**Background:** In October 2015, the Emergent Procedures Workgroup identified 34 services that have 60 minutes of pre-service clinical staff time in the facility-only setting. The Emergent Procedures Workgroup referred these issues to the RAW to review as potentially misvalued. Specialty societies should submit action plans addressing the appropriateness of site of service, global period, and dominant specialty for these services. The RAW will review the action plans in January 2016. The Workgroup had a robust discussion on these codes and determined that the 090 day global period is correct and an efficient bundling of the required services as well as share the same global period for all fracture care services. The Workgroup agreed with the specialty societies that the appropriate providers (emergency medicine and orthopaedic surgery) are reporting these services. The Workgroup noted that the emergency physicians are appropriately appending modifier -54. The specialty societies indicated that for these services that require anesthesia, it is unlikely that some of the specialties indicated in the Medicare utilization data actually perform the service under general anesthesia or regional block. The Workgroup agreed and recommends that the specialty societies develop a CPT Assistant article to reinforce correct coding and modifier use for all fracture codes and guidance on the meaning of "requiring anesthesia" and "with anesthesia" as it relates to restorative fracture care. The CPT Assistant article should also address the issue of restorative care for closed treatment without manipulation. The Workgroup determined that the Practice Expense Subcommittee are revising codes clinical staff time in the facility-only setting pre-time from 60 minutes and implementing a standard change to 20 minutes. The Workgroup refers these 34 emergent procedure codes identified back to the PE Subcommittee to apply this new standard. The Workgroup noted that for these low volume services any additional aberrations will be identified in future screens if applicable and the Workgroup does not need to examine these services further at this time. In April 2016, the PE Subcommittee reviewed this service and recommends 20 minutes of clinical staff pre-service time.

## ***RUC Recommendations to Develop CPT Assistant Articles - Incomplete Issues***

<b>31500 Intubation, endotracheal, emergency procedure</b>	<u><b>Screen:</b></u> CMS High Expenditure Procedural Codes2	<u><b>RUC Meeting:</b></u> January 2016	<u><b>RUC Rec:</b></u> 3.00 and Refer to CPT Assistant	<u><b>Specialty Society:</b></u> ACEP, ASA	<u><b>CPT Asst Status:</b></u> Article Needed
--	--	--	--	---	--

**Background:** In the NPRM for 2016 CMS re-ran the high expenditure services across specialties with Medicare allowed charges of \$10 million or more. CMS identified the top 20 codes by specialty in terms of allowed charges, excluding 010 and 090-day global services, anesthesia and Evaluation and Management services and services reviewed since CY 2010. In January 2016, the RUC discussed the unique patient population treated with CPT code 31500. The specialty described that typically the same physician will report this on the same day as a critical care code (>50% of the time) but that this will not impact critical care code reporting. The specialty explained that underlying medical issues which caused the need for a patient to receive the intubation of CPT code 31500 and communication with family around the care of these issues is categorized within critical care time but time spent on this intubation would not count toward the critical care time. Given that you need at least 30 minutes for proper coding of critical care for patients, the RUC recommends that the specialty societies develop a CPT Assistant article to clarify when to report this service. The article will help ensure providers understand the times for these two services do not overlap.

Final Rule for 2015

**RUC Meeting:**

October 2015

**RUC Rec:**

0.55 and refer to CPT Assistant

**Specialty Society:**

ACR, SIR, SVS

**CPT Asst Status:**

Article Needed

**Background:** When Medicare began paying for abdominal aortic aneurysm (AAA) ultrasound screening in CY 2007, CMS created HCPCS code G0389 and set the RVUs at the same level as CPT code 76775. CMS noted in the CY 2007 final rule with comment period that CPT code 76775 was used to report the service when furnished as a diagnostic test and that we believed the service reflected by G0389 used equivalent resources and work intensity to those contained in CPT code 76775. In the CY 2014 proposed rule, based on a RUC recommendation, we proposed to replace the ultrasound room included as a direct PE input for CPT code 76775 with a portable ultrasound unit. Since all the RVUs (including the PE RVUs) for G0389 were crosswalked from CPT code 76775, the proposed PE RVUs for G0389 in the CY 2014 proposed rule were reduced significantly as a result of this change to the direct PE inputs for 76775. However, CMS did not discuss the applicability of this change to G0389 in the proposed rule's preamble and did not receive any comments on G0389 in response to the proposed rule. CMS finalized the change to CPT code 76775 in the CY 2014 final rule with comment period and the corresponding PE RVUs for G0389 were also reduced. Subsequent to the publication of the CY 2014 final rule, a stakeholder suggested that the reduction in the RVUs for G0389 did not accurately reflect the resources involved in furnishing the service and asked that CMS consider using an alternative crosswalk. Specifically, the stakeholder stated that the type of equipment typically used in furnishing G0389 is different than that used for CPT code 76775, the time involved in furnishing G0389 is greater than that of CPT code 76775, and the specialty that typically furnishes G0389 is different than the one that typically furnishes CPT code 76775. The stakeholder suggested an alternative crosswalk of CPT code 76705. After considering the issue, CMS are proposing G0389 as a potentially misvalued code and seeking recommendations regarding the appropriate inputs that should be used to develop RVUs for this code. CMS has not reviewed the inputs used to develop RVUs for this code since it was established in CY 2007 and the RVUs were directly crosswalked from 76705. Based on the issues raised by stakeholders, CMS believes that it should value this code through the standard methodologies, including the full PE RVU methodology. In order to do so, CMS are proposing to include this code on our list of proposed potentially misvalued codes and seek input from the public and other stakeholders, including the RUC, regarding the appropriate work RVU, time, and direct PE inputs that reflect the typical resources involved in furnishing the service. In September 2014 the RUC referred G0389 to CPT to transition this code to a Category I code for the 2016 cycle. In October 2015, the RUC raised concerns that the practice expense recommendation was prepared by specialty societies that are not the dominant provider of this service according to Medicare claims data. The presenters explained that this is likely due to increased use of G code G0389 for a handheld device, which is not the intended use of the CPT code that is currently used as a crosswalk for the G code. The presenters explained and the RUC agreed that this is likely an issue of miscoding. The RUC recommends that the specialty develop a CPT Assistant article to clarify appropriate use of the new CPT code 767X1 that will replace the G code G0389.

Harvard Valued - Utilization over 30,000 / CPT 2013 Utilization Review

**RUC Meeting:**

January 2016

**RUC Rec:**

0.80. Refer to CPT Assistant and review 2 years after article is published.

**Specialty Society:**

ACR, ACNM, SNM

**CPT Asst Status:**

Article Needed

**Background:** In April 2011, CPT Code 78007, Thyroid imaging, with uptake; multiple determinations was identified in the Harvard Valued-Utilization over 30,000 screen. As part of the review of the entire endocrine family, the specialty societies determined that revisions to the parathyroid imaging procedures were necessary to reflect current bundling policies, guideline changes and new technology. AMA Staff reviewed the work neutrality impacts for codes reviewed in the CPT 2013 cycle. It appeared that was only one issue where there was a large growth in utilization in the first year. For CPT 2013 the Parathyroid Imaging codes were not work neutral, and it was initially estimated as a savings overall. It appears that there was 40% increase from what was projected. The specialty societies submitted an action plan indicating that literature supporting parathyroid scintigraphy as an effective diagnostic study for parathyroid disease has recently emerged and supports the clinical utility thus increasing utilization. Secondly, the availability of SPECT/CT cameras has increased and is greater than initially predicted, allowing for a higher utilization. The Workgroup agreed and also noted that these services are conducted on patients who are referred to the radiologists or nuclear medicine physicians. The physicians providing these services do not control the number of patients referred to them who receive these services. The Workgroup recommends that the specialty societies develop a CPT Assistant article to address potential current use of 78803 rather than the new codes 78071 and 78072. The Workgroup noted that these services are on the new technology list for review later this year and should be postponed and reviewed in 2 years after the CPT Assistant article is published.

In April 2015, the RAW reviewed services in which the RUC recommended that a CPT Assistant article be developed. The Workgroup requested that the specialty societies develop an action plan to address the increase in utilization and effectiveness of CPT Assistant article. In October 2017 the RUC recommended that the specialty societies develop a CPT Assistant article to ensure the codes are being used correctly. The May 2013 article was limited to a question of treating a scar using the laser codes 96920-96922, stating that would not be appropriate, and that 96999, Unlisted special dermatological service or procedure, should be used instead. A comprehensive article, with examples, on the use of the use of the three laser codes is needed. Review again in 2017 after article has taken effect.

## *RUC Recommendations to Develop CPT Assistant Articles - Incomplete Issues*

---

<b>G0389</b>	<b>Ultrasound b-scan and/or real time with image documentation; for abdominal aortic aneurysm (AAA) screening</b>	<b><u>Screen:</u></b> Final Rule for 2015	<b><u>RUC Meeting:</u></b> October 2015	<b><u>RUC Rec:</u></b> Refer to CPT Assistant.	<b><u>Specialty Society:</u></b> ACC, ACP, ACR, SCAI, SVS	<b><u>CPT Asst Status:</u></b> Article Needed
--------------	---	--	--	---	--	--

**Background:** When Medicare began paying for abdominal aortic aneurysm (AAA) ultrasound screening in CY 2007, CMS created HCPCS code G0389 and set the RVUs at the same level as CPT code 76775. CMS noted in the CY 2007 final rule with comment period that CPT code 76775 was used to report the service when furnished as a diagnostic test and that we believed the service reflected by G0389 used equivalent resources and work intensity to those contained in CPT code 76775. In the CY 2014 proposed rule, based on a RUC recommendation, we proposed to replace the ultrasound room included as a direct PE input for CPT code 76775 with a portable ultrasound unit. Since all the RVUs (including the PE RVUs) for G0389 were crosswalked from CPT code 76775, the proposed PE RVUs for G0389 in the CY 2014 proposed rule were reduced significantly as a result of this change to the direct PE inputs for 76775. However, CMS did not discuss the applicability of this change to G0389 in the proposed rule's preamble and did not receive any comments on G0389 in response to the proposed rule. CMS finalized the change to CPT code 76775 in the CY 2014 final rule with comment period and the corresponding PE RVUs for G0389 were also reduced. Subsequent to the publication of the CY 2014 final rule, a stakeholder suggested that the reduction in the RVUs for G0389 did not accurately reflect the resources involved in furnishing the service and asked that CMS consider using an alternative crosswalk. Specifically, the stakeholder stated that the type of equipment typically used in furnishing G0389 is different than that used for CPT code 76775, the time involved in furnishing G0389 is greater than that of CPT code 76775, and the specialty that typically furnishes G0389 is different than the one that typically furnishes CPT code 76775. The stakeholder suggested an alternative crosswalk of CPT code 76705. After considering the issue, CMS are proposing G0389 as a potentially misvalued code and seeking recommendations regarding the appropriate inputs that should be used to develop RVUs for this code. CMS has not reviewed the inputs used to develop RVUs for this code since it was established in CY 2007 and the RVUs were directly crosswalked from 76705. Based on the issues raised by stakeholders, CMS believes that it should value this code through the standard methodologies, including the full PE RVU methodology. In order to do so, CMS are proposing to include this code on our list of proposed potentially misvalued codes and seek input from the public and other stakeholders, including the RUC, regarding the appropriate work RVU, time, and direct PE inputs that reflect the typical resources involved in furnishing the service. In September 2014 the RUC referred G0389 to CPT to transition this code to a Category I code for the 2016 cycle. In October 2015, the RUC raised concerns that the practice expense recommendation was prepared by specialty societies that are not the dominant provider of this service according to Medicare claims data. The presenters explained that this is likely due to increased use of G code G0389 for a handheld device, which is not the intended use of the CPT code that is currently used as a crosswalk for the G code. The presenters explained and the RUC agreed that this is likely an issue of miscoding. The RUC recommends that the specialty develop a CPT Assistant article to clarify appropriate use of the new CPT code 767X1 that will replace the G code G0389.

Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81225	CYP2C19 (cytochrome P450, family 2, subfamily C, polypeptide 19) (eg, drug metabolism), gene analysis, common variants (eg, *2, *3, *4, *8, *17)	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012	October 2015	Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81227	CYP2C9 (cytochrome P450, family 2, subfamily C, polypeptide 9) (eg, drug metabolism), gene analysis, common variants (eg, *2, *3, *5, *6)	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012	October 2015	Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑

<i><b>CPT Code</b></i>	<i><b>2016 Descriptor</b></i>	<i><b>RUC Meeting</b></i>	<i><b>Issue</b></i>	<i><b>Tab</b></i>	<i><b>CPT Year</b></i>	<i><b>Date to Re-Review</b></i>	<i><b>RUC Rec</b></i>	<i><b>Complete</b></i>
81235	EGFR (epidermal growth factor receptor) (eg, non-small cell lung cancer) gene analysis, common variants (eg, exon 19 LREA deletion, L858R, T790M, G719A, G719S, L861Q)	Sep 2011	Molecular Pathology Test - Tier 1	09	CPT 2013	September 2016	Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81240	F2 (prothrombin, coagulation factor II) (eg, hereditary hypercoagulability) gene analysis, 20210G>A variant	Apr 2011	Molecular Pathology Test - Tier 1	15	CPT 2012	October 2015	Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81241	F5 (coagulation factor V) (eg, hereditary hypercoagulability) gene analysis, Leiden variant	Apr 2011	Molecular Pathology Test - Tier 1	15	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81243	FMR1 (fragile X mental retardation 1) (eg, fragile X mental retardation) gene analysis; evaluation to detect abnormal (eg, expanded) alleles	Apr 2011	Molecular Pathology - Tier 1	15	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81244	FMR1 (Fragile X mental retardation 1) (eg, fragile X mental retardation) gene analysis; characterization of alleles (eg, expanded size and methylation status)	Apr 2011	Molecular Pathology - Tier 1	15	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81245	FLT3 (fms-related tyrosine kinase 3) (eg, acute myeloid leukemia), gene analysis; internal tandem duplication (ITD) variants (ie, exons 14, 15)	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑

<i><b>CPT Code</b></i>	<i><b>2016 Descriptor</b></i>	<i><b>RUC Meeting</b></i>	<i><b>Issue</b></i>	<i><b>Tab</b></i>	<i><b>CPT Year</b></i>	<i><b>Date to Re-Review</b></i>	<i><b>RUC Rec</b></i>	<i><b>Complete</b></i>
81252	GJB2 (gap junction protein, beta 2, 26kDa, connexin 26) (eg, nonsyndromic hearing loss) gene analysis; full gene sequence	Sep 2011	Molecular Pathology Test - Tier 1	09	CPT 2013	September 2016	Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81253	GJB2 (gap junction protein, beta 2, 26kDa, connexin 26) (eg, nonsyndromic hearing loss) gene analysis; known familial variants	Sep 2011	Molecular Pathology Test - Tier 1	09	CPT 2013	September 2016	Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81254	GJB6 (gap junction protein, beta 6, 30kDa, connexin 30) (eg, nonsyndromic hearing loss) gene analysis, common variants (eg, 309kb [del(GJB6-D13S1830)] and 232kb [del(GJB6-D13S1854)])	Sep 2011	Molecular Pathology Test - Tier 1	09	CPT 2013	September 2016	Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81256	HFE (hemochromatosis) (eg, hereditary hemochromatosis) gene analysis, common variants (eg, C282Y, H63D)	Apr 2011	Molecular Pathology - Tier 1	15	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81257	HBA1/HBA2 (alpha globin 1 and alpha globin 2) (eg, alpha thalassemia, Hb Bart hydrops fetalis syndrome, HbH disease), gene analysis, for common deletions or variant (eg, Southeast Asian, Thai, Filipino, Mediterranean, alpha3.7, alpha4.2, alpha20.5, and Constant Spring)	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81261	IGH@ (Immunoglobulin heavy chain locus) (eg, leukemias and lymphomas, B-cell), gene rearrangement analysis to detect abnormal clonal population(s); amplified methodology (eg, polymerase chain reaction)	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑

<i><b>CPT Code</b></i>	<i><b>2016 Descriptor</b></i>	<i><b>RUC Meeting</b></i>	<i><b>Issue</b></i>	<i><b>Tab</b></i>	<i><b>CPT Year</b></i>	<i><b>Date to Re-Review</b></i>	<i><b>RUC Rec</b></i>	<i><b>Complete</b></i>
81262	IGH@ (Immunoglobulin heavy chain locus) (eg, leukemias and lymphomas, B-cell), gene rearrangement analysis to detect abnormal clonal population(s); direct probe methodology (eg, Southern blot)	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81263	IGH@ (Immunoglobulin heavy chain locus) (eg, leukemia and lymphoma, B-cell), variable region somatic mutation analysis	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81264	IGK@ (Immunoglobulin kappa light chain locus) (eg, leukemia and lymphoma, B-cell), gene rearrangement analysis, evaluation to detect abnormal clonal population(s)	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81265	Comparative analysis using Short Tandem Repeat (STR) markers; patient and comparative specimen (eg, pre-transplant recipient and donor germline testing, post-transplant non-hematopoietic recipient germline [eg, buccal swab or other germline tissue sample] and donor testing, twin zygosity testing, or maternal cell contamination of fetal cells)	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81266	Comparative analysis using Short Tandem Repeat (STR) markers; each additional specimen (eg, additional cord blood donor, additional fetal samples from different cultures, or additional zygosity in multiple birth pregnancies) (List separately in addition to code for primary procedure)	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012	October 2015	Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑

<i><b>CPT Code</b></i>	<i><b>2016 Descriptor</b></i>	<i><b>RUC Meeting</b></i>	<i><b>Issue</b></i>	<i><b>Tab</b></i>	<i><b>CPT Year</b></i>	<i><b>Date to Re-Review</b></i>	<i><b>RUC Rec</b></i>	<i><b>Complete</b></i>
81267	Chimerism (engraftment) analysis, post transplantation specimen (eg, hematopoietic stem cell), includes comparison to previously performed baseline analyses; without cell selection	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81268	Chimerism (engraftment) analysis, post transplantation specimen (eg, hematopoietic stem cell), includes comparison to previously performed baseline analyses; with cell selection (eg, CD3, CD33), each cell type	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81270	JAK2 (Janus kinase 2) (eg, myeloproliferative disorder) gene analysis, p.Val617Phe (V617F) variant	Apr 2011	Molecular Pathology - Tier 1	15	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81275	KRAS (Kirsten rat sarcoma viral oncogene homolog) (eg, carcinoma) gene analysis; variants in exon 2 (eg, codons 12 and 13)	Apr 2011	Molecular Pathology - Tier 1	15	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81291	MTHFR (5,10-methylenetetrahydrofolate reductase) (eg, hereditary hypercoagulability) gene analysis, common variants (eg, 677T, 1298C)	Apr 2011	Molecular Pathology - Tier 1	15	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81292	MLH1 (mutL homolog 1, colon cancer, nonpolyposis type 2) (eg, hereditary non-polyposis colorectal cancer, Lynch syndrome) gene analysis; full sequence analysis	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑

<i><b>CPT Code</b></i>	<i><b>2016 Descriptor</b></i>	<i><b>RUC Meeting</b></i>	<i><b>Issue</b></i>	<i><b>Tab</b></i>	<i><b>CPT Year</b></i>	<i><b>Date to Re-Review</b></i>	<i><b>RUC Rec</b></i>	<i><b>Complete</b></i>
81293	MLH1 (mutL homolog 1, colon cancer, nonpolyposis type 2) (eg, hereditary non-polyposis colorectal cancer, Lynch syndrome) gene analysis; known familial variants	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81294	MLH1 (mutL homolog 1, colon cancer, nonpolyposis type 2) (eg, hereditary non-polyposis colorectal cancer, Lynch syndrome) gene analysis; duplication/deletion variants	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81295	MSH2 (mutS homolog 2, colon cancer, nonpolyposis type 1) (eg, hereditary non-polyposis colorectal cancer, Lynch syndrome) gene analysis; full sequence analysis	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81296	MSH2 (mutS homolog 2, colon cancer, nonpolyposis type 1) (eg, hereditary non-polyposis colorectal cancer, Lynch syndrome) gene analysis; known familial variants	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81297	MSH2 (mutS homolog 2, colon cancer, nonpolyposis type 1) (eg, hereditary non-polyposis colorectal cancer, Lynch syndrome) gene analysis; duplication/deletion variants	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81298	MSH6 (mutS homolog 6 [E. coli]) (eg, hereditary non-polyposis colorectal cancer, Lynch syndrome) gene analysis; full sequence analysis	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑

<i><b>CPT Code</b></i>	<i><b>2016 Descriptor</b></i>	<i><b>RUC Meeting</b></i>	<i><b>Issue</b></i>	<i><b>Tab</b></i>	<i><b>CPT Year</b></i>	<i><b>Date to Re-Review</b></i>	<i><b>RUC Rec</b></i>	<i><b>Complete</b></i>
81299	MSH6 (mutS homolog 6 [E. coli]) (eg, hereditary non-polyposis colorectal cancer, Lynch syndrome) gene analysis; known familial variants	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	<input checked="" type="checkbox"/>
81300	MSH6 (mutS homolog 6 [E. coli]) (eg, hereditary non-polyposis colorectal cancer, Lynch syndrome) gene analysis; duplication/deletion variants	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012	October 2015	Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	<input checked="" type="checkbox"/>
81301	Microsatellite instability analysis (eg, hereditary non-polyposis colorectal cancer, Lynch syndrome) of markers for mismatch repair deficiency (eg, BAT25, BAT26), includes comparison of neoplastic and normal tissue, if performed	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	<input checked="" type="checkbox"/>
81302	MECP2 (methyl CpG binding protein 2) (eg, Rett syndrome) gene analysis; full sequence analysis	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	<input checked="" type="checkbox"/>
81303	MECP2 (methyl CpG binding protein 2) (eg, Rett syndrome) gene analysis; known familial variant	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	<input checked="" type="checkbox"/>
81304	MECP2 (methyl CpG binding protein 2) (eg, Rett syndrome) gene analysis; duplication/deletion variants	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	<input checked="" type="checkbox"/>

<i><b>CPT Code</b></i>	<i><b>2016 Descriptor</b></i>	<i><b>RUC Meeting</b></i>	<i><b>Issue</b></i>	<i><b>Tab</b></i>	<i><b>CPT Year</b></i>	<i><b>Date to Re-Review</b></i>	<i><b>RUC Rec</b></i>	<i><b>Complete</b></i>
81315	PML/RARalpha, (t(15;17)), (promyelocytic leukemia/retinoic acid receptor alpha) (eg, promyelocytic leukemia) translocation analysis; common breakpoints (eg, intron 3 and intron 6), qualitative or quantitative	Apr 2011	Molecular Pathology - Tier 1	15	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81316	PML/RARalpha, (t(15;17)), (promyelocytic leukemia/retinoic acid receptor alpha) (eg, promyelocytic leukemia) translocation analysis; single breakpoint (eg, intron 3, intron 6 or exon 6), qualitative or quantitative	Apr 2011	Molecular Pathology - Tier 1	15	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81317	PMS2 (postmeiotic segregation increased 2 [S. cerevisiae]) (eg, hereditary non-polyposis colorectal cancer, Lynch syndrome) gene analysis; full sequence analysis	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81318	PMS2 (postmeiotic segregation increased 2 [S. cerevisiae]) (eg, hereditary non-polyposis colorectal cancer, Lynch syndrome) gene analysis; known familial variants	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81319	PMS2 (postmeiotic segregation increased 2 [S. cerevisiae]) (eg, hereditary non-polyposis colorectal cancer, Lynch syndrome) gene analysis; duplication/deletion variants	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81321	PTEN (phosphatase and tensin homolog) (eg, Cowden syndrome, PTEN hamartoma tumor syndrome) gene analysis; full sequence analysis	Sep 2011	Molecular Pathology Test - Tier 1	09	CPT 2013	September 2016	Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑

<i><b>CPT Code</b></i>	<i><b>2016 Descriptor</b></i>	<i><b>RUC Meeting</b></i>	<i><b>Issue</b></i>	<i><b>Tab</b></i>	<i><b>CPT Year</b></i>	<i><b>Date to Re-Review</b></i>	<i><b>RUC Rec</b></i>	<i><b>Complete</b></i>
81322	PTEN (phosphatase and tensin homolog) (eg, Cowden syndrome, PTEN hamartoma tumor syndrome) gene analysis; known familial variant	Sep 2011	Molecular Pathology Test - Tier 1	09	CPT 2013	September 2016	Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81323	PTEN (phosphatase and tensin homolog) (eg, Cowden syndrome, PTEN hamartoma tumor syndrome) gene analysis; duplication/deletion variant	Sep 2011	Molecular Pathology Test - Tier 1	09	CPT 2013	September 2016	Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81331	SNRPN/UBE3A (small nuclear ribonucleoprotein polypeptide N and ubiquitin protein ligase E3A) (eg, Prader-Willi syndrome and/or Angelman syndrome), methylation analysis	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81332	SERPINA1 (serpin peptidase inhibitor, clade A, alpha-1 antiproteinase, antitrypsin, member 1) (eg, alpha-1-antitrypsin deficiency), gene analysis, common variants (eg, *S and *Z)	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81340	TRB@ (T cell antigen receptor, beta) (eg, leukemia and lymphoma), gene rearrangement analysis to detect abnormal clonal population(s); using amplification methodology (eg, polymerase chain reaction)	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81341	TRB@ (T cell antigen receptor, beta) (eg, leukemia and lymphoma), gene rearrangement analysis to detect abnormal clonal population(s); using direct probe methodology (eg, Southern blot)	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑

<i><b>CPT Code</b></i>	<i><b>2016 Descriptor</b></i>	<i><b>RUC Meeting</b></i>	<i><b>Issue</b></i>	<i><b>Tab</b></i>	<i><b>CPT Year</b></i>	<i><b>Date to Re-Review</b></i>	<i><b>RUC Rec</b></i>	<i><b>Complete</b></i>
81342	TRG@ (T cell antigen receptor, gamma) (eg, leukemia and lymphoma), gene rearrangement analysis, evaluation to detect abnormal clonal population(s)	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81350	UGT1A1 (UDP glucuronosyltransferase 1 family, polypeptide A1) (eg, irinotecan metabolism), gene analysis, common variants (eg, *28, *36, *37)	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81355	VKORC1 (vitamin K epoxide reductase complex, subunit 1) (eg, warfarin metabolism), gene analysis, common variant(s) (eg, -1639G>A, c.173+1000C>T)	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81370	HLA Class I and II typing, low resolution (eg, antigen equivalents); HLA-A, -B, -C, -DRB1/3/4/5, and -DQB1	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81371	HLA Class I and II typing, low resolution (eg, antigen equivalents); HLA-A, -B, and -DRB1 (eg, verification typing)	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81372	HLA Class I typing, low resolution (eg, antigen equivalents); complete (ie, HLA-A, -B, and -C)	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑

<i><b>CPT Code</b></i>	<i><b>2016 Descriptor</b></i>	<i><b>RUC Meeting</b></i>	<i><b>Issue</b></i>	<i><b>Tab</b></i>	<i><b>CPT Year</b></i>	<i><b>Date to Re-Review</b></i>	<i><b>RUC Rec</b></i>	<i><b>Complete</b></i>
81373	HLA Class I typing, low resolution (eg, antigen equivalents); one locus (eg, HLA-A, -B, or -C), each	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	<input checked="" type="checkbox"/>
81374	HLA Class I typing, low resolution (eg, antigen equivalents); one antigen equivalent (eg, B*27), each	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	<input checked="" type="checkbox"/>
81375	HLA Class II typing, low resolution (eg, antigen equivalents); HLA-DRB1/3/4/5 and -DQB1	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	<input checked="" type="checkbox"/>
81376	HLA Class II typing, low resolution (eg, antigen equivalents); one locus (eg, HLA-DRB1, -DRB3/4/5, -DQB1, -DQA1, -DPB1, or -DPA1), each	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	<input checked="" type="checkbox"/>
81377	HLA Class II typing, low resolution (eg, antigen equivalents); one antigen equivalent, each	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	<input checked="" type="checkbox"/>
81378	HLA Class I and II typing, high resolution (ie, alleles or allele groups), HLA-A, -B, -C, and -DRB1	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	<input checked="" type="checkbox"/>

99498	Advance care planning including the explanation and discussion of advance directives such as standard forms (with completion of such forms, when performed), by the physician or other qualified health care professional; each additional 30 minutes (List separately in addition to code for primary procedure)	Jan 2014	Advance Care Planning	19	CPT 2015	September 2017		<input type="checkbox"/>

## New Technology/Services Timeline

1. Code is identified as a new technology/service at the RUC meeting in which it is initially reviewed.
2. Code is flagged in the next version of the RUC database with date to be reviewed
3. Code will be reviewed in 5 years (depending on what meeting in the CPT/RUC cycle it is initially reviewed) after at least three years of data are available.

AMA/Specialty Society RVS Update Committee Summary of Recommendations

April 2016

**Psychiatric Collaborative Care Management Services**

In February 2016, the CPT Editorial Panel created three new codes to describe a model for providing psychiatric care in the primary care setting. This code set is one of several in response to a request from CMS to facilitate appropriate valuation of the services furnished under the Collaborative Care Model (CoCM). This CoCM is used to treat patients with common psychiatric conditions in the primary care setting through the provision of a defined set of services which operationalize the following core concepts: 1) Patient-Centered Team Care/Collaborative Care; 2) Population-Based Care; 3) Measurement-Based Treatment to Target; and 4) Evidence-Based Care.

The RUC reviewed the new code set for Psychiatric Collaborative Care Management, which captures a primary care physician working with a behavioral health manager and consulting psychiatrist to manage patient psychiatric care. The specialty societies requested that this issue be deferred until the October 2016 RUC meeting. The RUC noted that an Ad Hoc Workgroup has been created to provide feedback and guidance to the specialties involved to appropriately survey this code set. The Workgroup will review the unique survey plan before it goes to the Research Subcommittee for approval. **The RUC recommends deferral of the valuation of CPT codes 99492, 99493, and 99494 to the October 2016 RUC meeting.**

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
<b>Evaluation and Management</b>				
<b>Care Management Services</b>				
<i>Care management services are management, and support services provided by clinical staff under the direction of a physician or other qualified health care professional, to a patient residing at home or in a domiciliary, rest home, or assisted living facility. Services may include establishing, implementing, revising, or monitoring the care plan, coordinating the care of other professionals and agencies, and educating the patient or caregiver about the patient's condition, care plan, and prognosis. The physician or other qualified health care professional provides or oversees the management and/or coordination of services, as needed, for all medical</i>

-----**Coding Tip**-----

***Time of care management with the emergency department is reportable using 99487, 99489, 99490 but time while the patient is inpatient or admitted as observation is not.***

***If the physician personally performs the clinical staff activities, his or her time may be counted toward the required clinical staff time to meet the elements of the code.***

---

### **Psychiatric Collaborative Care Management Services**

Psychiatric collaborative care services are provided under the direction of a treating physician or other qualified health care professional (see definitions below) during a calendar month. These services are provided when a patient has a diagnosed psychiatric disorder that requires a behavioral health care assessment; establishing, implementing, revising, or monitoring a care plan; and provision of brief interventions. These services are reported by the treating physician or other qualified health care professional and include the services of the treating physician or other qualified health care professional, the behavioral health care manager (see definition below), and the psychiatric consultant (see definition below) who has contracted directly with the treating physician or other qualified health care professional, to provide consultation.

Patients directed to the behavioral health care manager typically have newly diagnosed conditions, may need help in engaging in treatment, have not responded to standard care delivered in a non-psychiatric setting, or require further assessment and engagement, prior to consideration of referral to a psychiatric care setting.

The following definitions apply to this section:

#### **Episode of Care**

Patients are treated for an episode of care, defined as beginning when the patient is directed by the treating physician or other qualified health care professional/QHP to the behavioral health care manager and ending with:

- the attainment of targeted treatment goals, which typically results in the discontinuation of care management services and continuation of usual follow-up with the treating physician or other qualified healthcare professional; or
- failure to attain targeted treatment goals culminating in referral to a psychiatric care provider for ongoing treatment; or
- lack of continued engagement with no psychiatric collaborative care management services provided over a consecutive six month calendar period (break in episode).

A new episode of care starts after a break in episode of six calendar months or more.

### **Health Care Professionals**

#### **Treating Physician or Other Qualified Health Care Professional**

The treating physician or other qualified health care professional directs the behavioral health care manager and continues to oversee the patient's care, including prescribing medications, providing treatments for medical conditions, and making referrals to specialty care when needed. Evaluation and management (E/M) and other services may be reported separately by the same physician or other qualified health care professional during the same calendar month.

#### **Behavioral Health Care Manager**

The behavioral health care manager refers to clinical staff with a masters/doctoral-level education or specialized training in behavioral health who provides care management services as well as an assessment of needs, including the administration of validated rating scales, the development of a care plan, provision of brief interventions, ongoing collaboration with the treating physician or other qualified health care professional/QHP, maintenance of a registry, all in consultation with a psychiatric consultant. Services are provided both face-to-face and non-face-to-face and psychiatric consultation is provided minimally on a weekly basis, typically non face-to-face.

The behavioral health care manager providing other services in the same calendar month, such as psychiatric evaluation (90791, 90792), psychotherapy (90832, 90833, 90834, 90836, 90837, 90838), psychotherapy for crisis (90839, 90840), family psychotherapy (90846, 90847), multiple family group psychotherapy (90849), group psychotherapy (90853), smoking and tobacco use cessation counseling (99406, 90407), and alcohol and/or substance abuse structured screening and brief intervention services (99408, 99409), may report these services separately. Activities for services reported separately are not included in the time applied to 99492, 99493, 99494.

#### **Psychiatric Consultant**

The psychiatric consultant refers to a medical professional trained in psychiatry or behavioral health and qualified to prescribe the full range of medications. The psychiatric consultant advises and makes recommendations, as needed, for psychiatric and other medical care, including psychiatric and other medical differential diagnosis, treatment strategies regarding appropriate therapies, medication management, medical management of complications associated with treatment of psychiatric disorders, and referral for specialty services; which are communicated to the treating physician or other qualified health care professional typically through the behavioral

health care manager. The psychiatric consultant does not typically see the patient nor prescribe medications, except in rare circumstances.

The psychiatric consultant may provide services in the calendar month described by other codes, such as evaluation and management (E/M) services and psychiatric evaluation (90791, 90792). These services may be reported separately by the psychiatric consultant. Activities for services reported separately are not included in the services reported using 99492, 99493, 99494.

### Code Selection

Do not report 99492 and 99493 in the same calendar month.

Table X

Type of Service	Total Duration of Collaborative Care Management Over Calendar Month	Code(s)
Initial – 70 minutes	Less than 36 minutes	Not reported separately
	36-85 minutes (36 minutes – 1 hr. 25 minutes)	99492
Initial plus each additional increment up to 30 minutes	86-116 minutes (1 hr. 26 minutes – 1 hr. 54 minutes)	99492 X 1 AND 99494 X 1
Subsequent – 60 minutes	Less than 31 minutes	Not reported separately
	31-75 minutes (31 minutes – 1 hr. 15 minutes)	99493

		Subsequent plus each additional increment up to 30 minutes	76-105 minutes  (1 hr. 16 minutes – 1 hr. 45 minutes)	99493 X 1 AND 99494 X 1	
●99492	A1	<p><b>Initial psychiatric collaborative care management</b>, first 70 minutes in the first calendar month of behavioral health care manager activities, in consultation with a psychiatric consultant, and directed by the treating physician or other qualified health care professional, with the following required elements:</p> <ul style="list-style-type: none"> <li>• outreach to and engagement in treatment of a patient directed by the treating physician or other qualified health care professional;</li> <li>• initial assessment of the patient, including administration of validated rating scales, with the development of an individualized treatment plan;</li> <li>• review by the psychiatric consultant with modifications of the plan if recommended;</li> <li>• entering patient in a registry and tracking patient follow-up and progress using the registry, with appropriate documentation, and participation in weekly caseload consultation with the psychiatric consultant; and</li> <li>• provision of brief interventions using evidence-based techniques such as behavioral activation, motivational interviewing, and other focused treatment strategies.</li> </ul>		XXX	Deferral to Oct 2016 RUC meeting

●99493	A2	<p><b>Subsequent psychiatric collaborative care management</b>, first 60 minutes in a subsequent month of behavioral health care manager activities, in consultation with a psychiatric consultant, and directed by the treating physician or other qualified health care professional, with the following required elements:</p> <ul style="list-style-type: none"> <li>• tracking patient follow-up and progress using the registry, with appropriate documentation;</li> <li>• participation in weekly caseload consultation with the psychiatric consultant;</li> <li>• ongoing collaboration with and coordination of the patient's mental health care with the treating physician or other qualified health care professional and any other treating mental health providers;</li> <li>• additional review of progress and recommendations for changes in treatment, as indicated, including medications, based on recommendations provided by the psychiatric consultant;</li> <li>• provision of brief interventions using evidence-based techniques such as behavioral activation, motivational interviewing, and other focused treatment strategies;</li> <li>• monitoring of patient outcomes using validated rating scales; and relapse prevention planning with patients as they achieve remission of symptoms and/or other treatment goals and are prepared for discharge from active treatment.</li> </ul>	XXX	Deferral to Oct 2016 RUC meeting
--------	----	---	-----	----------------------------------

●99494	A3	<b>Initial or subsequent psychiatric collaborative care management</b> , each additional 30 minutes in a calendar month of behavioral health care manager activities, in consultation with a psychiatric consultant, and directed by the treating physician or other qualified health care professional (List separately in addition to code for primary procedure)  <u>(Use 99494 in conjunction with 99492, 99493)</u>	ZZZ	Deferral to Oct 2016 RUC meeting
<b>Coding Tips</b>  <p>If the treating physician or other qualified health care professional personally performs behavioral health care manager activities and those activities are not used to meet criteria for a separately reported code, his or her time may be counted toward the required behavioral health care manager time to meet the elements of codes 99492, 99493, 99494.</p> <p>Behavioral health care manager time spent coordinating care with the emergency department may be reported using 99492, 99493, 99494, but time while the patient is inpatient or admitted to observation status may not be reported using 99492, 99493, 99494.</p>

Re: Tab 4, Psychiatric Collaborative Care Management Services (994X1-994X3)

Dear Dr. Smith,

I am writing on behalf of the American Psychiatric Association, the American Academy of Child and Adolescent Psychiatry, the American Academy of Family Physicians, the American College of Physicians, and the American Geriatrics Society, in reference to Tab 4, Psychiatric Collaborative Care Management Services (994X1-994X3). Specifically, we are writing to request that the RUC grant a delay in the survey of these codes until the related ad hoc work group of the Research Subcommittee completes its consideration of this matter.

The American Psychiatric Association submitted a CPT Coding Change Proposal for the February CPT Editorial Panel meeting in response to comments from CMS in the NPRM for the 2016 Physician Fee Schedule. In its comments, CMS indicated an interest in providing coverage for evidence-based collaborative care services for behavioral health conditions being treated within primary care. The Panel approved three new codes that describe the work of multiple providers, including a primary care physician (or qualified healthcare practitioner), a psychiatric consultant, and a behavioral health care manager, involved in managing the treatment of a population of patients.

As part of the Level of Interest process, we indicated that, given the unique collaborative nature of the work and the challenges with valuing a bundled delivery approach within the CPT code structure, a survey of this code set would very likely require a modified approach to the standard RUC survey process or possible alternative methods for valuation. We requested adequate time to investigate options and discuss alternatives with the RUC Research Subcommittee, which would require the deferment of a full review by the RUC to a future (e.g. October 2016) RUC meeting.

Since that time, the Research Subcommittee has met by teleconference and formed an ad hoc work group to assist us in this process. The first meeting of this group is scheduled for April 11, 2016. Since the first meeting of the ad hoc workgroup is not until April 11, we are unable to survey these codes for the April meeting. We will keep you apprised of the progress being made and whether we can survey for the October 2016 meeting.

We would be happy to provide an update at the April RUC meeting.

Sincerely,

Jeremy S. Musher, MD  
APA RUC Advisor

## AMA/Specialty Society RVS Update Committee Summary of Recommendations

April 2016

### **Cognitive Impairment Assessment and Care Plan Services**

In February 2016, the CPT Editorial Panel added a new code to describe an evidenced based cognitive service. This was one of several in response to a CMS request to capture cognitive service codes not currently described by Evaluation and Management (E/M) services. This service is provided when a comprehensive evaluation of a new or existing patient exhibiting signs of cognitive impairment is required to establish a diagnosis etiology and severity for the condition. The service includes a thorough evaluation of medical and psychosocial factors potentially contributing to increased morbidity. Typically, these patients are referred by a primary caregiver. There are ten required elements for the service, and all ten must be performed in order for the code to be reported. This service includes two distinct activities, assessment of the patient and establishment of care plan that is shared with the patient and caregiver, along with education. It is important that all elements are performed to be able to report this code. Other face-to-face E/M codes cannot be reported on the same date as this service to prevent any overlap with E/M codes.

#### ***99483 Assessment of and care planning for the patient with cognitive impairment***

The RUC reviewed the survey results from 165 practicing physicians. 91% of respondents found the vignette to be typical, and a median performance rate of 20 demonstrated the respondents were very familiar with the service. These respondents agreed with the following physician time components: pre-service time of 15 minutes, intra-service time of 50 minutes and immediate post-service time of 20 minutes.

The RUC reviewed the survey respondents' estimated physician work values and agreed with the specialty societies that the survey median work value of 3.44 is appropriate for the physician work required to perform this service. The RUC compared the surveyed code to a key reference code 99327 *Domiciliary or rest home visit for the evaluation and management of a new patient* (work RVU= 3.46, pre-service time=15 minutes, intra time= 50 minutes, and immediate post time=25 minutes) and noted that this code has identical pre and intra-service time and slightly higher post-service time justifying the slightly higher work value. The RUC also considered comparisons with CPT code 99205 *Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 60 minutes are spent face-to-face with the patient and/or family.* (work RVU=3.17, pre-service time of 7 minutes, intra-service time of 45 minutes, and immediate post-service time of 15 minutes) and CPT code 99235 *Observation or inpatient hospital care, for the evaluation and management of a patient including admission and discharge on the same date, which requires these 3 key components: A comprehensive history; A comprehensive examination; and Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided*

*consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually the presenting problem(s) requiring admission are of moderate severity. Typically, 50 minutes are spent at the bedside and on the patient's hospital floor or unit. (work RVU=3.24, pre-service time of 14 minutes, intra-service time of 50 minutes, and immediate post-service time of 19.5 minutes). The RUC recommends a work RVU of 3.44 for CPT code 99483.*

#### **Practice Expense:**

A detailed discussion occurred where it was considered that this service is different than most in terms of PE, because it can be billed every 180 days, and the RUC took into account potential overlap with E/M services that could be billed during this time period. The clinical staff type was revised so that, rather than a RN/CORF (L051C), the standard clinical staff type of a RN/LPN/MTA (L037D) is utilized, except where the scope of practice and clinical abilities of a RN is required, and in those instances, a RN (L051A) was recommended. In the pre-service period, the RUC approved that the standard three minutes for a phone call was not adequate and determined that it should be 6 minutes to ensure that the caregiver is aware and has available all the appropriate reports and paperwork that should accompany the patient to the visit. In the service period, there is 15 minutes of clinical staff time overlapping with 15 minutes of the physician work, because both are in the exam room with the patient and the caregiver. Following that, the clinical staff and the caregiver leave the exam room while the physician stays with the patient and completes the physical exam. During this time, the clinical staff meets separately with the caregiver for 15 minutes to discuss the care necessary for the patient and to assess if the caregiver is capable of providing for the needs of the patient. At the conclusion of this work, the physician and the clinical staff meet for 4 minutes to briefly discuss the care plan, and the clinical staff proceeds to draft the care plan while the physician does other work. The physician and clinical staff then reconvene to meet with the caregiver and patient to share the plan and educate specifically on medical and medication issues for 7 minutes. Then the physician will leave, and the clinical staff meets with patient and caregiver for an additional 10 minutes. During this time, the patient and caregiver have time to ask additional questions and review the care plan again. It is typical that once the physician leaves, there are logistical questions or repeated items. Educating the patient and caregiver is complex, as the caregiver is going to need to agree to do things and ask questions; this time is necessary so as not to rush and ensure the care plan can will be carried out. In the post-service period, 9 minutes of clinical staff time was allocated for 3 phone calls, modeled after CPT code 99205. The RUC approved the direct practice expense inputs with modifications as approved by the Practice Expense Subcommittee.

<b>Evaluation and Management</b>  <b>Cognitive Assessment and Care Plan Services</b>				

Cognitive assessment and care plan services are provided when a comprehensive evaluation of a new or existing patient exhibiting signs and/or symptoms of cognitive impairment is required to establish or confirm a diagnosis, etiology and severity for the condition. This service includes a thorough evaluation of medical and psychosocial factors potentially contributing to increased morbidity. Do not report Cognitive Assessment and Care Plan Services if any of the required elements are not performed or are deemed unnecessary for the patient's condition. For these services, see the appropriate evaluation and management code. A single physician or other qualified health care professional should not report 99483 more than once every 180 days.

Services for Cognitive Assessment and Care Plan include a cognition-relevant history, as well as an assessment of factors that could be contributing to cognitive impairment, including, but not limited to, psychoactive medication, chronic pain syndromes, infection, depression and other brain disease (eg, tumor, stroke, normal pressure hydrocephalus). Medical decision making includes current and likely progression of the disease, assessing the need for referral for rehabilitative, social, legal, financial or community-based services, meal, transportation and other personal assistance services.

●99483	B1	<p>Assessment of and care planning for a patient with cognitive impairment, requiring an independent historian, in the office or other outpatient, home or domiciliary or rest home, with all of the following required elements:</p> <ul style="list-style-type: none"> <li>• Cognition-focused evaluation including a pertinent history and examination</li> <li>• Medical decision making of moderate or high complexity</li> <li>• Functional assessment (eg, Basic and Instrumental Activities of Daily Living), including decision-making capacity</li> <li>• Use of standardized instruments for staging of dementia_(eg, Functional Assessment Staging Test [FAST], Clinical Dementia Rating [CDR])</li> <li>• Medication reconciliation and review for high-risk medications</li> <li>• Evaluation for neuropsychiatric and behavioral symptoms, including depression, including use of standardized screening instrument(s)</li> </ul>	XXX	3.44

RUC Recommended RVU: **3.44**

**CPT Descriptor:** Cognitive assessment and care plan services are provided when a comprehensive evaluation of a new or existing patient exhibiting signs and/or symptoms of cognitive impairment is required to establish or confirm a diagnosis, etiology and severity for the condition. This service includes a thorough evaluation of medical and psychosocial factors potentially contributing to increased morbidity. Do not report Cognitive Assessment and Care Plan Services if any of the required elements are not performed or are deemed unnecessary for the patient's condition. For these services, see the appropriate evaluation and management code. A single physician or other qualified health care professional should not report 99483 more than once every 180 days. Services for Cognitive Assessment and Care Plan include a cognition-relevant history, as well as an assessment of factors that could be contributing to cognitive impairment, including, but not limited to, psychoactive medication, chronic pain syndromes, infection, depression and other brain disease (eg, tumor, stroke, normal pressure hydrocephalus). Medical decision making includes current and likely progression of the disease, assessing the need for referral for rehabilitative, social, legal, financial or community-based services, meal, transportation and other personal assistance services.

●99483 Assessment of and care planning for the patient with cognitive impairment, requiring an independent historian, office or other outpatient, home or domiciliary or rest home, with all of the following required elements:

- Cognition-focused evaluation including a pertinent history and examination
- Medical decision making of moderate or high complexity
- Functional assessment (eg, Basic and Instrumental Activities of Daily Living), including decision-making capacity
- Use of standardized instruments for staging of dementia (eg, Functional Assessment Staging Test [FAST], Clinical Dementia Rating [CDR])
- Medication reconciliation and review for high-risk medications
- Evaluation for neuropsychiatric and behavioral symptoms, including depression, including use of standardized screening instrument(s)
- Evaluation of safety (eg, home), including motor vehicle operation
- Identification of caregiver(s), caregiver knowledge, caregiver needs, social supports, and the willingness of caregiver to take on caregiving tasks
- Development, updating or revision, or review of an Advance Care Plan
- Creation of a written care plan, including initial plans to address any neuropsychiatric symptoms, neuro-cognitive symptoms, functional limitations, and referral to community resources as needed (eg, rehabilitation services, adult day programs, support groups) shared with the patient and/or caregiver with initial education and support

(Do not report 99483 in conjunction with E/M services [99201, 99202, 99203, 99204, 99205, 99211, 99212, 99213, 99214, 99215, 99241, 99242, 99243, 99244, 99245, 99324, 99325, 99326, 99327, 99328, 99334, 99335, 99336, 99337, 99341, 99342, 99343, 99344, 99345, 99347, 99348, 99349, 99350, 99366, 99367, 99368, 99487, 99489, 99490, 99495, 99496, 99497, 99498]; psychiatric diagnostic procedures [90785, 90791, 90792]; psychological testing [96103]; neuropsychological testing [96120]; brief emotional/behavioral assessment [96127]; medication therapy management services [99605, 99606, 99607])

### CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: Evaluation of an 83-year-old female with hypertension, diabetes, arthritis and coronary artery disease, who presents with confusion, weight loss and failure to maintain her house, in which she lives alone.

Percentage of Survey Respondents who found Vignette to be Typical: 92%

### Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is;  
 Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an  
 E&M service later on the same day 0%

### **Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

---

Description of Pre-Service Work: Review the medical history form and rating scales completed by the patient and/or family or caregiver and vital signs obtained by clinical staff. Review any medical records obtained from other physicians and other sources (e.g., caregiver). Communicate with other health care professionals as necessary.

Description of Intra-Service Work: Obtain a complete history including focus of the patient's decline from the patient, family, and/or caregiver to include identification of potential symptoms that may indicate confounding underlying disease. Perform a pertinent physical examination and assessments of affect, cognition, functional status (Basic Activities of Daily Living and Instrumental Activities of Daily Living) including decision-making capacity, mobility, balance, vision, hearing, psychosocial function, and safety (i.e. at home and/or driving). Evaluate for neuropsychiatric and behavioral symptoms, including depression, mood instability, psychotic symptoms, aggression, apathy, and other behavioral disturbance, assess stage of dementia, using standardized instruments. Complete a medication reconciliation and review for high-risk medications that may affect cognition (separate from rating scales noted in pre service). Discuss the values and preferences of the patient and caregiver for care and goals of care (e.g., quality of life, advance care planning). Discuss and evaluate the caregiver's relationship to the patient, availability, knowledge, general capability (e.g., any physician limitation) and ability and willingness to implement the a care plan.

Consider relevant data, options, and risks; formulate a diagnosis; and develop a care plan (moderate to high-complexity MDM). Meet with the clinical care team to review findings and develop a care plan. Based on medication reconciliation, write prescription(s); and arrange diagnostic testing or referral as necessary. A written care plan is created with a copy provided to the patient and family and/or caregiver. Review findings and the care plan with the patient and family and/or caregiver, to include the etiology and severity of the cognitive impairment, goals of treatment, changes in medication, recommendations for physical and/or occupational therapy, address safety issues, discuss caregiving issues and make recommendations for appropriate community services (e.g., rehabilitation services, adult day programs, support groups).

Description of Post-Service Work: Complete medical record documentation. Contact other physicians as necessary to review findings and the care plan. If requested by clinical staff, contact the patient/caregiver to discuss test results, adverse reactions to medication, new clinical issues. Revise care plan if needed, based on test results.

**Modifier -51 Exempt Status**

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

**New Technology/Service:**

Is this new/revised procedure considered to be a new technology or service? Yes

**TOP KEY REFERENCE SERVICE:**

<u>Key CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
99205	XXX	3.17	RUC Time

CPT Descriptor Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 60 minutes are spent face-to-face with the patient and/or family.

**SECOND HIGHEST KEY REFERENCE SERVICE:**

<u>Key CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
99327	XXX	3.46	RUC Time

CPT Descriptor Domiciliary or rest home visit for the evaluation and management of a new patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; and Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of high severity. Typically, 60 minutes are spent with the patient and/or family or caregiver.

**KEY MPC COMPARISON CODES:**

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

<u>MPC CPT Code 1</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>	<u>Most Recent Medicare Utilization</u>
99344	XXX	3.38	RUC Time	76,328

CPT Descriptor 1 Home visit for the evaluation and management of a new patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; and Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of high severity. Typically, 60 minutes are spent face-to-face with the patient and/or family.

<u>MPC CPT Code 2</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>	<u>Most Recent Medicare Utilization</u>
99327	XXX	3.46	RUC Time	52,868

CPT Descriptor 2 Domiciliary or rest home visit for the evaluation and management of a new patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; and Medical decision making of moderate

complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of high severity. Typically, 60 minutes are spent with the patient and/or family or caregiver.

	<b><u>Top Key Ref Code</u></b>	<b><u>2<sup>nd</sup> Key Ref Code</u></b>
Overall intensity/complexity	0.90	0.96

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

The surveying specialty societies (AAFP, ACP, AGS, AAN, APA) convened an expert panel to review the results of the survey for 99XX3. The panel noted that the survey was particularly robust with 165 respondents and that all surveying specialties were well represented.

Before reviewing the survey time and work data the panel considered three important threshold issues.

First, 91% of the respondents thought the vignette was typical and the median performance rate was 20 which demonstrate that the respondents were familiar with the service.

Second, the panel reviewed the key reference services. Of the 165 respondents, 51 chose 99205, Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 60 minutes are spent face-to-face with the patient and/or family. as the reference service, and 24 chose 99327, Domiciliary or rest home visit for the evaluation and management of a new patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; and Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of high severity. Typically, 60 minutes are spent with the patient and/or family or caregiver. The expert panel noted that both these reference services were on the MPC list and agreed both these services were appropriate reference services.

With this in mind, the expert panel agreed with these respondents that the typical patient for 99483 is a new patient.

Third, the panel noted that a number of the required elements of 99483 are not required elements or components of existing face-to-face E/M services which need to be taken into account when determining a work value for this service; in particular, the requirement for the presence and active participation of a caregiver as well as the development of a written care plan that addresses all the patient's cognitive needs, which is shared with the patient and for which education and support is provided makes this a particularly intense service.

Keeping these things in mind, the panel reviewed the survey data.

The median survey times for 99483 were 15/50/20 with a total time of 85 minutes. This compares to 7/45/15/67 for 99205 and 15/60/25/100 for 99327. The panel agreed these times were appropriate and reflected the time spent by the physician performing this service and did not overlap with any staff time or activities.

The survey median work RVU for 99483 was 3.44 while the work RVU for 99205 is 3.17 and for 99327 is 3.46. The panel also carefully reviewed the intensity/complexity measures. The respondents found 99483 to be more complex than 99205 except for two measures where it was slightly less complex: urgency of medical decision making and risk of malpractice. The expert panel agreed completely with these rankings. Respondents who chose 99327 as the reference service found 99483 to be more complex in all measures (except physical effort where it was ranked as identical).

Before, comparing the survey median times and work RVU to other codes, the expert panel agreed that the survey median times and work placed 99483 in proper rank order to 99205 and 99327. In particular, the panel noted that 99483 must be valued higher than 99205 given the longer intra-service time and higher intensity/complexity measures.

The expert panel then considered other XXX global codes with intra-service times between 40 and 60 minutes and a work RVUs between 2.8 and 3.5 that had recently been reviewed by the RUC.

Below is a table of the most pertinent codes reviewed by the expert panel:

CPT Code	Long Desc	Work RVU	Pre Eval Time	Intra Time	Post Time	Total Time
99496	Transitional Care Management Services with the following required elements: Communication (direct contact, telephone, electronic) with the patient and/or caregiver within 2 business days of discharge Medical decision making of high complexity during the service period Face-to-face visit, within 7 calendar days of discharge	3.05	0	50	0	50
99306	Initial nursing facility care, per day, for the evaluation and management of a patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; and Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the	3.06	15	45	20	80

	nature of the problem(s) and the patient's and/or family's needs. Usually, the problem(s) requiring admission are of high severity. Typically, 45 minutes are spent at the bedside and on the patient's facility floor or unit.					
95953	Monitoring for localization of cerebral seizure focus by computerized portable 16 or more channel EEG, electroencephalographic (EEG) recording and interpretation, each 24 hours, unattended	3.08	10	45	15	70
99205	Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 60 minutes are spent face-to-face with the patient and/or family.	3.17	7	45	15	67
99235	Observation or inpatient hospital care, for the evaluation and management of a patient including admission and discharge on the same date, which requires these 3 key components: A comprehensive history; A comprehensive examination; and Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually the presenting problem(s) requiring admission are of moderate severity. Typically, 50 minutes are spent at the bedside and on the patient's hospital floor or unit.	3.24	14	50	20	84
90792	Psychiatric diagnostic evaluation with medical services	3.25	10	60	20	90
99344	Home visit for the evaluation and management of a new patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; and Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of high severity. Typically, 60 minutes are spent face-to-face with the patient and/or family.	3.38	15	60	25	100
99327	Domiciliary or rest home visit for the evaluation and management of a new patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; and Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of high severity. Typically, 60 minutes are spent with the patient and/or family or caregiver.	3.46	15	60	25	100

First, the panel compared 99483 to 90792, Psychiatric diagnostic interview with medical services, which was reviewed by the RUC in April 2012. 90792 is an appropriate comparator and has times of 10/60/20/90 with a work RVU of 3.25. The expert panel agreed that even though 90792 has a longer intra-service time and slightly more total time than 99483 should have a higher work RVU than 90792 because 90792 does not require as many elements as 99483 and, in particular, does not require development of a written care plan. 99483 is also more intense because it includes the presence of a caregiver and, because of the nature of memory assessments; they occur in an older population who would more typically have multiple co-morbidities and be on multiple medications.

The panel also compared 99483 to 99235, Observation or inpatient care with admission and discharge on the same date which was reviewed by the RUC in April 2011. 99235 have times of 14/50/20/84 which are almost identical to 99483 and a work RVU of 3.24. The panel observed that the most common two diagnoses for 99235 are respiratory symptoms and general symptoms and that a significant portion of the work involves evaluating a patient who has improved and is being discharged. Based on this, and because 99483 requires the presence and active participation of a caregiver, the expert panel agreed that 99483 is a more intense service than 99235.

The expert panel also considered 99306, initial nursing home visit which was reviewed by the RUC in February 2007 and has times of 15/45/20/80 and a work RVU of 3.06. Aside from having more intra-service and total time, 99483 is more intense than this service due to the presence and active participation of a caregiver and the need to develop a written care plan and educate the patient and caregiver on that plan.

The expert panel also compared 99483 to 99496, transition of care management with 50 minutes of intra and total time and an RVU of 3.05 which was reviewed by the RUC in October 2012 and agreed that 99483 should be valued high given the greater intensity and total time.

After reviewing these services, the expert panel concluded that the survey median times and work RVW for 99483 were appropriate and should be recommended to the RUC.

In summary, the expert panel recommends 99483, tracking number B1, pre time 15 minutes, intra time 50 minutes, post time 20 minutes and RVW of 3.44.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 99205 or 99215 Breakdown of frequency distribution is estimated to be 40% Geriatrics, 20% Neurology, 20% Psychiatry and 10% Internal Medicine and 10% Family Practice.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Geriatrics                      How often? Commonly

Specialty Neurology                      How often? Sometimes

Specialty Psychiatry                      How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 50000

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. There are an estimated 5.3 million cases of dementia in the U.S. with an incidence of approximately 500,000 annually. Of those, 10% will receive this service, resulting in 50,000 services per year.

Specialty Geriatrics                      Frequency 20000                      Percentage 40.00 %

Specialty Neurology                      Frequency 10000                      Percentage 20.00 %

Specialty Psychiatry                      Frequency 10000                      Percentage 20.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?  
 50,000 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty.  
 Please explain the rationale for this estimate. Almost all incidences of this service will occur in the Medicare population.

Specialty Geriatrics	Frequency 20000	Percentage 40.00 %
Specialty Neurology	Frequency 10000	Percentage 20.00 %
Specialty Psychiatry	Frequency 10000	Percentage 20.00 %

Do many physicians perform this service across the United States? Yes

---

### **Berenson-Eggers Type of Service (BETOS) Assignment**

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:  
 Evaluation Management

BETOS Sub-classification:  
 Office visit

BETOS Sub-classification Level II:  
 NA

---

### **Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 99205

CPT Long Descriptor: Assessment of and care planning for the patient with cognitive impairment, requiring an independent historian, office or other outpatient, home or domiciliary or rest home, with all of the following required elements:

- Cognition-focused evaluation including a pertinent history and examination
- Medical decision making of moderate or high complexity
- Functional assessment (eg, Basic and Instrumental Activities of Daily Living), including decision-making capacity
- Use of standardized instruments for staging of dementia (eg, Functional Assessment Staging Test [FAST], Clinical Dementia Rating [CDR])
- Medication reconciliation and review for high-risk medications
- Evaluation for neuropsychiatric and behavioral symptoms, including depression, including use of standardized screening instrument(s)
- Evaluation of safety (eg, home), including motor vehicle operation
- Identification of caregiver(s), caregiver knowledge, caregiver needs, social supports, and the willingness of caregiver to take on caregiving tasks
- Development, updating or revision, or review of an Advance Care Plan
- Creation of a written care plan, including initial plans to address any neuropsychiatric symptoms, neuro-cognitive symptoms, functional limitations, and referral to community resources as needed (eg, rehabilitation services, adult day programs, support groups) shared with the patient and/or caregiver with initial education and support

Global Period: XXX Meeting Date: April 2016

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:

**Advisors and subject matter experts from AAFP, AAN, ACP, AGS, and APA met by phone and via email to review the inputs and make recommendations.**

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code

Rationale: Code 99205 (level 5, new patient office visit) was selected as the key reference code for practice expense because it is the most common key reference service chosen by respondents to the survey of physician work.

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:

5. Please describe in detail the clinical activities of your staff:

**Pre-Service Period (6 minutes)**

Clinical Labor Activities:

- Conduct initial phone call for preliminary assessment of cognitive function to determine if cognitive assessment is appropriate, identify caregivers, who should be present at the visit to provide additional information and with whom the care plan should be shared, and explain what the assessment entails, schedule the visit (and convince patient to come, if necessary).
- Gather medical records obtained from other sources (including history, x-rays and labs if applicable) and referral (where applicable) and prepare for physician review prior to visit.
- Gather any pre-existing advance care directives, surrogate decision maker forms.

**Service Period (77 minutes)**

Pre-Service Clinical Labor Activities (of Service Period): (13 minutes)

- Greet patient (and caregiver, if applicable) and direct to exam room.
- Administer and collate forms for assessing mood, cognitive status, nutrition, functional status for the provider to use.
- Obtain vital signs.

Intra-Service Clinical Labor Activities (of Service Period): (61 minutes)

- Be present during the entire assessment (except physical exam) to hear entire history and supplement physician history with additional questions to patient and caregiver.
- Gather additional history from caregiver when patient is being examined in a different room including assessing nutritional status, additional caregiver history, ability to participate in activities of daily living, ability to participate in social activities (e.g. adult day memory care center.)
- Meet with physician and clinical care team to develop written care plan.
- Compile written care plan inputs from provider include advance care documents.
- Meet with family to share and discuss care plan and to educate patient and caregiver on care plan including use of community resources.
- Coordinate future care including home or outpatient care.
- Assess nutritional status.

Post-Service Clinical Labor Activities (of Service Period): (3 minutes)

- Clean room and any utilized equipment

**Post-Service Period (9 minutes)**

Clinical Labor Activities:

- Follow up phone calls between visits with patient, family, community resources, pharmacy.

2	Total Time	67	85	92		6
3	Pre-Service Time	7	15	6		7
4	Intra-Service Time	45	50	77		8
5	Post-Service Time	15	20	9		9
6	Pre Service					
7	Call patient-caregiver, ensure all necessary information and caregiver, will be available for visit		0	6	Conduct initial phone call for preliminary assessment of cognitive function--typically with primary caregiver-- to determine if cognitive assessment is appropriate, identify caregivers, who should be present at the visit to provide additional information and with whom the care plan should be shared, and explain what the assessment entails, schedule the visit (and convince patient to come, if necessary). Gather medical records obtained from other sources (including history, x-rays and labs if applicable) and referral (where applicable) and prepare for physician review prior to visit. Gather any pre-existing advance care directives, surrogate decision maker forms. Line 8 below clinical staff and physician may discuss phone call and clinical staff may point out elements in the medical documentation gathered for the physician review.	17
8	Review Records/documents gathered by the CSW for the patient-caregiver	7	15	0	The physician may interact with the clinical staff, as necessary, to discuss what was learned during the clinical staff call. The physician reviews all gathered elements of the records, labs, tests and notes.	N/A
9	Intra-Service					
10	Greet patient/vital signs/prep room		0	8	Combine rows 21 to 25 for clinical staff, all standard times and less than 99205 as some of this education has occurred in the pre service call to patient/caregiver.	21,22, 24,
11	Provide preservice education/obtain consent			5	Introduce self to patient and care giver; explain to caregiver and patient what the assessment it and what it will include; make sure they brought the necessary documents; understand the relationship between the patient and those present and understand what the care plan will be (if appropriate); the clinical staff must to the extent possible make the patient and caregiver understand what is going on; it is an unfamiliar environment; they need to be kept calm; many with impairment can still understand certain things;	23
12	Physician and staff assess patient together	45	15	15	Together physician and clinical staff conduct the initial history, functional assessment, safety assessment; it is important that both clinical staff and physician hear the history first hand, observe both the patient's responses and the interaction between patient and caregiver, and have a chance to elucidate and clarify the history as this will have a significant influence on the subsequent care plan.	30
13	Physician examines and assesses patient alone		24	0	Physician conducts a conventional physical exam and, in addition, performs instruments to assess and stage dementia and to assess for depression. It is important that the physician perform these tests personally to observe not only the answers, but the patients' manner and response to the questions.	N/A
14	Staff meets with caregiver alone (simultaneous with physician exam)			15	Identification of care givers , care giver knowledge, care giver needs, care giver burden, social supports, and the willingness of caregiver to take on caregiving tasks; assess for behavioral and psychological symptoms of dementia that the caregiver may have been reluctant to mention with patient present;	30
15	Physician and staff meet with team to discuss assessment and agree on care plan		4	4	Physician and clinical staff will meet to identify the problems, interventions, expected outcomes and necessary referrals to manage the caer plan.	31
16	Develop and draft written care plan		0	10	The clinical staff drafts care plan, gathers necessary paperwork, educational materials to share with patient and caregiver.	31
17	Physician and staff meet with patient and caregiver to share plan and educate		7	7	Patient, caregiver and clinical staff, with physician reviewing the elements of the care plan and follow up. Physician will address specific medical and medication issues.	32
18	Staffs meets with patient and caregiver, answers questions, reviews plan again, provide education, makes phone calls to arrange external portions of care plan such as local external care options and review how the follow up with occur			10	Physician will leave and the clinical staff then meets with patient and caregiver to see if they have additional questions, reviews the care plan again. It is typically that once physician leaves that there are logistical questions or repeated items. Educating the patient and caregiver is complex, as the caregiver is going to need to agree to do things and ask questions, this time is necessary so as not to rush and ensure the care plan can and will be carried out.	32
19	Clean Room		0	3	We are only asking for time to clean one room when two are typically used.	38
20	Post-Service					
21	Document Complete Service	10	10			N/A
22	Review and final sign off of all documentation	3	3			N/A
23	Call patient/caregiver/ prescriptions	2	2	9	99205 has 9 minutes for clinical staff we believe 1 additional minute is necessary for the complex nature of taking to caregiver and the patient.	51
24	Coordinate care clinical staff and MD review progress		5	0	A critical part of this service is continued coordination of the patients progress and discussion of any necessary changes, this is done in the post service and we believe a minimum of five minutes is necessary.	51

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
*CMS High Expenditure Procedures Screen*

April 2016

**Diagnostic Bone Marrow Aspiration and Biopsy**

In the NPRM for 2016, CMS re-ran the screen for high expenditure services across specialties with Medicare allowed charges of \$10 million or more. CMS identified the top 20 codes by specialty in terms of allowed charges, excluding 010 and 090-day global services, anesthesia and Evaluation and Management services and services reviewed since CY 2010. CPT code 38221 was one of the services identified in this screen.

Prior to the January 2016 RUC meeting, the specialty societies notified the RUC of their plan to submit a code change application to the CPT Editorial Panel to revise these services. The societies indicated their plan to improve nomenclature for these codes (ie diagnostic vs therapeutic use) and to create a CPT code to replace code G0364. At the February 2016 CPT meeting, the CPT Editorial panel created one new code to replace the existing G code and revised the descriptors for CPT codes 38220 and 38221.

**Compelling Evidence**

The specialty societies presented compelling evidence for code 38220. They noted that the physician work and times have changed relative to the amount and types of specimens that are obtained today which are greater in number than in 1995 when 38220 was discussed at the first Five-Year review. The specialty societies noted that due to advances and greater access to immunophenotyping techniques and simultaneous refinements in cytogenetic methods and molecular diagnostics, the number of tests performed has increased, necessitating more passes to obtain additional bone marrow aspirate and material. The RUC agreed with the specialty societies that, since this procedure was originally valued, the physician work has increased as multiple passes to obtain additional bone marrow aspirate and material are now necessary. Therefore, this service would meet the compelling evidence for both technique and physician time.

The specialty societies also noted that a flawed methodology was used in the previous valuation for this service as the code has a CMS/Other designation. As the RUC has noted previously during review of other services, codes with the CMS/Other designation were never surveyed by the RUC or any other stakeholder; their physician time and work were assigned by CMS in rulemaking over 20 years ago using an unknown methodology. The RUC accepted that there is compelling evidence that both the amount of physician work and technique involved in performing 38220 has changed and that a flawed methodology was utilized when 38220 was originally valued.

### **38220 Diagnostic bone marrow; aspiration(s)**

The RUC reviewed the survey results from 121 physicians and agreed with the societies on the following physician time components: a pre-service time of 15 minutes, an intra-service time of 20 minutes and a post-service time of 12 minutes.

The RUC reviewed the survey 25<sup>th</sup> percentile work RVU of 1.20 and agreed that this value appropriately accounts for the physician work involved. To justify a work RVU of 1.20, the RUC compared the survey code to XXX and MPC code 95805 *Multiple sleep latency or maintenance of wakefulness testing, recording, analysis and interpretation of physiological measurements of sleep during multiple trials to assess sleepiness* (work RVU= 1.20, intra-service time of 20 minutes, total time of 50 minutes) and noted that both service involve a similar amount of physician work, have identical intra-service times and very similar total times. The RUC also reviewed 000-day global CPT code 91010 *Esophageal motility (manometric study of the esophagus and/or gastroesophageal junction) study with interpretation and report;* (work RVU= 1.28, intra-service time of 20 minutes, total time of 50 minutes) and agreed that this reference code further supports a work RVU of 1.20 for the survey code. **The RUC recommends a work RVU of 1.20 for CPT code 38220.**

### **38221 Diagnostic bone marrow; biopsy(ies)**

The RUC reviewed the survey results from 120 physicians and agreed with the societies on the following physician time components: 15 minutes of pre-service time, 20 minutes of intra-service time and 15 minutes of post-service time.

The RUC reviewed the survey respondents' estimated physician work values and agreed that an appropriate value for this service is between the survey median RVU of 1.80 and survey 25<sup>th</sup> percentile value of 1.20. To determine an appropriate work value, the RUC compared the survey code to XXX code 99315 *Nursing facility discharge day management; 30 minutes or less* (work RVU=1.28, intra-service time of 20 minutes, total time of 40 minutes) and noted that reference code involves similar physician work and has identical intra-service time relative to the survey code. Therefore, the RUC recommends a direct work RVU crosswalk from code 99315 to code 38221. To further support this recommendation, the RUC compared the survey code to 000-day global code 91010 *Esophageal motility (manometric study of the esophagus and/or gastroesophageal junction) study with interpretation and report;* (work RVU= 1.28, intra-time of 20 minutes, total time of 50 minutes) and noted that both services involve a similar amount of physician work and have identical intra-service and total times. **The RUC recommends a work RVU of 1.28 for CPT code 38221.**

### **38222 Diagnostic bone marrow; biopsy(ies) and aspiration(s)**

The RUC reviewed the survey results from 120 physicians and agreed with the societies on the following physician time components: 15 minutes of pre-service time, 30 minutes of intra-service time and 15 minutes of post-service time.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the survey respondents somewhat overvalued the work involved, with a 25<sup>th</sup> percentile RVU of 1.50. To determine an appropriate work value, the RUC compared the survey code to 000-day code 91022 *Duodenal motility (manometric) study* (work RVU= 1.44, intra-service time of 30 minutes, total time of 61 minutes) and noted that both services involve a similar amount of physician work and have identical intra-service times. Therefore, the RUC recommends a direct work RVU crosswalk from code 91022 to code 38222. To further support this recommendation, the RUC compared the survey code to XXX code 90832 *Psychotherapy, 30 minutes with patient and/or family member* (work RVU= 1.50, intra-service time 30 minutes and total time of 45 minutes) and noted that both services have identical intra-service times and involve a similar amount of physician work. **The RUC recommends a work RVU of 1.44 for CPT code 38222.**

### **Global Period**

At the April 2016 RUC meeting, the RUC questioned why the current global period for these procedures is XXX, while a 000-day global would seem more appropriate. The specialties concurred with the RUC that a 000-day global would be more appropriate. **The RUC recommends for CMS to convert CPT codes 38220, 38221 and 38222 to a 000-day global period. The RUC noted that the Committee's recommendations are not contingent on this global period change.** To facilitate CMS' evaluation of the global period change recommendation, this RUC recommendation includes both XXX and 000-day reference codes for each survey code.

### **Practice Expense**

The clinical labor type was changed from the requested L051A RN to the more typical blend L037D RN/LPN/MTA with the exception of the intra-service time, as an RN typically assists the patient only with performing the procedure itself. The amount of milliliters for fixative in the supplies were also corrected. The amount of supplies included are adequate regardless and independent the number of passes and the amount of material that was obtained for each service in the family. The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.

### **New Technology**

These services will be placed on the New Technology list and be re-reviewed by the RUC in three years to ensure correct valuation and utilization assumptions.

### **Work Neutrality**

The RUC's recommendation for these codes will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

38230      *Bone marrow harvesting for transplantation; allogeneic*

38232      *autologous*

(For autologous and allogeneic blood-derived peripheral stem cell harvesting for transplantation, see 38205, -38206)

(For diagnostic bone marrow aspiration(s), ~~use~~ see 38220, 38222)

(For bone marrow aspiration(s) for platelet rich stem cell injection, use 0232T. For bone marrow aspiration(s) for the purpose of bone grafting and other therapeutic musculoskeletal applications, use 20999)

**Transplantation and Post-Transplantation Cellular Infusions**

38242      *Allogeneic lymphocyte infusions*

(For diagnostic bone marrow aspiration(s), ~~use~~ see 38220, 38222)

(For bone marrow aspiration(s) for platelet rich stem cell injection, use 0232T. For bone marrow aspiration(s) for the purpose of bone grafting and other therapeutic musculoskeletal applications, use 20999)

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 38220      Tracking Number   C1

Original Specialty Recommended RVU: **1.20**  
Presented Recommended RVU: **1.20**  
RUC Recommended RVU: **1.20**

Global Period: XXX

CPT Descriptor: Diagnostic bone marrow aspiration(s)

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 59-year-old male with known acute myeloid leukemia (AML) with rare circulating blasts requiring aspirate for assessment of relapse and clonal evolution.

Percentage of Survey Respondents who found Vignette to be Typical: 78%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 10%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 26%

Description of Pre-Service Work: Review clinical history including laboratory data to validate the need for the procedure and determine the type (aspirate, biopsy) to perform, and the appropriate studies (e. g. flow cytometry, cultures, genomics) to order. Inquire about allergies (topical cleansing solution, lidocaine, sedatives, anxiolytics) from patient and any prior history of excessive or prolonged bleeding. Explain the risks, benefits, and alternatives to the patient and obtain informed consent. Enter orders into computer system and confirm patient information. The patient is placed into a lateral decubitus position and the physician identifies landmarks, dons sterile gloves, and preps patient with appropriate antiseptic and local anesthetic. A time out to confirm patient identity is performed.

Description of Intra-Service Work: The physician makes a small incision with a scalpel, inserts and advances the bone marrow aspiration needle to the periosteal bone surface position and drills needle into the posterior iliac crest marrow space. The trocar is then removed. The patient is questioned and warned about pain and approximately 3 mL of the bone marrow is aspirated and used to prepare microscopic slides at the bedside with a technologist's assistance after s/he confirms the presence of at least one spicule. If necessary, the needle is repositioned after extraction from bone and the process repeated maintaining sterile techniques until adequate spicules are identified. Additional aspirates are obtained for culture, cytogenetics, flow cytometry, and molecular diagnostics. The physician reintroduces trocar and extracts needle. The physician places pressure on wound site for hemostasis and the wound is then cleansed and bandaged.

Description of Post-Service Work: The physician completes the procedure note and writes orders.

**Modifier -51 Exempt Status**

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

**New Technology/Service:**

Is this new/revised procedure considered to be a new technology or service? Yes

**TOP KEY REFERENCE SERVICE:**

<u>Key CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
99215	XXX	2.11	RUC Time

CPT Descriptor Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 40 minutes are spent face-to-face with the patient and/or family.

**SECOND HIGHEST KEY REFERENCE SERVICE:**

<u>Key CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
99232	XXX	1.39	RUC Time

CPT Descriptor Subsequent hospital care, per day, for the evaluation and management of a patient, which requires at least 2 of these 3 key components: An expanded problem focused interval history; An expanded problem focused examination; Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the patient is responding inadequately to therapy or has developed a minor complication. Typically, 25 minutes are spent at the bedside and on the patient's hospital floor or unit.

**KEY MPC COMPARISON CODES:**

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

<u>MPC CPT Code 1</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>	<u>Most Recent Medicare Utilization</u>

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Background:**

In the Final Rule for 2016 CMS re-ran the high expenditure services (*CMS High Expenditure Procedures Screen*) across specialties with Medicare allowed charges of \$10 million or more. CMS identified the top 20 codes by specialty in terms of allowed charges, excluding 010 and 090-day global services, anesthesia and Evaluation and Management services and services reviewed since CY 2010. **CPT code 38221 Bone marrow; biopsy, needle or trocar** was listed in this screen and is being brought forward to RUC, after the family 38221, G0364 and 38220 were revised at the February 2016 CPT Panel meeting. Specifically, at the February 2016 meeting CPT code 38220 was revised to specify diagnostic aspiration of bone marrow; revised bone marrow biopsy code 38221 by removing the specification of needle or trocar; addition of a new code to describe diagnostic bone marrow biopsy (ies) and aspiration(s) that would address the service currently reported with the ZZZ add-on G code, G0364 *Bone marrow aspiration performed with bone marrow biopsy through the same incision on the same date of service*.

The surveying societies convened an RVS consensus committee (herein referred to as "joint societies") consisting of experts appointed from the American Society of Clinical Oncology (ASCO), American Society of Hematology (ASH), American Society for Bone and Marrow Transplantation (ASBMT) and the College of American Pathologists (CAP).

**Compelling Evidence**

The joint societies believe that compelling evidence exists for this family that includes CPT 38220, 38221 and the new combined code 38222. Specifically, the physician work and times have changed relative to the amount and types of specimens that are obtained today which are greater in number than in 1995 when 38220 and 38221 were discussed at the 1<sup>st</sup> five year review. Due to advances and greater access to immunophenotyping techniques and simultaneous refinements in cytogenetic methods and molecular diagnostics the number of tests performed has increased. Therefore, this service would meet the compelling evidence for both technique and physician time. Additionally, we believe that the survey supports evidence that assumptions were made in the valuation in that the service was based on CMS/other codes.

### **38220 Survey Results & Recommendations:**

The joint societies reviewed and discussed the survey results. The surveys were sent randomly to members of the joint societies. The joint societies were pleased that there were 121 responses to the survey request. The survey performance rate median was 10 studies per year among the 121 respondents are a reasonable rate given CPT 38220 is a relatively low volume procedure, which adds support to the survey responses. The joint society's experts agreed that the survey physician median times of 15 minutes pre-service, 20 minutes intra-service and 12 minutes of post-service time accurately reflect the current time required to perform this service. As the prior time only noted as total time of 34 minutes are CMS/other and not part of a survey we believe the current survey times 15-20-12 should prevail.

The joint societies believe the median RVW of 1.70 is too high to recommend and not consistent with the rank order in this family or of other services, while the survey 25<sup>th</sup> percentile of 1.20 represents the appropriate value of the service. As noted in our compelling evidence arguments both physician time and work has changed for the aspiration service since 1995 due to the amount of aspirates and testing that are standards of care today. The table below and discussion below will supply supporting evidence for our recommendation to accept the 25<sup>th</sup> percentile of 1.20 RVW.

Key reference code 1 (CPT 99215) was chosen by 28 survey respondents. The intensity complexity measures were a mix of slightly lower value and slightly higher value which supports our notion that the median is too high. Key reference code 2 is 99232 and as in Key reference code 1 a much higher value than the existing value of 1.08, again supporting our recommendation that this service has changed and is more work today than in 1995. The intensity complexity comparisons as noted in this SOR are identical and somewhat more, for most measures. This again suggests that the survey respondents believe this service is more work than the current value.

We then reviewed other similar RUC surveyed codes noted in the table below and believe that these services clearly support maintaining CPT at the 25<sup>th</sup> percentile with the median times.

<b>CPT</b>	<b>Short Description</b>	<b>RVW</b>	<b>Pre</b>	<b>Intra</b>	<b>Post</b>	<b>Total</b>
76813	Ultrasound, pregnant uterus, real time	1.18	5	20	10	35
95868	Needle electromyography; cranial nerve	1.18	10	20	10	40
<b>38220</b>	<b>Diagnostic bone marrow; aspiration(s)</b>	<b>1.20</b>	<b>15</b>	<b>20</b>	<b>12</b>	<b>47</b>
95805	Multiple sleep latency	1.20	15	20	15	50
99339	Individual physician supervision	1.25	10	20	10	40

In summary, CPT code 38220, the joint societies believe the change in technique and physician work support the 25<sup>th</sup> percentile RVW 1.20. Therefore, tracking number C1, we recommend an RVW of 1.20 with pre time 15 minutes, intra time 20 minutes and 12 minutes of post time.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 38220

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Hem/Onc                      How often? Commonly

Specialty Med Onc                      How often? Commonly

Specialty Pathology                      How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 103599

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The national total was estimated by taking the 2014 Medicare claims volume and multiplied by 3.

Specialty Hem/Onc	Frequency 34188	Percentage 33.00 %
Specialty Med Onc	Frequency 10360	Percentage 10.00 %
Specialty Pathology	Frequency 8288	Percentage 8.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 34,533 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. We revised the specialties to Hem/Onc, Med Onc, and Pathology. The RUC database reflects the top three specialties as Hem/Onc, Orthopedic Surgery, and Neurosurgery. However, we believe the addition of the word "diagnostic" to the CPT code description will change the specialty mix once implemented in 2017.

Specialty Hem/Onc	Frequency 11396	Percentage 33.00 %
Specialty Med Onc	Frequency 3453	Percentage 9.99 %

Specialty Pathology

Frequency 2763

Percentage 8.00 %

CPT Code: 38220

Do many physicians perform this service across the United States? Yes

---

### **Berenson-Eggers Type of Service (BETOS) Assignment**

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Procedures

BETOS Sub-classification:

Minor procedure

BETOS Sub-classification Level II:

---

### **Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 38242. Note: The RUC database reflects the top three specialties as Hem/Onc, Orthopedic Surgery, and Neurosurgery. However, we believe the addition of the word "diagnostic" to the CPT code description will change the specialty mix once implemented in 2017

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 38221      Tracking Number   C2

Original Specialty Recommended RVU: **1.37**Presented Recommended RVU: **1.37**

Global Period: XXX

RUC Recommended RVU: **1.28**

CPT Descriptor: Diagnostic bone marrow biopsy (ies)

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 50-year-old male with newly diagnosed Hodgkin's disease who presents with adenopathy and fever. Patient requires bone marrow biopsy for staging to determine bone marrow involvement.

Percentage of Survey Respondents who found Vignette to be Typical: 83%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 10%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 26%

Description of Pre-Service Work: Review clinical history including laboratory data to validate the need for the procedure and determine the type (aspirate, biopsy, and flow cytometry, cultures) to perform, and the appropriate studies (e. g. flow cytometry, cultures, genomics) to order. Inquire about allergies (topical cleansing solution, lidocaine, sedatives, anxiolytics) from patient and any prior history of excessive or prolonged bleeding. Explain the risks, benefits and alternatives to the patient and obtain informed consent. Enter orders into computer system and confirm patient information. The patient is placed into lateral decubitus position, and the physician identifies landmarks, dons sterile gloves, and preps patient with appropriate antiseptic and local anesthetic. A time out to confirm patient identity is performed.

Description of Intra-Service Work: The physician makes a small incision with a scalpel, inserts and advances the bone marrow biopsy needle to the periosteal bone surface position and drills needle into the posterior iliac crest marrow space. Physician removes trocar. Patient is questioned regarding signs of pain. Physician drills needle about 2 cm into the bone/bone marrow of patient. Physician then replaces trocar to make sure that the biopsy is at least 2 cm in length and removes trocar again. Physician then rocks needle back and forth to break off biopsy. Biopsy is removed. Physician assesses bone marrow and biopsy length for adequacy. If adequate, biopsy needle is removed; if necessary a second biopsy is performed. If not, physician with places pressure on wound site for hemostasis cleanses the wound area and bandages. If the first biopsy is inadequate, the physician drills the needle again about 2 cm into the bone/bone marrow of patient. Physician then replaces the trocar to make sure that the biopsy is at least 2 cm in length. Physician then rocks needle back and forth to break off biopsy. Needle is removed, and removes biopsy. The biopsy is assessed to make certain it is bone marrow and the biopsy is measured for length and assessed for adequacy. If biopsy is less than 2 cm, another biopsy is done. The physician places pressure on wound site for hemostasis and the wound is then cleansed and bandaged

Description of Post-Service Work: The physician completes the procedure note and writes orders. Physician is monitoring the patient post-procedure.

**Modifier -51 Exempt Status**

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

**New Technology/Service:**

Is this new/revised procedure considered to be a new technology or service? Yes

**TOP KEY REFERENCE SERVICE:**

<u>Key CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
99215	XXX	2.11	RUC Time

CPT Descriptor Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 40 minutes are spent face-to-face with the patient and/or family.

**SECOND HIGHEST KEY REFERENCE SERVICE:**

<u>Key CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
99232	XXX	1.39	RUC Time

CPT Descriptor Subsequent hospital care, per day, for the evaluation and management of a patient, which requires at least 2 of these 3 key components: An expanded problem focused interval history; An expanded problem focused examination; Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the patient is responding inadequately to therapy or has developed a minor complication. Typically, 25 minutes are spent at the bedside and on the patient's hospital floor or unit.

**KEY MPC COMPARISON CODES:**

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

<u>MPC CPT Code 1</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>	<u>Most Recent Medicare Utilization</u>

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Background:**

In the Final Rule for 2016 CMS re-ran the high expenditure services (*CMS High Expenditure Procedures Screen*) across specialties with Medicare allowed charges of \$10 million or more. CMS identified the top 20 codes by specialty in terms of allowed charges, excluding 010 and 090-day global services, anesthesia and Evaluation and Management services and services reviewed since CY 2010. **CPT code 38221 Bone marrow; biopsy, needle or trocar** was listed in this screen and is being brought forward to RUC, after the family 38221, G0364 and 38220 were revised at the February 2016 CPT Panel meeting. Specifically, at the February 2016 meeting CPT code 38220 was revised to specify diagnostic aspiration of bone marrow; revised bone marrow biopsy code 38221 by removing the specification of needle or trocar; addition of a new code to describe diagnostic bone marrow biopsy (ies) and aspiration(s) that would address the service currently reported with the ZZZ add-on G code, G0364 *Bone marrow aspiration performed with bone marrow biopsy through the same incision on the same date of service*.

The surveying societies convened an RVS consensus committee (herein referred to as "joint societies") consisting of experts appointed from the American Society of Clinical Oncology (ASCO), American Society of Hematology (ASH), American Society for Bone and Marrow Transplantation (ASBMT) and the College of American Pathologists (CAP).

**Compelling Evidence**

The joint societies believe that compelling evidence exists for this family that includes CPT 38220, 38221 and the new combined code 38222. Specifically, the physician work and times have changed relative to the amount and types of specimens that are obtained today which are greater in number than in 1995 when 38220 and 38221 were discussed at the 1<sup>st</sup> five year review. Due to advances and greater access to immunophenotyping techniques and simultaneous refinements in cytogenetic methods and molecular diagnostics the number of tests performed has increased. Therefore, this service would meet the compelling evidence for both technique and physician time. Additionally, we believe that the survey supports evidence that assumptions were made in the valuation in that the service was based on CMS/other codes.

### **38221 Survey Results & Recommendations:**

The joint societies were pleased that there were 120 responses to the survey request. The survey performance rate median was 10 studies per year among the 120 respondents are a reasonable rate given the volume of this revised code is projected to decrease by the volume of the G add on code since 38222 will describe the full combine procedure rather than using an add on code. We believe that the survey respondents recognized the changes to the new family, which adds support to the survey responses. The joint society's experts agreed that the survey physician median times of 15 minutes pre-service, 20 minutes intra-service, 15 minutes post service time accurately reflect the times required to perform this service. As the prior times are CMS/other and not part of a survey we believe the survey times should prevail.

The joint societies reviewed the median RVW of 1.80 and like CPT 38220 believe that value is too high. However, the rank order of the medians is a better representation and relationship of the work between 38220 to 38221. The joint societies disagree with accepting the 25<sup>th</sup> percentile for this service and believe that maintaining the current value of 1.37 while accepting the median times is the correct representation of the rank order and work of these services.

Key reference code 1 (CPT 99215) was chosen by 27 survey respondents. The intensity complexity measures were a mix of slightly lower value and slightly higher value which supports our notion that the median is too high. Key reference code 2 (CPT 99232) was chosen by 15 respondents has a value of 1.39, again supporting our recommendation to maintain the current work value of 1.37. This is supported by the intensity complexity measures, where most believe the services were similar or slightly more work.

We then reviewed other similar RUC surveyed codes noted in the table below and believe that these services clearly support maintaining CPT 38221 at the current RVW 1.37 with the median times.

<b>CPT</b>	<b>Short Description</b>	<b>RVW</b>	<b>Pre</b>	<b>Intra</b>	<b>Post</b>	<b>Total</b>
73721	MRI joint lower extremity; w/o contrast	1.35	5	20	5	30
94003	Ventilation assist and management	1.37	10	20	10	40
<b>38221</b>	<b>Diagnostic bone marrow; biopsy(ies)</b>	<b>1.37</b>	<b>15</b>	<b>20</b>	<b>15</b>	<b>50</b>
99232	Subsequent hosp care	1.39	10	20	10	50
99203	E/M moderate, typical 30 min	1.42	4	20	5	29

In summary, for CPT code 38221 the joint societies believe maintaining the current value of 1.37 and accepting the median survey times preserve the appropriate rank of the family. Therefore, for tracking number C2, we recommend an RVW of 1.37 with pre time at 15 minutes, intra time 20 minutes and 15 minutes of post time.

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 38221

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Hem/Onc                      How often? Commonly

Specialty Diagnostic Radiology                      How often? Commonly

Specialty Medical Oncology                      How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 133413

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. This total was estimated by taking the 2014 Medicare claims volume multiplied by 3 minus the 2014 volume for HCPCS code G0364.

Specialty Hem/Onc	Frequency 54659	Percentage 40.96 %
Specialty Diagnostic Radiology	Frequency 18851	Percentage 14.12 %
Specialty Medical Oncology	Frequency 13235	Percentage 9.92 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 44,471 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This total was estimated from the 2014 Medicare claims volume in the RUC database minus the volume of HCPCS code G0364.

Specialty Hem/Onc	Frequency 18220	Percentage 40.97 %
Specialty Diagnostic Radiology	Frequency 6284	Percentage 14.13 %
Specialty Medical Oncology	Frequency 4412	Percentage 9.92 %

Do many physicians perform this service across the United States? Yes

### **Berenson-Eggers Type of Service (BETOS) Assignment**

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Procedures

BETOS Sub-classification:

Minor procedure

BETOS Sub-classification Level II:

---

### **Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 38221

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 38222      Tracking Number   C3

Original Specialty Recommended RVU: **1.50**Presented Recommended RVU: **1.50**

Global Period: XXX

RUC Recommended RVU: **1.44**

CPT Descriptor: Diagnostic bone marrow biopsy (ies) and aspiration(s)

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: 59-year-old female presenting with peripheral blood pancytopenia with non-diagnostic iron studies and level B12. Patient requires bone marrow biopsy and aspiration for diagnosis.

Percentage of Survey Respondents who found Vignette to be Typical: 92%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 8%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 24%

Description of Pre-Service Work: Review clinical history including laboratory data to validate the need for the procedure and determine the type (aspirate, biopsy,) to perform, and the appropriate studies (e.g. flow cytometry, cultures, genomics) to order. Inquire about allergies (topical cleansing solution, lidocaine, sedatives, anxiolytics) from patient and any prior history of excessive or prolonged bleeding. Explain risks, benefits, and alternatives to the patient and obtain informed consent. Enter orders into computer system and confirm patient information. The patient is placed into lateral decubitus position, and the physician, identifies landmarks, dons sterile gloves, and preps patient with appropriate antiseptic and local anesthetic.

Description of Intra-Service Work: The physician makes small incision with a scalpel, inserts and advances the bone marrow aspiration needle to the periosteal bone surface position and drills needle into the posterior iliac crest marrow space, the trocar is then removed. The patient is questioned and warned about pain and approximately 3mL of the bone marrow is aspirated and used to prepare microscopic slides at the bedside with a technologist's assistance after s/he confirms the presence of at least one spicule present. If necessary, the needle is repositioned after extraction from bone and the process repeated maintaining sterile techniques until adequate spicules are identified. Additional aspirates are obtained for culture, culture, cytogenetics, flow cytometry and molecular diagnostics. The physician then introduces the biopsy needle. Through the same skin hole, but to a different spot in bone surface the needle is advanced to the periosteal bone surface position and the needle is drilled into the posterior iliac crest marrow space. Physician removes trocar. Patient is questioned regarding signs of pain. Physician drills needle about 2 cm into the bone/bone marrow of patient. Physician then replaces trocar to make sure that the biopsy is at least 2 cm in length and removes trocar again. Physician then rocks needle back and forth to break off biopsy. Biopsy is removed. Physician assesses bone marrow and biopsy length for adequacy. If adequate, biopsy needle is removed; if necessary a second biopsy is performed. If not, physician with places pressure on wound site for hemostasis cleanses the wound area and bandages.

Description of Post-Service Work: The physician completes the procedure note and writes orders. Physician is monitoring the patient post-procedure.

**Modifier -51 Exempt Status**

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

**New Technology/Service:**

Is this new/revised procedure considered to be a new technology or service? Yes

**TOP KEY REFERENCE SERVICE:**

<u>Key CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
99215	XXX	2.11	RUC Time

CPT Descriptor Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 40 minutes are spent face-to-face with the patient and/or family.

**SECOND HIGHEST KEY REFERENCE SERVICE:**

<u>Key CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
99234	XXX	2.56	RUC Time

CPT Descriptor Observation or inpatient hospital care, for the evaluation and management of a patient including admission and discharge on the same date, which requires these 3 key components: A detailed or comprehensive history; A detailed or comprehensive examination; and Medical decision making that is straightforward or of low complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually the presenting problem(s) requiring admission are of low severity. Typically, 40 minutes are spent at the bedside and on the patient's hospital floor or unit.

**KEY MPC COMPARISON CODES:**

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

<u>MPC CPT Code 1</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>	<u>Most Recent Medicare Utilization</u>
88331	XXX	1.19	RUC Time	526,449

CPT Descriptor 1 Pathology consultation during surgery; first tissue block, with frozen section(s), single specimen

<u>MPC CPT Code 2</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>	<u>Most Recent Medicare Utilization</u>
		0.00		

CPT Descriptor 2

<u>Other Reference CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
		0.00	

CPT Descriptor**RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:**

Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by the mean) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

**Number of respondents who choose Top Key Reference Code: 27      % of respondents: 22.5 %**

**Number of respondents who choose 2<sup>nd</sup> Key Reference Code: 16      % of respondents: 13.3 %**

**TIME ESTIMATES (Median)**

	<b>CPT Code:</b> <b><u>38222</u></b>	<b>Top Key Reference CPT Code:</b> <b><u>99215</u></b>	<b>2nd Key Reference CPT Code:</b> <b><u>99234</u></b>
Median Pre-Service Time	15.00	5.00	14.00
Median Intra-Service Time	30.00	35.00	40.00
Median Immediate Post-service Time	15.00	15.00	15.00

Ref Code****Time Segment (Mean)**

Overall intensity/complexity	0.67	0.50
------------------------------	------	------

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Background:**

In the Final Rule for 2016 CMS re-ran the high expenditure services (*CMS High Expenditure Procedures Screen*) across specialties with Medicare allowed charges of \$10 million or more. CMS identified the top 20 codes by specialty in terms of allowed charges, excluding 010 and 090-day global services, anesthesia and Evaluation and Management services and services reviewed since CY 2010. **CPT code 38221 Bone marrow; biopsy, needle or trocar** was listed in this screen and is being brought forward to RUC, after the family 38221, G0364 and 38220 were revised at the February 2016 CPT Panel meeting. Specifically, at the February 2016 meeting CPT code 38220 was revised to specify diagnostic aspiration of bone marrow; revised bone marrow biopsy code 38221 by removing the specification of needle or trocar; addition of a new code to describe diagnostic bone marrow biopsy (ies) and aspiration(s) that would address the service currently reported with the ZZZ add-on G code, G0364 *Bone marrow aspiration performed with bone marrow biopsy through the same incision on the same date of service*.

The surveying societies convened an RVS consensus committee (herein referred to as "joint societies") consisting of experts appointed from the American Society of Clinical Oncology (ASCO), American Society of Hematology (ASH), American Society for Bone and Marrow Transplantation (ASBMT) and the College of American Pathologists (CAP).

**Compelling Evidence**

The joint societies believe that compelling evidence exists for this family that includes CPT 38220, 38221 and the new combined code 38222. Specifically, the physician work and times have changed relative to the amount and types of specimens that are obtained today which are greater in number than in 1995 when 38220 and 38221 were discussed at the 1<sup>st</sup> five year review. Due to advances and greater access to immunophenotyping techniques and simultaneous refinements in cytogenetic methods and molecular diagnostics the number of tests performed has increased. Therefore, this service would meet the compelling evidence for both technique and physician time. Additionally, we believe that the survey supports evidence that assumptions were made in the valuation in that the service was based on CMS/other codes.

### **38222 Survey Results & Recommendations:**

The joint societies reviewed and discussed the survey results. The joint societies were pleased that there were 120 responses to the survey request. The survey performance rate median was 25 studies per year among the 120 respondents are appropriate since we believe the literature and current practice supports performing the services together. We believe a performance rate of 25 is appropriate rate given the volume of this new code is projected to be similar to the volume of the G add on code since 38222 will describe the full combination procedure rather than using an add on code. We believe that the survey respondents recognized the changes to the new family, which adds support to the survey responses.

The joint society's experts agreed that the survey physician median times of 15 minutes pre-service, 30 minutes intra-service, and 15 minutes post service time accurately reflect the times required to perform this service. As the prior times are CMS/other and not part of a survey, we believe the survey times should prevail.

The joint societies believe the median RVW of 2.32 is too high to recommend and not consistent with the rank order in this family or of other services, while the survey 25<sup>th</sup> percentile of 1.50 correctly supports the value today. As noted in our compelling evidence arguments both physician time and work has changed for the aspiration service since 1995 due to the amount of aspirates and testing that are standards of care today. The table below and discussion below will supply supporting evidence for our recommendation to accept the 25<sup>th</sup> percentile of 1.50 RVW.

Key reference code 1 (CPT 99215) was chosen by 27 survey respondents and Key reference 2 CPT 99234 by 16 respondents. The intensity complexity measures were a mix of slightly lower value and slightly higher value which supports our notion that the median is too high. If you add the RVWs for the current 38221 plus the add on G0364 the current RVW is 1.53. This supports the 25<sup>th</sup> percentile value of 1.50 which we believe is the appropriate value for the combine service.

We then reviewed other similar RUC surveyed codes noted in the table below and believe that these services is supported CPT at the 25<sup>th</sup> percentile with the median times.

CPT	Short Description	RVW	Pre	Intra	Post	Total
99497	Advance Care planning	1.50	5	30	10	45
90832	Psychotherapy, 30 minutes	1.50	5	30	10	45
<b>38222</b>	<b>Diagnostic bone marrow; biopsy(ies) and aspiration(s)</b>	<b>1.50</b>	<b>20</b>	<b>30</b>	<b>15</b>	<b>60</b>
99325	Dom-Res home visit	1.52	10	30	12	52
99342	Home visit	1.52	10	30	12	52
76551	Ophthalmic ultrasound	1.55	5	30	10	45

In summary, CPT code 38222, the joint societies believe the change in technique and physician work support the 25<sup>th</sup> percentile RVW 1.50. Therefore, for tracking number C3, we recommend an RVW of 1.50 with pre time 15 minutes, intra time 30 minutes and 15 minutes of post time.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) This service was previously reported as G0364 (Bone marrow aspiration performed with bone marrow biopsy through the same incision on the same date of service) in conjunction with CPT code 38221.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Hem/Onc                      How often? Commonly

Specialty Diagnostic Radiology                      How often? Commonly

Specialty Medical Oncology                      How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 246153

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. This number was obtained by taking the 2014 Medicare volume and multiplying it by 3.

Specialty Hem/Onc	Frequency 100849	Percentage 40.97 %
Specialty Diagnostic Radiology	Frequency 34781	Percentage 14.12 %
Specialty Medical Oncology	Frequency 24418	Percentage 9.91 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?  
 82,051 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty.  
 Please explain the rationale for this estimate. This number was obtained from the Part B National Summary Data File 2014  
 for G0364.

Specialty Hem/Onc	Frequency 33616	Percentage 40.96 %
Specialty Diagnostic Radiology	Frequency 11594	Percentage 14.13 %
Specialty Medical Oncology	Frequency 8139	Percentage 9.91 %

Do many physicians perform this service across the United States? Yes

---

### **Berenson-Eggers Type of Service (BETOS) Assignment**

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Procedures

BETOS Sub-classification:

Minor procedure

BETOS Sub-classification Level II:

---

### **Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number This service was previously reported as G0364 (Bone marrow aspiration performed with bone marrow biopsy through the same incision on the same date of service) in conjunction with CPT code 38221. We do not believe this mix will change.

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/Specialty Society Update Process  
Practice Expense Summary of Recommendation  
Non Facility Direct Inputs**

CPT Long Descriptor:

Diagnostic bone marrow biopsy (ies) and aspiration(s)

Global Period: XXX

Meeting Date: April 2016

Revised 4/27/16

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee: The Specialty Society Advisors and Staff from ASCO, ASH, ASBMT, and CAP held a meeting via conference call to discuss the Practice Expense. The inputs were developed with input from physicians, specialty society staff, and clinical staff from a variety of settings.
2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** CPT Code 38222 is a new code, approved at the February 2016 CPT Editorial Panel meeting. The reference code for 38222 is G0364 (Bone marrow aspiration performed with bone marrow biopsy through the same incision on the same date of service).
3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:

**Complete pre-service diagnostic & referral forms:** Though the standard for a XXX/0 Day Global Period is 0 minutes, our Societies recommended 2 minutes should be added to account for the clinical staff's completion of referral forms and ensuring those referrals are in place before the procedure is performed.

**Follow-up phone calls and prescriptions:** Though the standard for a XXX/0 Day Global Period is 0 minutes, our Societies recommended 3 minutes should be added to account for calling the patient to confirm the appointment and providing them instructions for the day of the procedure.

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence: N/A

5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

The **RN/LPN/MTA** completes the required referral forms and ensures the information is in place prior to the procedure. (2 minutes)

Though the standard for a XXX/0 Day Global Period is 0 minutes, our Societies recommended 2 minutes should be added to account for the clinical staff's completion of referral forms and ensuring those referrals are in place before the procedure is performed.

The **RN/LPN/MTA** calls the patient to confirm the appointment and provides instructions for the day of the procedure (**3 minutes**)

Though the standard for a XXX/0 Day Global Period is 0 minutes, our Societies recommended **3 minutes** should be added to account for calling the patient to confirm the appointment and providing them instructions for the day of the procedure.

Intra-Service Clinical Labor Activities:

The **RN/LPN/MTA** greets the patient and escorts them to the room. The patient is provided the appropriate gowning. The nurse verifies the patient information and ensures appropriate medical records are available. (3 minutes)

The following vitals are then obtained by the **RN/LPN/MTA**: (5 minutes)

- 1) Blood Pressure
- 2) Temperature
- 3) Pulse
- 4) Respiration
- 5) Weight

The **RN/LPN/MTA** provides pre-service education and obtains signed consent from the patient. (12 minutes)

The **RN/LPN/MTA** prepares the room, equipment, and gathers the necessary supplies. (2 minutes)

The **RN/LPN/MTA** prepares and positions patient. (2 minutes)

The RN then assists the physician with performing the procedure. (30 minutes)

Monitor patient following procedure/check tubes, monitors, drains, multitasking 1:4 (not related to moderate sedation) (**RN/LPN/MTA**). (7.5 minutes)

Clean room/equipment by physician staff (**RN/LPN/MTA**) (3 minutes)

**Complete diagnostic forms, lab & x-ray requisitions (RN/LPN/MTA) (3 minutes)**

**Check dressings & wound/ home care instructions/coordinate office visits/prescriptions (RN/LPN/MTA) (5 minutes)**

**Other Clinical Activity: Lab Tech Activities (12.5 minutes):**

- 1) Label slides, tubes, and specimen containers with 2 unique patient identifiers (5 minutes)
- 2) Receive biopsy and/or aspirate specimen from physician into Petri dish (0.5 minutes)
- 3) Examine for adequacy (trabecular bone of adequate length and or adequate spicules in clot/aspirate) (1.5 minutes)
- 4) Aspirate with or without biopsy: Carefully select and collect spicules using pipette, place on slide, make smear, air dry. Repeat for total 10 slides. Biopsy only: Carefully roll biopsy core on slide. Air dry, repeat for total 10 slides (4 minutes)
- 5) Using spatula aggregate clot and place in labeled specimen container (0.5 minutes)
- 6) Aspirate only: Assist physician placing separate aspirate material into tube(s) for flow cytometry genetic studies, other studies as applicable (1 minute)

Post-Service Clinical Labor Activities:

**The RN/LPN/MTA conducts phone calls and calls in the necessary prescriptions for the patient. (3 minutes)**

**AMA/Specialty Society Update Process  
Practice Expense Summary of Recommendation  
Non Facility Direct Inputs**

CPT Long Descriptor:

Diagnostic bone marrow aspiration(s)

Global Period: XXX

Meeting Date: April 2016

Revised 4/27/16

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee: The Specialty Society Advisors and Staff from ASCO, ASH, ASBMT, and CAP held a meeting via conference call to discuss the Practice Expense. The inputs were developed with input from physicians, specialty society staff, and clinical staff from a variety of settings.
2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale: The reference code for 38220 is a direct comparison, however, it should be noted the CPT description was updated at the February 2016 CPT Editorial Panel meeting.
3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:

**Complete pre-service diagnostic & referral forms:** Though the standard for a XXX/0 Day Global Period is 0 minutes, our Societies recommended 2 minutes should be added to account for the clinical staff's completion of referral forms and ensuring those referrals are in place before the procedure is performed.

**Follow-up phone calls and prescriptions:** Though the standard for a XXX/0 Day Global Period is 0 minutes, our Societies recommended 3 minutes should be added to account for calling the patient to confirm the appointment and providing them instructions for the day of the procedure.

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:

**Obtain Vitals:** We are requesting 5 minutes for vitals, an increase from the current 3 minutes. The vitals for this procedure include 1) Blood Pressure, 2) Temperature, 3) Pulse, 4) Respiration, 5) Weight

**Complete diagnostic forms, lab & X-ray requisitions:** We are requesting 2 minutes for this task, an increase from the current 1 minute. This minute accounts for the additional completion of diagnostic

forms and lab requisitions. Due to advances and greater access to immunophenotyping techniques and simultaneous refinements in cytogenetic methods and molecular diagnostics, requests for tests have increased along with the forms staff must complete. This is the new standard of care.

5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

**The RN/LPN/MTA completes the required referral forms and ensures the information is in place prior to the procedure. (2 minutes)**

Though the standard for a XXX/0 Day Global Period is 0 minutes, our Societies felt there should be 2 minutes to account for the clinical staff's completion of referral forms and ensuring those referrals are in place before the procedure is performed

**The RN/LPN/MTA calls the patient to confirm the appointment and provides instructions for the day of the procedure (3 minutes)**

Though the standard for a XXX/0 Day Global Period is 0 minutes, our Societies felt there should be 3 minutes to account for calling the patient to confirm the appointment and providing them instructions for the day of the procedure.

Intra-Service Clinical Labor Activities:

**The RN/LPN/MTA greets the patient and escorts them to the room. The patient is provided the appropriate gowning. The nurse verifies the patient information and ensures appropriate medical records are available. (3 minutes)**

**The following vitals are then obtained by the RN/LPN/MTA: (5 minutes)**

- 1) Blood Pressure
- 2) Temperature
- 3) Pulse
- 4) Respiration
- 5) Weight

We are requesting an increase from 3 to 5 minutes, as there are 5 vitals that are typically obtained by the RN. The standard number of minutes for Level 2 (4-6 vitals) is 5 minutes.

The **RN/LPN/MTA** provides pre-service education and obtains signed consent from the patient. (12 minutes)

The **RN/LPN/MTA** prepares the room, equipment, and supplies. (2 minutes)

The **RN/LPN/MTA** prepares and positions patient. (2 minutes)

The RN assists the physician with performing the procedure. (20 minutes)

The **RN/LPN/MTA** monitors the patient following procedure/check tubes, monitors, drains, multitasking 1:4 (not related to moderate sedation). (7.5 minutes)

Clean room/equipment by physician staff (**RN/LPN/MTA**) (3 minutes)

**Complete diagnostic forms, lab & x-ray requisitions (RN/LPN/MTA) (2 minutes)**

We are requesting 2 minutes for this task, an increase from the current 1 minute. This minute accounts for the additional completion of diagnostic forms and lab requisitions. Due to advances and greater access to immunophenotyping techniques and simultaneous refinements in cytogenetic methods and molecular diagnostics, requests for tests have increased along with the forms staff must complete. This is the new standard of care.

**Check dressings & wound/ home care instructions/coordinate office visits/prescriptions (RN/LPN/MTA) (5 minutes)**

**Other Clinical Activity: Lab Tech Activities (12 minutes):**

- 1) Label slides, tubes, and specimen containers with 2 unique patient identifiers (5 minutes)
- 2) Receive biopsy and/or aspirate specimen from physician into Petri dish (0.5 minutes)
- 3) Examine for adequacy (trabecular bone of adequate length and or adequate spicules in clot/aspirate) (1 minute)
- 4) Aspirate with or without biopsy: Carefully select and collect spicules using pipette, place on slide, make smear, air dry. Repeat for total 10 slides. Biopsy only: Carefully roll biopsy core on slide. Air dry, repeat for total 10 slides (4 minutes)
- 5) Using spatula aggregate clot and place in labeled specimen container (0.5 minutes)

**CPT Code: 38220**

**Specialty Society('s): ASCO, ASH, ASBMT, CAP**

- 6) Aspirate only: Assist physician placing separate aspirate material into tube(s) for flow cytometry genetic studies, other studies as applicable (1 minute)

Post-Service Clinical Labor Activities:

The **RN/LPN/MTA** conducts phone calls and calls in the necessary prescriptions for the patient. (3 minutes)

**AMA/Specialty Society Update Process  
Practice Expense Summary of Recommendation  
Non Facility Direct Inputs**

CPT Long Descriptor:

Diagnostic bone marrow biopsy (ies)

Global Period: XXX

Meeting Date: April 2016

Revised 4/27/16

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee: The Specialty Society Advisors and Staff from ASCO, ASH, ASBMT, and CAP held a meeting via conference call to discuss the Practice Expense. The inputs were developed with input from physicians, specialty society staff, and clinical staff from a variety of settings.
2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale: The reference code for 38221 is a direct comparison, however, it should be noted the CPT description was updated at the February 2016 CPT Editorial Panel meeting.
3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:

**Complete pre-service diagnostic & referral forms:** Though the standard for a XXX/0 Day Global Period is 0 minutes, our Societies recommended 2 minutes should be added to account for the clinical staff's completion of referral forms and ensuring those referrals are in place before the procedure is performed.

**Follow-up phone calls and prescriptions:** Though the standard for a XXX/0 Day Global Period is 0 minutes, our Societies recommended 3 minutes should be added to account for calling the patient to confirm the appointment and providing them instructions for the day of the procedure.

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:

**Obtain Vitals:** We are requesting an increase from 3 to 5 minutes, as there are 5 vitals: (1) Blood Pressure 2) Temperature 3) Pulse 4) Respiration 5) Weight that are typically obtained by the RN. The standard number of minutes for Level 2 (4-6 vitals) is 5 minutes.

5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

The **RN/LPN/MTA** completes the required referral forms and ensures the information is in place prior to the procedure. (2 minutes)

Though the standard for a XXX/0 Day Global Period is 0 minutes, our Societies recommended 2 minutes should be added to account for the clinical staff's completion of referral forms and ensuring those referrals are in place before the procedure is performed.

The **RN/LPN/MTA** calls the patient to confirm the appointment and provides instructions for the day of the procedure (**3 minutes**)

Though the standard for a XXX/0 Day Global Period is 0 minutes, our Societies recommended **3 minutes** should be added to account for calling the patient to confirm the appointment and providing them instructions for the day of the procedure.

