem trauma patient from the bed to the OR table (eg, the patient may be ventilated or have other trauma that needs to be accommodated during movement). Finally, consideration should also be given to prone positioning for flaps used for reconstruction of the midline and posterior trunk defects (eg, trapezius, latissimus dorsi, and the gluteus maximus).

### Post-time Package 9b

We recommend post-time package 9b (*General Anesthesia or Complex Regional Block/Complex Procedure*), with a reduction of 3 minutes to be consistent with the survey median.

### Key Reference Service Comparison

KRS codes 27364 and 22905 are familiar to both general surgeons and plastic surgeons. Both procedures represent significant intraoperative work and similar postoperative management. The recommended work RVU of 23.00 for code 15734 fits well between the KRS codes.

Year	CPT	Long Descriptor	RVW	IWPUT	Total	PRE	INTRA	POST	33	32	31	38	14	13	12
2009	<b>22905</b>	Radical resection of tumor (eg, sarcoma), soft tissue of abdominal wall; 5 cm or greater	<b>21.58</b>	0.071	550	80	150	30		1	2	1	1	2	1
	<b>15734</b>	Muscle flap, trunk	<b>23.00</b>	0.054	596	75	180	30	1	2	1	1	1	2	2
2009	<b>27364</b>	Radical resection of tumor (eg, sarcoma), soft tissue of thigh or knee area; 5 cm or greater	<b>24.49</b>	0.078	463	63	180	30		2	2	1	1	2	1

### MPC Comparison

Survey code 15734 includes more postoperative hospital and office work than MPC code 55866 and significantly less hospital work than MPC code 33533.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.  
☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.  
☐ Multiple codes allow flexibility to describe exactly what components the procedure included.  
☐ Multiple codes are used to maintain consistency with similar codes.  
☐ Historical precedents.  
☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 15734

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
 If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty plastic surgery                      How often? Sometimes

Specialty general surgery                      How often? Sometimes

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. national utilization not available

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Specialty	Frequency	Percentage	%
Specialty	Frequency	Percentage	%

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?  
 23,069 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty.  
 Please explain the rationale for this estimate. RUC database

Specialty plastic surgery	Frequency 11000	Percentage 47.68 %
---------------------------	-----------------	--------------------

Specialty general surgery	Frequency 9100	Percentage 39.44 %
---------------------------	----------------	--------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Do many physicians perform this service across the United States? Yes

### Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Procedures

BETOS Sub-classification:

Major procedure

BETOS Sub-classification Level II:

Other

### Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 15734

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 15736	Tracking Number	Original Specialty Recommended RVU: <b>17.04</b>
		Presented Recommended RVU: <b>17.04</b>
Global Period: 090		RUC Recommended RVU: <b>17.04</b>
CPT Descriptor: Muscle, myocutaneous, or fasciocutaneous flap; upper extremity		

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A patient sustains an avulsion injury of the antecubital fossa resulting in a soft tissue defect exposing the brachial artery and median nerve. A pedicled muscle flap (eg, brachioradialis) is elevated and transposed to provide coverage of the defect.

Percentage of Survey Respondents who found Vignette to be Typical: 80%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 87% , In the ASC 13%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 5% , Overnight stay-less than 24 hours 45% , Overnight stay-more than 24 hours 50%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 42%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: Select and order the appropriate antibiotic(s) and confirm timing and administration. Assure appropriate selection, timing, and administration of deep vein thrombosis (DVT) prophylaxis. Write orders for preoperative medications. Review results of admission testing and imaging. Meet with patient and family to review planned procedure and postoperative management. Mark site and side of proposed skin incision and confirm with patient. Review and obtain informed consent with patient, including witness. Review length and type of anesthesia with anesthesiologist. Verify that all required instruments and supplies are available. Assist in transfer of patient from gurney to operating table. Monitor and/or assist with patient positioning; padding of bony prominences; and application of thermal regulation drapes. Assess position of extremities and head; adjust as needed. Place patient's arm on hand surgery table. Indicate areas of skin to be prepared. Prep and drape arm and hand. Scrub and gown. Apply a sterile tourniquet to the proximal arm. Mark surgical incisions on the arm. Perform surgical time out with operating surgical team. Elevate arm and exsanguinate. Inflate pneumatic tourniquet.

Description of Intra-Service Work: The traumatic defect in the antecubital fossa is debrided and irrigated. The defect is measured. An incision is made over the ipsilateral brachioradialis muscle. The incision is brought down to the level of the fascia which is divided exposing the muscle. The brachioradialis muscle is dissected radially and ulnarly proceeding distally where the distal tendon is divided. The superficial radial sensory nerve is first identified and carefully protected during the distal dissection. The muscle is then dissected proximally. During the dissection care is taken to identify the vascular pedicle coming from the recurrent radial artery. Secondary branches of the recurrent radial artery are divided to allow better mobilization. The nerve origin from the radial nerve is also identified and protected. The muscle is then transposed on the pedicle to cover the defect at the antecubital fossa and sutured in place. The tourniquet is deflated and the viability of the muscle is assessed. The flap is observed for any sign of congestion. If flap congestion is noted sutures are

removed/repositioned and the flap orientation is adjusted as needed. Drains are placed and sutured in position. The donor site fascia is sutured and the skin closed in layers. [Flap coverage is completed with an appropriate skin graft that is separately reported.]

#### Description of Post-Service Work:

Through discharge from recovery: A bulky dressing is applied to the entire arm from the hand to the axilla. A long arm plaster splint is applied. The patient's arm is monitored to be certain the flap is not ripped out of its bed should he/she forcefully extend the elbow during emergence from anesthesia. The patient is transferred from the operating table to gurney. Monitoring continues during the transport of patient from the OR to the recovery room. The postoperative recovery care is discussed with the anesthesia team and nursing staff. The nursing staff is instructed in the care of the drains and extremity. The postoperative laboratory results are reviewed. The procedure and outcome are discussed with family in waiting area. A brief operative note is written. Orders are written for the in-immediate postoperative care. The operative report is dictated, a copy of which is sent to the referring physician(s). The referring physician(s) is called. The patient is discharged from recovery room to surgical ward. Additional floor related postoperative orders are written and discussed with the surgical floor nursing staff.

Next day discharge management: The interval chart notes are reviewed. The superficial dressing is taken down. Care is taken to not disturb the non-adherent dressing covering the skin graft. The flap is accessed for viability and the wound for infection. The drain output is noted. The wound is redressed creating a small viewing port for postoperative flap observation. The extremity edema, circulation, sensation and motor function are assessed. Further discussions are held with the patient and family regarding diet, activity, bathing, arm positioning, care of the drain and dressings. Postoperative medication orders are written and discussed with the family. Medications are reconciled. All appropriate medical records, including day of discharge progress notes, discharge summary, discharge instructions are completed.

Office visits: The patient is seen within 24 hours of discharge to evaluate drain output and flap viability. The patient's comfort and adherence to the postoperative regimen is discussed. The extremity edema, circulation, sensation and motor function are assessed. The graft donor site is evaluated. The donor site dressing is changed or reinforced as needed. The drain anchor suture is located and removed along with the drain. The dressing is only disturbed enough to evaluate the flap viability via the previously created viewing port. The viewing port is covered. The splint is left in place. Pain is assessed and adjustments to medications are made as needed. The patient care plan is reviewed with the patient and family. Communication with the referring physician is completed. The medical record is completed.

At the second postoperative office visit, the patient's comfort and adherence to the postoperative regimen is discussed. The extremity edema, circulation, sensation and motor function are assessed. The splint is removed, but the arm is supported. The superficial dressing is removed. The viability of the flap is assessed. The wound is checked for any sign of infection. The non-stick dressing covering the skin graft is very carefully separated from the graft while protecting the graft with cotton swabs. A new non-stick dressing is applied to the flap. A new dressing is applied to the arm. A new splint is applied (separately reportable.) The donor site is evaluated and redressed. Pain is assessed and adjustments to medications are made as needed. The patient care plan is reviewed with the patient and family. Communication with the referring physician is completed. The medical record is completed.

At subsequent postoperative office visits, the patient's comfort and adherence to the postoperative regimen is discussed. The extremity edema, circulation, sensation and motor function are assessed. The splint is removed but the arm is supported. The superficial dressing is removed. The viability of the flap is assessed. The wound is checked for any sign of infection. The non-stick dressing covering the skin graft is very carefully separated from the graft while protecting the graft with cotton swabs. The stitches are removed, as appropriate. The arm is redressed as appropriate. The donor site dressing is removed. The donor site is assessed and redressed as appropriate. The patient and family are instructed in dressing changes. Occupational therapy is ordered to address elbow range of motion while protecting the flap. The progress in occupational therapy is assessed. Changes to the OT orders are written (full range of elbow motion, edema control.). The splint is adjusted or replaced as needed. (It will be worn between exercise periods.) Pain is assessed and adjustments to medications are made as needed. Orders are written for dressing supplies. The patient care plan is reviewed with the patient and family. Communication with the referring physician is completed. The medical record is completed.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Background**

Code 15734 was identified through a screen for services with Medicare utilization greater than 10,000 that include a 99214 in the global period. Code 15736 was added as a family code.

**Survey Process**

The previous survey in 1995 was conducted only by ASPS. For this current survey, both ASPS (plastic surgery) and ASSH (hand/upper extremity surgery) participated. A survey request was sent to a random selection of 1400 surgeons from the ASPS (reconstructive plastic surgeons) and ASSH (hand surgeons) membership database.

**Recommendation**

**We recommend maintaining the current work RVU of 17.04 for code 15736.** The intraoperative time has not changed and although the hospital visits have decreased, the office visits have increased in both number and level (ie, hospital work has been moved to the office setting). The total time and IWP/UT between the 1995 survey and the current survey are essentially the same, as further support to maintain the current value.

**Pre-time Package 4**

We recommend pre-time package 4 (*Difficult Patient/Difficult Procedure*). **Recommended times for the preservice categories are 40/12/20.** An additional 9 minutes has been added for positioning (Assist in transfer of patient from gurney to operating table. Monitor and/or assist with patient positioning; padding of bony prominences; and application of thermal regulation drapes. Assess position of extremities and head; adjust as needed. Place patient's arm on hand surgery table. Apply a sterile tourniquet to the proximal arm. Elevate arm and exsanguinate. Inflate pneumatic tourniquet.) A total positioning time of 12 minutes is consistent with many other recently reviewed upper extremity procedures, including: 23430, 24071, 24077, 24079, 24150, 24152, 24160, 24164, 24363, 24370, 24371, 25071, 25073, 25076, 25077, 25078, 25170, 26111, 26113, 26116, 26117, and 26118.

**Post-time Package 9b**

We recommend post-time package 9b (*General Anesthesia or Complex Regional Block/Complex Procedure*).

### Key Reference Service Comparison

KRS code 24160 has less intraoperative time, more hospital work, and less office work. Although the total time for 24160 is similar to 15736, the value for 24160 is greater than the recommendation for 15736 because the intraoperative intensity is greater.

KRS code 15731 is a smaller flap and has less intraoperative time than 15736. Patients undergoing 15731 will almost always go home the same day, whereas the patients undergoing 15736 will almost always stay overnight or be admitted for several days. This increases the post-operative work on the day of the procedure and the subsequent day for 15736 when compared with 15731. Given the CMS policy regarding "outpatient" coding, this nuance is lost because both codes will have 0.5 x 99238 in a data table even though the post-operative hospital work is greater for 15736. The recommended work RVU of 17.04 takes into account the difference in intraoperative time and difference in postoperative facility work.

### MPC Comparison

Survey code 15736 includes more intraoperative time than both MPC codes and post-operative work varies. The recommended work RVU of 17.04 correctly places 15736 between the MPC codes.

Year	CPT	Long Descriptor	RVW	IWPUT	Total	PRE	INTRA	POST	32	31	38	14	13	12

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 15736

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty plastic surgery                      How often? Sometimes

Specialty hand surgery                      How often? Rarely

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. national utilization not available

Specialty	Frequency	Percentage	%
Specialty	Frequency	Percentage	%
Specialty	Frequency	Percentage	%

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,402

If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC database

Specialty plastic surgery	Frequency 900	Percentage 64.19 %
Specialty hand surgery	Frequency 150	Percentage 10.69 %
Specialty	Frequency 0	Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

**Berenson-Eggers Type of Service (BETOS) Assignment**

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Procedures

BETOS Sub-classification:

Major procedure

BETOS Sub-classification Level II:

Other

---

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 15736

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 15738	Tracking Number	Original Specialty Recommended RVU: <b>21.58</b>
		Presented Recommended RVU: <b>21.58</b>
Global Period: 090		RUC Recommended RVU: <b>19.04</b>
CPT Descriptor: Muscle, myocutaneous, or fasciocutaneous flap; lower extremity		

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A patient presents with a large defect of the mid portion of the lower leg with exposed bone that is too large to close with a complex repair or adjacent tissue transfer. A pedicled muscle flap (eg, medial soleus) is elevated and transposed to provide coverage of the defect.

Percentage of Survey Respondents who found Vignette to be Typical: 95%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 100% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 6% , Overnight stay-more than 24 hours 94%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 39%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: Select and order the appropriate antibiotic(s) and confirm timing and administration. Assure appropriate selection, timing, and administration of deep vein thrombosis (DVT) prophylaxis. Write orders for preoperative medications including beta blockers if indicated. Review results of admission testing and imaging. Meet with patient and family to review planned procedure and postoperative management. Mark site and side of proposed skin incision and confirm with patient. Review and obtain informed consent with patient, including witness. Review length and type of anesthesia with anesthesiologist. Verify that all required instruments and supplies are available. Assist in transfer of patient from gurney to operating table. Monitor and/or assist with patient positioning; padding of bony prominences; and application of thermal regulation drapes. Assess position of extremities and head; adjust as needed. Indicate areas of skin to be prepared. Prep and drape leg. Scrub and gown. Apply a sterile tourniquet on thigh. Mark surgical incisions on the leg. Perform surgical time out with operating surgical team. Elevate leg and exsanguinate. Inflate pneumatic tourniquet.

Description of Intra-Service Work: The traumatic defect in the mid-tibial region of the leg is irrigated and thoroughly debrided. An incision is made from the wound extended proximally and distally to allow harvesting of the medial soleus muscle as a flap. The plane between the superficial surface of the soleus muscle and the deep surface of the medial gastrocnemius muscle is identified and dissected. This dissection is carried to the midline raphe between the medial and lateral portions of the muscle, frequently using the lesser saphenous vein as a landmark to establish its location. This dissection is then performed proximally to the bone origin and distal to the Achilles tendon. The anterior border of the muscle is divided off the tibia and the dissection is carried proximally to free both the bony and fibrous origins of the soleus muscle, using caution to prevent damage to the popliteal vessels and tibial nerve, as well as the vascular pedicle of the muscle itself. The deep surface of the muscle is then dissected off of the posterior intermuscular septum using caution to avoid damage to the peroneal and posterior tibial vessels as well as the tibial nerve. The insertion of the muscle at the

Achilles tendon is carefully divided in order to preserve the gastrocnemius insertion into the Achilles tendon. The dissection continues up the midline of the bipartite muscle. The tourniquet is released and the viability of the flap is assessed. The flap is observed for any sign of congestion. Drains are placed and sutured in position. The muscle is sutured in place to provide coverage for the bone. If flap congestion is noted sutures are removed/repositioned and the flap orientation is adjusted as needed. The donor site fascia is sutured and the skin closed in layers. [Flap coverage is completed with an appropriate skin graft that is separately reported.]

#### Description of Post-Service Work:

Through discharge from recovery: Apply sterile dressings. Monitor patient during reversal of anesthesia. Assist in transfer of patient from operating table to gurney. Monitor transport of patient from the OR to the recovery room. Discuss postoperative recovery care with anesthesia and nursing staff. Instruct nursing staff in care of drains, tubes, and other devices. Review postoperative laboratory results. Discuss procedure and outcome with family in waiting area. Write brief operative note. Write postoperative note in recovery room. Dictate operative report and copy referring physician(s). Call referring physician(s). Discharge patient from recovery room to surgical ward. Write patient-care orders and discuss floor care with nursing staff. Patient is seen again in the evening after surgery and flap viability is confirmed. Pain control reviewed.

Inpatient E/M visits: Review of interval chart notes. Talk with patient and family. Take down any necessary dressings. Evaluate flap for viability and wound for infection. Evaluate splint for pressure points. Assess drain output. Redress wound. Evaluate donor site. Evaluate neurovascular status of distal extremity. Assess pain score and order medications, as required. Continue prophylaxis for DVT. Assess need for beta blockers, order as required. Assess need for antibiotics, order as required. Write orders for patient activity. Chart patient progress notes. Answer patient and family questions. Answer nursing and/or other staff questions.

Discharge management: Review interval chart notes. Talk with patient and family. Take down dressings. Evaluate flaps for viability and wound for infection. Assess drain output. Redress wound. Assess extremity for edema, circulation, sensation and motor function. Assess need for beta blockers, order as required. Assess need for antibiotics, order as required. Discuss home restrictions (ie, diet, activity, bathing) and care of drain with patient and family members. Medications are reconciled and orders for discharge medications are written. Complete all appropriate medical records, including day of discharge progress notes, discharge summary, discharge instructions, and insurance forms.

Office visits: At first post-op visit typically within one week of surgery date, talk with patient and family. Evaluate general recovery and flap specific concerns. Assess pain score and order medications. Review pertinent pathology and/or cultures results. Take down dressings including splint. Evaluate flaps/skin graft for viability and wound for infection. Assess drain output and remove if appropriate. Evaluate skin graft donor site if present and replace dressing. Redress wounds/incisions. Assess pain score and order medications as required. Discuss changes to activity level. Evaluate lower extremity muscular function and neurovascular status. Evaluate edema/swelling of lower extremity. Review with patient and family all wound care orders and demonstrate appropriate care for incisions/skin graft. Communicate with both PCP and other involved physicians. Answer patient and family questions and reinforce instructions on wound care, activity, and bathing. Fill out FMLA/disability paperwork. Enter progress notes into medical record. Discuss progress with PCP/referring physicians.

At subsequent office visits, continue to evaluate patient recovery for both general and reconstruction specific concerns. Continue to monitor and manage wounds/incisions. Evaluate and remove drains (typically 2-4 drains overall) as appropriate. Remove sutures as indicated. Assess extremity for edema, circulation, sensation and motor function. Increase activity as tolerated and discuss rehabilitation needs with patient and family. Teach any new wound care instructions or changes in medications. Communicate with physical therapist on rehabilitation goals/next steps. Coordinate care with PCP and other involved physicians. Medical record is completed.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Background**

Code 15734 was identified through a screen for services with Medicare utilization greater than 10,000 that include a 99214 in the global period. Code 15738 was added as a family code.

**Compelling Evidence**

*Flawed methodology –underestimation of work because previous survey did not require level of hospital or office visits.* Code 15738 was identified by CMS as undervalued during the first five-year review in 1995. The survey instrument in 1995 requested total hospital time and number of visits, but not level of visits (ie, there was no consideration given to level of post-operative work, that could affect valuation of work). When level of visits was necessary for the first five-year review of practice expense, a CMS contractor transformed the postoperative time into visit levels using an algorithm based on intra-service time. This resulted in all low level hospital and office visits being assigned to code 15738. The current survey indicates that the hospital and office visit work was underestimated and that increases in the value for E/M codes over the years was not correctly incorporated in the global code value for 15738. **We believe that this underestimation of postoperative visit work meets compelling evidence that 15738 may not be correctly valued.**

**Survey Process**

A survey request was sent to a random selection of 800 surgeons from the ASPS (reconstructive plastic surgeons) membership database.

**Recommendation**

**We recommend the survey median work RVU of 21.58 for code 15738.** This work RVU which is slightly greater than the current value accounts increased postoperative work changes when compared to previous data.

### Pre-time Package 4

We recommend pre-time package 4 (*Difficult Patient/Difficult Procedure*). **Recommended times for the preservice categories are 40/15/20.** An additional 12 minutes has been added for positioning for a total of 15 minutes positioning time. The typical patient undergoing a medial soleus muscle flap can be positioned with the leg extended lateral or positioned prone, depending on the area of defect to be covered (ie, the medial soleus muscle is on the posterior leg). Repositioning may be necessary as the procedure progresses. In addition, these patients will require a significant amount of effort to transfer from the hospital bed to the OR bed because there is commonly a vacuum assisted dressing in place that will need to be taken down or, for patients with fractures, there may be external fixation that complicates positioning.

### Post-time Package 9b

We recommend post-time package 9b (*General Anesthesia or Complex Regional Block/Complex Procedure*), with a reduction of 3 minutes to be consistent with the survey median.

### Key Reference Service Comparison

KRS codes 27364 and 22905 represent significant intraoperative work and similar postoperative management. The recommended work RVU of 21.58 for code 15738 is supported by these codes.

CPT	Long Descriptor	RVW	IWPUT	Total	PRE	INTRA	POST	32	31	38	14	13	12
<b>15738</b>	Muscle flap, lower extremity	<b>21.58</b>	0.064	516	70	150	30	2	2	1		4	1
<b>22905</b>	Radical resection of tumor (eg, sarcoma), soft tissue of abdominal wall; 5 cm or greater	<b>21.58</b>	0.071	550	80	150	30	1	2	1	1	2	1

### Other Comparison Codes

The table below presents RUC reviewed 90-day global inpatient procedures with work RVUs just above and below the recommended value for 15738. For some codes, the intraoperative work is greater and the postoperative work is less than 15738. For other codes, the intraoperative work is less and the postoperative work is greater than 15738. When considering total work and magnitude estimation, these codes support a work RVU of 21.58 for 15738.

CPT	Long Descriptor	RVW	IWPUT	Total	PRE	INTRA	POST	33	32	31	38	14	13	12

## SERVICES REPORTED WITH MULTIPLE CPT CODES

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.  
☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.  
☐ Multiple codes allow flexibility to describe exactly what components the procedure included.  
☐ Multiple codes are used to maintain consistency with similar codes.  
☐ Historical precedents.  
☐ Other reason (please explain)

- Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

**FREQUENCY INFORMATION**

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 15738

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty plastic surgery                      How often? Sometimes

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. national utilization not available

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 5,771

If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC database

Specialty plastic surgery	Frequency 3800	Percentage 65.84 %
---------------------------	----------------	--------------------

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Do many physicians perform this service across the United States? Yes

**Berenson-Eggers Type of Service (BETOS) Assignment**

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Procedures

BETOS Sub-classification:

Major procedure

BETOS Sub-classification Level II:

Other

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 15738

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/Specialty Society Update Process**  
**Practice Expense Summary of Recommendation**  
**Facility Direct Inputs**

<b>15734</b>	Muscle, myocutaneous, or fasciocutaneous flap; trunk
--------------	--

Global Period: 090      Meeting Date: April 2016

**1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:** The ACS and ASPS Advisors reviewed the current PE details for 15734. The societies agree that code 15734 should not be performed in the office setting and are recommending no practice expense inputs for the office setting.

**2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison. You must provide an explanation for the selection of reference codes. Reference Code Rationale:** N/A

**3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:**

Post-operative office visit time has been adjusted to match the current survey.

**4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:**

Supplies

The current practice expense details related to the postoperative office visits do not include the necessary supplies for caring for a drain and two wounds on the trunk (flap and donor site). The necessary items have been added to the spreadsheet.

Supply	Qty	
pack, post-op incision care (suture)	2	typically more than one drain and typically removed at different visits – and different from the visit where staples/sutures removed from wounds
pack, post-op incision care (suture & staple)	1	remove staples and sutures, flap and donor wounds
silver nitrate applicator	1	first visit, flap and donor wounds
gauze, sterile 4in x 4in (10 pack uou)	2	cleaning related to drain removal and flap and donor wounds
dressing, 3in x 4in (Telfa, Release)	4	dressing, flap and donor wounds
dressing, 5in x 9in (ABD-Combine)	2	to cover dressing, flap and donor wounds

Equipment

The surgical light has been changed to an exam light which is typical in a surgeon's exam room.

**5. Please describe in detail the clinical activities of your staff:**

Pre-Service Clinical Labor Activities:

Clinical staff will coordinate diagnostic and referral forms, pre-surgery services, and scheduling space and equipment in the facility. In addition, clinical staff will communicate with the patient's family/caregiver regarding the procedure, after care, etc.

Intra-Service Clinical Labor Activities:

Staff will assist with coordination of care post-discharge, communicating with the patient's family/caregiver regarding questions about home care and follow-up.

Post-Service Clinical Labor Activities:

Clinical staff will assist at each office visit.

### Supplies

The current practice expense details related to the postoperative office visits do not include the necessary supplies for caring for a drain(s) and two wounds (flap and donor site). The necessary items have been added to the spreadsheet. Below is a list of items divided into each visit. Please note that activities at each visit may change based on wound healing. For example, sutures may not be removed until a later visit, depending on skin tension.

	Supply	QTY	
POV #1	kit, suture removal	1	remove drain
	bandage, Kerlix, sterile 4.5in	1	Flap
	gloves, sterile	1	Flap & donor site
	dressing, 5in x 9in (Xeroform)	2	Flap & donor site
	gauze, sterile 4in x 4in	6	Flap
	tape, surgical paper 1in (Micropore)	12"	Flap
	tape, surgical paper 1in (Micropore)	36"	Donor site
	gauze, sterile 4in x 4in	6	Donor site
POV# 2	gloves, sterile	1	Flap & donor site
	applicator, cotton-tipped, sterile, 6in	6	Flap
	sodium chloride 0.9% inj (250-1000ml uou)	1	Flap
	underpad 2ft x 3ft (Chux)	1	flap

	Supply	QTY	
	dressing, 3in x 4in (Telfa, Release)	1	Flap
	bandage, Kerlix, sterile 4.5in	1	Flap
	dressing, 5in x 9in (Xeroform)	2	Flap & donor site
	bandage, elastic wrap 3in (Ace)	2	Flap
	gauze, sterile 4in x 4in	6	Flap & donor site
	tape, surgical paper 1in (Micropore)	12"	Flap
	tape, surgical paper 1in (Micropore)	36"	Donor site
POV# 3	gloves, sterile	1	Flap & donor site
	kit, suture removal	1	remove sutures
	applicator, cotton-tipped, sterile, 6in	6	Flap
	sodium chloride 0.9% inj (250-1000ml uou)	1	Flap
	underpad 2ft x 3ft (Chux)	1	flap
	dressing, 3in x 4in (Telfa, Release)	1	Flap
	bandage, Kerlix, sterile 4.5in	1	Flap
	bandage, elastic wrap 3in (Ace)	2	Flap
	gauze, sterile 4in x 4in	6	Flap & donor site
	tape, surgical paper 1in (Micropore)	12"	Flap
	tape, surgical paper 1in (Micropore)	36"	Donor site
POV# 4	gauze, sterile 4in x 4in	6	Flap & donor site
	tape, surgical paper 1in (Micropore)	12"	Flap
	tape, surgical paper 1in (Micropore)	36"	Donor site
	bandage, Kerlix, sterile 4.5in	1	Flap
	bandage, elastic wrap 3in (Ace)	2	Flap
POV #5+	no supplies		

### Equipment

The surgical light has been changed to an exam light which is typical in a surgeon's exam room.

### **5. Please describe in detail the clinical activities of your staff:**

#### Pre-Service Clinical Labor Activities:

Clinical staff will coordinate diagnostic and referral forms, pre-surgery services, and scheduling space and equipment in the facility. In addition, clinical staff will communicate with the patient's family/caregiver regarding the procedure, after care, etc.

#### Intra-Service Clinical Labor Activities:

Staff will assist with coordination of care post-discharge, communicating with the patient's family/caregiver regarding questions about home care and follow-up.

#### Post-Service Clinical Labor Activities:

**CPT Code: 15736**  
**Specialty Society(s): ASSH, ASPS**

Clinical staff will assist at each office visit.

Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:** The ASSH and ASPS Advisors reviewed the current PE details for 15736. **The societies agree that code 15736 should not be performed in the office setting and are recommending no practice expense inputs for the office setting.**

**2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison. You must provide an explanation for the selection of reference codes. Reference Code Rationale:**

**3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:**

**4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:**

**5. Please describe in detail the clinical activities of your staff:**

## AMA/Specialty Society Update Process Practice Expense Summary of Recommendation Facility Direct Inputs

<b>15738</b>	Muscle, myocutaneous, or fasciocutaneous flap; lower extremity
--------------	--

Global Period: 090      Meeting Date: April 2016

**1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:** The ASPS Advisors reviewed the current PE details for 15738 and agree that code 15738 should not be performed in the office setting and are recommending no practice expense inputs for the office setting.

**2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison. You must provide an explanation for the selection of reference codes. Reference Code Rationale:** N/A

**3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:**

Post-operative office visit time has been adjusted to match the current survey.

**4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:**

### Supplies

The current practice expense details related to the postoperative office visits do not include the necessary supplies for caring for a drain and two wounds (flap and donor site). The necessary items have been added to the spreadsheet. Below is a list of items divided into each visit.

	Supply	QTY	
POV #1	kit, suture removal	1	remove drain
	bandage, Kerlix, sterile 4.5in	2	Flap
	gloves, sterile	1	Flap & donor site
	dressing, 5in x 9in (Xeroform)	2	Flap & donor site
	bandage, elastic wrap 4in (Ace)	1	Flap
	bandage, elastic wrap 6in (Ace)	1	Flap
	gauze, sterile 4in x 4in	6	Flap
	tape, surgical paper 1in (Micropore)	12"	Flap
	tape, surgical paper 1in (Micropore)	36"	Donor site
	gauze, sterile 4in x 4in	6	Donor site
POV# 2	gloves, sterile	1	Flap & donor site
	applicator, cotton-tipped, sterile, 6in	6	Flap

	Supply	QTY	
	sodium chloride 0.9% inj (250-1000ml uou)	1	Flap
	underpad 2ft x 3ft (Chux)	1	Flap
	dressing, 3in x 4in (Telfa, Release)	1	Flap
	bandage, Kerlix, sterile 4.5in	2	Flap
	dressing, 5in x 9in (Xeroform)	2	Flap & donor site
	bandage, elastic wrap 4in (Ace)	1	Flap
	bandage, elastic wrap 6in (Ace)	1	Flap
	gauze, sterile 4in x 4in	6	Flap & donor site
	tape, surgical paper 1in (Micropore)	12"	Flap
	tape, surgical paper 1in (Micropore)	36"	Donor site
POV# 3	gloves, sterile	1	Flap & donor site
	kit, suture removal	1	remove sutures
	applicator, cotton-tipped, sterile, 6in	6	Flap
	sodium chloride 0.9% inj (250-1000ml uou)	1	Flap
	underpad 2ft x 3ft (Chux)	1	Flap
	dressing, 3in x 4in (Telfa, Release)	1	Flap
	bandage, Kerlix, sterile 4.5in	2	Flap
	dressing, 5in x 9in (Xeroform)	2	Flap
	bandage, elastic wrap 4in (Ace)	1	Flap
	bandage, elastic wrap 6in (Ace)	1	Flap
	gauze, sterile 4in x 4in	6	Flap & donor site
	tape, surgical paper 1in (Micropore)	12"	Flap
	tape, surgical paper 1in (Micropore)	36"	Donor site
POV# 4	gauze, sterile 4in x 4in	6	Flap & donor site
	tape, surgical paper 1in (Micropore)	12"	Flap
	tape, surgical paper 1in (Micropore)	36"	Donor site
	bandage, Kerlix, sterile 4.5in	2	Flap
	bandage, elastic wrap 4in (Ace)	1	Flap
	bandage, elastic wrap 6in (Ace)	1	Flap
POV #5+	no supplies		

#### Equipment

The surgical light has been changed to an exam light which is typical in a surgeon's exam room.

#### **5. Please describe in detail the clinical activities of your staff:**

Pre-Service Clinical Labor Activities:

Clinical staff will coordinate diagnostic and referral forms, pre-surgery services, and scheduling space and equipment in the facility. In addition, clinical staff will communicate with the patient's family/caregiver regarding the procedure, after care, etc.

Intra-Service Clinical Labor Activities:

Staff will assist with coordination of care post-discharge, communicating with the patient's family/caregiver regarding questions about home care and follow-up.

Post-Service Clinical Labor Activities:

Clinical staff will assist at each office visit.

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
*CMS High Expenditure Procedures Screen*

January 2017

**Bone Marrow Aspiration**

At the September 2016 CPT Editorial Panel meeting a new Category I add-on code (20939) was approved for aspiration of bone marrow for spine autograft procedures as reflected in the literature submitted to CPT. Previously, CPT code 38220 *Bone marrow aspiration* was used to report this. CPT code 38220 was redefined to reflect only bone marrow aspiration for diagnostic purposes. CPT code 38220 had been incorrectly reported because the old code descriptor did not state "diagnostic" aspiration. The CPT Editorial Panel revised the descriptor to more clearly indicate the intent of CPT code 38220. The newly developed CPT code 20939 was valued at the January RUC meeting. This code will only be utilized for spine surgery procedures conducted by orthopedic surgeons and neurosurgeons doing spine autograft procedures.

***20939 Bone marrow aspiration for bone grafting, spine surgery only, through separate skin or fascial incision (List separately in addition to code for primary procedure)***

The RUC reviewed the survey results from 80 physicians and agreed with the following physician time component: intra-service time of 15 minutes. The RUC reviewed the 25<sup>th</sup> percentile work RVU of 1.16 and agreed that this value appropriately accounts for the physician work involved. To justify the work RVU of 1.16, the RUC referenced CPT code 64491 *Injection(s), diagnostic or therapeutic agent, paravertebral facet (zygapophyseal) joint (or nerves innervating that joint) with image guidance (fluoroscopy or CT), cervical or thoracic; second level (List separately in addition to code for primary procedure)* (work RVU=1.16, intra-service time of 15 minutes, total time of 15 minutes) and noted that both services have identical intra-services times, total times and intensities, and therefore should be valued similarly. The RUC also reviewed CPT code 64636 *Destruction by neurolytic agent, paravertebral facet joint nerve(s), with imaging guidance (fluoroscopy or CT); lumbar or sacral, each additional facet joint (List separately in addition to code for primary procedure)* (work RVU=1.16, intra-service time of 15 minutes, total time of 15 minutes) and noted that both services have identical intra-service times, total times, and intensity, further supporting a work RVU of 1.16 for the survey code. **The RUC recommends a work RVU of 1.16 for CPT code 20939.**

**Affirmation of RUC Recommendations**

**The RUC affirmed the recent RUC recommendations for CPT codes 38220, 38221 and 38222 previously submitted after review in this coding cycle. The relativity within the family remains correct.**

**Practice Expense**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

There are no direct expense inputs for CPT code 20939. This service is facility-only and does not require any clinical staff pre-service time.

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
<b>Musculoskeletal System</b>				
<b>General Excision</b>				
20150		<i>Excision of epiphyseal bar, with or without autogenous soft tissue graft obtained through same fascial incision</i> (For aspiration of bone marrow, use 38220)		
20220		<i>Biopsy, bone, trocar, or needle; superficial (eg, ilium, sternum, spinous process, ribs)</i>		
20225		<i>deep (eg, vertebral body, femur)</i> (Do not report 20225 in conjunction with 22510, 22511, 22512, 22513, 22514, 22515, 0200T, 0201T, when performed at the same level) (For bone marrow biopsy(ies) and/or aspiration(s), use see 38220, 38221, 382X3) (For radiologic supervision and interpretation, see 77002, 77012, 77021)		
<b>Grafts (Or Implants)</b>				
Codes for obtaining autogenous bone, cartilage, tendon, fascia lata grafts, <u>bone marrow</u> or other tissues through separate skin/fascial incisions should be reported separately unless the code descriptor references the harvesting of the graft or implant (eg, includes obtaining graft).				
+ 20936		<i>Autograft for spine surgery only (includes harvesting the graft); local (eg, ribs, spinous process, or laminar fragments) obtained from same incision (List separately in addition to code for primary procedure)</i>		
+20938		<i>structural, bicortical or tricortical (through separate skin or fascial incision) (List separately in addition to code for primary procedure)</i> (Use 20938 in conjunction with 22319, 22532, 22533, 22548-22558, 22590-22612, 22630, 22633, 22634, 22800-22812) (For needle aspiration of bone marrow for the purpose of bone grafting, use 38220. Do not report 38220-38230 for bone marrow aspiration for platelet rich stem cell injection. For bone marrow aspiration for platelet rich stem cell injection, use 0232T)		

(For aspiration of bone marrow for the purpose of bone grafting, other than spine surgery and other therapeutic musculoskeletal applications, use 20999)

(For aspiration of bone marrow for bone grafting, spine surgery only, use 20939)

(For bone marrow aspiration(s) for platelet rich stem cell injection, use 0232T)

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code:20939      Tracking Number   Q1

Original Specialty Recommended RVU: **1.16**Presented Recommended RVU: **1.16**

Global Period: ZZZ

RUC Recommended RVU: **1.16**

CPT Descriptor: Bone marrow aspiration for bone grafting, spine surgery only, through separate skin or fascial incision  
(List separately in addition to code for primary procedure)

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 50-year-old male undergoes a posterior cervical fusion of C5-C6 for degenerative disease. A posterior stab incision is made over the right iliac crest and a trephine needle placed into the bone. A syringe is used to aspirate 30cc of bone marrow to mix with allograft. (Code 20939 is an add-on code that represents the additional work for harvesting of bone marrow aspirate. Arthrodesis and/or instrumentation would be reported separately using the appropriate code[s])

Percentage of Survey Respondents who found Vignette to be Typical: 86%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is;  
Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: n/a

Description of Intra-Service Work: Prior to surgery, the surgeon will discuss with the patient and obtain consent for the the separate incision and bone marrow aspiration. At surgery, the area of the separate skin or fascial incision is prepped and draped (eg, iliac crest). A stab incision is made and a trephine needle is placed into the bone marrow space. A syringe is used to aspirate 30cc of bone marrow. The trephine needle is then removed. A suture is placed to close the stab incision and a dressing is placed. After surgery, the additional bone marrow aspiration procedure is documented as part of the primary procedure operative note.

Description of Post-Service Work: n/a

Overall intensity/complexity	0.28	0.43
------------------------------	------	------

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Background**

At the September 2016 CPT Editorial Panel meeting a new Category I add-on code (20939) was approved for aspiration of bone marrow for spine autograft procedures as reflected in the literature submitted to CPT. In addition, the Panel drafted parenthetical guidance to direct the use of code 20999 for non-spine therapeutic musculoskeletal procedures.

**Survey Process**

The AANS/CNS, NASS, AAOS, and ISASS surveyed a random selection of each society's membership and received 80 responses.

**Recommendation**

We recommend 1.16 work RVUs (the survey 25<sup>th</sup> percentile) for new code 20939.

**Key Reference Code Comparison**

CPT	Long Descriptor	RVW	IWP/UT	Total time
64491	Injection(s), diagnostic or therapeutic agent, paravertebral facet (zygapophyseal) joint (or nerves innervating that joint) with image guidance (fluoroscopy or CT), cervical or thoracic; second level (List separately in addition to code for primary procedure)	1.16	0.077	15
20939	Bone marrow aspiration for bone grafting, spine surgery only, through separate skin or fascial incision (List separately in addition to code for primary procedure)	1.16	0.077	15
11047	Debridement, bone (includes epidermis, dermis, subcutaneous tissue, muscle and/or fascia, if performed); each additional 20 sq cm, or part thereof (List separately in addition to code for primary procedure)	1.80	0.059	31

**MPC Code Comparison**

CPT	Long Descriptor	RVW	IWP/UT	Total time
64484	Injection(s), anesthetic agent and/or steroid, transforaminal epidural, with imaging guidance (fluoroscopy or CT); lumbar or sacral, each additional level (List separately in	1.00	0.100	10

	addition to code for primary procedure)			
<b>20939</b>	<b>Bone marrow aspiration for bone grafting, spine surgery only, through separate skin or fascial incision (List separately in addition to code for primary procedure)</b>	<b>1.16</b>	<b>0.077</b>	<b>15</b>
<b>64480</b>	<b>Injection(s), anesthetic agent and/or steroid, transforaminal epidural, with imaging guidance (fluoroscopy or CT); cervical or thoracic, each additional level (List separately in addition to code for primary procedure)</b>	<b>1.20</b>	<b>0.080</b>	<b>15</b>

### Other Comparison Codes with a ZZZ global

CPT	Long Descriptor	RVW	IWPUT	Total time
<b>64462</b>	Paravertebral block (PVB) (paraspinous block), thoracic; second and any additional injection site(s) (includes imaging guidance, when performed) (List separately in addition to code for primary procedure)	<b>1.10</b>	0.073	15
<b>64491</b>	Injection(s), diagnostic or therapeutic agent, paravertebral facet (zygapophyseal) joint (or nerves innervating that joint) with image guidance (fluoroscopy or CT), cervical or thoracic; second level (List separately in addition to code for primary procedure)	<b>1.16</b>	0.077	15
<b>64492</b>	Injection(s), diagnostic or therapeutic agent, paravertebral facet (zygapophyseal) joint (or nerves innervating that joint) with image guidance (fluoroscopy or CT), cervical or thoracic; third and any additional level(s) (List separately in addition to code for primary procedure)	<b>1.16</b>	0.077	15
<b>20939</b>	<b>Bone marrow aspiration for bone grafting, spine surgery only, through separate skin or fascial incision (List separately in addition to code for primary procedure)</b>	<b>1.16</b>	<b>0.077</b>	<b>15</b>
<b>64636</b>	Destruction by neurolytic agent, paravertebral facet joint nerve(s), with imaging guidance (fluoroscopy or CT); lumbar or sacral, each additional facet joint (List separately in addition to code for primary procedure)	<b>1.16</b>	0.077	15
<b>64480</b>	Injection(s), anesthetic agent and/or steroid, transforaminal epidural, with imaging guidance (fluoroscopy or CT); cervical or thoracic, each additional level (List separately in addition to code for primary procedure)	<b>1.20</b>	0.080	15
<b>61517</b>	Implantation of brain intracavitary chemotherapy agent (List separately in addition to code for primary procedure)	<b>1.38</b>	0.092	15
<b>16036</b>	Escharotomy; each additional incision (List separately in addition to code for primary procedure)	<b>1.50</b>	0.075	20
<b>20931</b>	Allograft, structural, for spine surgery only (List separately in addition to code for primary procedure)	<b>1.81</b>	0.091	20

### SERVICES REPORTED WITH MULTIPLE CPT CODES

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

- Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. (Use 20939 in conjunction with 22319, 22532, 22533, 22534, 22548, 22551, 22552, 22554, 22556, 22558, 22590, 22595, 22600, 22610, 22612, 22630, 22633, 22634, 22800, 22802, 22804, 22808, 22810, 22812)

### FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed)

Code 38220 had been incorrectly reported for this procedure because the old code descriptor for 38220 did not state "diagnostic" aspiration. The CPT Editorial Panel recently revised/corrected the descriptor to more clearly indicate the intent of code 38220.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty neurosurgery                      How often? Sometimes

Specialty orthopaedic surgery                      How often? Sometimes

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. national frequency is not known

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?

15,000 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty.

Please explain the rationale for this estimate. specialty estimate

Specialty neurosurgery	Frequency 7500	Percentage 50.00 %
------------------------	----------------	--------------------

Specialty orthopaedic surgery	Frequency 7500	Percentage 50.00 %
-------------------------------	----------------	--------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Do many physicians perform this service across the United States? Yes

### Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Procedures

BETOS Sub-classification:

Major procedure

BETOS Sub-classification Level II:

Other

### Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 20931

Practice Expense Summary of Recommendation  
Facility Direct Inputs**

**\*\* Facility only add-on code – no PE inputs recommended \*\***

CPT Long Descriptor:

Bone marrow aspiration for bone grafting, spine surgery only, through separate skin or fascial incision (List separately in addition to code for primary procedure)

Global Period *ZZZ*

Meeting Date January 2017

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:

**The Advisors met by conference call and determined that code 20939 would only be reported in the facility setting during spine surgery and that there should be no inputs for office clinical staff, supplies or equipment.**

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale:

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:

5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

Intra-Service Clinical Labor Activities:

Post-Service Clinical Labor Activities:

**CPT Code 20939**

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
*CMS High Expenditure Procedures Screen*

April 2016

**Diagnostic Bone Marrow Aspiration and Biopsy**

In the NPRM for 2016, CMS re-ran the screen for high expenditure services across specialties with Medicare allowed charges of \$10 million or more. CMS identified the top 20 codes by specialty in terms of allowed charges, excluding 010 and 090-day global services, anesthesia and Evaluation and Management services and services reviewed since CY 2010. CPT code 38221 was one of the services identified in this screen.

Prior to the January 2016 RUC meeting, the specialty societies notified the RUC of their plan to submit a code change application to the CPT Editorial Panel to revise these services. The societies indicated their plan to improve nomenclature for these codes (ie diagnostic vs therapeutic use) and to create a CPT code to replace code G0364. At the February 2016 CPT meeting, the CPT Editorial panel created one new code to replace the existing G code and revised the descriptors for CPT codes 38220 and 38221.

**Compelling Evidence**

The specialty societies presented compelling evidence for code 38220. They noted that the physician work and times have changed relative to the amount and types of specimens that are obtained today which are greater in number than in 1995 when 38220 was discussed at the first Five-Year review. The specialty societies noted that due to advances and greater access to immunophenotyping techniques and simultaneous refinements in cytogenetic methods and molecular diagnostics, the number of tests performed has increased, necessitating more passes to obtain additional bone marrow aspirate and material. The RUC agreed with the specialty societies that, since this procedure was originally valued, the physician work has increased as multiple passes to obtain additional bone marrow aspirate and material are now necessary. Therefore, this service would meet the compelling evidence for both technique and physician time.

The specialty societies also noted that a flawed methodology was used in the previous valuation for this service as the code has a CMS/Other designation. As the RUC has noted previously during review of other services, codes with the CMS/Other designation were never surveyed by the RUC or any other stakeholder; their physician time and work were assigned by CMS in rulemaking over 20 years ago using an unknown methodology. The RUC accepted that there is compelling evidence that both the amount of physician work and technique involved in performing 38220 has changed and that a flawed methodology was utilized when 38220 was originally valued.

### **38220 Diagnostic bone marrow; aspiration(s)**

The RUC reviewed the survey results from 121 physicians and agreed with the societies on the following physician time components: a pre-service time of 15 minutes, an intra-service time of 20 minutes and a post-service time of 12 minutes.

The RUC reviewed the survey 25<sup>th</sup> percentile work RVU of 1.20 and agreed that this value appropriately accounts for the physician work involved. To justify a work RVU of 1.20, the RUC compared the survey code to XXX and MPC code 95805 *Multiple sleep latency or maintenance of wakefulness testing, recording, analysis and interpretation of physiological measurements of sleep during multiple trials to assess sleepiness* (work RVU= 1.20, intra-service time of 20 minutes, total time of 50 minutes) and noted that both service involve a similar amount of physician work, have identical intra-service times and very similar total times. The RUC also reviewed 000-day global CPT code 91010 *Esophageal motility (manometric study of the esophagus and/or gastroesophageal junction) study with interpretation and report;* (work RVU= 1.28, intra-service time of 20 minutes, total time of 50 minutes) and agreed that this reference code further supports a work RVU of 1.20 for the survey code. **The RUC recommends a work RVU of 1.20 for CPT code 38220.**

### **38221 Diagnostic bone marrow; biopsy(ies)**

The RUC reviewed the survey results from 120 physicians and agreed with the societies on the following physician time components: 15 minutes of pre-service time, 20 minutes of intra-service time and 15 minutes of post-service time.

The RUC reviewed the survey respondents' estimated physician work values and agreed that an appropriate value for this service is between the survey median RVU of 1.80 and survey 25<sup>th</sup> percentile value of 1.20. To determine an appropriate work value, the RUC compared the survey code to XXX code 99315 *Nursing facility discharge day management; 30 minutes or less* (work RVU=1.28, intra-service time of 20 minutes, total time of 40 minutes) and noted that reference code involves similar physician work and has identical intra-service time relative to the survey code. Therefore, the RUC recommends a direct work RVU crosswalk from code 99315 to code 38221. To further support this recommendation, the RUC compared the survey code to 000-day global code 91010 *Esophageal motility (manometric study of the esophagus and/or gastroesophageal junction) study with interpretation and report;* (work RVU= 1.28, intra-time of 20 minutes, total time of 50 minutes) and noted that both services involve a similar amount of physician work and have identical intra-service and total times. **The RUC recommends a work RVU of 1.28 for CPT code 38221.**

### **382X3 Diagnostic bone marrow; biopsy(ies) and aspiration(s)**

The RUC reviewed the survey results from 120 physicians and agreed with the societies on the following physician time components: 15 minutes of pre-service time, 30 minutes of intra-service time and 15 minutes of post-service time.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the survey respondents somewhat overvalued the work involved, with a 25<sup>th</sup> percentile RVU of 1.50. To determine an appropriate work value, the RUC compared the survey code to 000-day code 91022 *Duodenal motility (manometric) study* (work RVU= 1.44, intra-service time of 30 minutes, total time of 61 minutes) and noted that both services involve a similar amount of physician work and have identical intra-service times. Therefore, the RUC recommends a direct work RVU crosswalk from code 91022 to code 382X3. To further support this recommendation, the RUC compared the survey code to XXX code 90832 *Psychotherapy, 30 minutes with patient and/or family member* (work RVU= 1.50, intra-service time 30 minutes and total time of 45 minutes) and noted that both services have identical intra-service times and involve a similar amount of physician work. **The RUC recommends a work RVU of 1.44 for CPT code 382X3.**

### **Global Period**

At the April 2016 RUC meeting, the RUC questioned why the current global period for these procedures is XXX, while a 000-day global would seem more appropriate. The specialties concurred with the RUC that a 000-day global would be more appropriate. **The RUC recommends for CMS to convert CPT codes 38220, 38221 and 382X3 to a 000-day global period. The RUC noted that the Committee's recommendations are not contingent on this global period change.** To facilitate CMS' evaluation of the global period change recommendation, this RUC recommendation includes both XXX and 000-day reference codes for each survey code.

### **Practice Expense**

The clinical labor type was changed from the requested L051A RN to the more typical blend L037D RN/LPN/MTA with the exception of the intra-service time, as an RN typically assists the patient only with performing the procedure itself. The amount of milliliters for fixative in the supplies were also corrected. The amount of supplies included are adequate regardless and independent the number of passes and the amount of material that was obtained for each service in the family. The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.

### **New Technology**

These services will be placed on the New Technology list and be re-reviewed by the RUC in three years to ensure correct valuation and utilization assumptions.

### **Work Neutrality**

The RUC's recommendation for these codes will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 38220      Tracking Number   C1

Original Specialty Recommended RVU: **1.20**  
Presented Recommended RVU: **1.20**  
RUC Recommended RVU: **1.20**

Global Period: XXX

CPT Descriptor: Diagnostic bone marrow aspiration(s)

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 59-year-old male with known acute myeloid leukemia (AML) with rare circulating blasts requiring aspirate for assessment of relapse and clonal evolution.

Percentage of Survey Respondents who found Vignette to be Typical: 78%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 10%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 26%

Description of Pre-Service Work: Review clinical history including laboratory data to validate the need for the procedure and determine the type (aspirate, biopsy) to perform, and the appropriate studies (e. g. flow cytometry, cultures, genomics) to order. Inquire about allergies (topical cleansing solution, lidocaine, sedatives, anxiolytics) from patient and any prior history of excessive or prolonged bleeding. Explain the risks, benefits, and alternatives to the patient and obtain informed consent. Enter orders into computer system and confirm patient information. The patient is placed into a lateral decubitus position and the physician identifies landmarks, dons sterile gloves, and preps patient with appropriate antiseptic and local anesthetic. A time out to confirm patient identity is performed.

Description of Intra-Service Work: The physician makes a small incision with a scalpel, inserts and advances the bone marrow aspiration needle to the periosteal bone surface position and drills needle into the posterior iliac crest marrow space. The trocar is then removed. The patient is questioned and warned about pain and approximately 3 mL of the bone marrow is aspirated and used to prepare microscopic slides at the bedside with a technologist's assistance after s/he confirms the presence of at least one spicule. If necessary, the needle is repositioned after extraction from bone and the process repeated maintaining sterile techniques until adequate spicules are identified. Additional aspirates are obtained for culture, cytogenetics, flow cytometry, and molecular diagnostics. The physician reintroduces trocar and extracts needle. The physician places pressure on wound site for hemostasis and the wound is then cleansed and bandaged.

Description of Post-Service Work: The physician completes the procedure note and writes orders.

**Modifier -51 Exempt Status**

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

**New Technology/Service:**

Is this new/revised procedure considered to be a new technology or service? Yes

**TOP KEY REFERENCE SERVICE:**

<u>Key CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
99215	XXX	2.11	RUC Time

CPT Descriptor Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 40 minutes are spent face-to-face with the patient and/or family.

**SECOND HIGHEST KEY REFERENCE SERVICE:**

<u>Key CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
99232	XXX	1.39	RUC Time

CPT Descriptor Subsequent hospital care, per day, for the evaluation and management of a patient, which requires at least 2 of these 3 key components: An expanded problem focused interval history; An expanded problem focused examination; Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the patient is responding inadequately to therapy or has developed a minor complication. Typically, 25 minutes are spent at the bedside and on the patient's hospital floor or unit.

**KEY MPC COMPARISON CODES:**

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

<u>MPC CPT Code 1</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>	<u>Most Recent Medicare Utilization</u>

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Background:**

In the Final Rule for 2016 CMS re-ran the high expenditure services (*CMS High Expenditure Procedures Screen*) across specialties with Medicare allowed charges of \$10 million or more. CMS identified the top 20 codes by specialty in terms of allowed charges, excluding 010 and 090-day global services, anesthesia and Evaluation and Management services and services reviewed since CY 2010. **CPT code 38221 Bone marrow; biopsy, needle or trocar** was listed in this screen and is being brought forward to RUC, after the family 38221, G0364 and 38220 were revised at the February 2016 CPT Panel meeting. Specifically, at the February 2016 meeting CPT code 38220 was revised to specify diagnostic aspiration of bone marrow; revised bone marrow biopsy code 38221 by removing the specification of needle or trocar; addition of a new code to describe diagnostic bone marrow biopsy (ies) and aspiration(s) that would address the service currently reported with the ZZZ add-on G code, G0364 *Bone marrow aspiration performed with bone marrow biopsy through the same incision on the same date of service*.

The surveying societies convened an RVS consensus committee (herein referred to as "joint societies") consisting of experts appointed from the American Society of Clinical Oncology (ASCO), American Society of Hematology (ASH), American Society for Bone and Marrow Transplantation (ASBMT) and the College of American Pathologists (CAP).

**Compelling Evidence**

The joint societies believe that compelling evidence exists for this family that includes CPT 38220, 38221 and the new combined code 382X3. Specifically, the physician work and times have changed relative to the amount and types of specimens that are obtained today which are greater in number than in 1995 when 38220 and 38221 were discussed at the 1<sup>st</sup> five year review. Due to advances and greater access to immunophenotyping techniques and simultaneous refinements in cytogenetic methods and molecular diagnostics the number of tests performed has increased. Therefore, this service would meet the compelling evidence for both technique and physician time. Additionally, we believe that the survey supports evidence that assumptions were made in the valuation in that the service was based on CMS/other codes.

### **38220 Survey Results & Recommendations:**

The joint societies reviewed and discussed the survey results. The surveys were sent randomly to members of the joint societies. The joint societies were pleased that there were 121 responses to the survey request. The survey performance rate median was 10 studies per year among the 121 respondents are a reasonable rate given CPT 38220 is a relatively low volume procedure, which adds support to the survey responses. The joint society's experts agreed that the survey physician median times of 15 minutes pre-service, 20 minutes intra-service and 12 minutes of post-service time accurately reflect the current time required to perform this service. As the prior time only noted as total time of 34 minutes are CMS/other and not part of a survey we believe the current survey times 15-20-12 should prevail.

The joint societies believe the median RVW of 1.70 is too high to recommend and not consistent with the rank order in this family or of other services, while the survey 25<sup>th</sup> percentile of 1.20 represents the appropriate value of the service. As noted in our compelling evidence arguments both physician time and work has changed for the aspiration service since 1995 due to the amount of aspirates and testing that are standards of care today. The table below and discussion below will supply supporting evidence for our recommendation to accept the 25<sup>th</sup> percentile of 1.20 RVW.

Key reference code 1 (CPT 99215) was chosen by 28 survey respondents. The intensity complexity measures were a mix of slightly lower value and slightly higher value which supports our notion that the median is too high. Key reference code 2 is 99232 and as in Key reference code 1 a much higher value than the existing value of 1.08, again supporting our recommendation that this service has changed and is more work today than in 1995. The intensity complexity comparisons as noted in this SOR are identical and somewhat more, for most measures. This again suggests that the survey respondents believe this service is more work than the current value.

We then reviewed other similar RUC surveyed codes noted in the table below and believe that these services clearly support maintaining CPT at the 25<sup>th</sup> percentile with the median times.

<b>CPT</b>	<b>Short Description</b>	<b>RVW</b>	<b>Pre</b>	<b>Intra</b>	<b>Post</b>	<b>Total</b>
76813	Ultrasound, pregnant uterus, real time	1.18	5	20	10	35
95868	Needle electromyography; cranial nerve	1.18	10	20	10	40
<b>38220</b>	<b>Diagnostic bone marrow; aspiration(s)</b>	<b>1.20</b>	<b>15</b>	<b>20</b>	<b>12</b>	<b>47</b>
95805	Multiple sleep latency	1.20	15	20	15	50
99339	Individual physician supervision	1.25	10	20	10	40

In summary, CPT code 38220, the joint societies believe the change in technique and physician work support the 25<sup>th</sup> percentile RVW 1.20. Therefore, tracking number C1, we recommend an RVW of 1.20 with pre time 15 minutes, intra time 20 minutes and 12 minutes of post time.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 38220

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Hem/Onc                      How often? Commonly

Specialty Med Onc                      How often? Commonly

Specialty Pathology                      How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 103599

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The national total was estimated by taking the 2014 Medicare claims volume and multiplied by 3.

Specialty Hem/Onc	Frequency 34188	Percentage 33.00 %
Specialty Med Onc	Frequency 10360	Percentage 10.00 %
Specialty Pathology	Frequency 8288	Percentage 8.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 34,533 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. We revised the specialties to Hem/Onc, Med Onc, and Pathology. The RUC database reflects the top three specialties as Hem/Onc, Orthopedic Surgery, and Neurosurgery. However, we believe the addition of the word "diagnostic" to the CPT code description will change the specialty mix once implemented in 2017.

Specialty Hem/Onc	Frequency 11396	Percentage 33.00 %
Specialty Med Onc	Frequency 3453	Percentage 9.99 %

Specialty Pathology

Frequency 2763

Percentage 8.00 %

CPT Code: 38220

Do many physicians perform this service across the United States? Yes

---

### **Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 38242. Note: The RUC database reflects the top three specialties as Hem/Onc, Orthopedic Surgery, and Neurosurgery. However, we believe the addition of the word "diagnostic" to the CPT code description will change the specialty mix once implemented in 2017

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 38221      Tracking Number   C2

Original Specialty Recommended RVU: **1.37**Presented Recommended RVU: **1.37**

Global Period: XXX

RUC Recommended RVU: **1.28**

CPT Descriptor: Diagnostic bone marrow biopsy (ies)

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 50-year-old male with newly diagnosed Hodgkin's disease who presents with adenopathy and fever. Patient requires bone marrow biopsy for staging to determine bone marrow involvement.

Percentage of Survey Respondents who found Vignette to be Typical: 83%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 10%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 26%

Description of Pre-Service Work: Review clinical history including laboratory data to validate the need for the procedure and determine the type (aspirate, biopsy, and flow cytometry, cultures) to perform, and the appropriate studies (e. g. flow cytometry, cultures, genomics) to order. Inquire about allergies (topical cleansing solution, lidocaine, sedatives, anxiolytics) from patient and any prior history of excessive or prolonged bleeding. Explain the risks, benefits and alternatives to the patient and obtain informed consent. Enter orders into computer system and confirm patient information. The patient is placed into lateral decubitus position, and the physician identifies landmarks, dons sterile gloves, and preps patient with appropriate antiseptic and local anesthetic. A time out to confirm patient identity is performed.

Description of Intra-Service Work: The physician makes a small incision with a scalpel, inserts and advances the bone marrow biopsy needle to the periosteal bone surface position and drills needle into the posterior iliac crest marrow space. Physician removes trocar. Patient is questioned regarding signs of pain. Physician drills needle about 2 cm into the bone/bone marrow of patient. Physician then replaces trocar to make sure that the biopsy is at least 2 cm in length and removes trocar again. Physician then rocks needle back and forth to break off biopsy. Biopsy is removed. Physician assesses bone marrow and biopsy length for adequacy. If adequate, biopsy needle is removed; if necessary a second biopsy is performed. If not, physician with places pressure on wound site for hemostasis cleanses the wound area and bandages. If the first biopsy is inadequate, the physician drills the needle again about 2 cm into the bone/bone marrow of patient. Physician then replaces the trocar to make sure that the biopsy is at least 2 cm in length. Physician then rocks needle back and forth to break off biopsy. Needle is removed, and removes biopsy. The biopsy is assessed to make certain it is bone marrow and the biopsy is measured for length and assessed for adequacy. If biopsy is less than 2 cm, another biopsy is done. The physician places pressure on wound site for hemostasis and the wound is then cleansed and bandaged

Description of Post-Service Work: The physician completes the procedure note and writes orders. Physician is monitoring the patient post-procedure.

**Modifier -51 Exempt Status**

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

**New Technology/Service:**

Is this new/revised procedure considered to be a new technology or service? Yes

**TOP KEY REFERENCE SERVICE:**

Key CPT Code	Global	Work RVU	Time Source
99215	XXX	2.11	RUC Time

CPT Descriptor Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 40 minutes are spent face-to-face with the patient and/or family.

**SECOND HIGHEST KEY REFERENCE SERVICE:**

Key CPT Code	Global	Work RVU	Time Source
99232	XXX	1.39	RUC Time

CPT Descriptor Subsequent hospital care, per day, for the evaluation and management of a patient, which requires at least 2 of these 3 key components: An expanded problem focused interval history; An expanded problem focused examination; Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the patient is responding inadequately to therapy or has developed a minor complication. Typically, 25 minutes are spent at the bedside and on the patient's hospital floor or unit.

**KEY MPC COMPARISON CODES:**

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
88331	XXX	1.19	RUC Time	526,449

CPT Descriptor 1 Pathology consultation during surgery; first tissue block, with frozen section(s), single specimen

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
		0.00		

CPT Descriptor 2

Other Reference CPT Code	Global	Work RVU	Time Source

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Background:**

In the Final Rule for 2016 CMS re-ran the high expenditure services (*CMS High Expenditure Procedures Screen*) across specialties with Medicare allowed charges of \$10 million or more. CMS identified the top 20 codes by specialty in terms of allowed charges, excluding 010 and 090-day global services, anesthesia and Evaluation and Management services and services reviewed since CY 2010. **CPT code 38221 Bone marrow; biopsy, needle or trocar** was listed in this screen and is being brought forward to RUC, after the family 38221, G0364 and 38220 were revised at the February 2016 CPT Panel meeting. Specifically, at the February 2016 meeting CPT code 38220 was revised to specify diagnostic aspiration of bone marrow; revised bone marrow biopsy code 38221 by removing the specification of needle or trocar; addition of a new code to describe diagnostic bone marrow biopsy (ies) and aspiration(s) that would address the service currently reported with the ZZZ add-on G code, G0364 *Bone marrow aspiration performed with bone marrow biopsy through the same incision on the same date of service*.

The surveying societies convened an RVS consensus committee (herein referred to as "joint societies") consisting of experts appointed from the American Society of Clinical Oncology (ASCO), American Society of Hematology (ASH), American Society for Bone and Marrow Transplantation (ASBMT) and the College of American Pathologists (CAP).

**Compelling Evidence**

The joint societies believe that compelling evidence exists for this family that includes CPT 38220, 38221 and the new combined code 382X3. Specifically, the physician work and times have changed relative to the amount and types of specimens that are obtained today which are greater in number than in 1995 when 38220 and 38221 were discussed at the 1<sup>st</sup> five year review. Due to advances and greater access to immunophenotyping techniques and simultaneous refinements in cytogenetic methods and molecular diagnostics the number of tests performed has increased. Therefore, this service would meet the compelling evidence for both technique and physician time. Additionally, we believe that the survey supports evidence that assumptions were made in the valuation in that the service was based on CMS/other codes.

### **38221 Survey Results & Recommendations:**

The joint societies were pleased that there were 120 responses to the survey request. The survey performance rate median was 10 studies per year among the 120 respondents are a reasonable rate given the volume of this revised code is projected to decrease by the volume of the G add on code since 382X3 will describe the full combine procedure rather than using an add on code. We believe that the survey respondents recognized the changes to the new family, which adds support to the survey responses. The joint society's experts agreed that the survey physician median times of 15 minutes pre-service, 20 minutes intra-service, 15 minutes post service time accurately reflect the times required to perform this service. As the prior times are CMS/other and not part of a survey we believe the survey times should prevail.

The joint societies reviewed the median RVW of 1.80 and like CPT 38220 believe that value is too high. However, the rank order of the medians is a better representation and relationship of the work between 38220 to 38221. The joint societies disagree with accepting the 25<sup>th</sup> percentile for this service and believe that maintaining the current value of 1.37 while accepting the median times is the correct representation of the rank order and work of these services.

Key reference code 1 (CPT 99215) was chosen by 27 survey respondents. The intensity complexity measures were a mix of slightly lower value and slightly higher value which supports our notion that the median is too high. Key reference code 2 (CPT 99232) was chosen by 15 respondents has a value of 1.39, again supporting our recommendation to maintain the current work value of 1.37. This is supported by the intensity complexity measures, where most believe the services were similar or slightly more work.

We then reviewed other similar RUC surveyed codes noted in the table below and believe that these services clearly support maintaining CPT 38221 at the current RVW 1.37 with the median times.

<b>CPT</b>	<b>Short Description</b>	<b>RVW</b>	<b>Pre</b>	<b>Intra</b>	<b>Post</b>	<b>Total</b>
73721	MRI joint lower extremity; w/o contrast	1.35	5	20	5	30
94003	Ventilation assist and management	1.37	10	20	10	40
<b>38221</b>	<b>Diagnostic bone marrow; biopsy(ies)</b>	<b>1.37</b>	<b>15</b>	<b>20</b>	<b>15</b>	<b>50</b>
99232	Subsequent hosp care	1.39	10	20	10	50
99203	E/M moderate, typical 30 min	1.42	4	20	5	29

In summary, for CPT code 38221 the joint societies believe maintaining the current value of 1.37 and accepting the median survey times preserve the appropriate rank of the family. Therefore, for tracking number C2, we recommend an RVW of 1.37 with pre time at 15 minutes, intra time 20 minutes and 15 minutes of post time.

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 38221

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Hem/Onc How often? Commonly

Specialty Diagnostic Radiology How often? Commonly

Specialty Medical Oncology How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 133413

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. This total was estimated by taking the 2014 Medicare claims volume multiplied by 3 minus the 2014 volume for HCPCS code G0364.

Specialty Hem/Onc	Frequency 54659	Percentage 40.96 %
Specialty Diagnostic Radiology	Frequency 18851	Percentage 14.12 %
Specialty Medical Oncology	Frequency 13235	Percentage 9.92 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 44,471 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This total was estimated from the 2014 Medicare claims volume in the RUC database minus the volume of HCPCS code G0364.

Specialty Hem/Onc	Frequency 18220	Percentage 40.97 %
Specialty Diagnostic Radiology	Frequency 6284	Percentage 14.13 %
Specialty Medical Oncology	Frequency 4412	Percentage 9.92 %

Do many physicians perform this service across the United States? Yes

Global Period: XXX

RUC Recommended RVU: **1.44**

CPT Descriptor: Diagnostic bone marrow biopsy (ies) and aspiration(s)

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: 59-year-old female presenting with peripheral blood pancytopenia with non-diagnostic iron studies and level B12. Patient requires bone marrow biopsy and aspiration for diagnosis.

Percentage of Survey Respondents who found Vignette to be Typical: 92%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 8%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 24%

Description of Pre-Service Work: Review clinical history including laboratory data to validate the need for the procedure and determine the type (aspirate, biopsy,) to perform, and the appropriate studies (e.g. flow cytometry, cultures, genomics) to order. Inquire about allergies (topical cleansing solution, lidocaine, sedatives, anxiolytics) from patient and any prior history of excessive or prolonged bleeding. Explain risks, benefits, and alternatives to the patient and obtain informed consent. Enter orders into computer system and confirm patient information. The patient is placed into lateral decubitus position, and the physician, identifies landmarks, dons sterile gloves, and preps patient with appropriate antiseptic and local anesthetic.