Intra-Service Clinical Labor Activities:

The **RN/LPN/MTA** greets the patient and escorts them to the room. The patient is provided the appropriate gowning. The nurse verifies the patient information and ensures appropriate medical records are available. (3 minutes)

The following vitals are then obtained by the **RN/LPN/MTA**: (5 minutes)

- 1) Blood Pressure
- 2) Temperature
- 3) Pulse
- 4) Respiration
- 5) Weight

We are requesting an increase from 3 to 5 minutes, as there are 5 vitals that are typically obtained by the RN. The standard number of minutes for Level 2 (4-6 vitals) is 5 minutes.

The **RN/LPN/MTA** provides pre-service education and obtains signed consent from the patient. (12 minutes)

The **RN/LPN/MTA** prepares the room, equipment, and gathers the necessary supplies. (2 minutes)

The **RN/LPN/MTA** prepares and positions patient. (2 minutes)

The RN then assists the physician with performing the procedure. (20 minutes)

The **RN/LPN/MTA** monitors the patient following procedure/check tubes, monitors, drains, multitasking 1:4 (not related to moderate sedation). (7.5 minutes)

Clean room/equipment by physician staff (**RN/LPN/MTA**) (3 minutes)

**Complete diagnostic forms, lab & x-ray requisitions (RN/LPN/MTA) (1 minute)**

**Check dressings & wound/ home care instructions/coordinate office visits/prescriptions (RN/LPN/MTA) (5 minutes)**

**Other Clinical Activity: Lab Tech Activities (7.5 minutes):**

- 1) Label slides, tubes, and specimen containers with 2 unique patient identifiers (3 minutes)
- 2) Receive biopsy and/or aspirate specimen from physician into Petri dish (0.5 minutes)
- 3) Examine for adequacy (trabecular bone of adequate length and or adequate spicules in clot/aspirate) (0.5 minutes)
- 4) Aspirate with or without biopsy: Carefully select and collect spicules using pipette, place on slide, make smear, air dry. Repeat for total 10 slides. Biopsy only: Carefully roll biopsy core on slide. Air dry, repeat for total 10 slides (3 minutes)
- 5) Using spatula aggregate clot and place in labeled specimen container (0.5 minutes)

Post-Service Clinical Labor Activities:

**The RN/LPN/MTA conducts phone calls and calls in the necessary prescriptions for the patient. (3 minutes)**

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
*\*CMS High Expenditure Procedures Screen\**

April 2016

**Chest X-ray**

In the Final Rule for 2016, CMS re-ran the screen for high expenditure services across specialties with Medicare allowed charges of \$10 million or more. CMS identified the top 20 codes by specialty in terms of allowed charges, excluding 010 and 090-day global services, anesthesia and Evaluation and Management services and services reviewed since CY 2010. CPT codes 71010 *Radiologic examination, chest; single view, frontal* and 71020 *Radiologic examination, chest, 2 views, frontal and lateral*; were identified via this screen. The specialty elected to send the entire family of chest X-ray codes to the CPT Editorial Panel to modernize the reporting of these services. The CPT Editorial panel deleted all 9 existing codes in the chest X-ray family and created 4 new codes for reporting chest X-ray.

**71045 *Radiologic examination, chest; single view***

The RUC reviewed the survey results from 86 radiologists and agreed with following physician time components: pre-service time of 1 minute, intra-service time of 3 minutes and post-service time of 1 minute.

The RUC reviewed the survey 25<sup>th</sup> percentile work RVU and agreed that it would be appropriate to assign the new code the same work value (work RVU= 0.18) as the deleted code 71010 *Radiologic examination, chest; single view, frontal*. The RUC noted that this deleted code 71010 was the most commonly performed single view chest X-ray code according to 2015 Medicare claims data; 99 percent of the volume for 71045 would have previously been reported using 71010. To justify a work RVU of 0.18, the RUC compared the survey code to 2<sup>nd</sup> key reference and MPC code 72100 *Radiologic examination, spine, lumbosacral; 2 or 3 views* (work RVU= 0.22, intra-service time of 3 minutes, total time of 6 minutes) and noted that although both services have identical intra-service times and involve a similar intensity of work, the survey code has slightly less total time. The RUC also compared the survey code to CPT code 73501 *Radiologic examination, hip, unilateral, with pelvis when performed; 1 view* (work RVU= 0.18, intra-service time of 3 minutes and total time of 5 minutes) and noted that both services have identical physician times and involve a similar amount of physician work, further supporting a value of 0.18 for the survey code. **The RUC recommends a work RVU of 0.18 for CPT code 71045.**

**71046 Radiologic examination, chest; 2 views**

The RUC reviewed the survey results from 86 radiologists and agreed with following physician time components: pre-service time of 1 minute, intra-service time of 4 minutes and post-service time of 1 minute.

The RUC reviewed the survey 25<sup>th</sup> percentile work RVU of 0.22 and agreed that this value appropriately accounts for the physician work involved. To justify a work RVU of 0.22, the RUC compared the survey code to CPT code 73502 *Radiologic examination, hip, unilateral, with pelvis when performed; 2-3 views* (work RVU= 0.22, intra-service time of 4 minutes, total time of 6 minutes) and 73521 *Radiologic examination, hips, bilateral, with pelvis when performed; 2 views* (work RVU= 0.22, intra-service time of 4 minutes, total time of 6 minutes). The RUC noted that all three services have identical intra-service and total times and involve similar amounts of physician work. **The RUC recommends a work RVU of 0.22 for CPT code 71046.**

**71047 Radiologic examination, chest; 3 views**

The RUC reviewed the survey results from 86 radiologists and agreed with following physician time components: pre-service time of 1 minute, intra-service time of 4 minutes and post-service time of 1 minute. The RUC noted that although 71047 has the same amount of survey time as 71046, the increased potential for disease and the increase in the complexity of the patient for the typical 3-view X-ray warranted a somewhat higher work RVU for 71047 relative to 71046. Also, the RUC noted that reviewing 3 views takes slightly more time than a 2 view X-ray, though the difference may only be in seconds which is a level of granularity not captured in the data.

The RUC reviewed the survey 25<sup>th</sup> percentile work RVU of 0.27 and agreed that this value appropriately accounts for the physician work involved. To justify a work RVU of 0.27, the RUC compared the survey code to top key reference code 73503 *Radiologic examination, hip, unilateral, with pelvis when performed; minimum of 4 views* (work RVU= 0.27, intra-service time of 5 minutes, total time of 7 minutes) and noted that both services involve a similar amount of physician work and similar physician times. The RUC also reviewed CPT code 73522 *Radiologic examination, hips, bilateral, with pelvis when performed; 3-4 views* (work RVU= 0.29, intra-service time of 5 minutes, total time of 7 minutes) and noted that both services involve a similar amount of physician work and similar physician times, confirming that a work RVU of 0.27 is appropriate for the survey code. **The RUC recommends a work RVU of 0.27 for CPT code 71047.**

**71048 Radiologic examination, chest; 4 or more views**

The RUC reviewed the survey results from 86 radiologists and agreed with following physician time components: pre-service time of 1 minute, intra-service time of 5 minutes and post-service time of 1 minute.

The RUC reviewed the survey 25<sup>th</sup> percentile work RVU and agreed that it would be appropriate to assign the new code the same work RVU of deleted code 71030 *Radiologic examination, chest, complete, minimum of 4 views*, 0.31. The RUC noted that the majority of projected Medicare volume for 71048 is estimated to have previously been reported using 71030. To justify a work RVU of 0.31, the RUC compared the survey code to top key reference code 72114 *Radiologic examination, spine, lumbosacral; complete, including bending views, minimum of 6 views* (work

RVU= 0.32, intra-service time of 5 minutes, total time of 8 minutes) and noted that both services have identical intra-service times and involve a similar amount of physician work. The RUC also compared the survey code to CPT code 72052 *Radiologic examination, spine, cervical; 6 or more views* (work RVU= 0.36, intra-service time of 5 minutes, total time of 8 minutes) and noted that both services have identical intra-service times while the survey code involves somewhat less physician work in the post-service period, supporting a somewhat lower valuation. **The RUC recommends a work RVU of 0.31 for CPT code 71048.**

### Practice Expense

A detailed discussion was convened regarding the typical clinical labor, supplies and equipment and site of service when CPT code 71045 is performed in the non-facility setting. The vast majority of the volume for this new code would have previously been reported using deleted code 71010. For the 437,000 Medicare claims in 2014 that were reported globally, the largest provider of these claims are independent providers in nursing homes, where the largest plurality are unskilled nursing homes that are not subject to the consolidated billing rules for Medicare Part A and the X-ray provider would have to get a contract from the nursing home. The service was evaluated based on the most typical scenario which is an independent provider wheeling a portable X-ray machine into an unskilled nursing home. Due to this typical scenario, the clinical labor time for acquiring the images was reduced to 2 minutes, the clinical labor time for cleaning the room and the equipment was reduced to 1 minute, the clinical labor time for reviewing exam with the interpreting physician was deleted. Also, the X-ray equipment was changed to EF041 Portable X-ray Machine and the equipment input for the basic radiology room was eliminated.

For CPT code 71048, the clinical labor time for acquiring the images was changed to 10 minutes to make the time in line with the other services in the family based on the number of views. The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.

### Work Neutrality

The RUC's recommendation for these codes will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

*Providing medical care to a critically ill . . .*

*Inpatient critical care services . . .*

*Services for a patient who is not . . .*

*Critical care and other E/M services . . .*

For reporting by professionals, the following services are included in critical care when performed during the critical period by the physician(s) providing critical care: the interpretation of cardiac output measurements (93561, 93562), chest X-rays (~~71010, 71015, 71020~~71045, 71046), pulse oximetry (94760, 94761, 94762), blood gases, and information data stored in computers (eg, ECGs, blood pressures, hematologic data [99090]); gastric intubation (43752, 43753); temporary transcutaneous pacing (92953); ventilatory management (94002-94004, 94660, 94662); and vascular access procedures (36000, 36410, 36415, 36591, 36600). Any services performed that are not included in this listing should be reported separately. Facilities may report the above services separately.

99291                    *Critical care, evaluation and management . . .*

99292                    *each additional 30 minutes . . .*

*(Use 99292 in conjunction with 99291)*

-----***Coding Tip***-----

### **Services Included in Critical Care Services**

For reporting by professionals, the following services are included in critical care when performed during the critical period by the physician(s) providing critical care: the interpretation of cardiac output measurements (93561, 93562), chest X-rays (~~71010, 71015, 71020~~71045, 71046), pulse oximetry (94760, 94761, 94762), blood gases, and information data stored in computers (eg, ECGs, blood pressures, hematologic data [99090]); gastric intubation (43752, 43753); temporary transcutaneous pacing (92953); ventilatory management (94002-94004, 94660, 94662); and vascular access procedures (36000, 36410, 36415, 36591, 36600). Any services performed that are not listed above should be reported separately. Facilities may report the above services separately.

## **Inpatient Neonatal Intensive Care Services and Pediatric and Neonatal Critical Care Services**

### **Pediatric Critical Care Patient Transport**

*Codes 99466, 99467 are used to report the . . .*

*Codes 99485, 99486 are used . . .*

*For the definition of the critically . . .*

*The non-face-to-face direction of emergency . . .*

*Emergency department services (99281-99285), initial . . .*

The following services are included when performed during the pediatric patient transport by the physician providing critical care and may not be reported separately: routine monitoring evaluations (eg, heart rate, respiratory rate, blood pressure, and pulse oximetry), the interpretation of cardiac output measurements (93562), chest X-rays (~~71010, 71015, 71020~~71045, 71046), pulse oximetry (94760, 94761, 94762), blood gases and information data stored in computers (eg, ECGs, blood pressures, hematologic data) (99090), gastric intubation (43752, 43753), temporary transcutaneous pacing (92953), ventilatory management (94002, 94003, 94660, 94662), and vascular access procedures (36000, 36400, 36405, 36406, 36415, 36591, 36600). Any services performed which are not listed above should be reported separately.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 71045      Tracking Number   D1

Original Specialty Recommended RVU: **0.18**Presented Recommended RVU: **0.18**

Global Period: XXX

RUC Recommended RVU: **0.18**

CPT Descriptor: Radiologic examination, chest; single view

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 65-year-old male with unstable angina underwent coronary artery bypass grafting. Immediately postoperatively the patient is hypoxemic with decreased breath sounds on the left. A portable anteroposterior (AP) chest radiograph is ordered.

Percentage of Survey Respondents who found Vignette to be Typical: 94%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 1%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 1%

**Description of Pre-Service Work:**

Review the reason for the examination and any pertinent clinical history.

Review any prior applicable imaging studies.

**Description of Intra-Service Work:**

Supervise technologist performing the examination.

Interpret the radiograph of the chest. Specifically, evaluate the lung fields, heart, mediastinum, and pleural spaces. Assess the ribs and other osseous structures, including the spine and shoulders. Review visualized soft tissues and portions of the upper abdomen.

Compare findings to previous studies, if applicable.

Dictate report for medical record.

**Description of Post-Service Work:**

Review and sign final report. Communicate findings to referring physician, when needed.

------------------------------	------	------

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Background:**

Two chest x-ray (CXR) CPT codes, 71010 (*Radiologic examination, chest; single view, frontal*) and 71020 (*Radiologic examination, chest, 2 views, frontal and lateral;*) were identified as potentially misvalued by CMS through its 2016 NPRM High Expenditure by Specialty screen. The specialty referred the entire family of CXR codes to the CPT Editorial Panel to modernize the reporting of these services. The CPT Editorial Panel created four new CXR codes and deleted nine existing CXR codes.

The CXR codes are as follows:

CPT Code	Descriptor
71045	Radiologic examination, chest; single view
71046	Radiologic examination, chest; 2 views
71047	Radiologic examination, chest; 3 views
71048	Radiologic examination, chest; 4 or more views

**Survey Process:**

The American College of Radiology (ACR) performed a random survey of our members. The ACR gathered an expert panel, including a number of physicians familiar with these services, to review the data and develop the following recommendations.

**Summary of Time and wRVU Recommendations for all Four Survey Codes:**

We recommend the wRVU which corresponds to the most commonly reported existing code across the family based on number of views. These recommendations are less than or equal to the 25<sup>th</sup> percentile survey value across the family.

We recommend the median service period times across the family.

### 71045 (Chest X-ray; 1 view)

#### Work RVU Recommendation:

We recommend a work RVU of 0.18 RVUs, which is below the 25<sup>th</sup> percentile and equivalent to the most commonly reported existing one view CXR code, 71010 (*Radiologic examination, chest; single view, frontal*).

#### Time Recommendation:

We recommend the median survey times: 1 minute pre-service, 3 minutes intra-service, and 1 minute post-service.

#### Key Reference Services:

Our recommendation compares favorably to the two most commonly chosen key reference services (KRS): 73030 (*Radiologic examination, shoulder; complete, minimum of 2 views*), chosen by 26% of respondents, and 72100 (*Radiologic examination, spine, lumbosacral; 2 or 3 views*), chosen by 20% of respondents. These KRS codes have comparable RVUs and intra-service times as summarized in this table:

CPT	Short Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
73030	X-ray, shoulder; min of 2 views	0.18	7	1	4	2	0.028
<b>71045</b>	<b>X-ray, chest; single view</b>	<b>0.18</b>	<b>5</b>	<b>1</b>	<b>3</b>	<b>1</b>	<b>0.045</b>
72100	X-ray, spine, lumbosacral; 2 or 3 views	0.22	6	1	3	2	0.051

#### MPC Codes:

Our recommendation compares favorably to MPC code 72100 (*Radiologic examination, spine, lumbosacral; 2 or 3 views*), which is also the second KRS. 71045 and 72100 have identical intra times, similar total times, and comparable RVUs.

CPT	Short Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
<b>71045</b>	<b>X-ray, chest; single view</b>	<b>0.18</b>	<b>5</b>	<b>1</b>	<b>3</b>	<b>1</b>	<b>0.045</b>
72100	X-ray, spine, lumbosacral; 2 or 3 views	0.22	6	1	3	2	0.051

## Summary and Comparison to Other codes in the Chest X-Ray Family

Our recommendations are supported by our survey and the KRS and MPC codes provided. The intra times for 71046 and 71047 are the same but the RVU recommendation for 71047 is higher since a 3 view CXR is of greater intensity than a 2 view CXR. Our recommendations maintain appropriate relativity across the CXR family and also across the abdomen X-ray family, which was surveyed at this same meeting as summarized in this table:

CPT	Short Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
71045	X-ray, chest; single view	0.18	5	1	3	1	0.045
74045	X-ray, abdomen; 1 view	0.18	5	1	3	1	0.045
71046	X-ray, chest; 2 views	0.22	6	1	4	1	0.044
74046	X-ray, abdomen, abdomen; 2 views	0.23	6	1	4	1	0.046
71047	X-ray, chest; 3 views	0.27	6	1	4	1	0.056
74047	X-ray, abdomen, abdomen; 3 or more views	0.27	6	1	4	1	0.056
71048	X-ray, chest; 4 or more views	0.31	7	1	5	1	0.053
74022	X-ray, abdomen, abdomen; complete acute abdomen series, including supine, erect, and/or decubitus views, single view chest	0.32	7	1	5	1	0.055

---

## SERVICES REPORTED WITH MULTIPLE CPT CODES

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

- Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

---

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 71010, 71015, 71035

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology                      How often? Commonly

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period? 53400000

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by 71045 provided nationally in a one-year period is estimated to be 53,400,000.

Specialty Diagnostic Radiology                      Frequency 48600000                      Percentage 91.01 %

Specialty                      Frequency 0                      Percentage 0.00 %

Specialty                      Frequency 0                      Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?

17,800,000 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The 2014 Medicare data estimates that CPT code 71045 will be billed approximately 17,800,000 times for Medicare patients nationally in a one-year period.

Specialty Diagnostic Radiology                      Frequency 16200000                      Percentage 91.01 %

Specialty                      Frequency 0                      Percentage 0.00 %

Specialty                      Frequency 0                      Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

### **Berenson-Eggers Type of Service (BETOS) Assignment**

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 71046      Tracking Number   D2

Original Specialty Recommended RVU: **0.22**Presented Recommended RVU: **0.22**

Global Period: XXX

RUC Recommended RVU: **0.22**

CPT Descriptor: Radiologic examination, chest; 2 views

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 70-year-old female with cough and fever. Two views (Posteroanterior (PA) and Lateral) of the chest are ordered.

Percentage of Survey Respondents who found Vignette to be Typical: 99%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 1%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 1%

**Description of Pre-Service Work:**

Review the reason for the examination and any pertinent clinical history. Review any prior applicable imaging studies

**Description of Intra-Service Work:**

Supervise technologist performing the examination.

Interpret the radiographs of the chest. Evaluate the lung fields, heart, mediastinum, and pleural spaces. Specifically assess the mediastinal structures and costophrenic sulci on the second view. Assess the ribs and other osseous structures, including the spine and shoulders. Review visualized soft tissues and portions of the upper abdomen.

Compare findings to previous studies, if applicable.

Dictate report for medical record.

**Description of Post-Service Work:**

Review and sign final report. Communicate findings to referring physician, when needed.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Background:**

Two chest x-ray (CXR) CPT codes, 71010 (*Radiologic examination, chest; single view, frontal*) and 71020 (*Radiologic examination, chest, 2 views, frontal and lateral;*) were identified as potentially misvalued by CMS through its 2016 NPRM High Expenditure by Specialty screen. The specialty referred the entire family of CXR codes to the CPT Editorial Panel to modernize the reporting of these services. The CPT Editorial Panel created four new CXR codes and deleted nine existing CXR codes.

The CXR codes are as follows:

CPT Code	Descriptor
71045	Radiologic examination, chest; single view
71046	Radiologic examination, chest; 2 views
71047	Radiologic examination, chest; 3 views
71048	Radiologic examination, chest; 4 or more views

**Survey Process:**

The American College of Radiology (ACR) performed a random survey of our members. The ACR gathered an expert panel, including a number of physicians familiar with these services, to review the data and develop the following recommendations.

**Summary of Time and wRVU Recommendations for all Four Survey Codes:**

We recommend the wRVU which corresponds to the most commonly reported existing code across the family based on number of views. These recommendations are less than or equal to the 25<sup>th</sup> percentile survey value across the family.

We recommend the median service period times across the family.

### 71046 (Chest X-ray; 2 views)

#### Work RVU Recommendation:

We recommend a work RVU of 0.22 RVUs, equal to the 25<sup>th</sup> percentile and equivalent to the most commonly reported existing two view CXR code, 71020 (*Radiologic examination, chest, 2 views, frontal and lateral;*).

#### Time Recommendation:

We recommend the median survey times: 1 minute pre-service, 4 minutes intra-service, and 1 minute post-service.

#### Key Reference Services:

Our recommendation compares favorably to the two most commonly chosen key reference services (KRS): 72100 (*Radiologic examination, spine, lumbosacral; 2 or 3 views*), chosen by 43% of respondents, and 73030 (*Radiologic examination, shoulder; complete, minimum of 2 views*), chosen by 12% of respondents. These KRS codes have comparable RVUs and intra-service times as summarized in this table:

CPT	Short Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
73030	X-ray, shoulder; min of 2 views	0.18	7	1	4	2	0.028
<b>71046</b>	<b>X-ray, chest; 2 views</b>	<b>0.22</b>	<b>6</b>	<b>1</b>	<b>4</b>	<b>1</b>	<b>0.044</b>
72100	X-ray, spine, lumbosacral; 2 or 3 views	0.22	6	1	3	2	0.051

#### MPC Codes:

Our recommendation compares favorably to MPC code 72100 (*Radiologic examination, spine, lumbosacral; 2 or 3 views*), which is also the KRS. 71046 and 72100 have similar intra times, and identical total times and RVUs.

CPT	Short Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
<b>71046</b>	<b>X-ray, chest; 2 views</b>	<b>0.22</b>	<b>6</b>	<b>1</b>	<b>4</b>	<b>1</b>	<b>0.044</b>
72100	X-ray, spine, lumbosacral; 2 or 3 views	0.22	6	1	3	2	0.051

## Summary and Comparison to Other codes in the Chest X-Ray Family

Our recommendations are supported by our survey and the KRS and MPC codes provided. The intra times for 71046 and 71047 are the same but the RVU recommendation for 71047 is higher since a 3 view CXR is of greater intensity than a 2 view CXR. Our recommendations maintain appropriate relativity across the CXR family and also across the abdomen X-ray family, which was surveyed at this same meeting as summarized in this table:

CPT	Short Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
71045	X-ray, chest; single view	0.18	5	1	3	1	0.045
74045	X-ray, abdomen; 1 view	0.18	5	1	3	1	0.045
71046	X-ray, chest; 2 views	0.22	6	1	4	1	0.044
74046	X-ray, abdomen, abdomen; 2 views	0.23	6	1	4	1	0.046
71047	X-ray, chest; 3 views	0.27	6	1	4	1	0.056
74047	X-ray, abdomen, abdomen; 3 or more views	0.27	6	1	4	1	0.056
71048	X-ray, chest; 4 or more views	0.31	7	1	5	1	0.053
74022	X-ray, abdomen, abdomen; complete acute abdomen series, including supine, erect, and/or decubitus views, single view chest	0.32	7	1	5	1	0.055

---

## SERVICES REPORTED WITH MULTIPLE CPT CODES

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

- Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.
- 

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 71020, 71023, 71035

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology                      How often? Commonly

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period? 35601000

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by 71046 provided nationally in a one-year period is estimated to be 35,601,000.

Specialty Diagnostic Radiology                      Frequency 29700000                      Percentage 83.42 %

Specialty                      Frequency 0                      Percentage 0.00 %

Specialty                      Frequency 0                      Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?

11,900,000 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The 2014 Medicare data estimates that CPT code 71046 will be billed approximately 11,900,000 times for Medicare patients nationally in a one-year period.

Specialty Diagnostic Radiology                      Frequency 10000000                      Percentage 84.03 %

Specialty                      Frequency 0                      Percentage 0.00 %

Specialty                      Frequency 0                      Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

------------------------------	------	------

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Background:**

Two chest x-ray (CXR) CPT codes, 71010 (*Radiologic examination, chest; single view, frontal*) and 71020 (*Radiologic examination, chest, 2 views, frontal and lateral;*) were identified as potentially misvalued by CMS through its 2016 NPRM High Expenditure by Specialty screen. The specialty referred the entire family of CXR codes to the CPT Editorial Panel to modernize the reporting of these services. The CPT Editorial Panel created four new CXR codes and deleted nine existing CXR codes.

The CXR codes are as follows:

CPT Code	Descriptor
71045	Radiologic examination, chest; single view
71046	Radiologic examination, chest; 2 views
71047	Radiologic examination, chest; 3 views
71048	Radiologic examination, chest; 4 or more views

**Survey Process:**

The American College of Radiology (ACR) performed a random survey of our members. The ACR gathered an expert panel, including a number of physicians familiar with these services, to review the data and develop the following recommendations.

**Summary of Time and wRVU Recommendations for all Four Survey Codes:**

We recommend the wRVU which corresponds to the most commonly reported existing code across the family based on number of views. These recommendations are less than or equal to the 25<sup>th</sup> percentile survey value across the family.

We recommend the median service period times across the family.

### 71047 (Chest X-ray; 3 views)

#### Work RVU Recommendation:

We recommend a work RVU of 0.27 RVUs, equal to the 25<sup>th</sup> percentile and equivalent to the most commonly reported existing CXR code, 71021 (*Radiologic examination, chest, 2 views, frontal and lateral; with apical lordotic procedure*).

#### Time Recommendation:

We recommend the median survey times: 1 minute pre-service, 4 minutes intra-service, and 1 minute post-service.

#### Key Reference Services:

Our recommendation compares favorably to the two most commonly chosen key reference services (KRS): 73503 (*Radiologic examination, hip, unilateral, with pelvis when performed; minimum of 4 views*), chosen by 34% of respondents, and 72110 (*Radiologic examination, spine, lumbosacral; minimum of 4 views*), chosen by 17% of respondents. These KRS codes have comparable RVUs and intra-service times as summarized in this table:

CPT	Short Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
73503	X-ray, hip/pelvis; min 4 views	0.27	7	1	5	1	0.045
<b>71047</b>	<b>X-ray, chest; 3 views</b>	<b>0.27</b>	<b>6</b>	<b>1</b>	<b>4</b>	<b>1</b>	<b>0.056</b>
72110	X-ray, spine, lumbosacral; min 4 views	0.31	8	1	5	2	0.049

#### MPC Codes:

Our recommendation compares favorably to MPC code 72100 (*Radiologic examination, spine, lumbosacral; 2 or 3 views*), which is also the KRS. 71047 and 72100 have similar intra times, and identical total times and RVUs.

CPT	Short Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
72100	X-ray, spine, lumbosacral; 2 or 3 views	0.22	6	1	3	2	0.051
<b>71047</b>	<b>X-ray, chest; 3 views</b>	<b>0.27</b>	<b>6</b>	<b>1</b>	<b>4</b>	<b>1</b>	<b>0.056</b>

### Summary and Comparison to Other codes in the Chest X-Ray Family

Our recommendations are supported by our survey and the KRS and MPC codes provided. The intra times for 71046 and 71047 are the same but the RVU recommendation for 71047 is higher since a 3 view CXR is of greater intensity than a 2 view CXR. Our recommendations maintain appropriate relativity across the CXR family and also across the abdomen X-ray family, which was surveyed at this same meeting as summarized in this table:

CPT	Short Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
71045	X-ray, chest; single view	0.18	5	1	3	1	0.045
74045	X-ray, abdomen; 1 view	0.18	5	1	3	1	0.045
71046	X-ray, chest; 2 views	0.22	6	1	4	1	0.044
74046	X-ray, abdomen, abdomen; 2 views	0.23	6	1	4	1	0.046
71047	X-ray, chest; 3 views	0.27	6	1	4	1	0.056
74047	X-ray, abdomen, abdomen; 3 or more views	0.27	6	1	4	1	0.056
71048	X-ray, chest; 4 or more views	0.31	7	1	5	1	0.053
74022	X-ray, abdomen, abdomen; complete acute abdomen series, including supine, erect, and/or decubitus views, single view chest	0.32	7	1	5	1	0.055

---

## SERVICES REPORTED WITH MULTIPLE CPT CODES

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

- Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.
- 

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 71021, 71022, 71035

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology                      How often? Commonly

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period? 37800

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by 71047 provided nationally in a one-year period is estimated to be 37,800.

Specialty Diagnostic Radiology                      Frequency 28100                      Percentage 74.33 %

Specialty                      Frequency 0                      Percentage 0.00 %

Specialty                      Frequency 0                      Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?

12,600 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The 2014 Medicare data estimates that CPT code 71047 will be billed approximately 12,600 times for Medicare patients nationally in a one-year period.

Specialty Diagnostic Radiology                      Frequency 9400                      Percentage 74.60 %

Specialty                      Frequency 0                      Percentage 0.00 %

Specialty                      Frequency 0                      Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

### **Berenson-Eggers Type of Service (BETOS) Assignment**

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Imaging

BETOS Sub-classification:

Standard imaging

BETOS Sub-classification Level II:

Chest

### **Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 74022

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 71048      Tracking Number   D4

Original Specialty Recommended RVU: **0.31**Presented Recommended RVU: **0.31**

Global Period: XXX

RUC Recommended RVU: **0.31**

CPT Descriptor: Radiologic examination, chest; 4 or more views

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 70-year-old female with a history of malignancy and a persistent left pleural effusion. Four views of the chest (Posteroanterior (PA), lateral, and bilateral decubitus) are ordered.

Percentage of Survey Respondents who found Vignette to be Typical: 94%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 2%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 1%

**Description of Pre-Service Work:**

Review the reason for the examination and any pertinent clinical history. Review any prior applicable imaging studies.

**Description of Intra-Service Work:**

Supervise technologist performing the examination.

Interpret the radiographs of the chest. Evaluate the lung fields, heart, mediastinum, and pleural spaces. Specifically assess the mediastinal structures and costophrenic sulci, as well as any previously identified abnormality that necessitated additional views. Assess the ribs and other osseous structures, including the spine and shoulders. Review visualized soft tissues and portions of the upper abdomen.

Compare findings to previous studies, if applicable.

Dictate report for medical record.

**Description of Post-Service Work:**

Review and sign final report. Communicate findings to referring physician, when needed.

71048	Radiologic examination, chest; 4 or more views

**Survey Process:**

The American College of Radiology (ACR) performed a random survey of our members. The ACR gathered an expert panel, including a number of physicians familiar with these services, to review the data and develop the following recommendations.

**Summary of Time and wRVU Recommendations for all Four Survey Codes:**

We recommend the wRVU which corresponds to the most commonly reported existing code across the family based on number of views. These recommendations are less than or equal to the 25<sup>th</sup> percentile survey value across the family.

We recommend the median service period times across the family.

### 71048 (Chest X-ray; 4 or more views)

#### Work RVU Recommendation:

We recommend a work RVU of 0.31 RVUs, which is below the 25<sup>th</sup> percentile and equivalent to the most commonly reported existing four or more view CXR code, 71030 *Radiologic examination, chest, complete, minimum of 4 views;*).

#### Time Recommendation:

We recommend the median survey times: 1 minute pre-service, 5 minutes intra-service, and 1 minute post-service.

#### Key Reference Services:

Our recommendation compares favorably to the two most commonly chosen key reference services (KRS): 72114 (*Radiologic examination, spine, lumbosacral; complete, including bending views, minimum of 6 views*), chosen by 37% of respondents, and 72052 (*Radiologic examination, spine, cervical; 6 or more views*), chosen by 26% of respondents. These KRS codes have identical intra times and similar RVUs as summarized in this table:

CPT	Short Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
<b>71048</b>	<b>X-ray, chest; 4 or more views</b>	<b>0.31</b>	<b>7</b>	<b>1</b>	<b>5</b>	<b>1</b>	<b>0.053</b>
72114	X-ray, spine, lumbosacral; min 6 views	0.32	8	1	5	2	0.051
72052	X-ray, spine, cervical; 6 or more views	0.36	8	1	5	2	0.059

#### MPC Codes:

Our recommendation compares favorably to MPC code 72114 (*Radiologic examination, spine, lumbosacral; complete, including bending views, minimum of 6 views*), which has identical intra time and similar total times and RVUs. 72114 is also the KRS.

CPT	Short Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
<b>71048</b>	<b>X-ray, chest; 4 or more views</b>	<b>0.31</b>	<b>7</b>	<b>1</b>	<b>5</b>	<b>1</b>	<b>0.053</b>
72114	X-ray, spine, lumbosacral; min 6 views	0.32	8	1	5	2	0.051

## Summary and Comparison to Other codes in the Chest X-Ray Family

Our recommendations are supported by our survey and the KRS and MPC codes provided. The intra times for 71046 and 71047 are the same but the RVU recommendation for 71047 is higher since a 3 view CXR is of greater intensity than a 2 view CXR. Our recommendations maintain appropriate relativity across the CXR family and also across the abdomen X-ray family, which was surveyed at this same meeting as summarized in this table:

CPT	Short Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
71045	X-ray, chest; single view	0.18	5	1	3	1	0.045
74045	X-ray, abdomen; 1 view	0.18	5	1	3	1	0.045
71046	X-ray, chest; 2 views	0.22	6	1	4	1	0.044
74046	X-ray, abdomen, abdomen; 2 views	0.23	6	1	4	1	0.046
71047	X-ray, chest; 3 views	0.27	6	1	4	1	0.056
74047	X-ray, abdomen, abdomen; 3 or more views	0.27	6	1	4	1	0.056
71048	X-ray, chest; 4 or more views	0.31	7	1	5	1	0.053
74022	X-ray, abdomen, abdomen; complete acute abdomen series, including supine, erect, and/or decubitus views, single view chest	0.32	7	1	5	1	0.055

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 71022, 71030, 71034, 71035

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology                      How often? Commonly

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period? 62500

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by 71048 provided nationally in a one-year period is estimated to be 62,500.

Specialty Diagnostic Radiology                      Frequency 43200                      Percentage 69.12 %

Specialty                      Frequency 0                      Percentage 0.00 %

Specialty                      Frequency 0                      Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 20,800 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The 2014 Medicare data estimates that CPT code 71048 will be billed approximately 20,800 times for Medicare patients nationally in a one-year period.

Specialty Diagnostic Radiology                      Frequency 14400                      Percentage 69.23 %

Specialty                      Frequency 0                      Percentage 0.00 %

Specialty                      Frequency 0                      Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

### **Berenson-Eggers Type of Service (BETOS) Assignment**

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Imaging

BETOS Sub-classification:

Standard imaging

BETOS Sub-classification Level II:

Chest

### **Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 74022

### Attestation Statement

This form needs to be completed by any **RUC Advisor** whose specialty society is developing a recommendation to be reviewed by the RUC.

As a RUC Advisor, I attest that the integrity of the RUC survey, summary of recommendation forms and practice expense recommendations are based on accurate and complete data to the best of my knowledge. As a RUC advisor, I acknowledge that violations would be addressed by the executive committee (i.e., RUC Chair , AMA Representative and Alternate AMA Representative.)

**AMA/Specialty Society Update Process  
Practice Expense Summary of Recommendation  
Non Facility Direct Inputs**

CPT Long Descriptor:

<b>71045</b>	Radiologic examination, chest; single view
<b>71046</b>	Radiologic examination, chest; 2 views
<b>71047</b>	Radiologic examination, chest; 3 views
<b>71048</b>	Radiologic examination, chest; 4 or more views

Global Period: XXX Meeting Date: April 2016

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:

*The American College of Radiology (ACR) convened a consensus panel to finalize the practice expense data for chest x-ray codes 71045-71048.*

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale:

*For the four new chest x-ray codes, the ACR referenced the component codes as the basis for our PE recommendations. The component codes will be deleted and replaced by the new codes.*

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:

- **Availability of prior images confirmed** - These images, if available, would be prepared and loaded for comparison to the current study; this is the standard of care.
- **Prepare room, equipment, supplies** - 2 minutes is standard for this activity, and is consistent with recent recommendations for codes in the x-ray family.
- **Prepare and position patient/ monitor patient/ set up IV** - 2 minutes is standard for this activity, and is consistent with recent recommendations for codes in the x-ray family.
- **Clean room/equipment by physician staff** – 3 minutes is standard for this activity, and is consistent with recent recommendations for codes in the x-ray family. Only 1 minute recommended for 71045, since it is typically performed in a nursing facility.
- **Technologist QC's images in PACS, checking for all images, reformats, and dose page** - CMS proposed a standard of 2 minutes as per Table 5 “Clinical Labor Tasks Associated With Digital Technology” in the CY 2016 MPFS Final Rule.

- **Review examination with interpreting MD** - CMS proposed a standard of 2 minutes as per Table 5 “Clinical Labor Tasks Associated With Digital Technology” in the CY 2016 MPFS Final Rule.
- **Exam documents scanned into PACS. Exam completed in RIS system to generate billing process and to populate images into Radiologist work queue** - CMS proposed a standard of 1 minute as per Table 5 “Clinical Labor Tasks Associated With Digital Technology” in the CY 2016 MPFS Final Rule.
- **PACS Workstation Proxy** – This is equal to the service period clinical labor time.
- **Professional PACS Workstation** - This is equal to the sum of the physician work pre and intra time.
- **Portable X-Ray Machine** – 71045 is typically performed in a nursing facility and requires a portable x-ray machine. This is being substituted for the radiology room.

5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

- Availability of prior images confirmed
- Patient clinical information and questionnaire reviewed by technologist, order from physician confirmed and exam protocolled by radiologist

Intra-Service Clinical Labor Activities:

- Greet patient, provide gowning, ensure appropriate medical records are available
- Prepare room, equipment, supplies
- Prepare and position patient/ monitor patient/ set up IV
- Assist physician in performing procedure/ Acquire Images
- Clean room/equipment by physician staff
- Technologist QC's images in PACS, checking for all images, reformats, and dose page
- Review examination with interpreting MD
- Exam documents scanned into PACS. Exam completed in RIS system to generate billing process and to populate images into Radiologist work queue

Post-Service Clinical Labor Activities:

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
*\*CMS High Expenditure Procedures Screen\**

April 2016

**Abdominal X-ray**

In the Final Rule for 2016, CMS re-ran the screen for high expenditure services across specialties with Medicare allowed charges of \$10 million or more. CMS identified the top 20 codes by specialty in terms of allowed charges, excluding 010 and 090-day global services, anesthesia and Evaluation and Management services and services reviewed since CY 2010. CPT codes 74000 *Radiologic examination, abdomen; single anteroposterior view* and 74022 *Radiologic examination, abdomen; complete acute abdomen series, including supine, erect, and/or decubitus views, single view chest* were identified via this screen. The specialty elected to submit the entire family of abdominal X-ray codes to the CPT Editorial Panel to modernize the reporting of these services. The CPT Editorial panel deleted 3 of the 4 existing codes in the abdominal X-ray family and created 3 new codes for reporting abdominal X-ray.

**74018 *Radiologic examination, abdomen; 1 view***

The RUC reviewed the survey results from 76 radiologists and agreed with following physician time components: pre-service time of 1 minute, intra-service time of 3 minutes and post-service time of 1 minute.

The RUC reviewed the survey 25<sup>th</sup> percentile work RVU, 0.19, and agreed that the physician work required to perform this new code is the same work as deleted code 74000 *Radiologic examination, abdomen; single anteroposterior view* (work RVU=0.18). The RUC noted that the vast majority of projected Medicare volume for 74018 is estimated to have previously been reported using 74000. To justify a work RVU of 0.18, the RUC compared the survey code to MPC code 72100 *Radiologic examination, spine, lumbosacral; 2 or 3 views* (work RVU= 0.22, intra-service time of 3 minutes, total time of 6 minutes) and noted that although both services have identical intra-service times and involve a similar intensity of work, the survey code has slightly less total time. The RUC also compared the survey code to 2<sup>nd</sup> key reference code 73501 *Radiologic examination, hip, unilateral, with pelvis when performed; 1 view* (work RVU= 0.18, intra-service time of 3 minutes and total time of 5 minutes) and noted that both services have identical physician times and involve a similar amount of physician work, further supporting a value of 0.18 for the survey code. **The RUC recommends a work RVU of 0.18 for CPT code 74018.**

**74019 Radiologic examination, abdomen; 2 views**

The RUC reviewed the survey results from 76 radiologists and agreed with following physician time components: pre-service time of 1 minute, intra-service time of 4 minutes and post-service time of 1 minute.

The RUC reviewed the survey 25<sup>th</sup> percentile work RVU of 0.23 and agreed that this value appropriately accounts for the physician work involved. To justify a work RVU of 0.23, the RUC compared the survey code to top key reference and MPC code 72100 *Radiologic examination, spine, lumbosacral; 2 or 3 views* (work RVU= 0.22, intra-service time of 3 minutes, total time of 6 minutes) and noted that they survey code has more intra-service times and involves a similar intensity of physician work. The RUC also compared the survey code to 2<sup>nd</sup> key reference code 72081 *Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); one view* (work RVU= 0.26, intra-service time of 5 minutes, total time of 7 minutes) and noted that with less intra-service and total time, a somewhat lower work value of 0.23 is justified for the survey code. **The RUC recommends a work RVU of 0.23 for CPT code 74019.**

**74021 Radiologic examination, abdomen; 3 or more views**

The RUC reviewed the survey results from 76 radiologists and agreed with following physician time components: pre-service time of 1 minute, intra-service time of 4 minutes and post-service time of 1 minute. The RUC noted that although 74021 has the same amount of survey time as 74019, the increased potential for disease and the increase in the complexity of the patient for the typical 3-view X-ray warranted a somewhat higher work RVU for 74021 relative to 74019. Also, the RUC noted that reviewing 3 views takes slightly more time than a 2 view X-ray, though the difference may only be in seconds which is a level of granularity not captured in the data.

The RUC reviewed the survey 25<sup>th</sup> percentile work RVU of 0.27 and agreed that this value appropriately accounts for the physician work involved. To justify a work RVU of 0.27, the RUC compared the survey code to top key reference code 73503 *Radiologic examination, hip, unilateral, with pelvis when performed; minimum of 4 views* (work RVU= 0.27, intra-service time of 5 minutes, total time of 7 minutes) and noted that both services involve a similar amount of physician work and similar physician times. The RUC also reviewed 2<sup>nd</sup> key reference code 73522 *Radiologic examination, hips, bilateral, with pelvis when performed; 3-4 views* (work RVU= 0.29, intra-service time of 5 minutes, total time of 7 minutes) and noted that both services involve a similar amount of physician work and similar physician times, confirming that a work RVU of 0.27 is appropriate for the survey code. **The RUC recommends a work RVU of 0.27 for CPT code 74021.**

**74022 Radiologic examination, abdomen; complete acute abdomen series, including supine, erect, and/or decubitus views, single view chest**

The RUC reviewed the survey results from 76 radiologists and agreed with following physician time components: pre-service time of 1 minute, intra-service time of 5 minutes and post-service time of 1 minute.

The RUC reviewed the survey 25<sup>th</sup> percentile work RVU of 0.32 and agreed that this value appropriately accounts for the physician work involved. To justify a work RVU of 0.32, the RUC compared the survey code to top key reference code 72114 *Radiologic examination, spine,*

*lumbosacral; complete, including bending views, minimum of 6 views* (work RVU= 0.32, intra-service time of 5 minutes, total time of 8 minutes) and noted that both services have identical intra-service times and involve a similar amount of physician work. The RUC also compared the survey code to 2<sup>nd</sup> key reference code 72052 *Radiologic examination, spine, cervical; 6 or more views* (work RVU= 0.36, intra-service time of 5 minutes, total time of 8 minutes) and noted that both services have identical intra-service times while the survey code involves somewhat less physician work in the post-service period, supporting a somewhat lower valuation. **The RUC recommends a work RVU of 0.32 for CPT code 74022.**

### Practice Expense

A discussion was convened, noting that although deleted code 74000 was identified as typically an emergent service, the corresponding new code, 74018 does not typically require any pre-service clinical labor time. It was confirmed that the inclusion of SB026 gown is warranted. The amount of time for acquiring images was decreased to 6 minutes for 74019 to ensure that there is a logical progression of 3 minutes per view. The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.

### Work Neutrality

The RUC's recommendation for this code will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 74018      Tracking Number E1      Original Specialty Recommended RVU: **0.18**  
 Global Period: XXX      Presented Recommended RVU: **0.18**  
    RUC Recommended RVU: **0.18**  
 CPT Descriptor: Radiologic examination, abdomen; 1 view

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: An 86-year-old male presents with constipation. A single view of the abdomen is ordered.

Percentage of Survey Respondents who found Vignette to be Typical: 88%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is;  
 Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

**Description of Pre-Service Work:**

Review the reason for the examination and any pertinent clinical history. Review any prior applicable imaging studies.

**Description of Intra-Service Work:**

Supervise technologist performing the examination. Interpret the examination and compare the findings to previous studies, if applicable.

Assess the bowel gas pattern, bowel wall, and enteric contents. Evaluate visualized portions of the lower chest, solid organs, and osseous structures, including the ribs, spine, and pelvis. Determine location of any internal tubes or catheters, if present, and assess for lithiasis.

Dictate report for medical record.

**Description of Post-Service Work:**

Review and sign final report. Communicate findings to referring physician, when nee

Ref Code****Time Segment (Mean)**

Overall intensity/complexity	0.36	0.53
------------------------------	------	------

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Background:**

Two abdomen X-ray CPT codes, 74000 (*Radiologic examination, abdomen; single anteroposterior view*) and 74022 (*Radiologic examination, abdomen; complete acute abdomen series, including supine, erect, and/or decubitus views, single view chest*), were identified as potentially misvalued by CMS through its 2016 NPRM High Expenditure by Specialty screen. The specialty referred the entire family of abdomen X-ray codes to the CPT Editorial Panel to modernize reporting of these services. The CPT Editorial Panel created three new abdomen X-ray codes, retained 74022 and deleted three existing abdomen X-ray codes.

The abdomen X-ray codes are as follows:

<b>CPT Code</b>	<b>Descriptor</b>
74018	Radiologic examination, abdomen; 1 view
74019	Radiologic examination, abdomen; 2 views
74021	Radiologic examination, abdomen; 3 or more views
74022	Radiologic examination, abdomen; complete acute abdomen series, including supine, erect, and/or decubitus views, single view chest

**Survey Process:**

The American College of Radiology (ACR) performed a random survey of our members. The ACR gathered an expert panel, including a number of physicians familiar with these services, to review the data and develop the following recommendations.

**Summary of Time and wRVU Recommendations for all Four Survey Codes:**

We recommend the wRVU which corresponds to the most commonly reported existing code across the family based on number of views. These recommendations are less than or equal to the 25<sup>th</sup> percentile survey value across the family.

We recommend the median service period times across the family.

### **74018 (Radiologic examination, abdomen; 1 view)**

#### **Work RVU Recommendation:**

We recommend a work RVU of 0.18 RVUs, which is below the 25<sup>th</sup> percentile and equivalent to the most commonly reported existing one view abdomen X-ray code, 74000 (*Radiologic examination, abdomen; single anteroposterior view*).

#### **Time Recommendation:**

We recommend the median survey times: 1 minute pre-service, 3 minutes intra-service, and 1 minute post-service.

#### **Key Reference Services:**

Our recommendation compares favorably to the two most commonly chosen key reference services (KRS): 72170 (*Radiologic examination, pelvis; 1 or 2 views*), chosen by 37% of respondents and 73501 (*Radiologic examination, hip, unilateral, with pelvis when performed; 1 view*), chosen by 20% of respondents. These KRS codes have comparable RVUs and intra-service times as summarized in this table:

CPT	Short Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
72170	X-ray, pelvis; 1 or 2 views	0.17	7	1	4	2	0.026
<b>74018</b>	<b>X-ray, abdomen; 1 view</b>	<b>0.18</b>	<b>5</b>	<b>1</b>	<b>3</b>	<b>1</b>	<b>0.045</b>
73501	X-ray, hip/pelvis, unilateral; 1 view	0.18	5	1	3	1	0.045

#### **MPC Codes:**

Our recommendation compares favorably to MPC code 72100 (*Radiologic examination, spine, lumbosacral; 2 or 3 views*). 74018 and 72100 have identical intra times, similar total times, and comparable RVUs.

CPT	Short Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
<b>74018</b>	<b>X-ray, abdomen; 1 view</b>	<b>0.18</b>	<b>5</b>	<b>1</b>	<b>3</b>	<b>1</b>	<b>0.045</b>
72100	X-ray, spine, lumbosacral; 2 or 3 views	0.22	6	1	3	2	0.051

## Summary and Comparison to Other codes in the Abdomen X-ray Family:

Our recommendations are supported by our survey and the KRS and MPC codes provided. Our recommendations maintain appropriate relativity across the abdomen X-ray family and also across the chest X-ray family, which was surveyed at this same meeting as summarized in this table:

CPT	Short Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
71045	X-ray, chest; single view	0.18	5	1	3	1	0.045
74018	X-ray, abdomen; 1 view	0.18	5	1	3	1	0.045
71046	X-ray, chest; 2 views	0.22	6	1	4	1	0.044
74019	X-ray, abdomen, abdomen; 2 views	0.23	6	1	4	1	0.046
71047	X-ray, chest; 3 views	0.27	6	1	4	1	0.056
74021	X-ray, abdomen, abdomen; 3 or more views	0.27	6	1	4	1	0.056
71048	X-ray, chest; 4 or more views	0.31	7	1	5	1	0.053
74022	X-ray, abdomen, abdomen; complete acute abdomen series, including supine, erect, and/or decubitus views, single view chest	0.32	7	1	5	1	0.055

## SERVICES REPORTED WITH MULTIPLE CPT CODES

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

- Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 74000

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology                      How often? Commonly

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period? 6168000

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by 74018 provided nationally in a one-year period is estimated to be 6,168,000.

Specialty Diagnostic Radiology                      Frequency 5216800                      Percentage 84.57 %

Specialty                      Frequency 0                      Percentage 0.00 %

Specialty                      Frequency 0                      Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?

2,056,000 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The 2014 Medicare data estimates that CPT code 74018 will be billed approximately 2,056,000 times for Medicare patients nationally in a one-year period.

Specialty Diagnostic Radiology                      Frequency 1739000                      Percentage 84.58 %

Specialty                      Frequency 0                      Percentage 0.00 %

Specialty                      Frequency 0                      Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

### **Berenson-Eggers Type of Service (BETOS) Assignment**

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Imaging

BETOS Sub-classification:

Standard imaging

BETOS Sub-classification Level II:

Other

### **Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 74022

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 71046      Tracking Number E2      Original Specialty Recommended RVU: **0.23**  
 Global Period: XXX      Presented Recommended RVU: **0.23**  
    RUC Recommended RVU: **0.23**

CPT Descriptor: Radiologic examination, abdomen; 2 views

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 50-year-old woman presents with acute onset abdominal pain, nausea, and vomiting. Two views of the abdomen (frontal supine and upright [Erect]) are ordered.

Percentage of Survey Respondents who found Vignette to be Typical: 97%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

**Description of Pre-Service Work:**

Review the reason for the examination and any pertinent clinical history. Review any prior applicable imaging studies.

**Description of Intra-Service Work:**

Supervise technologist performing the examination. Interpret the examination and compare the findings to previous studies, if applicable.

Assess the bowel gas pattern, bowel wall, and enteric contents. Evaluate for presence of lithiasis, pneumoperitoneum or ascites. Evaluate visualized portions of the lower chest, solid organs, and osseous structures, including the ribs, spine, and pelvis.

Dictate report for medical record.

**Description of Post-Service Work:**

Review and sign final report. Communicate findings to referring physician, when needed.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Background:**

Two abdomen X-ray CPT codes, 74000 (*Radiologic examination, abdomen; single anteroposterior view*) and 74022 (*Radiologic examination, abdomen; complete acute abdomen series, including supine, erect, and/or decubitus views, single view chest*), were identified as potentially misvalued by CMS through its 2016 NPRM High Expenditure by Specialty screen. The specialty referred the entire family of abdomen X-ray codes to the CPT Editorial Panel to modernize reporting of these services. The CPT Editorial Panel created three new abdomen X-ray codes, retained 74022 and deleted three existing abdomen X-ray codes.

The abdomen X-ray codes are as follows:

<b>CPT Code</b>	<b>Descriptor</b>
74018	Radiologic examination, abdomen; 1 view
74019	Radiologic examination, abdomen; 2 views
74021	Radiologic examination, abdomen; 3 or more views
74022	Radiologic examination, abdomen; complete acute abdomen series, including supine, erect, and/or decubitus views, single view chest

**Survey Process:**

The American College of Radiology (ACR) performed a random survey of our members. The ACR gathered an expert panel, including a number of physicians familiar with these services, to review the data and develop the following recommendations.

## Summary of Time and wRVU Recommendations for all Four Survey Codes:

We recommend the wRVU which corresponds to the most commonly reported existing code across the family based on number of views. These recommendations are less than or equal to the 25<sup>th</sup> percentile survey value across the family.

We recommend the median service period times across the family.

### 74019 (Radiologic examination, abdomen; 2 views)

#### Work RVU Recommendation:

We recommend a work RVU of 0.23 RVUs, which equal to the 25<sup>th</sup> percentile and equivalent to the most commonly reported existing abdomen X-ray code, 74010 (*Radiologic examination, abdomen; anteroposterior and additional oblique and cone views*).

#### Time Recommendation:

We recommend the median survey times: 1 minute pre-service, 4 minutes intra-service, and 1 minute post-service.

#### Key Reference Services:

Our recommendation compares favorably to the two most commonly chosen key reference services (KRS): 72100 (*Radiologic examination, spine, lumbosacral; 2 or 3 views*), chosen by 43% of respondents and 72081 (*Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); one view*), chosen by 12% of respondents. These KRS codes have comparable RVUs and intra-service times as summarized in this table:

CPT	Short Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
72100	X-ray, spine, lumbosacral; 2 or 3 views	0.22	6	1	3	2	0.051
<b>74019</b>	<b>X-ray, abdomen, abdomen; 2 views</b>	<b>0.23</b>	<b>6</b>	<b>1</b>	<b>4</b>	<b>1</b>	<b>0.046</b>
72081	X-ray, spine, entire spine; one view	0.26	7	1	5	1	0.043

#### MPC Codes:

Our recommendation compares favorably to MPC code 72100 (*Radiologic examination, spine, lumbosacral; 2 or 3 views*), which is also the KRS. 74019 and 72100 have identical total times, and similar intra times and RVUs.

CPT	Short Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
72100	X-ray, spine, lumbosacral; 2 or 3 views	0.22	6	1	3	2	0.051
<b>74019</b>	<b>X-ray, abdomen, abdomen; 2 views</b>	<b>0.23</b>	<b>6</b>	<b>1</b>	<b>4</b>	<b>1</b>	<b>0.046</b>

## Summary and Comparison to Other codes in the Abdomen X-ray Family:

Our recommendations are supported by our survey and the KRS and MPC codes provided. Our recommendations maintain appropriate relativity across the abdomen X-ray family and also across the chest X-ray family, which was surveyed at this same meeting as summarized in this table:

CPT	Short Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
71045	X-ray, chest; single view	0.18	5	1	3	1	0.045
74018	X-ray, abdomen; 1 view	0.18	5	1	3	1	0.045
71046	X-ray, chest; 2 views	0.22	6	1	4	1	0.044
74019	X-ray, abdomen, abdomen; 2 views	0.23	6	1	4	1	0.046
71047	X-ray, chest; 3 views	0.27	6	1	4	1	0.056
74021	X-ray, abdomen, abdomen; 3 or more views	0.27	6	1	4	1	0.056
71048	X-ray, chest; 4 or more views	0.31	7	1	5	1	0.053
74022	X-ray, abdomen, abdomen; complete acute abdomen series, including supine, erect, and/or decubitus views, single view chest	0.32	7	1	5	1	0.055

## SERVICES REPORTED WITH MULTIPLE CPT CODES

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

- Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 74010, 74020

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology

How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 1506000

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by 74019 provided nationally in a one-year period is estimated to be 1,506,000.

Specialty Diagnostic Radiology	Frequency 1381500	Percentage 91.73 %
--------------------------------	-------------------	--------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?

502,000 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The 2014 Medicare data estimates that CPT code 74019 will be billed approximately 502,000 times for Medicare patients nationally in a one-year period.

Specialty Diagnostic Radiology	Frequency 460500	Percentage 91.73 %
--------------------------------	------------------	--------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Do many physicians perform this service across the United States? Yes

### Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 74021      Tracking Number E3      Original Specialty Recommended RVU: **0.27**  
 Global Period: XXX      Presented Recommended RVU: **0.27**  
    RUC Recommended RVU: **0.27**

CPT Descriptor: Radiologic examination, abdomen; 3 or more views

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 65-year-old man with a history of renal calculi presents with flank pain. Three views of the abdomen (frontal (AP) and bilateral oblique) are ordered.

Percentage of Survey Respondents who found Vignette to be Typical: 76%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is;  
 Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

**Description of Pre-Service Work:**

Review the reason for the examination and any pertinent clinical history. Review any prior applicable imaging studies.

**Description of Intra-Service Work:**

Supervise technologist performing the examination. Interpret the examination and compare the findings to previous studies, if applicable.

Assess the bowel gas pattern, bowel wall, and enteric contents. Evaluate visualized portions of the lower chest, solid organs, and osseous structures, including the ribs, spine, and pelvis.

Determine presence or absence of lithiasis, pneumoperitoneum, or ascites.

Dictate report for medical record.

**Description of Post-Service Work:**

Review and sign final report. Communicate findings to referring physician, when needed.

**Ref Code****2<sup>nd</sup> Key**  
**Ref Code****Time Segment (Mean)**

Overall intensity/complexity	0.64	0.19
------------------------------	------	------

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Background:**

Two abdomen X-ray CPT codes, 74000 (*Radiologic examination, abdomen; single anteroposterior view*) and 74022 (*Radiologic examination, abdomen; complete acute abdomen series, including supine, erect, and/or decubitus views, single view chest*), were identified as potentially misvalued by CMS through its 2016 NPRM High Expenditure by Specialty screen. The specialty referred the entire family of abdomen X-ray codes to the CPT Editorial Panel to modernize reporting of these services. The CPT Editorial Panel created three new abdomen X-ray codes, retained 74022 and deleted three existing abdomen X-ray codes.

The abdomen X-ray codes are as follows:

<b>CPT Code</b>	<b>Descriptor</b>
74018	Radiologic examination, abdomen; 1 view
74019	Radiologic examination, abdomen; 2 views
74021	Radiologic examination, abdomen; 3 or more views
74022	Radiologic examination, abdomen; complete acute abdomen series, including supine, erect, and/or decubitus views, single view chest

**Survey Process:**

The American College of Radiology (ACR) performed a random survey of our members. The ACR gathered an expert panel, including a number of physicians familiar with these services, to review the data and develop the following recommendations.

**Summary of Time and wRVU Recommendations for all Four Survey Codes:**

We recommend the wRVU which corresponds to the most commonly reported existing code across the family based on number of views. These recommendations are less than or equal to the 25<sup>th</sup> percentile survey value across the family.

We recommend the median service period times across the family.

#### **74021 (X-ray, abdomen, abdomen; 3 or more views)**

##### **Work RVU Recommendation:**

We recommend a work RVU of 0.27 RVUs, which equal to the 25<sup>th</sup> percentile and equivalent to the most commonly reported existing abdomen X-ray code, 74020 (*Radiologic examination, abdomen; complete, including decubitus and/or erect views*).

##### **Time Recommendation:**

We recommend the median survey times: 1 minute pre-service, 4 minutes intra-service, and 1 minute post-service.

##### **Key Reference Services:**

Our recommendation compares favorably to the two most commonly chosen key reference services (KRS): 73503 (*Radiologic examination, hip, unilateral, with pelvis when performed; minimum of 4 views*), chosen by 29% of respondents and 73522 (*Radiologic examination, hips, bilateral, with pelvis when performed; 3-4 views*), chosen by 28% of respondents. These KRS codes have comparable RVUs and intra-service times as summarized in this table:

CPT	Short Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
<b>74021</b>	<b>X-ray, abdomen, abdomen; 3 or more views</b>	<b>0.27</b>	<b>6</b>	<b>1</b>	<b>4</b>	<b>1</b>	<b>0.056</b>
73503	X-ray, hip/pelvis, unilateral; min 4 views	0.27	7	1	5	1	0.045
73522	X-ray, hip/pelvis, bilateral; 3-4 views	0.29	7	1	5	1	0.049

##### **MPC Codes:**

Our recommendation compares favorably to MPC code 72100 (*Radiologic examination, spine, lumbosacral; 2 or 3 views*), which is also the KRS. 74021 and 72100 have identical total times, and similar intra times and RVUs.

CPT	Short Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
72100	X-ray, spine, lumbosacral; 2 or 3 views	0.22	6	1	3	2	0.051
<b>74021</b>	<b>X-ray, abdomen, abdomen; 3 or more views</b>	<b>0.27</b>	<b>6</b>	<b>1</b>	<b>4</b>	<b>1</b>	<b>0.056</b>

### Summary and Comparison to Other codes in the Abdomen X-ray Family:

Our recommendations are supported by our survey and the KRS and MPC codes provided. Our recommendations maintain appropriate relativity across the abdomen X-ray family and also across the chest X-ray family, which was surveyed at this same meeting as summarized in this table:

CPT	Short Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
71045	X-ray, chest; single view	0.18	5	1	3	1	0.045
74018	X-ray, abdomen; 1 view	0.18	5	1	3	1	0.045
71046	X-ray, chest; 2 views	0.22	6	1	4	1	0.044
74019	X-ray, abdomen, abdomen; 2 views	0.23	6	1	4	1	0.046
71047	X-ray, chest; 3 views	0.27	6	1	4	1	0.056
74021	X-ray, abdomen, abdomen; 3 or more views	0.27	6	1	4	1	0.056
71048	X-ray, chest; 4 or more views	0.31	7	1	5	1	0.053
74022	X-ray, abdomen, abdomen; complete acute abdomen series, including supine, erect, and/or decubitus views, single view chest	0.32	7	1	5	1	0.055

---

### SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

---

### FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 74010, 74020

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology                      How often? Commonly

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period? 578000

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by 74021 provided nationally in a one-year period is estimated to be 578,000.

Specialty Diagnostic Radiology                      Frequency 514400                      Percentage 88.99 %

Specialty                      Frequency 0                      Percentage 0.00 %

Specialty                      Frequency 0                      Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?

192,700 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The 2014 Medicare data estimates that CPT code 74021 will be billed approximately 192,700 times for Medicare patients nationally in a one-year period.

Specialty Diagnostic Radiology                      Frequency 171500                      Percentage 88.99 %

Specialty                      Frequency 0                      Percentage 0.00 %

Specialty                      Frequency 0                      Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

### **Berenson-Eggers Type of Service (BETOS) Assignment**

**Ref Code****2<sup>nd</sup> Key**  
**Ref Code****Time Segment (Mean)**

Overall intensity/complexity	0.81	0.88
------------------------------	------	------

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Background:**

Two abdomen X-ray CPT codes, 74000 (*Radiologic examination, abdomen; single anteroposterior view*) and 74022 (*Radiologic examination, abdomen; complete acute abdomen series, including supine, erect, and/or decubitus views, single view chest*), were identified as potentially misvalued by CMS through its 2016 NPRM High Expenditure by Specialty screen. The specialty referred the entire family of abdomen X-ray codes to the CPT Editorial Panel to modernize reporting of these services. The CPT Editorial Panel created three new abdomen X-ray codes, retained 74022 and deleted three existing abdomen X-ray codes.

The abdomen X-ray codes are as follows:

<b>CPT Code</b>	<b>Descriptor</b>
74018	Radiologic examination, abdomen; 1 view
74019	Radiologic examination, abdomen; 2 views
74021	Radiologic examination, abdomen; 3 or more views
74022	Radiologic examination, abdomen; complete acute abdomen series, including supine, erect, and/or decubitus views, single view chest

**Survey Process:**

The American College of Radiology (ACR) performed a random survey of our members. The ACR gathered an expert panel, including a number of physicians familiar with these services, to review the data and develop the following recommendations.

**Summary of Time and wRVU Recommendations for all Four Survey Codes:**

We recommend the wRVU which corresponds to the most commonly reported existing code across the family based on number of views. These recommendations are less than or equal to the 25<sup>th</sup> percentile survey value across the family.

We recommend the median service period times across the family.

**74022 (Radiologic examination, abdomen; complete acute abdomen series, including supine, erect, and/or decubitus views, single view chest)**

**Work RVU Recommendation:**

We recommend a work RVU of 0.32 RVUs, which equal to the survey 25<sup>th</sup> percentile and the current value.

**Time Recommendation:**

We recommend the median survey times: 1 minute pre-service, 5 minutes intra-service, and 1 minute post-service.

**Key Reference Services:**

Our recommendation compares favorably to the two most commonly chosen key reference services (KRS): 72114 (*Radiologic examination, spine, lumbosacral; complete, including bending views, minimum of 6 views*), chosen by 34% of respondents and 72052 (*Radiologic examination, spine, cervical; 6 or more views*), chosen by 21% of respondents. These KRS codes have comparable RVUs and intra-service times as summarized in this table:

CPT	Short Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
<b>74022</b>	<b>X-ray, abdomen; complete acute abdomen series</b>	<b>0.32</b>	<b>7</b>	<b>1</b>	<b>5</b>	<b>1</b>	<b>0.055</b>
72114	X-ray, lumbosacral spine; min 6 views	0.32	8	1	5	2	0.051
72052	X-ray, cervical spine; 6 or more views	0.36	8	1	5	2	0.059

**MPC Codes:**

Our recommendation compares favorably to MPC code 72114 (*Radiologic examination, spine, lumbosacral; complete, including bending views, minimum of 6 views*), which is also the KRS. 740X4 and 72114 have identical intra times and RVUs, and similar total times.

CPT	Short Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
<b>74022</b>	<b>X-ray, abdomen; complete acute abdomen series</b>	<b>0.32</b>	<b>7</b>	<b>1</b>	<b>5</b>	<b>1</b>	<b>0.055</b>
72114	X-ray, lumbosacral spine; min 6 views	0.32	8	1	5	2	0.051

**Summary and Comparison to Other codes in the Abdomen X-ray Family:**

Our recommendations are supported by our survey and the KRS and MPC codes provided. Our recommendations maintain appropriate relativity across the abdomen X-ray family and also across the chest X-ray family, which was surveyed at this same meeting as summarized in this table:

CPT	Short Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
71045	X-ray, chest; single view	0.18	5	1	3	1	0.045
74018	X-ray, abdomen; 1 view	0.18	5	1	3	1	0.045
71046	X-ray, chest; 2 views	0.22	6	1	4	1	0.044
74019	X-ray, abdomen, abdomen; 2 views	0.23	6	1	4	1	0.046
71047	X-ray, chest; 3 views	0.27	6	1	4	1	0.056
74021	X-ray, abdomen, abdomen; 3 or more views	0.27	6	1	4	1	0.056
71047	X-ray, chest; 4 or more views	0.31	7	1	5	1	0.053
74022	X-ray, abdomen, abdomen; complete acute abdomen series, including supine, erect, and/or decubitus views, single view chest	0.32	7	1	5	1	0.055

## SERVICES REPORTED WITH MULTIPLE CPT CODES

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

- Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 74022

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology

How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 1841000

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by 74022 provided nationally in a one-year period is estimated to be 1,841,000.

Specialty Diagnostic Radiology	Frequency 1733800	Percentage 94.17 %
--------------------------------	-------------------	--------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?

613,700 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The 2014 Medicare data estimates that CPT code 74022 will be billed approximately 613,700 times for Medicare patients nationally in a one-year period.

Specialty Diagnostic Radiology	Frequency 578000	Percentage 94.18 %
--------------------------------	------------------	--------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Do many physicians perform this service across the United States? Yes

### **Berenson-Eggers Type of Service (BETOS) Assignment**

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Imaging

BETOS Sub-classification:

Standard imaging

BETOS Sub-classification Level II:

Other

### **Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 74022

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/Specialty Society Update Process**  
**Practice Expense Summary of Recommendation**  
**Non Facility Direct Inputs**

CPT Long Descriptor:

<b>74018</b>	Radiologic examination, abdomen; 1 view
<b>74019</b>	Radiologic examination, abdomen; 2 views
<b>74021</b>	Radiologic examination, abdomen; 3 or more views
<b>74022</b>	Radiologic examination, abdomen; complete acute abdomen series, including supine, erect, and/or decubitus views, single view chest

Global Period: XXX Meeting Date: April 2016

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:

*The American College of Radiology (ACR) convened a consensus panel to finalize the practice expense data for the X-ray abdomen code family 74018, 74019, 74021, and 74022.*

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale:

*For the three new abdomen x-ray codes, the ACR referenced the component codes as the basis for our PE recommendations. The component codes will be deleted and replaced by the new codes. 74022 is an existing code, so its current inputs are used as the reference.*

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:

- **Prepare room, equipment, supplies** - 2 minutes is standard for this activity, and is consistent with recent recommendations for codes in the x-ray family.
- **Prepare and position patient/ monitor patient/ set up IV** - 2 minutes is standard for this activity, and is consistent with recent recommendations for codes in the x-ray family.
- **Clean room/equipment by physician staff** – 3 minutes is standard for this activity, and is consistent with recent recommendations for codes in the x-ray family.
- **Technologist QC's images in PACS, checking for all images, reformats, and dose page** - CMS proposed a standard of 2 minutes as per Table 5 “Clinical Labor Tasks Associated With Digital Technology” in the CY 2016 MPFS Final Rule.
- **Review examination with interpreting MD** - CMS proposed a standard of 2 minutes as per Table 5 “Clinical Labor Tasks Associated With Digital Technology” in the CY 2016 MPFS Final Rule.

- **Exam documents scanned into PACS. Exam completed in RIS system to generate billing process and to populate images into Radiologist work queue** - CMS proposed a standard of 1 minute as per Table 5 “Clinical Labor Tasks Associated With Digital Technology” in the CY 2016 MPFS Final Rule.
- **PACS Workstation Proxy** – This is equal to the service period clinical labor time.
- **Professional PACS Workstation** - This is equal to the sum of the physician work pre and intra time.

5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

Intra-Service Clinical Labor Activities:

- Greet patient, provide gowning, ensure appropriate medical records are available
- Prepare room, equipment, supplies
- Prepare and position patient/ monitor patient/ set up IV
- Acquire Images
- Clean room/equipment by physician staff
- Technologist QC's images in PACS, checking for all images, reformats, and dose page
- Review examination with interpreting MD
- Exam documents scanned into PACS. Exam completed in RIS system to generate billing process and to populate images into Radiologist work queue

Post-Service Clinical Labor Activities:

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
*\*CMS High Expenditure Procedures Screen\**

April 2016

**Pulmonary Diagnostic Tests**

In the Final Rule for 2016 CMS re-ran the high expenditure services across specialties with Medicare allowed charges of \$10 million or more. CMS identified the top 20 codes by specialty in terms of allowed charges, excluding 010 and 090-day global services, anesthesia and Evaluation and Management services and services reviewed since CY 2010. CPT code 94620 was identified via this screen.

In January 2016, the specialty societies explained that they submitted a Code Change Application (CCA) for the February 2016 CPT Editorial Panel meeting as CPT codes 94620 and 94621 required revisions that would allow the survey respondents to better value these services. Code 94620 described two different tests commonly performed for evaluation of dyspnea, the six minute walk test as well as pre-exercise and post-exercise spirometry. These tests are entirely different and should be described with two separate codes. In addition, code 94620 described a “simple” pulmonary exercise test and code 94621 a “complex” pulmonary exercise test. The testing described in 94621 is commonly called a cardiopulmonary exercise test (CPET) and not a complex pulmonary exercise test as it is currently labeled in CPT 2016. Code 94621 includes the measurement of minute ventilation and exhaled gases in addition to heart rate, oximetry and ECG monitoring. As such, it should not be included as part of the family of less complex exercise tests. The RUC referred CPT code 94620 to the CPT Editorial Panel. In February 2016, the CPT Editorial Panel deleted code 94620, added two new codes 94617 & 94618 to report an exercise test for bronchospasm, and revised code 94621 to describe a cardiopulmonary exercise test.

The RUC discussed the survey results for CPT codes 94617, 94621 and 94618 and determined that the survey respondents indicated immediate post-procedure physician time was not representative of the time required to perform this service. The RUC noted that the description of immediate post-procedure physician work described the same intensity for each of the three services but was not represented the same across all three services by the survey respondents.

The standard survey instrument did indicate that the survey respondents should capture the interpretation and report work in the intra-service time period as is typical for XXX global services, but the specialty society contends that the survey respondents did not appear to capture the physician time correctly. The RUC recommends that the specialty societies resurvey codes 94617, 94621 and 94618 with the same exact survey instrument (the current standard RUC survey for imaging and tests).

**The RUC recommends that CPT codes 94620, 94617, 94621 and 94618 be re-surveyed for the October 2016 RUC meeting.**

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation

(Do not report 94680, 94681, 94690 in conjunction with 94621)

## AMA/Specialty Society RVS Update Committee Summary of Recommendations

April 2016

### **Parent, Caregiver-focused Health Risk Assessment – PE Only**

The CPT Editorial Panel added two new codes, 96160 *Administration of patient-focused health risk assessment instrument (eg, health hazard appraisal) with scoring and documentation, per standardized instrument* and 96161 *Administration of caregiver-focused health risk assessment instrument (eg, depression inventory) for the benefit of the patient, with scoring and documentation, per standardized instrument*, to the Medicine section of CPT and deleted 99420 *Administration and interpretation of health risk assessment instrument (eg, health hazard appraisal)* from the Evaluation and Management (E/M) section.

At the January 2016 RUC meeting, the specialty societies recommended that this family of codes be surveyed for practice expense for the April 2016 RUC meeting. For their presentation in January, the specialty societies used an expert panel to determine the staff time and medical supplies, the same process that is used for most PE recommendations. The Practice Expense Subcommittee noted that PE surveys have been utilized on occasion and it would be possible for a PE survey to be created to review these services. The specialty societies noted their concern that the PE Subcommittee's recommendation of five minutes of clinical staff time in January 2016 undervalues the services and would like the data of a PE survey in order to either verify the PE Subcommittee's recommendation or indicate that more time is appropriate. The RUC agreed that these are important services and it is critical to get the PE inputs correct.

The specialty societies developed and administered a practice expense survey for the April 2016 RUC meeting. The PE Subcommittee and the RUC reviewed the survey results from 24 pediatricians and family physicians and noted that the survey 25<sup>th</sup> percentile of 96160 is 6 minutes clinical staff time and the survey 25<sup>th</sup> percentile of 96161 is 8 minutes clinical staff time. The RUC agreed with the specialty societies that a blend of the survey 25<sup>th</sup> percentiles for both codes, for a clinical staff time of 7 minutes, appropriately accounts for the clinical staff activities required to perform each code. The specialty societies clarified that they are recommending the survey 25<sup>th</sup> percentile for each clinical staff activity except *collate and score data elements on assessment in advance of physician's exam*. For this clinical staff activity, the survey respondents reported 0 minutes for 96160 and 2 minutes for 96161. The specialty societies recommended the average between the survey 25<sup>th</sup> percentiles for this clinical labor activity, or 1 minute of clinical labor time. The breakdown of time is *explain purpose of assessment to patient/caregiver and answer questions*, 2 minutes; *remain in exam room with patient/caregiver exclusive to completion of assessment*, 2 minutes; *collate and score data elements on assessment in advance of physician's exam* 1 minutes; and *scan assessment or enter data elements and total score into electronic health record*, 2 minutes. All clinical staff activities are performed by a *Medical/Technical Assistant (L026A)*. A PE Subcommittee member asked why the Beck Depression Inventory, Second Edition (BDI-II), was not recommended as a supply item as it was at the January 2016 RUC meeting, and the specialties explained that survey respondents reported using a free assessment tool, often provided as part of the electronic medical record.

The specialty societies agreed that 2 sheets of *paper, laser printing (each sheet)* (SK057) to print the assessment tool is the only supply item needed for these services. **The RUC recommends the direct practice expense inputs as recommended by the specialty societies and approved by the Practice Expense Subcommittee.**

CPT Long Descriptor:

**96160 Administration of patient-focused health risk assessment (eg, health hazard appraisal) with scoring and documentation, per standardized instrument**

Global Period: **XXX**

Meeting Date: **April 2016**

1) Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:

**Advisors and subject matter experts from AAFP and AAP met by phone and via email to review the inputs and make recommendations.**

2) You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison. You must provide an explanation for the selection of reference codes.  
Reference Code Rationale:

**When this code was initially presented in January 2016, code 99420 was used as a reference code, because, it was the predecessor code to 96160, and like 96160, it involves administration of a health risk assessment instrument.**

**For this presentation, we have also included the inputs recommended for 961X0 by the RUC at its January 2016 meeting.**

3) If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:

**N/A**

4) If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:

**Among the compelling evidence guidelines for practice expense is analysis of other data on time measures. The inputs recommended by the RUC in January 2016 were based on expert panel opinions presented by the AAFP and AAP. With the RUC's permission, the AAFP and AAP subsequently conducted a practice expense survey of a random sample of their memberships. A copy of the survey is included in the material submitted for this meeting. The specialties sent the survey to 1,888 physicians and received 24 responses. A spreadsheet summarizing those responses is also included in the material submitted for this meeting. The RUC has generally held that survey data is preferable to expert opinion data, where**

available. Therefore, based on our analysis of this new time data from the practice expense survey that we did, we believe there is compelling evidence to consider an increase over the inputs recommended by the RUC in January 2016.

5) Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities: **N/A**

Intra-Service Clinical Labor Activities:

- **Explain purpose of assessment to patient/caregiver and answer questions\***
- **Remain in exam room with patient/caregiver exclusive to completion of assessment**
- **Collate and score data elements on assessment in advance of physician's exam**
- **Scan assessment or enter data elements and total score into electronic health record**

**\*In response to concerns raised by the Practice Expense Subcommittee in January 2016, we asked survey respondents to also tell us:**

- **How many times a year they see the typical patient described in the vignette**
- **What percent of those visits involve the provision of this service**
- **Whether clinical staff typically provides the same level/amount of patient/caregiver instructions with subsequent administrations of the assessment as with the initial administration**

**Survey respondents told us that the median number of times a year they see the typical patient described in the vignette is five. The median percent of visits that involve the provision of this service was 50%, and 14 of the 24 respondents said clinical staff typically provides the same level/amount of patient/caregiver instructions with subsequent administrations of the assessment as with the initial administration. Based on these responses, we believe that the clinical staff time is the same each time this service is provided.**

Post-Service Clinical Labor Activities: **N/A**

**AMA/Specialty Society Update Process  
Practice Expense Summary of Recommendation  
Non Facility Direct Inputs**

CPT Long Descriptor:

**96161 Administration of caregiver-focused health risk assessment (eg, depression inventory) for benefit of the patient, with scoring and documentation, per standardized instrument**

1) Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:

**Advisors and subject matter experts from AAFP and AAP met by phone and via email to review the inputs and make recommendations.**

2) You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison. You must provide an explanation for the selection of reference codes. Reference Code Rationale:

**When this code was initially presented in January 2016, code 96127 was used as a reference code, because, like 96161, it involves administration of an assessment instrument such as a depression inventory as well as the scoring and documentation of that instrument on a per instrument basis.**

**For this presentation, we have also included the inputs recommended for 96161 by the RUC at its January 2016 meeting.**

3) If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:

**N/A**

4) If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:

**Among the compelling evidence guidelines for practice expense is analysis of other data on time measures. The inputs recommended by the RUC in January 2016 were based on expert panel opinions presented by the AAFP and AAP. With the RUC's permission, the AAFP and AAP subsequently conducted a practice expense survey of a random sample of their memberships. A copy of the survey is included in the material submitted for this meeting. The specialties sent the survey to 1,888 physicians and received 24 responses. A spreadsheet**

summarizing those responses is also included in the material submitted for this meeting. The RUC has generally held that survey data is preferable to expert opinion data, where available. Therefore, based on our analysis of this new time data from the practice expense survey that we did, we believe there is compelling evidence to consider an increase over the inputs recommended by the RUC in January 2016.

5) Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities: **N/A**

Intra-Service Clinical Labor Activities:

- **Explain purpose of assessment to patient/caregiver and answer questions\***
- **Remain in exam room with patient/caregiver exclusive to completion of assessment**
- **Collate and score data elements on assessment in advance of physician's exam**
- **Scan assessment or enter data elements and total score into electronic health record**

**\*In response to concerns raised by the Practice Expense Subcommittee in January 2016, we asked survey respondents to also tell us:**

- **How many times a year they see the typical patient described in the vignette**
- **What percent of those visits involve the provision of this service**
- **Whether clinical staff typically provides the same level/amount of patient/caregiver instructions with subsequent administrations of the assessment as with the initial administration**

Survey respondents told us that the median number of times a year they see the typical patient described in the vignette is five. The median percent of visits that involve the provision of this service was 63%, and 14 of the 24 respondents said clinical staff typically provides the same level/amount of patient/caregiver instructions with subsequent administrations of the assessment as with the initial administration. Based on these responses, we believe that the clinical staff time is the same each time this service is provided.

## Health Risk Assessment RUC Practice Expense Survey

Health Risk Assessment RUC Practice Expense Survey  
AAFP and AAP Need Your Help!

**The American Academy of Family Physicians (AAFP) and the American Academy of Pediatrics (AAP) are in need of your assistance to gather important practice expense data to assist in the valuation of two new/revised CPT codes:**

**961X0 Administration of patient-focused health risk assessment (eg, health hazard appraisal) with scoring and documentation, per standardized instrument**

**961X1 Administration of caregiver-focused health risk assessment (eg, depression inventory) for benefit of the patient, with scoring and documentation, per standardized instrument**

## Health Risk Assessment RUC Practice Expense Survey

The American Medical Association/Specialty Society RVS Update Committee

### The RVS Practice Expense Survey

#### Health Risk Assessment Direct Practice Expense RVS Update Survey

Global Period: XXX

#### CPT Codes, Descriptors, & Vignettes:

**961X0 Administration of patient-focused health risk assessment (eg, health hazard appraisal) with scoring and documentation, per standardized instrument**

**961X0 Vignette:** A patient comes into your office for follow up on chronic health issues, accompanied by a family member who expresses concern about the patient's increasing forgetfulness and social withdrawal.

**961X1 Administration of caregiver-focused health risk assessment (eg, depression inventory) for the benefit of the patient, with scoring and documentation, per standardized instrument**

**961X1 Vignette:** An intellectually disabled patient is accompanied by his parent/caregiver during a Preventive Medicine Service visit. The parent/caregiver admits the patient is increasingly more difficult to manage and things are falling apart at home.

#### Why should I complete this survey?

The AMA/Specialty Society RVS Update Committee (RUC), the American Academy of Family Physicians (AAFP), and the American Academy of Pediatrics (AAP) need your help to assure the practice expense relative value units (PE RVUs) will be accurately and fairly presented to the Centers for Medicare and Medicaid Services (CMS) during this revision process.

**Both codes must be surveyed. The questions for each are organized the same and are comprised of questions relating to direct practice expense inputs.**

If you have questions, please contact:

Kent Moore  
AAFP staff  
kmoore@aafp.org  
800/274-2237 ext 4170

Linda Walsh

## Health Risk Assessment RUC Practice Expense Survey

### Contact Information

\* The following information must be provided by the physician responsible for completing the survey.

**Physician Name**

**Business Name**

**E-mail Address**

**Business Phone**

\* Primary Geographic Practice Setting

\* Physician Specialty

\* Primary Type of Practice

Other (Please Specify if Applicable)

## Health Risk Assessment RUC Practice Expense Survey

### Financial Disclosure

[Please see bottom of page for asterisk (\*) key.]

**Please answer the following four (4) questions by checking yes or no.**

\* Do you or a family member\* have a direct financial interest in this service, other than providing it in the course of patient care? For purposes of this survey, "direct financial interest" means:

	Yes	No
A financial ownership interest in an organization** of 5% or more	<input type="radio"/>	<input type="radio"/>
A financial ownership interest in an organization** which contributes materially*** to your income	<input type="radio"/>	<input type="radio"/>
Ownership of stock options in an organization**	<input type="radio"/>	<input type="radio"/>
A position as proprietor, director, managing partner, or key employee in an organization**	<input type="radio"/>	<input type="radio"/>

\*Family member means spouse, domestic partner, parent, child, brother, or sister. Disclosure of family member's interest applies to the extent known by the survey respondent.

\*\*Organization means any entity that makes or distributes the product that is utilized in performing the service, and not the physician group or facility in which you work or perform the service.

\*\*\*Materially means \$10,000 or more in income (excluding any reimbursement for expenses) for the past twenty-four months.

If you have answered yes to any of the above questions, please do not complete this survey.

## Health Risk Assessment RUC Practice Expense Survey

### Financial Disclosure (Continued)

[Please see bottom of page for asterisk (\*) key.]

**Please answer the following question by answering yes or no.**

- \* Do you or a family member\* have a direct financial interest in this service, other than providing it in the course of patient care? For purposes of this survey, "direct financial interest" means:

Serve as a consultant, researcher, expert witness (excluding professional liability testimony), speaker, or writer for an organization\*\* or participate in a clinical trial that involves the services being reviewed, where payment contributes materially\*\*\* to your income

☐ Yes

☐ No

\*Family member means spouse, domestic partner, parent, child, brother, or sister. Disclosure of family member's interest applies to the extent known by the survey respondent.

\*\*Organization means any entity that makes or distributes the product that is utilized in performing the service, and not the physician group or facility in which you work or perform the service.

\*\*\*Materially means \$10,000 or more in income (excluding any reimbursement for expenses) for the past twenty-four months.

If you have answered yes to the above question, please do not complete this survey.

## Health Risk Assessment RUC Practice Expense Survey

### Additional Disclosure

\* Have you been contacted by anyone other than your specialty society, other specialty societies sponsoring this survey (or any of their representatives), or the American Medical Association with respect to this survey?

☐ Yes

☐ No

If you have answered yes to the above question, please do not complete this survey.

## Health Risk Assessment RUC Practice Expense Survey

### Site of Service & Global Period

#### **Site of Service: Non-Facility**

Practice expenses are classified according to the site of service as either non-facility (eg, physician office) or facility (eg, hospital). The typical site of service for the service of health risk assessment is non-facility.

#### **Global Period: XXX**

It is very important to consider the global period when you are estimating clinical staff time. Both codes included in this survey have an "XXX" global period, which means that the global period concept does not apply since evaluation and management (E/M) services performed may be reported on the same day.

## Health Risk Assessment RUC Practice Expense Survey

### Staff Time & Direct Practice Expense Inputs

#### Staff Time

You will be asked to estimate the staff time providing clinical support in minutes for each category/task listed. The work of clinical staff should not be counted when it substitutes for work the physician would provide within the definitions of physician work. However, when the clinical staff provides services that are above and beyond the tasks that the physician is usually expected to do and not a substitute for physician services, it should be included.

**Include:** Clinical labor provided by health care professionals who are paid by your practice and cannot bill separately, such as medical/technical assistants, registered nurses, or licensed practical nurses.

**Do not include:** Clinical labor provided by health care professionals such as physician assistants or nurse practitioners in this survey if they can separately bill for the service and their services are a substitute for the physician service. Also, administrative activities provided by clerical staff, medical secretaries, or clinical staff should NOT be included. Administrative activities include billing for services, scheduling appointments, transcribing and filing reports, and obtaining service authorizations.

**\*\*\*Do not include clinical staff time associated with any other service (eg, evaluation and management (E/M) service) provided during the same encounter.\*\*\***

#### Direct Practice Expense Inputs

Direct practice expenses inputs include the following:

- Time spent by health care professional clinical staff providing clinical activities
- Medical supplies used to perform service
- Medical equipment used to perform the service

**IN ANSWERING THESE PRACTICE EXPENSE QUESTIONS, YOU MAY FIND IT HELPFUL TO CONFER WITH YOUR CLINICAL STAFF.**

## Health Risk Assessment RUC Practice Expense Survey

How much time does your staff spend providing clinical support for each portion of this service?

### **961X0**

*Base your estimates on the 961X0 vignette included at the beginning of this survey and below.*

Only include clinical labor provided by health care professionals who are paid by your practice and cannot bill separately, such as medical/technical assistants, registered nurses, or licensed practical nurses. It is important to include the time associated with clinical activities regardless of the type of staff providing the service, since it is most important to capture the time related to clinical functions. For example, if you use non-clinical personnel for clinical activities, please list the staff type in the “other staff” category below; however, administrative activities should not be included.

\* 961X0 Administration of patient-focused health risk assessment (eg, health hazard appraisal) with scoring and documentation, per standardized instrument

961X0 Vignette: A patient comes into your office for follow up on chronic health issues, accompanied by a family member who expresses concern about the patient's increasing forgetfulness and social withdrawal.

Number of Minutes

Clinical Staff Type

Minutes spent  
explaining the purpose  
of the assessment to  
the patient/caregiver  
and answering  
questions

Minutes spent in the  
exam room with the  
patient/caregiver  
exclusive to  
completion of the  
assessment

Minutes spent  
collating and scoring  
the data elements on  
the assessment in  
advance of the  
physician's exam

Minutes spent  
scanning the  
assessment or  
entering data  
elements and total  
score into the  
electronic health  
record

Other Clinical Staff Type (Please Specify if Applicable)

## Health Risk Assessment RUC Practice Expense Survey

How much time does your staff spend providing clinical support for each portion of this service?

### **961X1**

*Base your estimates on the 961X1 vignette included at the beginning of this survey and below.*

Only include clinical labor provided by health care professionals who are paid by your practice and cannot bill separately, such as medical/technical assistants, registered nurses, or licensed practical nurses. It is important to include the time associated with clinical activities regardless of the type of staff providing the service, since it is most important to capture the time related to clinical functions. For example, if you use non-clinical personnel for clinical activities, please list the staff type in the “other staff” category below; however, administrative activities should not be included.

\* 961X1 Administration of caregiver-focused health risk assessment (eg, depression inventory) for the benefit of the patient, with scoring and documentation, per standardized instrument

961X1 Vignette: An intellectually disabled patient is accompanied by his parent/caregiver during a Preventive Medicine Service visit. The parent/caregiver admits the patient is increasingly more difficult to manage and things are falling apart at home.

Number of Minutes

Clinical Staff Type

Minutes spent explaining the purpose of the assessment to the patient/caregiver and answering questions

Minutes spent in the exam room with the patient/caregiver exclusive to completion of the assessment

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
*CMS Request – Final Rule for 2016*

April 2016

**Anesthesia for Intestinal Endoscopic Procedures**

In the Final Rule for 2016, CMS stated that the anesthesia procedure codes 00740 *Anesthesia for procedure on gastrointestinal tract using an endoscope* and 00810 *Anesthesia for procedure on lower intestine using an endoscope* are used for anesthesia furnished in conjunction with lower GI procedures. In reviewing Medicare claims data, CMS noted that a separate anesthesia service is now reported more than 50 percent of the time when several types of colonoscopy procedures are reported. Given the significant change in the relative frequency with which anesthesia codes are reported with colonoscopy services, CMS believes the base units of the anesthesia services should be reexamined. Therefore, CMS proposed to identify CPT codes 00740 and 00810 as potentially misvalued. The RUC reviewed CPT codes 00740 and 00810 in January 2016 and recommended:

1. An interim base unit of 5 for code 00740 and 00810 and notes the comparison to the RUC recommended values for moderate sedation, 991X4 and 991X6, results in a work RVU equivalent that is only slightly higher than moderate sedation service of the same number of minutes.
2. Referral to the Research Subcommittee for review of the vignettes and to develop a method on how to review the survey data to value these services. The specialty societies should revise the vignette for the typical patient receiving anesthesia for an EGD, CPT code 00740, and for a patient receiving anesthesia for a colonoscopy (45378) , CPT code 00810.
3. Resurvey 00740 and 00810 for the April 2016 RUC meeting.

In April 2016, an Ad Hoc Anesthesia Workgroup was formed to discuss the issues surrounding these services. The specialty society stated and the Workgroup agreed that CPT codes 00740 and 00810 are too broad in the range of endoscopic procedures covered under each code and should be referred to the CPT Editorial Panel September 29-October 1, 2016 meeting to request a new family of anesthesia codes to describe anesthesia for GI endoscopic procedures. The revised codes will specifically identify those patients undergoing both upper and lower gastrointestinal endoscopic procedures. **The RUC recommends CPT codes 00740 and 00810 be referred to CPT to better define these services.**

**The Anesthesia Workgroup also recommended an educational presentation be provided to the RUC on the existing survey and valuation process for anesthesia services since it has not been validated or used for a survey since 2007, including a specific example of how the data from a survey are used to value an anesthesia service.**

<b>CPT Code</b>	<b>CPT Descriptor</b>	<b>Global Period</b>	<b>Work RVU Recommendation</b>
00740	Anesthesia for upper gastrointestinal endoscopic procedures, endoscope introduced proximal to duodenum	XXX	Refer to CPT Sept 2016 and RUC Jan 2017
00810	Anesthesia for lower intestinal endoscopic procedures, endoscope introduced distal to duodenum	XXX	Refer to CPT Sept 2016 and RUC Jan 2017

February 18, 2016

RE: Resurveying Anesthesia Codes 00740 and 00810 for April 2016 RUC Meeting

Dear Dr. Smith:

The recently released CMS Requests and Relativity Assessment LOI, indicates that anesthesia codes 00740 and 00810 are to be resurveyed for the April 2016 RUC meeting. As you know, at the most recent meeting of the RUC, the committee reviewed these codes and recommended that they maintain their current value of 5 base units as interim until codes 00740 and 00810 could be resurveyed. At that meeting, the committee also noted that the vignettes might not represent the current typical patient. The committee suggested a new vignette; the ASA members suggested that there might be different patient populations that could warrant a separate CPT code for a subset of the patients currently covered by these two codes.

While the ASA agrees that the vignettes need to be reviewed to determine if they represent the typical patients requiring anesthesia services for upper and lower endoscopy and, based on revised vignettes, these codes should be resurveyed, the timing of the survey was not defined at the January meeting. Based on the need to revise the vignettes to reflect current practices, the ASA does not think a resurvey prior to the April 2016 meeting is a realistic time frame to determine the appropriate next steps, taking into account the following additional considerations:

1. The Research Subcommittee has been asked to develop a method by which the RUC can review and evaluate the results of a survey of an anesthesia code. We anticipate that the recommendations will require review by the full RUC, as is the case for most subcommittee recommendations. If so, it is likely that the anesthesia survey tool could require some modifications before completing the survey. We do not believe this can be accomplished prior to the April 2016 RUC meeting. Failure to develop a valuation methodology and making sure the survey tool includes all data necessary to utilize that methodology prior to surveying the codes, may result in a repeat of the January RUC

meeting in which data is presented but no clear pathway towards using that data to determine anesthesia base units exists.

2. During the January RUC meeting, the specialty was asked by CMS to consider splitting codes 00740 and 00810 to differentiate between screening and diagnostic and/or therapeutic procedures. As noted above, the ASA is considering this option and will be prepared to present its recommendations at the April 2016 meeting. If a decision is made to split the codes to reflect the different patient populations, the ASA will submit new code proposals to CPT promptly thereafter. If appropriate, new code proposals can be submitted to CPT for consideration at the September 2016 meeting, and reviewed at the January 2017 RUC meeting. This timeframe would allow completion of the process within the 2018 cycle.

ASA is committed to working with the RUC and CMS to insure that these services are accurately and fairly valued. To do so, we think this effort needs to be done in a timeframe that allows for a more comprehensive and thoughtful review.

We would be glad to meet with CMS to discuss the issues associated with these codes so that the agency's concerns are fully addressed as the process of affirming proper valuation of codes 00740 and 00810 moves forward.

Sincerely,

Marc Leib, MD  
ASA RUC Advisor

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
*CMS Request – Final Rule for 2016*

April 2016

**Fine Needle Aspiration**

Following publication of the 2014 Final Rule, the RUC solicited feedback from specialty societies regarding CPT codes potentially impacted by the OPPS/ASC payment cap proposal. Specialty societies looked over the list of 211 codes identified by the proposal and indicated which services they have an interest in reviewing. The RUC recommended developing practice expense (PE) inputs only for the subset of codes identified by specialty societies, grouped by specialty, at the April 2014 RUC meeting. In the 2016 Final Rule, CMS noted their concerns about implementing PE inputs without the corresponding work being reviewed. The RAW analyzed the 58 services that the RUC submitted PE recommendations for and determined that one or more of the following is true of many of the codes: frequency less than 10,000; reviewed for work within the last five years; included in the list of proposed potentially misvalued codes identified through high expenditure by specialty screen that CMS included in the proposed rule for 2016. If you apply these criteria only 6 codes remain. CPT code 10021 *Fine needle aspiration; without imaging guidance* met those criteria. CPT Code 10022 *Fine needle aspiration; with imaging guidance* was also identified under the CMS High Expenditure Procedure list.

The specialty societies provided two reasons why these codes need to be referred to the CPT Editorial Panel prior to conducting a RUC survey. First, both codes need clarifying language stating that they should be reported per lesion rather than for every pass on the same lesion. Second, CPT code 10022 is reported with 76942 *Ultrasonic guidance for needle placement (eg, biopsy, aspiration, injection, localization device), imaging supervision and interpretation* more than 75% of the time together and a bundled code solution will be developed. The specialty societies also requested that these two codes be moved to the 2019 CPT cycle, due to the high workload currently involving the societies. **The RUC recommends that CPT codes 10021 and 10022 be referred to the CPT Editorial Panel for the February 2017 meeting.**

<b>CPT Code</b>	<b>CPT Descriptor</b>	<b>Global Period</b>	<b>Work RVU Recommendation</b>
10021	Fine needle aspiration; without imaging guidance	XXX	Refer to CPT Feb 2017
10022	Fine needle aspiration; with imaging guidance	XXX	Refer to CPT Feb 2017

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

**Re: Tab 12, Fine Needle Aspiration (10021 and 10022)**

Dear Dr. Smith:

On behalf of the American Academy of Otolaryngology—Head and Neck Surgery (AAO-HNS), the American College of Surgeons (ACS), the American College of Radiology (ACR), the Society of Interventional Radiology (SIR), and the American Society of Breast Surgeons (ASBrS) we are writing to request that Tab 12, Fine Needle Aspiration (FNA) which includes CPT codes 10021 Fine needle aspiration; without imaging guidance and 10022 Fine needle aspiration; with imaging guidance, be referred to CPT for the 2019 cycle.

The reason for this request is twofold. First, regarding both codes, our organizations believe that additional parentheticals are needed to clarify that the code should be reported per lesion rather than for every pass on the same lesion. Second, for code 10022, we identified that this service is reported greater than 75% of the time with code 76942 Ultrasonic guidance for needle placement (eg, biopsy, aspiration, injection, localization device), imaging supervision and interpretation. Therefore, we would like to refer both codes to CPT to develop correct coding guidelines and a new bundled code in accordance with the typical RUC policy for services commonly reported together.

In summary, we request that Tab 12 be removed from the RUC agenda for the April 2016 meeting so that this family of codes can be referred to CPT for the aforementioned reasons. Should you have any questions or concerns, please do not hesitate to contact one of our Advisors listed below.

Sincerely,

Peter Manes, MD

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
*\*Harvard Valued – Utilization Over 30,000\**

April 2016

**Acne Surgery**

In October 2015, AMA staff re-ran the Harvard valued codes with utilization over 30,000 based on 2014 Medicare claims data and CPT code 10040 was identified.

**10040 Acne surgery (eg, marsupialization, opening or removal of multiple milia, comedones, cysts, pustules)**

The RUC reviewed the survey results from 35 practicing dermatologists and agreed on the following physician time components: pre-service evaluation time of 3 minutes, with a reduction of 4 minutes to account for the reporting of an Evaluation and Management service on the same date, pre-service positioning time of 1 minute, to position the patient to expose and stabilize the multiple lesions to be treated and pre-service scrub, dress, wait time of 1 minute for the physician to put on the mask and prepare the patient's treatment area. Finally, the RUC discussed the medical necessity for an Evaluation and Management (99212) within the 10 day global period for this code. The typical patient is a teenager who will often need to return due to the management of medication, including changing topical treatment and/or adjusting retinoid dosage. Patients also may have new lesions that need to be treated within the global period. The specialty society also noted that the survey respondents indicated a 99213 office visits was typical, but the expert panel reduced the visit to a 99212 to better align with clinical appropriateness.

The RUC reviewed the specialty society's recommended work value and agreed that the survey's 25<sup>th</sup> percentile work RVU of 0.91, lower than the current work RVU is, is appropriate. To justify a work RVU of 0.91, the RUC compared the survey code to second key reference service 17111 *Destruction (eg, laser surgery, electrosurgery, cryosurgery, chemosurgery, surgical curettement), of benign lesions other than skin tags or cutaneous vascular proliferative lesions; 15 or more lesions* (work RVU= 0.97, intra time= 10 minutes) and agreed that since both these codes have identical intra-service time and comparable physician work, both services should be valued similarly. The RUC also noted that the median intra-service time of 10 minutes is a reduction of 4 minutes from the current intra time. However, the current time source is Harvard, which assigned time for this service over 25 years ago, in a process that did not rise to the robust survey requirements currently followed by the RUC. The RUC also determined that there has been no change in the intensity of this procedure. The lowering of the IWPOT to 0.0265 is a direct result of the inclusion of a full 99212 post-operative Evaluation and Management service. Previously a half-day 99212 service was included by the Harvard study, whereas the RUC and CMS no longer include fractions of post-operative office visits. **The RUC recommends a work RVU of 0.91 for CPT code 10040.**

**Practice Expense:**

The clinical labor time duplicative of the Evaluation and Management code that is typically performed with this service was removed. Also, 1 *pack, minimum multi-specialty visit*, SA048 was added for a total of 2, 1 for the service and one for the post-operative visit and corrected the type of scalpel used. Additionally, equipment item *mayo stand*, EF015 was added. The RUC approved the direct practice expense inputs with modifications as approved by the Practice Expense Subcommittee.

**Work Neutrality**

The RUC's recommendation for this code will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
10040	Acne surgery (eg, marsupialization, opening or removal of multiple milia, comedones, cysts, pustules)	010	0.91

Global Period: 010

RUC Recommended RVU: **0.91**

CPT Descriptor: Acne surgery (eg, marsupialization, opening or removal of multiple milia, comedones, cysts, pustules)

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 16-year-old female comes to the office with stage 3 to 4 acne inclusive of multiple open comedones, inflammatory papules, pustules and some small cysts. Acne surgery is indicated. This is done by extraction of comedones, and by gentle lancing and drainage of the pustular component of acne lesions. The site of the treatment is cleaned. A follow-up visit is scheduled.

Percentage of Survey Respondents who found Vignette to be Typical: 85%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 100%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 5%

Description of Pre-Service Work: Review the patient's records, particularly any medications that might promote bleeding or scarring. Review physical and pharmacological options for the treatment of comedones and inflammatory cysts and the risk and benefits of each approach. Identify operative areas. Verify that all required instruments and supplies are available. Assist with and verify appropriate positioning. Drape and prepare site. Scrub and gown and glove

Description of Intra-Service Work: Select appropriate comedone extractor (size and type) for the first lesions to be treated. Using a scalpel, lightly incise the top of the top of the inflammatory cyst or comedone and follicular orifice collar. Using the extractor, apply pressure, while exerting appropriate traction on the surrounding skin, until the contents are expressed. Apply pressure until hemostasis is achieved, or apply hemostatic agent as needed. Repeat this process on all other appropriate lesions. Then, select the next appropriate extractor based on the next group of lesions to be treated, and repeat the process outlined previously.

Description of Post-Service Work: Apply appropriate ointment and sterile dressing. The patient will be examined in the office within a few days to assess wound healing by checking re-accumulation of follicular contents, degree of residual inflammation, completeness of apparent resolution of treated lesions and induction of lesions in the surrounding skin. Discuss changes in use of topical anti-acne therapies, if appropriate.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

The Acne surgery code (10040) was captured by the Harvard valued with utilization over 30,000 screen based on the 2014 Medicare claims data. The RUC requested the American Academy of Dermatology Association (AADA) to survey the code for April 2016 meeting. AADA conducted a random RUC survey of members. The survey sample size was 400 with 35 survey responses. The expert panel reviewed the survey result recommended the following RVUs and Times for the RUC's review.

**RVUs**

We recommend 0.91 RVUs, which is the 25<sup>th</sup> percentile of survey result. This value is lower than the current RVUs of this code which is 1.21 RVUs. Furthermore, the recommended RVU is lower than the Key reference code 10060, *incision and drainage of abscess (eg, carbuncle, suppurative hidradenitis, cutaneous or subcutaneous abscess, cyst, furuncle, or paronychia); simple or single*, which has 1.22 RVUs. Currently, the code has 7 minutes of Evaluation time, 14 minutes of Intra service time, and 7 minutes of post service time.

**Times**

We are recommending pre-service time package 5. This procedure is typically performed with an E&M service. The code is reported along with CPT code 99212 78% of the time.

We are recommending 3 minutes for evaluation by removing 4 minutes from the standard package time. The expert panel recommends 2 minutes for positioning time because the patients need to be positioned to expose and stabilize the multiple lesions that are being treated, and we also recommend including 1 additional minute to the standard package time (2 minutes) for dress, scrub and wait time based on the median survey result. The treatment areas need to be prepped in sterile fashion.

We are recommending median survey time of 10 minutes for intra service time. And 3 minutes for post service based on the median post survey time.

#### Comparison to key reference code

CPT Code	RVW	IWPUT	Total Time	PRE	INTRA	POST
10060 (KRS)	1.22	0.0153	41	16	15	10
10040	0.91	0.0235	20	7	10	3

In conclusion, the expert panel recommends a **pre-service time of 7 minutes, an intra-service time of 10 minutes, and a post-service time of 3 minutes for a total of 20 minutes.**

#### SERVICES REPORTED WITH MULTIPLE CPT CODES

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☒ Other reason (please explain) This code is commonly reported with E&M code 99212.

- Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

#### FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 10040

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Dermatology                      How often? Commonly

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period? 90000

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

Specialty Dermatology	Frequency 70000	Percentage 77.77 %
-----------------------	-----------------	--------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?  
31,445 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty.  
Please explain the rationale for this estimate. The estimation is based on the 2014 Medicare utilization rate.

Specialty Dermatology	Frequency 24835	Percentage 78.97 %
-----------------------	-----------------	--------------------

Specialty Physician Assistant	Frequency 2701	Percentage 8.58 %
-------------------------------	----------------	-------------------

Specialty NursePractitioners	Frequency 1333	Percentage 4.23 %
------------------------------	----------------	-------------------

Do many physicians perform this service across the United States? Yes

---

### **Berenson-Eggers Type of Service (BETOS) Assignment**

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Procedures

BETOS Sub-classification:

Minor procedure

BETOS Sub-classification Level II:

Skin

---

### **Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 10040

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

### Attestation Statement

This form needs to be completed by any **RUC Advisor** whose specialty society is developing a recommendation to be reviewed by the RUC.

As a RUC Advisor, I attest that the integrity of the RUC survey, summary of recommendation forms and practice expense recommendations are based on accurate and complete data to the best of my knowledge. As a RUC advisor, I acknowledge that violations would be addressed by the executive committee (i.e., RUC Chair, AMA Representative and Alternate AMA Representative.)

**AMA/Specialty Society Update Process  
Practice Expense Summary of Recommendation  
Non Facility Direct Inputs**

CPT Long Descriptor:

Acne surgery (eg, marsupialization, opening or removal of multiple milia, comedones, cysts, pustules)

Global Period: 010 Meeting Date: April 2016

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:

AADA convened a RUC expert panel to review the current Practice Expense data and practice patterns to make a recommendation.

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale:

CPT code 10060 is selected as the reference code because it was the code that was chosen as the key reference code by the physician work surveyors.

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:

N/A

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:

N/A

5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

- Prepare room, equipment and supplies
- Greet patient and provide gowning
- Obtain vital sign
- Assist in positioning the patient

Intra-Service Clinical Labor Activities:

- Assist the physician in performing the procedure
- Help in keeping the patient in a stable position
- Assist in passing gauze and instruments to physician
- Holding pressure for hemostasis

Post-Service Clinical Labor Activities:

- Clean room
- Complete diagnostic forms
- Check dressings and operative areas
- Coordinate office visits and prescriptions

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
*\*High Level E/M in Global Period\**

April 2016

**Muscle Flaps**

In October 2015, CPT codes 15732 and 15734 were identified under the High Level E/M screen for services with Medicare utilization greater than 10,000 that has a 99214 included in the global period. The RAW requested that the specialty societies submit an action plan to justify the 99214 visit and review if the family of services also have a 99214 included in the global periods. The RUC noted that a 99214 office visit is included for 15732 and 15736 but not included in the other codes in this family.

***15732 Muscle, myocutaneous, or fasciocutaneous flap; head and neck (eg, temporalis, masseter muscle, sternocleidomastoid, levator scapulae)***

The specialty societies explained that, as also indicated by the three previous surveys for this procedure, the new survey results indicate the typical patient will have inpatient status (72%) and the typical length of stay will be four days. As in the past, this conflicts with the Medicare utilization data that shows the primary place of service as the outpatient hospital setting. Therefore, the specialty societies determined that the code needs to be referred to the CPT Editorial Panel to better differentiate and describe the work of large flaps performed on patients with head and neck cancer who will have inpatient status. This is in contrast to smaller flaps that may be accomplished in an office or outpatient setting and to differentiate from procedures that would be best coded by the adjacent tissue transfer codes. In addition, during the discussion, CMS requested that CPT code 15731 be added to the family of codes for the subsequent RUC review. **The RUC recommends referral of CPT code 15732 to the CPT Editorial Panel. Additionally, CPT code 15731 will be added as part of the family for review.**

***15734 Muscle, myocutaneous, or fasciocutaneous flap; trunk***

Prior to reviewing the survey data for this procedure, the RUC considered compelling evidence that the current work RVU of 19.86 may be incorrect. The specialty societies detailed two compelling evidence arguments. First, a flawed methodology was used in the previous valuation. During the last valuation at the third Five-Year Review, plastic surgery was the only specialty to conduct a survey, and only 21 responses were collected. At that time, plastic surgery represented approximately 80% of the total utilization of CPT code 15734. Currently, 2015 Medicare utilization shows plastic surgery and general surgery as equally performing this service (43% and 42%, respectively). Furthermore, accounting for other specialties similar to general surgery (colorectal, surgical oncology, vascular, etc), who are performing the procedure for the same indications, the dominant provider has shifted. Second, the patient population and technique has changed. General surgeons are now performing this procedure to close large, complex abdominal defects that cannot be closed primarily. This is a new surgical procedure that was not performed at the time of the last review. During the previous valuation, plastic surgeons were primarily using this procedure to repair chest wall defects. Given this information, the RUC approved compelling evidence that the current work value for CPT code 15734 may be incorrect.

The RUC reviewed the survey results from 41 general and plastic surgeons and recommends the following physician time components: pre-service time of 75 minutes, intra-service time of 180 minutes and immediate post-service time of 30 minutes. The RUC agreed to add 12 minutes of positioning time above the standard package because the typical patient undergoing a latissimus muscle flap will be positioned supine, then lateral as the procedure progresses. The typical patient undergoing a rectus abdominis flap will require additional time related to a vacuum assisted dressing in place that will need to be taken down. The RUC also recommend the following post-operative visits: four hospital visits (1 x 99233, 2 x 99232, 1 x 99231), one discharge day management service 99238, and five office visits (1 x 99214, 2 x 99213, 2 x 99212). The RUC discussed the need for a higher level Evaluation and Management service (99214) for the first post-operative visit and agreed it was appropriate. The patient has an extensive dressing (for both the flap and the donor site) that has to be taken down. The process is complex and intense due to concern about not disturbing the blood supply to the flap, as well as not disturbing the skin graft. Finally the RUC noted the increase to two 99232 hospital visits in the global period and confirmed that this visit is in fact typical and was captured, by the survey respondents, as performed in the post-operative period and not on the same day of the surgery.

The RUC reviewed the specialty societies' recommendation and agreed that the survey median work RVU of 23.00 reflects the additional intra-operative time and additional postoperative hospital work for CPT code 15734. To justify a work RVU of 23.00, the RUC compared the surveyed code to the primary key reference code 22905 *Radical resection of tumor (eg, sarcoma), soft tissue of abdominal wall; 5 cm or greater* (work RVU= 21.58, intra time= 150 minutes) and determined that code 15734 is similar in time and intensity. The RUC also considered the second key reference service 27364 *Radical resection of tumor (eg, sarcoma), soft tissue of thigh or knee area; 5 cm or greater* (work RVU= 24.49, intra time= 180 minutes) and agreed that CPT code 15734 is more work and should be valued higher. Finally, the RUC noted that the increase in work RVUs is further substantiated by the increase in intra-service time, from 163 minutes to 180 minutes, and total time, from 524 minutes to 596 minutes. **The RUC recommends a work RVU of 23.00 for CPT code 15734.**

### **15736 Muscle, myocutaneous, or fasciocutaneous flap; upper extremity**

The RUC reviewed the survey results from 46 practicing general, plastic, and hand surgeons and recommends the following physician time components: pre-service time of 72 minutes, intra-service time of 150 minutes and immediate post-service time of 30 minutes. The RUC agreed to add 9 minutes of positioning time above the standard package to monitor and/or assist with patient positioning, including padding of bony prominences, application of thermal regulation drapes, assessing position of extremities and head and adjusting as needed, positioning the patient's arm on the hand surgery table, applying a sterile tourniquet to the proximal arm, elevating the arm and exsanguinating the arm, and inflating the pneumatic tourniquet. The RUC noted that total positioning time of 12 minutes is consistent with many other recently reviewed upper extremity procedures. The RUC also recommend the following post-operative visits: one-half discharge day management service 99238 that is consistent with outpatient facility status and five office visits (1 x 99214, 3 x 99213, 1 x 99212). The RUC discussed the need for a higher level Evaluation and Management service (99214) for the first post-operative visit and agreed it was appropriate. The patient's comfort and adherence to the postoperative regimen is discussed. The extremity edema, circulation, sensation and motor function are assessed. The splint is removed, but the arm is supported. The superficial dressing is removed. The viability of the flap is assessed. The wound is checked for any sign of infection. The non-stick dressing covering the skin graft is very carefully separated from the graft while protecting the graft with cotton swabs. A new non-stick dressing is

applied to the flap. A new dressing is applied to the arm. The donor site is evaluated and redressed. Pain is assessed and adjustments to medications are made as needed. The patient care plan is reviewed with the patient and family. Communication with the referring physician is completed. The medical record is completed. It is typical for this visit to take upwards of one hour.

The RUC reviewed the specialty societies' recommendation and agreed that the current work RVU of 17.04, which is between the survey's 25<sup>th</sup> percentile and median work values, is appropriate. The RUC agreed with the specialties that the work and total time has not changed; the intra-operative time is the same and the facility work has shifted to higher level office work. To justify a work RVU of 17.04, the RUC compared the surveyed code to the primary key reference code 24160 *Removal of prosthesis, includes debridement and synovectomy when performed; humeral and ulnar components* (work RVU= 18.63, intra time= 120 minutes) and agreed that while code 15736 has 30 additional minutes of intra-service time, the reference code has more post-operative visits and is a more intense procedure. Therefore, the surveyed code is valued appropriately slightly less than the key reference service. Additionally, the RUC reviewed a broad range of 090 day global outpatient procedures recently reviewed by the RUC and agreed that the current work RVU of 17.04 appropriately fits in this range. Specifically, CPT codes 49655 *Laparoscopy, surgical, repair, incisional hernia (includes mesh insertion, when performed); incarcerated or strangulated* (work RVU= 16.84, intra time= 150 minutes) and 42415 *Excision of parotid tumor or parotid gland; lateral lobe, with dissection and preservation of facial nerve* (work RVU= 17.16, intra time= 150 minutes) offer appropriate brackets around the recommended value. **The RUC recommends a work RVU of 17.04 for CPT code 15736.**

#### **15738 Muscle, myocutaneous, or fasciocutaneous flap; lower extremity**

The specialties presented compelling evidence of a flawed methodology in the previous survey. The specialties indicated that the survey instrument in 1995 requested total hospital time and number of visits, but not level of visits. Then, when level of visits was necessary for the first five-year review of practice expense, a CMS contractor transformed the postoperative time into visit levels using an algorithm based on intra-service time. This resulted in all low level hospital and office visits being assigned to code 15738. The current survey indicates that the hospital and office visit work was underestimated and that increases in the value for E/M codes over the years were not correctly incorporated in the global code value for 15738. The RUC rejected this compelling evidence citing that the RUC survey has evolved over time and that an old RUC survey instrument is not compelling evidence of a flawed methodology.

The RUC reviewed the survey results from 39 plastic surgeons and recommends the following physician time components: pre-service time of 70 minutes, intra-service time of 150 minutes and immediate post-service time of 30 minutes. The RUC agreed to add 12 minutes of positioning time above the standard package to adequately position the patient with the leg extended lateral or the patient positioned prone. In addition, these patients will require a significant amount of effort to transfer from the hospital bed to the operating room bed because there is commonly a vacuum-assisted dressing in place that will need to be taken down. The RUC also recommend the following post-operative visits: four hospital visits (2 x 99232, 2 x 99231), one discharge day management service (99238), five office visits (4 x 99213, 1 x 99212).

The RUC reviewed the survey respondents' estimated physician work values and noted that the current work RVU of 19.04, slightly above the 25<sup>th</sup> percentile work RVU of 19.00 should be maintained since compelling evidence was not accepted. The RUC compared the surveyed code to the second key reference code 22905 *Radical resection of tumor (eg, sarcoma), soft tissue of abdominal wall; 5 cm or greater* (work RVU= 21.58, intra time= 150 minutes) and agreed that while both services have identical intra-service time, the reference code has less total time, but may be more intense. **The RUC recommends a work RVU of 19.04 for CPT code 15738.**

**Practice Expense:**

The large amounts of supplies (eg, gauze, etc. were reviewed). However, the specialties explained that the wounds are large and complex for these patients and the large quantities of supplies are appropriate. The specialties provided details of quantities required on a visit by visit basis. The RUC approved the direct practice expense inputs as submitted by the specialty without modification and reviewed and approved by the PE Subcommittee.

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
15731(f)	Forehead flap with preservation of vascular pedicle (eg, axial pattern flap, paramedian forehead flap)	090	Refer to CPT Sept 2016
15732	Muscle, myocutaneous, or fasciocutaneous flap; head and neck (eg, temporalis, masseter muscle, sternocleidomastoid, levator scapulae)	090	Refer to CPT Sept 2016
15734	Muscle, myocutaneous, or fasciocutaneous flap; trunk	090	23.00
15736 (f)	Muscle, myocutaneous, or fasciocutaneous flap; upper extremity	090	17.04 (No Change)
15738 (f)	Muscle, myocutaneous, or fasciocutaneous flap; lower extremity	090	19.04 (No Change)

April 5, 2015

Peter Smith, MD, FACS  
Chair, AMA/RUC  
American Medical Association  
330 N. Wabash Ave.  
Chicago, IL 60611

**Subject: Tab 14 – CPT Code 15732**

Dear Dr. Smith:

On behalf of the American Society of Plastic Surgeons (ASPS), I am writing in regards to code 15732 *Muscle, myocutaneous, or fasciocutaneous flap; head and neck (eg, temporalis, masseter muscle, sternocleidomastoid, levator scapulae)* included in Tab 14 (Muscle and Skin Graft) for the April 2016 RUC meeting.

### **Background**

In 1995, for the first five-year review, codes 15732-15738 were identified by the CMDs as potentially misvalued. The ASPS and American Academy of Otolaryngology - Head and Neck Surgery (AAOHNS) conducted a RUC survey that resulted in data indicating that the typical patient was in the hospital for 5 days (ie, inpatient). The RUC and CMS accepted the survey results.

In 2005, for the third five-year review, code 15732 was identified as potentially misvalued because the service had been valued as an inpatient service and Medicare data indicated it was performed as an outpatient service. After a survey by ASPS and AAOHNS, and RUC discussion, it became apparent that this code described two disparate procedures, allowing both superficial repairs and repair of more serious cancer defects to be reported with 15732. The societies reported that these patient populations require different work, one group of patients are typically provided the service in the inpatient setting and the other group are treated in the outpatient setting. The RUC directed plastic surgery to coordinate with otolaryngology and ophthalmology to develop a coding proposal to specifically identify these different services as new CPT codes. Code 15732 was referred to the CPT Editorial Panel.

For CPT 2007, new code 15731 was created to describe axial pattern forehead flaps, which previously were billed using 15732 and are commonly outpatient procedures. With this revision, the outpatient percentage was expected decrease for 15732 in future claims data (2007 and beyond). The ASPS recommended that the hospital inpatient visits and discharge day be retained until further data is collected for 15732. The RUC agreed to maintain the visits and re-review when three years of utilization data were available.

In 2010, for the fourth five-year review, code 15732 was again identified by CMS as potentially misvalued through the Site of Service Anomaly screen. The ASPS and AAOHNS conducted another survey and 79% of the survey respondents indicated that 15732 is an inpatient service. The societies indicated that the typical patient is unstable and may even

require critical care services. The societies also indicated that this service should not be performed in the outpatient setting and miscoding is the cause for the outpatient claims. The RUC and specialties agreed that additional coding education needs to take place and agreed to develop a CPT Assistant article. In addition, another separate CPT code may be required. It was noted that ophthalmologists would need to lead the CPT education/proposal efforts. The RUC recommended maintaining the inpatient visits and reduced the work RVU slightly to the survey median. CMS disagreed with this recommendation and removed the inpatient visits and work RVUs using reverse building block and assigned 0.5 x 99238 for discharge management. The work RVU was reduced by 18% from 19.90 to 16.38.

More recently, the RAW identified that a 99214 office visit is included in the work of 15732 and 15736 but not included in the other codes in this family. The RAW recommended that the specialty societies survey the entire family (15732-15738) for April 2016.

### **Survey Results for 15732**

For the current survey of 15732, although ophthalmology and otolaryngology comprise 50% of the utilization, only ASPS indicated an interest to survey. A survey was conducted by ASPS and 47 responses were received (see attached RUC Summary Excel file). Similar to the three previous RUC surveys, the results indicate the typical patient will have inpatient status (72%) and the typical length of stay will be four days. The survey intraoperative time of 150 minutes has also not changed from the previous three surveys. The ASPS believes that this is the correct time and visit information related to 15732 when it is correctly reported.

### **Recommendation for 15732**

The ASPS expert panel discussed the survey results and determined that they cannot present the same time and visit data to the RUC that has been presented during the past three reviews. We believe code 15732 needs to be referred to CPT to better differentiate and describe the work of large flaps performed on patients with head and neck cancer who will have inpatient status and be similar to the other procedures in this family. This is in contrast to smaller flaps that may be accomplished in an office or outpatient setting and would be best coded by the adjacent tissue transfer codes. We request that the RUC refer this code to CPT to accomplish these goals.

I look forward to answering any RUC member questions at the upcoming meeting.

Sincerely,

A handwritten signature in black ink, appearing to read 'Mark Villa', with a stylized flourish at the end.

Mark Villa, MD  
ASPS RUC Advisor

Global Period: 090		RUC Recommended RVU: <b>23.00</b>
CPT Descriptor: Muscle, myocutaneous, or fasciocutaneous flap; trunk		

### CLINICAL DESCRIPTION OF SERVICE:

#### Vignette Used in Survey:

Vignette 1: A patient with a history of radiation therapy develops a large open wound of the chest with exposure of several ribs resulting in a defect that is too large to close with a complex repair or adjacent tissue transfer. The defect is reconstructed with a pedicled muscle flap (eg, latissimus).

Vignette 2: A trauma patient with multiple injuries initially undergoes a damage-control laparotomy with hemorrhage control, bowel resection and temporary abdominal closure. At the time of definitive closure of the abdomen, a wide gap between the opposing fascial edges in the abdominal wall has developed. A pedicled muscle flap (eg, rectus abdominis) is elevated and transposed to close the defect.

Percentage of Survey Respondents who found Vignette to be Typical: 83%

#### Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 100% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 28% , Overnight stay-more than 24 hours 72%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 62%

#### Moderate Sedation

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: Select and order the appropriate antibiotic(s) and confirm timing and administration. Assure appropriate selection, timing, and administration of deep vein thrombosis (DVT) prophylaxis. Write orders for preoperative medications including beta blockers if indicated. Review results of admission testing and imaging. Meet with patient and family to review planned procedure and postoperative management. Mark site and side of proposed skin incision and confirm with patient. Review and obtain informed consent with patient, including witness. Review length and type of anesthesia with anesthesiologist. Verify that all required instruments and supplies are available. Assist in transfer of patient from gurney to operating table. Verify areas surrounding skin incisions to be prepared and draped. Scrub and gown. Perform surgical time out with operating surgical team and anesthesia team.

Description of Intra-Service Work: Pedicled latissimus muscle flap: After the extirpative part of procedure has been completed, further dissection is performed through the defect into the axilla to identify and confirm the patency of the thoracodorsal pedicled. Any necessary tunnel between the defect and the axilla is created. The appropriate measurements of the defect are obtained and a plan for size of flap is confirmed. A sterile dressing is placed over the chest wall defect (this portion of the procedure is typically performed in a supine position). The drapes are removed and the patient is then reposition in a lateral decubitus position to allow for access to the back donor site. Make incision over latissimus muscle.

Carry dissection down to fascia, which is elevated off the muscle. Expose anterior and posterior borders of muscle and continue dissection inferiorly until enough length is obtained to reach the defect. Then divide inferior portion of the muscle, elevate muscle off the chest wall, and isolate on thoracodorsal vascular pedicle. Enlarge the tunnel to accommodate muscle flap. Transpose the flap from the back to the chest and re-assess the vascular pedicle. Inset flap into the chest-wall defect and suture in place after placement of a closed suction drain. Close donor site primarily over suction drains. [Wound coverage is completed with an appropriate skin graft that is separately reported.

**Pedicled rectus abdominis muscle flap:** The temporary abdominal dressing is removed and the extent of necessary additional mobilization to achieve closure is determined. After determining the extent of the rectus abdominis flap necessary to close the defect, a skin flap is raised from the costal margin to the inguinal ligament and posterolaterally to the anterior axillary line taking care to preserve perforating vessels and nerves. The external oblique aponeurosis is incised as a myofascial release is completed the entire length of the rectus muscle lateral to the linea semilunaris. The release is carried up over the costal margin and the fascia is incised onto the ribs. The plane between the internal and external oblique muscles is dissected with blunt dissection to mobilize the flap along the length of the myofascial release taking care not to injure any nerves to the muscular flap or compromise the blood supply. An additional release may be needed in the posterior rectus sheath allowing additional advancement as required. The rectus muscles are then re-approximated at the midline with running suture. (If mesh is placed for reinforcement, this is reported separately) Drains are placed beneath the skin flaps and are sutured in position. After assuring hemostasis and viability of the rectus muscle flap, the skin edges are re-approximated at the midline in layers.

**Description of Post-Service Work:** Through discharge from recovery: Apply sterile dressings. Monitor patient during reversal of anesthesia, protecting the wound with a hand so that wound disruption does not occur with an unrestrained cough. Assist in transfer of patient from operating table to gurney. Monitor transport of patient from the OR to the recovery room. Discuss postoperative recovery care with anesthesia and nursing staff. Instruct nursing staff in care of drains, tubes, and other devices. Review postoperative laboratory results. Discuss procedure and outcome with family in waiting area. Write brief operative note. Write postoperative note in recovery room. Dictate operative report and copy referring physician(s). Call referring physician(s). Discharge patient from recovery room to surgical ward. Write patient-care orders and discuss floor care with nursing staff.

**Inpatient visits:** Review interval chart notes. Talk with patient and family. Take down dressings. Evaluate flaps for viability and wound for infection. Assess drain output. Redress wound. For latissimus flap, assess extremity for edema, circulation, sensation and motor function. For rectus abdominis flap, assess bowel function, advance diet as appropriate. Assess pain score and order medications, as required. Continue prophylaxis for DVT. Assess need for beta blockers, order as required. Assess need for antibiotics, order as required. Write orders for patient activity. Chart patient progress notes. Answer patient and family questions. Answer nursing and/or other staff questions.

**Discharge management:** Review interval chart notes. Talk with patient and family. Take down dressings. Evaluate flaps for viability and wound for infection. Assess drain output. Redress wound. For latissimus flap, assess extremity for edema, circulation, sensation and motor function. For rectus abdominis flap, assess bowel function. Assess pain score and order medications, as required. Assess need for beta blockers, order as required. Assess need for antibiotics, order as required. Discuss home restrictions (ie, diet, activity, bathing) and care of drain with patient and family members. Medications are reconciled and orders for discharge medications are written. Complete all appropriate medical records, including day of discharge progress notes, discharge summary, discharge instructions, and insurance forms.

**Office visits:** Talk with patient and family. Take down dressings. Evaluate flaps for viability and wound for infection. Assess drain output and remove when appropriate. Remove staples/sutures when appropriate. Redress wound. For latissimus flap, assess extremity for edema, circulation, sensation and motor function. Order therapy, as required. Review with patient and family the need for post-mastectomy reconstructive procedures. For rectus abdominis flap, assess bowel function. Assess pain score and order medications, as required. Answer patient and family questions and reinforce instructions on wound care, activity, and bathing. Enter progress notes into medical record. Discuss progress with PCP.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Background**

Code 15734 was identified through a screen for services with Medicare utilization greater than 10,000 that include a 99214 in the global period.

**Compelling Evidence**

Flawed methodology - previous survey was conducted by one specialty to obtain a value, but in actuality that service is currently provided primarily by physicians from a different specialty according to utilization data.

Code 15734 was identified by CMS as a high volume Harvard-valued code that was potentially misvalued as part of the third five-year review in 2005. The 2003 Medicare data indicated plastic surgery as the dominant provider at approximately 80%, followed by general surgery, otolaryngology, and cardiothoracic surgery in small percentages. ASPS agreed to survey 15734 and a vignette was developed for a non-Medicare aged patient with a history of breast cancer treated with mastectomy followed by radiation therapy resulting in a large nonhealing radiation ulcer of the left lateral chest that was reconstructed with a pedicled latissimus muscle flap. The survey conducted by ASPS resulted in 21 responses (ie, less than 30) with an indication on the survey that work had not changed. The survey data from the 21 respondents was accepted as similar to Harvard data and the work RVU was maintained. Current information for code 15734 indicates a shift in the surgeons who provide the service. Specifically, plastic surgeons and general surgeons currently have almost equal utilization as more general surgeons perform muscle flaps to close large abdominal defects that cannot close primarily. **We believe that utilization changes in the typical provider meets compelling evidence that 15734 may not be correctly valued.**

**Survey Process**

**For CPT code 15734, please select one of the typical patients described below.** When completing this survey, consider the physician work related to the typical patient you have chosen.

- ☐ **Patient 1:** A patient with a history of radiation therapy develops a large open wound of the chest with exposure of several ribs resulting in a defect that is too large to close with a complex repair or adjacent tissue transfer. The defect is reconstructed with a pedicled muscle flap (eg, latissimus).
- ☐ **Patient 2:** A trauma patient with multiple injuries initially undergoes a damage-control laparotomy with hemorrhage control, bowel resection and temporary abdominal closure. At the time of definitive closure of the abdomen, a wide gap between the opposing fascial edges in the abdominal wall has developed. A pedicled muscle flap (eg, rectus abdominis) is elevated and transposed to close the defect

**Is your typical patient for 15734 similar to the typical patient described above?**

- ☐ Yes
- ☐ No. If no, please describe your typical patient for this service:

Muscle flaps on the trunk can involve the chest, the back, and/or the abdomen. Therefore, the ASPS and ACS recommended that two different typical patient vignettes be included in the survey instrument to accommodate a survey by both plastic surgeons and general surgeons who have almost equal utilization of the code. The Research Subcommittee approved the use of two vignettes for the survey process, one for a latissimus muscle flap and one for a rectus abdominis flap. The ASPS and ACS indicated that they believed the physician work for these vignettes were essentially equivalent and would allow survey participation by both specialties. The "typical patient" question on the survey instrument was modified as shown below to allow the survey respondent to choose a vignette for completion of the survey:

A survey request was sent to a random selection of 1,087 surgeons from the ASPS (reconstructive plastic surgeons) and ACS (general surgeons) membership databases. Forty-one responses were received with 26 respondents choosing vignette 1 and 15 respondents choosing vignette 2. The split in GS/PS for vignette 1 was 25% / 75% and for vignette 2 was approximately 50% / 50%. The RUC Summary Excel file shows combined data and data grouped by vignette.

### **Recommendation**

**We recommend the survey median work RVU of 23.00 for code 15734.** This work RVU which is slightly greater than the current value reflects the increased intra-service time and increased inpatient hospital work compared with the time and visit data from the previous review of 21 plastic surgeons.

### **Pre-time Package 4**

We recommend pre-time package 4 (*Difficult Patient/Difficult Procedure*). **Recommended times for the preservice categories are 40/15/20.** An additional 12 minutes has been added for positioning for a total of 15 minutes positioning time. This is consistent with the current survey data and the previous survey data. The typical patient undergoing a latissimus muscle flap will be positioned supine, then lateral as the procedure progresses. The typical patient undergoing a rectus abdominis flap will require a significant amount of effort to transfer from the hospital bed to the OR bed because there is commonly a vacuum assisted dressing in place that will need to be taken down. There may also be additional dressings or other management issues involved in transferring a multisystem trauma patient from the bed to the OR table (eg, the patient may be ventilated or have other trauma that needs to be accommodated during movement). Finally, consideration should also be given to prone positioning for flaps used for reconstruction of the midline and posterior trunk defects (eg, trapezius, latissimus dorsi, and the gluteus maximus).

### **Post-time Package 9b**

We recommend post-time package 9b (*General Anesthesia or Complex Regional Block/Complex Procedure*), with a reduction of 3 minutes to be consistent with the survey median.

### **Key Reference Service Comparison**

KRS codes 27364 and 22905 are familiar to both general surgeons and plastic surgeons. Both procedures represent significant intraoperative work and similar postoperative management. The recommended work RVU of 23.00 for code 15734 fits well between the KRS codes.

Year	CPT	Long Descriptor	RVW	IWPUT	Total	PRE	INTRA	POST	33	32	31	38	14	13	12

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.  
☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.  
☐ Multiple codes allow flexibility to describe exactly what components the procedure included.  
☐ Multiple codes are used to maintain consistency with similar codes.  
☐ Historical precedents.  
☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 15734

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
 If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty plastic surgery                      How often? Sometimes

Specialty general surgery                      How often? Sometimes

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. national utilization not available

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Specialty	Frequency	Percentage	%
Specialty	Frequency	Percentage	%

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?  
 23,069 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty.  
 Please explain the rationale for this estimate. RUC database

Specialty plastic surgery	Frequency 11000	Percentage 47.68 %
---------------------------	-----------------	--------------------

Specialty general surgery	Frequency 9100	Percentage 39.44 %
---------------------------	----------------	--------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Do many physicians perform this service across the United States? Yes

### Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Procedures

BETOS Sub-classification:

Major procedure

BETOS Sub-classification Level II:

Other

### Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 15734

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

		Presented Recommended RVU: <b>17.04</b>
Global Period: 090		RUC Recommended RVU: <b>17.04</b>
CPT Descriptor: Muscle, myocutaneous, or fasciocutaneous flap; upper extremity		

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A patient sustains an avulsion injury of the antecubital fossa resulting in a soft tissue defect exposing the brachial artery and median nerve. A pedicled muscle flap (eg, brachioradialis) is elevated and transposed to provide coverage of the defect.

Percentage of Survey Respondents who found Vignette to be Typical: 80%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 87% , In the ASC 13%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 5% , Overnight stay-less than 24 hours 45% , Overnight stay-more than 24 hours 50%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 42%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: Select and order the appropriate antibiotic(s) and confirm timing and administration. Assure appropriate selection, timing, and administration of deep vein thrombosis (DVT) prophylaxis. Write orders for preoperative medications. Review results of admission testing and imaging. Meet with patient and family to review planned procedure and postoperative management. Mark site and side of proposed skin incision and confirm with patient. Review and obtain informed consent with patient, including witness. Review length and type of anesthesia with anesthesiologist. Verify that all required instruments and supplies are available. Assist in transfer of patient from gurney to operating table. Monitor and/or assist with patient positioning; padding of bony prominences; and application of thermal regulation drapes. Assess position of extremities and head; adjust as needed. Place patient's arm on hand surgery table. Indicate areas of skin to be prepared. Prep and drape arm and hand. Scrub and gown. Apply a sterile tourniquet to the proximal arm. Mark surgical incisions on the arm. Perform surgical time out with operating surgical team. Elevate arm and exsanguinate. Inflate pneumatic tourniquet.

Description of Intra-Service Work: The traumatic defect in the antecubital fossa is debrided and irrigated. The defect is measured. An incision is made over the ipsilateral brachioradialis muscle. The incision is brought down to the level of the fascia which is divided exposing the muscle. The brachioradialis muscle is dissected radially and ulnarly proceeding distally where the distal tendon is divided. The superficial radial sensory nerve is first identified and carefully protected during the distal dissection. The muscle is then dissected proximally. During the dissection care is taken to identify the vascular pedicle coming from the recurrent radial artery. Secondary branches of the recurrent radial artery are divided to allow better mobilization. The nerve origin from the radial nerve is also identified and protected. The muscle is then transposed on the pedicle to cover the defect at the antecubital fossa and sutured in place. The tourniquet is deflated and the viability of the muscle is assessed. The flap is observed for any sign of congestion. If flap congestion is noted sutures are

removed/repositioned and the flap orientation is adjusted as needed. Drains are placed and sutured in position. The donor site fascia is sutured and the skin closed in layers. [Flap coverage is completed with an appropriate skin graft that is separately reported.]

#### Description of Post-Service Work:

Through discharge from recovery: A bulky dressing is applied to the entire arm from the hand to the axilla. A long arm plaster splint is applied. The patient's arm is monitored to be certain the flap is not ripped out of its bed should he/she forcefully extend the elbow during emergence from anesthesia. The patient is transferred from the operating table to gurney. Monitoring continues during the transport of patient from the OR to the recovery room. The postoperative recovery care is discussed with the anesthesia team and nursing staff. The nursing staff is instructed in the care of the drains and extremity. The postoperative laboratory results are reviewed. The procedure and outcome are discussed with family in waiting area. A brief operative note is written. Orders are written for the in-immediate postoperative care. The operative report is dictated, a copy of which is sent to the referring physician(s). The referring physician(s) is called. The patient is discharged from recovery room to surgical ward. Additional floor related postoperative orders are written and discussed with the surgical floor nursing staff.

Next day discharge management: The interval chart notes are reviewed. The superficial dressing is taken down. Care is taken to not disturb the non-adherent dressing covering the skin graft. The flap is accessed for viability and the wound for infection. The drain output is noted. The wound is redressed creating a small viewing port for postoperative flap observation. The extremity edema, circulation, sensation and motor function are assessed. Further discussions are held with the patient and family regarding diet, activity, bathing, arm positioning, care of the drain and dressings. Postoperative medication orders are written and discussed with the family. Medications are reconciled. All appropriate medical records, including day of discharge progress notes, discharge summary, discharge instructions are completed.

Office visits: The patient is seen within 24 hours of discharge to evaluate drain output and flap viability. The patient's comfort and adherence to the postoperative regimen is discussed. The extremity edema, circulation, sensation and motor function are assessed. The graft donor site is evaluated. The donor site dressing is changed or reinforced as needed. The drain anchor suture is located and removed along with the drain. The dressing is only disturbed enough to evaluate the flap viability via the previously created viewing port. The viewing port is covered. The splint is left in place. Pain is assessed and adjustments to medications are made as needed. The patient care plan is reviewed with the patient and family. Communication with the referring physician is completed. The medical record is completed.

At the second postoperative office visit, the patient's comfort and adherence to the postoperative regimen is discussed. The extremity edema, circulation, sensation and motor function are assessed. The splint is removed, but the arm is supported. The superficial dressing is removed. The viability of the flap is assessed. The wound is checked for any sign of infection. The non-stick dressing covering the skin graft is very carefully separated from the graft while protecting the graft with cotton swabs. A new non-stick dressing is applied to the flap. A new dressing is applied to the arm. A new splint is applied (separately reportable.) The donor site is evaluated and redressed. Pain is assessed and adjustments to medications are made as needed. The patient care plan is reviewed with the patient and family. Communication with the referring physician is completed. The medical record is completed.

At subsequent postoperative office visits, the patient's comfort and adherence to the postoperative regimen is discussed. The extremity edema, circulation, sensation and motor function are assessed. The splint is removed but the arm is supported. The superficial dressing is removed. The viability of the flap is assessed. The wound is checked for any sign of infection. The non-stick dressing covering the skin graft is very carefully separated from the graft while protecting the graft with cotton swabs. The stitches are removed, as appropriate. The arm is redressed as appropriate. The donor site dressing is removed. The donor site is assessed and redressed as appropriate. The patient and family are instructed in dressing changes. Occupational therapy is ordered to address elbow range of motion while protecting the flap. The progress in occupational therapy is assessed. Changes to the OT orders are written (full range of elbow motion, edema control.). The splint is adjusted or replaced as needed. (It will be worn between exercise periods.) Pain is assessed and adjustments to medications are made as needed. Orders are written for dressing supplies. The patient care plan is reviewed with the patient and family. Communication with the referring physician is completed. The medical record is completed.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Background**

Code 15734 was identified through a screen for services with Medicare utilization greater than 10,000 that include a 99214 in the global period. Code 15736 was added as a family code.

**Survey Process**

The previous survey in 1995 was conducted only by ASPS. For this current survey, both ASPS (plastic surgery) and ASSH (hand/upper extremity surgery) participated. A survey request was sent to a random selection of 1400 surgeons from the ASPS (reconstructive plastic surgeons) and ASSH (hand surgeons) membership database.

**Recommendation**

**We recommend maintaining the current work RVU of 17.04 for code 15736.** The intraoperative time has not changed and although the hospital visits have decreased, the office visits have increased in both number and level (ie, hospital work has been moved to the office setting). The total time and IWP/UT between the 1995 survey and the current survey are essentially the same, as further support to maintain the current value.

**Pre-time Package 4**

We recommend pre-time package 4 (*Difficult Patient/Difficult Procedure*). **Recommended times for the preservice categories are 40/12/20.** An additional 9 minutes has been added for positioning (Assist in transfer of patient from gurney to operating table. Monitor and/or assist with patient positioning; padding of bony prominences; and application of thermal regulation drapes. Assess position of extremities and head; adjust as needed. Place patient's arm on hand surgery table. Apply a sterile tourniquet to the proximal arm. Elevate arm and exsanguinate. Inflate pneumatic tourniquet.) A total positioning time of 12 minutes is consistent with many other recently reviewed upper extremity procedures, including: 23430, 24071, 24077, 24079, 24150, 24152, 24160, 24164, 24363, 24370, 24371, 25071, 25073, 25076, 25077, 25078, 25170, 26111, 26113, 26116, 26117, and 26118.

**Post-time Package 9b**

We recommend post-time package 9b (*General Anesthesia or Complex Regional Block/Complex Procedure*).

### Key Reference Service Comparison

KRS code 24160 has less intraoperative time, more hospital work, and less office work. Although the total time for 24160 is similar to 15736, the value for 24160 is greater than the recommendation for 15736 because the intraoperative intensity is greater.

KRS code 15731 is a smaller flap and has less intraoperative time than 15736. Patients undergoing 15731 will almost always go home the same day, whereas the patients undergoing 15736 will almost always stay overnight or be admitted for several days. This increases the post-operative work on the day of the procedure and the subsequent day for 15736 when compared with 15731. Given the CMS policy regarding "outpatient" coding, this nuance is lost because both codes will have 0.5 x 99238 in a data table even though the post-operative hospital work is greater for 15736. The recommended work RVU of 17.04 takes into account the difference in intraoperative time and difference in postoperative facility work.

### MPC Comparison

Survey code 15736 includes more intraoperative time than both MPC codes and post-operative work varies. The recommended work RVU of 17.04 correctly places 15736 between the MPC codes.

Year	CPT	Long Descriptor	RVW	IWPUT	Total	PRE	INTRA	POST	32	31	38	14	13	12

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 15736

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty plastic surgery                      How often? Sometimes

Specialty hand surgery                      How often? Rarely

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. national utilization not available

Specialty	Frequency	Percentage	%
Specialty	Frequency	Percentage	%
Specialty	Frequency	Percentage	%

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,402

If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC database

Specialty plastic surgery	Frequency 900	Percentage 64.19 %
Specialty hand surgery	Frequency 150	Percentage 10.69 %
Specialty	Frequency 0	Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

		Presented Recommended RVU: <b>21.58</b>
Global Period: 090		RUC Recommended RVU: <b>19.04</b>
CPT Descriptor: Muscle, myocutaneous, or fasciocutaneous flap; lower extremity		

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A patient presents with a large defect of the mid portion of the lower leg with exposed bone that is too large to close with a complex repair or adjacent tissue transfer. A pedicled muscle flap (eg, medial soleus) is elevated and transposed to provide coverage of the defect.

Percentage of Survey Respondents who found Vignette to be Typical: 95%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 100% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 6% , Overnight stay-more than 24 hours 94%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 39%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: Select and order the appropriate antibiotic(s) and confirm timing and administration. Assure appropriate selection, timing, and administration of deep vein thrombosis (DVT) prophylaxis. Write orders for preoperative medications including beta blockers if indicated. Review results of admission testing and imaging. Meet with patient and family to review planned procedure and postoperative management. Mark site and side of proposed skin incision and confirm with patient. Review and obtain informed consent with patient, including witness. Review length and type of anesthesia with anesthesiologist. Verify that all required instruments and supplies are available. Assist in transfer of patient from gurney to operating table. Monitor and/or assist with patient positioning; padding of bony prominences; and application of thermal regulation drapes. Assess position of extremities and head; adjust as needed. Indicate areas of skin to be prepared. Prep and drape leg. Scrub and gown. Apply a sterile tourniquet on thigh. Mark surgical incisions on the leg. Perform surgical time out with operating surgical team. Elevate leg and exsanguinate. Inflate pneumatic tourniquet.

Description of Intra-Service Work: The traumatic defect in the mid-tibial region of the leg is irrigated and thoroughly debrided. An incision is made from the wound extended proximally and distally to allow harvesting of the medial soleus muscle as a flap. The plane between the superficial surface of the soleus muscle and the deep surface of the medial gastrocnemius muscle is identified and dissected. This dissection is carried to the midline raphe between the medial and lateral portions of the muscle, frequently using the lesser saphenous vein as a landmark to establish its location. This dissection is then performed proximally to the bone origin and distal to the Achilles tendon. The anterior border of the muscle is divided off the tibia and the dissection is carried proximally to free both the bony and fibrous origins of the soleus muscle, using caution to prevent damage to the popliteal vessels and tibial nerve, as well as the vascular pedicle of the muscle itself. The deep surface of the muscle is then dissected off of the posterior intermuscular septum using caution to avoid damage to the peroneal and posterior tibial vessels as well as the tibial nerve. The insertion of the muscle at the

Achilles tendon is carefully divided in order to preserve the gastrocnemius insertion into the Achilles tendon. The dissection continues up the midline of the bipartite muscle. The tourniquet is released and the viability of the flap is assessed. The flap is observed for any sign of congestion. Drains are placed and sutured in position. The muscle is sutured in place to provide coverage for the bone. If flap congestion is noted sutures are removed/repositioned and the flap orientation is adjusted as needed. The donor site fascia is sutured and the skin closed in layers. [Flap coverage is completed with an appropriate skin graft that is separately reported.]

#### Description of Post-Service Work:

Through discharge from recovery: Apply sterile dressings. Monitor patient during reversal of anesthesia. Assist in transfer of patient from operating table to gurney. Monitor transport of patient from the OR to the recovery room. Discuss postoperative recovery care with anesthesia and nursing staff. Instruct nursing staff in care of drains, tubes, and other devices. Review postoperative laboratory results. Discuss procedure and outcome with family in waiting area. Write brief operative note. Write postoperative note in recovery room. Dictate operative report and copy referring physician(s). Call referring physician(s). Discharge patient from recovery room to surgical ward. Write patient-care orders and discuss floor care with nursing staff. Patient is seen again in the evening after surgery and flap viability is confirmed. Pain control reviewed.

Inpatient E/M visits: Review of interval chart notes. Talk with patient and family. Take down any necessary dressings. Evaluate flap for viability and wound for infection. Evaluate splint for pressure points. Assess drain output. Redress wound. Evaluate donor site. Evaluate neurovascular status of distal extremity. Assess pain score and order medications, as required. Continue prophylaxis for DVT. Assess need for beta blockers, order as required. Assess need for antibiotics, order as required. Write orders for patient activity. Chart patient progress notes. Answer patient and family questions. Answer nursing and/or other staff questions.

Discharge management: Review interval chart notes. Talk with patient and family. Take down dressings. Evaluate flaps for viability and wound for infection. Assess drain output. Redress wound. Assess extremity for edema, circulation, sensation and motor function. Assess need for beta blockers, order as required. Assess need for antibiotics, order as required. Discuss home restrictions (ie, diet, activity, bathing) and care of drain with patient and family members. Medications are reconciled and orders for discharge medications are written. Complete all appropriate medical records, including day of discharge progress notes, discharge summary, discharge instructions, and insurance forms.

Office visits: At first post-op visit typically within one week of surgery date, talk with patient and family. Evaluate general recovery and flap specific concerns. Assess pain score and order medications. Review pertinent pathology and/or cultures results. Take down dressings including splint. Evaluate flaps/skin graft for viability and wound for infection. Assess drain output and remove if appropriate. Evaluate skin graft donor site if present and replace dressing. Redress wounds/incisions. Assess pain score and order medications as required. Discuss changes to activity level. Evaluate lower extremity muscular function and neurovascular status. Evaluate edema/swelling of lower extremity. Review with patient and family all wound care orders and demonstrate appropriate care for incisions/skin graft. Communicate with both PCP and other involved physicians. Answer patient and family questions and reinforce instructions on wound care, activity, and bathing. Fill out FMLA/disability paperwork. Enter progress notes into medical record. Discuss progress with PCP/referring physicians.

At subsequent office visits, continue to evaluate patient recovery for both general and reconstruction specific concerns. Continue to monitor and manage wounds/incisions. Evaluate and remove drains (typically 2-4 drains overall) as appropriate. Remove sutures as indicated. Assess extremity for edema, circulation, sensation and motor function. Increase activity as tolerated and discuss rehabilitation needs with patient and family. Teach any new wound care instructions or changes in medications. Communicate with physical therapist on rehabilitation goals/next steps. Coordinate care with PCP and other involved physicians. Medical record is completed.

Ref Code****2<sup>nd</sup> Key  
Ref Code****Time Segment (Mean)**

Overall intensity/complexity	1.20	0.78
------------------------------	------	------

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Background**

Code 15734 was identified through a screen for services with Medicare utilization greater than 10,000 that include a 99214 in the global period. Code 15738 was added as a family code.

**Compelling Evidence**

*Flawed methodology –underestimation of work because previous survey did not require level of hospital or office visits.* Code 15738 was identified by CMS as undervalued during the first five-year review in 1995. The survey instrument in 1995 requested total hospital time and number of visits, but not level of visits (ie, there was no consideration given to level of post-operative work, that could affect valuation of work). When level of visits was necessary for the first five-year review of practice expense, a CMS contractor transformed the postoperative time into visit levels using an algorithm based on intra-service time. This resulted in all low level hospital and office visits being assigned to code 15738. The current survey indicates that the hospital and office visit work was underestimated and that increases in the value for E/M codes over the years was not correctly incorporated in the global code value for 15738. **We believe that this underestimation of postoperative visit work meets compelling evidence that 15738 may not be correctly valued.**

**Survey Process**

A survey request was sent to a random selection of 800 surgeons from the ASPS (reconstructive plastic surgeons) membership database.

**Recommendation**

**We recommend the survey median work RVU of 21.58 for code 15738.** This work RVU which is slightly greater than the current value accounts increased postoperative work changes when compared to previous data.

### Pre-time Package 4

We recommend pre-time package 4 (*Difficult Patient/Difficult Procedure*). **Recommended times for the preservice categories are 40/15/20.** An additional 12 minutes has been added for positioning for a total of 15 minutes positioning time. The typical patient undergoing a medial soleus muscle flap can be positioned with the leg extended lateral or positioned prone, depending on the area of defect to be covered (ie, the medial soleus muscle is on the posterior leg). Repositioning may be necessary as the procedure progresses. In addition, these patients will require a significant amount of effort to transfer from the hospital bed to the OR bed because there is commonly a vacuum assisted dressing in place that will need to be taken down or, for patients with fractures, there may be external fixation that complicates positioning.

### Post-time Package 9b

We recommend post-time package 9b (*General Anesthesia or Complex Regional Block/Complex Procedure*), with a reduction of 3 minutes to be consistent with the survey median.

### Key Reference Service Comparison

KRS codes 27364 and 22905 represent significant intraoperative work and similar postoperative management. The recommended work RVU of 21.58 for code 15738 is supported by these codes.

CPT	Long Descriptor	RVW	IWPUT	Total	PRE	INTRA	POST	32	31	38	14	13	12
<b>15738</b>	Muscle flap, lower extremity	<b>21.58</b>	0.064	516	70	150	30	2	2	1		4	1
<b>22905</b>	Radical resection of tumor (eg, sarcoma), soft tissue of abdominal wall; 5 cm or greater	<b>21.58</b>	0.071	550	80	150	30	1	2	1	1	2	1
<b>27364</b>	Radical resection of tumor (eg, sarcoma), soft tissue of thigh or knee area; 5 cm or greater	<b>24.49</b>	0.078	463	63	180	30	2	2	1	1	2	1

### MPC Comparison

Survey code 15738 includes more postoperative hospital and office work than MPC code 55866 and significantly less work than MPC code 33533.

CPT	Long Descriptor	RVW	IWPUT	Total	PRE	INTRA	POST	91	33	32	31	38	14	13	12
<b>55866</b>	Laparoscopy, surgical prostatectomy, retropubic radical, including nerve sparing, includes robotic assistance, when performed	<b>21.36</b>	0.074	442	68	180	30			1		1	1	2	
<b>15738</b>	Muscle flap, lower extremity	<b>21.58</b>	0.064	516	70	150	30			2	2	1		4	1
<b>33533</b>	Coronary artery bypass, using arterial graft(s); single arterial graft	<b>33.75</b>	0.096	682	95	158	40	1	3	1	1	1	1		1

### Other Comparison Codes

The table below presents RUC reviewed 90-day global inpatient procedures with work RVUs just above and below the recommended value for 15738. For some codes, the intraoperative work is greater and the postoperative work is less than 15738. For other codes, the intraoperative work is less and the postoperative work is greater than 15738. When considering total work and magnitude estimation, these codes support a work RVU of 21.58 for 15738.

CPT	Long Descriptor	RVW	IWPUT	Total	PRE	INTRA	POST	33	32	31	38	14	13	12

## SERVICES REPORTED WITH MULTIPLE CPT CODES

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

- Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

**FREQUENCY INFORMATION**

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 15738

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty plastic surgery                      How often? Sometimes

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. national utilization not available

**Code(s): 15732,15734,15736,15738**

**Attestation Statement**

This form needs to be completed by any **RUC Advisor** whose specialty society is developing a recommendation to be reviewed by the RUC.

As a RUC Advisor, I attest that the integrity of the RUC survey, summary of recommendation forms and practice expense recommendations are based on accurate and complete data to the best of my knowledge. As a RUC advisor, I acknowledge that violations would be addressed by the executive committee (i.e., RUC Chair , AMA Representative and Alternate AMA Representative.)

**AMA/Specialty Society Update Process**  
**Practice Expense Summary of Recommendation**  
**Facility Direct Inputs**

<b>15734</b>	Muscle, myocutaneous, or fasciocutaneous flap; trunk
--------------	--

Global Period: 090      Meeting Date: April 2016

**1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:** The ACS and ASPS Advisors reviewed the current PE details for 15734. The societies agree that code 15734 should not be performed in the office setting and are recommending no practice expense inputs for the office setting.

**2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison. You must provide an explanation for the selection of reference codes. Reference Code Rationale:** N/A

**3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:**

Post-operative office visit time has been adjusted to match the current survey.

**4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:**

Supplies

The current practice expense details related to the postoperative office visits do not include the necessary supplies for caring for a drain and two wounds on the trunk (flap and donor site). The necessary items have been added to the spreadsheet.

Supply	Qty	
pack, post-op incision care (suture)	2	typically more than one drain and typically removed at different visits – and different from the visit where staples/sutures removed from wounds
pack, post-op incision care (suture & staple)	1	remove staples and sutures, flap and donor wounds
silver nitrate applicator	1	first visit, flap and donor wounds
gauze, sterile 4in x 4in (10 pack uou)	2	cleaning related to drain removal and flap and donor wounds
dressing, 3in x 4in (Telfa, Release)	4	dressing, flap and donor wounds
dressing, 5in x 9in (ABD-Combine)	2	to cover dressing, flap and donor wounds

Equipment

The surgical light has been changed to an exam light which is typical in a surgeon's exam room.

**5. Please describe in detail the clinical activities of your staff:**

Pre-Service Clinical Labor Activities:

Clinical staff will coordinate diagnostic and referral forms, pre-surgery services, and scheduling space and equipment in the facility. In addition, clinical staff will communicate with the patient's family/caregiver regarding the procedure, after care, etc.

Intra-Service Clinical Labor Activities:

Staff will assist with coordination of care post-discharge, communicating with the patient's family/caregiver regarding questions about home care and follow-up.

Post-Service Clinical Labor Activities:

Clinical staff will assist at each office visit.

## AMA/Specialty Society Update Process Practice Expense Summary of Recommendation Facility Direct Inputs

<b>15736</b>	Muscle, myocutaneous, or fasciocutaneous flap; upper extremity
--------------	--

Global Period: 090      Meeting Date: April 2016

**1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:** The ASSH and ASPS Advisors reviewed the current PE details for 15736. The societies agree that code 15736 should not be performed in the office setting and are recommending no practice expense inputs for the office setting.

**2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison. You must provide an explanation for the selection of reference codes. Reference Code Rationale:** N/A

**3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:**

Post-operative office visit time has been adjusted to match the current survey.

**4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:**

### Supplies

The current practice expense details related to the postoperative office visits do not include the necessary supplies for caring for a drain(s) and two wounds (flap and donor site). The necessary items have been added to the spreadsheet. Below is a list of items divided into each visit. Please note that activities at each visit may change based on wound healing. For example, sutures may not be removed until a later visit, depending on skin tension.

	Supply	QTY	
POV #1	kit, suture removal	1	remove drain
	bandage, Kerlix, sterile 4.5in	1	Flap
	gloves, sterile	1	Flap & donor site
	dressing, 5in x 9in (Xeroform)	2	Flap & donor site
	gauze, sterile 4in x 4in	6	Flap
	tape, surgical paper 1in (Micropore)	12"	Flap
	tape, surgical paper 1in (Micropore)	36"	Donor site
	gauze, sterile 4in x 4in	6	Donor site
POV# 2	gloves, sterile	1	Flap & donor site
	applicator, cotton-tipped, sterile, 6in	6	Flap
	sodium chloride 0.9% inj (250-1000ml uou)	1	Flap
	underpad 2ft x 3ft (Chux)	1	flap

	Supply	QTY	
	dressing, 3in x 4in (Telfa, Release)	1	Flap
	bandage, Kerlix, sterile 4.5in	1	Flap
	dressing, 5in x 9in (Xeroform)	2	Flap & donor site
	bandage, elastic wrap 3in (Ace)	2	Flap
	gauze, sterile 4in x 4in	6	Flap & donor site
	tape, surgical paper 1in (Micropore)	12"	Flap
	tape, surgical paper 1in (Micropore)	36"	Donor site
POV# 3	gloves, sterile	1	Flap & donor site
	kit, suture removal	1	remove sutures
	applicator, cotton-tipped, sterile, 6in	6	Flap
	sodium chloride 0.9% inj (250-1000ml uou)	1	Flap
	underpad 2ft x 3ft (Chux)	1	flap
	dressing, 3in x 4in (Telfa, Release)	1	Flap
	bandage, Kerlix, sterile 4.5in	1	Flap
	bandage, elastic wrap 3in (Ace)	2	Flap
	gauze, sterile 4in x 4in	6	Flap & donor site
	tape, surgical paper 1in (Micropore)	12"	Flap
	tape, surgical paper 1in (Micropore)	36"	Donor site
POV# 4	gauze, sterile 4in x 4in	6	Flap & donor site
	tape, surgical paper 1in (Micropore)	12"	Flap
	tape, surgical paper 1in (Micropore)	36"	Donor site
	bandage, Kerlix, sterile 4.5in	1	Flap
	bandage, elastic wrap 3in (Ace)	2	Flap
POV #5+	no supplies		

### Equipment

The surgical light has been changed to an exam light which is typical in a surgeon's exam room.

### **5. Please describe in detail the clinical activities of your staff:**

#### Pre-Service Clinical Labor Activities:

Clinical staff will coordinate diagnostic and referral forms, pre-surgery services, and scheduling space and equipment in the facility. In addition, clinical staff will communicate with the patient's family/caregiver regarding the procedure, after care, etc.

#### Intra-Service Clinical Labor Activities:

Staff will assist with coordination of care post-discharge, communicating with the patient's family/caregiver regarding questions about home care and follow-up.

#### Post-Service Clinical Labor Activities:

**CPT Code: 15736**  
**Specialty Society(s): ASSH, ASPS**

Clinical staff will assist at each office visit.

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
*\*Site of Service Anomaly - 2015 / High Level E/M in Global Period\**

April 2016

**Mastectomy**

In October 2015, CPT code 19303 was identified by a screen in which the Medicare data from 2011-2013 indicated that it was performed less than 50% of the time in the inpatient setting, but included inpatient hospital Evaluation and Management services within the global period. This service was also identified under the High Level E/M screen for services with Medicare utilization greater than 10,000 that has a 99214 included in the global period.

**19303 Mastectomy, simple, complete**

The RUC reviewed the survey results from 148 general and breast surgeons and recommend the following physician time components: pre-service time of 58 minutes, intra-service time of 90 minutes and immediate post-service time of 30 minutes. The RUC agreed with the specialties and a majority of the survey respondents (87%) who indicated that the typical mastectomy patient will stay overnight or be admitted as inpatients. The RUC also agreed that the typical patient will require a E/M visit later the same day, however, because CMS does not allow reporting inpatient E/M codes for procedures that will have a facility status of outpatient, 10 minutes was added to the survey immediate post-time to reflect face to face time for a visit later on the same day, per CMS policy. The RUC also recommends the following post-operative visits in the surgical global package: one-half discharge management service (99238) (per CMS policy for codes with a facility status of outpatient), three office visits (2 x 99213 and 1 x 99214). The specialties explained that the 99214 office visit is appropriate because this procedure requires post-discharge management of a large, complex wound, including drains. At the second visit after discharge, the surgeon will take down dressings; evaluate the wound for infection; remove the drain; redress the wound; assess the extremity for edema, circulation, sensation and motor function; assess the pain score and order medication, as necessary; review pathology results and marker studies, and possible genetic analysis with the patient, family, referring physician(s), and appropriate consultants; discuss the need for postoperative adjuvant chemotherapy, post mastectomy radiation and/or hormonal therapy based on the pathology findings; discuss case with oncologist, and radiation oncologist if indicated, and prepare documents for transmission to their offices; answer patient and family questions and reinforce instructions on wound care, activity, and bathing; enter progress notes into medical record; and discuss progress with PCP. This post-surgical assessment, planning and discussion are time-intensive, with the typical visit lasting at least 30 minutes. The RUC agreed that this work is appropriately represented by 99214 for the typical patient.

The RUC reviewed the survey respondents' estimated physician work values and agreed with the specialty societies that the median work RVU of 15.00 accurately accounts for the physician work required for CPT code 19303. To justify a work RVU of 15.00, the RUC compared the surveyed code to key reference service 19302 *Mastectomy, partial (eg, lumpectomy, tylectomy, quadrantectomy, segmentectomy); with axillary lymphadenectomy* (work RVU= 13.99, intra time= 100 minutes) and agreed that the surveyed code is a more intense and complex surgical

procedure. The specialties noted that although the CPT descriptor for 19303 states "simple", the procedure is a "total" mastectomy. Compared to lumpectomy with axillary dissection (CPT code 19302), the procedure is in a completely different tissue plane with different risks - mostly involving control of tributary blood vessels along the sternal border and the lateral thoracic artery and vein in the axilla, which can result in substantial bleeding. An additional difference between these two procedures is that patients undergoing code 19302 will almost always go home the same day, whereas the patients undergoing code 19303 will almost always stay overnight or be admitted for several days. This difference reflects increased post-operative work on the day of the procedure.

Finally, the RUC reviewed several other surgical 90-day global codes with 90 minutes of intra-service time, performed as outpatient procedures, and agreed that a work RVU of 15.00 is appropriate relative to these comparable services. Specifically, CPT codes 29915 *Arthroscopy, hip, surgical; with acetabuloplasty (ie, treatment of pincer lesion)* (work RVU= 15.00) and 58571 *Laparoscopy, surgical, with total hysterectomy, for uterus 250 g or less; with removal of tube(s) and/or ovary(s)* (work RVU= 15.00) offer appropriate cross-references to the recommended value.

**The RUC recommends a work RVU of 15.00 for CPT code 19303.**

#### **Practice Expense:**

The RUC approved the direct practice expense inputs as submitted by the specialty without modification and reviewed and approved by the PE Subcommittee.

#### **Work Neutrality**

The RUC's recommendation for this code will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

Global Period: 090		RUC Recommended RVU: <b>15.00</b>
CPT Descriptor: Mastectomy, simple, complete		

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 68-year-old female undergoes stereotactic needle biopsy of an area of suspicious microcalcifications in the left breast showing ductal carcinoma in situ. Review of mammogram shows the area biopsied is part of an extensive area of suspicious calcifications extending over a 7-cm area along a ductal distribution. Following review of surgical alternatives with patient, and considering especially patient's breast size relative to the extent of calcifications, a mastectomy is planned.

Percentage of Survey Respondents who found Vignette to be Typical: 79%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 95% , In the ASC 5%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 13% , Overnight stay-less than 24 hours 75% , Overnight stay-more than 24 hours 12%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 59%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: Select and order the appropriate antibiotic(s) and confirm timing and administration. Assure appropriate selection, timing, and administration of deep vein thrombosis (DVT) prophylaxis. Write orders for preoperative medications including beta blockers if indicated. Review results of preadmission testing (laboratory, ECG, chest X ray). Review pre-admission work-up, with particular attention to pathology and imaging information and reports. Re-examine patient to make sure that physical findings have not changed and update H&P. Meet with patient and family to review planned procedure and postoperative management. Mark site and side of proposed skin incision and confirm with patient. Review and obtain informed consent with patient, including witness. Review length and type of anesthesia with anesthesiologist. Verify that all required instruments and supplies are available. Assist in transfer of patient from gurney to operating table. Monitor and/or assist with positioning of patient. Assist anesthesia team with line placement and induction of anesthesia and intubation. Insert or supervise insertion of urinary catheter. Indicate areas of skin to be prepared and draped. Scrub and gown. Perform surgical time out with operating surgical team.

Description of Intra-Service Work: Make an incision encompassing the nipple areolar complex and, if possible, the previous biopsy site. This may be performed based on previous markings to achieve optimal cosmetic or reconstructive results. Sharply divide the skin and subcutaneous tissues. Secure hemostasis with fine sutures, ligatures, and/or electrocautery. Use sharp dissection to create skin flaps. Throughout this dissection, pay close attention to thickness of the flaps as well as viability of the flaps. Carry out dissection to the level of the superficial mammary fascia to the limits of the clavicle, lateral border of the sternum, insertion of the rectus fascia, and latissimus dorsi tendon. Dissect the breast from underlying pectoralis major muscle fibers including the deep fascia in continuity with the specimen. During this process,

pay close attention to inspection of the deep margin, as any suspicious findings may require resection of superficial muscle fibers to achieve a definitive final pathologic margin. Incise the clavipectoral fascia exposing the axilla, which is examined for suspicious adenopathy. Pay meticulous attention to identifying and preserving the thoracodorsal and long thoracic nerves, as injury to these can result in permanent debilitating deformity. Dissect the breast from its remaining attachments along the serratus anterior fascia. Carefully mark the specimen using sutures and/or other labeling techniques to definitively orient the specimen for the pathologist. Examine the operative site for meticulous hemostasis and irrigate copiously with antibiotic solution. Insert a drain through a separate stab incision in the inferior skin flap and secure to the skin. Conduct an instrument, needle, sponge, and lap-pad count. Place subcutaneous sutures where appropriate to eliminate dead space. Reinspect flaps for viability and trim any areas as necessary. Re-approximate skin edges using interrupted and running subcuticular suture.

#### Description of Post-Service Work:

Through discharge from recovery: Apply sterile dressings. Monitor patient during reversal of anesthesia, protecting the wound so that wound disruption does not occur with an unrestrained cough. Assist in transfer of patient from operating table to gurney. Monitor transport of patient from the OR to the recovery room. Discuss postoperative recovery care with anesthesia and nursing staff. Instruct nursing staff in care of drains, tubes, and other devices. Discuss procedure and outcome with family in waiting area, including results of any frozen sections, if available. Write brief operative note. Write postoperative note in recovery room. Dictate operative report and copy referring physician(s). Call referring physician(s). Discharge patient from recovery room. Write patient-care orders and discuss floor care with nursing staff.

Later same day E/M: Review interval chart notes. Talk with patient and family. Evaluate flaps for viability and check for evidence of developing hematoma. Assess drain output. Assess extremity for edema, circulation, sensation and motor function. Assess pain score. Continue prophylaxis for DVT. Assess need for beta blockers, order as required. Assess need for antibiotics, order as required. Write orders for patient activity. Chart patient progress notes. Answer patient and family questions. Answer nursing and/or other staff questions.

Next day discharge management: Review interval chart notes. Talk with patient and family. Take down dressings. Evaluate flaps for viability and possible developing hematoma. Assess drain output. Redress wound. Assess extremity for edema, circulation, sensation and motor function. Assess pain score. Discuss home restrictions (ie, diet, activity, bathing) with patient and family members. Review drain care and management. Medications are reconciled and orders for discharge medications are written. Complete all appropriate medical records, including day of discharge progress notes, discharge summary, discharge instructions, and insurance forms.

Review interval chart notes. Take down dressings. Evaluate flaps for viability and wound for infection and developing fluid collections. Assess drain output. Remove drain when appropriate. Remove sutures. Aspirate seroma(s), as required. Redress wound. Assess extremity for edema, circulation, sensation and motor function. Order physical therapy, as appropriate. Assess physical therapy progress. Assess pain score and order medication, as necessary. When available, review pathology findings and marker studies, and possible genetic analysis with the patient, family, referring physician(s), and appropriate consultants. Discuss need for postoperative adjuvant chemotherapy, post mastectomy radiation and/or hormonal therapy based on the pathology findings. Discuss case with oncologist, and radiation oncologist if indicated, and prepare documents for transmission to their offices. Discuss progress with medical and radiation oncologists if adjuvant therapy is indicated. Answer patient and family questions and reinforce instructions on wound care, activity, bathing and drain care. Enter progress notes into medical record. Discuss progress with PCP.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Background**

In October 2015, code 19303 was identified as performed less than 50% of the time in the inpatient setting (2011-2013), yet include inpatient hospital E/M services within the global period. This service was also identified under the High Level E/M screen for services with Medicare utilization greater than 10,000 that has a 99214 included in the global period.

**Survey Sample**

A survey request was sent to a random selection of 971 surgeons from the ASBS membership database and the ACS membership database of general surgeons.

**Work RVU Recommendation**

We recommend the survey median work RVU of 15.00 for code. This is slightly less than the current work RVU.

**Pre-time Package 4**

We recommend pre-time package 4 (*Difficult Patient/Difficult Procedure*). Recommended times for the preservice categories are 40/3/15. The scrub, dress, wait time has been reduced by 5 minutes to be consistent with the survey median.

**Immediate Postoperative Time and Post-time Package 9b**

The median survey immediate post-operative time was 20 minutes. A majority of respondents (87%) indicated that the typical patient will stay overnight or be admitted. The respondents also indicated that the typical patient will require a E/M visit later the same day. Because CMS does not allow reporting inpatient E/M codes for procedures that will have a facility status of outpatient, we have added 10 minutes (total = 30

minutes) to the survey immediate post-time to reflect time for a visit later on the same day. We note that 30 minutes is less than the time for the recommended post-time package.

### **Post-operative Office Visits**

First visit (99213): (Because the patient is typically discharged the day after surgery, the first visit will occur one to two days after discharge.) Take down dressings. Evaluate flaps for viability and wound for infection and developing fluid collections. Assess drain output. Redress wound. Assess extremity for edema, circulation, sensation and motor function. Assess pain score and order medication, as necessary. Answer patient and family questions and reinforce instructions on wound care, activity, bathing and drain care. Enter progress notes into medical record.

Second visit (99214): Take down dressings. Evaluate wound for infection. Remove drain. Redress wound. Assess extremity for edema, circulation, sensation and motor function. Assess pain score and order medication, as necessary. Review pathology findings and marker studies, and possible genetic analysis with the patient, family, referring physician(s), and appropriate consultants. Discuss need for postoperative adjuvant chemotherapy, post mastectomy radiation and/or hormonal therapy based on the pathology findings. Discuss case with oncologist, and radiation oncologist if indicated, and prepare documents for transmission to their offices. Answer patient and family questions and reinforce instructions on wound care, activity, and bathing. Enter progress notes into medical record. Discuss progress with PCP.

Third visit (99213): Take down dressings. Evaluate wound for infection. Remove any remaining sutures. Redress wound. Assess extremity for edema, circulation, sensation and motor function. Order physical therapy, as appropriate. Assess pain score and order medication, as necessary. Discuss any additional required postoperative adjuvant therapy with patient and answer patient questions. Review again with patient and family the alternatives for post-mastectomy reconstructive procedures and possible plastic surgery consultation or follow-up as discussed preoperatively. Enter progress notes into medical record. Discuss progress with medical and radiation oncologists if adjuvant therapy is indicated.

### **Key Reference Comparison**

Although the CPT descriptor states "simple", 19303 is a "total" mastectomy. Simple was used in comparison to "radical" mastectomy and was initially considered a palliative "amputation" of the breast, with no attention to oncologic principles, possible reconstruction, etc. Compared to lumpectomy with axillary dissection (19302), the procedure is in a completely different tissue plane with different risks - mostly involving control of tributary blood vessels along the sternal border (these come from the internal mammary artery) and the lateral thoracic artery and vein in the axilla (which arise from the axillary vessels.) These are the vessels that can result in substantial bleeding post mastectomy and are almost never an issue in lumpectomy. These differences make 19303 more complex and intense than 19302. In addition, during the axillary dissection for a lumpectomy, the axillary vessels are avoided, increasing the time of lower intensity work for 19302 (ie, additional 10 minutes intra-time). For a mastectomy, the axillary vessels must be individually ligated, increasing the intensity.

Another significant difference between 19302 and 19303 is that patients undergoing 19302 will almost always go home the same day, whereas the patients undergoing 19303 will almost always stay overnight or be admitted for several days. This increases the post-operative work on the day of the procedure and the subsequent day for 19303 when compared with 19302. Given the CMS policy regarding "outpatient" coding, this nuance is lost because both codes will have 0.5 x 99238 in a data table. However, there is no question that 19303 is more total work than 19302.

**Other Comparison Codes to Support a work RVU of 15.00**

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.  
☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.  
☒ Multiple codes allow flexibility to describe exactly what components the procedure included.  
☐ Multiple codes are used to maintain consistency with similar codes.  
☐ Historical precedents.  
☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. 38525 Biopsy or excision of lymph node(s); open, deep axillary node(s)

**FREQUENCY INFORMATION**

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 19303

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
 If the recommendation is from multiple specialties, please provide information for each specialty.

Practice Expense Summary of Recommendation  
Facility Direct Inputs**

**\*\*\*\*NOTE – This is a Facility-only code, non-Facility direct inputs do not apply.\*\*\***

<b>19303</b>	Mastectomy, simple, complete
--------------	------------------------------

Global Period: 090 Meeting Date: April 2016

**1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:** The ASBS and ACS RUC Advisors reviewed the current PE details for 19303.

**2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison. You must provide an explanation for the selection of reference codes. Reference Code Rationale:** N/A

**3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:** N/A

**4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:**

Supplies

- Most of the supply items have been deleted as not typical in current practice or the quantity has been reduced.
- We have replaced the staple removal pack (SA052) with a suture removal pack (SA054) as more appropriate. We also indicate 2 packs; one will be used early in the post op period for drain removal and one will be used after 10-14 days for wound suture removal.
- The needle/syringe/alcohol pad quantity has been changed to one each. These items are will be used for seroma care.

Equipment time

Surgical light and exam table have been replaced with exam light and power table as standard equipment in a general surgeon's office exam room.

**5. Please describe in detail the clinical activities of your staff:**

Pre-Service Clinical Labor Activities:

Clinical staff will coordinate diagnostic and referral forms, pre-surgery services, and scheduling space and equipment in the facility. In addition, clinical staff will communicate with the patient regarding the procedure and pre-procedure instructions.

Intra-Service Clinical Labor Activities:

Clinical staff will assist surgeon with discharge coordination, office follow up, and responding to patient/family questions.

Post-Service Clinical Labor Activities:

At each office visit, clinical staff assist surgeon.

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
*\*Harvard Valued – Utilization Over 30,000/High Volume Growth\**

April 2016

**Injection for Knee Arthrography**

In October 2015, AMA staff re-ran the Harvard valued codes with utilization over 30,000 based on 2014 Medicare claims data and this service was identified. CPT code 27370 was also identified as a service on the high volume growth screen with Medicare utilization of 10,000 or more that have increased by at least 100% from 2008 through 2013 and the CMS High Expenditure Codes list in the Final Rule for 2016.

This service was previously reviewed in January 2014, in which the specialty societies noted that, at the February 2014 CPT Editorial Panel meeting, a Code Change Proposal (CCP) was submitted to address the high growth of this code. The Panel approved editorial revisions replacing the term “procedure” for “of contrast.” This revision to the descriptor clarifies that the correct use of 27370 is to describe the injection of contrast into the knee joint space for arthrography only. The specialty societies noted that the high volume growth for this procedure is likely due to its being reported incorrectly as arthrocentesis or aspiration. The correct reporting of those services is CPT code 20610 *Arthrocentesis, aspiration and/or injection, major joint or bursa (eg, shoulder, hip, knee, subacromial bursa); without ultrasound guidance* (work RVU= 0.79).

**27370 Injection of contrast for knee arthrography**

The specialty society indicated that CPT code 27370 was initially scheduled to be surveyed for the October 2016. However, this code was put on the Level of Interest (LOI) for the April 2016 RUC meeting. The specialty society still intends to survey this code for the following meeting in October 2016. **The RUC recommends deferral to October 2016 for CPT code 27370.**

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
27370	Injection of contrast for knee arthrography	000	Defer to October 2016 RUC meeting

April 5, 2016

Peter K. Smith, MD  
Chair  
Relative Value Scale Update Committee  
AMA Plaza  
330 N. Wabash Ave.  
Chicago, IL 60611-5885

**Re: Tab 16, Injection for Knee Arthrography (27370)**

Dear Dr. Smith:

CPT code 27370 (*Injection for Knee Arthrography*) was identified by CMS as potentially misvalued in the 2016 MPFS NPRM. In October of 2015, the ACR shared with AMA staff our expected calendar for review of the codes in the NPRM. The ACR indicated our intention to survey this code in October of 2016. However, the code appeared on the LOI for the April 2016 RUC meeting. The ACR re-iterates our intent to survey for the October 2016 meeting and is not presenting recommendations at the April 2016 RUC meeting.

Sincerely,

Ezequiel Silva III, MD, FACR  
ACR RUC Advisor

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
*\*High Volume Growth\**

April 2016

**Application of Rigid Leg Cast**

In October 2015, AMA Staff assembled a list of all services with total Medicare utilization of 10,000 or more that have increased by at least 100% from 2008 through 2013 and code 29445 was identified. In January 2016 the RAW indicated that the dominant provider has changed, there is high volume growth and it was surveyed more than 10 years ago.

**29445 *Application of rigid total contact leg cast***

The RUC reviewed the survey results from 59 practicing physicians and agreed with the following time components: pre-service time of 23 minutes, intra-service time of 25 minutes and immediate post-service time of 10 minutes.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the current work RVU of 1.78 is appropriate, which is below the survey 25<sup>th</sup> percentile (work RVU= 1.90). The RUC noted an increase in total time to 58 from current 50 minutes due to the appropriate pre-service package being used and the adjustment to include pre-service evaluation time of 13 minutes, pre-service position time of 5 minutes, and pre-service scrub, dress, and wait time of 5 minutes. The RUC discussed the intra-service time for this code to decipher if the physician is performing the application of the cast. It was determined that the cast requires precise application and it is imperative that the physician or podiatrist apply the cast, utilizing clinical staff to assist. The patient is prone with knee flexed at 90 degrees and ankle maintained in neutral position during application. Further, as the cast is applied, shaping is important to achieve total contact. It was noted that this patient population often suffer from diabetic ulcers and severe infections that put them at risk of an amputation. The management of foot ulcers requires offloading the wound. Offloading of the ulcerated area is imperative; requiring bed rest or footwear. Total contact casting for patients who are ambulatory has become the gold standard for off-loading. The RUC compared code 29445 to the primary key reference service 29450 *Application of clubfoot cast with molding or manipulation, long or short leg* (work RVU= 2.08, intra time= 20 minutes) and noted the physician work and time are comparable. **The RUC recommends a work RVU of 1.78 for CPT code 29445.**

**Practice Expense:**

A detailed discussion was convened that CPT code 29445 is a 0-day global code for the application of a rigid leg cast. CPT guidelines and CMS policy indicate that casting and strapping procedures include removal of cast or strapping. Therefore, 22 minutes for the physician and clinical staff to remove the cast on a subsequent date is included in the post-service period of the casting code. The RUC approved the direct practice expense inputs with minor modifications as approved by the PE Subcommittee.

## AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS SUMMARY OF RECOMMENDATION

CPT Code: 29445	Tracking Number	Original Specialty Recommended RVU: <b>1.78</b>
		Presented Recommended RVU: <b>1.78</b>
Global Period: 000		RUC Recommended RVU: <b>1.78</b>
CPT Descriptor: Application of rigid total contact leg cast		

### CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 55-year-old presents with a diabetic neuropathic ulcer on the weight-bearing surface of the foot without deep infection. An anatomically conforming composite short-leg walking cast covering the toes is applied.

Percentage of Survey Respondents who found Vignette to be Typical: 92%

### Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

### Moderate Sedation

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: Review chart with general medical and surgical history update, including current medications and allergies. Perform physical examination, which includes evaluating neurological and vascular status, along with a dermatologic and musculoskeletal examination of the foot, ankle, and lower leg, as well as examination of the ulcer. Conduct proper patient screening to exclude those with deep infection, excessive edema, or excessively fragile skin. Explain procedure to patient and family. Review all risks and complications (eg, joint stiffness, muscle atrophy, skin abrasions, new ulcerations, and malodorous drainage). Review postoperative course of therapy and need for repeated cast changes. Obtain informed consent. Verify all required instruments and supplies are available. Perform time out. Patient is positioned supine with an assistant holding the foot with the ankle in neutral position and the knee flexed at 90 degrees.

Description of Intra-Service Work: In supine position, a sterile foam dressing is applied to the ulcer area and proximally on the calf and secured with tape. A stockinette is placed over the foot, extending to the knee and pulled forward to cover the toes. The stockinette is folded approximately 2 to 4 inches over the dorsum of the foot and the excess is trimmed and secured with plastic tape. A strip of felt is placed along the anterior crest of the tibia with flaps covering the malleoli. Adhesive foam is folded lengthwise to cover the toes completely, with the top and bottom sticking to the stockinette, and the excess from each side trimmed. Next, the patient is repositioned prone with an assistant holding the foot with the knee flexed at 90 degrees and the ankle in neutral position. Cast padding is applied around the leg, overlapping slightly at the shin area, with attention to avoiding crimping materials in toe or heel/ankle areas during application. A four inch casting roll is wetted and wrapped around the foot and leg from distal to proximal, being certain to make all tucks or folds of excess plaster over the padded areas only. Next, a three inch roll is wetted and applied in the same fashion. A posterior splint from 4-inch fiberglass is fabricated without wetting the material, extending from the toes to the most proximal part of casting material. This splint is placed so any excess material hangs over the width of the foot medially to be able to roll this inward to fill any void in the arch area, as necessary. Another posterior splint with 3-inch fiberglass is fashioned without

wetting it and cut it in the appropriate place for the walking heel to show through. Finally, a layer of wet 4-inch roll of fiberglass is applied to finish the cast.

Description of Post-Service Work: Write brief procedure note in patient chart. Assess circulation, sensation, and motor function of the extremity. Discuss home restrictions (ie, activity, bathing) with the patient and family. Provide the patient with an instruction sheet and an emergency removal instruction card that should be carried in case of an emergency. Dictate procedure for medical record, copy PCP and insurance. At a subsequent visit, the cast will be removed and the leg cleaned.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Background**

Code 29445 was identified by the RAW through a screen of services with total Medicare utilization of 10,000 or more that have increased by at least 100% from 2008 through 2013. The specialty societies provided information to the RAW to explain the growth in utilization. Specifically, according to the National Institute of Diabetes and Digestive and Kidney Diseases, an estimated 21 million people in the U.S. have diabetes. Among patients with diabetes, 15% develop a foot ulcer, and 12-24% of individuals with a foot ulcer require amputation. Every year approximately 5% of diabetics develop foot ulcers and 1% require amputation. The management of diabetic foot ulcers requires offloading the wound. Offloading of the ulcerated area is imperative; requiring bed rest or footwear. Total contact casting for patients who are ambulatory has become the gold standard for off-loading. Further, the typical patient (diabetic) and typical diagnosis (chronic ulcer of skin) related to code 29445 has not changed since the code was last reviewed. What has changed is the incidence of the disease and the incidence of ulcers as discussed above. The cast described by 29445 is also used for Charcot fractures which are directly related to diabetes. Therefore, it is not surprising that the Medicare utilization for code 29445 is increasing. This is consistent with the increasing incidence of diabetes and the aging population. The RAW accepted this information, but indicated that code 29445 had not been reviewed in over ten years and the dominant provider had changed. The RAW requested code 29445 be surveyed.

**Survey Sample**

A survey request was sent to a random selection of 1,025 podiatrists and surgeons from the APMA, AAOS, and AOFAS membership database.

**Recommendation**

**We recommend maintaining the work RVU of 1.78 for code 29445.** The work to perform this procedure has not changed since this code was last reviewed in 1994.

### Pre-time Package 1a

We recommend pre-time package 4 (*Straightforward Patient/Straightforward Procedure, No sedation/anesthesia care*), **Recommended times for the preservice categories are 13/5/5.** An additional 4 minutes has been added for positioning (*The patient is initially positioned supine for dressing, padding, and stockinette application, and the repositioned prone for cast application*). The scrub, dress, wait time has been reduced by 1 minute to be consistent with the survey median.

### Post-time Package 7a

We recommend post-time package 7a (*Local Anesthesia/ Straightforward Procedure*), with a reduction of 8 minutes to be consistent with the survey median. This procedure will not involve anesthesia, but a minimum of 10 minutes is necessary for post-service work including: assessing circulation, sensation, and motor function of the extremity, discussing home restrictions (ie, activity, bathing) with the patient and family, dictating the procedure for medical record, and removal of cast at a subsequent visit.

### Key Reference Services (KRS)

Total work for 29445 and 29450 is similar. Code 29450 includes manipulation/stretching of an infant's foot prior to application of a conforming cast, while 29445 includes attention to dressings/padding of active ulcer(s) and pressure points for a walking conforming cast. The work for 29405 does not include this extra work and appropriately has a lower work RVU.

### Other Comparison Codes

The table below provides a list of recently reviewed codes that have similar work RVUs, total-time and intra-time. This list of multi-specialty codes support the recommended work RVU of 1.78 for code 29445.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

- Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

**FREQUENCY INFORMATION**

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 29445

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty podiatry                      How often? Commonly

Specialty orthopaedic surgery                      How often? Sometimes

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. national utilization not available

Specialty	Frequency	Percentage	%

**Practice Expense Summary of Recommendation**  
**Non-Facility and Facility Direct Inputs**

<b>29445</b>	Application of rigid total contact leg cast
--------------	---

Global Period: 000      Meeting Date: April 2016

**1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:**

Code 29445 is a 000 global code and is not typically reported with an E/M service.

The APMA, AAOS, and AOFAS RUC and HCPAC Advisors reviewed the current PE details for 29445. We discussed the fact that even though cast application codes have a 000 global period, the cast removal on a subsequent date is included and not separately reportable. We also discussed the overall PEAC review of casting codes, where considerable time was spent discussing how much time each type of cast would require for removal and that the approved time was placed in the post-service time category for clinical staff. The specialties agree that this methodology should be maintained and that when the PE spreadsheet is updated and activity codes are assigned, that a code be created for "removal of cast".

**2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison. You must provide an explanation for the selection of reference codes. Reference Code Rationale: N/A**

**3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:**

Casting involves both wet and dry dressings/materials. Three additional minutes have been added to "Prepare room, equipment, supplies" to account for setting up for the casting procedure.

**4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:**

			current		rec		
MEDICAL SUPPLIES	CODE	UNIT	NF	FAC	NF	FAC	Compelling Rationale / Discussion
pack, minimum multi-specialty visit	SA048	pack			1	0	On the day of the procedure, the patient will typically remove their pants and require a gown. They will be positioned supine on the table and then repositioned prone during the casting procedure.
drape, non-sterile, sheet 40in x 60in	SB006	item	2	1	1	1	When the cast is removed at a subsequent visit, a sheet will be needed to protect the patient from the dust of sawing off the cast.
gloves, non-sterile	SB022	pair	5	1	2	2	Gloves are included in the multispecialty pack applied to the visit when the cast is placed. When the cast is removed, both the physician and staff will require gloves.
underpad 2ft x 3ft (Chux)	SB044	item	2	0	2	0	Casting is a wet procedure. A Chux will be used under the patient and also on the surface that holds the waterbath and supplies.

5. Please describe in detail the clinical activities of your staff:

**Pre-Service Clinical Labor Activities: - N/A**

**Intra-Service Clinical Labor Activities: - NON-FACILITY ONLY**

**On the day of the cast placement,** staff will greet the patient, provide gowning, ensure appropriate medical records are available; provide pre-service education; prepare room, equipment, supplies; prepare and assist with positioning the patient; assist physician with the casting procedure; monitor the patient while the cast dries; clean the room; and review home care instructions and ability to ambulate.

**Post-Service Clinical Labor Activities – BOTH FACILITY AND NON-FACILITY**

**On the day of the cast application:** Staff will contact the patient to answer any questions about cast care, pain, ambulation, etc. Three minutes for a phone call has been applied.

**NOTE:** Code 29445 is a 0-day global code for application of a rigid leg cast. CPT guidelines and CMS policy indicate that casting and strapping procedures include removal of cast or strapping. Therefore, the physician and clinical staff time to remove the cast on a subsequent date is included in the post-service period of the casting code.

**On a subsequent date, cast removal will be perform:** Staff will assist the physician in removal of the cast at a subsequent visit. The 22 minutes previously approved for staff assistance with cast removal includes the following elements:

- Review charts, greet patient, provide education (3 min)
- Prepare room, equipment, supplies (3 min)
- Assist physician in performing procedure (10 min)
- Clean room/equipment by physician staff (3 min)
- Conduct phone calls/call in prescriptions/ lab slips completed, call lab (3 min)

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
*\*CMS High Expenditure Procedures\**

April 2016

**Strapping Multi-Layer Compression**

In the Final Rule for 2016 CMS re-ran the high expenditure services across specialties with Medicare allowed charges of \$10 million or more. CMS identified the top 20 codes by specialty in terms of allowed charges, excluding 010 and 090-day global services, anesthesia and Evaluation and Management services and services reviewed since CY 2010. CPT code 29580 *Strapping; Unna boot* was identified via this screen and 29581 *Application of multi-layer compression system; leg (below knee), including ankle and foot* was added as part of this family of services.

At the April 2016 RUC meeting, the specialty societies indicated that the vignettes were flawed. The specialty societies will be submitting revised vignettes to the Research Subcommittee for approval. Additionally, the Research Subcommittee will review an instructional note about precision in time by the specialty societies. CMS also indicated that the family should include three codes for the upper arm, CPT codes 29582, 29583, and 29584. However, the RUC found that these codes are performed by different specialties than those involved in this code group. The RUC decided CPT codes 29582, 29583, and 29584 should be placed on the LOI for the October RUC meeting, in addition to CPT codes 29580 and 29581, so that appropriate specialties could opt in to survey them. **The RUC recommends that the specialty societies revise the vignettes for CPT code 29580 and 29581 and resurvey for the October 2016 RUC meeting.**

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
29580	Strapping; Unna boot	000	Resurvey for Oct 2016 RUC meeting
29581 (f)	Application of multi-layer compression system; leg (below knee), including ankle and foot	000	Resurvey for Oct 2016 RUC meeting

April 5, 2016

Peter Smith, MD, FACS  
Chair, AMA/RUC  
American Medical Association  
330 N. Wabash Ave.  
Chicago, IL 60611

**Subject: Tab 18 Strapping/Multi-Layer Compression (29580, 29581)**

Dear Dr. Smith:

The American College of Surgeons (ACS), Society for Vascular Surgery (SVS) and American Podiatric Medical Association (APMA) are writing to request a resurvey of codes 29580 and 29581 in Tab 18, Strapping Multi-Layer Compression.

We used the vignettes in the RUC database for our survey and found that for code 29580 almost 50 percent of the respondents indicated they disagreed with the vignette because it indicated Unna boot was placed for edema instead of stasis ulcer. In fact a good number of respondents did not provide data for this code because they "would never place an Unna boot for edema." We plan to submit revised vignettes to Research Subcommittee that reflect the typical patient undergoing these services.

We also noted that over 90 percent of the respondents for both codes indicated intra-time in increments of 5 minutes. For our resurvey, we plan to use the new survey text that AMA staff is drafting for review by the RUC Time/Intensity Workgroup: *"....The Vice Chair noted that survey respondents often appear to round time estimates to the nearest multiple of 5 minutes. Several Workgroup members concurred with this observation with some noting that, for very long procedures, those respondents appear to round to the closest 15 minutes. The Chair suggested that making the language in the survey instrument even more explicit by finding a more eye-catching manor to ask the respondent to put their time estimates to the nearest minute. It was noted that the RUC regularly looks at differences between service times that are less than 5 minutes, while the survey respondents may not necessarily use that same granularity. The Chair requested for AMA staff to draft potential language for the Workgroup to consider at its next meeting in April 2016."*

We have attached the survey summary data for information. We will resurvey both codes after Research Subcommittee approval of revised vignettes and RUC Time/Intensity Workgroup development of additional survey text to obtain more precise estimates.

We will be available to answer questions at the upcoming meeting.

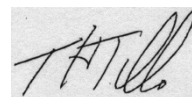

Sincerely,

Charles Mabry, MD, FACS  
ACS RUC Advisor

Mathew Sideman, MD, FACS  
SVS RUC Advisor

Timothy Tillo, DPM  
APMA HCPAC Advisor

**29581 Vignette:** A 50-year-old female returns to the office for treatment of a medial calf ulcer. It measures 3 cm x 3 cm and demonstrates no signs of infection. She has palpable pedal pulses. Pigmented skin changes in the gaiter distribution of both lower extremities are consistent with chronic venous insufficiency. The wound is examined and cleansed, and a multi-layer venous ulcer compression dressing is applied.

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
***Harvard Valued – Utilization Over 30,000***

April 2016

**Resection Inferior Turbinate**

In October 2015, AMA staff re-ran the Harvard valued codes with utilization over 30,000 based on 2014 Medicare claims data. CPT code 30140 was identified and recommended to be surveyed.

**30140 *Submucous resection inferior turbinate, partial or complete, any method***

The RUC reviewed the survey responses from 166 otolaryngologists and determined that the current work RVU of 3.57, below the survey 25<sup>th</sup> percentile work RVU of 3.89, was validated. The RUC recommends 30 minutes of pre-service evaluation time, 3 minutes of pre-service positioning time, 10 minutes of pre-service scrub/dress/wait time, 20 minutes of intra-service time, 15 minutes immediate post-service time, ½ day 99238 discharge day management and two 99213 Evaluation and Management office visits. The RUC noted that the previous physician time is Harvard valued over 25 years ago and should not be used in comparison to the current survey time.

The RUC compared the surveyed code to 67914 *Repair of ectropion; suture* (work RVU= 3.75, intra-service time of 20 minutes) as it has identical intra time and requires similar physician work to perform. The RUC also referenced CPT code 33282 *Implantation of patient-activated cardiac event recorder* (work RVU = 3.50 and 25 minutes intra-service time) to support the recommended work RVU and time for 30140 as it is a relative similar service.

This service is typically performed under general anesthesia in the outpatient hospital setting. Therefore, the RUC indicated that the ½ day discharge day management service is appropriate as the patient will still be discharged. The RUC agreed that two 99213 office visits are necessary in order to perform the following work:

- Visit #1: Examine patient, evaluating the incision site and nasal cavity for crusting, hematoma or synechiae. Clear nasal cavity of crusting. Assess for any complications including scarring or continued congestion. Discuss activity restrictions and maintenance of wound site in post-operative period, including use of nasal saline. Assess the need for topical medications to improve post-operative swelling.
- Visit #2: Examine patient, evaluating the incision site and nasal cavity for crusting or synechiae. Assess scarring or continued congestion. Discuss resumption of usual activity. Assess need for further nasal saline. Assess the need for further topical medication use.

**The RUC recommends a work RVU of 3.57 for CPT code 30140.**

**RUC Database Notation**

The RUC recommends to flag CPT code 30140 as “do not use” for validation of work as this service has a negative IWPUT and should be changed from a 090 day global period to a 000-day global period.

**Global Period**

**The RUC requests that CMS assign a 000-day global period to CPT code 30140 and it be resurveyed for October 2016.**

**Practice Expense**

The standard 090-day direct practice expense inputs were reviewed for 30140 and the equipment minutes for *chair with headrest, exam, reclining, EF008, light, fiberoptic headlight w-source, EQ170 and suction and pressure cabinet, ENT (SMR), EQ234* were revised to account for monitoring the patient following the procedure, and added supply item, *pack, cleaning, surgical instruments SA043* to clean instruments. The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.

30140	Submucous resection inferior turbinate, partial or complete, any method	<del>090</del> <u>000</u>	3.57 (No Change)

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 30140	Tracking Number	Original Specialty Recommended RVU: <b>3.57</b>
		Presented Recommended RVU: <b>3.57</b>
Global Period: 090		RUC Recommended RVU: <b>3.57</b>

CPT Descriptor: Submucous resection inferior turbinate, partial or complete, any method

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 42 year old female presents with right nasal obstruction due to a hypertrophied inferior turbinate that is refractory to medical therapy. A submucous resection of the right inferior turbinate is performed.

Percentage of Survey Respondents who found Vignette to be Typical: 84%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 42% , In the ASC 57%, In the office 2%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 99% , Overnight stay-less than 24 hours 1% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 4%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 4%

Description of Pre-Service Work: Select and order the appropriate antibiotic(s) and confirm timing and administration. Review medical history and results of preoperative testing (labs, EKG, CXR). Review reports of consultants providing preoperative assessment and clearance as indicated. Meet with patient and family to review planned procedure and postoperative management. Reexamine patient to ensure that physical findings have not changed and document history and physical. Mark side for procedure. Obtain informed consent. Review airway and medical management with anesthesiologist. Review planned procedure with OR staff. Verify that all required instruments and supplies are available. Monitor/assist with prepping and draping. Scrub and gown. Administer intranasal topical anesthetic/vasoconstrictive medication. Perform surgical "time out" with operating surgical team. Inject local anesthesia into planned incision site and subcutaneous tissue.

Description of Intra-Service Work: Make an incision at the anterior edge of the inferior turbinate. Raise a submucosal tunnel along the length of the turbinate between the bone and the mucosa, taking care not to tear the mucosa. Remove the bone from the turbinate using direct removal or powered instrumentation while carefully ensuring not to remove the overall structure of the turbinate. Examine the nasal cavity to ensure improved patency. Obtain hemostasis utilizing topical vasoconstrictors and/or absorbable packing material.

Description of Post-Service Work: Monitor patient during reversal of anesthesia. Discuss postoperative recovery care with anesthesia and nursing staff. Discuss procedure and outcome with family in waiting area. Write postoperative note. Dictate operative note and copy to referring physician. Prior to discharge, examine patient and write prescriptions for medications and supplies needed post-discharge. Review post-discharge wound care and activity limitations with patient and family.

FIRST 99213 VISIT

Examine patient, evaluating the incision site and nasal cavity for crusting, hematoma or synechiae. Clear nasal cavity of crusting. Assess for any complications including scarring or continued congestion. Discuss activity restrictions and maintenance of wound site in post-operative period, including use of nasal saline. Assess the need for topical medications to improve post-operative swelling.

#### SECOND 99213 VISIT

Examine patient, evaluating the incision site and nasal cavity for crusting or synechiae. Assess scarring or continued congestion. Discuss resumption of usual activity. Assess need for further nasal saline. Assess the need for further topical medication use.

**Modifier -51 Exempt Status**

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

**New Technology/Service:**

Is this new/revised procedure considered to be a new technology or service? No

**TOP KEY REFERENCE SERVICE:**

<u>Key CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
21013	090	4.45	RUC Time

CPT Descriptor Excision, tumor, soft tissue of face and scalp, subfascial (eg, subgaleal, intramuscular); less than 2 cm

**SECOND HIGHEST KEY REFERENCE SERVICE:**

<u>Key CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
21012	090	5.42	RUC Time

CPT Descriptor Excision, tumor, soft tissue of face or scalp, subcutaneous; 2 cm or greater

**KEY MPC COMPARISON CODES:**

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

<u>MPC CPT Code 1</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>	<u>Most Recent Medicare Utilization</u>
25071	090	5.91	RUC Time	1,467

CPT Descriptor 1 Excision, tumor, soft tissue of forearm and/or wrist area, subcutaneous; 3 cm or greater

<u>MPC CPT Code 2</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>	<u>Most Recent Medicare Utilization</u>
26765	090	5.86	RUC Time	1,407

CPT Descriptor 2 Open treatment of distal phalangeal fracture, finger or thumb, includes internal fixation, when performed, each

<u>Other Reference CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
33282	090	3.50	RUC Time

CPT Descriptor Implantation of patient-activated cardiac event recorder

**RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:**

Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by the mean) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Top Key Reference Code: 40      % of respondents: 44.4 %

Number of respondents who choose 2<sup>nd</sup> Key Reference Code: 37      % of respondents: 41.1 %

**TIME ESTIMATES (Median)**

	CPT Code: <u>30140</u>	Top Key Reference CPT Code: <u>21013</u>	2nd Key Reference CPT Code: <u>21012</u>
Median Pre-Service Time	43.00	30.00	56.00

Ref Code****2<sup>nd</sup> Key  
Ref Code****Time Segment (Mean)**

Overall intensity/complexity	0.68	0.19
------------------------------	------	------

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Reason for Survey:** In October 2015, AMA staff re-ran the Harvard valued codes with utilization over 30,000 based on 2014 Medicare claims data and this service was identified. The RUC determined that this service will be placed on the next level of interest form to survey for April 2016. The American Academy of Otolaryngology Head and Neck Surgery responded and indicated an interest to survey.

**Background on prior valuations:** This code is Harvard valued and has never been RUC surveyed.

**Survey Sample:**

The survey data and recommendations are based upon a random sample of AAO-HNS members. The total sample size was 2600 otolaryngologists.

**Reference Service List:** Based on reviewer comments, we feel it's worth noting that we had a great deal of difficulty generating an RSL for this survey due to there being virtually no 090 global codes that have been RUC reviewed in the last 7 years that had RVUs in a range this low. Based on this concern, we took the proposed RSL to the Research Subcommittee for approval prior to the survey being distributed. We had initially proposed a blended global RSL of 010 and 090 codes, however, Research directed us to remove all 010 codes and utilize non-otolaryngology procedures with 090 globals to develop the RSL. This included the addition of many excision of tumor codes which were reviewed within the 7 year period. Research then approved the modified RSL prior to survey.

**Physician Time:**  
*Pre-Service Time*

Our expert panel selected pre-service package 3 (Straightforward Patient/Difficult Procedure) for this code based on the fact that the procedure in the facility setting using general anesthesia. We are recommending taking the lesser of the survey or the pre-time package. **Therefore, we recommend a total pretime of 43 minutes.**

### *Intra-Service Time*

**We are recommending our median survey time of 20 minutes for intra service work.**

### *Post-Service Time*

The expert panel selected post-package 9A (General Anesthesia or Complex Regional Block/ Straightforward Procedure) for this code. We are recommending taking the lesser of the survey or the pre-time package. **The expert panel recommends a post-service time of 15 minutes. We also recommend the addition of a .5 discharge management visit despite our survey respondents not stating it was typical, given that the patient needs to be discharged which typically occurs on the same day as the procedure.**

### *Physician Work RVU*

Upon review of the survey results, the expert panel **recommends maintenance of existing value for 30140 of 3.57 RVUs. This is below the 25<sup>th</sup> percentile of our survey.**

The following table provides other RUC reviewed codes that are similar in time and work to provide additional support for the recommended value for CPT code 30140, as they demonstrate relativity across the fee schedule.

#### *Key Reference codes*

Time Source	Most Recent RUC Review	CPT Code	Long Desc	Global	Work RVU	Pre	Intra	Post	Post op visits	Total Time	IWPUT

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.  
☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.  
☒ Multiple codes allow flexibility to describe exactly what components the procedure included.  
☐ Multiple codes are used to maintain consistency with similar codes.  
☐ Historical precedents.  
☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

3. CPT Code 1: 30140 090 3.57 43 / 20 / 15 Total time: 124 2 - 99213 visits

4. CPT Code 2: 30520 090 7.01 38.5 / 60 / 15 Total time: 210.5 .5 - 99238 / 2- 99213 / 2-99212

After accounting for the MPPR work RVUs paid for these services when billed together is: 8.795

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 30140

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Otolaryngology

How often? Commonly

Specialty

How often?

Specialty

How often?

Estimate the number of times this service might be provided nationally in a one-year period? 100365

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. This represents the Medicare database volume of 33,455 multiplied by 3.

Specialty Otolaryngology

Frequency 98358

Percentage 98.00 %

Specialty Plastics and Reconstructive surgery

Frequency 1100

Percentage 1.09 %

Specialty

Frequency 0

Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?  
 33,455 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty.  
 Please explain the rationale for this estimate. This is based on the 2014 Medicare volume per the RUC database.

Specialty Otolaryngology	Frequency 32786	Percentage 98.00 %
Specialty Plastics and Reconstructive Surgery	Frequency 400	Percentage 1.19 %
Specialty	Frequency 0	Percentage 0.00 %

Do many physicians perform this service across the United States?

---

### **Berenson-Eggers Type of Service (BETOS) Assignment**

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Procedures

BETOS Sub-classification:

Minor procedure

BETOS Sub-classification Level II:

Other

---

### **Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 30140

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**Attestation Statement**

This form needs to be completed by any **RUC Advisor** whose specialty society is developing a recommendation to be reviewed by the RUC.

As a RUC Advisor, I attest that the integrity of the RUC survey, summary of recommendation forms and practice expense recommendations are based on accurate and complete data to the best of my knowledge. As a RUC advisor, I acknowledge that violations would be addressed by the executive committee (i.e., RUC Chair , AMA Representative and Alternate AMA Representative.)

<b>Signature:</b>

<b>Specialty Society:</b>	American Academy of Otolaryngology – Head and Neck Surgery
<b>Date:</b>	April 5, 2016

**AMA/Specialty Society Update Process  
Practice Expense Summary of Recommendation  
Non - Facility Direct Inputs**

CPT Long Descriptor: Submucous resection inferior turbinate, partial or complete, any method

Global Period: 090 Meeting Date: April 2016

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee: ***We convened an expert panel to develop our PE recommendations for this service.***

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale: ***We used the existing PE inputs for 30140 as our reference.***

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time: N/A

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:

We are adding in PE inputs for this code in the non-facility setting based on the change in technology which has now made this procedure safe to do under local/topical anesthesia in the office. As a result, we are requesting the standard PE Subcommittee time for pre-service clinical staff activities for a 090 global service and standard time for all staff activities during the intra service period.

We have retained several of the previous supply and equipment items, but are also requesting new items associated with drawing up the local and topical anesthesia in the office setting to make this code consistent with other similar services' PE inputs. We are also requesting tubing which attaches to the microdebrider used to perform the procedure, providing irrigation and suction to the microdebrider hand piece.

For equipment, we are adding a microdebrider, a microdebrider hand piece and a 2mm blade, all of which are utilized to perform the procedure in the non-facility setting. We included the time for sedation/application of topical/local anesthesia in the equipment time formula for these new inputs, as they are present in the room during the anesthesia time as well as the procedure. In addition, we have added an instrument pack which is utilized during the procedure as well as during all post op visits. The nasal speculum is used to examine the nose, alligator forceps are used to remove any crusting and a Cottle elevator is used to lateral the turbinate and visualize its entire length.

5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

Staff complete diagnostic and referral forms, coordinate pre-surgery services, schedule space and equipment in the facility, and provide pre-service education and consent.

Intra-Service Clinical Labor Activities:

The staff greet and gown the patient, obtain 1-3 vitals, prepare room and set up supplies, prepare and position the patient, and assist the physician in applying local/topical anesthesia. While we recognize line 27 “Sedate/apply anesthesia” is typically used for procedures done under moderate sedation the PE subcommittee has historically approved this same line item for Otolaryngology procedures that utilize local anesthesia as the staff must assist the physician in the application and/or injection of local/topical anesthesia prior to the procedure. They assist for the entire procedure, handing instruments to the physician, and monitor the patient at a 1:4 ratio for 15 minutes following the procedure. They clean the room and equipment, clean the surgical instruments, and provide home care instructions and set up post op visits and prescriptions/antibiotics.

Post-Service Clinical Labor Activities: In the post-service period the staff assist with two post op visits conducted during the global period. Staff prepare room and ensure all necessary equipment is available and functioning. Assist physician with cleaning the patient’s nose (i.e. hand instruments and wipe them down). Clean the room after visit.

**AMA/Specialty Society Update Process  
Practice Expense Summary of Recommendation  
Facility Direct Inputs**

CPT Long Descriptor: Submucous resection inferior turbinate, partial or complete, any method

Global Period: 090 Meeting Date: April 2016

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee: ***We convened an expert panel to develop our PE recommendations for this service.***

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale:  
***We used the existing PE inputs for 30140 as our reference.***

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time: N/A

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:

We have added an instrument pack which is utilized during all post op visits. The nasal speculum is used to examine the nose, alligator forceps are used to remove any crusting and a Cottle elevator is used to lateral the turbinate and visualize its entire length.

5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

Staff complete diagnostic and referral forms, coordinate pre-surgery services, schedule space and equipment in the facility, and provide pre-service education and consent.

Intra-Service Clinical Labor Activities:

There are no intra-service activities performed by the clinical staff.

Post-Service Clinical Labor Activities:

In the post-service period the staff assist with two post op visits conducted during the global period. Staff prepare room and ensure all necessary equipment is available and functioning. Assist physician with cleaning the patient's nose (i.e. hand instruments and wipe them down). Clean the room after visit.

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
*CMS Request – Final Rule for 2016*

April 2016

**Control Nasal Hemorrhage**

In October 2015, the PE Subcommittee analyzed the 58 services that the RUC submitted PE only recommendations for and determined that one or more of the following is true of many of the codes: frequency less than 10,000; reviewed for work within the last five years; included in the list of proposed potentially misvalued codes identified through high expenditure by specialty screen that CMS included in the proposed rule for 2016. If you apply these criteria only 6 codes remain. The codes are 10021, 30903, 88333, 88334, 95812 and 95813. Code 30903 was identified and the specialty society identified 30901, 30905 and 30906 as part of the same family.

**30901 Control nasal hemorrhage, anterior, simple (limited cautery and/or packing) any method**

The RUC reviewed the survey results from 83 otolaryngologists and determined that the current work RVU and survey median of 1.10 was validated. The RUC reviewed the pre-service time and recommends 3 minutes for evaluation, 1 minute for positioning and 5 minutes for scrub/dress/wait. This service is typically reported with an Evaluation and Management (E/M) service, therefore the RUC reduced the evaluation time by 14 minutes from the standard package. The specialty society indicated and the RUC agreed that 3 minutes for evaluation is necessary for the physician to obtain supplies and equipment (packing material and silver nitrate for cautery) and drape and gown for the patient which is not included in the E/M. The RUC agreed that 5 minutes of scrub/dress/wait time is necessary for the physician to scrub, obtain gown, shoe covers and eye shield. The RUC recommends the same intra-service time of 10 minutes and immediate post-operative time of 5 minutes.

The RUC compared CPT code 30901 (with 23 minutes total time) to the top two key reference services 31231 *Nasal endoscopy, diagnostic, unilateral or bilateral (separate procedure)* (work RVU = 1.10 and 21 minutes total time) and 12011 *Simple repair of superficial wounds of face, ears, eyelids, nose, lips and/or mucous membranes; 2.5 cm or less* (work RVU = 1.07 and 24 minutes total time) and noted that the physician work, time and intensity for these are similar and valued appropriately. For additional support the RUC referenced similar services 20611 *Arthrocentesis, aspiration and/or injection, major joint or bursa (eg, shoulder, hip, knee, subacromial bursa); with ultrasound guidance, with permanent recording and reporting* (work RVU = 1.10 and 27 minutes total time) and 11980 *Subcutaneous hormone pellet implantation (implantation of estradiol and/or testosterone pellets beneath the skin)* (work RVU = 1.10 and 27 minutes total time). **The RUC recommends a work RVU of 1.10 for CPT code 30901.**

**30903 Control nasal hemorrhage, anterior, complex (extensive cautery and/or packing) any method**

The RUC reviewed the survey results from 83 otolaryngologists and determined that the current work RVU of 1.54, between the survey 25<sup>th</sup> percentile 1.30 and median 1.80, was validated. The RUC reviewed the pre-service time and recommends 8 minutes for evaluation, 1 minute for positioning and 5 minutes for scrub/dress/wait. This service is typically reported with an Evaluation and Management (E/M) service, therefore the RUC reduced the evaluation time by two minutes. The specialty society indicated and the RUC agreed that the additional 5 minutes for evaluation time compared to 30901 is necessary to prepare the patient for using the additional electrocautery equipment. Silver nitrate sticks are used for the limited cautery used in 30901, whereas for more extensive cautery (30903, 30905 and 30906), the physician uses bipolar electrocautery equipment. The RUC recommends intra-service time of 15 minutes and immediate post-operative time of 10 minutes. The RUC agreed with the specialty societies that the intra-service time is longer than 30901 to account for the additional monitoring time by the physician as this service is more noxious and is secondary to more significant bleeding. The specialty society noted that the previous intra-service time last valued in 1995 was excessive. The RUC agreed that 15 minutes of intra-service time is more appropriate in line with the intensity of work per unit of time (IWPUT) and in position relative to other comparable services. More patients receiving this service are on blood thinners and therefore have more significant bleeding, hence the service is more intense than it was previously. The increase in post-time compared to 30901 is also due to these patients with more extensive bleeding requiring more monitoring.

The RUC also noted that during the 1995 review the specialty society requested a higher work RVU of 2.50 with 30 minutes of intra-service time, which was also similar to the original Harvard intra-service time (10 minutes pre-time /28 intra-time/10 minutes post-time). In 1995 the specialty society presented that the physician work has changed due to increased risk of HIV and Hepatitis. Although this compelling evidence was not accepted to increase the work RVU at that time, the survey intra service times were approved, which may have allowed for the intra-service time to remain high at 30 minutes. The specialty society also noted that many more people are now on some form of a blood thinner, given that so many are commercially available today. This makes the epistaxis more difficult to control, and the procedure more intense which provides a rationale for the increase in intensity given the reduced intra time.

The RUC compared CPT code 30903 (with 39 minutes total time) to the top two key reference services 31237 *Nasal/sinus endoscopy, surgical; with biopsy, polypectomy or debridement (separate procedure)* (work RVU = 2.60 and 48 minutes total time) and noted that the physician work and time is lower for the surveyed code and valued appropriately. For additional support the RUC referenced similar services 15271 *Application of skin substitute graft to trunk, arms, legs, total wound surface area up to 100 sq cm; first 25 sq cm or less wound surface area* (work RVU = 1.50), 64447 *Injection, anesthetic agent; femoral nerve, single* (work RVU = 1.50) and 64493 *Injection(s), diagnostic or therapeutic agent, paravertebral facet (zygapophyseal) joint (or nerves innervating that joint) with image guidance (fluoroscopy or CT), lumbar or sacral; single level* (work RVU = 1.52) all which require the same intra-service time and similar physician work to perform. **The RUC recommends a work RVU of 1.54 for CPT code 30903.**

**30905 Control nasal hemorrhage, posterior, with posterior nasal packs and/or cautery, any method; initial**

The RUC reviewed the survey results from 78 otolaryngologists and determined that the current work RVU of 1.97, below the survey 25<sup>th</sup> percentile work RVU of 2.20, was validated. The RUC reviewed the pre-service time and recommends 8 minutes for evaluation, 1 minute for positioning and 5 minutes for scrub/dress/wait. This service is typically reported with an Evaluation and Management (E/M) service, therefore the RUC reduced the evaluation time by two minutes. The specialty society indicated and the RUC agreed that the additional 5 minutes for evaluation time compared to 30901 is necessary to prepare the patient for using the additional electrocautery equipment. Silver nitrate sticks are used for the limited cautery used in 30901, whereas for more extensive cautery (30903, 30905 and 30906), the physician uses bipolar electrocautery equipment. The RUC recommends intra-service time of 20 minutes and immediate post-operative time of 10 minutes. The RUC agreed with the specialty societies that the intra-service time is longer than 30903 because for 30905 access to the area is more difficult, the work is more extensive and posterior bleeds are typically arterial, therefore controlling those are more challenging and require more time. The specialty society noted that the previous intra-service time last valued in 1995 was much longer than the current time for this procedure based on the rationale that the 1995 review occurred during a time when concerns about HIV and Hepatitis were at an all-time high. Given this, significantly more time was taken by clinicians to protect against exposure and contamination during procedures where extensive bleeding occurs. Over time, and as education and precautionary measures against contracting these viruses has grown, the time needed related to those concerns has decreased which is consistent with the decreased intra-service survey times that respondents indicated in the 2016 survey data. The RUC agreed that 20 minutes of intra-service time is more appropriate in line with the intensity of work per unit of time (IWPUT) and in position relative to other comparable services. The increase in post-time compared to 30901 is also due to these patients with more extensive bleeding requiring more monitoring.

The RUC also noted that during the 1995 review the specialty society requested a much higher work RVU of 4.50 with 48 minutes of intra-service time, which was also similar to the original Harvard intra-service time (14 minutes pre-time /39 intra-time/13 minutes post-time). In 1995 specialty society presented that the physician work has changed due to increased risk of HIV and Hepatitis. Although this compelling evidence was not accepted to increase the work RVU at that time, it may have allowed for the intra-service time to remain high at 48 minutes. The specialty society also noted that many more people are now on some form of a blood thinner, given that so many are commercially available today. This makes the epistaxis more difficult to control, and the procedure more intense which provides a rationale for the increase in intensity given the reduced intra time.

The RUC compared CPT code 30905 (with 44 minutes total time) to the top two key reference services 31237 *Nasal/sinus endoscopy, surgical; with biopsy, polypectomy or debridement (separate procedure)* (work RVU = 2.60 and 48 minutes total time) and noted that the physician work and time is lower for the surveyed code and valued appropriately. For additional support the RUC referenced similar services 12005 *Simple repair of superficial wounds of scalp, neck, axillae, external genitalia, trunk and/or extremities (including hands and feet); 12.6 cm to 20.0 cm* (work RVU = 1.97 and 25 minutes intra-service time) and 92960 *Cardioversion, elective, electrical conversion of arrhythmia; external* (work RVU = 2.25 and 15 minutes intra-service time) which require similar time and physician work to perform. **The RUC recommends a work RVU of 1.97 for CPT code 30905.**

**30906 Control nasal hemorrhage, posterior, with posterior nasal packs and/or cautery, any method; subsequent**

The RUC reviewed the survey results from 76 otolaryngologists and determined that the current work RVU of 2.45, below the survey 25<sup>th</sup> percentile work RVU of 2.54, was validated. The RUC reviewed the pre-service time and recommends 12 minutes for evaluation, 1 minute for positioning and 5 minutes for scrub/dress/wait. This service is typically reported with an Evaluation and Management (E/M) service, therefore the RUC reduced the evaluation time by 9 minutes. The specialty society indicated and the RUC agreed that the additional 4 minutes for evaluation time compared to 30905 is necessary to obtain supplies such as syringes, alligator forceps and suction materials to take down the nasal packs that were already inserted and failed in 30905, while the patient is actively bleeding. Silver nitrate sticks are used for the limited cautery used in 30901, whereas for more extensive cautery (30903, 30905 and 30906), the physician uses bipolar electrocautery equipment. The RUC recommends intra-service time of 30 minutes and immediate post-operative time of 15 minutes. The RUC agreed with the specialty societies that the intra-service time is longer than 30905 because for 30906 the work is more extensive for this subsequent bleed, removing previous packing and requiring more time. The specialty society noted that the previous intra-service time last valued in 1995 was excessive, consistent with the rationale of why longer intra service times were appropriate in 1995 versus the 2016 review. The RUC agreed that 30 minutes of intra-service time is more appropriate in line with the intensity of work per unit of time (IWPUT) and in position relative to other comparable services.

The RUC also noted that during the 1995 review the specialty society requested a much higher work RVU of 5.00 with 60 minutes of intra-service time, which was also similar to the original Harvard intra-service time (15 minutes pre-time /45 intra-time/14 minutes post-time). In 1995 specialty society presented that the physician work has changed due to increased risk of HIV and Hepatitis. Although this compelling evidence was not accepted to increase the work RVU at that time, the survey intra service times were approved, which may have allowed for the intra-service time to remain high at 60 minutes. The specialty society also noted that many more people are now on some form of a blood thinner, given that so many are commercially available today. This makes the epistaxis more difficult to control, and the procedure more intense which provides a rationale for the increase in intensity given the reduced intra time.

The RUC compared CPT code 30906 (with 30 minutes intra-service time) to the top two key reference services 31237 *Nasal/sinus endoscopy, surgical; with biopsy, polypectomy or debridement (separate procedure)* (work RVU = 2.60 and 20 minutes intra-service time) and noted that the physician work and time is similar and slightly more intense to perform for the surveyed code. For additional support the RUC referenced similar services 12016 *Simple repair of superficial wounds of face, ears, eyelids, nose, lips and/or mucous membranes; 12.6 cm to 20.0 cm* (work RVU = 2.68 and 30 minutes intra-service time) and 31622 *Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; diagnostic, with cell washing, when performed (separate procedure)* (work RVU = 2.78 and 30 minutes intra-service time) which require similar time and physician work to perform. **The RUC recommends a work RVU of 2.45 for CPT code 30906.**

**Practice Expense**

Modifications were made to the direct practice expense inputs to correct monitoring times to account for the 1:4 multi-tasking for the two anterior packing codes and the and 1:1 for the two posterior packing codes, deleted phone call duplicative to E/M and supplies and accounted for the gowning and draping of the patient due to bleeding. The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.

<b>CPT Code</b>	<b>CPT Descriptor</b>	<b>Global Period</b>	<b>Work RVU Recommendation</b>
30901 (f)	Control nasal hemorrhage, anterior, simple (limited cautery and/or packing) any method	000	1.10 (No Change)
30903	Control nasal hemorrhage, anterior, complex (extensive cautery and/or packing) any method	000	1.54 (No Change)

SUMMARY OF RECOMMENDATION**

CPT Code: 30901	Tracking Number	Original Specialty Recommended RVU: <b>1.10</b>
		Presented Recommended RVU: <b>1.10</b>
Global Period: 000		RUC Recommended RVU: <b>1.10</b>

CPT Descriptor: Control nasal hemorrhage, anterior, simple (limited cautery and/or packing) any method

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 75 year old male presents with intermittent unilateral epistaxis. A bleeding source on the anterior septum is identified and controlled with limited cautery and/or packing

Percentage of Survey Respondents who found Vignette to be Typical: 90%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 11%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 8%

Description of Pre-Service Work: Following an evaluation and management visit, the physician explains the procedure and obtains consent. The physician confirms necessary supplies are gathered and available in the procedure area. The physician confirms medication history. Laboratory values are obtained and/or evaluated. A time out is performed and the physician washes hands and dons proper protective personal equipment. Topical decongestant and anesthetic sprays are applied to the nostrils followed by a wait time for them to take effect. The patient is positioned in an upright, seated position and draped for protection.

Description of Intra-Service Work: Topical vasoconstrictors are applied to the site of bleeding to visualize the area well. Once adequate visualization is achieved, the site of bleeding is identified. Cautery is applied directly to the site of bleeding as well as the surrounding area to disrupt any feeding vasculature. Once hemostasis is achieved, absorbable packing is placed over the cautery site.

Description of Post-Service Work: The patient is monitored during the recovery period. Home restrictions (i.e. activity), treatment, and findings are explained to the patient. Subsequent evaluation and therapeutic plan are discussed. Prescriptions are written for medications and supplies needed post discharge. Medication reconciliation is performed. The primary care physician is contacted regarding need and timing for further use of anticoagulation medication. The procedure note is dictated and findings communicated to the referring physician.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Reason for Survey:** Three of the codes in this family were captured by the CMS OP/PS Cap screen issued within the 2014 Medicare Physician Fee Schedule (MP/FS) proposed rule. In response to this, the American Academy of Otolaryngology Head and Neck Surgery (along with several other specialties) elected to review the practice expense for all Otolaryngology services captured by this screen in hopes of addressing CMS' concerns that the PE for these services may be overstated or incorrect. The PE for this family was reviewed at the April 2014 RUC meeting and submitted to CMS. CMS, however, elected not to accept the PE as submitted, based on their concerns that PE should not be reviewed without a coinciding review of the physician work. Thus, in the 2016 final rule, CMS included the OP/PS cap codes again on their "potentially misvalued codes" list, and requested a review of the physician work for these services.

The RUC and the Academy commented that we understood CMS' concerns about implementing PE inputs without the corresponding work being reviewed, however, after analyzing the 58 services that the RUC submitted PE recommendations for and determined that one or more of the following is true of many of the codes: frequency less than 10,000; reviewed for work within the last five years; included in the list of proposed potentially misvalued codes identified through high expenditure by specialty screen that CMS included in the proposed rule for 2016. If you apply these criteria only 6 codes remain. The codes are 10021, 30903, 88333, 88334, 95812 and 95813. Given that 30903 remained on this list, the Academy indicated an interest in surveying the entire family of nasal hemorrhage codes (30901-30906) for the April 2016 RUC meeting.

**Background on prior valuations:**

In October 2009, CPT code 30901 Control nasal hemorrhage, anterior, simple (limited cautery and/or packing) any method was identified for review through the Five-Year Review Identification Workgroup screen of Harvard valued codes with Medicare utilization over 100,000. In response, 30901 was surveyed and presented at the April 2010 RUC meeting.