Description of Intra-Service Work: The physician makes small incision with a scalpel, inserts and advances the bone marrow aspiration needle to the periosteal bone surface position and drills needle into the posterior iliac crest marrow space, the trocar is then removed. The patient is questioned and warned about pain and approximately 3mL of the bone marrow is aspirated and used to prepare microscopic slides at the bedside with a technologist's assistance after s/he confirms the presence of at least one spicule present. If necessary, the needle is repositioned after extraction from bone and the process repeated maintaining sterile techniques until adequate spicules are identified. Additional aspirates are obtained for culture, culture, cytogenetics, flow cytometry and molecular diagnostics. The physician then introduces the biopsy needle. Through the same skin hole, but to a different spot in bone surface the needle is advanced to the periosteal bone surface position and the needle is drilled into the posterior iliac crest marrow space. Physician removes trocar. Patient is questioned regarding signs of pain. Physician drills needle about 2 cm into the bone/bone marrow of patient. Physician then replaces trocar to make sure that the biopsy is at least 2 cm in length and removes trocar again. Physician then rocks needle back and forth to break off biopsy. Biopsy is removed. Physician assesses bone marrow and biopsy length for adequacy. If adequate, biopsy needle is removed; if necessary a second biopsy is performed. If not, physician with places pressure on wound site for hemostasis cleanses the wound area and bandages.

Description of Post-Service Work: The physician completes the procedure note and writes orders. Physician is monitoring the patient post-procedure.

**Modifier -51 Exempt Status**

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

**New Technology/Service:**

Is this new/revised procedure considered to be a new technology or service? Yes

**TOP KEY REFERENCE SERVICE:**

<u>Key CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
99215	XXX	2.11	RUC Time

CPT Descriptor Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 40 minutes are spent face-to-face with the patient and/or family.

**SECOND HIGHEST KEY REFERENCE SERVICE:**

<u>Key CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
99234	XXX	2.56	RUC Time

CPT Descriptor Observation or inpatient hospital care, for the evaluation and management of a patient including admission and discharge on the same date, which requires these 3 key components: A detailed or comprehensive history; A detailed or comprehensive examination; and Medical decision making that is straightforward or of low complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually the presenting problem(s) requiring admission are of low severity. Typically, 40 minutes are spent at the bedside and on the patient's hospital floor or unit.

**KEY MPC COMPARISON CODES:**

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

<u>MPC CPT Code 1</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>	<u>Most Recent Medicare Utilization</u>
88331	XXX	1.19	RUC Time	526,449

CPT Descriptor 1 Pathology consultation during surgery; first tissue block, with frozen section(s), single specimen

------------------------------	------	------

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Background:**

In the Final Rule for 2016 CMS re-ran the high expenditure services (*CMS High Expenditure Procedures Screen*) across specialties with Medicare allowed charges of \$10 million or more. CMS identified the top 20 codes by specialty in terms of allowed charges, excluding 010 and 090-day global services, anesthesia and Evaluation and Management services and services reviewed since CY 2010. **CPT code 38221 Bone marrow; biopsy, needle or trocar** was listed in this screen and is being brought forward to RUC, after the family 38221, G0364 and 38220 were revised at the February 2016 CPT Panel meeting. Specifically, at the February 2016 meeting CPT code 38220 was revised to specify diagnostic aspiration of bone marrow; revised bone marrow biopsy code 38221 by removing the specification of needle or trocar; addition of a new code to describe diagnostic bone marrow biopsy (ies) and aspiration(s) that would address the service currently reported with the ZZZ add-on G code, G0364 *Bone marrow aspiration performed with bone marrow biopsy through the same incision on the same date of service*.

The surveying societies convened an RVS consensus committee (herein referred to as "joint societies") consisting of experts appointed from the American Society of Clinical Oncology (ASCO), American Society of Hematology (ASH), American Society for Bone and Marrow Transplantation (ASBMT) and the College of American Pathologists (CAP).

**Compelling Evidence**

The joint societies believe that compelling evidence exists for this family that includes CPT 38220, 38221 and the new combined code 382X3. Specifically, the physician work and times have changed relative to the amount and types of specimens that are obtained today which are greater in number than in 1995 when 38220 and 38221 were discussed at the 1<sup>st</sup> five year review. Due to advances and greater access to immunophenotyping techniques and simultaneous refinements in cytogenetic methods and molecular diagnostics the number of tests performed has increased. Therefore, this service would meet the compelling evidence for both technique and physician time. Additionally, we believe that the survey supports evidence that assumptions were made in the valuation in that the service was based on CMS/other codes.

### **382X3 Survey Results & Recommendations:**

The joint societies reviewed and discussed the survey results. The joint societies were pleased that there were 120 responses to the survey request. The survey performance rate median was 25 studies per year among the 120 respondents are appropriate since we believe the literature and current practice supports performing the services together. We believe a performance rate of 25 is appropriate rate given the volume of this new code is projected to be similar to the volume of the G add on code since 382X3 will describe the full combination procedure rather than using an add on code. We believe that the survey respondents recognized the changes to the new family, which adds support to the survey responses.

The joint society's experts agreed that the survey physician median times of 15 minutes pre-service, 30 minutes intra-service, and 15 minutes post service time accurately reflect the times required to perform this service. As the prior times are CMS/other and not part of a survey, we believe the survey times should prevail.

The joint societies believe the median RVW of 2.32 is too high to recommend and not consistent with the rank order in this family or of other services, while the survey 25<sup>th</sup> percentile of 1.50 correctly supports the value today. As noted in our compelling evidence arguments both physician time and work has changed for the aspiration service since 1995 due to the amount of aspirates and testing that are standards of care today. The table below and discussion below will supply supporting evidence for our recommendation to accept the 25<sup>th</sup> percentile of 1.50 RVW.

Key reference code 1 (CPT 99215) was chosen by 27 survey respondents and Key reference 2 CPT 99234 by 16 respondents. The intensity complexity measures were a mix of slightly lower value and slightly higher value which supports our notion that the median is too high. If you add the RVWs for the current 38221 plus the add on G0364 the current RVW is 1.53. This supports the 25<sup>th</sup> percentile value of 1.50 which we believe is the appropriate value for the combine service.

We then reviewed other similar RUC surveyed codes noted in the table below and believe that these services is supported CPT at the 25<sup>th</sup> percentile with the median times.

CPT	Short Description	RVW	Pre	Intra	Post	Total
99497	Advance Care planning	1.50	5	30	10	45
90832	Psychotherapy, 30 minutes	1.50	5	30	10	45
<b>382X3</b>	<b>Diagnostic bone marrow; biopsy(ies) and aspiration(s)</b>	<b>1.50</b>	<b>20</b>	<b>30</b>	<b>15</b>	<b>60</b>
99325	Dom-Res home visit	1.52	10	30	12	52
99342	Home visit	1.52	10	30	12	52
76551	Ophthalmic ultrasound	1.55	5	30	10	45

In summary, CPT code 382X3, the joint societies believe the change in technique and physician work support the 25<sup>th</sup> percentile RVW 1.50. Therefore, for tracking number C3, we recommend an RVW of 1.50 with pre time 15 minutes, intra time 30 minutes and 15 minutes of post time.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) This service was previously reported as G0364 (Bone marrow aspiration performed with bone marrow biopsy through the same incision on the same date of service) in conjunction with CPT code 38221.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Hem/Onc                      How often? Commonly

Specialty Diagnostic Radiology                      How often? Commonly

Specialty Medical Oncology                      How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 246153

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. This number was obtained by taking the 2014 Medicare volume and multiplying it by 3.

Specialty Hem/Onc	Frequency 100849	Percentage 40.97 %
Specialty Diagnostic Radiology	Frequency 34781	Percentage 14.12 %
Specialty Medical Oncology	Frequency 24418	Percentage 9.91 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?  
 82,051 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty.  
 Please explain the rationale for this estimate. This number was obtained from the Part B National Summary Data File 2014  
 for G0364.

Specialty Hem/Onc	Frequency 33616	Percentage 40.96 %
Specialty Diagnostic Radiology	Frequency 11594	Percentage 14.13 %
Specialty Medical Oncology	Frequency 8139	Percentage 9.91 %

Do many physicians perform this service across the United States? Yes

---

### **Berenson-Eggers Type of Service (BETOS) Assignment**

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Procedures

BETOS Sub-classification:

Minor procedure

BETOS Sub-classification Level II:

---

### **Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number This service was previously reported as G0364 (Bone marrow aspiration performed with bone marrow biopsy through the same incision on the same date of service) in conjunction with CPT code 38221. We do not believe this mix will change.

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/Specialty Society Update Process**  
**Practice Expense Summary of Recommendation**  
**Non Facility Direct Inputs**

CPT Long Descriptor:

Diagnostic bone marrow biopsy (ies) and aspiration(s)

Global Period: XXX

Meeting Date: April 2016

Revised 4/27/16

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee: The Specialty Society Advisors and Staff from ASCO, ASH, ASBMT, and CAP held a meeting via conference call to discuss the Practice Expense. The inputs were developed with input from physicians, specialty society staff, and clinical staff from a variety of settings.
2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** CPT Code 382X3 is a new code, approved at the February 2016 CPT Editorial Panel meeting. The reference code for 382X3 is G0364 (Bone marrow aspiration performed with bone marrow biopsy through the same incision on the same date of service).
3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:

**Complete pre-service diagnostic & referral forms:** Though the standard for a XXX/0 Day Global Period is 0 minutes, our Societies recommended 2 minutes should be added to account for the clinical staff's completion of referral forms and ensuring those referrals are in place before the procedure is performed.

**Follow-up phone calls and prescriptions:** Though the standard for a XXX/0 Day Global Period is 0 minutes, our Societies recommended 3 minutes should be added to account for calling the patient to confirm the appointment and providing them instructions for the day of the procedure.

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence: N/A

5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

The **RN/LPN/MTA** completes the required referral forms and ensures the information is in place prior to the procedure. (2 minutes)

Though the standard for a XXX/0 Day Global Period is 0 minutes, our Societies recommended 2 minutes should be added to account for the clinical staff's completion of referral forms and ensuring those referrals are in place before the procedure is performed.

The **RN/LPN/MTA** calls the patient to confirm the appointment and provides instructions for the day of the procedure (**3 minutes**)

Though the standard for a XXX/0 Day Global Period is 0 minutes, our Societies recommended **3 minutes** should be added to account for calling the patient to confirm the appointment and providing them instructions for the day of the procedure.

Intra-Service Clinical Labor Activities:

The **RN/LPN/MTA** greets the patient and escorts them to the room. The patient is provided the appropriate gowning. The nurse verifies the patient information and ensures appropriate medical records are available. (3 minutes)

The following vitals are then obtained by the **RN/LPN/MTA**: (5 minutes)

- 1) Blood Pressure
- 2) Temperature
- 3) Pulse
- 4) Respiration
- 5) Weight

The **RN/LPN/MTA** provides pre-service education and obtains signed consent from the patient. (12 minutes)

The **RN/LPN/MTA** prepares the room, equipment, and gathers the necessary supplies. (2 minutes)

The **RN/LPN/MTA** prepares and positions patient. (2 minutes)

The RN then assists the physician with performing the procedure. (30 minutes)

Monitor patient following procedure/check tubes, monitors, drains, multitasking 1:4 (not related to moderate sedation) (**RN/LPN/MTA**). (7.5 minutes)

Clean room/equipment by physician staff (**RN/LPN/MTA**) (3 minutes)

**Complete diagnostic forms, lab & x-ray requisitions (RN/LPN/MTA) (3 minutes)**

**Check dressings & wound/ home care instructions/coordinate office visits/prescriptions (RN/LPN/MTA) (5 minutes)**

**Other Clinical Activity: Lab Tech Activities (12.5 minutes):**

- 1) Label slides, tubes, and specimen containers with 2 unique patient identifiers (5 minutes)
- 2) Receive biopsy and/or aspirate specimen from physician into Petri dish (0.5 minutes)
- 3) Examine for adequacy (trabecular bone of adequate length and or adequate spicules in clot/aspirate) (1.5 minutes)
- 4) Aspirate with or without biopsy: Carefully select and collect spicules using pipette, place on slide, make smear, air dry. Repeat for total 10 slides. Biopsy only: Carefully roll biopsy core on slide. Air dry, repeat for total 10 slides (4 minutes)
- 5) Using spatula aggregate clot and place in labeled specimen container (0.5 minutes)
- 6) Aspirate only: Assist physician placing separate aspirate material into tube(s) for flow cytometry genetic studies, other studies as applicable (1 minute)

Post-Service Clinical Labor Activities:

**The RN/LPN/MTA conducts phone calls and calls in the necessary prescriptions for the patient. (3 minutes)**

**AMA/Specialty Society Update Process  
Practice Expense Summary of Recommendation  
Non Facility Direct Inputs**

CPT Long Descriptor:

Diagnostic bone marrow aspiration(s)

Global Period: XXX

Meeting Date: April 2016

Revised 4/27/16

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee: The Specialty Society Advisors and Staff from ASCO, ASH, ASBMT, and CAP held a meeting via conference call to discuss the Practice Expense. The inputs were developed with input from physicians, specialty society staff, and clinical staff from a variety of settings.
2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale: The reference code for 38220 is a direct comparison, however, it should be noted the CPT description was updated at the February 2016 CPT Editorial Panel meeting.
3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:

**Complete pre-service diagnostic & referral forms:** Though the standard for a XXX/0 Day Global Period is 0 minutes, our Societies recommended 2 minutes should be added to account for the clinical staff's completion of referral forms and ensuring those referrals are in place before the procedure is performed.

**Follow-up phone calls and prescriptions:** Though the standard for a XXX/0 Day Global Period is 0 minutes, our Societies recommended 3 minutes should be added to account for calling the patient to confirm the appointment and providing them instructions for the day of the procedure.

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:

**Obtain Vitals:** We are requesting 5 minutes for vitals, an increase from the current 3 minutes. The vitals for this procedure include 1) Blood Pressure, 2) Temperature, 3) Pulse, 4) Respiration, 5) Weight

**Complete diagnostic forms, lab & X-ray requisitions:** We are requesting 2 minutes for this task, an increase from the current 1 minute. This minute accounts for the additional completion of diagnostic

forms and lab requisitions. Due to advances and greater access to immunophenotyping techniques and simultaneous refinements in cytogenetic methods and molecular diagnostics, requests for tests have increased along with the forms staff must complete. This is the new standard of care.

5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

**The RN/LPN/MTA completes the required referral forms and ensures the information is in place prior to the procedure. (2 minutes)**

Though the standard for a XXX/0 Day Global Period is 0 minutes, our Societies felt there should be 2 minutes to account for the clinical staff's completion of referral forms and ensuring those referrals are in place before the procedure is performed

**The RN/LPN/MTA calls the patient to confirm the appointment and provides instructions for the day of the procedure (3 minutes)**

Though the standard for a XXX/0 Day Global Period is 0 minutes, our Societies felt there should be 3 minutes to account for calling the patient to confirm the appointment and providing them instructions for the day of the procedure.

Intra-Service Clinical Labor Activities:

**The RN/LPN/MTA greets the patient and escorts them to the room. The patient is provided the appropriate gowning. The nurse verifies the patient information and ensures appropriate medical records are available. (3 minutes)**

**The following vitals are then obtained by the RN/LPN/MTA: (5 minutes)**

- 1) Blood Pressure
- 2) Temperature
- 3) Pulse
- 4) Respiration
- 5) Weight

We are requesting an increase from 3 to 5 minutes, as there are 5 vitals that are typically obtained by the RN. The standard number of minutes for Level 2 (4-6 vitals) is 5 minutes.

The **RN/LPN/MTA** provides pre-service education and obtains signed consent from the patient. (12 minutes)

The **RN/LPN/MTA** prepares the room, equipment, and supplies. (2 minutes)

The **RN/LPN/MTA** prepares and positions patient. (2 minutes)

The RN assists the physician with performing the procedure. (20 minutes)

The **RN/LPN/MTA** monitors the patient following procedure/check tubes, monitors, drains, multitasking 1:4 (not related to moderate sedation). (7.5 minutes)

Clean room/equipment by physician staff (**RN/LPN/MTA**) (3 minutes)

**Complete diagnostic forms, lab & x-ray requisitions (RN/LPN/MTA) (2 minutes)**

We are requesting 2 minutes for this task, an increase from the current 1 minute. This minute accounts for the additional completion of diagnostic forms and lab requisitions. Due to advances and greater access to immunophenotyping techniques and simultaneous refinements in cytogenetic methods and molecular diagnostics, requests for tests have increased along with the forms staff must complete. This is the new standard of care.

Manu Goyal and K. Gayathri (2012). Diagnostic Approach in Acute Myeloid Leukemias in Line with WHO 2008 Classification, Myeloid Leukemia - Clinical Diagnosis and Treatment, Dr Steffen Koschmieder (Ed.), ISBN: 978- 953-307-886-1, InTech, Available from: <http://www.intechopen.com/books/myeloid-leukemia-clinical-diagnosisand-treatment/diagnostic-approach-in-acute-myeloid-leukemias-in-line-with-who-2008-classification>

<http://www.nejm.org/doi/full/10.1056/NEJMra1406184?af=R&>

**Check dressings & wound/ home care instructions/coordinate office visits/prescriptions (RN/LPN/MTA) (5 minutes)**

**Other Clinical Activity: Lab Tech Activities (12 minutes):**

- 1) Label slides, tubes, and specimen containers with 2 unique patient identifiers (5 minutes)
- 2) Receive biopsy and/or aspirate specimen from physician into Petri dish (0.5 minutes)
- 3) Examine for adequacy (trabecular bone of adequate length and or adequate spicules in clot/aspirate) (1 minute)
- 4) Aspirate with or without biopsy: Carefully select and collect spicules using pipette, place on slide, make smear, air dry. Repeat for total 10 slides. Biopsy only: Carefully roll biopsy core on slide. Air dry, repeat for total 10 slides (4 minutes)
- 5) Using spatula aggregate clot and place in labeled specimen container (0.5 minutes)

**CPT Code: 38220**

**Specialty Society('s): ASCO, ASH, ASBMT, CAP**

- 6) Aspirate only: Assist physician placing separate aspirate material into tube(s) for flow cytometry genetic studies, other studies as applicable (1 minute)

Post-Service Clinical Labor Activities:

The **RN/LPN/MTA** conducts phone calls and calls in the necessary prescriptions for the patient. (3 minutes)

**AMA/Specialty Society Update Process  
Practice Expense Summary of Recommendation  
Non Facility Direct Inputs**

CPT Long Descriptor:

Diagnostic bone marrow biopsy (ies)

Global Period: XXX

Meeting Date: April 2016

Revised 4/27/16

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee: The Specialty Society Advisors and Staff from ASCO, ASH, ASBMT, and CAP held a meeting via conference call to discuss the Practice Expense. The inputs were developed with input from physicians, specialty society staff, and clinical staff from a variety of settings.
2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale: The reference code for 38221 is a direct comparison, however, it should be noted the CPT description was updated at the February 2016 CPT Editorial Panel meeting.
3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:

**Complete pre-service diagnostic & referral forms:** Though the standard for a XXX/0 Day Global Period is 0 minutes, our Societies recommended 2 minutes should be added to account for the clinical staff's completion of referral forms and ensuring those referrals are in place before the procedure is performed.

**Follow-up phone calls and prescriptions:** Though the standard for a XXX/0 Day Global Period is 0 minutes, our Societies recommended 3 minutes should be added to account for calling the patient to confirm the appointment and providing them instructions for the day of the procedure.

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:

**Obtain Vitals:** We are requesting an increase from 3 to 5 minutes, as there are 5 vitals: (1) Blood Pressure 2) Temperature 3) Pulse 4) Respiration 5) Weight that are typically obtained by the RN. The standard number of minutes for Level 2 (4-6 vitals) is 5 minutes.

5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

The **RN/LPN/MTA** completes the required referral forms and ensures the information is in place prior to the procedure. (2 minutes)

Though the standard for a XXX/0 Day Global Period is 0 minutes, our Societies recommended 2 minutes should be added to account for the clinical staff's completion of referral forms and ensuring those referrals are in place before the procedure is performed.

The **RN/LPN/MTA** calls the patient to confirm the appointment and provides instructions for the day of the procedure (**3 minutes**)

Though the standard for a XXX/0 Day Global Period is 0 minutes, our Societies recommended **3 minutes** should be added to account for calling the patient to confirm the appointment and providing them instructions for the day of the procedure.

Intra-Service Clinical Labor Activities:

The **RN/LPN/MTA** greets the patient and escorts them to the room. The patient is provided the appropriate gowning. The nurse verifies the patient information and ensures appropriate medical records are available. (3 minutes)

The following vitals are then obtained by the **RN/LPN/MTA**: (5 minutes)

- 1) Blood Pressure
- 2) Temperature
- 3) Pulse
- 4) Respiration
- 5) Weight

We are requesting an increase from 3 to 5 minutes, as there are 5 vitals that are typically obtained by the RN. The standard number of minutes for Level 2 (4-6 vitals) is 5 minutes.

The **RN/LPN/MTA** provides pre-service education and obtains signed consent from the patient. (12 minutes)

The **RN/LPN/MTA** prepares the room, equipment, and gathers the necessary supplies. (2 minutes)

The **RN/LPN/MTA** prepares and positions patient. (2 minutes)

The RN then assists the physician with performing the procedure. (20 minutes)

The **RN/LPN/MTA** monitors the patient following procedure/check tubes, monitors, drains, multitasking 1:4 (not related to moderate sedation). (7.5 minutes)

Clean room/equipment by physician staff (**RN/LPN/MTA**) (3 minutes)

**Complete diagnostic forms, lab & x-ray requisitions (RN/LPN/MTA) (1 minute)**

**Check dressings & wound/ home care instructions/coordinate office visits/prescriptions (RN/LPN/MTA) (5 minutes)**

**Other Clinical Activity: Lab Tech Activities (7.5 minutes):**

- 1) Label slides, tubes, and specimen containers with 2 unique patient identifiers (3 minutes)
- 2) Receive biopsy and/or aspirate specimen from physician into Petri dish (0.5 minutes)
- 3) Examine for adequacy (trabecular bone of adequate length and or adequate spicules in clot/aspirate) (0.5 minutes)
- 4) Aspirate with or without biopsy: Carefully select and collect spicules using pipette, place on slide, make smear, air dry. Repeat for total 10 slides. Biopsy only: Carefully roll biopsy core on slide. Air dry, repeat for total 10 slides (3 minutes)
- 5) Using spatula aggregate clot and place in labeled specimen container (0.5 minutes)

Post-Service Clinical Labor Activities:

**The RN/LPN/MTA conducts phone calls and calls in the necessary prescriptions for the patient. (3 minutes)**

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
*\*Codes Reported Together 75% or More, New Technology/New Services and CMS Request -Final Rule for 2016\**

January 2017

**Nasal-Sinus Endoscopy**

In April 2015, the Joint CPT/RUC Workgroup accepted the recommendation of the specialty societies with regards to bundling the codes in this group: 31276/31255, 31287/31255, 31288/31255, 31297/31296. In the Final Rule for 2016, a stakeholder indicated that due to changes in technology and technique, several codes that describe endoscopic sinus surgeries can now be furnished in the non-facility setting. According to Medicare claims data, there are a relatively small number of these services furnished in non-facility settings. The RUC noted that this code family is already being reviewed by CPT and RUC for bundling of services. In October 2016 the CPT Editorial Panel created five new codes (31241-31298) with new instructions how to report bundled nasal endoscopy services and revised the parentheticals for codes 31238 and 31254, 31255, 31276, 31287, 31288, 31296 and 31297.

Codes 31231-31297 were included on the level of interest for survey due to the changes in the introductory language, parentheticals or the code descriptor itself. The specialty societies indicated:

- 1) CPT codes 31231, 31233 and 31235 are not part of the family because these are diagnostic services as contrasted with the endoscopic sinus surgery and balloon sinus dilation codes which are therapeutic services. **The RUC agreed that codes 31231-31235 are not part of this family of services.**
- 2) CPT codes 31231, 31237, 31238, 31239 and 31240 should not be included as part of the family because they were recently surveyed. 31237-31240 were reviewed (31239 along with Ophthalmology) in April 2013 and 31231 was reviewed in January 2012. **The specialty societies requested and the RUC agreed to affirm the January 2012 and April 2013 work and practice expense recommendations for codes 31231, 31237-31240;**
- 3) Last, CPT 31290-31294 should not be included as part of family because they are clinically dissimilar. This group of codes are used to treat different disease processes (i.e. CSF leaks and orbital/ocular conditions) rather than disease of the sinus(es). **The RUC agreed that codes 31290-31294 are not part of this family of services.**

The specialty societies proceeded with a survey of 31254-31288, 31241-31298 and 31295-31297 as this is the properly defined family of codes for review and also captures the list of services that the CMS and RUC screens requested for review.

Based on the extensive preliminary review and pre-facilitation with RUC members, the RUC agreed with the specialty societies that the survey results for the majority of the existing codes were disparate due to the lack of similar services with a 000-day global period with a wide range of work RVUs available to be placed on the reference service list (as most were being surveyed or affirmed as part of this family of services) resulting in a low percentage of respondents choosing the same key reference service. Therefore, the RUC suggested either maintaining existing work RVUs or recommending an appropriate direct crosswalk to support the recommendations relative to similar services in the payment schedule.

### **Balloon Sinuplasty Codes**

Medical therapy is typically used to manage chronic and acute rhinosinusitis. However, there are some patients who do not respond to medical therapy and will need surgery, either balloon or functional endoscopic sinus surgery to establish ventilation and drainage. Endoscopic sinus surgery optimizes further medical therapy and allows obtaining cultures and tissues for pathology. Several key things introduced since the 1990s are dramatic advances in medical therapy. Therefore, the typical patient has changed which results in increased intensity of the service for those individuals who must undergo these procedures. Additionally, when these codes were valued as new technology in 2010, they were solely performed in the hospital outpatient setting under general anesthesia. Over time, physicians have increased their skill and comfort level with performing these in the office setting, and now virtually all balloon procedures are done in the office under local/topical anesthesia. This dramatically reduced the pre-time (based on survey time and the package differentials) allotted for these procedures. However, the work has remained unchanged, resulting in increased intensities for these procedures.

The sphenoid balloon sinus is the least intense of these services. It is a straightforward shot enlarging of ostium of the sphenoid sinus. The next intense is the maxillary balloon sinus surgery, where the physician must work on an angle to create an opening and enlarge the opening of maxillary sinus. The most intense is the frontal sinus codes, which involves enlarging the ostium of the frontal sinus using angled scopes working adjacent to skull base and orbit to remove tissue and bone establish ventilation between the skull base and the sinus. Additionally, for frontal sinus surgery the physician is normally working at a 45-70 degree angle with both the endoscope and instruments. The frontal ostium is a very narrow space compared to the other sinuses and any scarring leads the patients to additional surgeries to repair.

### ***31295 Nasal/sinus endoscopy, surgical; with dilation of maxillary sinus ostium (eg, balloon dilation), transnasal or canine fossa***

The RUC reviewed the survey results of 123 otolaryngologists for CPT 31295 and recommends maintaining a work RVU of 2.70. The RUC recommends 15 minutes of evaluation time, 1 minute positioning, 5 minutes of scrub/dress/wait time, 20 minutes of intra-service time and 15 minutes immediate post-service time. The RUC noted that the intra-service time for this service is the same and the difference in total time is primarily due to applying the standard pre-time package. The specialty society noted that the site of service for this procedure has changed and this service is now typically performed in the office setting under topical and local anesthesia. The specialty noted and the RUC agreed that this service is slightly more intense performed on wide awake patient without any sedation. The physician is instrumenting the maxillary sinus and performing multiple dilations at a time while the patient hears and feels the bone cracking and reverberating, which is more intense than previously when the patient was sedated and unaware.

The RUC compared the surveyed code to MPC codes 51102 *Aspiration of bladder; with insertion of suprapubic catheter* (work RVU = 2.70 and 20 minutes intra-service time) and 52281 *Cystourethroscopy, with calibration and/or dilation of urethral stricture or stenosis, with or without meatotomy, with or without injection procedure for cystography, male or female* (work RVU = 2.75 and 20 minutes intra-service time) and determined that these similar widely performed services support the existing value and physician time required to perform this service. **The RUC recommends a work RVU of 2.70 for CPT code 31295.**

**31297 Nasal/sinus endoscopy, surgical; with dilation of sphenoid sinus ostium (eg, balloon dilation)**

The RUC reviewed CPT 31297 and recommends a work RVU of 2.44. The RUC recommends 15 minutes of evaluation time, 1 minute positioning, 5 minutes of scrub/dress/wait time, 20 minutes of intra-service time and 15 minutes immediate post-service time. The RUC noted that the survey top reference services were not comparable for physician work and time. The specialty society recommended and vetted by the robust pre-facilitation of this tab, the RUC agreed that a direct crosswalk to CPT 43215 *Esophagoscopy, flexible, transoral; with removal of foreign body(s)* (work RVU = 2.44 and 20 minutes intra-service time) appropriately accounts for the work and time required to perform this service. The RUC noted that the decrease from the current work RVU appropriately accounts for the decrease in intra-service work as indicated by the survey respondents. The RUC agreed with the specialty society that this service is appropriately less intense and requires less physician work than the frontal sinus code 31296. The specialty society noted that the site of service for this procedure has changed and this service is now typically performed in the office setting under topical and local anesthesia. The specialty noted and the RUC agreed that this service is more intense performed on wide awake patient without any sedation. For additional support, the RUC referenced MPC code 51102 *Aspiration of bladder; with insertion of suprapubic catheter* (work RVU = 2.70 and 20 minutes intra-service time). **The RUC recommends a work RVU of 2.44 for CPT code 31297.**

**31296 Nasal/sinus endoscopy, surgical; with dilation of frontal sinus ostium (eg, balloon dilation)**

The RUC reviewed CPT 31296 and recommends a work RVU of 3.10. The RUC recommends 15 minutes of evaluation time, 1 minute positioning, 5 minutes of scrub/dress/wait time, 25 minutes of intra-service time and 15 minutes immediate post-service time. The RUC noted that the survey top reference services were not comparable for physician work and time. The specialty society recommended and the RUC agreed that a direct crosswalk to CPT 19083 *Biopsy, breast, with placement of breast localization device(s) (eg, clip, metallic pellet), when performed, and imaging of the biopsy specimen, when performed, percutaneous; first lesion, including ultrasound guidance* (work RVU = 3.10 and 25 minutes intra-service time) appropriately accounts for the work and time required to perform this service. The RUC noted that the decrease from the current work RVU appropriately accounts for the 5 minute decrease in intra-service work as indicated by the survey respondents. The specialty society noted that the site of service for this procedure has changed and this service is now typically performed in the office setting under topical and local anesthesia. The specialty noted and the RUC agreed that this service is more intense performed on wide awake patient without any sedation. The RUC also noted that the frontal sinus is the most complex sinus for the balloon dilation endoscopy services and therefore appropriately valued higher than 31295 and 31297. For additional support, the RUC referenced similar service 45378 *Colonoscopy, flexible;*

*diagnostic, including collection of specimen(s) by brushing or washing, when performed (separate procedure) (work RVU = 3.26 and 25 minutes intra-service time).* **The RUC recommends a work RVU of 3.10 for CPT code 31296.**

**31298 Nasal/sinus endoscopy, surgical; with dilation of frontal and sphenoid sinus ostia (eg, balloon dilation)**

The RUC reviewed the survey results from 114 otolaryngologists and recommends the survey 25<sup>th</sup> percentile work RVU of 4.50. The RUC recommends 15 minutes of evaluation time, 1 minute positioning, 5 minutes of scrub/dress/wait time, 40 minutes of intra-service time and 15 minutes immediate post-service time. The RUC noted that this is a bundle of 31296 and 31297. The RUC determined that the intensity and complexity, physician work and time for this bundled service is appropriate. The RUC compared the surveyed code to similar services 47532 *Injection procedure for cholangiography, percutaneous, complete diagnostic procedure including imaging guidance (eg, ultrasound and/or fluoroscopy) and all associated radiological supervision and interpretation; new access (eg, percutaneous transhepatic cholangiogram) (work RVU = 4.25 and 45 minutes intra-service time)* and 58558 *Hysteroscopy, surgical; with sampling (biopsy) of endometrium and/or polypectomy, with or without D & C (work RVU = 4.17 and 30 minutes intra-service time).* **The RUC recommends a work RVU of 4.50 for CPT code 31298.**

**Functional Endoscopic Sinus Surgery (FESS) Codes**

Medical therapy is typically used to manage chronic and acute rhinosinusitis. However, there are some patients who do not respond to medical therapy and will need surgery, either balloon or functional endoscopic sinus surgery to establish ventilation and drainage. Endoscopic sinus surgery optimizes further medical therapy and allows obtaining cultures and tissues for pathology. The typical patient and the intensity of the surgery have changed since these codes were last valued in the 1990s. The specialty society explained the increased intensity for these procedures.

First, the specialty societies indicated that the etiology and pathophysiology of chronic sinusitis has improved significantly since that time, as has the medical treatments clinicians have available. Such improvement in knowledge and treatment has led to greater success with initial medical treatment. In addition, those patients who fail medical therapy may undergo less invasive surgery with balloons, a procedure not available in the early 1990s. As such, the most recalcitrant, complex, difficult patients fail medical therapy and undergo endoscopic sinus surgery. These patients have greater degree of inflammation and infection, which makes the surgery more technically demanding, as visualization is hampered by the increased vascularity of infected and inflamed tissue.

Second, the outcome of surgery has changed significantly, also greatly increasing the technical demands of the surgery. It is now evident that stripping of mucosa, removal of turbinates, and minor abrasions to structures such as the nasal septum can contribute to scarring and can lead to significantly worse outcomes. Preserving mucosa and avoiding trauma to adjacent structures increases the technical demands and intensity of the surgery. This is of paramount importance in the frontal recess, where a small amount of scarring can lead to complete obstruction of the frontal sinus and the need for revision surgery. This information was not evident back in the early 1990s and, as such, the technical proficiency required to perform the surgery is much greater.

Lastly, the surgery itself has changed significantly since the early 1990s. In the past, the dictum was to avoid critical structures such as the ethmoid skull base and lamina papyracea along the orbit. Dissection stopped before ever reaching these areas. It is now known and taught to future physicians, that in order to obtain optimal outcomes, a comprehensive dissection must be performed. This involves removing partitions along the medial orbital wall, along the ethmoid skull base, and widely opening the sphenoid sinus in the vicinity of the carotid artery and optic nerve. This change represents the most technically challenging and intense portions of endoscopic sinus surgery. This and the other reasons above represent the increase in intensity from the original valuation in the 1990s when compared to present day.

**31256 Nasal/sinus endoscopy, surgical, with maxillary antrostomy;**

The RUC reviewed CPT 31256 and recommends a work RVU of 3.11, below the survey 25<sup>th</sup> percentile. The RUC recommends 15 minutes of evaluation time, 8 minutes positioning, 10 minutes of scrub/dress/wait time, 30 minutes of intra-service time and 20 minutes immediate post-service time. The specialty society indicated and the RUC agreed that additional 5 minutes of positioning time is required for the multiple applications of topical decongestant. As is indicated in the description of work, pledgets soaked with topical decongestant are placed and adequate time is given to allow for decongestant to take place. Pledgets are then removed and injection with local anesthesia with vasoconstrictors is performed. Pledgets soaked with topical decongestant are then placed again. This reflects the typical flow of the operation involves the surgeon performing this prior to scrubbing and gowning. This additional time provided by the survey respondents was provided consistently across the family and is consistent with the increased time provided in positioning. The RUC agreed that this was the typical flow of the procedure to provide the appropriate positioning and preparation of the patient.

The RUC noted that the survey top reference services were not comparable for physician work and time. The specialty society recommended and the RUC agreed that a direct crosswalk to CPT 43247 *Esophagogastroduodenoscopy, flexible, transoral; with removal of foreign body(s)* (work RVU = 3.11 and 30 minutes intra-service time) appropriately accounts for the work and time required to perform this service. The RUC noted that the decrease from the current work RVU appropriately accounts for the decrease in intra-service work as indicated by the survey respondents. The RUC noted that the services' intensity was probably undervalued previously based on the understanding of the complexity of this service. For additional support, the RUC referenced similar service 43214 *Esophagoscopy, flexible, transoral; with dilation of esophagus with balloon (30 mm diameter or larger) (includes fluoroscopic guidance, when performed)* (work RVU = 3.40 and 30 minutes intra-service time). **The RUC recommends a work RVU of 3.11 for CPT code 31256.**

**31267 Nasal/sinus endoscopy, surgical, with maxillary antrostomy; with removal of tissue from maxillary sinus**

The RUC reviewed CPT 31267 and recommends a work RVU of 4.68. The RUC recommends 15 minutes of evaluation time, 8 minutes positioning, 10 minutes of scrub/dress/wait time, 40 minutes of intra-service time and 20 minutes immediate post-service time. The specialty society indicated and the RUC agreed that additional 5 minutes of positioning time is required for the multiple applications of topical decongestant. As is indicated in the description of work, pledgets soaked with topical decongestant are placed and adequate time is given to allow for decongestant to take place. Pledgets are then removed and injection with local anesthesia with vasoconstrictors is performed. Pledgets soaked with topical decongestant are then placed again. This reflects the typical flow of the operation involves the surgeon performing this prior to scrubbing

and gowning. This additional time provided by the survey respondents was provided consistently across the family and is consistent with the increased time provided in positioning. The RUC agreed that this was the typical flow of the procedure to provide the appropriate positioning and preparation of the patient.

The RUC noted that the survey top reference services were not comparable for physician work and time. The specialty society recommended and the RUC agreed that a direct crosswalk to CPT 45393 *Colonoscopy, flexible; with decompression (for pathologic distention) (eg, volvulus, megacolon), including placement of decompression tube, when performed* (work RVU = 4.68 and 40 minutes intra-service time) appropriately accounts for the work and time required to perform this service. The RUC noted that the decrease from the current work RVU appropriately accounts for the decrease in intra-service work as indicated by the survey respondents. The RUC pre-facilitated and fully examined the direct crosswalk and confirmed the physician time, intensity and complexity and physician work are appropriate. For additional support, the RUC referenced similar service 43253 *Esophagogastroduodenoscopy, flexible, transoral; with transendoscopic ultrasound-guided transmural injection of diagnostic or therapeutic substance(s) (eg, anesthetic, neurolytic agent) or fiducial marker(s) (includes endoscopic ultrasound examination of the esophagus, stomach, and either the duodenum or a surgically altered stomach where the jejunum is examined distal to the anastomosis)* (work RVU = 4.73 and 40 minutes intra-service time). **The RUC recommends a work RVU of 4.68 for CPT code 31267.**

**31287 Nasal/sinus endoscopy, surgical, with sphenoidotomy;**

The RUC reviewed CPT 31287 and recommends a work RVU of 3.50. The RUC recommends 15 minutes of evaluation time, 8 minutes positioning, 13 minutes of scrub/dress/wait time, 30 minutes of intra-service time and 20 minutes immediate post-service time. The specialty society indicated and the RUC agreed that additional 5 minutes of positioning time is required for the multiple applications of topical decongestant. As is indicated in the description of work, pledgets soaked with topical decongestant are placed and adequate time is given to allow for decongestant to take place. Pledgets are then removed and injection with local anesthesia with vasoconstrictors is performed. Pledgets soaked with topical decongestant are then placed again. This reflects the typical flow of the operation involves the surgeon performing this prior to scrubbing and gowning. This additional time provided by the survey respondents was provided consistently across the family and is consistent with the increased time provided in positioning. The RUC agreed that this was the typical flow of the procedure to provide the appropriate positioning and preparation of the patient.

The RUC noted that the survey top reference services were not comparable for physician work and time. The specialty society recommended and the RUC agreed that a direct crosswalk to CPT 36473 *Endovenous ablation therapy of incompetent vein, extremity, inclusive of all imaging guidance and monitoring, percutaneous, mechanochemical; first vein treated* (work RVU = 3.50 and 30 minutes intra-service time) appropriately accounts for the work and time required to perform this service. The RUC noted that the decrease from the current work RVU appropriately accounts for the decrease in intra-service work as indicated by the survey respondents. The RUC pre-facilitated and fully examined the direct crosswalk and confirmed the physician time, intensity and complexity and physician work are appropriate. For additional support, the RUC referenced similar service 43233 *Esophagogastroduodenoscopy, flexible, transoral; with dilation of esophagus with balloon (30 mm diameter or*

larger) (includes fluoroscopic guidance, when performed) (work RVU = 4.07 and 30 minutes intra-service time). **The RUC recommends a work RVU of 3.50 for CPT code 31287.**

**31288 Nasal/sinus endoscopy, surgical, with sphenoidotomy; with removal of tissue from the sphenoid sinus**

The RUC reviewed CPT 31288 and recommends a work RVU of 4.10. The RUC recommends 15 minutes of evaluation time, 8 minutes positioning, 13 minutes of scrub/dress/wait time, 40 minutes of intra-service time and 20 minutes immediate post-service time. The specialty society indicated and the RUC agreed that additional 5 minutes of positioning time is required for the multiple applications of topical decongestant. As is indicated in the description of work, pledgets soaked with topical decongestant are placed and adequate time is given to allow for decongestant to take place. Pledgets are then removed and injection with local anesthesia with vasoconstrictors is performed. Pledgets soaked with topical decongestant are then placed again. This reflects the typical flow of the operation involves the surgeon performing this prior to scrubbing and gowning. This additional time provided by the survey respondents was provided consistently across the family and is consistent with the increased time provided in positioning. The RUC agreed that this was the typical flow of the procedure to provide the appropriate positioning and preparation of the patient.

The RUC noted that the survey top reference services were not comparable for physician work and time. The specialty society recommended and the RUC agreed that a direct crosswalk to CPT 44406 *Colonoscopy through stoma; with endoscopic ultrasound examination, limited to the sigmoid, descending, transverse, or ascending colon and cecum and adjacent structures* (work RVU = 4.10 and 40 minutes intra-service time) appropriately accounts for the work and time required to perform this service. The RUC noted that the decrease from the current work RVU appropriately accounts for the decrease in intra-service work as indicated by the survey respondents. The RUC pre-facilitated and fully examined the direct crosswalk and confirmed the physician time, intensity and complexity and physician work are appropriate. For additional support, the RUC referenced similar service 43253 *Esophagogastroduodenoscopy, flexible, transoral; with transendoscopic ultrasound-guided transmural injection of diagnostic or therapeutic substance(s) (eg, anesthetic, neurolytic agent) or fiducial marker(s) (includes endoscopic ultrasound examination of the esophagus, stomach, and either the duodenum or a surgically altered stomach where the jejunum is examined distal to the anastomosis)* (work RVU = 4.73 and 40 minutes intra-service time). **The RUC recommends a work RVU of 4.10 for CPT code 31288.**

**31254 Nasal/sinus endoscopy, surgical with ethmoidectomy; partial (anterior)**

The RUC reviewed CPT 31254 and recommends a work RVU of 4.27. The RUC recommends 15 minutes of evaluation time, 8 minutes positioning, 10 minutes of scrub/dress/wait time, 30 minutes of intra-service time and 20 minutes immediate post-service time. The specialty society indicated and the RUC agreed that additional 5 minutes of positioning time is required for the multiple applications of topical decongestant. As is indicated in the description of work, pledgets soaked with topical decongestant are placed and adequate time is given to allow for decongestant to take place. Pledgets are then removed and injection with local anesthesia with vasoconstrictors is performed. Pledgets soaked with topical decongestant are then placed again. This reflects the typical flow of the operation involves the surgeon performing this prior to scrubbing and gowning. This additional time provided by the survey respondents was provided consistently across the family and is consistent with the

increased time provided in positioning. The RUC agreed that this was the typical flow of the procedure to provide the appropriate positioning and preparation of the patient.

The RUC agreed that the intensity for this service is higher than the functional endoscopic sinus surgery on the maxillary or sphenoid sinuses. The physician is working closer to the orbit and skull base and the risk of major complications such as injury to eye muscles, bleeding into the eye or brain fluid leak become more inherent to these specific technical procedures.

The RUC noted that the survey top reference services were not comparable for physician work and time. The specialty society recommended and the RUC agreed that a direct crosswalk to CPT 43243 *Esophagogastroduodenoscopy, flexible, transoral; with injection sclerosis of esophageal/gastric varices* (work RVU = 4.27 and 30 minutes intra-service time) appropriately accounts for the work and time required to perform this service. The RUC noted that the decrease from the current work RVU appropriately accounts for the decrease in intra-service work as indicated by the survey respondents. The RUC pre-facilitated and fully examined the direct crosswalk and confirmed the physician time, intensity and complexity and physician work are appropriate. For additional support, the RUC referenced similar service 37191 *Insertion of intravascular vena cava filter, endovascular approach including vascular access, vessel selection, and radiological supervision and interpretation, intraprocedural roadmapping, and imaging guidance (ultrasound and fluoroscopy), when performed* (work RVU = 4.46 and 30 minutes intra-service time). **The RUC recommends a work RVU of 4.27 for CPT code 31254.**

**31255 *Nasal/sinus endoscopy, surgical with ethmoidectomy; total (anterior and posterior)***

The RUC reviewed CPT 31255 and recommends a work RVU of 5.75. The RUC recommends 15 minutes of evaluation time, 8 minutes positioning, 10 minutes of scrub/dress/wait time, 45 minutes of intra-service time and 20 minutes immediate post-service time. The specialty society indicated and the RUC agreed that additional 5 minutes of positioning time is required for the multiple applications of topical decongestant. As is indicated in the description of work, pledgets soaked with topical decongestant are placed and adequate time is given to allow for decongestant to take place. Pledgets are then removed and injection with local anesthesia with vasoconstrictors is performed. Pledgets soaked with topical decongestant are then placed again. This reflects the typical flow of the operation involves the surgeon performing this prior to scrubbing and gowning. This additional time provided by the survey respondents was provided consistently across the family and is consistent with the increased time provided in positioning. The RUC agreed that this was the typical flow of the procedure to provide the appropriate positioning and preparation of the patient.

The RUC noted that the survey top reference services were not comparable for physician work and time. The RUC indicated that the intensity may be slightly higher than the anterior only code 31254, but there were no other comparable crosswalks. The specialty society recommended and the RUC agreed that a direct crosswalk to MPC code 52351 *Cystourethroscopy, with ureteroscopy and/or pyeloscopy; diagnostic* (work RVU = 5.75 and 45 minutes intra-service time) appropriately accounts for the work and time required to perform this service. The RUC noted that the decrease from the current work RVU appropriately accounts for the decrease in intra-service work as indicated by the survey respondents. The RUC pre-facilitated and fully examined the direct crosswalk and confirmed the physician time, intensity and complexity and physician work are appropriate.

For additional support, the RUC referenced similar service 52352 *Cystourethroscopy, with ureteroscopy and/or pyeloscopy; with removal or manipulation of calculus (ureteral catheterization is included)* (work RVU = 6.75 and 45 minutes intra-service time). **The RUC recommends a work RVU of 5.75 for CPT code 31255.**

***31276 Nasal/sinus endoscopy, surgical; with frontal sinus exploration, including removal of tissue from frontal sinus, when performed***

The RUC reviewed CPT 31276 and recommends a work RVU of 6.75. The RUC recommends 15 minutes of evaluation time, 8 minutes positioning, 10 minutes of scrub/dress/wait time, 45 minutes of intra-service time and 20 minutes immediate post-service time. The specialty society indicated and the RUC agreed that additional 5 minutes of positioning time is required for the multiple applications of topical decongestant. As is indicated in the description of work, pledgets soaked with topical decongestant are placed and adequate time is given to allow for decongestant to take place. Pledgets are then removed and injection with local anesthesia with vasoconstrictors is performed. Pledgets soaked with topical decongestant are then placed again. This reflects the typical flow of the operation involves the surgeon performing this prior to scrubbing and gowning. This additional time provided by the survey respondents was provided consistently across the family and is consistent with the increased time provided in positioning. The RUC agreed that this was the typical flow of the procedure to provide the appropriate positioning and preparation of the patient.

The RUC noted that this is the most intense and complex functional endoscopic sinus surgeries. The specialty societies reiterated that this is the most difficult working with 45-70 degree endoscope working in the narrow confines up in the frontal recess. The frontal sinus is the least forgiving, if the physician inadvertently strips the mucosa or develop scarring the risk of failure is significant. The RUC noted that the survey top reference services were not comparable for physician work and time. The specialty society recommended and the RUC agreed that a direct crosswalk to CPT code 52352 *Cystourethroscopy, with ureteroscopy and/or pyeloscopy; with removal or manipulation of calculus (ureteral catheterization is included)* (work RVU = 6.75 and 45 minutes intra-service time) appropriately accounts for the work and time required to perform this service. The RUC noted that the decrease from the current work RVU appropriately accounts for the decrease in intra-service work as indicated by the survey respondents. The RUC pre-facilitated and fully examined the direct crosswalk and confirmed the physician time, intensity and complexity and physician work are appropriate. For additional support, the RUC referenced similar service 37192 *Repositioning of intravascular vena cava filter, endovascular approach including vascular access, vessel selection, and radiological supervision and interpretation, intraprocedural roadmapping, and imaging guidance (ultrasound and fluoroscopy), when performed* (work RVU = 7.10 and 45 minutes intra-service time). **The RUC recommends a work RVU of 6.75 for CPT code 31276.**

**New Bundled Codes**

***31253 Nasal/sinus endoscopy, surgical with ethmoidectomy; total (anterior and posterior), including frontal sinus exploration, with removal of tissue from frontal sinus, when performed***

The RUC reviewed the survey results from 128 otolaryngologists and determined the survey 25<sup>th</sup> percentile work RVU of 9.00 appropriately accounts for the physician work required to perform this service. The RUC recommends 15 minutes of evaluation time, 8 minutes positioning, 13

minutes of scrub/dress/wait time, 70 minutes of intra-service time and 20 minutes immediate post-service time. The specialty society indicated and the RUC agreed that additional 5 minutes of positioning time is required for the multiple applications of topical decongestant. As is indicated in the description of work, pledgets soaked with topical decongestant are placed and adequate time is given to allow for decongestant to take place. Pledgets are then removed and injection with local anesthesia with vasoconstrictors is performed. Pledgets soaked with topical decongestant are then placed again. This reflects the typical flow of the operation involves the surgeon performing this prior to scrubbing and gowning. This additional time provided by the survey respondents was provided consistently across the family and is consistent with the increased time provided in positioning. The RUC agreed that this was the typical flow of the procedure to provide the appropriate positioning and preparation of the patient.

The RUC noted that this new service bundles 31255 (recommended work RVU = 5.75 and 45 minutes intra-time) and 31276 (recommended work RVU = 6.75 and 45 minutes intra-service time). The RUC notes that the survey physician time and 25<sup>th</sup> percentile work RVU appropriately accounts for the efficiencies of these services being performed together. The RUC compared the surveyed code to key reference 93582 *Percutaneous transcatheter closure of patent ductus arteriosus* (work RVU = 12.31 and 60 minutes intra-service time) and noted that the surveyed code is more intense and complex. For additional support the RUC referenced CPT code 47539 *Placement of stent(s) into a bile duct, percutaneous, including diagnostic cholangiography, imaging guidance (eg, fluoroscopy and/or ultrasound), balloon dilation, catheter exchange(s) and catheter removal(s) when performed, and all associated radiological supervision and interpretation; new access, without placement of separate biliary drainage catheter* (work RVU = 8.75 and 75 minutes intra-service time). **The RUC recommends a work RVU of 9.00 for CPT code 31253.**

**31257 Nasal/sinus endoscopy, surgical with ethmoidectomy; total (anterior and posterior), including sphenoidotomy**

The RUC reviewed CPT 31257 and recommends a work RVU of 8.00. The RUC recommends 15 minutes of evaluation time, 8 minutes positioning, 15 minutes of scrub/dress/wait time, 60 minutes of intra-service time and 20 minutes immediate post-service time. The specialty society indicated and the RUC agreed that additional 5 minutes of positioning time is required for the multiple applications of topical decongestant. As is indicated in the description of work, pledgets soaked with topical decongestant are placed and adequate time is given to allow for decongestant to take place. Pledgets are then removed and injection with local anesthesia with vasoconstrictors is performed. Pledgets soaked with topical decongestant are then placed again. This reflects the typical flow of the operation involves the surgeon performing this prior to scrubbing and gowning. This additional time provided by the survey respondents was provided consistently across the family and is consistent with the increased time provided in positioning. The RUC agreed that this was the typical flow of the procedure to provide the appropriate positioning and preparation of the patient.

The RUC recommends a direct crosswalk to CPT code 52356 *Cystourethroscopy, with ureteroscopy and/or pyeloscopy; with lithotripsy including insertion of indwelling ureteral stent (eg, Gibbons or double-J type)* (work RVU = 8.00 and 60 minutes intra-service time). The RUC noted that this new service bundles 31255 (recommended work RVU = 5.75 and 45 minutes intra-time) and 31287 (recommended work RVU = 3.50 and 30 minutes intra-service time). The RUC notes that the recommended physician time and work RVU appropriately accounts for the efficiencies of

these services being performed together. The RUC confirmed the physician time and work for 31257 and 31241 are the same and thus should be valued the same. The additional support the RUC referenced CPT code 47539 *Placement of stent(s) into a bile duct, percutaneous, including diagnostic cholangiography, imaging guidance (eg, fluoroscopy and/or ultrasound), balloon dilation, catheter exchange(s) and catheter removal(s) when performed, and all associated radiological supervision and interpretation; new access, without placement of separate biliary drainage catheter* (work RVU = 8.75 and 75 minutes intra-service time). **The RUC recommends a work RVU of 8.00 for CPT code 31257.**

***31259 Nasal/sinus endoscopy, surgical with ethmoidectomy; total (anterior and posterior), including sphenoidotomy, with removal of tissue from the sphenoid sinus***

The RUC reviewed CPT 31259 and recommends a work RVU of 8.48. The RUC recommends 15 minutes of evaluation time, 8 minutes positioning, 15 minutes of scrub/dress/wait time, 65 minutes of intra-service time and 20 minutes immediate post-service time. The specialty society indicated and the RUC agreed that additional 5 minutes of positioning time is required for the multiple applications of topical decongestant. As is indicated in the description of work, pledgets soaked with topical decongestant are placed and adequate time is given to allow for decongestant to take place. Pledgets are then removed and injection with local anesthesia with vasoconstrictors is performed. Pledgets soaked with topical decongestant are then placed again. This reflects the typical flow of the operation involves the surgeon performing this prior to scrubbing and gowning. This additional time provided by the survey respondents was provided consistently across the family and is consistent with the increased time provided in positioning. The RUC agreed that this was the typical flow of the procedure to provide the appropriate positioning and preparation of the patient.

The RUC recommends a direct crosswalk to CPT code 43274 *Endoscopic retrograde cholangiopancreatography (ERCP); with placement of endoscopic stent into biliary or pancreatic duct, including pre- and post-dilation and guide wire passage, when performed, including sphincterotomy, when performed, each stent* (work RVU = 8.48 and 68 minutes intra-service time). The RUC noted that this new service bundles 31255 (recommended work RVU = 5.75 and 45 minutes intra-time) and 31288 (recommended work RVU = 4.10 and 40 minutes intra-service time). The RUC notes that the recommended physician time and work RVU appropriately accounts for the efficiencies of these services being performed together. The additional support the RUC referenced CPT code 47539 *Placement of stent(s) into a bile duct, percutaneous, including diagnostic cholangiography, imaging guidance (eg, fluoroscopy and/or ultrasound), balloon dilation, catheter exchange(s) and catheter removal(s) when performed, and all associated radiological supervision and interpretation; new access, without placement of separate biliary drainage catheter* (work RVU = 8.75 and 75 minutes intra-service time). **The RUC recommends a work RVU of 8.48 for CPT code 31259.**

**New Sphenopalatine Artery Code**

***31241 Nasal/sinus endoscopy, surgical; with ligation of sphenopalatine artery***

The RUC reviewed CPT 31241 and recommends a work RVU of 8.00. The RUC recommends 15 minutes of evaluation time, 8 minutes positioning, 15 minutes of scrub/dress/wait time, 60 minutes of intra-service time, 25 minutes immediate post-service time and a half day discharge day management 99238. The specialty society indicated and the RUC agreed that additional 5 minutes of positioning time is required for

the multiple applications of topical decongestant. As is indicated in the description of work, pledgets soaked with topical decongestant are placed and adequate time is given to allow for decongestant to take place. Pledgets are then removed and injection with local anesthesia with vasoconstrictors is performed. Pledgets soaked with topical decongestant are then placed again. This reflects the typical flow of the operation involves the surgeon performing this prior to scrubbing and gowning. This additional time provided by the survey respondents was provided consistently across the family and is consistent with the increased time provided in positioning. The RUC agreed that this was the typical flow of the procedure to provide the appropriate positioning and preparation of the patient.

The specialty society noted that they failed to use the 000-day survey instrument that questions the number and type of visits. However, during review of the direct practice expense inputs the specialty society confirmed that a half day discharge day management is necessary as the patients typically stay overnight to be monitored for further bleeding and monitored due to the recent acute blood loss.

The RUC recommends a direct crosswalk to CPT code 52356 *Cystourethroscopy, with ureteroscopy and/or pyeloscopy; with lithotripsy including insertion of indwelling ureteral stent (eg, Gibbons or double-J type)* (work RVU = 8.00 and 60 minutes intra-service time). The RUC confirmed the physician time and work for 31257 and 31241 are the same and thus should be valued the same. For additional support the RUC referenced CPT code 52346 *Cystourethroscopy with ureteroscopy; with treatment of intra-renal stricture (eg, balloon dilation, laser, electrocautery, and incision)* (work RVU = 8.58 and 60 minutes intra-service time). **The RUC recommends a work RVU of 8.00 for CPT code 31241.**

### **Affirmation of RUC Recommendations**

The RUC affirmed the recent RUC recommendations for CPT codes 31231, 31237, 31238, 31239 and 31240, previously submitted after review in this coding cycle. The relativity within the family remains correct.

### **Work Neutrality**

The RUC's recommendation for these codes will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

### **Practice Expense**

The Practice Expense Subcommittee reviewed the direct practice expense inputs as recommended by the specialty and reduced the pre-service time for all the services to be similar to pre-service time for 000 day global endoscopic procedures. The PE Subcommittee reduced the overall time for CPT code 31241 because of its emergent nature and also to account for any service that is typically reported with an Evaluation and Management service. In addition, the PE Subcommittee added a half discharge day management for 31241. This is unusual for a 000 day global, however the Subcommittee determined that it was appropriate because the patient will be staying overnight in the facility setting. The Subcommittee increased the time to correct cleaning of the instrument pack for CPT codes 31254, 31295, 31296, 31297 and 31298 which had incorrectly been assigned 10 minutes to clean a basic pack previously, but requires 15 minutes to clean a medium pack. The Subcommittee also verified that a full balloon is necessary for the 31298 because this service includes two sinuses. The Subcommittee noted that a half catheter for

each balloon is necessary for the rest of the services because multiple sinuses, typically two, could be balloon dilated at the same time. The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
<b>Respiratory System Endoscopy</b>  A surgical sinus endoscopy includes a sinusotomy (when appropriate) and diagnostic endoscopy.  Codes 31295-31297 describe dilation of sinus ostia by displacement of tissue, any method, and include fluoroscopy if performed.  <u>Stereotactic computer-assisted navigation may be used to facilitate the performance of endoscopic sinus surgery, and may be reported with 61782.</u>  Codes 31233-31297 are used to report unilateral procedures unless otherwise specified.  Codes 31231-31235 for diagnostic evaluation refer to employing a nasal/sinus endoscope to inspect the interior of the nasal cavity and the middle and superior meatus, the turbinates, and the spheno-ethmoid recess. Any time a diagnostic evaluation is performed all these areas would be inspected and a separate code is not reported for each area. <u>To report these services when all the elements are not fully examined (eg, judged not clinically pertinent), or because the clinical situation precludes such exam (eg, technically unable, altered anatomy), append modifier 52 if repeat examination is not planned, or modifier 53 if repeat examination is planned.</u>  31239 <i>with dacryocystorhinostomy</i>  31240

Chicago, IL 60611

Re: Tab 7: Nasal Endoscopy

Dear Dr. Smith:

On behalf of the American Academy of Otolaryngology—Head and Neck Surgery (AAO-HNS), presenters for Tab 7 Nasal Endoscopy, we are writing to outline our rationale for selecting which codes to survey for the upcoming RUC meeting in January 2017. Immediately after the level of interest (LOI) forms were released, our RUC staff contacted our assigned AMA staff for Tab 7 (Susan Clark) to notify her that we disagreed with the list of codes included on the LOI. Specifically, the LOI included over 20 CPT codes, ranging from 31231-31297 as well as the five new codes approved by the CPT Editorial Panel during the October 2016 CPT meeting. After discussion with Ms. Clark, it was clarified that the reason that several codes (31231-40 and 31290-94) were included were because minor editorial changes were made to their parentheticals as part of the CPT meeting. In contrast, the codes that underwent significant review/revision included: 31254-88 (endoscopic sinus surgery codes) and CPT 31295-97 (balloon sinus dilation codes). These were the codes initially captured by the reported 75% together (endoscopic sinus surgery codes and balloon codes) and the new technology screen (balloon codes), and for which CMS and the RUC had requested review.

After discussion, AMA staff requested a rationale for why 31231-40 and 31290-94 should not be included in the review. We note that there are multiple reasons for exclusion of these codes in the survey for the upcoming RUC meeting. That includes:

- 1) CPT codes 31231, 31233 and 31235 are not part of the family because these are diagnostic services as contrasted with the endoscopic sinus surgery and balloon sinus dilation codes which are therapeutic services;
- 2) CPT codes 31231 and 31237-40 should not be included as part of the family because they were recently surveyed. 31237-40 were reviewed (31239 along with Ophthalmology) in April 2013 and 31231 was reviewed in January 2012. As such, we request that the RUC reaffirm the January 2012 and April 2013 work and practice expense recommendations for these codes;
- 3) Last, CPT 31290-94 should not be included as part of family because they are clinically dissimilar. This group of codes are used to treat different disease processes (i.e. CSF leaks and orbital/ocular conditions) rather than disease of the sinus(es).

In conclusion, based on the aforementioned rationale, we proceeded with a survey of 31254-88, 312XX1-X5 and 31295-97 as we believe this is the properly defined family of codes for review and it also captures

the list of services that the CMS and RUC screens requested for review. As such, we respectfully request that the RUC reaffirm the recently recommended values for 31231 and 31237-40. We do not believe the remaining codes require review at this time.

Should you have any questions or concerns regarding this matter, please contact our RUC staff, Jenna Minton, Esq., at: [mintonhealthcarestrategies@gmail.com](mailto:mintonhealthcarestrategies@gmail.com) or 517.927.8696. Thank you in advance for your consideration of this request.

Sincerely,

R. Peter Manes, MD  
AAO-HNS RUC Advisor

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 31295      Tracking Number R12

Original Specialty Recommended RVU: **2.70**Presented Recommended RVU: **2.70**

Global Period: 000

RUC Recommended RVU: **2.70**

CPT Descriptor: Nasal/sinus endoscopy, surgical with dilation of maxillary sinus ostium (eg, balloon dilation), transnasal or canine fossa

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 45-year-old patient who has failed medical management presents with chronic maxillary sinusitis, characterized by maxillary discomfort, purulent drainage from the maxillary ostium, and/or maxillary outflow (infundibulum) obstruction, is considered a candidate for balloon dilation of the ostium.

Percentage of Survey Respondents who found Vignette to be Typical: 95%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Vital signs are obtained and the physician ensures that the endoscopes, suction, air source for insufflation, and video recording equipment are available and functioning properly. Radiographic images are reviewed. The physician explains the procedure and obtains consent. A time out is performed and the physician washes hands and dons proper gloves, gown and personal protective equipment. The patient is draped. Topical decongestant and anesthetic sprays are applied to the nostrils followed by a wait time for them to take effect. Pledgets soaked in decongestant and anesthesia are then placed in the nasal cavity followed by a wait time for them to take effect.

Description of Intra-Service Work: Previously placed pledgets are removed. Under endoscopic visualization, pledgets soaked in decongestant and anesthesia are placed in the middle meatus followed by a wait time for them to take effect. Pledgets are then removed and an intranasal anesthetic/vasoconstrictive agent is injected into the middle turbinate and uncinate process, followed by a wait time for this to take effect. The middle turbinate is medialized. The uncinate process is rotated anteriorly. Under endoscopic visualization a guide-wire is introduced into the maxillary ostium via either a transnasal or sublabial transmaxillary (puncture) approach. A deflated balloon catheter is threaded over the guide wire and introduced into the natural maxillary ostium. Positioning of both the guide-wire and the balloon are confirmed endoscopically and with transillumination. The balloon is then inflated resulting in dilation of the natural ostium of the sinus, displacing bone and mucosa. After dilation the balloon is deflated and removed. In some cases, a separate catheter can be introduced over the guide-wire for irrigation of the sinus.

Description of Post-Service Work: The patient is monitored during the recovery period. Home restrictions (ie, activity), treatment, and findings are explained to the patient using the procedure video recording and pointing out areas of normal anatomy and pathology. Subsequent evaluation and therapeutic plan are discussed. Prescriptions are written for medications needed post discharge. Medication reconciliation is performed. The examination and any still images are saved on the digital recording system. The procedure note is dictated and findings communicated to the referring physician.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Reason for Survey:** This family of codes is being reviewed following the October 2016 CPT meeting where the CPT Editorial Panel approved the addition of 5 codes 31XX1-31XX5 to report bundled nasal endoscopy services (X2-X5) in response to identification in RAW screen for services reported together with more than 75% frequency and revision of parentheticals for codes 31238 and 31254, 31255, 31276, 31287, 31288, 31296 and 31297. CPT 312XX1 represents a new code entirely. The existing endoscopic sinus surgery family of codes 31254-88 were also captured by a CMS high expenditure screen. Separately, the balloon sinuplasty codes were captured by the new technology screen as well as the reported together greater than 75% of the time screen, resulting in our specialty's decision to take all of the codes on the reported together screen to CPT in one sitting, and ultimately review them as a family at the January 2017 RUC meeting.

**Background on prior valuations:** CPT codes 31254-31276 were last valued by the AMA RUC in 1994 and CPT 31287 and 31288 were valued in 1993. CPT codes 31295-31297 were first valued by the RUC in 2010 as new technology. CPT 312XX1-X5 are new codes and have never been RUC valued.

**Survey Sample:**

The survey data and recommendations are based upon a Random Sample of Applicable Subsets (general oto, rhinology, allergy) of American Academy of Otolaryngology-Head and Neck Surgery (AAO-HNS), American Rhinologic Society (ARS), and American Academy of Otolaryngic Allergy (AAOA) members. The total sample size was 4138 otolaryngologists.

**Physician Time:*****Pre-Service Time***

As our reviewers likely noticed, the pre-service times for the balloon codes are down considerably. The reason for this is when the codes were initially presented in 2010 these procedures were only done in the facility setting, therefore pre-service package 3 was selected. Over the past six years, the site of service has changed and is now predominantly office based. Given this, our expert panel selected pre-service package 6A (Procedure with local/topical anesthesia care requiring wait time for anesthesia to take effect) for this code based on the fact that the procedure is typically performed in the non-

facility setting using local/topical anesthesia. We are recommending taking the lesser of the survey or the pre-time package. **Therefore, we recommend a total pretime of 21 minutes.**

### ***Intra-Service Time***

**We are recommending our median survey time of 20 minutes for intra service work.**

### ***Post-Service Time***

The expert panel selected post-package 7A (Local Anesthesia/ Straightforward Procedure) for this code. We are recommending taking the lesser of the survey or the pre-time package. **The expert panel recommends a post-service time of 15 minutes.**

### ***Physician Work RVU***

Upon review of the survey results, the expert panel **recommends maintenance of existing value at 2.70 RVUs with a total time of 56 minutes**

The following table provides other RUC reviewed codes that are similar in time and work to provide additional support for the recommended value for CPT code 31295, as they demonstrate relativity across the fee schedule.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.  
☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.  
☒ Multiple codes allow flexibility to describe exactly what components the procedure included.  
☐ Multiple codes are used to maintain consistency with similar codes.  
☐ Historical precedents.  
☒ Other reason (please explain) The 2012 claims data available when this code family initially hit the RAW screen for services reported together greater than 75% did not indicate these code pairings. The 2014 claims data sent prior to this RUC meeting indicated that these code combinations are now also reported together greater than 75% of the time. This information was not available until the surveys for the January RUC meeting were already out to respondents.