For 30901, the RUC reviewed the survey results from 41 otolaryngologists and agreed with the specialty society recommended physician time required to perform this service (6 minutes pre-evaluation, 0 min for positioning, 5

minutes scrub/dress/wait, 10 minutes intra-service, and 5 minutes immediate post-service time). The RUC confirmed that although this service is typically billed with an Evaluation and Management visit, additional pre-service time is necessary to confirm that necessary supplies and equipment are available and to gown/drape the patient for protection as well as allow the physician to put on protective clothing and gloves.

The RUC reviewed the specialty society survey data and agreed with the specialty society that there is no compelling evidence to change the current work RVU of 1.21, and therefore, the RUC recommended maintaining the current work RVU of 1.21 for code 30901.

In contrast, codes 30903-30906 were last valued by the RUC in 1995. At that time, the Academy presented compelling evidence, based on the reported survey data, to increase the values of all three codes quite significantly from current values. The RUC did not agree that compelling evidence existed due to the fact that the median intra times were very similar to the Harvard intra service times. Thus, the RUC recommended maintaining existing value for these three codes at that time.

### **Survey Sample:**

The survey data and recommendations are based upon a random sample of AAO-HNS members. The total sample size was 2565 otolaryngologists.

### **Physician Time:**

#### ***Pre-Service Time***

Our expert panel selected pre-service package 6A (Procedure with local/topical anesthesia care requiring wait time for anesthesia to take effect) for this family of codes based on the fact they are performed either in the emergency room or the physician office using local / topical anesthesia. We are recommending taking the lesser of the survey or the pre-time package. An E/M is typically done with this procedure, however, we believe the significant reduction from the pre time indicated by survey respondents down to the package times more than accounts for the reductions typically taken to account for an E/M performed on the same date of service. The RUC panel, however, the Panel felt that additional reductions were needed to the pre time given an E/M on the same day, so we recommend a further reduction of 2 minutes to evaluation time. **Therefore, we recommend a pretime of 9 minutes.**

#### ***Intra-Service Time***

**We are recommending our median survey time of 10 minutes for intra service work.**

#### ***Post-Service Time***

The expert panel selected post-package 7A (Local Anesthesia/ Straightforward Procedure) for this code. We are recommending taking the lesser of the survey or the pre-time package. **The expert panel recommends a post-service time of 5 minutes.**

#### ***Physician Work RVU***

Upon review of the survey results, the expert panel **recommends the median value of our survey, which is also existing value for the code, at 1.10 RVUs.**

The following table provides other RUC reviewed codes that are similar in time and work to provide additional support for the recommended value for CPT code 30901, as they demonstrate relativity across the fee schedule.

#### ***Key Reference codes***

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☒ Other reason (please explain) typically reported with an E/M or hospital visit on the same day.

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 30901

Specialty Physician Asst / Family Practice How often? Rarely

### **Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 30901

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 30903	Tracking Number	Original Specialty Recommended RVU: <b>1.54</b>
		Presented Recommended RVU: <b>1.54</b>
Global Period: 000		RUC Recommended RVU: <b>1.54</b>

CPT Descriptor: Control nasal hemorrhage, anterior, complex (extensive cautery and/or packing) any method

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 75 year old male presents with persistent, brisk unilateral epistaxis. A bleeding source on the anterior septum is identified, requiring extensive cautery and/or packing to control.

Percentage of Survey Respondents who found Vignette to be Typical: 96%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 25%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 13%

Description of Pre-Service Work: Following an evaluation and management visit, the physician explains the procedure and obtains consent. The physician confirms necessary supplies are gathered and available in the procedure area. The physician ensures cautery equipment is functioning properly. The physician confirms medication history. Laboratory values are obtained and/or evaluated. A time out is performed and the physician washes hands and dons proper protective personal equipment. Topical decongestant and anesthetic sprays are applied to the nostrils followed by a wait time for them to take effect. The patient is positioned in an upright, seated position and draped for protection.

Description of Intra-Service Work: Topical vasoconstrictors are applied to the site of bleeding to visualize the area well and control the epistaxis. Once adequate visualization is achieved, the site of bleeding is identified. Local anesthesia is infiltrated into the area as more extensive cautery is needed. Cautery is applied directly to the site of bleeding as well as the surrounding area to disrupt any feeding vasculature. Once hemostasis is achieved, absorbable packing is placed over the cautery site.

Description of Post-Service Work: The patient is monitored during the recovery period. Home restrictions (i.e. activity), treatment, and findings are explained to the patient. Subsequent evaluation and therapeutic plan are discussed. Prescriptions are written for medications and supplies needed post discharge. Medication reconciliation is performed. The primary care physician is contacted regarding need and timing for further use of anticoagulation medication. The procedure note is dictated and findings communicated to the referring physician.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Reason for Survey:** Three of the codes in this family were captured by the CMS OP/PS Cap screen issued within the 2014 Medicare Physician Fee Schedule (MP/FS) proposed rule. In response to this, the Academy (along with several other specialties) elected to review the practice expense for all Otolaryngology services captured by this screen in hopes of addressing CMS' concerns that the PE for these services may be overstated or incorrect. The PE for this family was reviewed at the April 2014 RUC meeting and submitted to CMS. CMS, however, elected not to accept the PE as submitted, based on their concerns that PE should not be reviewed without a coinciding review of the physician work. Thus, in the 2016 final rule, CMS included the OP/PS cap codes again on their "potentially misvalued codes" list, and requested a review of the physician work for these services. The RUC and the Academy commented that we understood CMS' concerns about implementing PE inputs without the corresponding work being reviewed, however, after analyzing the 58 services that the RUC submitted PE recommendations for and determined that one or more of the following is true of many of the codes: frequency less than 10,000; reviewed for work within the last five years; included in the list of proposed potentially misvalued codes identified through high expenditure by specialty screen that CMS included in the proposed rule for 2016. If you apply these criteria only 6 codes remain. The codes are 10021, 30903, 88333, 88334, 95812 and 95813. Given that 30903 remained on this list, the Academy indicated an interest in surveying the entire family of nasal hemorrhage codes (30901-30906) for the April 2016 RUC meeting.

**Background on prior valuations:**

In October 2009, CPT code 30901 Control nasal hemorrhage, anterior, simple (limited cautery and/or packing) any method was identified for review through the Five-Year Review Identification Workgroup screen of Harvard valued codes with Medicare utilization over 100,000. In response, 30901 was surveyed and presented at the April 2010 RUC meeting.

Codes 30903-30906 were last valued by the RUC in 1995. At that time, the Academy presented compelling evidence, based on the reported survey data, to increase the values of all three codes quite significantly from current values. The RUC did not agree that compelling evidence existed due to the fact that the median intra

times were very similar to the Harvard intra service times. Thus, the RUC recommended maintaining existing value for these three codes at that time.

### Survey Sample:

The survey data and recommendations are based upon a random sample of AAO-HNS members. The total sample size was 2656 otolaryngologists.

### Physician Time:

#### *Pre-Service Time*

Our expert panel selected pre-service package 1A (Straightforward Patient/Straightforward Procedures (No sedation/anesthesia care)) for this family of codes based on the fact they are performed either in the emergency room or the physician office using local / topical anesthesia. We are recommending taking the lesser of the survey or the pre-time package. An E/M is typically done with this procedure. We believe the significant reduction from the pre time indicated by survey respondents down to the package times more than accounts for the reductions typically taken to account for an E/M performed on the same date of service. The Panel, however, expressed concern that further reduction to evaluation time was needed, so we are recommending a 2 minute reduction from the survey time of 10 minutes of evaluation. **Therefore, we recommend a pretime of 14 minutes.**

#### *Intra-Service Time*

**We are recommending our median survey time of 15 minutes for intra service work.**

#### *Post-Service Time*

The expert panel selected post-package 7A (Local Anesthesia/ Straightforward Procedure) for this code. We are recommending taking the lesser of the survey or the pre-time package. **The expert panel recommends a post-service time of 10 minutes.**

### Physician Work RVU

Upon review of the survey results, the expert panel **recommends retention of existing value for CPT 30903 of 1.54 RVUs. This is between the median and 25<sup>th</sup> percentile of our survey.**

The following table provides other RUC reviewed codes that are similar in time and work to provide additional support for the recommended value for CPT code 30903, as they demonstrate relativity across the fee schedule.

#### *Key Reference codes*

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.  
☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.  
☐ Multiple codes allow flexibility to describe exactly what components the procedure included.  
☐ Multiple codes are used to maintain consistency with similar codes.  
☐ Historical precedents.  
☒ Other reason (please explain) typically reported with an E/M or hospital visit on the same day.

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 30903

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

How often? Commonly

How often? Sometimes

How often? Rarely

Estimate the number of times this service might be provided nationally in a one-year period? 156621

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. This is the 2014 Medicare volume multiplied by three.

Percentage 48.99 %

Percentage 38.99 %

Percentage 8.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?

52,207 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This is based on the 2014 Medicare volume per the RUC database.

Percentage 48.99 %

Percentage 39.00 %

Percentage 8.00 %

Do many physicians perform this service across the United States? Yes

### Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

### Main BETOS Classification:

## Procedures

BETOS Sub-classification:

### Minor procedure

### BETOS Sub-classification Level II:

Other

### Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 30903

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 30905	Tracking Number	Original Specialty Recommended RVU: <b>1.97</b>
		Presented Recommended RVU: <b>1.97</b>
Global Period: 000		RUC Recommended RVU: <b>1.97</b>

CPT Descriptor: Control nasal hemorrhage, posterior, with posterior nasal packs and/or cautery, any method; initial

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 75 year old male presents with posterior epistaxis. Control of nasal hemorrhage, posterior, with posterior nasal packs and/or cautery is performed.

Percentage of Survey Respondents who found Vignette to be Typical: 96%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 41%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 17%

Description of Pre-Service Work: Following an evaluation and management visit, the physician explains the procedure and obtains consent. The physician confirms necessary supplies are gathered and available in the procedure area. The physician ensures cautery equipment is functioning properly. The physician confirms medication history. Laboratory values are obtained and/or evaluated. A time out is performed and the physician washes hands and dons proper protective personal equipment. Topical decongestant and anesthetic sprays are applied to the nostrils followed by a wait time for them to take effect. The patient is positioned in an upright, seated position and draped for protection.

Description of Intra-Service Work: Topical vasoconstrictors are applied to the site of bleeding to visualize the area well and control the epistaxis. Once adequate visualization is achieved, an attempt to identify the source of bleeding is made. Local anesthesia is infiltrated into the area as extensive cautery is needed. Cautery is applied directly to the site of bleeding if identified as well as the surrounding area to disrupt any feeding vasculature. A posterior nasal pack is placed transnasal, applying direct pressure to the site of bleeding. The remainder of the nasal cavity is then packed with absorbable hemostatic material as well as Vaseline gauze.

Description of Post-Service Work: The patient is monitored during the recovery period. Restrictions (i.e. activity), treatment, and findings are explained to the patient. Subsequent evaluation and therapeutic plan are discussed. Laboratory values evaluating the extent of blood loss are reviewed. The primary care physician is contacted regarding need and timing for further use of anticoagulation medication. The procedure note is dictated and findings communicated to the referring physician. Medication reconciliation is performed. If the patient is admitted to the hospital, admission orders are written. If the patient is discharged, prescriptions are written for medications and supplies needed post discharge.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Reason for Survey:** Three of the codes in this family were captured by the CMS OP/PS Cap screen issued within the 2014 Medicare Physician Fee Schedule (MP/FS) proposed rule. In response to this, the Academy (along with several other specialties) elected to review the practice expense for all Otolaryngology services captured by this screen in hopes of addressing CMS' concerns that the PE for these services may be overstated or incorrect. The PE for this family was reviewed at the April 2014 RUC meeting and submitted to CMS. CMS, however, elected not to accept the PE as submitted, based on their concerns that PE should not be reviewed without a coinciding review of the physician work. Thus, in the 2016 final rule, CMS included the OP/PS cap codes again on their "potentially misvalued codes" list, and requested a review of the physician work for these services. The RUC and the Academy commented that we understood CMS' concerns about implementing PE inputs without the corresponding work being reviewed, however, after analyzing the 58 services that the RUC submitted PE recommendations for and determined that one or more of the following is true of many of the codes: frequency less than 10,000; reviewed for work within the last five years; included in the list of proposed potentially misvalued codes identified through high expenditure by specialty screen that CMS included in the proposed rule for 2016. If you apply these criteria only 6 codes remain. The codes are 10021, 30903, 88333, 88334, 95812 and 95813. Given that 30903 remained on this list, the Academy indicated an interest in surveying the entire family of nasal hemorrhage codes (30901-30906) for the April 2016 RUC meeting.

**Background on prior valuations:**

In October 2009, CPT code 30901 Control nasal hemorrhage, anterior, simple (limited cautery and/or packing) any method was identified for review through the Five-Year Review Identification Workgroup screen of Harvard valued codes with Medicare utilization over 100,000. In response, 30901 was surveyed and presented at the April 2010 RUC meeting.

Codes 30903-30906 were last valued by the RUC in 1995. At that time, the Academy presented compelling evidence, based on the reported survey data, to increase the values of all three codes quite significantly from current values. The RUC did not agree that compelling evidence existed due to the fact that the median intra

times were very similar to the Harvard intra service times. Thus, the RUC recommended maintaining existing value for these three codes at that time.

### Survey Sample:

The survey data and recommendations are based upon a random sample of AAO-HNS members. The total sample size was 2565 otolaryngologists.

### Physician Time:

#### *Pre-Service Time*

Our expert panel selected pre-service package 1A (Straightforward Patient/Straightforward Procedures (No sedation/anesthesia care)) for this family of codes based on the fact they are performed either in the emergency room or the physician office using local / topical anesthesia. We are recommending taking the lesser of the survey or the pre-time package. An E/M is typically done with this procedure. We believe the significant reduction from the pre time indicated by survey respondents down to the package times more than accounts for the reductions typically taken to account for an E/M performed on the same date of service. The Panel, however, expressed concern that further reduction to evaluation time was needed, so we are recommending a 2 minute reduction from the survey time of 10 minutes of evaluation. **Therefore, we recommend a pretime of 14 minutes.**

#### *Intra-Service Time*

**We are recommending our median survey time of 20 minutes for intra service work.**

#### *Post-Service Time*

The expert panel selected post-package 7A (Local Anesthesia/ Straightforward Procedure) for this code. We are recommending taking the lesser of the survey or the pre-time package. **The expert panel recommends a post-service time of 10 minutes.**

### Physician Work RVU

Upon review of the survey results, the expert panel **recommends retention of existing value for 30905 which is below the 25<sup>th</sup> percentile of our survey, at 1.97 RVUs.**

The following table provides other RUC reviewed codes that are similar in time and work to provide additional support for the recommended value for CPT code 30905, as they demonstrate relativity across the fee schedule.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.  
☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.  
☐ Multiple codes allow flexibility to describe exactly what components the procedure included.  
☐ Multiple codes are used to maintain consistency with similar codes.  
☐ Historical precedents.  
☒ Other reason (please explain) typically reported with an E/M or hospital visit on the same day.

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 30905

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Emergency Medicine                      How often? Commonly

Specialty Otolaryngology                      How often? Sometimes

Specialty Physician Asst / Family Practice                      How often? Rarely

Estimate the number of times this service might be provided nationally in a one-year period? 20631

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. This is the 2014 Medicare volume multiplied by three.

Specialty Emergency Medicine	Frequency 9490	Percentage 45.99 %
Specialty Otolaryngology	Frequency 7840	Percentage 38.00 %
Specialty Physician Asst / Family Practice	Frequency 1650	Percentage 7.99 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 6,877

If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This is based on the 2014 Medicare volume per the RUC database.

Specialty Emergency Medicine	Frequency 3163	Percentage 45.99 %
Specialty Otolaryngology	Frequency 2613	Percentage 37.99 %
Specialty Physician Asst / Family Practice	Frequency 550	Percentage 7.99 %

Do many physicians perform this service across the United States? Yes

### Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Procedures

BETOS Sub-classification:

Minor procedure

BETOS Sub-classification Level II:

Other

### Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 30905

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code:30906      Tracking Number

Original Specialty Recommended RVU: **2.45**Presented Recommended RVU: **2.45**

Global Period: 000

RUC Recommended RVU: **2.45**

CPT Descriptor: Control nasal hemorrhage, posterior, with posterior nasal packs and/or cautery, any method; subsequent

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 75 year old male presents with recurrent posterior epistaxis, having undergone prior treatment of posterior nasal hemorrhage. Control of nasal hemorrhage, posterior, with posterior nasal packs and/or cautery is performed.

Percentage of Survey Respondents who found Vignette to be Typical: 96%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is;  
Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 51%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 12%

Description of Pre-Service Work: Following an evaluation and management visit, the physician explains the procedure and obtains consent. The physician confirms necessary supplies are gathered and available in the procedure area. The physician ensures cautery equipment is functioning properly. The physician confirms medication history. Laboratory values are obtained and/or evaluated. The physician explains the procedure and obtains consent. A time out is performed and the physician washes hands and dons personal protective equipment. The patient is positioned in an upright, seated position and draped for protection. The previously placed posterior pack is removed. Topical decongestant and anesthetic sprays are applied to the nostrils followed by a wait time for them to take effect.

Description of Intra-Service Work: Topical vasoconstrictors are applied to the site of bleeding to visualize the area well and control the epistaxis. Once adequate visualization is achieved, an attempt to identify the source of bleeding is made. Local anesthesia is infiltrated into the area as extensive cautery is needed. Cautery is applied directly to the site of bleeding if identified as well as the surrounding area to disrupt any feeding vasculature. A posterior nasal pack is placed transnasal, applying direct pressure to the site of bleeding. The remainder of the nasal cavity is then packed with absorbable hemostatic material as well as Vaseline gauze.

Description of Post-Service Work: The patient is monitored during the recovery period. Restrictions (i.e. activity), treatment, and findings are explained to the patient. Subsequent evaluation and therapeutic plan are discussed. Laboratory values evaluating the extent of blood loss are reviewed. The primary care physician is contacted regarding need and timing for further use of anticoagulation medication. The procedure note is dictated and findings communicated to the referring physician. Medication reconciliation is performed. Admission orders are written.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Reason for Survey:** Three of the codes in this family were captured by the CMS OP/PS Cap screen issued within the 2014 Medicare Physician Fee Schedule (MP/FS) proposed rule. In response to this, the Academy (along with several other specialties) elected to review the practice expense for all Otolaryngology services captured by this screen in hopes of addressing CMS' concerns that the PE for these services may be overstated or incorrect. The PE for this family was reviewed at the April 2014 RUC meeting and submitted to CMS. CMS, however, elected not to accept the PE as submitted, based on their concerns that PE should not be reviewed without a coinciding review of the physician work. Thus, in the 2016 final rule, CMS included the OP/PS cap codes again on their "potentially misvalued codes" list, and requested a review of the physician work for these services. The RUC and the Academy commented that we understood CMS' concerns about implementing PE inputs without the corresponding work being reviewed, however, after analyzing the 58 services that the RUC submitted PE recommendations for and determined that one or more of the following is true of many of the codes: frequency less than 10,000; reviewed for work within the last five years; included in the list of proposed potentially misvalued codes identified through high expenditure by specialty screen that CMS included in the proposed rule for 2016. If you apply these criteria only 6 codes remain. The codes are 10021, 30903, 88333, 88334, 95812 and 95813. Given that 30903 remained on this list, the Academy indicated an interest in surveying the entire family of nasal hemorrhage codes (30901-30906) for the April 2016 RUC meeting.

**Background on prior valuations:**

In October 2009, CPT code 30901 Control nasal hemorrhage, anterior, simple (limited cautery and/or packing) any method was identified for review through the Five-Year Review Identification Workgroup screen of Harvard valued codes with Medicare utilization over 100,000. In response, 30901 was surveyed and presented at the April 2010 RUC meeting.

Codes 30903-30906 were last valued by the RUC in 1995. At that time, the Academy presented compelling evidence, based on the reported survey data, to increase the values of all three codes quite significantly from current values. The RUC did not agree that compelling evidence existed due to the fact that the median intra

times were very similar to the Harvard intra service times. Thus, the RUC recommended maintaining existing value for these three codes at that time.

### Survey Sample:

The survey data and recommendations are based upon a random sample of AAO-HNS members. The total sample size was 2565 otolaryngologists.

### Physician Time:

#### *Pre-Service Time*

Our expert panel selected pre-service package 6A (Procedure with local/topical anesthesia care requiring wait time for anesthesia to take effect) for this family of codes based on the fact they are performed either in the emergency room or the physician office using local / topical anesthesia. We are recommending taking the lesser of the survey or the pre-time package. We acknowledge that an E/M is typically done with this procedure, and given that the survey respondents included more pre-time for evaluation than allowed by the package, we reduced the time down to the package's 17 minutes and then removed an additional 5 minutes of evaluation time to account for the E/M visit. **Therefore, we recommend a total pretime of 18 minutes.**

#### *Intra-Service Time*

Performing the subsequent procedure typically means the initial performance of the procedure failed. Therefore, you are doing more during the intraservice time in order to control the epistaxis, leading to longer intraservice time. **Therefore, we are recommending our median survey time of 30 minutes for intra service work**

#### *Post-Service Time*

The expert panel selected post-package 7A (Local Anesthesia/ Straightforward Procedure) for this code. We are recommending taking the lesser of the survey or the pre-time package. While these are typically done in a physician's office, patients with a recurrent posterior bleed are typically admitted after intervention (no matter where the procedure is performed) for monitoring of further bleeding, as posterior epistaxis can lead to significant blood loss. **The expert panel recommends a post-service time of 15 minutes.**

### Physician Work RVU

Upon review of the survey results, the expert panel **recommends existing value of 2.45 RVUs which is below the 25<sup>th</sup> percentile of our survey.**

The following table provides other RUC reviewed codes that are similar in time and work to provide additional support for the recommended value for CPT code 30906, as they demonstrate relativity across the fee schedule.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.  
☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.  
☐ Multiple codes allow flexibility to describe exactly what components the procedure included.  
☐ Multiple codes are used to maintain consistency with similar codes.  
☐ Historical precedents.  
☒ Other reason (please explain) typically reported with an E/M or hospital visit on the same day.

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 30906

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
 If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Otolaryngology

How often? Sometimes

Specialty Emergency Medicine

How often? Rarely

Specialty Physician Asst / Family Practice

How often? Rarely

Estimate the number of times this service might be provided nationally in a one-year period? 3672

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. This is the 2014 Medicare volume multiplied by three.

Specialty Otolaryngology	Frequency 2717	Percentage 73.99 %
Specialty Emergency Medicine	Frequency 661	Percentage 18.00 %
Specialty Physician Asst / Family Practice	Frequency 110	Percentage 2.99 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,224

If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This is based on the 2014 Medicare volume per the RUC database.

Specialty Otolaryngology	Frequency 906	Percentage 74.01 %
Specialty Emergency Medicine	Frequency 220	Percentage 17.97 %
Specialty Physician Asst / Family Practice	Frequency 37	Percentage 3.02 %

Do many physicians perform this service across the United States? Yes

---

### **Berenson-Eggers Type of Service (BETOS) Assignment**

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Procedures

BETOS Sub-classification:

Minor procedure

BETOS Sub-classification Level II:

Other

---

### **Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 30906

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**Attestation Statement**

This form needs to be completed by any **RUC Advisor** whose specialty society is developing a recommendation to be reviewed by the RUC.

As a RUC Advisor, I attest that the integrity of the RUC survey, summary of recommendation forms and practice expense recommendations are based on accurate and complete data to the best of my knowledge. As a RUC advisor, I acknowledge that violations would be addressed by the executive committee (i.e., RUC Chair , AMA Representative and Alternate AMA Representative.)

**AMA/Specialty Society Update Process  
Practice Expense Summary of Recommendation  
Facility Direct Inputs**

CPT Long Descriptor: Control nasal hemorrhage, anterior, simple (limited cautery and/or packing) any method

CPT Long Descriptor: Control nasal hemorrhage, anterior, complex (extensive cautery and/or packing) any method

CPT Long Descriptor: Control nasal hemorrhage, posterior, with posterior nasal packs and/or cautery, any method;  
initial

CPT Long Descriptor: Control nasal hemorrhage, posterior, with posterior nasal packs and/or cautery, any method;  
subsequent

Global Period: 000 Meeting Date: April 2016

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee: ***We convened an expert panel to develop our PE recommendations for these services.***

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale: ***We used the existing PE inputs for these codes as our reference. Of note, codes 30903-30906 had their PE inputs reviewed in April 2014. 30901 was not reviewed at that time and has not been reviewed since October 2000.***

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time: N/A

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence: We are not requesting an increase in facility clinical staff time for this code.

5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

There are no pre-service staff activities for 30901 or 30903. For 30905 and 30906, the PE subcommittee previously approved time for staff to schedule space in the facility and obtain consent prior to the procedure.

Intra-Service Clinical Labor Activities:

There are no staff activities in the facility for these services as they are 000 global codes.

Post-Service Clinical Labor Activities:

We are not requesting any post service staff time when these procedures are performed in the facility setting.

CPT Long Descriptor: Control nasal hemorrhage, posterior, with posterior nasal packs and/or cautery, any method;  
subsequent

Global Period: .000 Meeting Date: April 2016

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee: ***We convened an expert panel to develop our PE recommendations for these services.***

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale:  
***We used the existing PE inputs for these codes as our reference. Of note, codes 30903-30906 had their PE inputs reviewed in April 2014. 30901 was not reviewed at that time and has not been reviewed since October 2000.***

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time: N/A

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:

We are requesting an increase in clinical staff time for 30901 to ensure the times for each activity are in accordance with PE subcommittee standards that have been put in place since the code's PE was last reviewed in 2000. We also modified the monitoring time for 30905 and 30906, which is much more critical with posterior bleeds, to reflect that the monitoring is done at a 1:4 ratio. This distinction / line was not available when the codes were reviewed in April 2014.

We are also requesting some modified supplies and equipment to replace former inputs that are now outdated and no longer the standard. For example, we are replacing the surgical mask for the physician and staff with a surgical mask with face shield. We replaced the former syringe with a 3CC syringe which is needed to inflate the catheter. We added an epistaxis balloon for both posterior codes as this is the item utilized to control posterior epistaxis. We added tubing and suction (Yankauer and Frazier) to 30901 as this is how you suck out the patient's mouth and suction the blood that's in the nose. We added a suction canister to each code to collect the suctioned blood. We added cautery supplies to 30905 as it was erroneously left out of the last PE review. We replaced the cotton balls with cottonoids and the lidocaine with epi with 1-2% injectable lidocaine to mirror other codes in this area of the CPT book. We added an atomizer tip and tip shield as it was erroneously left out of the last PE review, and is needed to deliver topical medications to the nose. Further, shoe covers are used to avoid soiling of the physician and staff's shoes.

For equipment, we added several items to 30901 to make it consistent with the other codes in this family. That includes the electrocautery, the SMR cabinet, and the instrument pack of basic instruments such as a nasal speculum, alligator forceps,

Blakesely forceps and bayonet forceps. We are also requesting additional equipment time to clean the necessary items used during the procedure.

5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

There are no pre-service staff activities for these services when performed in a physician office.

Intra-Service Clinical Labor Activities:

Intra service activities performed by the staff include: prepare room and equipment, position patient, assist physician with application of local / topical anesthesia used during the procedure, assist the physician with the procedure, monitor the patient (1:4 ratio), clean the room and equipment, clean the surgical instruments, review lab reports, and provide home care instructions and coordinate prescriptions or antibiotics. Time was removed for all codes for lines 21-23 to reflect that these are typically done with an E/M or a hospital visit, however, we are requesting additional time, despite an E/M typically being done on the same day because the equipment needed for this procedure is not typically available or prepared for an E/M visit. This includes topical anesthetic, topical vasoconstrictors, bayonet forceps, silver nitrate, and nasal packing. Further, the patient needs to be draped which is not typically done with an E/M.

Post-Service Clinical Labor Activities:

We are requesting 3 minutes for staff to make phone calls in the post op period. During this time staff call in prescriptions for pain medication or antibiotics depending on what the physician used to pack the patient's nose.

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
*CMS High Expenditure Procedures*

April 2016

**Tracheostomy**

In the Final Rule for 2016 CMS re-ran the high expenditure services across specialties with Medicare allowed charges of \$10 million or more. CMS identified the top 20 codes by specialty in terms of allowed charges, excluding 010 and 090-day global services, anesthesia and Evaluation and Management services and services reviewed since CY 2010. Code 31600 was identified through this screen and codes 31601, 31603, 31605, and 31610 were added as family codes for survey.

**31600 Tracheostomy, planned (separate procedure);**

The RUC reviewed the survey results from 66 general surgeons and otolaryngologists and determined that the survey 25<sup>th</sup> percentile work RVU of 5.56, lower than the current value, appropriately accounts for the work required to perform this service. The RUC recommends 40 minutes of pre-service evaluation, 10 minutes of pre-service positioning, 10 minutes of pre-service scrub/dress/wait, 30 minutes of intra-service time and 30 minutes of immediate post-operative time.

The RUC compared the surveyed code to the top two key reference services 32608 *Thoracoscopy; with diagnostic biopsy(ies) of lung nodule(s) or mass(es) (eg, wedge, incisional), unilateral* (work RVU = 6.84 and intra-service time of 60 minutes) and 43210 *Esophagogastroduodenoscopy, flexible, transoral; with esophagogastric fundoplasty, partial or complete, includes duodenoscopy when performed* (work RVU = 7.75 and intra-service time of 60 minutes) and agreed that the survey respondents valued this service lower as it requires less physician work and time to perform, but is more intense and complex. Performing a tracheotomy carries the risk of serious complications including bleeding, damage to the trachea, subcutaneous emphysema, pneumothorax, and hematoma, any of which can compromise continued breathing and patient survival.

The RUC compared 31600 to MPC code 52352 *Cystourethroscopy, with ureteroscopy and/or pyeloscopy; with removal or manipulation of calculus (ureteral catheterization is included)* (work RVU 6.75 and 45 minutes intra-service time) and agreed that a work RVU of 5.56 for 31600 correctly accounts for less intra-operative time, but greater intensity and complexity, as the RUC noted that 52352 was an endoscopic outpatient procedure on an otherwise healthy individual. Finally, the RUC reviewed the relative intra-operative intensity to other recently reviewed codes with similar intensity and agreed that 31600 was relatively as intense and complex. For additional support the RUC referenced comparable services 34834 *Open brachial artery exposure to assist in the deployment of aortic or iliac endovascular prosthesis by arm incision, unilateral* (work RVU = 5.34 and 30 minutes intra-service time) and 35476 *Transluminal balloon angioplasty, percutaneous; venous* (work RVU = 5.10 and 35 minutes intra-service time). **The RUC recommends a work RVU of 5.56 for CPT code 31600.**

### **31601 Tracheostomy, planned (separate procedure); younger than 2 years**

#### **Compelling Evidence**

The specialty societies presented compelling evidence that the value for code 31601 was based on a flawed methodology. The specialty societies informed the RUC that Harvard reviewed code 31601 as a 090-day global code. In that study, the intra-operative work estimates were provided by only ten general otolaryngologists and the pre-and post-operative work were computed by algorithm. The specialty societies also noted that the 1992 Medicare Physician Payment Schedule indicated a 090-day global period for 31601 with a footnote that the work RVU was “gap-filled” by CMS. In the 1993 Medicare Physician Payment Schedule, the global period was changed to 000-day and the work RVU reduced without resurvey and without any discussion in the Federal Register text. The specialty societies further noted that, during the first five-year-review in 1995, a comment was made to CMS that the intra-operative work of 31601 was under valued and the code was surveyed. However, in 1995, the society did not have the history of the CMS global period changes and “gap fill” changes in valuation for this low volume procedure. Therefore, the RUC concluded that the patient population and procedure had not changed since the Harvard review and the Harvard work RVU was maintained. The rejected survey data were entered into the RUC database several years later and were marked “do not use to validate for physician work” because the surveyed physician time did not correspond to the Harvard work RVU that the RUC maintained. The RUC accepted the compelling evidence of flawed methodology as presented.

The RUC reviewed the survey results from 33 otolaryngologists and determined that the median work RVU of 8.00 appropriately accounts for the work required to perform this service. The RUC recommends 40 minutes of pre-service evaluation, 10 minutes of pre-service positioning, 10 minutes of pre-service scrub/dress/wait, 45 minutes of intra-service time and 30 minutes of immediate post-operative time.

The RUC compared the surveyed code to the top two key reference services 43274 *Endoscopic retrograde cholangiopancreatography (ERCP); with placement of endoscopic stent into biliary or pancreatic duct, including pre- and post-dilation and guide wire passage, when performed, including sphincterotomy, when performed, each stent* (work RVU = 8.58 and intra-service time of 68 minutes) and 43210 *Esophagogastroduodenoscopy, flexible, transoral; with esophagogastric fundoplasty, partial or complete, includes duodenoscopy when performed* (work RVU = 7.75 and intra-service time of 60 minutes) and agreed that this service is appropriately valued as it requires less time to perform but is more intense and complex. Performing a tracheotomy carries the risk of serious complications including bleeding, damage to the trachea, subcutaneous emphysema, pneumothorax, and hematoma, any of which can compromise continued breathing and survival. In addition, performing a tracheostomy in pediatric patients has added difficulty because a child's neck is anatomically different from an adult's neck in the following ways: The dome of the pleura extends into the neck and is thus vulnerable to injury. The trachea is pliable and can be difficult to palpate. The neck is short, and there is significantly less working space. The cricoid can be injured if it is not correctly identified. The RUC also determined that a work RVU of 8.00 for 31601 appropriately ranked relative to 31600, as 31601 is performed on a pediatric patient and is significantly more intense and complex and requires more physician time.

The RUC also agreed that code 31601 was more intense and complex than MPC code 52353 *Cystourethroscopy, with ureteroscopy and/or pyeloscopy; with lithotripsy (ureteral catheterization is included)* (work RVU = 7.50 and 60 minutes intra-service time) which includes a low intensity diagnostic endoscopy prior to a therapeutic procedure and which is an outpatient procedure on otherwise healthy patients.. Finally, the RUC reviewed the relative intra-operative intensity to other recently reviewed codes with similar intensity and agreed that 31601 was relatively as intense/complex. **The RUC recommends a work RVU of 8.00 for CPT code 31601.**

### **31603 Tracheostomy, emergency procedure; transtracheal**

#### **Compelling Evidence**

The specialty societies presented compelling evidence that the value for code 31603 was based on a flawed methodology. The specialty societies informed the RUC that Harvard obtained estimates from both otolaryngologists and thoracic surgeons as a 090-day global code, however thoracic surgeons are not a primary provider of this service (less than 2%) and general surgeons (29%) were not included in the review. In addition, prior to implementation of the 1992 Medicare Physician Payment Schedule, the global period was changed from 090-day to 000-day and the work RVU reduced without any discussion in the Federal Register text. The specialty societies further noted that, during the first five-year-review in 1995, a comment was made to CMS that the intra-operative work of 31603 was under valued and the code was surveyed. However, in 1995, the society did not have the history of the CMS global period changes and “gap fill” changes in valuation for this low volume procedure. Therefore, the RUC concluded that the patient population and procedure had not changed since the Harvard review and the Harvard work RVU was maintained. The rejected survey data were entered into the RUC database several years later and were marked “do not use to validate for physician work” because the surveyed physician time did not correspond to the Harvard work RVU that the RUC maintained. The RUC accepted the compelling evidence of flawed methodology as presented.

The RUC reviewed the survey results from 61 general surgeons and otolaryngologists and determined that the survey 25<sup>th</sup> percentile work RVU of 6.00 appropriately accounts for the work required to perform this service. The RUC recommends 30 minutes of pre-service evaluation, 5 minutes of pre-service positioning, 10 minutes of pre-service scrub/dress/wait, 30 minutes of intra-service time and 30 minutes of immediate post-operative time.

Although both 31603 and 31600 are both intense procedures, the RUC noted code 31603 is relatively more intense than a planned tracheostomy, code 31600. The RUC compared code 31603 to the top two key reference services 43274 *Endoscopic retrograde cholangiopancreatography (ERCP); with placement of endoscopic stent into biliary or pancreatic duct, including pre- and post-dilation and guide wire passage, when performed, including sphincterotomy, when performed, each stent* (work RVU = 8.58 and intra-service time of 68 minutes) and 32608 *Thoracoscopy; with diagnostic biopsy(ies) of lung nodule(s) or mass(es) (eg, wedge, incisional), unilateral* (work RVU = 6.84 and intra-service time of 60 minutes) and agreed that 31603 requires less physician time to perform, but is more intense and complex. Performing a tracheostomy carries the risk of serious complications including bleeding, damage to the trachea, subcutaneous emphysema, pneumothorax, and hematoma, any of which can compromise continued breathing and survival. Furthermore, in this case, the airway is not secured during the performance of the procedure, increasing the intensity and complexity.

For additional support the RUC referenced comparable services 34834 *Open brachial artery exposure to assist in the deployment of aortic or iliac endovascular prosthesis by arm incision, unilateral* (work RVU = 5.34 and 30 minutes intra-service time); 36222 *elective catheter placement, common carotid or innominate artery, unilateral, any approach, with angiography of the ipsilateral extracranial carotid circulation and all associated radiological supervision and interpretation, includes angiography of the cervicocerebral arch, when performed* (work RVU = 5.53 and 40 minutes intra-service time) and MPC code 52352 *Cystourethroscopy, with ureteroscopy and/or pyeloscopy; with removal or manipulation of calculus (ureteral catheterization is included)* (work RVU 6.75 and 45 minutes intra-service time) and agreed that a work RVU of 6.00 for 31603 correctly accounted for less intra-operative time, but greater intensity and complexity, as the RUC noted that 52352 was an endoscopic outpatient procedure on an otherwise healthy individual and 36222, a percutaneous procedure, was also performed most often as outpatient and 11% in the office and did not carry the risks and intensity of 31603. Finally, the RUC reviewed the relative intra-operative intensity to other recently reviewed codes with similar intensity and agreed that 31603 was relatively as intense and complex. **The RUC recommends a work RVU of 6.00 for CPT code 31603.**

### **31605 Tracheostomy, emergency procedure; cricothyroid membrane**

#### **Compelling Evidence**

The specialty societies presented compelling evidence that the value for code 31605 was based on a flawed methodology. The specialty societies informed the RUC that Harvard obtained estimates from 10 otolaryngologists only for intraoperative time. General surgeons and other providers of the service were not included in the review. The specialties also indicated that Harvard work estimates and the proposed rule for the 1992 Medicare Physician Payment Schedule indicated code 31605 was a 000-day global code with a proposed work RVU of 5.57 (FR 06/05/91). Prior to implementation of the Final Rule for the first payment schedule, it appears that code 31605 was treated as if it were reviewed as a 090-day global code similar to codes 31601 and 31603 and then reduced to 3.77 as a 000-day global code (FR 11/25/91) without any discussion in the Federal Register text. The RUC accepted the compelling evidence of flawed methodology as presented.

The survey was sent to a random selection of 1,802 surgeons from the AAO-HNS and ACS membership database. Responses were obtained from 56 surgeons; however the median experience was zero. This was not unexpected as this procedure is rarely performed. The survey data was significantly different between respondents who had experience and respondents without experience. After significant discussion, the RUC agreed that the recommendation should be based on the summary data from the experienced providers. The RUC reviewed the survey results from the 20 respondents with experience performing this very low volume service in the past 12 months and agreed that the survey 25<sup>th</sup> percentile work RVU of 6.45 accurately accounts for the work required to perform this procedure.

The RUC recommends 15 minutes of pre-service evaluation, 3 minutes of pre-service positioning, 5 minutes of pre-service scrub/dress/wait, 20 minutes of intra-service time and 21 minutes of immediate post-operative time. The RUC compared the surveyed code to the top two key reference services 43274 *Endoscopic retrograde cholangiopancreatography (ERCP); with placement of endoscopic stent into biliary or pancreatic duct, including pre- and post-dilation and guide wire passage, when performed, including sphincterotomy, when performed, each stent* (work RVU = 8.58 and intra-service time of 68 minutes) and 32608 *Thoracoscopy; with diagnostic biopsy(ies) of lung nodule(s) or mass(es) (eg, wedge,*

*incisional*), *unilateral* (work RVU = 6.84 and intra-service time of 60 minutes) and agreed that the intra-service work intensity of 31605 (IWPUT=0.277) is significantly more intense and complex than both of these services. The RUC noted that the intensity of 31605 is more comparable to the intensity for 31500 *Intubation, endotracheal, emergency procedure* (Feb 2016 for CY 2017 RUC recommended work RVU=3.00, intra-service time of 10 minutes and IWPUT=0.252). **The RUC recommends a work RVU of 6.45 for CPT code 31605.**

### **31610 Tracheostomy, fenestration procedure with skin flaps**

The RUC reviewed the survey results from 94 general surgeons and otolaryngologists and recommends the current work RVU of 9.38 and 40 minutes of pre-service evaluation, 10 minutes of pre-service positioning, 10 minutes of pre-service scrub/dress/wait, 45 minutes of intra-service time, 20 minutes of immediate post-operative time, 2-99231 subsequent hospital care visits, 1-99232 subsequent hospital care visit, 1-99233 subsequent hospital care visit, 1-99238 discharge day management and 3-99213 office visits. The RUC agreed that the 99232 visit is typically the first inpatient post-operative visit and is more intense and complex than the two 99231 visits because the physician is checking for significant post-op complications such as pneumothorax subcutaneous crepitus and subcutaneous emphysema. The 99231 visits are to evaluate the skin flaps for viability and make sure there is no infection. The 99233 service is typically 4-5 days after the procedure and is the most intense visit because it includes changing the tracheostomy, taking out sutures, removing the tracheostomy, inspecting the area and inserting a new tracheostomy into the stoma. Further, the RUC agreed that 3-99123 office visits are appropriate in order to examine the patient, inspect the larynx, remove the tracheostomy and examine stoma and skin flaps, replace the tracheostomy, cauterize any granulation tissue at stoma, answer patient/family questions, assess for adequacy of pain control and discuss proper maintenance of the tracheostomy including stoma care.

The RUC noted that the previous Harvard physician intra-service time of 61 minutes was computed by an algorithm. The initial Harvard review indicated the intra-operative time was 52 minutes and then finalized at 61 minutes. The RUC noted it is not valid to compare the current surveyed intra-operative time of 45 minutes to the old computed Harvard time. The specialty societies also noted that the Harvard postop visit times were transformed into low level hospital and office visits. The RUC noted that a correction of the postoperative visits to the correct levels results in a negative intensity. **The RUC determined that since this service has a negative IWPUT it should be converted to a 000-day global period and be re-surveyed.**

The RUC compared the surveyed code to the top two key reference services 41120 *Glossectomy; less than one-half tongue* (work RVU = 11.14 and intra-service time of 60 minutes) and 38542 *Dissection, deep jugular node(s)* (work RVU = 7.95 and intra-service time of 60 minutes) and recommends the current value as an interim step as there was no compelling evidence provided to consider a higher value at this time. The intra-operative work for CPT code 31610 is more intense and complex than both 41120 and 38542, both of which are outpatient procedures. The post-operative work for 31610 is significantly greater than both of the key reference services. **The RUC recommends an interim work RVU of 9.38 for CPT code 31610.**

**Practice Expense:**

CPT codes 31603 and 31605 were identified by the PE Subcommittee as emergent procedures and no practice expense direct inputs were requested for these two services. For CPT code 31610, the RUC recommends the 090-global direct practice expense inputs with minor modifications for additional supplies and equipment that are not standard to Evaluation and Management services.

**RUC Database Flag**

The RUC recommends to flag CPT codes 31605 and 31610 as “do not use” for validation of work as 31605 physician time and work recommendations are based on only the 20 survey respondents who performed this service in the past 12 months and 31610 has a negative IWPUT and should be considered for a 000-day global period.

**Global Period**

The RUC requests that CMS assign a 000-day global period to CPT code 31610 and it be resurveyed for October 2016 and may require CPT to create a new code to describe changing the tracheostomy tube in the office. The RUC noted that the specialty does not need to resurvey the entire family.

**Work Neutrality**

The RUC’s recommendation for this code will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
31600	Tracheostomy, planned (separate procedure);	000	5.56
31601 (f)	Tracheostomy, planned (separate procedure); younger than 2 years	000	8.00
31603 (f)	Tracheostomy, emergency procedure; transtracheal	000	6.00
31605 (f)	Tracheostomy, emergency procedure; cricothyroid membrane	000	6.45

31610 (f)	Tracheostomy, fenestration procedure with skin flaps	090	9.38 (No Change)  (Interim, resurvey as 000-day global period)

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 31600	Tracking Number	Original Specialty Recommended RVU: <b>6.93</b>
		Presented Recommended RVU: <b>6.93</b>
Global Period: 000		RUC Recommended RVU: <b>5.56</b>
CPT Descriptor: Tracheostomy, planned (separate procedure)		

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 65-year-old male with pneumonia and chronic obstructive pulmonary disease is unable to be extubated after prolonged intubation. A planned tracheostomy is performed.

Percentage of Survey Respondents who found Vignette to be Typical: 91%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 25%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: Review labs and imaging. Select and order the appropriate antibiotic(s) and confirm timing and administration. Re-examine patient to make sure that physical findings have not changed and update H&P. Meet with patient and family to review planned procedure and postoperative management. Mark site of proposed skin incision. Review and obtain informed consent with patient and/or family. Review length and type of anesthesia with anesthesiologist. Verify that all required instruments and supplies are available. Assist in transfer of patient from gurney to operating table. Patient is positioned with the neck extended and the shoulders elevated on a small roll. Assist with adjusting the OR table and anesthesia lines so operative site is accessible.. Perform surgical time out with operating surgical team and anesthesia team. Verify areas surrounding skin incisions to be prepared and draped and sterilely prep area. Scrub and gown. Re-assess position of the extremities and head. Drape out surgical area. Inject local anesthesia into planned incision site and subcutaneous tissue.

Description of Intra-Service Work: Under general anesthesia, a transverse incision is performed. Subcutaneous fat may be removed with electrocautery. Dissection proceeds until the midline raphe between the strap muscles is identified. The inferior limit of the field is palpated to assess the proximity of the innominate artery. The aberrant anterior jugular veins and smaller vessels are either cauterized or ligated. Midline dissection is essential for hemostasis and avoidance of paratracheal structures. The strap muscles are then separated and retracted laterally, exposing the pretracheal fascia and the thyroid isthmus. The thyroid isthmus division is performed sharply with suture ligature or with electrocautery. The isthmus is elevated off the trachea with a hemostat. Anesthesia is notified that the surgical team is about to enter the airway with a cricoid hook and the endotracheal tube balloon is deflated. A cricoid hook is placed to gain control of the airway and the endotracheal tube balloon is reinflated. Next, attention is turned to drying the field and cleaning the remaining fascia off of the anterior face of the trachea. The tracheostomy tube is tested to ensure there is no leak in the balloon. The presence and ease of access of all instruments needed to secure the airway is reconfirmed. Anesthesia is notified that the surgical team

will be entering the airway and the endotracheal tube balloon is deflated. After the trachea is entered, secretions and blood are suctioned out of the airway lumen. The lateral retractors are placed in the trachea and the tracheotomy is dilated. Anesthesia withdraws the endotracheal tube slowly to a point just proximal to the opening. The previously tested tracheostomy tube is inserted. The obturator is removed, the inner cannula is placed and the balloon is inflated. After an intact airway is confirmed with carbon dioxide return and bilateral breath sounds, the tracheostomy tube is secured to the skin with non-absorbable sutures. A tracheostomy collar is attached with the head flexed to avoid unnecessary slack in the collar. The skin is not closed to avoid the risk of subcutaneous emphysema and subsequent pneumomediastinum. A sponge is placed between the skin and the flange.

Description of Post-Service Work: Assist in transfer of patient from operating table to gurney. Supervise transfer of patient, who is respirator dependent, back to the ICU. Discuss postoperative recovery care with ICU staff. Write postoperative orders for medications, imaging, and labs. Discuss procedure and outcome with family. Write brief operative note. Dictate operative report and copy referring physician(s). Review post-operative x-ray for pneumothorax.

------------------------------	------	------

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Background**

In the Final Rule for 2016, code 36100 was identified by CMS through a screen of high expenditure services across specialties with Medicare allowed charges of \$10 million or more.

**Survey Sample**

A survey request was sent to a random selection of 1,802 surgeons from the AAO-HNS and ACS membership database.

**Recommendation - 31600****Pre-time Package 4**

We recommend pre-time package 4 (*Difficult Patient/Difficult Procedure*). **Recommended times for the preservice categories are 40/10/10.** An additional 7 minutes has been added for positioning (*Patient is positioned with the neck extended and the shoulders elevated on a small roll. Assist with adjusting the OR table and anesthesia lines so operative site is accessible. Re-assess position of the extremities and head, adjust as needed. Inject local anesthesia into planned incision site and subcutaneous tissue.*). The scrub, dress, wait time has been reduced by 10 minutes to be consistent with the survey median.

**Post-time Package 9b**

We recommend post-time package 9b (*General Anesthesia or Complex Regional Block/Complex Procedure*), with a reduction of 3 minutes to be consistent with the survey median.

**Key Reference Services (KRS)**

The intra-operative work of code 31600 is more intense/complex than both 32608 and 43210. Performing a tracheotomy carries the risk of serious complications including bleeding, damage to the trachea, subcutaneous emphysema, pneumothorax, and hematoma, any of which can compromise continued breathing and patient survival.

**MPC Comparison**

The intra-operative work of code 31600 is more intense than MPC codes 52352 and 52353, both of which include diagnostic endoscopy prior to a therapeutic procedure and both of which are outpatient procedures on otherwise healthy patients.

**Other Comparison Codes**

The intra-operative work for code 31600 is intense and complex and carries the risk of serious complications that could compromise a patient's survival. Code 31600 is not easily compared with other 000 global codes, many of which are performed as outpatient and/or office procedures on ambulatory patients. As support of our recommendation, we provide a list of codes below that have been recently reviewed by the RUC and approved by CMS that have intra-operative intensities comparable to the IWPUT of 0.123 for 31600 with a work RVU of 5.56.

RUC	CPT	DESCRIPTOR	IWPUT	INTRA TIME
2015	<b>65855</b>	Trabeculoplasty by laser surgery	0.142	10
2010	<b>35840</b>	Exploration for postoperative hemorrhage, thrombosis or infection; abdomen	0.142	60
2012	<b>92937</b>	Percutaneous transluminal revascularization of or through coronary artery bypass graft (internal mammary, free arterial, venous), any combination of intracoronary stent, atherectomy and angioplasty, including distal protection when performed; single vessel	0.145	67
2013	<b>33366</b>	Transcatheter aortic valve replacement (TAVR/TAVI) with prosthetic valve; transapical exposure (eg, left thoracotomy)	0.147	195
2012	<b>92941</b>	Percutaneous transluminal revascularization of acute total/subtotal occlusion during acute myocardial infarction, coronary artery or coronary artery bypass graft, any combination of intracoronary stent, atherectomy and angioplasty, including aspiration thrombectomy when performed, single vessel	0.155	70
2013	<b>67041</b>	Vitrectomy, mechanical, pars plana approach; with removal of preretinal cellular membrane (eg, macular pucker)	0.160	60
2013	<b>67042</b>	Vitrectomy, mechanical, pars plana approach; with removal of internal limiting membrane of retina (eg, for repair of macular hole, diabetic macular edema), includes, if performed, intraocular tamponade (ie, air, gas or silicone oil)	0.160	60
2010	<b>67220</b>	Destruction of localized lesion of choroid (eg, choroidal neovascularization); photocoagulation (eg, laser), 1 or more sessions	0.183	15
2010	<b>67210</b>	Destruction of localized lesion of retina (eg, macular edema, tumors), 1 or more sessions; photocoagulation	0.199	15
2012	<b>66982</b>	Extracapsular cataract removal with insertion of intraocular lens prosthesis (1-stage procedure), manual or mechanical technique (eg, irrigation and aspiration or phacoemulsification), complex, requiring devices or techniques not generally used in routine cataract surgery (eg, iris expansion device, suture support for intraocular lens, or primary posterior capsulorrhexis) or performed on patients in the amblyogenic developmental stage	0.207	33
2012	<b>66984</b>	Extracapsular cataract removal with insertion of intraocular lens prosthesis (1 stage procedure), manual or mechanical technique (eg, irrigation and aspiration or phacoemulsification)	0.210	21
2012	<b>65800</b>	Paracentesis of anterior chamber of eye (separate procedure); with removal of aqueous	0.217	5

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code:31601      Tracking Number

Original Specialty Recommended RVU: **8.00**

Global Period: 000

Presented Recommended RVU: **8.00**RUC Recommended RVU: **8.00**

CPT Descriptor: Tracheostomy, planned (separate procedure); younger than 2 years

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: An 18-month-old male with subglottic stenosis is unable to be extubated after prolonged intubation. A planned tracheostomy is performed.

Percentage of Survey Respondents who found Vignette to be Typical: 85%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 15%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: Review labs and imaging. Select and order the appropriate antibiotic(s) and confirm timing and administration. Re-examine patient to make sure that physical findings have not changed and update H&P. Meet with patient and family to review planned procedure and postoperative management. Mark site of proposed skin incision. Review and obtain informed consent with patient and/or family. Review length and type of anesthesia with anesthesiologist. Verify that all required instruments and supplies are available. Assist in transfer of patient from gurney to operating table. Patient is positioned with the neck extended and the shoulders elevated on a small roll. Assist with adjusting the OR table and anesthesia lines so operative site is accessible.. Perform surgical time out with operating surgical team and anesthesia team. Verify areas surrounding skin incisions to be prepared and draped and sterilely prep area. Scrub and gown. Re-assess position of the extremities and head. Drape out surgical area. Inject local anesthesia into planned incision site and subcutaneous tissue.

Description of Intra-Service Work: Under general anesthesia, a transverse incision is performed. Subcutaneous fat may be removed with electrocautery. Dissection proceeds until the midline raphe between the strap muscles is identified. The inferior limit of the field is palpated to assess the proximity of the innominate artery. The aberrant anterior jugular veins and smaller vessels are either cauterized or ligated. Midline dissection is essential for hemostasis and avoidance of paratracheal structures. The strap muscles are then separated and retracted laterally, exposing the pretracheal fascia and the thyroid isthmus. The thyroid isthmus division is performed sharply with suture ligature or with electrocautery. The isthmus is elevated off the trachea with a hemostat. Anesthesia is notified that the surgical team is about to enter the airway with a cricoid hook and the endotracheal tube balloon is deflated. A cricoid hook is placed to gain control of the airway and the endotracheal tube balloon is reinflated. Next, attention is turned to drying the field and cleaning the remaining fascia off of the anterior face of the trachea. The tracheostomy tube is tested to ensure there is no leak in the balloon. The presence and ease of access of all instruments needed to secure the airway is reconfirmed. Anesthesia is notified that the surgical team will be entering the airway and the endotracheal tube balloon is deflated. After the trachea is entered, secretions and blood

are suctioned out of the airway lumen. The lateral retractors are placed in the trachea and the tracheotomy is dilated. Anesthesia withdraws the endotracheal tube slowly to a point just proximal to the opening. The previously tested tracheostomy tube is inserted. The obturator is removed, the inner cannula is placed and the balloon is inflated. After an intact airway is confirmed with carbon dioxide return and bilateral breath sounds, the tracheostomy tube is secured to the skin with non-absorbable sutures. A tracheostomy collar is attached with the head flexed to avoid unnecessary slack in the collar. The skin is not closed to avoid the risk of subcutaneous emphysema and subsequent pneumomediastinum. A sponge is placed between the skin and the flange.

Description of Post-Service Work: Assist in transfer of patient from operating table to gurney. Supervise transfer of patient, who is respirator dependent, back to the ICU. Discuss postoperative recovery care with ICU staff. Write postoperative orders for medications, imaging, and labs. Discuss procedure and outcome with family. Write brief operative note. Dictate operative report and copy referring physician(s). Review post-operative x-ray for pneumothorax.

Overall intensity/complexity	1.09	1.60
------------------------------	------	------

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Background**

In the Final Rule for 2016, code 36100 was identified by CMS through a screen of high expenditure services across specialties with Medicare allowed charges of \$10 million or more. Code 36101 was added as family code.

**Compelling Evidence****Flawed methodology in previous valuation:**

Code 31601 is a rarely performed pediatric procedure. Harvard reviewed code 31601 as a 90-day global code. Intra-operative work estimates were provided by only ten general otolaryngologists and pre-and post-operative work was computed by algorithm. In fact, the 1992 PFS indicated a 90-day global period for 31601 with a footnote that the work RVU was "gap-filled" by CMS. In the 1993 PFS, the global period was changed to 0-day and the work RVU reduced without any discussion in the Federal Register text. **Therefore, we believe the original Harvard value was derived using a flawed methodology.**

During the first five-year-review in 1995, AAO-HNS commented that the intra-operative work of 31601 was under valued. The RUC workgroup reviewing the otolaryngology codes developed criteria for considering a change in a value, specifically, the presenting society was required to have convincing evidence of a change in patient or convincing evidence that Harvard times were incorrect. Absent that evidence, the workgroup maintained the current Harvard work RVU. In 1995, the society did not have the history of the global period changes and "gap fill" changes in valuation for this low volume procedure. Therefore, the workgroup concluded that the patient population and procedure had not changed since the Harvard review. They recommended to maintain the Harvard work RVU and rejected the society recommendation of 7.75. Several years after the 1995 review, when the RUC database was created, the Harvard work RVU and the 1994 survey data were included as RUC time. Several years after that, the code was tagged as "do not use to validate for physician work" because the surveyed physician time did not correspond to the Harvard work RVU. **We believe the process of review during the Harvard study and the 1995 5YR was flawed and that consideration should have been given to the value of the intra-operative work relative to other highly intense/complex procedures.**

**Survey Sample**

A survey request was sent to a random selection of 1,379 surgeons from the AAO-HNS membership database.

**Recommendation - 31601**

We recommend the survey median work RVU of 8.00 for code 31601.

**Pre-time Package 4**

We recommend pre-time package 4 (*Difficult Patient/Difficult Procedure*). **Recommended times for the preservice categories are 40/10/10.** An additional 7 minutes has been added for positioning (*Infant is positioned with the neck extended and the shoulders elevated on a small roll. Assist with adjusting the OR table and anesthesia lines so operative site is accessible. Re-assess position of the extremities and head, adjust as needed. Inject local anesthesia into planned incision site and subcutaneous tissue.*). The scrub, dress, wait time has been reduced by 10 minutes to be consistent with the survey median.

**Post-time Package 9b**

We recommend post-time package 9b (*General Anesthesia or Complex Regional Block/Complex Procedure*), with a reduction of 3 minutes to be consistent with the survey median.

**Key Reference Services (KRS)**

The intra-operative work of code 31601 is more intense/complex than both 43274 and 43210. Performing a tracheotomy carries the risk of serious complications including bleeding, damage to the trachea, subcutaneous emphysema, pneumothorax, and hematoma, any of which can compromise continued breathing and survival. In addition, performing a tracheostomy in pediatric patients has added difficulty because a child's neck is anatomically different from an adult's neck in the following ways: The dome of the pleura extends into the neck and is thus vulnerable to injury. The trachea is pliable and can be difficult to palpate. The neck is short, and there is significantly less working space. The cricoid can be injured if it is not correctly identified.

**MPC Comparison**

The intra-operative work of code 31601 is more intense/complex than MPC code 52353, which includes diagnostic endoscopy prior to a therapeutic procedure and which is an outpatient procedure on an otherwise healthy patient.

**Other Comparison Codes**

The intra-operative work for code 31601 is intense and complex and carries the risk of serious complications that could compromise a patient's survival. Code 31601 is not easily compared with other 000 global codes, many of which are performed as outpatient and/or office procedures on ambulatory patients. As support of our recommendation, we provide a list of codes below that have been recently reviewed by the RUC and approved by CMS that have intra-operative intensities comparable to the IWPUT of 0.134 for 31601 with a work RVU of 8.00.

RUC	CPT	DESCRIPTOR	IWPUT	INTRA TIME
2015	<b>65855</b>	Trabeculoplasty by laser surgery	0.142	10
2010	<b>35840</b>	Exploration for postoperative hemorrhage, thrombosis or infection; abdomen	0.142	60
2012	<b>92937</b>	Percutaneous transluminal revascularization of or through coronary artery bypass graft (internal mammary, free arterial, venous), any combination of intracoronary stent, atherectomy and angioplasty, including distal protection when performed; single vessel	0.145	67
2013	<b>33366</b>	Transcatheter aortic valve replacement (TAVR/TAVI) with prosthetic valve; transapical exposure (eg, left thoracotomy)	0.147	195
2012	<b>92941</b>	Percutaneous transluminal revascularization of acute total/subtotal occlusion during acute myocardial infarction, coronary artery or coronary artery bypass graft, any combination of intracoronary stent, atherectomy and angioplasty, including aspiration thrombectomy when performed, single vessel	0.155	70
2013	<b>67041</b>	Vitrectomy, mechanical, pars plana approach; with removal of preretinal cellular membrane (eg, macular pucker)	0.160	60
2013	<b>67042</b>	Vitrectomy, mechanical, pars plana approach; with removal of internal limiting membrane of retina (eg, for repair of macular hole, diabetic macular edema), includes, if performed, intraocular tamponade (ie, air, gas or silicone oil)	0.160	60
2010	<b>67220</b>	Destruction of localized lesion of choroid (eg, choroidal neovascularization); photocoagulation (eg, laser), 1 or more sessions	0.183	15

RUC	CPT	DESCRIPTOR	IWPUT	INTRA TIME
2010	<b>67210</b>	Destruction of localized lesion of retina (eg, macular edema, tumors), 1 or more sessions; photocoagulation	0.199	15
2012	<b>66982</b>	Extracapsular cataract removal with insertion of intraocular lens prosthesis (1-stage procedure), manual or mechanical technique (eg, irrigation and aspiration or phacoemulsification), complex, requiring devices or techniques not generally used in routine cataract surgery (eg, iris expansion device, suture support for intraocular lens, or primary posterior capsulorrhexis) or performed on patients in the amblyogenic developmental stage	0.207	33
2012	<b>66984</b>	Extracapsular cataract removal with insertion of intraocular lens prosthesis (1 stage procedure), manual or mechanical technique (eg, irrigation and aspiration or phacoemulsification)	0.210	21
2012	<b>65800</b>	Paracentesis of anterior chamber of eye (separate procedure); with removal of aqueous	0.217	5

## SERVICES REPORTED WITH MULTIPLE CPT CODES

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.  
☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.  
☐ Multiple codes allow flexibility to describe exactly what components the procedure included.  
☐ Multiple codes are used to maintain consistency with similar codes.  
☐ Historical precedents.  
☐ Other reason (please explain)

- Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 31601

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
 If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty otolaryngology                      How often? Rarely

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. national utilization not available

Specialty	Frequency	Percentage	%
Specialty	Frequency	Percentage	%
Specialty	Frequency	Percentage	%

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 13 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC database

Specialty otolaryngology Frequency 5 Percentage 38.46 %

Specialty Frequency Percentage %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? No

### **Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 31601

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code:31603	Tracking Number	Original Specialty Recommended RVU: <b>8.00</b>
		Presented Recommended RVU: <b>6.00</b>
Global Period: 000		RUC Recommended RVU: <b>6.00</b>
CPT Descriptor: Tracheostomy, emergency procedure; transtracheal		

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 57-year-old male presents with significant airway obstruction from a large laryngeal tumor. There is concern for impending airway obstruction. An emergency tracheostomy transtracheal is performed.

Percentage of Survey Respondents who found Vignette to be Typical: 97%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 17%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: The pre-service work in a patient requiring an emergency tracheostomy is by nature limited due to the time constraints placed upon the physician. Typical pre-service work is not always possible, including reviewing labs, imaging, patient history and ordering pre-operative medications. Landmarks (eg, thyroid notch, sternal notch, cricoid cartilage) will be marked followed by marking the planned incision. Patient is positioned with the neck extended and the shoulders elevated on a small roll. Areas surrounding the skin incision are prepped and draped. The physician scrubs and gowns. Local anesthesia is infiltrated.

Description of Intra-Service Work: Under local anesthesia, a transverse incision is performed. Subcutaneous fat may be removed with electrocautery. Dissection proceeds until the midline raphe between the strap muscles is identified. The inferior limit of the field is palpated to assess the proximity of the innominate artery. The aberrant anterior jugular veins and smaller vessels are either cauterized or ligated. Midline dissection is essential for hemostasis and avoidance of paratracheal structures. The strap muscles are then separated and retracted laterally, exposing the pretracheal fascia and the thyroid isthmus. The thyroid isthmus division is performed sharply with suture ligature or with electrocautery. The isthmus is elevated off the trachea with a hemostat. There is communication with the patient to determine the need for further local anesthesia. A cricoid hook is placed to gain control of the airway. Next, attention is turned to drying the field and cleaning the remaining fascia off of the anterior face of the trachea. The tracheostomy tube is tested to ensure there is no leak in the balloon. The presence and ease of access of all instruments needed to secure the airway is reconfirmed. Anesthesia is notified that the surgical team will be entering the airway. After the trachea is entered, secretions and blood are suctioned out of the airway lumen. The lateral retractors are placed in the trachea and the tracheotomy is dilated. The previously tested tracheostomy tube is inserted. The obturator is removed, the inner cannula is placed and the balloon is inflated. After an intact airway is confirmed with carbon dioxide return and bilateral breath sounds, general anesthesia is induced. The tracheostomy tube is secured to the skin with non-absorbable sutures. Attach a tracheostomy collar with the head flexed to

avoid unnecessary slack in the collar. The skin is not closed to avoid the risk of subcutaneous emphysema and subsequent pneumomediastinum. A sponge is placed between the skin and the flange.

Description of Post-Service Work: Apply sterile dressings. Assist in transfer of patient from operating table to gurney. Supervise transfer of patient to the ICU. Discuss postoperative recovery care with ICU staff. Write postoperative orders for medications, imaging, and labs. Discuss procedure and outcome with family. Write brief operative note. Dictate operative report and copy referring physician(s). Review post-operative x-ray for pneumothorax.

### Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

### Background

In the Final Rule for 2016, code 36100 was identified by CMS through a screen of high expenditure services across specialties with Medicare allowed charges of \$10 million or more. Code 36103 was added as family code.

### Compelling Evidence

#### Flawed methodology in previous valuation:

Code 31603 is a low volume procedure. Harvard obtained estimates from both otolaryngologists and thoracic surgeons as a 90-day global code. Thoracic surgeons are not a primary provider of this service and general surgeons were not included in the review. Prior to implementation of the 1992 PFS, the global period was changed to 0-day and the work RVU reduced without any discussion in the Federal Register text. **Therefore, we believe the original Harvard value was derived using a flawed methodology.**

During the first five-year-review in 1995, AAO-HNS commented that the intra-operative work of 31603 was under valued. The RUC workgroup reviewing the otolaryngology codes developed criteria for considering a change in a value, specifically, the society was required to have convincing evidence of a change in patient or convincing evidence that Harvard times were incorrect. Absent that evidence, the workgroup maintained the current work RVU. In 1995, the society did not have the history of the Harvard study process and global period changes to provide as evidence. Therefore, the workgroup concluded that the patient population and procedure had not changed since the Harvard review. They recommended to maintain the Harvard work RVU and rejected the society recommendation of 8.35. Several years after the 1995 review, when the RUC database was created, the Harvard work RVU and the 1994 survey data were included as RUC time. Several years after that, the code was tagged as "do not use to validate for physician work" because the survey physician time did not correspond to the Harvard work RVU. **We believe the process of review during the Harvard study and the first 5YR was flawed and that consideration should have been given to the value of the intra-operative work relative to other highly intense/complex procedures.**

### Survey Sample

A survey request was sent to a random selection of 1,802 surgeons from the AAO-HNS and ACS membership database.

## Recommendation - 31603

**We recommend the survey median work RVU of 8.00 for code 31603.**

### Pre-time Package 4

We recommend pre-time package 4 (*Difficult Patient/Difficult Procedure*). **Recommended times for the preservice categories are 30/5/10.** Although the code descriptor states "emergency," the typical patient will have "impending" airway obstruction and not an obstructed airway. These patients will typically be taken to the OR to perform the procedure under local, with anesthesia staff available to assist, if needed. An additional 2 minutes has been added for positioning (*Patient is positioned with the neck extended and the shoulders elevated on a small roll.*). The scrub, dress, wait time has been reduced by 10 minutes to be consistent with the survey median.

### Post-time Package 7b

We recommend post-time package 7b (*Local Anesthesia/ Complex Procedure*), with the addition of 7 minutes. Time for post-operative work to monitor/stabilize the patient and for post-operative orders for this patient who will be transferred to ICU is consistent with the times for a complex patient/procedure that will undergo general anesthesia.

### Key Reference Services (KRS)

The intra-operative work of code 31603 is more intense/complex than both 43274 and 32608. Performing a tracheostomy carries the risk of serious complications including bleeding, damage to the trachea, subcutaneous emphysema, pneumothorax, and hematoma, any of which can compromise continued breathing and survival. Furthermore, in this case, the airway is not secured during the performance of the procedure, increasing the intensity and complexity.

### MPC Comparison

The intra-operative work of code 31603 is more intense/complex than MPC code 52353, which includes diagnostic endoscopy prior to a therapeutic procedure and which is an outpatient procedure on an otherwise healthy patient.

### Other Comparison Codes

The intra-operative work for code 31603 is intense and complex and carries the risk of serious complications that could compromise a patient's survival. Almost all of the pre-service work necessary for 31600 is necessary for 31603, but has to be performed in a much shorter time frame because of the nature of the procedure. This increases the intensity of the service. Code 31603 is not easily compared with other 000 global codes, many of which are performed as outpatient and/or office procedures on ambulatory patients. As support of our recommendation, we provide a list of codes below that have been recently reviewed by the RUC and approved by CMS that have intra-operative intensities comparable to the IWP/UT of 0.215 for 31603 with a work RVU of 8.00.

RUC	CPT	DESCRIPTOR	IWP/UT	INTRA TIME
2010	<b>67220</b>	Destruction of localized lesion of choroid (eg, choroidal neovascularization); photocoagulation (eg, laser), 1 or more sessions	0.183	15
2010	<b>67210</b>	Destruction of localized lesion of retina (eg, macular edema, tumors), 1 or more sessions; photocoagulation	0.199	15
2012	<b>66982</b>	Extracapsular cataract removal with insertion of intraocular lens prosthesis (1-stage procedure), manual or mechanical technique (eg, irrigation and aspiration or phacoemulsification), complex, requiring devices or techniques not generally used in routine cataract surgery (eg, iris expansion device, suture support for intraocular lens, or primary posterior capsulorrhexis) or performed on patients in the amblyogenic developmental stage	0.207	33
2012	<b>66984</b>	Extracapsular cataract removal with insertion of intraocular lens prosthesis (1 stage procedure), manual or mechanical technique (eg, irrigation and aspiration or phacoemulsification)	0.210	21
2012	<b>65800</b>	Paracentesis of anterior chamber of eye (separate procedure); with removal of aqueous	0.217	5
2009	<b>67028</b>	Intravitreal injection of a pharmacologic agent (separate procedure)	0.226	5

RUC	CPT	DESCRIPTOR	IWPUT	INTRA TIME
2007	31500	Intubation, endotracheal, emergency procedure	0.406	5

### SERVICES REPORTED WITH MULTIPLE CPT CODES

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No  
  
Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)  
  
☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.  
☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.  
☐ Multiple codes allow flexibility to describe exactly what components the procedure included.  
☐ Multiple codes are used to maintain consistency with similar codes.  
☐ Historical precedents.  
☐ Other reason (please explain)
- Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

### FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 31603

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty otolaryngology                      How often? Rarely

Specialty general surgery                      How often? Rarely

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?  
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. national utilization not available

Specialty	Frequency	Percentage	%
Specialty	Frequency	Percentage	%
Specialty	Frequency	Percentage	%

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,238  
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC database

Specialty otolaryngology	Frequency 600	Percentage 48.46 %
Specialty general surgery	Frequency 350	Percentage 28.27 %
Specialty	Frequency 0	Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 31605      Tracking Number

Original Specialty Recommended RVU: **6.45**  
Presented Recommended RVU: **6.45**  
RUC Recommended RVU: **6.45**

Global Period: 000

CPT Descriptor: Tracheostomy, emergency procedure; cricothyroid membrane

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 45 year old female develops angioedema with swelling of the larynx and airway obstruction. Intubation is unsuccessful. An emergency tracheostomy through the cricothyroid membrane is performed

Percentage of Survey Respondents who found Vignette to be Typical: 95%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 10%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: The physician is typically present during the intubation attempts, which ultimately, fail. The physician obtains a focused history from family and/or other physicians. Supplies needed for the tracheostomy, including scalpel, endotracheal tube, clamps, and a headlight are obtained. The physician confers with other physicians regarding airway management. Landmarks (eg, thyroid notch, sternal notch, cricoid cartilage) are identified and marked. Areas surrounding the incision site are prepped and draped while the physician scrubs and gowns. Patient is positioned with the neck extended and the shoulders elevated on a small roll. Local anesthesia is infiltrated.

Description of Intra-Service Work: An incision is made between the cricoid and thyroid cartilages. A clamp is used to spread through the subcutaneous tissues and through the cricothyroid membrane. Once access through the cricothyroid membrane is achieved, an endotracheal tube is passed through the cricothyroid membrane. An intact airway is confirmed by the return of carbon dioxide and bilateral breath sounds. Control of bleeding is obtained after the airway is secured. The endotracheal tube is secured to the patient utilizing tape and non-absorbable sutures.

Description of Post-Service Work: Once the airway is secure and the endotracheal tube secured, the physician remains with the patient for monitoring, awaiting availability of an operating room. The physician supervises transfer of patient to the OR for conversion to a tracheostomy. Discuss procedure and outcome with family. Write brief operative note and dictate full operative report.

**Ref Code****Time Segment (Mean)**

Overall intensity/complexity	1.67	1.00
------------------------------	------	------

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Background**

In the Final Rule for 2016, code 36100 was identified by CMS through a screen of high expenditure services across specialties with Medicare allowed charges of \$10 million or more. Code 36105 was added as family code.

**Compelling Evidence****Flawed methodology in previous valuation:**

Code 31605 is a very low volume procedure. Harvard obtained estimates from 10 otolaryngologists only for intraoperative time. General surgeons and other providers of the service were not included in the review.

Harvard work estimates and the proposed rule for the 1992 PFS indicated code 31605 was a 0-day global code with a proposed work RVU of 5.57 (FR 06/05/91). Prior to implementation of the Final Rule for the first fee schedule, it appears that code 31605 was treated as if it were reviewed as a 90-day global code and then reduced to 3.77 as a 0-day global code (FR 11/25/91) without any discussion in the Federal Register text. **Therefore, we believe the original Harvard value was manipulated using flawed assumptions and a flawed methodology.**

**Survey Sample**

A survey request was sent to a random selection of 1,802 surgeons from the AAO-HNS and ACS membership database. Responses were obtained from 56 surgeons, however the median experience was zero. This is not unexpected as this procedure is rarely performed. The summary Excel file presents the survey data for all 56 respondents and separately for those respondents with and without experience in the past 12 months.

**Recommendation - 31605**

**The survey data was significantly different between respondents who had experience and respondents without experience. Our recommendation is based on the summary data from experienced providers.**

**We recommend the survey 25<sup>th</sup> percentile work RVU of 6.45 based on data from providers with experience in the past 12 months.**

**Pre-time Package 4**

We recommend pre-time package 4 (*Difficult Patient/Difficult Procedure*) with reductions as described below. We recommend a total of 23 minutes (15 min for eval, 3 minutes of positioning, and 5 min for sdw). Typically, depending on the facility and site within the facility, intubation is first attempted by either anesthesiology or the emergency medicine physician. The surgeon is in attendance during this time performing a rushed pre-procedure update

We recommend the standard 21 minutes for post-time package 7b (*Local Anesthesia/ Complex Procedure*). This time includes post-operative work to monitor the patient prior to transport to the operating room. The physician documents and writes orders, discusses the procedure and outcome with the family and other clinicians. We believe the reduction in time from the 30 minutes recommended by survey respondents accounts for the fact that this service is typically billed with a critical care visit.

The intra-operative work of code 31605 is significantly more intense/complex than both 43274 and 32608 and similar in intensity to 31500 (emergency intubation, IWPUT=0.4061).

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.

☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.

☐ Multiple codes allow flexibility to describe exactly what components the procedure included.

☐ Multiple codes are used to maintain consistency with similar codes.

☐ Historical precedents.

☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

Description of Pre-Service Work: Review labs and imaging. Select and order the appropriate antibiotic(s) and confirm timing and administration. Re-examine patient to make sure that physical findings have not changed and update H&P. Meet with patient and family to review planned procedure and postoperative management. Mark site of proposed skin incision. Review and obtain informed consent with patient and/or family. Review length and type of anesthesia with anesthesiologist. Verify that all required instruments and supplies are available. Assist in transfer of patient from gurney to operating table. Patient is positioned with the neck extended and the shoulders elevated on a small roll. Assist with adjusting the OR table and anesthesia lines so operative site is accessible.. Perform surgical time out with operating surgical team and anesthesia team. Verify areas surrounding skin incisions to be prepared and draped and sterilely prep area. Scrub and gown. Re-assess position of the extremities and head. Drape out surgical area. Inject local anesthesia into planned incision site and subcutaneous tissue.

Description of Intra-Service Work: Under general anesthesia, a transverse incision is performed. Subcutaneous fat may be removed with electrocautery. Dissection proceeds until the midline raphe between the strap muscles is identified. The inferior limit of the field is palpated to assess the proximity of the innominate artery. The aberrant anterior jugular veins and smaller vessels are either cauterized or ligated. Midline dissection is essential for hemostasis and avoidance of paratracheal structures. The strap muscles are then separated and retracted laterally, exposing the pretracheal fascia and the thyroid isthmus. The thyroid isthmus division is performed sharply or with electrocautery and suture ligation. The isthmus is elevated off the trachea with a hemostat. Anesthesia is notified that the surgical team is about to enter the airway with a cricoid hook and the endotracheal tube balloon is deflated. A cricoid hook is placed to gain control of the airway and the endotracheal tube balloon is reinflated. Next, attention is turned to drying the field and cleaning the remaining fascia off of the anterior face of the trachea. The tracheostomy tube and endotracheal tube are tested to ensure there is no leak in the balloon. The presence and ease of access of all instruments needed to secure the airway is reconfirmed. Anesthesia is

notified that the surgical team will be entering the airway and the endotracheal tube balloon is deflated. After the trachea is entered, secretions and blood are suctioned out of the airway lumen. The lateral retractors are placed in the trachea and the tracheotomy is dilated. Anesthesia withdraws the endotracheal tube slowly to a point just proximal to the opening. The previously tested endotracheal tube is inserted. The balloon is inflated. An intact airway is confirmed with carbon dioxide return and bilateral breath sounds. Skin flaps are developed and an anterior portion of the trachea is resected. The skin flaps are then sutured to the anterior tracheal opening, creating a permanent stoma. Once the stoma is secured, anesthesia is notified the surgeon will be removing the endotracheal tube. The balloon is deflated and the endotracheal tube is removed. The previously tested tracheostomy tube is inserted. The obturator is removed, the inner cannula is placed and the balloon is inflated. After an intact airway is confirmed with carbon dioxide return and bilateral breath sounds, the tracheostomy tube is secured to the skin with non-absorbable sutures. Attach a tracheostomy collar with the head flexed to avoid unnecessary slack in the collar. The skin is not closed to avoid the risk of subcutaneous emphysema and subsequent pneumomediastinum. A sponge is placed between the skin and the flange.

#### Description of Post-Service Work:

Through discharge from recovery: Assist in transfer of patient from operating table to gurney. Supervise transfer of patient, who is respirator dependent, back to the ICU. Discuss postoperative recovery care with ICU staff. Write postoperative orders for medications, imaging, and labs. Discuss procedure and outcome with family. Write brief operative note. Dictate operative report and copy referring physician(s). Review post-operative x-ray for pneumothorax.

Inpatient visits: Review interval chart notes. Evaluate flaps for viability and wound for infection. Assess need for continued inflation of tracheostomy cuff. Clean around tracheostomy. Remove and replace tracheostomy at or around post-operative day 5. Assess vocalization and swallowing. Chart patient progress notes. Answer patient and family questions. Answer nursing and/or other staff questions.

Discharge management: Review interval chart notes. Talk with patient and family. Evaluate flaps for viability and wound for infection. Redress wound. Assess pain score and order medications, as required. Discuss home restrictions (ie, diet, activity, bathing) and care of drain with patient and family members. Medications are reconciled and orders for home care, discharge medications and supplies are written. Complete all appropriate medical records, including day of discharge progress notes and discharge instructions.

Office visits: Examine patient. Inspect the larynx. Remove tracheostomy and examine stoma and skin flaps. Replace tracheostomy. Cauterize any granulation tissue at stoma. Answer patient/family questions. Assess for adequacy of pain control. Assess adequacy of oral intake, discuss advancing diet and daily activities. Assess ability to produce speech. Assess appropriateness of speaking valve candidacy, when appropriate. Discuss proper maintenance of tracheostomy including stoma care. Dictate progress notes for visit.

### Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

### Background

In the Final Rule for 2016, code 36100 was identified by CMS through a screen of high expenditure services across specialties with Medicare allowed charges of \$10 million or more. Code 36110 was added as family code.

### Compelling Evidence

#### Flawed methodology in previous valuation:

During Phase III of the Harvard study, intra-operative work estimates were provided by multiple small panels of general otolaryngologists in order to obtain enough responses and pre-and post-operative work were computed by algorithm. The intraoperative time from this initial review was 52 minutes. In the final Harvard report, the intra-operative time was shown as 61 minutes. During the first five-year-review in 1995, AAO-HNS commented that the intra-operative work of 31610 was undervalued. The society did not receive enough responses to present to the RUC and the code was withdrawn from review. We believe that the algorithm that was used to assign post-operative hospital and office visits underestimated the level of work required. The typical patient will be discharged to ICU after the operation and the surgeon will closely monitor and evaluate flaps for viability and wound for infection; assess the need for continued inflation of the tracheostomy cuff; remove and replace the tracheostomy after several days; and assess vocalization and swallowing. This is in addition to charting patient progress, answering patient and family questions, and answering nursing and/or other staff questions. At each office visit, the surgeon will examine the patient, inspect the larynx, remove the tracheostomy and examine stoma and skin flaps, replace the tracheostomy, answer patient/family questions, assess for adequacy of pain control, assess adequacy of oral intake, discuss advancing diet and daily activities, assess ability to produce speech, discuss proper maintenance of tracheostomy including stoma care, cauterize any granulation tissue at stoma, and chart progress notes. **This work is not consistent with the low level of hospital and office visits that were assigned by algorithm and therefore we believe the previous methodology for valuation was flawed.**

### Survey Sample

A survey request was sent to a random selection of 1,642 surgeons from the AAO-HNS and ACS membership database.

### Recommendation - 31610

**We recommend the survey median work RVU of 11.00 for code 31610.** This increased value accounts for a higher level of postoperative work compared with the work derived by algorithm during the Harvard review, but still results in almost zero value for the operation itself.

**Pre-time Package 4**

We recommend pre-time package 4 (*Difficult Patient/Difficult Procedure*). **Recommended times for the preservice categories are 40/10/10.** An additional 7 minutes has been added for positioning (*Patient is positioned with the neck extended and the shoulders elevated on a small roll. Assist with adjusting the OR table and anesthesia lines so operative site is accessible. Re-assess position of the extremities and head, adjust as needed. Inject local anesthesia into planned incision site and subcutaneous tissue.*). The scrub, dress, wait time has been reduced by 10 minutes to be consistent with the survey median.

**Post-time Package 9b**

We recommend post-time package 9b (*General Anesthesia or Complex Regional Block/Complex Procedure*), with a reduction of 10 minutes to be consistent with the survey median.

**Key Reference Services (KRS)**

The intra-operative work of code 31610 is more intense/complex than both 41120 and 38542, both of which are outpatient procedures. The post-operative work of 31610 is significantly greater than both KRS.

**MPC Comparison and Other Comparison Codes**

Code 31610 is a 90-day global code that has a relatively short intra-operative time (45 minutes) and considerable post-operative hospital and office work. There are no MPC codes or other recently reviewed codes with this amount of work that are comparable; all have a much higher work RVU than the recommendation for 31610.

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

**FREQUENCY INFORMATION**

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 31610

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty otolaryngology

How often? Sometimes

Specialty general surgery

How often? Rarely

Specialty

How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. national utilization not available

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,802

If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC database

Specialty otolaryngology	Frequency 1500	Percentage 83.24 %
--------------------------	----------------	--------------------

Specialty general surgery	Frequency 150	Percentage 8.32 %
---------------------------	---------------	-------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Do many physicians perform this service across the United States? Yes

### Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Procedures

BETOS Sub-classification:

Major procedure

BETOS Sub-classification Level II:

Other

### Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 31610

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

<b>31603</b>	Tracheostomy, emergency procedure; transtracheal

Global Period: 000      Meeting Date: April 2016

**1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:** The AAO-HNS and ACS RUC Advisors reviewed the current PE details for 31600, 31601, and 31603.

**2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison. You must provide an explanation for the selection of reference codes. Reference Code Rationale:** N/A

**3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:**

31600 is a planned major operation performed in an OR under general anesthesia. We recommend the 0-day standard package for extensive use of clinical staff minus the times for providing pre-service education and follow-up phone calls to the patient since the typical patient is already in the hospital. This is the same time (20 minutes) that was previously approved by the PEAC.

31601 is a planned major operation performed in an OR under general anesthesia. We recommend the 0-day standard package for extensive use of clinical staff without any adjustments. Although the infant is in the hospital, there will typically be several phone calls from the parents regarding the procedure, after care, necessary home supplies, etc. This is the same time (30 minutes) that was previously approved by the PEAC.

**4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:** N/A

**5. Please describe in detail the clinical activities of your staff:**

Pre-Service Clinical Labor Activities:

31600. For this planned procedure, clinical staff coordinate pre-service diagnostic and referral forms, coordinate pre-surgery services between the surgeon and anesthesia, and schedule space and equipment for the procedure.

31601. For this planned procedure, clinical staff coordinate pre-service diagnostic and referral forms, coordinate pre-surgery services between the surgeon and anesthesia, and schedule space and equipment for the procedure. In addition, clinical staff will field several phone calls from the parents regarding the procedure, after care, needed home supplies, etc.

31603. N/A

Intra-Service Clinical Labor Activities: N/A

Post-Service Clinical Labor Activities: N/A

<b>31610</b>	Tracheostomy, fenestration procedure with skin flaps
--------------	--

Global Period: 090 Meeting Date: April 2016

**1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:** The AAO-HNS and ACS RUC Advisors reviewed the current PE details for 31610.

**2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison. You must provide an explanation for the selection of reference codes. Reference Code Rationale:** N/A

**3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:**

Post-operative office visit time has been adjusted to match the current survey.

Time to clean a basic surgical instrument pack at each office visit has been added to the post-service period.

**4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:**

Clinical Staff Time

Post-operative office visit time has been adjusted to match the current survey.

Time to clean a basic surgical instrument pack that is utilized at each office visit has been added to the post-service period.

Supplies

Tracheostomy replacement and stoma care is provided at every post op office visit. The quantities for supplies have been adjusted to match the number of post operative visits (3) where the item is used. Three new items necessary for tracheostomy replacement and stoma care have been added; (1) hydrogen peroxide for cleaning tracheostomy tube and associated materials; (2) suction canister; and cleaning pack for instruments.

Equipment time

Times for the fiberoptic headlight, exam chair, and suction cabinet have been adjusted to correspond to the new post op visit time. These three items are in the procedure / exam room from the time the patient enters the office until the patient leaves. These items are not used by any other patient during this time.

A basic instrument pack required at each office visit has been added. Per CMS instructions regarding simultaneous cleaning room and cleaning instruments, the calculated time for each office visit is equal to POV time minus 3 minutes for cleaning room plus 10 minutes for cleaning instruments). This was multiplied by 3 visits to equal 129 minutes.

**5. Please describe in detail the clinical activities of your staff:**

Pre-Service Clinical Labor Activities:

Clinical staff will coordinate diagnostic and referral forms, pre-surgery services, and scheduling space and equipment in the facility. In addition, clinical staff will communicate with the patient's family/caregiver regarding the procedure, after care including home health care, necessary supplies, etc.

Intra-Service Clinical Labor Activities:

Staff will assist with coordination of care post-discharge, communicating with the patient's family/caregiver regarding questions about home care, supplies and follow-up.

Post-Service Clinical Labor Activities:

At each office visit, clinical staff will greet and gown the patient, assure all records are available, set up room with necessary supplies and instruments, set up the suctioning equipment and confirm it is functioning, assist the physician 100% of the time with changing of the tracheostomy tube and cleaning of the stoma, cleaning the room, instruments, and suction machine, and reviewing home care of the tracheostomy with the patient and family/caregiver.

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
*\*Harvard Valued – Utilization Over 30,000\**

April 2016

**Bronchoscopy**

In October 2015, AMA staff re-ran the screen for Harvard valued codes with utilization over 30,000 based on 2014 Medicare claims data and CPT code 31645 was identified. CPT code 31646 was identified as part of the family.

The specialty societies noted that a Code Change Application (CCA) is needed to describe the services accurately, thereby allowing for an adequate RUC survey. This CCA, attached, will be reviewed by the CPT Editorial Panel in May 2016 and a RUC survey will be conducted for presentation at the October 2016 RUC meeting. **The RUC recommends referral to the CPT Editorial Panel for CPT code 31645 and 31646.**

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
31645	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with therapeutic aspiration of tracheobronchial tree, initial (eg, drainage of lung abscess)	000	Refer to CPT May 2016 (October 2016 RUC meeting)
31646 (f)	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with therapeutic aspiration of tracheobronchial tree, subsequent	000	Refer to CPT May 2016 (October 2016 RUC meeting)

Dr. Peter Smith  
 RUC Chair  
 American Medical Association  
 AMA Plaza 330 N. Wabash Ave.,  
 Suite 39300 Chicago, IL 60611-5885

February 12, 2016

Dear Dr. Smith,

The American Thoracic Society (ATS) and the American College of Chest Physicians (CHEST) submitted a CPT Code Change Application for the AMA CPT Editorial Panel consideration at the May 2016 meeting. We believe that CPT 31645 and 31646 require revisions that would be of benefit to any survey taker for these codes. We have attached the CCP for your information.

Therefore, with the RUC's permission, we are requesting the presentation to the RUC for CPT codes 31645 and 31646 be moved to the October 2016 RUC meeting.

If you have any questions, contact Denise Merlino, ATS and CHEST staff at (978) 283-0940.

Sincerely,

 Stephen Hoffmann, MD for ATS CPT Advisor American Thoracic Society	 Steve Peters, MD for CHEST CPT Advisor American College of Chest Physicians
 Alan Plummer, MD RUC Advisor American Thoracic Society	 Robert DeMarco, MD RUC Advisor American College of Chest Physicians

CC: Denise A. Merlino, CPC, CNMT, ATS and CHEST Coding Advisor

Please Note: This code change application is an abbreviated version of the standard Category I/Category III code change application intended to be used only in response to requests referred from the Joint CPT-RUC Workgroup or the Relativity Assessment Workgroup. Before using this form, please verify with CPT/RUC staff that it is applicable to your issue. If any component of the request submitted herein involves a new service not previously described in CPT, the standard Code Change Application must be submitted for that portion of the request.

## Application Submission Requirements

All CPT Code Change Applications are reviewed and evaluated by CPT staff, the CPT/HCPAC Advisory Committee, and the CPT Editorial Panel. Strict conformance with the following is required for review of a code change application:

- Submission of a complete application, including all necessary supporting documents;
- Adherence to all posted deadlines;
- Cooperation with requests from CPT staff and/or Editorial Panel members for clarification and information; and
- Compliance with [CPT Lobbying Policy](#). (Press “Ctrl” and click link)

## General Criteria for Category I Codes

All Category I code change application must satisfy each of the following criteria:

- The proposed descriptor is unique, well-defined, and describes a procedure or service which is clearly identified and distinguished from existing procedures and services already in CPT;
- The descriptor structure, guidelines and instructions are consistent with current Editorial Panel standards for maintenance of the code set;
- The proposed descriptor for the procedure or service is neither a fragmentation of an existing procedure or service nor currently reportable as a complete service by one or more existing codes (with the exclusion of unlisted codes). However, procedures and services frequently performed together may require new or revised codes;
- The structure and content of the proposed code descriptor accurately reflects the procedure or service as typically performed. If always or frequently performed with one or more other procedures or services, the descriptor structure and content will reflect the typical combination or complete procedure or service;
- The descriptor for the procedure or service is not proposed as a means to report extraordinary circumstances related to the performance of a procedure or service already described in the CPT code set; and
- The procedure or service satisfies the category-specific criteria set forth below.

## Criteria for development and evaluation of CPT Category I Codes

A proposal for a new or revised Category I code must satisfy all of the following criteria:

- All devices and drugs necessary for performance of the procedure or service have received FDA clearance or approval when such is required for performance of the procedure or service;
- The procedure or service is performed by many physicians or other qualified health care professionals across the United States;
- The procedure or service is performed with frequency consistent with the intended clinical use (i.e. a service for a common condition should have high volume, whereas a service commonly performed for a rare condition may have low volume);
- The procedure or service is consistent with current medical practice;
- The clinical efficacy of the procedure or service is documented in literature that meets the requirements set forth in the CPT Code Change Application.

This form plays a vital role in maintaining and increasing the efficiency of the CPT process. Please complete the entire form (insert additional lines and pages as needed). Refer to the accompanying instructions if necessary. Once the application is completed, [submit it using the instructions on the last page of this application](#). (Press "Ctrl" and click link)

# Cover Sheet for the Short Form CPT<sup>®</sup> Coding Change Application

It is recommended that applicants consult with national medical specialties and other qualified healthcare professional organizations that will typically provide the proposed procedure(s)/ service(s) requested in this application to obtain comments on the type of work and potential for development of relative value units (RVUs) by the AMA Specialty Society RVS Update Committee (RUC). With recognition of scheduling needs of the specialty societies, when assistance from a specialty society will be sought, it is highly recommended that the applicant plan for enough time for scheduling such discussions in advance of the application deadline to avoid violation of the AMA Lobbying Policy. Interested national specialty organizations may have deadlines prior to the CPT application submission deadline to allow for application review and comment.

**Date:** January 22, 2016

Office 978-283-0940 Cell 339-221-0199

**Please include this cover sheet with your application.**

NOTICE: Individuals or organizations that believe they may be affected by a decision of the CPT Editorial Panel on your code change application may request review of your application in advance of the CPT Editorial Panel meeting. To ensure transparency in the CPT Editorial Panel process, the AMA will provide your code change application and supporting documentation to such interested parties (provided they can demonstrate a valid interest) so they can be prepared, if desired, to comment at the CPT Editorial Panel meeting from the floor microphones or to submit written comments in advance of the meeting.

If the AMA receives a request from an interested party to review this code change application, you will be notified of that request and given five business days to submit a redacted version of the application that deletes any confidential and proprietary information. Failure to respond in that time will be deemed by the AMA as your approval to release the full application. The CPT Editorial Panel and CPT/HCPAC Advisory Committee will be provided the unredacted version of the application

☒ **Yes. I approve of sharing this application in full to an interested party that requests to review the application.**

This form plays a vital role in maintaining and increasing the efficiency of the CPT process. It can be used to submit a short form coding change application for Category I codes. For more information and code criteria for Category I codes, please see the [Code Change Application Instructions](#). For other forms, see the [AMA CPT website](#). (Press "Ctrl" key and click link)

When requesting a new code, the entire form should be completed. When submitting a request for multiple new codes, a response should be provided for each new code. The applicant may need to create additional lines and pages as needed. Refer to the [Code Change Applications Instructions](#) if necessary. Once the application is completed, submit the form electronically to the AMA. (See information on submitting applications on the last page for [instructions on uploading](#) applications, literature supplements and other documents.) (Press "Ctrl" and click link)

**You may withdraw your application up until the time that the CPT Editorial Panel takes up the agenda item at a CPT Editorial Panel meeting. At that time, the discussion falls under the authority of the Editorial Panel, and the application may not be withdrawn. If the CPT Editorial Panel determines that additional information or evaluation is warranted, consideration of your application may be tabled until later during that meeting or postponed until time certain (a specific future CPT meeting) or to time uncertain.**

## Formatting Instructions for the Coding Change Application Form

When entering code information on this application, please use this formatting shown below. When **ADDING** codes, this will require specifying the recommended terminology (code descriptor) for the proposed CPT code and the placement of the proposed code in the current text of CPT (list section, subsection as illustrated below). When requesting a code **REVISION** you should use strike-outs for deletions and underlining for additions/revisions (example: 33420 Valvotomy, mitral valve ~~(commissurotomy)~~; closed heart). You may copy and paste the following symbols as appropriate:

- This symbol precedes a **new** code (example: ●1234X)
- ▲ This symbol precedes a **revised** code (example: ▲ 12345)
- ⊙ This symbol indicates **moderate sedation** is inherent in the procedure (example: ⊙12345)
- ⊕ This symbol indicates an **add-on code** to be reported with another code (example: ⊕12345)

### Example:

**Surgery**  
**Digestive System**  
**Stomach**  
**Incision**

D12345 ~~Old procedure~~

(Code 12345 has been deleted. To report, see 1234X1-1234X2)

⊙●1234X1 New procedure first

⊕⊙●1234X2 each additional (list separately in addition to primary procedure)

(Report code 1234X2 in conjunction with code 1234X1)

1. With which screen has this service been selected for review by the CPT Editorial Panel? (please check all that apply)

- 
2. Indicate the specific reasons why this code change is necessary and provide rationale to explain why this issue was referred to the CPT Editorial Panel by the RUC (i.e., refer to the Relativity Assessment Workgroup report.)

As part of the January 2016 RUC meeting, RAW identified CPT 31645 as potentially misvalued based on volume and it was a Harvard valued code. In preparing for a potential RUC survey of the code and the family we recommend that the wording, "initial (e.g. drainage of lung abscess)" in 31645 should be removed. In addition, we believe that the subsequent code 31646 is not necessary and should be deleted.

3. If this application requests addition of a new code, specify the recommended terminology (code descriptor) for the proposed CPT code. Specify the placement of the proposed code in the current text of CPT (list section, subsection (example: MUSCULOSKELETAL, HEAD, INCISION ●210XX)). Also, list synonyms, eponyms or other technical names for the procedure (example: ●8661X *Borrelia burgdorferi* (Lyme disease) confirmatory test (e.g. Western blot or immunoblot)). Please note that any new services or procedures not currently described in CPT require use of the standard Code Change Application.

Not applicable.

4. If this application requests revision of a code(s), specify the recommended terminology (code descriptor) for the proposed revised code. Use the conventional techniques of strike-outs for deletions and underlining for additions/revisions (example: 33420 Valvotomy, mitral valve ~~(commissurotomy)~~; closed heart). Also, indicate the revision(s) in context with the current code descriptor (list the complete family of codes related to your request). Please refer to code change application instructions.

## Respiratory System

### Trachea and Bronchi

#### Endoscopy

▲ Ⓢ31645 Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with therapeutic aspiration of tracheobronchial tree, ~~initial (eg, drainage of lung abscess)~~

Ⓢ31646 ~~with therapeutic aspiration of tracheobronchial tree, subsequent~~

(For catheter aspiration of tracheobronchial tree at bedside, use 31725)

(31646 has been deleted. To report initial or subsequent see 31645.)

5. If you are recommending a code deletion, please provide the recommended cross-reference (i.e. how is the deleted service now to be coded? Example (33100 has been deleted. To report, see 33030, 33031)).

<del>31646</del>	<del>with therapeutic aspiration of tracheobronchial tree, subsequent</del>
<u>(31646 has been deleted. To report initial or subsequent see 31645.)</u>	

- 6.1 Please review the most frequent conditions reported for the current codes as presented on the RUC database. Do you believe these accurately reflect the entire (i.e. not limited to Medicare) population?

☒ Yes

☐ No

518	OTHER DISEASES OF LUNG	39.20%
486	PNEUMONIA ORGANISM UNSPECIFIED	9.10%
786	RESPIRATORY SYMPTOMS	8.50%
519	OTHER DISEASES RESPIRATORY SYSTEM	4.49%
933	FOREIGN BODY IN PHARYNX AND LARYNX	3.17%

**31646 Top 5 ICD- Codes**

ICD- 9	Description	Percentage
518	OTHER DISEASES OF LUNG	52.63%
486	PNEUMONIA ORGANISM UNSPECIFIED	5.26%
933	FOREIGN BODY IN PHARYNX AND LARYNX	5.26%
V58	ENCOUNTER FOR AFTERCARE	4.83%

- 6.2 Will the combined service or remaining uncombined services be used for different conditions than presently listed?

☐ Yes

☒ No

Additional Comments

7. Please provide a list of CPT codes for all procedures/services which are an integral part of the proposed procedure/service. This list should include CPT codes for all procedures/services

which, if coded in addition to the code for the procedure/service proposed here, would represent unbundling.

Does not apply.

8. Is the requested service typically reported on the same date as services reported with existing CPT codes? If yes, please explain why multiple codes are typically reported.

☒ No

☐ Yes

9. Do you request that this service be added to Appendix E (i.e. should this application be presented to the RBRVS Update Committee for valuation as modifier 51 exempt)?

☐ Yes

☒ No

10. For each proposed coding change, please provide (attach) a clinical vignette that describes the typical patient who would receive the procedure(s).service(s) including diagnosis and relevant conditions. Please refer to the sample format and examples of appropriate clinical vignettes included in the code change application instructions. This same vignette is used during the development of work values by the AMA/Specialty Society RVS Update Committee (RUC). It is important that the description of the typical patient make apparent the degree of complexity required to provide the service.

**31645 Vignette:**

A 60 year old man has been hospitalized for one week for respiratory failure. He has respiratory decompensation, oxygen requirements have increased, and chest radiograph shows new lung atelectasis. Bronchoscopy is performed for the clearance of secretions obstructing bronchi.

11. For each [proposed coding change, please provide (attach) a brief description of the procedure(s)/service(s) performed by the physician or non-physician health care professional. Please refer to the sample and examples of appropriate descriptions of service included in the code change application instructions. This should be a summary description and should **not** contain the detail or pre, intra and post service breakdowns that are required as part of the AMA/Specialty Society RVS Update Committee (RUC). It is important that the description of the service make apparent the degree of complexity required to provide the service.

If the description includes services that are reported separately, please clearly indicate this separate reporting. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

**31645 Description:** The physician examines the patient to verify that he can undergo the procedure. He is then placed on supplemental oxygen in the endoscopy suite which has resuscitative equipment in place. An IV is started and the physician supervises the administration of conscious sedation while the patient receives inhaled topical anesthesia as he is properly monitored for pulse, blood pressure, SPO2, and ECG. The physician inserts the bronchoscope through the upper airway, noting any abnormalities. The vocal cords are visualized and the structure and function are noted. The bronchoscope is advanced into the tracheobronchial tree. Secretions are identified and aspirated. Sterile saline may be required to mobilize more viscous and distal secretions. The bronchoscope is removed and the inner channel is flushed as necessary to clear more tenacious secretions. The bronchoscope is reinserted as necessary until the secretions are clear. The physician examines the patient post-endoscopy to ascertain that no complications such as bleeding has occurred.

12. Has there been a change in the diagnosis or conditions for which this service/procedure is designed to diagnose/treat? If so, please specify the change.

☐ Yes

☒ No

13. For the proposed coding change, is conscious sedation inherent to this procedure?

☒ Yes

☐ No

---

14. Please identify the specialties or sub-specialties that might perform this procedure/service.

Specialty	Spec %
<b>PULMONARY DISEASE</b>	<b>67.87%</b>
<b>CRITICAL CARE (INTENSIVISTS)</b>	<b>11.47%</b>
<b>INTERNAL MEDICINE</b>	<b>8.15%</b>
<b>THORACIC SURGERY</b>	<b>6.11%</b>
<b>GENERAL SURGERY</b>	<b>2.92%</b>
<b>ANESTHESIOLOGY</b>	<b>1.01%</b>
<b>CARDIAC SURGERY</b>	<b>0.84%</b>

15. Have all of the national offices for the specialty groups listed in the CPT Advisory Committee listing in the CPT codebook been contacted? If yes, which one(s)? If not, which one(s) were not?

Society of Thoracic Surgery

16. What is the typical site of service that this procedure is performed in? (please check all that apply)

- |  |  |
|--|--|
| <input checked="" type="checkbox"/> Office or other outpatient setting | <input checked="" type="checkbox"/> Emergency department       |

## Conflict of Interest Policy for Presenters

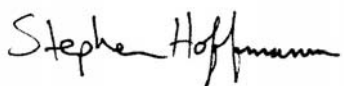

Every code change proposal applicant or their designee(s) making a presentation ("Presenter") to the CPT Editorial Panel on a code change proposal shall disclose all individual and corporate **disclosable interests** as defined below, but without regard to financial limit. Presenters who are applicants shall complete a written disclosure at the time of the code change proposal application. Presenters who are a designee(s) of the code change proposal applicant shall complete a written disclosure in response to the "presenter letter" sent to applicants approximately two weeks in advance of the meeting of the CPT Editorial Panel. All Presenters are also asked by the Chair of the CPT Editorial Panel to make a verbal disclosure of individual and corporate interests at the time of presentation. Any disclosable interest that is a **material individual interest** or a **material corporate interest** must be designated as such in the disclosure.

[View the Key Elements of the Conflict of Interest for Presenters in this document.](#)

### Coding Change Proposal Applicant or Designee ("Presenter") Disclosure of Interest

I affirm that I have read and understand the Conflict of Interest Policy of the CPT Editorial Panel and Workgroup Members, Advisors and Presenters (available on the public AMA CPT web page). I have no individual or corporate **disclosable interests** at this time, except as set forth below. I understand that I have a continuing obligation to comply with the Conflict of Interest Policy and will update this form prior to any coding change proposal application. Disclosure does not restrict or limit the ability of the Presenter to support the applicant's coding change proposal.

DISCLOSABLE INTERESTS	(INDICATE IF MATERIAL INTEREST)
None	

Print Name	Steve Peters, MD
Signature

Date	January 22, 2016

---

For convenience, key elements of the Conflict of Interest Policy applicable for **Presenters** are summarized below. **The Conflict of Interests Policy in its entirety is controlling (please refer to the Conflict of Interest Policy its entirety):**

- Presenters members must disclose all individual and corporate disclosable interests as defined in the Policy held by the member or immediate family without regard to financial limit.
- **“Immediate family”** means a spouse, domestic partner, parent, child, brother or sister of a Presenter. Requirements for disclosure of interests of immediate family apply to the extent such interests are known by the Presenter.
- **“Disclosable individual interest”** means cash, goods or other value (e.g., consultancies, speaking honoraria, salary or salary support, research or other grant support, stock ownership or options, expert testimony, royalties or other intellectual property rights, service on a speakers bureau, gifts or paid travel and vacation) that, with respect to the Presenter or the Presenter’s immediate family members, the individual may receive such interest as a result of the approval or denial of the code change, the value of which exceeds \$1.00 in the past two years.
- **“Disclosable corporate interest”** means cash, goods or other value (e.g., increased sales, decreased sales of competitors, increased value of intellectual property, increased grant support, etc.) which in the aggregate exceeds \$5,000 within the past two years or is reasonably expected to exceed \$5,000 in the next two years, only where the Presenter is a consultant, agent or employee and the Presenter should reasonably be aware that their client or employer may receive such interest from the approval or denial of the coding change proposal.
- Individual and corporate **disclosable interests** do not include [i] any interest that is limited to providing clinical services to patients (including the service for which a coding change proposal has been submitted), or [ii] providing professional educational services or interpretative advice on proper coding.
- **“Material individual interest”** means a disclosable individual interest the value of which exceeds \$10,000 in the aggregate within the past two years.
- **“Material corporate interest”** means disclosable corporate interest the value of which, in the aggregate, exceeds \$10,000 within the past two years or is reasonable expected to exceed \$10,000 in the next two years.
- Presenters who are applicants shall complete a written disclosure at the time of the coding change proposal application. Presenters who are a designee(s) of the coding change proposal applicant shall complete a written disclosure in response to the “presenter letter” sent to applicants approximately two weeks in advance of the meeting of the CPT Editorial Panel. All Presenters are also asked by the Chair of the CPT Editorial Panel to make a verbal disclosure of interest and corporate interests at the time of presentation.

[return](#)

## Statement on Lobbying

Applicants and other interested parties must not engage in “lobbying” for or against coding change applications. “Lobbying” means **unsolicited** communications of any kind made at any time (including during Editorial Panel meetings) for the purpose of attempting to influence either (1) the CPT Advisors’ evaluation of or comments upon a coding change application or (2) voting by members of the Editorial Panel on a coding change application. **Lobbying is strictly prohibited. Violation of the prohibition on lobbying may result in sanctions, such as being barred from further participation in the CPT process.** Information that accompanies a coding change application, presentations or commentary to the full Editorial Panel during an open meeting and responses to inquiries from a Panel member or a CPT staff member do not constitute “lobbying”.

In order for the CPT Editorial Panel to effectively review and act on proposed changes to the CPT code set, coding change applications must be reviewed by the CPT Advisors and the Editorial Panel based on the information contained in the application and available clinical literature. CPT staff is responsible for organizing and submitting information to the CPT Advisors and the Editorial Panel for consideration. Information relating to a coding change application must be submitted to CPT staff no later than thirty days prior to the start of the Editorial Panel meeting at which the coding change application will be considered. In some cases, the Chair of the Editorial Panel may establish rules which allow for supplemental submissions of information to workgroups or facilitation sessions established by the Chair or for postponed or appealed agenda items. (A facilitation session is an information meeting requested by the Chair during a CPT Editorial Panel meeting to allow interested parties to confer and attempt to reach a consensus recommendation for presentation at the meeting.)

During development of a coding change application, an applicant may seek input or assistance from staff or advisors of medical specialty societies, but may not engage in “lobbying” as defined above. Medical specialty societies may have their own policies governing interactions with applicants or other interested parties regarding coding change applications. The AMA encourages medical societies to work with applicants from both industry and other medical specialties to assure that coding change applications are complete, coherent and consistent with current medical practice. Contacts with consulting medical societies should be limited to that which is necessary to construct and submit the coding change application. After the date a coding change application is posted for review and comment by the CPT Advisors and the Editorial Panel, contact between an applicant and medical society representatives should be confined to communications pertaining to feedback from the CPT staff or Advisor’s comments regarding the application. If an applicant or other interested party wishes the CPT Advisors or the Editorial Panel to consider additional information, that information must be submitted to AMA’s CPT staff and not directly to the CPT Advisors or the Editorial Panel.

Applicants and other interested parties are invited to participate in open CPT Editorial Panel meetings and present their views on coding change application when recognized by the Chair during the course of the meeting. The views of applications and other interested parties may be sought during work group or facilitation sessions established by the Chair and participation in a workgroup or facilitation session is not considered lobbying.

## Attestations

By signing below, I hereby attest to each of the following:

1. the information provided in this application is true, correct and complete, and, to the best of my knowledge, accurately depicts current clinical and or surgical practice;
2. I have read the CPT Statement on Lobbying, Criteria for Development and Evaluation of CPT Category I and Category III codes, CPT Coding Application Instructions, CPT Editorial Panel Confidentiality Agreement, and CPT Application Process FAQs all referenced on the **Applying for CPT Codes** page and on related pages (press "Ctrl" key and click link); and
3. I have authority to sign this application in both an individual and organizational capacity.

## Copyright Assignment

In consideration of the American Medical Association's review of this coding change application, on behalf of myself and the organization named below, I hereby assign to the AMA all rights including copyright, if any, in the changes to the CPT code set contained in the application and any variation thereof approved by the CPT Editorial Panel.

# Instructions for Submitting your Coding Change Application

## Coding Change Application:

- Email the application and any signature pages to [ccpsubmit@ama-assn.org](mailto:ccpsubmit@ama-assn.org)
- **Only the Coding Change Application and nay signature pages should be emailed to [ccpsubmit@ama-assn.org](mailto:ccpsubmit@ama-assn.org).**

**Supporting documents** for your Coding Change Application should be uploaded onto the **AMA CPT Submissions** page (<https://connection.ama-assn.org/sites/cpt/Submit/default.aspx>).

- You will be required to sign in to have access to this site.
- Any AMA website login account that you currently have (including your CPT Collaboration website username and password) should allow access to this site.
- If you do not have an AMA login account, press the link that says **Create an Account** on the login page in order to establish access to the **AMA CPT Submissions site**.

---

## To use the drag and drop option for submission of documents:

- The AMA CPT Submissions site is compatible with the following browsers: Internet Explorer, Chrome and Firefox. We have found that using Mozilla Firefox provides optimum performance. This browser can be obtained with a free download through the [Mozilla website](#).
- **Open the AMA CPT Submissions** site using the link shown above. (Click the AMA CPT Submissions link or copy and paste the URL into your browser address bar.)
- On the login screen, enter your username and password.
- Open the file on your computer that contains the documents to be uploaded.
- To make things easier, decrease the size of the window that you just opened as well as the size of the AMA CPT Submissions window. You may do this by clicking the icon that has the “2 overlapping boxes” located in the upper right hand corner of each page.
- **Hold the Ctrl key down** and highlight the files on your computer that you want to upload to the AMA CPT Submissions site.
- Place your curser in this group of highlighted files, hold down the left button on your mouse and drag the documents from the source file directly to the AMA CPT Submissions site just below the heading **Drop Off Library**.
- When you see the notice “**Drop Here**” on the AMA CPT Submissions site, release the mouse button and the files will transfer over. You will see the titles to the documents that you just submitted.
- If you decide to **upload each document separately**, press the “New Document” link. An “upload dialog box” will open allowing you to submit an individual document. These documents will not appear on the CPT Submissions home page. They will be uploaded directly to the CPT Staff site.

For security reasons, the files that you upload or drag and drop to the AMA CPT Submissions page will not be visible by any person other than you. Within approximately one hour, these items will be transferred to a different site that will allow the CPT staff to review them.

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
**\*CMS High Expenditure Procedures/ Harvard Valued – Utilization Over 30,000 screen \***

April 2016

**Selective Catheter Placement**

In the Final Rule for 2016 CMS re-ran the high expenditure services across specialties with Medicare allowed charges of \$10 million or more. CMS identified the top 20 codes by specialty in terms of allowed charges, excluding 010 and 090-day global services, anesthesia and Evaluation and Management services and services reviewed since CY 2010. *CPT code 36215 also identified via the Harvard Valued – Utilization Over 30,000 screen.* CPT codes 36216, 36217 and 36218 were added as part of the family of services.

**36215 Selective catheter placement, arterial system; each first order thoracic or brachiocephalic branch, within a vascular family**

The RUC reviewed the survey results from 113 practicing interventional radiologists, vascular surgeons and renal physicians and recommends the following physician time components: pre-service time of 25 minutes, intra-service time of 30 minutes and immediate post-service time of 20 minutes. The RUC agreed to add two minutes of positioning time above the standard package to account for positioning the patient supine and orienting the patient, imaging equipment, and lines/catheters to allow for access to the puncture site. Additionally, 5 minutes of scrub, dress, wait time was added above the standard package to maintain a sterile operating room technique when performed in the office suite, requiring scrubbing and sterile gown, mask and gloves for the physician and clinical staff.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the survey respondents somewhat overvalued the work involved, with a 25<sup>th</sup> percentile work RVU of 5.25. To find an appropriate work RVU for CPT code 36215, the RUC reviewed CPT code 32550 *Insertion of indwelling tunneled pleural catheter with cuff* (work RVU= 4.17, intra time= 30 minutes) and agreed that since this reference code has identical intra-service time compared to 36215 and is an analogous procedure with a similar amount of physician work, the work RVUs should be identical. To justify a direct physician work RVU crosswalk of 4.17, the RUC also reviewed CPT code 43233

*Esophagogastroduodenoscopy, flexible, transoral; with dilation of esophagus with balloon (30 mm diameter or larger) (includes fluoroscopic guidance, when performed)* (work RVU= 4.17, intra-time= 28 minutes) and MPC code 52224 *Cystourethroscopy, with fulguration (including cryosurgery or laser surgery) or treatment of MINOR (less than 0.5 cm) lesion(s) with or without biopsy* (work RVU= 4.05, intra-time= 30 minutes) and agreed that both codes validate the recommended work RVU of 4.17. Finally, the RUC noted the decrease in intra-service time from 61 minutes to 30 minutes. The current time source is Harvard, with all the physicians' time is captured in the intra-service category, without considering the time required for pre and immediate post-service. Comparisons between the prior intensity and current intensity are inappropriate due to the lack of adequate physician time components assigned during the Harvard studies. **The RUC recommends a work RVU of 4.17 for CPT code 36215.**

***36216 Selective catheter placement, arterial system; initial second order thoracic or brachiocephalic branch, within a vascular family***

The RUC reviewed the survey results from 87 practicing interventional radiologists and vascular surgeons and recommends the following physician time components: pre-service time of 31 minutes, intra-service time of 45 minutes and immediate post-service time of 20 minutes. The RUC agreed to add two minutes of positioning time above the standard package to account for positioning the patient supine and orienting the patient, imaging equipment, and lines/catheters to allow for access to the puncture site.

The RUC reviewed the survey respondents' estimated physician work values and agreed with the specialty societies that the current work RVU of 5.27, lower than the survey's 25<sup>th</sup> percentile, is appropriate for CPT code 36216. To justify a work RVU of 5.27, the RUC compared the surveyed code to the top two key reference services CPT code 36246 *Selective catheter placement, arterial system; initial second order abdominal, pelvic, or lower extremity artery branch, within a vascular family* (work RVU= 5.27, intra time= 45 minutes and code 36223 *Selective catheter placement, common carotid or innominate artery, unilateral, any approach, with angiography of the ipsilateral intracranial carotid circulation and all associated radiological supervision and interpretation, includes angiography of the extracranial carotid and cervicocerebral arch, when performed* (work RVU= 6.00, intra time= 45 minutes) and agreed that these comparable services provide appropriate comparisons to the recommended value. In addition, the RUC noted the incremental work difference between the work of placing the stent in the first order branch (code 36215) and the initial second order (code 36216) is 1.10 work RVUs with 15 additional minutes. This increment is appropriate and magnitude estimation of this increment is maintained throughout the family of services.

Finally, the RUC noted the decrease in intra-service time from 72 minutes to 45 minutes. The current time source is Harvard, all the physicians' time is captured in the intra-service category, without considering the time required for pre and immediate post-service. Comparisons between the prior intensity are inappropriate due to the lack of adequate physician time components assigned during the Harvard studies. **The RUC recommends a work RVU of 5.27 for CPT code 36216.**

***36217 Selective catheter placement, arterial system; initial third order or more selective thoracic or brachiocephalic branch, within a vascular family***

The RUC reviewed the survey results from 87 practicing interventional radiologists and vascular surgeons and recommends the following physician time components: pre-service time of 31 minutes, intra-service time of 60 minutes and immediate post-service time of 20 minutes. The RUC agreed to add two minutes of positioning time above the standard package to account for positioning the patient supine and orienting the patient, imaging equipment, and lines/catheters to allow for access to the puncture site.

The RUC had significant discussions regarding the appropriate intra-service time for this procedure. The median survey intra-service time was 50 minutes. However, CPT code 36217 includes the work of both 36215 (intra time= 30 minutes) and 36216 (intra time= 45 minutes). Therefore, the median intra-service time of 50 minutes, only 5 minutes above 36216, is not clinically appropriate. The RUC agreed to accept the 75<sup>th</sup> intra-service

time of 60 minutes in order to accurately account for the physician work of placing a catheter in the third order branch. This more accurate intra-service time, preserves the incremental, linear consistency between the work RVU and intra-service time within the family.

The RUC reviewed the survey respondents' estimated physician work values and agreed with the specialty societies that the current work RVU of 6.29, supported by the survey's 25<sup>th</sup> percentile work RVU of 6.30, is appropriate for CPT code 36217. To justify a work RVU of 6.29, the RUC compared the surveyed code to the top key reference service CPT code 36247 *Selective catheter placement, arterial system; initial third order or more selective abdominal, pelvic, or lower extremity artery branch, within a vascular family* (work RVU= 6.29, intra time= 60 minutes) and agreed that since both services have identical intra-service time and comparable physician work, the work RVUs should be the same. In addition, the RUC noted the incremental work difference between the work of placing the stent in the second order branch (code 36216) and the initial third order (code 36217) is 1.01 work RVUs with 15 additional minutes. This increment is appropriate and magnitude estimation of this increment is maintained throughout the family of services.

Finally, the RUC noted the decrease in intra-service time from 86 minutes to 60 minutes. The current time source is Harvard, all the physicians' time is captured in the intra-service category, without considering the time required for pre and immediate post-service. Comparisons between the prior intensity are inappropriate due to the lack of adequate physician time components assigned during the Harvard studies. **The RUC recommends a work RVU of 6.29 for CPT code 36217.**

**36218 *Selective catheter placement, arterial system; additional second order, third order, and beyond, thoracic or brachiocephalic branch, within a vascular family***

The RUC reviewed the survey results from 80 practicing interventional radiologists and vascular surgeons and recommends intra-service time of 15 minutes for this add-on procedure.

The RUC reviewed the survey respondents' estimated physician work values and agreed with the specialty societies that the current work RVU of 1.01, lower than the survey's 25<sup>th</sup> percentile, is appropriate for CPT code 36218. To justify a work RVU of 1.01, the RUC compared the surveyed code to MPC code 64480 *Injection(s), anesthetic agent and/or steroid, transforaminal epidural, with imaging guidance (fluoroscopy or CT); cervical or thoracic, each additional level* (work RVU= 1.20, intra time= 15 minutes) and code 36148 *Introduction of needle and/or catheter, arteriovenous shunt created for dialysis (graft/fistula); additional access for therapeutic intervention* (work RVU= 1.00, intra time= 15 minutes) and agreed that both reference services have identical intra-service time and should be valued nearly identical to CPT code 36218. Finally, the RUC agreed that the increment of 1.01 for an additional branch with intra-service time of 15 minutes appropriately fits with the incremental hierarchy established with the base codes in this family. **The RUC recommends a work RVU of 1.01 for CPT code 36218.**

**Practice Expense:**

The RUC approved the direct expense inputs with modifications as approved by the Practice Expense Subcommittee.

**Global Period:**

The RUC requests that CMS assign CPT codes 36215, 36216 and 36217 a 000-day global period.

**Work Neutrality**

The RUC's recommendation for these codes will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
36215	Selective catheter placement, arterial system; each first order thoracic or brachiocephalic branch, within a vascular family	<del>XXX</del> 000	4.17
36216 (f)	Selective catheter placement, arterial system; initial second order thoracic or brachiocephalic branch, within a vascular family	<del>XXX</del> 000	5.27 (No Change)
36217 (f)	Selective catheter placement, arterial system; initial third order or more selective thoracic or brachiocephalic branch, within a vascular family	<del>XXX</del> 000	6.29 (No Change)
36218 (f)	Selective catheter placement, arterial system; additional second order, third order, and beyond, thoracic or brachiocephalic branch, within a vascular family (List in addition to code for initial second or third order vessel as appropriate)	ZZZ	1.01 (No Change)

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 36215      Tracking Number

Original Specialty Recommended RVU: **4.67**  
Presented Recommended RVU: **4.67**  
RUC Recommended RVU: **4.17**

Global Period: 000

CPT Descriptor: Selective catheter placement, arterial system; each first order thoracic or brachiocephalic branch, within a vascular family

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: Selective catheterization of the left subclavian artery to evaluate upper extremity ischemia in a 68-year-old male (eg, claudication, ischemia distal to an AV access).

Percentage of Survey Respondents who found Vignette to be Typical: 88%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: Pertinent medical information including labs and imaging is reviewed. A targeted H&P is performed. The proposed procedure is discussed with the patient and family and consent is obtained and documented. The patient is transported to the procedure room and placed supine on the procedure table.

Description of Intra-Service Work: The right common femoral artery access and sheath placement are performed. Wire and catheter are advanced to the origin of the left subclavian artery. Diagnostic arteriography is performed to assess subclavian artery origin pathology. Using a wire, the diagnostic catheter is then advanced into a more stable position further into the left subclavian artery and complete upper extremity angiography is performed. The catheter and sheath are removed, and hemostasis is obtained with manual compression, or by a closure device.

Description of Post-Service Work: Sterile dressing is applied. Appropriate care orders are entered in the electronic medical record. The procedure is documented in the chart. The patient is transferred from the procedure table to the recovery area and monitored for 4 hours. The procedure outcome is discussed with the patient and family. The patient is discharged home with follow up care instructions.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Background**

In the Final Rule for 2016 CMS re-ran the high expenditure services across specialties with Medicare allowed charges of \$10 million or more. CMS identified the top 20 codes by specialty in terms of allowed charges, excluding 010 and 090-day global services, anesthesia and Evaluation and Management services and services reviewed since CY 2010. CPT Code 36215 was identified in this CMS screen. The specialties identified 36216-8 as part of this selective catheter placement family.

**Global Period Change**

The multi specialty group (SIR, ACR, RPA, SVS) requested a global period change for CPT Codes 36215, 36216 and 36217 from XXX to 000. The societies argued that it was important to have the global periods line up with other similar services (i.e. 36246, 36247, 36200). CMS approved the request.

**Moderate Sedation**

Moderate sedation will be reported separately, with the new moderate sedation codes (when CMS approves them). These codes are not currently included on Appendix G.

**Methodology**

The utilization for these services, require a minimum of 30 completed RUC surveys. A survey was distributed randomly to the members of the representative societies. Note that RPA only surveyed code 36215. The societies exceeded the minimum requirement for the number of surveys (80-113). A multi-disciplinary expert panel including SVS, SIR, ACR and RPA was convened. The survey data were reviewed by the multi-specialty expert panel and the following recommendations are being made.

**Pre- and Post-Service Time Packages**

We recommend the follow adjustments to the pre-time packages:

1. Evaluation: For facility based codes 36216 and 36217, we removed the 10 minutes from evaluation time for "Administer moderate sedation/observe (wait) anesthesia care".

2. Positioning: For codes 36215, 36216, and 36217, we recommend an additional 2 minutes of positioning time to account for positioning the patient supine and orienting the patient, imaging equipment, and lines/catheters to allow for access to the puncture site.
3. Scrub, dress, and wait: For code 36215, we recommend an additional 5 minutes for “Dress and scrub for procedure”. Sterile OR technique is maintained for this procedure when performed in an office procedure/surgery suite, requiring scrubbing and sterile gown, mask and gloves for the physician and clinical staff.

### **Work RVU Recommendation for 36215**

We are recommending maintaining the current work RVU value of 4.67, lower than the 25<sup>th</sup> percentile.

### **Pre- and Post-Service Time Packages**

The current Medicare utilization indicates this procedure is typically performed in the office setting. As such, we are recommending pre-time package 6b – office based procedure with (moderate) sedation. We are not recommending a particular post time package, as this is an office-based procedure. We are recommending survey time in the post service period.

### **Billed Together**

CPT Code 36215 is reported more than 50% with code 36147. However, 36147 will be deleted in 2017 as part of the bundling of dialysis circuit codes. An S&I code is typically reported on the same day (i.e. 75710).

### **Comparison with Key Reference Services**

The key reference codes chosen by the majority of the survey respondents were CPT Code 36223 *Selective catheter placement, common carotid or innominate artery, unilateral, any approach, with angiography of the ipsilateral intracranial carotid circulation and all associated radiological supervision and interpretation, includes angiography of the extracranial carotid and cervicocerebral arch, when performed* and CPT Code 36246 *Selective catheter placement, arterial system; initial second order abdominal, pelvic, or lower extremity artery branch, within a vascular family.*

CPT	RVW	IWPUT	Total Time	Eval	Posit	SDW	INTRA	IM-post
36215 Surveyed	4.67	0.124	75	17	3	5	30	20
36245 RefCode	5.27	0.088	106	33	3	5	45	20
36223 RefCode	6.00	0.096	123	40	3	5	45	30

### **Comparison to MPC codes**

CPT Code 36215 ranks appropriately between two MPC codes with similar intra-service times and intensities. CPT Code 52224 *Cystourethroscopy, with fulguration (including cryosurgery or laser surgery) or treatment of MINOR (less than 0.5 cm) lesion(s) with or without biopsy* and CPT Code 37191 *Insertion of intravascular vena cava filter, endovascular approach including vascular access, vessel selection, and radiological supervision and interpretation, intraprocedural roadmapping, and imaging guidance (ultrasound and fluoroscopy), when performed.*

CPT	RVW	IWPUT	Total Time	Eval	Posit	SDW	INTRA	IM-post
52224	4.05	0.101	79	19	5	5	30	20

MPC								
36215 Survey	4.67	0.124	75	17	3	5	30	20
37191 MPC	4.71	0.120	83	30	3	5	30	15

**Relativity**

36254 Ref	<i>Superselective catheter placement (one or more second order or higher renal artery branches) renal artery and any accessory renal artery(s) for renal angiography, including arterial puncture, catheterization, fluoroscopy, contrast injection(s), image postprocessing, permanent recording of images, and radiological supervision and interpretation, including pressure gradient measurements when performed, and flush aortogram when performed; bilateral</i>	8.15	33	3	5	68	30	139	0.098

### **Conclusion**

A multi-disciplinary survey of CPT 36215 was performed with strong survey results and concordance between specialties. When comparing the survey results to the key reference services, two MPC codes, and across the selective catheter placement family, we believe that the current work RVU value of 4.67 appropriately ranks CPT 36215 relative to other services.

---

### **SERVICES REPORTED WITH MULTIPLE CPT CODES**

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☒ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. Code 36215 is reported more than 50% with code 36147. However, 36147 will be deleted in 2017 as part of the bundling of dialysis circuit codes. Code 36215 is reported more than 50% with code 75710. The utilization of this code with 36215 should decrease because angiography will be bundled into the new dialysis circuit codes.

---

### **FREQUENCY INFORMATION**

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 36215

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty radiology                      How often? Sometimes

Specialty vascular surgery                      How often? Sometimes

Specialty nephrology                      How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. national utilization not available

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?

47,260 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC database

Specialty radiology	Frequency 12750	Percentage 26.97 %
---------------------	-----------------	--------------------

Specialty vascular surgery	Frequency 5500	Percentage 11.63 %
----------------------------	----------------	--------------------

Specialty nephrology	Frequency 19000	Percentage 40.20 %
----------------------	-----------------	--------------------

Do many physicians perform this service across the United States? Yes

### **Berenson-Eggers Type of Service (BETOS) Assignment**

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Procedures

BETOS Sub-classification:

Minor procedure

BETOS Sub-classification Level II:

Other

### **Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 36215

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code:36216      Tracking Number

Original Specialty Recommended RVU: **5.27**  
Presented Recommended RVU: **5.27**  
RUC Recommended RVU: **5.27**

Global Period: 000

CPT Descriptor: Selective catheter placement, arterial system; initial second order thoracic or brachiocephalic branch, within a vascular family

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: Selective catheterization of the right subclavian artery to evaluate for thoracic outlet syndrome in a 32-year-old male with evidence of distal emboli to the hand.

Percentage of Survey Respondents who found Vignette to be Typical: 89%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: Pertinent medical information including labs and imaging is reviewed. A targeted H&P is performed. The proposed procedure is discussed with the patient and family and consent is obtained and documented. The patient is transported to the procedure room and placed supine on the procedure table.

Description of Intra-Service Work: The right common femoral artery access and sheath placement are performed. Wire and catheter are advanced into the brachiocephalic artery. Diagnostic arteriography is performed to assess proximal subclavian artery pathology. Using a wire, the diagnostic catheter is then advanced into the right subclavian artery for complete upper extremity angiography. The catheter and sheath are removed, and hemostasis is obtained with manual compression, or by a closure device.

Description of Post-Service Work: Sterile dressing is applied. Appropriate care orders are entered in the electronic medical record. The procedure is documented in the chart. The patient is transferred from the procedure table to the recovery area and monitored for 4 hours. The procedure outcome is discussed with the patient and family. The patient is discharged home with follow up care instructions.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Background**

In the Final Rule for 2016 CMS re-ran the high expenditure services across specialties with Medicare allowed charges of \$10 million or more. CMS identified the top 20 codes by specialty in terms of allowed charges, excluding 010 and 090-day global services, anesthesia and Evaluation and Management services and services reviewed since CY 2010. CPT Code 36215 was identified in this CMS screen. The specialties identified 36216-8 as part of this selective catheter placement family.

**Global Period Change**

The multi specialty group (SIR, ACR, RPA, SVS) requested a global period change for CPT Codes 36215, 36216 and 36217 from XXX to 000. The societies argued that it was important to have the global periods line up with other similar services (i.e. 36246, 36247, 36200). CMS approved the request.

**Moderate Sedation**

Moderate sedation will be reported separately, with the new moderate sedation codes (when CMS approves them). These codes are not currently included on Appendix G.

**Methodology**

The utilization for these services, require a minimum of 30 completed RUC surveys. A survey was distributed randomly to the members of the representative societies. Note that RPA only surveyed code 36215. The societies exceeded the minimum requirement for the number of surveys (80-113). A multi-disciplinary expert panel including SVS, SIR, ACR and RPA was convened. The survey data were reviewed by the multi-specialty expert panel and the following recommendations are being made.

**Pre- and Post-Service Time Packages**

We recommend the follow adjustments to the pre-time packages:

1. Evaluation: For facility based codes 36216 and 36217, we removed the 10 minutes from evaluation time for "Administer moderate sedation/observe (wait) anesthesia care".

2. Positioning: For codes 36215, 36216, and 36217, we recommend an additional 2 minutes of positioning time to account for positioning the patient supine and orienting the patient, imaging equipment, and lines/catheters to allow for access to the puncture site.
3. Scrub, dress, and wait: For code 36215, we recommend an additional 5 minutes for “Dress and scrub for procedure”. Sterile OR technique is maintained for this procedure when performed in an office procedure/surgery suite, requiring scrubbing and sterile gown, mask and gloves for the physician and clinical staff.

### **Work RVU Recommendation for 36216**

We are recommending maintaining the current work RVU value of 5.27, lower than the 25<sup>th</sup> percentile.

### **Pre- and Post-Service Time Packages**

The current Medicare utilization indicates this procedure is dominantly performed in the inpatient setting. As such, we are recommending pre-time package 2b – facility based Difficult Patient/Straightforward Procedure (With sedation/anesthesia care).

We are recommending post-time package 8b IV Sedation/ Complex Procedure.

### **Billed Together**

CPT Code 36216 is not typically reported with other procedures. An S&I code is typically reported on the same day (i.e. 75710).

### **Comparison with Key Reference Services**

The key reference codes chosen by the majority of the survey respondents were CPT Code 36246 *Selective catheter placement, arterial system; initial second order abdominal, pelvic, or lower extremity artery branch, within a vascular family* and CPT Code 36223 *Selective catheter placement, common carotid or innominate artery, unilateral, any approach, with angiography of the ipsilateral intracranial carotid circulation and all associated radiological supervision and interpretation, includes angiography of the extracranial carotid and cervicocerebral arch, when performed.*

CPT	RVW	IWPUT	Total Time	Eval	Posit	SDW	INTRA	IM-post
36216	5.27	0.093	96	23	3	5	45	20
36246	5.27	0.088	106	33	3	5	45	20
36223	6.00	0.096	123	40	3	5	45	30

### **Comparison to MPC codes**

CPT Code 36216 ranks appropriately between two MPC codes with similar intra-service times and intensities. CPT Code 37191 *Insertion of intravascular vena cava filter, endovascular approach including vascular access, vessel selection, and radiological supervision and interpretation, intraprocedural roadmapping, and imaging guidance (ultrasound and fluoroscopy), when performed* and CPT Code 52235 *Cystourethroscopy, with fulguration (including cryosurgery or laser surgery) and/or resection of; MEDIUM bladder tumor(s) (2.0 to 5.0 cm)*

CPT	RVW	IWPUT	Total Time	Eval	Posit	SDW	INTRA	IM-post
37191 MPC	4.71	0.120	83	30	3	5	30	15
36216	5.27	0.088	106	33	3	5	45	20

### **Conclusion**

A multi-disciplinary survey of CPT 36216 was performed with strong survey results and concordance between specialties. When comparing the survey results to the key reference services, two MPC codes, and across the selective catheter placement family, we believe that the current work RVU value of 5.27 appropriately ranks CPT 36216 relative to other services.

### **SERVICES REPORTED WITH MULTIPLE CPT CODES**

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

### **FREQUENCY INFORMATION**

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 36216

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. national utilization not available

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC database

Specialty diagnostic radiology	Frequency 1 100	Percentage 21.20 %
--------------------------------	-----------------	--------------------

Do many physicians perform this service across the United States? Yes

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

## Procedures

## Major procedure

Cardiovascular-Other

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 36216

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 36217      Tracking Number

Original Specialty Recommended RVU: **6.29**  
Presented Recommended RVU: **6.29**  
RUC Recommended RVU: **6.29**

Global Period: 000

CPT Descriptor: Selective catheter placement, arterial system; initial third order or more selective thoracic or brachiocephalic branch, within a vascular family

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: Selective catheterization of the right brachial artery to evaluate digital ischemia in a 44-year-old female (eg., vasculitis, atherosclerosis, trauma, thromboembolism, vascular malformation).

Percentage of Survey Respondents who found Vignette to be Typical: 89%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: Pertinent medical information including labs and imaging is reviewed. A targeted H&P is performed. The proposed procedure is discussed with the patient and family and consent is obtained and documented. The patient is transported to the procedure room and placed supine on the procedure table.

Description of Intra-Service Work: The right common femoral artery access and sheath placement are performed. Wire and catheter are advanced into the brachiocephalic artery. Diagnostic arteriography is performed to assess for subclavian artery pathology. Using a wire, the diagnostic catheter is then advanced into the right subclavian artery and diagnostic angiography is performed to assess for right axillary and brachial artery pathology. Using a wire, the catheter is then advanced into the right brachial artery for subselective detailed angiography of the distal brachial artery, forearm, and hand. The catheter and sheath are removed, and hemostasis is obtained with manual compression, or by a closure device.

Description of Post-Service Work: Sterile dressing is applied. Appropriate care orders are entered in the electronic medical record. The procedure is documented in the chart. The patient is transferred from the procedure table to the recovery area and monitored for 4 hours. The procedure outcome is discussed with the patient and family. The patient is discharged home with follow up care instructions.

<u>Key CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
36254	000	8.15	RUC Time

CPT Descriptor Superselective catheter placement (one or more second order or higher renal artery branches) renal artery and any accessory renal artery(s) for renal angiography, including arterial puncture, catheterization, fluoroscopy, contrast injection(s), image postprocessing, permanent recording of images, and radiological supervision and interpretation, including pressure gradient measurements when performed, and flush aortogram when performed; bilateral

**KEY MPC COMPARISON CODES:**

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

<u>MPC CPT Code 1</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>	<u>Most Recent Medicare Utilization</u>
52235	000	5.44	RUC Time	32,000

CPT Descriptor 1 Cystourethroscopy, with fulguration (including cryosurgery or laser surgery) and/or resection of; MEDIUM bladder tumor(s) (2.0 to 5.0 cm)

<u>MPC CPT Code 2</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>	<u>Most Recent Medicare Utilization</u>
52352	000	6.75	RUC Time	22,192

CPT Descriptor 2 Cystourethroscopy, with ureteroscopy and/or pyeloscopy; with removal or manipulation of calculus (ureteral catheterization is included)

<u>Other Reference CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
		0.00	

CPT Descriptor**RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:**

Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by the mean) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

**Number of respondents who choose Top Key Reference Code: 51      % of respondents: 58.6 %**

**Number of respondents who choose 2<sup>nd</sup> Key Reference Code: 21      % of respondents: 24.1 %**

------------------------------	------	------

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Background**

In the Final Rule for 2016 CMS re-ran the high expenditure services across specialties with Medicare allowed charges of \$10 million or more. CMS identified the top 20 codes by specialty in terms of allowed charges, excluding 010 and 090-day global services, anesthesia and Evaluation and Management services and services reviewed since CY 2010. CPT Code 36215 was identified in this CMS screen. The specialties identified 36216-8 as part of this selective catheter placement family.

**Global Period Change**

The multi specialty group (SIR, ACR, RPA, SVS) requested a global period change for CPT Codes 36215, 36216 and 36217 from XXX to 000. The societies argued that it was important to have the global periods line up with other similar services (i.e. 36246, 36247, 36200). CMS approved the request.

**Moderate Sedation**

Moderate sedation will be reported separately, with the new moderate sedation codes (when CMS approves them). These codes are not currently included on Appendix G.

**Methodology**

The utilization for these services, require a minimum of 30 completed RUC surveys. A survey was distributed randomly to the members of the representative societies. Note that RPA only surveyed code 36215. The societies exceeded the minimum requirement for the number of surveys (80-113). A multi-disciplinary expert panel including SVS, SIR, ACR and RPA was convened. The survey data were reviewed by the multi-specialty expert panel and the following recommendations are being made.

**Pre- and Post-Service Time Packages**

We recommend the follow adjustments to the pre-time packages:

1. Evaluation: For facility based codes 36216 and 36217, we removed the 10 minutes from evaluation time for "Administer moderate sedation/observe (wait) anesthesia care".

2. Positioning: For codes 36215, 36216, and 36217, we recommend an additional 2 minutes of positioning time to account for positioning the patient supine and orienting the patient, imaging equipment, and lines/catheters to allow for access to the puncture site.
3. Scrub, dress, and wait: For code 36215, we recommend an additional 5 minutes for “Dress and scrub for procedure”. Sterile OR technique is maintained for this procedure when performed in an office procedure/surgery suite, requiring scrubbing and sterile gown, mask and gloves for the physician and clinical staff.

### **Work RVU Recommendation for 36217**

We are recommending maintaining the current work RVU value of 6.29, lower than the 25<sup>th</sup> percentile.

### **Pre- and Post-Service Time Packages**

The current Medicare utilization indicates this procedure is typically performed in the inpatient setting. As such, we are recommending pre-time package 2b – facility based Difficult Patient/Straightforward Procedure (With sedation/anesthesia care).

We are recommending post-time package 8b IV Sedation/ Complex Procedure.

### **Billed Together**

CPT Code 36217 is not typically reported with other procedures. An S&I code is typically reported on the same day (i.e. 75710).

### **Comparison with Key Reference Services**

The key reference codes chosen by the majority of the survey respondents were CPT Code 36247 *Selective catheter placement, arterial system; initial third order or more selective abdominal, pelvic, or lower extremity artery branch, within a vascular family* and CPT Code 36254 *Superselective catheter placement (one or more second order or higher renal artery branches) renal artery and any accessory renal artery(s) for renal angiography, including arterial puncture, catheterization, fluoroscopy, contrast injection(s), image postprocessing, permanent recording of images, and radiological supervision and interpretation, including pressure gradient measurements when performed, and flush aortogram when performed; bilateral.*

The expert panel believes the increased complexity for the surveyed code recommendation is appropriate and due to stroke risk/upper extremity ischemic complication which are more debilitating than lower extremity/possibly and technically more difficult.

CPT	RVW	IWPUT	Total Time	Eval	Posit	SDW	INTRA	IM-post
36217	6.29	0.087	101	23	3	5	60	20
36247	6.29	0.080	131	33	3	5	60	30
36254	8.15	0.098	139	33	3	5	68	30

### **Comparison to MPC codes**

CPT Code 36217 ranks appropriately between two MPC codes with similar intra-service times and intensities. CPT Code 52235 *Cystourethroscopy, with fulguration (including cryosurgery or laser surgery) and/or resection of; MEDIUM bladder tumor(s) (2.0 to 5.0 cm)* and 52352 *Cystourethroscopy, with ureteroscopy and/or pyeloscopy; with removal or manipulation of calculus (ureteral catheterization is included).*

CPT	RVW	IWPUT	Total Time	Eval	Posit	SDW	INTRA	IM-post

### **Conclusion**

A multi-disciplinary survey of CPT 36217 was performed with strong survey results and concordance between specialties. When comparing the survey results to the key reference services, two MPC codes, and across the selective catheter placement family, we believe that the current work RVU value of 6.29 appropriately ranks CPT 36217 relative to other services.

---

### **SERVICES REPORTED WITH MULTIPLE CPT CODES**

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

---

### **FREQUENCY INFORMATION**

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 36217

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty interventional radiology                      How often? Sometimes

Specialty vascular surgery                      How often? Sometimes

Specialty diagnostic radiology                      How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. national utilization not available

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 4,705

If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC database

Specialty interventional radiology	Frequency 700	Percentage 14.87 %
------------------------------------	---------------	--------------------

Specialty vascular surgery	Frequency 1000	Percentage 21.25 %
----------------------------	----------------	--------------------

Specialty diagnostic radiology	Frequency 1500	Percentage 31.88 %
--------------------------------	----------------	--------------------

Do many physicians perform this service across the United States? Yes

### **Berenson-Eggers Type of Service (BETOS) Assignment**

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Procedures

BETOS Sub-classification:

Major procedure

BETOS Sub-classification Level II:

Cardiovascular-Other

### **Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 36217

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code:36218

Tracking Number

Original Specialty Recommended RVU: **1.01**Presented Recommended RVU: **1.01**

Global Period: ZZZ

RUC Recommended RVU: **1.01**

CPT Descriptor: Selective catheter placement, arterial system; additional second order, third order, and beyond, thoracic or brachiocephalic branch, within a vascular family (List in addition to code for initial second or third order vessel as appropriate)

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: Following subselective catheterization of the radial artery, the catheter is drawn back and the ulnar artery is then selectively catheterized to evaluate digital ischemia in a 44-year-old female (eg, vasculitis, atherosclerosis, trauma, thromboembolism, vascular malformation).

Percentage of Survey Respondents who found Vignette to be Typical: 94%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

**Description of Pre-Service Work:**

Description of Intra-Service Work: Following subselective catheterization of the radial artery, the catheter is drawn back and roadmap angiogram is performed. A wire is inserted and the ulnar artery is then selectively catheterized. After test injection ensuring no spasm, additional subselective angiography of the forearm and hand is performed. The catheter is safely removed.

**Description of Post-Service Work:**

Ref Code****Time Segment (Mean)**

Overall intensity/complexity	0.69	1.30
------------------------------	------	------

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Background**

In the Final Rule for 2016 CMS re-ran the high expenditure services across specialties with Medicare allowed charges of \$10 million or more. CMS identified the top 20 codes by specialty in terms of allowed charges, excluding 010 and 090-day global services, anesthesia and Evaluation and Management services and services reviewed since CY 2010. CPT Code 36215 was identified in this CMS screen. The specialties identified 36216-8 as part of this selective catheter placement family.

**Global Period Change**

The multi specialty group (SIR, ACR, RPA, SVS) requested a global period change for CPT Codes 36215, 36216 and 36217 from XXX to 000. The societies argued that it was important to have the global periods line up with other similar services (i.e. 36246, 36247, 36200). CMS approved the request.

**Moderate Sedation**

Moderate sedation will be reported separately, with the new moderate sedation codes (when CMS approves them). These codes are not currently included on Appendix G.

**Methodology**

The utilization for these services, require a minimum of 30 completed RUC surveys. A survey was distributed randomly to the members of the representative societies. Note that RPA only surveyed code 36215. The societies exceeded the minimum requirement for the number of surveys (80-113). A multi-disciplinary expert panel including SVS, SIR, ACR and RPA was convened. The survey data were reviewed by the multi-specialty expert panel and the following recommendations are being made.

**Pre- and Post-Service Time Packages**

We recommend the follow adjustments to the pre-time packages:

1. **Evaluation:** For facility based codes 36216 and 36217, we removed the 10 minutes from evaluation time for “*Administer moderate sedation/observe (wait) anesthesia care*”.
2. **Positioning:** For codes 36215, 36216, and 36217, we recommend an additional 2 minutes of positioning time to account for positioning the patient supine and orienting the patient, imaging equipment, and lines/catheters to allow for access to the puncture site.
3. **Scrub, dress, and wait:** For code 36215, we recommend an additional 5 minutes for “Dress and scrub for procedure”. Sterile OR technique is maintained for this procedure when performed in an office procedure/surgery suite, requiring scrubbing and sterile gown, mask and gloves for the physician and clinical staff.

### **Work RVU Recommendation for 36218**

The expert panel strongly believes in the RUC survey process. The panel also believes the survey respondents accurately report increased time and rvu from current. However the expert panel cannot account for the increase in time to 30 min and cannot create a credible compelling evidence argument. The panel agrees that 15 minutes (the 25<sup>th</sup> percentile) of time is more appropriate for the services described by this procedure. As such, the panel is recommending the 25<sup>th</sup> percentile of time 15 minutes of intra-service time and the current value.

### **Pre- and Post-Service Time Packages**

This service is an add-on service. We are not recommending pre or post time.

### **Billed Together**

CPT Code 36218 is an add-on code. It would typically be reported with CPT Code 36217.

### **Comparison with Key Reference Services**

The key reference codes chosen by the majority of the survey respondents were CPT Code 36227 *Selective catheter placement, external carotid artery, unilateral, with angiography of the ipsilateral external carotid circulation and all associated radiological supervision and interpretation (List separately in addition to code for primary procedure)* and CPT Code 37239 *Transcatheter placement of an intravascular stent(s), open or percutaneous, including radiological supervision and interpretation and including angioplasty within the same vessel, when performed; each additional vein (List separately in addition to code for primary procedure)*.

CPT	RVW	IWPUT	Total Time	Eval	Posit	SDW	INTRA	IM-post
36218	1.01	0.067	15				15	
36227	2.09	0.139	15				15	
37239	2.97	0.098	32	1			30	1

### **Comparison to MPC codes**

CPT Code 36218 ranks appropriately between two MPC codes with similar intra-service times and intensities. CPT Code 64484 *Injection(s), anesthetic agent and/or steroid, transforaminal epidural, with imaging guidance (fluoroscopy or CT); lumbar or sacral, each additional level (List separately in addition to code for primary procedure)* and CPT Code 64480 *Injection(s), anesthetic agent and/or steroid, transforaminal epidural, with imaging guidance (fluoroscopy or CT); cervical or thoracic, each additional level (List separately in addition to code for primary procedure)*.

CPT	RVW	IWPUT	Total	Eval	Posit	SDW	INTRA	IM-post
-----	-----	-------	-------	------	-------	-----	-------	---------

			<b>Time</b>					
64484 MPC	1.00		12	1			10	1
36218 Survey	1.01		15				15	
64480 MPC	1.20		15				15	

### **Relativity**

<b>CPT Code</b>	<b>Descriptor</b>	<b>Work RVU</b>	<b>PreEval Time</b>	<b>Intra Time</b>	<b>Post Time</b>	<b>Total Time</b>	<b>IWPUT</b>
64484 MPC	<i>Injection(s), anesthetic agent and/or steroid, transforaminal epidural, with imaging guidance (fluoroscopy or CT); lumbar or sacral, each additional level (List separately in addition to code for primary procedure)</i>	1.00	0	10	0	10	0
<b>36218 Surveyed</b>	<b><i>Selective catheter placement, arterial system; additional second order, third order, and beyond, thoracic or brachiocephalic branch, within a vascular family (List in addition to code for initial second or third order vessel as appropriate)</i></b>	<b>1.01</b>		<b>15</b>			<b>0.067</b>
64480 MPC	<i>Injection(s), anesthetic agent and/or steroid, transforaminal epidural, with imaging guidance (fluoroscopy or CT); cervical or thoracic, each additional level (List separately in addition to code for primary procedure)</i>	1.20	0	15	0	15	0
36227 RefCode	<i>Selective catheter placement, external carotid artery, unilateral, with angiography of the ipsilateral external carotid circulation and all associated radiological supervision and interpretation (List separately in addition to code for primary procedure)</i>	2.09	0	15	0	15	0.139
37239 RefCode	<i>Transcatheter placement of an intravascular stent(s), open or percutaneous, including radiological supervision and interpretation and including angioplasty within the same vessel, when performed; each additional vein (List separately in addition to code for primary procedure)</i>	2.97	1	30	1	32	0.098

### **Conclusion**

A multi-disciplinary survey of CPT 36218 was performed with strong survey results and concordance between specialties. When comparing the survey results to the key reference services, two MPC codes, and across the

selective catheter placement family, we believe that the current work RVU value of 1.01 appropriately ranks CPT 36218 relative to other services.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.  
☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.  
☐ Multiple codes allow flexibility to describe exactly what components the procedure included.  
☐ Multiple codes are used to maintain consistency with similar codes.  
☐ Historical precedents.  
☐ Other reason (please explain) (Use 36218 in conjunction with 36216, 36217, 36225, 36226)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 36218

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
 If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty interventional radiology How often? Rarely

Specialty vascular surgery How often? Rarely

Specialty diagnostic radiology How often? Rarely

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. national utilization not available

Specialty	Frequency	Percentage	%
Specialty	Frequency	Percentage	%
Specialty	Frequency	Percentage	%

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,077  
 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC database

Specialty interventional radiology	Frequency 250	Percentage 23.21 %
------------------------------------	---------------	--------------------

Specialty vascular surgery	Frequency 100	Percentage 9.28 %
Specialty diagnostic radiology	Frequency 450	Percentage 41.78 %

Do many physicians perform this service across the United States? Yes

---

**Berenson-Eggers Type of Service (BETOS) Assignment**

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Procedures

BETOS Sub-classification:

Major procedure

BETOS Sub-classification Level II:

Cardiovascular-Other

---

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 36218

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/Specialty Society Update Process  
Practice Expense Summary of Recommendation  
Facility Direct Inputs**

**Global Period:** 000

**Meeting Date:** April 2016

*36215 Selective catheter placement, arterial system; each first order thoracic or brachiocephalic branch, within a vascular family*

*36216 Selective catheter placement, arterial system; initial second order thoracic or brachiocephalic branch, within a vascular family*

*36217 Selective catheter placement, arterial system; initial third order or more selective thoracic or brachiocephalic branch, within a vascular family*

**Global Period:** ZZZ

**Meeting Date:** April 2016

*36218 Selective catheter placement, arterial system; additional second order, third order, and beyond, thoracic or brachiocephalic branch, within a vascular family (List in addition to code for initial second or third order vessel as appropriate)*

---

**1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:**

SIR, ACR, SVS and RPA convened a panel that included a number of experts familiar with these services to evaluate the direct practice expense inputs for this family of codes for selective catheter placement during angiography.

**2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison. You must provide an explanation for the selection of reference codes. Reference Code Rationale:**

The 4 codes surveyed in this family all have existing direct PE inputs. As such, we included the current inputs on the excel spreadsheet as a reference. We also included the direct PE inputs for the most typical S&I code reported with the codes. And finally, we included the pending/RUC approved direct PE inputs for the new Moderate Sedation codes.

**3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:**

N/A

**4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:**

N/A

**5. Please describe in detail the clinical activities of your staff:**

Pre-Service Clinical Labor Activities:

N/A

Intra-Service Clinical Labor Activities:

N/A

Post-Service Clinical Labor Activities:

- Conduct phone calls/call in prescriptions:  
*The post procedure phone call is used to inquire about possible complications from the procedure such as arterial access site complications or complications related to the target vessels selected during the procedure. Staff will inquire about any new signs or symptoms, answer any additional questions, and prescribe any needed medications such as anti-nausea or pain medications as needed.*

**AMA/Specialty Society Update Process  
Practice Expense Summary of Recommendation  
Non Facility Direct Inputs**

**Global Period:** 000

**Meeting Date:** April 2016

*36215 Selective catheter placement, arterial system; each first order thoracic or brachiocephalic branch, within a vascular family*

*36216 Selective catheter placement, arterial system; initial second order thoracic or brachiocephalic branch, within a vascular family*

*36217 Selective catheter placement, arterial system; initial third order or more selective thoracic or brachiocephalic branch, within a vascular family*

**Global Period:** ZZZ

**Meeting Date:** April 2016

*36218 Selective catheter placement, arterial system; additional second order, third order, and beyond, thoracic or brachiocephalic branch, within a vascular family (List in addition to code for initial second or third order vessel as appropriate)*

---

**1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:**

SIR, ACR, SVS and RPA convened a panel that included a number of experts familiar with these services to evaluate the direct practice expense inputs for this family of codes for selective catheter placement during angiography.

**2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison. You must provide an explanation for the selection of reference codes. Reference Code Rationale:**

The 4 codes surveyed in this family all have existing direct PE inputs. As such, we included the current inputs on the excel spreadsheet as a reference. We also included the direct PE inputs for the most typical S&I code reported with the codes. And finally, we included the pending/RUC approved direct PE inputs for the new Moderate Sedation codes.

**3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:**

The Practice Expense Subcommittee has reviewed the pre-service staff times for codes with global periods of 0 and 10 days. **The RUC has agreed that 0 and 10 day codes are assumed to have no pre-service clinical staff time (standard of 0 minutes) unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate.** The RUC agreed that with evidence some subset of codes in the facility setting may require minimal use of clinical staff and has allocated 15 minutes when appropriate. The RUC agreed that with evidence some subset of codes may require

**CPT Code: 36215, 36216, 36217 and 36218**  
**Specialty Society('s): SIR, ACR, SVS and RPA**

extensive use of clinical staff and has allocated 18 minutes for the non-facility and 30 minutes for the facility when appropriate.

	NON FACILITY	NON FACILITY	NON FACILITY	FACILITY	FACILITY	FACILITY	FACILITY
Description of Clinical Activities - 000 and 010	Standard use of Clinical Staff	Extensive use of Clinical Staff	Standard use of Clinical Staff for Endoscopy	Standard use of Clinical Staff for Endoscopy	Standard use of Clinical Staff	Minimal use of Clinical Staff	Extensive use of Clinical Staff
Complete pre-service diagnostic and referral forms	0	5	0	3	0	3	5
Coordinate pre-service surgery services	0	3	0	5	0	3	10
Schedule space and equipment in facility	0	0	0	3	0	3	5
Provide pre-service education/obtain consent	0	7	0	5	0	3	7
Follow-up phone call and prescriptions	0	3	0	3	0	3	3
Other Clinical Activity	0	0	0	0	0	0	0
TOTAL	0	18	0	19	0	15	30

We are recommending facility minimal use of clinical staff for CPT codes 36216 & 36217:

Complete pre-service diagnostic & referral forms	3
Coordinate pre-surgery services	3
Schedule space and equipment in facility	3
Provide pre-service education/obtain consent	*
Follow-up phone calls & prescriptions	3

We need this time to review patient information, obtain prior imaging and clinical records, and ensure proper laboratory tests have been obtained prior to scheduling the procedure (total of 6 minutes). Staff must coordinate with referring clinical services to schedule and allocate space and equipment as well as ensure appropriate staff availability (3 minutes). After scheduling and resource allocation, staff must inform referring clinical services of the scheduled procedure, ensure appropriate clinical preparations are initiated (such as NPO status, etc) and prepare standard post-procedure recommendations/prescriptions and patient recovery space (3 minutes). Performing these tasks will require 12 minutes of staff time.

*\*We have included time in the service period for pre-service education/obtain consent. As such, we have not included it in the pre-service period.*

**4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:**

Pre Time

Availability of prior images confirmed (2 min): Added. Typically performed.

Patient clinical information and questionnaire reviewed by technologist, order from physician confirmed and exam protocolled by radiologist (2 min): Added. Typically performed.

Service Period

Circulator: Added the circulator to account for the typical interventional model. We did not include the angio tech at 75% to assist with image acquisition as this time would be captured in the S&I code.

Post Procedure Monitoring Time: These are arterial studies, which require 4 hours post procedure monitoring. Since 1 hour of recovery will be captured in the new moderate sedation codes, we have included 3 hours of post procedure monitoring in these codes.

Technologist QC's images in PACS, checking for all images, reformats, and dose page: Added. Typically performed.

Review examination with interpreting MD: Added. Typically performed.

Exam documents scanned into PACS. Exam completed in RIS system to generate billing process and to populate images into Radiologist work queue: Added. Typically performed.

### Supplies

We have included the following supply items, that were not in the original inputs:

- Kit, guidewire introducer (Micro-Stick) SA016
- Syringe 10-12ml SC051
- Syringe 20ml SC053
- Syringe 5-6ml SC057
- Sodium chloride SH069
- Mask, surgical SB033
- Suture device for vessel closure (Perclose A-T) SD207

Although the procedure has not significantly changed, experience with the supplies needed in the nonfacility setting has improved. Usage of micropuncture technique for arterial access has become standard of care. Additional syringes and saline flush are necessary to prevent complications related to working above the diaphragm (complications such as embolic stroke). A surgical mask (without face shield) was added for the RN in the Angio Room, which is a requirement for sterile conditions in an OR setting. In the nonfacility setting, access site related complications are more of a concern, and therefore use of a closure device has become more typical than manual pressure for hemostasis.

For clarification, the third order selection of an artery requires selecting the parent vessel with a larger catheter (SIM2F1) SD148 followed by superselection of the smaller branch artery using the microcatheter (selective 3rd order) SD154 which passes through the parent catheter. A microcatheter alone cannot be used to select a large parent branch of the aorta and the larger catheter cannot be used to select small branches itself.

### Equipment

Based on the CMS definition of highly technical equipment, we believe CMS will classify the **angio room** as highly technical. As such, we included the following standard clinical labor tasks in the calculation of time allocated to the **angio room**:

- Prepare room, equipment, supplies
- Prepare and position patient
- Assist physician in performing procedure and/or Acquire images
- Clean room/equipment by physician staff
- Technologist QC's images in PACS, checking for all images, reformats, and dose page

**CPT Code:** 36215, 36216, 36217 and 36218  
**Specialty Society('s):** SIR, ACR, SVS and RPA

We included the entire service period for the **PACs** system minus the additional clinical staff time for subsequent clinical staff for assist physician and the post procedure monitoring time.

**5. Please describe in detail the clinical activities of your staff:**

Pre-Service Clinical Labor Activities:

- Complete pre-service diagnostic & referral forms
- Coordinate pre-surgery services
- Phone calls and prescriptions
- Availability of prior images confirmed and reviewed
- Patient clinical information and questionnaire reviewed by technologist, order from physician confirmed and exam protocol by radiologist

Intra-Service Clinical Labor Activities:

- Prepare room, equipment, supplies after consulting with MD
- Patient is greeted, gowned and escorted into procedure room.
- Prepare and position patient prone on table / obtain vitals / set up IV / monitor patient
- Sterile prep performed and draping of target site
- Ensure proper patient position for use of angiography equipment
- Assist physician in performing procedure
- Assist physician with fluoro, contrast, supplies and image acquisition
- Monitor pt. following service/check tubes, monitors, drains (*not related to moderate sedation*)
- Clean room/equipment by physician staff
- Technologist archives and QC's images to/in PACS, checking for all images and dose page
- Review examination with interpreting MD
- Exam documents scanned into PACS. Exam completed in RIS system to generate billing process and to populate images into Radiologist work queue

Post-Service Clinical Labor Activities:

- Conduct phone calls/call in prescriptions

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
*\*CMS Request – Final Rule for 2016\**

April 2016

**Therapeutic Apheresis**

CPT code 36516 was identified by Centers for Medicare and Medicaid Services (CMS) as potentially misvalued in the final rule for 2016. At the April 2016 RUC meeting, Therapeutic Apheresis code 36516 was discussed. During the discussion, the Renal Physicians Association and the College of American Pathologists indicated there is a concern that the service is misplaced within the CPT coding structure and this misplacement may have resulted in recent inaccuracy of coding. Specifically, the service is an extracorporeal therapy that is more akin to dialysis services (CPT codes 90935-90999) than to surgical procedures, and the code may need to reside in the 909XX series of codes within the CPT coding structure. The two specialties plan to submit a code change proposal to CPT that will address CPT code 36516 as well as any others in the coding family that may be impacted by a change. The specialty societies will submit a CCP for the September 2016 CPT meeting to address these concerns. **The RUC refers CPT code 36516 to the CPT Editorial Panel.**

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
36516	Therapeutic apheresis; with extracorporeal selective adsorption or selective filtration and plasma reinfusion	000	Refer to CPT Sept 2016

COLLEGE of AMERICAN  
PATHOLOGISTS

April 1, 2016

Peter Smith, M.D.  
Chair, AMA RVS Update Committee  
American Medical Association  
515 North State Street  
Chicago, IL 60610

RE: Request for Referral of Therapeutic Apheresis Code 36516 to CPT

Dear Dr. Smith:

On behalf of the undersigned societies, we are contacting you with regard to the status of the therapeutic apheresis CPT code 36516 (Therapeutic apheresis; with extracorporeal selective adsorption or selective filtration and plasma reinfusion). CPT code 36516 appeared on the list of potentially misvalued codes as noted in the Medicare Fee Schedule final rule for 2016 published in the *Federal Register* on November 16, 2015.

While our organizations concur that there appears to be uncertainty within the Centers for Medicare and Medicaid Services (CMS) about the physician work as well as the direct and indirect practice expense inputs of code 36516, we have an overriding concern that the service is misplaced within the CPT coding structure. This misplacement may have resulted in recent inaccuracy of coding. RUC database Medicare claims data indicates specialty utilization that is inconsistent with our understanding of how this service is typically provided. Further research is necessary to understand the array of utilization. This service is an extracorporeal therapy that is more akin to dialysis services (CPT codes 90935-90999) than to surgical procedures, and therefore we believe that the code should reside in the 909XX series of codes. Accordingly, we are collaboratively requesting a postponement of the RUC survey process in order to resolve what we believe to be an outstanding CPT issue. We plan to submit a code change proposal to CPT that will address this code as well as any others in the coding family that may be impacted by a change.

As always, our organizations appreciate the scope of AMA's efforts in the area of physician reimbursement, and we look forward to future collaboration with the AMA whenever possible. Any questions or comments regarding this correspondence should be directed to RPA's Director of Public Policy, Rob Blaser, at 301-468-3515, or by email at [rblaser@renalmd.org](mailto:rblaser@renalmd.org) or to CAP's Assistant Director of Economic Affairs, Maurine Dennis, at 202-354-7136, or by email at [mdennis@cap.org](mailto:mdennis@cap.org).

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
**\*CMS High Expenditure Procedures\***

April 2016

**Voiding Pressure Studies**

In the Final Rule for 2016 CMS re-ran the high expenditure services across specialties with Medicare allowed charges of \$10 million or more. CMS identified the top 20 codes by specialty in terms of allowed charges, excluding 010 and 090-day global services, anesthesia and Evaluation and Management services and services reviewed since CY 2010. The RUC commented that CPT code 51798 *Measurement of post-voiding residual urine and/or bladder capacity by ultrasound, non-imaging* should be removed from this screen because it has a work RVU of 0.00. In the Final Rule for 2016, CMS indicated that the work and practice expense (PE) for this service should be reviewed.

The PE Subcommittee and the RUC reviewed the direct PE inputs for CPT code 51798. A member questioned one of the supply items *paper, recording, roll (per foot)* SK060 and the specialty explained that this is a print out that the machine automatically does and that it is scanned into the electronic medical record. The following modifications were made:

- Removed 1 minute from line 21 *Greet patient, provide gowning, ensure appropriate medical records are available* as it is duplicative of the Evaluation and Management service typically performed on the same day.
- Removed 2 minutes from line 23 *Provide pre-service education/obtain consent* as it is duplicative of the Evaluation and Management service typically performed on the same day.
- Remove 3 minutes from line 43 *Other Clinical Activity - specify: Enter data in EMR* as entering information into the medical record is not typically allocated clinical staff time.
- The unit for supply item *paper, recording, roll (per foot)* SK060 was changed from item to foot.
- The equipment time calculation was modified to include the entire service period for both, the *table, power* EF031 and the *ultrasound, noninvasive bladder scanner w-cart* EQ255.

**The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.**

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
51798	Measurement of post-voiding residual urine and/or bladder capacity by ultrasound, non-imaging	XXX	0.00 (PE Only)

Measurement of post-voiding residual urine and/or bladder capacity by ultrasound, non-imaging

Transurethral electrosurgical resection of prostate, including control of postoperative bleeding, complete (vasectomy, meatotomy, cystourethroscopy, urethral calibration and/or dilation, and internal urethrotomy are included)

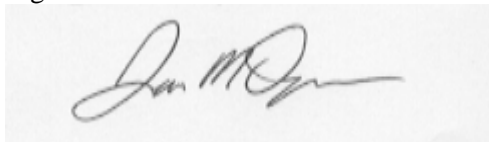

51798 and 52601  
Code Range

### Attestation Statement

This form needs to be completed by any **RUC Advisor** whose specialty society is developing a recommendation to be reviewed by the RUC.

As a RUC Advisor, I attest that the integrity of the RUC survey, summary of recommendation forms and practice expense recommendations are based on accurate and complete data to the best of my knowledge. As a RUC advisor, I acknowledge that violations would be addressed by the executive committee (i.e., RUC Chair , AMA Representative and Alternate AMA Representative.)

**AMA/Specialty Society Update Process  
Practice Expense Summary of Recommendation  
Non Facility Direct Inputs**

CPT Long Descriptor: Measurement of post-voiding residual urine and/or bladder capacity by ultrasound, non-imaging

Global Period: XXX Meeting Date: April 26-30, 2016

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:

The recommendations were developed by a Panel consisting of six physicians who represents urologic practices from across the United States in single specialty groups in suburban and urban settings. They represent the states of Washington, Illinois, Florida and North Carolina. The panel reviews current information, makes recommendations and these recommendations are submitted to the AMA.

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes.  
Reference Code Rationale:

CPT code 51798 Measurement of post-voiding residual urine and/or bladder capacity by ultrasound, non-imaging was the reference code.

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time: N/A
4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:

In reviewing the supplies listed in the RUC database, we recommend adding 2 sanitizing cloths to wipe the transmission jelly off of the patient's abdomen.

5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

- Greet and identify patient
- Ask patient to empty bladder completely in bathroom
- Provide preservice education
- Prepare equipment
- Have the patient disrobe to allow examination of pubic area

**CPT Code: 51798**

**Specialty Society('s) American Urological Association**

- Position the draped patient in a supine position on examination table
- Turn on the ultrasound machine and select gender-appropriate mode

Intra-Service Clinical Labor Activities:

- Palpate the abdominal area to identify the pubic bone
- Apply ultrasound jelly to suprapubic area
- Repeatedly scan the suprapubic area, typically three to six times

Post-Service Clinical Labor Activities:

- Observing the ultrasound machine, note the scan with the largest volume
- Print out the bladder image along with the volume of urine in milliliters (ml)
- Have physician document findings and sign
- Scan report into electronic medical record

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
*Site of Service Anomaly*

April 2016

**Transurethral Electrosurgical Resection of Prostate (TURP)**

In October 2015, CPT code 52601 was identified in which the Medicare data from 2011-2013 indicated that it was performed less than 50% of the time in the inpatient setting, yet include inpatient hospital Evaluation and Management services within the global period.

***52601 Transurethral electrosurgical resection of prostate, including control of postoperative bleeding, complete (vasectomy, meatotomy, cystourethroscopy, urethral calibration and/or dilation, and internal urethrotomy are included)***

The RUC reviewed the survey results from 97 urologists for CPT code 52601 and determined that the survey 25<sup>th</sup> percentile work RVU was too high compared to the key reference services. The RUC recommends cross-walking the survey code to CPT code 29828 *Arthroscopy, shoulder, surgical; biceps tenodesis* (work RVU = 13.16, intra-service time of 75 minutes and 252 minutes total time) because these services require the same physician work and intra-service time. The RUC recommends 33 minutes of pre-service evaluation time, 8 minutes of pre-service positioning, 10 minutes of pre-service scrub/dress/wait, 75 minutes intra-service time, 45 minutes of immediate post-service time, ½ day discharge management 99238 and two 99213 office visits. The top two key reference services 52649 *Laser enucleation of the prostate with morcellation, including control of postoperative bleeding, complete (vasectomy, meatotomy, cystourethroscopy, urethral calibration and/or dilation, internal urethrotomy and transurethral resection of prostate are included if performed)* (work RVU = 14.56 and intra-service time of 120 minutes) and 55873 *Cryosurgical ablation of the prostate (includes ultrasonic guidance and monitoring)* (work RVU = 13.60 and intra-service time of 100 minutes) require significantly more intra-service time and more physician work. Therefore, the RUC determined the crosswalk to CPT code 29828 was appropriate.

The RUC noted that this service has shifted from the inpatient setting to primarily the outpatient hospital. The RUC confirmed that the immediate post-service time of 45 minutes appropriately accounts for the immediate care of the patient (25 minutes) as well as the post-operative care for the patient within the next 23 hours (20 minutes). As per CMS' policy for 23-hour stay hospital outpatient services, the 20 minutes is derived from the intra-service time of the post-operative hospital visit that is typically performed on the same day. The specialty society noted that approximately 65% of the survey respondents indicated that they performed a 99232 hospital visit and the RUC determined that the time should be captured in the immediate post-service time. The postoperative visit during the 23-hour stay includes conducting the post-operative pain assessment, hand irrigating the catheter, determining the need for continued catheter traction or continuous bladder irrigation and answering any questions from the patient.

For additional support, the RUC referenced similar service 58545 *Laparoscopy, surgical, supracervical hysterectomy, for uterus 250 g or less*; (work RVU = 12.29, intra-service time of 75 minutes and 226 minutes total time). **The RUC recommends a work RVU of 13.16 for CPT code 52601.**

**Practice Expense:**

A minor modification to delete 3 minutes for a telephone call on line 49 as it is duplicative of that associated with an Evaluation and Management service was made. The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.

**Work Neutrality**

The RUC's recommendation for this code will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
52601	Transurethral electrosurgical resection of prostate, including control of postoperative bleeding, complete (vasectomy, meatotomy, cystourethroscopy, urethral calibration and/or dilation, and internal urethrotomy are included)	090	13.16

## AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS SUMMARY OF RECOMMENDATION

CPT Code: 52601	Tracking Number	Original Specialty Recommended RVU: <b>14.60</b>
		Presented Recommended RVU: <b>14.60</b>
Global Period: 090		RUC Recommended RVU: <b>13.16</b>

CPT Descriptor: Transurethral electrosurgical resection of prostate, including control of postoperative bleeding, complete (vasectomy, meatotomy, cystourethroscopy, urethral calibration and/or dilation, and internal urethrotomy are included)

### CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 78-year-old male presents with urinary retention and wears a urinary catheter. He has failed alpha-blocker and 5-alpha reductase inhibitor therapy. Digital rectal exam reveals a 65 gram prostate. The patient elects to have a TURP.

Percentage of Survey Respondents who found Vignette to be Typical: 92%

#### Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 92% , In the ASC 7%, In the office 1%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 8% , Overnight stay-less than 24 hours 66% , Overnight stay-more than 24 hours 26%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 27%

#### Moderate Sedation

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 12%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 1%

Description of Pre-Service Work: Review the medical record including preoperative laboratory results. Write preoperative orders (to be sent or faxed to the hospital). Determine expected length of hospital stay and determine the need for preoperative anesthesia evaluation. Contact medical specialists, such as cardiologists, to confirm patient appropriateness and stability for planned surgical procedure. Review surgical procedure and postoperative recovery in and out of hospital with patient and /or family. Answer patient and / or family questions. Insure that the informed consent has been completed and is present in the medical record.

Change into scrubs. Speak with the Anesthesiologist about the length of the procedure and any special concerns about this particular patient (e.g. positioning, medical problems, expectations for postoperative management). Wash and disinfect hands, put on sterile surgical gown. Prepare the genitalia with standard prep solution and place sterile drapes. Inspect and assemble the endoscopic equipment, connect the video equipment (insure functioning light source, irrigation fluid, appropriate endoscopic lens and choose the resection loop/ device) and apply defogger to the lens and video camera. Connect the irrigation source, light sources and white balance. Position patient onto the endoscopic table and move into dorsal lithotomy position. Perform the initial time out / briefing with the surgical team. Wait for the Anesthesiologist to complete the induction of anesthesia.

Description of Intra-Service Work: Place lubrication jelly into the urethra. Perform the time out and insert the endoscope into the urethra.

If it is difficult to insert the endoscope into the urethral meatus it may be necessary to perform sequential dilations with graduated urethral sounds. Once the endoscope is in the urethra, inspect the fossa navicularis, anterior and posterior urethral lumen, and document the integrity of the external sphincter. Determine caliber of the urethral lumen prior to inserting the larger resectoscope. Inspect the prostatic urethral lumen for extent of lateral lobe coaptation, anatomy and length of visually obstructing prostatic tissue. Locate the verumontanum and prostatic utricle. Examine the bladder neck and determine the extent of elevation of the bladder neck and/ or protrusion of the median lobe of the prostate into the bladder lumen. Inspect the ureteral orifices to make certain that the resection of the median lobe will not injure the ureteral orifices. Check for efflux of urine from each ureter. Inspect the bladder wall for trabeculations, cellules, diverticula, stones or suspicious lesions. Assess bladder for capacity and compliance.

If using a flexible cystoscope then retroflex the scope to evaluate the bladder neck. If using a rigid scope, change lens to better evaluate the protrusion of the prostate. Drain the bladder and remove the cystoscope.

Re-examine the urethral meatus prior to passing the larger resectoscope. Repeat the dilation with graduated sounds or perform a meatotomy if required. Although infrequent, it may be necessary to perform an optical internal urethrotomy with another type of cystoscope to allow passage of the larger resectoscope in the presence of a urethral stricture. Pass the resectoscope into the bladder with either a blunt obturator or a visual obturator. Remove the obturator and insert the electrosurgical working element. Reconnect the light source, irrigation fluid, video camera, and electrical cords.

Repeat identification of the ureteral orifices. Begin the transurethral resection of the prostate with removal of the median lobe taking care to not injure the bladder neck. Resect the coapting lateral lobe tissue to the level of the compressed prostatic capsule and cauterize all bleeding vessels. Carefully resect the anterior prostatic tissue so as not to injure the urinary sphincter. Resect apical tissue that is adjacent to the verumontanum. Stop the procedure at various intervals to irrigate out blood clots and prostatic tissue with the Ellik evacuator. Complete the resection and insure hemostasis. It may be necessary to change from the resection loop electrode to a roller ball electrode in order to cauterize the prostatic fossa for control of bleeding.

Once the procedure has been completed remove the resectoscope, disconnect the video camera, light source and irrigation. Insert a lubricated 3- way foley catheter into the bladder, inflate the balloon to 30 ml, hand irrigate the catheter to insure adequate drainage of the bladder without obstruction from blood clots and connect the saline irrigation to the instillation port of the catheter. It is often necessary to insert the 3- way foley catheter with a metal catheter guide. This increases the complexity of the procedure and the catheter guide must be inserted carefully and then removed once the catheter is safely in the bladder. Place the foley catheter on traction to minimize bleeding from the resected prostatic fossa. Perform the postoperative final time out / debriefing with the surgical and anesthesia teams.

Description of Post-Service Work: Remove the surgical drapes and return the patient to supine position. Secure the foley catheter. Confirm that the catheter is draining adequately. Hand irrigate the catheter again if needed. Wait for the Anesthesiologist to awaken the patient. Transfer the patient off of the operating table to a stretcher. Accompany the patient to the recovery area and assist in moving the patient to the recovery area bed. Review the procedure and expected care with the recovery room nursing staff. Meet with the patient's family and discuss the procedure, the expected outcome, planned postoperative care in the hospital, and expected outpatient follow up. Discuss the procedure with the patient in the recovery room when awake. Conduct a postoperative pain assessment and insure that the catheter is draining well. Prepare the postoperative orders and operative reports. Assess laboratory tests such as serum sodium or hemoglobin. Contact the referring physician regarding the outcome of the procedure and organize any unusual aspects of the postoperative care (cardiac disease, diabetes management).

Facility (after discharge from the Recovery area): examine the patient and assess any postoperative laboratory test results. Conduct postoperative pain assessment and hand irrigate the catheter to remove any accumulated blood clots. Determine the need for continued catheter traction or continuous bladder irrigation. Review patient hospital medical record notes (such as nursing, pharmacy and discharge planning). Answer patient and family questions. Answer nursing questions. Write any additional orders. Prepare a progress note for the medical record.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

The American Urological Association requested a random sample of approximately 6000 urologists from our general membership database. The survey was sent to 6000 individuals and of those individuals, 97 responses were received for a response rate of 1.6%. In 2014, 46,978 of these procedures were performed in the Medicare population so the number of responses to this survey meets the RUC criteria of 30 respondents as the minimum survey sample size for this code.

The AUA RUC expert panel reviewed the survey results and the respondents stated that the median intraservice time was 75 minutes to complete this procedure, which remains unchanged. The current work RVU is 15.26. The median work value from the survey is 14.60 and the 25th percentile of the work RVU is 14.46. According to our survey results, the surveyees selected 1 subsequent hospital visit, 99232; however, this code is primarily done as an outpatient procedure. Our expert panel requests to add 40 minutes to the post service time since these patients are staying in the hospital less than 24 hours but are being seen by the physician. The AUA is recommending a work RVU of 14.60 with a median intraservice time of 75 minutes and an immediate post time of 65 minutes.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 52601

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Urology How often? Sometimes

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 0

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. National data is not available

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?  
 46,978 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty.  
 Please explain the rationale for this estimate. 2014 Claims data from RUC database

Specialty Urology	Frequency 46734	Percentage 99.48 %
-------------------	-----------------	--------------------

Specialty General Surgery	Frequency 146	Percentage 0.31 %
---------------------------	---------------	-------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Do many physicians perform this service across the United States? Yes

**AMA/Specialty Society Update Process  
Practice Expense Summary of Recommendation  
Facility Direct Inputs**

CPT Long Descriptor: Transurethral electrosurgical resection of prostate, including control of postoperative bleeding, complete (vasectomy, meatotomy, cystourethroscopy, urethral calibration and/or dilation, and internal urethrotomy are included)

Global Period: 090

Meeting Date: April 26-30, 2017

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:

The recommendations were developed by a Panel consisting of six physicians who represents urologic practices from across the United States in single specialty groups in suburban and urban settings. They represent the states of Washington, Illinois, Florida and North Carolina. The panel reviews current information, makes recommendations and these recommendations are submitted to the AMA.

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale:

52649 Laser enucleation of the prostate with morcellation, including control of postoperative bleeding, complete (vasectomy, meatotomy, cystourethroscopy, urethral calibration and/or dilation, internal urethrotomy and transurethral resection of prostate are included if performed) was the reference code.

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time: N/A

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence: After reviewing the RUC database, it was determined that there was an error in the supplies, so our expert panel is requesting to add lines 61 – 65 to allow proper care for the patient at the first postoperative visit.

line 61 syringe, 50-60ml

line 62 syringe, 10-12ml

line 63 cup, container, sterile, graduated 1000ml

line 64 sodium chloride 0.9% irrigation (500-1000ml uou)

line 65 underpad, 2ft X 3ft (CHUX)

5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

- Complete pre-service diagnostic and referral forms
- Coordinate pre-service surgery services
- Schedule space and equipment in facility

- Provide pre-service education/obtain consent

Intra-Service Clinical Labor Activities:

None

Post-Service Clinical Labor Activities:

- Follow-up phone calls and prescriptions

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
*Site of Service Anomaly*

April 2016

**Colporrhaphy**

In October 2015, CPT code 57240 was identified in which the Medicare data from 2011-2013 indicated that it was performed less than 50% of the time in the inpatient setting, yet include inpatient hospital Evaluation and Management services within the global period.

In April 2016, the specialty society indicated they are working with CMS and its contractor NCCI on issues related to the colporrhaphy codes. NCCI instituted edits that prohibit reporting a Cystourethroscopy (CPT code 52000) with these services. The specialty society determined that the most appropriate way to address this issue is through the CPT process. The specialty will submit a CCP for the September 2016 CPT meeting to address these concerns. **The RUC recommends 57240, 57250, 57260 and 57265 be referred to the CPT Editorial Panel.**

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
57240	Anterior colporrhaphy, repair of cystocele with or without repair of urethrocele	090	Refer to CPT Sept 2016
57250 (f)	Posterior colporrhaphy, repair of rectocele with or without perineorrhaphy	090	Refer to CPT Sept 2016
57260 (f)	Combined anteroposterior colporrhaphy;	090	Refer to CPT Sept 2016
57265 (f)	Combined anteroposterior colporrhaphy; with enterocele repair	090	Refer to CPT Sept 2016

April 5, 2016

Peter Smith, MD, FACS  
Chair, AMA/RUC  
American Medical Association  
330 N. Wabash Ave.  
Chicago, IL 60611

**Subject: Tab 27 Colporrhaphy (57240, 57250, 57260 & 57265)**

Dear Dr. Smith:

In October 2015, CPT code 57240 was identified in which the Medicare data from 2011-2013 indicated that it was performed less than 50% of the time in the inpatient setting yet included inpatient hospital Evaluation and Management services within the global period. The RUC determined that these services would be placed on the next Level of Interest form to survey for April 2016. The American Congress of Obstetricians and Gynecologists (ACOG) identified CPT Codes 57250, 57260 and 57265 as part of the family.

ACOG has been working with CMS and its contractor NCCI on issues related to the colporrhaphy codes. NCCI instituted edits that prohibit reporting a Cystourethroscopy (CPT Code 52000) with these services. It was determined that the most appropriate way to address this issue was through the CPT process. As such, ACOG requests this issue be referred to the CPT Editorial Panel. The specialty will submit a CCP for the 2018 cycle to address these concerns.

Please let me know if you have any questions.

Thank you,

A handwritten signature in black ink, appearing to read "George A. Hill, MD". The signature is stylized with a large "G" and "H".

George A. Hill, MD

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
*Harvard Valued – Utilization Over 30,000*

April 2016

**Injection Anesthetic Agent**

In October 2015, AMA staff re-ran the Harvard valued codes with utilization over 30,000 based on 2014 Medicare claims data and this service was identified.

**64418 Injection, anesthetic agent; suprascapular nerve**

The RUC reviewed the survey results from 139 physicians for CPT code 64418 and determined that the survey median and 25th percentile work RVUs did not adequately account for the work required to perform this service. Therefore, the RUC recommends crosswalking code 64418 to code 20611 *Arthrocentesis, aspiration and/or injection, major joint or bursa (eg, shoulder, hip, knee, subacromial bursa); with ultrasound guidance, with permanent recording and reporting* (work RVU = 1.10 and 10 minutes intra-service time).

The RUC reviewed the pre-service time for CPT code 66418 and agreed that pre-time package 6A (Procedure with local/topical anesthesia care requiring wait time for anesthesia to take effect) is appropriate. However, the RUC did not agree with the specialties recommended pre-time inputs and determined that the pre-time needed to be decreased further to account for overlap in time with an Evaluation and Management service that typically reported with this service. Therefore, the RUC recommends 6 minutes of evaluation time, 3 minutes of positioning time, 3 minutes of scrub dress and wait time, 10 minutes intra-service time and 10 minutes immediate post-service time. The RUC confirmed that 10 minutes of immediate post-service time is required to assess the patient for pain relief, respiratory, hemodynamic, mental orientation, and extremity vascular status changes; required as a result of the risk of intra-vascular injection or pneumothorax. The physician also assesses any impact on the patient's activities of daily living including eating, bathing, brushing teeth and hair and overhead activities. The physician performs both strength testing and functional assessments to evaluate weakness in the limb that was injected as a result of anesthetic response. The RUC noted that the majority of nerve block codes that were recently reviewed include 10 minutes of immediate post-service time.

The RUC noted that the recommended work RVU of 1.10 and 32 minutes of total time for CPT 66418 is relative compared to the top two key reference services 64450 *Injection, anesthetic agent; other peripheral nerve or branch* (work RVU = 0.75 and 20 minutes total time) and 64486 *Transversus abdominis plane (TAP) block (abdominal plane block, rectus sheath block) unilateral; by injection(s) (includes imaging guidance, when performed)* (work RVU = 1.27 and 35 minutes of total time). The RUC noted that the recommendation is comparable to other nerve block codes 64405 *Injection, anesthetic agent; greater occipital nerve* (work RVU = 0.94 and 22 minutes total time) and 64415 *Injection, anesthetic agent; brachial plexus, single* (work RVU = 1.48 and 44 minutes total time). **The RUC recommends a work RVU of 1.10 for CPT code 64418.**

**Practice Expense**

One minor modification was made to correct the equipment minutes calculation. The Practice Expense Subcommittee reviewed the clinical staff time inputs to ensure that there were no duplicative times with the Evaluation and Management visit. The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.

**Work Neutrality**

The RUC's recommendation for this code will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 52-year-old woman with a frozen shoulder is unable to tolerate physical therapy due to pain. She is referred for a suprascapular nerve block to provide pain relief so that she can undergo physical therapy.

Percentage of Survey Respondents who found Vignette to be Typical: 83%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 38%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 15%

Description of Pre-Service Work: Review records, communicate with other professionals, patient, and family; and obtain consent. Perform a focused History and Physical examination of the patient to confirm indications for procedure, potential contraindications, existing neurological deficits, and bleeding disorders. The pre-operative work also includes dressing, scrubbing, and waiting before the procedure; preparing the patient and equipment for the procedure; obtaining vital signs and positioning the patient in the sitting position.

Description of Intra-Service Work: Universal protocol is followed with confirmation of patient identifiers, procedure site, and laterality. The injection site overlying the scapular notch is identified. After sterile preparation of the skin, a local anesthetic skin wheal is placed at the site of injection. A needle is inserted toward the scapular notch. Once correct needle position is achieved, the needle is aspirated to confirm the absence of blood or air. Following negative aspiration, a small test-dose of local anesthetic is administered. The patient is queried about symptoms of intravascular local anesthetic injection. If there are no signs or symptoms of intravascular injection, the planned local anesthetic volume is injected in incremental doses with frequent aspiration to avoid intravascular injection. After completion of the injection, the needle is removed. The patient is evaluated for the initial effects of the block by physical examination to determine if the patient is developing weakness or numbness, and is evaluated for relief of pain in the expected nerve distribution.

Description of Post-Service Work: The patient is observed post-procedure for pain relief, respiratory, hemodynamic, mental orientation, or extremity vascular status changes. In addition, the limb that has received the nerve block is protected to prevent injury. The patient is provided education on the signs and symptoms of potential complications and the need to protect the anesthetized extremity. The physician communicates findings with the patient and other professionals (including written and telephone reports and orders).

------------------------------	------	------

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

In October 2015, AMA staff re-ran the Harvard valued codes with utilization over 30,000 based on 2014 Medicare claims data and this service was identified. The RUC determined that this service was to be placed on the next level of interest form to survey for April 2016.

**Survey Sample and Process**

The survey request was sent to a random selection from the membership database of the American Academy of Physician Medicine & Rehabilitation (AAPM&R). The American Society of Anesthesiologists (ASA) took a random sample of subspecialty pain medicine doctors from the ASA membership database. The standard RUC survey was conducted using a vignette drafted by the societies involved since 64418 had not previously been RUC reviewed. The Research Subcommittee reviewed and approved the vignette.

**Pre-Service Time Package 6A**

We recommend pre-time package 6A (NF Procedure w local/topical anesthesia care requiring wait time for anesthesia to take effect) as this procedure is performed in the physician's office 89% of the time according to the 2014 Medicare data. We recommend reducing the package pre-service evaluation time from 17 minutes to 8 minutes to account for overlap in time with an E/M service that is reported more than 50% of the time with 64418 on the same day. We also recommend increasing the package pre-service positioning time from 1 minute to 3 minutes. This is a reduction from the survey respondents' 5 minutes, as the Expert Panel indicated that 5 minutes overstated the positioning time, while the standard 1 minute in the pre-time package underestimates the time needed to position the patient. Additional positioning time is necessary because there is increased difficulty in identifying the target injection site, requiring manipulation of the patient's position to achieve the appropriate outcome. The Expert Panel agreed that the standard 5 minute scrub, dress and wait time in the pre-service package is appropriate.

**Post-Service Time Package**

We recommend post-service time package 7A (Local/Simple Procedure). We recommend reducing the package post-time from 18 minutes to 10 minutes, which corresponds with our survey data. In the post-service period the physician returns to the room following the initial injection to evaluate the patient for pain relief, respiratory, hemodynamic, mental orientation, and extremity vascular status changes; required as a result of the risk of intra-vascular injection or

pneumothorax. The physician must proceed with caution to protect the shoulder post injection as an injury to the suprascapular nerve will have an impact on the patient's activities of daily living including eating, bathing, brushing teeth and hair and overhead activities. Both strength testing and functional assessments are performed to evaluate weakness in the limb that was injected as a result of anesthetic response. The physician then evaluates for appropriateness of functional bracing of the shoulder.

### **Key Reference Codes**

The recommended work RVU of 1.20 for 64418 fits well above the top key reference service (64450), since 64418 is more difficult to palpate the vessels around the suprascapular notch (compared to the posterior tibial vessels). Also, an injury to the suprascapular nerve will have a much greater impact on the patient than an injury to the posterior tibial nerve at the level of the ankle. It also fits well just below the second key reference code (64486). TAP block includes and is typically performed with image guidance. It also fits well with other injection codes and other codes in the RBRVS with similar IWPUTs, total time, and intra time.

### **MPC Comparison**

MPC	Descriptor	RVW	IWPUT	Total Time	PRE	INTRA	POST
12011	Simple repair of superficial wounds of face, ears, eyelids, nose, lips and/or mucous membranes; 2.5 cm or less	1.07	0.068	24	7	12	5
30901	Control nasal hemorrhage, anterior, simple (limited cautery and/or packing) any method	1.10	0.081	26	11	10	5
<b>64418</b>	<b>Injection, anesthetic agent; suprascapular nerve</b>	<b>1.10</b>	<b>0.065</b>	<b>32</b>	<b>12</b>	<b>10</b>	<b>10</b>
40490	Biopsy of lip	1.22	0.058	34	14	15	5
12013	Simple repair of superficial wounds of face, ears, eyelids, nose, lips and/or mucous membranes; 2.6 cm to 5.0 cm	1.22	0.064	27	7	15	5

### **Other Comparison Codes**

Code	Descriptor	RVW	IWPUT	Total Time	PRE	INTRA	POST
12011	Simple repair of superficial wounds of face, ears, eyelids, nose, lips and/or mucous membranes; 2.5 cm or less	1.07	0.068	24	7	12	5
12002	Simple repair of superficial wounds of scalp, neck, axillae, external genitalia, trunk and/or extremities (including hands and feet); 2.6 cm to 7.5 cm	1.14	0.059	27	7	15	5
<b>64418</b>	<b>Injection, anesthetic agent; suprascapular nerve</b>	<b>1.10</b>	<b>0.065</b>	<b>32</b>	<b>12</b>	<b>10</b>	<b>10</b>
40490	Biopsy of lip	1.22	0.058	34	14	15	5
49082	Abdominal paracentesis (diagnostic or therapeutic); without imaging guidance	1.24	0.065	40	20	10	10
67505	Retrobulbar injection; alcohol	1.27	0.078	35	20	10	5
64486	Transversus abdominis plane (TAP) block (abdominal plane block, rectus sheath block) unilateral; by injection(s) (includes imaging guidance, when performed)	1.27	0.078	35	15	10	10

### **Recommendation**

We recommend a work RVU of 1.20 for 64418. This value maintains the RUC and specialty accepted intensity/complexity rank order and relativity for code 64418 with many other injections codes requiring 10 minutes of intra-service time.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☒ Other reason (please explain) Typically reported with an E&M service.

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. For Medicare patients, 64418 is typically reported with an E&M service.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 64418

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Anesthesiology How often? Sometimes

Specialty Physical Medicine and Rehabilitation How often? Sometimes

Specialty Interventional Pain Management & Pain Management How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 92955

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. National frequency is estimated at 3 times Medicare frequency.

Specialty Anesthesiology Frequency 26588 Percentage 28.60 %

Specialty Physical Medicine and Rehabilitation Frequency 11807 Percentage 12.70 %

Specialty Interventional Pain Management & Pain Medicine Frequency 20590 Percentage 22.15 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 30,985 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. 2014 Data RUC Database

Specialty Anesthesiology	Frequency 8862	Percentage 28.60 %
Specialty Physical Medicine and Rehabilitation	Frequency 3957	Percentage 12.77 %
Specialty Interventional Pain Management and Pain Medicine	Frequency 6865	Percentage 22.15 %

Do many physicians perform this service across the United States? Yes

---

### **Berenson-Eggers Type of Service (BETOS) Assignment**

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Procedures

BETOS Sub-classification:

Minor procedure

BETOS Sub-classification Level II:

Musculoskeletal

---

### **Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 64418

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

Non Facility Direct Inputs**

CPT Long Descriptor: Injection, anesthetic agent; suprascapular nerve

Global Period: 000 Meeting Date: April 2016

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee: The Advisors from the participating specialties reviewed the current PE details for 64418 and made adjustments as appropriate.
2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale: Current inputs for 64418 are used as reference.
3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time: Not applicable.
4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:

Supplies

The Expert Panel that reviewed the supplies did not believe that this procedure required a pack, minimum multi-specialty visit.

Additionally, the Panel believed that the pack, basic injection, did not accurately reflect the supplies need for this procedure and we are recommending only the inputs that are necessary to perform this procedure in a sterile environment including:

- 5ml - bupivacaine 0.25% inj (Marcaine)
- 1 - cap, surgical
- 1 - mask, surgical
- 1 - gloves, sterile
- 1 - drape, sterile barrier 16in x 29in
- 1 - drape, sterile, for Mayo stand
- 1 - swab, patient prep, 1.5 ml (chloraprep)
- 1 - needle, 18-27g
- 1 - needle, 18-26g 1.5-3.5in, spinal
- 2 - syringe 5-6ml
- 5ml - lidocaine 1%-2% inj (Xylocaine)
- 1 - gauze, sterile 4in x 4in
- 1 - bandage, strip 0.75in x 3in (Bandaaid)

Equipment

Mayo stand - The removable instrument tray (mayo stand) is set adjacent to the injection; it provides a place for sterile instruments and supplies used during the injection.

Light, exam – The exam light is used to accurately visualize the injection site.

5. Please describe in detail the clinical activities of your staff:

Pre-Service Period Clinical Labor Activities:

Service Period Clinical Labor Activities:

Pre-service

During the service period clinical staff will provide pre-service education, prepare the room, equipment, and supplies, and prepare and position patient. The 2 minutes included with an E/M service does not include setting up supplies for the injection which will include preparing the exam light and mayo stand with syringes, needles, drapes, and etc. to maintain a sterile field; 5 minutes additional time is recommended for these activities.

Intra-service

Clinical staff assists the physician for 100% of the intra-service time.

Post-service

Clinical staff provides 1:1 monitoring of the patient following the injection to monitor the patient for vasovagal response, mental status, and check vital signs. Clinical staff also fits the patient for the bracing and demonstrate proper use of the device. Finally, clinical staff will check the injection site, provide written and verbal post-injection and follow-up instructions on care of the injection site and activity restrictions.

Post-Service Clinical Labor Activities:

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
*\*CMS High Expenditure Procedures\**

April 2016

**Correction of Trichiasis**

In the Final Rule for 2016 CMS re-ran the high expenditure services across specialties with Medicare allowed charges of \$10 million or more. CMS identified the top 20 codes by specialty in terms of allowed charges, excluding 010 and 090-day global services, anesthesia and Evaluation and Management services and services reviewed since CY 2010.

**67820 *Correction of trichiasis; epilation, by forceps only***

The RUC reviewed the survey results from 59 practicing ophthalmologists and optometrists and agreed with the following physician time components: pre-service time of 4 minutes, intra-service time of 5 minutes and immediate post-service time of 2 minutes.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the appropriate value is below the 25<sup>th</sup> percentile (work RVU 0.50). The RUC compared the surveyed code to a key reference code 11900 *Injection, intralesional; up to and including 7 lesions* (work RVU= 0.52, intra time= 8 minutes) and noted that it is appropriate to value CPT code 67820 below this comparison given its increased complexity. Additionally the RUC compared CPT code 11720 *Debridement of nail(s) by any method(s); 1 to 5* (work RVU=0.32 and intra-service time of 5 minutes) noting identical intra-time and physician work. **The RUC recommends a work RVU of 0.32 for CPT code 67820.**

**Practice Expense:**

The pre-service time was revised to be consistent with the times for minimal use of clinical staff time for a 000 day global service in the facility setting. The RUC approved the direct practice expense inputs with modifications as approved by the Practice Expense Subcommittee.

**Work Neutrality**

The RUC's recommendation for these codes will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
67820	Correction of trichiasis; epilation, by forceps only	000	0.32

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 67820	Tracking Number	Original Specialty Recommended RVU: <b>0.40</b>
		Presented Recommended RVU: <b>0.32</b>
Global Period: 000		RUC Recommended RVU: <b>0.32</b>
CPT Descriptor: Correction of trichiasis, epilation, by forceps only		

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 68-year-old female presents with excessive pain and tearing in the left eye.

Percentage of Survey Respondents who found Vignette to be Typical: 92%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 2%

Description of Pre-Service Work: Review patient records. Explain procedure to the patient and obtain informed consent. Apply topical anesthetic to the eye.

Description of Intra-Service Work: Position patient properly at the slit lamp. Under slit lamp magnification, identify the aberrant lashes and epilate with forceps. Following removal, instill an antibiotic drop in the eye. Provide patient with postoperative instructions.

Description of Post-Service Work: Dictate report and communicate the results to the referring physician as appropriate.

### Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

CPT 67820 *Correction of trichiasis; epilation, by forceps only* was identified by CMS as a high expenditure 000-day global procedure. It was last reviewed by the RUC in 2005.

A random survey of AAO and AOA members had 59 respondents, 92% of whom found the vignette typical. The median WRVU was 0.75 and the 25<sup>th</sup> percentile was 0.50. Median IST was 5 minutes. The current value of the code is 0.71 WRVU. The primary reference service, chosen by 76%, was 65222, *Removal of foreign body, external eye; corneal, with slit lamp* (RUC September 2011) with a WRVU of 0.84 and 7 minutes IST. The intensity and complexity metrics for the surveyed code were lower than those of the reference code.

The expert panel of the AAO and AOA, which is familiar with the procedure and the RUC process, reviewed the survey findings. The median survey IST of 5 minutes is unchanged from the current value. The survey pre-times were 5/2/1. We used pre-service package 5 with times of 7/0/1. We reduced the pre-service time further because the procedure is typically done on the same day as an office visit, retaining 3 minutes to prepare for the procedure, describe the procedure to the patient and obtain consent, and 1 minute to administer and wait for the anesthetic, as suggested by the package detail, for a total pre-time of 4 minutes. We reduced the survey post-time from 3 to 2 minutes to prepare the report and communicate the results. **We recommend 0.40 WRVU, below the survey's 25<sup>th</sup> percentile.**

This value is supported by MPC code 51702 *Insertion of temporary indwelling bladder catheter; simple (eg, Foley)* (RUC April 2002) with 0.50 WRVU and IST and total times of 8 minutes, and by CPT code 11720 *Debridement of nail(s) by any method(s); 1 to 5* (RUC September 2011) with 0.32 WRVU, an IST of 5 minutes and total time of 14 minutes.

---

### SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.

- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☒ Other reason (please explain) Billed with an office visit

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. E/M or the ophthalmologic exam codes

3.	CPT Code	Pre-	Intra-	Post-	Total Time	Work RVU	Global Period
4.	92002	5	15	5	25	.88	XXX
5.	92004	5	25	10	40	1.82	XXX
6.	92012	5	15	5	25	.92	XXX
7.	92014	5	24	8	37	1.42	XXX
8.	99212	2	10	4	16	.48	XXX
9.	99213	3	15	5	23	.97	XXX

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) N/A

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Ophthalmology How often? Commonly

Specialty Optometry How often? Sometimes

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 414,265

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Estimation Only

Specialty Ophthalmology Frequency 281865 Percentage 68.03 %

Specialty Optometry Frequency 132400 Percentage 31.96 %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 276,177 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC Database

Specialty Ophthalmology Frequency 187910 Percentage 68.03 %

Specialty Optometry Frequency 88267 Percentage 31.96 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

**Berenson-Eggers Type of Service (BETOS) Assignment**

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Procedures

BETOS Sub-classification:

Eye procedure

BETOS Sub-classification Level II:

Other

---

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 67820

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. N/A

**AMA/Specialty Society Update Process  
Practice Expense Summary of Recommendation  
Facility Direct Inputs**

CPT Long Descriptor:

Correction of trichiasis; epilation, by forceps only

Global Period: 000 Meeting Date: April, 2016

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:

The Academy convenes a consensus subcommittee utilizing the appropriate subspecialty representatives who sit on our Health Policy Committee that oversees our activities at RUC and CPT. Additionally, we use other physicians who have the appropriate expertise as needed. The consensus committee considered the survey data and PE details in order to determine clinical time and applicable standard packages were also applied. The physicians on the consensus panel familiar with the service provided input on whether or not any changes were needed for the existing supplies and equipment.

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale: **N/A**

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time: **N/A**

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence: **N/A**

5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

Use of this code in a facility is very uncommon, with most facility cases occurring in an outpatient hospital or a nursing facility. The bulk of practice expense lies in pre-service activities. Staff time is used to complete referral forms, coordinate pre-surgery services, schedule space and equipment in the facility, provide pre-service education and consent, and perform follow-up phone calls. There is no technician time required during the intra-service period.

Intra-Service Clinical Labor Activities:

**N/A**

Post-Service Clinical Labor Activities:

**N/A**

**AMA/Specialty Society Update Process  
Practice Expense Summary of Recommendation  
Non Facility Direct Inputs**

CPT Long Descriptor: Correction of trichiasis; epilation, by forceps only

Global Period: 000 Meeting Date: April, 2016

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:

The Academy convenes a consensus subcommittee utilizing the appropriate subspecialty representatives who sit on our Health Policy Committee that oversees our activities at RUC and CPT. Additionally, we use other physicians who have the appropriate expertise as needed. The consensus committee considered the survey data and PE details in order to determine clinical time and applicable standard packages were also applied. The physicians on the consensus panel familiar with the service provided input on whether or not any changes were needed for the existing supplies and equipment.

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale: N/A

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time: N/A

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence: N/A

5. Please describe in detail the clinical activities of your staff:

CMS data have shown that this code is typically done in conjunction with an office visit code. Therefore, previous times for completing pre-service diagnostic and referral forms, providing pre-service education and obtaining consent, greeting the patient and ensuring medical records are available, and cleaning room are covered by the office visit code and have been removed. The only remaining practice expense inputs remain the use of the screening lane by the physician in addition to the visit time, which prevents the technician from using the screening lane for another patient.

Pre-Service Clinical Labor Activities:

These services are still performed, but are covered under the office visit's code

Intra-Service Clinical Labor Activities:

The only practice expense inputs remain the use of the screening lane while the procedure is being performed by the physician. This procedure is performed in a screening or exam lane, and takes time in excess of that covered by the visit time. This time spent prevents the screening or exam lane from being able to be used to provide care for another patient.

Post-Service Clinical Labor Activities:

N/A

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
*\*CMS/Other Source – Utilization over 250,000\**

April 2016

**X ray of Ribs**

In October 2015, CPT code 71101 was identified as a CMS/Other source code with 2014 Medicare utilization of 250,000 or more.

**Compelling Evidence**

The specialty society presented compelling evidence for code 71110. The society noted that a flawed methodology was used in the previous valuation for this service as the code has a CMS/Other designation. As the RUC has noted previously during review of other services, codes with the CMS/Other designation were never surveyed by the RUC or any other stakeholder; their physician time and work were assigned by CMS in rulemaking over 20 years ago using an unknown methodology. The RUC accepted that there is compelling evidence that 71110 was originally valued using a flawed methodology.

**71100 Radiologic examination, ribs, unilateral; 2 views**

The RUC reviewed the survey results from 50 radiologists and agreed with following physician time components: pre-service time of 1 minute, intra-service time of 4 minutes and post-service time of 1 minute.

The RUC reviewed the survey 25<sup>th</sup> percentile work RVU of 0.22 and agreed that this value appropriately accounts for the physician work involved. To justify a work RVU of 0.22, the RUC compared the survey code to CPT code 73502 *Radiologic examination, hip, unilateral, with pelvis when performed; 2-3 views* (work RVU= 0.22, intra-service time of 4 minutes, total time of 6 minutes) and 73521 *Radiologic examination, hips, bilateral, with pelvis when performed; 2 views* (work RVU= 0.22, intra-service time of 4 minutes, total time of 6 minutes). The RUC noted that all three services have identical intra-service and total times and involve similar amounts of physician work. **The RUC recommends a work RVU of 0.22 for CPT code 71100.**

**71101 Radiologic examination, ribs, unilateral; including posteroanterior chest, minimum of 3 views**

The RUC reviewed the survey results from 50 radiologists and agreed with following physician time components: pre-service time of 1 minute, intra-service time of 5 minutes and post-service time of 1 minute.

The RUC reviewed the survey 25<sup>th</sup> percentile work RVU of 0.27 and agreed that this value appropriately accounts for the physician work involved. To justify a work RVU of 0.27, the RUC compared the survey code to top key reference code 73503 *Radiologic examination, hip,*

*unilateral, with pelvis when performed; minimum of 4 views* (work RVU= 0.27, intra-service time of 5 minutes, total time of 7 minutes) and noted that both services have identical intra-service and total times and involve a similar amount of physician work. The RUC also reviewed CPT code 72050 *Radiologic examination, spine, cervical; 4 or 5 views* (work RVU= 0.31, intra-service time of 5 minutes, total time of 8 minutes) and noted that both services have identical intra-service time and involve a similar physician work intensity, confirming that a work RVU of 0.27 is appropriate for the survey code. **The RUC recommends a work RVU of 0.27 for CPT code 71101.**

**71110 Radiologic examination, ribs, bilateral; 3 views**

The RUC reviewed the survey results from 50 radiologists and agreed with following physician time components: pre-service time of 1 minute, intra-service time of 6 minutes and post-service time of 1 minute.

The RUC reviewed the survey 25<sup>th</sup> percentile work RVU of 0.29 and agreed that this value appropriately accounts for the physician work involved and aligns appropriately with the other codes in the x-ray of ribs code family. To justify a work RVU of 0.29, the RUC compared the survey code to 2<sup>nd</sup> key reference code 72110 *Radiologic examination, spine, lumbosacral; minimum of 4 views* (work RVU= 0.31, intra-service time of 5 minutes, total time of 8 minutes) and noted that while both services have identical total times, the survey code has more intra-service time. The RUC also compared the survey code to CPT code 73523 *Radiologic examination, hips, bilateral, with pelvis when performed; minimum of 5 views* (work RVU= 0.31, intra-service time of 6 minutes, total time of 8 minutes) and noted that both services have identical times and involve a similar amount of physician work, supporting a work RVU of 0.29 for the survey code. **The RUC recommends a work RVU of 0.29 for CPT code 71110.**

**71111 Radiologic examination, ribs, bilateral; including posteroanterior chest, minimum of 4 views**

The RUC reviewed the survey results from 50 radiologists and agreed with following physician time components: pre-service time of 1 minute, intra-service time of 7 minutes and post-service time of 1 minute.

The RUC reviewed the survey 25<sup>th</sup> percentile work RVU and agreed that maintaining the current work RVU of 0.32 is supported. To justify a work RVU of 0.32, the RUC compared the survey code to 2<sup>nd</sup> key reference and MPC code 72114 *Radiologic examination, spine, lumbosacral; complete, including bending views, minimum of 6 views* (work RVU= 0.32, intra-service time of 5 minutes, total time of 8 minutes) and noted that the survey code has more intra-service and total time. The RUC also compared the survey code to CPT code 72083 *Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); 4 or 5 views* (work RVU= 0.35, intra-service time of 7 minutes, total time of 9 minutes) and noted that although both codes have identical times, the survey code involves somewhat less intense physician work, supporting a somewhat lower work RVU of 0.32 for the survey code. **The RUC recommends a work RVU of 0.32 for CPT code 71111.**

**Practice Expense**

The RUC recommends the direct practice expense inputs as submitted by the specialty and reviewed and approved by the Practice Expense Subcommittee.

<b>CPT Code</b>	<b>CPT Descriptor</b>	<b>Global Period</b>	<b>Work RVU Recommendation</b>
71100 (f)	Radiologic examination, ribs, unilateral; 2 views	XXX	0.22 (No Change)

Global Period: XXX		RUC Recommended RVU: <b>0.22</b>
CPT Descriptor: Radiologic examination, ribs, unilateral; 2 views		

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 65-year-old female presents with a right chest contusion after suffering a fall. Frontal and oblique views of the right rib cage are obtained.

Percentage of Survey Respondents who found Vignette to be Typical: 96%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: Review the clinical history. Review any prior applicable plain film or other imaging studies.

Description of Intra-Service Work: Supervise technologist performing the examination.

Interpret radiographs of the ribs. Specifically, evaluate the costovertebral and costosternal junctions as well as the shoulder and clavicle. Assess visualized portions of the chest, abdomen and spine. Review the superficial soft tissues.

Compare the findings to previous studies, if available.

Dictate report for the medical record.

Description of Post-Service Work: Review and sign final report. Communicate findings to referring physician, when needed.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUR analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Background**

CPT Code 71101 (Radiologic examination, ribs, unilateral; including posteroanterior chest, minimum of 3 views) was identified as a CMS/Other codes with 2014 Medicare utilization greater than 250,000. The family of surveyed codes was expanded to include the three other codes for evaluating the ribs.

CPT Code	Descriptor	Current Work RVU	Pre-Service	Intra-Service	Post-Service	Total Time	IWPUR T
71100	Radiologic examination, ribs, unilateral; 2 views	0.22	1	4	1	6	0.044
71101	Radiologic examination, ribs, unilateral; including posteroanterior chest, minimum of 3 views	0.27				7*	
71110	Radiologic examination, ribs, bilateral; 3 views	0.27				7*	
71111	Radiologic examination, ribs, bilateral; including posteroanterior chest, minimum of 4 views	0.32		5		5*	

\* Both 71101 and 71110 are CMS/Other and 71111 is Harvard valued.

**Survey Process**

The American College of Radiology (ACR) conducted a random survey of members and assembled an expert panel to review the data and develop the following recommendations.

### Summary of Recommendation for all 4 codes

We are recommending the 25<sup>th</sup> percentile survey value for the first three codes in the rib x-ray family. This value is equal to the current value for both 71100 and 71101, and would represent a slight increase in value for the third code, 71110, which is one of the two CMS/Other codes in the family. We are recommending maintenance of existing value for the fourth code, 71111, which is a Harvard valued service.

We recommend 1 minute of time for both pre- and post-service activities in all four codes. These times are consistent with or slightly lower than the survey responses for each of the codes, but are consistent with recently valued x-ray codes.

We believe these work values and times are supported by the survey data and comparison codes as will be laid out individually for each service.

### Compelling Evidence

We are requesting an increase in value for only one code in this family, 71110 (*Radiologic examination, ribs, bilateral; 3 views*). The prior methodology for valuing this code is unknown and considered flawed, as the source is CMS/Other. An increase in value for this code is justified by the survey data, comparisons with both KRS codes, and to maintain relativity within the family.

### 71100 - Radiologic examination, ribs, unilateral; 2 views

#### Work RVU Recommendation:

We recommend maintaining the current work RVU of 0.22 for 71100, which is also the 25<sup>th</sup> percentile survey value.

#### Time Recommendation:

We recommend the median survey times of 1 minute pre-service, 4 minutes intra-service, and 1 minute post-service.

#### Key Reference Services:

Our recommendation compares favorably to the two most commonly chosen key reference services (KRS): 72070 (*Radiologic examination, spine, thoracic, 2 views*) chosen by 54% of respondents and 72110 (*Radiologic examination, spine, lumbosacral; minimum of 4 views*) chosen by 14% of respondents. Our recommendation for 71100 is equivalent to the first KRS except for one additional minute of intra-service time in 71100. The surveyed code scored slightly more complex on the majority of complexity measurements compared with the two KRS codes.

CPT Code	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
72070	Radiologic examination, spine; thoracic, 2 views	0.22	5	1	3	1	0.058
<b>71100</b>	<b>Radiologic examination, ribs, unilateral; 2 views</b>	<b>0.22</b>	<b>6</b>	<b>1</b>	<b>4</b>	<b>1</b>	<b>0.044</b>
72110	Radiologic examination, spine; lumbosacral, minimum 4 views	0.31	8	1	5	2	0.049

#### MPC Codes:

The surveyed code compares well with 72100 (*Radiologic examination, spine, lumbosacral; 2 or 3 views*), which has the same wRVU of 0.22 and total time of 6 minutes (pre-, intra-, and post-service times of 1, 3, and 2 minutes, respectively).

CPT Code	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
<b>71100</b>	<b>Radiologic examination, ribs, unilateral; 2 views</b>	<b>0.22</b>	<b>6</b>	<b>1</b>	<b>4</b>	<b>1</b>	<b>0.044</b>
72100	X-ray, spine, lumbosacral; 2 or 3 views	0.22	6	1	3	2	0.051

#### Family of Codes:

Our recommendation for 71100 is supported by our survey, KRS, and MPC, and fits appropriately within the family of rib x-ray codes and maintains proper relativity.

CPT Code	Descriptor	Recommended Work RVU	Pre-Service	Intra-Service	Post-Service	Total Time
71100	X-ray, ribs, unilateral; 2 views	0.22	1	4	1	6
71101	X-ray, ribs, unilateral; including posteroanterior chest, minimum of 3 views	0.27	1	5	1	7
71110	X-ray, ribs, bilateral; 3 views	0.29	1	6	1	8
71111	X-ray, ribs, bilateral; including posteroanterior chest, minimum of 4 views	0.32	1	7	1	9

---

#### SERVICES REPORTED WITH MULTIPLE CPT CODES

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions:

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 71100

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology                      How often? Commonly

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period? 700509

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by code 71100 provided nationally in a one-year period is estimated to be 700,509.

Specialty Diagnostic Radiology                      Frequency 524643                      Percentage 74.89 %

Specialty                      Frequency 0                      Percentage 0.00 %

Specialty                      Frequency 0                      Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 233,503 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The 2014 Medicare data estimates that CPT code 71100 is billed approximately 233,503 times in total for Medicare patients nationally in a one-year period.

Specialty Diagnostic Radiology                      Frequency 174881                      Percentage 74.89 %

Specialty                      Frequency 0                      Percentage 0.00 %

Specialty                      Frequency 0                      Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

## Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Imaging

BETOS Sub-classification:

Standard imaging

BETOS Sub-classification Level II:  
Musculoskeletal

---

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 71100

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

CPT Descriptor: Radiologic examination, ribs, unilateral; including posteroanterior chest, minimum of 3 views

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 65-year-old female presents with a right chest contusion, pleuritic chest pain and shortness of breath after suffering a fall. Frontal and oblique views of the right rib cage and a posteroanterior view of the chest are obtained.

Percentage of Survey Respondents who found Vignette to be Typical: 98%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is;  
Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: Review the clinical history. Review any prior applicable plain film or other imaging studies.

Description of Intra-Service Work: Supervise technologist performing the examination.

Interpret radiographs of the ribs and chest. Specifically, evaluate the costovertebral and costosternal junctions as well as the shoulder and clavicle. Assess the pulmonary parenchyma, hila and mediastinum, pleural spaces, and diaphragm. Inspect visualized portions of the spine and abdomen. Review the superficial soft tissues.

Compare the findings to previous studies, if applicable.

Dictate report for the medical record.

Description of Post-Service Work: Review and sign final report. Communicate findings to referring physician, when needed.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Background**

CPT Code 71101 (Radiologic examination, ribs, unilateral; including posteroanterior chest, minimum of 3 views) was identified as a CMS/Other codes with 2014 Medicare utilization greater than 250,000. The family of surveyed codes was expanded to include the three other codes for evaluating the ribs.

CPT Code	Descriptor	Work RVU	Pre-Service	Intra-Service	Post-Service	Total Time	IWPUT
71100	Radiologic examination, ribs, unilateral; 2 views	0.22	1	4	1	6	0.044
71101	Radiologic examination, ribs, unilateral; including posteroanterior chest, minimum of 3 views	0.27				7*	
71110	Radiologic examination, ribs, bilateral; 3 views	0.27				7*	
71111	Radiologic examination, ribs, bilateral; including posteroanterior chest, minimum of 4 views	0.32		5		5*	

\* Both 71101 and 71110 are CMS/Other and 71111 is Harvard valued.

**Survey Process**

The American College of Radiology (ACR) conducted a random survey of members and assembled an expert panel to review the data and develop the following recommendations.

**Summary of Recommendation for all 4 codes**

We are recommending the 25<sup>th</sup> percentile survey value for the first three codes in the rib x-ray family. This value is equal to the current value for both 71100 and 71101, and would represent a slight increase in value for the third code, 71110, which is one of the two CMS/Other codes in the family. We are recommending maintenance of existing value for the fourth code, 71111, which is a Harvard valued service.

We recommend 1 minute of time for both pre- and post-service activities in all four codes. These times are consistent with or slightly lower than the survey responses for each of the codes, but are consistent with recently valued x-ray codes.

We believe these work values and times are supported by the survey data and comparison codes as will be laid out individually for each service.

### Compelling Evidence

We are requesting an increase in value for only one code in this family, 71110 (*Radiologic examination, ribs, bilateral; 3 views*). The prior methodology for valuing this code is unknown and considered flawed, as it is in the CMS/Other group of codes. An increase in value for this code is justified by the survey data, comparisons with both KRS codes, and to maintain relativity within the family.

### 71101 - Radiologic examination, ribs, unilateral; including posteroanterior chest, minimum of 3 views

#### Work RVU Recommendation:

We recommend maintaining the current work RVU of 0.27 for 71101, which is also the 25<sup>th</sup> percentile survey value.

#### Time Recommendation:

We recommend the median survey times of 1 minute pre-service, 5 minutes intra-service, and 1 minute post-service.

#### Key Reference Services:

Our recommendation compares favorably to the two most commonly chosen key reference services (KRS): 73503 (*Radiologic examination, hip, unilateral, with pelvis when performed; minimum of 4 views*) chosen by 46% of respondents and 72110 (*Radiologic examination, spine, lumbosacral; minimum of 4 views*) chosen by 16% of respondents. Our recommendation for 71101 is equivalent to the first KRS (73505) in wRVU and time. The surveyed code scored slightly more complex on the majority of complexity measurements compared with the first KRS and was considered equivalent to the second.

CPT Code	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
73503	X-ray, hip, unilateral, with pelvis when performed; min 4 views	0.27	7	1	5	1	0.045
<b>71100</b>	<b>X-ray, ribs, unilateral; including PA chest, min 3 views</b>	<b>0.27</b>	<b>7</b>	<b>1</b>	<b>5</b>	<b>1</b>	<b>0.045</b>
72110	X-ray, spine; lumbosacral, minimum 4 views	0.31	8	1	5	2	0.049

#### MPC Codes:

The surveyed code compares well with 72110 (*Radiologic examination, spine, lumbosacral; minimum 4 views*), which is the second most commonly selected KRS, and has wRVU of 0.31 and total time of 8 minutes (pre-, intra-, and post-service times of 1, 5, and 2 minutes, respectively). The relative differences between 71101 and 72100 are appropriate given the differences in service times and number of views. Additionally, 71101 has slightly lower recommended wRVU compared with 92568 (*Acoustic reflex testing, threshold*), a code with 10 minutes of total time.

CPT Code	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
<b>71101</b>	<b>X-ray, ribs, unilateral; including PA chest, min 3 view</b>	<b>0.27</b>	<b>7</b>	<b>1</b>	<b>5</b>	<b>1</b>	<b>0.045</b>
72110	X-ray, spine, lumbosacral; minimum 4 views	0.31	8	1	5	2	0.049
92568	Acoustic reflex testing, threshold	0.29	10	1	8	1	0.031

#### Family of Codes:

Our recommendation for 71101 is supported by our survey, KRS, and MPC, and fits appropriately within the family of rib x-ray codes and maintains proper relativity.

CPT Code	Descriptor	Recommended Work RVU	Pre-Service	Intra-Service	Post-Service	Total Time
71100	X-ray, ribs, unilateral; 2 views	0.22	1	4	1	6
71101	X-ray, ribs, unilateral; including posteroanterior chest, minimum of 3 views	0.27	1	5	1	7
71110	X-ray, ribs, bilateral; 3 views	0.29	1	6	1	8
71111	X-ray, ribs, bilateral; including posteroanterior chest, minimum of 4 views	0.32	1	7	1	9

### SERVICES REPORTED WITH MULTIPLE CPT CODES

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions:

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

- Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

### FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 71101

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 796206

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by code 71101 provided nationally in a one-year period is estimated to be 796206.

Specialty Diagnostic Radiology	Frequency 668813	Percentage 83.99 %
--------------------------------	------------------	--------------------

Specialty	Frequency 0	Percentage 0.00 %

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Background**

CPT Code 71101 (Radiologic examination, ribs, unilateral; including posteroanterior chest, minimum of 3 views) was identified as a CMS/Other codes with 2014 Medicare utilization greater than 250,000. The family of surveyed codes was expanded to include the three other codes for evaluating the ribs.

CPT Code	Descriptor	Work RVU	Pre-Service	Intra-Service	Post-Service	Total Time	IWPUT
71100	Radiologic examination, ribs, unilateral; 2 views	0.22	1	4	1	6	0.044
71101	Radiologic examination, ribs, unilateral; including posteroanterior chest, minimum of 3 views	0.27				7*	
71110	Radiologic examination, ribs, bilateral; 3 views	0.27				7*	
71111	Radiologic examination, ribs, bilateral; including posteroanterior chest, minimum of 4 views	0.32		5		5*	

\* Both 71101 and 71110 are CMS/Other and 71111 is Harvard valued.

**Survey Process**

The American College of Radiology (ACR) conducted a random survey of members and assembled an expert panel to review the data and develop the following recommendations.

**Summary of Recommendation for all 4 codes**

We are recommending the 25<sup>th</sup> percentile survey value for the first three codes in the rib x-ray family. This value is equal to the current value for both 71100 and 71101, and would represent a slight increase in value for the third code, 71110, which is one of the two CMS/Other codes in the family. We are recommending maintenance of existing value for the fourth code, 71111, which is a Harvard valued service.

We recommend 1 minute of time for both pre- and post-service activities in all four codes. These times are consistent with or slightly lower than the survey responses for each of the codes, but are consistent with recently valued x-ray codes.

We believe these work values and times are supported by the survey data and comparison codes as will be laid out individually for each service.

### Compelling Evidence

We are requesting an increase in value for only one code in this family, 71110 (*Radiologic examination, ribs, bilateral; 3 views*). The prior methodology for valuing this code is unknown and considered flawed, as it is in the CMS/Other group of codes.

An increase in value for this code is also supported by the survey data, comparisons with both KRS codes, and necessary to maintain relativity within the family. The current value for this code is 0.27. The 25<sup>th</sup> percentile survey value is 0.29, which falls between the current values of 0.27 for 71101 (*unilateral ribs, minimum 3 views*) and 0.32 for 71111 (*bilateral ribs with chest radiograph, minimum 4 views*). Additionally, the survey respondents indicated an intraservice time for 71110 of 6 minutes, which falls appropriately between the surveyed intra-service times of 5 and 7 minutes for 71101 and 71111, respectively.

### 71110 - Radiologic examination, ribs, bilateral; 3 views

#### Work RVU Recommendation:

We recommend a work RVU of 0.29 for 71111, which is the 25<sup>th</sup> percentile survey value.

#### Time Recommendation:

We recommend the median survey times of 1 minute pre-service, 6 minutes intra-service, and 1 minute post-service.