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

3.	CPT Code	Global	Work RVU	Pre time	Intra time	Post Time	TOTAL RVW w/ MPPR
4.	31295	000	2.70	43	20	15	4.74
5.	31296	000	3.39	43	30	15	
6.							
7.	CPT Code	Global	Work RVU	Pre time	Intra time	Post Time	TOTAL RVW w/ MPPR
8.	31295	000	2.70	43	20	15	4.02
9.	31297	000	2.64	43	28	15	
10.							

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) This procedure previously was reported using 31295

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Otolaryngology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 79446

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. This is three times the Medicare database volume

Specialty Otolaryngology Frequency 79446 Percentage 100.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 26,482 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This is based on the RUC database volume for CY 2015

Specialty Otolaryngology Frequency 26482 Percentage 100.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

### **Berenson-Eggers Type of Service (BETOS) Assignment**

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Procedures

BETOS Sub-classification:

Minor procedure

BETOS Sub-classification Level II:

Musculoskeletal

### **Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 31295

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code:31297      Tracking Number   R14

Original Specialty Recommended RVU: **2.64**Presented Recommended RVU: **2.44**

Global Period: 000

RUC Recommended RVU: **2.44**

CPT Descriptor: Nasal/sinus endoscopy, surgical with dilation of sphenoid sinus ostium (eg, balloon dilation)

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 45-year-old patient who has failed medical management presents with chronic sphenoid sinusitis, characterized by a history of headaches, purulent drainage from the sphenoid ostium, and/or sphenoid ostial obstruction, with possible visual disturbance, is considered a candidate for balloon dilation of the sphenoid ostium.

Percentage of Survey Respondents who found Vignette to be Typical: 91%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is;  
Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Vital signs are obtained and the physician ensures that the endoscopes, suction, air source for insufflation, and video recording equipment are available and functioning properly. Radiographic images are reviewed. The physician explains the procedure and obtains consent. A time out is performed and the physician washes hands and dons proper gloves, gown and personal protective equipment. The patient is draped. Topical decongestant and anesthetic sprays are applied to the nostrils followed by a wait time for them to take effect. Pledgets soaked in decongestant and anesthesia are then placed in the nasal cavity followed by a wait time for them to take effect.

Description of Intra-Service Work: Previously placed pledgets are removed. Under endoscopic visualization, pledgets soaked in decongestant and anesthesia are placed in the sphenoethmoid recess followed by a wait time for them to take effect. Pledgets are then removed and an intranasal anesthetic/vasoconstrictive agent is injected into the middle turbinate, followed by a wait time for this to take effect. The middle turbinate is lateralized. Under endoscopic visualization a guide-wire is introduced into the sphenoid ostium via a transnasal approach. A deflated balloon catheter is threaded over the guide wire and introduced into the sphenoid ostium. Positioning of both the guide-wire and the balloon are confirmed endoscopically during the course of the placement of each. The balloon is then inflated resulting in dilation of the natural ostium of the sinus, displacing bone and mucosa. After dilation the balloon is deflated and removed. In some cases, a separate catheter can be introduced over the guide-wire for irrigation of the sinus.

Description of Post-Service Work: The patient is monitored during the recovery period. Home restrictions (ie, activity), treatment, and findings are explained to the patient using the procedure video recording and pointing out areas of normal anatomy and pathology. Subsequent evaluation and therapeutic plan are discussed. Prescriptions are written for medications needed post discharge. Medication reconciliation is performed. The examination and any still images are saved on the digital recording system. The procedure note is dictated and findings communicated to the referring physician.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Reason for Survey:** This family of codes is being reviewed following the October 2016 CPT meeting where the CPT Editorial Panel approved the addition of 5 codes 31XX1-31XX5 to report bundled nasal endoscopy services (X2-X5) in response to identification in RAW screen for services reported together with more than 75% frequency and revision of parentheticals for codes 31238 and 31254, 31255, 31276, 31287, 31288, 31296 and 31297. CPT 312XX1 represents a new code entirely. The existing endoscopic sinus surgery family of codes 31254-88 were also captured by a CMS high expenditure screen. Separately, the balloon sinuplasty codes were captured by the new technology screen as well as the reported together greater than 75% of the time screen, resulting in our specialty's decision to take all of the codes on the reported together screen to CPT in one sitting, and ultimately review them as a family at the January 2017 RUC meeting.

**Background on prior valuations:** CPT codes 31254-31276 were last valued by the AMA RUC in 1994 and CPT 31287 and 31288 were valued in 1993. CPT codes 31295-31297 were first valued by the RUC in 2010 as new technology. CPT 312XX1-X5 are new codes and have never been RUC valued.

**Survey Sample:**

The survey data and recommendations are based upon a Random Sample of Applicable Subsets (general oto, rhinology, allergy) of American Academy of Otolaryngology-Head and Neck Surgery (AAO-HNS), American Rhinologic Society (ARS), and American Academy of Otolaryngic Allergy (AAOA) members. The total sample size was 4138 otolaryngologists.

**Physician Time:*****Pre-Service Time***

As our reviewers likely noticed, the pre-service times for the balloon codes are down considerably. The reason for this is when the codes were initially presented in 2010 these procedures were only done in the facility setting, therefore pre-service package 3 was selected. Over the past six years, the site of service has changed and is now predominantly office based. Given this, our expert panel selected pre-service package 6A (Procedure with local/topical anesthesia care requiring wait time for anesthesia to take effect) for this code based on the fact that the procedure is typically performed in the non-

facility setting using local/topical anesthesia. We are recommending taking the lesser of the survey or the pre-time package. **Therefore, we recommend a total pretime of 21 minutes.**

### ***Intra-Service Time***

**We are recommending our median survey time of 20 minutes for intra service work.**

### ***Post-Service Time***

The expert panel selected post-package 7A (Local Anesthesia/ Straightforward Procedure) for this code. We are recommending taking the lesser of the survey or the pre-time package. **The expert panel recommends a post-service time of 15 minutes.**

### ***Physician Work RVU***

Upon review of the survey results, the expert panel **recommends maintenance a work RVU of 2.44 based on a crosswalk to CPT 43215 Esophagoscopy, flexible, transoral; with removal of foreign body(s), with a total time of 56 minutes**

The following table provides other RUC reviewed codes that are similar in time and work to provide additional support for the recommended value for CPT code 31297, as they demonstrate relativity across the fee schedule.

### ***Additional Reference Codes***

<b>CPT Code</b>	<b>Long Desc</b>	<b>Work RVU</b>	<b>Pre</b>	<b>Intra Time</b>	<b>Post Time</b>	<b>Total Time</b>	<b>Most Recent RUC Review</b>	<b>IWPUT</b>	<b>2015 Utilization</b>

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☒ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☒ Other reason (please explain) The 2012 claims data available when this code family initially hit the RAW screen for services reported together greater than 75% did not indicate these code pairings. The 2014 claims data sent prior to this RUC meeting indicated that these code combinations are now also reported together greater than 75% of the time. This information was not available until the surveys for the January RUC meeting were already out to respondents.

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

3.	CPT Code	Global	Work RVU	Pre time	Intra time	Post Time	TOTAL RVW w/ MPPR
4.	31295	000	2.70	43	20	15	4.02
5.	31297	000	2.64	43	28	15	
6.							
7.							

**FREQUENCY INFORMATION**

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) This procedure previously was reported using 31297

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Otolaryngology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 50964

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. This is the annual Medicare volume multiplied by three.

Specialty Otolaryngology Frequency 50964 Percentage 100.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?  
 16,988 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty.  
 Please explain the rationale for this estimate. This is based on the RUC database volume for CY 2015

Specialty Otolaryngology	Frequency 16988	Percentage 100.00 %
--------------------------	-----------------	---------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Do many physicians perform this service across the United States? Yes

---

### **Berenson-Eggers Type of Service (BETOS) Assignment**

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Procedures

BETOS Sub-classification:

Minor procedure

BETOS Sub-classification Level II:

Musculoskeletal

---

### **Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 31297

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 31296      Tracking Number R13

Original Specialty Recommended RVU: **3.29**Presented Recommended RVU: **3.10**

Global Period: 000

RUC Recommended RVU: **3.10**

CPT Descriptor: Nasal/sinus endoscopy, surgical with dilation of frontal sinus ostium (eg, balloon dilation)

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 45-year-old patient who has failed medical management presents with chronic frontal sinusitis, characterized by frontal discomfort, purulent frontal recess drainage, and/or frontal recess obstruction, is considered a candidate for balloon dilation of the frontal sinus ostium/outflow tract

Percentage of Survey Respondents who found Vignette to be Typical: 97%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is;  
Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Vital signs are obtained and the physician ensures that the endoscopes, suction, air source for insufflation, and video recording equipment are available and functioning properly. Radiographic images are reviewed. The physician explains the procedure and obtains consent. A time out is performed and the physician washes hands and dons proper gloves, gown and personal protective equipment. The patient is draped. Topical decongestant and anesthetic sprays are applied to the nostrils followed by a wait time for them to take effect. Pledgets soaked in decongestant and anesthesia are then placed in the nasal cavity followed by a wait time for them to take effect.

Description of Intra-Service Work: Previously placed pledgets are removed. Under endoscopic visualization, pledgets soaked in decongestant and anesthesia are placed in the middle meatus followed by a wait time for them to take effect. Pledgets are then removed and an intranasal anesthetic/vasoconstrictive agent is injected into the middle turbinate and uncinate process, followed by a wait time for this to take effect. The middle turbinate is medialized. Pledgets soaked in decongestant and anesthesia are placed in the frontal recess followed by a wait time for them to take effect. Under endoscopic visualization a guide-wire is introduced into the frontal recess via a transnasal approach. A deflated balloon catheter is threaded over the guide wire and introduced into the frontal ostium. Positioning of both the guide-wire and the balloon are confirmed endoscopically and with transillumination during the course of the placement of each. The balloon is then inflated resulting in dilation of the natural ostium of the sinus, displacing bone and mucosa. After dilation the balloon is deflated and removed. In some cases, a separate catheter can be introduced over the guide-wire for irrigation of the sinus.

Description of Post-Service Work: The patient is monitored during the recovery period. Home restrictions (ie, activity), treatment, and findings are explained to the patient using the procedure video recording and pointing out areas of normal anatomy and pathology. Subsequent evaluation and therapeutic plan are discussed. Prescriptions are written for medications needed post discharge. Medication reconciliation is performed. The examination and any still images are saved on the digital recording system. The procedure note is dictated and findings communicated to the referring physician.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Reason for Survey:** This family of codes is being reviewed following the October 2016 CPT meeting where the CPT Editorial Panel approved the addition of 5 codes 31XX1-31XX5 to report bundled nasal endoscopy services (X2-X5) in response to identification in RAW screen for services reported together with more than 75% frequency and revision of parentheticals for codes 31238 and 31254, 31255, 31276, 31287, 31288, 31296 and 31297. CPT 312XX1 represents a new code entirely. The existing endoscopic sinus surgery family of codes 31254-88 were also captured by a CMS high expenditure screen. Separately, the balloon sinuplasty codes were captured by the new technology screen as well as the reported together greater than 75% of the time screen, resulting in our specialty's decision to take all of the codes on the reported together screen to CPT in one sitting, and ultimately review them as a family at the January 2017 RUC meeting.

**Background on prior valuations:** CPT codes 31254-31276 were last valued by the AMA RUC in 1994 and CPT 31287 and 31288 were valued in 1993. CPT codes 31295-31297 were first valued by the RUC in 2010 as new technology. CPT 312XX1-X5 are new codes and have never been RUC valued.

**Survey Sample:**

The survey data and recommendations are based upon a Random Sample of Applicable Subsets (general oto, rhinology, allergy) of American Academy of Otolaryngology-Head and Neck Surgery (AAO-HNS), American Rhinologic Society (ARS), and American Academy of Otolaryngic Allergy (AAOA) members. The total sample size was 4138 otolaryngologists.

**Physician Time:*****Pre-Service Time***

As our reviewers likely noticed, the pre-service times for the balloon codes are down considerably. The reason for this is when the codes were initially presented in 2010 these procedures were only done in the facility setting, therefore pre-service package 3 was selected. Over the past six years, the site of service has changed and is now predominantly office based. Given this, our expert panel selected pre-service package 6A (Procedure with local/topical anesthesia care requiring wait time for anesthesia to take effect) for this code based on the fact that the procedure is typically performed in the non-

facility setting using local/topical anesthesia. We are recommending taking the lesser of the survey or the pre-time package. **Therefore, we recommend a total pretime of 21 minutes.**

### ***Intra-Service Time***

**We are recommending our median survey time of 25 minutes for intra service work.**

### ***Post-Service Time***

The expert panel selected post-package 7A (Local Anesthesia/ Straightforward Procedure) for this code. We are recommending taking the lesser of the survey or the pre-time package. **The expert panel recommends a post-service time of 15 minutes.**

### ***Physician Work RVU***

Upon review of the survey results, the expert panel **recommends a work RVU of 3.10 based on a crosswalk to CPT 19083 Biopsy, breast, with placement of breast localization device(s) of 3.10 and a total time of 61 minutes**

The following table provides other RUC reviewed codes that are similar in time and work to provide additional support for the recommended value for CPT code 31296, as they demonstrate relativity across the fee schedule.

### ***Additional Reference Codes***

CPT Code	Long Desc	Work RVU	Pre	Intra Time	Post Time	Total Time	Most Recent RUC Review	IWPUT	2015 Utilization
19083	Biopsy, breast, with placement of breast localization device(s) (eg, clip, metallic pellet), when performed, and imaging of the biopsy specimen, when performed, percutaneous; first lesion, including ultrasound guidance	3.1	19	25	15	59	Apr13	0.0964	108026
<b>31296</b>	<b>Nasal/sinus endoscopy, surgical with dilation of frontal sinus ostium (eg, balloon dilation)</b>	<b>3.29</b>	<b>21</b>	<b>25</b>	<b>15</b>	<b>61</b>		<b>.102</b>	<b>26,168</b>
45378	Colonoscopy, flexible; diagnostic, including collection of specimen(s) by brushing or washing, when performed (separate procedure)	3.36	27	25	15	67	Jan14	0.0996	461645
15277	Application of skin substitute graft to face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet, and/or multiple digits, total wound surface area greater than or equal to 100 sq cm; first 100 sq cm wound surface area, or 1% of body area of infants and children	4	65	25	20	110	Apr11	0.0896	1335

## **SERVICES REPORTED WITH MULTIPLE CPT CODES**

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☒ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☒ Other reason (please explain) The 2012 claims data available when this code family initially hit the RAW screen for services reported together greater than 75% did not indicate these code pairings.

The 2014 claims data sent prior to this RUC meeting indicated that these code combinations are now also reported together greater than 75% of the time. This information was not available until the surveys for the January RUC meeting were already out to respondents.

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

3.	CPT Code	Global	Work RVU	Pre time	Intra time	Post Time	TOTAL RVW w/ MPPR
4.	31295	000	2.70	43	20	15	4.74
5.	31296	000	3.39	43	30	15	
6.							

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) This procedure previously was reported using 31296

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Otolaryngology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 78504

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. This is the annual Medicare volume multiplied by three.

Specialty Otolaryngology Frequency 78504 Percentage 100.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?

26,168 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This is based on the RUC database volume for CY 2015

Specialty Otolaryngology Frequency 26168 Percentage 100.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

## Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:  
Procedures

BETOS Sub-classification:  
Minor procedure

BETOS Sub-classification Level II:  
Musculoskeletal

---

### **Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 31296

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 31298      Tracking Number R15

Original Specialty Recommended RVU: **4.50**Presented Recommended RVU: **4.50**

Global Period: 000

RUC Recommended RVU: **4.50**

CPT Descriptor: Nasal/sinus endoscopy, surgical with dilation of frontal and sphenoid sinus ostia (eg, balloon dilation)

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 48 year-old female presents with chronic right frontal and ipsilateral sphenoid sinusitis, with obstruction of the right sphenoid ostium, and of the frontal recess. She has failed medical therapy. The patient undergoes balloon dilatation of the right frontal and sphenoid sinus ostia.

Percentage of Survey Respondents who found Vignette to be Typical: 92%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is;  
Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Vital signs are obtained and the physician ensures that the endoscopes, suction, air source for insufflation, and video recording equipment are available and functioning properly. Radiographic images are reviewed. The physician explains the procedure and obtains consent. A time out is performed and the physician washes hands and dons proper gloves, gown and personal protective equipment. The patient is draped. Topical decongestant and anesthetic sprays are applied to the nostrils followed by a wait time for them to take effect. Pledgets soaked in decongestant and anesthesia are then placed in the nasal cavity followed by a wait time for them to take effect.

Description of Intra-Service Work: Previously placed pledgets are removed. Under endoscopic visualization, pledgets soaked in decongestant and anesthesia are placed in the middle meatus followed by a wait time for them to take effect. Pledgets are then removed and an intranasal anesthetic/vasoconstrictive agent is injected into the middle turbinate and uncinate process, followed by a wait time for this to take effect. The middle turbinate is medialized. Pledgets soaked in decongestant and anesthesia are placed in the frontal recess followed by a wait time for them to take effect. Under endoscopic visualization a guide-wire is introduced into the frontal recess via a transnasal approach. A deflated balloon catheter is threaded over the guide wire and introduced into the frontal ostium. Positioning of both the guide-wire and the balloon are confirmed endoscopically and with transillumination during the course of the placement of each. The balloon is then inflated resulting in dilation of the natural ostium of the sinus, displacing bone and mucosa. After dilation the balloon is deflated and removed. In some cases, a separate catheter can be introduced over the guide-wire for irrigation of the sinus. The middle turbinate is then lateralized and pledgets soaked in decongestant and anesthesia are placed in the sphenoethmoid recess, followed by a wait time for this to take effect. Pledgets are then removed. Under endoscopic visualization a guide-wire is introduced into the sphenoid ostium via a transnasal approach. A deflated balloon catheter is threaded over the guide wire and introduced into the sphenoid ostium. Positioning of both the guide-wire and the balloon are confirmed endoscopically during the course of the placement of each. The balloon is then inflated resulting in dilation of the natural ostium of the sinus, displacing bone and mucosa. After dilation the balloon is deflated and removed. In some cases, a separate catheter can be introduced over the guide-wire for irrigation of the sinus.

Description of Post-Service Work: The patient is monitored during the recovery period. Home restrictions (ie, activity), treatment, and findings are explained to the patient using the procedure video recording and pointing out areas of normal

anatomy and pathology. Subsequent evaluation and therapeutic plan are discussed. Prescriptions are written for medications needed post discharge. Medication reconciliation is performed. The examination and any still images are saved on the digital recording system. The procedure note is dictated and findings communicated to the referring physician.

**Modifier -51 Exempt Status**

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

**New Technology/Service:**

Is this new/revised procedure considered to be a new technology or service? No

**TOP KEY REFERENCE SERVICE:**

<u>Key CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
45389	000	5.34	RUC Time

CPT Descriptor Colonoscopy, flexible; with endoscopic stent placement (includes pre- and post-dilation and guide wire passage, when performed)

**SECOND HIGHEST KEY REFERENCE SERVICE:**

<u>Key CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
32608	000	6.84	RUC Time

CPT Descriptor Thoracoscopy; with diagnostic biopsy(ies) of lung nodule(s) or mass(es) (eg, wedge, incisional), unilateral

**KEY MPC COMPARISON CODES:**

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

<u>MPC CPT Code 1</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>	<u>Most Recent Medicare Utilization</u>
15004	000	4.58	RUC Time	23,944

CPT Descriptor 1 Surgical preparation or creation of recipient site by excision of open wounds, burn eschar, or scar (including subcutaneous tissues), or incisional release of scar contracture, face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet and/or multiple digits; first 100 sq cm or 1% of body area of infants and children

<u>MPC CPT Code 2</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>	<u>Most Recent Medicare Utilization</u>
52441	000	4.50	RUC Time	1,420

CPT Descriptor 2 Cystourethroscopy, with insertion of permanent adjustable transprostatic implant; single implant

<u>Other Reference CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
45393	000	4.78	RUC Time

CPT Descriptor Colonoscopy, flexible; with decompression (for pathologic distention) (eg, volvulus, megacolon), including placement of decompression tube, when performed

**RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:**

Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by the mean) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

**Number of respondents who choose Top Key Reference Code: 13      % of respondents: 11.4 %**

**Number of respondents who choose 2<sup>nd</sup> Key Reference Code: 12      % of respondents: 10.5 %**

**TIME ESTIMATES (Median)**

	<b>CPT Code: <u>31298</u></b>	<b>Top Key Reference CPT Code: <u>45389</u></b>	<b>2nd Key Reference CPT Code: <u>32608</u></b>

	<b><u>Top Key Ref Code</u></b>	<b><u>2<sup>nd</sup> Key Ref Code</u></b>
<b><u>Time Segment (Mean)</u></b>		
Overall intensity/complexity	0.31	0.00

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Reason for Survey:** This family of codes is being reviewed following the October 2016 CPT meeting where the CPT Editorial Panel approved the addition of 5 codes 31241-31298 to report bundled nasal endoscopy services (X2-X5) in response to identification in RAW screen for services reported together with more than 75% frequency and revision of parentheticals for codes 31238 and 31254, 31255, 31276, 31287, 31288, 31296 and 31297. CPT 312XX1 represents a new code entirely. The existing endoscopic sinus surgery family of codes 31254-88 were also captured by a CMS high expenditure screen. Separately, the balloon sinuplasty codes were captured by the new technology screen as well as the reported together greater than 75% of the time screen, resulting in our specialty's decision to take all of the codes on the reported together screen to CPT in one sitting, and ultimately review them as a family at the January 2017 RUC meeting.

**Background on prior valuations:** CPT codes 31254-31276 were last valued by the AMA RUC in 1994 and CPT 31287 and 31288 were valued in 1993. CPT codes 31295-31297 were first valued by the RUC in 2010 as new technology. CPT 312XX1-X5 are new codes and have never been RUC valued.

**Survey Sample:**

The survey data and recommendations are based upon a Random Sample of Applicable Subsets (general oto, rhinology, allergy) of American Academy of Otolaryngology-Head and Neck Surgery (AAO-HNS), American Rhinologic Society (ARS), and American Academy of Otolaryngic Allergy (AAOA) members. The total sample size was 4138 otolaryngologists.

**Physician Time:*****Pre-Service Time***

Our expert panel selected pre-service package 6A (Procedure with local/topical anesthesia care requiring wait time for anesthesia to take effect) for this code based on the fact that the procedure is typically performed in the non-facility setting using local/topical anesthesia. We are recommending taking the lesser of the survey or the pre-time package. **Therefore, we recommend a total pretime of 21 minutes.**

***Intra-Service Time***

We are recommending our median survey time of 40 minutes for intra service work.

***Post-Service Time***

The expert panel selected post-package 7A (Local Anesthesia/ Straightforward Procedure) for this code. We are recommending taking the lesser of the survey or the pre-time package. **The expert panel recommends a post-service time of 15 minutes.**

***Physician Work RVU***

Upon review of the survey results, the expert panel **recommends the survey's 25<sup>th</sup> percentile of 4.50 RVUs with a total time of 76 minutes**

The following table provides other RUC reviewed codes that are similar in time and work to provide additional support for the recommended value for CPT code 312X5, as they demonstrate relativity across the fee schedule.

***Additional Reference Codes***

CPT Code	Long Desc	Work RVU	Pre	Intra Time	Post Time	Total Time	Most Recent RUC Review	IWPUT	2015 Utilization
43266	Esophagogastroduodenoscopy, flexible, transoral; with placement of endoscopic stent (includes pre- and post-dilation and guide wire passage, when performed)	4.17	41	40	20	101	Jan13	0.0719	4783

44408	Colonoscopy through stoma; with decompression (for pathologic distention) (eg, volvulus, megacolon), including placement of decompression tube, when performed	4.24	40	40	15	95	Jan14	0.077	0
47532	Injection procedure for cholangiography, percutaneous, complete diagnostic procedure including imaging guidance (eg, ultrasound and/or fluoroscopy) and all associated radiological supervision and interpretation; new access (eg, percutaneous transhepatic cholangiogram)	4.25	41	40	20	101	Apr15	0.0739	0
49405	Image-guided fluid collection drainage by catheter (eg, abscess, hematoma, seroma, lymphocele, cyst); visceral (eg, kidney, liver, spleen, lung/mediastinum), percutaneous	4.25	45	40	20	105	Jan13	0.0716	6046
49406	Image-guided fluid collection drainage by catheter (eg, abscess, hematoma, seroma, lymphocele, cyst); peritoneal or retroperitoneal, percutaneous	4.25	45	40	20	105	Jan13	0.0716	30464

312XX5	Nasal/sinus endoscopy, surgical with dilation of frontal and sphenoid sinus ostia (eg, balloon dilation)	4.5	21	40	15	76		.094	NEW
45382	Colonoscopy, flexible; with control of bleeding, any method	4.76	41	40	15	96	Jan14	0.0894	23810
45393	Colonoscopy, flexible; with decompression (for pathologic distention) (eg, volvulus, megacolon), including placement of decompression tube, when performed	4.78	41	40	15	96	Jan14	0.0899	0
43253	Esophagogastroduodenoscopy, flexible, transoral; with transendoscopic ultrasound-guided transmural injection of diagnostic or therapeutic substance(s) (eg, anesthetic, neurolytic agent) or fiducial marker(s) (includes endoscopic ultrasound examination of the esophagus, stomach, and either the duodenum or a surgically altered stomach where the jejunum is examined distal to the anastomosis)	4.83	41	40	23	104	Apr13	0.0867	1411

---

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.  
☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.  
☐ Multiple codes allow flexibility to describe exactly what components the procedure included.  
☐ Multiple codes are used to maintain consistency with similar codes.  
☐ Historical precedents.  
☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

---

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) This procedure previously was reported using code combination 31296 and 31297

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Otolaryngology

How often? Commonly

Specialty

How often?

Specialty

How often?

Estimate the number of times this service might be provided nationally in a one-year period? 112197

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on a population studies (Martin TJ, Yauck JS, Smith TL. Patients undergoing sinus surgery: constructing a demographic profile. Laryngoscope. 2006 Jul;116(7):1185-91 and Bhattacharyya, Neil. Ambulatory sinus and nasal surgery in the United States: Demographics and perioperative outcomes. The Laryngoscope. 2010 March; 120 (3): 635–638.), 10-20% of patients are Medicare age, therefore we have multiplied the Medicare volume by 5 to estimate total volume nationally.

Specialty Otolaryngology	Frequency 112197	Percentage 100.00 %
Specialty	Frequency 0	Percentage 0.00 %
Specialty	Frequency 0	Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 22,439 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This is based on the RUC database volume for CY 2015

Specialty Otolaryngology	Frequency 22439	Percentage 100.00 %
Specialty	Frequency 0	Percentage 0.00 %
Specialty	Frequency 0	Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

### **Berenson-Eggers Type of Service (BETOS) Assignment**

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Procedures

BETOS Sub-classification:

Minor procedure

BETOS Sub-classification Level II:

Musculoskeletal

### **Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 31296

SUMMARY OF RECOMMENDATION**

CPT Code: 31256      Tracking Number R7

Original Specialty Recommended RVU: **3.29**Presented Recommended RVU: **3.11**

Global Period: 000

RUC Recommended RVU: **3.11**

CPT Descriptor: Nasal/sinus endoscopy, surgical with maxillary antrostomy

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 48 year-old female presents with chronic right maxillary sinusitis, which has been refractory to medical management. Endoscopic examination reveals edema and/or mucopurulent within the ipsilateral middle meatus. CT scan demonstrates opacification of the right maxillary sinus. A nasal/sinus endoscopy with maxillary antrostomy is performed.

Percentage of Survey Respondents who found Vignette to be Typical: 96%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The patient's records and imaging studies are reviewed for surgical planning. Pre-anesthesia studies are reviewed, the patient is examined, and a history and physical examination note is written. Relative risks and benefits of the surgery are discussed with the patient. . Mark sinus side for procedure. Review airway and medical management with anesthesiologist. Review planned procedure with OR staff. Verify that all required instruments and supplies are available. Change into scrub clothes. Ensure that radiographic images are available in the OR. The patient is transported to the surgical suite, where positioning and general anesthesia is induced. Monitor/assist with positioning of the patient, endoscopy and video equipment, and anesthesia lines. Pledgets soaked with topical decongestant are placed and adequate time is given to allow for decongestant to take place. Pledgets are then removed and injection with local anesthesia with vasoconstrictors is performed. Pledgets soaked with topical decongestant are then placed again. A time-out is performed. The surgeon scrubs and gowns. The patient is prepped and draped

Description of Intra-Service Work: Previously placed pledgets are removed. Comprehensive nasal endoscopy is performed and pre-surgical findings are confirmed. Topical decongestion is performed in the middle meatus. An intranasal anesthetic/vasoconstrictive agent is injected. The middle turbinate is medialized. The uncinate process is identified and resected. The orbital wall (lamina papyracea) is identified within the infundibulum. The natural ostium of maxillary sinus is identified and surgically opened posteriorly and inferiorly. The antrum of the maxillary sinus is irrigated and/or suctioned. Following completion of the procedure, hemostasis is ensured and packing or a stent may be placed within the middle meatus.

Description of Post-Service Work: Monitor patient during reversal of anesthesia. Discuss postoperative recovery care with anesthesia and nursing staff. Discuss procedure and findings with family in the waiting area. Write postoperative note. Dictate operative note and copy to referring physician. Prior to discharge, examine patient and write prescriptions and supplies needed for post-discharge. Perform medication reconciliation. Review post-discharge wound care and activity limitations with the patient and family and write discharge instructions.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Reason for Survey:** This family of codes is being reviewed following the October 2016 CPT meeting where the CPT Editorial Panel approved the addition of 5 codes 31XX1-31XX5 to report bundled nasal endoscopy services (X2-X5) in response to identification in RAW screen for services reported together with more than 75% frequency and revision of parentheticals for codes 31238 and 31254, 31255, 31276, 31287, 31288, 31296 and 31297. CPT 312XX1 represents a new code entirely. The existing endoscopic sinus surgery family of codes 31254-88 were also captured by a CMS high expenditure screen. Separately, the balloon sinuplasty codes were captured by the new technology screen as well as the reported together greater than 75% of the time screen, resulting in our specialty's decision to take all of the codes on the reported together screen to CPT in one sitting, and ultimately review them as a family at the January 2017 RUC meeting.

**Background on prior valuations:** CPT codes 31254-31276 were last valued by the AMA RUC in 1994 and CPT 31287 and 31288 were valued in 1993. CPT codes 31295-31297 were first valued by the RUC in 2010 as new technology. CPT 312XX1-X5 are new codes and have never been RUC valued.

**Survey Sample:**

The survey data and recommendations are based upon a Random Sample of Applicable Subsets (general oto, rhinology, allergy) of American Academy of Otolaryngology-Head and Neck Surgery (AAO-HNS), American Rhinologic Society (ARS), and American Academy of Otolaryngic Allergy (AAOA) members. The total sample size was 4138 otolaryngologists.

**Reference Service List Background:** As a reminder to our reviewers, we note that this tab was taken before the Research Subcommittee to review the revised vignettes for all existing codes as well as the reference service list for the survey. We struggled to compile an RSL that included an appropriate range of values for this family of codes given that the bundled codes were expected to be valued well above the highest RVU in the current family of services (CPT 31276 at 8.84 RVUs).

We noted to Research that there are very limited RVU options in the 8-13 RVU range that are 000 globals which forced the inclusion of many surgical procedures that are not performed by Otolaryngologists, but we hoped would be familiar enough to them to use as comparators for the procedures being surveyed. Additionally, 2-3 codes that were "CMS Revised" were included on the on the RSL in order to avoid large gaps value between codes.

In addition, one code was included at the higher range of the RSL, CPT 93582 Percutaneous transcatheter closure of patent ductus arteriosus, which was valued by the RUC in January 2013. This code is marked as “do not use to value physician work” in the RUC database, however, that label does not export out when codes marked as such are captured in a broader RUC database search. The rationale given for this designation is that *“The RUC recommends flagging this code in the RUC database as not to use to validate physician work because the median survey intra-time may not reflect the appropriate intra-service time compared to those who frequently perform this service.”* Further review of the code history indicates that this procedure is performed on infants and there was some question as to whether 60 minutes was sufficient time to perform this procedure and the survey data indicated those who performed the service more frequently indicated that 75 minutes was more typical. Given this, it was an oversight on our part that this code was included in the RSL. It was chosen as the number 1 or 2 KRS for a handful of codes, which is reflected in the SORs. In order to provide greater transparency to our reviewers, we have listed the other top KRS codes beyond 1 and 2 for our reviewers in cases where 93582 was chosen. We would note that in virtually all instances where 93582 was used as a KRS by respondents, we are not recommending a value anywhere near the RVUs assigned to that code (12.56 RVUs).

### **Physician Time:**

#### ***Pre-Service Time***

Our expert panel selected pre-service package 3 (Straightforward Patient/Difficult Procedure) for this code based on the fact that the procedure is typically performed in the facility setting using general anesthesia. We are requesting that 5 additional minutes from the surveyee indicated positioning time be added to the package’s 3 minutes as we believe survey respondents assigned time for the multiple applications of topical decongestant in the positioning time. As is indicated in our description of work, pledgets soaked with topical decongestant are placed and adequate time is given to allow for decongestant to take place. Pledgets are then removed and injection with local anesthesia with vasoconstrictors is performed. Pledgets soaked with topical decongestant are then placed again. This reflects the typical flow of the operation involves the surgeon performing this prior to scrubbing and gowning. This additional time provided by the survey respondents was provided consistently across the family, and we feel explains the consistency in increased time provided in positioning.

**Given the extra time this requires, we are requesting an additional 5 minutes to the 3 minutes already allotted in this package for use of general anesthesia. This is the accepted standard for the use of local / topical anesthetic for office based procedures. In all other cases we are recommending taking the lesser of the survey or the pre-time package. Therefore, we recommend a total pretime of 33 minutes.**

#### ***Intra-Service Time***

**We are recommending our median survey time of 30 minutes for intra service work.**

#### ***Post-Service Time***

The expert panel selected post-package 9A (General Anesthesia or Complex Regional Block/ Straightforward Procedure) for this code. We are recommending taking the lesser of the survey or the pre-time package. **The expert panel recommends a post-service time of 20 minutes.**

#### ***Physician Work RVU***

Upon review of the survey results, the expert panel **recommends a work RVU of 3.11 and total time of 83 minutes, based on a crosswalk to CPT 43247 Esophagogastroduodenoscopy, flexible, transoral; with removal of foreign body(s).**

#### ***Comments on Increased Intensity***

Our expert panel feels that the intensity of the endoscopic sinus surgery codes has changed since the first valuation in the early 1990s. First, our understanding of the etiology and pathophysiology of chronic sinusitis has improved significantly since that time, as has the medical treatments clinicians have available. Such improvement in knowledge and treatment has led to greater success with initial medical treatment. In addition, those patients who fail medical therapy may undergo less invasive surgery with balloons, a procedure not available in the early 1990s. As such, the most recalcitrant, complex, difficult patients fail medical therapy and undergo endoscopic sinus surgery. These patient have greater degree of inflammation and infection, which makes the surgery more technically demanding, as visualization is hampered by the increased vascularity of infected and inflamed tissue.

Second, our knowledge of the outcomes of surgery has changed significantly, also greatly increasing the technical demands of the surgery. We now know that stripping of mucosa, removal of turbinates, and minor abrasions to structures such as the nasal septum can contribute to scarring and can lead to significantly worse outcomes. Preserving mucosa and avoiding trauma to adjacent structures increases the technical demands and intensity of the surgery. This is of paramount importance in the frontal recess, where a small amount of scarring can lead to complete obstruction of the frontal sinus and the need for revision surgery. We did not have this knowledge back in the early 1990s and, as such, the technical proficiency required to perform the surgery is much greater.

Lastly, the surgery itself has changed significantly since the early 1990s. In the past, the dictum was to avoid critical structures such as the ethmoid skull base and lamina papyracea along the orbit. Dissection stopped before ever reaching these areas. We now know, and teach future physicians, that in order to obtain optimal outcomes, a comprehensive dissection must be performed. This involves removing partitions along the medial orbital wall, along the ethmoid skull base, and widely opening the sphenoid sinus in the vicinity of the carotid artery and optic nerve. This change represents the most technically challenging and intense portions of endoscopic sinus surgery. This and the other reasons above represent the increase in intensity from the original valuation in the 1990s when compared to present day.

The following table provides other RUC reviewed codes that are similar in time and work to provide additional support for the recommended value for CPT code 31256, as they demonstrate relativity across the fee schedule.

#### *Additional Reference Codes*

CPT Code	Long Desc	Work RVU	Pre	Intra Time	Post Time	Total Time	Most Recent RUC Review	IWPUT	2015 Utilization
<b>31256</b>	<b>Nasal/sinus endoscopy, surgical with maxillary antrostomy</b>	<b>3.29</b>	<b>33</b>	<b>30</b>	<b>20</b>	<b>83</b>		<b>.077</b>	<b>16,055</b>
43212	Esophagoscopy, flexible, transoral; with placement of endoscopic stent (includes pre- and post-dilation and guide wire passage, when performed)	3.5	41	30	15	86	Jan13	0.0772	644
43214	Esophagoscopy, flexible, transoral; with dilation of esophagus with balloon (30 mm diameter or larger) (includes fluoroscopic guidance, when performed)	3.5	41	30	16	87	Jan13	0.0765	189
52214	Cystourethroscopy, with fulguration (including cryosurgery or laser surgery) of trigone, bladder neck, prostatic fossa, urethra, or periurethral glands	3.5	29	30	20	79	Jan12	0.0825	20000
45349	Sigmoidoscopy, flexible; with endoscopic mucosal resection	3.62	33	30	15	78	Apr14	0.0872	0
44392	Colonoscopy through stoma; with removal of tumor(s), polyp(s), or other lesion(s) by hot biopsy forceps	3.63	26	30	10	66	Jan14	0.0965	521
43246	Esophagogastroduodenoscopy, flexible, transoral; with directed placement of percutaneous gastrostomy tube	3.66	41	30	15	86	Apr13	0.0826	94189

#### **SERVICES REPORTED WITH MULTIPLE CPT CODES**

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.

- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☒ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☒ Other reason (please explain) The 2012 claims data available when this code family initially hit the RAW screen for services reported together greater than 75% did not indicate these code pairings. The 2014 claims data sent prior to this RUC meeting indicated that while these code combinations are "typically" (i.e. greater than 50% of the time) reported together, they still do not meet the 75% RAW screen threshold.

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

3.	CPT Code	Global	Work RVU	Pre time	Intra time	Post Time	TOTAL RVW w/ MPPR
4.	31255	000	6.95	30	68	30	8.60
5.	31256	000	3.29	33	45	18	

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 31256

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Otolaryngology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 48165

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. This is the RUC database frequency for Medicare patients multiplied by three.

Specialty Otolaryngology Frequency 48165 Percentage 100.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?

16,055 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This is based on the RUC database volume for CY 2015

Specialty Otolaryngology Frequency 16055 Percentage 100.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States?

**Berenson-Eggers Type of Service (BETOS) Assignment**

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Procedures

BETOS Sub-classification:

Minor procedure

BETOS Sub-classification Level II:

Musculoskeletal

---

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 31256

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

SUMMARY OF RECOMMENDATION**

CPT Code: 31267      Tracking Number   R8

Original Specialty Recommended RVU: **5.28**Presented Recommended RVU: **4.68**

Global Period: 000

RUC Recommended RVU: **4.68**

CPT Descriptor: Nasal/sinus endoscopy, surgical with removal of tissue from maxillary sinus

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 48 year-old female presents with chronic right maxillary sinusitis and ipsilateral nasal airway obstruction, which has been refractory to medical management. Endoscopic examination reveals a large polyp extending through the natural ostium of the maxillary sinus and into the nasopharynx. CT scan demonstrates opacification of the right maxillary sinus and a soft tissue mass filling the posterior nasal cavity and nasopharynx. A nasal/sinus endoscopy with maxillary antrostomy with removal of tissue from the maxillary sinus is performed.

Percentage of Survey Respondents who found Vignette to be Typical: 95%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The patient's records and imaging studies are reviewed for surgical planning. Pre-anesthesia studies are reviewed, the patient is examined, and a history and physical examination note is written. Relative risks and benefits of the surgery are discussed with the patient. . Mark sinus side for procedure. Review airway and medical management with anesthesiologist. Review planned procedure with OR staff. Verify that all required instruments and supplies are available. Change into scrub clothes. Ensure that radiographic images are available in the OR. The patient is transported to the surgical suite, where positioning and general anesthesia is induced. Monitor/assist with positioning of the patient, endoscopy and video equipment, and anesthesia lines. Pledgets soaked with topical decongestant are placed and adequate time is given to allow for decongestant to take place. Pledgets are then removed and injection with local anesthesia with vasoconstrictors is performed. Pledgets soaked with topical decongestant are then placed again. A time-out is performed. The surgeon scrubs and gowns. The patient is prepped and draped

Description of Intra-Service Work: Previously placed pledgets are removed. Comprehensive nasal endoscopy is performed and pre-surgical findings are confirmed. Topical decongestion is performed in the middle meatus. An intranasal anesthetic/vasoconstrictive agent is injected. The middle turbinate is medialized. Inflammatory tissue extending into the middle meatus and nasal cavity from the maxillary sinus is removed to provide visualization. After hemostasis, the uncinate process is identified and resected. The orbital wall (lamina papyracea) is identified within the infundibulum. The natural ostium of maxillary sinus is identified and surgically opened posteriorly and inferiorly. The antrum of the maxillary sinus is inspected and inflammatory tissue and inspissated debris within the maxillary antrum is surgically removed. Following completion of the procedure, hemostasis is ensured and packing or a stent may be placed within the middle meatus.

Description of Post-Service Work: Monitor patient during reversal of anesthesia. Discuss postoperative recovery care with anesthesia and nursing staff. Discuss procedure and findings with family in the waiting area. Write postoperative note. Dictate operative note and copy to referring physician. Prior to discharge, examine patient and write prescriptions and

supplies needed for post-discharge. Perform medication reconciliation. Review post-discharge wound care and activity limitations with the patient and family and write discharge instructions.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Reason for Survey:** This family of codes is being reviewed following the October 2016 CPT meeting where the CPT Editorial Panel approved the addition of 5 codes 31XX1-31XX5 to report bundled nasal endoscopy services (X2-X5) in response to identification in RAW screen for services reported together with more than 75% frequency and revision of parentheticals for codes 31238 and 31254, 31255, 31276, 31287, 31288, 31296 and 31297. CPT 312XX1 represents a new code entirely. The existing endoscopic sinus surgery family of codes 31254-88 were also captured by a CMS high expenditure screen. Separately, the balloon sinuplasty codes were captured by the new technology screen as well as the reported together greater than 75% of the time screen, resulting in our specialty's decision to take all of the codes on the reported together screen to CPT in one sitting, and ultimately review them as a family at the January 2017 RUC meeting.

**Background on prior valuations:** CPT codes 31254-31276 were last valued by the AMA RUC in 1994 and CPT 31287 and 31288 were valued in 1993. CPT codes 31295-31297 were first valued by the RUC in 2010 as new technology. CPT 312XX1-X5 are new codes and have never been RUC valued.

**Survey Sample:**

The survey data and recommendations are based upon a Random Sample of Applicable Subsets (general oto, rhinology, allergy) of American Academy of Otolaryngology-Head and Neck Surgery (AAO-HNS), American Rhinologic Society (ARS), and American Academy of Otolaryngic Allergy (AAOA) members. The total sample size was 4138 otolaryngologists.

**Reference Service List Background:** As a reminder to our reviewers, we note that this tab was taken before the Research Subcommittee to review the revised vignettes for all existing codes as well as the reference service list for the survey. We struggled to compile an RSL that included an appropriate range of values for this family of codes given that the bundled codes were expected to be valued well above the highest RVU in the current family of services (CPT 31276 at 8.84 RVUs). We noted to Research that there are very limited RVU options in the 8-13 RVU range that are 000 globals which forced the inclusion of many surgical procedures that are not performed by Otolaryngologists, but we hoped would be familiar enough to them to use as comparators for the procedures being

surveyed. Additionally, 2-3 codes that were “CMS Revised” were included on the on the RSL in order to avoid large gaps value between codes.

In addition, one code was included at the higher range of the RSL, CPT 93582 Percutaneous transcatheter closure of patent ductus arteriosus, which was valued by the RUC in January 2013. This code is marked as “do not use to value physician work” in the RUC database, however, that label does not export out when codes marked as such are captured in a broader RUC database search. The rationale given for this designation is that “*The RUC recommends flagging this code in the RUC database as not to use to validate physician work because the median survey intra-time may not reflect the appropriate intra-service time compared to those who frequently perform this service.*” Further review of the code history indicates that this procedure is performed on infants and there was some question as to whether 60 minutes was sufficient time to perform this procedure and the survey data indicated those who performed the service more frequently indicated that 75 minutes was more typical. Given this, it was an oversight on our part that this code was included in the RSL. It was chosen as the number 1 or 2 KRS for a handful of codes, which is reflected in the SORs. In order to provide greater transparency to our reviewers, we have listed the other top KRS codes beyond 1 and 2 for our reviewers in cases where 93582 was chosen. We would note that in virtually all instances where 93582 was used as a KRS by respondents, we are not recommending a value anywhere near the RVUs assigned to that code (12.56 RVUs).

### **Physician Time:**

#### ***Pre-Service Time***

Our expert panel selected pre-service package 3 (Straightforward Patient/Difficult Procedure) for this code based on the fact that the procedure is typically performed in the facility setting using general anesthesia. We are requesting that 5 additional minutes from the surveyee indicated positioning time be added to the package’s 3 minutes as we believe survey respondents incorrectly assigned time for the multiple applications of topical decongestant in the positioning time. As is indicated in our description of work, pledgets soaked with topical decongestant are placed and adequate time is given to allow for decongestant to take place. Pledgets are then removed and injection with local anesthesia with vasoconstrictors is performed. Pledgets soaked with topical decongestant are then placed again. This reflects the typical flow of the operation involves the surgeon performing this prior to scrubbing and gowning. This additional time provided by the survey respondents was provided consistently across the family, and we feel explains the consistency in increased time provided in positioning.

**Given the extra time this requires, we are requesting an additional 5 minutes to the 3 minutes already allotted in this package for use of general anesthesia. This is the accepted standard for the use of local / topical anesthetic for office based procedures. In all other cases we are recommending taking the lesser of the survey or the pre-time package. Therefore, we recommend a total pretime of 33 minutes.**

#### ***Intra-Service Time***

**We are recommending our median survey time of 40 minutes for intra service work.**

#### ***Post-Service Time***

The expert panel selected post-package 9A (General Anesthesia or Complex Regional Block/ Straightforward Procedure) for this code. We are recommending taking the lesser of the survey or the pre-time package. **The expert panel recommends a post-service time of 20 minutes.**

#### ***Physician Work RVU***

Upon review of the survey results, the expert panel **recommends a work RVU of 4.68 with a total time of 93 minutes, based on a crosswalk to CPT 45393** Colonoscopy, flexible; with decompression (for pathologic distention) (eg, volvulus, megacolon), including placement of decompression tube, when performed.

#### ***Comments on Increased Intensity***

Our expert panel feels that the intensity of the endoscopic sinus surgery codes has changed since the first valuation in the early 1990s. First, our understanding of the etiology and pathophysiology of chronic sinusitis has improved significantly since that time, as has the medical treatments clinicians have available. Such improvement in knowledge and treatment has led to greater success with initial medical treatment. In addition, those patients who fail medical therapy may undergo less invasive surgery with balloons, a procedure not available in the early 1990s. As such, the most recalcitrant, complex, difficult patients fail medical therapy and undergo endoscopic sinus surgery. These patient

have greater degree of inflammation and infection, which makes the surgery more technically demanding, as visualization is hampered by the increased vascularity of infected and inflamed tissue.

Second, our knowledge of the outcomes of surgery has changed significantly, also greatly increasing the technical demands of the surgery. We now know that stripping of mucosa, removal of turbinates, and minor abrasions to structures such as the nasal septum can contribute to scarring and can lead to significantly worse outcomes. Preserving mucosa and avoiding trauma to adjacent structures increases the technical demands and intensity of the surgery. This is of paramount importance in the frontal recess, where a small amount of scarring can lead to complete obstruction of the frontal sinus and the need for revision surgery. We did not have this knowledge back in the early 1990s and, as such, the technical proficiency required to perform the surgery is much greater.

Lastly, the surgery itself has changed significantly since the early 1990s. In the past, the dictum was to avoid critical structures such as the ethmoid skull base and lamina papyracea along the orbit. Dissection stopped before ever reaching these areas. We now know, and teach future physicians, that in order to obtain optimal outcomes, a comprehensive dissection must be performed. This involves removing partitions along the medial orbital wall, along the ethmoid skull base, and widely opening the sphenoid sinus in the vicinity of the carotid artery and optic nerve. This change represents the most technically challenging and intense portions of endoscopic sinus surgery. This and the other reasons above represent the increase in intensity from the original valuation in the 1990s when compared to present day.

The following table provides other RUC reviewed codes that are similar in time and work to provide additional support for the recommended value for CPT code 31267, as they demonstrate relativity across the fee schedule.

#### *Additional Reference Codes*

## SERVICES REPORTED WITH MULTIPLE CPT CODES

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☒ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☒ Other reason (please explain) The 2012 claims data available when this code family initially hit the RAW screen for services reported together greater than 75% did not indicate these code pairings. The 2014 claims data sent prior to this RUC meeting indicated that while these code combinations are "typically" (i.e. greater than 50% of the time) reported together, they still do not meet the 75% RAW screen threshold.

- Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 31267

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Otolaryngology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 79740

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. This is the RUC database frequency for Medicare patients multiplied by three.

Specialty Otolaryngology Frequency 79740 Percentage 100.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?

26,580 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This is based on the RUC database volume for CY 2015

Specialty Otolaryngology Frequency 26580 Percentage 100.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States?

### Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Procedures

BETOS Sub-classification:

Minor procedure

BETOS Sub-classification Level II:

Musculoskeletal

### Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 31267

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

SUMMARY OF RECOMMENDATION**

CPT Code: 31287      Tracking Number   R10

Original Specialty Recommended RVU: **3.91**Presented Recommended RVU: **3.50**

Global Period: 000

RUC Recommended RVU: **3.50**

CPT Descriptor: Nasal/sinus endoscopy; surgical, with sphenoidotomy

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 48 year-old female presents with chronic right sphenoid sinusitis, which has been refractory to medical management. Endoscopic examination reveals edema and/or mucopurulent within the ipsilateral sphenoethmoid recess. CT scan demonstrates opacification of the right sphenoid sinus. A nasal/sinus endoscopy with sphenoidotomy is performed.

Percentage of Survey Respondents who found Vignette to be Typical: 98%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The patient's records and imaging studies are reviewed for surgical planning. Pre-anesthesia studies are reviewed, the patient is examined, and a history and physical examination note is written. Relative risks and benefits of the surgery are discussed with the patient. Mark sinus side for procedure. Review airway and medical management with anesthesiologist. Review planned procedure with OR staff. Verify that all required instruments and supplies are available. Change into scrub clothes. Ensure that radiographic images are available in the OR. The patient is transported to the surgical suite, where positioning and general anesthesia is induced. Monitor/assist with positioning of the patient, endoscopy and video equipment, and anesthesia lines. Pledgets soaked with topical decongestant are placed and adequate time is given to allow for decongestant to take place. Pledgets are then removed and injection with local anesthesia with vasoconstrictors is performed. Pledgets soaked with topical decongestant are then placed again. A time-out is performed. The surgeon scrubs and gowns. The patient is prepped and draped

Description of Intra-Service Work: Previously placed pledgets are removed. Comprehensive nasal endoscopy is performed and pre-surgical findings are confirmed. Topical decongestion is performed in the middle meatus. An intranasal anesthetic/vasoconstrictive agent is injected. The middle turbinate is lateralized and the superior turbinate is identified. The natural ostium of the sphenoid sinus is identified and surgically enlarged. The anterior face of the sphenoid is resected superiorly to sphenoid planum (sphenoid skull base) and laterally to the level of the orbit. The sphenoid sinus is irrigated and/or suctioned. Following completion of the procedure, hemostasis is ensured and packing or a stent may be placed within the middle meatus.

Description of Post-Service Work: Monitor patient during reversal of anesthesia. Discuss postoperative recovery care with anesthesia and nursing staff. Discuss procedure and findings with family in the waiting area. Write postoperative note. Dictate operative note and copy to referring physician. Prior to discharge, examine patient and write prescriptions and supplies needed for post-discharge. Perform medication reconciliation. Review post-discharge wound care and activity limitations with the patient and family and write discharge instructions.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Reason for Survey:** This family of codes is being reviewed following the October 2016 CPT meeting where the CPT Editorial Panel approved the addition of 5 codes 31XX1-31XX5 to report bundled nasal endoscopy services (X2-X5) in response to identification in RAW screen for services reported together with more than 75% frequency and revision of parentheticals for codes 31238 and 31254, 31255, 31276, 31287, 31288, 31296 and 31297. CPT 312XX1 represents a new code entirely. The existing endoscopic sinus surgery family of codes 31254-88 were also captured by a CMS high expenditure screen. Separately, the balloon sinuplasty codes were captured by the new technology screen as well as the reported together greater than 75% of the time screen, resulting in our specialty's decision to take all of the codes on the reported together screen to CPT in one sitting, and ultimately review them as a family at the January 2017 RUC meeting.

**Background on prior valuations:** CPT codes 31254-31276 were last valued by the AMA RUC in 1994 and CPT 31287 and 31288 were valued in 1993. CPT codes 31295-31297 were first valued by the RUC in 2010 as new technology. CPT 312XX1-X5 are new codes and have never been RUC valued.

**Survey Sample:**

The survey data and recommendations are based upon a Random Sample of Applicable Subsets (general oto, rhinology, allergy) of American Academy of Otolaryngology-Head and Neck Surgery (AAO-HNS), American Rhinologic Society (ARS), and American Academy of Otolaryngic Allergy (AAOA) members. The total sample size was 4138 otolaryngologists.

**Reference Service List Background:** As a reminder to our reviewers, we note that this tab was taken before the Research Subcommittee to review the revised vignettes for all existing codes as well as the reference service list for the survey. We struggled to compile an RSL that included an appropriate range of values for this family of codes given that the bundled codes were expected to be valued well above the highest RVU in the current family of services (CPT 31276 at 8.84 RVUs).

We noted to Research that there are very limited RVU options in the 8-13 RVU range that are 000 globals which forced the inclusion of many surgical procedures that are not performed by Otolaryngologists, but we hoped would be familiar enough to them to use as comparators for the procedures being surveyed. Additionally, 2-3 codes that were "CMS Revised" were included on the on the RSL in order to avoid large gaps value between codes.

In addition, one code was included at the higher range of the RSL, CPT 93582 Percutaneous transcatheter closure of patent ductus arteriosus, which was valued by the RUC in January 2013. This code is marked as “do not use to value physician work” in the RUC database, however, that label does not export out when codes marked as such are captured in a broader RUC database search. The rationale given for this designation is that *“The RUC recommends flagging this code in the RUC database as not to use to validate physician work because the median survey intra-time may not reflect the appropriate intra-service time compared to those who frequently perform this service.”* Further review of the code history indicates that this procedure is performed on infants and there was some question as to whether 60 minutes was sufficient time to perform this procedure and the survey data indicated those who performed the service more frequently indicated that 75 minutes was more typical. Given this, it was an oversight on our part that this code was included in the RSL. It was chosen as the number 1 or 2 KRS for a handful of codes, which is reflected in the SORs. In order to provide greater transparency to our reviewers, we have listed the other top KRS codes beyond 1 and 2 for our reviewers in cases where 93582 was chosen. We would note that in virtually all instances where 93582 was used as a KRS by respondents, we are not recommending a value anywhere near the RVUs assigned to that code (12.56 RVUs).

### **Physician Time:**

#### ***Pre-Service Time***

Our expert panel selected pre-service package 3 (Straightforward Patient/Difficult Procedure) for this code based on the fact that the procedure is typically performed in the facility setting using general anesthesia. We are requesting that 5 additional minutes from the surveyee indicated positioning time be added to the package’s 3 minutes as we believe survey respondents incorrectly assigned time for the multiple applications of topical decongestant in the positioning time. As is indicated in our description of work, pledgets soaked with topical decongestant are placed and adequate time is given to allow for decongestant to take place. Pledgets are then removed and injection with local anesthesia with vasoconstrictors is performed. Pledgets soaked with topical decongestant are then placed again. This reflects the typical flow of the operation involves the surgeon performing this prior to scrubbing and gowning. This additional time provided by the survey respondents was provided consistently across the family, and we feel explains the consistency in increased time provided in positioning.

**Given the extra time this requires, we are requesting an additional 5 minutes to the 3 minutes already allotted in this package for use of general anesthesia. This is the accepted standard for the use of local / topical anesthetic for office based procedures. In all other cases we are recommending taking the lesser of the survey or the pre-time package. Therefore, we recommend a total pretime of 36 minutes.**

#### ***Intra-Service Time***

**We are recommending our median survey time of 30 minutes for intra service work.**

#### ***Post-Service Time***

The expert panel selected post-package 9A (General Anesthesia or Complex Regional Block/ Straightforward Procedure) for this code. We are recommending taking the lesser of the survey or the pre-time package. **The expert panel recommends a post-service time of 20 minutes.**

#### ***Physician Work RVU***

Upon review of the survey results, the expert panel **recommends a work value of 3.50 with a total of 86 minutes, based on a crosswalk to CPT 36473 Endovenous ablation therapy of incompetent vein, extremity.**

#### ***Comments on Increased Intensity***

Our expert panel feels that the intensity of the endoscopic sinus surgery codes has changed since the first valuation in the early 1990s. First, our understanding of the etiology and pathophysiology of chronic sinusitis has improved significantly since that time, as has the medical treatments clinicians have available. Such improvement in knowledge and treatment has led to greater success with initial medical treatment. In addition, those patients who fail medical therapy may undergo less invasive surgery with balloons, a procedure not available in the early 1990s. As such, the most recalcitrant, complex, difficult patients fail medical therapy and undergo endoscopic sinus surgery. These patient have greater degree of inflammation and infection, which makes the surgery more technically demanding, as visualization is hampered by the increased vascularity of infected and inflamed tissue.

Second, our knowledge of the outcomes of surgery has changed significantly, also greatly increasing the technical demands of the surgery. We now know that stripping of mucosa, removal of turbinates, and minor abrasions to

structures such as the nasal septum can contribute to scarring and can lead to significantly worse outcomes. Preserving mucosa and avoiding trauma to adjacent structures increases the technical demands and intensity of the surgery. This is of paramount importance in the frontal recess, where a small amount of scarring can lead to complete obstruction of the frontal sinus and the need for revision surgery. We did not have this knowledge back in the early 1990s and, as such, the technical proficiency required to perform the surgery is much greater.

Lastly, the surgery itself has changed significantly since the early 1990s. In the past, the dictum was to avoid critical structures such as the ethmoid skull base and lamina papyracea along the orbit. Dissection stopped before ever reaching these areas. We now know, and teach future physicians, that in order to obtain optimal outcomes, a comprehensive dissection must be performed. This involves removing partitions along the medial orbital wall, along the ethmoid skull base, and widely opening the sphenoid sinus in the vicinity of the carotid artery and optic nerve. This change represents the most technically challenging and intense portions of endoscopic sinus surgery. This and the other reasons above represent the increase in intensity from the original valuation in the 1990s when compared to present day.

The following table provides other RUC reviewed codes that are similar in time and work to provide additional support for the recommended value for CPT code 31287, as they demonstrate relativity across the fee schedule.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☒ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☒ Other reason (please explain) The 2012 claims data available when this code family initially hit the RAW screen for services reported together greater than 75% did not indicate these code pairings. The 2014 claims data sent prior to this RUC meeting indicated that while these code combinations are "typically" (i.e. greater than 50% of the time) reported together, they still do not meet the 75% RAW screen threshold.

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

3.	CPT Code	Global	Work RVU	Pre time	Intra time	Post Time	TOTAL RVW w/ MPPR
4.	31276	000	8.84	30	75	30	10.80
5.	31287	000	3.91	30	45	30	
6.							

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 31287

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Otolaryngology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 26787

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. This is the RUC database frequency for Medicare patients multiplied by three.

Specialty Otolaryngology Frequency 26787 Percentage 100.00 %

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 8,929  
 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This is based on the RUC database volume for CY 2015

Specialty Otolaryngology	Frequency 8929	Percentage 100.00 %
--------------------------	----------------	---------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Do many physicians perform this service across the United States? Yes

---

### **Berenson-Eggers Type of Service (BETOS) Assignment**

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Procedures

BETOS Sub-classification:

Minor procedure

BETOS Sub-classification Level II:

Musculoskeletal

---

### **Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 31287

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

SUMMARY OF RECOMMENDATION**

CPT Code: 31288      Tracking Number   R11

Original Specialty Recommended RVU: **4.57**Presented Recommended RVU: **4.10**

Global Period: 000

RUC Recommended RVU: **4.10**

CPT Descriptor: Nasal/sinus endoscopy, surgical with removal of tissue from sphenoid sinus

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 48 year-old female presents with chronic right sphenoid sinusitis, which has been refractory to medical management. Endoscopic examination reveals edema and a polypoid mass within the ipsilateral sphenoethmoid recess. CT scan demonstrates opacification of the right sphenoid sinus. A nasal/sinus endoscopy with sphenoidotomy with removal of tissue is performed.

Percentage of Survey Respondents who found Vignette to be Typical: 97%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is;  
Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The patient's records and imaging studies are reviewed for surgical planning. Pre-anesthesia studies are reviewed, the patient is examined, and a history and physical examination note is written. Relative risks and benefits of the surgery are discussed with the patient. Mark sinus side for procedure. Review airway and medical management with anesthesiologist. Review planned procedure with OR staff. Verify that all required instruments and supplies are available. Change into scrub clothes. Ensure that radiographic images are available in the OR. The patient is transported to the surgical suite, where positioning and general anesthesia is induced. Monitor/assist with positioning of the patient, endoscopy and video equipment, and anesthesia lines. Pledgets soaked with topical decongestant are placed and adequate time is given to allow for decongestant to take place. Pledgets are then removed and injection with local anesthesia with vasoconstrictors is performed. Pledgets soaked with topical decongestant are then placed again. A time-out is performed. The surgeon scrubs and gowns. The patient is prepped and draped.

Description of Intra-Service Work: Previously placed pledgets are removed. Comprehensive nasal endoscopy is performed and pre-surgical findings are confirmed. Topical decongestion is performed in the middle meatus. An intranasal anesthetic/vasoconstrictive agent is injected. The middle turbinate is lateralized and the superior turbinate is identified. Inflammatory tissue extending into the sphenoethmoid recess and nasal cavity from the sphenoid sinus is removed to provide visualization. After hemostasis, the natural ostium of the sphenoid sinus is identified and surgically enlarged. The anterior face of the sphenoid is resected superiorly to sphenoid planum (sphenoid skull base) and laterally to the level of the orbit. The sphenoid sinus is irrigated and/or suctioned. . The sphenoid sinus is inspected and inflammatory tissue and inspissated debris within the sinus is surgically removed. Following completion of the procedure, hemostasis is ensured and packing or a stent may be placed within the middle meatus.

Description of Post-Service Work: Monitor patient during reversal of anesthesia. Discuss postoperative recovery care with anesthesia and nursing staff. Discuss procedure and findings with family in the waiting area. Write postoperative note. Dictate operative note and copy to referring physician. Prior to discharge, examine patient and write prescriptions and supplies needed for post-discharge. Perform medication reconciliation. Review post-discharge wound care and activity limitations with the patient and family and write discharge instructions.

Overall intensity/complexity	0.93	0.69
------------------------------	------	------

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Reason for Survey:** This family of codes is being reviewed following the October 2016 CPT meeting where the CPT Editorial Panel approved the addition of 5 codes 31XX1-31XX5 to report bundled nasal endoscopy services (X2-X5) in response to identification in RAW screen for services reported together with more than 75% frequency and revision of parentheticals for codes 31238 and 31254, 31255, 31276, 31287, 31288, 31296 and 31297. CPT 312XX1 represents a new code entirely. The existing endoscopic sinus surgery family of codes 31254-88 were also captured by a CMS high expenditure screen. Separately, the balloon sinuplasty codes were captured by the new technology screen as well as the reported together greater than 75% of the time screen, resulting in our specialty's decision to take all of the codes on the reported together screen to CPT in one sitting, and ultimately review them as a family at the January 2017 RUC meeting.

**Background on prior valuations:** CPT codes 31254-31276 were last valued by the AMA RUC in 1994 and CPT 31287 and 31288 were valued in 1993. CPT codes 31295-31297 were first valued by the RUC in 2010 as new technology. CPT 312XX1-X5 are new codes and have never been RUC valued.

**Survey Sample:**

The survey data and recommendations are based upon a Random Sample of Applicable Subsets (general oto, rhinology, allergy) of American Academy of Otolaryngology-Head and Neck Surgery (AAO-HNS), American Rhinologic Society (ARS), and American Academy of Otolaryngic Allergy (AAOA) members. The total sample size was 4138 otolaryngologists.

**Reference Service List Background:** As a reminder to our reviewers, we note that this tab was taken before the Research Subcommittee to review the revised vignettes for all existing codes as well as the reference service list for the survey. We struggled to compile an RSL that included an appropriate range of values for this family of codes given that the bundled codes were expected to be valued well above the highest RVU in the current family of services (CPT 31276 at 8.84 RVUs).

We noted to Research that there are very limited RVU options in the 8-13 RVU range that are 000 globals which forced the inclusion of many surgical procedures that are not performed by Otolaryngologists, but we hoped would be familiar enough to them to use as comparators for the procedures being surveyed. Additionally, 2-3 codes that were "CMS Revised" were included on the on the RSL in order to avoid large gaps value between codes.

In addition, one code was included at the higher range of the RSL, CPT 93582 Percutaneous transcatheter closure of patent ductus arteriosus, which was valued by the RUC in January 2013. This code is marked as “do not use to value physician work” in the RUC database, however, that label does not export out when codes marked as such are captured in a broader RUC database search. The rationale given for this designation is that *“The RUC recommends flagging this code in the RUC database as not to use to validate physician work because the median survey intra-time may not reflect the appropriate intra-service time compared to those who frequently perform this service.”* Further review of the code history indicates that this procedure is performed on infants and there was some question as to whether 60 minutes was sufficient time to perform this procedure and the survey data indicated those who performed the service more frequently indicated that 75 minutes was more typical. Given this, it was an oversight on our part that this code was included in the RSL. It was chosen as the number 1 or 2 KRS for a handful of codes, which is reflected in the SORs. In order to provide greater transparency to our reviewers, we have listed the other top KRS codes beyond 1 and 2 for our reviewers in cases where 93582 was chosen. We would note that in virtually all instances where 93582 was used as a KRS by respondents, we are not recommending a value anywhere near the RVUs assigned to that code (12.56 RVUs).

### **Physician Time:**

#### ***Pre-Service Time***

Our expert panel selected pre-service package 3 (Straightforward Patient/Difficult Procedure) for this code based on the fact that the procedure is typically performed in the facility setting using general anesthesia. We are requesting that 5 additional minutes from the surveyee indicated positioning time be added to the package’s 3 minutes as we believe survey respondents incorrectly assigned time for the multiple applications of topical decongestant in the positioning time. As is indicated in our description of work, pledgets soaked with topical decongestant are placed and adequate time is given to allow for decongestant to take place. Pledgets are then removed and injection with local anesthesia with vasoconstrictors is performed. Pledgets soaked with topical decongestant are then placed again. This reflects the typical flow of the operation involves the surgeon performing this prior to scrubbing and gowning. This additional time provided by the survey respondents was provided consistently across the family, and we feel explains the consistency in increased time provided in positioning.