#### Key Reference Services:

Our recommendation compares favorably to the two most commonly chosen key reference services (KRS): 73503 (*Radiologic examination, hip, unilateral, with pelvis when performed; minimum of 4 views*) chosen by 32% of respondents and 72110 (*Radiologic examination, spine, lumbosacral; minimum of 4 views*) chosen by 20% of respondents. Our recommendation for 71101 is a value between to the first and second KRS (73505) in wRVU. The surveyed code scored more complex on the majority of complexity measurements compared with both KRS codes.

CPT Code	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
73503	X-ray, hip, unilateral, with pelvis when performed; min 4 views	0.27	7	1	5	1	0.045
<b>71100</b>	<b>X-ray, ribs, bilateral; 3 views</b>	<b>0.29</b>	<b>8</b>	<b>1</b>	<b>6</b>	<b>1</b>	<b>0.041</b>
72110	X-ray, spine; lumbosacral, minimum 4 views	0.31	8	1	5	2	0.049

#### MPC Codes:

The surveyed code compares well with 72110 (*Radiologic examination, spine, lumbosacral; minimum 4 views*), which is the second most commonly selected KRS, and has wRVU of 0.31 and total time of 8 minutes (pre-, intra-, and post-service times of 1, 5, and 2 minutes, respectively). The relative differences between 71110 and 72100 are appropriate given the differences in number of views and intensity of clinical work involved.

CPT Code	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
<b>71100</b>	<b>X-ray, ribs, bilateral; 3 views</b>	<b>0.29</b>	<b>8</b>	<b>1</b>	<b>6</b>	<b>1</b>	<b>0.041</b>
72110	X-ray, spine, lumbosacral; minimum 4 views	0.31	8	1	5	2	0.049

#### Family of Codes:

Our recommendation for 71110 is supported by our survey, KRS, and MPC, and fits appropriately within the family of rib x-ray codes and maintains proper relativity.

CPT Code	Descriptor	Recommended Work RVU	Pre-Service	Intra-Service	Post-Service	Total Time
71100	X-ray, ribs, unilateral; 2 views	0.22	1	4	1	6
71101	X-ray, ribs, unilateral; including posteroanterior chest, minimum of 3 views	0.27	1	5	1	7
71110	X-ray, ribs, bilateral; 3 views	0.29	1	6	1	8
71111	X-ray, ribs, bilateral; including posteroanterior chest, minimum of 4 views	0.32	1	7	1	9

---

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.  
☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.  
☐ Multiple codes allow flexibility to describe exactly what components the procedure included.  
☐ Multiple codes are used to maintain consistency with similar codes.  
☐ Historical precedents.  
☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.
- 

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 71110

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology                      How often? Commonly

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period? 90006

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by code 71110 provided nationally in a one-year period is estimated to be 90,006.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Background**

CPT Code 71101 (Radiologic examination, ribs, unilateral; including posteroanterior chest, minimum of 3 views) was identified as a CMS/Other codes with 2014 Medicare utilization greater than 250,000. The family of surveyed codes was expanded to include the three other codes for evaluating the ribs.

CPT Code	Descriptor	Work RVU	Pre-Service	Intra-Service	Post-Service	Total Time	IWP/UT
71100	Radiologic examination, ribs, unilateral; 2 views	0.22	1	4	1	6	0.044
71101	Radiologic examination, ribs, unilateral; including posteroanterior chest, minimum of 3 views	0.27				7*	
71110	Radiologic examination, ribs, bilateral; 3 views	0.27				7*	
71111	Radiologic examination, ribs, bilateral; including posteroanterior chest, minimum of 4 views	0.32		5		5*	

\* Both 71101 and 71110 are CMS/Other and 71111 is Harvard valued.

**Survey Process**

The American College of Radiology (ACR) conducted a random survey of members and assembled an expert panel to review the data and develop the following recommendations.

**Summary of Recommendation for all 4 codes**

We are recommending the 25<sup>th</sup> percentile survey value for the first three codes in the rib x-ray family. This value is equal to the current value for both 71100 and 71101, and would represent a slight increase in value for the third code, 71110, which is one of the two CMS/Other codes in the family. We are recommending maintenance of existing value for the fourth code, 71111, which is a Harvard valued service.

We recommend 1 minute of time for both pre- and post-service activities in all four codes. These times are consistent with or slightly lower than the survey responses for each of the codes, but are consistent with recently valued x-ray codes.

We believe these work values and times are supported by the survey data and comparison codes as will be laid out individually for each service.

### Compelling Evidence

We are requesting an increase in value for only one code in this family, 71110 (Radiologic examination, ribs, bilateral; 3 views). The prior methodology for valuing this code is unknown and considered flawed, as it is in the CMS/Other group of codes. An increase in value for this code is justified by the survey data, comparisons with both KRS codes, and to maintain relativity within the family.

### 71111 - X-ray, ribs, bilateral; including posteroanterior chest, minimum of 4 views

#### Work RVU Recommendation:

We recommend maintaining the current work RVU of 0.32 for 71111, which is below the 25<sup>th</sup> percentile survey value.

#### Time Recommendation:

We recommend the median survey times of 1 minute pre-service, 7 minutes intra-service, and 1 minute post-service.

#### Key Reference Services:

Our recommendation compares favorably to the two most commonly chosen key reference services (KRS): 72052 (Radiologic examination, spine, cervical, 6 or more views) chosen by 26% of respondents and 72114 (Radiologic examination, spine, lumbosacral; complete, including bending views, minimum of 6 views) chosen by 22% of respondents. Our recommendation for 71111 is equivalent to the second KRS (72114) wRVU of 0.32 and the surveyed code has 2 more minutes of total time. The surveyed code scored essentially the same on the majority of complexity measurements compared with the second KRS and was considered slightly more complex compared with the first.

CPT Code	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
72052	X-ray, spine, cervical; 6 or more views	0.36	8	1	5	2	0.059
<b>71111</b>	<b>X-ray, ribs, bilateral; including PA chest, min 4 views</b>	<b>0.32</b>	<b>9</b>	<b>1</b>	<b>7</b>	<b>1</b>	<b>0.039</b>
72114	X-ray, spine; lumbosacral; complete, min 6 views	0.32	8	1	5	2	0.051

#### MPC Codes:

As detailed above, the surveyed code compares well with both KRS codes, which are also both MPC codes. Additional appropriate MPC codes include 92081 (Visual field examination, unilateral or bilateral, with interpretation and report; limited), which also has 10 minutes of total time and a wRVU of 0.30, and 92025 (Computerized corneal topography, unilateral or bilateral, with interpretation and report), which has 17 minutes of total time and wRVU of 0.35.

CPT Code	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
<b>71111</b>	<b>X-ray, ribs, bilateral; including PA chest, min 4 views</b>	<b>0.32</b>	<b>9</b>	<b>1</b>	<b>7</b>	<b>1</b>	<b>0.039</b>
72114	X-ray, spine; lumbosacral; complete, min 6 views	0.32	8	1	5	2	0.051
72052	X-ray, spine, cervical; 6 or more views	0.36	8	1	5	2	0.059

#### Family of Codes:

Our recommendation for 71111 is supported by our survey, KRS, and MPC, and fits appropriately within the family of rib x-ray codes and maintains proper relativity.

CPT Code	Descriptor	Recommended Work RVU	Pre-Service	Intra-Service	Post-Service	Total Time
71100	X-ray, ribs, unilateral; 2 views	0.22	1	4	1	6
71101	X-ray, ribs, unilateral; including posteroanterior chest, minimum of 3 views	0.27	1	5	1	7
71110	X-ray, ribs, bilateral; 3 views	0.29	1	6	1	8
71111	X-ray, ribs, bilateral; including posteroanterior chest, minimum of 4 views	0.32	1	7	1	9

### SERVICES REPORTED WITH MULTIPLE CPT CODES

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

- Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

### FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 71111

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 86526

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by code 71111 provided nationally in a one-year period is estimated to be 86,526.

Specialty Diagnostic Radiology	Frequency 60941	Percentage 70.43 %
--------------------------------	-----------------	--------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?  
 28,842 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty.  
 Please explain the rationale for this estimate. The 2014 Medicare data estimates that CPT code 71111 is billed  
 approximately 28,842 times in total for Medicare patients nationally in a one-year period

Specialty Diagnostic Radiology	Frequency 20314	Percentage 70.43 %
--------------------------------	-----------------	--------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Do many physicians perform this service across the United States? Yes

---

### **Berenson-Eggers Type of Service (BETOS) Assignment**

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Imaging

BETOS Sub-classification:

Standard imaging

BETOS Sub-classification Level II:

Musculoskeletal

---

### **Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 71111

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

### Attestation Statement

This form needs to be completed by any **RUC Advisor** whose specialty society is developing a recommendation to be reviewed by the RUC.

As a RUC Advisor, I attest that the integrity of the RUC survey, summary of recommendation forms and practice expense recommendations are based on accurate and complete data to the best of my knowledge. As a RUC advisor, I acknowledge that violations would be addressed by the executive committee (i.e., RUC Chair , AMA Representative and Alternate AMA Representative.)

**AMA/Specialty Society Update Process  
Practice Expense Summary of Recommendation  
Non Facility Direct Inputs**

CPT Long Descriptor:

<b>71100</b>	Radiologic examination, ribs, unilateral; 2 views
<b>71101</b>	Radiologic examination, ribs, unilateral; including posteroanterior chest, minimum of 3 views
<b>71110</b>	Radiologic examination, ribs, bilateral; 3 views
<b>71111</b>	Radiologic examination, ribs, bilateral; including posteroanterior chest, minimum of 4 views

Global Period: XXX Meeting Date: April 2016

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:

*The American College of Radiology (ACR) convened a consensus panel to finalize the practice expense data for the X-ray ribs code family 71100, 71101, 71110, and 71111.*

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale:

The society included the existing PE inputs for codes 71100, 71101, 71110, and 71111 on the spreadsheet to serve as a reference.

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:

N/A

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:

- **Prepare room, equipment, supplies** - 2 minutes is standard for this activity, and is consistent with recent recommendations for codes in the x-ray family.
- **Prepare and position patient/ monitor patient/ set up IV** - 2 minutes is standard for this activity, and is consistent with recent recommendations for codes in the x-ray family.
- **Clean room/equipment by physician staff** – 3 minutes is standard for this activity, and is consistent with recent recommendations for codes in the x-ray family.
- **Technologist QC's images in PACS, checking for all images, reformats, and dose page** - CMS proposed a standard of 2 minutes as per Table 5 “Clinical Labor Tasks Associated With Digital Technology” in the CY 2016 MPFS Final Rule.
- **Review examination with interpreting MD** - CMS proposed a standard of 2 minutes as per Table 5 “Clinical Labor Tasks Associated With Digital Technology” in the CY 2016 MPFS Final Rule.

- **Exam documents scanned into PACS. Exam completed in RIS system to generate billing process and to populate images into Radiologist work queue** - CMS proposed a standard of 1 minute as per Table 5 “Clinical Labor Tasks Associated With Digital Technology” in the CY 2016 MPFS Final Rule.
- **PACS Workstation Proxy** – This is equal to the service period clinical labor time.
- **Professional PACS Workstation** - This is equal to the sum of the physician work pre and intra time.

5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

Intra-Service Clinical Labor Activities:

- Greet patient, provide gowning, ensure appropriate medical records are available
- Prepare room, equipment, supplies
- Prepare and position patient/ monitor patient/ set up IV
- Assist physician in performing procedure/ Acquire Images
- Clean room/equipment by physician staff
- Technologist QC's images in PACS, checking for all images, reformats, and dose page
- Review examination with interpreting MD
- Exam documents scanned into PACS. Exam completed in RIS system to generate billing process and to populate images into Radiologist work queue

Post-Service Clinical Labor Activities:

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
***\*CMS High Expenditure Procedures\****

April 2016

**CT Chest**

In the Final Rule for 2016 CMS re-ran the high expenditure services across specialties with Medicare allowed charges of \$10 million or more. CMS identified the top 20 codes by specialty in terms of allowed charges, excluding 010 and 090-day global services, anesthesia and Evaluation and Management services and services reviewed since CY 2010.

**Compelling Evidence**

The specialty society presented compelling evidence for code 71250. The society noted that a flawed methodology was used in the previous valuation for this service as instead of accepting the RUC recommended value of 1.16, CMS assigned a work RVU of 1.02 based on the single lowest response to the survey. The RUC agreed that using a work RVU based on the survey minimum RVU is statistically invalid and inappropriate. The RUC accepted that there is compelling evidence that 71250 was originally valued using a flawed methodology.

***71250 Computed tomography, thorax; without contrast material***

The RUC reviewed the survey results from 76 radiologists and agreed on the following physician time components: pre-service time of 5 minutes, intra-service time of 15 minutes and post-service time of 5 minutes.

The RUC reviewed the respondents' estimated 25<sup>th</sup> percentile work RVU of 1.19, and agreed that reaffirming the October 2009 RUC recommended work RVU of 1.16 is supported by the new survey data. The RUC also noted that this value has appropriate rank order relative to the other codes in the family. The RUC compared the survey code to MPC code 70470 *Computed tomography, head or brain; without contrast material, followed by contrast material(s) and further sections* (work RVU= 1.27, intra-service time of 15 minutes, total time of 25 minutes) and noted that both services have identical intra-service and total times, whereas the survey is somewhat less intense. The RUC also compared the survey code to CPT code 78071 *Parathyroid planar imaging (including subtraction, when performed); with tomographic (SPECT)* (work RVU= 1.20, intra-service time of 15 minutes, total time of 25 minutes) and noted that both services have identical intra-service and total times and involve similar amounts of physician work.

As the RUC agreed that its prior recommendation for 71250 was still appropriately relative, the RUC re-affirmed the recommendations made for this code at the October 2009 RUC meeting:

The RUC reviewed survey data from nearly 60 physicians who frequently perform this service. The specialty recommended a pre-service time of 5 minutes based on the survey results and the RUC concurred. The RUC also agreed that the surveyed intra-service of 15 minutes and immediate post service time of 5 minutes were typical for the physician work required for the service. The total time of 25 minutes is comparable to the 22 minutes of total time assumed by CMS.

The RUC compared 71250 to key reference service 71260 *Computed tomography, thorax; with contrast material(s)* (work RVU = 1.24, with pre, intra, and post service times of 3, 15, and 5 minutes respectively), and noted that the survey respondents indicated that in general a CT of the thorax without contrast is a slightly less intense service than one with contrast, as reflected in slightly lower values for the intensity and complexity measures. The RUC also compared 71250 to the specialty's multi-specialty points of comparison codes 78306 *Bone and/or joint imaging; whole body* (work RVU = 0.86, with pre, intra, and post service times of 5, 8, and 5 minutes respectively) and 74160 *Computed tomography, abdomen; with contrast material(s)* (work RVU = 1.27, with pre, intra, and post service times of 3, 15, and 5 minutes respectively).

The RUC agreed that there is significant evidence to support the current valuation, given changes in technology and the patient population. The RUC and the specialty cited the following as evidence to maintain the work relative value of 1.16 for CT of the thorax:

- Modern CT technology produces an increased amount of data to be reviewed and interpreted. Because of the improved spatial resolution and multi-planar reformation of the data, a higher level of diagnostic specificity and accuracy is expected, and the number of possible protocols to be considered in the pre-service period by the interpreting physician has increased. Many patients require prone and supine imaging with both inspiration and expiration for the evaluation of interstitial lung disease. Further, 2D reconstructions (previously separately billable using code 76375 *Coronal, sagittal, multiplanar, oblique, 3-dimensional and/or holographic reconstruction of computed tomography, magnetic resonance imaging, or other tomographic modality* in 2005 with 0.16 work RVUs) were bundled into the base code in 2006 and are now being considered an inherent part of the service.
- Using multi-detector row CT scanners, modern high resolution CT protocols are able to generate contiguous 1.25 mm images through the entirety of the lungs which are also used to create coronal 2D reconstructions to more accurately assess distribution of disease. As such, these examinations now generate more than 300 images for interpretation.
- The expectation of the referring physician is now much higher in terms of defining the various subtypes of interstitial lung disease and also in evaluating whether a lung nodule merits follow up or more aggressive intervention. The incidence of smoking-related lung disease continues to increase in the Medicare population, as does the ability to characterize these diseases with the advent of high resolution multi-detector CT. Current estimates are that pulmonary emphysema and the smoking related interstitial lung diseases – centrilobular emphysema, respiratory bronchiolitis interstitial lung disease (RBILD), desquamative interstitial

pneumonia (DIP), and Langerhan's cell histiocytosis (LCH) – are among the top ten causes of morbidity and mortality in the Medicare population and both morbidity and mortality from these illnesses are expected to increase by 2020.

- Because of refinements in technique and the ability to examine the entire lung, specific diagnoses of potentially reversible diseases such as RBILD and DIP can now be made and differentiated from irreversible diseases such as LCH and pulmonary fibrosis (usual interstitial pneumonia) without open lung biopsy or the need to institute potentially harmful empiric therapy without a definitive diagnosis. The extent and distribution of pulmonary centrilobular and bullous emphysema is now well characterized and critically important in both medical and surgical treatment planning.

While CT technology is changing rapidly, the adoption of newer techniques is not yet universal. The reasons for the increase in utilization of non-enhanced CT procedures are likely multi-factorial but concerns over the use of intravenous contrast and its potential nephrotoxicity in at-risk patients is felt to contribute at least in part to this increase.

Advances in CT technology have provided new indications for non-enhanced CT leading to volume growth. The most common indication for non-enhanced CT of the thorax is evaluation and follow-up of pulmonary nodules. The ability to detect small non-calcified pulmonary nodules has increased dramatically in recent years with high-resolution exam protocols. And while any of these nodules could represent small malignancies, most of the nodules are benign. The protocol for following likely benign pulmonary nodules developed by the Fleischner Society stated that pulmonary nodules should be followed with serial CT examinations for two years to assure benignity. Recent literature has prompted a re-evaluation of these guidelines by the Fleischner Society with the end result being a statement that will drastically reduce the number of follow-up examinations in low-risk patients with nodules less than 8 mm in size. These recommendations are supported by pulmonary medicine and thoracic surgery societies as well, and it is expected that the volume of these service will likely decrease in the future as these practice guidelines are established in the community.

From the survey results, comparison of similar services, rank order maintenance, and considerations regarding the rationale for the volume growth in the service, the RUC agreed that the physician work relative value should be maintained at its current value of 1.16 work RVUs, which was lower than the survey's 25% percentile of 1.20. The RUC acknowledges the growth in CT scans in the Medicare population. However, there is no evidence that this growth has led to a reduction in physician resources, as confirmed by the recent survey time data.

**The RUC recommends maintaining the relative work value for CPT code 71250 of 1.16.**

**The RUC recommends a work RVU of 1.16 for CPT code 71250.**

**71260 Computed tomography, thorax; with contrast material(s)**

The RUC reviewed the survey results from 76 radiologists and agreed on the following physician time components: pre-service time of 5 minutes, intra-service time of 16 minutes and post-service time of 5 minutes.

The RUC reviewed the respondents' estimated 25<sup>th</sup> percentile work RVU of 1.27, and agreed that maintaining the current work RVU of 1.24 is supported by the new survey data. The RUC compared the survey code to MPC code 73721 *Magnetic resonance (eg, proton) imaging, any joint of lower extremity; without contrast material* (work RVU= 1.35, intra-service time of 20 minutes, total time of 30 minutes) and noted that both services have identical intra-service and total times and involve similar physician work. **The RUC recommends a work RVU of 1.24 for CPT code 71250.**

**71270 Computed tomography, thorax; without contrast material, followed by contrast material(s) and further sections**

The RUC reviewed the survey results from 76 radiologists and agreed on the following physician time components: pre-service time of 5 minutes, intra-service time of 20 minutes and post-service time of 5 minutes.

The RUC reviewed the respondents' estimated 25<sup>th</sup> percentile work RVU of 1.40, and agreed that maintaining the current work RVU of 1.38 is supported by the new survey data. The RUC compared the survey code to MPC code 73721 *Magnetic resonance (eg, proton) imaging, any joint of lower extremity; without contrast material* (work RVU= 1.35, intra-service time of 20 minutes, total time of 30 minutes) and noted that both services have identical intra-service and total times and while the survey code involves somewhat more physician work. The RUC also compared the survey code to MPC code 74170 *Computed tomography, abdomen; without contrast material, followed by contrast material(s) and further sections* (work RVU= 1.40, intra-service time of 18 minutes, total time of 28 minutes, and noted that the survey code has slightly more intra-service and total times, supporting a work RVU of 1.38 for the survey code. **The RUC recommends a work RVU of 1.38 for CPT code 71270.**

**Practice Expense**

A detailed discussion was convened regarding specialty society's recommendation to include 3 minutes for the CT Technologist (L046A) to *Technologist QC's images in PACS, checking for all images, reformats, and dose page* (line 44). Often this clinical labor input requires 2 minutes of clinical staff time, however this line item does not have a standard time. An additional minute above the typical is warranted for these CT Chest codes. During the discussion, precedent was cited from the practice expense review for Mammography services and Cardiac MR services.

The RUC recommends the direct practice expense inputs as submitted by the specialty and reviewed and approved by the Practice Expense Subcommittee.

<b>CPT Code</b>	<b>CPT Descriptor</b>	<b>Global Period</b>	<b>Work RVU Recommendation</b>

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 65-year-old female smoker has developed progressive dyspnea over the past six months. Chest radiograph demonstrates a basilar interstitial abnormality. A CT scan of the thorax is requested for further evaluation.

Percentage of Survey Respondents who found Vignette to be Typical: 92%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 1%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: Review the reason for the examination and any pertinent clinical history.

Review any prior imaging studies.

Determine the appropriate CT protocol for the examination, confirm that noncontrast-only images are indicated and determine the need for prone imaging and additional 2D reconstructions.

Communicate protocol to the CT technologists.

Description of Intra-Service Work: Supervise acquisition of scout views, prescribe area of coverage, and supervise acquisition of axial source image sections.

Review initial and subsequent series of CT image data to assure adequacy of anatomic coverage and assess need for repeat sections or reconstruction of thin sections in specific locations.

Supervise reconstruction of coronal and/or sagittal 2D multiplanar reformatted (MPR) images; assess need for oblique or other 2D images.

Evaluate and interpret findings related to the trachea, bronchi, and distal airways.

Evaluate and interpret findings within the lung parenchyma including the interstitium, lobular units, and pleura using supine, and when necessary prone series, as well as reformatted images with lung algorithm/lung window.

Evaluate and interpret findings related to the lung hila and mediastinum, including the heart, aorta and arch vessels, mediastinal lymph nodes, and esophagus.

Evaluate and interpret findings related to the chest wall structures including bones, axillae and soft tissues in axial, sagittal, and coronal planes using bone and soft tissue windows.

Evaluate and interpret findings related to the base of neck and upper abdomen in axial and reformatted projections using soft tissue and bone windows. Compare current findings to previous studies. Dictate report for medical record.

Description of Post-Service Work: Review, edit, and sign report for medical record.  
Discuss findings with referring provider as needed.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Background**

CPT Codes 71260 (*Computed tomography, thorax; with contrast material*) and 71270 (*Computed tomography, thorax; without contrast material, followed by contrast material and further sections*) were identified as potentially misvalued in the High Expenditure by Specialty Table 8 of the 2016 MPFS NPRM. The family of surveyed codes was expanded to include 71250 (*Computed tomography, thorax; without contrast material*).

CPT Code	Descriptor	Current Work RVU	Pre-Service	Intra-Service	Post-Service	Total Time	IWP/UT
71250	CT chest; without contrast material	1.02	5	15	5	25	0.053
71260	CT chest; with contrast material	1.24	3	15	5	23	0.071
71270	CT chest; without contrast material, followed by contrast material and further sections	1.38				26*	

\*71270 is a CMS/Other code

**Survey Process**

The American College of Radiology (ACR) conducted a random survey of members and assembled an expert panel to review the data and develop the following recommendations.

**Summary of Recommendation for all codes**

We are recommending the current value for the all three codes in the CT Chest family. These values are below the 25<sup>th</sup> percentile of the survey results for all three codes. We believe the current value for 71250 should be 1.16, which was the RUC recommended value at the time of the last survey in October 2009, as opposed to 1.02, and will describe our position in the compelling evidence section.

We recommend 5 minutes of time for both pre- and post-service activities in all three codes. These times are consistent with both the current survey and recently valued CT codes.

### Compelling Evidence

We are requesting an increase in value for only one code in this family, 71250 (*CT chest; without contrast*). This code was last presented at the October 2009 RUC meeting. The RUC recommended a value of 1.16, which was below the 25<sup>th</sup> percentile survey wRVU of 1.20. CMS subsequently assigned a wRVU of 1.02 to this code, which was based on the single lowest survey response. We believe this methodology is inconsistent with the standards of the RUC and is statistically invalid. The current 2016 survey has 76 respondents, compared with 60 respondents in 2009. The 25<sup>th</sup> percentile wRVU response of 1.19 in the 2016 survey closely parallels the 25<sup>th</sup> percentile value of 1.20 from 2009. This consistency highlights the validity of the survey process.

There are two additional considerations within this family of codes that support compelling evidence for an increase in value within the family. 71270 (*CT chest; without contrast followed by contrast*) is a CMS/Other code, a valuation methodology that is also considered flawed. As well, the population of patients for 71250 has changed. As was discussed in the rationale from the October 2009 RUC, the development and spread of guidelines that limit the number of follow up Chest CT exams for pulmonary nodules has continued to increase with time (e.g. Fleischner Society and now LUNG-Rads). This changes the patient pool for 71250, which is now more frequently used for intensive evaluation of intrinsic lung diseases, such as emphysema, interstitial pneumonias, and other acquired chronic parenchymal diseases. Accurate characterization of these disease entities is important for treatment planning, and this necessitates more intense physician work during the interpretation of the study.

In conclusion, the methodologies used for valuation of codes 71250 and 71270 should be considered flawed, and the patient population for 71250 has changed. For these reasons, we believe the threshold for compelling evidence has been met.

### 71250

#### Work RVU Recommendation:

We recommend a work RVU of 1.16 for 71250, which is below the 25<sup>th</sup> percentile survey value.

#### Time Recommendation:

We recommend the median survey times of 5 minutes pre-service, 15 minutes intra-service, and 5 minutes post-service.

#### Key Reference Services:

Our recommendation compares favorably to the two most commonly chosen key reference services (KRS): 74150 (*CT abdomen; without contrast*) chosen by 67% of respondents and 74176 (*CT abdomen and pelvis; without contrast*) chosen by 10% of respondents. Our recommendation for 71250 is a work value below both of these reference services; however, both the total and intra-service times for 71250 fall between the two reference codes. The surveyed code scored slightly more complex on all complexity measurements compared with both KRS codes.

CPT	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
<b>71250</b>	<b>CT chest; without contrast</b>	<b>1.16</b>	<b>25</b>	<b>5</b>	<b>15</b>	<b>5</b>	<b>0.062</b>
74150	CT abdomen; without contrast	1.19	20	3	12	5	0.084
74176	CT abdomen and pelvis; without contrast	1.74	32	5	22	5	0.069

#### MPC Codes:

The surveyed code compares well with two other MPC codes: 76805 (*Ultrasound, pregnant uterus, real time with image documentation, fetal and maternal evaluation, after first trimester (> or = 14 weeks 0 days), transabdominal approach; single or first gestation*), and 70470 (*Computed tomography, head or brain; without contrast material, followed by contrast material(s) and further sections*). While these three codes have similar total times, the surveyed code has an intermediate wRVU between the two MPC codes, which is appropriate given the intensity of the work between the codes as well as the comparison across imaging modalities.

CPT	Descriptor	wRVU	Total Time	Pre	Intra	Post
-----	------------	------	------------	-----	-------	------

76805	US pregnant uterus, fetal and maternal, after first trimester	0.99	26	5	15	6
<b>71250</b>	<b>CT chest; without contrast</b>	<b>1.16</b>	<b>25</b>	<b>5</b>	<b>15</b>	<b>5</b>
70470	CT head; without contrast	1.27	25	5	15	5

**Family of Codes:**

Our recommendations for 71250 fit appropriately within the family of Chest CT codes and maintain proper relativity.

CPT Code	Descriptor	Recommended Work RVU	Pre-Service	Intra-Service	Post-Service	Total Time	IWPUT
71250	CT chest; without contrast material	1.16	5	15	5	25	0.062
71260	CT chest; with contrast material	1.24	5	16	5	26	0.064
71270	CT chest; without contrast material, followed by contrast material	1.38	5	20	5	30	0.058

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

- Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

**FREQUENCY INFORMATION**

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 71250

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology

How often? Commonly

Specialty

How often?

Specialty

How often?

Estimate the number of times this service might be provided nationally in a one-year period? 4975413

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by code 71250 provided nationally in a one-year period is estimated to be 4,975,413.

Specialty Diagnostic Radiology	Frequency 4710023	Percentage 94.66 %
--------------------------------	-------------------	--------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,658,471 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The 2014 Medicare data estimates that CPT code 71250 is billed approximately 1,658,471 times in total for Medicare patients nationally in a one-year period

Specialty Diagnostic Radiology	Frequency 1570008	Percentage 94.66 %
--------------------------------	-------------------	--------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Do many physicians perform this service across the United States? Yes

---

### **Berenson-Eggers Type of Service (BETOS) Assignment**

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Imaging

BETOS Sub-classification:

Advanced imaging

BETOS Sub-classification Level II:

CAT/CT/CTA: Other

---

### **Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 71250

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

## AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS SUMMARY OF RECOMMENDATION

CPT Code: 71260	Tracking Number	Original Specialty Recommended RVU: <b>1.24</b>
		Presented Recommended RVU: <b>1.24</b>
Global Period: XXX		RUC Recommended RVU: <b>1.24</b>
CPT Descriptor: Computed tomography, thorax; with contrast material(s)		

### CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 75-year-old male with a history of smoking presents with persistent cough. Chest radiographs demonstrate mediastinal widening and new interstitial opacities on the left. A contrast enhanced CT of the chest is ordered. [Note: 3D rendering, if ordered and performed, is coded separately. Interpretation of 2D thin section coronal and/or sagittal reformatted images is included and not separately reported with 71260.]

Percentage of Survey Respondents who found Vignette to be Typical: 96%

#### Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is;  
Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

#### Moderate Sedation

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 1%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: Review the reason for the exam and any pertinent clinical history including history of contrast allergy, renal insufficiency, or other contraindication to IV contrast.

Review any prior imaging studies. Determine the appropriate CT protocol for the examination and communicate that protocol to the CT technologists.

Description of Intra-Service Work: Supervise insertion of IV catheter, selection of contrast media, and set-up of mechanical injector. Obtain and interpret scout views of area to be imaged.

Supervise administration of intravenous contrast. Review initial and subsequent series of CT image data to assure adequacy of anatomic coverage and assess need for repeat sections.

Create and/or supervise reconstruction of coronal and/or sagittal 2D multiplanar reformatted (MPR) images.

Evaluate and interpret findings related to the trachea, bronchi, and distal airways.

Evaluate and interpret findings within the lung parenchyma including the interstitium, lobular units, and pleura using, as well as reformatted images with lung and/or soft tissue algorithm.

Evaluate and interpret findings related to the lung hila and mediastinum, including the heart, aorta and arch vessels, mediastinal lymph nodes, and esophagus. Evaluate and interpret findings related to the chest wall structures including bones, axillae and soft tissues in axial, sagittal, and coronal planes using bone and soft tissue windows.

Evaluate and interpret findings related to the base of neck and upper abdomen in axial and reformatted projections using soft tissue and bone windows.

Compare current findings to previous studies. Dictate report for the medical record.

Description of Post-Service Work: Review, edit, and sign final report for the medical record.  
Discuss findings with referring physician as needed.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Background**

CPT Codes 71260 (*Computed tomography, thorax; with contrast material*) and 71270 (*Computed tomography, thorax; without contrast material, followed by contrast material and further sections*) were identified as potentially misvalued in the High Expenditure by Specialty Table 8 of the 2016 MPFS NPRM. The family of surveyed codes was expanded to include 71250 (*Computed tomography, thorax; without contrast material*).

CPT Code	Descriptor	Current Work RVU	Pre-Service	Intra-Service	Post-Service	Total Time	IWP/UT
71250	CT chest; without contrast material	1.02	5	15	5	25	0.053
71260	CT chest; with contrast material	1.24	3	15	5	23	0.071
71270	CT chest; without contrast material, followed by contrast material and further sections	1.38				26*	

\*71270 is a CMS/Other code

**Survey Process**

The American College of Radiology (ACR) conducted a random survey of members and assembled an expert panel to review the data and develop the following recommendations.

**Summary of Recommendation for all codes**

We are recommending the current value for the all three codes in the CT Chest family. These values are below the 25<sup>th</sup> percentile of the survey results for all three codes. We believe the current value for 71250 should be 1.16, which was the RUC recommended value at the time of the last survey in October 2009, as opposed to 1.02, and this discussion is located in the compelling evidence section of the 71250 SOR.

We recommend 5 minutes of time for both pre and post-service activities in all three codes. These times are consistent with both the current survey and recently valued CT codes.

**71260****Work RVU Recommendation:**

We recommend maintaining the current work RVU of 1.24 for 71260, which is below the 25<sup>th</sup> percentile survey value.

**Time Recommendation:**

We recommend the median survey times of 5 minutes pre-service, 16 minutes intra-service, and 5 minutes post-service.

**Key Reference Services:**

Our recommendation compares favorably to the two most commonly chosen key reference services (KRS): 74160 (*CT abdomen; with contrast*) chosen by 64% of respondents and 74176 (*CT abdomen and pelvis; without contrast*) chosen by 10% of respondents. Our recommendation for 71260 is a work value below both of these reference services; however, the total time for 71260 falls between the two reference codes, while the intra-service time is the same as the most commonly chosen reference service (74160). As well, the surveyed code scored almost identical to the most commonly selected KRS across all complexity measurements. Of note, the 25<sup>th</sup> percentile survey wRVU for 71260 recommended by the survey respondents is equivalent to the first KRS (74160).

CPT	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
<b>71260</b>	<b>CT chest; with contrast</b>	<b>1.24</b>	<b>25</b>	<b>5</b>	<b>16</b>	<b>5</b>	<b>0.064</b>
74160	CT abdomen; with contrast	1.27	23	3	15	5	0.073
74176	CT abdomen and pelvis; without contrast	1.74	32	5	22	5	0.069

**MPC Codes:**

The surveyed code compares well with two other MPC codes: 73721 (*Magnetic resonance (eg, proton) imaging, any joint of lower extremity; without contrast material*), and 70470 (*Computed tomography, head or brain; without contrast material, followed by contrast material(s) and further sections*). While these three codes have similar total times, the surveyed code has an intermediate wRVU as well as total and intra-service times between the two MPC codes, which is appropriate given the differences in intensity of the work between the codes as well as the comparison across imaging modalities.

CPT	Descriptor	wRVU	Total Time	Pre	Intra	Post
<b>71260</b>	<b>CT chest; with contrast</b>	<b>1.24</b>	<b>26</b>	<b>5</b>	<b>16</b>	<b>5</b>
70470	CT head; without contrast	1.27	25	5	15	5
73721	MR joint, lower extremity; without contrast	1.35	30	5	20	5

**Family of Codes:**

Our recommendations for 71260 fit appropriately within the family of Chest CT codes.

CPT Code	Descriptor	Recommended Work RVU	Pre-Service	Intra-Service	Post-Service	Total Time	IWPUT
71250	CT chest; without contrast material	1.16	5	15	5	25	0.062
71260	CT chest; with contrast material	1.24	5	16	5	26	0.064
71270	CT chest; without contrast material, followed by contrast material	1.38	5	20	5	30	0.058

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 71260

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology                      How often? Commonly

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period? 4988406

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by code 71260 provided nationally in a one-year period is estimated to be 4,988,406.

Specialty Diagnostic Radiology                      Frequency 4767619                      Percentage 95.57 %

Specialty                      Frequency 0                      Percentage 0.00 %

Specialty                      Frequency 0                      Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,662,802 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The 2014 Medicare data estimates that CPT code 71260 is billed approximately 1,662,802 times in total for Medicare patients nationally in a one-year period.

Specialty Diagnostic Radiology                      Frequency 1589206                      Percentage 95.57 %

Specialty                      Frequency 0                      Percentage 0.00 %

Specialty                      Frequency 0                      Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

**Berenson-Eggers Type of Service (BETOS) Assignment**

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Imaging

BETOS Sub-classification:

Advanced imaging

BETOS Sub-classification Level II:

CAT/CT/CTA: Other

Global Period: XXX		RUC Recommended RVU: <b>1.38</b>

CPT Descriptor: Computed tomography, thorax; without contrast material, followed by contrast material(s) and further sections

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 76-year-old female presents with dyspnea and hemoptysis. Prior chest radiograph showed an abnormality suspicious for a vascular lesion. A CT scan of the thorax with and without contrast is requested for further evaluation.

Percentage of Survey Respondents who found Vignette to be Typical: 96%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 1%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: Review the reason for the exam and any pertinent clinical history including history of contrast allergy, renal insufficiency, or other contraindication to IV contrast.

Review any prior imaging studies.

Determine the appropriate CT protocol for the examination, confirm that both pre- and post-contrast images are indicated, and communicate that protocol to the CT technologists.

Description of Intra-Service Work: Supervise insertion of IV catheter, selection of contrast media, and set-up of mechanical injector. Obtain and interpret scout views of area to be imaged.

Obtain and review non-contrast CT images to ensure proper anatomic coverage prior to contrast administration.

Supervise administration of intravenous contrast.

Obtain and review post-contrast CT images, and assess need for additional delayed images if necessary.

Review initial and subsequent series of CT image data to assure adequacy of anatomic coverage and assess need for repeat sections.

Create and/or supervise reconstruction of coronal and/or sagittal 2D multiplanar reformatted (MPR) images.

Evaluate and interpret findings related to the trachea, bronchi, and distal airways.

Evaluate and interpret findings within the lung parenchyma including the interstitium, lobular units, and pleura using, as well as reformatted images with lung and/or soft tissue algorithm.

Evaluate and interpret findings related to the lung hila and mediastinum, including the heart, aorta and arch vessels, mediastinal lymph nodes, and esophagus.

Evaluate and interpret findings related to the chest wall structures including bones, axillae and soft tissues in axial, sagittal, and coronal planes using bone and soft tissue windows.

Evaluate and interpret findings related to the base of neck and upper abdomen in axial and reformatted projections using soft tissue and bone windows.

Specifically compare pre- and post-contrast images of pertinent findings and vascular/mediastinal structures.

Compare current findings to previous studies.

Dictate report for the medical record.

Description of Post-Service Work: Review, edit, and sign final report for the medical record.

Discuss findings with referring physician as needed.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Background**

CPT Codes 71260 (*Computed tomography, thorax; with contrast material*) and 71270 (*Computed tomography, thorax; without contrast material, followed by contrast material and further sections*) were identified as potentially misvalued in the High Expenditure by Specialty Table 8 of the 2016 MPFS NPRM. The family of surveyed codes was expanded to include 71250 (*Computed tomography, thorax; without contrast material*).

CPT Code	Descriptor	Current Work RVU	Pre-Service	Intra-Service	Post-Service	Total Time	IWP/UT
71250	CT chest; without contrast material	1.02	5	15	5	25	0.053
71260	CT chest; with contrast material	1.24	3	15	5	23	0.071
71270	CT chest; without contrast material, followed by contrast material and further sections	1.38				26*	

\*71270 is a CMS/Other code

**Survey Process**

The American College of Radiology (ACR) conducted a random survey of members and assembled an expert panel to review the data and develop the following recommendations.

**Summary of Recommendation for all codes**

We are recommending the current value for the all three codes in the CT Chest family. These values are below the 25<sup>th</sup> percentile of the survey results for all three codes. We believe the current value for 71250 should be 1.16, which was the RUC recommended value at the time of the last survey in October 2009, as opposed to 1.02, and this discussion is located in the compelling evidence section of the 71250 SOR.

We recommend 5 minutes of time for both pre- and post-service activities in all three codes. These times are consistent with both the current survey and recently valued CT codes.

## 71270

### Work RVU Recommendation:

We recommend maintaining the current work RVU of 1.38 for 71270, which is below the 25<sup>th</sup> percentile survey value.

Even though 71270 is a CMS/Other code, we believe the current value is appropriate, given the survey responses and relativity within the Chest CT code family.

### Time Recommendation:

We recommend the median survey times of 5 minutes pre-service, 20 minutes intra-service, and 5 minutes post-service.

### Key Reference Services:

Our recommendation compares favorably to the two most commonly chosen key reference services (KRS): 74170 (*CT abdomen; without contrast, followed by contrast*) chosen by 47% of respondents and 74176 (*CT abdomen and pelvis; without contrast*) chosen by 18% of respondents. Our recommendation for 71270 is a work value below both of these reference services; however, the total time for 71270 falls between the two reference codes, while the total and intra-service times are between the two reference services. As well, the surveyed code scored slightly more complex across all complexity measurements compared to the two reference services. Of note, the 25<sup>th</sup> percentile survey wRVU for 71270 recommended by the survey respondents is equivalent to the first KRS (74170).

CPT	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
<b>71270</b>	<b>CT chest; without and with contrast</b>	<b>1.38</b>	<b>30</b>	<b>5</b>	<b>20</b>	<b>5</b>	<b>0.058</b>
74170	CT abdomen; without and with contrast	1.40	28	5	18	5	0.065
74176	CT abdomen and pelvis; without contrast	1.74	32	5	22	5	0.069

### MPC Codes:

The surveyed code compares well with two other MPC codes: 73721 (*Magnetic resonance (eg, proton) imaging, any joint of lower extremity; without contrast material*), and 99203 (*Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: A detailed history; A detailed examination; Medical decision making of low complexity*). These three codes have almost identical total times, while the surveyed code has an intermediate wRVU between the two MPC codes.

CPT	Descriptor	wRVU	Total Time	Pre	Intra	Post
73721	MR joint, lower extremity; without contrast	1.35	30	5	20	5
<b>71270</b>	<b>CT chest; without and with contrast</b>	<b>1.38</b>	<b>30</b>	<b>5</b>	<b>20</b>	<b>5</b>
99203	Office or other outpatient visit for the evaluation and management of a new patient, Medical decision making of low complexity	1.42	29	4	20	5

### Family of Codes:

Our recommendations for 71270 fit appropriately within the family of Chest CT codes (See table on next page).

CPT Code	Descriptor	Recommended Work RVU	Pre-Service	Intra-Service	Post-Service	Total Time	IWPUT
71250	CT chest; without contrast material	1.16	5	15	5	25	0.062
71260	CT chest; with contrast material	1.24	5	16	5	26	0.064
71270	CT chest; without contrast material, followed by contrast material	1.38	5	20	5	30	0.058

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

**FREQUENCY INFORMATION**

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 71270

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology                      How often? Commonly

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period? 293310

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by code 71270 provided nationally in a one-year period is estimated to be 293,310.

Specialty Diagnostic Radiology                      Frequency 264411                      Percentage 90.14 %

Specialty                      Frequency 0                      Percentage 0.00 %

Specialty                      Frequency 0                      Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 97,770 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The 2014 Medicare data estimates that CPT code 71270 is billed approximately 97,770 times in total for Medicare patients nationally in a one-year period.

Specialty Diagnostic Radiology                      Frequency 88137                      Percentage 90.14 %

Specialty                      Frequency 0                      Percentage 0.00 %

Specialty                      Frequency 0                      Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

**Berenson-Eggers Type of Service (BETOS) Assignment**

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Imaging

BETOS Sub-classification:

Advanced imaging

BETOS Sub-classification Level II:

CAT/CT/CTA: Other

---

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 71270

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

### Attestation Statement

This form needs to be completed by any **RUC Advisor** whose specialty society is developing a recommendation to be reviewed by the RUC.

As a RUC Advisor, I attest that the integrity of the RUC survey, summary of recommendation forms and practice expense recommendations are based on accurate and complete data to the best of my knowledge. As a RUC advisor, I acknowledge that violations would be addressed by the executive committee (i.e., RUC Chair , AMA Representative and Alternate AMA Representative.)

**AMA/Specialty Society Update Process  
Practice Expense Summary of Recommendation  
Non Facility Direct Inputs**

CPT Long Descriptor:

Global Period: XXX Meeting Date: April 2016

<b>71250</b>	Computed tomography, thorax; without contrast material
<b>71260</b>	Computed tomography, thorax; with contrast material(s)
<b>71270</b>	Computed tomography, thorax; without contrast material, followed by contrast material(s) and further sections

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:

*The American College of Radiology (ACR) convened a consensus panel to finalize the practice expense data for the CT chest code family 71250, 71260, and 71270.*

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes.

Reference Code Rationale:

The society included the existing PE inputs for codes 71250, 71260, and 71270 on the spreadsheet to serve as a reference.

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:
  - **Prepare room, equipment, supplies** – 2 minutes is the standard for most exams; however, we are requesting 4 minutes for 71260 and 71270 to allow additional time for the technologist to set up the contrast injector and prepare the contrast materials for injection.
  - **Prepare and position patient/ monitor patient/ set up IV-** 2 minutes is standard for non-contrast codes and consistent with prior CT exams. We recommended 5 minutes for the codes involving contrast (71260 and 71270) to allow for time for positioning the patient with the IV, connecting the patient to the contrast injector, and ensuring there are no impediments to table motion during the exam.
  - **Technologist QC's images in PACS, checking for all images, reformats, and dose page** – A standard of 2 minutes is appropriate for most plain radiograph codes; however, a CT exam generates hundreds of images as well as multiplanar reformats. The technologist requires additional time to prepare and review these images prior to finalizing them for the medical record. Allowing 3 minutes for this task is appropriate and fits within the overall relativity of radiology exams.
4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:

- **Availability of prior images confirmed** – 2 minutes is standard on cross-sectional imaging codes. This line item did not exist when these codes were previously valued as it was created by the Film to Digital Workgroup.
- **Patient clinical information and questionnaire reviewed by technologist, order from physician confirmed and exam protocolled by radiologist** – 2 minutes is standard on imaging codes. This line item did not exist when these codes were previously valued as it was created by the Film to Digital Workgroup.
- **Technologist QC's images in PACS, checking for all images, reformats, and dose page-** CMS proposed a standard of 2 minutes as per Table 5 “Clinical Labor Tasks Associated With Digital Technology” in the CY 2016 MPFS Final Rule.
- **Review examination with interpreting MD-** CMS proposed a standard of 2 minutes as per Table 5 “Clinical Labor Tasks Associated With Digital Technology” in the CY 2016 MPFS Final Rule.
- **Exam documents scanned into PACS. Exam completed in RIS system to generate billing process and to populate images into Radiologist work queue-** CMS proposed a standard of 1 minute as per Table 5 “Clinical Labor Tasks Associated With Digital Technology” in the CY 2016 MPFS Final Rule.
- **Professional PACS Workstation** - This is equal to the sum of the physician work pre and intra time.

5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

- Availability of prior images confirmed
- Patient clinical information and questionnaire reviewed by technologist, order from physician confirmed and exam protocolled by radiologist

Intra-Service Clinical Labor Activities:

- Greet patient, provide gowning, ensure appropriate medical records are available
- Provide pre-service education/obtain consent
- Prepare room, equipment, supplies
- Prepare and position patient/ monitor patient/ set up IV
- Assist physician in performing procedure/ Acquire Images
- Clean room/equipment by physician staff
- Technologist QC's images in PACS, checking for all images, reformats, and dose page
- Review examination with interpreting MD
- Exam documents scanned into PACS. Exam completed in RIS system to generate billing process and to populate images into Radiologist work queue

Post-Service Clinical Labor Activities:

AMA/Specialty Society RVS Update Committee  
Summary of Recommendations  
*Originated from Five-Year Review – CMS Fastest Growing Screen*

October 2009

**CT Thorax**

In October 2008, CPT Code 71250 *Computed tomography, thorax; without contrast material* (Work RVU = 1.16) was identified by the RUC's Five-Year Identification Workgroup as one of the fastest growing services and had never been surveyed by the RUC. The RUC recommended a full RUC survey be conducted.

The RUC reviewed survey data from nearly 60 physicians who frequently perform this service. The specialty recommended a pre-service time of 5 minutes based on the survey results and the RUC concurred. The RUC also agreed that the surveyed intra-service of 15 minutes and immediate post service time of 5 minutes were typical for the physician work required for the service. The total time of 25 minutes is comparable to the 22 minutes of total time assumed by CMS.

The RUC compared 71250 to key reference service 71260 *Computed tomography, thorax; with contrast material(s)* (Work RVU = 1.24, with pre, intra, and post service times of 3, 15, and 5 minutes respectively), and noted that the survey respondents indicated that in general a CT of the thorax without contrast is a slightly less intense service than one with contrast, as reflected in slightly lower values for the intensity and complexity measures. The RUC also compared 71250 to the specialty's multi-specialty points of comparison codes 78306 *Bone and/or joint imaging; whole body* (Work RVU = 0.86, with pre, intra, and post service times of 5, 8, and 5 minutes respectively) and 74160 *Computed tomography, abdomen; with contrast material(s)* (Work RVU = 1.27, with pre, intra, and post service times of 3, 15, and 5 minutes respectively).

The RUC agreed that there is significant evidence to support the current valuation, given changes in technology and the patient population.. The RUC and the specialty cited the following as evidence to maintain the work relative value of 1.16 for CT of the thorax:

- Modern CT technology produces an increased amount of data to be reviewed and interpreted. Because of the improved spatial resolution and multi-planar reformation of the data, a higher level of diagnostic specificity and accuracy is expected, and the number of possible protocols to be considered in the pre-service period by the interpreting physician has increased. Many patients require prone and supine imaging with both inspiration and expiration for the evaluation of interstitial lung disease. Further, 2D reconstructions (previously separately billable using code 76375 *Coronal, sagittal, multiplanar, oblique, 3-*

*dimensional and/or holographic reconstruction of computed tomography, magnetic resonance imaging, or other tomographic modality* in 2005 with 0.16 work RVUs) were bundled into the base code in 2006 and are now being considered an inherent part of the service.

- Using multi-detector row CT scanners, modern high resolution CT protocols are able to generate contiguous 1.25 mm images through the entirety of the lungs which are also used to create coronal 2D reconstructions to more accurately assess distribution of disease. As such, these examinations now generate more than 300 images for interpretation.
- The expectation of the referring physician is now much higher in terms of defining the various subtypes of interstitial lung disease and also in evaluating whether a lung nodule merits follow up or more aggressive intervention. The incidence of smoking-related lung disease continues to increase in the Medicare population, as does the ability to characterize these diseases with the advent of high resolution multi-detector CT. Current estimates are that pulmonary emphysema and the smoking related interstitial lung diseases – centrilobular emphysema, respiratory bronchiolitis interstitial lung disease (RBILD), desquamative interstitial pneumonia (DIP), and Langerhan’s cell histiocytosis (LCH) – are among the top ten causes of morbidity and mortality in the Medicare population and both morbidity and mortality from these illnesses are expected to increase by 2020.
- Because of refinements in technique and the ability to examine the entire lung, specific diagnoses of potentially reversible diseases such as RBILD and DIP can now be made and differentiated from irreversible diseases such as LCH and pulmonary fibrosis (usual interstitial pneumonia) without open lung biopsy or the need to institute potentially harmful empiric therapy without a definitive diagnosis. The extent and distribution of pulmonary centrilobular and bullous emphysema is now well characterized and critically important in both medical and surgical treatment planning.

While CT technology is changing rapidly, the adoption of newer techniques is not yet universal. The reasons for the increase in utilization of non-enhanced CT procedures are likely multi-factorial but concerns over the use of intravenous contrast and its potential nephrotoxicity in at-risk patients is felt to contribute at least in part to this increase.

Advances in CT technology have provided new indications for non-enhanced CT leading to volume growth. The most common indication for non-enhanced CT of the thorax is evaluation and follow-up of pulmonary nodules. The ability to detect small non-calcified pulmonary nodules has increased dramatically in recent years with high-resolution exam protocols. And while any of these nodules could represent small malignancies, most of the nodules are benign. The protocol for following likely benign pulmonary nodules developed by the Fleischner Society stated that pulmonary nodules should be followed with serial CT examinations for two years to assure benignity. Recent literature has prompted a re-evaluation of these guidelines by the Fleischner Society with the end result being a statement that will drastically reduce the number of follow-up examinations in low-risk patients with nodules less than 8

mm in size. These recommendations are supported by pulmonary medicine and thoracic surgery societies as well, and it is expected that the volume of these service will likely decrease in the future as these practice guidelines are established in the community.

From the survey results, comparison of similar services, rank order maintenance, and considerations regarding the rationale for the volume growth in the service, the RUC agreed that the physician work relative value should be maintained at its current value of 1.16 work RVUs, which was lower than the survey's 25% percentile of 1.20. The RUC acknowledges the growth in CT scans in the Medicare population. However, there is no evidence that this growth has led to a reduction in physician resources, as confirmed by the recent survey time data.

**The RUC recommends maintaining the relative work value for CPT code 71250 of 1.16.**

#### **Practice Expense**

The Practice Expense Subcommittee reviewed all direct costs for CT in 2003 and did not believe that the direct inputs had changed in the past six years.

SUMMARY OF RECOMMENDATION**

CPT Code: 71250  
Global Period: XXX

Tracking Number

Specialty Society Recommended RVU: **1.16**  
RUC Recommended RVU: **1.16**

CPT Descriptor: Computed tomography, thorax; without contrast material

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 65 year old female smoker has developed progressive dyspnea over the past six months. Chest radiograph demonstrates basilar interstitial abnormality. Computed tomography of the thorax is requested for further evaluation.

Percentage of Survey Respondents who found Vignette to be Typical: 97%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Kept overnight (less than 24 hours) 0% , Admitted (more than 24 hours) 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Is moderate sedation inherent in your reference code (Office setting)? No

Is moderate sedation inherent in your reference code (Hospital/ASC setting)? No

**Description of Pre-Service Work:**

- Review the reason for the exam and any pertinent clinical history.
- Review any prior imaging studies.
- Determine the appropriate CT protocol for the examination, confirm that non-contrast only images are indicated and determine the need for prone imaging and additional 2D reconstructions.
- Communicate protocol to the CT technologists.

**Description of Intra-Service Work:**

- Supervise acquisition of scout views, prescribe area of coverage and supervise acquisition of axial source image sections.
- Review initial and subsequent series of CT image data to assure adequacy of anatomic coverage and assess need for repeat sections or reconstruction of thin sections in specific locations.
- Supervise reconstruction of coronal and/or sagittal 2-D multiplanar reformatted (MPR) images; assess need for oblique or other 2D images.
- Evaluate and interpret findings related to the trachea, bronchi and lung parenchyma using supine and prone sections and coronal images with lung algorithm/ lung windows at 1.5 mm intervals.
- Evaluate and interpret findings related to the lung hila, and mediastinum, including the heart, aorta and arch vessels, mediastinal lymph nodes, trachea, and esophagus.

- Evaluate and interpret findings related to the chest wall structures including osseous structures, axillae and soft tissues in axial, sagittal and coronal planes using bone and soft tissue windows.
- Evaluate and interpret findings related to the base of neck and upper abdomen in axial and coronal projection using soft tissue and bone windows.
- Compare current findings to previous studies.
- Dictate report for medical record.

Description of Post-Service Work:

- Review, edit and sign report for medical record.
- Discuss findings with referring physicians.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The ACR convened a panel that included a number of physicians familiar with this service to review the RUC survey data. The initial recommendation of the Society is for the median survey times of 5, 15 and 5 minutes of pre, intra and post-service time, respectively, with the 25<sup>th</sup> percentile RVU of 1.20. The current value for 71250 is 1.16, which was later the society's recommendation after discussions with the RUC.

The majority of the survey respondents chose as the reference service 71260, CT chest with contrast. The service is RUC valued with 1.24 RVU and pre, intra and post service times of 3, 15 and 5 minutes, respectively. The survey respondents felt that in general CT chest without contrast is a slightly less intense service, as reflected in slightly lower values indicated on 9 of 11 intensity measures. Respondents felt the service times were similar, but did indicate 5 minutes of pre-service time which we support based on the complex protocols involved, which are further illustrated below. We have indicated standard pre-service package 5, which includes 7 minutes of pre time. This has been reduced to a total of 5 minutes, congruent with our survey results.

The specialty believed there is compelling evidence to demonstrate that the current valuation may not be appropriate given changes in technology and the patient population which have increased physician work. Modern CT technology produces an increased amount of data to be reviewed and interpreted. Because of the improved spatial resolution and multi-planar reformation of the data, a higher level of diagnostic specificity and accuracy is expected.

The number of possible protocols to be considered in the pre-service period by the interpreting physician has increased. For example, many patients require prone and supine imaging with both inspiration and expiration for the evaluation of interstitial lung disease. Further, 2D reconstructions (previously separately billable using code 76375 with 0.20 RVU) are now considered an inherent part of the service.

Using multi-detector row CT scanners, modern high resolution CT protocols are able to generate contiguous 1.25 mm images through the entirety of the lungs which are also used to create coronal 2D reconstructions to more accurately assess distribution of disease. As such, these examinations now generate more than 300 images for interpretation.

The expectation of the referring physician is now much higher in terms of defining the various subtypes of interstitial lung disease and also in evaluating whether a lung nodule merits follow up or more aggressive intervention. The incidence of smoking-related lung disease continues to increase in the Medicare population, as does the ability to characterize these diseases with the advent of high resolution multi-detector CT. Current estimates are that pulmonary emphysema and the smoking related interstitial lung diseases – centrilobular emphysema, respiratory bronchiolitis interstitial lung disease (RBILD), desquamative interstitial pneumonia (DIP), and Langerhan's cell histiocytosis (LCH) – are among the top ten causes of morbidity and mortality in the Medicare population and both morbidity and mortality from these illnesses are expected to increase by 2020.

Because of refinements in technique and the ability to examine the entire lung, specific diagnoses of potentially reversible diseases such as RBILD and DIP can now be made and differentiated from irreversible diseases such as LCH and pulmonary fibrosis (usual interstitial pneumonia) without open lung biopsy or the need to institute potentially harmful empiric therapy without a definitive diagnosis. The extent and distribution of pulmonary centrilobular and bullous emphysema is now well characterized and critically important in both medical and surgical treatment planning.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.

- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 71250

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Radiology                      How often? Commonly

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period? 3873306

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services for 71250 in a one year period is estimated to be 3,873,306.

Specialty Radiology                      Frequency 3524706                      Percentage 90.99 %

Specialty                      Frequency 0                      Percentage 0.00 %

Specialty                      Frequency 0                      Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,291,102 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The 2007 Medicare data estimates that code 71250 was billed approximately 1,291,102.

Specialty Radiology                      Frequency 1174902                      Percentage 90.99 %

Specialty                      Frequency 0                      Percentage 0.00 %

Specialty                      Frequency 0                      Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

## Professional Liability Insurance Information (PLI)

Does the reference CPT code selected for physician work serve as a reasonable reference for PLI crosswalk? (ie. similar work RVU, and specialty) No

If no, please select another crosswalk and provide a brief rationale. 71250

Indicate what risk factor the new/revised code should be assigned to determine PLI relative value. Non-Surgical

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
*\*CMS High Expenditure Procedures\**

April 2016

**X-ray of Wrist**

In the Final Rule for 2016 CMS re-ran the high expenditure services across specialties with Medicare allowed charges of \$10 million or more. CMS identified the top 20 codes by specialty in terms of allowed charges, excluding 010 and 090-day global services, anesthesia and Evaluation and Management services and services reviewed since CY 2010. Code 73110 was identified in this screen and code 73100 was added as a family code.

***73100 Radiologic examination, wrist; 2 views***

The RUC reviewed the survey results from 97 radiologists, hand surgeons and orthopaedic surgeons and agreed with following physician time components: pre-service time of 1 minute, intra-service time of 3 minutes and post-service time of 1 minute.

The RUC reviewed the survey 25<sup>th</sup> percentile work RVU of 0.16 and agreed that this value appropriately accounts for the physician work involved. To justify a work RVU of 0.16, the RUC compared the survey code to the primary key reference code 73600 *Radiologic examination, ankle; 2 views* (work RVU= 0.16, intra-service time of 3 minutes, total time of 5 minutes) and noted that both services have identical intra-service and total times and involve a similar amount of physician work. The RUC also compared the survey code to the second key reference code 73060 *Radiologic examination; humerus, minimum of 2 views* (work RVU= 0.16, intra-service time of 3 minutes, total time of 5 minutes) and noted that both services have identical physician times and involve a similar amount of physician work. **The RUC recommends a work RVU of 0.16 for CPT code 73100.**

***73110 Radiologic examination, wrist; complete, minimum of 3 views***

The RUC reviewed the survey results from 97 radiologists, hand surgeons and orthopaedic surgeons and agreed with following physician time components: pre-service time of 1 minute, intra-service time of 4 minutes and post-service time of 1 minute.

The RUC reviewed the survey 25<sup>th</sup> percentile work RVU of 0.17 and agreed that this value appropriately accounts for the physician work involved. To justify a work RVU of 0.17, the RUC compared the survey code to MPC code 72100 *Radiologic examination, spine, lumbosacral; 2 or 3 views* (work RVU= 0.22, intra-service time of 3 minutes, total time of 6 minutes) and noted that the survey code has more intra-service time and identical total time. The RUC also compared the survey code to the primary key reference code 73080 *Radiologic examination, elbow;*

*complete, minimum of 3 views* (work RVU= 0.17, intra-service time of 3 minutes, total time of 5 minutes) and noted that the survey code has more intra-service and total time. **The RUC recommends a work RVU of 0.17 for CPT code 73110.**

### Practice Expense

The specialty met compelling evidence that there is a change from previous code-specific practice expense to adoption of a newly applicable standard or package. The amount of time for acquiring images was increased to 8 minutes for 73110, because the CPT descriptor has a minimum of 3 views and in the typical scenario 4 views are performed. The change to 8 minutes would insure that the typical number of views for this service would follow a logical progression per view. PACS workstations are also typically present in the office-based practices of orthopaedic surgeons and hand surgeons, so the inclusion of a PACS workstation is warranted. The RUC determined that the inclusion of SB026 gown is not typical for codes 73100 or 73110 and therefore removed that supply input. The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
73100 (f)	Radiologic examination, wrist; 2 views	XXX	0.16 (No Change)
73110	Radiologic examination, wrist; complete, minimum of 3 views	XXX	0.17 (No Change)

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Background**

Several plain film x-ray codes were identified as potentially misvalued by the CY2016 Medicare Physician Fee Schedule Final Rule Table 8 High Expenditure Screen, including one of the wrist X-ray codes (73110, x-ray, wrist, 3 views) and one of the hand X-ray codes (73130, x-ray, hand, 3 views). Codes 73100, 73120, and 73140 were added as family codes for survey.

Even though these codes are separated across two agenda tabs, we have elected to present them as one family given the anatomic similarities in these codes.

The five codes in the wrist/hand/finger family and their existing values are as follows:

CPT Code	Descriptor	Work RVU	Pre-Service	Intra-Service	Post-Service	Total Time	IWP/UT	RUC Meeting
73100	Radiologic examination, wrist; 2 views	0.16	1	3	1	5	0.038	Aug 2005
73110	Radiologic examination, wrist; complete, minimum of 3 views	0.17	1	3	1	5	0.042	Aug 2005
73120	Radiologic examination, hand; 2 views	0.16	1	3	1	5	0.038	Aug 2005
73130	Radiologic examination, hand; minimum of 3 views	0.17	1	3	1	5	0.042	Aug 2005
73140	Radiologic examination, finger(s), minimum of 2 views	0.13	1	2	1	4	0.043	Aug 2005

These studies are the mainstay in the initial imaging evaluation of the fingers, hand and wrist. It is crucial the appropriate imaging technique for each region be utilized. The wrist 2 view and complete, minimum 3 view

codes are used when dedicated wrist images, with appropriate positioning, field-of-view, centering, and exposure are needed to evaluate for wrist pathologies such as non-displaced scaphoid waist fractures. The hand 2 view and complete, minimum 3 view codes are used when dedicated hand images, with appropriate positioning, field-of-view, centering, and exposure are needed to evaluate for hand pathologies such as a metacarpal neck fractures in trauma or subtle metacarpophalangeal joint erosions in inflammatory arthritis. The wrist and hand are two separate anatomic regions that require specific radiographic views to accurately diagnose underlying wrist or hand pathology. The hand comprises the metacarpal and phalangeal bones. Radiographs of the hand do not include the views required to accurately evaluate the wrist, which includes the radiocarpal, ulnocarpal, midcarpal, carpometacarpal and distal radioulnar joints. For example, in order to evaluate a wrist for carpal instability, specialized views are required, such as a clenched fist view, radial deviation view, or ulnar deviation view. Also a specific view is needed to evaluate ulnar variance. If one suspects a scaphoid fracture, specific views are needed to evaluate the integrity of the scaphoid. None of these views are included in the views of the hand. Radiologic examination, finger(s), minimum 2 views is used when well-profiled, small field-of-view high-resolution images of an individual finger (or fingers) are needed to evaluate finger pathologies such as subtle volar plate fractures.

### Survey Process

The American College of Radiology (ACR), the American Academy of Orthopaedic Surgeons (AAOS), and the American Society for Surgery of the Hand (ASSH) performed a random survey of our respective members. The ACR, AAOS, and ASSH gathered an expert panel, including a number of physicians familiar with these services, to review the data and develop the following recommendations.

### Summary of Time and work RVU Recommendations for all 5 Survey Codes:

We recommend the 25<sup>th</sup> percentile work RVU and the median intra-service time for all 5 codes. We recommend 1 minute pre-service time and 1 minute post-service time for all 5 codes, which is lower than the surveyed values, but consistent with the pre- and post-service times of the most recently valued plain x-ray codes.

### 73100 (Radiologic examination, wrist; 2 views)

#### Work RVU Recommendation

We recommend the 25<sup>th</sup> percentile work RVU of 0.16, which maintains the current value.

#### Time Recommendation

We recommend the following times: 1 minute pre-service, 3 minutes intra-service, and 1 minute post-service. This is the median intra-service time. The 1 minute pre-service and 1 minute post-service times are lower than the surveyed values, but are consistent with the pre- and post-service times of the most recently valued plain x-ray codes.

#### Key Reference Services

Our recommendation compares favorably to the two most commonly chosen key reference services. 73600 (*Radiologic examination, ankle; 2 views*) was chosen by 47% of respondents and 73060 (*Radiologic examination; humerus, minimum of 2 views*) was chosen by 15% of respondents. The proposed RVU and times are identical to both KRS codes and support relativity.

CPT	Short Descriptor	work RVU	Total Time	Pre	Intra	Post	IWPUT
73600	X-ray, ankle; 2 views	0.16	5	1	3	1	0.038

<b>73100</b>	<b>X-ray, wrist; 2 views</b>	<b>0.16</b>	<b>5</b>	<b>1</b>	<b>3</b>	<b>1</b>	<b>0.038</b>
73060	X-ray; humerus, min 2 views	0.16	5	1	3	1	0.038

### MPC Codes

Our recommendation compares favorably to MPC code 90970 and 72100.

CPT	Short Descriptor	work RVU	Total Time	Pre	Intra	Post	IWPUT
90970	Esrd home pt serv p day 20+	0.14	2.5		2.5		0.056
<b>73100</b>	<b>X-ray, wrist; 2 views</b>	<b>0.16</b>	<b>5</b>	<b>1</b>	<b>3</b>	<b>1</b>	<b>0.038</b>
72100	X-ray, spine, lumbosacral; 2 or 3 views	0.22	6	1	3	2	0.051

### Summary and Comparison To Other Codes In The Wrist/Hand/Finger Family

Our recommendations are supported by our survey and the KRS and MPC codes provided, and maintain relativity across the wrist/hand/finger family:

CPT Code	Descriptor	work RVU	Pre-Service	Intra-Service	Post-Service	Total Time	IWPUT
73100	Radiologic examination, wrist; 2 views	0.16	1	3	1	5	0.038
73110	Radiologic examination, wrist; complete, minimum of 3 views	0.17	1	4	1	6	0.031
73120	Radiologic examination, hand; 2 views	0.16	1	4	1	6	0.029
73130	Radiologic examination, hand; minimum of 3 views	0.17	1	5	1	7	0.025
73140	Radiologic examination, finger(s), minimum of 2 views	0.16	1	4	1	6	0.029

### SERVICES REPORTED WITH MULTIPLE CPT CODES

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

- Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

### FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 73100

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Orthopedic Surgery                      How often? Commonly

Specialty Hand Surgery                      How often? Commonly

Specialty Diagnostic Radiology                      How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 1017912

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by code 73100 provided nationally in a one-year period is estimated to be 1,017,912.

Specialty Orthopedic Surgery	Frequency 408102	Percentage 40.09 %
------------------------------	------------------	--------------------

Specialty Hand Surgery	Frequency 76953	Percentage 7.55 %
------------------------	-----------------	-------------------

Specialty Diagnostic Radiology	Frequency 309233	Percentage 30.37 %
--------------------------------	------------------	--------------------

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 339,304 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The 2014 Medicare data estimates that CPT code 73100 is billed approximately 339,304 times in total for Medicare patients nationally in a one-year period.

Specialty Orthopedic Surgery	Frequency 136034	Percentage 40.09 %
------------------------------	------------------	--------------------

Specialty Hand Surgery	Frequency 25651	Percentage 7.55 %
------------------------	-----------------	-------------------

Specialty Diagnostic Radiology	Frequency 103078	Percentage 30.37 %
--------------------------------	------------------	--------------------

Do many physicians perform this service across the United States? Yes

### **Berenson-Eggers Type of Service (BETOS) Assignment**

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Imaging

BETOS Sub-classification:

Standard imaging

BETOS Sub-classification Level II:

Musculoskeletal

### **Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 73100

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS

CPT Code: 73110	Tracking Number	Original Specialty Recommended RVU: <b>0.17</b>
		Presented Recommended RVU: <b>0.17</b>
Global Period: XXX		RUC Recommended RVU: <b>0.17</b>

CPT Descriptor: Radiologic examination, wrist; complete, minimum of 3 views

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 25-year-old female sustained an injury to the left wrist. Initial radiographs were negative. One week later the patient has persistent pain localized to the anatomic snuffbox. Four views of the wrist, including a scaphoid view, were ordered.

Percentage of Survey Respondents who found Vignette to be Typical: 92%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is;  
Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: Review the reason for the examination and any pertinent clinical history. Review any prior applicable imaging studies.

Description of Intra-Service Work: Supervise technologist performing the examination. Interpret the examination and compare the findings to previous studies, if applicable. Interpretation includes evaluation of all wrist bones, joints, joint spaces, alignment, and the deep and superficial soft tissues. Dictate report for the medical record.

Description of Post-Service Work: Review and sign final report. Communicate findings to referring physician, when needed.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Background**

Several plain film x-ray codes were identified as potentially misvalued by the CY2016 Medicare Physician Fee Schedule Final Rule Table 8 High Expenditure Screen, including one of the wrist X-ray codes (73110, x-ray, wrist, 3 views) and one of the hand X-ray codes (73130, x-ray, hand, 3 views). Codes 73100, 73120, and 73140 were added as family codes for survey.

Even though these codes are separated across two agenda tabs, we have elected to present them as one family given the anatomic similarities in these codes.

The five codes in the wrist/hand/finger family and their existing values are as follows:

CPT Code	Descriptor	Work RVU	Pre-Service	Intra-Service	Post-Service	Total Time	IWP/UT	RUC Meeting
73100	Radiologic examination, wrist; 2 views	0.16	1	3	1	5	0.038	Aug 2005
73110	Radiologic examination, wrist; complete, minimum of 3 views	0.17	1	3	1	5	0.042	Aug 2005
73120	Radiologic examination, hand; 2 views	0.16	1	3	1	5	0.038	Aug 2005
73130	Radiologic examination, hand; minimum of 3 views	0.17	1	3	1	5	0.042	Aug 2005
73140	Radiologic examination, finger(s), minimum of 2 views	0.13	1	2	1	4	0.043	Aug 2005

These studies are the mainstay in the initial imaging evaluation of the fingers, hand and wrist. It is crucial the appropriate imaging technique for each region be utilized. The wrist 2 view and complete, minimum 3 view

codes are used when dedicated wrist images, with appropriate positioning, field-of-view, centering, and exposure are needed to evaluate for wrist pathologies such as non-displaced scaphoid waist fractures. The hand 2 view and complete, minimum 3 view codes are used when dedicated hand images, with appropriate positioning, field-of-view, centering, and exposure are needed to evaluate for hand pathologies such as a metacarpal neck fractures in trauma or subtle metacarpophalangeal joint erosions in inflammatory arthritis. The wrist and hand are two separate anatomic regions that require specific radiographic views to accurately diagnose underlying wrist or hand pathology. The hand comprises the metacarpal and phalangeal bones. Radiographs of the hand do not include the views required to accurately evaluate the wrist, which includes the radiocarpal, ulnocarpal, midcarpal, carpometacarpal and distal radioulnar joints. For example, in order to evaluate a wrist for carpal instability, specialized views are required, such as a clenched fist view, radial deviation view, or ulnar deviation view. Also a specific view is needed to evaluate ulnar variance. If one suspects a scaphoid fracture, specific views are needed to evaluate the integrity of the scaphoid. None of these views are included in the views of the hand. Radiologic examination, finger(s), minimum 2 views is used when well-profiled, small field-of-view high-resolution images of an individual finger (or fingers) are needed to evaluate finger pathologies such as subtle volar plate fractures.

## Survey Process

The American College of Radiology (ACR), the American Academy of Orthopaedic Surgeons (AAOS), and the American Society for Surgery of the Hand (ASSH) performed a random survey of our respective members. The ACR, AAOS, and ASSH gathered an expert panel, including a number of physicians familiar with these services, to review the data and develop the following recommendations.

## Summary of Time and work RVU Recommendations for all 5 Survey Codes:

We recommend the 25<sup>th</sup> percentile work RVU and the median intra-service time for all 5 codes. We recommend 1 minute pre-service time and 1 minute post-service time for all 5 codes, which is lower than the surveyed values, but consistent with the pre- and post-service times of the most recently valued plain x-ray codes.

## 73110 (Radiologic examination, wrist; complete, minimum of 3 views)

### Work RVU Recommendation

We recommend the 25<sup>th</sup> percentile work RVU of 0.17, which maintains the current value.

### Time Recommendation

We recommend the following times: 1 minute pre-service, 4 minutes intra-service, and 1 minute post-service. The median intra-service time of 4 minutes is a 1 minute increase over existing, and supports relativity with the recommendation CPT code 73100 (*x-ray, wrist; 2 views*). The 1 minute pre-service and 1 minute post-service times are lower than the surveyed values, but are consistent with the pre- and post-service times of the most recently valued plain x-ray codes.

### Key Reference Services

Our recommendation compares favorably to the two most commonly chosen key reference services. 73080 (*Radiologic examination, elbow; complete, minimum of 3 views*) was chosen by 29% of respondents and 73630 (*Radiologic examination, foot; complete, minimum of 3 views*) was chosen by 26% of respondents. 73110 has one additional minute of intra time compared to both KRS codes, and identical recommended work RVU. Survey respondents indicated that 73110 is more intense/complex than both KRS on all measures.

CPT	Short Descriptor	work RVU	Total Time	Pre	Intra	Post	IWPUT
73080	X-ray, elbow; complete, min 3 views	0.17	5	1	3	1	0.042
73630	X-ray, foot; complete, min 3 views	0.17	5	1	3	1	0.042
<b>73110</b>	<b>X-ray, wrist; min 3 views</b>	<b>0.17</b>	<b>6</b>	<b>1</b>	<b>4</b>	<b>1</b>	<b>0.031</b>

## MPC Codes

Our recommendation compares favorably to MPC codes 90970 and 72100.

CPT	Short Descriptor	work RVU	Total Time	Pre	Intra	Post	IWPUT
90970	Esrd home pt serv p day 20+	0.14	2.5		2.5		0.056
<b>73110</b>	<b>X-ray, wrist; min 3 views</b>	<b>0.17</b>	<b>6</b>	<b>1</b>	<b>4</b>	<b>1</b>	<b>0.031</b>
72100	X-ray, spine, lumbosacral; 2 or 3 views	0.22	6	1	3	2	0.051

## Summary and Comparison To Other Codes In The Wrist/Hand/Finger Family

Our recommendations are supported by our survey and the KRS and MPC codes provided, and maintain relativity across the wrist/hand/finger family:

CPT Code	Descriptor	work RVU	Pre-Service	Intra-Service	Post-Service	Total Time	IWPUT
73100	Radiologic examination, wrist; 2 views	0.16	1	3	1	5	0.038
73110	Radiologic examination, wrist; complete, minimum of 3 views	0.17	1	4	1	6	0.031
73120	Radiologic examination, hand; 2 views	0.16	1	4	1	6	0.029
73130	Radiologic examination, hand; minimum of 3 views	0.17	1	5	1	7	0.025
73140	Radiologic examination, finger(s), minimum of 2 views	0.16	1	4	1	6	0.029

## SERVICES REPORTED WITH MULTIPLE CPT CODES

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

- Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

---

**FREQUENCY INFORMATION**

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 73110

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Orthopedic Surgery                      How often? Commonly

Specialty Hand Surgery                      How often? Commonly

Specialty Diagnostic Radiology                      How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 2876067

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by code 73110 provided nationally in a one-year period is estimated to be 2,876,067.

Specialty Orthopedic Surgery	Frequency 647837	Percentage 22.52 %
------------------------------	------------------	--------------------

Specialty Hand Surgery	Frequency 209959	Percentage 7.30 %
------------------------	------------------	-------------------

Specialty Diagnostic Radiology	Frequency 1600305	Percentage 55.64 %
--------------------------------	-------------------	--------------------

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 958,689 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The 2014 Medicare data estimates that CPT code 73110 is billed approximately 958,689 times in total for Medicare patients nationally in a one-year period.

Specialty Orthopedic Surgery	Frequency 215946	Percentage 22.52 %
------------------------------	------------------	--------------------

Specialty Hand Surgery	Frequency 69986	Percentage 7.30 %
------------------------	-----------------	-------------------

Specialty Diagnostic Radiology	Frequency 533435	Percentage 55.64 %
--------------------------------	------------------	--------------------

Do many physicians perform this service across the United States? Yes

---

**Berenson-Eggers Type of Service (BETOS) Assignment**

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Imaging

BETOS Sub-classification:

Standard imaging

BETOS Sub-classification Level II:

Musculoskeletal

---

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 73110

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/Specialty Society Update Process  
Practice Expense Summary of Recommendation  
Non Facility Direct Inputs**

CPT Long Descriptor:

<b>73100</b>	Radiologic examination, wrist; 2 views
<b>73110</b>	Radiologic examination, wrist; complete, minimum of 3 views
<b>73120</b>	Radiologic examination, hand; 2 views
<b>73130</b>	Radiologic examination, hand; minimum of 3 views
<b>73140</b>	Radiologic examination, finger(s), minimum of 2 views

Global Period: XXX Meeting Date: April 2016

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:

*The American College of Radiology (ACR), American Academy of Orthopaedic Surgeons (AAOS), and American Society for Surgery of the Hand (ASSH) convened a consensus panel to finalize the practice expense data for x-ray wrist, hand, and finger codes 73100, 73110, 73120, 73130, and 73140.*

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale:

*The societies included the existing PE inputs for codes 73100, 73110, 73120, 73130, and 73140 on the spreadsheet to serve as a reference.*

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:

- **Prepare room, equipment, supplies** - 2 minutes is standard for this activity, and is consistent with recent recommendations for codes in the x-ray family.
- **Prepare and position patient/ monitor patient/ set up IV** - 2 minutes is standard for this activity, and is consistent with recent recommendations for codes in the x-ray family.
- **Clean room/equipment by physician staff** – 3 minutes is standard for this activity, and is consistent with recent recommendations for codes in the x-ray family.
- **Technologist QC's images in PACS, checking for all images, reformats, and dose page** - CMS proposed a standard of 2 minutes as per Table 5 “Clinical Labor Tasks Associated With Digital Technology” in the CY 2016 MPFS Final Rule.

**CPT Code: 73100, 73110, 73120, 73130, 73140**  
**Specialty Society(s) ACR, AAOS, ASSH**

- **Review examination with interpreting MD** - CMS proposed a standard of 2 minutes as per Table 5 “Clinical Labor Tasks Associated With Digital Technology” in the CY 2016 MPFS Final Rule.
- **Exam documents scanned into PACS. Exam completed in RIS system to generate billing process and to populate images into Radiologist work queue** - CMS proposed a standard of 1 minute as per Table 5 “Clinical Labor Tasks Associated With Digital Technology” in the CY 2016 MPFS Final Rule.
- **PACS Workstation Proxy** - This is equal to the service period clinical labor time.
- **Professional PACS Workstation** - This is equal to the sum of the physician work pre and intra time.

5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

Intra-Service Clinical Labor Activities:

- Greet patient, ensure appropriate medical records are available
- Prepare room, equipment, supplies
- Prepare and position patient/ monitor patient/ set up IV
- Acquire images
- Clean room/equipment by physician staff
- Technologist QC's images in PACS, checking for all images, reformats, and dose page
- Review examination with interpreting MD
- Exam documents scanned into PACS. Exam completed in RIS system to generate billing process and to populate images into Radiologist work queue

Post-Service Clinical Labor Activities:

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
*\*CMS High Expenditure Procedures\**

April 2016

**X-ray of Hand and Fingers**

In the Final Rule for 2016 CMS re-ran the high expenditure services across specialties with Medicare allowed charges of \$10 million or more. CMS identified the top 20 codes by specialty in terms of allowed charges, excluding 010 and 090-day global services, anesthesia and Evaluation and Management services and services reviewed since CY 2010. Code 73130 was identified in this screen and codes 73120 and 73140 were added as family codes.

**73120 Radiologic examination, hand; 2 views**

The RUC reviewed the survey results from 93 radiologists, hand surgeons and orthopaedic surgeons and agreed with the following physician time components: pre-service time of 1 minute, intra-service time of 4 minutes and post-service time of 1 minute.

The RUC reviewed the 2014 Medicare claims data for this service and confirmed that diagnostic radiology is the dominant provider for global reporting and 26-modifier reporting in aggregate.

The RUC reviewed the survey 25<sup>th</sup> percentile work RVU of 0.16 and agreed that this value appropriately accounts for the physician work involved. To justify a work RVU of 0.16, the RUC compared the survey code to the primary key reference code 73600 *Radiologic examination, ankle; 2 views* (work RVU= 0.16, intra-service time of 3 minutes, total time of 5 minutes) and the second key reference code 73060 *Radiologic examination; humerus, minimum of 2 views* (work RVU= 0.16, intra-service time of 3 minutes, total time of 5 minutes) and noted that the survey code includes more intra-service time and total time relative to the reference codes. **The RUC recommends a work RVU of 0.16 for CPT code 73120.**

**73130 Radiologic examination, hand; minimum of 3 views**

The RUC reviewed the survey results from 93 radiologists, hand surgeons and orthopaedic surgeons and agreed with the following physician time components: pre-service time of 1 minute, intra-service time of 5 minutes and post-service time of 1 minute.

The RUC reviewed the survey 25<sup>th</sup> percentile work RVU of 0.17 and agreed that this value appropriately accounts for the physician work involved. To justify a work RVU of 0.17, the RUC compared the survey code to MPC code 72100 *Radiologic examination, spine, lumbosacral; 2 or 3 views* (work RVU= 0.22, intra-service time of 3 minutes, total time of 6 minutes) and noted that the survey code has more intra-service time and total time. The RUC also compared the survey code to the second key reference code 73080 *Radiologic examination, elbow; complete,*

*minimum of 3 views* (work RVU= 0.17, intra-service time of 3 minutes, total time of 5 minutes) and noted that the survey code has more intra-service and total time. **The RUC recommends a work RVU of 0.17 for CPT code 73130.**

**73140 Radiologic examination, finger(s), minimum of 2 views**

The specialty societies presented compelling evidence that hand surgeons were not involved the previous review of this code in 2005 and that the work and times recorded were based on flawed data. The RUC rejected compelling evidence, indicating that hand surgeons are not the dominant providers and a hand surgeon was involved in the presentation to the RUC in 2005.

The RUC reviewed the survey results from 93 radiologists, hand surgeons and orthopaedic surgeons and agreed with the following physician time components: pre-service time of 1 minute, intra-service time of 4 minutes and post-service time of 1 minute.

The RUC reviewed the survey data and agreed that since compelling evidence was not accepted, the existing value of 0.13 should be maintained for this service. The RUC compared the survey code to the top key reference code 73060 *Radiologic examination; humerus, minimum of 2 views* (work RVU= 0.16, intra-service time of 3 minutes, total time of 5 minutes) and the second key reference code 73600 *Radiologic examination, ankle; 2 views* (work RVU= 0.16, intra-service time of 3 minutes, total time of 5 minutes) and noted that the survey code includes more intra-service time and total time relative to the reference codes. The RUC also noted that all RUC reviewed plain film codes with one or two views were valued at 0.16, however since compelling evidence was not accepted, an increased work RVU for 73140 was not appropriate. **The RUC recommends a work RVU of 0.13 for CPT code 73140.**

**Practice Expense**

The specialty met compelling evidence that there is a change from previous code-specific practice expense to adoption of a newly applicable standard or package. The RUC determined that the inclusion of SB026 gown is not typical for codes 73120, 73130 or 73140 and therefore removed that supply input. The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
73120 (f)	Radiologic examination, hand; 2 views	XXX	0.16 (No Change)

73130	Radiologic examination, hand; minimum of 3 views	XXX	0.17 (No Change)
73140 (f)	Radiologic examination, finger(s), minimum of 2 views	XXX	0.13 (No Change)

SUMMARY OF RECOMMENDATION**

CPT Code: 73120	Tracking Number	Original Specialty Recommended RVU: <b>0.16</b>
		Presented Recommended RVU: <b>0.16</b>
Global Period: XXX		RUC Recommended RVU: <b>0.16</b>
CPT Descriptor: Radiologic examination, hand; 2 views		

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 55-year-old female with long-standing rheumatoid arthritis has developed worsening pain and deformity in her left hand. AP and lateral views of the hand were ordered for further evaluation.

Percentage of Survey Respondents who found Vignette to be Typical: 73%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 3%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: Review the reason for the examination and any pertinent clinical history. Review any prior applicable imaging studies.

Description of Intra-Service Work: Supervise technologist performing the examination. Interpret the examination and compare the findings to previous studies, if applicable. Interpretation includes evaluation of all hand bones, joints, joint spaces, alignment, and the deep and superficial soft tissues. Dictate report for the medical record.

Description of Post-Service Work: Review and sign final report. Communicate findings to referring physician, when needed.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Background**

Several plain film x-ray codes were identified as potentially misvalued by the CY2016 Medicare Physician Fee Schedule Final Rule Table 8 High Expenditure Screen, including one of the wrist X-ray codes (73110, x-ray, wrist, 3 views) and one of the hand X-ray codes (73130, x-ray, hand, 3 views). Codes 73100, 73120, and 73140 were added as family codes for survey.

Even though these codes are separated across two agenda tabs, we have elected to present them as one family given the anatomic similarities in these codes.

The five codes in the wrist/hand/finger family and their existing values are as follows:

CPT Code	Descriptor	Work RVU	Pre-Service	Intra-Service	Post-Service	Total Time	IWP/UT	RUC Meeting
73100	Radiologic examination, wrist; 2 views	0.16	1	3	1	5	0.038	Aug 2005
73110	Radiologic examination, wrist; complete, minimum of 3 views	0.17	1	3	1	5	0.042	Aug 2005
73120	Radiologic examination, hand; 2 views	0.16	1	3	1	5	0.038	Aug 2005
73130	Radiologic examination, hand; minimum of 3 views	0.17	1	3	1	5	0.042	Aug 2005
73140	Radiologic examination, finger(s), minimum of 2 views	0.13	1	2	1	4	0.043	Aug 2005

These studies are the mainstay in the initial imaging evaluation of the fingers, hand and wrist. It is crucial the appropriate imaging technique for each region be utilized. The wrist 2 view and complete, minimum 3 view

codes are used when dedicated wrist images, with appropriate positioning, field-of-view, centering, and exposure are needed to evaluate for wrist pathologies such as non-displaced scaphoid waist fractures. The hand 2 view and complete, minimum 3 view codes are used when dedicated hand images, with appropriate positioning, field-of-view, centering, and exposure are needed to evaluate for hand pathologies such as a metacarpal neck fractures in trauma or subtle metacarpophalangeal joint erosions in inflammatory arthritis. The wrist and hand are two separate anatomic regions that require specific radiographic views to accurately diagnose underlying wrist or hand pathology. The hand comprises the metacarpal and phalangeal bones. Radiographs of the hand do not include the views required to accurately evaluate the wrist, which includes the radiocarpal, ulnocarpal, midcarpal, carpometacarpal and distal radioulnar joints. For example, in order to evaluate a wrist for carpal instability, specialized views are required, such as a clenched fist view, radial deviation view, or ulnar deviation view. Also a specific view is needed to evaluate ulnar variance. If one suspects a scaphoid fracture, specific views are needed to evaluate the integrity of the scaphoid. None of these views are included in the views of the hand. Radiologic examination, finger(s), minimum 2 views is used when well-profiled, small field-of-view high-resolution images of an individual finger (or fingers) are needed to evaluate finger pathologies such as subtle volar plate fractures.

### Survey Process

The American College of Radiology (ACR), the American Academy of Orthopaedic Surgeons (AAOS), and the American Society for Surgery of the Hand (ASSH) performed a random survey of our respective members. The ACR, AAOS, and ASSH gathered an expert panel, including a number of physicians familiar with these services, to review the data and develop the following recommendations.

### Summary of Time and work RVU Recommendations for all 5 Survey Codes:

We recommend the 25<sup>th</sup> percentile work RVU and the median intra-service time for all 5 codes. We recommend 1 minute pre-service time and 1 minute post-service time for all 5 codes, which is lower than the surveyed values, but consistent with the pre- and post-service times of the most recently valued plain x-ray codes.

### 73120 (Radiologic examination, hand; 2 views)

#### Work RVU Recommendation

We recommend the 25<sup>th</sup> percentile work RVU of 0.16, which maintains the current value.

#### Time Recommendation

We recommend the following times: 1 minute pre-service, 4 minutes intra-service, and 1 minute post-service. The median intra-service time of 4 minutes is a 1 minute increase over existing. The 1 minute pre-service and 1 minute post-service times are lower than the surveyed values, but are consistent with the pre- and post-service times of most recently valued plain x-ray codes.

#### Key Reference Service

Our recommendation compares favorably to the two most commonly chosen key reference services. 73600 (*Radiologic examination, ankle; 2 views*) was chosen by 37% of respondents and 73060 (*Radiologic examination; humerus, minimum of 2 views*) was chosen by 15% of respondents. The proposed work RVU is identical to both KRS codes, but 73120 has one additional minute of intra time.

CPT	Short Descriptor	work RVU	Total Time	Pre	Intra	Post	IWPUT
73600	X-ray, ankle; 2 views	0.16	5	1	3	1	0.038

73060	X-ray; humerus, min 2 views	0.16	5	1	3	1	0.038
<b>73120</b>	<b>X-ray, hand; 2 views</b>	<b>0.16</b>	<b>6</b>	<b>1</b>	<b>4</b>	<b>1</b>	<b>0.029</b>

### MPC Code

Our recommendation compares favorably to MPC code 90970 and 72100.

CPT	Short Descriptor	work RVU	Total Time	Pre	Intra	Post	IWPUT
90970	Esrd home pt serv p day 20+	0.14	2.5		2.5		0.056
<b>73120</b>	<b>X-ray, hand; 2 views</b>	<b>0.16</b>	<b>6</b>	<b>1</b>	<b>4</b>	<b>1</b>	<b>0.029</b>
72100	X-ray, spine, lumbosacral; 2 or 3 views	0.22	6	1	3	2	0.051

### Summary and Comparison To Other Codes In The Wrist/Hand/Finger Family

Our recommendations are supported by our survey and the KRS and MPC codes provided, and maintain relativity across the wrist/hand/finger family:

CPT Code	Descriptor	work RVU	Pre-Service	Intra-Service	Post-Service	Total Time	IWPUT
73100	Radiologic examination, wrist; 2 views	0.16	1	3	1	5	0.038
73110	Radiologic examination, wrist; complete, minimum of 3 views	0.17	1	4	1	6	0.031
<b>73120</b>	<b>Radiologic examination, hand; 2 views</b>	<b>0.16</b>	<b>1</b>	<b>4</b>	<b>1</b>	<b>6</b>	<b>0.029</b>
73130	Radiologic examination, hand; minimum of 3 views	0.17	1	5	1	7	0.025
73140	Radiologic examination, finger(s), minimum of 2 views	0.16	1	4	1	6	0.029

### SERVICES REPORTED WITH MULTIPLE CPT CODES

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

- Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

### FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 73120

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Orthopedic Surgery                      How often? Commonly

Specialty Hand Surgery                      How often? Commonly

Specialty Diagnostic Radiology                      How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 837978

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by code 73120 provided nationally in a one-year period is estimated to be 837,978.

Specialty Orthopedic Surgery	Frequency 119436	Percentage 14.25 %
------------------------------	------------------	--------------------

Specialty Hand Surgery	Frequency 45114	Percentage 5.38 %
------------------------	-----------------	-------------------

Specialty Diagnostic Radiology	Frequency 321298	Percentage 38.34 %
--------------------------------	------------------	--------------------

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 279,326 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The 2014 Medicare data estimates that CPT code 73120 is billed approximately 279,326 times in total for Medicare patients nationally in a one-year period.

Specialty Orthopedic Surgery	Frequency 39812	Percentage 14.25 %
------------------------------	-----------------	--------------------

Specialty Hand Surgery	Frequency 15038	Percentage 5.38 %
------------------------	-----------------	-------------------

Specialty Diagnostic Radiology	Frequency 107099	Percentage 38.34 %
--------------------------------	------------------	--------------------

Do many physicians perform this service across the United States? Yes

### **Berenson-Eggers Type of Service (BETOS) Assignment**

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Imaging

BETOS Sub-classification:

Standard imaging

BETOS Sub-classification Level II:

Musculoskeletal

### **Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 73120

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

SUMMARY OF RECOMMENDATION**

CPT Code: 73130	Tracking Number	Original Specialty Recommended RVU: <b>0.17</b>
		Presented Recommended RVU: <b>0.17</b>
Global Period: XXX		RUC Recommended RVU: <b>0.17</b>

CPT Descriptor: Radiologic examination, hand; minimum of 3 views

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 15-year-old male slammed his hand against a wall at school. Pain is localized to the ulnar aspect of the metacarpal region of the hand. AP, lateral, and oblique views of the hand are ordered.

Percentage of Survey Respondents who found Vignette to be Typical: 97%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: Review the reason for the examination and any pertinent clinical history. Review any prior applicable imaging studies.

Description of Intra-Service Work: Supervise technologist performing the examination. Interpret the examination and compare the findings to previous studies, if applicable. Interpretation includes evaluation of all hand bones, joints, joint spaces, alignment, and the deep and superficial soft tissues. Dictate report for the medical record.

Description of Post-Service Work: Review and sign final report. Communicate findings to referring physician, when needed.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Background**

Several plain film x-ray codes were identified as potentially misvalued by the CY2016 Medicare Physician Fee Schedule Final Rule Table 8 High Expenditure Screen, including one of the wrist X-ray codes (73110, x-ray, wrist, 3 views) and one of the hand X-ray codes (73130, x-ray, hand, 3 views). Codes 73100, 73120, and 73140 were added as family codes for survey.

Even though these codes are separated across two agenda tabs, we have elected to present them as one family given the anatomic similarities in these codes.

The five codes in the wrist/hand/finger family and their existing values are as follows:

CPT Code	Descriptor	Work RVU	Pre-Service	Intra-Service	Post-Service	Total Time	IWP/UT	RUC Meeting
73100	Radiologic examination, wrist; 2 views	0.16	1	3	1	5	0.038	Aug 2005
73110	Radiologic examination, wrist; complete, minimum of 3 views	0.17	1	3	1	5	0.042	Aug 2005
73120	Radiologic examination, hand; 2 views	0.16	1	3	1	5	0.038	Aug 2005
73130	Radiologic examination, hand; minimum of 3 views	0.17	1	3	1	5	0.042	Aug 2005
73140	Radiologic examination, finger(s), minimum of 2 views	0.13	1	2	1	4	0.043	Aug 2005

These studies are the mainstay in the initial imaging evaluation of the fingers, hand and wrist. It is crucial the appropriate imaging technique for each region be utilized. The wrist 2 view and complete, minimum 3 view

codes are used when dedicated wrist images, with appropriate positioning, field-of-view, centering, and exposure are needed to evaluate for wrist pathologies such as non-displaced scaphoid waist fractures. The hand 2 view and complete, minimum 3 view codes are used when dedicated hand images, with appropriate positioning, field-of-view, centering, and exposure are needed to evaluate for hand pathologies such as a metacarpal neck fractures in trauma or subtle metacarpophalangeal joint erosions in inflammatory arthritis. The wrist and hand are two separate anatomic regions that require specific radiographic views to accurately diagnose underlying wrist or hand pathology. The hand comprises the metacarpal and phalangeal bones. Radiographs of the hand do not include the views required to accurately evaluate the wrist, which includes the radiocarpal, ulnocarpal, midcarpal, carpometacarpal and distal radioulnar joints. For example, in order to evaluate a wrist for carpal instability, specialized views are required, such as a clenched fist view, radial deviation view, or ulnar deviation view. Also a specific view is needed to evaluate ulnar variance. If one suspects a scaphoid fracture, specific views are needed to evaluate the integrity of the scaphoid. None of these views are included in the views of the hand. Radiologic examination, finger(s), minimum 2 views is used when well-profiled, small field-of-view high-resolution images of an individual finger (or fingers) are needed to evaluate finger pathologies such as subtle volar plate fractures.

### Survey Process

The American College of Radiology (ACR), the American Academy of Orthopaedic Surgeons (AAOS), and the American Society for Surgery of the Hand (ASSH) performed a random survey of our respective members. The ACR, AAOS, and ASSH gathered an expert panel, including a number of physicians familiar with these services, to review the data and develop the following recommendations.

### Summary of Time and work RVU Recommendations for all 5 Survey Codes:

We recommend the 25<sup>th</sup> percentile work RVU and the median intra-service time for all 5 codes. We recommend 1 minute pre-service time and 1 minute post-service time for all 5 codes, which is lower than the surveyed values, but consistent with the pre- and post-service times of the most recently valued plain x-ray codes.

### 73130 (Radiologic examination, hand; minimum of 3 views)

#### Work RVU Recommendation

We recommend the 25<sup>th</sup> percentile work RVU of 0.17, which maintains the current value.

#### Time Recommendation

We recommend the following times: 1 minute pre-service, 5 minutes intra-service, and 1 minute post-service. The median intra-service time of 5 minutes is a 1 minute increase over existing. The 1 minute pre-service and 1 minute post-service times are lower than the surveyed values, but are consistent with the pre- and post-service times of the most recently valued plain x-ray codes.

#### Key Reference Services

Our recommendation compares favorably to the two most commonly chosen key reference services. 73630 (*Radiologic examination, foot; complete, minimum of 3 views*) was chosen by 43% of respondents, and 73080 (*Radiologic examination, elbow; complete, minimum of 3 views*) was chosen by 22% of respondents. 73130 has two additional minutes of intra time compared to both KRS codes, and identical recommended work RVU.

CPT	Short Descriptor	work RVU	Total Time	Pre	Intra	Post	IWPUT
73080	X-ray, elbow; complete, min 3 views	0.17	5	1	3	1	0.042

73630	X-ray, foot; complete, min 3 views	0.17	5	1	3	1	0.042
<b>73130</b>	<b>X-ray, hand; min 3 views</b>	<b>0.17</b>	<b>7</b>	<b>1</b>	<b>5</b>	<b>1</b>	<b>0.025</b>

## MPC Codes

Our recommendation compares favorably to MPC codes 90970 and 72100.

CPT	Short Descriptor	work RVU	Total Time	Pre	Intra	Post	IWPUT
90970	Esrd home pt serv p day 20+	0.14	2.5		2.5		0.056
<b>73130</b>	<b>X-ray, hand; min 3 views</b>	<b>0.17</b>	<b>7</b>	<b>1</b>	<b>5</b>	<b>1</b>	<b>0.025</b>
72100	X-ray, spine, lumbosacral; 2 or 3 views	0.22	6	1	3	2	0.051

## Summary and Comparison To Other Codes In The Wrist/Hand/Finger Family

Our recommendations are supported by our survey and the KRS and MPC codes provided, and maintain relativity across the wrist/hand/finger family:

CPT Code	Descriptor	work RVU	Pre-Service	Intra-Service	Post-Service	Total Time	IWPUT
73100	Radiologic examination, wrist; 2 views	0.16	1	3	1	5	0.038
73110	Radiologic examination, wrist; complete, minimum of 3 views	0.17	1	4	1	6	0.031
73120	Radiologic examination, hand; 2 views	0.16	1	4	1	6	0.029
73130	Radiologic examination, hand; minimum of 3 views	0.17	1	5	1	7	0.025
73140	Radiologic examination, finger(s), minimum of 2 views	0.16	1	4	1	6	0.029

## SERVICES REPORTED WITH MULTIPLE CPT CODES

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

- Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 73130

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Orthopedic Surgery                      How often? Commonly

Specialty Hand Surgery                      How often? Commonly

Specialty Diagnostic Radiology                      How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 3108264

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by code 73130 provided nationally in a one-year period is estimated to be 3,108,264.

Specialty Orthopedic Surgery	Frequency 478056	Percentage 15.38 %
------------------------------	------------------	--------------------

Specialty Hand Surgery	Frequency 202543	Percentage 6.51 %
------------------------	------------------	-------------------

Specialty Diagnostic Radiology	Frequency 1904614	Percentage 61.27 %
--------------------------------	-------------------	--------------------

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,036,088 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The 2014 Medicare data estimates that CPT code 73130 is billed approximately 1,036,088 times in total for Medicare patients nationally in a one-year period.

Specialty Orthopedic Surgery	Frequency 159352	Percentage 15.38 %
------------------------------	------------------	--------------------

Specialty Hand Surgery	Frequency 67514	Percentage 6.51 %
------------------------	-----------------	-------------------

Specialty Diagnostic Radiology	Frequency 634871	Percentage 61.27 %
--------------------------------	------------------	--------------------

Do many physicians perform this service across the United States? Yes

### Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Imaging

BETOS Sub-classification:

Standard imaging

BETOS Sub-classification Level II:

Musculoskeletal

### Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 73130

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Background**

Several plain film x-ray codes were identified as potentially misvalued by the CY2016 Medicare Physician Fee Schedule Final Rule Table 8 High Expenditure Screen, including one of the wrist X-ray codes (73110, x-ray, wrist, 3 views) and one of the hand X-ray codes (73130, x-ray, hand, 3 views). Codes 73100, 73120, and 73140 were added as family codes for survey.

Even though these codes are separated across two agenda tabs, we have elected to present them as one family given the anatomic similarities in these codes.

The five codes in the wrist/hand/finger family and their existing values are as follows:

CPT Code	Descriptor	Work RVU	Pre-Service	Intra-Service	Post-Service	Total Time	IWP/UT	RUC Meeting
73100	Radiologic examination, wrist; 2 views	0.16	1	3	1	5	0.038	Aug 2005
73110	Radiologic examination, wrist; complete, minimum of 3 views	0.17	1	3	1	5	0.042	Aug 2005
73120	Radiologic examination, hand; 2 views	0.16	1	3	1	5	0.038	Aug 2005
73130	Radiologic examination, hand; minimum of 3 views	0.17	1	3	1	5	0.042	Aug 2005
73140	Radiologic examination, finger(s), minimum of 2 views	0.13	1	2	1	4	0.043	Aug 2005

These studies are the mainstay in the initial imaging evaluation of the fingers, hand and wrist. It is crucial the appropriate imaging technique for each region be utilized. The wrist 2 view and complete, minimum 3 view

codes are used when dedicated wrist images, with appropriate positioning, field-of-view, centering, and exposure are needed to evaluate for wrist pathologies such as non-displaced scaphoid waist fractures. The hand 2 view and complete, minimum 3 view codes are used when dedicated hand images, with appropriate positioning, field-of-view, centering, and exposure are needed to evaluate for hand pathologies such as a metacarpal neck fractures in trauma or subtle metacarpophalangeal joint erosions in inflammatory arthritis. The wrist and hand are two separate anatomic regions that require specific radiographic views to accurately diagnose underlying wrist or hand pathology. The hand comprises the metacarpal and phalangeal bones. Radiographs of the hand do not include the views required to accurately evaluate the wrist, which includes the radiocarpal, ulnocarpal, midcarpal, carpometacarpal and distal radioulnar joints. For example, in order to evaluate a wrist for carpal instability, specialized views are required, such as a clenched fist view, radial deviation view, or ulnar deviation view. Also a specific view is needed to evaluate ulnar variance. If one suspects a scaphoid fracture, specific views are needed to evaluate the integrity of the scaphoid. None of these views are included in the views of the hand. Radiologic examination, finger(s), minimum 2 views is used when well-profiled, small field-of-view high-resolution images of an individual finger (or fingers) are needed to evaluate finger pathologies such as subtle volar plate fractures.

### Survey Process

The American College of Radiology (ACR), the American Academy of Orthopaedic Surgeons (AAOS), and the American Society for Surgery of the Hand (ASSH) performed a random survey of our respective members. The ACR, AAOS, and ASSH gathered an expert panel, including a number of physicians familiar with these services, to review the data and develop the following recommendations.

### Summary of Time and work RVU Recommendations for all 5 Survey Codes:

We recommend the 25<sup>th</sup> percentile work RVU and the median intra-service time for all 5 codes. We recommend 1 minute pre-service time and 1 minute post-service time for all 5 codes, which is lower than the surveyed values, but consistent with the pre- and post-service times of the most recently valued plain x-ray codes.

### 73130 (Radiologic examination, hand; minimum of 3 views)

#### Work RVU Recommendation

We recommend the 25<sup>th</sup> percentile work RVU of 0.17, which maintains the current value.

#### Time Recommendation

We recommend the following times: 1 minute pre-service, 5 minutes intra-service, and 1 minute post-service. The median intra-service time of 5 minutes is a 1 minute increase over existing. The 1 minute pre-service and 1 minute post-service times are lower than the surveyed values, but are consistent with the pre- and post-service times of the most recently valued plain x-ray codes.

#### Key Reference Services

Our recommendation compares favorably to the two most commonly chosen key reference services. 73630 (*Radiologic examination, foot; complete, minimum of 3 views*) was chosen by 43% of respondents, and 73080 (*Radiologic examination, elbow; complete, minimum of 3 views*) was chosen by 22% of respondents. 73130 has two additional minutes of intra time compared to both KRS codes, and identical recommended work RVU.

CPT	Short Descriptor	work RVU	Total Time	Pre	Intra	Post	IWPUT
73080	X-ray, elbow; complete, min 3 views	0.17	5	1	3	1	0.042

73630	X-ray, foot; complete, min 3 views	0.17	5	1	3	1	0.042
<b>73130</b>	<b>X-ray, hand; min 3 views</b>	<b>0.17</b>	<b>7</b>	<b>1</b>	<b>5</b>	<b>1</b>	<b>0.025</b>

## MPC Codes

Our recommendation compares favorably to MPC codes 90970 and 72100.

CPT	Short Descriptor	work RVU	Total Time	Pre	Intra	Post	IWPUT
90970	Esrd home pt serv p day 20+	0.14	2.5		2.5		0.056
<b>73130</b>	<b>X-ray, hand; min 3 views</b>	<b>0.17</b>	<b>7</b>	<b>1</b>	<b>5</b>	<b>1</b>	<b>0.025</b>
72100	X-ray, spine, lumbosacral; 2 or 3 views	0.22	6	1	3	2	0.051

## Summary and Comparison To Other Codes In The Wrist/Hand/Finger Family

Our recommendations are supported by our survey and the KRS and MPC codes provided, and maintain relativity across the wrist/hand/finger family:

CPT Code	Descriptor	work RVU	Pre-Service	Intra-Service	Post-Service	Total Time	IWPUT
73100	Radiologic examination, wrist; 2 views	0.16	1	3	1	5	0.038
73110	Radiologic examination, wrist; complete, minimum of 3 views	0.17	1	4	1	6	0.031
73120	Radiologic examination, hand; 2 views	0.16	1	4	1	6	0.029
73130	Radiologic examination, hand; minimum of 3 views	0.17	1	5	1	7	0.025
73140	Radiologic examination, finger(s), minimum of 2 views	0.16	1	4	1	6	0.029

## SERVICES REPORTED WITH MULTIPLE CPT CODES

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

- Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 73130

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Orthopedic Surgery                      How often? Commonly

Specialty Hand Surgery                      How often? Commonly

Specialty Diagnostic Radiology                      How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 3108264

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by code 73130 provided nationally in a one-year period is estimated to be 3,108,264.

Specialty Orthopedic Surgery                      Frequency 478056                      Percentage 15.38 %

Specialty Hand Surgery                      Frequency 202543                      Percentage 6.51 %

Specialty Diagnostic Radiology                      Frequency 1904614                      Percentage 61.27 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?

1,036,088 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The 2014 Medicare data estimates that CPT code 73130 is billed approximately 1,036,088 times in total for Medicare patients nationally in a one-year period.

Specialty Orthopedic Surgery                      Frequency 159352                      Percentage 15.38 %

Specialty Hand Surgery                      Frequency 67514                      Percentage 6.51 %

Specialty Diagnostic Radiology                      Frequency 634871                      Percentage 61.27 %

Do many physicians perform this service across the United States? Yes

### **Berenson-Eggers Type of Service (BETOS) Assignment**

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Imaging

BETOS Sub-classification:

Standard imaging

BETOS Sub-classification Level II:

Musculoskeletal

### **Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 73130

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 73140      Tracking Number

Original Specialty Recommended RVU: **0.16**Presented Recommended RVU: **0.16**

Global Period: XXX

RUC Recommended RVU: **0.13**

CPT Descriptor: Radiologic examination, finger(s), minimum of 2 views

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 26-year-old male sustained a crush injury to his finger producing an open fracture of the middle phalanx. The presence of foreign material in the wound is questioned. AP, lateral, and oblique views of the finger are ordered.

Percentage of Survey Respondents who found Vignette to be Typical: 92%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: Review the reason for the examination and any pertinent clinical history. Review any prior applicable imaging studies.

Description of Intra-Service Work: Supervise technologist performing the examination. Interpret the examination and compare the findings to previous studies, if applicable. Interpretation includes evaluation of all bones, joints, joint spaces, alignment, and the deep and superficial soft tissues of the finger. Dictate report for the medical record.

Description of Post-Service Work: Review and sign final report. Communicate findings to referring physician, when needed.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

---

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

---

**FREQUENCY INFORMATION**

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 73140

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Orthopedic Surgery                      How often? Commonly

Specialty Hand Surgery                      How often? Commonly

Specialty Diagnostic Radiology                      How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 1050909

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by code 73140 provided nationally in a one-year period is estimated to be 1050909.

Specialty Orthopedic Surgery                      Frequency 285442                      Percentage 27.16 %

Specialty Hand Surgery                      Frequency 165846                      Percentage 15.78 %

Specialty Diagnostic Radiology                      Frequency 443788                      Percentage 42.22 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?

350,303 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The 2014 Medicare data estimates that CPT code 73140 is billed approximately 350,303 times in total for Medicare patients nationally in a one-year period.

Specialty Orthopedic Surgery                      Frequency 95147                      Percentage 27.16 %

Specialty Hand Surgery                      Frequency 55282                      Percentage 15.78 %

Specialty Diagnostic Radiology                      Frequency 147929                      Percentage 42.22 %

Do many physicians perform this service across the United States? Yes

### **Berenson-Eggers Type of Service (BETOS) Assignment**

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Imaging

BETOS Sub-classification:

BETOS Sub-classification Level II:

Musculoskeletal

### **Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 73140

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 73140	Tracking Number	Original Specialty Recommended RVU: <b>0.16</b>
		Presented Recommended RVU: <b>0.16</b>
Global Period: XXX		RUC Recommended RVU: <b>0.13</b>
CPT Descriptor: Radiologic examination, finger(s), minimum of 2 views		

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 26-year-old male sustained a crush injury to his finger producing an open fracture of the middle phalanx. The presence of foreign material in the wound is questioned. AP, lateral, and oblique views of the finger are ordered.

Percentage of Survey Respondents who found Vignette to be Typical: 92%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: Review the reason for the examination and any pertinent clinical history. Review any prior applicable imaging studies.

Description of Intra-Service Work: Supervise technologist performing the examination. Interpret the examination and compare the findings to previous studies, if applicable. Interpretation includes evaluation of all bones, joints, joint spaces, alignment, and the deep and superficial soft tissues of the finger. Dictate report for the medical record.

Description of Post-Service Work: Review and sign final report. Communicate findings to referring physician, when needed.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

---

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

- Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

---

**FREQUENCY INFORMATION**

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 73140

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Orthopedic Surgery                      How often? Commonly

Specialty Hand Surgery                      How often? Commonly

Specialty Diagnostic Radiology                      How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 1050909

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by code 73140 provided nationally in a one-year period is estimated to be 1050909.

Specialty Orthopedic Surgery                      Frequency 285442                      Percentage 27.16 %

Specialty Hand Surgery                      Frequency 165846                      Percentage 15.78 %

Specialty Diagnostic Radiology                      Frequency 443788                      Percentage 42.22 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?

350,303 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The 2014 Medicare data estimates that CPT code 73140 is billed approximately 350,303 times in total for Medicare patients nationally in a one-year period.

Specialty Orthopedic Surgery                      Frequency 95147                      Percentage 27.16 %

Specialty Hand Surgery                      Frequency 55282                      Percentage 15.78 %

Specialty Diagnostic Radiology                      Frequency 147929                      Percentage 42.22 %

Do many physicians perform this service across the United States? Yes

### **Berenson-Eggers Type of Service (BETOS) Assignment**

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Imaging

BETOS Sub-classification:

BETOS Sub-classification Level II:

Musculoskeletal

### **Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 73140

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

### Attestation Statement

This form needs to be completed by any **RUC Advisor** whose specialty society is developing a recommendation to be reviewed by the RUC.

As a RUC Advisor, I attest that the integrity of the RUC survey, summary of recommendation forms and practice expense recommendations are based on accurate and complete data to the best of my knowledge. As a RUC advisor, I acknowledge that violations would be addressed by the executive committee (i.e., RUC Chair , AMA Representative and Alternate AMA Representative.)

<b>73140</b>	Radiologic examination, finger(s), minimum of 2 views

Global Period: XXX Meeting Date: April 2016

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:

*The American College of Radiology (ACR), American Academy of Orthopaedic Surgeons (AAOS), and American Society for Surgery of the Hand (ASSH) convened a consensus panel to finalize the practice expense data for x-ray wrist, hand, and finger codes 73100, 73110, 73120, 73130, and 73140.*

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale:

*The societies included the existing PE inputs for codes 73100, 73110, 73120, 73130, and 73140 on the spreadsheet to serve as a reference.*

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:

- **Prepare room, equipment, supplies** - 2 minutes is standard for this activity, and is consistent with recent recommendations for codes in the x-ray family.
- **Prepare and position patient/ monitor patient/ set up IV** - 2 minutes is standard for this activity, and is consistent with recent recommendations for codes in the x-ray family.
- **Clean room/equipment by physician staff** – 3 minutes is standard for this activity, and is consistent with recent recommendations for codes in the x-ray family.
- **Technologist QC's images in PACS, checking for all images, reformats, and dose page** - CMS proposed a standard of 2 minutes as per Table 5 “Clinical Labor Tasks Associated With Digital Technology” in the CY 2016 MPFS Final Rule.
- **Review examination with interpreting MD** - CMS proposed a standard of 2 minutes as per Table 5 “Clinical Labor Tasks Associated With Digital Technology” in the CY 2016 MPFS Final Rule.

**CPT Code: 73100, 73110, 73120, 73130, 73140**  
**Specialty Society('s) ACR, AAOS, ASSH**

- **Exam documents scanned into PACS. Exam completed in RIS system to generate billing process and to populate images into Radiologist work queue** - CMS proposed a standard of 1 minute as per Table 5 “Clinical Labor Tasks Associated With Digital Technology” in the CY 2016 MPFS Final Rule.
- **PACS Workstation Proxy** - This is equal to the service period clinical labor time.
- **Professional PACS Workstation** - This is equal to the sum of the physician work pre and intra time.

5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

Intra-Service Clinical Labor Activities:

- Greet patient, ensure appropriate medical records are available
- Prepare room, equipment, supplies
- Prepare and position patient/ monitor patient/ set up IV
- Acquire images
- Clean room/equipment by physician staff
- Technologist QC's images in PACS, checking for all images, reformats, and dose page
- Review examination with interpreting MD
- Exam documents scanned into PACS. Exam completed in RIS system to generate billing process and to populate images into Radiologist work queue

Post-Service Clinical Labor Activities:

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
***\*CMS High Expenditure Procedures\****

April 2016

**CT Angiography of Abdominal Arteries**

In the Final Rule for 2016 CMS re-ran the high expenditure services across specialties with Medicare allowed charges of \$10 million or more. CMS identified the top 20 codes by specialty in terms of allowed charges, excluding 010 and 090-day global services, anesthesia and Evaluation and Management services and services reviewed since CY 2010.

***75635 Computed tomographic angiography, abdominal aorta and bilateral iliofemoral lower extremity runoff, with contrast material(s), including-noncontrast images, if performed, and image postprocessing***

The RUC reviewed the survey results from 65 radiologists and agreed with the following physician time components: pre-service time of 10 minutes, intra-service time of 39 minutes and post-service time of 8 minutes. The RUC noted that, although there was a modest decrease in physician time relative to when this service was last reviewed by the RUC in 2001, the number of images has increased several fold and the detail in those image reconstructions has increased. The RUC agreed that the change in the amount and detail of these images would make the work somewhat more intense to perform.

The specialty society noted that the survey code was presented separately from other CTA codes as this service represents a different patient populations and different diagnoses. For example, the typical patient receiving a CTA of abdominal arteries has peripheral vascular disease, as opposed to CTA Abdomen and Pelvis where aortic disease or visceral disease are typical. The RUC agreed the survey code does not have any other services within the same family.

The RUC reviewed the respondents' estimated 25<sup>th</sup> percentile work RVU of 2.45, which is somewhat higher than the existing work RVU, and agreed that the survey data supports maintaining a work RVU of 2.40 for the code. The RUC compared the survey code to key reference code 74262 *Computed tomographic (CT) colonography, diagnostic, including image postprocessing; with contrast material(s) including non-contrast images, if performed* (work RVU= 2.50, intra-service time of 45 minutes, total time of 57 minutes) and noted that both services have identical total times, while the survey code involves somewhat more intense work, supporting a work RVU of 2.40 for the survey code. To further justify a work RVU of 2.40, the RUC compared the survey code to MPC code 95810 *Polysomnography; age 6 years or older, sleep staging with 4 or more additional parameters of sleep, attended by a technologist* (work RVU= 2.50, intra-service time of 36.5 minutes, total time of 66.5 minutes) and noted that the survey code has more intra-service time and involves somewhat more intense physician work. The RUC also compared the survey

code to other CT Angiography services such as, 73706 *CT Angiography, lower extremity, with contrast, including noncontrast images, if performed, and post processing* (work RVU= 1.90) and 74174 *CT Angiography, abdomen and pelvis, with contrast, including noncontrast images, if performed, and post processing* (work RVU= 2.20) and agreed that the valuation of the survey code is appropriate relative to these other CTA services. **The RUC recommends a work RVU of 2.40 for CPT code 75635.**

#### Practice Expense

The clinical staff time inputs were revised to ensure that there is sufficient time for the clinical staff to obtain consent and to prepare the supplies to accommodate the angiography. Additionally, the equipment minutes were corrected for the CT room as it is used to acquire the images, but not during the post processing. The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
75635	Computed tomographic angiography, abdominal aorta and bilateral iliofemoral lower extremity runoff, with contrast material(s), including-noncontrast images, if performed, and image postprocessing	XXX	2.40 (No Change)

## AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS SUMMARY OF RECOMMENDATION

CPT Code: 75635	Tracking Number	Original Specialty Recommended RVU: <b>2.40</b>
		Presented Recommended RVU: <b>2.40</b>
Global Period: XXX		RUC Recommended RVU: <b>2.40</b>

CPT Descriptor: Computed tomographic angiography, abdominal aorta and bilateral iliofemoral lower extremity runoff, with contrast material(s), including noncontrast images, if performed, and image postprocessing

### CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 70-year-old male referred for further evaluation of claudication with suspected aortoiliac atherosclerotic disease. A CT angiogram with lower extremity runoff is requested.

Percentage of Survey Respondents who found Vignette to be Typical: 98%

#### Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

#### Moderate Sedation

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: Review the reason for the exam and any pertinent clinical history including history of contrast allergy, renal insufficiency, or other contraindication to IV contrast.

Review any prior imaging studies.

Determine the appropriate CT protocol for the examination, confirm that pre- and post-contrast images are indicated, and communicate that protocol to the CT technologists.

Description of Intra-Service Work: Supervise insertion of IV catheter, selection of contrast media, and set-up of mechanical injector. Obtain and interpret scout views of area to be imaged. Obtain and review non-contrast CT images to ensure proper anatomic coverage prior to contrast administration.

Supervise low- or iso-osmolar contrast injection. Obtain the arterial phase CT images and review to ensure adequate anatomic coverage. Obtain and review delayed parenchymal phase CT images.

Assess the need for additional delayed images based on the initial contrast phases (e.g. solid organ or complex vascular lesions, endoleak after stent graft repair of aneurysms, or poor cardiac output and insufficient opacification of distal extremity arteries).

Create and/or supervise two-dimensional reconstructions of the intra-abdominal, pelvic, and lower extremity vasculature and associated organs, interpret, and annotate.

Supervise and/or create three-dimensional reconstructions of the intra-abdominal, pelvic, and lower extremity vasculature and associated organs.

Adjust the projections of the three-dimensional reconstructions to optimize visualization of anatomy or pathology and store the obtained images.

Interpret the axial source images of the pre-contrast sequence, arterial phase sequence, parenchymal phase sequence, and any additional delayed sequences, as well as the two-dimensional and three-dimensional reformatted images resulting from the study, often including cine review.

Perform and record appropriate measurements for pre-operative assessment of intra-abdominal, pelvis, and/or peripheral vascular disease.

Compare to all pertinent available prior studies. Dictate report. Documentation of radiation exposure, specifically dose and/or registry reporting.

Description of Post-Service Work: Review, edit, and sign the final report. Communicate results to referring provider.

Sub Obs Care:	<u>0.00</u>	99224x 0.00	99225x 0.00	99226x 0.00	

**Modifier -51 Exempt Status**

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

**New Technology/Service:**

Is this new/revised procedure considered to be a new technology or service? No

**TOP KEY REFERENCE SERVICE:**

<u>Key CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
74262	XXX	2.50	RUC Time

CPT Descriptor Computed tomographic (CT) colonography, diagnostic, including image postprocessing; with contrast material(s) including non-contrast images, if performed

**SECOND HIGHEST KEY REFERENCE SERVICE:**

<u>Key CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
75573	XXX	2.55	RUC Time

CPT Descriptor Computed tomography, heart, with contrast material, for evaluation of cardiac structure and morphology in the setting of congenital heart disease (including 3D image postprocessing, assessment of LV cardiac function, RV structure and function and evaluation of venous structures, if performed)

**KEY MPC COMPARISON CODES:**

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

<u>MPC CPT Code 1</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>	<u>Most Recent Medicare Utilization</u>
95810	XXX	2.50	RUC Time	295,206

CPT Descriptor 1 Polysomnography; age 6 years or older, sleep staging with 4 or more additional parameters of sleep, attended by a technologist

<u>MPC CPT Code 2</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>	<u>Most Recent Medicare Utilization</u>
99349	XXX	2.33	RUC Time	1,104,486

CPT Descriptor 2 Home visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A detailed interval history; A detailed examination; Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are moderate to high severity. Typically, 40 minutes are spent face-to-face with the patient and/or family.

<u>Other Reference CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
74178	XXX	2.00	RUC Time

CPT Descriptor Computed tomography, abdomen and pelvis; without contrast material in one or both body regions, followed by contrast material(s) and further sections in one or both body regions

---

**RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:**

Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by the mean) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

**Number of respondents who choose Top Key Reference Code: 24      % of respondents: 36.9 %**

**Number of respondents who choose 2<sup>nd</sup> Key Reference Code: 12      % of respondents: 18.4 %**

**TIME ESTIMATES (Median)**

	<b>CPT Code:</b> <u>75635</u>	<b>Top Key Reference CPT Code:</b> <u>74262</u>	<b>2nd Key Reference CPT Code:</b> <u>75573</u>

Ref Code****2<sup>nd</sup> Key  
Ref Code****Time Segment (Mean)**

Overall intensity/complexity	0.67	0.50
------------------------------	------	------

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Background**

CPT Code 75635 (*Computed tomographic angiography, abdominal aorta and bilateral iliofemoral lower extremity runoff, with contrast material(s), including noncontrast images, if performed, and image postprocessing*) was identified as potentially misvalued in the High Expenditure by Specialty Table 8 of the 2016 MPFS NPRM.

**Survey Process**

The American College of Radiology (ACR) conducted a random survey of members and assembled an expert panel to review the data and develop the following recommendations.

**Work RVU Recommendation:**

We recommend maintaining the current work RVU of 2.40, which is below the 25<sup>th</sup> percentile survey value.

**Time Recommendation:**

We recommend the median survey times of 10 minutes pre-service, 39 minutes intra-service, and 8 minutes post-service.

**Key Reference Services:**

Our recommendation compares favorably to the two most commonly chosen key reference services (KRS): 74262 (*Computed tomographic (CT) colonography, diagnostic, including image postprocessing; with contrast material(s) including non-contrast images, if performed*) chosen by 37% of respondents and 75573 (*Computed tomography, heart, with contrast material, for evaluation of cardiac structure and morphology in the setting of congenital heart disease (including 3D image postprocessing, assessment of LV cardiac function, RV structure and function and evaluation of venous structures, if performed)*) chosen by 18% of respondents.

Our recommendation for 75635 has a slightly lower wRVU compared to the two KRS codes while having a lower intra-service time than 74262 and also having higher pre- and post-service times. Moreover 75635 has 9 minutes more intra-service time compared with the second KRS, 75573, while having a lower existing and recommended wRVU of 2.40 compared with 2.55 for 75573. The surveyed code scored more complex on all of the complexity measurements compared with the two KRS codes.

CPT	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
75635	CT Angiography, abdominal aorta and lower extremity runoff, with contrast, and non-contrast images, if performed	2.40	57	10	39	8	0.051
74262	CT Colonography, diagnostic, with contrast, and non-contrast images, if performed	2.50	57	5	45	7	0.050
75573	CT Heart, with contrast, cardiac structure and morphology for congenital heart disease	2.55	60	15	30	15	0.063

#### MPC Codes:

The surveyed code compares well with 99204 (*Office or other outpatient visit for the evaluation and management of a new patient*), and 95810 (*Polysomnography; age 6 years or older, sleep staging with 4 or more additional parameters of sleep, attended by a technologist*), both of which have greater wRVU value and less intra-service time.

CPT	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
75635	CT Angiography, abdominal aorta and lower extremity runoff, with contrast, and non-contrast images, if performed	2.40	57	10	39	8	0.051
99204	Office visit, new patient	2.43	45	5	30	10	0.070
95810	Polysomnography; age 6 years and older, sleep staging with 4 or more additional parameters, attended by a technologist	2.50	66.5	15	36.5	15	0.050

#### Family of Codes:

Our recommendation for maintenance of the current value for 75635 is supported by the survey data, comparisons with Key Reference Services, and relativity to appropriate MPC codes. Our recommendation also maintains relativity within the larger body CTA family.

CPT	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
73706	CT Angiography, lower extremity, with contrast, including noncontrast images, if performed, and post processing	1.90	50	10	30	10	0.0484
73706	CT Angiography, lower extremity, with contrast, including noncontrast images, if performed, and post processing	1.90	50	10	30	10	0.0484
74174	CT Angiography, abdomen and pelvis, with contrast, including noncontrast images, if performed, and post processing	2.20	40	5	30	5	0.066
75635	CT Angiography, abdominal aorta and lower extremity runoff, with contrast, and non-contrast images, if performed, and post processing	2.40	57	10	39	8	0.051

## SERVICES REPORTED WITH MULTIPLE CPT CODES

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 75635

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology                      How often? Commonly

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period? 278652

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by code 75635 provided nationally in a one-year period is estimated to be 278652.

Specialty Diagnostic Radiology                      Frequency 229525                      Percentage 82.36 %

Specialty                      Frequency 0                      Percentage 0.00 %

Specialty                      Frequency 0                      Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 92,884 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The 2014 Medicare data estimates that CPT code 75635 is billed approximately 92,884 times in total for Medicare patients nationally in a one-year period.

Specialty Diagnostic Radiology                      Frequency 76508                      Percentage 82.36 %

Specialty                      Frequency 0                      Percentage 0.00 %

Specialty                      Frequency 0                      Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

## Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Imaging

BETOS Sub-classification:

Advanced imaging

BETOS Sub-classification Level II:  
CAT/CT/CTA: Other

---

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 75635

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/Specialty Society Update Process  
Practice Expense Summary of Recommendation  
Non Facility Direct Inputs**

CPT Long Descriptor:

<b>75635</b>	Computed tomographic angiography, abdominal aorta and bilateral iliofemoral lower extremity runoff, with contrast material(s), including noncontrast images, if performed, and image postprocessing
--------------	---

Global Period: XXX Meeting Date: April 2016

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:

*The American College of Radiology (ACR) convened a consensus panel to finalize the practice expense data for the CT Angiography of Abdominal Arteries code 75635.*

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale:

The society included the existing PE inputs for code 75635 on the spreadsheet to serve as a reference. Codes 71275 and 74174 were also included to provide further comparison with other computed tomographic angiography codes.

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:

- **Prepare room, equipment, supplies** – An additional 2 minutes is required for preparing the contrast.
- **Prepare and position patient/ monitor patient/ set up IV** - 2 minutes is standard for non-contrast codes and consistent with prior CT exams. We recommended 5 minutes for the codes involving contrast to allow time for positioning the patient with the IV, connecting the patient to the contrast injector, and ensuring there are no impediments to table motion during the exam.
- **Technologist QC's images in PACS, checking for all images, reformats, and dose page** - A standard of 2 minutes is appropriate for most plain radiograph codes; however, a CT Angiography exam generates hundreds of images as well as multiplanar MPR and MIP reformats. The technologist requires additional time to prepare and review these images prior to finalizing them for the medical record. Allowing 4 minutes for this task is appropriate and fits within the overall relativity of radiology modalities (3 minutes for CT and 5 minutes for MRI).

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:

- **Patient clinical information and questionnaire reviewed by technologist, order from physician confirmed and exam protocolled by radiologist**- This protocol is required prior to procedure.
- **Acquire images**- This is the standard procedure for this CT Angiography service.

- **Technologist QC's images in PACS, checking for all images, reformats, and dose page** - CMS proposed a standard of 2 minutes as per Table 5 “Clinical Labor Tasks Associated With Digital Technology” in the CY 2016 MPFS Final Rule.
- **Review examination with interpreting MD** - CMS proposed a standard of 2 minutes as per Table 5 “Clinical Labor Tasks Associated With Digital Technology” in the CY 2016 MPFS Final Rule.
- **Exam documents scanned into PACS. Exam completed in RIS system to generate billing process and to populate images into Radiologist work queue** - CMS proposed a standard of 1 minute as per Table 5 “Clinical Labor Tasks Associated With Digital Technology” in the CY 2016 MPFS Final Rule.
- **Kit, Contrast imaging** – required for contrast administration
- **Paper, exam table** – necessary for the CT table
- **IV tubing (extension)** – required for contrast administration (power injector)
- **Syringe, 25ml (MRI power injector)** – required for contrast administration. The other pressure syringe (syringe, pressure (radiology)) included is used for saline.
- **Tubing, sterile, connecting (fluid administration)** – required for contrast administration
- **Sodium chloride 0.9% inj (250-1000ml uou)** – required for contrast administration
- **Room, CT** – required to perform the procedure
- **Professional PACS Workstation** - This is equal to the sum of the physician work pre and intra time.

5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

- Availability of prior images confirmed
- Patient clinical information and questionnaire reviewed by technologist, order from physician confirmed and exam protocolled by radiologist

Intra-Service Clinical Labor Activities:

- Greet patient, provide gowning, ensure appropriate medical records are available
- Provide pre-service education/obtain consent
- Prepare room, equipment, supplies
- Prepare and position patient/ monitor patient/ set up IV
- Acquire Images
- Assist physician in performing procedure/Computer post processing
- Clean room/equipment by physician staff
- Technologist QC's images in PACS, checking for all images, reformats, and dose page
- Review examination with interpreting MD
- Exam documents scanned into PACS. Exam completed in RIS system to generate billing process and to populate images into Radiologist work queue

Post-Service Clinical Labor Activities:

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
*\*CMS High Expenditure Procedures\**

April 2016

**Ophthalmic Ultrasound**

In the Final Rule for 2016 CMS re-ran the high expenditure services across specialties with Medicare allowed charges of \$10 million or more. CMS identified the top 20 codes by specialty in terms of allowed charges, excluding 010 and 090-day global services, anesthesia and Evaluation and Management services and services reviewed since CY 2010. CPT code 76512 was identified via this screen and codes 76510 and 76511 were added for review as part of this family of services.

The specialty societies indicated a scheduling conflict for the American Society of Retina Specialists (ASRS) to be able to survey for the April 2016 RUC meeting. The RUC inquired about the delay and learned that ASRS had a meeting conflict which would have prohibited their involvement in the survey process. The RUC agreed that it was important for the appropriate specialties to be involved and that the delay would not impact the ability of the RUC to value the codes within the current cycle. Therefore, the RUC agreed that a delay in surveying for the October RUC meeting would be appropriate. **The RUC recommends delay to the October 2016 RUC meeting for CPT codes 76510, 76511, and 76512.**

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
76510 (f)	Ophthalmic ultrasound, diagnostic; B-scan and quantitative A-scan performed during the same patient encounter	XXX	Deferral to Oct 2016 RUC Meeting.
76511 (f)	Ophthalmic ultrasound, diagnostic; quantitative A-scan only	XXX	Deferral to Oct 2016 RUC Meeting.

76512	Ophthalmic ultrasound, diagnostic; B-scan (with or without superimposed non-quantitative A-scan)	XXX	Deferral to Oct 2016 RUC Meeting.

Peter Smith, M.D., Chair  
AMA Specialty Society Relative Value Update Committee  
American Medical Association  
330 North Wabash Ave., Suite 39300  
Chicago IL 60611-5885

Dear Dr. Smith,

The American Academy of Ophthalmology is writing to provide further information regarding Tab 35 Ophthalmic Ultrasound. The Academy is requesting to postpone surveys for CPT 76510, 76511 and 76512 because of a scheduling conflict for the April meeting. One of the presenting organizations which would participate in presenting the surveys is not available. Moving presentation of these surveys to the October meeting does not impact the implementation of any resulting recommendations by the RUC and it will mean that one of the key groups will be able to provide their expertise to the panel this fall during the discussion.

We greatly appreciate your consideration of this request. If you have any questions or need additional information please contact Ms. Cherie McNett, AAO Health Policy Director at [cmcnett@aaodc.org](mailto:cmcnett@aaodc.org) or via phone at 202-737-6662.

Sincerely,

A handwritten signature in black ink, appearing to read "Michael X. Repka".

Michael X. Repka, M.D., M.B.A  
Medical Director for Government Affairs

A handwritten signature in black ink, appearing to read "David B. Glasser".

David B. Glasser, M.D.  
RUC Advisor

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
**\*CMS High Expenditure Procedures\***

April 2016

**Ophthalmic Biometry**

In the Final Rule for 2016 CMS re-ran the high expenditure services across specialties with Medicare allowed charges of \$10 million or more. CMS identified the top 20 codes by specialty in terms of allowed charges, excluding 010 and 090-day global services, anesthesia and Evaluation and Management services and services reviewed since CY 2010.

**76516 Ophthalmic biometry by ultrasound echography, A-scan;**

The RUC reviewed the survey results from 86 practicing ophthalmologists and agreed with the following time components: pre-service time of 2 minutes, intra-service time of 10 minutes and immediate post-service time of 2 minutes.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the appropriate value is the 25<sup>th</sup> percentile (work RVU= 0.40). The RUC compared the surveyed code to top key reference code 92083 *Visual field examination, unilateral or bilateral, with interpretation and report; extended examination (eg, Goldmann visual fields with at least 3 isopters plotted and static determination within the central 30 deg.; or quantitative, automated threshold perimetry, Octopus program G-1, 32 or 42, Humphrey visual field analyzer full threshold programs 30-2, 24-2, or 30/60-2)* (work RVU= 0.50, intra time= 10 minutes) and noted that both services have identical intra-service time and comparable physician work. The RUC also compared to CPT code 92541 *Spontaneous nystagmus test, including gaze and fixation nystagmus, with recording* (workRVU=0.40, intra time=10 minutes) as a recently reviewed (RUC review 2014) code with identical intra-service time. **The RUC recommends a work RVU of 0.40 for CPT code 76516.**

**76519 Ophthalmic biometry by ultrasound echography, A-scan; with intraocular lens power calculation**

The RUC reviewed the survey results from 99 practicing ophthalmologists and agreed with the following time components: pre-service time of 2 minutes, intra-service time of 10 minutes and immediate post-service time of 10 minutes.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the appropriate value is between the median value (work RVU= 0.70) and 25<sup>th</sup> percentile (work RVU= 0.51), which aligns with maintaining the current work RVU of 0.54. The RUC compared the surveyed code to top key reference code 92083 *Visual field examination, unilateral or bilateral, with interpretation and report; extended examination (eg, Goldmann visual fields with at least 3 isopters plotted and static determination within the central 30 deg.; or quantitative, automated threshold perimetry, Octopus program G-1, 32 or 42, Humphrey visual field analyzer full threshold programs 30-2, 24-2, or 30/60-2)*

(work RVU= 0.50, intra time= 10 minutes) and noted that both services have identical intra-service time and comparable physician work. **The RUC recommends a work RVU of 0.54 for CPT code 76519.**

**92136 Ophthalmic biometry by partial coherence interferometry with intraocular lens power calculation**

The RUC reviewed the survey results from 101 practicing ophthalmologists and agreed with the following time components: pre-service time of 2 minutes, intra-service time of 10 minutes and immediate post-service time of 10 minutes.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the appropriate value is between the median value (work RVU= 0.75) and 25<sup>th</sup> percentile (work RVU= 0.50), which aligns with maintaining the current work RVU of 0.54.. The RUC compared the surveyed code to top key reference code 92083 *Visual field examination, unilateral or bilateral, with interpretation and report; extended examination (eg, Goldmann visual fields with at least 3 isopters plotted and static determination within the central 30 deg.; or quantitative, automated threshold perimetry, Octopus program G-1, 32 or 42, Humphrey visual field analyzer full threshold programs 30-2, 24-2, or 30/60-2)* (work RVU= 0.50, intra time= 10 minutes) and noted that both services have identical intra-service time and comparable physician work. **The RUC recommends a work RVU of 0.54 for CPT code 92136.**

**Practice Expense:**

The RUC approved the direct practice expense inputs with modifications as approved by the Practice Expense Subcommittee.

**Work Neutrality**

The RUC's recommendation for these codes will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
76516 (f)	Ophthalmic biometry by ultrasound echography, A-scan;	XXX	0.40
76519	Ophthalmic biometry by ultrasound echography, A-scan; with intraocular lens power calculation	XXX	0.54 (No Change)

92136	Ophthalmic biometry by partial coherence interferometry with intraocular lens power calculation	XXX	0.54 (No Change)

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 76516	Tracking Number	Original Specialty Recommended RVU: <b>0.40</b>
		Presented Recommended RVU: <b>0.40</b>
Global Period: XXX		RUC Recommended RVU: <b>0.40</b>

CPT Descriptor: Ophthalmic biometry by ultrasound echography, A-scan;

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 79-year old male with a visually significant cataract has his axial length measured with ultrasound.

Percentage of Survey Respondents who found Vignette to be Typical: 85%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 12%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: Review patient's chief complaint and chart. Describe the test. Review the purpose, risks and benefits of the procedure with patient and/or family. Evaluate previous testing if available.

Description of Intra-Service Work: Evaluate the ultrasound images for quality of the waveform spikes. Review the images and compare the axial length, anterior chamber depth and lens thickness between the two eyes for symmetry and correlate with preoperative refractive error.

Description of Post-Service Work: Dictate the report of the procedure for the medical record. Review and sign report. Communicate results to the patient and referring physician.

**Modifier -51 Exempt Status**

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

**New Technology/Service:**

Is this new/revised procedure considered to be a new technology or service? No

**TOP KEY REFERENCE SERVICE:**

<u>Key CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
92083	XXX	0.50	RUC Time

CPT Descriptor Visual field examination, unilateral or bilateral, with interpretation and report; extended examination (eg, Goldmann visual fields with at least 3 isopters plotted and static determination within the central 30 deg.;, or quantitative, automated threshold perimetry, Octopus program G-1, 32 or 42, Humphrey visual field analyzer full threshold programs 30-2, 24-2, or 30/60-2)

**SECOND HIGHEST KEY REFERENCE SERVICE:**

<u>Key CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
92025	XXX	0.35	RUC Time

CPT Descriptor Computerized corneal topography, unilateral or bilateral, with interpretation and report

**KEY MPC COMPARISON CODES:**

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

<u>MPC CPT Code 1</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>	<u>Most Recent Medicare Utilization</u>
99281	XXX	0.45	RUC Time	78,955

CPT Descriptor 1 Emergency department visit for the evaluation and management of a patient, which requires these 3 key components: A problem focused history; A problem focused examination; and Straightforward medical decision making. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are self limited or minor.

<u>MPC CPT Code 2</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>	<u>Most Recent Medicare Utilization</u>
92082	XXX	0.40	RUC Time	154,388

CPT Descriptor 2 Visual field examination, unilateral or bilateral, with interpretation and report; intermediate examination (eg, at least 2 isopters on Goldmann perimeter, or semiquantitative, automated suprathreshold screening program, Humphrey suprathreshold automatic diagnostic test, Octopus program 33).

<u>Other Reference CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
72084	XXX	0.41	RUC Time

CPT Descriptor Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); minimum of 6 views

### **RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:**

Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by the mean) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

**Number of respondents who choose Top Key Reference Code: 23      % of respondents: 26.7 %**

**Number of respondents who choose 2<sup>nd</sup> Key Reference Code: 15      % of respondents: 17.4 %**

### **TIME ESTIMATES (Median)**

	<b>CPT Code:</b> <u>76516</u>	<b>Top Key Reference CPT Code:</b> <u>92083</u>	<b>2nd Key Reference CPT Code:</b> <u>92025</u>

Urgency of medical decision making	0.43	0.27

**Technical Skill/Physical Effort (Mean)**

Technical skill required	0.83	0.47
Physical effort required	0.43	0.20

**Psychological Stress (Mean)**

The risk of significant complications, morbidity and/or mortality	0.83	0.33
Outcome depends on the skill and judgment of physician	1.17	0.27
Estimated risk of malpractice suit with poor outcome	1.22	0.73

**INTENSITY/COMPLEXITY MEASURES****Top Key  
Ref Code****2<sup>nd</sup> Key  
Ref Code****Time Segment (Mean)**

Overall intensity/complexity	0.87	0.33
------------------------------	------	------

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

CPT 76516 *Ophthalmic biometry by ultrasound echography, A-scan* is part of a family of codes, including 76519 *Ophthalmic biometry by ultrasound echography, A-scan; with intraocular lens power calculation* that was identified by CMS as a high expenditure XXX procedure. It has never been reviewed by the RUC.

A random survey of AAO and ASCRS members had 86 respondents, 85% of whom found the vignette typical. The median WRVU was 0.55 and the 25<sup>th</sup> percentile was 0.40. Median IST was 10 minutes. The current value of the code is 0.54 WRVU. The primary reference service, chosen by 27%, was 92083, *Visual field examination, unilateral or bilateral, with interpretation and report; extended examination (eg, Goldmann visual fields with at least 3 isopters plotted and static determination within the central 30 deg; or quantitative, automated threshold perimetry, Octopus program G-1, 32 or 42, Humphrey visual field analyzer full threshold programs 30-2, 24-2, or 30/60-2)* (RUC April 2012) with a WRVU of 0.50 and 10 minutes IST. The second reference service, chosen by 17%, was 92025, *Computerized corneal topography, unilateral or bilateral, with interpretation and report* (RUC February 2006) with a WRVU of 0.35 and 12 minutes IST. The low percentages likely reflect the diverse number of XXX reference codes with similar WRVU values, none of which are particularly similar to the work performed in 76516. The intensity and complexity metrics for the surveyed code were similar or slightly higher than those of the reference codes.

The expert panel of the AAO and ASCRS, which is familiar with the procedure and the RUC process, reviewed the survey findings. The median survey IST of 10 minutes is reduced from the Harvard time of 17 minutes. The Harvard times reflect no pre- or post-time. The survey pre-time for evaluation was 5 minutes. The procedure is typically done in conjunction with an office visit. We therefore reduced the pre-service time

to 2 minutes to describe the test and review its purpose, risks and benefits with the patient. The survey post-time was 6 minutes. We reduced this to 2 minutes to prepare the report and communicate the results. **We recommend the survey's 25<sup>th</sup> percentile value of 0.40 WRVU.**

This value is supported by MPC code 92082 *Visual field examination, unilateral or bilateral, with interpretation and report; intermediate examination...* (RUC April 2010) with 0.40 WRVU, an IST of 8 minutes, and total time of 11 minutes and MPC code 99281 *Emergency department visit for the evaluation and management of a patient... self-limited or minor.* (RUC September 2005) with 0.45 WRVU, an IST of 7 minutes and total time of 13 minutes. The value is also supported by CPT code 72084, *Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); minimum of 6 views* (RUC January 2015) with 0.41 WRVU, an IST of 8 minutes and total time of 10 minutes.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☒ Other reason (please explain) Billed with an office visit

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. E/M or the ophthalmologic exam codes

3.	CPT Code	Pre-	Intra-	Post-	Total Time	Work RVU	Global Period
4.	92002	5	15	5	25	.88	XXX

CPT Descriptor: Ophthalmic biometry by ultrasound echography, A-scan; with intraocular lens power calculation

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 75-year-old female with a visually significant cataract in the right eye undergoes ultrasonic biometry and intraocular lens calculations.

Percentage of Survey Respondents who found Vignette to be Typical: 95%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 14%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: Review patient's chief complaint and chart. Describe the test. Review the risks and benefits of the procedure with patient and/or family. Evaluate previous testing if available. Communicate target refractive error and desired potential intraocular lens implants to technician.

Description of Intra-Service Work: Evaluate the ultrasound images for quality of the waveform spikes. Review the images and compare the axial length, anterior chamber depth and lens thickness between the two eyes for symmetry and correlate with preoperative refractive error. Provide a report that includes the use of the biometry measurements along with keratometry and white-to-white measurement in the calculation of intraocular lens implant power using one or more formulae.

Description of Post-Service Work: Dictate the report of the procedure for the medical record. Review and sign report. Communicate results to the patient, discussing lens implant options for desired post-operative refractive result. Enter an order for the intraocular lens implant.

**Modifier -51 Exempt Status**

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

**New Technology/Service:**

Is this new/revised procedure considered to be a new technology or service? No

**TOP KEY REFERENCE SERVICE:**

<u>Key CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
99213	XXX	0.97	RUC Time

CPT Descriptor Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: An expanded problem focused history; An expanded problem focused examination; Medical decision making of low complexity. Counseling and coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of low to moderate severity. Typically, 15 minutes are spent face-to-face with the patient and/or family.

**SECOND HIGHEST KEY REFERENCE SERVICE:**

<u>Key CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
92083	XXX	0.50	RUC Time

CPT Descriptor Visual field examination, unilateral or bilateral, with interpretation and report; extended examination (eg, Goldmann visual fields with at least 3 isopters plotted and static determination within the central 30 deg; or quantitative, automated threshold perimetry, Octopus program G-1, 32 or 42, Humphrey visual field analyzer full threshold programs 30-2, 24-2, or 30/60-2)

**KEY MPC COMPARISON CODES:**

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

<u>MPC CPT Code 1</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>	<u>Most Recent Medicare Utilization</u>
76536	XXX	0.56	RUC Time	760,096

CPT Descriptor 1 Ultrasound, soft tissues of head and neck (eg, thyroid, parathyroid, parotid), real time with image documentation

<u>MPC CPT Code 2</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>	<u>Most Recent Medicare Utilization</u>
99212	XXX	0.48	RUC Time	15,861,840

CPT Descriptor 2 Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A problem focused history; A problem focused examination; Straightforward medical decision making. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are self limited or minor. Typically, 10 minutes are spent face-to-face with the patient and/or family.

<u>Other Reference CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
76705	XXX	0.59	RUC Time

CPT Descriptor Ultrasound, abdominal, real time with image documentation; limited (eg, single organ, quadrant, follow-up)

### **RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:**

Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by the mean) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

**Number of respondents who choose Top Key Reference Code: 30      % of respondents: 30.3 %**

**Number of respondents who choose 2<sup>nd</sup> Key Reference Code: 18      % of respondents: 18.1 %**

### **TIME ESTIMATES (Median)**

	<b>CPT Code:</b> <u>76519</u>	<b>Top Key Reference CPT Code:</b> <u>99213</u>	<b>2nd Key Reference CPT Code:</b> <u>92083</u>
Median Pre-Service Time	2.00	3.00	3.00
Median Intra-Service Time	10.00	15.00	10.00
Median Immediate Post-service Time	10.00	5.00	0.00
Median Critical Care Time	0.0	0.00	0.00

The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed	0.70	0.89
Urgency of medical decision making	0.37	0.50
<b><u>Technical Skill/Physical Effort (Mean)</u></b>		
Technical skill required	0.90	1.33
Physical effort required	0.53	0.89
<b><u>Psychological Stress (Mean)</u></b>		
The risk of significant complications, morbidity and/or mortality	1.13	1.56
Outcome depends on the skill and judgment of physician	1.20	1.61
Estimated risk of malpractice suit with poor outcome	1.33	1.94

**INTENSITY/COMPLEXITY MEASURES**

	<b><u>Top Key Ref Code</u></b>	<b><u>2<sup>nd</sup> Key Ref Code</u></b>
<b><u>Time Segment (Mean)</u></b>		
Overall intensity/complexity	1.10	1.50

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

CPT 76519 *Ophthalmic biometry by ultrasound echography, A-scan; with intraocular lens power calculation* was identified by CMS as a high expenditure XXX procedure. It was last reviewed by the RUC in 2005.

A random survey of AAO and ASCRS members had 99 respondents, 95% of whom found the vignette typical. The median WRVU was 0.70 and the 25<sup>th</sup> percentile was 0.51. Median IST was 10 minutes. The current value of the code is 0.54 WRVU. The primary reference service, chosen by 30%, was 92083, *Visual field examination, unilateral or bilateral, with interpretation and report; extended examination ...* (RUC April 2012) with a WRVU of 0.50 and 10 minutes IST. The second reference service, chosen by 18%, was 99213, *Office or other outpatient visit for the evaluation and management of an established patient... low to moderate severity.* (RUC February 2006) with a WRVU of 0.97 and 15 minutes IST. The low percentages likely reflect the diverse number of XXX reference codes with similar WRVU values, none of which are particularly similar to the type of work performed with 76519. The intensity and complexity metrics for the surveyed code were higher than those of the reference codes.

The expert panel of the AAO and ASCRS, which is familiar with the procedure and the RUC process, reviewed the survey findings. The median survey IST of 10 minutes is increased from the current time of 5 minutes, while pre-service time is less and post-service time is greater. This reflects a change in technique over time. In the past, physicians typically positioned the patient and acquired the images. A technician now typically does that work. The survey pre-time for evaluation was 5 minutes. The procedure is typically done in conjunction with an office visit. We therefore reduced the pre-service time to 2 minutes to describe the test and review its purpose, risks and benefits with the patient. The increased intra-service time of 10 minutes is consistent with the increased amount of data to analyze and increased number of power calculation formulae to choose from. There are now multiple measurements to assess the consistency of the data. In addition, anterior segment depth and lens thickness are evaluated in addition to axial length, as all of these parameters are now typically used in calculating intraocular lens power. The survey post-service time was 10 minutes. This is a realistic time given the need to discuss the multiple lens options and refractive outcomes with the patient. Many of these options were not available when the code was last surveyed. **We recommend maintaining the current WRVU of 0.54, just above the survey's 25<sup>th</sup> percentile and matching our recommended work value for 92136.** 92136 is the same type of service, but performed with partial coherence interferometry.

This value is supported by MPC code 99212 *Office or other outpatient visit for the evaluation and management of an established patient... self-limited or minor.* (RUC February 2006) with 0.48 WRVU, an IST of 10 minutes, and total time of 16 minutes, and by MPC code 76536 *Ultrasound, soft tissues of head and neck (eg, thyroid, parathyroid, parotid), real time with image documentation* (RUC April 2009) with 0.56 WRVU, an IST of 10 minutes and total time of 18 minutes. The value is also supported by CPT code 76705, *Ultrasound, abdominal, real time with image documentation; limited (eg, single organ, quadrant, follow-up)* (RUC October 2013) with 0.59 WRVU, an IST of 8 minutes and total time of 18 minutes.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.

- ☐ Historical precedents.  
☒ Other reason (please explain) Billed with an office visit

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. E/M or the ophthalmologic exam codes

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 13%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: Review patient's chief complaint and chart. Describe the test. Review the purpose, risks and benefits of the procedure with patient and/or family. Evaluate previous testing if available. Provide target refractive error and desired possible intraocular lens implants to technician

Description of Intra-Service Work: Evaluate the quality of the study. Review the images and compare the axial length, anterior chamber depth and lens thickness between the two eyes for symmetry and correlate with preoperative refractive error. Provide a report that includes the use of the biometry measurements along with keratometry and white-to-white measurements in the calculation of intraocular lens implant power using one or more formulae.

Description of Post-Service Work: Dictate the report of the procedure for the medical record. Review and sign report. Communicate results to the patient, discussing lens options for desired post-operative refractive result. Enter an order for the intraocular lens implant.

**Modifier -51 Exempt Status**

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

**New Technology/Service:**

Is this new/revised procedure considered to be a new technology or service? No

**TOP KEY REFERENCE SERVICE:**

<u>Key CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
92083	XXX	0.50	RUC Time

CPT Descriptor Visual field examination, unilateral or bilateral, with interpretation and report; extended examination (eg, Goldmann visual fields with at least 3 isopters plotted and static determination within the central 30 deg.; or quantitative, automated threshold perimetry, Octopus program G-1, 32 or 42, Humphrey visual field analyzer full threshold programs 30-2, 24-2, or 30/60-2)

**SECOND HIGHEST KEY REFERENCE SERVICE:**

<u>Key CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
99213	XXX	0.97	RUC Time

CPT Descriptor Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: An expanded problem focused history; An expanded problem focused examination; Medical decision making of low complexity. Counseling and coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of low to moderate severity. Typically, 15 minutes are spent face-to-face with the patient and/or family.

**KEY MPC COMPARISON CODES:**

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

<u>MPC CPT Code 1</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>	<u>Most Recent Medicare Utilization</u>
76536	XXX	0.56	RUC Time	760,096

CPT Descriptor 1 Ultrasound, soft tissues of head and neck (eg, thyroid, parathyroid, parotid), real time with image documentation

<u>MPC CPT Code 2</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>	<u>Most Recent Medicare Utilization</u>
99212	XXX	0.48	RUC Time	15,861,840

CPT Descriptor 2 Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A problem focused history; A problem focused examination; Straightforward medical decision making. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are self limited or minor. Typically, 10 minutes are spent face-to-face with the patient and/or family.

<u>Other Reference CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
76705	XXX	0.59	RUC Time

CPT Descriptor Ultrasound, abdominal, real time with image documentation; limited (eg, single organ, quadrant, follow-up)

#### **RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:**

Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by the mean) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

**Number of respondents who choose Top Key Reference Code: 31      % of respondents: 30.6 %**

**Number of respondents who choose 2<sup>nd</sup> Key Reference Code: 23      % of respondents: 22.7 %**

#### **TIME ESTIMATES (Median)**

	<b>CPT Code: <u>92136</u></b>	<b>Top Key Reference CPT Code: <u>92083</u></b>	<b>2nd Key Reference CPT Code: <u>99213</u></b>

	<b><u>Top Key Ref Code</u></b>	<b><u>2<sup>nd</sup> Key Ref Code</u></b>
<b><u>Time Segment (Mean)</u></b>		
Overall intensity/complexity	1.10	1.26

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

CPT 92136 *Ophthalmic biometry by partial coherence interferometry with intraocular lens power calculation* was identified by CMS as a high expenditure XXX procedure. It was last reviewed by the RUC in 2001.

A random survey of AAO and ASCRS members had 101 respondents, 99% of whom found the vignette typical. The median WRVU was 0.75 and the 25<sup>th</sup> percentile was 0.50. Median IST was 10 minutes. The current value of the code is 0.54 WRVU. The primary reference service, chosen by 31%, was 92083, *Visual field examination, unilateral or bilateral, with interpretation and report; extended examination ...* (RUC April 2012) with a WRVU of 0.50 and 10 minutes IST. The second reference service, chosen by 23%, was 99213, *Office or other outpatient visit for the evaluation and management of an established patient... low to moderate severity.* (RUC February 2006) with a WRVU of 0.97 and 15 minutes IST. The low percentages likely reflect the diverse number of XXX reference codes with similar WRVU values, none of which are particularly similar to the type of work performed with 92136. The intensity and complexity metrics for the surveyed code were higher than those of the reference codes.

The expert panel of the AAO and ASCRS, which is familiar with the procedure and the RUC process, reviewed the survey findings. The median survey IST of 10 minutes is increased from the current time of 5 minutes, while pre-service time is less and post-service time is greater. This reflects a change in technique over time. In the past, physicians typically positioned the patient and acquired the images. A technician now typically does that work. The survey pre-time for evaluation was 5 minutes. The procedure is typically done in conjunction with an office visit. We therefore reduced the pre-service time to 2 minutes to describe the test and review its purpose, risks and benefits with the patient. The increased intra-service time of 10 minutes is consistent with the increased amount of data to analyze and increased number of power calculation formulae to choose from. There are now multiple measurements to assess the consistency of the data. In addition, anterior segment depth and lens thickness are evaluated in addition to axial length, as all of these parameters are now typically used in calculating intraocular lens power. The survey post-service time was 10 minutes. This is a realistic time given the need to discuss the multiple lens options and refractive outcomes with the patient. Many of these options were not available when the code was last surveyed. **We recommend maintaining the current WRVU of 0.54, just above the survey's 25<sup>th</sup> percentile and matching our recommended work value for 76519.** 76519 is the same type of service, but performed with ultrasound.

This value is supported by MPC code 99212 *Office or other outpatient visit for the evaluation and management of an established patient... self-limited or minor.* (RUC February 2006) with 0.48 WRVU, an IST of 10 minutes, and total time of 16 minutes, and by MPC code 76536 *Ultrasound, soft tissues of head and neck (eg, thyroid, parathyroid, parotid), real time with image documentation* (RUC April 2009) with 0.56 WRVU, an IST of 10 minutes and total time of 18 minutes. The value is also supported by CPT code 76705, *Ultrasound, abdominal, real time with image documentation; limited (eg, single organ, quadrant, follow-up)* (RUC October 2013) with 0.59 WRVU, an IST of 8 minutes and total time of 18 minutes.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☒ Other reason (please explain) Billed with an office visit

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. E/M or the ophthalmologic exam codes

	CPT Code	Pre-	Intra-	Post-	Total Time	Work RVU	Global Period
4.	92002	5	15	5	25	.88	XXX
5.	92004	5	25	10	40	1.82	XXX
6.	92012	5	15	5	25	.92	XXX
7.	92014	5	24	8	37	1.42	XXX
8.	99212	2	10	4	16	.48	XXX
9.	99213	3	15	5	23	.97	XXX

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) N/A

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Ophthalmology How often? Commonly

Specialty Optometry How often? Rarely

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 2183562

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Estimation Only

Specialty Ophthalmology Frequency 2139672 Percentage 97.98 %

Specialty Optometry Frequency 41488 Percentage 1.90 %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,455,708 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC database

Specialty Ophthalmology Frequency 1426448 Percentage 97.98 %

Specialty Optometry Frequency 27659 Percentage 1.90 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

## Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Imaging

BETOS Sub-classification:  
Standard imaging

BETOS Sub-classification Level II:  
NA

---

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 92136

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. N/A

### Attestation Statement

This form needs to be completed by any **RUC Advisor** whose specialty society is developing a recommendation to be reviewed by the RUC.

As a RUC Advisor, I attest that the integrity of the RUC survey and summary of recommendation forms are based on accurate and complete data to the best of my knowledge. As a RUC advisor, I acknowledge that violations would be addressed by the executive committee (i.e., RUC Chair, AMA Representative and Alternate AMA Representative.)

Date

**AMA/Specialty Society Update Process  
Practice Expense Summary of Recommendation  
Non Facility Direct Inputs**

CPT Long Descriptor: Ophthalmic biometry by ultrasound echography, A-scan;

Global Period: 000 Meeting Date: April, 2016

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:

The Academy convenes a consensus subcommittee utilizing the appropriate subspecialty representatives who sit on our Health Policy Committee that oversees our activities at RUC and CPT. Additionally, we used many other physicians who have the appropriate expertise and their technicians for this code. The consensus committee considered the survey data and PE details in order to determine clinical time and applicable standard packages were also applied. The physicians on the consensus panel familiar with the service provided input on whether or not any changes were needed for the existing supplies and equipment.

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale:

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time: Please see below.

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence: N/A

5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

Although this code is typically done in conjunction with an office visit, there is still a significant component of pre-service labor that occurs in addition to standard office visits. Time is required to escort patient from the exam lane into the room with the ophthalmic ultrasound, to calibrate the machine in its separate room, and to provide pre-service education and consent. In addition to these activities, time is taken to position the patient properly at the ophthalmic ultrasound, prior to measurements being performed.

- Greet patient, provide gowning, ensure appropriate medical records are available: **3 min**
  - This time is spent with the technician greeting the patient, reviewing the patient records including ocular diagnosis, laterality, surgical plan, and then transporting the patient from the room where the E&M service was performed to the room where the ophthalmic ultrasound is housed.
- Provide pre-service education/obtain consent: **2 min**
  - The patient is informed of this procedure and educated regarding the proper fixation, positioning, and performance in order to obtain accurate readings. This education occurs in the room that houses the ultrasound.
- Prepare room, equipment, supplies: **2 min**
  - This time is spent preparing the new room where the ophthalmic ultrasound is housed, and entering patient demographic information into the ultrasound machine, setting it to immersion mode, and preparing the scleral shell and coupling solution (typically saline).

- Other Clinical Activity - specify: Calibrate ophthalmic ultrasound machine: **2 min**
  - This time is spent prior to bringing the patient to the room, in order to ensure that the ophthalmic ultrasound is appropriately calibrated to accurately obtain the axial length of the patient's eye.
- Prepare and position patient/ monitor patient: **2 min**
  - This time is spent positioning the patient in the chair for the ophthalmic ultrasound. The patient is placed in a supine position, looking up at the ceiling, elevated so the technician can perform the test.

Intra-Service Clinical Labor Activities: **14 min**

- Axial length
  - The technician places a drop of tetracaine into the patient's eye.
  - The technician sets the ophthalmic ultrasound to the axial length/a-scan setting.
  - The patient is then told to look upwards, and the technician fits the ultrasonic scleral shell into the lower fornix. The upper lid is then elevated as the patient looks straight ahead, and the shell is positioned between both eyelids, centered over the cornea. If the shell does not sit in place, this step is repeated until the shell is resting on the eye. This shell prevents the patient from blinking, and provides a reservoir for coupling fluid and lifts the ultrasonic probe off the eye so that the measurements are not falsely affected by indenting the cornea.
  - The ultrasonic probe is then inserted into the scleral shell, and the shell is filled with coupling fluid. The technician checks to ensure that an adequate seal is obtained between the shell and the eye surface, and that no coupling fluid is leaking. It is common for the patient to squeeze the shell out of the palpebral fissure, and for fluid to spill. The shell is simply repositioned, and refilled repeatedly until the patient is capable of relaxing to leave the shell in place. When an adequate seal is obtained, the technician then aligns the ultrasonic probe with the patient's pupil. The patient is instructed to fixate on a red light emitted from the ultrasonic probe, which then allows the technician to align the probe with the patient's visual axis.
  - The technician then engages the ultrasound. While the ultrasound is scanning, the technician ensures that fixation is maintained and that the probe is directed at the fovea. The technician looks to ensure that the spikes representing the cornea, anterior lens capsule, posterior lens capsule, retina and sclera are all steeply rising and of maximum height.
  - When the alignment is correct and the ultrasonic spikes appear reliable, the measurement is recorded. This step is repeated at least five times to ensure repeatability and reliability of the measurements.
  - Following accurate measurement of one eye, typically the technician proceeds to perform all of the above-listed steps for the fellow eye, even if the patient is only planning on undergoing cataract surgery in one eye. This is because the fellow eye provides a built-in control variable by which to judge the accuracy of the measurements for the eye in question.
  - Following acquisition of the axial length, the patient's shell is removed and the coupling fluid is cleaned from the eye. The patient is then returned from the supine position.
  - The patient is then escorted from the room.

Post-Service Clinical Labor Activities:

- Cleanup: **3 min**
  - The room and instrument is then cleaned and closed.

**AMA/Specialty Society Update Process  
Practice Expense Summary of Recommendation  
Non Facility Direct Inputs**

CPT Long Descriptor:

Ophthalmic biometry by ultrasound echography, A-scan; with intraocular lens power calculation

Global Period: 000 Meeting Date: April, 2016

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:

The Academy convenes a consensus subcommittee utilizing the appropriate subspecialty representatives who sit on our Health Policy Committee that oversees our activities at RUC and CPT. Additionally, we used many other physicians who have the appropriate expertise and their technicians for this code. The consensus committee considered the survey data and PE details in order to determine clinical time and applicable standard packages were also applied. The physicians on the consensus panel familiar with the service provided input on whether or not any changes were needed for the existing supplies and equipment.

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale: N/A

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time: Please see below.

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence: N/A

5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

Although this code is typically done in conjunction with an office visit, there is still a significant component of pre-service labor that occurs in addition to standard office visits. Time is required to escort patient from the exam lane into the room with the ophthalmic ultrasound, to calibrate the machine in its separate room, and to provide pre-service education and consent. In addition to these activities, time is taken to position the patient properly at the ophthalmic ultrasound, prior to measurements being performed.

- Greet patient, provide gowning, ensure appropriate medical records are available: **3 min**
  - This time is spent with the technician greeting the patient, reviewing the patient records including ocular diagnosis, laterality, surgical plan, and then transporting the patient from the room where the E&M service was performed to the room where the ophthalmic ultrasound is housed.
- Provide pre-service education/obtain consent: **2 min**
  - The patient is informed of this procedure and educated regarding the proper fixation, positioning, and performance in order to obtain accurate readings. This education occurs in the room that houses the ultrasound.
- Prepare room, equipment, supplies: **2 min**

- This time is spent preparing the new room where the ophthalmic ultrasound is housed, and entering patient demographic information into the ultrasound machine, setting it to immersion mode, and preparing the scleral shell and coupling solution (typically saline).
- Other Clinical Activity - specify: calibrate optical biometer or ultrasound machine: **2 min**
  - This time is spent prior to bringing the patient to the room, in order to ensure that the ophthalmic ultrasound is appropriately calibrated to accurately obtain the axial length of the patient's eye.
- Prepare and position patient/ monitor patient: **2 min**
  - This time is spent positioning the patient in the chair for the ophthalmic ultrasound. The patient is placed in a supine position, looking up at the ceiling, elevated so the technician can perform the test.

#### Intra-Service Clinical Labor Activities: 24 min

- Axial length
  - The technician places a drop of tetracaine into the patient's eye.
  - The technician sets the ophthalmic ultrasound to the axial length/a-scan setting.
  - The patient is then told to look upwards, and the technician fits the ultrasonic scleral shell into the lower fornix. The upper lid is then elevated as the patient looks straight ahead, and the shell is positioned between both eyelids, centered over the cornea. If the shell does not sit in place, this step is repeated until the shell is resting on the eye. This shell prevents the patient from blinking, and provides a reservoir for coupling fluid and lifts the ultrasonic probe off the eye so that the measurements are not falsely affected by indenting the cornea.
  - The ultrasonic probe is then inserted into the scleral shell, and the shell is filled with coupling fluid. The technician checks to ensure that an adequate seal is obtained between the shell and the eye surface, and that no coupling fluid is leaking. It is common for the patient to squeeze the shell out of the palpebral fissure, and for fluid to spill. The shell is simply repositioned, and refilled repeatedly until the patient is capable of relaxing to leave the shell in place. When an adequate seal is obtained, the technician then aligns the ultrasonic probe with the patient's pupil. The patient is instructed to fixate on a red light emitted from the ultrasonic probe, which then allows the technician to align the probe with the patient's visual axis.
  - The technician then engages the ultrasound. While the ultrasound is scanning, the technician ensures that fixation is maintained and that the probe is directed at the fovea. The technician looks to ensure that the spikes representing the cornea, anterior lens capsule, posterior lens capsule, retina and sclera are all steeply rising and of maximum height.
  - When the alignment is correct and the ultrasonic spikes appear reliable, the measurement is recorded. This step is repeated at least five times to ensure repeatability and reliability of the measurements.
  - Following accurate measurement of one eye, typically the technician proceeds to perform all of the above-listed steps for the fellow eye, even if the patient is only planning on undergoing cataract surgery in one eye. This is because the fellow eye provides a built-in control variable by which to judge the accuracy of the measurements for the eye in question.
  - Following acquisition of the axial length, the patient's shell is removed and the coupling fluid is cleaned from the eye. The patient is then returned from the supine position.
- Keratometry
  - Prior to the patient undergoing axial length measurements, the patient undergoes keratometry readings. The patient is positioned at the keratometer, which is turned on after adjusting the height of the chair to fit the patient into the keratometer well. The keratometer alignment is adjusted to grossly align on the pupillary center. The patient then blinks several times and then is asked to maintain fixation while the technician further refines the keratometry alignment. To do so, the technician must adjust the vertical, horizontal, and axial positions of the keratometer to place it in focus on the corneal surface. Keratometry readings are then performed, adjusting the horizontal and vertical measuring dials and spinning the keratometer to the correct axis. If the technician is successful, the patient sits back and the technician

documents the keratometric readings for the eye's horizontal and vertical power and axes. If keratometric readings are not successful, the patient closes his or her eyes, or lubricating drops are placed to restore tear lake for optimal readings. As tear lakes easily become unstable with prolonged eye opening, keratometry readings can vary substantially in the same patient, introducing significant error into the lens calculation. Thus, multiple keratometry readings may be performed to ensure accuracy and stability.

- IOL Calculation
  - Following keratometry and axial length measurements of the eyes, the technician moves to the intraocular lens (IOL) calculation steps.
  - The technician changes the ultrasound machine to the IOL calculation screen. Then they input the keratometry readings. They select the physician's preferred IOL brands (for which constants are previously programmed in) for primary, secondary and/or tertiary choices of lens options. They then input the preferred biometric equations based on the doctor's preferences and the patient's axial length measurements. After making these inputs, the technician runs calculations. These provide a list of IOL choice options which are then printed for review, evaluation, and selection by the physician.
  - The patient is then escorted from the room.

Post-Service Clinical Labor Activities:

- Clean up: **3 min**
  - The room and instrument is then cleaned and closed.

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time: Please see below.

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence: **N/A**

5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

Although this code is typically done in conjunction with an office visit, there is still a significant component of pre-service labor that occurs in addition to standard office visits. For instance, since the last time this code was surveyed, the typical location of the optical biometer is now no longer in the exam lane. It is now typically housed in a separate room with eye imaging modalities. Hence, time is taken to escort patient from the exam lane into the room with the optical biometer, to calibrate the machine in its separate room, and to provide pre-service education and consent. In addition to these activities, time is taken to position the patient properly at the optical biometer for measurements to be performed.

- Greet patient, provide gowning, ensure appropriate medical records are available: **3 min**
  - This time is spent with the technician greeting the patient, reviewing the patient records including ocular diagnosis, laterality, surgical plan, and then transporting the patient from the room where the E&M service was performed to the room where the optical biometer is housed.
- Provide pre-service education/obtain consent: **2 min**
  - The patient is informed of the procedure and consent is obtained. Instructions regarding This process takes more than the standard amount allotted to an E&M code.

- Prepare room, equipment, supplies: **2 min**
  - This time is spent preparing the new room where the optical biometer is housed, and entering patient demographic information into the biometer
- Other Clinical Activity - specify: calibrate optical biometer or ultrasound machine: **2 min**
  - This time is spent prior to bringing the patient to the room, in order to ensure that the optical biometer is appropriately calibrated to accurately obtain the axial length, keratometry readings, anterior chamber depth, and white-to-white distance of the patient's eye.
- Prepare and position patient/ monitor patient: **2 min**
  - This time is spent positioning the patient at the optical biometer, adjusting the table to the patient's height and adjusting the chin rest to align the patient's eyes with the lens of the biometer.

Intra-Service Clinical Labor Activities: **15 min**

- Axial length
  - The technician sets the optical biometer to the axial length setting and aligns the lens of the biometer with the patient's pupil. The patient is instructed to fixate on a target, which then allows the technician to align the biometer with the patient's visual axis. The technician locks the subsequent reading as the anterior aspect of the cornea.
  - The technician then instructs the patient to avoid blinking during the acquisition of axial length measurements with the biometer. The patient blinks to restore corneal clarity after each axial length measurement is performed. Depending on the clarity of the signal through the patient's tear lake, cornea, cataract, and vitreous, between five and twenty axial length readings are performed.
- Keratometry
  - Following acquisition of the axial length, the patient closes their eyes while the technician changes the setting to keratometry readings. The patient is again asked to fixate at a target, open eyes widely, and avoid blinking. The technician focuses the biometer on the corneal surface, and keratometry readings are performed. The patient then closes his or her eyes to restore tear lake for optimal readings. As tear lakes easily become unstable with prolonged eye opening, keratometry readings can vary substantially in the same patient, introducing significant error into the lens calculation. Thus, multiple keratometry readings are typically performed to ensure accuracy and stability. If the technician is unsatisfied with the accuracy or stability of the keratometry readings, lubricating drops are placed, the eyes are closed for a period of time, the patient re-positioned, and keratometry readings repeated.
- Anterior Chamber Depth
  - The patient again closes their eyes while the technician changes the biometer to the anterior chamber depth setting. The patient again is asked to fixate at a target and avoid blinking. A slit beam is shined at an angle on the patient's eye. The technician aligns perkinje reflexes to be in focus between the beam on the cornea and the beam on the iris. The reflexes are brought into focus, and the measurement of the anterior chamber depth is taken.
- White-to-White Distance
  - The patient again closes their eyes while the technician changes the biometer to the white-to-white distance setting. The patient opens and fixates on the target while the technician aligns the biometer into focus again, and then performs the measurement. If the superimposed outline of the white to white does not match the patient's actual white to white distance, this step is repeated until accurate.

- Fellow Eye
  - Following accurate measurement of one eye, typically the technician proceeds to perform all of the above-listed steps for the fellow eye, even if the patient is only planning on undergoing cataract surgery in one eye. This is because the fellow eye provides a built-in control variable by which to judge the accuracy of the measurements for the eye in question.
- IOL Calculation
  - Following measurement of the eyes, the patient relaxes away from the machine while the technician moves to the intraocular lens (IOL) calculation steps.
  - The technician changes the biometer to the IOL calculation screen. Then they input the physician's preferred IOL brands (for which constants are previously programmed in) for primary choice and secondary and/or tertiary choices of lens options. They then input the preferred biometric equations based on the doctor's preferences and the patient's axial length measurements. If the axial length is excessively long, the technician calculates an adjusted axial length to improve accuracy of IOL choice. After making these inputs and adjustments, the technician runs calculations. These provide IOL choice options which are then printed for review, evaluation, and selection by the physician.
  - The patient is then escorted from the room.

Post-Service Clinical Labor Activities:

- Clean up: **3 min**
  - The room and instrument is then cleaned and closed.

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
**\*CMS High Expenditure Procedures\***

April 2016

**Radiation Therapy Planning**

In the Final Rule for 2016 CMS re-ran the high expenditure services across specialties with Medicare allowed charges of \$10 million or more. CMS identified the top 20 codes by specialty in terms of allowed charges, excluding 010 and 090-day global services, anesthesia and Evaluation and Management services and services reviewed since CY 2010. CPT code 77263 was identified by this criteria and CPT code 77261 and 77262 were added as part of the family of services.

***77261 Therapeutic radiology treatment planning; simple***

The RUC reviewed the survey results from 143 practicing radiation oncologists and recommend the following physician time components: pre-service time of 3 minutes, intra-service time of 30 minutes and immediate post-service time of 3 minutes.

The RUC reviewed the survey respondents' estimated physician work RVUs and agreed that the survey's 25<sup>th</sup> percentile work RVU of 1.30, lower than the current work RVU of 1.39, is appropriate. To justify a work RVU of 1.30, the RUC compared the surveyed code to the top key reference service CPT code 77306 *Teletherapy isodose plan; simple (1 or 2 unmodified ports directed to a single area of interest), includes basic dosimetry calculation(s)* (work RVU= 1.40, intra time= 30 minutes) and agreed that while the two services have comparable physician work, the reference code has more intra-service time and should be valued higher. The RUC also reviewed CPT codes 77334 *Treatment devices, design and construction; complex (irregular blocks, special shields, compensators, wedges, molds or casts)* (work RVU= 1.24, intra time= 35 minutes) and 77768 *Remote afterloading high dose rate radionuclide skin surface brachytherapy, includes basic dosimetry, when performed; lesion diameter over 2.0 cm and 2 or more channels, or multiple lesions* (work RVU= 1.40, intra time= 35 minutes) and agreed both services offer reasonable comparisons to the recommended value.

Finally, the RUC discussed the current CMS/Other physician time. This service was originally assigned a work value and times by CMS over 20 years ago using some unknown methodology, making it inappropriate to compare changes in total time. In addition to the existing times having been assigned using a flawed methodology, the RUC noted that only existing total time was assigned, making it not possible to compare changes in intra-service time. Accounting for appropriate time allocation, the intensity has not meaningfully changed. **The RUC recommends a work RVU of 1.30 for CPT code 77261.**

### **77262 Therapeutic radiology treatment planning; intermediate**

The RUC reviewed the survey results from 144 practicing radiation oncologists and recommend the following physician time components: pre-service time of 3 minutes, intra-service time of 45 minutes and immediate post-service time of 6 minutes.

The RUC reviewed the survey respondents' estimated physician work RVUs and agreed that the survey's 25<sup>th</sup> percentile work RVU of 2.00, lower than the current work RVU of 2.11, is appropriate. To justify a work RVU of 2.00, the RUC compared the surveyed code to the top two key reference services CPT codes 77317 *Brachytherapy isodose plan; intermediate (calculation[s] made from 5 to 10 sources, or remote afterloading brachytherapy, 2-12 channels), includes basic dosimetry calculation(s)* (work RVU= 1.83, intra time= 50 minutes) and 77307 *Teletherapy isodose plan; complex (multiple treatment areas, tangential ports, the use of wedges, blocking, rotational beam, or special beam considerations), includes basic dosimetry calculation(s)* (work RVU= 2.90, intra time= 80 minutes) and agreed that both these reference codes provide appropriate brackets around the recommended value. The RUC also reviewed CPT code 77770 *Remote afterloading high dose rate radionuclide interstitial or intracavitary brachytherapy, includes basic dosimetry, when performed; 1 channel* (work RVU= 1.95, intra time= 45 minutes) and agreed that both services have comparable physician time and work and should be valued similarly.

Finally, the RUC discussed the current CMS/Other physician time. This service was originally assigned a work value and times by CMS over 20 years ago using some unknown methodology, making it inappropriate to compare changes in total time. In addition to the existing times having been assigned using a flawed methodology, the RUC noted that only existing total time was assigned, making it not possible to compare changes in intra-service time. Accounting for appropriate time allocation, the intensity has not meaningfully changed. **The RUC recommends a work RVU of 2.00 for CPT code 77262.**

### **77263 Therapeutic radiology treatment planning; complex**

The RUC reviewed the survey results from 146 practicing radiation oncologists and recommend the following physician time components: pre-service time of 7 minutes, intra-service time of 60 minutes and immediate post-service time of 15 minutes.

The RUC reviewed the survey respondents' estimated physician work RVUs and agreed that the current work RVU of 3.14, lower than the survey's 25<sup>th</sup> percentile value, is appropriate. To justify a work RVU of 3.14, the RUC compared the surveyed code to the second key reference service 77307 *Teletherapy isodose plan; complex (multiple treatment areas, tangential ports, the use of wedges, blocking, rotational beam, or special beam considerations), includes basic dosimetry calculation(s)* (work RVU= 2.90, intra time= 80 minutes) and agreed that while both services have analogous physician work, with similar total time, surveyed code is more intense procedure and is correctly valued higher. In addition, the RUC reviewed several recently RUC reviewed services with identical intra-service time to validate the recommended work value across a broad spectrum of services: CPT code 38241 *Hematopoietic progenitor cell (HPC); autologous transplantation* (work RVU= 3.00), 90792 *Psychiatric diagnostic evaluation with medical services* (work RVU= 3.25) and 94012 *Measurement of spirometric forced expiratory flows, before and after bronchodilator, in an infant or child through 2 years of age* (work RVU= 3.10).

Finally, the RUC discussed whether it is possible to compare changes in intra-service time. Unlike the other codes in this family, this service was RUC reviewed in 2005. However, the survey only collected total time and thus does not have appropriate breakouts for pre- and post-service time. Accounting for appropriate time allocation, the intensity has not meaningfully changed. **The RUC recommends a work RVU of 3.14 for CPT code 77263.**

**Practice Expense:**

There are no direct practice expense inputs for these services. These services represent physician work only.

**Work Neutrality**

The RUC's recommendation for this code will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
77261 (f)	Therapeutic radiology treatment planning; simple	XXX	1.30
77262 (f)	Therapeutic radiology treatment planning; intermediate	XXX	2.00
77263	Therapeutic radiology treatment planning; complex	XXX	3.14 (No Change)

Description of Pre-Service Work: The physician decides if additional tests and/or imaging (e.g. nuclear bone, CT, MR, or PET/CT scans) are needed to better evaluate the tumor extent and the necessary treatment volume to achieve the goals of the treatment (e.g. pain control, minimize fracture risk, local control).

Description of Intra-Service Work: The physician synthesizes the findings from the patient history, physical exam, relevant medical issues (e.g. osteoarthritis, artificial hips, inflammatory bowel disease, previous radiation therapy in regard to tissue tolerance and/or recall reactions), and available imaging to develop an appropriate treatment plan reflecting the extent of disease, the patient's clinical scenario, and logistical considerations such as pain control and transportation.

The physician determines the appropriate treatment modality, goals of treatment, tumor coverage and protection of collateral organs and tissues at risk. The physician considers adjuvant or alternative treatment strategies (e.g. surgical pinning prior to radiation).

The physician determines the area to be treated based upon the tumor's location and extent of gross and subclinical disease, correlating with the site and distribution of the patient's pain.

The physician considers the radiobiological consequence of the total radiation dose needed to meet the goals of therapy, the daily dose delivered, and the number of fractions to be delivered. The physician will consider alternative dose fractionation regimens and the biologic consequences of normal tissue tolerances for adjacent organs at risk (e.g. skin, muscle, bone, bowel, and bladder) as well as the patient's overall prognosis and ability to travel for treatment.

The physician decides on the most appropriate position for simulation, the kind of patient preparation needed for treatment and immobilization appropriate for the patient's clinical scenario, reflecting on the extent of the patient's tumor, symptomatology, adjacent organs, and body habitus with the intent to displace normal tissue out of the area to be treated yet have a reliably reproducible setup and minimize systematic and random errors.

The physician reaffirms the palliative intent of treatment and obtains informed consent from the patient after reviewing the details of the planned course of therapy, possible side effects, and potential complications.

Description of Post-Service Work: The physician verifies and documents the treatment planning parameters as well as the intent of treatment and dictates a note in the clinical chart. The physician documents the intended plan directives (e.g. treatment site, laterality, type of radiation treatment to be employed, beam energy(s), radiation fractionation schedule, total radiation dose, etc.).

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

In the Final Rule for 2016, CMS re-ran the high expenditure services across specialties with Medicare allowed charges of \$10 million or more. CMS identified the top 20 codes by specialty in terms of allowed charges, excluding 010 and 090-day global services, anesthesia and Evaluation and Management services and services reviewed since CY 2010. CPT Code 77263 *Therapeutic radiology treatment planning; complex* was identified in this screen. ASTRO identified 77261 *Therapeutic radiology treatment planning; simple* and 77262 *Therapeutic radiology treatment planning; intermediate* as part of the family.

Clinical treatment planning codes (CPT codes 77261-77263) are a professional charge only, describing physician work to integrate the patient's overall medical condition and extent of disease, and to formulate a plan of therapy for the patient. A clinical treatment planning code may only be billed once for the entire course of treatment. Documentation for clinical treatment planning includes a written note or individualized form signed and dated by the physician that includes diagnosis, treatment site, the target anatomical structures (e.g., primary and regional lymph nodes or primary site only), identification of any organs at risk in or adjacent to the treatment fields, intent of treatment, special tests interpreted, modality and interaction with chemotherapy and technique contemplated (e.g., conventional, three-dimensional, IMRT, SRS, SBRT or brachytherapy).

The Research Subcommittee reviewed and approved our vignettes for 77261-77263.

ASTRO conducted a survey, with a 3992 sample size, and collected 143 random surveys. ASTRO convened a panel that included a number of experts familiar with this service to evaluate the RUC survey data. ASTRO recommends the 25<sup>th</sup> percentile RVU of 1.30 for CPT 77261.

Our rationale for this recommendation is based on multiple factors described below.

Vignette

For CPT 77261, the RUC database currently has ICD-9 code 173 “other malignant neoplasms of the skin,” as the most dominant ICD9 code, comprising 42.9% of claims in 2014. However, there were changes in the introductory language for the “Radiation Treatment Delivery” codes, beginning in 2015, that specifically precludes the reporting of clinical treatment planning codes (such as 77261) for *CPT 77401, Radiation treatment delivery, superficial or orthovoltage*. This will significantly reduce the number of claims for ICD-9 code 173 for 77261 going forward. As such, we proposed a vignette with the second most common ICD9 code, 198 “other secondary malignant neoplasm”. This ICD-9 code comprised 24.8% of claims for CPT 77261 in 2014. In addition, the top diagnosis code in 2012 was ICD-9 code 198, “other secondary malignant neoplasms” (34%), as well as in 2011 (34.7%). We concluded that the typical patient for the 77261 survey is a patient with a painful bone metastasis in the femur and presented this to the Research Subcommittee, which was approved. 95% of the survey respondents found this vignette to be typical.

Time

CPT Code 77261 has an XXX global period, so there is no standard pre or post service package.

We are recommending 3 minutes of pre time and 3 minutes of post time. Our current surveyed total time was 50 minutes (10, 30, 10). ASTRO is recommending the median survey time for intra (30), which results in a total of 36 minutes (3, 30, 3). We note that our recommended time is lower than the existing time of 43 minutes (CMS/Other), which is why we are recommending the 25<sup>th</sup> percentile, which is lower than the existing work RVUs.

IWPUT

The surveyed CPT code 77261 will have an IWPUT of 0.039. If you were to calculate the existing IWPUT for 43 minutes of total time and the existing 1.39 RVUs, it would be 0.032, which is very similar to the new IWPUT. The IWPUT relationship within the surveyed family of codes maintains rank order, as well as with the reference codes.

CPT	IWPUT
77261	0.039
1 <sup>st</sup> Ref 77306	0.032
77262	0.040
1 <sup>st</sup> Ref 77317	0.034
77263	0.044
1 <sup>st</sup> Ref 77295	0.042

Billed Together

Clinical Treatment Planning occurs after the initial consultation process, and can only be billed once throughout the entire course of care. No other codes are typically reported on the same day of service. The “Medicare Same Day EM Billing Occurrences” file illustrates that an E/M is reported on the same day 18% of the time. In this case, the consultation is completed prior to initiating the clinical treatment planning process.

Comparison to the Key Reference Services

The key reference service code was CPT 77306, Teletherapy isodose plan; simple. This key reference code was most often selected (48.2%) by the survey respondents. This code has a total time of 46 minute (3, 40, 3), an IWPUT of 0.032, and a wRVU of 1.40. The second key reference code 77290, Therapeutic radiology simulation-aided field setting; complex was selected by 9.0%, with a total time of 77 minutes (7,60,10), an IWPUT of 0.020, and a wRVU of 1.56. Both codes have similarities, and are well understood by membership. We believe that

these two reference codes were an appropriate selection by our survey respondents and fits nicely with our survey data.

### Relativity

Our recommendation will maintain relativity compared to the reference codes, the other two treatment planning codes, and codes within the radiation oncology family. Therapeutic treatment planning; simple has an RVU of 1.30. Therapeutic treatment planning; intermediate has an RVU of 2.00. Therapeutic treatment planning; complex (with a wRVU of 3.14) takes into account the added complexity, time and effort, and correlates nicely with the other two treatment planning codes.

		Work RVU	Pre Time	Intra Time	Post Time	Total Time	IWPUT

### Recommendation

We are recommending the surveyed 25<sup>th</sup> % wRVU of 1.30. Pre service: 3 minutes, median intra time of 30 minutes, and post service time of 3 minutes, for a total time of 36 minutes. The expert panel believes that our survey supports our recommendation.

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

**FREQUENCY INFORMATION**

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 77261

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Radiation Oncology                      How often? Commonly

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. A national number is not known.

Specialty Radiation Oncology	Frequency	Percentage	%
------------------------------	-----------	------------	---

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?

14,483 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The current RUC database reports 14,483 as the current Medicare utilization.

Specialty Radiation Oncology	Frequency 8303	Percentage 57.32 %
------------------------------	----------------	--------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Do many physicians perform this service across the United States? Yes

---

**Berenson-Eggers Type of Service (BETOS) Assignment**

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Procedures

BETOS Sub-classification:

Oncology

BETOS Sub-classification Level II:

Radiation Therapy

---

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 77261

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: Patient with multiple bone metastases with pain in the hip and shoulder presents for clinical treatment planning.

Percentage of Survey Respondents who found Vignette to be Typical: 95%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: The physician decides if additional tests and/or imaging (e.g. nuclear bone, CT, MR, or PET/CT scans) are needed to better evaluate the tumor extent and the necessary treatment volume to achieve the goals of the treatment (e.g. pain control, minimize fracture risk, local control).

Description of Intra-Service Work: The physician synthesizes the findings from the patient history, physical exam, relevant medical issues (e.g. osteoarthritis, artificial hips, inflammatory bowel disease, previous radiation therapy in regard to tissue tolerance and/or recall reactions), and available imaging to develop an appropriate treatment plan reflecting the extent of disease, the patient's clinical scenario, and logistical considerations such as pain control and transportation.

The physician determines the appropriate treatment modality, goals of treatment, tumor coverage and protection of collateral organs and tissues at risk. The physician considers adjuvant or alternative treatment strategies (e.g. surgical pinning prior to radiation).

The physician determines the area to be treated based upon the tumor's location and extent of gross and subclinical disease, correlating with the site and distribution of the patient's pain.

The physician considers the radiobiological consequence of multi-site treatment to include the total radiation dose needed to meet the goals of therapy, the daily dose delivered, and the number of fractions to be delivered. The physician will consider alternative dose fractionation regimens and the biologic consequences of normal tissue tolerances for adjacent organs at risk (e.g. skin, muscle, bone, bowel, and bladder) as well as the patient's overall prognosis and ability to travel for treatment. The physician will carefully consider the potential radiobiological consequence and therapeutic benefit of

providing multiple sites of palliative radiation (e.g. integral dose, the total dose deposited throughout the entire volume of the patient) with careful consideration to patient safety and radiation tolerance.

The physician decides on the most appropriate position for simulation, the kind of patient preparation needed for treatment and immobilization appropriate for the patient's clinical scenario, reflecting on the extent of the patient's tumor, symptomatology, adjacent organs, and body habitus with the intent to displace normal tissue out of the area to be treated yet have a reliably reproducible setup and minimize systematic and random errors. Given the different anatomic locations of the two treatment sites, there will be differences in patient positioning, reproducibility and immobilization which needs to be carefully considered.

The physician reaffirms the palliative intent of treatment and obtains informed consent from the patient after reviewing the details of the planned course of therapy, possible side effects, and potential complications.

Description of Post-Service Work: The physician verifies and documents the treatment planning parameters as well as the intent of treatment and dictates a note in the clinical chart. The physician documents the intended plan directives for all sites of radiation (e.g. treatment site, laterality, type of radiation treatment to be employed, beam energy(s), radiation fractionation schedule, total radiation dose, etc).

**Modifier -51 Exempt Status**

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

**New Technology/Service:**

Is this new/revised procedure considered to be a new technology or service? No

**TOP KEY REFERENCE SERVICE:**

Key CPT Code	Global	Work RVU	Time Source
77317	XXX	1.83	RUC Time

CPT Descriptor Brachytherapy isodose plan; intermediate (calculation[s] made from 5 to 10 sources, or remote afterloading brachytherapy, 2-12 channels), includes basic dosimetry calculation(s)

**SECOND HIGHEST KEY REFERENCE SERVICE:**

Key CPT Code	Global	Work RVU	Time Source
77307	XXX	2.90	RUC Time

CPT Descriptor Teletherapy isodose plan; complex (multiple treatment areas, tangential ports, the use of wedges, blocking, rotational beam, or special beam considerations), includes basic dosimetry calculation(s)

**KEY MPC COMPARISON CODES:**

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
74170	XXX	1.40	RUC Time	108,543

CPT Descriptor 1 Computed tomography, abdomen; without contrast material, followed by contrast material(s) and further sections

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
99204	XXX	2.43	RUC Time	9,128,695

CPT Descriptor 2 Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 45 minutes are spent face-to-face with the patient and/or family.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

In the Final Rule for 2016, CMS re-ran the high expenditure services across specialties with Medicare allowed charges of \$10 million or more. CMS identified the top 20 codes by specialty in terms of allowed charges, excluding 010 and 090-day global services, anesthesia and Evaluation and Management services and services reviewed since CY 2010. CPT Code 77263 *Therapeutic radiology treatment planning; complex* was identified in this screen. ASTRO identified 77261 *Therapeutic radiology treatment planning; simple* and 77262 *Therapeutic radiology treatment planning; intermediate* as part of the family.

Clinical treatment planning codes (CPT codes 77261-77263) are a professional charge only, describing physician work to integrate the patient's overall medical condition and extent of disease, and to formulate a plan of therapy for the patient. A clinical treatment planning code may only be billed once for the entire course of treatment. Documentation for clinical treatment planning includes a written note or individualized form signed and dated by the physician that includes diagnosis, treatment site, the target anatomical structures (e.g., primary and regional lymph nodes or primary site only), identification of any organs at risk in or adjacent to the treatment fields, intent of treatment, special tests interpreted, modality and interaction with chemotherapy and technique contemplated (e.g., conventional, three-dimensional, IMRT, SRS, SBRT or brachytherapy).

The Research Subcommittee reviewed and approved our vignettes for 77261-77263.

ASTRO conducted a survey, with a 3992 sample size, and collected 144 random surveys. ASTRO convened a panel that included a number of experts familiar with this service to evaluate the RUC survey data. ASTRO recommends the 25<sup>th</sup> percentile RVU of 2.00 for CPT 77262.

Our rationale for this recommendation is based on multiple factors described below.

### Vignette

For CPT 77262, the RUC database currently has ICD-9 code 198 “other secondary malignant neoplasm,” as the most dominant ICD9 code, comprising 28.8% of claims in 2014. As such, we proposed a vignette of a patient with multiple bone metastases, who will be treated to two or more sites. This vignette fits in nicely with our Coding Guide criteria for more than one lesion requiring treatment, and well understood by our membership. This vignette was presented to the Research Subcommittee and was approved. 95% of the survey respondents found this vignette to be typical.

### Time

CPT Code 77262 has an XXX global period, so there is no standard pre or post service package.

We are recommending 3 minutes of pre time and 6 minutes of post time. Our current surveyed total time was 70 minutes (15, 45, 10). ASTRO is recommending the median survey time for intra (45), reducing the surveyed pre- and post-times, resulting in a total of 54 minutes (3, 45, 6). We note that our recommended time is lower than the existing time of 55 minutes (CMS/Other), which is why we are recommending the 25<sup>th</sup> percentile, and lower than the existing work RVUs.

### IWPUT

The surveyed CPT code 77262 will have an IWPUT of 0.040. If you were to calculate the existing IWPUT for 55 minutes of total time and the existing 2.11 RVUs, it would be 0.038, which is very similar to the new IWPUT. The IWPUT relationship within the surveyed family of codes maintains rank order, as well as with the reference codes.

CPT	IWPUT
77261	0.039
1 <sup>st</sup> Ref 77306	0.032
77262	0.040
1 <sup>st</sup> Ref 77317	0.034
77263	0.044
1 <sup>st</sup> Ref 77295	0.042

### Billed Together

Clinical Treatment Planning occurs after the initial consultation process, and can only be billed once throughout the entire course of care. No other codes are typically reported on the same day of service. The “Medicare Same Day EM Billing Occurrences” file illustrates that an E/M is reported on the same day 24% of the time. In this case, the consultation is completed prior to initiating the clinical treatment planning process.

### Comparison to the Key Reference Services

The key reference service code was CPT 77317, Brachytherapy isodose plan; intermediate. This key reference code was most often selected (26.3%) by the survey respondents. This code has a total time of 56 minute (3, 50, 3), an IWPUT of 0.034, and a wRVU of 1.83. The second key reference code 77307, Teletherapy isodose plan; complex, was selected by 19.4%, with a total time of 86 minutes (3, 80, 3), an IWPUT of 0.035, and a wRVU of 2.9. Both codes have similarities, and are well understood by membership. We believe that these two reference codes were an appropriate selection by our survey respondents and fits nicely with our survey data.

Relativity

Our recommendation will maintain relativity compared to the reference codes, the other two treatment planning codes, and codes within the radiation oncology family. Therapeutic treatment planning; simple has an RVU of 1.30. Therapeutic treatment planning; intermediate has an RVU of 2.00. Therapeutic treatment planning; complex (with a wRVU of 3.14) takes into account the added complexity, time and effort, and correlates nicely with the other two treatment planning codes.

		Work RVU	Pre Time	Intra Time	Post Time	Total Time	IWPUT

77295 RefCode	<i>3-dimensional radiotherapy plan, including dose-volume histograms</i>	4.29	7	90	15	112	0.042

Recommendation

We are recommending the surveyed 25<sup>th</sup> % wRVU of 2.00. Pre service: 3 minutes, median intra time of 45 minutes, and post service time of 6 minutes, for a total time of 54 minutes. The expert panel believes that our survey supports our recommendation.

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

**FREQUENCY INFORMATION**

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 77262

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Radiation Oncology                      How often? Commonly

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. A national number is not known.

Specialty Radiation Oncology	Frequency	Percentage	%
Specialty	Frequency	Percentage	%
Specialty	Frequency	Percentage	%

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 6,543

If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The current version of the RUC database indicates the frequency of 6,543.

Specialty Radiation Oncology	Frequency 4908	Percentage 75.01 %
Specialty	Frequency 0	Percentage 0.00 %
Specialty	Frequency 0	Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

### **Berenson-Eggers Type of Service (BETOS) Assignment**

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Procedures

BETOS Sub-classification:

Oncology

BETOS Sub-classification Level II:

Radiation Therapy

---

### **Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 77262

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: Patient with locally advanced prostate cancer presents for clinical treatment planning.

Percentage of Survey Respondents who found Vignette to be Typical: 96%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

**Description of Pre-Service Work:** The physician decides if additional tests and/or imaging (e.g. nuclear bone, CT, MRI, PET/CT, ultrasound, molecular imaging scans, urine dynamics, colonoscopy or cystoscopy) are needed to better to evaluate the tumor extent (e.g. tumor extension, lymphadenopathy (LAD), etc.), and to understand and/or correct any preexisting pathology (e.g. bowel, bladder, etc.) prior to proceeding with treatment.

**Description of Intra-Service Work:** The physician synthesizes the findings from the physical history, physical exam and additional imaging (e.g. tumor extent, lymph nodes, etc.) and additional testing (e.g. functional studies, scopes, etc.) with attention to potential interventions required prior to proceeding with radiation therapy. The physician will also carefully consider relevant medical issues (e.g. osteoarthritis, artificial hips, inflammatory bowel disease, autoimmune disease, previous radiation therapy in regard to collateral tissue tolerance and/or recall reactions, the need for biological tissue spacers between the rectum and prostate, etc.), and available imaging to develop an appropriate treatment plan reflecting the extent of disease, the patient's clinical scenario, tumor eradication, acute and long term consequences of curative treatment and the logistical issues of transportation associated with a protracted treatment course.

The physician determines the appropriate treatment modality based upon the patient clinical parameters such as: external beam conformal radiotherapy, intensity modulated radiotherapy, volumetric arc radiotherapy, brachytherapy (low dose rate versus high dose rate), particle beam therapy, and the use of hormonal manipulation, and whether these modalities should be used individually or in combination, and in what sequence if more than one modality is utilized.

The physician determines whether one or more treatment volume will be clinically necessary based upon the location of the tumor within or surrounding the region of interest and the potential for local or regional spread. Differential dosing may be required based on the extent of disease found in these treatment volumes. A combination of radiation modalities may be

required to address the primary tumor volume, as well as secondary and tertiary tumor volumes depending on the extent of tumor involvement.

The physician decides on the most appropriate position for simulation, the kind of patient preparation needed for treatment and immobilization appropriate for the patient's clinical scenario, reflecting on the extent of the patient's tumor, symptomatology, adjacent organs, and body habitus with the intent to displace normal tissue out of the area to be treated yet have a reliably reproducible setup and minimize systematic and random errors. The physician will consider alternative dose fractionation regimens and the biologic consequences of normal tissue tolerances for adjacent organs at risk (e.g. skin, muscle, bone, bowel, rectum, bladder, femoral heads, etc.) as well as the patient's overall health and prognosis weighing the acute and long term radiobiological consequences of each therapeutic decision. Consideration is given to the use of low energy photons or high energy photons, intensity modulated radiotherapy or volumetric arc radiotherapy, brachytherapy (LDR/HDR) and protons which requires understanding the various depth of penetration and their inherent internal scatter.

The physician will carefully consider the potential radiobiological consequence and therapeutic benefit of providing multiple volume radiation treatment (e.g. integral dose, the total dose deposited throughout the entire volume of the patient) while maximizing the biological effective dose (BED) to the tumor while minimizing dose to critical and sensitive organs at risk. Based upon the radiobiology of the various organs and tumor type, the physician may need to incorporate these tolerances into the fractionation schedule to ultimately improve the therapeutic ratio by improving the local control of the tumor and decreasing the potential for acute and long-term side effects of therapy. Improving the therapeutic window in curative treatments may require the careful blending of two or more radiation modalities (e.g. sequencing a brachytherapy boosts to external beam radiation modalities).

The physician obtains informed consent from the patient after reviewing the details of the planned course of therapy, possible acute and long term side effects, potential complications and alternatives to treatment. The physician will reaffirm how he or she would like the patient to ready themselves for daily treatment (e.g. empty rectum, full bladder, breath hold etc.).

**Description of Post-Service Work:** The physician verifies and documents the treatment planning parameters as well as the intent of treatment (e.g. integral dose, the total dose deposited throughout the entire volume of the patient) and dictates a note in the clinical chart. The physician documents the intended radiation plan directive and the temporal sequencing of the modalities to be used in the care course (e.g. multi-volume, multi-stage radiation treatment plan, all treatments site, laterality, type(s) of radiation treatment to be employed, beam energy(s), radiation fractionation schedule, total radiation dose). The physician will provide treatment planning directives for tumor and organs at risk constraints. Ideal patient treatment considerations will be requested (e.g. full bladder, empty rectum, breath hold, time of day, etc.). Imaging directives will be documented.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

In the Final Rule for 2016, CMS re-ran the high expenditure services across specialties with Medicare allowed charges of \$10 million or more. CMS identified the top 20 codes by specialty in terms of allowed charges, excluding 010 and 090-day global services, anesthesia and Evaluation and Management services and services reviewed since CY 2010. CPT Code 77263 *Therapeutic radiology treatment planning; complex* was identified in this screen. ASTRO identified 77261 *Therapeutic radiology treatment planning; simple* and 77262 *Therapeutic radiology treatment planning; intermediate* as part of the family.

Clinical treatment planning codes (CPT codes 77261-77263) are a professional charge only, describing physician work to integrate the patient's overall medical condition and extent of disease, and to formulate a plan of therapy for the patient. A clinical treatment planning code may only be billed once for the entire course of treatment. Documentation for clinical treatment planning includes a written note or individualized form signed and dated by the physician that includes diagnosis, treatment site, the target anatomical structures (e.g., primary and regional lymph nodes or primary site only), identification of any organs at risk in or adjacent to the treatment fields, intent of treatment, special tests interpreted, modality and interaction with chemotherapy and technique contemplated (e.g., conventional, three-dimensional, IMRT, SRS, SBRT or brachytherapy).

The Research Subcommittee reviewed and approved our vignettes for 77261-77263.

ASTRO conducted a survey, with a 3992 sample size, and collected 146 random surveys. ASTRO convened a panel that included a number of experts familiar with this service to evaluate the RUC survey data. ASTRO recommends maintaining the wRVU of 3.14 for CPT 77263.

Our rationale for this recommendation is based on multiple factors described below.

### Vignette

For CPT code 77263, we have also carefully considered the 2014 claims data found within the 2016 RUC database and have concluded that the typical vignette for our 77263 survey would be a patient with prostate cancer, the second most frequently listed diagnosis code (ICD-185; 14.53%) and not the top diagnosis of a “other secondary malignant neoplasm” (ICD-9; 17.25%). Our rationale for this conclusion is based on the fact that ICD-9 code 198 has numerous sub classifications to include, but not limited to, bone, brain, breast, lung, skin as well as the genitourinary organs, which by definition would also include the prostate. With such a vast array of anatomical areas associated with ICD-9 198 (other secondary malignant neoplasm), the many different treating planning processes for these patients, and the small 2.72% (7412 claims) difference between the first (ICD9 198 17.25%) and second (ICD9 185 14.53%) listed diagnosis, are not simple comparisons.

Appreciating that all the sub classification of ICD9 198 are aggregated for reporting purposes within the Database, it is impossible to choose the appropriate disease site to design a vignette. Considering this aggregation, we presented a vignette of a “malignant neoplasm of the prostate” to the Research Subcommittee, and approved. 96% of the survey respondents found this vignette to be typical.

### Time

CPT Code 77263 has an XXX global period, so there is no standard pre or post service package.

We are recommending 7 minutes of pre time and 15 minutes of post time. Our current surveyed total time was 95 minutes (20, 60, 15). ASTRO is recommending the median survey time for intra (60), which results in a total time of 82 minutes (7, 60, 15). We note that our recommended time is slightly higher than the existing time of 75 minutes (CMS/Other). We are recommending maintaining current existing work RVU, which is below our surveyed 25<sup>th</sup> percentile.

### IWPUT

The surveyed CPT code 77263 will have an IWPUT of 0.044. If you were to calculate the existing IWPUT for 75 of total time and the existing 3.14 RVUs, it would be 0.042, which is very similar to the new IWPUT. The IWPUT relationship within the surveyed family of codes maintains rank order, as well as with the reference codes.

CPT	IWPUT
77261	0.039
1 <sup>st</sup> Ref 77306	0.032
77262	0.040
1 <sup>st</sup> Ref 77317	0.034
77263	0.044
1 <sup>st</sup> Ref 77295	0.042

### Billed Together

Clinical Treatment Planning occurs after the initial consultation process, and can only be billed once throughout the entire course of care. No other codes are typically reported on the same day of service. The “Medicare Same Day EM Billing Occurrences” file illustrates that an E/M is reported on the same day 25% of the time. In this case, the consultation is completed prior to initiating the clinical treatment planning process.

### Comparison to the Key Reference Services

The key reference service code was CPT 77295, 3-dimensional radiotherapy plan. This key reference code was most often selected (32.1%) by the survey respondents. This code has a total time of 112 minute (7, 90, 15), an IWP/UT of 0.042, and a wRVU of 4.29. The second key reference code 77307, Teletherapy isodose plan; complex, was selected by 15.0%, with a total time of 86 minutes (3, 80, 3), an IWP/UT of 0.035, and a wRVU of 2.90. Both codes have similarities, and are well understood by membership. We believe that these two reference codes were an appropriate selection by our survey respondents and fits nicely with our survey data.

### Relativity

Our recommendation will maintain relativity compared to the reference codes, the other two treatment planning codes, and codes within the radiation oncology family. Therapeutic treatment planning; simple has an RVU of 1.30. Therapeutic treatment planning; intermediate has an RVU of 2.00. Therapeutic treatment planning; complex (with a wRVU of 3.14) takes into account the added complexity, time and effort, and correlates nicely with the other two treatment planning codes.

		Work RVU	Pre Time	Intra Time	Post Time	Total Time	IWP/UT
95819 MPC	<i>Electroencephalogram (EEG); including recording awake and asleep</i>	1.08	5	15	6	26	0.056

<b>77263 Surveyed</b>	<b><i>Therapeutic radiology treatment planning; complex</i></b>	<b>3.14</b>	<b>7</b>	<b>60</b>	<b>15</b>	<b>82</b>	<b>0.044</b>
99205 MPC	<i>Office/outpatient visit new</i>	3.17	7	45	15	67	0.060
77295 RefCode	<i>3-dimensional radiotherapy plan, including dose-volume histograms</i>	4.29	7	90	15	112	0.042

Recommendation

We are recommending maintaining the wRVU of 3.14, which is below our surveyed 25<sup>th</sup> percentile. Pre service: 7 minutes, median intra time of 60 minutes, and post service time of 15 minutes, for a total time of 82 minutes. The expert panel believes that our survey supports our recommendation.

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

**FREQUENCY INFORMATION**

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 77263

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Radiation Oncology                      How often? Commonly

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. A national number is not known.

Specialty Radiation Oncology	Frequency	Percentage	%
------------------------------	-----------	------------	---

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?

272,535 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty.

Please explain the rationale for this estimate. The current RUC database indicates the frequency data is 272,535 for CPT code 77263.

Specialty Radiation Oncology	Frequency 264359	Percentage 97.00 %
------------------------------	------------------	--------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Do many physicians perform this service across the United States? Yes

---

### **Berenson-Eggers Type of Service (BETOS) Assignment**

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Procedures

BETOS Sub-classification:

Oncology

BETOS Sub-classification Level II:

Radiation Therapy

---

### **Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 77263

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
*\*CMS High Expenditure Procedures\**

April 2016

**Bone Imaging**

In the Final Rule for 2016 CMS re-ran the high expenditure services across specialties with Medicare allowed charges of \$10 million or more. CMS identified the top 20 codes by specialty in terms of allowed charges, excluding 010 and 090-day global services, anesthesia and Evaluation and Management services and services reviewed since CY 2010. CPT code 78306 was identified via this screen.

During the RUC's discussion of this tab, the specialty societies noted and the RUC agreed that physician work governed by regulatory requirements happens both in the pre-service and post-service periods. The specialty societies noted that before the study is performed, the physician must review flood sources and perform tasks pertaining to receipt of the radiopharmaceutical; after the intra-service period, there are regulatory review tasks pertaining to review of surveys and disposal or return of radiopharmaceuticals.

***78300 Bone and/or joint imaging; limited area***

The RUC reviewed the survey results from 143 physicians and agreed on the following physician time components: pre-service time of 5 minutes, intra-service time of 10 minutes and post-service time of 5 minutes. The RUC noted that the Harvard Study only measured total time for this service, so a comparison of change in intra-service time is not possible.

The RUC reviewed the respondents' estimated 25<sup>th</sup> percentile work RVU of 0.70, and agreed that maintaining the current work RVU of 0.62 is appropriate. To further validate a work RVU of 0.62, the RUC compared the survey code to top key reference code 78226 *Hepatobiliary system imaging, including gallbladder when present*; (work RVU= 0.74, intra-service time of 10 minutes, and total time of 20 minutes) and noted that both services have identical intra-service and total times and the survey respondents rated both services as involving a similar amount of intensity and complexity. The RUC also compared the survey code to CPT code 76856 *Ultrasound, pelvic (nonobstetric), real time with image documentation; complete* (work RVU= 0.69, intra-service time of 10 minutes, total time of 20 minutes) and noted that both services have identical intra-service and total times and involve a similar amount of physician work. **The RUC recommends a work RVU of 0.62 for CPT code 78300.**

**78305 Bone and/or joint imaging; multiple areas**

The RUC reviewed the survey results from 132 physicians and agreed on the following physician time components: pre-service time of 5 minutes, intra-service time of 10 minutes and post-service time of 5 minutes.

The RUC noted that although the survey times were identical relative to 78300, the amount of physician work of bone imaging studies for multiple areas represents more physician work relative to only a limited area. The RUC also noted that although the Harvard Study only measured total time for this service, so a comparison of change in intra-service time is not possible.

The RUC reviewed the respondents' estimated 25<sup>th</sup> percentile work RVU of 0.85, and agreed that maintaining the current work RVU of 0.83 is appropriate. To further validate a work RVU of 0.83, the RUC compared the survey code to 70486 *Computed tomography, maxillofacial area; without contrast material* (work RVU= 0.85, intra-service time of 10 minutes, total time of 16 minutes) and noted that both services have identical intra-service time, while the survey code includes more total time. The RUC also compared the survey code to CPT code 78453 *Myocardial perfusion imaging, planar (including qualitative or quantitative wall motion, ejection fraction by first pass or gated technique, additional quantification, when performed); single study, at rest or stress (exercise or pharmacologic)* (work RVU= 1.00, intra-service time of 10 minutes, total time of 20 minutes) and noted that identical intra-service time and total times, a work RVU of 0.83 for the survey code is supported. **The RUC recommends a work RVU of 0.83 for CPT code 78305.**

**78306 Bone and/or joint imaging; whole body**

The RUC reviewed the survey results from 137 physicians and agreed on the following physician time components: pre-service time of 5 minutes, intra-service time of 10 minutes and post-service time of 5 minutes.

The RUC noted that although the survey times were identical relative to 78306, the amount of physician work of bone imaging studies for the whole body represents more work relative to only multiple areas.

The RUC reviewed the respondents' estimated 25<sup>th</sup> percentile work RVU of 0.90, and agreed that maintaining the current work RVU of 0.86 is appropriate. To further validate a work RVU of 0.86, the RUC compared the survey code to the RUC compared the survey code to 70486 *Computed tomography, maxillofacial area; without contrast material* (work RVU= 0.85, intra-service time of 10 minutes, total time of 16 minutes) and noted that both services have identical intra-service time, while the survey code includes more total time. The RUC also compared the survey code to CPT code 78453 *Myocardial perfusion imaging, planar (including qualitative or quantitative wall motion, ejection fraction by first pass or gated technique, additional quantification, when performed); single study, at rest or stress (exercise or pharmacologic)* (work RVU= 1.00, intra-service time of 10 minutes, total time of 20 minutes) and noted that identical intra-service time and total times, a work RVU of 0.86 for the survey code is supported. **The RUC recommends a work RVU of 0.86 for CPT code 78306.**

**Practice Expense**

It was determined that the clinical staff perform surveys of areas used during imaging and documentation for regulatory compliance during the clinical labor post-service period after the patient has left the office and not during the post-service portion of the service period when the patient is still in the office. Making this reallocation also reduced the PACS Workstation equipment time by 3 minutes for each code. The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.

<b>CPT Code</b>	<b>CPT Descriptor</b>	<b>Global Period</b>	<b>Work RVU Recommendation</b>

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 67-year-old female with acute onset of pain in left knee. Radiographs do not demonstrate suspected tibial plateau insufficiency fracture. MRI contraindicated due to pacemaker. Bone scan of left knee is requested to evaluate for occult fracture.

Percentage of Survey Respondents who found Vignette to be Typical: 88%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: Physician reviews the clinical request, pertinent medical records, X rays, and any prior bone imaging data, interim medical history, including medications and concurrent medical problems. The decision is made as to the appropriateness and protocol for this patient's bone scan. Consult with the ordering physician to clarify the indications, when necessary. The physician instructs the nuclear medicine technologists to order the appropriate radiopharmaceutical, dose and assures by oversight that appropriate records are maintained per NRC and/or state regulations.

Description of Intra-Service Work: Under the supervision of the authorized user the patient receives the prescribed dose intravenously. Limited area imaging, includes anterior and posterior images and lateral or oblique images as per protocol. The physician reviews the initial imaging data and compares to any previous radionuclide and other imaging bone data. Request additional bone images based on initial imaging findings. The interpreting physician reviews these additional images. Dictate a formal consultative report for the medical record.

Description of Post-Service Work: Review and sign the report. May discuss the imaging results with the referring physician and they may also be discussed with the patient. Order additional plain radiographs as necessary after discussion with the referring physician. Provide regulatory (NRC/state) review and oversight throughout the procedure.

---

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Background:**

**CPT 78306 Bone and/or joint imaging; whole body** was identified in the 2016 MPFS NPRM High Expenditure by Specialty screen and is being brought forward for survey at the April 2016 RUC meeting along with two other codes in the family: **CPT 78305 Bone and/or joint imaging; multiple areas** and **CPT 78300 Bone and/or joint imaging; limited area**.

**78300 Survey Results & Recommendations:**

A joint SNMMI, ACNM and ACR consensus committee (herein referred to as "joint societies") reviewed and discussed the survey results. The survey was conducted in both random and targeted methods. The SNMMI and ACNM lists were random, while the ACR identified one random group from the entirety of its membership database and another group of randomly chosen members from those who identified themselves as performing nuclear medicine services.

The joint societies received 137 responses survey responses of which 88 percent of the survey respondents stated the vignette was typical. The survey performance rate median 40 studies per year among the 137 respondents is higher than we anticipated given the lower volume of this service, however it does suggest that survey participants are familiar with this service. CPT 78300 is a relatively lower volume service compared to CPT 78306; however, unlike 78306, CPT 78300 has not previously been surveyed, and the times are Harvard. The joint societies agreed that the survey physician median times of 5 minutes pre-service, 10 minutes intra-service and 5 minutes post time, accurately reflect the time required to perform this service.

The key reference code 1 chosen was 78226 *Hepatobiliary system imaging, including gallbladder when present*; by 25 (18%) respondents and the key reference code 2, 78070 *Parathyroid planar imaging (including subtraction, when performed)* both have higher RVWs and times, chosen by 20 (15%) respondents, which we believe supports rank order with this recommendation. The intensity/complexity comparisons for key reference code 1 and 2 identifies mixes of lower, equivalent and higher measures and therefore we did not factor that into our recommendation.

We then reviewed other similar RUC surveyed codes noted in the table below and believe that these services support maintaining CPT 78300 at the current RVW 0.62 with the median times 5-10-5.

CPT	Short Description	RVW	Pre	Intra	Post	Total
78014	Thyroid imaging with single or multiple uptake(s) quantitative measurement(s)	0.50	5	10	5	20
74230	CINE/Xray throat/esoph	0.53	3	10	4	17
78300	Bone and/or joint imaging; limited	0.62 REC	5 REC	10 REC	5 REC	20 REC
76642	Ultrasound breast limited	0.68	5	10	5	20
78226	Hepato Imag without drug and quant	0.74	5	10	5	20
78597	Quantitative differential pulmonary perfusion, including imaging	0.75	5	10	5	20

In summary, for CPT 78300, the joint societies believe the survey supports maintaining the RVW current work value. We recommend the maintaining the RVW 0.62 with pre time 5 minutes, intra time 10 minutes and 5 minutes of post time.

---

## SERVICES REPORTED WITH MULTIPLE CPT CODES

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

- Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

---

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 78300

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Radiology                      How often? Commonly

Specialty Nuclear Medicine                      How often? Commonly

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period? 41241

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. 3 Times Medicare Volume

Specialty Radiology                      Frequency 37117                      Percentage 90.00 %

Specialty Nuclear Medicine                      Frequency 4124                      Percentage 9.99 %

Specialty                      Frequency 0                      Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?

13,747 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC data base 2014 volume

Specialty Radiology                      Frequency 12372                      Percentage 89.99 %

Specialty Nuclear Medicine                      Frequency 1375                      Percentage 10.00 %

Specialty                      Frequency 0                      Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

### **Berenson-Eggers Type of Service (BETOS) Assignment**

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Imaging

BETOS Sub-classification:

Standard imaging

BETOS Sub-classification Level II:

Nuclear Medicine

### **Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 78300

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

------------------------------	------	------

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Background:**

**CPT 78306 Bone and/or joint imaging; whole body** was identified in the 2016 MPFS NPRM High Expenditure by Specialty screen and is being brought forward for survey at the April 2016 RUC meeting along with two other codes in the family: **CPT 78305 Bone and/or joint imaging; multiple areas** and **CPT 78300 Bone and/or joint imaging; limited area**.

**78305 Survey Results & Recommendations:**

A joint SNMMI, ACNM and ACR consensus committee (herein referred to as "joint societies") reviewed and discussed the survey results. The survey was conducted in both random and targeted methods. The SNMMI and ACNM lists were random, while the ACR identified one random group from the entirety of its membership database and another group of randomly chosen members from those who identified themselves as performing nuclear medicine services.

The joint societies received 132 responses survey responses of which 94 percent of the survey respondents stated the vignette was typical. The survey performance rate median 40 studies per year among the 132 respondents is higher than we anticipated given the lower volume of this service, however it does suggest that survey participants are familiar with this service. CPT 78305 is a relatively lower volume service compared to CPT 78306; however, unlike 78306, CPT 78305 has not previously been surveyed, and the times are Harvard. The joint societies agreed that the survey physician median times of 5 minutes pre-service, 10 minutes intra-service and 5 minutes post time, accurately reflect the time required to perform this service.

The key reference code 1 chosen was 78582 *Pulmonary ventilation (eg, aerosol or gas) and perfusion imaging* by 29 respondents (22%) and the key reference code 2, 78227 *Hepatobiliary system imaging*,

including gallbladder when present; with pharmacologic intervention, including quantitative measurement(s) when performed both have higher RVWs and times, chosen by 25 (29%) respondents, which we believe supports rank order with this recommendation. The intensity/complexity comparisons for key reference code 1 and 2 identifies mixes of lower, equivalent and higher measures and therefore we did not factor that into our recommendation.

We then reviewed other similar RUC surveyed codes noted in the table below and believe that these services support maintaining CPT 78305 at the current RVW 0.83 with the median times 5-10-5.

CPT	Short Description	RVW	Pre	Intra	Post	Total
76700	US exam abd complete	0.81	5	11	5	21
78598	Quantitative VQ lung	0.85	5	10	9	24
78305	Bone and/or joint imaging; multiple areas	0.83 REC	5 REC	10 REC	5 REC	20 REC
78227	Hepato Imag with drug and quantitation	0.90	6	15	5	26
78453	Planar MPI, single study	1.00	5	10	5	20

In summary, for CPT 78305 the joint societies believe the survey supports maintaining the RVW current work value. We recommend the maintaining the RVW 0.83 with pre time 5 minutes, intra time 10 minutes and 5 minutes of post time.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

- Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 78305

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Radiology

How often? Commonly

Specialty Nuclear Medicine

How often? Commonly

Specialty

How often?

Estimate the number of times this service might be provided nationally in a one-year period? 8157

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. 3 Times Medicare Volume

Specialty Radiology	Frequency 7341	Percentage 89.99 %
---------------------	----------------	--------------------

Specialty Nuclear Medicine	Frequency 816	Percentage 10.00 %
----------------------------	---------------	--------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 2,719

If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC Database 2014 Medicare Data

Specialty Radiology	Frequency 2447	Percentage 89.99 %
---------------------	----------------	--------------------

Specialty Nuclear Medicine	Frequency 272	Percentage 10.00 %
----------------------------	---------------	--------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Do many physicians perform this service across the United States? Yes

### **Berenson-Eggers Type of Service (BETOS) Assignment**

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Imaging

BETOS Sub-classification:

Standard imaging

BETOS Sub-classification Level II:

Nuclear Medicine

### **Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 78305

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 78306	Tracking Number	Original Specialty Recommended RVU: <b>0.86</b>
		Presented Recommended RVU: <b>0.86</b>
Global Period: XXX		RUC Recommended RVU: <b>0.86</b>
CPT Descriptor: Bone and/or joint imaging; whole body		

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 57-year-old male with a history of prostate carcinoma presents with an elevated PSA and pain in his right pelvic region. A bone scan is requested to assess the cause of the pain in his pelvis and the extent of any other foci of metastatic bone disease.

Percentage of Survey Respondents who found Vignette to be Typical: 99%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is;  
Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: Physician reviews the clinical request, pertinent medical records, X rays, and any prior bone imaging data, interim medical history, including medications and concurrent medical problems. The decision is made as to the appropriateness and protocol for this patients bone scan. Consult with the ordering physician to clarify the indications, when necessary. The physician instructs the nuclear medicine technologists to order the appropriate radiopharmaceutical, dose and assures by oversight that appropriate records are maintained per NRC and/or state regulations.

Description of Intra-Service Work: Under the supervision of the authorized user the patient receives the prescribed dose intravenously. Whole body imaging, includes anterior and posterior images and lateral or oblique images, whole body includes top of skull to feet imaging, as per protocol. Review the initial imaging data and compare to any previous radionuclide and other imaging bone data. Request additional bone images based on initial imaging findings. The interpreting physician reviews these additional images. Dictate a formal consultative report for the medical record.

Description of Post-Service Work: Review and sign the report. May discuss the imaging results with the referring physician and they may also be discussed with the patient. Order additional plain radiographs as necessary after discussion with the referring physician. Provide regulatory (NRC/state) review and oversight throughout the procedure.

------------------------------	------	------

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Background:**

**CPT 78306 Bone and/or joint imaging; whole body** was identified in the 2016 MPFS NPRM High Expenditure by Specialty screen and is being brought forward for survey at the April 2016 RUC meeting along with two other codes in the family: **CPT 78305 Bone and/or joint imaging; multiple areas** and **CPT 78300 Bone and/or joint imaging; limited area**.

**78306 Survey Results & Recommendations:**

A joint SNMMI, ACNM and ACR consensus committee (herein referred to as "joint societies") reviewed and discussed the survey results. The survey was conducted in both random and targeted methods. The SNMMI and ACNM lists were random, while the ACR identified one random group from the entirety of its membership database and another group of randomly chosen members from those who identified themselves as performing nuclear medicine services.

The joint societies received 143 responses survey responses of which 99 percent of the survey respondents stated the vignette was typical. The survey performance rate median 200 studies per year among the 143 respondents is an anticipated rate given this is a high volume procedure, which adds support to the survey responses. CPT 78306 was surveyed in the third five-year review in August 2005 and our current recommendations are concordant with those survey results. The joint societies agreed that the survey physician median times of 5 minutes pre-service, 10 minutes intra-service and 5 minutes post time, accurately reflect the time required to perform this service. Regarding the service period times, at the five year review, the intra service time was reduced from the median survey intraservice time of 10 minutes time to 8 minutes. In hind sight, the joint societies would not have accepted that recommendation.