**Given the extra time this requires, we are requesting an additional 5 minutes to the 3 minutes already allotted in this package for use of general anesthesia. This is the accepted standard for the use of local / topical anesthetic for office based procedures. In all other cases we are recommending taking the lesser of the survey or the pre-time package. Therefore, we recommend a total pretime of 36 minutes.**

#### ***Intra-Service Time***

**We are recommending our median survey time of 40 minutes for intra service work.**

#### ***Post-Service Time***

The expert panel selected post-package 9A (General Anesthesia or Complex Regional Block/ Straightforward Procedure) for this code. We are recommending taking the lesser of the survey or the pre-time package. **The expert panel recommends a post-service time of 20 minutes.**

#### ***Physician Work RVU***

Upon review of the survey results, the expert panel **recommends a value of 4.10 with a total time of 96 minutes, based on a crosswalk to CPT 44406** Colonoscopy through stoma; with endoscopic ultrasound examination, limited to the sigmoid, descending, transverse, or ascending colon and cecum and adjacent structures.

#### ***Comments on Increased Intensity***

Our expert panel feels that the intensity of the endoscopic sinus surgery codes has changed since the first valuation in the early 1990s. First, our understanding of the etiology and pathophysiology of chronic sinusitis has improved significantly since that time, as has the medical treatments clinicians have available. Such improvement in knowledge and treatment has led to greater success with initial medical treatment. In addition, those patients who fail medical therapy may undergo less invasive surgery with balloons, a procedure not available in the early 1990s. As such, the most recalcitrant, complex, difficult patients fail medical therapy and undergo endoscopic sinus surgery. These patient have greater degree of inflammation and infection, which makes the surgery more technically demanding, as visualization is hampered by the increased vascularity of infected and inflamed tissue.

Second, our knowledge of the outcomes of surgery has changed significantly, also greatly increasing the technical demands of the surgery. We now know that stripping of mucosa, removal of turbinates, and minor abrasions to structures such as the nasal septum can contribute to scarring and can lead to significantly worse outcomes. Preserving mucosa and avoiding trauma to adjacent structures increases the technical demands and intensity of the surgery. This is of paramount importance in the frontal recess, where a small amount of scarring can lead to complete obstruction of the frontal sinus and the need for revision surgery. We did not have this knowledge back in the early 1990s and, as such, the technical proficiency required to perform the surgery is much greater.

Lastly, the surgery itself has changed significantly since the early 1990s. In the past, the dictum was to avoid critical structures such as the ethmoid skull base and lamina papyracea along the orbit. Dissection stopped before ever reaching these areas. We now know, and teach future physicians, that in order to obtain optimal outcomes, a comprehensive dissection must be performed. This involves removing partitions along the medial orbital wall, along the ethmoid skull base, and widely opening the sphenoid sinus in the vicinity of the carotid artery and optic nerve. This change represents the most technically challenging and intense portions of endoscopic sinus surgery. This and the other reasons above represent the increase in intensity from the original valuation in the 1990s when compared to present day.

The following table provides other RUC reviewed codes that are similar in time and work to provide additional support for the recommended value for CPT code 31288, as they demonstrate relativity across the fee schedule.

#### *Additional Reference Codes*

<b>CPT Code</b>	<b>Long Desc</b>	<b>Work RVU</b>	<b>Pre</b>	<b>Intra Time</b>	<b>Post Time</b>	<b>Total Time</b>	<b>IWPUT</b>	<b>2015 Utilization</b>

43253	Esophagogastroduodenoscopy, flexible, transoral; with transendoscopic ultrasound-guided transmural injection of diagnostic or therapeutic substance(s) (eg, anesthetic, neurolytic agent) or fiducial marker(s) (includes endoscopic ultrasound examination of the esophagus, stomach, and either the duodenum or a surgically altered stomach where the jejunum is examined distal to the anastomosis)	4.83	41	40	23	104	Apr13	0.0867

## SERVICES REPORTED WITH MULTIPLE CPT CODES

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.  
☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.  
☒ Multiple codes allow flexibility to describe exactly what components the procedure included.  
☐ Multiple codes are used to maintain consistency with similar codes.  
☐ Historical precedents.  
☒ Other reason (please explain) The 2012 claims data available when this code family initially hit the RAW screen for services reported together greater than 75% did not indicate these code pairings. The 2014 claims data sent prior to this RUC meeting indicated that while these code combinations are "typically" (i.e. greater than 50% of the time) reported together, they still do not meet the 75% RAW screen threshold.

- Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

3.	CPT Code	Global	Work RVU	Pre time	Intra time	Post Time	TOTAL RVW w/ MPPR
4.	31288	000	4.57	30	60	30	7.74
5.	31267	000	5.45	30	50	30	
6.	CPT Code	Global	Work RVU	Pre time	Intra time	Post Time	TOTAL RVW w/ MPPR
7.	31276	000	8.84	30	75	30	11.13
8.	31288	000	4.57	30	60	30	

**FREQUENCY INFORMATION**

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 31288

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Otolaryngology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 29949

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. This is the RUC database frequency for Medicare patients multiplied by three.

Specialty Otolaryngology Frequency 29949 Percentage 100.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 9,983

If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This is based on the RUC database volume for CY 2015

Specialty Otolaryngology Frequency 9983 Percentage 100.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

**Berenson-Eggers Type of Service (BETOS) Assignment**

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Procedures

BETOS Sub-classification:

Minor procedure

BETOS Sub-classification Level II:

Musculoskeletal

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 31288

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 31254      Tracking Number R2

Original Specialty Recommended RVU: **4.64**Presented Recommended RVU: **4.27**

Global Period: 000

RUC Recommended RVU: **4.27**

CPT Descriptor: Nasal/sinus endoscopy, surgical with ethmoidectomy; partial (anterior)

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 48 year-old female presents with chronic left ethmoid sinusitis, which has been refractory to medical management. Endoscopic examination reveals chronic ethmoiditis. CT scan demonstrated opacification of the osteomeatal complex and anterior ethmoid sinuses. A nasal/sinus endoscopy, with ethmoidectomy, partial (anterior) is performed.

Percentage of Survey Respondents who found Vignette to be Typical: 98%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The patient's records and imaging studies are reviewed for surgical planning. Pre-anesthesia studies are reviewed, the patient is examined, and a history and physical examination note is written. Relative risks and benefits of the surgery are discussed with the patient. . Mark sinus side for procedure. Review airway and medical management with anesthesiologist. Review planned procedure with OR staff. Verify that all required instruments and supplies are available. Change into scrub clothes. Ensure that radiographic images are available in the OR. The patient is transported to the surgical suite, where positioning and general anesthesia is induced. Monitor/assist with positioning of the patient, endoscopy and video equipment, and anesthesia lines. Pledgets soaked with topical decongestant are placed and adequate time is given to allow for decongestant to take place. Pledgets are then removed and injection with local anesthesia with vasoconstrictors is performed. Pledgets soaked with topical decongestant are then placed again. A time-out is performed. The surgeon scrubs and gowns. The patient is prepped and draped

Description of Intra-Service Work: Previously placed pledgets are removed. Comprehensive nasal endoscopy is performed and pre-surgical findings are confirmed. Topical decongestion is performed in the middle meatus. An intranasal anesthetic/vasoconstrictive agent is injected. The middle turbinate is medialized. bulla ethmoidalis is entered and its walls removed. Following identification of the orbital wall (lamina papyracea), all ethmoid lamella are removed posteriorly to the level of basal lamella, and superiorly to the level of the ethmoid skull base. The anterior ethmoidal neurovascular bundle is identified and preserved. Following completion of the procedure, hemostasis is ensured and packing or a stent may be placed within the middle meatus.

Description of Post-Service Work: Monitor patient during reversal of anesthesia. Discuss postoperative recovery care with anesthesia and nursing staff. Discuss procedure and findings with family in the waiting area. Write postoperative note. Dictate operative note and copy to referring physician. Prior to discharge, examine patient and write prescriptions and supplies needed for post-discharge. Perform medication reconciliation. Review post-discharge wound care and activity limitations with the patient and family and write discharge instructions.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Reason for Survey:** This family of codes is being reviewed following the October 2016 CPT meeting where the CPT Editorial Panel approved the addition of 5 codes 31XX1-31XX5 to report bundled nasal endoscopy services (X2-X5) in response to identification in RAW screen for services reported together with more than 75% frequency and revision of parentheticals for codes 31238 and 31254, 31255, 31276, 31287, 31288, 31296 and 31297. CPT 312XX1 represents a new code entirely. The existing endoscopic sinus surgery family of codes 31254-88 were also captured by a CMS high expenditure screen. Separately, the balloon sinuplasty codes were captured by the new technology screen as well as the reported together greater than 75% of the time screen, resulting in our specialty's decision to take all of the codes on the reported together screen to CPT in one sitting, and ultimately review them as a family at the January 2017 RUC meeting.

**Background on prior valuations:** CPT codes 31254-31276 were last valued by the AMA RUC in 1994 and CPT 31287 and 31288 were valued in 1993. CPT codes 31295-31297 were first valued by the RUC in 2010 as new technology. CPT 312XX1-X5 are new codes and have never been RUC valued.

**Survey Sample:**

The survey data and recommendations are based upon a Random Sample of Applicable Subsets (general oto, rhinology, allergy) of American Academy of Otolaryngology-Head and Neck Surgery (AAO-HNS), American Rhinologic Society (ARS), and American Academy of Otolaryngic Allergy (AAOA) members. The total sample size was 4138 otolaryngologists.

**Reference Service List Background:** As a reminder to our reviewers, we note that this tab was taken before the Research Subcommittee to review the revised vignettes for all existing codes as well as the reference service list for the survey. We struggled to compile an RSL that included an appropriate range of values for this family of codes given that the bundled codes were expected to be valued well above the highest RVU in the current family of services (CPT 31276 at 8.84 RVUs).

We noted to Research that there are very limited RVU options in the 8-13 RVU range that are 000 globals which forced the inclusion of many surgical procedures that are not performed by Otolaryngologists, but we hoped would be familiar enough to them to use as comparators for the procedures being surveyed. Additionally, 2-3 codes that were "CMS Revised" were included on the on the RSL in order to avoid large gaps value between codes.

In addition, one code was included at the higher range of the RSL, CPT 93582 Percutaneous transcatheter closure of patent ductus arteriosus, which was valued by the RUC in January 2013. This code is marked as “do not use to value physician work” in the RUC database, however, that label does not export out when codes marked as such are captured in a broader RUC database search. The rationale given for this designation is that *“The RUC recommends flagging this code in the RUC database as not to use to validate physician work because the median survey intra-time may not reflect the appropriate intra-service time compared to those who frequently perform this service.”* Further review of the code history indicates that this procedure is performed on infants and there was some question as to whether 60 minutes was sufficient time to perform this procedure and the survey data indicated those who performed the service more frequently indicated that 75 minutes was more typical. Given this, it was an oversight on our part that this code was included in the RSL. It was chosen as the number 1 or 2 KRS for a handful of codes, which is reflected in the SORs. In order to provide greater transparency to our reviewers, we have listed the other top KRS codes beyond 1 and 2 for our reviewers in cases where 93582 was chosen. We would note that in virtually all instances where 93582 was used as a KRS by respondents, we are not recommending a value anywhere near the RVUs assigned to that code (12.56 RVUs).

### **Physician Time:**

#### ***Pre-Service Time***

Our expert panel selected pre-service package 3 (Straightforward Patient/Difficult Procedure) for this code based on the fact that the procedure is typically performed in the facility setting using general anesthesia. We are requesting that 5 additional minutes from the surveyee indicated positioning time be added to the package’s 3 minutes as we believe survey respondents incorrectly assigned time for the multiple applications of topical decongestant in the positioning time. As is indicated in our description of work, pledgets soaked with topical decongestant are placed and adequate time is given to allow for decongestant to take place. Pledgets are then removed and injection with local anesthesia with vasoconstrictors is performed. Pledgets soaked with topical decongestant are then placed again. This reflects the typical flow of the operation involves the surgeon performing this prior to scrubbing and gowning. This additional time provided by the survey respondents was provided consistently across the family, and we feel explains the consistency in increased time provided in positioning.

**Given the extra time this requires, we are requesting an additional 5 minutes to the 3 minutes already allotted in this package for use of general anesthesia. This is the accepted standard for the use of local / topical anesthetic for office based procedures. In all other cases we are recommending taking the lesser of the survey or the pre-time package. Therefore, we recommend a total pretime of 33 minutes.**

#### ***Intra-Service Time***

**We are recommending our median survey time of 30 minutes for intra service work.**

#### ***Post-Service Time***

The expert panel selected post-package 9A (General Anesthesia or Complex Regional Block/ Straightforward Procedure) for this code. We are recommending taking the lesser of the survey or the pre-time package. **The expert panel recommends a post-service time of 20 minutes.**

#### ***Physician Work RVU***

Upon review of the survey results, the expert panel **recommends a work value of 4.27 with a total of 83 minutes, based on a crosswalk to CPT 43243 Esophagogastroduodenoscopy, flexible, transoral; with injection sclerosis of esophageal/gastric varices.**

#### ***Comments on Increased Intensity***

Our expert panel feels that the intensity of the endoscopic sinus surgery codes has changed since the first valuation in the early 1990s. First, our understanding of the etiology and pathophysiology of chronic sinusitis has improved significantly since that time, as has the medical treatments clinicians have available. Such improvement in knowledge and treatment has led to greater success with initial medical treatment. In addition, those patients who fail medical therapy may undergo less invasive surgery with balloons, a procedure not available in the early 1990s. As such, the most recalcitrant, complex, difficult patients fail medical therapy and undergo endoscopic sinus surgery. These patient have greater degree of inflammation and infection, which makes the surgery more technically demanding, as visualization is hampered by the increased vascularity of infected and inflamed tissue.

Second, our knowledge of the outcomes of surgery has changed significantly, also greatly increasing the technical demands of the surgery. We now know that stripping of mucosa, removal of turbinates, and minor abrasions to structures such as the nasal septum can contribute to scarring and can lead to significantly worse outcomes. Preserving mucosa and avoiding trauma to adjacent structures increases the technical demands and intensity of the surgery. This is of paramount importance in the frontal recess, where a small amount of scarring can lead to complete obstruction of the frontal sinus and the need for revision surgery. We did not have this knowledge back in the early 1990s and, as such, the technical proficiency required to perform the surgery is much greater.

Lastly, the surgery itself has changed significantly since the early 1990s. In the past, the dictum was to avoid critical structures such as the ethmoid skull base and lamina papyracea along the orbit. Dissection stopped before ever reaching these areas. We now know, and teach future physicians, that in order to obtain optimal outcomes, a comprehensive dissection must be performed. This involves removing partitions along the medial orbital wall, along the ethmoid skull base, and widely opening the sphenoid sinus in the vicinity of the carotid artery and optic nerve. This change represents the most technically challenging and intense portions of endoscopic sinus surgery. This and the other reasons above represent the increase in intensity from the original valuation in the 1990s when compared to present day.

The following table provides other RUC reviewed codes that are similar in time and work to provide additional support for the recommended value for CPT code 31254, as they demonstrate relativity across the fee schedule.

supervision and interpretation, intraprocedural roadmapping, and imaging guidance (ultrasound and fluoroscopy), when performed

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 31254

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

SUMMARY OF RECOMMENDATION**

CPT Code: 31255      Tracking Number R3

Original Specialty Recommended RVU: **6.95**Presented Recommended RVU: **5.75**

Global Period: 000

RUC Recommended RVU: **5.75**

CPT Descriptor: Nasal/sinus endoscopy, surgical with ethmoidectomy; total (anterior and posterior)

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 48 year-old female presents with chronic left ethmoid sinusitis, which has been refractory to medical management. Endoscopic examination reveals chronic ethmoiditis. CT scan demonstrated opacification of the osteomeatal complex, anterior, and posterior ethmoid sinuses. A nasal/sinus endoscopy with ethmoidectomy, total (anterior and posterior) is performed.

Percentage of Survey Respondents who found Vignette to be Typical: 98%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The patient's records and imaging studies are reviewed for surgical planning. Pre-anesthesia studies are reviewed, the patient is examined, and a history and physical examination note is written. Relative risks and benefits of the surgery are discussed with the patient. . Mark sinus side for procedure. Review airway and medical management with anesthesiologist. Review planned procedure with OR staff. Verify that all required instruments and supplies are available. Change into scrub clothes. Ensure that radiographic images are available in the OR. The patient is transported to the surgical suite, where positioning and general anesthesia is induced. Monitor/assist with positioning of the patient, endoscopy and video equipment, and anesthesia lines. Pledgets soaked with topical decongestant are placed and adequate time is given to allow for decongestant to take place. Pledgets are then removed and injection with local anesthesia with vasoconstrictors is performed. Pledgets soaked with topical decongestant are then placed again. A time-out is performed. The surgeon scrubs and gowns. The patient is prepped and draped.

Description of Intra-Service Work: Previously placed pledgets are removed. Comprehensive nasal endoscopy is performed and pre-surgical findings are confirmed. Topical decongestion is performed in the middle meatus. An intranasal anesthetic/vasoconstrictive agent is injected. The middle turbinate is medialized. The bulla ethmoidalis is entered and its walls removed. Following identification of the orbital wall (lamina papyracea), all ethmoid lamella are removed posteriorly to the level of basal lamella, and superiorly to the level of the ethmoid skull base. The anterior ethmoidal neurovascular bundle is identified and preserved. After completion of the anterior ethmoidectomy, the basal lamella is incised to gain access to the posterior ethmoid cells. The orbit is identified posterior to the basal lamella and the superior turbinate is identified. All posterior ethmoid lamella are resected posteriorly to the anterior face of the sphenoid sinus, laterally to the orbit (lamina papyracea) and superiorly to the posterior ethmoid skull base. Following completion of the procedure, hemostasis is ensured and packing or a stent may be placed within the middle meatus.

Description of Post-Service Work: Monitor patient during reversal of anesthesia. Discuss postoperative recovery care with anesthesia and nursing staff. Discuss procedure and findings with family in the waiting area. Write postoperative note. Dictate operative note and copy to referring physician. Prior to discharge, examine patient and write prescriptions and

supplies needed for post-discharge. Perform medication reconciliation. Review post-discharge wound care and activity limitations with the patient and family and write discharge instructions.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Reason for Survey:** This family of codes is being reviewed following the October 2016 CPT meeting where the CPT Editorial Panel approved the addition of 5 codes 31XX1-31XX5 to report bundled nasal endoscopy services (X2-X5) in response to identification in RAW screen for services reported together with more than 75% frequency and revision of parentheticals for codes 31238 and 31254, 31255, 31276, 31287, 31288, 31296 and 31297. CPT 312XX1 represents a new code entirely. The existing endoscopic sinus surgery family of codes 31254-88 were also captured by a CMS high expenditure screen. Separately, the balloon sinuplasty codes were captured by the new technology screen as well as the reported together greater than 75% of the time screen, resulting in our specialty's decision to take all of the codes on the reported together screen to CPT in one sitting, and ultimately review them as a family at the January 2017 RUC meeting.

**Background on prior valuations:** CPT codes 31254-31276 were last valued by the AMA RUC in 1994 and CPT 31287 and 31288 were valued in 1993. CPT codes 31295-31297 were first valued by the RUC in 2010 as new technology. CPT 312XX1-X5 are new codes and have never been RUC valued.

**Survey Sample:**

The survey data and recommendations are based upon a Random Sample of Applicable Subsets (general oto, rhinology, allergy) of American Academy of Otolaryngology-Head and Neck Surgery (AAO-HNS), American Rhinologic Society (ARS), and American Academy of Otolaryngic Allergy (AAOA) members. The total sample size was 4138 otolaryngologists.

**Reference Service List Background:** As a reminder to our reviewers, we note that this tab was taken before the Research Subcommittee to review the revised vignettes for all existing codes as well as the reference service list for the survey. We struggled to compile an RSL that included an appropriate range of values for this family of codes given that the bundled codes were expected to be valued well above the highest RVU in the current family of services (CPT 31276 at 8.84 RVUs). We noted to Research that there are very limited RVU options in the 8-13 RVU range that are 000 globals which forced the inclusion of many surgical procedures that are not performed by Otolaryngologists, but we hoped would be familiar

enough to them to use as comparators for the procedures being surveyed. Additionally, 2-3 codes that were “CMS Revised” were included on the on the RSL in order to avoid large gaps value between codes.

In addition, one code was included at the higher range of the RSL, CPT 93582 Percutaneous transcatheter closure of patent ductus arteriosus, which was valued by the RUC in January 2013. This code is marked as “do not use to value physician work” in the RUC database, however, that label does not export out when codes marked as such are captured in a broader RUC database search. The rationale given for this designation is that *“The RUC recommends flagging this code in the RUC database as not to use to validate physician work because the median survey intra-time may not reflect the appropriate intra-service time compared to those who frequently perform this service.”* Further review of the code history indicates that this procedure is performed on infants and there was some question as to whether 60 minutes was sufficient time to perform this procedure and the survey data indicated those who performed the service more frequently indicated that 75 minutes was more typical. Given this, it was an oversight on our part that this code was included in the RSL. It was chosen as the number 1 or 2 KRS for a handful of codes, which is reflected in the SORs. In order to provide greater transparency to our reviewers, we have listed the other top KRS codes beyond 1 and 2 for our reviewers in cases where 93582 was chosen. We would note that in virtually all instances where 93582 was used as a KRS by respondents, we are not recommending a value anywhere near the RVUs assigned to that code (12.56 RVUs).

### **Physician Time:**

#### ***Pre-Service Time***

Our expert panel selected pre-service package 3 (Straightforward Patient/Difficult Procedure) for this code based on the fact that the procedure is typically performed in the facility setting using general anesthesia. We are requesting that 5 additional minutes from the surveyee indicated positioning time be added to the package’s 3 minutes as we believe survey respondents incorrectly assigned time for the multiple applications of topical decongestant in the positioning time. As is indicated in our description of work, pledgets soaked with topical decongestant are placed and adequate time is given to allow for decongestant to take place. Pledgets are then removed and injection with local anesthesia with vasoconstrictors is performed. Pledgets soaked with topical decongestant are then placed again. This reflects the typical flow of the operation involves the surgeon performing this prior to scrubbing and gowning. This additional time provided by the survey respondents was pro

**Given the extra time this requires, we are requesting an additional 5 minutes to the 3 minutes already allotted in this package for use of general anesthesia. . This is the accepted standard for the use of local / topical anesthetic for office based procedures. In all other cases we are recommending taking the lesser of the survey or the pre-time package. Therefore, we recommend a total pretime of 33 minutes.**

#### ***Intra-Service Time***

**We are recommending our median survey time of 45 minutes for intra service work.**

#### ***Post-Service Time***

The expert panel selected post-package 9A (General Anesthesia or Complex Regional Block/ Straightforward Procedure) for this code. We are recommending taking the lesser of the survey or the pre-time package. **The expert panel recommends a post-service time of 20 minutes.**

#### ***Physician Work RVU***

Upon review of the survey results, the expert panel **recommends a value of 5.75 with a total time of 98 minutes, based on a crosswalk to CPT 52351 cystourethroscopy, with ureteroscopy and/or pyeloscopy; diagnostic.**

#### ***Comments on Increased Intensity***

Our expert panel feels that the intensity of the endoscopic sinus surgery codes has changed since the first valuation in the early 1990s. First, our understanding of the etiology and pathophysiology of chronic sinusitis has improved significantly since that time, as has the medical treatments clinicians have available. Such improvement in knowledge and treatment has led to greater success with initial medical treatment. In addition, those patients who fail medical therapy may undergo less invasive surgery with balloons, a procedure not available in the early 1990s. As such, the most recalcitrant, complex, difficult patients fail medical therapy and undergo endoscopic sinus surgery. These patient have greater degree of inflammation and infection, which makes the surgery more technically demanding, as visualization is hampered by the increased vascularity of infected and inflamed tissue.

Second, our knowledge of the outcomes of surgery has changed significantly, also greatly increasing the technical demands of the surgery. We now know that stripping of mucosa, removal of turbinates, and minor abrasions to structures such as the nasal septum can contribute to scarring and can lead to significantly worse outcomes. Preserving mucosa and avoiding trauma to adjacent structures increases the technical demands and intensity of the surgery. This is of paramount importance in the frontal recess, where a small amount of scarring can lead to complete obstruction of the frontal sinus and the need for revision surgery. We did not have this knowledge back in the early 1990s and, as such, the technical proficiency required to perform the surgery is much greater.

Lastly, the surgery itself has changed significantly since the early 1990s. In the past, the dictum was to avoid critical structures such as the ethmoid skull base and lamina papyracea along the orbit. Dissection stopped before ever reaching these areas. We now know, and teach future physicians, that in order to obtain optimal outcomes, a comprehensive dissection must be performed. This involves removing partitions along the medial orbital wall, along the ethmoid skull base, and widely opening the sphenoid sinus in the vicinity of the carotid artery and optic nerve. This change represents the most technically challenging and intense portions of endoscopic sinus surgery. This and the other reasons above represent the increase in intensity from the original valuation in the 1990s when compared to present day.

The following table provides other RUC reviewed codes that are similar in time and work to provide additional support for the recommended value for CPT code 31255, as they demonstrate relativity across the fee schedule.

#### *Additional Reference Codes*

<b>CPT Code</b>	<b>Long Desc</b>	<b>Work RVU</b>	<b>Pre</b>	<b>Intra Time</b>	<b>Post Time</b>	<b>Total Time</b>	<b>Most Recent RUC Review</b>	<b>2015 Utilization</b>

#### **SERVICES REPORTED WITH MULTIPLE CPT CODES**

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☒ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☒ Other reason (please explain) The 2012 claims data available when this code family initially hit the RAW screen for services reported together greater than 75% did not indicate these code pairings. The 2014 claims data sent prior to this RUC meeting indicated that while these code combinations are "typically" (i.e. greater than 50% of the time) reported together, they still do not meet the 75% RAW screen threshold.

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

3.	CPT Code	Global	Work RVU	Pre time	Intra time	Post Time	TOTAL RVW w/ MPPR
4.	31255	000	6.95	30	68	30	8.60
5.	31256	000	3.29	33	45	18

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 31255

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Otolaryngology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 92784

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. This is the RUC database frequency for Medicare patients multiplied by three.

Specialty Otolaryngology Frequency 92784 Percentage 100.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?  
 30,928 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty.  
 Please explain the rationale for this estimate. This is based on the RUC database volume for CY 2015

Specialty Otolaryngology	Frequency 30928	Percentage 100.00 %
--------------------------	-----------------	---------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Do many physicians perform this service across the United States?

---

### **Berenson-Eggers Type of Service (BETOS) Assignment**

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Procedures

BETOS Sub-classification:

Minor procedure

BETOS Sub-classification Level II:

Musculoskeletal

---

### **Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 31255

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 31276      Tracking Number   R9

Original Specialty Recommended RVU: **8.00**Presented Recommended RVU: **6.75**

Global Period: 000

RUC Recommended RVU: **6.75**

CPT Descriptor: Nasal/sinus endoscopy, surgical with with frontal sinus exploration, including removal of tissue from frontal sinus, when performed

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 48 year-old female presents with chronic right frontal sinusitis, which has been refractory to medical management. Endoscopic examination reveals edema and/or mucopurulent within the ipsilateral frontal recess. CT scan demonstrates opacification of the right frontal sinus. A nasal/sinus endoscopy with frontal exploration is performed.

Percentage of Survey Respondents who found Vignette to be Typical: 97%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The patient's records and imaging studies are reviewed for surgical planning. Pre-anesthesia studies are reviewed, the patient is examined, and a history and physical examination note is written. Relative risks and benefits of the surgery are discussed with the patient. Mark sinus side for procedure. Review airway and medical management with anesthesiologist. Review planned procedure with OR staff. Verify that all required instruments and supplies are available. Change into scrub clothes. Ensure that radiographic images are available in the OR. The patient is transported to the surgical suite, where positioning and general anesthesia is induced. Monitor/assist with positioning of the patient, endoscopy and video equipment, and anesthesia lines. Pledgets soaked with topical decongestant are placed and adequate time is given to allow for decongestant to take place. Pledgets are then removed and injection with local anesthesia with vasoconstrictors is performed. Pledgets soaked with topical decongestant are then placed again. A time-out is performed. The surgeon scrubs and gowns. The patient is prepped and draped

Description of Intra-Service Work: Previously placed pledgets are removed. Comprehensive nasal endoscopy is performed and pre-surgical findings are confirmed. Topical decongestion is performed in the middle meatus. An intranasal anesthetic/vasoconstrictive agent is injected. The middle turbinate is medialized. The bulla ethmoidalis is identified and used to serve as the posterior limit of frontal recess dissection. The superior portion of the uncinate process is identified and resected. Using angled endoscopes and instruments, the agger nasi cell at the superior extent of the uncinate process is entered inferiorly allowing access to the frontal recess. Cells within the frontal recess and superior to the bulla ethmoidalis are examined and sequentially resected laterally to the orbital wall (lamina papyracea), posteriorly to the anterior ethmoidal neurovascular bundle, and medially to the lateral lamella of the cribriform plate. After access to the frontal sinus is established, tissue may be removed from within the sinus. Care is taken to preserve mucosa on all surfaces of the frontal recess as denuded mucosa will lead to scarring of the frontal ostium. Following completion of the procedure, hemostasis is ensured and packing or a stent may be placed within the middle meatus.

Description of Post-Service Work: Monitor patient during reversal of anesthesia. Discuss postoperative recovery care with anesthesia and nursing staff. Discuss procedure and findings with family in the waiting area. Write postoperative note. Dictate operative note and copy to referring physician. Prior to discharge, examine patient and write prescriptions and

supplies needed for post-discharge. Perform medication reconciliation. Review post-discharge wound care and activity limitations with the patient and family and write discharge instructions.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Reason for Survey:** This family of codes is being reviewed following the October 2016 CPT meeting where the CPT Editorial Panel approved the addition of 5 codes 31XX1-31XX5 to report bundled nasal endoscopy services (X2-X5) in response to identification in RAW screen for services reported together with more than 75% frequency and revision of parentheticals for codes 31238 and 31254, 31255, 31276, 31287, 31288, 31296 and 31297. CPT 312XX1 represents a new code entirely. The existing endoscopic sinus surgery family of codes 31254-88 were also captured by a CMS high expenditure screen. Separately, the balloon sinuplasty codes were captured by the new technology screen as well as the reported together greater than 75% of the time screen, resulting in our specialty's decision to take all of the codes on the reported together screen to CPT in one sitting, and ultimately review them as a family at the January 2017 RUC meeting.

**Background on prior valuations:** CPT codes 31254-31276 were last valued by the AMA RUC in 1994 and CPT 31287 and 31288 were valued in 1993. CPT codes 31295-31297 were first valued by the RUC in 2010 as new technology. CPT 312XX1-X5 are new codes and have never been RUC valued.

**Survey Sample:**

The survey data and recommendations are based upon a Random Sample of Applicable Subsets (general oto, rhinology, allergy) of American Academy of Otolaryngology-Head and Neck Surgery (AAO-HNS), American Rhinologic Society (ARS), and American Academy of Otolaryngic Allergy (AAOA) members. The total sample size was 4138 otolaryngologists.

**Reference Service List Background:** As a reminder to our reviewers, we note that this tab was taken before the Research Subcommittee to review the revised vignettes for all existing codes as well as the reference service list for the survey. We struggled to compile an RSL that included an appropriate range of values for this family of codes given that the bundled codes were expected to be valued well above the highest RVU in the current family of services (CPT 31276 at 8.84 RVUs).

We noted to Research that there are very limited RVU options in the 8-13 RVU range that are 000 globals which forced the inclusion of many surgical procedures that are not performed by Otolaryngologists, but we hoped would be familiar enough to them to use as comparators for the procedures being surveyed. Additionally, 2-3 codes that were "CMS Revised" were included on the on the RSL in order to avoid large gaps value between codes.

In addition, one code was included at the higher range of the RSL, CPT 93582 Percutaneous transcatheter closure of patent ductus arteriosus, which was valued by the RUC in January 2013. This code is marked as “do not use to value physician work” in the RUC database, however, that label does not export out when codes marked as such are captured in a broader RUC database search. The rationale given for this designation is that *“The RUC recommends flagging this code in the RUC database as not to use to validate physician work because the median survey intra-time may not reflect the appropriate intra-service time compared to those who frequently perform this service.”* Further review of the code history indicates that this procedure is performed on infants and there was some question as to whether 60 minutes was sufficient time to perform this procedure and the survey data indicated those who performed the service more frequently indicated that 75 minutes was more typical. Given this, it was an oversight on our part that this code was included in the RSL. It was chosen as the number 1 or 2 KRS for a handful of codes, which is reflected in the SORs. In order to provide greater transparency to our reviewers, we have listed the other top KRS codes beyond 1 and 2 for our reviewers in cases where 93582 was chosen. We would note that in virtually all instances where 93582 was used as a KRS by respondents, we are not recommending a value anywhere near the RVUs assigned to that code (12.56 RVUs).

### **Physician Time:**

#### ***Pre-Service Time***

Our expert panel selected pre-service package 3 (Straightforward Patient/Difficult Procedure) for this code based on the fact that the procedure is typically performed in the facility setting using general anesthesia. We are requesting that 5 minutes from the surveyee indicated positioning time be moved to the time allotted for scrub, dress, and wait as we believe survey respondents incorrectly assigned time for the multiple applications of topical decongestant in the positioning time. As is indicated in our description of work, pledgets soaked with topical decongestant are placed and adequate time is given to allow for decongestant to take place. Pledgets are then removed and injection with local anesthesia with vasoconstrictors is performed. Pledgets soaked with topical decongestant are then placed again. The typical flow of the operation involves the surgeon performing this prior to scrubbing and gowning, and thus appears to have been assigned in the positioning time. This additional time provided by the survey respondents was provided consistently across the family, and we feel explains the consistency in increased time provided in positioning.

**Given the extra time this requires, we are requesting an additional 5 minutes to the 10 minutes already allotted in this package for use of general anesthesia. This is the accepted standard for the use of local / topical anesthetic for office based procedures. In all other cases we are recommending taking the lesser of the survey or the pre-time package. Therefore, we recommend a total pretime of 33 minutes.**

#### ***Intra-Service Time***

**We are recommending our median survey time of 45 minutes for intra service work.**

#### ***Post-Service Time***

The expert panel selected post-package 9A (General Anesthesia or Complex Regional Block/ Straightforward Procedure) for this code. We are recommending taking the lesser of the survey or the pre-time package. **The expert panel recommends a post-service time of 20 minutes.**

### ***Comments on Increased Intensity***

Our expert panel feels that the intensity of the endoscopic sinus surgery codes has changed since the first valuation in the early 1990s. First, our understanding of the etiology and pathophysiology of chronic sinusitis has improved significantly since that time, as has the medical treatments clinicians have available. Such improvement in knowledge and treatment has led to greater success with initial medical treatment. In addition, those patients who fail medical therapy may undergo less invasive surgery with balloons, a procedure not available in the early 1990s. As such, the most recalcitrant, complex, difficult patients fail medical therapy and undergo endoscopic sinus surgery. These patients have greater degree of inflammation and infection, which makes the surgery more technically demanding, as visualization is hampered by the increased vascularity of infected and inflamed tissue.

Second, our knowledge of the outcomes of surgery has changed significantly, also greatly increasing the technical demands of the surgery. We now know that stripping of mucosa, removal of turbinates, and minor abrasions to structures such as the nasal septum can contribute to scarring and can lead to significantly worse outcomes. Preserving mucosa and avoiding trauma to adjacent structures increases the technical demands and intensity of the surgery. This is of paramount importance in the frontal recess, where a small amount of scarring can lead to complete obstruction of the

frontal sinus and the need for revision surgery. We did not have this knowledge back in the early 1990s and, as such, the technical proficiency required to perform the surgery is much greater.

Lastly, the surgery itself has changed significantly since the early 1990s. In the past, the dictum was to avoid critical structures such as the ethmoid skull base and lamina papyracea along the orbit. Dissection stopped before ever reaching these areas. We now know, and teach future physicians, that in order to obtain optimal outcomes, a comprehensive dissection must be performed. This involves removing partitions along the medial orbital wall, along the ethmoid skull base, and widely opening the sphenoid sinus in the vicinity of the carotid artery and optic nerve. This change represents the most technically challenging and intense portions of endoscopic sinus surgery. This and the other reasons above represent the increase in intensity from the original valuation in the 1990s when compared to present day.

The following table provides other RUC reviewed codes that are similar in time and work to provide additional support for the recommended value for CPT code 31276, as they demonstrate relativity across the fee schedule.

### *Additional Reference Codes*

<b>CPT Code</b>	<b>Long Desc</b>	<b>Work RVU</b>	<b>Pre</b>	<b>Intra Time</b>	<b>Post Time</b>	<b>Total Time</b>	<b>Most Recent RUC Review</b>	<b>2015 Utilization</b>

### **SERVICES REPORTED WITH MULTIPLE CPT CODES**

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☒ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☒ Other reason (please explain) The 2012 claims data available when this code family initially hit the RAW screen for services reported together greater than 75% did not indicate these code pairings. The 2014 claims data sent prior to this RUC meeting indicated that while these code combinations are "typically" (i.e. greater than 50% of the time) reported together, they still do not meet the 75% RAW screen threshold.

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

3.	CPT Code	Global	Work RVU	Pre time	Intra time	Post Time	TOTAL RVW w/ MPPR

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 31253      Tracking Number R4

Original Specialty Recommended RVU: **12.28**Presented Recommended RVU: **9.00**

Global Period: 000

RUC Recommended RVU: **9.00**

CPT Descriptor: Nasal/sinus endoscopy, surgical with ethmoidectomy; total (anterior and posterior), including frontal sinus exploration, with removal of tissue from frontal sinus, when performed

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 48-year-old female presents with chronic right frontal and ipsilateral ethmoid sinusitis, with obstruction of the right frontal, and anterior and posterior ethmoid sinuses. She has failed medical therapy. The patient undergoes right endoscopic frontal sinusotomy and right endoscopic total ethmoidectomy.

Percentage of Survey Respondents who found Vignette to be Typical: 96%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The patient's records and imaging studies are reviewed for surgical planning. Pre-anesthesia studies are reviewed, the patient is examined, and a history and physical examination note is written. Relative risks and benefits of the surgery are discussed with the patient. Mark sinus side for procedure. Review airway and medical management with anesthesiologist. Review planned procedure with OR staff. Verify that all required instruments and supplies are available. Change into scrub clothes. Ensure that radiographic images are available in the OR. The patient is transported to the surgical suite, where positioning and general anesthesia is induced. Monitor/assist with positioning of the patient, endoscopy and video equipment, and anesthesia lines. Pledgets soaked with topical decongestant are placed and adequate time is given to allow for decongestant to take place. Pledgets are then removed and injection with local anesthesia with vasoconstrictors is performed. Pledgets soaked with topical decongestant are then placed again. A time-out is performed. The surgeon scrubs and gowns. The patient is prepped and draped.

Description of Intra-Service Work: Previously placed pledgets are removed. Comprehensive nasal endoscopy is performed and pre-surgical findings are confirmed. Topical decongestion is performed in the middle meatus. An intranasal anesthetic/vasoconstrictive agent is injected. The middle turbinate is medialized. The superior portion of the uncinate process is identified and resected. The bulla ethmoidalis is entered and its walls removed. Following identification of the orbital wall (lamina papyracea), all ethmoid lamella are removed posteriorly to the level of basal lamella, and superiorly to the level of the ethmoid skull base. The anterior ethmoidal neurovascular bundle is identified and preserved. After completion of the anterior ethmoidectomy, the basal lamella is incised to gain access to the posterior ethmoid cells. The orbit is identified posterior to the basal lamella and the superior turbinate is identified. All posterior ethmoid lamella are resected posteriorly to the anterior face of the sphenoid sinus, laterally to the orbit (lamina papyracea) and superiorly to the posterior ethmoid skull base. Using angled endoscopes and instruments, the agger nasi cell at the superior extent of the uncinate process is entered inferiorly allowing access to the frontal recess. Cells within the frontal recess and superior to the bulla ethmoidalis are examined and sequentially resected laterally to the orbital wall (lamina papyracea), posteriorly to the anterior ethmoidal neurovascular bundle, and medially to the lateral lamella of the cribriform. After access to the frontal sinus is established, tissue may be removed from within the sinus. Care is taken to preserve mucosa on all surfaces

of the frontal recess as denuded mucosa will lead to scarring of the frontal ostium. Following completion of the procedure, hemostasis is ensured and packing or a stent may be placed within the middle meatus.

Description of Post-Service Work: Monitor patient during reversal of anesthesia. Discuss postoperative recovery care with anesthesia and nursing staff. Discuss procedure and findings with family in the waiting area. Write postoperative note. Dictate operative note and copy to referring physician. Prior to discharge, examine patient and write prescriptions and supplies needed for post-discharge. Perform medication reconciliation. Review post-discharge wound care and activity limitations with the patient and family and write discharge instructions.

**New Technology/Service:**

Is this new/revised procedure considered to be a new technology or service? No

**TOP KEY REFERENCE SERVICE:**

<u>Key CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
93582	000	12.56	RUC Time

CPT Descriptor Percutaneous transcatheter closure of patent ductus arteriosus

**SECOND HIGHEST KEY REFERENCE SERVICE:**

<u>Key CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
37225	000	12.00	RUC Time

CPT Descriptor Revascularization, endovascular, open or percutaneous, femoral, popliteal artery(s), unilateral; with atherectomy, includes angioplasty within the same vessel, when performed

**KEY MPC COMPARISON CODES:**

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

<u>MPC CPT Code 1</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>	<u>Most Recent Medicare Utilization</u>
52354	000	8.00	RUC Time	8,128

CPT Descriptor 1 Cystourethroscopy, with ureteroscopy and/or pyeloscopy; with biopsy and/or fulguration of ureteral or renal pelvic lesion

<u>MPC CPT Code 2</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>	<u>Most Recent Medicare Utilization</u>
37244	000	13.75	RUC Time	9,240

CPT Descriptor 2 Vascular embolization or occlusion, inclusive of all radiological supervision and interpretation, intraprocedural roadmapping, and imaging guidance necessary to complete the intervention; for arterial or venous hemorrhage or lymphatic extravasation

<u>Other Reference CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
92941	000	12.56	RUC Time

CPT Descriptor Percutaneous transluminal revascularization of acute total/subtotal occlusion during acute myocardial infarction, coronary artery or coronary artery bypass graft, any combination of intracoronary stent, atherectomy and angioplasty, including aspiration thrombectomy when performed, single vessel

**RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:**

Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by the mean) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

**Number of respondents who choose Top Key Reference Code: 45      % of respondents: 35.1 %**

**Number of respondents who choose 2<sup>nd</sup> Key Reference Code: 21      % of respondents: 16.4 %**

**TIME ESTIMATES (Median)**

	CPT Code: <u>31253</u>	Top Key Reference CPT Code: <u>93582</u>	2nd Key Reference CPT Code: <u>37225</u>
Median Pre-Service Time	36.00	51.00	48.00

Ref Code****2<sup>nd</sup> Key  
Ref Code****Time Segment (Mean)**

Overall intensity/complexity	1.16	1.24
------------------------------	------	------

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Reason for Survey:** This family of codes is being reviewed following the October 2016 CPT meeting where the CPT Editorial Panel approved the addition of 5 codes 31241-31298 to report bundled nasal endoscopy services (X2-X5) in response to identification in RAW screen for services reported together with more than 75% frequency and revision of parentheticals for codes 31238 and 31254, 31255, 31276, 31287, 31288, 31296 and 31297. CPT 312XX1 represents a new code entirely. The existing endoscopic sinus surgery family of codes 31254-88 were also captured by a CMS high expenditure screen. Separately, the balloon sinuplasty codes were captured by the new technology screen as well as the reported together greater than 75% of the time screen, resulting in our specialty's decision to take all of the codes on the reported together screen to CPT in one sitting, and ultimately review them as a family at the January 2017 RUC meeting.

**Background on prior valuations:** CPT codes 31254-31276 were last valued by the AMA RUC in 1994 and CPT 31287 and 31288 were valued in 1993. CPT codes 31295-31297 were first valued by the RUC in 2010 as new technology. CPT 312XX1-X5 are new codes and have never been RUC valued.

**Survey Sample:**

The survey data and recommendations are based upon a Random Sample of Applicable Subsets (general oto, rhinology, allergy) of American Academy of Otolaryngology-Head and Neck Surgery (AAO-HNS), American Rhinologic Society (ARS), and American Academy of Otolaryngic Allergy (AAOA) members. The total sample size was 4138 otolaryngologists.

**Reference Service List Background:** As a reminder to our reviewers, we note that this tab was taken before the Research Subcommittee to review the revised vignettes for all existing codes as well as the reference service list for the survey. We struggled to compile an RSL that included an appropriate range of values for this family of codes given that the bundled codes were expected to be valued well above the highest RVU in the current family of services (CPT 31276 at 8.84 RVUs). We noted to Research that there are very limited RVU options in the 8-13 RVU range that are 000 globals which forced the inclusion of many surgical procedures that are not performed by Otolaryngologists, but we hoped would be familiar

**Physician Time:**  
*Pre-Service Time*

Given the extra time this requires, we are requesting an additional 5 minutes to the 3 minutes already allotted in this package for use of general anesthesia. This is the accepted standard for the use of local / topical anesthetic for office based procedures. In all other cases we are recommending taking the lesser of the survey or the pre-time package. Therefore, we recommend a total pretime of 36 minutes.

**We are recommending our median survey time of 70 minutes for intra service work.**

The expert panel selected post-package 9A (General Anesthesia or Complex Regional Block/ Straightforward Procedure) for this code. We are recommending taking the lesser of the survey or the pre-time package. **The expert panel recommends a post-service time of 20 minutes.**

Upon review of the survey results, the expert panel **recommends a work value of 9.00 and a total time of 126 based on the survey's 25<sup>th</sup> percentile value.**

### *Additional Reference Codes*

CPT Code	Long Desc	Work RVU	Pre	Intra Time	Post Time	Total Time	Most Recent RUC Review	IWPUT	2015 Utilization
----------	-----------	----------	-----	------------	-----------	------------	------------------------	-------	------------------

92920	Percutaneous transluminal coronary angioplasty; single major coronary artery or branch	10.1	39	68	30	137	Jan12	0.1269	25148

## SERVICES REPORTED WITH MULTIPLE CPT CODES

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

- Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is

involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) This procedure previously was reported using two codes, 31255 and 31276

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Otolaryngology                      How often? Commonly

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period? 146163

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. This is consistent with our estimates provided in our CCP to the CPT editorial Panel. Based on a population studies (Martin TJ, Yauck JS, Smith TL. Patients undergoing sinus surgery: constructing a demographic profile. Laryngoscope. 2006 Jul;116(7):1185-91 and Bhattacharyya, Neil. Ambulatory sinus and nasal surgery in the United States: Demographics and perioperative outcomes. The Laryngoscope. 2010 March; 120 (3): 635–638.), 10-20% of patients are Medicare age, therefore we have multiplied the Medicare volume by 5 to estimate total volume nationally.

Specialty Otolaryngology                      Frequency 146163                      Percentage 100.00 %

Specialty                      Frequency 0                      Percentage 0.00 %

Specialty                      Frequency 0                      Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 29,228 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This is based on the RUC database volume for CY 2015

Specialty Otolaryngology                      Frequency 29228                      Percentage 100.00 %

Specialty                      Frequency 0                      Percentage 0.00 %

Specialty                      Frequency 0                      Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

## Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Procedures

BETOS Sub-classification:

Minor procedure

BETOS Sub-classification Level II:  
Musculoskeletal

---

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 31276

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 31257      Tracking Number   R5

Original Specialty Recommended RVU: **8.38**Presented Recommended RVU: **8.00**

Global Period: 000

RUC Recommended RVU: **8.00**

CPT Descriptor: Nasal/sinus endoscopy, surgical with ethmoidectomy; total (anterior and posterior), including sphenoidotomy

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 48-year-old female presents with chronic left ethmoid and ipsilateral sphenoid sinusitis, with obstruction of the left sphenoid, and anterior and posterior ethmoid sinuses. She has failed medical therapy. The patient undergoes left endoscopic total ethmoidectomy and left endoscopic sphenoidotomy.

Percentage of Survey Respondents who found Vignette to be Typical: 95%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The patient's records and imaging studies are reviewed for surgical planning. Pre-anesthesia studies are reviewed, the patient is examined, and a history and physical examination note is written. Relative risks and benefits of the surgery are discussed with the patient. Mark sinus side for procedure. Review airway and medical management with anesthesiologist. Review planned procedure with OR staff. Verify that all required instruments and supplies are available. Change into scrub clothes. Ensure that radiographic images are available in the OR. The patient is transported to the surgical suite, where positioning and general anesthesia is induced. Monitor/assist with positioning of the patient, endoscopy and video equipment, and anesthesia lines. Pledgets soaked with topical decongestant are placed and adequate time is given to allow for decongestant to take place. Pledgets are then removed and injection with local anesthesia with vasoconstrictors is performed. Pledgets soaked with topical decongestant are then placed again. A time-out is performed. The surgeon scrubs and gowns. The patient is prepped and draped.

Description of Intra-Service Work: Previously placed pledgets are removed. Comprehensive nasal endoscopy is performed and pre-surgical findings are confirmed. Topical decongestion is performed in the middle meatus. An intranasal anesthetic/vasoconstrictive agent is injected. The middle turbinate is medialized. The uncinate process is identified and resected. The bulla ethmoidalis is entered and its walls removed. Following identification of the orbital wall (lamina papyracea), all ethmoid lamella are removed posteriorly to the level of basal lamella, and superiorly to the level of the ethmoid skull base. The anterior ethmoidal neurovascular bundle is identified and preserved. After completion of the anterior ethmoidectomy, the basal lamella is incised to gain access to the posterior ethmoid cells. The orbit is identified posterior to the basal lamella and the superior turbinate is identified. All posterior ethmoid lamella are resected posteriorly to the anterior face of the sphenoid sinus, laterally to the orbit (lamina papyracea) and superiorly to the posterior ethmoid skull base. The superior turbinate is then identified. The natural ostium of the sphenoid sinus is identified and surgically enlarged. The anterior face of the sphenoid is resected superiorly to sphenoid planum (sphenoid skull base) and laterally to the level of the orbit. The sphenoid sinus is irrigated and/or suctioned. Following completion of the procedure, hemostasis is ensured and packing or a stent may be placed within the middle meatus.

Description of Post-Service Work: Monitor patient during reversal of anesthesia. Discuss postoperative recovery care with anesthesia and nursing staff. Discuss procedure and findings with family in the waiting area. Write postoperative note. Dictate operative note and copy to referring physician. Prior to discharge, examine patient and write prescriptions and supplies needed for post-discharge. Perform medication reconciliation. Review post-discharge wound care and activity limitations with the patient and family and write discharge instructions.

Ref Code****Time Segment (Mean)**

Overall intensity/complexity	1.16	0.84
------------------------------	------	------

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Reason for Survey:** This family of codes is being reviewed following the October 2016 CPT meeting where the CPT Editorial Panel approved the addition of 5 codes 31241-31298 to report bundled nasal endoscopy services (X2-X5) in response to identification in RAW screen for services reported together with more than 75% frequency and revision of parentheticals for codes 31238 and 31254, 31255, 31276, 31287, 31288, 31296 and 31297. CPT 312XX1 represents a new code entirely. The existing endoscopic sinus surgery family of codes 31254-88 were also captured by a CMS high expenditure screen. Separately, the balloon sinuplasty codes were captured by the new technology screen as well as the reported together greater than 75% of the time screen, resulting in our specialty's decision to take all of the codes on the reported together screen to CPT in one sitting, and ultimately review them as a family at the January 2017 RUC meeting.

**Background on prior valuations:** CPT codes 31254-31276 were last valued by the AMA RUC in 1994 and CPT 31287 and 31288 were valued in 1993. CPT codes 31295-31297 were first valued by the RUC in 2010 as new technology. CPT 31241-X5 are new codes and have never been RUC valued.

**Survey Sample:**

The survey data and recommendations are based upon a Random Sample of Applicable Subsets (general oto, rhinology, allergy) of American Academy of Otolaryngology-Head and Neck Surgery (AAO-HNS), American Rhinologic Society (ARS), and American Academy of Otolaryngic Allergy (AAOA) members. The total sample size was 4138 otolaryngologists.

**Reference Service List Background:** As a reminder to our reviewers, we note that this tab was taken before the Research Subcommittee to review the revised vignettes for all existing codes as well as the reference service list for the survey. We struggled to compile an RSL that included an appropriate range of values for this family of codes given that the bundled codes were expected to be valued well above the highest RVU in the current family of services (CPT 31276 at 8.84 RVUs).

We noted to Research that there are very limited RVU options in the 8-13 RVU range that are 000 globals which forced the inclusion of many surgical procedures that are not performed by Otolaryngologists, but we hoped would be familiar enough to them to use as comparators for the procedures being surveyed. Additionally, 2-3 codes that were "CMS Revised" were included on the on the RSL in order to avoid large gaps value between codes.

In addition, one code was included at the higher range of the RSL, CPT 93582 Percutaneous transcatheter closure of patent ductus arteriosus, which was valued by the RUC in January 2013. This code is marked as “do not use to value physician work” in the RUC database, however, that label does not export out when codes marked as such are captured in a broader RUC database search. The rationale given for this designation is that *“The RUC recommends flagging this code in the RUC database as not to use to validate physician work because the median survey intra-time may not reflect the appropriate intra-service time compared to those who frequently perform this service.”* Further review of the code history indicates that this procedure is performed on infants and there was some question as to whether 60 minutes was sufficient time to perform this procedure and the survey data indicated those who performed the service more frequently indicated that 75 minutes was more typical. Given this, it was an oversight on our part that this code was included in the RSL. It was chosen as the number 1 or 2 KRS for a handful of codes, which is reflected in the SORs. In order to provide greater transparency to our reviewers, we have listed the other top KRS codes beyond 1 and 2 for our reviewers in cases where 93582 was chosen. We would note that in virtually all instances where 93582 was used as a KRS by respondents, we are not recommending a value anywhere near the RVUs assigned to that code (12.56 RVUs).

### **Physician Time:**

#### ***Pre-Service Time***

Our expert panel selected pre-service package 3 (Straightforward Patient/Difficult Procedure) for this code based on the fact that the procedure is typically performed in the facility setting using general anesthesia. We are requesting that 5 additional minutes from the surveyee indicated positioning time be added to the package’s 3 minutes as we believe survey respondents incorrectly assigned time for the multiple applications of topical decongestant in the positioning time. As is indicated in our description of work, pledgets soaked with topical decongestant are placed and adequate time is given to allow for decongestant to take place. Pledgets are then removed and injection with local anesthesia with vasoconstrictors is performed. Pledgets soaked with topical decongestant are then placed again. This reflects the typical flow of the operation involves the surgeon performing this prior to scrubbing and gowning. This additional time provided by the survey respondents was provided consistently across the family, and we feel explains the consistency in increased time provided in positioning.

**Given the extra time this requires, we are requesting an additional 5 minutes to the 3 minutes already allotted in this package for use of general anesthesia. This is the accepted standard for the use of local / topical anesthetic for office based procedures. In all other cases we are recommending taking the lesser of the survey or the pre-time package. Therefore, we recommend a total pretime of 38 minutes.**

#### ***Intra-Service Time***

**We are recommending our median survey time of 60 minutes for intra service work.**

#### ***Post-Service Time***

The expert panel selected post-package 9A (General Anesthesia or Complex Regional Block/ Straightforward Procedure) for this code. We are recommending taking the lesser of the survey or the pre-time package. **The expert panel recommends a post-service time of 20 minutes.**

#### ***Physician Work RVU***

Upon review of the survey results, the expert panel **recommends a value of 8.00 with a total time of 118 minutes, based on the crosswalk to CPT 52356 Cystourethroscopy, with ureteroscopy and/or pyeloscopy; with lithotripsy including insertion of indwelling ureteral stent (eg, Gibbons or double-J type).**

The following table provides other RUC reviewed codes that are similar in time and work to provide additional support for the recommended value for CPT code 312X3, as they demonstrate relativity across the fee schedule.

#### ***Additional Reference Codes***

<b>CPT Code</b>	<b>Long Desc</b>	<b>Work RVU</b>	<b>Pre</b>	<b>Intra Time</b>	<b>Post Time</b>	<b>Total Time</b>	<b>Most Recent RUC Review</b>	<b>IWPUT</b>	<b>2015 Utilization</b>

## SERVICES REPORTED WITH MULTIPLE CPT CODES

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

- Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) This procedure previously was reported using two codes, 31255 and 31287

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Otolaryngology                      How often? Commonly

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period? 44113

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. This is consistent with our estimates provided in our CCP to the CPT editorial Panel. Based on a population studies (Martin TJ, Yauck JS, Smith TL. Patients undergoing sinus surgery: constructing a demographic profile. Laryngoscope. 2006 Jul;116(7):1185-91 and Bhattacharyya, Neil. Ambulatory sinus and nasal surgery in the United States: Demographics and perioperative outcomes. The Laryngoscope. 2010 March; 120 (3): 635–638.), 10-20% of patients are Medicare age, therefore we have multiplied the Medicare volume by 5 to estimate total volume nationally.

Specialty Otolaryngology                      Frequency 44113                      Percentage 100.00 %

Specialty                      Frequency 0                      Percentage 0.00 %

Specialty                      Frequency 0                      Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 8,822

If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This is based on the RUC database volume for CY 2015

Specialty Otolaryngology                      Frequency 8822                      Percentage 100.00 %

Specialty                      Frequency 0                      Percentage 0.00 %

Specialty                      Frequency 0                      Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

### **Berenson-Eggers Type of Service (BETOS) Assignment**

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Procedures

BETOS Sub-classification:

Minor procedure

BETOS Sub-classification Level II:

Musculoskeletal

### **Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 31255

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 31259      Tracking Number R6

Original Specialty Recommended RVU: **9.13**Presented Recommended RVU: **8.48**

Global Period: 000

RUC Recommended RVU: **8.48**

CPT Descriptor: Nasal/sinus endoscopy, surgical with ethmoidectomy; total (anterior and posterior), including sphenoidotomy, with removal of tissue from sphenoid sinus

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 46-year-old female presents with chronic left ethmoid and ipsilateral sphenoid sinusitis, with obstruction of the left sphenoid, and anterior and posterior ethmoid sinuses. Significant diseased tissue is present within the sphenoid sinus. She has failed medical therapy. The patient undergoes left endoscopic total ethmoidectomy, and sphenoidotomy with removal of tissue from the sphenoid sinus cavity.

Percentage of Survey Respondents who found Vignette to be Typical: 96%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The patient's records and imaging studies are reviewed for surgical planning. Pre-anesthesia studies are reviewed, the patient is examined, and a history and physical examination note is written. Relative risks and benefits of the surgery are discussed with the patient. Mark sinus side for procedure. Review airway and medical management with anesthesiologist. Review planned procedure with OR staff. Verify that all required instruments and supplies are available. Change into scrub clothes. Ensure that radiographic images are available in the OR. The patient is transported to the surgical suite, where positioning and general anesthesia is induced. Monitor/assist with positioning of the patient, endoscopy and video equipment, and anesthesia lines. Pledgets soaked with topical decongestant are placed and adequate time is given to allow for decongestant to take place. Pledgets are then removed and injection with local anesthesia with vasoconstrictors is performed. Pledgets soaked with topical decongestant are then placed again. A time-out is performed. The surgeon scrubs and gowns. The patient is prepped and draped.

Description of Intra-Service Work: Previously placed pledgets are removed. Comprehensive nasal endoscopy is performed and pre-surgical findings are confirmed. Topical decongestion is performed in the middle meatus. An intranasal anesthetic/vasoconstrictive agent is injected. The middle turbinate is medialized. The uncinate process is identified and resected. The bulla ethmoidalis is entered and its walls removed. Following identification of the orbital wall (lamina papyracea), all ethmoid lamella are removed posteriorly to the level of basal lamella, and superiorly to the level of the ethmoid skull base. The anterior ethmoidal neurovascular bundle is identified and preserved. After completion of the anterior ethmoidectomy, the basal lamella is incised to gain access to the posterior ethmoid cells. The orbit is identified posterior to the basal lamella and the superior turbinate is identified. All posterior ethmoid lamella are resected posteriorly to the anterior face of the sphenoid sinus, laterally to the orbit (lamina papyracea) and superiorly to the posterior ethmoid skull base. The superior turbinate is identified. Inflammatory tissue extending into the sphenoid recess and nasal cavity from the sphenoid sinus is removed to provide visualization. After hemostasis, the natural ostium of the sphenoid sinus is identified and surgically enlarged. The anterior face of the sphenoid is resected superiorly to sphenoid planum (sphenoid skull base) and laterally to the level of the orbit. The sphenoid sinus is irrigated and/or suctioned. The sphenoid

sinus is inspected and inflammatory tissue and inspissated debris within the sinus is surgically removed. Following completion of the procedure, hemostasis is ensured and packing or a stent may be placed within the middle meatus.

Description of Post-Service Work: Monitor patient during reversal of anesthesia. Discuss postoperative recovery care with anesthesia and nursing staff. Discuss procedure and findings with family in the waiting area. Write postoperative note. Dictate operative note and copy to referring physician. Prior to discharge, examine patient and write prescriptions and supplies needed for post-discharge. Perform medication reconciliation. Review post-discharge wound care and activity limitations with the patient and family and write discharge instructions.

Overall intensity/complexity	1.11	0.88
------------------------------	------	------

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Reason for Survey:** This family of codes is being reviewed following the October 2016 CPT meeting where the CPT Editorial Panel approved the addition of 5 codes 31241-31298 to report bundled nasal endoscopy services (X2-X5) in response to identification in RAW screen for services reported together with more than 75% frequency and revision of parentheticals for codes 31238 and 31254, 31255, 31276, 31287, 31288, 31296 and 31297. CPT 312XX1 represents a new code entirely. The existing endoscopic sinus surgery family of codes 31254-88 were also captured by a CMS high expenditure screen. Separately, the balloon sinuplasty codes were captured by the new technology screen as well as the reported together greater than 75% of the time screen, resulting in our specialty's decision to take all of the codes on the reported together screen to CPT in one sitting, and ultimately review them as a family at the January 2017 RUC meeting.

**Background on prior valuations:** CPT codes 31254-31276 were last valued by the AMA RUC in 1994 and CPT 31287 and 31288 were valued in 1993. CPT codes 31295-31297 were first valued by the RUC in 2010 as new technology. CPT 312XX1-X5 are new codes and have never been RUC valued.

**Survey Sample:**

The survey data and recommendations are based upon a Random Sample of Applicable Subsets (general oto, rhinology, allergy) of American Academy of Otolaryngology-Head and Neck Surgery (AAO-HNS), American Rhinologic Society (ARS), and American Academy of Otolaryngic Allergy (AAOA) members. The total sample size was 4138 otolaryngologists.

**Reference Service List Background:** As a reminder to our reviewers, we note that this tab was taken before the Research Subcommittee to review the revised vignettes for all existing codes as well as the reference service list for the survey. We struggled to compile an RSL that included an appropriate range of values for this family of codes given that the bundled codes were expected to be valued well above the highest RVU in the current family of services (CPT 31276 at 8.84 RVUs). We noted to Research that there are very limited RVU options in the 8-13 RVU range that are 000 globals which forced the inclusion of many surgical procedures that are not performed by Otolaryngologists, but we hoped would be familiar

enough to them to use as comparators for the procedures being surveyed. Additionally, 2-3 codes that were “CMS Revised” were included on the on the RSL in order to avoid large gaps value between codes.

In addition, one code was included at the higher range of the RSL, CPT 93582 Percutaneous transcatheter closure of patent ductus arteriosus, which was valued by the RUC in January 2013. This code is marked as “do not use to value physician work” in the RUC database, however, that label does not export out when codes marked as such are captured in a broader RUC database search. The rationale given for this designation is that *“The RUC recommends flagging this code in the RUC database as not to use to validate physician work because the median survey intra-time may not reflect the appropriate intra-service time compared to those who frequently perform this service.”* Further review of the code history indicates that this procedure is performed on infants and there was some question as to whether 60 minutes was sufficient time to perform this procedure and the survey data indicated those who performed the service more frequently indicated that 75 minutes was more typical. Given this, it was an oversight on our part that this code was included in the RSL. It was chosen as the number 1 or 2 KRS for a handful of codes, which is reflected in the SORs. In order to provide greater transparency to our reviewers, we have listed the other top KRS codes beyond 1 and 2 for our reviewers in cases where 93582 was chosen. We would note that in virtually all instances where 93582 was used as a KRS by respondents, we are not recommending a value anywhere near the RVUs assigned to that code (12.56 RVUs).

### **Physician Time:**

#### ***Pre-Service Time***

Our expert panel selected pre-service package 3 (Straightforward Patient/Difficult Procedure) for this code based on the fact that the procedure is typically performed in the facility setting using general anesthesia. We are requesting that 5 additional minutes from the surveyee indicated positioning time be added to the package’s 3 minutes as we believe survey respondents incorrectly assigned time for the multiple applications of topical decongestant in the positioning time. As is indicated in our description of work, pledgets soaked with topical decongestant are placed and adequate time is given to allow for decongestant to take place. Pledgets are then removed and injection with local anesthesia with vasoconstrictors is performed. Pledgets soaked with topical decongestant are then placed again. This reflects the typical flow of the operation involves the surgeon performing this prior to scrubbing and gowning. This additional time provided by the survey respondents was provided consistently across the family, and we feel explains the consistency in increased time provided in positioning.

**Given the extra time this requires, we are requesting an additional 5 minutes to the 3 minutes already allotted in this package for use of general anesthesia. This is the accepted standard for the use of local / topical anesthetic for office based procedures. In all other cases we are recommending taking the lesser of the survey or the pre-time package. Therefore, we recommend a total pretime of 38 minutes.**

#### ***Intra-Service Time***

**We are recommending our median survey time of 65 minutes for intra service work.**

#### ***Post-Service Time***

The expert panel selected post-package 9A (General Anesthesia or Complex Regional Block/ Straightforward Procedure) for this code. We are recommending taking the lesser of the survey or the pre-time package. **The expert panel recommends a post-service time of 20 minutes.**

#### ***Physician Work RVU***

Upon review of the survey results, the expert panel **recommends a value of 8.48 with a total time of 123 minutes, based on a crosswalk to CPT 43274 Endoscopic retrograde cholangiopancreatography (ERCP); with placement of endoscopic stent into biliary or pancreatic duct, including pre- and post-dilation and guide wire passage, when performed, including sphincterotomy, when performed, each stent.**

The following table provides other RUC reviewed codes that are similar in time and work to provide additional support for the recommended value for CPT code 312X4, as they demonstrate relativity across the fee schedule.

#### ***Additional Reference Codes***

CPT Code	Long Desc	Work RVU	Pre	Intra Time	Post Time	Total Time	Most Recent RUC Review	IWPUT	2015 Utilization
43276	Endoscopic retrograde cholangiopancreatography (ERCP); with removal and exchange of stent(s), biliary or pancreatic duct, including pre- and post-dilation and guide wire passage, when performed, including sphincterotomy, when performed, each stent exchanged	8.94	48	60	25	133	Apr13	0.1229	12214

33954	Extracorporeal membrane oxygenation (ECMO)/extracorporeal life support (ECLS) provided by physician; insertion of peripheral (arterial and/or venous) cannula(e), open, 6 years and older	9.11	48	60	30	178	Apr14	0.1031	294
<b>31259</b>	<b>Nasal/sinus endoscopy, surgical with ethmoidectomy; total (anterior and posterior), including sphenoidotomy, with removal of tissue from sphenoid sinus</b>	<b>8.48</b>	<b>38</b>	<b>65</b>	<b>20</b>	<b>123</b>		<b>0.114</b>	<b>NEW</b>
33964	Extracorporeal membrane oxygenation (ECMO)/extracorporeal life support (ECLS) provided by physician; reposition central cannula(e) by sternotomy or thoracotomy, 6 years and older (includes fluoroscopic guidance, when performed)	9.5	60	60	20	195	Apr14	0.0987	18
33986	Extracorporeal membrane oxygenation (ECMO)/extracorporeal life support (ECLS) provided by physician; removal of central cannula(e) by sternotomy or thoracotomy, 6 years and older	10	60	60	30	205	Apr14	0.1033	138

---

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.  
☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.  
☐ Multiple codes allow flexibility to describe exactly what components the procedure included.  
☐ Multiple codes are used to maintain consistency with similar codes.  
☐ Historical precedents.  
☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) This procedure previously was reported using two codes, 31255 and 31288

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Otolaryngology                      How often? Commonly

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period? 50045

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. This is consistent with our estimates provided in our CCP to the CPT editorial Panel. Based on a population studies (Martin TJ, Yauck JS, Smith TL. Patients undergoing sinus surgery: constructing a demographic profile. Laryngoscope. 2006 Jul;116(7):1185-91 and Bhattacharyya, Neil. Ambulatory sinus and nasal surgery in the United States: Demographics and perioperative outcomes. The Laryngoscope. 2010 March; 120 (3): 635–638.), 10-20% of patients are Medicare age, therefore we have multiplied the Medicare volume by 5 to estimate total volume nationally.

Specialty Otolaryngology                      Frequency 50045                      Percentage 100.00 %

Specialty                      Frequency 0                      Percentage 0.00 %

Specialty                      Frequency 0                      Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?

10,009 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This is based on the RUC database volume for CY 2015

Specialty Otolaryngology                      Frequency 10009                      Percentage 100.00 %

Specialty                      Frequency 0                      Percentage 0.00 %

Specialty                      Frequency 0                      Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

## Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Procedures

BETOS Sub-classification:  
Minor procedure

BETOS Sub-classification Level II:  
Musculoskeletal

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 31241      Tracking Number R1

Original Specialty Recommended RVU: **8.51**Presented Recommended RVU: **8.00**

Global Period: 000

RUC Recommended RVU: **8.00**

CPT Descriptor: Nasal/sinus endoscopy, surgical; with ligation of sphenopalatine artery

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 62-year-old male presents with left-sided epistaxis refractory to attempts to control. The patient undergoes left endoscopic ligation of the sphenopalatine artery.

Percentage of Survey Respondents who found Vignette to be Typical: 96%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0% , In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The patient's records and imaging studies are reviewed for surgical planning. Pre-anesthesia studies are reviewed, the patient is examined, and a history and physical examination note is written. Relative risks and benefits of the surgery are discussed with the patient. Mark side for procedure. Review airway and medical management with anesthesiologist. Review planned procedure with OR staff. Verify that all required instruments and supplies are available. Change into scrub clothes. Ensure that radiographic images are available in the OR. The patient is transported to the surgical suite, where positioning and general anesthesia is induced. Monitor/assist with positioning of the patient, endoscopy and video equipment, and anesthesia lines. Pledgets soaked with topical decongestant are placed around previously placed nasal packing and adequate time is given to allow for decongestant to take place. Pledgets are then removed and injection with local anesthesia with vasoconstrictors is performed. Pledgets soaked with topical decongestant are then placed again. A time-out is performed. The surgeon scrubs and gowns. The patient is prepped and draped

Description of Intra-Service Work: Previously placed nasal packing and pledgets are removed and attempts are made to isolate and slow down the bleeding to allow adequate visualization. Comprehensive nasal endoscopy is performed and pre-surgical findings are confirmed. Topical decongestion is performed in the middle meatus. An intranasal anesthetic/vasoconstrictive agent is injected. The middle turbinate is medialized and the posterior attachment is identified. Local anesthesia is infiltrated into the posterior attachment of the middle turbinate. An incision is made along the lateral nasal wall and a mucoperiosteal flap is raised, with identification of the crista ethmoidalis. The sphenopalatine foramen is identified and the sphenopalatine artery is traced out. This takes place in the midst of active bleeding, which obscures visualization and requires repeated packing with topical vasoconstrictors. There are often multiple branches of the sphenopalatine artery and each one is traced out and dissected from surrounding tissues. An endoscopic clip applier is then utilized to clip each branch of the vessel in multiple spots, and the vessel is ligated. Hemostasis is then obtained using topical vasoconstrictors. The mucoperiosteal flap is replaced. Packing or a stent may be placed.

Description of Post-Service Work: Monitor patient during reversal of anesthesia. Discuss postoperative recovery care with anesthesia and nursing staff. Discuss procedure and findings with family in the waiting area. Write postoperative note. Dictate operative note and copy to referring physician. Prior to discharge, examine patient and write prescriptions and supplies needed for post-discharge. Perform medication reconciliation. Review post-discharge wound care and activity limitations with the patient and family and write discharge instructions.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Reason for Survey:** This family of codes is being reviewed following the October 2016 CPT meeting where the CPT Editorial Panel approved the addition of 5 codes 31XX1-31XX5 to report bundled nasal endoscopy services (21352-31298) in response to identification in RAW screen for services reported together with more than 75% frequency and revision of parentheticals for codes 31238 and 31254, 31255, 31276, 31287, 31288, 31296 and 31297. CPT 312XX1 represents a new code entirely. The existing endoscopic sinus surgery family of codes 31254-88 were also captured by a CMS high expenditure screen. Separately, the balloon sinuplasty codes were captured by the new technology screen as well as the reported together greater than 75% of the time screen, resulting in our specialty's decision to take all of the codes on the reported together screen to CPT in one sitting, and ultimately review them as a family at the January 2017 RUC meeting.

**Background on prior valuations:** CPT codes 31254-31276 were last valued by the AMA RUC in 1994 and CPT 31287 and 31288 were valued in 1993. CPT codes 31295-31297 were first valued by the RUC in 2010 as new technology. CPT 31253-31298 are new codes and have never been RUC valued.

**Survey Sample:**

The survey data and recommendations are based upon a Random Sample of Applicable Subsets (general oto, rhinology, allergy) of American Academy of Otolaryngology-Head and Neck Surgery (AAO-HNS), American Rhinologic Society (ARS), and American Academy of Otolaryngic Allergy (AAOA) members. The total sample size was 4138 otolaryngologists.

**Reference Service List Background:** As a reminder to our reviewers, we note that this tab was taken before the Research Subcommittee to review the revised vignettes for all existing codes as well as the reference service list for the survey. We struggled to compile an RSL that included an appropriate range of values for this family of codes given that the bundled codes were expected to be valued well above the highest RVU in the current family of services (CPT 31276 at 8.84 RVUs). We noted to Research that there are very limited RVU options in the 8-13 RVU range that are 000 globals which forced the inclusion of many surgical procedures that are not performed by Otolaryngologists, but we hoped would be familiar enough to them to use as comparators for the

procedures being surveyed. Additionally, 2-3 codes that were “CMS Revised” were included on the on the RSL in order to avoid large gaps value between codes.

In addition, one code was included at the higher range of the RSL, CPT 93582 Percutaneous transcatheter closure of patent ductus arteriosus, which was valued by the RUC in January 2013. This code is marked as “do not use to value physician work” in the RUC database, however, that label does not export out when codes marked as such are captured in a broader RUC database search. The rationale given for this designation is that “*The RUC recommends flagging this code in the RUC database as not to use to validate physician work because the median survey intra-time may not reflect the appropriate intra-service time compared to those who frequently perform this service.*” Further review of the code history indicates that this procedure is performed on infants and there was some question as to whether 60 minutes was sufficient time to perform this procedure and the survey data indicated those who performed the service more frequently indicated that 75 minutes was more typical. Given this, it was an oversight on our part that this code was included in the RSL. It was chosen as the number 1 or 2 KRS for a handful of codes, which is reflected in the SORs. In order to provide greater transparency to our reviewers, we have listed the other top KRS codes beyond 1 and 2 for our reviewers in cases where 93582 was chosen. We would note that in virtually all instances where 93582 was used as a KRS by respondents, we are not recommending a value anywhere near the RVUs assigned to that code (12.56 RVUs).

### **Physician Time:**

#### ***Pre-Service Time***

Our expert panel selected pre-service package 3 (Straightforward Patient/Difficult Procedure) for this code based on the fact that the procedure is typically performed in the facility setting using general anesthesia. We are requesting that 5 additional minutes from the surveyee indicated positioning time be added to the package’s 3 minutes as we believe survey respondents incorrectly assigned time for the multiple applications of topical decongestant in the positioning time. As is indicated in our description of work, pledgets soaked with topical decongestant are placed and adequate time is given to allow for decongestant to take place. Pledgets are then removed and injection with local anesthesia with vasoconstrictors is performed. Pledgets soaked with topical decongestant are then placed again. This reflects the typical flow of the operation involves the surgeon performing this prior to scrubbing and gowning. This additional time provided by the survey respondents was provided consistently across the family, and we feel explains the consistency in increased time provided in positioning.

**Given the extra time this requires, we are requesting an additional 5 minutes to the 3 minutes already allotted in this package for use of general anesthesia. This is the accepted standard for the use of local / topical anesthetic for office based procedures. In all other cases we are recommending taking the lesser of the survey or the pre-time package. Therefore, we recommend a total pretime of 38 minutes.**

#### ***Intra-Service Time***

**We are recommending our median survey time of 60 minutes for intra service work.**

#### ***Post-Service Time***

The expert panel selected post-package 9A (General Anesthesia or Complex Regional Block/ Straightforward Procedure) for this code. We are recommending taking the lesser of the survey or the pre-time package. **The expert panel recommends a post-service time of 25 minutes. A half a discharge management visit is also included as these patients typically stay overnight to carefully monitor the risk of any additional bleeding.**

#### ***Physician Work RVU***

Upon review of the survey results, the expert panel **recommends a work value of 8.00 and a total time of 142 minutes, based on a crosswalk to CPT 52356 Cystourethroscopy, with ureteroscopy and/or pyeloscopy; with lithotripsy including insertion of indwelling ureteral stent (eg, Gibbons or double-J type).**

The following table provides other RUC reviewed codes that are similar in time and work to provide additional support for the recommended value for CPT code 31241, as they demonstrate relativity across the fee schedule.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.  
☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.  
☐ Multiple codes allow flexibility to describe exactly what components the procedure included.  
☐ Multiple codes are used to maintain consistency with similar codes.  
☐ Historical precedents.  
☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

---

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 31299

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Otolaryngology                      How often? Sometimes

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period? 715

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. We estimate that the national volume is typically three times the Medicare volume. In this case, we expect about 50% of the unlisted code's volume to shift to this new CPT code, so that is multiplied by three.

Specialty otolaryngology                      Frequency 715                      Percentage 100.00 %

Specialty                      Frequency 0                      Percentage 0.00 %

Specialty                      Frequency 0                      Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 238

If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This is the estimated national volume divided by 3, per the rationale above.

Specialty otolaryngology                      Frequency 238                      Percentage 100.00 %

Specialty                      Frequency 0                      Percentage 0.00 %

Specialty                      Frequency 0                      Percentage 0.00 %

Do many physicians perform this service across the United States?

### **Berenson-Eggers Type of Service (BETOS) Assignment**

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Procedures

BETOS Sub-classification:

Minor procedure

BETOS Sub-classification Level II:

Musculoskeletal

### **Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 31238

**Tab Number: 7**

**Issue: Nasal Endoscopy**

**Code(s): 31254-88, 312XX1-X5**

**Attestation Statement**

This form needs to be completed by any **RUC Advisor** whose specialty society is developing a recommendation to be reviewed by the RUC.

As a RUC Advisor, I attest that the integrity of the RUC survey, summary of recommendation forms and practice expense recommendations are based on accurate and complete data to the best of my knowledge. As a RUC advisor, I acknowledge that violations would be addressed by the executive committee (i.e., RUC Chair , AMA Representative and Alternate AMA Representative.)

31287	Nasal/sinus endoscopy, surgical, with sphenoidotomy;
31288	Nasal/sinus endoscopy, surgical, with sphenoidotomy; with removal of tissue from the sphenoid sinus
31295	Nasal/sinus endoscopy, surgical; with dilation of maxillary sinus ostium (eg, balloon dilation), transnasal or canine fossa
31296	Nasal/sinus endoscopy, surgical; with dilation of frontal sinus ostium (eg, balloon dilation)
31297	Nasal/sinus endoscopy, surgical; with dilation of sphenoid sinus ostium (eg, balloon dilation)
31298	Nasal/sinus endoscopy, surgical; with dilation of frontal and sphenoid sinus ostia (eg, balloon dilation)

Global Period: 000 Meeting Date: January 2017

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:

*Our specialty formed a panel of experts to develop practice expense recommendations for this family of codes. The panel was comprised of our RUC Advisor and multiple clinical experts who practice in the areas of general otolaryngology,*

*rhinology and allergy. The expert panel members also practice across in settings that vary by size, geography, and represent both private and academic settings.*

*By way of history, we remind reviewers that CPT 31295-97 were captured by the OPPS screen several years ago and our Academy elected at that time to bring them forward for PE review in April of 2014. The RUC approved PE for these codes, however, CMS did not accept any PE only reviews from that meeting. At the recommendation of AMA staff, we are including both the existing PE inputs for those codes (blue columns) as well as the RUC approved PE from April 2014 (yellow columns) for your reference.*

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale:

*We utilized the existing PE inputs as a reference for codes 31254-31288 and 31295-31297. For 31241, 31253, 31257 and 31259 we utilized CPT 31237 as the base diagnostic code in this section of the CPT book which had recently reviewed in-office PE inputs. For 31298, we utilized existing inputs for the balloon codes (31295-97) as the reference since 31298 represents a bundled procedure of two of these services.*

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:

*We are retaining previous RUC approved recommendations for all existing codes (31254-31297) to include clinical staff pre-time above the standard for 000 globals of 0 minutes. This represents extensive use of clinical staff per the PE Subcommittee standards and is consistent with the PE approved in the October 2016 meeting for CPT 30140 Resection of Inferior Turbinate. The rationale for this time is that staff are essential to scheduling and completing paperwork necessary to schedule these procedures in the facility setting.*

*All new codes are consistent with these recommendations and include time for extensive use of clinical staff time in the pre-service as well.*

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:

*Clinical time: We are increasing the intra service time request for all codes in this family to add in the 6 minutes for the half-discharge management visit which is standard for 000 global procedures done in the facility setting. This was erroneously excluded in the previous PE, so we are adding it in for all codes in this presentation to correct that oversight. We are also adding in 3 minutes of post service time for CPT 31295-31297 to reflect time for post operative phone calls to call in prescriptions. This makes it consistent across the family and reflects time that is spent by clinical staff.*

*Supplies: no supplies in the facility*

*Equipment: no equipment in the facility*

5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities: *Staff complete pre-service referral forms, including coordinating and obtaining pre-operative clearance, coordinate pre-surgery services, including ensuring availability of pre-operative lab results and imaging, schedule space and equipment in the facility and provide pre-service education and obtain consent from the patient.*

CPT Codes: 31241, 31253, 31257, 31258, 31298, 31254-31288, 31295-31297

Specialty Society('s) AAO-HNS

Intra-Service Clinical Labor Activities: *staff provide the patient with home care instructions*

Post-Service Clinical Labor Activities: *Staff conduct a post service phone call to call in prescriptions for the patient.*

31297	Nasal/sinus endoscopy, surgical; with dilation of sphenoid sinus ostium (eg, balloon dilation)
31298	Nasal/sinus endoscopy, surgical; with dilation of frontal and sphenoid sinus ostia (eg, balloon dilation)

Global Period: 000 Meeting Date: January 2017

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:

*Our specialty formed a panel of experts to develop practice expense recommendations for this family of codes. The panel was comprised of our RUC Advisor and multiple clinical experts who practice in the areas of general otolaryngology, rhinology and allergy. The expert panel members also practice across in settings that vary by size, geography, and represent both private and academic settings.*

*By way of history, we remind reviewers that CPT 31295-97 were captured by the OPPS screen several years ago and our Academy elected at that time to bring them forward for PE review in April of 2014. The RUC approved PE for these codes, however, CMS did not accept any PE only reviews from that meeting. At the recommendation of AMA staff, we are including both the existing PE inputs for those codes (blue columns) as well as the RUC approved PE from April 2014 (yellow columns) for your reference.*

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale:

*We utilized the existing PE inputs as a reference for codes 31254-31288 and 31295-31297. For 31241, 31253, 31257, 31259 we utilized CPT 31237 as the base diagnostic code in this section of the CPT book which had recently reviewed in-office PE inputs. For 31298, we utilized existing inputs for the balloon codes (31295-97) as the reference since 31298 represents a bundled procedure of two of these services.*

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:

*We are retaining previous RUC approved recommendations for all existing codes (31254-31297) to include clinical staff pre-time above the standard for 000 globals of 0 minutes. This represents extensive use of clinical staff per the PE Subcommittee standards and is consistent with the PE approved in the October 2016 meeting for CPT 30140 Resection of Inferior Turbinate. The rationale for this time is that staff are essential to scheduling and completing paperwork necessary to schedule these procedures in the facility setting.*

*All new codes are consistent with these recommendations and include time for extensive use of clinical staff time in the pre-service as well.*

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:

*We are not recommending an increase in time for any of the codes with existing non-facility inputs. We are adding in-office PE for new code 31298 and for 31254. The addition to in-office PE for 31254 is based on the fact that over 20% of utilization in the RUC database is done in the office setting. We also feel that this service can now safely be done in the office setting under appropriate clinical indications.*

**Supplies:** *we did not increase any supply amounts or add any new supplies for 31295-97. For 31254 and 31298, we mirrored the reference code used with the exception of 31298 requiring two scopes since two sinuses are being accessed. This requires double the scope cleaning materials (kit and anti-fog solution) as well as double the balloon kits which are listed. We added one new supply for all codes with in-office inputs, the cleaning pack for surgical instruments which was previously omitted. These packs are needed to clean the instruments following the procedure.*

*We modified the type of mask included from the regular surgical mask SB033 to the surgical mask with face shield SB034 for 31254 and 31295-97 and 31298, as this is the more appropriate mask to wear for these procedures. For, 31254 reusable blades are required and an invoice has been provided.*

**Equipment:** *there were no changes to equipment for 31295-97 from what was approved in April 2014 by the RUC. Changes were made in 2014 from the prior PE which was approved in 2010 when the codes were first valued as new technology. Times for equipment are slightly modified in accordance with PE subcommittee standards and the CMS rules related to highly technical and non-technical equipment times. As mentioned above, 31298 requires two scopes which are listed (0 degree and 30 degree rigid scopes). We added one piece of equipment for all procedures done in-office ES005 endoscope disinfectant cart in order to include the necessary equipment to clean the scopes used in these procedures which was previously omitted. A microdebrider console and handpiece are also required to perform 31254 in the office, so those have been listed with the inputs for this code. Invoices are provided for those items.*

5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

*Staff complete pre-service referral forms, including coordinating and obtaining pre-operative clearance, coordinate pre-surgery services, including ensuring availability of pre-operative lab results and imaging, schedule space and equipment in the facility and provide pre-service education and obtain consent from the patient. Furthermore, prescriptions are called in for the patient to begin taking the day of the procedure (usually diazepam).*

Intra-Service Clinical Labor Activities:

Greet patient, provide gowning, ensure appropriate medical records are available	
Obtain vital signs	3 vitals are taken
Prepare room, equipment and supplies	
Setup scope (nonfacility setting only)	Rigid endoscopes are utilized for all of these procedures.
Prepare, set-up and start IV, initial positioning and monitoring of patient	Patient must be positioned for procedure
Sedate/apply anesthesia	Staff assists physician in the application of topical/local anesthesia
Assist physician or other qualified healthcare professional---directly related to physician work time (100% of physician intra-service time)	Staff assist the physician during the entire procedure for all of these services.
Monitor patient following procedure/service, multitasking 1:4	Staff monitor the patient for up to an hour following the procedure. Monitoring is done at the 1:4 ratio
Clean room/equipment by clinical staff	
Clean scope	Time for cleaning the rigid endoscope is required (for 31298 there is double
Clean surgical instrument package	Time for cleaning the basic instrument pack is required
Complete post-procedure diagnostic forms, lab and x-ray requisitions	Diagnostic forms are completed and, for 31254, pathology requisitions are completed.
Review home care instructions, coordinate visits/prescriptions	Home care instructions are provided to patient

Post-Service Clinical Labor Activities:

Conduct patient communications to evaluate how they're doing after the procedure and answer any questions they may have. Call in post-operative prescriptions.

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
*High Expenditure Procedural Codes Screen*

April 2013

**Nasal/Sinus Endoscopy**

CPT code 31237 *Nasal/sinus endoscopy, surgical; with biopsy, polypectomy or debridement (separate procedure)* was identified through the CMS High Expenditure Procedural Codes screen. The RUC recommended survey of physician work and review of practice expense for this family of services at the April 2013 RUC meeting.

**31237 *Nasal/sinus endoscopy, surgical; with biopsy, polypectomy or debridement (separate procedure)***

The RUC reviewed the survey results from 153 otolaryngologists and agreed with the specialty on the following physician time components: 23 minutes of pre-service time, 20 minutes of intra-service time and 5 minutes of immediate post-service time.

The RUC reviewed the survey data and agreed that current work RVU of 2.98 no longer accurately reflects the physician work involved in this service. Specifically, the RUC noted the decrease in intra-service time from the previous survey performed in 1993. Given this, the RUC agreed with the specialty society that the 25<sup>th</sup> percentile survey value of 2.60 accurately accounts for the work to perform 31237. To justify this value, the RUC reviewed MPC code 51102 *Aspiration of bladder; with insertion of suprapubic catheter* (work RVU= 2.70) and noted that both services have identical intra-service time, 20 minutes; however, the reference code has 12 additional minutes of total time and is therefore properly valued slightly higher than the surveyed code. In addition, the RUC compared code 31237 to CPT code 57454 *Colposcopy of the cervix including upper/adjacent vagina; with biopsy(s) of the cervix and endocervical curettage* (work RVU= 2.33) and agreed that while both procedures have identical intra-service time, the surveyed code should be valued higher due to greater total time and increased intensity compared to 57454. **The RUC recommends a work RVU of 2.60 for CPT code 31237.**

**31238 *Nasal/sinus endoscopy, surgical; with control of nasal hemorrhage***

The RUC reviewed the survey results from 132 otolaryngologists and agreed with the specialty on the following physician time components: 18 minutes of pre-service time, 25 minutes of intra-service time and 10 minutes of immediate post-service time. These recommended pre- and post-service times reflect a reduction of 5 minutes in each category to account for any potential overlap of physician work between the endoscopy service and an Evaluation and Management service that is typically performed on the same date of service.

The RUC reviewed the survey data and agreed that the current work RVU of 3.26 no longer accurately reflects the physician work involved in this service. As with the survey data for 31237, the median intra-service time is lower than the last RUC survey performed in 1993. Given this, the RUC agreed with the specialty society that the 25<sup>th</sup> percentile survey value of 2.74 accurately accounts for the work of 31238. To justify this value,

the RUC reviewed the key reference code 31296 *Nasal/sinus endoscopy, surgical; with dilation of frontal sinus ostium (eg, balloon dilation)* (work RVU= 3.29) and noted that the reference code has 5 additional minutes of intra-service time and greater total time compared to the surveyed code. Therefore, the reference code is accurately valued higher than 31238. In addition, the RUC reviewed codes 57460 *Colposcopy of the cervix including upper/adjacent vagina; with loop electrode biopsy(s) of the cervix* (work RVU= 2.83) and 52204 *Cystourethroscopy, with biopsy(s)* (work RVU= 2.59) and agreed that since both codes have identical intra-service time, 25 minutes, compared to the surveyed code, 31238 is appropriately valued between these services. **The RUC recommends a work RVU of 2.74 for CPT code 31238.**

### **31239 *Nasal/sinus endoscopy, surgical; with dacryocystorhinostomy***

The RUC reviewed the survey results from 105 otolaryngologists and ophthalmologists and agreed with the specialties on the following physician time components: 46 minutes of pre-service time, 60 minutes of intra-service time and 20 minutes of immediate post-service time. The RUC also agreed with the following post-operative visits for this 010 day global code: one 99213 and one-half day discharge management service, 99238. The RUC noted that while the survey respondents did not indicate a discharge management service was typical, there was consensus that the physician work of detailing to the patient the post-operative care instructions and prescriptions, preparing the operative report and scheduling the follow-up visit is necessary physician work and should be captured in a discharge management code.

The RUC reviewed the survey data and agreed that the current work RVU of 9.33 no longer accurately reflects the physician work involved in this service. The RUC again noted that the surveyed median intra-service time is lower than the last RUC survey performed in 1994, 60 minutes versus 90 minutes. To determine an appropriate value, the RUC compared the surveyed code to CPT code 22523 *Percutaneous vertebral augmentation, including cavity creation (fracture reduction and bone biopsy included when performed) using mechanical device, 1 vertebral body, unilateral or bilateral cannulation (eg, kyphoplasty); thoracic* (work RVU= 9.04) and agreed that both codes have almost identical intra-service time, 58 minutes compared to 60 minutes, and similar total time. Therefore, the RUC agreed to directly crosswalk the physician work of 22523 to the surveyed code, 31239. To justify a work RVU of 9.04, the RUC compared the surveyed code to MPC code 22520 *Percutaneous vertebroplasty (bone biopsy included when performed), 1 vertebral body, unilateral or bilateral injection; thoracic* (work RVU= 9.22) and agreed that since the reference code has slightly greater total time and is a more intense procedure, it is appropriately valued slightly higher than 31239. Finally, the RUC validated the crosswalk by noting that the recommended post-operative visits contain one less 99213 and the addition of a half-day discharge code compared to the current time for this code. By subtracting out the work of a 99213 (0.97) and adding in the work of a half-day discharge (0.64) to the current work RVU (9.33) the resulting value (9.00) is almost identical to the recommended value of 9.04. **The RUC recommends a work RVU of 9.04 for CPT code 31239.**

**31240 Nasal/sinus endoscopy, surgical; with concha bullosa resection**

The RUC reviewed the survey results from 125 otolaryngologists and agreed with the specialty on the following physician time components: 38 minutes of pre-service time, 20 minutes of intra-service time and 15 minutes of immediate post-service time.

The RUC reviewed the survey respondent's estimated physician work values and agreed that the current work value of 2.61, almost identical to the 25<sup>th</sup> percentile value (2.64), remains appropriate for this code. The RUC noted that the median intra-service time is reduced from the last survey performed in 1993, 20 minutes versus 30 minutes. However, it appears that in 1993 the RUC recommended a much higher value (4.00) for this procedure, but CMS (then HCFA) rejected this recommendation by lowering the value for the services in this family by 33 percent. This arbitrary reduction was justified by the Agency, noting that the intensities would have been too high based on the RUC recommendations at the time. Given how these services were previously considered by the RUC, the RUC agreed that the current value, properly valued relative to the other codes in this family of services, is appropriate. Further justification was gained by comparing the surveyed code to key reference code 31295 *Nasal/sinus endoscopy, surgical; with dilation of maxillary sinus ostium (eg, balloon dilation), transnasal or via canine fossa* (work RVU= 2.70). The RUC noted that since both codes have identical intra-service time and analogous total time, the two codes should be valued similarly. Finally, CPT code 36555 *Insertion of non-tunneled centrally inserted central venous catheter; younger than 5 years of age* (work RVU= 2.68) was compared to code 31240 and since both codes have identical intra-service time, they should be valued similarly. **The RUC recommends a work RVU of 2.61 for CPT code 31240.**

**Practice Expense:**

The PE Subcommittee determined that the equipment time needed to be recalculated to comply with the CMS definition of appropriate allocation of equipment time. This resulted in removing 15 minutes of equipment time for each of the three scopes included in this procedure. The RUC noted that the specialty did not agree with this decision, stating that staff observes the patient for recurrent bleeding and if bleeding occurs the scopes need to be available in the room and therefore cannot be used by other patients. However, the RUC agreed that the 15 minutes of patient monitoring should be removed from all the equipment time to comply with CMS standards. The Chair noted that a PE Subcommittee workgroup is going to be established to review monitoring time issues. The RUC reviewed and approved the direct practice expense inputs with modifications as recommended by the Practice Expense Subcommittee.

**Work Neutrality:**

The RUC's recommendation for these codes will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

<b>CPT Code (●New)</b>	<b>CPT Descriptor</b>	<b>Global Period</b>	<b>Work RVU Recommendation</b>
31237	Nasal/sinus endoscopy, surgical; with biopsy, polypectomy or debridement (separate procedure)	000	2.60

## AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS SUMMARY OF RECOMMENDATION

CPT Code: 31237	Tracking Number	Original Specialty Recommended RVU: <b>2.98</b>
		Presented Recommended RVU: <b>2.60</b>
Global Period: 000		RUC Recommended RVU: <b>2.60</b>

CPT Descriptor: Nasal/sinus endoscopy, surgical; with biopsy, polypectomy or debridement (separate procedure)

### CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 60 year old who has undergone previous endoscopic sinus surgery presents with nasal obstruction, heavy postnasal drainage and intermittent facial pain. On endoscopic exam the patient is found to have recurrent polyps, inspissated mucus, and infected crusts in the sinus cavities on the right side. They undergo nasal endoscopy with debridement and removal of polyps and crusts, as well as devitalized tissue and bone.

Percentage of Survey Respondents who found Vignette to be Typical: 84%

#### Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is;  
Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

#### Moderate Sedation

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 42%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 4%

#### Description of Pre-Service Work:

- After the decision is made for the need for nasal endoscopy the patient is moved to a room equipped with the video tower and a protective drape is placed on the patient.
- Vital signs are obtained.
- The physician ensures that the endoscopes, suction, air source for insufflation, and video recording equipment are available and functioning properly.
- The procedure is explained and consent obtained.
- A time out is performed.
- The physician washes hands and dons proper gloves.
- Topical decongestant and anesthetic sprays are applied to the nostrils followed by a wait time for it to take effect.
- The patient is positioned in an upright, seated position.

Description of Intra-Service Work: A complete nasal endoscopy is performed using one or more telescopes. On endoscopic exam she is found to have recurrent polyps, inspissated mucus, and infected crusts in the sinus cavities on the right side. Additional anesthesia is applied by the placement of cotton pledgets soaked with anesthetic and/or direct injection to the affected areas. The recurrent polyps and devitalized tissue/bone are removed with thru-cutting instruments. The infected crusts are removed with grasping forceps. Inspissated mucus is cleared with straight and curved suctions. Hemostasis is achieved with application of cotton pledgets soaked with topical decongestant with appropriate wait time. Any residual bleeding sites are controlled with absorbable packing and/or cautery.

Description of Post-Service Work:

- Monitor patient during recover period.
- Home restrictions (i.e. diet, activity), treatment and findings are explained to the patient using the procedure video recording and pointing out areas of normal anatomy and pathology.
- Subsequent evaluation and therapeutic plan are discussed.
- Write prescriptions for medications and supplies needed post-discharge
- Perform medication reconciliation.
- The examination and any still images are saved on the digital recording system.
- The procedure note is dictated and findings communicated to the referring physician.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

**Why are these codes being reviewed?**

The nasal/sinus endoscopy code 31237 was identified in the CY 2012 Final Physician Fee Schedule by CMS as a potentially misvalued service. Following submission of an action plan to survey 31237 by the Academy, it was determined

that 31237-31240 was a “family” of codes based on their location in the CPT book, and therefore, all four codes were required for survey by the RAW for April 2013.

### **Description of Random Survey**

All four codes in this family were surveyed by AAO-HNS. The standard 000 global survey instrument was utilized with two revisions instructing respondents to include time for administering topical anesthetic, where appropriate, in the pre-service time and localized or injected anesthesia, where appropriate, in the intra service time. This change was approved by the Research Subcommittee. Surveys for CPT 31237 were sent to nearly 1100 Otolaryngologists, including the subspecialty of rhinology. Of the 1088 surveys distributed for CPT 31237, 153 responses were received, a response rate of 14%.

### **Physician Time**

**Pre Time:** Following a review of the pre-time survey data, our expert panel determined that preservice package 6 (Non-Facility procedure with sedation/anesthesia care) was most appropriate. Prepackage 6 assigns 17 minutes for evaluation, 1 minute for positioning, and 5 minutes for scrub, dress, and wait. Our expert panel felt this was the most appropriate package given that service is predominantly provided in a physician’s office and topical anesthetic and decongestant is utilized to numb the nose prior to providing an endoscopy procedure. The expert panel reviewed the survey pre times and are not requesting any adjustments to the pre-time package. As a result, we are requesting a total of 23 pre-service minutes for 31237.

**Intra Time:** Our expert panel agreed with our surveyees regarding the time for intra service work and are recommending the survey median time of 20 minutes for intra service work.

**Post Time:** Likewise, our experts felt that the survey’s post time was an accurate reflection of the post time required for this procedure and are recommending the median post time of 5 minutes. This results in a request for a total of 48 minutes of physician work time for CPT 31237.

### **Physician Work Recommendation**

This recommendation is supported by the key reference code 31231 which survey respondents said was lower in intensity and complexity, and accordingly has a lower work RVU of 1.10, and less physician time, totaling 21 minutes. In addition, our expert panel believes the work and intensity of 31237 is approximately three times the work of the key reference services, 31231, which is reflected in the survey responses where respondents assigned a median value of 3.05, nearly three times that of the 1.10 value for 31231. Respondents also nearly tripled the time as compared to the key reference service’s 21 minutes, assigning 55 total minutes to 31237. Given this, we believe the survey and key reference service clearly support retention of the existing value for 31237, at 2.98 physician work RVUs.

We are also providing the following reference tables which include recently reviewed services which support our requested values for physician time and work for CPT 31237.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

- Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Ophthalmology How often? Rarely

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. This is three times the 2011 Medicare volume for this service which we believe accurately estimates the national frequency of this service.

Specialty Ophthalmology	Frequency 1687	Percentage 0.63 %
-------------------------	----------------	-------------------

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?  
89,235 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty.  
Please explain the rationale for this estimate. This is based on the 2011 claims data from the 2013 RUC database.

Specialty Ophthalmology	Frequency 563	Percentage 0.63 %
-------------------------	---------------	-------------------

Do many physicians perform this service across the United States? Yes

### Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 31237

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 49%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 9%

**Description of Pre-Service Work:**

- After the decision is made for the need for nasal endoscopy the patient is moved to a room equipped with the video tower and a protective drape is placed on the patient.
- Vital signs are obtained.
- The physician ensures that the endoscopes, suction, air source for insufflation, cautery, and video recording equipment are available and functioning properly.
- The procedure is explained and consent obtained.
- A time out is performed.
- The physician washes hands and dons proper gloves, mask, and protective eye wear.
- Topical decongestant and anesthetic sprays are applied to the nostrils followed by a wait time for it to take effect.
- The patient is positioned in an upright, seated position.

Description of Intra-Service Work: Complete bilateral nasal endoscopy is performed. Previous packing, crusts, and clots are removed to help identify the bleeding site. The bleeding area is then packed with cotton or pledget soaked with topical decongestant and anesthetic spray followed by a wait time for the anesthetic to take effect. The bleeding region is then infiltrated with local with epinephrine followed by a wait time. The bleeding site(s) is then cauterized with bipolar or suction cautery to achieve control of epistaxis. Absorbable packing, such as fibrillar surgical, is applied to the cautery site and any other bleeding areas.

**Description of Post-Service Work:**

- Monitor patient during recovery period and check for any recurrence of bleeding.
- Home restrictions (i.e. diet, activity), treatment and findings are explained to the patient using the procedure video recording and pointing out areas of normal anatomy and pathology.
- Subsequent evaluation and therapeutic plan are discussed.
- Write prescriptions for medications and supplies needed post-discharge
- Perform medication reconciliation.
- The examination and any still images are saved on the digital recording system.
- The procedure note is dictated and findings communicated to the referring physician.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

**Why are these codes being reviewed?**

The nasal/sinus endoscopy code 31237 was identified in the CY 2012 Final Physician Fee Schedule by CMS as a potentially misvalued service. Following submission of an action plan to survey 31237 by the Academy, it was determined

that 31237-31240 was a “family” of codes based on their location in the CPT book, and therefore, all four codes were required for survey by the RAW for April 2013.

### **Description of Random Survey**

All four codes in this family were surveyed by AAO-HNS. The standard 000 global survey instrument was utilized with two revisions instructing respondents to include time for administering topical anesthetic, where appropriate, in the pre-service time and localized or injected anesthesia, where appropriate, in the intra service time. This change was approved by the Research Subcommittee. The Otolaryngology physician work recommendations were derived by conducting a random survey of our members. Surveys for CPT 31238 were sent to nearly 1100 Otolaryngologists, including the subspecialty of rhinology, as well as to the Academy’s leadership and key committees such as the Rhinology Paranasal Sinus Committee which contains clinicians who were most likely to be familiar with the services under review. Of the 1088 surveys distributed for CPT 31238, 132 responses were received, a response rate of 12%.

### **Physician Time**

**Pre Time:** Following a review of the pre-time survey data, our expert panel determined that preservice package 6 (Non-Facility procedure with sedation/anesthesia care) was most appropriate. Prepackage 6 assigns 17 minutes for evaluation, 1 minute for positioning, and 5 minutes for scrub, dress, and wait. Our expert panel felt this was the most appropriate package given that service is predominantly provided in a physician’s office and topical anesthetic and decongestant is utilized to numb the nose prior to providing an endoscopy procedure. We recognize that the five percent file claims data provided by the AMA RUC staff reflects that 31238 is billed with an E/M code on the same date of service 67% of the time. As a result, our expert panel recommends a reduction to the pre-service package’s evaluation time of 9 minutes (the time for the history and exam) to account for the E/M typically billed on the same day. Our expert panel felt, however, that the preservice package’s 1 minute allotted for the check/set-up room, supplies and equipment was not sufficient for this type of emergency procedure, and recommends adding 4 minutes for this work, resulting in 5 minutes to set up the room for a total of 12 preservice evaluation minutes. This results in a total pre service time recommendation of 18 minutes.

**Intra Time:** Our expert panel agreed with our surveyees regarding the time for intra service work and are recommending the survey median time of 25 minutes for intra service work.

**Post Time:** Likewise, our experts felt that the survey’s post time was an accurate reflection of the post time required for this procedure and are recommending the median post time of 15 minutes. The expert panel did not feel it was necessary to reduce the post time for this service, despite the fact that it is typically billed with an E/M, because with this type of emergency procedure patients frequently stay at the physician office far longer than the survey’s reflected 15 minutes of post time to ensure there is no recurrence of bleeding. This results in a request for a total of 58 minutes of physician work time for CPT 31238.

### **Physician Work Recommendation**

After concluding the survey, the results were analyzed by an expert panel and it was determined that the survey’s median value was too high given that the work for this service has not changed, and no compelling evidence exists to increase the value of the service. As a result, they felt the survey’s 25<sup>th</sup> percentile of 2.74 RVUs was more appropriate for CPT 31238.

**Therefore, we recommend an RVU of 2.74, consistent with the survey’s 25<sup>th</sup> percentile, for CPT 31238.**

This recommendation is supported by the key reference service (KRS) 31296. While survey said the KRS was lower in intensity and complexity, it contains 30 minutes of additional time as compared to our recommendations for 31238, and therefore, has a higher work RVU of 3.29. Our expert panel also felt CPT 57460 served as an excellent reference code for this service and has a work RVU of 2.83 and a total time of 50 minutes. We are also providing the following reference tables which include recently reviewed services which support our requested values for physician time and work for CPT 31238.

### **Comparison to key reference code**

<b>CPT Code</b>	<b>RVW</b>	<b>IWPUT</b>	<b>Total Time</b>	<b>Eval</b>	<b>Posit</b>	<b>SDW</b>	<b>INTRA</b>	<b>Post</b>
<b>31238</b>	2.74	0.0829	58	12	1	5	25	15
<b>31296</b>	3.29	0.0710	88	30	3	10	30	15

### **Comparison to MPC codes**

<b>CPT Code</b>	<b>Descriptor</b>	<b>RVW</b>	<b>IWPUT</b>	<b>Total Time</b>	<b>Eval</b>	<b>Posit</b>	<b>SDW</b>	<b>INTRA</b>	<b>Post</b>
<b>51102</b>	Aspiration of bladder; with insertion of	2.70	0.0938	60	19	1	5	20	15

	suprapubic catheter								
<b>31238</b>	Nasal/sinus endoscopy, surgical; with control of nasal hemorrhage	2.74	0.0829	58	12	1	5	25	15
<b>15002</b>	Surgical preparation or creation of recipient site by excision of open wounds, burn eschar, or scar (including subcutaneous tissues), or incisional release of scar contracture, trunk, arms, legs; first 100 sq cm or 1% of body area of infants and children	3.65	0.0868	115	45	15	15	20	20

The table below compares the survey code to other RUC reviewed codes of similar time and work, providing further support that the recommended value for 31238 is appropriate.

<u>RUC Reviewed</u>	<u>CPT Code</u>	<u>Descriptor</u>	<u>RVW</u>	<u>IWPUT</u>	<u>Total Time</u>	<u>Eval</u>	<u>Posit</u>	<u>SDW</u>	<u>INTRA</u>	<u>Post</u>

## SERVICES REPORTED WITH MULTIPLE CPT CODES

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☒ Other reason (please explain) CPT 31238 is typically billed in conjunction with an E/M office visit.

- Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. CPT 31238 is billed with one of the following office E/M visits (99212-99215) on the same day 67% of the time per the CMS 5% data file.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 31238

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Otolaryngology	How often? Commonly
Specialty Physicians Assistant	How often? Rarely
Specialty Nurse Practitioners	How often? Rarely

Estimate the number of times this service might be provided nationally in a one-year period? 74847

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. This is three times the 2011 Medicare volume for this service which we believe accurately estimates the national frequency of this service.

Specialty Otolaryngology	Frequency 72602	Percentage 97.00 %
Specialty	Frequency 0	Percentage 0.00 %
Specialty	Frequency 0	Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 24,949 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This is based on the 2011 claims data from the 2013 RUC database.

Specialty Otolaryngology	Frequency 24201	Percentage 97.00 %
Specialty	Frequency 0	Percentage 0.00 %
Specialty	Frequency 0	Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

### Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 31238

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 31239	Tracking Number	Original Specialty Recommended RVU: <b>9.33</b>
		Presented Recommended RVU: <b>9.33</b>
Global Period: 010		RUC Recommended RVU: <b>9.04</b>

CPT Descriptor: Nasal/sinus endoscopy, surgical; with dacryocystorhinostomy

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 49 year old presents with constant daily tearing in the right eye over the past six months. The patient has a history of multiple episodes of conjunctivitis and right inner canthal tenderness that have responded to topical and oral antibiotics. The examination confirms a purulent discharge with pressure to the lacrimal sac. Lacrimal irrigation reveals a blocked nasolacrimal duct distal to the common canaliculus.

Percentage of Survey Respondents who found Vignette to be Typical: 96%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 55% , In the ASC 46%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 49% , Overnight stay-less than 24 hours 7% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 4%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? Yes

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 54%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 8%

Description of Pre-Service Work: The patient history, physical exam and appropriate preoperative tests are reviewed. The preoperative interval history and exam are documented in the patient record. The surgical plan is discussed with the patient, all questions are addressed and surgical consent is reviewed. The operative nostril is decongested with Afrin nasal spray twice separated by a ten minute interval. The surgical eye is confirmed with the patient, surgical and anesthesia team, and the forehead is marked to indicate the operative eye. After anesthesia is administered, the patient is positioned.

Description of Intra-Service Work: The operative eyelid is confirmed by the surgeon and surgical team. The patient is monitored with pulse oximetry and electrocardiography. The surgeon adds topical anesthesia to both eyes. A local anesthetic block is injected into the operative supratrochlear, infraorbital, anterior lacrimal crest regions and intra-nasally along the lacrimal crest and middle turbinate. The involved nostril is packed with a cotton pledget soaked in 2% lidocaine w/epinephrine. The eye, periocular area and nostril are prepped and draped. The nasal packing is removed. A fiber optic endoilluminator is inserted through the lacrimal canaliculi into the sac to transilluminate the lacrimal bone. A nasal endoscope is inserted for visualization. The nasal mucosa is incised vertically with a crescent blade and elevated with endoscopic forceps and periosteal elevators to fully expose the lacrimal bone. The lacrimal bone is removed with Kerrison or pituitary rongeurs. The final bony ostium should allow adequate clearance of the common canaliculus and the inferior sac. The exposed lacrimal sac mucosa is infiltrated with local anesthetic for vasoconstriction, incised, and the medial sac mucosa removed with forceps. Adequate lacrimal sac mucosal removal is confirmed by free flow of saline or fluorescein from the canaliculi through the nasal ostium, or direct visualization of the common internal punctum with the endoscope. Nasal dressing is applied. Antibiotic-steroid drops are placed in the operative eye.

Description of Post-Service Work: Pain management is discussed and the IV removed. The nostril is packed if excessive intranasal bleeding is noted. The patient and family are given detailed postoperative care instructions and appropriate prescriptions. An operative report is prepared, and required paperwork completed. Follow-up visits are scheduled.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

**Why are these codes being reviewed?**

The nasal/sinus endoscopy code 31237 was identified in the CY 2012 Final Physician Fee Schedule by CMS as a potentially misvalued service. Following submission of an action plan to survey 31237 by the Academy, it was determined that 31237-31240 was a “family” of codes based on their location in the CPT book, and therefore, all four codes were required for survey by the RAW for April 2013. We note as a reminder for the RUC in reviewing this family of codes, that 31239 is the only 010 global in this “family”, and therefore, has an appropriately higher RVU and associated time required to perform this procedure.

**Description of Random Survey**

All four codes in this family were surveyed by AAO-HNS. One of the codes, 31239, was surveyed jointly by Otolaryngology and Ophthalmology. The standard 010 global survey instrument was utilized with two revisions instructing respondents to include time for administering topical anesthetic, where appropriate, in the pre-service time and localized or injected anesthesia, where appropriate, in the intra service time. This change was approved by the Research Subcommittee. The Otolaryngology physician work recommendations were derived by conducting a random survey of our members. Surveys for 31239 were sent to nearly 1100 Otolaryngologists, including the subspecialty of rhinology, as well as to the Academy’s leadership and key committees such as the Rhinology Paranasal Sinus Committee which contains clinicians who were most likely to be familiar with the services under review. The American Academy of Ophthalmology’s survey for 31239 was distributed to 264 Ophthalmologists, who indicated an interest in ocular plastic procedures. Of the 1355 surveys distributed for 31239, 105 responses were received, a response rate of 7.7%.

**Physician Time**

**Pre Time:** Following a review of the pre-time survey data, our expert panel determined that preservice package 3 (Straightforward Patient/Difficult Procedure) was most appropriate. Prepackage 3 assigns 33 minutes for evaluation, 3 minute for positioning, and 15 minutes for scrub, dress, and wait. Our expert panel felt this was the most appropriate package given that service is provided in the facility setting and both topical and general anesthetic are utilized for the endoscopy procedure. They believe this qualifies as a “difficult procedure” based on the fact that the surgical site is located in the corner of the eye and involved placing metal rods in the nose which can cause bleeding and has the risk of other complications. The expert panel reviewed the survey pre times and determined that 33 minutes for evaluation and 3 minutes for positioning were appropriate, however, they recommended reducing the scrub dress and wait package time of 15 minutes down to 10 to maintain consistency with the time allotted for scrub dress and wait by the survey respondents. This results in an overall preservice time recommendation of 33 minutes evaluation, 3 minutes for positioning, and 10 minutes for scrub, dress and wait, totaling 46 preservice minutes for 31239.

**Intra Time:** Our expert panel agreed with our surveyees regarding the time for intra service work and are recommending the survey median time of 60 minutes for intra service work.

**Post Time & Post Operative Visits:** Likewise, our experts felt that the survey’s post time was an accurate reflection of the post time required for this procedure and are recommending the median post time of 20 minutes. In addition, we are requesting the standard .5 discharge management visit (99238) which is typical for 010 global services performed in the facility where the patient is discharged on the same day as the procedure. Our expert panel also agreed with survey respondents that one visit, a 99213 office visit, is typical during the 5-10 days of the post operative period. This results in a request for a total of 168 minutes of physician work time for CPT 31239.

**Physician Work Recommendation**

After concluding the survey, the results were analyzed by an expert panel and it was determined that the existing value for 31239 is appropriate and should be maintained. This is supported by our survey which had a higher median and 25<sup>th</sup> percentile, than the existing value of 9.33 RVUs. Our expert panel does not believe this service has changed, or that compelling evidence exists to increase the value of the code; **therefore, we recommend retention of the existing value of 9.33 RVUs for CPT 31239.**

This recommendation is supported by the key reference code 31292 which survey respondents said was greater in intensity and complexity, and as a result, has a higher work RVU of 15.90 and substantially more post operative work, resulting in a total time of 453 total minutes. We are also providing the following reference tables which include recently reviewed services which support our requested values for physician time and work for CPT 31239.

**Comparison to key reference code**

<u>CPT Code</u>	<u>RVW</u>	<u>IWPUT</u>	<u>Total Time</u>	<u>Eval</u>	<u>Posit</u>	<u>SDW</u>	<u>INTRA</u>	<u>Post</u>	<u>Post Visits</u>
<b>31292</b>	15.90	0.0449	453	90	0	0	140	30	193
<b>31239</b>	9.33	0.1064	168	33	3	10	60	20	42

**Comparison to MPC codes**

<u>CPT Code</u>	<u>Descriptor</u>	<u>RVW</u>	<u>IWPUT</u>	<u>Total Time</u>	<u>Eval</u>	<u>Posit</u>	<u>SDW</u>	<u>INTRA</u>	<u>Post</u>	<u>Post Visits</u>
<b>22523</b>	Percutaneous vertebral augmentation, including cavity creation (fracture reduction and bone biopsy included when performed) using mechanical device, 1 vertebral body, unilateral or bilateral cannulation (eg, kyphoplasty); thoracic	9.04	0.1009	180	30	15	15	58	20	42
<b>31239</b>	Nasal/sinus endoscopy, surgical; with dacryocystorhinostomy	9.33	0.1064	168	30	3	10	60	20	42
<b>38571</b>	Laparoscopy, surgical; with bilateral total pelvic lymphadenectomy	14.76	0.0692	272	60	0	0	180	0	32

The table below compares the survey code to other RUC reviewed codes of similar time and work, providing further support that the recommended value for 31239 is appropriate.

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.  
☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.  
☒ Multiple codes allow flexibility to describe exactly what components the procedure included.  
☐ Multiple codes are used to maintain consistency with similar codes.

- ☐ Historical precedents.  
☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. This service is billed with CPT 68815, Probing of Nasolacrimal Duct, 51% of the time according to the five percent file 2011 data. Multiple procedure modifier -51 would be appended to CPT 68815 when billed in conjunction with 31239. SEE TABLE AT END OF SOR.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 31239

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Ophthalmology                      How often? Sometimes

Specialty Otolaryngology                      How often? Sometimes

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period? 3168

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. This is three times the 2011 Medicare volume for this service which we believe accurately estimates the national frequency of this service.

Specialty Ophthalmology                      Frequency 1869                      Percentage 58.99 %

Specialty Otolaryngology                      Frequency 1267                      Percentage 39.99 %

Specialty                      Frequency 0                      Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,056

If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This is based on the 2011 claims data from the 2013 RUC database.

Specialty Ophthalmology                      Frequency 623                      Percentage 58.99 %

Specialty Otolaryngology                      Frequency 422                      Percentage 39.96 %

Specialty                      Frequency 0                      Percentage 0.00 %

Do many physicians perform this service across the United States? No

## Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 31239

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

## AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS SUMMARY OF RECOMMENDATION

CPT Code: 31240	Tracking Number	Original Specialty Recommended RVU: <b>2.61</b>
		Presented Recommended RVU: <b>2.61</b>
Global Period: 000		RUC Recommended RVU: <b>2.61</b>

CPT Descriptor: Nasal/sinus endoscopy, surgical; with concha bullosa resection

### CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 30 year old presents with a history of nasal blockage, facial pressure, and recurrent maxillary sinusitis and an obstruction of the natural ostium of the left maxillary sinus from an abnormally large and pneumatized middle turbinate (a concha bullosa cell). The patient undergoes endoscopic resection of the obstructing concha bullosa.

Percentage of Survey Respondents who found Vignette to be Typical: 98%

### Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

### Moderate Sedation

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? Yes

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 54%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 16%

### Description of Pre-Service Work:

- After the decision is made to perform a nasal endoscopy with excision of a concha bullosa, the physician must perform the following steps to prepare the patient and the room for the procedure.
- Assure appropriate selection, timing, and administration of DVT prophylaxis.
- Assess need for beta-blockers, order as required.
- Review medical history, pathology, and radiology report.
- Review radiographic images.
- Review results of preoperative testing (labs, EKG, CXR).
- Review reports of consultants providing preoperative assessment and clearance as indicated.
- Meet with patient and family to review planned procedure and postoperative management.
- Reexamine patient to ensure that physical findings have not changed and dictate history and physical.
- Obtain informed consent.
- Review airway and medical management with anesthesiologist.
- Review planned procedure with OR staff.
- Verify that all required instruments and supplies are available, set up scopes, suction, light source, and photodocumentation equipment and ensure functionality.
- Change into scrub clothes.
- Observe/wait during induction of anesthesia and intubation.
- Monitor/assist with positioning of the patient (supine, head slightly elevated)
- Ensure that radiographic images are available in the OR.

Cotton pledgts soaked with topical decongestant are placed in the nasal cavity under direct visualization.

- Monitor/assist with draping.
- Scrub and gown.
- Operating table is turned either 90 or 180 degrees.
- Perform surgical "time out" with operating surgical team.

Description of Intra-Service Work: Previously placed pledgets are removed. An endoscope is utilized for visualization. Local anesthesia is injected into the anterior and posterior attachments of the concha bullosa. Cotton pledgets soaked with topical decongestant are placed adjacent to the concha bullosa, followed by a wait time to allow efficacy. A vertical incision is made through the anterior portion of the concha bullosa. Thru cutting instruments are utilized to extend the cut posteriorly, both at the anterior and inferior attachments. Care is taken not to excessively manipulate to concha bullosa. The anterior and posterior cuts are completed and the lateral aspect of the concha bullosa is removed. Bipolar electrocautery is applied to the area of the inferior attachment as this can be a source of major hemorrhage. The middle meatus is then packed with cotton pledgets soaked with topical decongestant, followed by a wait time to ensure adequate hemostasis. Once adequate hemostasis is confirmed, the patient is turned over to anesthesia and awoken from anesthesia.

Description of Post-Service Work:

- Monitor patient during reversal of anesthesia.
- Monitor transport of patient from OR to recovery room.
- Discuss postoperative recovery care with anesthesia and nursing staff.
- Write postoperative orders.
- Discuss procedure and operative findings with family and the patient.
- Write postoperative note. Dictate operative note and copy to referring physician.
- Monitor patient progress. Chart notes.
- Monitor overall medical condition of the patient including fluid balance, vital signs, and urinary function
- Assess pain scores and adequacy of analgesia.
- Discuss post-discharge management with nursing staff and answer questions
- Home restrictions (i.e., diet, activity) are discussed with the patient, family members and discharging nurse.
- Write prescriptions for medications and supplies needed post-discharge
- Perform medication reconciliation
- All appropriate medical records are completed, including day of discharge progress notes, discharge summary and discharge instructions, and insurance forms.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

**Why are these codes being reviewed?**

The nasal/sinus endoscopy code 31237 was identified in the CY 2012 Final Physician Fee Schedule by CMS as a potentially misvalued service. Following submission of an action plan to survey 31237 by the Academy, it was determined

that 31237-31240 was a “family” of codes based on their location in the CPT book, and therefore, all four codes were required for survey by the RAW for April 2013.

### **Description of Random Survey**

All four codes in this family were surveyed by AAO-HNS. The standard 000 global survey instrument was utilized with two revisions instructing respondents to include time for administering topical anesthetic, where appropriate, in the pre-service time and localized or injected anesthesia, where appropriate, in the intra service time. This change was approved by the Research Subcommittee. The Otolaryngology physician work recommendations were derived by conducting a random survey of our members. Surveys for 31240 were sent to nearly 1100 Otolaryngologists, including the subspecialty of rhinology, as well as to the Academy’s leadership and key committees such as the Rhinology Paranasal Sinus Committee which contains clinicians who were most likely to be familiar with the services under review. Of the 1090 surveys distributed for 31240, 125 responses were received, a response rate of 11%.

### **Physician Time**

**Pre Time:** Following a review of the pre-time survey data, our expert panel determined that preservice package 3 Facility - Straightforward patient/Difficult was most appropriate. Prepackage 3 assigns 33 minutes for evaluation, 3 minutes for positioning, and 15 minutes for scrub, dress, and wait. Our expert panel felt this was the most appropriate package given that service is predominantly provided in the facility setting and both topical and general anesthetic is utilized for the endoscopy procedure. The expert panel reviewed the survey pre times and recommended that the preservice time for evaluation be adjusted down to 25 minutes to maintain consistency with the survey responses. Similarly, they recommended that time for scrub, dress and wait be reduced from the package’s 15 minutes down to 10 to match the time allotted for this work by survey respondents. This results in a total preservice time recommendation of 38 minutes.

**Intra Time:** Our expert panel agreed with our surveyees regarding the time for intra service work and are recommending the survey median time of 20 minutes for intra service work.

**Post Time:** Likewise, our experts felt that the survey’s post time was an accurate reflection of the post time required for this procedure and are recommending the median post time of 15 minutes. This results in a request for a total of 73 minutes of physician work time for CPT 31240.

### **Physician Work Recommendation**

After concluding the survey, the results were analyzed by an expert panel and it was determined that the existing RVU of 2.61 is appropriate for 31240. This is supported by our survey which had a higher median, and 25<sup>th</sup> percentile, than existing value of 2.61 RVUs. Our expert panel does not believe this service has changed, or that compelling evidence exists, to increase the value of the code; **therefore, we recommend retention of the existing value of 2.61 RVUs for CPT 31240.**

This recommendation is supported by the key reference code 31295 which survey respondents said was similar in intensity and complexity, but has a slightly higher work RVU of 2.70 and similar total physician time of 78 minutes. We are also providing the following reference tables which include recently reviewed services which support our requested values for physician time and work for CPT 31240.

#### **Comparison to key reference code**

<b><u>CPT Code</u></b>	<b><u>RVW</u></b>	<b><u>IWPUT</u></b>	<b><u>Total Time</u></b>	<b><u>Eval</u></b>	<b><u>Posit</u></b>	<b><u>SDW</u></b>	<b><u>INTRA</u></b>	<b><u>Post</u></b>
<b>31240</b>	2.61	0.0783	73	25	3	10	20	15
<b>31295</b>	2.70	0.0772	78	30	3	10	20	15

#### **Comparison to MPC codes**

<b><u>CPT Code</u></b>	<b><u>Descriptor</u></b>	<b><u>RVW</u></b>	<b><u>IWPUT</u></b>	<b><u>Total Time</u></b>	<b><u>Eval</u></b>	<b><u>Posit</u></b>	<b><u>SDW</u></b>	<b><u>INTRA</u></b>	<b><u>Post</u></b>
<b>36556</b>	Insertion of non-tunneled centrally inserted central venous catheter; age 5 years or older	2.50	0.1192	50	15	5	5	15	10
<b>31240</b>	Nasal/sinus endoscopy, surgical; with concha bullosa resection	2.61	0.0783	73	25	3	10	20	15
<b>51102</b>	Aspiration of bladder; with insertion of suprapubic catheter	2.70	0.0938	60	19	1	5	20	15

The table below compares the survey code to other RUC reviewed codes of similar time and work, providing further support that the recommended value for 31240 is appropriate.

<u>RUC</u> <u>Reviewed</u>	<u>CPT</u> <u>Code</u>	<u>Descriptor</u>	<u>RVW</u>	<u>IWPUT</u>	<u>Total</u> <u>Time</u>	<u>Eval</u>	<u>Posit</u>	<u>SDW</u>	<u>INTRA</u>	<u>Post</u>
2002	<b>56821</b>	Colposcopy of the vulva; with biopsy(s)	2.05	0.0745	45	15	0	0	20	10
2002	<b>57421</b>	Colposcopy of the entire vagina, with cervix if present; with biopsy(s) of vagina/cervix	2.20	0.0820	45	15	0	0	20	10
2002	<b>57454</b>	Colposcopy of the cervix including upper/adjacent vagina; with biopsy(s) of the cervix and endocervical curettage	2.33	0.0885	45	15	0	0	20	10

2003	<b>36555</b>	Insertion of non-tunneled centrally inserted central venous catheter; younger than 5 years of age	2.68	0.0928	60	20	5	5	20	10
2010	<b>52281</b>	Cystourethroscopy, with calibration and/or dilation of urethral stricture or stenosis, with or without meatotomy, with or without injection procedure for cystography, male or female	2.75	0.1120	46	10	1	5	20	10
2012	<b>32551</b>	Tube thoracostomy, includes connection to drainage system (eg, water seal), when performed, open (separate procedure)	3.29	0.1011	83	30	3	10	20	20
2000	<b>16035</b>	Escharotomy; initial incision	3.74	0.1310	70	30	0	0	20	20

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.  
☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.  
☒ Multiple codes allow flexibility to describe exactly what components the procedure included.  
☐ Multiple codes are used to maintain consistency with similar codes.  
☐ Historical precedents.  
☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. This service is billed with CPT 30520, Repair of Nasal Septum, 58% of the time according to the five percent file 2011 data. Multiple procedure modifier -51 would be appended to CPT 31240 when billed in conjunction with 30520. SEE TABLE AT END OF SOR.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 31240

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

**AMA/Specialty Society Update Process  
Practice Expense Summary of Recommendation  
Facility Direct Inputs**

CPT Long Descriptor: Nasal/sinus endoscopy, surgical; with biopsy, polypectomy or debridement (separate procedure)

Global Period: 000 Meeting Date: April 2013

- 1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:** *We convened an expert panel to review the practice expense for 31237 which included our RUC Advisor and Alternate Advisor as well as two clinical experts who specialize in Rhinology. The practice expense inputs were revised using the 2003 PEAC approved inputs for 31237 as a reference.*
- 2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale: *The practice expense inputs were derived using the 2003 PEAC approved inputs for 31237 as a reference.*
- 3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:** *Our recommendations do not exceed PEAC approved standards for the facility setting.*
- 4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:** *Our recommendations do not exceed the previous recommendations for 31237 in the facility setting.*
- 5. Please describe in detail the clinical activities of your staff:**

**Pre-Service Clinical Labor Activities:**

For this procedure we believe the use of extensive clinical staff is required to complete pre-service diagnostic forms, coordinate pre-surgery services, schedule space and equipment, provide pre-service education and obtain consent, and conduct follow up phone calls and coordinate prescriptions.

**Intra-Service Clinical Labor Activities:**

There are no intra service clinical labor activities for this code.

**Post-Service Clinical Labor Activities:**

The only post service clinical activity is conducting a phone call and calling in any necessary prescriptions.

**AMA/Specialty Society Update Process  
Practice Expense Summary of Recommendation  
Non Facility Direct Inputs**

CPT Long Descriptor: Nasal/sinus endoscopy, surgical; with biopsy, polypectomy or debridement (separate procedure)

Global Period: 000 Meeting Date: April 2013

1. **Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:** *We convened an expert panel to review the practice expense for 31237 which included our RUC Advisor and Alternate Advisor as well as two clinical experts who specialize in Rhinology. The practice expense inputs were revised using the 2003 PEAC approved inputs for 31237 as a reference.*
2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale: *The reference code utilized was the 2003 PEAC approved practice expense inputs for 31237.*
3. **If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:** *We are not making any recommendations which exceed PEAC standards.*
4. **If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:** *We are not recommending an increase over current staff times, but would note that we have reduced minutes on lines 22, 25, 27, and 30 which is offset by our requests for the addition of time, per PEAC standards, in lines 32, 34, and 35. These recommended changes in the assignment of minutes does not change the overall staff time recommended for this code in the non-facility setting.*

*We are recommending some revised supplies and equipment for 31237. Specifically, we recommend deletion of line 69 as lidocaine is included in the injection pack and we did not feel cocaine was needed in addition for this procedure. In addition, we recommend deletion of supplies in lines 78-81 and replacing with the PEAC approved standard endoscope cleaning pack SAO42. The compelling evidence for this change is a change from previous code-specific PE to adoption of an applicable standard or package. For equipment, we are adding two endoscopes, lines 87 and 88, as three scopes of varying degrees (which provide different angles of visualization) are used for this procedure and only one scope was previously listed for 31237.*

5. Please describe in detail the clinical activities of your staff:

**Pre-Service Clinical Labor Activities:** Clinical staff completes pre-service diagnostic and referral forms, coordinates pre-surgery services, provides pre-service education and obtains consent, conducts follow up phone calls and coordinates any necessary prescriptions.

**Intra-Service Clinical Labor Activities:** Staff greet the patient, gown them, and ensure appropriate medical records are available. They obtain vital signs, prepare the room with equipment and supplies, set up the scope, prepare and position the patient, and apply anesthesia. Clinical staff assists during the entire procedure and monitor the patient following the procedure. They clean the room and equipment, as well as the scope and surgical instrument package. They complete diagnostic forms, read any necessary x-ray, lab, pathology reports, and check dressing and provide home care instructions and coordinate prescriptions.

**Post-Service Clinical Labor Activities:** Clinical staff conducts a follow up phone call in the post-service period.

**AMA/Specialty Society Update Process  
Practice Expense Summary of Recommendation  
Facility Direct Inputs**

CPT Long Descriptor: Nasal/sinus endoscopy, surgical; with control of nasal hemorrhage

Global Period: 000 Meeting Date: April 2013

- 1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:** *We convened an expert panel to review the practice expense for 31238 which included our RUC Advisor and Alternate Advisor as well as two clinical experts who specialize in Rhinology. The practice expense inputs were revised using the 2003 PEAC approved inputs for 31238 as a reference.*
- 2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale: *The practice expense inputs were derived using the 2003 PEAC approved inputs for 31238 as a reference.*
- 3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:** *Our recommendations do not exceed PEAC approved standards for the facility setting.*
- 4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:** *Our recommendations do not exceed the previous recommendations for 31238 in the facility setting.*
- 5. Please describe in detail the clinical activities of your staff:**

**Pre-Service Clinical Labor Activities:**

For this procedure we believe the use of extensive clinical staff is required to complete pre-service diagnostic forms, coordinate pre-surgery services, schedule space and equipment, provide pre-service education and obtain consent, and conduct follow up phone calls and coordinate prescriptions.

**Intra-Service Clinical Labor Activities:**

There are no intra service clinical labor activities for this code.

**Post-Service Clinical Labor Activities:**

The only post service clinical activity is conducting a phone call and calling in any necessary prescriptions.

**AMA/Specialty Society Update Process  
Practice Expense Summary of Recommendation  
Non Facility Direct Inputs**

CPT Long Descriptor: Nasal/sinus endoscopy, surgical; with control of nasal hemorrhage

Global Period: 000 Meeting Date: April 2013

1. **Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:** *We convened an expert panel to review the practice expense for 31238 which included our RUC Advisor and Alternate Advisor as well as two clinical experts who specialize in Rhinology. The practice expense inputs were revised using the 2003 PEAC approved inputs for 31238 as a reference.*
2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale: *The reference code utilized was the 2003 PEAC approved practice expense inputs for 31238.*
3. **If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:** *We are not making any recommendations which exceed PEAC standards.*
4. **If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:** *We are not recommending an increase over current staff times, but would note that we have reduced minutes on lines 25, 27, and 30 and deleted time for greeting the patient and obtaining vital signs, lines 21 and 22, since this code is typically billed with an E/M and we felt those minutes would be duplicative. These reductions in time are offset by our requests for the addition of time, per PEAC standards, in lines 32, 34, and 35. These recommended changes in the assignment of minutes do not exceed existing time for clinical staff work for 31238.*

*Regarding supplies and equipment for 31238, we are requesting the same changes made to CPT 31237 with a few additional changes. Specifically, we recommend deletion of line 69 as lidocaine is included in the injection pack and we did not feel cocaine was needed in addition for this procedure. In addition, we recommend deletion of supplies in lines 78-81 and replacing with the PEAC approved standard endoscope cleaning pack SAO42. The compelling evidence for this change is a change from previous code-specific PE to adoption of an applicable standard or package. We also request the addition of a new supply, line 84, to include a fibrillar (an invoice has been provided for this new supply). This is used to aid in the control of bleeding for this service. The compelling evidence for this change is that there has been a change in the technology and silver nitrate cautery is no longer sufficient, on its own, to control this type of hemorrhage. Therefore, we are adding supplies and equipment to reflect the necessary tools to control the nasal hemorrhage.*

*For equipment, we are adding two endoscopes, lines 87 and 88, as three scopes of varying degrees (which provide different angles of visualization) are used for this procedure and only one scope was previously listed for 31238. We also request the addition of new equipment, lines 96 and 97, to include bipolar cautery forceps and a biopolar cautery two-wire cable (an invoice has been provided for these pieces of equipment). These are also typically used to aid in the control of bleeding for this service. As noted above, the compelling evidence for this change is that there has been a change in the technology and silver nitrate cautery is no longer sufficient, on its own, to control this type of hemorrhage. Therefore, we are adding supplies and equipment to reflect the necessary tools to control the nasal hemorrhage.*

5. Please describe in detail the clinical activities of your staff:

**Pre-Service Clinical Labor Activities:** There is no pre-service clinical staff time for 31238 in the non-facility

setting.

**Intra-Service Clinical Labor Activities:** Clinical staff prepares the room with equipment and supplies, set up the scope, prepare and position the patient, and apply anesthesia. Clinical staff assists during the entire procedure and monitor the patient following the procedure. They clean the room and equipment, as well as the scope and surgical instrument package. They complete diagnostic forms, read any necessary x-ray, lab, pathology reports, and check dressing and provide home care instructions and coordinate prescriptions.

**Post-Service Clinical Labor Activities:** Clinical staff conducts a follow up phone call in the post-service period and calls in any necessary prescriptions.

**AMA/Specialty Society Update Process  
Practice Expense Summary of Recommendation  
Facility Direct Inputs**

CPT Long Descriptor: Nasal/sinus endoscopy, surgical; with dacryocystorhinostomy

Global Period: 010 Meeting Date: April 2013

**1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:** *Our societies convened an expert panel to review the practice expense for 31239 which included our RUC Advisors, Alternate Advisors and clinical experts who specialize in the procedure for both specialties. The practice expense inputs were revised using the 2003 PEAC approved inputs for 31239 as a reference.*

**2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale: *The practice expense inputs were derived using the 2003 PEAC approved inputs for 31239 as a reference.*

**3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:** *We are not recommending more minutes than the PE Subcommittee standards for CPT 31239.*

**4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:** *We are not requesting an increase over current inputs in clinical staff time. We do request some minor modifications from the prior practice expense, including removal of 7 minutes for providing pre-service education/obtaining consent, as well as the addition of 10 minutes during the post-service period, line 54, to clean the instrument pack during the post operative visit.*

*We are requesting modifications to the supplies and equipment for 31239 to reflect the necessary items for the office visit (99213) in the post operative period for 31239. The compelling evidence for this change is that previous PE supplies and equipment did not reflect the equipment/supplies required by the dominant specialty (Ophthalmology), therefore, previous inputs were based on Otolaryngology, but in actuality this service is currently provided primarily by Ophthalmologists according to utilization data. The new supplies we are requesting include the standard pack for an Ophthalmology visit (SA050), a 5-6 ml syringe, and the standard cleaning pack for cleaning/disinfecting the endoscope utilized during the post operative visit.*

*The new equipment includes a screening lane, listed on line 95, and a medium instrument pack. Both of these are standard pieces of equipment utilized during a routine ophthalmology post operative visit. The time assigned to the equipment is consistent with the time for the post operative office visit (36 minutes).*

**5. Please describe in detail the clinical activities of your staff:**

**Pre-Service Clinical Labor Activities:** For this procedure we believe the use of extensive clinical staff is required to complete pre-service diagnostic forms, coordinate pre-surgery services, schedule space and equipment, and conduct follow up phone calls and coordinate prescriptions.

**Intra-Service Clinical Labor Activities:**

The only intra service staff time for this service is 6 minutes for a half discharge management visit (99238).

CPT Code: 31239  
Specialty Society('s) AAO-HNS

**Post-Service Clinical Labor Activities:**

The clinical staff post time includes time for a post operative visit which is done in the physician office (99213) and time to clean the instrument pack utilized during the visit.

**AMA/Specialty Society Update Process  
Practice Expense Summary of Recommendation  
Facility Direct Inputs**

CPT Long Descriptor: Nasal/sinus endoscopy, surgical; with concha bullosa resection

Global Period: 000 Meeting Date: April 2013

1. **Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:** *We convened an expert panel to review the practice expense for 31240 which included our RUC Advisor and Alternate Advisor as well as two clinical experts who specialize in Rhinology. The practice expense inputs were revised using the 2003 PEAC approved inputs for 31240 as a reference.*
2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale: *The practice expense inputs were derived using the 2003 PEAC approved inputs for 31240 as a reference.*
3. **If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:** *We are not recommending more minutes than the PE Subcommittee standards for CPT 31240.*
4. **If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:** *We are not requesting any changes to existing inputs for 31240.*  
  
*There are no supplies or equipment requested for 31240 as this procedure is performed in the facility setting and is a 000 global.*
5. Please describe in detail the clinical activities of your staff:

**Pre-Service Clinical Labor Activities:** For this procedure we believe the use of extensive clinical staff is required to complete pre-service diagnostic forms, coordinate pre-surgery services, schedule space and equipment, provide pre-service education and obtain consent, and conduct follow up phone calls and coordinate prescriptions.

**Intra-Service Clinical Labor Activities:** There are no intra service clinical staff activities for 31240 as this procedure is facility based.

**Post-Service Clinical Labor Activities:** The clinical staff post time includes time for a follow up phone call and calling in any necessary prescriptions.

This item is available to ship within 24-48 hours of order placement.

Pricing is valid for 30 days and does not include shipping.

We accept Visa, MC and American Express. We also accept purchase orders from Universities.

This item is being quoted based on the item number and description you provided.

In general, Care Express Products will accept returns of product purchased from us. However, due to the special nature of certain medical products, there are certain restrictions on returnable product.

We do not accept returns of:

- Products returned more than 30 days after the date of the sale.
- Products that have been used.
- Any item purchased on "special order".
- Regulated hazardous chemicals or reagents.
- Products returned in defaced, opened, damaged or other than original packaging.
- Any temperature-sensitive/refrigerated products.

Product that is returned is subject to a minimum 15% Restocking Fee.

If you have any questions please give me a call.

Thank you,

Denise Greenwald

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
*MPC List Screen*

January 2012

**Diagnostic Nasal Endoscopy**

In October 2012, CMS identified CPT code 31231 *Nasal endoscopy, diagnostic, unilateral or bilateral (separate procedure)* through the MPC List screen. In September 2011, the RUC recommended that the specialty society should re-survey this service for the January 2012 RUC meeting with an improved vignette to describe the typical unilateral vs. bilateral nasal endoscopy and better define the work of the involved topical and pledgets anesthetic in the survey instrument.

In January 2012, the RUC reviewed the survey results from 135 otolaryngologists for CPT code 31231 and determined that the survey 25<sup>th</sup> percentile and current work RVU of 1.10 should be maintained. The RUC noted that this service is typically performed with an Evaluation and Management service on the same day and the specialty society confirmed that 12 minutes was specifically removed from pre-time package-6, to account for any duplication of work with the Evaluation and Management service. Therefore, 5 minutes of pre-evaluation time accounts for the time to obtain consent, move the patient, check equipment and review the CT scan, 1 minute for positioning the patient and 5 minutes of scrub/dress/wait time to administer local anesthetic and have it take effect. The RUC compared 31231 to key reference service 31575 *Laryngoscopy, flexible fiberoptic; diagnostic* (work RVU = 1.10) and noted that 31231 requires slightly less intra-service time to perform, 7 minutes and 8 minutes, respectively. The specialty society indicated and the RUC agreed that this difference in time and intensity may be because 31231 is typically performed using a rigid endoscope, whereas 31575 is performed using a flexible endoscope. The specialty society indicated that use of a flexible endoscope is easier and requires less skill. The RUC compared 31231 to similar service 30901 *Control nasal hemorrhage, anterior, simple (limited cautery and/or packing) any method* (work RVU = 1.10) and noted that 31231 requires 3 minutes less intra-service time, however is more intense as the surveyed service requires the use of an endoscope. Additionally, the RUC compared 31231 to 99213 *Office or other outpatient visit for the evaluation and management of an established patient* (work RVU = 0.97 and 23 minutes total time) and determined that these services require the same total physician time to perform, however 31231 is more intense and complex because it is an invasive procedure and therefore should be valued higher.

Lastly, the RUC noted that the survey respondents indicated that the intra-time is 3 minutes less than current time but requires the same physician work, thus increasing the intensity. The RUC reviewed the comparative intrusive diagnostic services referenced by the specialty society [CPT codes 52000 *Cystourethroscopy* (work RVU = 2.23), 43250 *Upper gastrointestinal endoscopy including esophagus, stomach, and either the duodenum and/or jejunum as appropriate; with removal of tumor(s), polyp(s), or other lesion(s) by hot biopsy forceps or bipolar cautery* (work RVU = 3.20) and 31629 *Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with transbronchial needle aspiration*

*biopsy(s), trachea, main stem and/or lobar bronchus(i)* (work RVU = 4.09)] and determined that a slight decrease in physician time for the surveyed code is appropriate compared to these services that combine technical skill for insertion of a scope for the purpose of cognitive/diagnostic evaluation. The RUC agreed that services such as 31231, that have low work RVUs and do not require a significant amount of time to perform will be more effected by small valuations in time, however, the survey data and reference services support to maintain the current value. **The RUC recommends a work RVU of 1.10 for CPT code 31231.**

**Practice Expense:**

The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.

CPT Code (●New)	CPT Descriptor	Global Period	Work RVU Recommendation
31231	Nasal endoscopy, diagnostic, unilateral or bilateral (separate procedure)	000	1.10 (No change)

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code:31231	Tracking Number	Original Specialty Recommended RVU: <b>1.10</b>
		Presented Recommended RVU: <b>1.10</b>
Global Period: 000		RUC Recommended RVU: <b>1.10</b>

CPT Descriptor: Nasal endoscopy, diagnostic, unilateral or bilateral (separate procedure)

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 47 year-old male is evaluated for nasal obstruction, chronic rhinorrhea, and recurrent rhino sinusitis, unresponsive to prior medical therapy. Physical examination, including anterior rhinoscopy, is normal except for nasal mucosal edema. The patient undergoes a diagnostic nasal endoscopy of both nasal passages.

Percentage of Survey Respondents who found Vignette to be Typical: 91%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is;  
Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 17%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 3%

Description of Pre-Service Work: After decision is made to perform nasal endoscopy, the patient is moved to room equipped with video tower and protective gown/drape is provided. The physician ensures that proper nasal endoscope, suction and video recording equipment are available and working. The procedure is explained to the patient, consent obtained. Time out is performed. Physician washes hands and dons sterile gloves. Topical decongestant and anesthetic sprays are applied with 5 minute wait time for these to take effect.

Description of Intra-Service Work: The nasal cavity is examined to ensure that there is adequate patency and further anesthetic on pledgets applied with endoscopic direction to specific areas requiring more profound anesthesia (ex, middle meatus, sphenoid cleft) in order to allow full visualization of key areas. After additional wait to allow topical anesthetic to take effect; systematic nasal endoscopy is performed (one side or both evaluating inferior, middle and superior meati with attention to all major sinus ostia, septal contour, and nasopharyngeal entrance). Images are captured on digital system. Culture swabs are taken from areas of mucopurulence as indicated. Temporary re-positioning of pledgets in any region of minor hemorrhage applied as needed.

Description of Post-Service Work: Aftercare treatment and findings are explained to the patient (often by the use of the procedure video recording, archiving of images file), including subsequent therapeutic plan. Images are saved on digital video system. The procedure note is dictated and findings communicated to relevant care providers.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

**Why is this Code Being Reviewed?**

Code 31231 was identified by the MPC List screen. This code has not been reviewed by the RUC in the past 6 years and the RUC recommended that this service be surveyed. The code was initially surveyed by American Academy of

Otolaryngology-Head and Neck Surgery (AAO-HNS) for the September 2011 RUC meeting. However, based on difficulty interpreting the survey data received by our expert panel, the AAO-HNS requested the opportunity to re-survey the code for the January 2012 RUC meeting in pre-facilitation. The Research Subcommittee accepted the AAO-HNS proposed revised vignette and survey instrument to provide clarification to survey respondents and a repeat survey was performed.

### **Work RVU Recommendation**

The American Academy of Otolaryngology-Head and Neck Surgery (AAO-HNS) conducted a RUC survey in fall of 2011, receiving 135 responses and a very robust survey response rate of 47%. The survey median RVW was 1.30, however the expert panel reviewing did not find compelling evidence that the work has changed to support an increased valuation. Therefore, the Academy recommends maintaining the current value of 1.10 which is the survey 25<sup>th</sup> percentile.

The panel's recommendations are in line with comparator codes: the key reference service code 31575 *Laryngoscopy, flexible fiberoptic; diagnostic*, and 30901 *Control nasal hemorrhage, anterior, simple (limited cautery and/or packing) any method*, both with RVWs of 1.10. Key reference code 31575 has similar time and is a similar service. The time for 31575 includes more pre-service time, but the survey indicates a modestly higher level of intensity for 31231.

### **Pre-time**

Pre-time package 6 (office procedure with anesthesia) is selected.

Evaluation: Subtract 12 minutes overall (total = 5) Typically, an E/M is performed the same day so 9 minutes is subtracted for history and exam.

Position: No change (total = 1).

Scrub, dress, wait: No change (total = 5) for initial spray application of topical anesthetic and decongestant agents

### **Comparison to key reference code**

	RVW	IWPUT	Total Time	Eval	Posit	SDW	INTRA	IM-post
<b>31231</b>	1.10	0.116	23	5	1	5	7	5
<b>31575</b>	1.10	0.090	28	5	5	5	8	5

### **Comparison to MPC codes**

CPT	DESCRIPTOR	RVW	IWPUT	Total Time	Eval	Posit	SDW	INTRA	IM-post
<b>78315</b>	Bone and/or joint imaging; 3 phase study	1.02	.0995	18	5			8	5
<b>31231</b>	Nasal endoscopy, diagnostic, unilateral or bilateral (separate procedure)	1.10	.116	23	5	1	5	7	5
<b>78494</b>	nuclear med gated blood pool study	1.19	.0488	26	3			23	0

The table below compares the survey code to other RUC reviewed codes of similar time and work, providing further support that the recommended value for 31231 is appropriate.

RUC Year	CPT	2011 RVW	2011 IWPUT	Total Time	Pre eval	Pre posit	Pre s,d,w	INTRA	Post sd-im
2002	78306	0.86	0.0794	18	5			8	5

2000	53620	1.62	0.1284	25	15			10	0

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.  
☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.  
☒ Multiple codes allow flexibility to describe exactly what components the procedure included.  
☐ Multiple codes are used to maintain consistency with similar codes.  
☐ Historical precedents.  
☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. Typically billed with an E/M code.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 31231

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Otolaryngology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 0

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?

390,494 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate.

Specialty Otolaryngology	Frequency 365500	Percentage 93.59 %
--------------------------	------------------	--------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Do many physicians perform this service across the United States? Yes

---

### Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 31231

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/Specialty Society RVS Update Committee Summary of Recommendations

January 2017

**Cryoablation of Pulmonary Tumors**

The CPT Editorial Panel created a new code (32994) to report cryoablation of pulmonary tumors, and revision of 32998 to include imaging for ablation of tumor. Category III code 0340T will be deleted.

***32998 Ablation therapy for reduction or eradication of 1 or more pulmonary tumor(s) including pleura or chest wall when involved by tumor extension, percutaneous, including imaging guidance when performed, unilateral; radiofrequency***

The RUC reviewed the survey results from 38 physicians and agreed with the following physician time components: 33 minutes for pre-service evaluation time, 10 minutes of pre-service positioning, 5 minutes of pre-service scrub/dress/wait, intra-service time of 85 minutes, and immediate post-time of 30 minutes.

The RUC reviewed the survey 25<sup>th</sup> percentile work RVU of 8.00 and survey median work RVU of 9.30. The specialty society indicated that the 25<sup>th</sup> percentile work RVU was too low to value this service with imaging guidance. The specialty societies indicated and the RUC agreed to crosswalk CPT code 32998 to a similar service that radiologists and interventional radiologists perform, CPT code 47540 *Placement of stent(s) into a bile duct, percutaneous, including diagnostic cholangiography, imaging guidance (eg, fluoroscopy and/or ultrasound), balloon dilation, catheter exchange(s) and catheter removal(s) when performed, and all associated radiological supervision and interpretation; new access, with placement of separate biliary drainage catheter (eg, external or internal-external)* (work RVU = 9.03 and intra-service time of 85 minutes). For additional support, the RUC also referenced CPT code 52355 *Cystourethroscopy, with ureteroscopy and/or pyeloscopy; with resection of ureteral or renal pelvic tumor* (work RVU = 9.00 and intra-service time of 90 minutes). **The RUC recommends a work RVU of 9.03 for CPT code 32998.**

***32994 Ablation therapy for reduction or eradication of 1 or more pulmonary tumor(s) including pleura or chest wall when involved by tumor extension, percutaneous, including imaging guidance when performed, unilateral; cryoablation***

The RUC reviewed the survey results from 38 physicians and agreed with the following physician time components: 33 minutes for pre-service evaluation time, 10 minutes of pre-service positioning, 5 minutes of pre-service scrub/dress/wait, intra-service time of 90 minutes, and immediate post-time of 30 minutes.

The RUC reviewed the survey 25<sup>th</sup> percentile work RVU of 8.13 and survey median work RVU of 9.30. The specialty society indicated that the 25<sup>th</sup> percentile work RVU was too low to value this service with imaging guidance. The specialty societies indicated and the RUC agreed to crosswalk CPT code 32994 to a similar service that radiologists and interventional radiologists perform, CPT code 47540 *Placement of stent(s)*

into a bile duct, percutaneous, including diagnostic cholangiography, imaging guidance (eg, fluoroscopy and/or ultrasound), balloon dilation, catheter exchange(s) and catheter removal(s) when performed, and all associated radiological supervision and interpretation; new access, with placement of separate biliary drainage catheter (eg, external or internal-external) (work RVU = 9.03 and intra-service time of 85 minutes). For additional support, the RUC also referenced CPT code 52355 *Cystourethroscopy, with ureteroscopy and/or pyeloscopy; with resection of ureteral or renal pelvic tumor* (work RVU = 9.00 and intra-service time of 90 minutes). **The RUC recommends a work RVU of 9.03 for CPT code 32994.**

### **Practice Expense**

The Practice Expense (PE) Subcommittee discussed the direct practice expense inputs for CPT codes 32998 and 32994 and determined that the extensive use of clinical staff time in the pre-service period is not necessary for this procedure. The Subcommittee reduced the time to 9 minutes in the non-facility setting and 19 minutes in the facility setting consistent with similar services for the standard pre-service inputs. The Subcommittee reviewed the specialties request for an additional 6 minutes to *Review patient clinical extant information and questionnaire* and agreed with the specialty that there is additional time needed but determined that 2 minutes is more appropriate for this activity. The PE Subcommittee discussed the clinical staff needed to assist the physician with this service and agreed with the specialty societies that the standard for an additional circulator used in interventional radiology services applies to these codes. The standard includes one staff to assist the physician and a separate staff represented by two clinical staff types to act as a circulator. For these services it is an CT technologist, L046A, “hip to hip” with the physician to assist during the procedure and a CT technologist, L046A (75%) and a RN/LPN/MTA, L037D (25%) to circulate. The Subcommittee discussed that 3 minutes is required for the cleaning of additional ablation generator and equipment. The clinical labor task of clean scope is being used as a proxy for cleaning this equipment. The specialty societies noted that they believe there is an error in the change of pricing for the supply item *probe, radiofrequency, 3 array (StarBurstSDE)* (SD109) and will be submitting invoices to CMS to correct the pricing of this supply. A representative of CMS questioned the need for 3 probes, supply item *probe, cryoablation, renal* (SD233). The specialty stated that the number of probes is dependent on the size of the tumor and that for the size tumor that would require this type of procedure 3 probes are typical in order to get sufficient margins around the tumor, this is also supported in the literature. The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.

### **New Technology**

CPT codes 32994 will be placed on the New Technology list and be re-reviewed by the RUC in three years to ensure correct valuation and utilization assumptions.

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
▲ 32998	S1	Ablation therapy for reduction or eradication of 1 or more pulmonary tumor(s) including pleura or chest wall when involved by tumor extension, percutaneous, <u>including imaging guidance when performed, unilateral</u> ; radiofrequency <del>unilateral</del> (For imaging guidance and monitoring, see 76940,77013,77022)	000	9.03

Overall intensity/complexity	0.95	1.00
------------------------------	------	------

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Background**

The CPT Editorial Panel has created a new code (32994) to report cryoablation of pulmonary tumors, and revision of 32998 to include imaging for ablation of tumor. Cat III code 0340T will be deleted.

**Positioning Time**

The society requests 7 additional minutes of positioning time to position the patient so they can go in and out of the CT gantry in a sterile fashion and at the same time allow for 2 RF probes and patient lead monitoring. To do this patient is positioned on table, patient goes into CT gantry (moving table) to localize lesion, comes out of gantry and mark the entry site, patient is prepped. First probe is introduced slowly going in (to image) and out of the gantry (to position). As probes are positioned patient goes in and out of the gantry many times. RF probes and monitors have wires that are connected to nonsterile equipment. The wires and equipment need to be positioned so that the patient can go in and out of the CT gantry without leads becoming detached.

**Recommendations**

The specialty societies received 38 completed RUC physician work surveys from physicians. The multispecialty RUC workgroup reviewed the survey data and believes the following physician work recommendations appropriately rank these procedures within the interventional radiology family as well as within the fee schedule. See below:

	<b>CPT</b>	<b>wRVU</b>	<b>IWP/UT</b>	<b>Total Time</b>	<b>Pre Time</b>	<b>Intra Time</b>	<b>Post Time</b>

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.
- 

**FREQUENCY INFORMATION**

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 32998 and 77013

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Interventional Radiology

How often? Sometimes

Specialty

How often?

Specialty

How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. A national number is not known.

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 412

If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. 2015 Medicare data/current RUC database

Specialty Interventional Radiology

Frequency 372

Percentage 90.29 %

Specialty	Frequency 0	Percentage 0.00 %
Specialty	Frequency 0	Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

**Berenson-Eggers Type of Service (BETOS) Assignment**

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Procedures

BETOS Sub-classification:

Minor procedure

BETOS Sub-classification Level II:

Other

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Background**

The CPT Editorial Panel has created a new code (32994) to report cryoablation of pulmonary tumors, and revision of 32998 to include imaging for ablation of tumor. Cat III code 0340T will be deleted.

**Positioning Time**

The society requests 7 additional minutes of positioning time to position the patient so they can go in and out of the CT gantry in a sterile fashion and at the same time allow for 3 cryo probes and patient lead monitoring. To do this patient is positioned on table, patient goes into CT gantry (moving table) to localize lesion, comes out of gantry and mark the entry site, patient is prepped. First probe is introduced slowly going in (to image) and out of the gantry (to position). As probes are positioned patient goes in and out of the gantry many times. Cryo probes and monitors have wires that are connected to nonsterile equipment. The wires and equipment need to be positioned so that the patient can go in and out of the CT gantry without leads becoming detached.

**Recommendations**

The specialty societies received 38 completed RUC physician work surveys from physicians. The multispecialty RUC workgroup reviewed the survey data and believes the following physician work recommendations appropriately rank these procedures within the interventional radiology family as well as within the fee schedule. See below:

	CPT	wRVU	IWP/UT	Total Time	Pre Time	Intra Time	Post Time
Reference	20983	7.13	0.046	200	60	115	25

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 0340T and 77013

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Interventional Radiology How often? Sometimes

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. A national number is not known.

Specialty	Frequency	Percentage	%
Specialty	Frequency	Percentage	%
Specialty	Frequency	Percentage	%

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 600  
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate.

Specialty Interventional Radiology	Frequency 500	Percentage 83.33 %
Specialty	Frequency 0	Percentage 0.00 %
Specialty	Frequency 0	Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

**Berenson-Eggers Type of Service (BETOS) Assignment**

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Procedures

BETOS Sub-classification:

Minor procedure

BETOS Sub-classification Level II:

Other

---

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 32998

December 13, 2016  
Date

**AMA/Specialty Society Update Process  
Practice Expense Summary of Recommendation  
Facility Direct Inputs**

**Global Period:** 000

**Meeting Date:** January 2017

*32988 Ablation therapy for reduction or eradication of 1 or more pulmonary tumor(s) including pleura or chest wall when involved by tumor extension, percutaneous, including imaging guidance when performed, unilateral; radiofrequency*

*32994 Ablation therapy for reduction or eradication of 1 or more pulmonary tumor(s) including pleura or chest wall when involved by tumor extension, percutaneous, including imaging guidance when performed, unilateral; cryoablation*

---

**1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:**

SIR and ACR convened a panel that included a number of experts familiar with these services to evaluate the direct practice expense inputs for these two pulmonary tumor ablation codes (32998 & 32994).

**2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison. You must provide an explanation for the selection of reference codes.  
Reference Code Rationale:**

CPT Code 32998 has existing direct PE inputs. As such, we included the current inputs on the excel spreadsheet as a reference. We also included CPT Code 20983 on the spreadsheet, which is in the same ablation family and recently RUC reviewed in April of 2014.

**3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:**

Complete pre-service diagnostic and referral forms (5)  
Coordinate pre-surgery services (including test results) (10)  
Schedule space and equipment in facility (5)  
Provide pre-service education/obtain consent (7)  
Complete pre-procedure phone calls and prescription (3)

**4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:**

N/A

**5. Please describe in detail the clinical activities of your staff:**

Pre-Service Clinical Labor Activities:

Complete pre-service diagnostic and referral forms (5)  
Coordinate pre-surgery services (including test results) (10)  
Schedule space and equipment in facility (5)  
Provide pre-service education/obtain consent (7)  
Complete pre-procedure phone calls and prescription (3)

Intra-Service Clinical Labor Activities:

N/A

Post-Service Clinical Labor Activities:

Conduct phone calls/call in prescriptions

**AMA/Specialty Society Update Process  
Practice Expense Summary of Recommendation  
Non Facility Direct Inputs**

**Global Period:** 000

**Meeting Date:** January 2017

*32988 Ablation therapy for reduction or eradication of 1 or more pulmonary tumor(s) including pleura or chest wall when involved by tumor extension, percutaneous, including imaging guidance when performed, unilateral; radiofrequency*

*32994 Ablation therapy for reduction or eradication of 1 or more pulmonary tumor(s) including pleura or chest wall when involved by tumor extension, percutaneous, including imaging guidance when performed, unilateral; cryoablation*

---

**1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:**

SIR and ACR convened a panel that included a number of experts familiar with these services to evaluate the direct practice expense inputs for these two pulmonary tumor ablation codes (32998 & 32994).

**2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison. You must provide an explanation for the selection of reference codes.  
Reference Code Rationale:**

CPT Code 32998 has existing direct PE inputs. As such, we included the current inputs on the excel spreadsheet as a reference. We also included CPT Code 20983 on the spreadsheet, which is in the same ablation family and was recently RUC reviewed in April of 2014.

**3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:**

(1) Pre-time - an additional 18 minutes is requested in pre time.

Complete pre-service diagnostic and referral forms (5)

Coordinate pre-surgery services (including test results) (3)

Provide pre-service education/obtain consent

Complete pre-procedure phone calls and prescription (7)

Confirm availability of prior images/studies

Review patient clinical extant information and questionnaire (6)

(2) Prepare room, equipment and supplies - an additional 4 minutes is requested for preparing the room, equipment and supplies. Ablation generators are brought into the room and positioned appropriately adjacent to the patient and exam table. (For 32994, pressurized gas tanks are brought into the room and connected to the ablation generator. Consideration has to be given during set up to allow the table to move in & out of the scanner during the procedure, allowing the probe cords to follow.

(3) Extra personnel to assist physician - Our recommendations follow the 'interventional' standards whereby a "hip to hip" technologist is needed to assist the MD during the procedure as a scrub hand, one technologist (75%) is used to perform the imagine and one nurse blend (25%) is used as a circulator.

(4) Clean scope – an additional 3 minutes is requested for cleaning of additional ablation generator and equipment. Clean scope is being used as a proxy for cleaning this equipment.

**4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:**

Line 108 (surgical cap), Line 114 (sterile gown), Line 115(surgical mask), Line 116 (shoe covers): There is three staff in the room (MD, "hip to hip" scrubbed tech and nurse), all requiring proper sterile surgical attire. We have made edits to the inputs for line items listed above to reflect this sterile practice. We believe these were oversights in previous PE presentations and this remains consistent with all recent PE presentations.

**5. Please describe in detail the clinical activities of your staff:**

Pre-Service Clinical Labor Activities:

- Complete pre-service diagnostic & referral forms
- Coordinate pre-surgery services
- Phone calls and prescriptions
- Availability of prior images confirmed and reviewed
- Patient clinical information and questionnaire reviewed by technologist, order from physician confirmed and exam protocolled by radiologist

Intra-Service Clinical Labor Activities:

- Prepare room, equipment, supplies
- Greet patient and escort into procedure room
- Prepare and position patient prone on table / obtain vitals / set up IV / monitor patient
- Position grid/relative measurement tool under sterile field for planning and guidance imaging.
- Perform scout imaging and plan anatomical area to scan for procedure.
- Set up scan area if CT-Fluoro is used or adjust scan area if repeated CT scans are performed during probe placement/adjustment.
- Assist in setting up ablation equipment, attach probe wires to generators, and assist in nonsterile manipulation of equipment during procedure.
- Performs quality control of images in PACS, checking for all images and dose page
- Review examination with interpreting MD
- Exam documents scanned into PACS. Exam completed in RIS system to generate billing process and to populate images into Radiologist work queue

Post-Service Clinical Labor Activities:

- Conduct phone calls/call in prescriptions

**CPT Code:** 32998 and 32994  
**Specialty Society('s):** SIR and ACR

Supplies

- pack, minimum multi-specialty visit
  - exam paper, gloves NS(2), patient gown, pillow case, and thermometer cover
- tray, shave prep
  - shaving chest area of hair
- cap, surgical
  - Needed for each staff member in the room
    - (1) for MD
    - (1) for “hip to hip” technologist
    - (1) for nurse
- drape, sterile, fenestrated 16inx29in
  - sterile drape to cover upper chest, neck region
- drape, sterile, three-quarter sheet
  - sterile drape to cover lower chest, abdominal region
- drape, towel, sterile 18inx26in
  - towel is place secure, sterile border at target site. Absorbent towels are needed around the target site.
- gloves, sterile
  - Needed for each staff member in the scrubbed into the procedure
    - (1) for MD
    - (1) for “hip to hip” technologist
- gown, surgical sterile
  - Needed for each staff member in the scrubbed into the procedure
    - (1) for MD
    - (1) for “hip to hip” technologist
- mask, surgical with face shield
  - Needed for each staff member in the scrubbed into the procedure
    - (1) for MD
    - (1) for “hip to hip” technologist
- shoe covers, surgical
  - Needed for each staff member in the room
    - (1) for MD
    - (1) for “hip to hip” technologist
    - (1) for nurse
- underpad 2ft x 3ft (Chux)
  - needed on CT table, beneath patient chest area for absorbent needs
- needle, 18-27g
  - for lidocaine delivery
- syringe 10-12ml
  - for lidocaine delivery
- syringe 20ml
  - A larger volume syringe is needed to aspirate a small pneumothorax which can be introduced during needle and probe exchange during the procedure. A large pneumothorax would require chest tube placement.
- gas, helium (32994)
  - for thawing during cycles of cryoablation
- probe, radiofrequency, 3 array (32998)
  - three pronged treatment probe/antenna, inserted percutaneously to treat tumor
- gas, argon (32994)

- for freezing during cycles of cryoablation
- probe, cryoablation renal (32994)
  - treatment probe/antenna, inserted percutaneously to treat tumor, (3) used in same tumor, as described as typical for cryoablation procedure
- scalpel with blade, surgical
  - to make skin nick prior to insert thermal probe(s)
- applicator, sponge-tipped
  - assist with sterile skin prep with Betadine.
- dressing, 3inx4in (telfa, release)
  - (32998) (1) & (32994) (1)  
Single Telfa pad is required for dressing the wound and is placed underneath the Tegaderm occlusive dressing.
- dressing, 4in x 4.75in
  - to dress probe entry site post procedure
- gauze, xray detectable 4in x 4in (10 pack uou)
  - to wipe blood, etc during procedure
- steri-strip (6 strip uou) (32994)
  - to close probe entry site post procedure
- tape, surgical paper 1in (micropore)
  - (12 inches) used to assist in maintaining position of probes and introducer needles between subsequent CT imaging scans. Probes can become easily dislodged while moving CT table in and out of gantry and need to be secured with tape.
- lidocaine 1%-2% inj (Xylocaine)
  - For anesthetic agent at probe entry site
- Sodium chloride 0.9% irrigation (500-1000ml uou)
  - To be placed in bowl on tray for general use during procedure (wiping down probes)
    - For 32994, testing probe ice ball formation
- Providone soin (Betadine)
  - For sterile prep of the skin, large area of unilateral chest
- tincture of benzoin, swab
  - Tincture of benzoin is applied to skin around incision prior to tegaderm (dressing) placement to prevent dressing from detaching. Occlusive dressing necessary due to puncture of pleural space.
- cup, biopsy-specimen sterile 4oz
  - for placement of biopsy specimen to be sent for pathology
- disinfectant, surface (Envirocide, Sanizide)
  - to clean CT table and room equipment

## **Equipment**

- Radiofrequency generator (NEURO) (32998)
  - *Highly technical formula. Rows 41, 44, 53, 67 & 73. Prepare room. Position patient. Assist MD. Clean room. QC images.*
  - *Used to provide power to RF probes, set parameters for ablation times and temperatures, and monitors temperatures during procedure*
- Cryosurgery system (for tumor ablation) (32994)
  - *Highly technical formula. Rows 41, 44, 53, 67 & 73. Prepare room. Position patient. Assist MD. Clean room. QC images.*
  - *Used to provide power & gases to cryo probes, set parameters for ablation times and temperatures, and monitors temperatures during procedure*
- Room, CT
  - *Highly technical formula. Rows 41, 44, 53, 67 & 73. Prepare room. Position patient. Assist MD. Clean room. QC images.*
  - *Computed tomography suite is used for pre, intra and post-procedure imaging. CT is used for needle/probe placement, tissue monitoring during ablation, with intermittent localized scans being performed.*
- light exam
  - *Highly technical formula. Rows 41, 44, 53, 67 & 73. Prepare room. Position patient. Assist MD. Clean room. QC images.*
  - *Exam light is needed to provide lighting for surgical field when performing dermatotomy, positioning probes through skin, inserting probe through introducer needles. CT rooms are not primarily designed for surgical procedures and lighting is not optimal for visualization of operative field.*
- Post Procedure Monitoring Equipment
  - The societies are recommending 60 minutes of post procedure monitoring (above the 1 hour post procedure monitoring related to moderate sedation). The following 4 items are in the recommendations with 60 minutes of time:
    - table, instrument, mobile
    - stretcher
    - IV infusion pump
    - ECG, 3-channel (with SpO2, NIBP, temp, resp)
- PACS Workstation Proxy
  - *Non-highly technical formula. All of service period.*

## AMA/Specialty Society RVS Update Committee Summary of Recommendations

January 2017

### Artificial Heart System Procedures

In September 2016, the CPT Editorial Panel deleted Category III codes 0051T-0053T and created three Category I codes to report artificial heart system procedures.

The specialty societies indicated that these services are rarely performed in the US. Currently, there are 76 centers in the US certified to perform these procedures. Only those hospitals that are certified transplant centers, working on becoming a transplant center, use MCS devices, or JCAHO certified DT LVAD center are certified. Certain exceptions may apply such as some children's centers may only have had experience with the Berlin Heart. There is currently only one total artificial heart (TAH) available in the US market. Other TAH manufactures have either gone out of business or are not currently implanting in the US. The specialty societies used a targeted list approved by the Research Subcommittee from the company that included 128 individuals who are considered implanting surgeons, explanting surgeons or assistants.

#### ***33927 Implantation of a total replacement heart system (artificial heart) with recipient cardiectomy***

The RUC reviewed the survey data from 24 cardiothoracic surgeons and determined that the survey median work RVU of 49.00 appropriately accounts for the work required to perform this service. The RUC recommends 60 minutes pre-service evaluation time, 15 minutes pre-service positioning time, 20 minutes pre-service scrub/dress/wait time, 360 minutes intra-service time and 105 minutes immediate post-service time. Of the 24 respondents 18 indicated they had experience with this service and 6 with no experience performing this service in the last 12 months. The top key reference service selected for comparison by all respondents was CPT code 33983 *Replacement of ventricular assist device pump(s); implantable intracorporeal, single ventricle, with cardiopulmonary bypass* (work RVU = 44.54 and 345 minutes intra-service time, 560 total time). This code was the highest valued reference code available on the reference service list and the respondents for the combined and experienced groups all indicated that that code being surveyed was significantly more complex in the intensity for all measures examined compared to the key reference code 33983. The specialty societies indicated and the RUC agreed that the median physician time data of 360 minutes from the experienced respondents was more representative of the work involved in the TAH implantation. The specialty societies indicated and the RUC agreed that the respondents with no experience underestimated the work involved. The RUC also agreed that the time involved for implantation of biventricular pumps and the associated components with the replacement of total heart function with right and left sided circulation management was longer than that represented by physician time of CPT code 33983, which involves replacement of only the pump for one ventricle and the management of supplementing partial heart function.

The RUC also compared the surveyed code to the second key reference service 33979 *Insertion of ventricular assist device, implantable intracorporeal, single ventricle* (work RVU = 37.50 and 280 minutes intra-service time, 465 minutes total time) and noted that the survey respondents indicated that the surveyed code was more intense and complex on all measures examined (e.g. mental effort, technical skill, physical effort, psychological stress) and requires more physician work to perform. Therefore, the surveyed code is valued appropriately higher than CPT code 33979. **The RUC recommends a work RVU of 49.00 for CPT code 33927.**

***33929 Removal of a total replacement heart system (artificial heart) for heart transplantation (List separately in addition to code for primary procedure)***

The RUC recommends that CPT code 33929 be carrier priced until code 33927 for the TAH implantation comes up for new technology review and/or the service is more widely utilized in the US. The specialty societies indicated that the survey respondents may have considered the work of some of the heart transplant in addition to the work for removal of the TAH instead of just the work associated with the removal of the TAH components when valuing the procedure. **The RUC recommends that CPT code 33929 be carrier priced.**

***33928 Removal and replacement of total replacement heart system (artificial heart)***

The RUC recommends that CPT code 33928 be carrier priced until code 33927 for the TAH implantation comes up for new technology review and/or the service is more widely utilized in the US. This service is rarely provided and only three of the 20 respondents had any experience with the procedure. The CPT Editorial Panel discussed the low utilization of this procedure at the meeting and anticipated possible difficulty to survey. **The RUC recommends that CPT code 33928 be carrier priced.**

**Practice Expense**

There are no direct practice expense inputs for this facility-only service.

**New Technology**

CPT codes 33927, 33929 and 33928 will be placed on the New Technology list and be re-reviewed by the RUC in three years to ensure correct valuation and utilization assumptions.

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
<b>Category I Surgery Cardiovascular System Heart/Lung Transplantation</b>				
<i>33935            Heart-lung transplant with recipient cardiectomy-pneumonectomy</i>				
<i>33945            Heart transplant, with or without recipient cardiectomy</i>				
●33927	T1	Implantation of a total replacement heart system (artificial heart) with recipient cardiectomy  <u>(For implantation of ventricular assist device, see 33975, 33976, 33979, 33990, 33991)</u>	XXX	49.00
●+33929	T2	Removal of a total replacement heart system (artificial heart) for heart transplantation (List separately in addition to code for primary procedure)  <u>(Use 33929 in conjunction with 33945)</u>	ZZZ	Carrier Price
●33928	T3	Removal and replacement of total replacement heart system (artificial heart)  <u>(For revision or replacement of components only of a replacement heart system, [artificial heart] use 33999)</u>	XXX	Carrier Price

***Recipient heart with or without lung allotransplantation***, which includes transplantation of allograft and care of the recipient (see 33935, 33945).

(For implantation of a total replacement heart system (artificial heart) with recipient cardiectomy, use 33927~~see Category III codes 0051T-0053T~~)

**33930** Donor cardiectomy-pneumonectomy (including cold preservation)

CPT Descriptor: Implantation of a total replacement heart system (artificial heart) with recipient cardiectomy

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 50-year-old man presented for treatment of decompensated ischemic cardiomyopathy. The patient's history included myocardial infarction and prior coronary artery bypass surgery with defibrillator implantation. Echocardiography showed global hypokinesis and ejection fraction of 15%. After evaluation, the patient was listed in United Network for Organ Sharing (UNOS) and status IA for heart transplantation. He continued to decline, despite multiple inotropes and placement of an intra-aortic balloon pump. The patient was at high risk for imminent death from irreversible biventricular cardiac failure. The patient was referred for an implantation of a total artificial heart.

Percentage of Survey Respondents who found Vignette to be Typical: 83%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Physician performs a complete or interval history and physical exam, comprehensive medical decision making, writes pre-operative orders for pre-operative medications, reviews pre-operative work-up including review of information from other physicians, and relevant tests/data/labs, reviews incision and procedure, talks with patient and family and answers any questions, obtains informed consent, confirms O.R. start time, changes into scrubs, reviews with anesthesia, waits for anesthetic induction, intubation, placement of arterial and central lines, places bladder catheter, positions and pads patient, places defibrillator pads on the chest and back, scrubs, gloves, preps and drapes patient. The vast majority of these patients have implantable cardiac defibrillators that must be interrogated and have the defibrillator function deactivated in the operating room after they have safely been induced with general anesthesia. The physician must also interpret and assess the intraoperative transesophageal echocardiogram to ensure that: no patent foramen ovale exists, documents flow from the pulmonary veins and performs a bicaval view to make sure there is no obstruction to flow in SVC and IVC. The patient is placed on the operating room table in supine position with administration of general anesthesia via endotracheal tube. Entire neck, chest, abdomen and both legs circumferentially to the knees are prepped with Betadine solution and draped in a sterile manner. Just prior to incision, the entire operating room team undertakes a comprehensive "Time Out" procedure.

Description of Intra-Service Work: Median sternotomy is performed in the usual fashion. The pericardium is opened and the heart is suspended in a pericardial cradle. The atrial quick connects are brought to the field and cut to appropriate length. Two stab wounds are made in the left upper quadrant, and the drivelines to the ventricle are tunneled subcutaneously.

A 20 Fr aortic cannula is inserted for cardiopulmonary bypass. Another cannula is placed in the superior vena cava. Tourniquets are placed on the superior and inferior vena cava. The superior vena cava venous line is connected to the femoral vein line. Another cannula for venous return is placed in the inferior vena cava and secured. Cardiopulmonary bypass is initiated. The tourniquets are placed on the superior inferior vena cava and the aorta is cross clamped. A ventriculectomy is made below the AV groove circumferentially. The tricuspid valve is transected leaving about 1-2 mm of

tissue in the tricuspid valve annulus. In a similar fashion, the ventricular septum is divided. The wires from the AICD generator are removed. The mitral valve is excised leaving 1 or 2 mm of valve tissue. The aorta and the pulmonary artery are divided. The right ventricular outflow tract is excised leaving the posterior aspect of the aorta and anterior leaflet of the mitral valve. The coronary sinus is closed. The 1st atrial quick connect is anastomosed to the left atrium. The other atrial quick connect is placed in the tricuspid valve, and sutured in place. The artificial ventricles are brought into the field. The aortic and the pulmonary artery conduits are measured and cut to appropriate length. The pulmonary artery and aortic conduits are sewn in place. The artificial left ventricle is connected to the mitral quick connect and to the aorta. The artificial right ventricle is connected to the tricuspid valve.

The pulmonary artery conduit is connected to the prosthetic right ventricle. The patient is placed in Trendelenburg position. The aorta is vented. The total artificial heart is connected to the drivelines. Single shots were given in order to remove air. Echocardiography is used throughout the procedure and especially at the time of chest closure to ensure that the heart does not impinge on surrounding structures and ensure there is no evidence of air. The patient is weaned off cardiopulmonary bypass without any difficulty.

Once the patient is hemodynamically stable, all cannulae are removed and protamine is given. Hemostatic control is obtained from all bleeding surfaces. The AICD generator is removed by incision and the AICD pocket is closed in layers. The skin is closed. Two chest tubes are placed in the mediastinum. Once there is no evidence of bleeding, Gortex membranes are placed over and around the TAH. Blue bands are placed around the aorta, superior and inferior vena cavae. The chest tubes and the drivelines are secured to the skin.

Sternal wires are placed with a silastic membrane placed between the wires and the sternum. The sternum is re-approximated. The subcutaneous tissues are closed in layers. The skin is closed. A sterile dressing is placed over all wounds. The patient is then transferred to the ICU, intubated and hemodynamically stable.

Note: The echocardiography procedure throughout the surgery is performed by a different physician other than the surgeon.

Description of Post-Service Work: A sterile dressing is applied. Drapes are removed with close attention to pacing wires (if any), tubes and lines to ensure that none are dislodged or disconnected. The patient is carefully evaluated for hemodynamic stability, and TAH settings are optimized, changing frequently in response to volume status change and the need for alpha agents to maintain blood pressure. The patient almost always is coagulopathic due to pre-existing liver dysfunction and to the effect of the TAH on coagulation factors. Accordingly, the patient is observed in the operating room until immediate re-exploration is unlikely and until the TAH function is stable enough for the diminished monitoring available during transport. Drivelines are secured. The operative note is dictated and postoperative orders written. The procedure's outcome is discussed with the family, nurses, and other physicians. The patient is accompanied to the ICU.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

Three total artificial heart (TAH) codes were submitted by industry and approved by the CPT Editorial Panel at the October 2016 CPT meeting. The codes include the following:

- 33927 - Implantation of a total replacement heart system (artificial heart) with recipient cardiectomy
- +33929 - Removal of a total replacement heart system (artificial heart) for heart transplantation (List separately in addition to code for primary procedure)
- 33928 - Removal and replacement of total replacement heart system (artificial heart)

These services are rarely performed in the US. At this time there are 76 centers in the US certified to perform these procedures. Only those hospitals that are certified transplant centers, working on becoming a transplant center, use MCS devices, or JCAHO certified DT LVAD center are certified. Certain exceptions may apply such as some children's centers may only have had experience with the Berlin Heart.

There is currently only one TAH available in the US market, which is manufactured by Syncardia. The other TAH manufacturers have either gone out of business or are not currently implanting in the US. The specialty societies used a targeted list from the company that included 128 individuals who are considered implanting surgeons, explanting surgeons or assistants.

**Specific Code Rationale:**

33927 - Implantation of a total replacement heart system (artificial heart) with recipient cardiectomy

The STS/AATS recommend the survey median work RVU of the experienced respondents of 49.00, with an intra-service time of 360 minutes, total time of 560 minutes and an IWP/UT of 0.124 for 33927.

In reviewing the survey data, the combined data showed a median RVW of 49.35 with a median intra-service time of 310 minutes and a total time of 505 minutes. The key reference service selected by 58% of the combined respondents and 67% of the respondents with experience was 33983 – replacement of a VAD pump(s), single ventricle with cardiopulmonary bypass with an intra-service time of 345 minutes, a total time of 560 minutes and an RVW of 44.54. This code was the highest valued reference code available on the RSL and the respondents for the combined and experienced groups all indicated that that code being surveyed was significantly more complex in the intensity than the

key reference code 33983. The STS/AATS expert panel reviewed the data and felt that, in this case, the median time data of 360 minutes from the experienced respondents, was more representative of the work involved in the TAH implantation. The expert panel felt that the respondents with no experience underestimated the work involved. The panel felt that the time involved for implantation of biventricular pumps and the associated components with the replacement of total heart function with right and left sided circulation management was longer than that represented by the work of 33983 (345 minutes) which involves replacement of only the pump for one ventricle and the management of supplementing partial heart function and as such is recommending 360 minutes of intraservice time based on the median of the experienced survey respondents.

#### **PRE-TIME Package 4**

**Evaluation (total = 60 minutes):** An additional 20 minutes was added to the package, which is typical for cardiac surgical procedures. The physician performs a complete or interval history and physical exam, with comprehensive medical decision-making. The physician writes pre-operative orders for pre-operative medications, reviews the pre-operative work-up including review of information from other physicians, and relevant tests/data/labs. Additionally, the physician evaluates hemodynamic data and reviews a CT scan of the chest to confirm that the anterior-posterior diameter of the patient's chest is sufficient to accommodate the TAH. The physician also reviews the incision and procedure, talks with patient and family and answers any questions, obtains informed consent, confirms O.R. start time.

**Positioning (total = 15 minutes):** Additional positioning time is required to account for the physician working around the typical patient having an intra-aortic balloon pump and frequently on a temporary type of cardiopulmonary bypass, the addition of sensing electrodes for the TAH and safely disabling the AICD, a biventricular pacing system.

#### **POST-TIME Package 9b**

**Total = 105 minutes:** Additional time has been added to post-service package to account for the following: increased time for patient stabilization to ensure hemodynamic synchrony between the right and left prosthetic ventricles; increased time associated with the transfer of the patient off the table and to the ICU required to accommodate the necessary equipment for monitoring TAH function while the patient is being moved and transferred; additional documentation in the operative note to capture the complexity of the procedure and include the specific data on the right and left TAH setting and note of pulmonary veins and vena cava are made; additional time spent in communication with the patient and family related to the device function and care; additional time for post operative orders related to the parameters and monitoring for the TAH device function.

#### **Key Reference Service Comparison**

CPT	Long Descriptor	RVW	IWP/UT	minutes			
				Total	PRE	INTR A	POST
33893	Replacement of ventricular assist device pump(s); implantable intracorporeal, single ventricle, with cardiopulmonary bypass	44.54	0.116	560	95	345	120
33927	Implantation of a total replacement heart system (artificial heart) with recipient cardiectomy	49.00	0.124	560	95	360	105

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 0051T

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty cardiothoracic surgery How often? Rarely

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 100

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. based on company estimates from implatnations in previous years 2014 - 75; 2015 - 82; through 10/16/16 - 57

Specialty caridothoracic surgery Frequency 100 Percentage 100.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 8 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. It is estimated that about 8% of the patients that receive a total artificial heart implantation are Medicare patients

Specialty cardiothoracic surgery	Frequency 8	Percentage 100.00 %
----------------------------------	-------------	---------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Do many physicians perform this service across the United States? No

### **Berenson-Eggers Type of Service (BETOS) Assignment**

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Procedures

BETOS Sub-classification:

Major procedure

BETOS Sub-classification Level II:

Cardiovascular-Other

### **Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 33983

AMA/Specialty Society RVS Update Committee Summary of Recommendations

*\*Pre-time Analysis and Codes Reported Together 75% or More\**

January 2017

**Endovascular Repair Procedures (EVAR)**

In October 2015, the CPT/RUC Joint Workgroup on Codes Reported Together recommended to bundle endovascular abdominal aortic aneurysm repair (EVAR) codes with radiologic supervision and interpretation (34800, 34802, 34803, 34804, 34825, 75952 and 75953). In September 2016, the CPT Editorial Panel bundled endovascular repair of abdominal aortic aneurysm and radiologic supervision and interpretation services with the addition of 16 new codes 34701-34716, revision of 4 category I codes (34812, 34820, 34833 and 34834), deletion of 14 codes (34800-34806, 34825, 34826, 34900, 75952-75954, 93982, 0255T), and revision of category III code 0254T.

**Background**

During the multispecialty presentation at the January 2017 RUC meeting, the presenters provided a comprehensive history of this family of services and also their rationale in creating this new coding structure. They noted that the first two devices for endovascular repair of abdominal aortic aneurysms received FDA approval in 1999, and a family of EVAR codes was presented to the RUC in April 2000. At that time, EVAR was typically performed by a team of physicians including vascular surgeons and interventional radiologists. Thus, the coding structure was created according to component coding standards for endovascular procedures. The EVAR family of codes appeared in the 2001 Medicare Physician Fee Schedule and the values have remained stable since that time.

At the January 2014 RUC meeting, the RAW identified CPT codes 34802, 34812, and 34825 in the pre-time screen for procedures having pre-service minutes in excess of standard package times. These long pre-times had been approved by the RUC to reflect the extensive pre-operative endograft sizing work that is required to carry out a successful operation. The need for the surgeon to perform extensive pre-operative measurements of multiple diameters and lengths, and to then perform endograft sizing, is still required physician work today.

There have been several significant paradigm shifts since the codes were originally valued. First, the specialty societies observed that there has been an increased emphasis placed on bundling codes that are commonly performed together by the same provider. Second, providers of this service only rarely work in teams today and the typical service is performed by one clinician who does the surgical and radiologic portions of the repair. Finally, providers have begun performing EVAR for treatment of life-threatening ruptured aortic aneurysms, a practice that was never considered viable in April 2000 when the codes were originally valued.

For all of these reasons, the multispecialty panel decided to propose to the CPT Editorial Panel for this the family of services that describe EVAR to be restructured. The CPT Editorial Panel approved the final coding changes at the September 2016 CPT meeting. The new codes incorporate many of the concerns described above and are outlined as follow:

1. Catheter placement is now bundled into the main procedure.
2. Radiologic supervision & interpretation is now bundled into the main procedure.
3. All distal extensions performed to the common iliac artery bifurcations are now bundled into the main procedure.
4. All proximal extensions performed to the lowest renal artery are now bundled into the main procedure.
5. The coding structure is now based on the anatomy of the disease rather than the device used to treat the aneurysm.
6. New codes have been created for the significantly different work of EVAR for ruptured aneurysms.
7. The global period has been changed from 0-day to ZZZ for the access procedures since these are never performed as stand-alone services.

#### **Pre-service Time (34701-34708, 34710, 34712)**

The specialties noted that there is significant pre-service time and work that goes into providing these procedures to review the aneurysm anatomy on CT angiogram, confirm the suitability of the anatomy for EVAR, make a large number of aortic diameter and center-line length measurements, review available endograft sizes and develop an operative plan that will successfully treat the pathology at hand. This time was originally added to the pre-service time of the original codes (leading to identification in the RAW screen). This service is provided after evaluation in the office, but more than 24 hours prior to the procedure. Therefore, prior to conducting their survey's, the multispecialty panel received approval to add an additional question to the RUC survey to capture time spent planning for EVAR. The specialties noted that this is consistent with the code descriptors which include the phrase "including pre-procedure sizing and device selection." They also noted that this is also consistent with CMS' statement regarding to how to handle the the Fenestrated Endovascular Repair (FEVAR) Endograft Planning code 34839 in the CY2015 Final Rule: "CY 2014 final rule and CMS said "In general, we prefer that planning be bundled with the underlying service, and we have no reason to believe bundling is not appropriate in this case. Accordingly, we are assigning a PFS procedure status indicator of B (Bundled Code) to CPT code 34839.". The RUC agreed that the additional planning time should therefore included in the total evaluation minutes and becomes part of the pre-service work. The specialty noted and the RUC agreed that the emergent codes (34702, 34704, 34706 and 34708) should have less time for EVAR planning relative to the planned codes (34701, 34703, 34705, 34707 and 34710).

The RUC agreed with the specialties that pre-service package 4 was appropriate for EVAR procedures with adjustment to the times for addition of EVAR planning time. The specialties noted and the RUC agreed that the recommended pre-service times appropriately captured the additional work the day before and the day of the procedure to ensure that all necessary supplies are available for the operation, to ensure that the radiologic equipment is operational and prepared for the procedure, and to re-review the extensive anatomic imaging prior to performing the procedure. An additional 17 minutes of positioning time has been added to codes 34701-34708 to account for positioning the imaging equipment and operating room equipment to minimize conflicts between equipment and patient during surgery, appropriately positioning the patient with arms tucked as indicated, and confirming that all EKG leads and IV, Foley and arterial catheter lines are clear from the areas to be imaged during the procedure.

**Immediate Post-service Time (34701-34708, 34710, 34712)**

Post-service package 9B would apply for these complex procedures, however, this package only includes 5 minutes for “operative note” which is not sufficient time for endovascular procedures that have radiologic supervision & interpretation bundled into the code. There is significantly more time involved to review all images and cines, annotate appropriate images, dictate radiologic findings, and document radiation exposure and contrast volumes. The RUC agreed with the specialties that the survey median times should be utilized for the immediate post-service time in order to capture the additional work above and beyond the standard post-time package.

**Post-operative Visits (34701-34708, 34710, 34712)**

The specialty societies noted that the post-operative in-hospital visits include: interval history-taking for new complaints of pain or neurovascular compromise; close monitoring of abdominal tenderness, lower extremities for tenderness or emboli, all arterial access sites for bleeding or hematoma formation, blood pressure, urinary output for signs of hypovolemia, pulse and perfusion, neurologic evaluation for any signs of spinal cord ischemia and Hemoglobin and coagulation labs. The need for routine or advanced imaging is assessed daily. Post-op CT scans are obtained, either during the inpatient stay or early in the post-discharge time period. Progress notes are recorded daily. Patient and family questions are answered. Orders are updated daily. Rounds with nursing staff and other consultants are performed daily. Discharge day management includes communicating with all support services such as visiting nurses, referring physicians, review interval chart notes, answer patient and family questions, evaluate all pre-discharge labs, evaluate and redress the incisions, assess pain score, and perform medication reconciliation. Surgeon discusses home restrictions (ie, diet, activity, bathing) with patient and family members; writes orders for home care, discharge medications and supplies; and completes all appropriate medical records, including day of discharge progress notes and final discharge instructions. At each office visit, the surgeon solicits an interval history for ongoing or new symptoms, examines the abdomen for tenderness, examines arterial access sites and surgical incisions for inflammation, drainage, wound infection; examines lower extremities for adequate perfusion. The surgeon orders diagnostic blood tests and/or imaging studies based on findings and reviews post-op CT scans and ultrasounds for possible endoleak. They also make clinical decisions regarding need for repeat surgical intervention and provide wound care when necessary. They also remove staples and sutures as indicated, answer patient/family questions and write prescriptions for medication and therapy, as necessary. In addition, they discuss progress with referring physician (verbal and written) and record progress notes for the medical chart.

**34701 Endovascular repair of infrarenal aorta by deployment of an aorto-aortic tube endograft including pre-procedure sizing and device selection, all nonselective catheterization(s), all associated radiological supervision and interpretation, all endograft extension(s) placed in the aorta from the level of the renal arteries to the aortic bifurcation, and all angioplasty/stenting performed from the level of the renal arteries to the aortic bifurcation; for other than rupture (eg, for aneurysm, pseudoaneurysm, dissection, penetrating ulcer)**

The RUC reviewed the survey results from 55 physicians and agreed on the following physician time components: 60 minutes for EVAR planning time, 50 minutes for pre-service evaluation time, 20 minutes for pre-service positioning time, 20 minutes for pre-service scrub/dress/wait, 120

minutes for intra-service time, 40 minutes for immediate post-time, 1 99233 visit, 1 99232 visit, 1 99238 discharge visit, 1 99213 office visit and 1 99212 office visit.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the respondents somewhat overvalued the work involved in performing this service, with a 25<sup>th</sup> percentile work RVU of 25.00. To find an appropriate work RVU crosswalk, the RUC compared the survey code to CPT code 33254 *Operative tissue ablation and reconstruction of atria, limited (eg, modified maze procedure)* (work RVU of 23.71, intra-service time of 120 minutes, total time of 416 minutes) and noted that both services have identical intra-service times, the same number of post-operative visits and a similar amount of total physician work. Therefore, the RUC recommends a direct work RVU crosswalk from 33254 to 34701. **The RUC recommends a work RVU of 23.71 for CPT code 34701.**

**34702 Endovascular repair of infrarenal aorta by deployment of an aorto-aortic tube endograft including pre-procedure sizing and device selection, all nonselective catheterization(s), all associated radiological supervision and interpretation, all endograft extension(s) placed in the aorta from the level of the renal arteries to the aortic bifurcation, and all angioplasty/stenting performed from the level of the renal arteries to the aortic bifurcation; for rupture including temporary aortic and/or iliac balloon occlusion when performed (eg, for aneurysm, pseudoaneurysm, dissection, penetrating ulcer, traumatic disruption)**

The RUC reviewed the survey results from 49 physicians and agreed on the following physician time components: 30 minutes for EVAR planning time, 30 minutes for pre-service evaluation time, 20 minutes for pre-service positioning time, 20 minutes for pre-service scrub/dress/wait, 120 minutes for intra-service time, 60 minutes for immediate post-time, 1 99291 visit, 2 99233 visits, 2 99232 visits, 1 99231 visit, 1 99238 discharge visit, 1 99214 office visit, 1 99213 office visit and 1 99212 office visit. The RUC agreed with the specialties that the emergent codes require many more post-operative visits relative to the planned EVAR procedures.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the respondents appropriately valued the physician work involved in performing this service at the median work RVU of 36.00. To justify a work RVU of 36.00, the RUC compared the survey code to CPT code 33390 *Valvuloplasty, aortic valve, open, with cardiopulmonary bypass; simple (ie, valvotomy, debridement, debulking, and/or simple commissural resuspension)* (work RVU of 35.00, intra-service time of 180 minutes, total time of 622 minutes) and noted that although the reference code has more intra-service time, the survey code has much more total time and involves a similar amount of physician work. **The RUC recommends a work RVU of 36.00 for CPT code 34702.**

**34703 Endovascular repair of infrarenal aorta and/or iliac artery(ies) by deployment of an aorto-uniiliac endograft including pre-procedure sizing and device selection, all nonselective catheterization(s), all associated radiological supervision and interpretation, all endograft extension(s) placed in the aorta from the level of the renal arteries to the iliac bifurcation, and all angioplasty/stenting performed from the level of the renal arteries to the iliac bifurcation; for other than rupture (eg, for aneurysm, pseudoaneurysm, dissection, penetrating ulcer)**

The RUC reviewed the survey results from 54 physicians and agreed on the following physician time components: 60 minutes for EVAR planning time, 50 minutes for pre-service evaluation time, 20 minutes for pre-service positioning time, 20 minutes for pre-service scrub/dress/wait, 150 minutes for intra-service time, 35 minutes for immediate post-time, 1 99233 visit, 1 99232 visit, 1 99238 discharge visit, 1 99213 office visit and 1 99212 office visit.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the respondents somewhat overvalued the work involved in performing this service, with a 25<sup>th</sup> percentile work RVU of 30.25. To find an appropriate work RVU crosswalk, the RUC compared the survey code to CPT code 34151 *Embolectomy or thrombectomy, with or without catheter; renal, celiac, mesentery, aortoiliac artery, by abdominal incision* (work RVU of 26.52, intra-service time of 150 minutes, total time of 508 minutes) and noted that both services have identical intra-service times, a similar amount of total time and involve a similar amount of total physician work. Therefore, the RUC recommends a direct work RVU crosswalk from 34151 to 34703. **The RUC recommends a work RVU of 26.52 for CPT code 34703.**

**34704 Endovascular repair of infrarenal aorta and/or iliac artery(ies) by deployment of an aorto-uniliac endograft including pre-procedure sizing and device selection, all nonselective catheterization(s), all associated radiological supervision and interpretation, all endograft\_extension(s) placed in the aorta from the level of the renal arteries to the iliac bifurcation, and all angioplasty/stenting performed from the level of the renal arteries to the iliac bifurcation; for rupture including temporary aortic and/or iliac balloon occlusion when performed (eg, for aneurysm, pseudoaneurysm, dissection, penetrating ulcer, traumatic disruption)**

The RUC reviewed the survey results from 53 physicians and agreed on the following physician time components: 30 minutes for EVAR planning time, 30 minutes for pre-service evaluation time, 20 minutes for pre-service positioning time, 20 minutes for pre-service scrub/dress/wait, 180 minutes for intra-service time, 60 minutes for immediate post-time, 1 99291 visit, 2 99233 visits, 2 99232 visits, 1 99231 visit, 1 99238 discharge visit, 1 99214 office visit, 1 99213 office visit and 1 99212 office visit. The RUC agreed with the specialties that the emergent codes require many more post-operative visits relative to the planned EVAR procedures.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the respondents appropriately valued the physician work involved in performing this service at the median work RVU of 45.00. To justify a work RVU of 45.00, the RUC compared the survey code to CPT code 43415 *Suture of esophageal wound or injury; transthoracic or transabdominal approach* (work RVU of 44.88, intra-service time of 180 minutes, total time of 842) and noted that both services have identical intra-service time and involve a similar total amount of physician work. Although the reference code has more total time, the survey code is a much more intense procedure to perform. **The RUC recommends a work RVU of 45.00 for CPT code 34704.**

**34705 Endovascular repair of infrarenal aorta and/or iliac artery(ies) by deployment of an aorto-biiliac endograft including pre-procedure sizing and device selection, all nonselective catheterization(s), all associated radiological supervision and interpretation, all endograft\_extension(s) placed in the aorta from the level of the renal arteries to the iliac bifurcation, and all angioplasty/stenting**

**performed from the level of the renal arteries to the iliac bifurcation; for other than rupture (eg, for aneurysm, pseudoaneurysm, dissection, penetrating ulcer)**

The RUC reviewed the survey results from 54 physicians and agreed on the following physician time components: 60 minutes for EVAR planning time, 50 minutes for pre-service evaluation time, 20 minutes for pre-service positioning time, 20 minutes for pre-service scrub/dress/wait, 150 minutes for intra-service time, 40 minutes for immediate post-time, 1 99233 visit, 1 99232 visit, 1 99238 discharge visit, 1 99213 office visit and 1 99212 office visit.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the respondents somewhat overvalued the work involved in performing this service, with a 25<sup>th</sup> percentile work RVU of 32.28. To find an appropriate work RVU crosswalk, the RUC compared the survey code to CPT code 33641 *Repair atrial septal defect, secundum, with cardiopulmonary bypass, with or without patch* (work RVU of 29.58, intra-service time of 164 minutes, total time of 562 minutes) and noted that although the reference code has somewhat more intra-service and total time, both services involve a similar amount of total physician work as the survey code is a more intense procedure to perform. Therefore, the RUC recommends a direct work RVU crosswalk from 33641 to 34705. **The RUC recommends a work RVU of 29.58 for CPT code 34705.**

**34706 Endovascular repair of infrarenal aorta and/or iliac artery(ies) by deployment of an aorto-biiliac endograft including pre-procedure sizing and device selection, all nonselective catheterization(s), all associated radiological supervision and interpretation, all endograft extension(s) placed in the aorta from the level of the renal arteries to the iliac bifurcation, and all angioplasty/stenting performed from the level of the renal arteries to the iliac bifurcation; for rupture including temporary aortic and/or iliac balloon occlusion when performed (eg, for aneurysm, pseudoaneurysm, dissection, penetrating ulcer, traumatic disruption)**

The RUC reviewed the survey results from 54 physicians and agreed on the following physician time components: 30 minutes for EVAR planning time, 30 minutes for pre-service evaluation time, 20 minutes for pre-service positioning time, 20 minutes for pre-service scrub/dress/wait, 178 minutes for intra-service time, 60 minutes for immediate post-time, 1 99291 visit, 2 99233 visits, 2 99232 visits, 1 99231 visit, 1 99238 discharge visit, 1 99214 office visit, 1 99213 office visit and 1 99212 office visit. The RUC agreed with the specialties that the emergent codes require many more post-operative visits relative to the planned EVAR procedures.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the respondents appropriately valued the physician work involved in performing this service at the median work RVU of 45.00. To justify a work RVU of 45.00, the RUC compared the survey code to CPT code 43415 *Suture of esophageal wound or injury; transthoracic or transabdominal approach* (work RVU of 44.88, intra-service time of 180 minutes, total time of 842) and noted that the services have very similar intra-service times and involve a similar total amount of physician work. Although the reference code has more total time, the survey code is a much more intense procedure to perform. **The RUC recommends a work RVU of 45.00 for CPT code 34706.**

**34707 Endovascular repair of iliac artery by deployment of an ilio-iliac tube endograft including pre-procedure sizing and device selection, all nonselective catheterization(s), all associated radiological supervision and interpretation, and all endograft extension(s) proximally to the aortic bifurcation and distally to the iliac bifurcation, and treatment zone angioplasty/stenting when performed, unilateral; for other than rupture (eg, for aneurysm, pseudoaneurysm, dissection, arteriovenous malformation)**

The RUC reviewed the survey results from 54 physicians and agreed on the following physician time components: 60 minutes for EVAR planning time, 50 minutes for pre-service evaluation time, 20 minutes for pre-service positioning time, 20 minutes for pre-service scrub/dress/wait, 120 minutes for intra-service time, 40 minutes for immediate post-time, 1 99233 visit, 1 99232 visit, 1 99238 discharge visit, 1 99213 office visit and 1 99212 office visit.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the respondents somewhat overvalued the work involved in performing this service, with a 25<sup>th</sup> percentile work RVU of 24.00. To find an appropriate work RVU crosswalk, the RUC compared the survey code to CPT code 37660 *Ligation of common iliac vein* (work RVU of 22.28, intra-service time of 120 minutes, total time of 397 minutes) and noted that both services have identical total time and involve a similar amount of total physician work. Therefore, the RUC recommends a direct work RVU crosswalk from 37660 to 34707. **The RUC recommends a work RVU of 22.28 for CPT code 34707.**

**34708 Endovascular repair of iliac artery by deployment of an ilio-iliac tube endograft including pre-procedure sizing and device selection, all nonselective catheterization(s), all associated radiological supervision and interpretation, and all endograft extension(s) proximally to the aortic bifurcation and distally to the iliac bifurcation, and treatment zone angioplasty/stenting when performed, unilateral; for rupture including temporary aortic and/or iliac balloon occlusion when performed (eg, for aneurysm, pseudoaneurysm, dissection, arteriovenous malformation, traumatic disruption)**

The RUC reviewed the survey results from 54 physicians and agreed on the following physician time components: 30 minutes for EVAR planning time, 30 minutes for pre-service evaluation time, 20 minutes for pre-service positioning time, 20 minutes for pre-service scrub/dress/wait, 120 minutes for intra-service time, 60 minutes for immediate post-time, 1 99291 visit, 2 99233 visits, 2 99232 visits, 1 99231 visit, 1 99238 discharge visit, 1 99214 office visit, 1 99213 office visit and 1 99212 office visit. The RUC agreed with the specialties that the emergent codes require many more post-operative visits relative to the planned EVAR procedures.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the respondents appropriately valued the physician work involved in performing this service at the median work RVU of 36.50. To justify a work RVU of 36.50, the RUC compared the survey code to CPT code 33390 *Valvuloplasty, aortic valve, open, with cardiopulmonary bypass; simple (ie, valvotomy, debridement, debulking, and/or simple commissural resuspension)* (work RVU of 35.00, intra-service time of 180 minutes, total time of 622 minutes) and noted that although the reference code has more intra-service time, the survey code has much more total time and involves slightly more total physician work. **The RUC recommends a work RVU of 36.50 for CPT code 34708.**

**34709 Placement of extension prosthesis(es) distal to the common iliac artery(ies) or proximal to the renal artery(ies) for endovascular repair of infrarenal abdominal aortic or iliac aneurysm, false aneurysm, dissection, penetrating ulcer, including pre-procedure sizing and device selection, all nonselective catheterization(s), all associated radiological supervision and interpretation, and treatment zone angioplasty/stenting when performed, per vessel treated (List separately in addition to code for primary procedure)**

The RUC reviewed the survey results from 33 physicians and agreed on the following physician time components: 60 minutes of intra-service time. The specialty societies explained that the difference for 34709 compared to extension codes in the prior coding method is that the treatment zone is now explicitly defined as from the level of the lowest renal artery to the iliac bifurcation for the devices that extend from the aorta into the iliac. In previous coding, when extensions could be placed within that treatment zone and coded, that work is now bundled into 34701-34708. By definition, to use 34709 the surgeon is placing an extension beyond the treatment zone.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the respondents appropriately valued the physician work involved in performing this service at the 25<sup>th</sup> percentile work RVU of 6.50. To justify a work RVU of 6.50, the RUC compared the survey code to CPT code 37233 *Revascularization, endovascular, open or percutaneous, tibial/peroneal artery, unilateral, each additional vessel; with atherectomy, includes angioplasty within the same vessel, when performed (List separately in addition to code for primary procedure)* (work RVU of 6.50, intra-service time of 60 minutes, total time of 62 minutes) and noted that both services have identical intra-service times and near identical total times. The value for 34709 is higher than the value for 34711 which is a very similar service; however, clinically speaking, the additional endograft extension placed in a delayed fashion for 34711 could be within the previous treatment zone of the initial endograft placement and is therefore less intense than an extension placed at the time of initial endografts deployment. **The RUC recommends a work RVU of 6.50 for CPT code 34709.**

**34710 Delayed placement of distal or proximal extension prosthesis for endovascular repair of infrarenal abdominal aortic or iliac aneurysm, false aneurysm, dissection, endoleak, or endograft migration, including pre-procedure sizing and device selection, all nonselective catheterization(s), all associated radiological supervision and interpretation, and treatment zone angioplasty/stenting when performed; initial vessel treated**

The RUC reviewed the survey results from 33 physicians and agreed on the following physician time components: 60 minutes for EVAR planning time, 50 minutes for pre-service evaluation time, 15 minutes for pre-service positioning time, 15 minutes for pre-service scrub/dress/wait, 90 minutes for intra-service time, 30 minutes for immediate post-time, 1 99232 visit, 1 99231 visit, 1 99238 discharge visit, 1 99213 office visit and 1 99212 office visit.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the respondents appropriately valued the physician work involved in performing this service at the 25<sup>th</sup> percentile work RVU of 15.00. To justify a work RVU of 15.00, the RUC compared the survey code to MPC code 63047 *Laminectomy, facetectomy and foraminotomy (unilateral or bilateral with decompression of spinal cord, cauda equina and/or nerve root[s], [eg, spinal or lateral recess stenosis]), single vertebral segment; lumbar* (work RVU of 15.37, intra-service time of

90 minutes, total time of 362 minutes) and noted that both services have identical intra-service time and the survey code has more total time. **The RUC recommends a work RVU of 15.00 for CPT code 34710.**

**34711 Delayed placement of distal or proximal extension prosthesis for endovascular repair of infrarenal abdominal aortic or iliac aneurysm, false aneurysm, dissection, endoleak, or endograft migration, including pre-procedure sizing and device selection, all nonselective catheterization(s), all associated radiological supervision and interpretation, and treatment zone angioplasty/stenting when performed; each additional vessel treated (List separately in addition to code for primary procedure)**

The RUC reviewed the survey results from 33 physicians and agreed on the following physician time components: 60 minutes of intra-service time.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the respondents appropriately valued the physician work involved in performing this service at the 25<sup>th</sup> percentile work RVU of 6.00. To justify a work RVU of 6.00, the RUC compared the survey code to CPT code 37233 *Revascularization, endovascular, open or percutaneous, tibial/peroneal artery, unilateral, each additional vessel; with atherectomy, includes angioplasty within the same vessel, when performed (List separately in addition to code for primary procedure)* (work RVU of 6.50, intra-service time of 60 minutes, total time of 62 minutes) and noted that both services have identical intra-service times and near identical total times. The value for 34711 is lower than the value for 34709 which is a very similar service; however, clinically speaking, the additional endograft extension placed in a delayed fashion for 34711 could be within the previous treatment zone of the initial endograft placement and is therefore less intense than an extension placed at the time of initial endografts deployment. **The RUC recommends a work RVU of 6.00 for CPT code 34711.**

**34712 Transcatheter delivery of enhanced fixation device(s) to the endograft (eg, anchor, screw, tack) and all associated radiological supervision and interpretation**

The RUC reviewed the survey results from 33 physicians and agreed on the following physician time components: 40 minutes for pre-service evaluation time, 20 minutes for pre-service positioning time, 20 minutes for pre-service scrub/dress/wait, 60 minutes for intra-service time, 30 minutes for immediate post-time, 1 99232 visit, 1 99231 visit, 1 99238 discharge visit, 1 99213 office visit and 1 99212 office visit.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the respondents appropriately valued the physician work involved in performing this service at the 25<sup>th</sup> percentile work RVU of 12.00. To justify a work RVU of 12.00, the RUC compared the survey code to MPC code 54437 *Repair of traumatic corporeal tear(s)* (work RVU of 11.50, intra-service time of 60 minutes, total time of 264 minutes) and noted that both services have identical intra-service times, whereas the survey code involves much more total time, justifying a somewhat higher value for the survey code. **The RUC recommends a work RVU of 12.00 for CPT code 34712.**

**34713 Percutaneous access and closure of femoral artery for delivery of endograft through a large sheath (12 French or larger), including ultrasound guidance, when performed, unilateral (List separately in addition to code for primary procedure)**

The RUC reviewed the survey results from 33 physicians and agreed on the following physician time components: 20 minutes of intra-service time.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the respondents overvalued the physician work involved in performing this service, with a 25<sup>th</sup> percentile work RVU of 3.73. To find an appropriate work RVU crosswalk, the RUC compared the survey code to CPT code 15152 *Tissue cultured skin autograft, trunk, arms, legs; each additional 100 sq cm, or each additional 1% of body area of infants and children, or part thereof (List separately in addition to code for primary procedure)* (work RVU of 2.50, intra-service time of 20 minutes) and noted that both services have identical times and involve a very similar amount of physician work. Therefore, the RUC recommends a direct work RVU crosswalk from 15152 to 34713. **The RUC recommends a work RVU of 2.50 for CPT code 34713.**

**34812 Open femoral artery exposure for delivery of endovascular prosthesis by groin incision, unilateral**

The RUC reviewed the survey results from 34 physicians and agreed on the following physician time components: 40 minutes of intra-service time.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the respondents appropriately valued the physician work involved in performing this service at the 25<sup>th</sup> percentile work RVU of 4.13. To justify a work RVU of 4.13, the RUC compared the survey code to top key reference code 35600 *Harvest of upper extremity artery, 1 segment, for coronary artery bypass procedure (List separately in addition to code for primary procedure)* (work RVU of 4.94, intra-service time of 40 minutes) and noted that both services have identical time components. **The RUC recommends a work RVU of 4.13 for CPT code 34812.**

**34714 Open femoral artery exposure with creation of conduit for delivery of endovascular prosthesis or for establishment of cardiopulmonary bypass, by groin incision, unilateral (List separately in addition to code for primary procedure)**

The RUC reviewed the survey results from 49 physicians and agreed on the following physician time components: 52 minutes of intra-service time. The specialty societies noted that their expert panel determined and the RUC agreed that there should be a 12 minute increment between 34812 and 34714 to account for the additional work for the conduit, which is a reduction of 8 minutes relative to the survey median. The specialty societies noted that the incremental increase in work RVU and intra-service time would have a similar intensity relative to CPT code 33987 *Arterial exposure with creation of graft conduit (eg, chimney graft) to facilitate arterial perfusion for ECMO/ECLS (List separately in addition to code for primary procedure)* (work RVU = 4.04), supporting their expert panel recommendation.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the respondents appropriately valued the physician work involved in performing this service at the 25<sup>th</sup> percentile work RVU of 5.25. To justify a work RVU of 5.25, the RUC compared the survey code to CPT code 22552 *Arthrodesis, anterior interbody, including disc space preparation, discectomy, osteophylectomy and decompression of*

*spinal cord and/or nerve roots; cervical below C2, each additional interspace (List separately in addition to code for separate procedure)* (work RVU of 6.50, intra-service time of 45 minutes, total time of 50 minutes) and noted that although the survey code has more intra-service and total time, the reference code involves slightly more intense physician work. **The RUC recommends a work RVU of 5.25 for CPT code 34714.**

**34820 Open iliac artery exposure for delivery of endovascular prosthesis or iliac occlusion by abdominal or retroperitoneal incision, unilateral (List separately in addition to code for primary procedure)**

The RUC reviewed the survey results from 34 physicians and agreed on the following physician time components: 60 minutes of intra-service time.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the respondents appropriately valued the physician work involved in performing this service at the 25<sup>th</sup> percentile work RVU of 7.00. To justify a work RVU of 7.00, the RUC compared the survey code to CPT code 93592 *Percutaneous transcatheter closure of paravalvular leak; each additional occlusion device (List separately in addition to code for primary procedure)* (work RVU of 8.00, intra-service time of 60 minutes) and noted that both services have identical intra-service time. **The RUC recommends a work RVU of 7.00 for CPT code 34820.**

**34833 Open iliac artery exposure with creation of conduit for delivery of endovascular prosthesis or for establishment of cardiopulmonary bypass, by abdominal or retroperitoneal incision, unilateral (List separately in addition to code for primary procedure)**

The RUC reviewed the survey results from 47 physicians and agreed on the following physician time components: 72 minutes of intra-service time. The specialty societies noted that their expert panel determined and the RUC agreed that there should be a 12 minute increment between 34833 and 34820 to account for the additional work for the conduit, which is an increase of 12 minutes relative to the survey median. The specialty societies noted that the incremental increase in work RVU and intra-service time would have a similar intensity relative to CPT code 33987 *Arterial exposure with creation of graft conduit (eg, chimney graft) to facilitate arterial perfusion for ECMO/ECLS (List separately in addition to code for primary procedure)*, supporting their expert panel recommendation.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the respondents somewhat undervalued the physician work involved in performing this service, with a 25<sup>th</sup> percentile work RVU of 8.00. To find an appropriate work RVU crosswalk, the RUC compared the survey code to CPT code 22634 *Arthrodesis, combined posterior or posterolateral technique with posterior interbody technique including laminectomy and/or discectomy sufficient to prepare interspace (other than for decompression), single interspace and segment; each additional interspace and segment (List separately in addition to code for primary procedure)* (work RVU of 8.16, intra-service time of 70 minutes) and noted that both services have very similar intra-service times and involve a similar amount of physician work. Therefore, the RUC recommends a direct work RVU crosswalk from 22634 to 34833. **The RUC recommends a work RVU of 8.16 for CPT code 34833.**

**34834 Open brachial artery exposure for delivery of endovascular prosthesis unilateral (List separately in addition to code for primary procedure)**

The RUC reviewed the survey results from 34 physicians and agreed on the following physician time components: 30 minutes of intra-service time.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the respondents overvalued the physician work involved in performing this service, with a 25<sup>th</sup> percentile work RVU of 4.00. To find an appropriate work RVU crosswalk, the RUC compared the survey code to CPT code 36476 *Endovenous ablation therapy of incompetent vein, extremity, inclusive of all imaging guidance and monitoring, percutaneous, radiofrequency; subsequent vein(s) treated in a single extremity, each through separate access sites (List separately in addition to code for primary procedure)* (work RVU of 2.65, intra-service time of 30 minutes) Therefore, the RUC recommends a direct work RVU crosswalk from 36476 to 34834. **The RUC recommends a work RVU of 2.65 for CPT code 34834.**

**34715 Open axillary/subclavian artery exposure for delivery of endovascular prosthesis by infraclavicular or supraclavicular incision, unilateral (List separately in addition to code for primary procedure)**

The RUC reviewed the survey results from 34 physicians and agreed on the following physician time components: 60 minutes of intra-service time.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the respondents appropriately valued the physician work involved in performing this service at the 25<sup>th</sup> percentile work RVU of 6.00. To justify a work RVU of 6.00, the RUC compared the survey code to CPT code 37233 *Revascularization, endovascular, open or percutaneous, tibial/peroneal artery, unilateral, each additional vessel; with atherectomy, includes angioplasty within the same vessel, when performed (List separately in addition to code for primary procedure)* (work RVU of 6.50, intra-service time of 60 minutes, total time of 62 minutes) and noted that both services have identical intra-service times and near identical total times. **The RUC recommends a work RVU of 6.00 for CPT code 34715.**

**34716 Open axillary/subclavian artery exposure with creation of conduit for delivery of endovascular prosthesis or for establishment of cardiopulmonary bypass, by infraclavicular or supraclavicular incision, unilateral (List separately in addition to code for primary procedure)**

The RUC reviewed the survey results from 49 physicians and agreed on the following physician time components: 72 minutes of intra-service time. The specialty societies noted that their expert panel determined and the RUC agreed that there should be a 12 minute increment between 34715 and 34716 to account for the additional work for the conduit, which is an increase of 12 minutes relative to the survey median. The specialty societies noted that the incremental increase in work RVU and intra-service time would have a similar intensity relative to CPT code 33987 *Arterial exposure with creation of graft conduit (eg, chimney graft) to facilitate arterial perfusion for ECMO/ECLS (List separately in addition to code for primary procedure)*, supporting their expert panel recommendation.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the respondents somewhat undervalued the physician work involved in performing this service, with a 25<sup>th</sup> percentile work RVU of 7.00. To find an appropriate work RVU crosswalk, the RUC compared the survey code to CPT code 35682 *Bypass graft; autogenous composite, 2 segments of veins from 2 locations (List separately in addition to code for primary procedure)* (work RVU of 7.19, intra-service time of 78 minutes), and noted that although the survey code has somewhat less intra-service time, it has somewhat more intense physician work and involves a similar total amount of total physician work compared to the reference code. Therefore, the RUC recommends a direct work RVU crosswalk from 35682 to 34716. **The RUC recommends a work RVU of 7.19 for CPT code 34716.**

### Practice Expense

The RUC reviewed and approved the direct practice expense inputs as approved by the Practice Expense Subcommittee. The 090-day services codes included the standard 090-day clinical labor pre-service times, except for the appropriate reductions for the ruptured emergent services (34702, 34704, 34706 and 34708).

### Work Neutrality

The RUC's recommendation for these codes will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

### Do Not Use to Validate for Physician Work

The RUC agreed that CPT codes 34702 should be labeled in the RUC database with a flag that it should not be used to validate physician work. The service is projected to have a very low volume and the median survey performance rate for these services was zero times per year.

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
<p><b>Surgery</b>  <b>Cardiovascular System</b>  <b>Heart and Pericardium</b>  <b>Endovascular Repair of Descending Thoracic Aorta</b></p> <p>Codes 33880-33891 represent a family of procedures to report placement of an endovascular graft for repair of the descending thoracic aorta. These codes include all device introduction, manipulation, positioning, and deployment. All balloon angioplasty and/or stent deployment within the target treatment zone for the endoprosthesis, either before or after endograft deployment, are not separately reportable. Open arterial exposure</p>				

and associated closure of the arteriotomy sites (eg, 34714, 34715, 34716, 34812, 34820, 34833, 34834), introduction of guidewires and catheters (eg, 36140, 36200-36218), and extensive repair or replacement of an artery (eg, 35226, 35286) ~~should~~ may be additionally reported. Transposition of subclavian artery to carotid, and carotid-carotid bypass performed in conjunction with endovascular repair of the descending thoracic aorta (eg, 33889, 33891) ~~should~~ may be separately reported. The primary codes, 33880 and 33881, include placement of all distal extensions, if required, in the distal thoracic aorta, while proximal extensions, if needed, ~~are~~ may be reported separately.

#### *Repositioning of a...*

#### *Replacement of a...*

#### *Replacement of the...*

### **Arteries and Veins**

#### **Endovascular Repair of Abdominal ~~Aortic Aneurysm~~ Aorta and/or Iliac Arteries**

~~Codes 34800-34826 represent a family of component procedures to report placement of an endovascular graft for abdominal aortic aneurysm repair. These codes describe open femoral or iliac artery exposure, device manipulation and deployment, and closure of the arteriotomy sites. Balloon angioplasty and/or stent deployment within the target treatment zone for the endoprosthesis, either before or after endograft deployment, are not separately reportable. Introduction of guide wires and catheters should be reported separately (eg, 36200, 36245-36248, 36140). Extensive repair or replacement of an artery should be additionally reported (eg, 35226 or 35286).~~

For fluoroscopic guidance in conjunction with endovascular aneurysm repair, see code 75952 or 75953, as appropriate. Code 75952 includes angiography of the aorta and its branches for diagnostic imaging prior to deployment of the endovascular device (including all routine components of modular devices), fluoroscopic guidance in the delivery of the endovascular components, and intraprocedural arterial angiography (eg, confirm position, detect endoleak, evaluate runoff). Code 75953 includes the analogous services for placement of additional extension prostheses (not for routine components of modular devices).

Codes 34701, 34702, 34703, 34704, 34705, 34706 describe introduction, positioning, and deployment of an endograft for treatment of abdominal aortic pathology (with or without rupture) such as aneurysm, pseudoaneurysm, dissection, penetrating ulcer or traumatic disruption in the infrarenal abdominal aorta with or without extension into the iliac artery(ies). The terms endovascular graft, endoprosthesis, endograft, and stentgraft all refer to a covered stent. The infrarenal aortic endograft may be an aortic tube device, a bifurcated unibody device, a modular bifurcated docking system with docking limb(s), or an aorto-uniiliac device. Codes 34707 and 34708 describe introduction, positioning, and deployment of an ilio-iliac endograft for treatment of isolated arterial pathology (with or without rupture) such as aneurysm, pseudoaneurysm, arteriovenous malformation, or trauma involving the iliac artery. For treatment of atherosclerotic occlusive disease in the iliac artery(ies) with a covered stent(s), see 37221, 37223. For covered stent placement for atherosclerotic occlusive disease in the aorta, see 37236, 37237.

Report 34705 or 34706 for simultaneous bilateral iliac artery aneurysm repairs with aorto-biiliac endograft. For isolated bilateral iliac artery repair, report 34707 or 34708 with modifier 50 appended.

Decompressive laparotomy for abdominal compartment syndrome after ruptured abdominal aortic and/or iliac artery aneurysm repair may be separately reported with 49000 in addition to 34702, 34704, 34706 or 34708.

The treatment zone for endograft procedures is defined by those vessels that contain an endograft(s) (main body, docking limb[s], and/or extension[s]) deployed during that operative session. Adjunctive procedures outside the treatment zone may be separately reported (eg, angioplasty, endovascular stent placement, embolization). For example, when an endograft terminates in the common iliac artery, any additional treatment performed in the external and/or internal iliac artery may be separately reportable.

Placement of a docking limb is inherent to a modular endograft(s), and therefore 34709 may not be reported separately if the docking limb extends into the external iliac artery. Additionally, any interventions (eg, angioplasty, stenting, additional stent graft extension[s]) in the external iliac artery where the docking limb terminates may not be reported separately. Any catheterization or treatment of the internal iliac artery, such as embolization, may be separately reported. For 34701 and 34702, the abdominal aortic treatment zone is defined as the infrarenal aorta. For 34703 and 34704, the abdominal aortic treatment zone is typically defined as the infrarenal aorta and the ipsilateral common iliac artery. For 34705 and 34706, the abdominal aortic treatment zone is typically defined as the infrarenal aorta and both common iliac arteries. For 34707 and 34708, the treatment zone is defined as the portion of the iliac artery(s) (eg, common, internal, external iliac arteries) that contain the endograft. For a bifurcated iliac branch device, use 0254T.

Codes 34702, 34704, 34706 and 34708 are reported when endovascular repair is performed on ruptured aneurysm in the aorta or iliac artery(s). Rupture is defined as clinical and/or radiographic evidence of acute hemorrhage for purposes of reporting these codes. A chronic, contained rupture is considered a pseudoaneurysm and endovascular treatment of a chronic, contained rupture is reported with 34701, 34703, 34705, or 34707.

Code 34709 is reported for placement of extension prosthesis(es) that terminate(s) either in the internal iliac, external iliac, or common femoral artery(ies) or in the abdominal aorta proximal to the renal artery(ies) in conjunction with 34701, 34702, 34703, 34704, 34705, 34706, 34707, 34708.

Code 34709 may only be reported once per vessel treated (ie, multiple endograft extensions placed in a single vessel may only be reported once). Endograft extension(s) that terminate(s) in the common iliac arteries are included in 34703, 34704, 34705, 34706, 34707, 34708 and are not separately reported. Treatment zone angioplasty/stenting when performed is included in 34709 when performed. Additionally, proximal infrarenal abdominal aortic extension prosthesis(es) that terminate(s) in the aorta below the renal artery(ies) are also included in 34701, 34702, 34703, 34704, 34705, 34706 and are not separately reportable.

Codes 34710 and 34711 are reported for delayed placement of distal or proximal extension prosthesis(es) for endovascular repair of infrarenal abdominal aortic or iliac aneurysm, false aneurysm, dissection, endoleak, or endograft migration. Pre-procedure sizing and device selection, all nonselective catheterization(s), all associated radiological supervision and interpretation, and treatment zone angioplasty/stenting when performed are included in 34710 and 34711. Codes 34710 and 34711 may only be reported once per vessel treated (ie, multiple endograft extensions placed in a single vessel may only be reported once).

Nonselective catheterization is included in 34701, 34702, 34703, 34704, 34705, 34706, 34707, 34708 and is not separately reported. However, selective catheterization of the hypogastric artery(ies), renal artery(ies), and/or arterial families outside the treatment zone of the endograft may be separately reported. Intravascular ultrasound (37252, 37253) performed during endovascular aneurysm repair may be separately reported. Balloon angioplasty and/or stenting within the treatment zone of the endograft, either before or after endograft deployment, is not separately reported. Fluoroscopic guidance and radiological supervision and interpretation in conjunction with endograft-repair is not separately reported and includes all intraprocedural imaging (eg, angiography, rotational CT) of the aorta and its branches prior to deployment of the endovascular device, fluoroscopic guidance and roadmapping used in the delivery of the endovascular components, and intraprocedural and completion angiography (eg, confirm position, detect endoleak, evaluate runoff) performed at the time of the endovascular infrarenal aorta and/or iliac repair.

Codes 34709, 34710, 34711 include nonselective introduction of guidewires and catheters into the treatment zone from peripheral artery access(es). However, selective catheterization of the hypogastric artery(ies), renal artery(ies), and/or arterial families outside the treatment zone may be separately reported. Codes 34709, 34710, 34711 also include balloon angioplasty and/or stenting within the treatment zone of the endograft extension, either before or after deployment of the endograft, fluoroscopic guidance, and all associated radiological supervision and

interpretation performed in conjunction with endovascular endograft extension (eg, angiographic diagnostic imaging of the aorta and its branches prior to deployment of the endovascular device, fluoroscopic guidance in the delivery of the endovascular components, and intraprocedural and completion angiography to confirm endograft position, detect endoleak, and evaluate runoff).

Code 34712 describes transcatheter delivery of accessory enhanced fixation devices to endograft (eg, anchor, screw, tack) including all associated radiological supervision and interpretation. Code 34712 may only be reported once per operative session.

Vascular access requiring use of closure devices for large sheaths (12 French or larger) or access requiring open surgical arterial exposure may be separately reported (eg, 34713, 34812 ~~34X14~~, 34714, 34820 ~~34X16~~, 34833 ~~34X17~~, 34834 ~~34X18~~, 34715, 34716). Code 34713 describes percutaneous access and closure of a femoral arteriotomy for delivery of endovascular prosthesis through a large arterial sheath (ie, 12 French or larger). Ultrasound guidance (ie, 76937) when performed is included in 34713. (Percutaneous access using a sheath smaller than 12 French is included in 34701-34712 and is not separately reported.)

Code 34812 ~~34X14~~ describes open repair and closure of the femoral artery. Extensive repair of an artery (eg, 35226, 35286, 35371) may also be reported separately. Iliac exposure for device delivery through a retroperitoneal incision, open brachial exposure, or axillary or subclavian exposure through an infraclavicular, supraclavicular or sternotomy incision during endovascular aneurysm repair may be separately reported (eg, 34812 ~~34X14~~, 34820 ~~34X16~~, 34834 ~~34X18~~, 34715). Endovascular device delivery or establishment of cardiopulmonary bypass that requires creation of a prosthetic conduit utilizing a femoral artery, iliac artery with a retroperitoneal incision, or axillary or subclavian artery exposure through an infraclavicular, supraclavicular or sternotomy incision (eg 34714, 34833 ~~34X17~~, 34716) and oversewing of the conduit at the time of procedure completion may be separately reported during endovascular aneurysm repair or cardiac procedures requiring cardiopulmonary bypass. If a conduit is converted to a bypass, report the bypass (eg, 35665) and not the arterial exposure with conduit (ie, 34714, 34833 ~~34X17~~, 34716). Arterial embolization(s) of renal, lumbar, inferior mesenteric, hypogastric or external iliac arteries to facilitate complete endovascular aneurysm exclusion may be separately reported (eg, 37242)

Balloon angioplasty and/or stenting at the sealing zone(s) of an endograft is an integral part of the procedure and is not separately reported. However, balloon angioplasty and/or stent deployment in vessels that do not contain endograft (outside the treatment zone for the endograft), either before or after endograft deployment, may be separately reported (eg, 37220, 37221, 37222, 37223).  
Other interventional procedures performed at the time of endovascular abdominal aortic aneurysm repair ~~may should~~ be additionally reported (eg, renal transluminal angioplasty, arterial embolization, intravascular ultrasound, balloon angioplasty or stenting of native artery[s] outside the endograft ~~endoprosthesis target~~ treatment zone, when done before or after deployment of endograft).

*(For fenestrated endovascular repair of the visceral aorta, see 34841-34844. For fenestrated endovascular repair of the visceral aorta and concomitant infrarenal abdominal aorta, see 34845-34848)*

~~(For transcatheter placement of wireless physiologic sensor in aneurysmal sac, use 34806)~~

~~(For analysis, interpretation and report of implanted wireless pressure sensor in aneurysmal sac, use 93982)~~

●34701	U1	Endovascular repair of infrarenal aorta by deployment of an aorto-aortic tube endograft including pre-procedure sizing and device selection, all nonselective catheterization(s), all associated radiological supervision and interpretation, all endograft extension(s) placed in the aorta from the level of the renal arteries to the aortic bifurcation, and all angioplasty/stenting performed from the level of the renal arteries to the aortic bifurcation; for other than rupture (eg, for aneurysm, pseudoaneurysm, dissection, penetrating ulcer)  <u>(For covered stent placement(s) for atherosclerotic occlusive disease isolated to the aorta, see 37236, 37237)</u>	090	23.71

**Tab 10: Endovascular Repair Procedures (EVAR)**  
**SoR Additional Rationale**

**Background**

The first two devices for endovascular repair of abdominal aortic aneurysms received FDA approval in September 1999, and a family of endovascular abdominal aortic aneurysm repair (EVAR) codes was presented to the RUC in April 2000. At that time, EVAR was typically performed by a team of physicians including vascular surgeons and interventional radiologists. Thus, the coding structure was created according to component coding standards for endovascular procedures. The EVAR family of codes appeared in the 2001 Medicare Physician Fee Schedule and the values have remained stable since that time.

At the January 2014 RUC meeting, the RAW identified CPT codes 34802, 34812, and 34825 in the pre-time screen for procedures having pre-service minutes in excess of standard package times. These long pre-times had been approved by the RUC to reflect the extensive pre-operative endograft sizing work that is required to carry out a successful operation. The need for the surgeon to perform extensive pre-operative measurements of multiple diameters and lengths, and to then perform endograft sizing, is still required physician work today.

There have been several significant paradigm shifts since the codes were originally valued. First, component coding, which was standard when the original codes were created, has fallen into disfavor with the RUC and CMS with emphasis placed on bundling codes that are commonly performed together by the same provider. Second, providers of this service only rarely work in teams today and the typical service is performed by one clinician who does the surgical and radiologic portions of the repair. Finally, providers have begun performing EVAR for treatment of life-threatening ruptured aortic aneurysms, a practice that was never considered viable in April 2000 when the codes were originally valued.

For all of these reasons, we decided to restructure the family of codes that describe EVAR. Collaborators from SVS, SIR, ACS, STS, AATS, ACC, and SCAI worked for over one year to create a CPT proposal that would radically change the way the work of EVAR is coded. The CPT panel approved the final coding changes at the September 2016 CPT meeting. This recommendation includes 16 new codes, 4 revised codes, and 14 code deletions. The new codes incorporate many of the concerns described above and are outlined as follow:

1. Catheter placement is now bundled into the main procedure.
2. Radiologic supervision & interpretation is now bundled into the main procedure.
3. All distal extensions performed to the common iliac artery bifurcations are now bundled into the main procedure.
4. All proximal extensions performed to the lowest renal artery are now bundled into the main procedure.
5. The coding structure is now based on the anatomy of the disease rather than the device used to treat the aneurysm.
6. New codes have been created for the significantly different work of EVAR for ruptured aneurysms.
7. The global period has been changed from 0-day to ZZZ for the access procedures since these are never performed as stand-alone services.

## **Survey Methodology**

A multi-disciplinary workgroup including SVS, SIR, ACS, STS, and AATS was convened. Approval to modify the survey instrument was obtained from the Research Subcommittee. Three surveys were created to collect input for the 20 new/revised codes.

**Survey #1** included codes 34701-34708, the 090 day-global codes that describe elective and ruptured repair of aneurysms.

**Survey #2** included 34709-34712, which describe associated procedures for EVAR.

**Survey #3** included 34713-34716, which are ZZZ add-on codes to describe the vascular access options for performing EVAR.

Links to all three surveys were distributed randomly to the members of the representative societies in a single email, along with a document that included all the new guidelines, parentheticals and coding changes. The results were reviewed by the multi-specialty expert panel and the following recommendations submitted for the family. We will present the results as three distinct groups of codes that correspond to the three surveys.

## **Compelling Evidence/Budget Neutrality**

The specialty societies will present compelling evidence for the RUC's consideration, detailed in the specific survey sections below. A budget neutrality calculation has been included with the submission as well as a worksheet in the RUC Summary Excel file.

## **Survey #1 (34701-34708) Overview of Recommended Values**

Currently, endovascular aneurysm repairs performed for rupture and in elective circumstances are reported with the same code. This is an historical artifact because the original codes were developed exclusively for elective repair. In 2000, it was not technically feasible to repair a ruptured aortic aneurysm using endovascular techniques. Over time, physicians have developed appropriate skill such that endovascular repair of a ruptured aortic aneurysm is now performed. Thus, we believe the RUC will require a budget neutrality consideration for the new 90-day global EVAR codes despite the fact that the additional work associated with ruptured aortic and iliac aneurysms was never considered when this family of endovascular repairs was created.

In general, the elective endovascular repairs in this proposal represent approximately 85% of reported services, while the repair of ruptured aneurysms represent approximately 15% of total reported services. For the much more common elective repairs, we are recommending work RVWs significantly lower than current value. For the less common ruptured aneurysm repair, we are recommending RVWs higher than the existing values. Overall, however, based on best available information, the expert panel believes this coding proposal will result in a net reduction in work RVU expenditures.

### **Compelling Evidence**

There has been a change in the patient population since the codes were previously valued. Ruptured aneurysms now account for an estimated 15% of EVARs. Endovascular repair was not performed or even considered when the original codes were surveyed and valued. The patient who has a rupture is in varying degrees of hemorrhagic shock and multisystem organ failure and represents distinctly different work from that of an elective EVAR patient. We feel that this fact alone more than serves as adequate compelling evidence to consider new values for codes 34701-34708.

### **Pre-Service Time**

There is significant pre-service time and work that goes into providing these procedures to review the aneurysm anatomy on CT angiogram, confirm the suitability of the anatomy for EVAR, make a large number of aortic diameter and center-line length measurements, review available endograft sizes and develop an operative plan that will successfully treat the pathology at hand. This time was originally added to the pre-service time of the original codes (leading to identification in the RAW screen). This service is provided after evaluation in the office, but more than 24 hours prior to the procedure. We therefore received approval from the Research Subcommittee to add an additional question to the survey to capture time spent planning for EVAR. This is consistent with the code descriptors which include the phrase "including pre-procedure sizing and device selection." This is also consistent with CMS' request to include this work as bundled in the main procedure. The additional planning time is therefore included in the total evaluation minutes and becomes part of the pre-service work.

Pre-service package 4 is appropriate for EVAR procedures with adjustment to the times. Surveyed planning times have been added to the pre-service evaluation time. The survey respondents also identified varying additional minutes for evaluation. We believe this to be related to the additional work the day before and the day of the procedure to ensure that all necessary supplies are available for the operation, to ensure that the radiologic equipment is operational and prepared for the procedure, and to re-review the extensive anatomic imaging prior to performing the procedure.

An additional 17 minutes of positioning time has been added to account for positioning the imaging equipment and operating room equipment to minimize conflicts between equipment and patient during surgery, appropriately positioning the patient with arms tucked as indicated, and confirming that all EKG leads and IV, Foley and arterial catheter lines are clear from the areas to be imaged during the procedure.

## **Post-Service Time**

Post-service package 9B would apply for these complex procedures, however, this package only allows 5 minutes for “operative note” which is not sufficient time for endovascular procedures that have radiologic supervision & interpretation bundled into the code. There is significantly more time involved to review all images and cines, annotate appropriate images, dictate radiologic findings, and document radiation exposure and contrast volumes. We therefore recommend accepting the survey values for immediate post-service time.

## **Comparison with Key Reference Services**

There were four codes that were chosen most often as key reference services for 34X01-34708. They are:

- 35131, *Direct repair of aneurysm, pseudoaneurysm, or excision (partial or total) and graft insertion, with or without patch graft; for aneurysm, pseudoaneurysm, and associated occlusive disease, iliac artery (common, hypogastric, external)*
- 35081, *Direct repair of aneurysm, pseudoaneurysm, or excision (partial or total) and graft insertion, with or without patch graft; for aneurysm, pseudoaneurysm, and associated occlusive disease, abdominal aorta*
- 35082, *Direct repair of aneurysm, pseudoaneurysm, or excision (partial or total) and graft insertion, with or without patch graft; for ruptured aneurysm, abdominal aorta*
- 35103, *Direct repair of aneurysm, pseudoaneurysm, or excision (partial or total) and graft insertion, with or without patch graft; for ruptured aneurysm, abdominal aorta involving iliac vessels (common, hypogastric, external)*

The following table incorporates our recommended RVW for 34X01-34708 along with the key reference services identified for these codes arranged in ascending order of values.

## Comparison to MPC codes

There are limited MPC codes in the RVW range of these complex procedures. We offer the following codes as brackets for our recommendations:

- MPC 35301, *Thromboendarterectomy, including patch graft, if performed; carotid, vertebral, subclavian, by neck incision*
- MPC 33641, *Repair atrial septal defect, secundum, with cardiopulmonary bypass, with or without patch*
- MPC 33426, *Valvuloplasty, mitral valve, with cardiopulmonary bypass; with prosthetic ring*
- MPC 33863, *Ascending aorta graft, with cardiopulmonary bypass, with aortic root replacement using valved conduit and coronary reconstruction (eg, Bentall)*

	RVW	IWPUT	Total Time	Eval	Posit	SDW	INTRA	Post	Hosp	Office
35301 MPC	21.16	0.104	404	40	15	20	120	30	33, 32, 38	13x2
34707	24.00	0.116	482	110	20	20	120	40	33, 32, 38	13, 12
34701	25.00	0.124	482	110	20	20	120	40	33, 32, 38	13, 12
33641 MPC	29.58	0.094	562	60	15	20	164	40	91, 33, 32, 31, 38	14
34703	30.25	0.135	507	110	20	20	150	35	33, 32, 38	13, 12
34705	32.28	0.148	512	110	20	20	150	40	33, 32, 38	13, 12
34708	36.50	0.113	717	70	20	20	120	60	91x2, 33x2, 32, 31, 38	14, 13, 12
34702	39.69	0.142	707	60	20	20	120	60	91x2, 33x2, 32, 31, 38	14, 13, 12

## Survey #1 Additional Rationale for Specific Codes

### 34701 Elective Aorto-Aortic Repair:

We recommend the 25<sup>th</sup> percentile survey value of 25.00 RVW. This represents a **decrease of 15.8%** from current value of 29.69 RVWs by current coding convention.

Comparison to existing codes is a difficult process due to bundling of the new codes to include pre-service planning, all radiologic S&I, and a variable use of extensions when compared to the existing codes. To calculate the current RVW using current coding convention, one would begin with the existing work of 34800. The work of bilateral non-selective catheterization is added by multiplying the RVW for 36200 by 1.5 to account for the bilaterality and then multiply by 0.5 for the multiple procedure reduction. The radiologic supervision and interpretation for EVAR is then added. All proximal and/or distal

extensions from the level of the renal arteries down to the level of the aortic bifurcation is now included in the work of 34X01. To account for this work, we multiplied the RVW for 34825 by the percentage of time that 34825 is billed together with 34800 and then applied the multiple procedure reduction. Finally, the radiologic supervision and interpretation for extensions was multiplied by this same billed together data to calculate the final existing RVW for 34X01. Comparing this computed existing value with our proposed value for 34701 results in a **15.8% reduction** in existing value. The following table is a graphic explanation of this comparison.

<b>Existing EVAR Aorto-Aortic Graft</b>	<b>Work RVU</b>	<b>Adjustment</b>	<b>Adjusted Work RVU</b>
34800 Main body, tube graft	21.54	None	21.54
36200-50 Bilateral catheter in aorta	3.02	Bilaterality & MPPR	2.27
75952 Rad S&I code for main body	4.49	None	4.49
34825 Extension	12.80	MPPR & Billed together (18%)	1.15
75953 Rad S&I for extension	1.36	Billed together (18%)	0.24
<b>Total existing coding sequence</b>			<b>29.69</b>
<b>New Code</b>			
34701 Aorto-Aortic EVAR	25.00	None	<b>25.00</b>
<b>Change Existing to New</b>			<b>-15.8%</b>

### **34702 Ruptured Aorto-Aortic Repair:**

We recommend a crosswalk to CPT code 48001 (*Placement of drains, peripancreatic, for acute pancreatitis; with cholecystostomy, gastrostomy, and jejunostomy*) with a value of 39.69 RVW.

Ruptured aortic aneurysms are a catastrophic event with mortality rates as high as 90%. In fact, half of all patients who suffer a ruptured aneurysm will die before they can ever reach a hospital for definitive treatment. The mortality for surgical repair ranges from 40-60% for patients who are able to present for repair. Without rapid treatment, death is certain. These patients present in varying degrees of hemorrhagic shock and are typically plagued by multisystem organ failure post-operatively. Despite advances in detection and treatment of aneurysmal disease, the rupture rate has remained relatively constant over the past two decades at roughly 15% of the overall number of patients presenting for abdominal aortic and iliac aneurysm repair.

EVAR for rupture offers a less invasive approach for treatment but remains an extremely intense service performed in an attempt to save the life of an actively dying patient. As stated above, this is a new code to capture the significantly different work compared to an elective aneurysm repair. This procedure was never imagined in 2000 when the original EVAR codes were valued but this concept of differential work for elective and ruptured aneurysm repair exists in CPT codes for open surgical repair. These new EVAR codes for rupture include the additional work of temporary balloon aortic occlusion as needed for hemodynamic instability as well as the significantly different, longer and more complex post-operative care.

This new group of codes to report endovascular repair of ruptured abdominal aortic aneurysms is extremely difficult to assess by RUC survey since there is really nothing like it in CPT. The multi-specialty expert panel believes the survey respondents were challenged by the concepts of bundling the pre-planning, catheterization, all radiologic S&I, critical care visits and estimating whether or not

extensions would be needed in the typical case. In addition, code 34702 is the EVAR code for rupture with the lowest anticipated volume.

For all of these reasons, the expert panel believes survey respondents under-estimated the true work of this service. The expert panel believes the accurate work value of this service should be slightly above the median survey response of 36.00, but less than the 75<sup>th</sup> percentile value of 44.00. We recommend a crosswalk to CPT code 48001 (*Placement of drains, peripancreatic, for acute pancreatitis; with cholecystostomy, gastrostomy, and jejunostomy*) with a value of 39.69 RVW.

	RVW	IWPUT	Total Time	Eval	Posit	SDW	INTRA	Post	Hosp	Office
48001 crosswalk	39.69	0.093	815	83			142	45	91x2, 33x3, 32x3, 31, 38	13x2, 12
<b>34702</b>	<b>39.69</b>	<b>0.142</b>	<b>707</b>	<b>60</b>	<b>20</b>	<b>20</b>	<b>120</b>	<b>60</b>	<b>91x2, 33x2, 32, 31, 38</b>	<b>14, 13, 12</b>

The pancreatic debridement has a typical patient who is also critically ill. The IWPUT of the pancreatic debridement is lower because the typical patient is hemodynamically stable, while typical patient for 34702 is not. Thus, there is substantially more intense/complex work for the new code during the intra-service period. Visit patterns are similar.

Service Performance Rate for 34702: This is the one code out of the family where the median service performance rate among survey respondents was zero. This will be a very low volume code and it is not surprising that few survey takers had significant experience with this new service in the past 12 months. When the data is reviewed between those without experience and those with, there are significant differences in the recommended RVW. The median RVW for 34702 among those survey respondents have performed this operation was 40.00, further supporting our crosswalk recommended value of 39.69 RVW.

#### 34703 Elective Aorto-Uni-Iliac Repair:

We recommend the 25<sup>th</sup> percentile survey value of 30.25 RVW. This represents a **decrease of 12.6%** from current value of 34.62 RVWs by current coding convention.

Comparison to existing codes is a complex process due to bundling of the new codes, to include pre-service planning, all radiologic S&I, and variable use of extensions with the previous codes. To calculate the current RVW using current coding convention, one would begin with the existing work of 34805. The work of bilateral non-selective catheterization is added by multiplying the RVW for 36200 by 1.5 to account for the bilaterality and then multiply by 0.5 for the multiple procedure reduction. The radiologic supervision and interpretation for EVAR is then added. All proximal and distal extensions from the level of the renal arteries down to the level of the iliac bifurcation is now included in the work of 34703. To account for this work, we multiplied the RVW for 36825 by the percentage of time that 34825 is billed together with 34805 and then applied the multiple procedure reduction. Finally, the radiologic supervision and interpretation for extensions was multiplied by this same billed together data to calculate the final existing RVW for 34703. Comparing this computed existing value with our proposed value for 34703 results in a **12.6% reduction** in existing value. The following table is a graphic explanation of this comparison.

<b>Existing EVAR Aorto-Aortic Graft</b>	<b>Work RVU</b>	<b>Adjustment</b>	<b>Adjusted Work RVU</b>
34805 Main body, Aorto-Uni-Iliac graft	22.67	None	22.67
36200-50 Bilateral catheter in aorta	3.02	Bilaterality & MPPR	2.27
75952 Rad S&I code for main body	4.49	None	4.49
34825 Extension	12.80	MPPR & Billed together (67%)	4.29
75953 Rad S&I for extension	1.36	Billed together (67%)	0.91
<b>Total existing coding sequence</b>			<b>34.63</b>
<b>New Code</b>			
34703 Aorto-Uni-Iliac EVAR	30.25	None	<b>30.25</b>
<b>Change Existing to New</b>			<b>-12.6%</b>

### **34704 Ruptured Aorto-Uni-Iliac Repair:**

We recommend the 75<sup>th</sup> percentile survey value of 47.00 RVW.

Ruptured aortic aneurysms are a catastrophic event with mortality rates as high as 90%. In fact, half of all patients that suffer a ruptured aneurysm will die before they can ever reach a hospital for definitive treatment. The mortality for surgical repair ranges from 40-60% for patients who are able to present for repair. Without rapid treatment, death is certain. These patients present in varying degrees of hemorrhagic shock and are typically plagued by multisystem organ failure post-operatively. Despite advances in detection and treatment of aneurysmal disease, the rupture rate has remained relatively constant over the past two decades at roughly 15% of the total number of patients who present for abdominal aortic and iliac aneurysm repair.

EVAR for rupture offers a less invasive approach for treatment but remains an extremely intense service in an attempt to save the life of an actively dying patient. As stated above, this is a new code to capture the significantly different work compared to an elective aneurysm repair. This procedure, endovascular repair of a ruptured aortic aneurysm, was never imagined in 2000 when the original EVAR codes were valued, but the concept of differential work for elective and ruptured aneurysm repair exists in CPT codes for open surgical repair. These new EVAR codes for rupture include the additional work of temporary balloon aortic occlusion as needed for hemodynamic instability as well as the significantly different, longer and more complex post-operative care.

This new group of codes to report endovascular repair of ruptured abdominal aortic aneurysms is extremely difficult to assess by RUC survey since there is really nothing like it in CPT. The multi-specialty expert panel believes the survey respondents were challenged by the concepts of bundling the pre-planning, catheterization, all radiologic S&I, critical care visits and estimating whether or not extensions would be needed in the typical case.

For all of these reasons, the expert panel believes survey respondents under-estimated the true work of this service. Based on the extraordinary intensity of this service, plus extended complexity of postoperative care, the expert panel believes the accurate work value of this service should be the 75<sup>th</sup> percentile value of 47.00 RVW.

### **34705 Elective Aorto-Bi-Iliac Repair:**

We recommend the 25<sup>th</sup> percentile survey value of 32.28 RVW. This represents a **decrease of 7.6%** from current value of 34.92 RVWs by current coding convention.

Comparison to existing codes is a complex process due to bundling of the new codes, to include pre-service planning, all radiologic S&I, and variable use of extensions with the previous codes. To calculate the true current RVW using current coding convention, utilization percentages are first used to “weight” the three main body codes (34802, 34803, 34804) that will be consolidated into the new code 34705. The work of bilateral non-selective catheterization is added by multiplying the RVW for 36200 by 1.5 to account for the bilaterality and then multiply by 0.5 for the multiple procedure reduction. The radiologic supervision and interpretation for EVAR is then added. All proximal and distal extensions from the level of the renal arteries down to the level of the iliac bifurcations is now included in the work of 34705. To account for this work, we multiplied the RVW for 34825 by a utilization weighted average of the percentage of time that 34825 is billed together with 34802, 34803, and 34804 and adjusted for multiple procedure reduction. Finally, the radiologic supervision and interpretation for extensions was multiplied by this same weighted billed together data to calculate the final existing RVW for this code set. Comparing this computed existing value with our proposed value for 34705 results in a **7.6% reduction** in existing value. The following table is a graphic explanation of this comparison.

<b>Existing EVAR Aorto-Bi-Iliac Graft</b>	<b>Work RVU</b>	<b>Adjustment</b>	<b>Adjusted Work RVU</b>
34802 Main body, 1 docking limb	23.79	Utilization (58%)	13.89
34803 Main body, 2 docking limbs	24.82	Utilization (25%)	6.31
34803 Unibody bifurcated device	23.79	Utilization (16%)	3.85
36200-50 Bilateral catheter in aorta	3.02	Bilaterality & MPPR	2.27
75952 Rad S&I code for main body	4.49	None	4.49
34825 Extension	12.80	MPPR & Billed together (53%)	3.38
75953 Rad S&I for extension	1.36	Billed together (53%)	0.72
<b>Total existing coding sequence</b>			<b>34.92</b>
<b>New Code</b>			
34705 Aorto-Bi-Iliac EVAR	32.28	None	<b>32.28</b>
<b>Change Existing to New</b>			<b>-7.6%</b>

### **34706 Ruptured Aorto-Uni-Iliac Repair:**

We recommend the 75<sup>th</sup> percentile survey value of 50.00 RVW.

Ruptured aortic aneurysms are a catastrophic event with mortality rates as high as 90%. In fact, half of all patients that suffer a ruptured aneurysm will die before they can ever reach a hospital for definitive treatment. The mortality for surgical repair ranges from 40-60% for patients who are able to present for repair. Without rapid treatment, death is certain. These patients present in varying degrees of hemorrhagic shock and are typically plagued by multisystem organ failure post-operatively. Despite advances in detection and treatment of aneurysmal disease, the rupture rate has remained relatively constant over the past two decades at roughly 15% of the total number of patients who present for abdominal aortic and iliac aneurysm repair.

EVAR for rupture offers a less invasive approach for treatment but remains an extremely intense service in an attempt to save the life of an actively dying patient. As stated above, this is a new code to capture

the significantly different work compared to an elective aneurysm repair. This procedure, endovascular repair of a ruptured aortic aneurysm, was never imagined in 2000 when the original EVAR codes were valued but the concept of differential work for elective and ruptured aneurysm repair exists in CPT codes for open surgical repair. These new EVAR codes for rupture include the additional work of temporary balloon aortic occlusion as needed for hemodynamic instability as well as the significantly different, more complex and longer post-operative care.

This new group of codes to report endovascular repair of ruptured abdominal aortic aneurysms is extremely difficult to assess by RUC survey since there is really nothing like it in CPT. The multi-specialty expert panel believes the survey respondents were challenged by the concepts of bundling the pre-planning, catheterization, all radiologic S&I, critical care visits and estimating whether or not extensions would be needed in the typical case.

For all of these reasons, the expert panel believes survey respondents under-estimated the true work of this service. Based on the extraordinary intensity of this service, plus extended complexity of postoperative care, the expert panel believes the accurate work value of this service should be the 75<sup>th</sup> percentile value of 50.00 RVW.

#### **34707 Elective Repair Iliac Aneurysm:**

We recommend the 25<sup>th</sup> percentile survey value of 24.00 RVW. This recommendation is slightly above the value of calculated existing value of 22.37 RVW as detailed below.

Comparison to existing codes is a complex process due to bundling of the new codes, to include pre-planning, all radiologic S&I, and variable use of extensions with the previous codes. To calculate the current RVW using current coding convention, one would begin with the existing work of 34900. The work of bilateral non-selective catheterization is added by multiplying the RVW for 36200 by 1.5 to account for the bilaterality and then multiply by 0.5 for the multiple procedure reduction. The radiologic supervision and interpretation for iliac EVAR is then added. All proximal and distal extensions from the level of the aortic bifurcation down to the level of the iliac bifurcation are now included in the work of 34707. To account for this work, we multiplied the RVW for 34825 by the percentage of time that 34825 is billed together with 34900 and then applied the multiple procedure reduction. Finally, the radiologic supervision and interpretation for extensions was multiplied by this same billed together data to calculate the final existing RVW for 34707. The following table is a graphic explanation of this comparison.

<b>Existing EVAR Aorto-Aortic Graft</b>	<b>Work RVU</b>	<b>Adjustment</b>	<b>Adjusted Work RVU</b>
34900 Iliac-iliac graft	16.85	None	16.85
36200-50 Bilateral catheter in aorta	3.02	Bilaterality & MPPR	2.27
75954 Rad S&I code for iliac	2.25	None	2.25
34825 Extension	12.80	MPPR & Billed together (13%)	0.83
75953 Rad S&I for extension	1.36	Billed together (13%)	0.18
<b>Total existing coding sequence</b>			<b>22.37</b>
<b>New Code</b>			
34707 Iliac-iliac EVAR	24.00	None	<b>24.00</b>
<b>Change Existing to New</b>			<b>7.3%</b>

### **34708 Ruptured Iliac Aneurysm Repair:**

We recommend the median survey RVW of 36.50.

Ruptured iliac aneurysms are a catastrophic event with mortality rates as high as 90%. In fact, half of all patients that suffer a ruptured iliac aneurysm will die before they can ever reach a hospital for definitive treatment. The mortality for surgical repair ranges from 40-60% for patients who are able to present for repair. Without rapid treatment, death is certain. These patients present in varying degrees of hemorrhagic shock and are typically plagued by multisystem organ failure post-operatively. Despite advances in detection and treatment of aneurysmal disease, the rupture rate has remained relatively constant over the past two decades at roughly 15%.

EVAR for rupture offers a less invasive approach for treatment but remains an extremely intense service in an attempt to save the life of an actively dying patient. As stated above, this is a new code to capture the significantly different work compared to an elective aneurysm repair. This procedure, endovascular repair of a ruptured iliac aneurysm, was never imagined in 2000 when the original EVAR codes were valued but this concept of differential work for elective and ruptured aneurysm repair exists in CPT codes for open surgical repair. These new EVAR codes for rupture include the additional work of temporary balloon aortic occlusion as needed for hemodynamic instability and the significantly different, more complex and longer post-operative care.

### **Survey #1 Summary**

The new family of CPT codes for EVAR represent a complex set of operations that now pre-planning, all radiologic supervision and interpretation, all routine catheterization, almost all currently placed extensions, and the extension S&I into codes that better describe the current practice of EVAR and conform with current concepts in code creation and valuation.

This family was surveyed by a multispecialty group. Detailed analysis of the survey results by expert panel, comparison to key reference services, MPC codes, and to the other codes have resulted in the above detailed recommendations of RVW for codes 34X01-34708. In general, the elective endovascular repairs will be valued significantly lower than current values. Based on available data, the elective codes will represent approximately 85% of the reported services. The repair of ruptured aneurysm will be valued higher than the existing codes, but this cohort will be reported only about 15% of the total. Overall, based on best available utilization information, this coding proposal will result in a net reduction in work RVU expenditure. We believe these recommendations are appropriate and well supported with our rationale.

## **Survey #2 (+34709, 34710, +34711, 34712) Overview of Recommended Values**

The codes surveyed in the second group include three codes (+34709, 34710, +34711) that describe the placement of proximal and/or distal extensions at the time of the initial procedure and in a delayed fashion. The previous codes for extensions did not specify at what setting they were performed leading to overlap in pre and post-service work and multiple procedure reductions if they were done at the same time as the original procedure. If extensions are performed in a delayed fashion, there is additional pre-procedure planning time similar to the base codes that needs to be taken into consideration. To overcome this problem, separate codes were created to describe the work of extensions performed at the same setting as the initial procedure and those performed in a delayed fashion. Appropriate global periods for each code were assigned. The last code in this survey (34712) describes the transcatheter delivery of enhanced fixation device(s) to the endograft (e.g., anchor, screw, tack) and all associated radiological supervision and interpretation. Code 34712 represents new technology and new work that was not present previously.

### **Compelling Evidence**

There has been a change in the patient population for codes +34709, 34710, and +34711. As stated above, under current coding convention, there is no distinction as to the timing of proximal and/or distal endograft extensions. Furthermore, the treatment zone itself was ill defined. Current billed together and utilization data indicate that an initial extension is *typical* (53%) at the time of the initial procedure. As such, the new base codes (34X01-34708) were created with the initial extension and extension radiologic supervision & interpretation bundled. The treatment zone has been specifically defined such that clinical scenarios that were previous billed with 34825 are now part of the base procedure. The residual patients who require extensions beyond the treatment zone represent a new patient population and different work than the previous codes. The patients who have delayed proximal and/or distal extensions placed also represent a new patient population that is significantly different work from what was previously captured with 34825, +34826, and 75953. Code 34712 is a new code that describes work previously captured with an unlisted vascular procedure code. We therefore feel that compelling evidence has been met for codes +34709, 34710, +34711, 34712.

### **Pre-Service Time (34710, 34712)**

When a patient needs to return to the operating room for placement of a proximal and/or distal endograft extension or delivery of an enhanced fixation device, there has been failure of the initial endograft requiring corrective action. This results in significant additional pre-service time and work. Multiple images (including CT angiogram, duplex, and possibly arteriogram) are reviewed to diagnose the problem, available devices are reviewed, and an operative plan is developed. This service is provided after evaluation in the office, but more than 24 hours prior to the procedure. We received approval from the Research Subcommittee to add an additional question to the 34710 survey to capture time spent for planning. This is consistent with the code descriptor which includes the phrase "including pre-procedure sizing and device selection." The additional planning time is therefore included in the total evaluation minutes and becomes part of the pre-service work for 34710.

Pre-service package 4 is appropriate for 34710 and 34712 with adjustment to the times. Surveyed planning times have been added to the pre-service evaluation time for 34710. The survey respondents also identified varying addition minutes for evaluation. We believe this to be related to the additional work the day before and the day of the procedure to ensure that all necessary supplies are available for the operation and to ensure that the radiologic equipment is operational and prepared for the procedure.

The survey respondents identified additional minutes of positioning time for these codes. This is to account for positioning the imaging equipment and operating room equipment to minimize conflicts between equipment and patient during surgery, appropriately positioning the patient with arms tucked as

indicated, and confirming that all EKG leads and IV, Foley and arterial catheter lines are clear from the areas to be imaged during the procedure. A total of 15 minutes is recommended for 34710 and a total of 20 minutes for 34712. The survey respondents also reported 5 minutes less scrub, dress, and wait time for 34710 than exists in pre-service package 4. We recommend accepting the survey results and subtracting 5 minutes of SDW time for 34710.

### **Post-Service Time (34710, 34712)**

Post-service time package 9B would apply for these complex procedures, however, this package only allows 5 minutes for “operative note” which is not sufficient time for endovascular procedures that have radiologic supervision & interpretation bundled into the code. There is significantly more time involved to review all images and cines, annotate appropriate images, dictate radiologic findings, and document radiation exposure and contrast volumes. We therefore recommend accepting the survey values for immediate post-service time.

### **Comparison with Key Reference Services**

There were two codes that were chosen most often as key reference services for +34709 and +34711 and two codes chosen for 34710 and 34712. They are:

- +37237, *Transcatheter placement of an intravascular stent(s) (except lower extremity artery(s) for occlusive disease, cervical carotid, extracranial vertebral or intrathoracic carotid, intracranial, or coronary), open or percutaneous, including radiological supervision and interpretation and including all angioplasty within the same vessel, when performed; each additional artery (List separately in addition to code for primary procedure)*
- +37235, *Revascularization, endovascular, open or percutaneous, tibial/peroneal artery, unilateral, each additional vessel; with transluminal stent placement(s) and atherectomy, includes angioplasty within the same vessel, when performed (List separately in addition to code for primary procedure)*
- 37218, *Transcatheter placement of intravascular stent(s), intrathoracic common carotid artery or innominate artery, open or percutaneous antegrade approach, including angioplasty, when performed, and radiological supervision and interpretation*
- 37217, *Transcatheter placement of intravascular stent(s), intrathoracic common carotid artery or innominate artery by retrograde treatment, open ipsilateral cervical carotid artery exposure, including angioplasty, when performed, and radiological supervision and interpretation*

The following tables incorporates our recommended RVW for +34709, +34711 and 34710, 34712 along with the key reference services identified for these codes arranged in ascending order of values.

	<b>RVW</b>	<b>IWPUT</b>	<b>Total Time</b>	<b>Pre</b>	<b>INTRA</b>	<b>Post</b>
+37237 KRS	4.25	0.093	47	1	45	1
<b>+34711</b>	<b>6.00</b>	<b>0.100</b>	<b>60</b>	<b>0</b>	<b>60</b>	<b>0</b>
<b>+34709</b>	<b>6.50</b>	<b>0.108</b>	<b>60</b>	<b>0</b>	<b>60</b>	<b>0</b>
37235 KRS	7.80	0.097	82	1	60	1

	RVW	IWPUT	Total Time	Eval	Posit	SDW	INTRA	Post	Hosp	Office
<b>34712</b>	<b>14.00</b>	<b>0.108</b>	<b>327</b>	<b>60</b>	<b>20</b>	<b>20</b>	<b>60</b>	<b>30</b>	<b>32, 31, 38</b>	<b>13, 12</b>
37218 KRS	15.00	0.106	265	33	5	5	90	28	31, 38	13x2
<b>34710</b>	<b>17.00</b>	<b>0.095</b>	<b>397</b>	<b>110</b>	<b>15</b>	<b>15</b>	<b>90</b>	<b>30</b>	<b>32, 31, 38</b>	<b>13, 12</b>
37217 KRS	20.38	0.098	403	40	14	20	120	30	33, 32, 38	13x2

### Comparison to MPC codes

There are only 10 ZZZ global MPC codes for comparison, all of which are lower values than our recommendations for +34709 and +34711. We offer the following code for comparison:

- MPC 57267, *Insertion of mesh or other prosthesis for repair of pelvic floor defect, each site (anterior, posterior compartment), vaginal approach (List separately in addition to code for primary procedure)*

	RVW	IWPUT	Total Time	Pre	INTRA	Post
+37237 MPC	4.88	0.108	45	0	45	0
<b>+34711</b>	<b>6.00</b>	<b>0.100</b>	<b>60</b>	<b>0</b>	<b>60</b>	<b>0</b>
<b>+34709</b>	<b>6.50</b>	<b>0.108</b>	<b>60</b>	<b>0</b>	<b>60</b>	<b>0</b>

We offer the following codes as brackets for our recommendations for 34710 and 34712:

- MPC 53440, *Sling operation for correction of male urinary incontinence (eg, fascia or synthetic)*
- MPC 52601, *Transurethral electrosurgical resection of prostate, including control of postoperative bleeding, complete (vasectomy, meatotomy, cystourethroscopy, urethral calibration and/or dilation, and internal urethrotomy are included)*
- MPC 37215, *Transcatheter placement of intravascular stent(s), cervical carotid artery, open or percutaneous, including angioplasty, when performed, and radiological supervision and interpretation; with distal embolic protection*

	RVW	IWPUT	Total Time	Eval	Posit	SDW	INTRA	Post	Hosp	Office
53440 MPC	13.36	0.098	248	33	7	15	90	22	38x0.5	13x2, 12
<b>34712</b>	<b>14.00</b>	<b>0.108</b>	<b>327</b>	<b>60</b>	<b>20</b>	<b>20</b>	<b>60</b>	<b>30</b>	<b>32, 31, 38</b>	<b>13, 12</b>
52601 MPC	15.26	0.088	355	35	10	15	75	40	32, 31x2, 38	13x2, 12
<b>34710</b>	<b>17.00</b>	<b>0.095</b>	<b>397</b>	<b>110</b>	<b>15</b>	<b>15</b>	<b>90</b>	<b>30</b>	<b>32, 31, 38</b>	<b>13, 12</b>
37215 MPC	18.00	0.121	322	40	8	15	90	30	33, 38	13x2

## **Survey #2: Additional Rationale for Specific Codes**

### **+34709 Placement of Extension Prosthesis at Initial Procedure:**

We recommend the 25<sup>th</sup> percentile survey value of 6.50 RVW.

This represents an increase from current value of 5.48 RVWs by current coding convention. This value is determined by adding the RVWs of +34826 and its corresponding radiologic supervision & interpretation code 75953. Compelling evidence as detailed above justifies this slight increase in value for this new code compared to existing. Comparison to KRS, MPC and family further support our recommendation.

### **34710 Delayed Placement of Extension Prosthesis:**

We recommend the median survey value of 17.00 RVW.

This represents a slight increase from the current value of 16.43 by current coding convention which is determined by adding the RVWs for 34825 and its corresponding radiologic supervision & interpretation 75953, and the work of bilateral non-selective catheterization is added by multiplying the RVW for 36200 by 1.5 to account for the bilaterality and then multiplying by 0.5 for the multiple procedure reduction. The following table is a graphic explanation of this comparison.

<b>Existing Extension</b>	<b>Work RVU</b>	<b>Adjustment</b>	<b>Adjusted Work RVU</b>
34825 Extension	12.80	None	12.80
36200-50 Bilateral catheter in aorta	3.02	Bilaterality & MPPR	2.27
75953 Rad S&I for extension	1.36	None	1.36
<b>Total existing coding sequence</b>			<b>16.43</b>
<b>New Code</b>			
34710 Delayed Extension	17.00	None	<b>17.00</b>
<b>Change Existing to New</b>			<b>3.5%</b>

Compelling evidence as detailed above justifies this slight increase in value for this new code compared to existing as it represents significantly different work from the existing codes. Comparison to KRS, MPC and family further support our recommendation.

### **+34711 Delayed Placement of Additional Extension Prosthesis:**

We recommend the 25<sup>th</sup> percentile survey value of 6.00 RVW.

This represents an increase from current value of 5.48 RVWs by current coding convention. This value is determined by adding the RVWs of +34826 and its corresponding radiologic supervision & interpretation code 75953. This value is lower than the value for +34709 which is a very similar service; however, clinically speaking, the additional endograft extension placed in a delayed fashion could be within the previous treatment zone of the initial endograft placement and is therefore less intense than an extension placed at the time of initial endografts deployment. For example, a patient who has had a previous EVAR for aneurysm repair is found to have bilateral type 1B endoleaks at the distal limbs in the common iliac arteries bilaterally. There is enough landing zone within the common iliac arteries to seal the leaks with bilateral extensions to the common iliac bifurcation without extending into the external iliac arteries. This scenario would be reported with 34710 and +34711 in the delayed setting but if these extensions were

performed at the time of the original procedure, these extensions are within the treatment zone and bundled into the base code.

#### **34712 Enhanced Fixation Device:**

We recommend the median survey value of 14.00 RVW.

This new code describes the work of transcatheter delivery of enhanced fixation device(s) to the endograft (eg, anchor, screw, tack) and all associated radiological supervision and interpretation. The work of this procedure was previously coded with unlisted vascular or unlisted cardiac codes depending on the location of the endograft. This will be a low volume code estimated to be used in less than 2% of EVARs.

#### **Survey #2 Summary**

The new family of CPT codes for EVAR represent a complex set of operations that now bundle all commonly performed services into codes that better describe the current practice of EVAR and conform with current concepts in code creation and valuation. This family was surveyed by a multispecialty group. Detailed analysis of the survey results by expert panel, comparison to key reference services, MPC codes, and to the other codes have resulted in the above detailed recommendations of RVW for these new codes. The four codes specific to this survey represent significantly different work from previous coding or new work that was not previously captured as detailed in compelling evidence above. We believe these recommendations are appropriate and well supported with our rationale.

### **Survey #3 (+34713-34716) Overview of Recommended Values**

The codes surveyed in the third group are all ZZZ add-on codes that describe the work of vascular access for the performance of EVAR. This family includes 4 codes (34812, 34820, 34833, 34834) that were previously 000 day globals that have now been converted to ZZZ and 4 new ZZZ codes (+34713, +34714, +34715, +34716).

#### **Compelling Evidence**

The existing four codes (34812, 34820, 34833, 34834) have been the only code options to report vascular access for EVAR since 2003. There have been many advances in technology and technique since that time. One of the more commonly used approaches for vascular access for EVAR is now a percutaneous approach. This work is currently not described by a CPT code. Open exposure of the axillary or subclavian artery has been added as an option that was not previously present and also represents new work. Finally, the use of conduits has expanded from the currently existing code for an iliac conduit (34833) to other access options including the femoral, axillary, and subclavian arteries. This new work is now captured in the codes +34714 and +34715. The three access with conduit codes can also be used for establishment of cardiopulmonary bypass. Our expert panel agrees that the change in global period, the expansion of access options, and the expansion of indications represent compelling evidence for consideration of new values.

#### **Expert Panel Review of Survey Results**

Our review of the data obtained from the survey respondents for these eight codes revealed several inconsistencies that we were unable to explain in a logical fashion. Specifically, the survey respondents stated that the intra-service time for open iliac exposure (+34820), open iliac exposure with conduit (+34833), open axillary/subclavian exposure (+34715), and open axillary/subclavian exposure with conduit (+34716) were all identical at 60 minutes. The two conduit codes (+34833, +34716) include the work of the open exposure codes (+34820, +34715) as well as the incremental work of anastomosing a conduit onto the target artery. It is physically impossible for this additional work to take 0 minutes. Our only explanation of this error is survey fatigue on the part of the respondents. This was quite a large proposal and in an effort to maintain relativity between all twenty codes by having respondents answer all three surveys we may have exhausted their ability to focus and discern time differences between similar codes by the time they reached the end of the survey.

We therefore will be making recommendations for these 4 codes based on magnitude estimation as detailed in each individual section below.

#### **Comparison with Key Reference Services**

These eight code recommendations cover an RVU range from 2.50 to 9.00. There were ten key reference services selected by the survey respondents most commonly when making their recommendations. They are:

- +37222, *Revascularization, endovascular, open or percutaneous, iliac artery, each additional ipsilateral iliac vessel; with transluminal angioplasty (List separately in addition to code for primary procedure)*
- +36476, *Revascularization, endovascular, open or percutaneous, iliac artery, each additional ipsilateral iliac vessel; with transluminal angioplasty (List separately in addition to code for primary procedure)*
- +35600, *Harvest of upper extremity artery, 1 segment, for coronary artery bypass procedure (List separately in addition to code for primary procedure)*
- +35682, *Bypass graft; autogenous composite, 2 segments of veins from 2 locations (List separately in addition to code for primary procedure)*

- +35572, *Harvest of femoropopliteal vein, 1 segment, for vascular reconstruction procedure (eg, aortic, vena caval, coronary, peripheral artery) (List separately in addition to code for primary procedure)*
- +22845, *Anterior instrumentation; 2 to 3 vertebral segments (List separately in addition to code for primary procedure)*
- +37237, *Transcatheter placement of an intravascular stent(s) (except lower extremity artery(s) for occlusive disease, cervical carotid, extracranial vertebral or intrathoracic carotid, intracranial, or coronary), open or percutaneous, including radiological supervision and interpretation and including all angioplasty within the same vessel, when performed; each additional artery (List separately in addition to code for primary procedure)*
- +35683, *Bypass graft; autogenous composite, 3 or more segments of vein from 2 or more locations (List separately in addition to code for primary procedure)*
- +35306, *Harvest of femoropopliteal vein, 1 segment, for vascular reconstruction procedure (eg, aortic, vena caval, coronary, peripheral artery) (List separately in addition to code for primary procedure)*

The following table incorporates our recommended RVW for these eight codes along with the key reference services identified for these codes arranged in ascending order of RVW.

### Comparison to MPC codes

There are a limited number of ZZZ global MPC codes for comparison, most of which are lower values than our recommendations for this group of codes. We offer the following codes for comparison:

- MPC +36227, *Selective catheter placement, external carotid artery, unilateral, with angiography of the ipsilateral external carotid circulation and all associated radiological supervision and interpretation (List separately in addition to code for primary procedure)*
- MPC +99292, *Critical care, evaluation and management of the critically ill or critically injured patient; each additional 30 minutes (List separately in addition to code for primary service)*
- MPC +63048, *Laminectomy, facetectomy and foraminotomy (unilateral or bilateral with decompression of spinal cord, cauda equine and/or nerve root[s], [eg, spinal or lateral recess stenosis]), single vertebral segment; each additional segment, cervical, thoracic, or lumbar (List separately in addition to code for primary procedure)*
- MPC +57267, *Insertion of mesh or other prosthesis for repair of pelvic floor defect, each site (anterior, posterior compartment), vaginal approach (List separately in addition to code for primary procedure)*

The following table incorporates our recommended RVW for these eight codes along with the MPC services identified for these codes arranged in ascending order of values.

	RVW	IWPUT	Total Time	Pre	INTRA	Post
+36227 MPC	2.09	0.139	15	0	15	0
+99292 MPC	2.25	0.075	30	0	30	0

### **Survey #3: Additional Rationale for Specific Codes**

#### **+34713 Percutaneous Access and Closure:**

We recommend using a crosswalk to CPT code +15152 for a value of 2.50 RVW.

Percutaneous access and closure for EVAR has been increasing in utilization over the past several years. However, this requires significant work to close the access artery as the sheath size for delivery of the EVAR devices are quite large. Percutaneous repair is achieved with a “pre-closure” technique of placing suture mediated closure devices under ultrasound guidance (included). These closure devices are designed for smaller sized sheaths. The arteriotomy is then dilated to the necessary size for placement of the delivery sheath which can be as large as 24 French. At the completion of the procedure, the large sheaths are removed slowly over a dilator and the sutures are tied to close the large arteriotomy. Manual pressure is then held for hemostasis. Failure to achieve hemostasis requires surgical cutdown and repair of the vessel.

Our expert panel agreed that the 25<sup>th</sup> percentile and median survey values for +34713 were too high and not consistent with the work. We agree that the work and intensity for +34713 is similar to CPT code +15152, *Tissue cultured skin autograft, trunk, arms, legs; each additional 100 sq cm, or each additional 1% of body area of infants and children, or part thereof (List separately in addition to code for primary procedure)*, and therefore recommend an RVW of 2.50.

	<b>RVW</b>	<b>IWPUT</b>	<b>Total Time</b>	<b>Pre</b>	<b>INTRA</b>	<b>Post</b>
+15152	2.50	0.124	20	0	20	0
<b>+34713</b>	<b>2.50</b>	<b>0.124</b>	<b>20</b>	<b>0</b>	<b>20</b>	<b>0</b>

#### **+34812 Open Femoral Exposure:**

We recommend the 25<sup>th</sup> percentile survey value of 4.13 RVW.

This is an existing code for femoral artery exposure for the purpose of delivery of endografts. The existing code is a 000-day global and was captured in the RAW screen for pre-service time in excess of standard packages. The global period was changed to ZZZ as this procedure is never performed as a stand-alone service. The current value of 34812 can be converted into a ZZZ valued by multiplying the existing intra-service time by the IWPUT which predicts a value of 4.39 RVW for 34812 if it were an add-on code. This compares favorably with our recommendation for the 25<sup>th</sup> percentile at 4.13 RVW for +34812.

#### **+34714 Open Femoral Exposure with Conduit:**

We recommend a value of 6.13 RVW by magnitude estimation.

The survey respondents identified 20 more intra-service minutes for the additional work of sewing an artificial conduit onto the femoral artery for this new code compared to the work of exposure of the femoral artery (+34812). Our expert panel reviewed this data and agree that 20 minutes is accurate for this incremental work. We also compared this code to CPT +33987, *Arterial exposure with creation of graft conduit (eg, chimney graft) to facilitate arterial perfusion for ECMO/ECLS (List separately in addition to code for primary procedure)*, which describes similar work except the typical patient for +33987 would be a pediatric patient. Code +33987 has an intra-service time of 45 minutes and RVW of 4.04. We agree that an appropriate magnitude estimation for the additional work of placing a femoral conduit with 20 minutes of intra-service time would be 2.00 RVW when compared to +33987. This increment of 2.00 RVW was further validated by our survey respondents in our recommendations for the

incremental values between iliac exposure (+34820) and iliac conduit (+34833) and between axillary/subclavian exposure (+34715) and axillary/subclavian conduit (+34716).

There is no direct ZZZ crosswalk to a value of 6.13 RVW, however, the following codes are RUC reviewed ZZZ codes with 60 minutes of intra-service time and similar RVW that bracket our recommendation and further support use of incremental valuation and magnitude estimation of 6.13 RVW for +34714.

- +22216, *Osteotomy of spine, posterior or posterolateral approach, 1 vertebral segment; each additional vertebral segment (List separately in addition to primary procedure)*
- +22226, *Osteotomy of spine, including discectomy, anterior approach, single vertebral segment; each additional vertebral segment (List separately in addition to code for primary procedure)*
- +35500, *Harvest of upper extremity vein, 1 segment, for lower extremity or coronary artery bypass procedure (List separately in addition to code for primary procedure)*
- +37233, *Revascularization, endovascular, open or percutaneous, tibial/peroneal artery, unilateral, each additional vessel; with atherectomy, includes angioplasty within the same vessel, when performed (List separately in addition to code for primary procedure)*

	RVW	IWPUT	Total Time	Pre	INTRA	Post
+22216	6.03	0.101	60	0	60	0
+22226	6.03	0.101	60	0	60	0
<b>+34714</b>	<b>6.13</b>	<b>0.102</b>	<b>60</b>	<b>0</b>	<b>60</b>	<b>0</b>
+35500	6.44	0.107	60	0	60	0
+37233	6/50	0.108	62	1	60	1

#### **+34820 Open Iliac Exposure:**

We recommend the 25<sup>th</sup> percentile survey value of 7.00 RVW.

This is an existing code for iliac artery exposure for the purpose of delivery of endografts. The global period was changed to ZZZ as this procedure is never performed as a stand-alone service. The current value of 34820 can be converted into a ZZZ valued by multiplying the existing intra-service time by the IWPUT which predicts a value of 7.05 RVW for 34820 if it were an add-on code. This compares favorably with our recommendation for the 25<sup>th</sup> percentile at 7.00 RVW for +34820.

#### **+34833 Open Iliac Exposure with Conduit:**

We recommend the median survey value of 9.00 RVW.

The survey respondents did not report any additional intra-service time for the additional work of placing an iliac conduit compared to +34820. As stated above, the expert panel agree this is physically impossible and would create an anomaly for this pair of codes. The existing values for 34820 and 34833 have a differential of 2.24 RVW and a differential intra-service time of 25 minutes. The survey respondents identified 20 more intra-service minutes for the additional work of sewing an artificial conduit onto the femoral artery for +34714 compared to +34812. Our expert panel agrees that 20 minutes is the accurate intra-service time for the incremental work related to the conduit. We also reviewed CPT +33987, *Arterial exposure with creation of graft conduit (eg, chimney graft) to facilitate arterial perfusion for ECMO/ECLS (List separately in addition to code for primary procedure)*, which describes similar work except the typical patient for +33987 would be a pediatric patient. Code +33987 has an intra-service time of 45 minutes and RVW of 4.04. We agree that an appropriate magnitude estimation

for the additional work of placing an iliac conduit is 2.00 RVW and 20 additional minutes of intra-service time. We therefore recommend the median survey value of 9.00 RVW for +34833 with an additional 20 intra-service minutes for a total of 80 intra-service minutes.

#### **+34834 Open Brachial Exposure:**

We recommend using a crosswalk to CPT +36476 for value of 2.65 RVW.

This is an existing code for brachial artery exposure for the purpose of delivery of endografts. The existing code is a 000-day global. The global period was changed to ZZZ as this procedure is never performed as a stand-alone service. The current value of 34834 can be converted into a ZZZ valued by multiplying the existing intra-service time by the IWPUT which predicts a value of 2.35 RVW for 34833 if it were an add-on code. This existing ZZZ-based value is below the minimum response from our survey respondents and we therefore cannot accept it as valid. An alternative consideration for the existing value of 34834 would be to apply the multiple procedure payment reduction model which produces a “real world” value of 2.67 RVW. This calculation strongly supports our proposed crosswalk to CPT +36476, *Endovenous ablation therapy of incompetent vein, extremity, inclusive of all imaging guidance and monitoring, percutaneous, radiofrequency; second and subsequent veins treated in a single extremity, each through separate access sites (List separately in addition to code for primary procedure)* for a value of 2.65 RVW for +34834.

#### **+34715 Open Axillary/Subclavian Exposure:**

We recommend the 25<sup>th</sup> percentile survey value of 6.00 RVW.

This is a new code to describe the work of exposing the axillary/subclavian artery for delivery of endografts. The survey respondents identified 60 minutes of intra-service time for the performance of this service which is comparable to the time identified for the performance of iliac artery exposure (+34820). Our expert panel agree that this is appropriate as the axillary/subclavian artery can be difficult to expose. In addition, the subclavian artery is one of the most friable arteries in the body and requires additional care in its dissection to prevent injury. We therefore agree that the 25<sup>th</sup> percentile survey value of 6.00 RVW is appropriate for +34715.

#### **+34716 Open Axillary/Subclavian Exposure, with Conduit:**

We recommend the median survey value of 8.00 RVW.

This is a new code to describe the work of exposing the axillary/subclavian artery with creation of conduit for delivery of endovascular prosthesis or for establishment of cardiopulmonary bypass. The survey respondents did not report any additional intra-service time for the additional work of placing an axillary/subclavian conduit compared to +34715. As stated above, the expert panel agree this is physically impossible and would create an anomaly for this code pair. The survey respondents identified 20 more intra-service minutes for the additional work of sewing an artificial conduit onto the femoral artery for +34714 compared to +34812. Our expert panel agrees that 20 minutes is the accurate intra-service time for this incremental work. We also reviewed CPT +33987, *Arterial exposure with creation of graft conduit (eg, chimney graft) to facilitate arterial perfusion for ECMO/ECLS (List separately in addition to code for primary procedure)*, which describes similar work except the typical patient for +33987 would be a pediatric patient. Code +33987 has an intra-service time of 45 minutes and RVW of 4.04. We agree that an appropriate magnitude estimation for the additional work of placing an axillary/subclavian conduit is 2.00 RVW and 20 additional minutes of intra-service time. We therefore recommend the median survey value of 8.00 RVW for +34716 with an additional 20 intra-service minutes for a total of 80 intra-service minutes.

### **Survey #3 Summary**

The new family of CPT codes for EVAR represent a complex set of operations that now bundle all commonly performed services into codes that better describe the current practice of EVAR and conform with current concepts in code creation and valuation. This family was surveyed by a multispecialty group. Detailed analysis of the survey results by expert panel, comparison to key reference services, MPC codes, and to the other codes have resulted in the above detailed recommendations of RVW for these new codes. The eight codes specific to this survey are now all ZZZ add-on codes to describe the work of access for these complex procedures. The global period change eliminates any duplication of pre and post-service work and allows for maximum flexibility to describe the access needed for individual procedures. We believe these recommendations are appropriate and well supported with our rationale.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 34701      Tracking Number   U1

Original Specialty Recommended RVU: **25.00**  
Presented Recommended RVU: **23.71**  
RUC Recommended RVU: **23.71**

Global Period: 090

CPT Descriptor: Endovascular repair of infrarenal aorta by deployment of an aorto-aortic tube endograft including pre-procedure sizing and device selection, all nonselective catheterization(s), all associated radiological supervision and interpretation, all endograft extension(s) placed in the aorta from the level of the renal arteries to the aortic bifurcation, and all angioplasty/stenting performed from the level of the renal arteries to the aortic bifurcation; for other than rupture (eg, for aneurysm, pseudoaneurysm, dissection, penetrating ulcer)

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 75-year-old male with CAD and COPD presents with an asymptomatic infrarenal abdominal aortic aneurysm. Endovascular repair is performed by deployment of an aorto-aortic tube endograft and all required infrarenal aortic extension(s), as necessary.

Percentage of Survey Respondents who found Vignette to be Typical: 82%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 100% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 13% , Overnight stay-more than 24 hours 87%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 69%

Description of Pre-Service Work: Preservice endograft planning: Extensive and detailed review of the preoperative imaging studies is required to determine the exact measurements of the aneurysm and to select the precise, correct endograft. This work is unique in that it would not be performed until after the decision for surgery, but it must be completed several days prior to surgery to ensure that all required implants are ordered and have arrived on site before surgery begins. An accurate preoperative choice of component diameters and lengths is one of the primary determinants of whether the endovascular procedure will be successful, so this work must be done carefully. Cross-sectional imaging from the aortic arch to femoral vessels with fine cuts are reviewed and uploaded to a workstation, where 3D software is applied permitting iterative modelling of a virtual device within the aorta in multiplanar views and center line of flow analysis. The physician needs to manually adjust modelling for altered anatomy which is tortuous or thrombus laden. Orthogonal center-line imaging is used to determine diameter measurements of the aorta, iliac and femoral arteries for appropriate sizing of the main body endograft and limbs with extensions as needed. The iliac and femoral diameters also determine the success of the device delivery and any potential adjunctive maneuvers that may be required to facilitate delivery. Tortuosity, calcification, thrombus presence and stenosis require consideration as they may impact device delivery. Cross section, longitudinal and center line of flow measurements, with manual adjustments where needed, are utilized to map the distances between the lowest renal artery and the distal seal zone depending on the extent and involvement of the distal aorta and iliac segments. A stretched/straightened view permits manual validation of the computer-generated lengths.

Preservice work also includes the procedural work-up. Pre-service work necessarily includes review of surgical indication, physical exam findings, current medications and all laboratory test results. Careful final review of imaging is performed. The proposed procedure is discussed with the patient and family including risks and expected recovery. Final informed consent is obtained. The physical exam, procedural plan, and consent are documented in the medical record. The access site(s) is marked. The endograft, catheters, and introducer sheaths are brought into the operating room after verification of appropriate diameters and lengths. Assessment is made for the need for stand-by devices (eg, balloons) that might be needed emergently. The surgeon ensures availability of pharmacologic and laboratory agents such as heparin, protamine and ACT testing. In addition, the surgeon ensures all technical personnel have been familiarized with the upcoming

procedure and that they are fully familiar with all required devices. Imaging studies are uploaded on the OR computers and placed on monitors for ready viewing during the operative procedure. The surgeon supervises appropriate patient positioning on the OR table, ensures fluoroscopy is functional and that desired imaging angles are attainable with equipment at hand. The surgeon dons radiation protection gear, ensures that all who will be in the suite do likewise, and supervises sterile prep of access site(s) and subsequent draping. The surgeon leads the pre-procedural "time-out."

Description of Intra-Service Work: Although deployment of this prosthesis is accomplished from a single femoral or iliac access site, the requirement for accurate positioning typically means that intra-arterial catheterization is performed bilaterally. Catheter placement is bundled in this procedure. Under fluoroscopic guidance, an introducer needle is used to access the vessel. A series of graded guidewires, vascular sheaths and catheters is introduced flush aortography is performed to confirm the location of the renal arteries and the aorto-iliac anatomy. The patient is then systemically anticoagulated. A rigid wire is inserted over a catheter to provide secure tracking of the large introducer sheath for the endograft. The endograft is loaded onto the guidewire and advanced through the access vessel into the aorta. The endograft is positioned and deployed under fluoroscopic guidance with intermittent angiographic control imaging. A large compliant balloon is placed over the wire into the endograft to perform balloon dilation at the proximal and distal seal zones of the endograft. An aortogram is performed for adequacy of the graft position, patency of adjacent branch vessels (renals and hypogastrics), presence or absence of endoleaks, and type of endoleak if present. The patency of collateral vessels (lumbar or inferior mesenteric arteries) that may contribute to persistent endoleaks is also assessed. Adjunctive balloon angioplasty is performed for endoleak treatment, as necessary. Extensions required to achieve fixation and seal from the lowest renal artery to the aortic bifurcation are deployed (and included in this service). When the graft is in appropriate position and free of endoleaks on angiogram, the catheters and guidewires are removed.

Description of Post-Service Work: Hospital: Apply sterile dressings. Assist transfer of patient from operating table to gurney. Monitor patient for hemodynamic stability in transit and ensure adequate perfusion to the lower extremities. Write postoperative orders for medications, imaging, and labs. Discuss procedure and outcome with family. Write brief operative note. Dictate operative report and copy referring physician. Review post-operative imaging.

Post-operative in-hospital visits require interval history-taking for new complaints of pain or neurovascular compromise. Exam requires close monitoring for abdominal or lower extremity tenderness. All arterial access sites are monitored for bleeding or hematoma formation. Tight control of blood pressure is critical. Urinary output is followed closely for signs of hypovolemia. Frequent pulse and perfusion checks are necessary as is neurologic evaluation for any signs of spinal cord ischemia. Lower extremities are checked for emboli. Hemoglobin and coagulation labs are monitored daily. The need for routine or advanced imaging is assessed daily. Post-op CT scans are obtained, either during the inpatient stay or early in the post-discharge time period. Progress notes are recorded daily. Patient and family questions are answered. Orders are updated daily. Rounds with nursing staff and other consultants are performed daily.

Discharge day management includes communicating with all support services such as visiting nurses, referring physicians, review interval chart notes, answer patient and family questions, evaluate all pre-discharge labs, evaluate and redress the incisions, assess pain score, and perform medication reconciliation. Surgeon discusses home restrictions (ie, diet, activity, bathing) with patient and family members; writes orders for home care, discharge medications and supplies; and completes all appropriate medical records, including day of discharge progress notes and final discharge instructions.

Office: At each office visit, solicit an interval history for ongoing or new symptoms; examine the abdomen for tenderness, examine arterial access sites and surgical incisions for inflammation, drainage, wound infection; examine lower extremities for adequate perfusion. Order diagnostic blood tests and/or imaging studies based on findings. Review post-op CT scans and ultrasounds for possible endoleak. Make clinical decisions regarding need for repeat surgical intervention. Provide wound care as needed. Remove staples and sutures as indicated. Answer patient/family questions. Write prescriptions for medication and therapy, as necessary. Discuss progress with referring physician (verbal and written). Dictate/type progress notes for medical chart.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**34701 Elective Aorto-Aortic Repair:**

We recommend crosswalking to CPT code 33254 (*Operative tissue ablation and reconstruction of atria, limited (eg, modified maze procedure)*), for a value of 23.71 RVW. This represents a **decrease of 20.1%** from current value of 29.69 RVWs by current coding convention.

Comparison to existing codes is a difficult process due to bundling of the new codes to include pre-service planning, all radiologic S&I, and a variable use of extensions when compared to the existing codes. To calculate the current RVW using current coding convention, one would begin with the existing work of 34800. The work of bilateral non-selective catheterization is added by multiplying the RVW for 36200 by 1.5 to account for the bilaterality and then multiply by 0.5 for the multiple procedure reduction. The radiologic supervision and interpretation for EVAR is then added. All proximal and/or distal extensions from the level of the renal arteries down to the level of the aortic bifurcation is now included in the work of 34701. To account for this work, we multiplied the RVW for 34825 by the percentage of time that 34825 is billed together with 34800 and then applied the multiple procedure reduction. Finally, the radiologic supervision and interpretation for extensions was multiplied by this same billed together data to calculate the final existing RVW for 34701. Comparing this computed existing value with our proposed value for 34701 results in a **20.1% reduction** in existing value. The following table is a graphic explanation of this comparison.

Existing EVAR Aorto-Aortic Graft	Work RVU	Adjustment	Adjusted Work RVU
34800 Main body, tube graft	21.54	None	21.54
36200-50 Bilateral catheter in aorta	3.02	Bilaterality & MPPR	2.27
75952 Rad S&I code for main body	4.49	None	4.49
34825 Extension	12.80	MPPR & Billed together (18%)	1.15
75953 Rad S&I for extension	1.36	Billed together (18%)	0.24
<b>Total existing coding sequence</b>			<b>29.69</b>

New Code			
34701 Aorto-Aortic EVAR	23.71	None	<b>23.71</b>
<b>Change Existing to New</b>			<b>-20.1%</b>

### Comparison to Crosswalk

Below is a tabular comparison to CPT code 33254 (*Operative tissue ablation and reconstruction of atria, limited (eg, modified maze procedure)*)

### Comparison to MPC codes

There are limited MPC codes in the RVW range of these complex procedures. We offer the following codes as brackets for our recommendations:

- MPC 35301, *Thromboendarterectomy, including patch graft, if performed; carotid, vertebral, subclavian, by neck incision*
- MPC 33641, *Repair atrial septal defect, secundum, with cardiopulmonary bypass, with or without patch*

	RVW	IWPUT	Total Time	Eval	Posit	SDW	INTRA	Post	Hosp	Office
35301 MPC	21.16	0.104	404	40	15	20	120	30	33, 32, 38	13x2
<b>34701</b>	<b>23.71</b>	<b>0.114</b>	<b>482</b>	<b>110</b>	<b>20</b>	<b>20</b>	<b>120</b>	<b>40</b>	<b>33, 32, 38</b>	<b>13, 12</b>
33641 MPC	29.58	0.094	562	60	15	20	164	40	91, 33, 32, 31, 38	14

### **SERVICES REPORTED WITH MULTIPLE CPT CODES**

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed)

34800

75952

34825

75953

36200

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty vascular surgery                      How often? Sometimes

Specialty general surgery                      How often? Sometimes

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. National frequency is not available

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?

If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. See budget neutrality excel file

Specialty vascular surgery	Frequency	Percentage	%
----------------------------	-----------	------------	---

Specialty general surgery	Frequency	Percentage	%
---------------------------	-----------	------------	---

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Do many physicians perform this service across the United States? Yes

**Berenson-Eggers Type of Service (BETOS) Assignment**

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Procedures

BETOS Sub-classification:

Major procedure

BETOS Sub-classification Level II:

---

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 34800

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 34702      Tracking Number   U2

Original Specialty Recommended RVU: **39.69**Presented Recommended RVU: **36.00**

Global Period: 090

RUC Recommended RVU: **36.00**

CPT Descriptor: Endovascular repair of infrarenal aorta by deployment of an aorto-aortic tube endograft including pre-procedure sizing and device selection, all nonselective catheterization(s), all associated radiological supervision and interpretation, all endograft extension(s) placed in the aorta from the level of the renal arteries to the aortic bifurcation, and all angioplasty/stenting performed from the level of the renal arteries to the aortic bifurcation; for rupture, including temporary aortic and/or iliac balloon occlusion when performed (eg, for aneurysm, pseudoaneurysm, dissection, penetrating ulcer, traumatic disruption)

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 75-year-old male with CAD and COPD presents with a ruptured infrarenal abdominal aortic aneurysm. Endovascular repair is performed by deployment of an aorto-aortic tube endograft and all required infrarenal aortic extension(s), as necessary.

Percentage of Survey Respondents who found Vignette to be Typical: 86%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 100% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 100%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 82%

Description of Pre-Service Work: Preservice endograft planning for a ruptured aneurysm must be thorough, but must also be performed as quickly as possible. The speed required for these subsequent steps depends on the patient's hemodynamic stability.

Careful assessment of available imaging studies is required to determine whether the patient is an endovascular repair candidate. Exact measurements of the aneurysm diameter and length must be undertaken quickly. This is necessary because an accurate preoperative choice of component diameters and lengths is a primary determinant of endovascular procedural success. Cross-sectional imaging from the aortic arch to femoral vessels with fine cuts are reviewed, and if patient stability permits, uploaded rapidly to a workstation, where 3D software is applied permitting iterative modelling of the aorta and device in multiplanar views and center line of flow analysis. The physician must adjust modelling for altered anatomy which is tortuous or thrombus laden. Axial imaging is used to determine diameter measurements of the aorta, iliac and femoral arteries for appropriate sizing of the main body endograft plus all limbs and extensions that will be needed. The iliac and femoral diameters also determine the success of the device delivery. Tortuosity, calcification, thrombus presence and stenoses require consideration as they may impact on device delivery. Cross section, longitudinal and center line of flow measurements, with manual adjustments where needed, are utilized to map the distances between the lowest renal artery and the distal seal zone depending on the extent and involvement of the distal aorta and iliac segments. Stretched and straightened views assist choice of correct endovascular components.

All available laboratory and other diagnostic tests are assessed thoroughly but as quickly as possible. The proposed procedure is discussed expeditiously with the patient and family including risks and expected recovery. Informed consent is obtained quickly. Expedited documentation is performed. The access site(s) is marked. Due to the significant risk of mortality and hemodynamic compromise including hemodynamic shock, the patient's operative treatment course is discussed with the anesthesia team for coordination of care. The blood bank is also notified that a massive transfusion protocol may be required. The endograft, catheters, and introducer sheaths are brought into the operating room after

verification of appropriate diameters and lengths. Aortic balloon occlusion catheters are prepared for emergent use. Ensure all technical personnel are familiar with the operative plan and required devices. Position patient on OR table. Ensure or assist with large-bore intravenous access. Ensure or assist with monitoring device placement and confirm fluoroscopy function. Don radiation protection gear and confirm that all in OR do likewise. Supervise sterile prep of access site(s) and subsequent draping. Perform pre-procedural "time-out." Be ready at any time in this process to insert an aortic occlusion balloon should cardiovascular collapse occur.

Description of Intra-Service Work: Although deployment of this prosthesis is accomplished from a single femoral or iliac access site, the requirement for accurate positioning typically means that intra-arterial catheterization is performed bilaterally.

Under fluoroscopic guidance, introducer needles are used to access the vessels. A series of graded guidewire, vascular sheaths and catheters is introduced and flush aortography is performed to confirm the location of the renal arteries and the aortoiliac anatomy. A large sheath is placed as needed in the suprarenal aorta for stabilization of an aortic occlusion balloon. At any time in this process, the aortic occlusion balloon may be inflated if the patient suffers hemorrhagic shock.

The patient may be systemically anticoagulated. A rigid wire is inserted over a catheter to provide secure tracking of the large introducer sheath for the endograft. The endograft is loaded onto the guidewire and advanced through the access vessel into the aorta. The endograft is positioned and deployed under fluoroscopic guidance with intermittent angiographic control imaging. A large compliant balloon is placed over the wire into the endograft to perform balloon dilation at the proximal and distal seal zones of the endograft. An aortogram is performed for adequacy of the graft position, patency of adjacent branch vessels (renals and hypogastrics), presence or absence of endoleaks, and type of endoleak if present. The patency of collateral vessels (lumbar or inferior mesenteric arteries) that may contribute to persistent endoleaks is also assessed. Adjunctive balloon angioplasty is performed for endoleak treatment, as necessary (not separately reportable). When the graft is in appropriate position and free of endoleak on angiogram, the catheters and guidewires are removed.

Description of Post-Service Work: Hospital: Apply sterile dressings. Assist in transfer of patient from operating table to gurney. Monitor patient for hemodynamic stability during transit to ICU. In ICU, assess immediately for abdominal compartment syndrome and any sign of acute mesenteric ischemia. Direct immediate and ongoing resuscitation. Order and review results of frequent and multiple blood tests. Ensure adequate perfusion to the lower extremities. Make decision regarding need for return to surgery for any signs of extensive hemorrhage or abdominal compartment syndrome. Assess lower extremities for adequate post-op perfusion. Assess for vital organ system failure, in particular, postoperative shock, renal failure, hepatic failure and/or respiratory failure. Perform multiple iterative exams to identify life threatening deterioration. Write postoperative orders for medications, imaging, and labs. Discuss procedure and outcome with family. Write brief operative note. Dictate operative report and copy referring physician(s). Communicate frequently with ICU nurses and consultants. Review post-operative imaging. Write orders for discharge to ICU.

Post-operative in-hospital visits require history-taking for any complaints of pain or neurovascular compromise. Exam require close monitoring for tenderness. All arterial access sites are monitored for bleeding or hematoma formation. Close maintenance of blood pressure is critical. Urinary output is followed closely for signs of hypovolemia. Frequent pulse and perfusion checks are necessary as is neurologic evaluation for any signs of spinal cord ischemia. Lower extremities are checked for emboli. Hemoglobin and coagulation labs are monitored daily. The need for routine or advanced imaging is assessed daily. Post-op CT scans are commonly obtained. Progress notes are recorded daily. Patient and family questions are answered. Orders are updated daily. Rounds with nursing staff and other consultants is performed daily.

Discharge day management includes communicating with all support services such as visiting nurses, referring physicians, review interval chart notes, answer patient and family questions, evaluate all pre-discharge labs, evaluate and redress the incisions, assess pain score, and perform medication reconciliation. Surgeon discusses home restrictions (ie, diet, activity, bathing) with patient and family members; writes orders for home care, discharge medications and supplies; and complete all appropriate medical records, including day of discharge progress notes and final discharge instructions.

Office: At each office visit, the surgeon take a history for any ongoing or new symptoms. Examine the abdomen for tenderness, examine arterial access sites and surgical incisions for inflammation, drainage, wound infection. Order diagnostic blood tests and/or imaging studies based on findings. Review post-op CT scans and ultrasounds for presence or absence of endoleak. Make clinical decisions regarding need for repeat surgical intervention. Provide wound care as needed. Remove staples and sutures as indicated. Answer patient/family questions. Write prescriptions for medication and therapy, as necessary. Discuss progress with referring physician(s) (verbal and written). Dictate/type progress notes for medical chart.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**34X02 Ruptured Aorto-Aortic Repair:**

We recommend the median survey value of 36.00 RVW.

Ruptured aortic aneurysms are a catastrophic event with mortality rates as high as 90%. In fact, half of all patients that suffer a ruptured iliac aneurysm will die before they can ever reach a hospital for definitive treatment. The mortality for surgical repair ranges from 40-60% for patients who are able to present for repair. Without rapid treatment, death is certain. These patients present in varying degrees of hemorrhagic shock and are typically plagued by multisystem organ failure post-operatively. Despite advances in detection and treatment of aneurysmal disease, the rupture rate has remained relatively constant over the past two decades at roughly 15%.

For the purposes of work consideration, it is important to note that patients who die in the operating room would be coded with the -53 modifier "discontinued procedure" which typically results in a 50% payment reduction (e.g. WPS 2016 payment policy).

EVAR for rupture offers a less invasive approach for treatment but remains an extremely intense service in an attempt to save the life of an actively dying patient. As stated above, this is a new code to capture the significantly different work and extremely high intensity compared to an elective aneurysm repair.

This procedure, endovascular repair of a ruptured aortic aneurysm, was never imagined in 2000 when the original EVAR codes were valued but this concept of differential work for elective and ruptured aneurysm repair exists in CPT codes for open surgical repair. These new EVAR codes for rupture include the additional work of temporary balloon aortic occlusion as needed for hemodynamic instability and the significantly different, more complex and longer post-operative care.

This code includes a complex urgently performed pre-planning, all radiologic supervision and interpretation, all routine catheterization, almost all currently placed extensions, and the extension S&I into codes that better describe the current practice of EVAR and conform with current concepts in code creation and valuation.

Service Performance Rate for 34702: This is the one code out of the family where the median service performance rate among survey respondents was zero. This will be a very low volume code and it is not surprising that few survey takers had significant experience with this new service in the past 12 months. When the data is reviewed between those without experience and those with, there are significant differences in the recommended RVW. The median RVW for 34702 among those survey respondents have performed this operation was 40.00, further supporting our recommended median survey value of 36.00 RVW.

**Comment on Postoperative Visit Pattern**

The visit pattern for 34702 has been changed following discussion with the Pre-facilitation Committee. This committee questioned whether the operating surgeons actually provide critical care level visits, and our answer is yes. Particularly, when it comes to providing immediate post-operative care for ruptured aortic aneurysms, the vascular surgeon is the captain of the ship. Questions of whether hypotension should be treated with volume or vasopressors is a clinical judgment best handled by the surgeon. Questions of whether a ruptured aneurysm patient is failing because he/she needs a decompressive laparotomy vs more volume or more vasopressors is a highest level and most complex decision makeable only by the operating surgeon. Nevertheless, we appreciate the concern of the pre-facilitation committee, and we are responding to their recommendation by reducing one 99291 critical visit to 99233 and one 99233 to 99232.

**Comparison with Key Reference Services**

The following key reference services were chosen for 34702:

- 35082, *Direct repair of aneurysm, pseudoaneurysm, or excision (partial or total) and graft insertion, with or without patch graft; for ruptured aneurysm, abdominal aorta*
- 35103, *Direct repair of aneurysm, pseudoaneurysm, or excision (partial or total) and graft insertion, with or without patch graft; for ruptured aneurysm, abdominal aorta involving iliac vessels (common, hypogastric, external)*

	RVW	IWPUT	Total Time	Eval	Posit	SDW	INTRA	Post	Hosp	Office

**Comparison to MPC codes**

There are limited MPC codes in the RVW range of these complex procedures. We offer the following codes as brackets for our recommendations:

- MPC 33641, *Repair atrial septal defect, secundum, with cardiopulmonary bypass, with or without patch*
- MPC 33426, *Valvuloplasty, mitral valve, with cardiopulmonary bypass; with prosthetic ring*

	RVW	IWPUT	Total Time	Eval	Posit	SDW	INTRA	Post	Hosp	Office

33426 MPC	43.28	0.111	776	60	15	20	205	40	91, 33x3, 32 x2, 31, 38	14, 13

**Additional Rationale**

This family was surveyed by a multispecialty group. Detailed analysis of the survey results by expert panel, comparison to key reference services, MPC codes, and to the other codes have resulted in our recommendations of median survey RVW of 36.50 for code 34X08. This extremely intense service merits the relatively high IWPUT of 0.139. The following short table demonstrates IWPUTs of highly intense services. We believe the intensity of ruptured iliac aneurysm repair is equal or greater than any of the following.

CPT	Descriptor	IWPUT	RVW	INTRA	Total Time
22864	Removal of total disc arthroplasty (artificial disc), anterior approach, single interspace; cervical	0.1335	29.40	150	457
47130	Hepatectomy, resection of liver; total right lobectomy	0.1338	57.19	240	870

CPT	Descriptor	IWPUT	RVW	INTRA	Total Time
22861	Revision including replacement of total disc arthroplasty (artificial disc), anterior approach, single interspace; cervical	0.1345	33.36	180	477
33681	Closure of single ventricular septal defect, with or without patch;	0.1369	32.34	150	507
61798	Stereotactic radiosurgery (particle beam, gamma ray, or linear accelerator); 1 complex cranial lesion	0.1372	19.85	120	225
22856	Total disc arthroplasty (artificial disc), anterior approach, including discectomy with end plate preparation (includes osteophyctomy for nerve root or spinal cord decompression and microdissection); single interspace, cervical	0.1386	24.05	120	367
22551	Arthrodesis, anterior interbody, including disc space preparation, discectomy, osteophyctomy and decompression of spinal cord and/or nerve roots; cervical below C2	0.1403	25.00	120	395
43313	Esophagoplasty for congenital defect (plastic repair or reconstruction), thoracic approach; without repair of congenital tracheoesophageal fistula	0.1741	48.45	178	713
45126	Pelvic exenteration for colorectal malignancy, with proctectomy (with or without colostomy), with removal of bladder and ureteral transplantations, and/or hysterectomy, or cervicectomy, with or without removal of tube(s), with or without removal of ovary(s), or any combination thereof	0.1983	49.10	120	755
43314	Esophagoplasty for congenital defect (plastic repair or reconstruction), thoracic approach; with repair of congenital tracheoesophageal fistula	0.2021	53.43	178	713

## SERVICES REPORTED WITH MULTIPLE CPT CODES

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

- Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 34800

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 34703      Tracking Number   U3

Original Specialty Recommended RVU: **30.25**Presented Recommended RVU: **26.52**

Global Period: 090

RUC Recommended RVU: **26.52**

CPT Descriptor: Endovascular repair of infrarenal aorta and/or iliac artery(ies) by deployment of an aorto-uniiliac endograft including pre-procedure sizing and device selection, all nonselective catheterization(s), all associated radiological supervision and interpretation, all endograft extension(s) placed in the aorta from the level of the renal arteries to the iliac bifurcation, and all angioplasty/stenting performed from the level of the renal arteries to the iliac bifurcation; for other than rupture (eg, for aneurysm, pseudoaneurysm, dissection, penetrating ulcer)

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 75-year-old male with CAD and COPD presents with asymptomatic infrarenal abdominal aortic aneurysm. Endovascular repair is performed by deployment of an aorto-uniiliac endograft and all required proximal infrarenal extension(s) and all distal extension(s) to the level of the iliac artery bifurcation, as necessary.

Percentage of Survey Respondents who found Vignette to be Typical: 89%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 100% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 2% , Overnight stay-more than 24 hours 98%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 80%

Description of Pre-Service Work: Preservice endograft planning: Extensive and detailed review of the preoperative imaging studies is required to determine the exact measurements of the aneurysm and to select the precise, correct endograft. This work is unique in that it would not be performed until after the decision for surgery, but it must be completed several days prior to surgery in order to ensure that all required implants are ordered and have arrived on site before surgery begins. An accurate preoperative choice of component diameters and lengths is one of the primary determinants of whether the endovascular procedure will be successful, so this work must be done carefully. Cross-sectional imaging from the aortic arch to femoral vessels with fine cuts are reviewed and uploaded to a workstation, where 3D software is applied permitting iterative modelling of a virtual device within the aorta in multiplanar views and center line of flow analysis. The physician needs to manually adjust modelling for altered anatomy which is tortuous or thrombus laden. Orthogonal center-line imaging is used to determine diameter measurements of the aorta, iliac and femoral arteries for appropriate sizing of the main body endograft and limbs with extensions as needed. The iliac and femoral diameters also determine the success of the device delivery and any potential adjunctive maneuvers that may be required to facilitate delivery. Tortuosity, calcification, thrombus presence and stenosis require consideration as they may impact device delivery. Cross section, longitudinal and center line of flow measurements, with manual adjustments where needed, are utilized to map the distances between the lowest renal artery and the distal seal zone depending on the extent and involvement of the distal aorta and iliac segments. A stretched/straightened view permits manual validation of the computer-generated lengths.

Preservice work also includes the procedural work-up. Pre-service work necessarily includes review of surgical indication, physical exam findings, current medications and all laboratory test results. Careful final review of imaging is performed. The proposed procedure is discussed with the patient and family including risks and expected recovery. Final informed consent is obtained. The physical exam, procedural plan, and consent are documented in the medical record. The access site(s) is marked. The endograft, catheters, and introducer sheaths are brought into the operating room after verification of appropriate diameters and lengths. Assessment is made for the need for stand-by devices (eg, balloons) that might be needed emergently. The surgeon ensures availability of pharmacologic and laboratory agents such as heparin, protamine

and ACT testing. In addition, the surgeon ensures all technical personnel have been familiarized with the upcoming procedure and that they are fully familiar with all required devices. Imaging studies are uploaded on the OR computers and placed on monitors for ready viewing during the operative procedure. The surgeon supervises appropriate patient positioning on the OR table, ensures fluoroscopy is functional and that desired imaging angles are attainable with equipment at hand. The surgeon dons radiation protection gear, ensures that all who will be in the suite do likewise, and supervises sterile prep of access site(s) and subsequent draping. The surgeon leads the pre-procedural "time-out."

**Description of Intra-Service Work:** Although deployment of this prosthesis is accomplished from a single femoral or iliac access site, the requirement for accurate positioning typically means that intra-arterial catheterization is performed bilaterally. Performance of an aorto-uni-iliac graft requires additional considerations and steps related to treatment of the iliac artery that are not required for the aorto-aortic graft

Catheter placement is bundled in this procedure. Under fluoroscopic guidance, an introducer needle is used to access the vessel. A series of graded guidewires, vascular sheaths and catheters is introduced flush aortography is performed to confirm the location of the renal arteries and the aorto-iliac anatomy. The patient is then systemically anticoagulated. A rigid wire is inserted over a catheter to provide secure tracking of the large introducer sheath for the main body of the endograft. The endograft is loaded onto the guidewire and advanced through the access vessel into the aorta. The endograft is positioned and deployed under fluoroscopic guidance with intermittent angiographic control imaging. Additional limbs and extensions are implanted as required to obtain coverage of diseased aorta and common iliac. A large compliant balloon is placed over the wire into the endograft to perform balloon dilation at the proximal and distal seal zones of the endograft. An aortogram is performed for adequacy of the graft position, patency of adjacent branch vessels (renals and hypogastries), presence or absence of endoleaks, and type of endoleak if present. The patency of collateral vessels (lumbar or inferior mesenteric arteries) that may contribute to persistent endoleaks is also assessed. Adjunctive balloon angioplasty is performed for endoleak treatment, as necessary. An extension is placed to achieve fixation and seal. When the graft is in appropriate position and free of endoleaks on angiogram, the catheters and guidewires are removed.

**Description of Post-Service Work: Hospital:** Apply sterile dressings. Assist transfer of patient from operating table to gurney. Monitor patient for hemodynamic stability in transit and ensure adequate perfusion to the lower extremities. Write postoperative orders for medications, imaging, and labs. Discuss procedure and outcome with family. Write brief operative note. Dictate operative report and copy referring physician. Review post-operative imaging.

Post-operative in-hospital visits require interval history-taking for new complaints of pain or neurovascular compromise. Exam requires close monitoring for abdominal or lower extremity tenderness. All arterial access sites are monitored for bleeding or hematoma formation. Tight control of blood pressure is critical. Urinary output is followed closely for signs of hypovolemia. Frequent pulse and perfusion checks are necessary as is neurologic evaluation for any signs of spinal cord ischemia. Lower extremities are checked for emboli. Hemoglobin and coagulation labs are monitored daily. The need for routine or advanced imaging is assessed daily. Post-op CT scans are obtained, either during the inpatient stay or early in the post-discharge time period. Progress notes are recorded daily. Patient and family questions are answered. Orders are updated daily. Rounds with nursing staff and other consultants are performed daily.

Discharge day management includes communicating with all support services such as visiting nurses, referring physicians, review interval chart notes, answer patient and family questions, evaluate all pre-discharge labs, evaluate and redress the incisions, assess pain score, and perform medication reconciliation. Surgeon discusses home restrictions (ie, diet, activity, bathing) with patient and family members; writes orders for home care, discharge medications and supplies; and completes all appropriate medical records, including day of discharge progress notes and final discharge instructions.

**Office:** At each office visit, solicit an interval history for ongoing or new symptoms; examine the abdomen for tenderness, examine arterial access sites and surgical incisions for inflammation, drainage, wound infection; examine lower extremities for adequate perfusion. Order diagnostic blood tests and/or imaging studies based on findings. Review post-op CT scans and ultrasounds for possible endoleak. Make clinical decisions regarding need for repeat surgical intervention. Provide wound care as needed. Remove staples and sutures as indicated. Answer patient/family questions. Write prescriptions for medication and therapy, as necessary. Discuss progress with referring physician (verbal and written). Dictate/type progress notes for medical chart.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**34703 Elective Aorto-Uni-Iliac Repair:**

We recommend a crosswalk to CPT 34151 (*Embolectomy or thrombectomy, with or without catheter; renal, celiac, mesentery, aortoiliac artery, by abdominal incision*) with a value of 26.52 RVW. This represents a **decrease of 23.4%** from current value of 34.62 RVWs by current coding convention.

Comparison to existing codes is a complex process due to bundling of the new codes, to include pre-service planning, all radiologic S&I, and variable use of extensions with the previous codes. To calculate the current RVW using current coding convention, one would begin with the existing work of 34805. The work of bilateral non-selective catheterization is added by multiplying the RVW for 36200 by 1.5 to account for the bilaterality and then multiply by 0.5 for the multiple procedure reduction. The radiologic supervision and interpretation for EVAR is then added. All proximal and distal extensions from the level of the renal arteries down to the level of the iliac bifurcation is now included in the work of 34703. To account for this work, we multiplied the RVW for 36825 by the percentage of time that 34825 is billed together with 34805 and then applied the multiple procedure reduction. Finally, the radiologic supervision and interpretation for extensions was multiplied by this same billed together data to calculate the final existing RVW for 34703. Comparing this computed existing value with our proposed value for 34703 results in a **23.4% reduction** in existing value. The following table is a graphic explanation of this comparison.

Existing EVAR Aorto-Uni-Iliac Graft	Work RVU	Adjustment	Adjusted Work RVU
34805 Main body, Aorto-Uni-Iliac graft	22.67	None	22.67
36200-50 Bilateral catheter in aorta <i>or</i>	3.02	Bilaterality & MPPR	2.27
75952 Rad S&I code for main body	4.49	None	4.49
34825 Extension	12.80	MPPR & Billed together (67%)	4.29
75953 Rad S&I for extension	1.36	Billed together (67%)	0.91
<b>Total existing coding sequence</b>			<b>34.63</b>

New Code			
34703 Aorto-Uni-Iliac EVAR	30.25	None	<b>26.52</b>
<b>Change Existing to New</b>			<b>-23.4%</b>

### Comparison to Crosswalk

Below is a tabular comparison of to CPT 35141 (*Embolectomy or thrombectomy, with or without catheter; renal, celiac, mesentery, aortoiliac artery, by abdominal incision*)

	RVW	IWPUT	Total Time	Eval	Posit	SDW	INTRA	Post	Hosp	Office
35141	26.52	0.101	508	75			150	30	32x2, 31x4, 38	13, 12x2
<b>34703</b>	<b>26.52</b>	<b>0.110</b>	<b>507</b>	<b>110</b>	<b>20</b>	<b>20</b>	<b>150</b>	<b>35</b>	<b>33, 32, 38</b>	<b>13, 12</b>

### Comparison with Key Reference Services

The following codes were chosen as key reference services for 34X03. They are:

- 35081, *Direct repair of aneurysm, pseudoaneurysm, or excision (partial or total) and graft insertion, with or without patch graft; for aneurysm, pseudoaneurysm, and associated occlusive disease, abdominal aorta*
- 35103, *Direct repair of aneurysm, pseudoaneurysm, or excision (partial or total) and graft insertion, with or without patch graft; for ruptured aneurysm, abdominal aorta involving iliac vessels (common, hypogastric, external)*

The following table incorporates our recommended RVW for 34X03 along with the key reference services identified for this code arranged in ascending order of values.

	RVW	IWPUT	Total Time	Eval	Posit	SDW	INTRA	Post	Hosp	Office
<b>34703</b>	<b>26.52</b>	<b>0.110</b>	<b>507</b>	<b>110</b>	<b>20</b>	<b>20</b>	<b>150</b>	<b>35</b>	<b>33, 32, 38</b>	<b>13, 12</b>
35081 KRS	33.53	0.079	677	60	15	15	210	30	91, 32x3, 31x2, 38	14, 13, 12
35103 KRS	43.62	0.117	740	60			180	60	91x2, 32x3, 31x4, 38	13x2, 12

### Comparison to MPC codes

There are limited MPC codes in the RVW range of these complex procedures. We offer the following codes as brackets for our recommendations:

- MPC 35301, *Thromboendarterectomy, including patch graft, if performed; carotid, vertebral, subclavian, by neck incision*
- MPC 33641, *Repair atrial septal defect, secundum, with cardiopulmonary bypass, with or without patch*

	RVW	IWPUT	Total Time	Eval	Posit	SDW	INTRA	Post	Hosp	Office
35301 MPC	21.16	0.104	404	40	15	20	120	30	33, 32, 38	13x2
<b>34703</b>	<b>26.52</b>	<b>0.110</b>	<b>507</b>	<b>110</b>	<b>20</b>	<b>20</b>	<b>150</b>	<b>35</b>	<b>33, 32, 38</b>	<b>13, 12</b>
33641 MPC	29.58	0.094	562	60	15	20	164	40	91, 33, 32, 31, 38	14

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

**FREQUENCY INFORMATION**

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed)

34805

75952

34825

75953

36200

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty vascular surgery                      How often? Sometimes

Specialty general surgery                      How often? Sometimes

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. National frequency is not available

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?

If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. See budget neutrality excel file

Specialty vascular surgery	Frequency	Percentage	%
----------------------------	-----------	------------	---

Specialty general surgery	Frequency	Percentage	%
---------------------------	-----------	------------	---

Specialty                      Frequency 0                      Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

### **Berenson-Eggers Type of Service (BETOS) Assignment**

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Procedures

BETOS Sub-classification:

Major procedure

BETOS Sub-classification Level II:

---

### **Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 34805

## AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS SUMMARY OF RECOMMENDATION

CPT Code: 34704      Tracking Number   U4

Original Specialty Recommended RVU: **47.00**Presented Recommended RVU: **45.00**

Global Period: 090

RUC Recommended RVU: **45.00**

CPT Descriptor: Endovascular repair of infrarenal aorta and/or iliac artery(ies) by deployment of an aorto-uniiliac endograft including pre-procedure sizing and device selection, all nonselective catheterization(s), all associated radiological supervision and interpretation, all endograft extension(s) placed in the aorta from the level of the renal arteries to the iliac bifurcation, and all angioplasty/stenting performed from the level of the renal arteries to the iliac bifurcation; for rupture, including temporary aortic and/or iliac balloon occlusion when performed (eg, for aneurysm, pseudoaneurysm, dissection, penetrating ulcer, traumatic disruption)

### CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 75-year-old male with CAD and COPD presents with a ruptured infrarenal abdominal aortic aneurysm. Endovascular repair is performed by deployment of an aorto-uniiliac endograft and all required proximal infrarenal extension(s) and all distal extension(s) to the level of the iliac artery bifurcation, as necessary.

Percentage of Survey Respondents who found Vignette to be Typical: 89%

### Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 100% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 100%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 83%

Description of Pre-Service Work: Preservice endograft planning for a ruptured aneurysm must be thorough, but must also be performed as quickly as possible. The speed required for these subsequent steps depends on the patient's hemodynamic stability.

Careful assessment of available imaging studies is required to determine whether the patient is an endovascular repair candidate. Exact measurements of the aneurysm diameter and length must be undertaken quickly. This is necessary because an accurate preoperative choice of component diameters and lengths is a primary determinant of endovascular procedural success. Cross-sectional imaging from the aortic arch to femoral vessels with fine cuts are reviewed, and if patient stability permits, uploaded rapidly to a workstation, where 3D software is applied permitting iterative modelling of the aorta and device in multiplanar views and center line of flow analysis. The physician must adjust modelling for altered anatomy which is tortuous or thrombus laden. Axial imaging is used to determine diameter measurements of the aorta, iliac and femoral arteries for appropriate sizing of the main body endograft plus all limbs and extensions that will be needed. The iliac and femoral diameters also determine the success of the device delivery. Tortuosity, calcification, thrombus presence and stenoses require consideration as they may impact on device delivery. Cross section, longitudinal and center line of flow measurements, with manual adjustments where needed, are utilized to map the distances between the lowest renal artery and the distal seal zone depending on the extent and involvement of the distal aorta and iliac segments. Stretched and straightened views assist choice of correct endovascular components.

All available laboratory and other diagnostic tests are assessed thoroughly but as quickly as possible. The proposed procedure is discussed expeditiously with the patient and family including risks and expected recovery. Informed consent is obtained quickly. Expedited documentation is performed. The access site(s) is marked. Due to the significant risk of mortality and hemodynamic compromise including hemodynamic shock, the patient's operative treatment course is discussed with the anesthesia team for coordination of care. The blood bank is also informed that a massive transfusion protocol may be required. The endograft, catheters, and introducer sheaths are brought into the operating room after

verification of appropriate diameters and lengths. Aortic balloon occlusion catheters are prepared for emergent use. Ensure all technical personnel are familiar with the operative plan and required devices. Position patient on OR table. Ensure or assist with large-bore intravenous access. Ensure or assist with monitoring device placement and confirm fluoroscopy function. Don radiation protection gear and confirm that all in OR do likewise. Supervise sterile prep of access site(s) and subsequent draping. Perform pre-procedural "time-out." Be ready at any time in this process to insert an aortic balloon occlusion catheter should cardiovascular collapse occur.

#### Description of Intra-Service Work: Description of Procedure:

Although deployment of this prosthesis is accomplished from a single femoral or iliac access site, the requirement for accurate positioning typically means that intra-arterial catheterization is performed bilaterally. Performance of an aorto-uni-iliac graft requires additional considerations and steps related to treatment of the iliac artery that are not required for the aorto-aortic graft

Under fluoroscopic guidance, introducer needles are used to access the vessels. A series of graded guidewire, vascular sheaths and catheters is introduced and flush aortography is performed to confirm the location of the renal arteries and the aortoiliac anatomy. A large sheath is placed as needed in the suprarenal aorta for stabilization of an aortic occlusion balloon. At any time in this process, the aortic occlusion balloon may be inflated if the patient suffers hemorrhagic shock.

The patient may be systemically anticoagulated. A rigid wire is inserted over a catheter to provide secure tracking of the large introducer sheath for the endograft. The endograft is loaded onto the guidewire and advanced through the access vessel into the aorta. The endograft is positioned and deployed under fluoroscopic guidance with intermittent angiographic control imaging. Additional limbs and extensions are implanted as required to obtain coverage of diseased aorta and common iliac. A large compliant balloon is placed over the wire into the endograft to perform balloon dilation at the proximal and distal seal zones of the endograft. An aortogram is performed for adequacy of the graft position, patency of adjacent branch vessels (renals and hypogastrics), presence or absence of endoleaks, and type of endoleak if present. The patency of collateral vessels (lumbar or inferior mesenteric arteries) that may contribute to persistent endoleaks is also assessed. Adjunctive balloon angioplasty is performed for endoleak treatment, as necessary (not separately reportable). When the graft is in appropriate position and free of endoleak on angiogram, the catheters and guidewires are removed.

Description of Post-Service Work: patient for hemodynamic stability during transit to ICU. In ICU, assess immediately for abdominal compartment syndrome and any sign of acute mesenteric ischemia. Direct immediate and ongoing resuscitation. Order and review results of frequent and multiple blood tests. Ensure adequate perfusion to the lower extremities. Make decision regarding need for return to surgery for any signs of extensive hemorrhage or abdominal compartment syndrome. Assess lower extremities for adequate post-op perfusion. Assess for vital organ system failure, in particular, postoperative shock, renal failure, hepatic failure and/or respiratory failure. Perform multiple iterative exams to identify life threatening deterioration. Write postoperative orders for medications, imaging, and labs. Discuss procedure and outcome with family. Write brief operative note. Dictate operative report and copy referring physician(s). Communicate frequently with ICU nurses and consultants. Review post-operative imaging. Write orders for discharge to ICU.

Post-operative in-hospital visits require history-taking for any complaints of pain or neurovascular compromise. Exam require close monitoring for tenderness. All arterial access sites are monitored for bleeding or hematoma formation. Close maintenance of blood pressure is critical. Urinary output is followed closely for signs of hypovolemia. Frequent pulse and perfusion checks are necessary as is neurologic evaluation for any signs of spinal cord ischemia. Lower extremities are checked for emboli. Hemoglobin and coagulation labs are monitored daily. The need for routine or advanced imaging is assessed daily. Post-op CT scans are commonly obtained. Progress notes are recorded daily. Patient and family questions are answered. Orders are updated daily. Rounds with nursing staff and other consultants is performed daily.

Discharge day management includes communicating with all support services such as visiting nurses, referring physicians, review interval chart notes, answer patient and family questions, evaluate all pre-discharge labs, evaluate and redress the incisions, assess pain score, and perform medication reconciliation. Surgeon discusses home restrictions (ie, diet, activity, bathing) with patient and family members; writes orders for home care, discharge medications and supplies; and complete all appropriate medical records, including day of discharge progress notes and final discharge instructions.

Office: At each office visit, the surgeon take a history for any ongoing or new symptoms. Examine the abdomen for tenderness, examine arterial access sites and surgical incisions for inflammation, drainage, wound infection. Order diagnostic blood tests and/or imaging studies based on findings. Review post-op CT scans and ultrasounds for presence or absence of endoleak. Make clinical decisions regarding need for repeat surgical intervention. Provide wound care as

needed. Remove staples and sutures as indicated. Answer patient/family questions. Write prescriptions for medication and therapy, as necessary. Discuss progress with referring physician(s) (verbal and written). Dictate/type progress notes for medical chart.

**Modifier -51 Exempt Status**

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

**New Technology/Service:**

Is this new/revised procedure considered to be a new technology or service? No

**TOP KEY REFERENCE SERVICE:**

<u>Key CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
35103	090	43.62	RUC Time

CPT Descriptor Direct repair of aneurysm, pseudoaneurysm, or excision (partial or total) and graft insertion, with or without patch graft; for ruptured aneurysm, abdominal aorta involving iliac vessels (common, hypogastric, external)

**SECOND HIGHEST KEY REFERENCE SERVICE:**

<u>Key CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
35082	090	42.09	RUC Time

CPT Descriptor Direct repair of aneurysm, pseudoaneurysm, or excision (partial or total) and graft insertion, with or without patch graft; for ruptured aneurysm, abdominal aorta

**KEY MPC COMPARISON CODES:**

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

<u>MPC CPT Code 1</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>	<u>Most Recent Medicare Utilization</u>
33426	090	43.28	RUC Time	4,513

CPT Descriptor 1 Valvuloplasty, mitral valve, with cardiopulmonary bypass; with prosthetic ring

<u>MPC CPT Code 2</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>	<u>Most Recent Medicare Utilization</u>
33863	090	58.79	RUC Time	1,734

CPT Descriptor 2 Ascending aorta graft, with cardiopulmonary bypass, with aortic root replacement using valved conduit and coronary reconstruction (eg, Bentall)

<u>Other Reference CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
		0.00	

CPT Descriptor

**RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:**

Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by the mean) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Top Key Reference Code: 15      % of respondents: 28.3 %

Number of respondents who choose 2<sup>nd</sup> Key Reference Code: 8      % of respondents: 15.0 %

**TIME ESTIMATES (Median)**

	CPT Code: <u>34704</u>	Top Key Reference CPT Code: <u>35103</u>	2nd Key Reference CPT Code: <u>35082</u>
Median Pre-Service Time	100.00	60.00	60.00
Median Intra-Service Time	180.00	180.00	180.00
Median Immediate Post-service Time	60.00	60.00	60.00
Median Critical Care Time	70.0	140.00	140.00
Median Other Hospital Visit Time	210.0	200.00	235.00
Median Discharge Day Management Time	38.0	38.00	38.00
Median Office Visit Time	79.0	62.00	79.00

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUR analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**34704 Ruptured Aorto-Uni-Iliac Repair:**

We recommend the median survey value of 45.00 RVW.

Ruptured aortic aneurysms are a catastrophic event with mortality rates as high as 90%. In fact, half of all patients that suffer a ruptured iliac aneurysm will die before they can ever reach a hospital for definitive treatment. The mortality for surgical repair ranges from 40-60% for patients who are able to present for repair. Without rapid treatment, death is certain. These patients present in varying degrees of hemorrhagic shock and are typically plagued by multisystem organ failure post-operatively. Despite advances in detection and treatment of aneurysmal disease, the rupture rate has remained relatively constant over the past two decades at roughly 15%.

For the purposes of work consideration, it is important to note that patients who die in the operating room would be coded with the -53 modifier "discontinued procedure" which typically results in a 50% payment reduction (e.g. WPS 2016 payment policy).

EVAR for rupture offers a less invasive approach for treatment but remains an extremely intense service in an attempt to save the life of an actively dying patient. As stated above, this is a new code to capture the significantly different work and extremely high intensity compared to an elective aneurysm repair.

This procedure, endovascular repair of a ruptured aortic aneurysm, was never imagined in 2000 when the original EVAR codes were valued but this concept of differential work for elective and ruptured aneurysm repair exists in CPT codes for open surgical repair. These new EVAR codes for rupture include the additional work of temporary balloon aortic occlusion as needed for hemodynamic instability and the significantly different, more complex and longer post-operative care.

This code includes a complex urgently performed pre-planning, all radiologic supervision and interpretation, all routine catheterization, almost all currently placed extensions, and the extension S&I into codes that better describe the current practice of EVAR and conform with current concepts in code creation and valuation.

**Comment on Postoperative Visit Pattern**

The visit pattern for 34704 has been changed following discussion with the Pre-facilitation Committee. This committee questioned whether the operating surgeons actually provide critical care level visits, and our answer is yes. Particularly, when it comes to providing immediate post-operative care for ruptured aortic aneurysms, the vascular surgeon is the captain of the ship. Questions of whether hypotension should be treated with volume or vasopressors is a clinical judgment best handled by the surgeon. Questions of whether a ruptured aneurysm patient is failing because he/she needs a decompressive laparotomy vs more volume or more vasopressors is a highest level and most complex decision makeable only by the operating surgeon. Nevertheless, we appreciate the concern of the pre-facilitation committee, and we are responding to their recommendation by reducing one 99291 critical visit to 99233 and one 99233 to 99232.

### Comparison with Key Reference Services

The codes that were chosen most often as key reference services for 34704 are:

- 35082, *Direct repair of aneurysm, pseudoaneurysm, or excision (partial or total) and graft insertion, with or without patch graft; for ruptured aneurysm, abdominal aorta*
- 35103, *Direct repair of aneurysm, pseudoaneurysm, or excision (partial or total) and graft insertion, with or without patch graft; for ruptured aneurysm, abdominal aorta involving iliac vessels (common, hypogastric, external)*

The following table incorporates our recommended RVW for 34704 along with the key reference services identified for this code arranged in ascending order of values.

	RVW	IWPUT	Total Time	Eval	Posit	SDW	INTRA	Post	Hosp	Office
35082 KRS	42.09	0.098	792	60			180	60	91x2, 33, 32 x3, 31x3, 38	14, 13, 12
35103 KRS	43.62	0.117	740	60			180	60	91x2, 32x3, 31x4, 38	13x2, 12
<b>34704</b>	<b>45.00</b>	<b>0.140</b>	<b>747</b>	<b>70</b>	<b>20</b>	<b>20</b>	<b>180</b>	<b>60</b>	<b>91, 33x2, 32x2, 31, 38</b>	<b>14, 13, 12</b>

### Comparison to MPC codes

There are limited MPC codes in the RVW range of these complex procedures. We offer the following codes as brackets for our recommendations:

- MPC 33426, *Valvuloplasty, mitral valve, with cardiopulmonary bypass; with prosthetic ring*
- MPC 33863, *Ascending aorta graft, with cardiopulmonary bypass, with aortic root replacement using valved conduit and coronary reconstruction (eg, Bentall)*

	RVW	IWPUT	Total Time	Eval	Posit	SDW	INTRA	Post	Hosp	Office
33426 MPC	43.28	0.111	776	60	15	20	205	40	91, 33x3, 32 x2, 31, 38	14, 13
<b>34704</b>	<b>45.00</b>	<b>0.140</b>	<b>747</b>	<b>70</b>	<b>20</b>	<b>20</b>	<b>180</b>	<b>60</b>	<b>91, 33x2, 32x2, 31, 38</b>	<b>14, 13, 12</b>
33863 MPC	58.79	0.121	905	60	15	20	287	40	91x2, 33x3, 32x2, 31, 38	14

### Additional Rationale

This family was surveyed by a multispecialty group. Detailed analysis of the survey results by expert panel, comparison to key reference services, MPC codes, and to the other codes have resulted in our recommendations of median survey RVW of 36.50 for code 34X08. This extremely intense service merits the relatively high IWPUT of 0.139. The following short table demonstrates IWPUTs of highly intense services. We believe the intensity of ruptured iliac aneurysm repair is equal or greater than any of the following.

CPT	Descriptor	IWPUT	RVW	INTRA	Total Time
22864	Removal of total disc arthroplasty (artificial disc), anterior approach, single interspace; cervical	0.1335	29.40	150	457
47130	Hepatectomy, resection of liver; total right lobectomy	0.1338	57.19	240	870
22861	Revision including replacement of total disc arthroplasty (artificial disc), anterior approach, single interspace; cervical	0.1345	33.36	180	477
33681	Closure of single ventricular septal defect, with or without patch;	0.1369	32.34	150	507
61798	Stereotactic radiosurgery (particle beam, gamma ray, or linear accelerator); 1 complex cranial lesion	0.1372	19.85	120	225
22856	Total disc arthroplasty (artificial disc), anterior approach, including discectomy with end plate preparation (includes osteophyctomy for nerve root or spinal cord decompression and microdissection); single interspace, cervical	0.1386	24.05	120	367
22551	Arthrodesis, anterior interbody, including disc space preparation, discectomy, osteophyctomy and decompression of spinal cord and/or nerve roots; cervical below C2	0.1403	25.00	120	395
43313	Esophagoplasty for congenital defect (plastic repair or reconstruction), thoracic approach; without repair of congenital tracheoesophageal fistula	0.1741	48.45	178	713
45126	Pelvic exenteration for colorectal malignancy, with proctectomy (with or without colostomy), with removal of bladder and ureteral transplantations, and/or hysterectomy, or cervicectomy, with or without removal of tube(s), with or without removal of ovary(s), or any combination thereof	0.1983	49.10	120	755
43314	Esophagoplasty for congenital defect (plastic repair or reconstruction), thoracic approach; with repair of congenital tracheoesophageal fistula	0.2021	53.43	178	713

## SERVICES REPORTED WITH MULTIPLE CPT CODES

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

- Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and

accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed)

34805  
75952  
34825  
75953  
36200

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty vascular surgery                      How often? Sometimes

Specialty general surgery                      How often? Sometimes

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. National frequency is not available

Specialty	Frequency	Percentage	%