The key reference code 1 chosen was 75852 *Pulmonary ventilation (eg, aerosol or gas) and perfusion imaging* by 33 respondents (18 %) and the key reference code 2, 70470 *Computed tomography, head or brain; without contrast material, followed by contrast material(s) and further sections* both have higher RVWs and times, chose by 17 (12%), which we believe supports rank order with this recommendation. The intensity/complexity comparisons for key reference code 1 and 2 identifies mixes of lower, equivalent and higher measures and therefore we did not factor that into our recommendation.

We then reviewed other similar RUC surveyed codes noted in the table below and believe that these services support maintaining CPT 78306 at the current RVW 0.86 with the median times 5-10-5.

CPT	Short Description	RVW	Pre	Intra	Post	Total
76700	US exam abd complete	0.81	5	11	5	21
78598	Quantitative VQ lung	0.85	5	10	9	24
70450	CT brain w/o dye	0.85	4	10	5	19
70486	CT maxil/facial w/o dye	0.85	3	10	3	16
78306	Bone and/or joint imaging; whole body	0.86 REC	5 REC	10 REC	5 REC	20 REC
78227	Hepato Imag with drug and quantitation	0.90	6	15	5	26
78453	Planar MPI, single study	1.00	5	10	5	20

In summary, for CPT 78306 the joint societies believe the survey supports maintaining the RVW current work value based on the close relationship to the 25<sup>th</sup> percentile. We recommend maintaining the RVW 0.86 and accepting the median survey times, pre time 5 minutes, intra time 10 minutes and 5 minutes of post time.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 78306

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Radiology                      How often? Commonly

Specialty Nuclear Medicine                      How often? Commonly

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period? 897201

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. 3 Times the Medicare Population

Specialty Radiology                      Frequency 807481                      Percentage 90.00 %

Specialty Nuclear Medicine                      Frequency 89720                      Percentage 9.99 %

Specialty                      Frequency 0                      Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?

299,067 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Ruc Database 2014 Medicare Volume

Specialty Radiology                      Frequency 269160                      Percentage 89.99 %

Specialty Nuclear Medicine                      Frequency 29907                      Percentage 10.00 %

Specialty                      Frequency 0                      Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

### **Berenson-Eggers Type of Service (BETOS) Assignment**

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Imaging

BETOS Sub-classification:

Standard imaging

BETOS Sub-classification Level II:

Nuclear Medicine

### **Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 78306

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

# AMA/Specialty Society Update Process

## Practice Expense Summary of Recommendation

### Non Facility Direct Inputs

CPT Long Descriptor:

<b>78306</b>	<i>Bone and/or joint imaging; whole body</i>
<b>78305</b>	<i>Bone and/or joint imaging; multiple areas</i>
<b>78300</b>	<i>Bone and/or joint imaging; limited area</i>

Global Period: **XXX** Meeting Date: **April 2016**

**Revised 4-28-2016**

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee: *A joint society consensus with members from three societies participating including; Society of Nuclear Medicine and Molecular Imaging (SNMMI), the American College of Nuclear Medicine (ACNM) and the American College of Radiology (ACR).*

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale: *Existing codes 78306, 78305, 78300 brought forward from a CMS request for review. Inputs for 78306, 78305 and 78300 were used respectively, as the reference for existing CPT codes.*

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:

#### LINE 30 time

Two minutes are standard time, one additional minute for nuclear medicine services in general, as patients are placed on equipment in several positions for imaging. Equipment is moving around them and will come in very close but not touch, them, nor should they touch the equipment or it will stop.

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:

#### Points of clarification

#### LINE 66 time

Is moved to the standard PAC lines, see lines 46, 47, 48 for more accurate placement in the service period and accepting standards.

#### Equipment computers/workstation:

There are three distinct computer workstations;

1. The first computer workstation, line 94 (ED020) is a nuclear pharmacy management computer, located in the hot lab / injection room. Its sole purpose is to track ordered, receipt and disposal of radiopharmaceuticals; example tasks, administered and decayed/disposed patient dose record, all the surveys done throughout the day, these are all requirements following the NRC/State regulations.
2. The second computer workstation, line 96 (ED019) is specifically used with the gamma camera for such activities as image acquisition, data and initial image processing. Images are not stored or interpreted with this computer workstation. *(There may also be another workstation (this would be a fourth) in the physician reading room for physician computer analysis and additional image processing, **however we have not asked for this additional computer** as that is now the PACs noted below.)*
3. The PACS Workstation Proxy, line 97 (ED050) is the technologists workstation and its time is the clinical service period time. Additional image processing and formatting is performed on this workstation, including quality control to prepare the images for interpretation. The PACS Professional Workstation (line 98) (no

CMS code yet available) is for the professional interpretation and its service period time is the physician work pre and intra times.

#### **Calculation of equipment times:**

While we understand that CMS typically does not account for equipment time for items in pre service. The standard NRC/State regulatory requirements do occur in the pre service time (lines 20 & line 21) and those required activities do involve the use of the equipment, therefore we have added lines 20 and 21 respectively as those pieces of equipment are in use during that time and no other work can occur on that equipment during that time. Specifically the gamma camera (ER032/ED019) and the acquisition/processing station are together in the camera room. When we do the required FDA/State flood check, it is done on the camera therefore line 20 requires the Co-57 flood source (line 85 ER001) and the gamma camera/workstation lines 95 ER032 & 96 ED019.

Additionally, we added line 17 to service period technical PACs since availability of prior imaging would require use of the PACs.

5. Please describe in detail the clinical activities of your staff:

#### **Pre-Service Clinical Labor Activities:**

- Review x-ray, lab and past test to confirm appropriateness with physician, confirm technique / protocol to be used, obtain physician written directive, determine radiopharmaceutical dose, and order radiopharmaceutical(s) from central/commercial nuclear pharmacy.
- Verification of Planar Equipment, using Co-57 flood source, following NRC/State requirements mandated prior to use of equipment.
- Prepare radiopharmaceutical (prepare and QC dose(s)) delivered by central/commercial nuclear pharmacy with NRC required check-in of RP, survey, package, wipe test of syringe, and recording all regulatory required documentation. Ready dose for potential injection with in-house labels and records. Store radiopharmaceutical(s) in Hot Lab which is leaded protective shielding.

#### **Intra-Service Clinical Labor Activities:**

- Greet patient, ensure appropriate medical records are available
- Provide pre-service education/obtain consent including mandatory radiation education
- Prepare room, equipment, supplies (additional change collimator and set up protocol)
- Prepare and position patient/ monitor patient
- Obtain RP from RP storage/preparation area, prepare meal(s), recheck dose, record, resay, and ensure dose would be appropriate (following protocols) based on the written directive (correct test and patient weight)
- Acquire images and discuss imaging views with physician for potential additional instructions regarding the protocol or additional views as requested.
- Complete diagnostic forms, lab & X-ray requisitions, image processing, development hard copy or complete labeling of electronic view, archive and obtain approval to discharge patient

#### **Post-Service Clinical Labor Activities:**

- Clean room/equipment by physician staff
- Specific room clean-up of RP injection/administration areas with mandatory defacement of labels for proper RP residual disposal
- Regulatory compliance - NRC required wipe tests and survey areas used including regulatory documentation.

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
*CMS Request – Final Rule for 2016*

April 2016

**Pathology Consultation During Surgery**

Following publication of the 2014 Final Rule, the RUC solicited feedback from the specialties societies regarding CPT codes potentially impacted by the OPPS/ASC Payment Cap. Specialty societies indicated an interest in re-reviewing or validating a recent RUC review for PE only, for 58 of the 211 codes identified through the cap. The PE Subcommittee reviewed the codes identified by specialty societies, grouped by families, at the April 2014 RUC meeting and provide CMS with the recommendations as a sample subset of the codes impacted by the cap. CPT codes 88333 and 88334 were included in these recommendations. CMS chose not to implement the RUC recommendations for 2015, but has reviewed and accepted the recommendations with refinement for 2016. CMS expressed concern about the way the services were selected for review and limiting the review to PE only. The RUC understand CMS' concerns about implementing PE inputs without the corresponding work being reviewed. AMA staff analyzed the 58 services that the RUC submitted PE recommendations for and determined that one or more of the following is true of most of the codes: frequency less than 10,000; reviewed for work within the last five years; included in the list of proposed potentially misvalued codes identified through high expenditure by specialty screen that CMS included in the proposed rule for 2016. The application of this criteria, results in only 6 remaining codes. The codes are 10021, 30903, 88333, 88334, 95812 and 95813.

**88333 Pathology consultation during surgery; cytologic examination (eg, touch prep, squash prep), initial site**

The RUC reviewed the survey results from 53 pathologists and cytopathologists and determined that it was appropriate to maintain the current work RVU of 1.20, which is supported by the survey median of 1.20. The RUC recommends 25 minutes intra-service time. The RUC compared the surveyed code to the top key reference service 88331, *Pathology consultation during surgery; first tissue block, with frozen section(s), single specimen* (work RVU = 1.19, intra-service time of 25 minutes) and noted that both services have similar physician work and should be valued similarly. For additional support the RUC compared the surveyed code to CPT code 88120 *Cytopathology, in situ hybridization (eg, FISH), urinary tract specimen with morphometric analysis, 3-5 molecular probes, each specimen; manual* (work RVU = 1.20, intra-service time of 30 minutes) and noted that the surveyed code requires slightly less intra-service time, but is more intense to perform justifying the identical work RVUs. **The RUC recommends a work RVU of 1.20 for CPT code 88333.**

**88334 Pathology consultation during surgery; cytologic examination (eg, touch prep, squash prep), each additional site (List separately in addition to code for primary procedure)**

The RUC reviewed the survey results from 41 pathologists and cytopathologists and determined that it was appropriate to maintain the current work RVU of 0.73, which is supported by the survey 25<sup>th</sup> percentile of 0.75. The RUC recommends 20 minutes intra-service time. The RUC

compared the surveyed code to the top key reference service 88332, *Pathology consultation during surgery; each additional tissue block with frozen section(s) (List separately in addition to code for primary procedure)* (work RVU = 0.59, intra-service time of 16 minutes) and noted that the surveyed code as greater intra-service time and is appropriately valued higher. For additional support the RUC compared the surveyed code to CPT code 95887 *Needle electromyography, non-extremity (cranial nerve supplied or axial) muscle(s) done with nerve conduction, amplitude and latency/velocity study (List separately in addition to code for primary procedure)* (work RVU = 0.71, intra-service time of 20 minutes) and noted that the both services have identical intra-service time and similar intensity and should be valued similarly. Additionally the RUC discussed that 88334 is an add-on code and should have a ZZZ global period rather than a XXX global period. **The RUC recommends a work RVU of 0.73 for CPT code 88334.**

#### Global Period

**The RUC requests that CMS assign a ZZZ global period to CPT code 88334.** The RUC noted that the Committee's other recommendations are not contingent on this global period change, as this code does not include any pre-service or post-service time.

#### Practice Expense

The RUC recommends the direct practice expense inputs as submitted by the specialty societies and approved by the Practice Expense Subcommittee.

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
88333	Pathology consultation during surgery; cytologic examination (eg, touch prep, squash prep), initial site	XXX	1.20 (No Change)
88334	Pathology consultation during surgery; cytologic examination (eg, touch prep, squash prep), each additional site (List separately in addition to code for primary procedure)	<del>XXX</del> ZZZ	0.73 (No Change)

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 88333      Tracking Number

Original Specialty Recommended RVU: **1.20**  
Presented Recommended RVU: **1.20**  
RUC Recommended RVU: **1.20**

Global Period: XXX

CPT Descriptor: Pathology consultation during surgery; cytologic examination (eg, touch prep, squash prep) initial site

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 65 year old male with a peribronchial mass undergoes a needle biopsy and an immediate evaluation is requested. Touch preps of the specimen are made.

Percentage of Survey Respondents who found Vignette to be Typical: 94%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting?

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting?

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: N/A

Description of Intra-Service Work: Go to the procedure room and review pertinent clinical information. Take biopsy specimen to the intraoperative pathology suite where the patient's previous diagnosis' are reviewed by a query into the anatomic pathology computer system. Perform a gross examination. With assistance from histo/cytotechnologist, label glass slides with the patient's name and other slide-specific identifiers carefully touch a slide to the tissue, stain the smear with diff-quick and cover slip. Then screen and evaluate entire slide for evidence of malignant cells and other pathologic findings. Following examination present a verbal report to the physician procuring the tissue and provide a written confirmation of this report in the patient's medical record.

Description of Post-Service Work: N/A

**Modifier -51 Exempt Status**

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

**New Technology/Service:**

Is this new/revised procedure considered to be a new technology or service? No

**TOP KEY REFERENCE SERVICE:**

<u>Key CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
88331	XXX	1.19	RUC Time

CPT Descriptor Pathology consultation during surgery; first tissue block, with frozen section(s), single specimen

**SECOND HIGHEST KEY REFERENCE SERVICE:**

<u>Key CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
88173	XXX	1.39	RUC Time

CPT Descriptor Cytopathology, evaluation of fine needle aspirate; interpretation and report

**KEY MPC COMPARISON CODES:**

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

<u>MPC CPT Code 1</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>	<u>Most Recent Medicare Utilization</u>
70460	XXX	1.13	RUC Time	34,103

CPT Descriptor 1 Computed tomography, head or brain; with contrast material(s)

<u>MPC CPT Code 2</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>	<u>Most Recent Medicare Utilization</u>
70470	XXX	1.27	RUC Time	138,206

CPT Descriptor 2 Computed tomography, head or brain; without contrast material, followed by contrast material(s) and further sections

<u>Other Reference CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
78071	XXX	1.20	RUC Time

CPT Descriptor Parathyroid planar imaging (including subtraction, when performed); with tomographic (SPECT)

**RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:**

Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by the mean) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Top Key Reference Code: 37      % of respondents: 69.8 %

Number of respondents who choose 2<sup>nd</sup> Key Reference Code: 10      % of respondents: 18.8 %

**TIME ESTIMATES (Median)**

	CPT Code: <u>88333</u>	Top Key Reference CPT Code: <u>88331</u>	2nd Key Reference CPT Code: <u>88173</u>

------------------------------	------	------

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

At the April 2014 RUC meeting, the College of American Pathologists (CAP) and the American Society of Cytopathology (ASC) reviewed the practice expense only for CPT Codes 88333 *Pathology consultation during surgery; cytologic examination (eg, touch prep, squash prep) initial site* and 88334 *Pathology consultation during surgery; cytologic examination (eg, touch prep, squash prep) each additional site (List separately in addition to code for primary procedure)*. In the 2016 NPRM, the CMS identified these codes as potentially misvalued because their direct PE inputs were not reviewed alongside review of their work RVUs and time. Therefore, the RUC requested these services be surveyed for physician work and the practice expense be reviewed at the April 2016 RUC meeting.

Upon review of current ICD-9 data, the CAP and ASC found that the typical patient scenario has changed since these codes were originally valued and, as a result, revised the vignette to reflect the most current data and physician practice. The RUC's Research Subcommittee approved a change in the vignettes and in the current standard physician work survey that removed questions about pre-service or post-service physician work for these services. The CAP and the ASC performed a joint random survey on their respective memberships. A total of 53 surveys were received, which demonstrated a median intra service time of 25 minutes, a 25<sup>th</sup> percentile WRVU of 1.19, and a median WRVU of 1.20. The key reference service was 88331 *Pathology consultation during surgery; first tissue block, with frozen section(s), single specimen*, which has a time of 25 minutes and a WRVU of 1.19. CPT Code 88333 has a current WRVU of 1.20 with 25 minutes of intra-service time. The survey results support the current work RVU and physician time. The specialty survey results are shown below.

<b>Random Membership Survey</b>	<b>Email #</b>	<b>Median Time</b>	<b>Median WRVU</b>
ASC Member Random Sample	300	30	1.19
CAP Member Random Sample	2,250	20	1.20
<b>Total Surveyed/Respondents</b>	<b>2,550</b>	<b>25</b>	<b>1.20</b>

The CAP and the ASC convened an expert panel composed of their respective Economic and Regulatory Affairs Committee members to review the survey analysis. **Based on the results, the expert panel concluded that the survey results validate and support the current time and WRVU of 88333, and therefore the CAP and ASC recommend a time of 25 minutes and a WRVU of 1.20.**

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☒ Other reason (please explain) Typically it may be performed as a part of an interoperative assessment of an 88305 specimen.

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 88333

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pathology                      How often? Commonly

Specialty Independent Laboratory                      How often? Rarely

Specialty Dermatology                      How often? Rarely

Estimate the number of times this service might be provided nationally in a one-year period? 118764

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The Medicare volume from the 2016 RUC Database indicates 59,382 claims for 2014. Medicare procedures represent approximately 50% of the total volume for pathology procedures (59,382\*2=118,764). Percentages are from the RUC database for the year 2014 and reflect the 26 modifier which accounts for 98% of the total volume.

Specialty Pathology                      Frequency 113740                      Percentage 95.76 %

Specialty Independent Laboratory                      Frequency 4632                      Percentage 3.90 %

Specialty Dermatology                      Frequency 119                      Percentage 0.10 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?

59,382 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The Medicare volume from the 2016 RUC Database indicates 59,382 claims for 2014. Percentages are from the RUC database for the year 2014 and reflect the 26 modifier which accounts for 98% of the total volume.

Specialty Pathology                      Frequency 56864                      Percentage 95.75 %

Specialty Independent Laboratory                      Frequency 2316                      Percentage 3.90 %

Specialty Dermatology

Frequency 60

Percentage 0.10 %

CPT Code: 88333

Do many physicians perform this service across the United States? Yes

---

### **Berenson-Eggers Type of Service (BETOS) Assignment**

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Tests

BETOS Sub-classification:

Lab tests

BETOS Sub-classification Level II:

Other (MPFS)

---

### **Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 88333

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

**Modifier -51 Exempt Status**

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

**New Technology/Service:**

Is this new/revised procedure considered to be a new technology or service? No

**TOP KEY REFERENCE SERVICE:**

Key CPT Code	Global	Work RVU	Time Source
88332	XXX	0.59	RUC Time

CPT Descriptor Pathology consultation during surgery; each additional tissue block with frozen section(s) (List separately in addition to code for primary procedure)

**SECOND HIGHEST KEY REFERENCE SERVICE:**

Key CPT Code	Global	Work RVU	Time Source
88331	XXX	1.19	RUC Time

CPT Descriptor Pathology consultation during surgery; first tissue block, with frozen section(s), single specimen

**KEY MPC COMPARISON CODES:**

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
76830	XXX	0.69	RUC Time	456,190

CPT Descriptor 1 Ultrasound, transvaginal

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
93015	XXX	0.75	RUC Time	1,133,681

CPT Descriptor 2 Cardiovascular stress test using maximal or submaximal treadmill or bicycle exercise, continuous electrocardiographic monitoring, and/or pharmacological stress; with supervision, interpretation and report

Other Reference CPT Code	Global	Work RVU	Time Source
76885	XXX	0.74	RUC Time

CPT Descriptor Ultrasound, infant hips, real time with imaging documentation; dynamic (requiring physician or other qualified health care professional manipulation)

**RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:**

Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by the mean) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Top Key Reference Code: 17      % of respondents: 41.4 %

Number of respondents who choose 2<sup>nd</sup> Key Reference Code: 12      % of respondents: 29.2 %

**TIME ESTIMATES (Median)**

	CPT Code: <u>88334</u>	Top Key Reference CPT Code: <u>88332</u>	2nd Key Reference CPT Code: <u>88331</u>
Median Pre-Service Time	0.00	0.00	0.00
Median Intra-Service Time	20.00	16.00	25.00
Median Immediate Post-service Time	0.00	0.00	0.00
Median Critical Care Time	0.0	0.00	0.00
Median Other Hospital Visit Time	0.0	0.00	0.00
Median Discharge Day Management Time	0.0	0.00	0.00
Median Office Visit Time	0.0	0.00	0.00
Prolonged Services Time	0.0	0.00	0.00
Median Subsequent Observation Care Time	0.0	0.00	0.00
<b>Median Total Time</b>	<b>20.00</b>	<b>16.00</b>	<b>25.00</b>
Other time if appropriate			

**INTENSITY/COMPLEXITY MEASURES**

*(of those that selected Key Reference codes)*

Survey respondents are rating the survey code relative to the key reference code.

**Intensity & Complexity Rating Scale:** (much less= -2.00, somewhat less= -1.00, identical= 0.00, somewhat more= 1.00, much more= 2.00)

	<u>Top Key Ref Code</u>	<u>2<sup>nd</sup> Key Ref Code</u>
<b><u>Mental Effort and Judgment (Mean)</u></b>		
The number of possible diagnosis and/or the number of management options that must be considered	0.53	0.17
The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed	0.29	0.08
Urgency of medical decision making	0.47	0.00
<b><u>Technical Skill/Physical Effort (Mean)</u></b>		
Technical skill required	0.29	-0.08
Physical effort required	-0.06	0.08

**Psychological Stress (Mean)**

The risk of significant complications, morbidity and/or mortality	0.47	-0.33
Outcome depends on the skill and judgment of physician	0.71	0.25
Estimated risk of malpractice suit with poor outcome	0.29	-0.50

**INTENSITY/COMPLEXITY MEASURES****Top Key  
Ref Code****2<sup>nd</sup> Key  
Ref Code****Time Segment (Mean)**

Overall intensity/complexity	0.47	0.17
------------------------------	------	------

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

At the April 2014 RUC meeting, the College of American Pathologists (CAP) and the American Society of Cytopathology (ASC) reviewed the practice expense only for CPT Codes 88333 *Pathology consultation during surgery; cytologic examination (eg, touch prep, squash prep) initial site* and 88334 *Pathology consultation during surgery; cytologic examination (eg, touch prep, squash prep) each additional site (List separately in addition to code for primary procedure)*. In the 2016 NPRM, the CMS identified these codes as potentially misvalued because their direct PE inputs were not reviewed alongside review of their work RVUs and time. Therefore, the RUC requested these services be surveyed for physician work and the practice expense be reviewed again at the April 2016 RUC meeting.

Upon review of current ICD-9 data, the CAP and ASC found that the typical patient scenario has changed since these codes were originally valued and, as a result, revised the vignette to reflect the most current data and physician practice. The RUC's Research Subcommittee approved a change in the vignettes and in the current standard physician work survey that removed questions about pre-service or post-service physician work for these services. The CAP and the ASC performed a joint random survey on their respective memberships. A total of 41 surveys were received, which demonstrated a median time of 20 minutes, a 25<sup>th</sup> percentile WRVU of 0.75, and a median WRVU of 1.00. The first reference service selected was 88332 *Pathology consultation during surgery; each additional tissue block with frozen section(s) (List separately in addition to code for primary procedure)* (WRVU=0.59, 16 minutes intra-service time), and the second reference service selected was 88331 *Pathology consultation during surgery; first tissue block, with frozen section(s), single specimen* (WRVU=1.19, 25 minutes intra-service time). CPT code 88334 has a current WRVU of 0.73 with 20 minutes of intra-service time.

The CAP and the ASC convened an expert panel composed of their respective Economic and Regulatory Affairs Committee members to review the survey analysis. Based on the results, the expert panel concluded that the survey results support the current time (20 minutes) and WRVU (0.73) of 88334. The median survey time validates the current time, and while the survey 25th percentile WRVU is higher than the current WRVU, the expert panel could not identify compelling evidence to recommend an increase in value. Therefore, the survey results support the current work RVU and physician time. The specialty survey results are shown below.

<b>Random Membership Survey</b>	<b>Email #</b>	<b>Median Time</b>	<b>Median WRVU</b>
ASC Member Random Sample	300	25	0.98

CAP Member Random Sample	2,250	20	1.10
<b>Total Surveyed/Respondents</b>	2,550	20	1.00

The CAP and ASC expert panel recommends that the values of 88334 be maintained with a WRVU of 0.73 and 20 minutes of intra-service time.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

- Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 88334

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pathology                      How often? Commonly

Specialty Independent Laboratory                      How often? Rarely

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period? 54786

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The Medicare volume from the 2016 RUC Database indicates 27,393 claims for 2014. Medicare procedures represent approximately 50% of the total volume for pathology procedures (27,393\*2=54,786). Percentages are from the RUC database for the year 2014 and reflect the 26 modifier which accounts for 98% of the total volume.

Specialty Pathology Laboratory                      Frequency 52940                      Percentage 96.63 %

Specialty Independent Laboratory                      Frequency 1720                      Percentage 3.13 %

Specialty                      Frequency 0                      Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 27,393 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The Medicare volume from the 2016 RUC Database indicates 27,393 claims for 2014. Percentages are from the RUC database for the year 2014 and reflect the 26 modifier which accounts for 98% of the total volume.

Specialty Pathology	Frequency 26470	Percentage 96.63 %
Specialty Independent Laboratory	Frequency 860	Percentage 3.13 %
Specialty	Frequency 0	Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

### **Berenson-Eggers Type of Service (BETOS) Assignment**

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Tests

BETOS Sub-classification:

Lab tests

BETOS Sub-classification Level II:

Other (MPFS)

---

### **Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 88334

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/Specialty Society RVS Update Committee (RUC)  
Financial Disclosure Statement For  
Specialty Society Presenters**

I certify that my personal or my family members'\* direct financial interest in, and my personal or my family members' affiliation with or involvement in any organization or entity with a direct financial interest in the development of relative value recommendations in which I am participating are noted below. Otherwise, my signature indicates I have no such direct financial interest or affiliation with an organization with a direct financial interest, other than providing these services in the course of patient care.

For purposes of this disclosure "direct financial interest" means:

- A financial ownership interest in an organization\*\* of 5% or more; or
- A financial ownership interest in an organization\*\* which contributes materially\*\*\* to your income; or
- Ownership of stock options in an organization\*\*; or
- A position as proprietor, director, managing partner, or key employee in an organization\*\*; or
- Serve as a consultant, researcher, expert witness (excluding professional liability testimony), speaker or writer for an organization\*\* or participate in a clinical trial that involves the services being reviewed, where payment contributes materially\*\*\* to your income.

*\*Family member means spouse, domestic partner, parent, child, brother or sister. Disclosure of family member's interest applies to the extent known by the representative or presenter..*

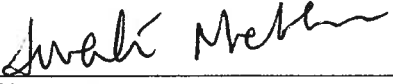

*\*\* Organization means any entity that makes or distributes the product that is utilized in performing the service, and not the physician group or facility in which you work or perform the service.*

*\*\*\*Materially means \$10,000 or more in income (excluding any reimbursement for expenses) for the past twenty-four months.*

**Include only interests that relate to the specific issue that you are presenting at this RUC meeting.**

Specific Disclosure (i.e., list organization)	Explain relationship between the service(s) that you are presenting and your disclosure	Identify interest for the past 24 months (circle one)	Identify cumulative lifetime interest (circle one)	If disclosure relates to stock, please list number of shares owned, options or warrants

**AMA/Specialty Society Update Process  
Practice Expense Summary of Recommendation  
Facility Direct Inputs**

CPT Long Descriptor:

88333 - Pathology consultation during surgery; cytologic examination (eg, touch prep, squash prep), initial site

88334 - Pathology consultation during surgery; cytologic examination (eg, touch prep, squash prep), each additional site

(List separately in addition to code for primary procedure)

Global Period: XXX Meeting Date: April 2016

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee: The practice expense of these codes was reviewed and approved by the RUC in April 2014. The 2016 NPRM identified these codes as potentially misvalued because their direct practice expense had not been reviewed alongside their WRVU and time. Hence these codes are being reviewed along with WRVU and time at the request of RUC. The CAP and ASC created an expert panel to once again review the direct practice expense inputs for 88333 and 88334. Individuals with expertise and those who perform these services were consulted through a series of conference calls in order to refine practice expense inputs.

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale:

**The CAP recommends no direct practice expense inputs in the facility setting.**

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time: See #2

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence: See #2

5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

None

Intra-Service Clinical Labor Activities:

None

Post-Service Clinical Labor Activities:

None

**AMA/Specialty Society Update Process**  
**Practice Expense Summary of Recommendation**  
**Non Facility Direct Inputs**

CPT Long Descriptor:

88333 - *Pathology consultation during surgery; cytologic examination (eg, touch prep, squash prep), initial site*

88334 - *Pathology consultation during surgery; cytologic examination (eg, touch prep, squash prep), each additional site (List separately in addition to code for primary procedure)*

Global Period: XXX Meeting Date: April 2016

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee: The practice expense of these codes was reviewed and approved by the RUC in April 2014. The 2016 NPRM identified these codes as potentially misvalued because their direct practice expense had not been reviewed alongside their WRVU and time. Therefore these codes' practice expenses are being reviewed along with WRVU and time at the request of RUC during the April 2016 RUC Meeting. The College of American Pathologists (CAP) and American Society of Cytopathology (ASC) created an expert panel which was composed of individuals who perform these services or who have other relevant expertise with the codes. The expert panel was consulted through a series of conference calls in order to refine practice expense inputs and make recommendations to the RUC.
2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale: April 2014 RUC recommended inputs and the current PE direct inputs are used as a reference.
3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time: During the refinement process, the CAP and the ASC found that the typical patient scenario has changed, prompting adoption of a revised vignette approved by the Research Subcommittee. The change in PE inputs reflect a change in clinical labor steps, supplies, and/or equipment items and time paralleling a change in practice patterns, laboratory standards and techniques. As a result, there may be instances where the clinical labor was adjusted either up or down, medical supplies were added or deleted as not being typical, and equipment items or times were changed. The specialties appreciate the review of the direct practice expense in order to update the inputs to properly reflect the delivery of these services and protect beneficiaries' access to these services.
4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence: The expert panel is recommending inputs that reflect the typical patient scenario. The CMS made several edits to the inputs from the April 2014 inputs recommended by the RUC. The expert panel has identified these differences and in many cases is again recommending direct inputs that reflect the April 2014 RUC recommendations. On the submitted PE Spreadsheet, the societies noted where they

agree with the CMS' methodology and made several further changes that depend on the CMS' assumptions. However, there were several line items where CMS's rationale or methodology was flawed, and the specialties' rationale for differing inputs were either explained on the Spreadsheet or will be explained at RUC presentation.

**5. Please describe in detail the clinical activities of your staff:**

**Pre-Service Clinical Labor Activities:**

The laboratory technician prepares the room and grossing station, including filtering and replenishing or replacing supplies needed for the services. These supplies include slides, labels, forceps, blades, colored stains, and any other necessary items.

**Intra-Service Clinical Labor Activities:**

The histotechnologist or cytotechnologist assists the pathologist with gross specimen examination. The histo/cytotechnologist helps with slide preparation including making touch or crush preparations, staining, cover slipping, and labeling. The histo/cytotechnologist then assembles and delivers slides with paperwork to pathologists. Also, the histo/cytotechnologist performs other needed tasks, such as performing quality control functions and maintaining specimen tracking logs. Finally, the residual specimen is eventually appropriately triaged for final processing by the histo/cytotechnologist.

**Post-Service Clinical Labor Activities:**

The histo/cytotechnologist cleans the room and specialized equipment following procedure, preparing the room and equipment for the next specimen. The histo/cytotechnologist also performs any necessary equipment maintenance that must be done after the procedure.

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
**\*CMS High Expenditure Procedures\***

April 2016

**Tumor Immunohisto-chemistry**

In the Proposed Rule for 2016 CMS re-ran the high expenditure services across specialties with Medicare allowed charges of \$10 million or more. CMS identified the top 20 codes by specialty in terms of allowed charges, excluding 010 and 090-day global services, anesthesia and Evaluation and Management services and services reviewed since CY 2010. CPT codes 88360 and 88361 were among the codes under this high expenditure screen for which CMS sought recommended values from the RUC and other interested stakeholders,

***88360 Morphometric analysis, tumor immunohistochemistry (eg, Her-2/neu, estrogen receptor/progesterone receptor), quantitative or semiquantitative, per specimen, each single antibody stain procedure; manual***

The RUC reviewed the survey results from 60 practicing pathologists and cytopathologists and recommends 23 minutes of intra-service time. The RUC then reviewed the survey respondents' estimated physician work values and noted that the survey's 25<sup>th</sup> percentile work RVU of 0.85, lower than the current work RVU of 1.10, is appropriate for this code. To justify a work value of 0.85, the RUC compared the surveyed code to the top key reference code 88342 *Immunohistochemistry or immunocytochemistry, per specimen; initial single antibody stain procedure* (work RVU= 0.70, intra time= 25 minutes) and agreed that code 88360 is a more intense procedure than code 88342; although it has slightly less intra-service time, it should be valued higher. With code 88342, the physician is only giving a positive or negative result. Whereas in code 88360 the physician must, in addition to reporting the result, also give a quantitative or semi-quantitative analysis of the number of positive cells.

To corroborate this assertion, the RUC, noting the drop in intra-service time and the change in intensity since the previous valuation, had a significant discussion regarding the rise in intensity due to a lower survey time.. In 2010, practice guidelines were published by the American Society of Clinical Oncology and the College of American Pathologists regarding the reporting of estrogen and progesterone receptor results. Prior to the guidelines, there was no consensus as to what constituted a positive result. Now physicians are now required to do the following: report a percentage of positive cells, indicate whether the staining is weak, moderate or strong, check the length and type of fixation and document the status of internal and external control tissue. All of this was not required when the code was last reviewed in 2004. Given this robust set of clinical information, the RUC confirmed that the intensity has increased and the recommended value is appropriately higher than the top key reference service. **The RUC recommends a work RVU of 0.85 for CPT code 88360.**

**88361 Morphometric analysis, tumor immunohistochemistry (eg, Her-2/neu, estrogen receptor/progesterone receptor), quantitative or semiquantitative, per specimen, each single antibody stain procedure; using computer-assisted technology**

The RUC reviewed the survey results from 53 practicing pathologists and cytopathologists and recommends 25 minutes of intra-service time. The RUC then reviewed the survey respondents' estimated physician work values and noted that the survey's 25<sup>th</sup> percentile work RVU of 0.95, lower than the current work RVU of 1.18, is appropriate for this code. To justify a work value of 0.95, the RUC compared the surveyed code to the top two key reference codes 88121 *Cytopathology, in situ hybridization (eg, FISH), urinary tract specimen with morphometric analysis, 3-5 molecular probes, each specimen; using computer-assisted technology* (work RVU= 1.00, intra time= 25 minutes) and 88342 *Immunohistochemistry or immunocytochemistry, per specimen; initial single antibody stain procedure* (work RVU= 0.70, intra time= 25 minutes) and agreed that the work involved in code 88361 is more analogous to code 88121 than code 88342. The surveyed code and code 88121 both contain similar physician work in that both use computer-assisted technology and include morphometry. The second key reference code contains neither element. Additionally, the top key reference code and the surveyed code are also more intense procedures because the findings result in direct therapeutic intervention.

In addition to discussing the issue of increased intensity for this service due to the lower survey time, which is covered in the discussion above for code 88360, the RUC also noted that the physician work is greater for code 88361 compared to 88360, even though computer-assisted technology is involved. With the aid of the computer, the physician is able to review many more cells compared to the manual approach. Furthermore, the computer does not just produce the answers. The physician must still check the staining intensity, review fixation and ensure the technologist set the gait correctly in order to identify the correct target area. Given this information, the RUC agreed that the recommend value is appropriate relative to both the top key reference service and the other manual procedure (88360) in the family. **The RUC recommends a work RVU of 0.95 for CPT code 88361.**

**Practice Expense:**

The RUC approved the direct practice expense inputs with the specialty society's' modifications as approved by the Practice Expense Subcommittee.

**Work Neutrality**

The RUC's recommendation for these codes will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

<b>CPT Code</b>	<b>CPT Descriptor</b>	<b>Global Period</b>	<b>Work RVU Recommendation</b>
88360	Morphometric analysis, tumor immunohistochemistry (eg, Her-2/neu, estrogen receptor/progesterone receptor), quantitative or semiquantitative, per specimen, each single antibody stain procedure; manual	XXX	0.85
88361	Morphometric analysis, tumor immunohistochemistry (eg, Her-2/neu, estrogen receptor/progesterone receptor), quantitative or semiquantitative, per specimen, each single antibody stain procedure; using computer-assisted technology	XXX	0.95

SUMMARY OF RECOMMENDATION**

CPT Code: 88360      Tracking Number

Original Specialty Recommended RVU: **0.85**  
Presented Recommended RVU: **0.85**  
RUC Recommended RVU: **0.85**

Global Period: XXX

CPT Descriptor: Morphometric analysis, tumor immunohistochemistry (eg, Her-2/neu, estrogen receptor/progesterone receptor), quantitative or semiquantitative, per specimen

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 54 year female has invasive ductal carcinoma of the breast diagnosed on needle biopsy. Estrogen receptor stained slides from the patient's specimen, along with reference positive and negative samples, are examined to determine if the staining process is interpretable. The estrogen receptor stain is positive and a semiquantitative or quantitative interpretation is manually performed.

Percentage of Survey Respondents who found Vignette to be Typical: 97%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting?

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting?

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: N/A

Description of Intra-Service Work: Obtain and review history and diagnostic studies, including examination of previous study reports. Interpret hematoxylin and stained slides to determine if a semiquantitative or quantitative procedure can be accurately performed and is warranted. Perform semiquantitative or quantitative interpretation of the estrogen receptor stain. Compare to internal and external control tissue staining and correlate with previous study reports. Consider relevant exceptions or variations, such as the impact of tumor heterogeneity on the interpretation. Identify clinically meaningful findings, dictate report, review, edit, and sign out the final report.

Description of Post-Service Work: N/A

<b><u>Time Segment (Mean)</u></b>	<b><u>Top Key Ref Code</u></b>	<b><u>2<sup>nd</sup> Key Ref Code</u></b>
Overall intensity/complexity	1.00	0.50

### Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

In the 2016 NPRM, the CMS identified CPT Code 88360 *Morphometric analysis, tumor immunohistochemistry (eg, Her-2/neu, estrogen receptor/progesterone receptor), quantitative or semiquantitative, per specimen* as potentially misvalued on the High Expenditure by Specialty Screen. The RUC requested this service be surveyed for physician work and the practice expense reviewed at the April 2016 RUC meeting. The College of American Pathologists (CAP) and the American Society of Cytopathology (ASC) reviewed this code as well as CPT Code 88361 *Morphometric analysis, tumor immunohistochemistry (eg, Her-2/neu, estrogen receptor/progesterone receptor), quantitative or semiquantitative, per specimen, each single antibody stain procedure; using computer-assisted technology.*

The CAP and the ASC performed a joint random survey on its respective memberships. The RUC's Research Subcommittee approved a change in the current standard physician work survey that removed questions about pre-service or post-service physician work for these services. A total of 60 surveys were received, which demonstrated a median time of 23 minutes, a 25<sup>th</sup> percentile WRVU of 0.85, and a median WRVU of 1.00. The key reference service was 88342 *Immunohistochemistry or immunocytochemistry, per specimen; initial single antibody stain procedure*, which has a time of 25 minutes and a WRVU of 0.70. CPT Code 88360 is currently valued at 1.10 WRVUs with 35 minutes of intra-service time.

The CAP and the ASC convened an expert panel composed of their respective Economic and Regulatory Affairs Committee members to review the survey analysis. Based on the results, the expert panel concluded that the survey results best supported the median time of 23 minutes and the 25<sup>th</sup> percentile WRVU of 0.85. These values reflect the increase in the intensity and complexity that occurred since the last time this code was valued due to the adoption of the ASCO/CAP guidelines in the performance of estrogen receptor testing. Furthermore, the survey analysis showed that 88360 should be more intense than the key reference service 88342 because the average score on the comparison of the overall intensity and complexity was 1.00, corresponding with a somewhat more intense service. This maintains relative value because there is no morphometric analysis in 88342, but there is a morphometric analysis performed in 88360 in addition to the immunohistochemical stain. The specialty survey results are shown below.

Random Membership Survey	Email #	Median Time	Median WRVU
ASC Member Random Sample	350	30	1.00
CAP Member Random Sample	3,150	20	1.00
<b>Total Surveyed/Respondents</b>	<b>3,500</b>	<b>23</b>	<b>1.00</b>

The expert panel agreed and recommends the median physician time and the 25<sup>th</sup> percentile WRVU survey results for CPT Code 88360. The expert panel recommends a WRVU of 0.85 with a time of 23 minutes.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☒ Other reason (please explain) Typically this service may be used for the study and assessment after an 88305, in breast cancer patients.

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 88360

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pathology How often? Commonly

Specialty Independent Laboratory How often? Sometimes

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 661252

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The Medicare volume from the 2016 RUC Database indicates 330,626 claims for 2014. Medicare procedures represent approximately 50% of the total volume for pathology procedures (330,626\*2=661,252). Percentages are from the RUC database for the year 2014 and reflect the 26 modifier which accounts for 74% of the total volume.

Specialty Pathology Frequency 589176 Percentage 89.10 %

Specialty Independent Laboratory Frequency 69894 Percentage 10.56 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 330,626 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The Medicare volume from the 2016 RUC Database indicates 59,382 claims

for 2014. Percentages are from the RUC database for the year 2014 and reflect the 26 modifier which accounts for 74% of the total volume

Specialty Pathology	Frequency 294588	Percentage 89.10 %
Specialty Independent Laboratory	Frequency 34947	Percentage 10.56 %
Specialty	Frequency 0	Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

### **Berenson-Eggers Type of Service (BETOS) Assignment**

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Tests

BETOS Sub-classification:

Lab tests

BETOS Sub-classification Level II:

Other (MPFS)

### **Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 88360

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 88361      Tracking Number

Original Specialty Recommended RVU: **1.00**  
Presented Recommended RVU: **0.95**  
RUC Recommended RVU: **0.95**

Global Period: XXX

CPT Descriptor: Morphometric analysis, tumor immunohistochemistry (eg, Her-2/neu, estrogen receptor/progesterone receptor), quantitative or semiquantitative, per specimen, each single antibody stain procedure; using computer assisted technology

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 54 year female has invasive ductal carcinoma of the breast diagnosed on needle biopsy. Estrogen receptor stained slides from the patient's specimen, along with reference positive and negative samples, are examined to determine if the staining process is interpretable. The estrogen receptor stain is positive and a semiquantitative or quantitative interpretation is performed using a computer assisted methodology

Percentage of Survey Respondents who found Vignette to be Typical: 96%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting?

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting?

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: N/A

Description of Intra-Service Work: Obtain and review history and diagnostic studies, including examination of previous study reports. Review hematoxylin and eosin stained slides to determine if a semiquantitative or quantitative procedure can be accurately performed and is indicated. The pathologist reviews machine calibration and quality control data and gating of areas that are counted by the machine. Perform semiquantitative or quantitative analysis of the estrogen receptor staining and correlate with the computer generated data. Account for discrepancies with computer generated data and consider re-testing. . Compare to and comment on internal and external control tissue staining. Consider relevant variations, such as the impact of tumor heterogeneity on the interpretation. Identify clinically meaningful findings, dictate, review, and sign out the final report.

Description of Post-Service Work: N/A

**Modifier -51 Exempt Status**

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

**New Technology/Service:**

Is this new/revised procedure considered to be a new technology or service? No

**TOP KEY REFERENCE SERVICE:**

Key CPT Code	Global	Work RVU	Time Source
88121	XXX	1.00	RUC Time

CPT Descriptor Cytopathology, in situ hybridization (eg, FISH), urinary tract specimen with morphometric analysis, 3-5 molecular probes, each specimen; using computer-assisted technology

**SECOND HIGHEST KEY REFERENCE SERVICE:**

Key CPT Code	Global	Work RVU	Time Source
88342	XXX	0.70	RUC Time

CPT Descriptor Immunohistochemistry or immunocytochemistry, per specimen; initial single antibody stain procedure

**KEY MPC COMPARISON CODES:**

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
74280	XXX	0.99	RUC Time	17,220

CPT Descriptor 1 Radiologic examination, colon; air contrast with specific high density barium, with or without glucagon

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
95819	XXX	1.08	RUC Time	255,217

CPT Descriptor 2 Electroencephalogram (EEG); including recording awake and asleep

Other Reference CPT Code	Global	Work RVU	Time Source
78453	XXX	1.00	RUC Time

CPT Descriptor Myocardial perfusion imaging, planar (including qualitative or quantitative wall motion, ejection fraction by first pass or gated technique, additional quantification, when performed); single study, at rest or stress (exercise or pharmacologic)

**RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:**

Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by the mean) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Top Key Reference Code: 14      % of respondents: 26.4 %

Number of respondents who choose 2<sup>nd</sup> Key Reference Code: 8      % of respondents: 15.0 %

**TIME ESTIMATES (Median)**

Ref Code****2<sup>nd</sup> Key  
Ref Code****Time Segment (Mean)**

Overall intensity/complexity	1.00	0.00
------------------------------	------	------

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

In the 2016 NPRM, the CMS identified CPT Code 88361 *Morphometric analysis, tumor immunohistochemistry (eg, Her-2/neu, estrogen receptor/progesterone receptor), quantitative or semiquantitative, per specimen, each single antibody stain procedure; using computer-assisted technology* as potentially misvalued on the High Expenditure by Specialty Screen. The RUC requested this service be surveyed for physician work and the practice expense reviewed at the April 2016 RUC meeting. The College of American Pathologists (CAP) and the American Society of Cytopathology (ASC) reviewed this code as well as CPT Code 88360 *Morphometric analysis, tumor immunohistochemistry (eg, Her-2/neu, estrogen receptor/progesterone receptor), quantitative or semiquantitative, per specimen*.

The CAP and the ASC performed a joint random survey on its respective memberships. The RUC's Research Subcommittee approved a change in the current standard physician work survey that removed questions about pre-service or post-service physician work for these services. A total of 53 surveys were received, which demonstrated a median time of 25 minutes, a 25<sup>th</sup> percentile of 0.95, and a median WRVU of 1.00. The key reference service was 88121 *Cytopathology, in situ hybridization (eg, FISH), urinary tract specimen with morphometric analysis, 3-5 molecular probes, each specimen; using computer-assisted technology*, which has a time of 25 minutes and a WRVU of 1.00. CPT Code 88361 is currently valued at 1.18 with 40 minutes of intra-service time.

The CAP and the ASC convened an expert panel composed of their respective Economic and Regulatory Affairs Committee members to review the survey analysis. Based on the results, the expert panel concluded that the survey results best supported the median time of 25 minutes and the median WRVU of 1.00. This would be identical to the key reference service 88121, which is a similar computer-assisted service. The survey respondents found the surveyed code to be more intense than this key reference service. The same expert panel is concurrently recommending a time of 23 minutes and a WRVU of 0.85 for CPT Code 88360 *Morphometric analysis, tumor immunohistochemistry (eg, Her-2/neu, estrogen receptor/progesterone receptor), quantitative or semiquantitative, per specimen*. In comparison to 88360, 88361 should take slightly more time and be slightly more intense because the physician is typically evaluating more cells and makes more decisions with 88361 compared to 88360. Using the 25<sup>th</sup> percentile WRVU of 0.95 would make the IWP/UT of both 88361 and 88360 equal to each other, and this would create a rank order discrepancy. Therefore, **the expert panel recommends a time of 25 minutes and a WRVU of 1.00.** The specialty survey results are shown below.

Random Membership Survey	Email #	Median Time	Median WRVU
ASC Member Random Sample	350	30	1.20
CAP Member Random Sample	3,150	23	1.00
<b>Total Surveyed/Respondents</b>	3,500	25	1.00

The expert panel agreed to preserve proper rank order amongst these services and therefore recommends the median physician time and the median work RVU survey results for CPT code 88361. The expert panel recommends a WRVU of 1.00 with a time of 25 minutes for CPT code 88361.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☒ Other reason (please explain) Typically this service may be used for the study and assessment after an 88305, in breast cancer patients.

- Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 88361

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pathology                      How often? Commonly

Specialty Independent Laboratory                      How often? Sometimes

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period? 282454

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The Medicare volume from the 2016 RUC Database indicates 141,227 claims for 2014. Medicare procedures represent approximately 50% of the total volume for pathology procedures (141,227\*2=282,454). Percentages are from the RUC database for the year 2014 and reflect the 26 modifier which accounts for 73% of the total volume.

Specialty Pathology                      Frequency 233702                      Percentage 82.73 %

Specialty Independent Laboratory	Frequency 48413	Percentage 17.14 %
----------------------------------	-----------------	--------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?  
141,227 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty.  
Please explain the rationale for this estimate. The Medicare volume from the 2016 RUC Database indicates 330,626 claims for 2014. Percentages are from the RUC database for the year 2014 and reflect the 26 modifier which accounts for 73% of the total volume

Specialty Pathology	Frequency 116851	Percentage 82.73 %

## Summary of ASCO/CAP ER and PgR Guideline Recommendations

### Optimal algorithm for ER/PgR testing

**Recommendation:**

Positive for ER or PgR if finding of  $\geq 1\%$  of tumor cell nuclei are immunoreactive.

Negative for ER or PgR if finding of  $< 1\%$  of tumor cell nuclei are immunoreactive in the presence of evidence that the sample can express ER or PgR (positive intrinsic controls are seen).

Uninterpretable for ER or PgR if finding that no tumor nuclei are immunoreactive and that internal epithelial elements present in the sample or separately submitted from the same sample lack any nuclear staining.

**Comments:**

These definitions depend on laboratory documentation of the following:

1. Proof of initial validation in which positive ER or PgR categories are 90% concordant and negative ER or PgR categories are 95% concordant with a clinically validated ER or PgR assay.
2. Ongoing internal QA procedures, including use of external controls of variable ER and PgR activity with each run of assay, regular assay reassessment, and competency assessment of technicians and pathologists.
3. Participation in external proficiency testing according to the proficiency testing program guidelines.
4. Biennial accreditation by valid accrediting agency.

### Optimal testing conditions

**Recommendation:**

Large, preferably multiple core biopsies of tumor are preferred for testing if they are representative of the tumor (grade and type) at resection.

**Comments:**

Specimen should be rejected and testing repeated on a separate sample if any of the following conditions exist:

1. External controls are not as expected (scores recorded daily show variation).
2. Artifacts involve most of sample.

Specimen may also be rejected and testing repeated on another sample if:

1. Slide has no staining of included normal epithelial elements and/or normal positive control on same slide.
2. Specimen has been decalcified using strong acids.
3. Specimen shows an ER-negative/PgR-positive phenotype (to rule out a false-negative ER assay or a false-positive PgR assay).
4. Sample has prolonged cold ischemia time or fixation duration,  $< 6$  hours or  $> 72$  hours and is negative on testing in the absence of internal control elements.

**Recommendation:**

Interpretation follows guideline recommendation.

**Comments:**

Positive ER or PgR requires that  $\geq 1\%$  of tumor cells are immunoreactive. Both average intensity and extent of staining are reported. Image analysis is a desirable method of quantifying percentage of tumor cells that are immunoreactive.

H score, Allred score, or Quick score may be provided.

Negative ER or PgR requires  $< 1\%$  of tumor cells with ER or PgR staining. Interpreters have method to maintain consistency and competency documented regularly.

Accession slip and report must include guideline-detailed elements.

**Recommendation:**

Accession slip and report must include guideline-detailed elements.

# Summary of ASCO/CAP ER and PgR Guideline Recommendations

## Optimal tissue handling requirements\*

\*Revised per the 2011 ASCO/CAP Clinical Notice on HER2 and ER/PgR

### Recommendation:

Time from tissue acquisition to fixation should be ≤ one hour. Samples for ER and PgR testing are fixed in 10% NBF for 6–72 hours. Samples should be sliced at 5-mm intervals after appropriate gross inspection and margins designation and placed in sufficient volume of NBF to allow adequate tissue penetration. If tumor comes from remote location, it should be bisected through the tumor on removal and sent to the laboratory immersed in a sufficient volume of NBF. Cold ischemia time, fixative type, and time the sample was placed in NBF must be recorded.

As in the ASCO/CAP HER2 guideline, storage of slides for more than 6 weeks before analysis is not recommended.

Time tissue is removed from patient, time tissue is placed in fixative, duration of fixation, and fixative type must be recorded and noted on accession slip or in report.

## Optimal internal validation procedure

### Recommendation:

Validation of any test must be done before test is offered. See separate article on testing validation (Fitzgibbons et al<sup>1</sup>).

Validation must be done using a clinically validated ER or PgR test method.

Revalidation should be done whenever there is a significant change to the test system, such as a change in the primary antibody clone or introduction of new antigen retrieval or detection systems.

## Optimal internal QA procedures

### Recommendation:

Initial test validation. See separate article on testing validation (Fitzgibbons et al<sup>1</sup>).

Ongoing quality control and equipment maintenance.

Initial and ongoing laboratory personnel training and competency assessment.

Use of standardized operating procedures including routine use of external control materials with each batch of testing and routine evaluation of internal normal epithelial elements or the inclusion of normal breast sections on each tested slide, wherever possible.

Regular, ongoing assay reassessment should be done at least semiannually (as described in Fitzgibbons et al<sup>1</sup>). Revalidation is needed whenever there is a significant change to the test system.

Ongoing competency assessment and education of pathologists.

## Optimal external proficiency assessment

### Recommendation:

Mandatory participation in external proficiency testing program with at least two testing events (mailings) per year.

Satisfactory performance requires at least 90% correct responses on graded challenges for either test.

### Comments:

Unsatisfactory performance will require laboratory to respond according to accreditation agency program requirements.

## Optimal laboratory accreditation

### Recommendation:

On-site inspection every other year with annual requirement for self-inspection.

### Comments:

Reviews laboratory validation, procedures, QA results and processes, and reports.

Unsuccessful performance results in suspension of laboratory testing for ER or PgR.

Abbreviations: ER, estrogen receptor; PgR, progesterone receptor; IHC, immunohistochemistry; QA, quality assurance; NBF, neutral buffered formalin; ASCO, American Society of Clinical Oncology; CAP, College of American Pathologists; HER2, human epidermal growth factor receptor 2.

**Practice Expense Summary of Recommendation**  
**Facility Direct Inputs**

CPT Long Descriptor:

88360 - Morphometric analysis, tumor immunohistochemistry (eg, Her-2/neu, estrogen receptor/progesterone receptor), quantitative or semiquantitative, each antibody; manual

88361 - Morphometric analysis, tumor immunohistochemistry (eg, Her-2/neu, estrogen receptor/progesterone receptor), quantitative or semiquantitative, each antibody; using computer-assisted technology

Global Period: XXX Meeting Date: April 2016

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:

The practice expense of these codes was reviewed and approved by the RUC in April 2014. The 2016 NPRM identified these codes as potentially misvalued because their direct practice expense had not been reviewed alongside their WRVU and time. Hence these codes are being reviewed along with WRVU and time at the request of RUC. The CAP and ASC created an expert panel to once again review the direct practice expense inputs for 88333 and 88334. Individuals with expertise and those who perform these services were consulted through a series of conference calls in order to refine practice expense inputs.

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale:

The technical component of these services are typically and almost exclusively provided in the non-facility setting, the CAP recommends no direct practice expense inputs in the facility setting.

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time: See #2

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence: See #2

5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

None

Intra-Service Clinical Labor Activities:

None

Post-Service Clinical Labor Activities:

CPT Long Descriptor:

88360 - *Morphometric analysis, tumor immunohistochemistry (eg, Her-2/neu, estrogen receptor/progesterone receptor), quantitative or semiquantitative, each antibody; manual*

88361 - *Morphometric analysis, tumor immunohistochemistry (eg, Her-2/neu, estrogen receptor/progesterone receptor), quantitative or semiquantitative, each antibody; using computer-assisted technology*

Global Period: XXX Meeting Date: April 2016

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:

In the 2016 NPRM, the CMS identified these codes as potentially misvalued on the High Expenditure by Specialty Screen. The RUC requested these services be surveyed for physician work and the practice expense reviewed at the April 2016 RUC meeting. The College of American Pathologists (CAP) and the American Society of Cytopathology (ASC) created an expert panel to review the direct practice expense inputs for 88360 and 88361. The expert panel was composed of individuals who perform these services or who have other relevant expertise with the codes, and was consulted through a series of conference calls in order to refine practice expense inputs.

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale: April 2014 RUC recommended inputs and the current PE direct inputs are used as a reference

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time: The CAP and the ASC are requesting more time (2 minutes) than the RUC approved in 2014, because there were two tasks not originally included that have been added. The two tasks that were not included are calibration, start-up, and shutdown of the imager (1 minute), and gating the cells to be counted by the image analyzer (1 minute).

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence: The expert panel is recommending inputs that reflect the typical patient scenario. The CMS made several edits to the inputs from the April 2014 RUC recommended inputs. The expert panel has identified these differences and in many cases is again recommending direct inputs from the April 2014 RUC recommendations. The CMS' rationale or methodology for many of their edits is flawed, and the specialty's rationale for a change is either explained on the spreadsheet or will be explained at RUC presentation. In addition, the CAP and the ASC are requesting more time (2 minutes) than the RUC approved in 2014, because there were two tasks not originally included that have been added. The two tasks that were not included are calibration, start-up, and shutdown of the imager (1 minute), and gating the cells to be counted by the image analyzer (1 minute).

5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

The lab technician receives the immunohistochemical (IHC) stain order and adds the order to the case in the laboratory information system. The histotechnologist pulls and verifies tissue block contains adequate tissue, and then prepares a positive control block. Preparation of the control block includes the following: taking the cassette out of embedding chamber, opening the cassette, putting paraffin in the bottom of the embedding mold, embedding the tissue, putting the cassette on top of mold and filling the mold with paraffin, putting the mold on cold plate, removing the embedded cassette out of mold and transferring to cutting cold plate, adding additional paraffin to the embedding melting pot, and cleaning the embedding center.

The histotechnologist then cuts patient tissue and places the tissue on a slide. This includes the following steps: scan the tissue block bar code and print labeled slides, section paraffin block on microtome, place section in water bath, mount floated section from water bath onto slides, change knife, rough-cut block, and clean the water bath surface using Kim-Wipes. The histotechnologist then cuts positive control tissue and places the tissue on a slide, places the slides in oven to dry for 60 minutes, sets timer, and removes slides from oven.

The histotechnologist enters detailed patient data, selects antibodies to be tested, and generates and applies bar codes for automated IHC slide stainer to the slides. The histotechnologist then loads the primary antibody (and a secondary antibody if applicable), detection kit dispensers, and required reagents onto the reagent tray and places the tray on the automated slide stainer. The slides are loaded onto the automated slide stainer and the stainer is started. The technologist verifies that the instrument starts correctly.

The lab technician then removes slides from automated slide stainer and rinses the slides in soapy water to remove the coverslip material. The slides are loaded into a basket and then are dehydrated through progressive alcohols, cleared with xylene, and glass coverslipped by hand with permanent mounting media. The histotechnologist then reviews positive and negative control slides and completes workload recording logs. The slides are sorted by pathologist, placed into slide holders, and delivered to pathologist with a quality control sheet.

88361 includes the above plus:

The histotechnologist performs instrument calibration and instrument quality control during start up and shutdown of the imaging instrument. The case is also accessioned into the cellular imaging system. The slides are labeled and loaded into the imaging instrument. The histotechnologist gates the areas to be counted by the machine and the run is initiated. In some cases, the technician will take the recut slide back to the original pathologist and ask for the tumor to be identified on the slide.

Intra-Service Clinical Labor Activities:

None

Post-Service Clinical Labor Activities:

The histotechnologist refills the block and unloads and stores antibodies, detection kits and reagents. The lab technician cleans the equipment and the work station in histology lab, disposes of hazardous waste, and recycles xylenes.

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
*\*Harvard Valued – Utilization Over 30,000\**

April 2016

**Glaucoma Provocative Tests**

In October 2015, AMA staff re-ran the Harvard valued codes with utilization over 30,000 based on 2014 Medicare claims data and this service was identified.

The specialty societies noted that they believe the increase usage is due to incorrect coding and have submitted a Coding Change Application to the CPT Editorial Panel. The RUC noted that the review of this code for potential deletion will occur at the May 2016 CPT meeting. **The RUC recommends referral of CPT code 92140 to the CPT for deletion.**

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
92140	Provocative tests for glaucoma, with interpretation and report, without tonography	XXX	Referral to May 2016 CPT for deletion.

Peter Smith, M.D., Chair  
AMA Specialty Society Relative Value Update Committee  
American Medical Association  
330 North Wabash Ave., Suite 39300  
Chicago IL 60611-5885

Dear Dr. Smith,

The American Academy of Ophthalmology is writing to provide further information regarding Tab 41: CPT 92140 *Provocative tests for glaucoma, with interpretation and report, without tonography*. This code was found on the recent LOI form and previously identified as potentially misvalued with utilization over 30,000 and high growth. This code was created for historical ophthalmology services, such as placing the patient in a face down position or challenging with high water intakes to induce pressure elevations. These techniques are no longer necessary, so we were puzzled by the utilization and suspected miscoding.

Upon reviewing the RUC Database for 2016 we were interested to see that the service was performed in most cases for glaucoma in 2013 which would be appropriate. However, it was found that more than 50% were performed by primary care physicians. This was unexpected as no provocative test for glaucoma currently exists that could be used in a primary care setting. We sought information from the American College of Physicians (ACP) about why internal medicine should be using this code. No recommendation was provided by their CPT representatives. However, a search of the internet found the likely answer; the erroneous suggestion by a manufacturer, BICOM, Inc., directed to primary care to use this code for tonometry.

Tonometry is a different service than described by 92140. It is a pressure measurement that when done during an eye exam is typically bundled. The marketing information is attached for RUC review as well as a copy of our Code Change Proposal as submitted to the AMA CPT Panel. The trans-lid measurement of IOP has been suggested as important on their [website](#) and promoted for many clinical settings. However, tonometry services such as this are typically bundled with an ophthalmological exam.

We believe the increased usage of CPT 92140 is due to this incorrect coding information. After conferring with ACP, we have submitted an application to the CPT Editorial Panel for the May 2016 meeting for code deletion. If you have any questions or need additional information please contact Ms. Cherie McNett, AAO Health Policy Director at [cmcnett@aaodc.org](mailto:cmcnett@aaodc.org) or via phone at 202-737-6662.

Sincerely,

Michael X. Repka, M.D., M.B.A  
Medical Director for Government Affairs

David B. Glasser, M.D.  
RUC Advisor

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
CMS High Expenditure Procedures  
April 2016

**Transthoracic Echocardiography (TTE)**

In the Final Rule for 2016 CMS re-ran the high expenditure services across specialties with Medicare allowed charges of \$10 million or more. CMS identified the top 20 codes by specialty in terms of allowed charges, excluding 010 and 090-day global services, anesthesia and Evaluation and Management services and services reviewed since CY 2010. CPT code 93306 was identified by CMS.

**Compelling Evidence**

The specialty societies indicated that there has been a change in technique and diffusion of technology used to perform 93306. The digital evolution and more sophisticated computers allow for additional modalities to be deployed for echocardiography. The eleven different windows for each echocardiography now comprise more information per study. The physician also performs new services such as diastolic function and spectral tracking, resulting in more images. The physician now reviews 84 video loops for a typical study. Additionally, there have been many accreditation body requirements since this service was last valued, which increases the work per study. For example, the American Society of Echocardiography has published 27 different guideline/clinical recommendations. The RUC accepts compelling evidence that the work for CPT code 93306 has changed.

***93306 Echocardiography, transthoracic, real-time with image documentation (2D), includes M-mode recording, when performed, complete, with spectral Doppler echocardiography, and with color flow Doppler echocardiography***

The RUC reviewed the survey results from 172 cardiologists for CPT code 93306 and determined that the survey 25<sup>th</sup> percentile work RVU of 1.50 appropriately accounts for the physician work required to perform this service. The RUC recommends 5 minutes of pre-service evaluation time, 20 minutes of intra-service time and 5 minutes of post-service time. The RUC agreed that the intensity for this service has increased in the last 10 years because the physician reviews more images in the same amount of time and performs additional testing such as diastolic function and spectral tracking. Part of the standard of care now includes the physician calculation of left ventricular ejection fraction in many patient populations. This is all incremental physician work that is not an automated function. The RUC agreed that there may be minor efficiencies in time for this service, however the intensity in work has been compounded by the increase in technology and the number of images to review, additional testing and calculations that the physician is now conducting.

The RUC compared 93306 to top key reference service 78452 *Myocardial perfusion imaging, tomographic (SPECT) (including attenuation correction, qualitative or quantitative wall motion, ejection fraction by first pass or gated technique, additional quantification, when performed); multiple studies, at rest and/or stress (exercise or pharmacologic) and/or redistribution and/or rest reinjection* (work RVU = 1.62 and 20 minutes intra-service time). The survey respondents indicated that 93306 is somewhat more intense/complex than 78452, however the intra-service times are

identical (20 minutes). The specialty societies indicated that the higher intensity and complexity measures, likely reflect the more diverse disease processes to consider when the physician is reviewing the images. CPT code 93306 provides a non-invasive comprehensive assessment of cardiac structure and function which includes measurements performed in the course of the examination, 2-dimensional and/or M-Mode numerical data for transthoracic echocardiograms, and Doppler/color flow data. Whereas, CPT code 78452 assesses heart conditions including myocardial wall motion abnormalities with myocardial perfusion at stress and rest. The total time differences between codes 78452 and 93306 were solely based on the shorter pre- and post-service time periods, which are balanced by the difference in work RVUs.

For additional support, the RUC referenced MPC code 74176 *Computed tomography, abdomen and pelvis; without contrast material* (work RVU = 1.74 and 22 minutes intra-service) and similar service 72146 *Magnetic resonance (eg, proton) imaging, spinal canal and contents, thoracic; without contrast material* (work RVU = 1.48 and 20 minutes intra-service time). **The RUC recommends a work RVU of 1.50 for CPT code 93306.**

***93307 Echocardiography, transthoracic, real-time with image documentation (2D), includes M-mode recording, when performed, complete, without spectral or color Doppler echocardiography***

The RUC reviewed the survey results from 152 cardiologists for CPT code 93307 and determined that the current work RVU of 0.92, lower than the survey 25<sup>th</sup> percentile, appropriately accounts for the physician work required to perform this service. The RUC recommends 5 minutes of pre-service evaluation time, 15 minutes of intra-service time and 5 minutes of post-service time. The RUC noted that CPT code 93307 was last RUC reviewed in 2007; since that time there have been technological and clinical advances which allow for efficient review of additional images. The Intersocietal Accreditation Commission (IAC) standards last updated in 2015 require eleven separate imaging windows, with approximately 4-5 views per window (even without color Doppler or pulse Doppler). Quantitative evaluation of cardiac structures, such as a left atrial volume, is now the expected standard. While digital technology has afforded some improvement in intra service time, the physician no longer must passively wait as videotape advances, the volume and complexity of information to evaluate in the study has increased. The RUC agreed that this appropriately explains the increased intensity that results from maintaining the work RVU while slightly reducing the intra-service time.

The RUC compared 93307 to top key reference service 78454 *Myocardial perfusion imaging, planar (including qualitative or quantitative wall motion, ejection fraction by first pass or gated technique, additional quantification, when performed); multiple studies, at rest and/or stress (exercise or pharmacologic) and/or redistribution and/or rest reinjection* (work RVU = 1.34 and 15 minutes intra-service time). The survey respondents indicated that 93307 is somewhat more intense/complex than 78454, however the intra-service times are identical (15 minutes). The specialty societies indicated that the intensity and complexity measures were higher for 93307, likely reflecting the more diverse disease processes to consider when the physician is reviewing the images. CPT code 93307 is a comprehensive cardiac study which includes measurements performed in the course of the examination, 2-dimensional and/or M-Mode numerical data for transthoracic echocardiograms and Doppler/color flow data. Whereas, CPT code 78454 is a planar imaging test to assess specific heart conditions including myocardial wall motion abnormalities with myocardial perfusion at stress and rest.

For additional support, the RUC referenced MPC codes 76805 *Ultrasound, pregnant uterus, real time with image documentation, fetal and maternal evaluation, after first trimester (> or = 14 weeks 0 days), transabdominal approach; single or first gestation* (work RVU = 0.99 and 15 minutes intra-service time) and 95819 *Electroencephalogram (EEG); including recording awake and asleep* (work RVU = 1.08 and 15 minutes intra-service time). **The RUC recommends a work RVU of 0.92 for CPT code 93307.**

**93308 Echocardiography, transthoracic, real-time with image documentation (2D), includes M-mode recording, when performed, follow-up or limited study**

The RUC reviewed the survey results from 167 cardiologists for CPT code 93308 and determined that the current work RVU of 0.53, lower than the survey 25<sup>th</sup> percentile, appropriately accounts for the physician work required to perform this service. The RUC recommends 5 minutes of pre-service evaluation time, 10 minutes of intra-service time and 5 minutes immediate of post-service time. The RUC noted that CPT code 93308 was last RUC reviewed in 2011. This limited study is a problem-specific study, such a follow up for left ventricular ejection fraction in a patient undergoing chemotherapy. Once again, the array of tools now applied in this “limited” setting has advanced considerably since the last valuation. Use of contrast detailed analysis of regional ventricular function and quantitative assessment of ejection fraction are now routinely applied in “limited” echo studies, in stark contrast to the clinical standard at the time of the prior valuation. Additionally, while digital technology has afforded some improvement in intra service time, the volume and complexity of information the physician must evaluate for the study has increased. The RUC agreed that this appropriately explains the increased intensity that results from maintaining the work RVU while slightly reducing the intra-service time.

The RUC compared 93308 to top key reference service 78454 *Myocardial perfusion imaging, planar (including qualitative or quantitative wall motion, ejection fraction by first pass or gated technique, additional quantification, when performed); multiple studies, at rest and/or stress (exercise or pharmacologic) and/or redistribution and/or rest reinjection* (work RVU = 1.34 and 15 minutes intra-service time). The survey respondents indicated that 93308 is somewhat more intense/complex than 78454. The specialty societies indicated that the intensity and complexity measures were higher for 93308, likely reflecting the more diverse disease processes to consider when the physician is reviewing the images. CPT code 93308 is a cardiac study which includes measurements performed in the course of the examination, 2-dimensional and/or M-Mode numerical data for transthoracic echocardiograms and Doppler/color flow data. Whereas, CPT code 78454 is a planar imaging test to assess specific heart conditions including myocardial wall motion abnormalities with myocardial perfusion at stress and rest. CPT code 78454 requires 5 more minutes of intra-service time than 93308, which is balanced by the difference in work RVUs.

For additional support, the RUC referenced similar codes 78014 *Thyroid imaging (including vascular flow, when performed); with single or multiple uptake(s) quantitative measurement(s) (including stimulation, suppression, or discharge, when performed)* (work RVU = 0.50 and 10 minutes intra-service time), 93882 *Duplex scan of extracranial arteries; unilateral or limited study* (work RVU = 0.50 and 10 minutes intra-service time) and 93979 *Duplex scan of aorta, inferior vena cava, iliac vasculature, or bypass grafts; unilateral or limited study* (work RVU = 0.50 and 10 minutes intra-service time). **The RUC recommends a work RVU of 0.53 for CPT code 93308.**

**Practice Expense**

The direct practice expense inputs were modified by reducing the clinical staff time in accordance with the two minute standard: line 21 *review prior images and report*, line 30 *prepare room, equipment, supplies*, and line 32 *Prepare and position patient/ monitor patient/ set up IV*. The Subcommittee also corrected line 71 the amount of *ultrasound transmission gel*, deleted line 73 *glutaraldehyde 3.4% (Cidex, Maxicide, Wavicide)* and replaced the vascular ultrasound room (EL016) with a general ultrasound room (EL015) thus eliminating the duplicative equipment. The RUC recommends the direct practice expense modifications as indicated by the Practice Expense Subcommittee.

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
93306	Echocardiography, transthoracic, real-time with image documentation (2D), includes M-mode recording, when performed, complete, with spectral Doppler echocardiography, and with color flow Doppler echocardiography	XXX	1.50

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 67-year-old male with progressive exertional dyspnea and a new systolic murmur.

Percentage of Survey Respondents who found Vignette to be Typical: 89%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 13%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 5%

Description of Pre-Service Work: Review existing information (e.g., request for an echocardiographic evaluation), relevant clinical records, and prior studies to clarify procedural indications and clinical questions. Review appropriateness of procedure against appropriate use criteria.

Description of Intra-Service Work: Obtain a sequence of real-time tomographic images of cardiac structure and dynamics from multiple views and record digitally or on videotape. Make selected M-mode (time-motion) recordings as necessary to facilitate dimensional measurement. Using color Doppler flow imaging, view blood flow velocity patterns and record across the cardiac valves and along the atrial and ventricular septae, as well as in the great arteries and veins. When abnormal findings indicate valvular regurgitation or an intracardiac or extracardiac shunt, record additional views. Using spectral Doppler (by means of pulsed and/or continuous wave techniques), record flow velocities across the cardiac valves, and record abnormal flow signals (such as with stenotic or regurgitant valves) usually from multiple transducer positions and orientations. The interpreting physician may verify the suitability of the images and Doppler flow data to the completion of the study and may obtain additional views if necessary. The interpreting physician reviews digitally or videotaped recorded views of the heart and analyzes and measures the structure and dynamics of the heart chambers, valves, and great vessels. In the context of the anatomic and dynamic findings, note the presence of any abnormalities of the flow stream in the heart and great vessels, and where appropriate, measure jet width, jet area, and proximal flow convergence, to quantitate the severity of abnormalities noted. The interpreting physician also reviews spectral Doppler velocity recordings and makes or verifies quantitative measures, assesses Doppler velocities for hemodynamic assessment of systolic and diastolic left ventricular function as well as pressures in the right atrium, right ventricle, pulmonary artery, and left atrium. When appropriate, calculations include pressure gradients and valve orifice areas in patients with stenotic valves, and regurgitant volumes, regurgitant fractions, and effective regurgitant orifice areas in patients with pathologic valvular regurgitation. From these anatomic and hemodynamic data, develop a complete interpretation. Make quantitative

anatomic and functional measures such as left ventricular size, wall thickness, mass, ejection fraction, and regional wall motion and document sizes of the left atrium, aorta, and right heart chambers. Final interpretation typically also includes side-by-side review of the most recent previous study to determine if significant changes have occurred.

Description of Post-Service Work: Prepare a report, review and correct as necessary, and sign. Review study findings in detail with the referring physician to facilitate appropriate patient management decisions.

CPT Descriptor Myocardial perfusion imaging, tomographic (SPECT) (including attenuation correction, qualitative or quantitative wall motion, ejection fraction by first pass or gated technique, additional quantification, when performed); multiple studies, at rest and/or stress (exercise or pharmacologic) and/or redistribution and/or rest reinjection

**SECOND HIGHEST KEY REFERENCE SERVICE:**

Key CPT Code	Global	Work RVU	Time Source
75572	XXX	1.75	RUC Time

CPT Descriptor Computed tomography, heart, with contrast material, for evaluation of cardiac structure and morphology (including 3D image postprocessing, assessment of cardiac function, and evaluation of venous structures, if performed)

**KEY MPC COMPARISON CODES:**

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
99203	XXX	1.42	RUC Time	10,547,995

CPT Descriptor 1 Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: A detailed history; A detailed examination; Medical decision making of low complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate severity. Typically, 30 minutes are spent face-to-face with the patient and/or family.

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
74176	XXX	1.74	RUC Time	2,123,351

CPT Descriptor 2 Computed tomography, abdomen and pelvis; without contrast material

Other Reference CPT Code	Global	Work RVU	Time Source
72146	XXX	1.48	RUC Time

CPT Descriptor Magnetic resonance (eg, proton) imaging, spinal canal and contents, thoracic; without contrast material

**RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:**

Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by the mean) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

**Number of respondents who choose Top Key Reference Code:** 44      **% of respondents:** 25.5 %

**Number of respondents who choose 2<sup>nd</sup> Key Reference Code:** 43      **% of respondents:** 25.0 %

**TIME ESTIMATES (Median)**

	<b>CPT Code:</b> <u>93306</u>	<b>Top Key Reference CPT Code:</b> <u>78452</u>	<b>2nd Key Reference CPT Code:</b> <u>75572</u>

Overall intensity/complexity	1.14	0.84
------------------------------	------	------

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

93306 is the primary diagnostic transthoracic echocardiography (TTE) code. It describes the work of acquiring/interpreting images, acquiring the results, and creating a report. CMS identified 93306 in CY 2016 rulemaking as potentially misvalued through its high-expenditure screen. A random survey of ACC and ASE members was executed with 172 completed surveys. The information obtained is used to develop the survey results in the SOR and the summary spreadsheet.

**Compelling Evidence**

We believe the family of TTE codes meets the RUC's compelling evidence standard to suggest the current values are no longer appropriate under several criteria.

**Change in Technique and Diffusion of Technology**

Since 93306 and 93307 were valued in September 2007, the American Society of Echocardiography has published (either alone or in association with other societies) **27** separate guideline/clinical recommendations documents (1). Adoption of recommendations included in these documents improves image quality, clinical care, and patient safety. Nearly all of these recommendations involve incremental increases in physician work. At the same time, the broad adoption of PACS technology allows physicians to be more efficient in their review of images, producing a net increase in intensity as more images are reviewed in comparable but somewhat less time. Examples include:

1. Recommendations for ultrasound contrast agent use in many new clinical scenarios, which results in additional images for physician review and interpretation (2). Recent data indicates that judicious use of contrast echocardiography results in overall healthcare savings (~\$120 per patient largely due to avoidance of additional downstream testing) (3) and is associated with substantial reductions in overall mortality in critically ill patients (4), likely due to more accurate and timely diagnosis.
2. Comprehensive recommendations for evaluation of valve stenosis which require additional physician image review, computation, and decision-making (5).

3. New recommendations for left ventricular diastolic dysfunction evaluation, including newer techniques such as tissue Doppler imaging (now standard, but not described by an existing CPT code) (6).
4. New recommendations for evaluation of prosthetic valves, which includes additional image review, computation and physician decision-making (7).
5. New guidelines for right heart assessment, which includes incremental image acquisition, computation and interpreting physician decision-making (8).
6. Promulgation of appropriate use criteria for echocardiography (9). Interpreting physicians must now typically determine the appropriateness of an echocardiographic study at the point of service (additional pre-service time), and in the case of stress echocardiography, must determine whether the probability of coronary artery disease is low, intermediate, or high based on appropriate use criteria for imaging.
7. Publication of recommendations for quality echocardiography laboratory operations (10). This document indicates that “physicians must allow sufficient time for image interpretation” and that “transthoracic echocardiography interpretation must include assessment of all cardiac structures, cardiac function and the *performance of all measurements* when technically feasible”. Additionally, this document places incremental responsibility on the interpreting physician for results communication, inclusion of all key clinical elements in the echocardiography report, and generation of report amendments. Interpreting physicians must also individually report all critical values to the referring physician. These include, but are not limited to, aortic dissection, a new large pericardial effusion, findings consistent with pericardial tamponade, a new cardiac mass or thrombus, new severe left ventricular or right ventricular dysfunction, new valvular vegetations, new severe valvular regurgitation or stenosis, and high risk stress echocardiographic findings. Documentation of direct physician to physician communication must be present on the report.

Accreditation Body Requirements: the Intersocietal Accreditation Commission has issued annual updates, with substantive changes involving increased physician work. These include:

1. Provisions must exist for the timely reporting of critical examination results by the interpreting physician, including immediate verbal communication between the interpreting physician and the ordering physician (11).
2. Inclusion of additional demographic and echocardiographic data on the echocardiography report, report comments on whether all measurements obtained are normal or abnormal, additional comments on left ventricular size, ejection fraction and regional dysfunction, additional comments on any structure which is not well visualized, and a final conclusion which resolves all inconsistencies or discrepancies, and which provides further clinical guidance if necessary (12).

### **Key Reference Service (KRS) for 78452**

Our recommendation compares favorably to the most commonly chosen KRS, 78452, multiple study single photon emission computed tomography (SPECT) myocardial perfusion imaging. Our proposed RVU of 1.50 is 0.12 RVU less than 78452. The KRS was selected by 26% of respondents who indicated 93306 to be somewhat more intense/complex. The intra times are identical between 78452 and 93306. Intensity and complexity measures were generally higher for 93306, likely reflecting the more diverse disease processes to consider when reviewing images. 93306 provides a non-invasive comprehensive assessment of cardiac structure and function which includes measurements performed in the course of the examination, 2-dimensional and/or M-Mode numerical data for transthoracic echocardiograms, and Doppler / color flow data. 78452 assesses heart conditions including myocardial wall motion abnormalities with myocardial perfusion at stress and rest. The total time differences between 78452 and 93306 were solely based on the shorter pre and post service time period, which is more than balanced by the differences in wRVU.

The second highest KRS is 75572, cardiac CT with contrast for evaluation of structure and morphology. Respondents who selected the second KRS indicated 93306 to be somewhat more intense/complex. The second KRS was selected by 25% of respondents. Both KRSs are cardiac imaging services with many similarities to 93306 including identical intra service times.

CPT Code	Short Descriptor	RUC Review	Work RVU	Pre	Intra	Post	Total	IWPUT
----------	------------------	------------	----------	-----	-------	------	-------	-------

74176	CT abd & pelvis w/o contrast	2010	1.74	5	22	5	32	0.069
70498	CT angiography neck	2014	1.75	5	20	5	30	0.076
72146	MRI chest/spine w/o dye	2013	1.48	5	20	5	30	0.063
75572	CT heart w/ 3D image	2009	1.75	10	20	10	40	0.065
78452	Heart muscle image SPECT multi	2008	1.62	10	20	10	40	0.059
<b>93306</b>	<b>TTE w/ Doppler complete</b>	<b>Survey</b>	<b>1.50</b>	<b>5</b>	<b>20</b>	<b>5</b>	<b>30</b>	<b>0.064</b>

In light of the robust survey and changes we discussed in our compelling evidence section, we recommend the 25<sup>th</sup> percentile survey **work RVU of 1.50 with median survey times of 5 minutes preservice, 20 minutes intraservice, and 5 minutes postservice.** This recommendation places 93306 a bit closer to the two KRSs, between the noted MPC codes, and compares almost identically to additional comparator 72146 (MRI chest/spine) that was reviewed by the RUC in 2013.

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.
- 

**FREQUENCY INFORMATION**

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 93306

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty cardiology                      How often? Commonly

Specialty                                      How often?

Specialty                                      How often?

Estimate the number of times this service might be provided nationally in a one-year period? 14400000

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Double the estimated Medicare utilization

Specialty cardiology                      Frequency 14400000                      Percentage 100.00 %

Specialty                                      Frequency 0                                      Percentage 0.00 %

Specialty                                      Frequency 0                                      Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 7,200,000 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Peak utilization from 2011.

Specialty cardiology                      Frequency 7200000                      Percentage 100.00 %

Specialty                                      Frequency 0                                      Percentage 0.00 %

Specialty                      Frequency 0                      Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

**Berenson-Eggers Type of Service (BETOS) Assignment**

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Imaging

BETOS Sub-classification:

Echography/ultrasonography

BETOS Sub-classification Level II:

Heart

---

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 93306

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 93307	Tracking Number	Original Specialty Recommended RVU: <b>1.05</b>
		Presented Recommended RVU: <b>0.92</b>
Global Period: XXX		RUC Recommended RVU: <b>0.92</b>

CPT Descriptor: Echocardiography, transthoracic, real-time with image documentation (2D), includes M-mode recording, when performed, complete, without spectral or color Doppler echocardiography

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 67 year old man presents to a cardiology office complaining of recent chest discomfort. His EKG is abnormal. Echocardiography is performed to exclude regional wall motion abnormalities.

Percentage of Survey Respondents who found Vignette to be Typical: 75%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 10%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 3%

Description of Pre-Service Work: Review existing information (e.g., request for an echocardiographic evaluation), relevant clinical records, and prior studies to clarify procedural indications and clinical questions. Review appropriateness of procedure against appropriate use criteria.

Description of Intra-Service Work: Obtain a sequence of real-time tomographic images of cardiac structure and dynamics from multiple views and record digitally or on videotape. Make selected M-mode (time-motion) recordings as necessary to facilitate dimensional measurement. The interpreting physician may verify the suitability of the images prior to the completion of the study and may obtain additional views if necessary. The interpreting physician reviews digitally or videotaped recorded views of the heart and analyzes and measures the structure and dynamics of the heart chambers, valves, and great vessels. From these anatomic and hemodynamic data, develop a complete interpretation. Make quantitative anatomic and functional measures such as left ventricular size, wall thickness, mass, ejection fraction, and regional wall motion and document sizes of the left atrium, aorta, and right heart chambers. Final interpretation typically also includes side-by-side review of the most recent previous study to determine if significant changes have occurred.

Description of Post-Service Work: Prepare a report, review and correct as necessary, and sign. Review study findings in detail with the referring physician to facilitate appropriate patient management decisions.

Ref Code****Time Segment (Mean)**

Overall intensity/complexity	0.73	0.84
------------------------------	------	------

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

93307 is a less comprehensive version of TTE than bundled code 93306—it does not bundle in spectral or color Doppler. It describes the work of acquiring/interpreting images, acquiring the results, and creating a report. A random survey of ACC and ASE members was executed to obtain the survey results presented in the SOR and the summary spreadsheet.

**Key Reference Service (KRS) for 78454**

Our recommendation compares favorably to the most commonly chosen KRS, 78454, Heart muscle image planar multi. The KRS was selected by 26% of respondents who indicated 93307 to be somewhat more intense/complex. The intra times are identical between 78454 and 93307. Intensity and complexity measures were generally higher for 93307, likely reflecting the more diverse disease processes to consider when reviewing images. 93307 provides a non-invasive assessment of the health of the heart. It is a comprehensive cardiac study which includes measurements performed in the course of the examination, 2-dimensional and/or M-Mode numerical data for transthoracic echocardiograms, and Doppler / color flow data. 78454 is a planar imaging test to assess specific heart conditions including myocardial wall motion abnormalities with myocardial perfusion at stress and rest. The total time for 78454 and 93307 is identical with the intra service time of 15 minutes for each service.

The second highest KRS is 78452, multiple study single photon emission computed tomography (SPECT) myocardial perfusion imaging. Respondents who selected the second KRS indicated 93307 to be somewhat more intense/complex. The second KRS was selected by 16% of respondents. Both KRSs are cardiac imaging services with many similarities to 93307.

CPT Code	Short Descriptor	RUC Review	Work RVU	Pre	Intra	Post	Total	IWPUT

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.  
☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.  
☐ Multiple codes allow flexibility to describe exactly what components the procedure included.  
☐ Multiple codes are used to maintain consistency with similar codes.  
☐ Historical precedents.  
☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 93307

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty cardiology How often? Sometimes

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 186000

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Double the estimated Medicare utilization

Specialty cardiology Frequency 186000 Percentage 100.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?

93,000 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty.

Please explain the rationale for this estimate. Peak utilization from 2010.

Specialty cardiology	Frequency 93000	Percentage 100.00 %
Specialty	Frequency 0	Percentage 0.00 %
Specialty	Frequency 0	Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

**Berenson-Eggers Type of Service (BETOS) Assignment**

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Imaging

BETOS Sub-classification:

Echography/ultrasonography

BETOS Sub-classification Level II:

Heart

---

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 93307

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 93308	Tracking Number	Original Specialty Recommended RVU: <b>0.76</b>
		Presented Recommended RVU: <b>0.53</b>
Global Period: XXX		RUC Recommended RVU: <b>0.53</b>

CPT Descriptor: Echocardiography, transthoracic, real-time with image documentation (2D), includes M-mode recording, when performed, follow-up or limited study

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 54-year-old female with metastatic breast cancer presents after percutaneous drainage of a malignant pericardial effusion. A limited echocardiogram is performed to assess the re-accumulation of pericardial fluid.

Percentage of Survey Respondents who found Vignette to be Typical: 90%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is;  
Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 8%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 3%

Description of Pre-Service Work: Review existing information (e.g., request for an echocardiographic evaluation), relevant clinical records, and prior studies to clarify procedural indications and clinical questions. Review appropriateness of procedure against appropriate use criteria.

Description of Intra-Service Work: Obtain a sequence of real-time tomographic images of cardiac structure and dynamics from multiple views and record digitally or on videotape. Make selected M-mode (time-motion) recordings as necessary to facilitate dimensional measurement. The interpreting physician may verify the suitability of the images prior to the study completion and may obtain additional views if necessary. The interpreting physician reviews digitally or videotaped recorded views of the heart and analyzes and measures the structure of the heart chambers, valves, and great vessels. From these anatomic data, develop a complete interpretation. Make quantitative anatomic and functional measures such as left ventricular size, wall thickness, mass, ejection fraction, and regional wall motion and document sizes of the left atrium, aorta, and right heart chambers. Final interpretation typically also includes side-by-side review of the most recent previous study to determine if significant changes have occurred.

Description of Post-Service Work: Prepare a report, review and correct as necessary, and sign. Review study findings in detail with the referring physician to facilitate appropriate patient management decisions.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

93308 is the limited/follow-up TTE, typically limited to, or performed in follow-up of a focused clinical concern. It describes the work of acquiring/interpreting images, acquiring the results, and creating a report. A random survey of ACC and ASE members was executed to obtain the survey results presented in the SOR and the summary spreadsheet.

**Key Reference Service (KRS) for 78454**

Our recommendation compares favorably to the most commonly chosen KRS, 78454, Heart muscle image planar multi. Our proposed RVU of 0.76 is 0.58 RVU less than 78454. Respondents who selected the KRS indicated 93308 to be somewhat more intense/complex. The KRS was selected by 13% of respondents.

Intensity and complexity measures were generally higher for 93307, likely reflecting the more diverse disease processes to consider when reviewing images. 93307 provides a non-invasive assessment of the health of the heart. It is a comprehensive cardiac study which includes measurements performed in the course of the examination, 2-dimensional and/or M-Mode numerical data for transthoracic echocardiograms, and Doppler / color flow data. 78454 is a planar imaging test to assess specific heart conditions including myocardial wall motion abnormalities with myocardial perfusion at stress and rest. The time differences between 78454 and 93308 are balanced by the differences in wRVU.

The second highest KRS is 99213, a level three office visit. Respondents who selected the second KRS indicated 93308 to be somewhat more intense/complex. The second KRS was selected by 12% of respondents. One KRS is a cardiac imaging service with similarities to 93308 while the other is a well-understood E/M service.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 93308

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

### Attestation Statement

This form needs to be completed by any **RUC Advisor** whose specialty society is developing a recommendation to be reviewed by the RUC.

As a RUC Advisor, I attest that the integrity of the RUC survey, summary of recommendation forms and practice expense recommendations are based on accurate and complete data to the best of my knowledge. As a RUC advisor, I acknowledge that violations would be addressed by the executive committee (i.e., RUC Chair , AMA Representative and Alternate AMA Representative.)

**AMA/Specialty Society Update Process**  
**Practice Expense Summary of Recommendation**  
**Non Facility Direct Inputs**

CPT Long Descriptor:

93306 - Echocardiography, transthoracic, real-time with image documentation (2D), includes M-mode recording, when performed, complete, with spectral Doppler echocardiography, and with color flow Doppler echocardiography

93307 - Echocardiography, transthoracic, real-time with image documentation (2D), includes M-mode recording, when performed, complete, without spectral or color Doppler echocardiography

93308 - Echocardiography, transthoracic, real-time with image documentation (2D), includes M-mode recording, when performed, follow-up or limited study

Global Period: XXX Meeting Date: April 2016

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:

The ACC and ASE utilized a consensus panel process to develop recommended inputs. This group was convened from a broad range of geographic locations with differing practice circumstances and settings - community, academic, teaching, and public; urban, suburban and rural; single and multi-specialty group; independent and employed - who typically perform these services. The committee served as the consensus panel to develop PE recommendations. A number of recommendations to add clinical staff time result from requirements of the Intersocietal Accreditation Commission standards for echocardiography, the gold standards for the vast majority of echocardiography labs in the US. Those requirements are attached.

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale: Current CPT Codes

For codes previously priced in the office setting, the current PE times are shown.

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:

Updated recommendations IAC – Lines 31, 32, 44, 47, 48, 49 50 and 65

Reviewer highlighted the following lines that are inconsistent with standard inputs for further explanation:

Line 16 (0 minutes standard): Completion of prior authorization and referral forms is consistent with current code inputs.

Line 21 (2 minutes standard): Prior images and reports typically (>50%) exist and are reviewed. Applied 4 minutes to line 21 while removing 3 minutes from line 23 and 1 minute from line 34 that was previously allocated for this purpose to update inputs.

**CPT Code 93306, 93307 and 93308**  
**Specialty Society('s) ACC and ASE**

Line 22 (0 minutes standard): Verification of indication and ordering process is part of the IAC standards under which the vast majority of echo labs operate.

Line 30 (2 minutes standard): Room preparation is consistent with current PE inputs and more detailed setup for Doppler versus the other two echo codes under consideration.

Line 32 (2 minutes standard): Consistent with current PE inputs. The sonographer must correctly prepare and position the patient before images are acquired. This typically includes manipulation of beds/tables with drop sections and proper placement of electrodes to ensure accurate study.

Line 49 (1 minute standard): Changed to 1 minute

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:

As discussed in the SORs, the service has changed significantly. We have updated the relevant clinical staff times accordingly and summed what we think are the appropriate line items to allocate equipment use.

Reviewer also inquired about two supply inputs.

Line 71: 180 ml of ultrasound gel is used. Input error should be 25ml

Line 73: Updated 93306 and 93307 to include Cidex. More is used in these services than 93308.

5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

RN/LPN/MTA will complete pre-service diagnostic & referral forms, access prior images and review confirm order and exam protocol with physician and review questionnaire and prepare information for technologist and physician

Cardiac Sonographer will review patient clinical information, questionnaire; confirm order from physician and exam protocol by cardiologist

Intra-Service Clinical Labor Activities:

RN/LPN/MTA will greet and gown patient and obtain vitals signs.

Cardiac Sonographer is operating running echo machine controls, preparing equipment prior to the study, transferring digital images and preparing preliminary report, booting up the machine, entering demographic data. The sonographer will the position patient to begin exam and apply ECG leads, then operating system controls throughout exam will obtain images. Then the sonographer will review of acquired images, comparison to previous images and preparation of preliminary report and complete diagnostic forms. The images are QC'd in PACS, checking for all images, reformats, and data transfer and prelim report generation.

Post-Service Clinical Labor Activities:

The cardiac sonographer cleans the room and complete all required forms for accreditation.

# Introduction

The Intersocietal Accreditation Commission (IAC) accredits imaging facilities specific to echocardiography. IAC accreditation is a means by which facilities can evaluate and demonstrate the level of patient care they provide.

An echocardiography facility is defined as an entity located at one postal address, composed of at least one ultrasound instrument and a Medical Director and a Technical Director performing and/or interpreting transthoracic echocardiography. There may be additional physicians and sonographers. The facility may also perform transesophageal or stress echocardiography.

An accredited echocardiography facility requires the interpreting physicians and practicing sonographers to be adequately trained and experienced to interpret and perform echocardiograms. Published documents recognize that echocardiography requires considerable training and expertise ([see Bibliography](#)). Although published opinions vary with regard to the absolute numbers necessary for attaining and maintaining competence in echocardiography, all agree that numbers of studies performed or interpreted are helpful but not sufficient by themselves to assure clinical competence.

In order to achieve accreditation for transesophageal (TEE) or stress echocardiography, all facilities are required to be accredited in adult transthoracic echocardiography. Facilities may submit completed applications for all testing areas at the same time or may first apply for transthoracic and add on TEE or stress echocardiography at a later date. All areas granted accreditation will expire at the same time regardless of when they were submitted in the accreditation cycle.

The intent of the accreditation process is two-fold. It is designed to recognize facilities that provide quality echocardiographic services. It is also designed to be used as an educational tool to improve the overall quality of the facility.

The following are the specific areas of adult echocardiography for which accreditation may be obtained:

- adult transthoracic
- adult stress
- adult transesophageal

These accreditation Standards and Guidelines are the minimum standards for accreditation of echocardiography facilities. Standards are the minimum requirements to which an accredited facility is held accountable. *Guidelines are descriptions, examples, or recommendations that elaborate on the Standards. Guidelines are not required, but can assist with interpretation of the Standards.*

Standards are printed in regular typeface in outline form. *Guidelines are printed in italic typeface in narrative form.*

Standards that are highlighted are content changes that were made as part of the August 3, 2015 revision. These Standards will become effective on February 3, 2016. Facilities applying for accreditation after February 3, 2016 revision must comply with these new highlighted Standards.

In addition to all Standards listed below, the facility, including all staff, must comply at all times with all federal, state and local laws and regulations, including but not limited to laws relating to licensed scope of practice, facility operations and billing requirements.

# Part A: Organization

---

## Section 1A: Personnel and Supervision

### STANDARD – Medical Director

1.1A The Medical Director must be a licensed physician.

1.1.1A Medical Director Required Training and Experience

The Medical Director must meet one of the following criteria:

- 1.1.1.1A Level III training in echocardiography;
- 1.1.1.2A Level II training in echocardiography plus one year of experience that includes interpretation of at least 600 echocardiogram/Doppler examinations; or
- 1.1.1.3A Three years of echocardiography practice experience and at least 1,800 echocardiogram/Doppler examination interpretations, preferably with Testamur status by the National Board of Echocardiography (NBE) in echocardiography.

1.1.2A Medical Director Responsibilities

The Medical Director responsibilities include but are not limited to:

- 1.1.2.1A all clinical services provided and for the determination of the quality and appropriateness of care provided;
- 1.1.2.2A supervising the entire operation of the facility or may delegate specific operations to associate directors and the Technical Director;
- 1.1.2.3A assuring compliance of the medical and technical staff to the Standards outlined in this document and the supervision of their work; and
- 1.1.2.4A must be an active participant in the interpretation of studies performed in the facility.

1.1.3A Continuing Medical Education (CME) Requirements

- 1.1.3.1A The Medical Director must document at least 15 hours of CME relevant to echocardiography over a period of three years. CME credits must be earned within the three-year period prior to application submission.
  - i. 10 hours must be Category 1 AMA or Canadian Cardiovascular Society (CCS) accredited continuing professional development (CPD) Section 1 Group Learning Activities
  - ii. The other five echocardiography-related hours may be non-category I AMA (i.e., ASE CEU)
- 1.1.3.2A Yearly accumulated CME must be kept on file and available for submission upon request.

Comment: If the Medical Director has completed formal training as specified under 1.1.1.1A or 1.1.1.2A in the past three years, or has successfully acquired Testamur status by passing the Examination of Special Competence in adult echocardiography by the NBE within the past three years, the CME requirement will be considered fulfilled.

## STANDARD – Technical Director

- 1.2A A qualified Technical Director(s) must be designated for the facility. The Technical Director is generally a full-time position. If the Technical Director is not on-site full time or serves as Technical Director in another facility, an appropriately credentialed sonographer who is a member of the technical staff must be present in the facility in the absence of the Technical Director and assume the duties of the Technical Director.

Comment: In a facility with no sonographers, the Medical Director serves as Technical Director. In this case, in addition to submitting the Medical Director forms, the Medical Director must also submit all forms and representative cases required for the Technical Director.

### 1.2.1A Technical Director Required Training and Experience

The Technical Director must meet the following criteria:

- 1.2.1.1A The Technical Director must have an appropriate credential in echocardiography:

- i. Registered Diagnostic Cardiac Sonographer (RDCS) from American Registry of Diagnostic Medical Sonography (ARDMS)
- ii. Registered Cardiac Sonographer (RCS) or Registered Congenital Cardiac Sonographer (RCCS) from Cardiovascular Credentialing International (CCI)
- iii. Canadian Registered Cardiac Sonographer (CRCS) Canadian Association of Registered Diagnostic Ultrasound Professionals (CARDUP)

- 1.2.1.2A In a facility with no sonographers, the physician Technical Director must have either Level II or III echocardiography training, or equivalent if trained before 1998, as defined by the ACC/AHA guidelines for physician training in echocardiography or an appropriate sonographer credential from the ARDMS, CCI or CARDUP.

### 1.2.2A Technical Director Responsibilities

- 1.2.2.1A The Technical Director reports directly to the Medical Director or his/her delegate. Responsibilities must include, but are not limited to:

- i. all facility duties delegated by the Medical Director;
- ii. performance of echocardiograms in the facility;
- iii. general supervision of the technical staff and/or ancillary staff (if applicable);
- iv. delegation, when warranted, of specific responsibilities to the technical staff and/or the ancillary staff;
- v. daily technical operation of the facility (e.g., staff scheduling, patient scheduling, facility record keeping, etc.);
- vi. operation and maintenance of facility equipment;
- vii. compliance of the technical and/or ancillary staff to the Standards outlined within this document;
- viii. working with the Medical Director, medical staff and technical staff to ensure quality patient care; and
- ix. technical training.

### 1.2.3A Continuing Medical Education (CME) Requirements

- 1.2.3.1A The Technical Director must document at least 15 hours of echocardiography-related CME over a period of three years. CME credits must be earned within the three-year period prior to application submission.

*(See Guidelines on Page 9 for further recommendations.)*

- 1.2.3.2A Yearly accumulated CME must be kept on file and available for submission upon request.

Comment: The CME requirement will be considered fulfilled if the credential status of the Technical Director is currently active as a Registered Diagnostic Cardiac Sonographer (RDCS) from American Registry of Diagnostic Medical Sonography (ARDMS); or Registered Cardiac Sonographer (RCS) or Registered Congenital Cardiac Sonographer (RCCS) from Cardiovascular Credentialing International (CCI); or Canadian Registered Cardiac Sonographer (CRCS) Canadian Association of Registered Diagnostic Ultrasound Professionals (CARDUP). Fifteen of the CME hours must be echocardiography-related.

## **STANDARD – Medical Staff**

- 1.3A All members of the medical staff must be licensed physicians.

1.3.1A Medical Staff Required Training and Experience

The medical staff members must meet one or more of the following criteria:

- 1.3.1.1A level II or III training in echocardiography;
- 1.3.1.2A if echocardiography training was completed prior to 1998 – three years of echocardiography practice experience and interpretation of at least 1,200 echocardiogram/Doppler examinations;
- 1.3.1.3A if echocardiography training was completed during or after 1998, and if not Level II or Level III trained – three years of echocardiography practice experience and interpretation of at least 1,200 echocardiogram/Doppler examinations with Testamur status by the National Board of Echocardiography (NBE) in echocardiography by December 31, 2015.

1.3.2A Medical Staff Responsibilities

Medical staff responsibilities include but are not limited to:

- 1.3.2.1A the medical staff interprets and/or performs clinical studies.

1.3.3A Continuing Medical Education (CME) Requirements

- 1.3.3.1A The medical staff must document at least 15 hours of CME relevant to echocardiography over a period of three years. CME credits must be earned within the three-year period prior to application submission.
- i. 10 hours must be Category 1 AMA or The Canadian Cardiovascular Society (CCS) accredited continuing professional development (CPD) Section 1 Group Learning Activities.
  - ii. The other five echocardiography-related hours may be non-category I AMA (i.e., ASE CEU)
- 1.3.3.2A Yearly accumulated CME must be kept on file and available to the IAC when requested.

Comment: If the medical staff member has completed formal training as specified under 1.3.1.1A or 1.3.1.2A in the past three years, or has successfully acquired Testamur status by passing the Examination of Special Competence in adult echocardiography by the NBE within the past three years, the CME requirement will be considered fulfilled.

## STANDARD – Technical Staff

1.4A All members of the technical staff must be qualified sonographers.

Comment: Though the Standards include multiple pathways by which a technical staff member may document experience and training, the IAC encourages that all staff members acquire an appropriate credential in echocardiography within two years of completion of pathway 1.4.1.2A, 1.4.1.3A or 1.4.1.4A. The facility must have a process in place to ensure that all sonographers become credentialed.

By January 31, 2017, all technical staff must have obtained an appropriate credential in echocardiography.

### 1.4.1A Technical Staff Required Training and Experience

The technical staff members must meet one of the following criteria:

- 1.4.1.1A An appropriate credential in echocardiography from the ARDMS, CCI or CARDUP:
- i. Registered Diagnostic Cardiac Sonographer (RDCS) from American Registry of Diagnostic Medical Sonography (ARDMS)
  - ii. Registered Cardiac Sonographer (RCS) or Registered Congenital Cardiac Sonographer (RCCS) from Cardiovascular Credentialing International (CCI)
  - iii. Canadian Registered Cardiac Sonographer (CRCS) Canadian Association of Registered Diagnostic Ultrasound Professionals (CARDUP)
- 1.4.1.2A Successful completion of an ultrasound or cardiovascular technology program which includes verified didactic and supervised clinical experience in echocardiography.
- (See Guidelines on Page 9 for further recommendations.)*
- 1.4.1.3A Completion of 12 months full-time (35 hours/week) clinical echocardiography experience performing echocardiograms plus one of the following:
- i. completion of a formal two-year program in another allied health profession;
  - ii. completion of a bachelor's degree unrelated to a CAAHEP/CMA accredited program or a bachelor's degree in sonography, vascular technology or a minor in some aspect of ultrasound which is not CAAHEP accredited to offer echocardiography; or
  - iii. have an MD, DO degree or equivalent.
- 1.4.1.4A Minimum of 12 months of echocardiography practice experience and the performance of at least 600 echocardiogram/Doppler examinations.

Comment: An individual who does not meet at least one of the above criteria is considered a "trainee."

### 1.4.2A Technical Staff Responsibilities

Technical staff responsibilities include but are not limited to:

- 1.4.2.1A reports to the Technical Director; and
- 1.4.2.2A assumes the responsibilities specified by the Technical Director and, in general, is responsible for the performance of clinical examinations and other tasks assigned.

#### 1.4.3A Continuing Medical Education (CME) Requirements

- 1.4.3.1A The technical staff must document at least 15 hours of echocardiography-related CME over a period of three years. CME credits must be earned within the three-year period prior to application submission.

*(See Guidelines below for further recommendations.)*

- 1.4.3.2A Yearly accumulated CME must be kept on file and available for submission upon request.

Comment: The CME requirement will be considered fulfilled if the credential status of the technical staff member is currently active as a Registered Diagnostic Cardiac Sonographer (RDCS) from American Registry of Diagnostic Medical Sonography (ARDMS); or Registered Cardiac Sonographer (RCS) or Registered Congenital Cardiac Sonographer (RCCS) from Cardiovascular Credentialing International (CCI); or Canadian Registered Cardiac Sonographer (CRCS) Canadian Association of Registered Diagnostic Ultrasound Professionals (CARDUP). Fifteen of the CME hours must be echocardiography-related. Or if the technical staff member has completed formal training as specified under 1.4.1.2A within the past three years the CME requirement will be considered fulfilled.

### **STANDARD – Support Services**

- 1.5A Ancillary personnel (clerical, nursing, transport, etc.) necessary for safe and efficient patient care are provided.
- 1.5.1A Clerical and administrative support must be sufficient to ensure efficient operation and record keeping.
- 1.5.2A Nursing and ancillary services sufficient to ensure quality patient care are available when necessary.
- 1.5.3A Supervision: The Medical Director must ensure that appropriate support services are provided in the best interest of patient care.

## **Section 1A: Personnel and Supervision** *Guidelines*

#### *1.2.3.1A and 1.4.3.1A Technical Director and Technical Staff CME Requirements*

*Explanation: Echocardiography-related continuing education may be Category 1 AMA or other approved noncategory 1 credit including those credits designated as approved by organizations such as ASE, SDMS, ARRT or CCS that have content specific to echocardiography.*

#### *1.4.1.2A Technical Staff Required Training and Experience*

*An ultrasound or cardiovascular technology program should be accredited by the Commission for Accreditation of Allied Health Education Programs (CAAHEP) in collaboration with the Joint Review Committee on Education in Diagnostic Medical Sonography (JRC-DMS) and/or the Joint Review Committee on Education in Cardiovascular Technology (JRC-CVT) or the Canadian Medical Association (CMA).*

## Section 2A: Facility

### STANDARD – Examination Areas

- 2.1A Examinations must be performed in a setting providing patient and technical staff safety, comfort and privacy.
  - 2.1.1A The adequate performance of an echocardiogram requires the proper positioning of the patient, the echocardiographic system and the sonographer. For this reason, adequate spacing is required for inclusion of a patient bed, which allows for position changes, an echocardiographic imaging system and patient privacy.
    - 2.1.1.1A It is understood that many echocardiographic studies are performed on a portable basis, requiring performance of the studies in less than optimal conditions. All studies, regardless of the location, must be performed with adequate room for patient positioning and equipment use.
    - 2.1.1.2A Patient privacy must be assured with the use of either appropriate curtains or doors.
    - 2.1.1.3A A sink and antiseptic soap must be readily available and used for hand washing in accordance with the infection control policy of the facility.

*([See Guidelines on Page 11 for further recommendations.](#))*

### STANDARD – Interpretation Areas

- 2.2A Adequate designated space must be provided for the interpretation of the echocardiogram and the preparation of reports.

*([See Guidelines on Page 11 for further recommendations.](#))*

### STANDARD – Storage

- 2.3A Space permitted for storage of records and supplies must be sufficient for the patient volume of the facility.

### STANDARD – Instrument Maintenance

- 2.4A Instrumentation used for diagnostic testing must be maintained in good operating condition. The accuracy of the data collected by ultrasound instruments is paramount in the interpretation and diagnostic utilization of the information collected. Guidelines for equipment maintenance include, but are not limited to, the following:
  - 2.4.1A Recording of the method and frequency of maintenance of ultrasound instrumentation and digitizing equipment.
  - 2.4.2A Establishment of and adherence to a policy regarding routine safety inspections and testing of all facility electrical equipment.
  - 2.4.3A Establishment of and adherence to an instrument cleaning schedule that includes routine cleaning of equipment parts, including filters and transducers, according to the specifications of the manufacturer. The cleaning schedule must be frequent enough to allow for accurate collection of data.

## **Section 2A: Facility Guidelines**

- 2.1.1A      *Approximately 150 square feet is recommended for a transthoracic echocardiography examination room.*
- 2.2A        *Space should be provided for data evaluation, interpretation and discussion of the study with the sonographer and/or referring physician as needed.*

# Section 3A: Examination Reports and Records

## STANDARD – Records

- 3.1A Provisions must exist for the generation and retention of examination data for all echocardiograms performed.
  - 3.1.1A A system for recording and archiving echocardiographic data (images, measurements and final reports) obtained for diagnostic purposes must be in place.
  - 3.1.2A A permanent record of the images and interpretation must be made and retained in accordance with applicable state or federal guidelines for medical records, generally five to seven years. Images and interpretation must be retrievable for comparison with new studies.
  - 3.1.3A Studies must be archived in the original format that they were acquired. Archiving media includes, but is not limited to:
    - 3.1.3.1A videotape; and
    - 3.1.3.2A digital storage – the facility must ensure that a sufficient portion of the examination can be archived in digital storage and that a secure back-up system is in place. Digital studies must include information consistent with that required for videotape acquisition, although fewer cardiac cycles are generally recorded.

*(See Guidelines on Page 16 for further recommendations.)*

## STANDARD – Examination Interpretation and Reports

- 3.2A Provisions must exist for the timely reporting of examination data.
  - 3.2.1A There must be a policy in place for communicating critical results.
  - 3.2.2A The findings of a STAT echocardiogram must be made available immediately by the interpreting physician.

Comment: Sonographer worksheets, comments (verbal or written) or electronic summary of findings must not be provided to anyone other than the interpreting physician.

*(See Guidelines on Page 16 for further recommendations.)*
  - 3.2.3A Preliminary reports can only be issued by a physician. There must be a policy in place for communicating any significant changes between the preliminary and final reports.
  - 3.2.4A Routine inpatient echocardiographic studies must be interpreted by a qualified physician within 24 hours of completion of the examination. Outpatient studies must be interpreted by the end of the next business day. The final verified (by the interpreting physician) signed report must be completed within 48 hours after interpretation.

*(See Guidelines on Page 16 for further recommendations.)*
- 3.3A Echocardiography reporting must be standardized in the facility. All physicians interpreting echocardiograms in the facility must agree on uniform diagnostic criteria and a standardized report format.<sup>2</sup>
  - 3.3.1A The report must accurately reflect the content and results of the study. The report must include, but may not be limited to:
    - 3.3.1.1A Demographics:

- i. date of the study;
- ii. name and/or identifier of the facility;
- iii. name and/or identifier of the patient;
- iv. date of birth and/or age of the patient;
- v. indication for the study;
- vi. name or initials of the performing sonographer;
- vii. name of the ordering physician and/or identifier;
- viii. height;
- ix. weight;
- x. gender; and
- xi. blood pressure – systolic and diastolic blood pressure must be obtained on or around the time of the study and displayed on the report.

Comment: The information must be sufficient to allow for the identification and retrieval of previous studies on the same patient.

3.3.1.2A A summary of the results of the examination, including any pertinent positive and negative findings particularly those relative to the indication for examination.

3.3.1.3A The final report must be completely typewritten, including the printed name of the interpreting physician. The final report must be reviewed, signed and dated manually or electronically by the interpreting physician. Electronic signatures must be password protected and indicate they are electronically recorded. Stamped signatures or signing by non-physician staff is unacceptable.

#### 3.4A Adult Transthoracic Echocardiogram Report Components

3.4.1A The report must accurately reflect the content and results of the study. The report must include, but may not be limited to:

3.4.1.1A 2-dimensional and/or M-mode numerical data which must include:

- i. the measurements performed in the course of the examination and/or interpretation; and
- ii. 2-dimensional and/or M-Mode numerical data for transthoracic echocardiograms, must include, but not be limited to (except where technically unobtainable):
  - measurements of the left ventricular internal dimension at end-diastole;
  - left ventricular internal dimension at end-systole;
  - left ventricular posterobasal free wall thickness at end-diastole;
  - ventricular septal thickness at end-diastole;
  - left atrial dimension at end-systole or indexed LA volume; and
  - aortic root dimension at end-diastole or ascending aorta.

Comment: Normal ranges may be included in the report. The report must comment on whether a given dimension is normal or abnormal.

*[\(See Guidelines on Page 16 for further recommendations.\)](#)*

3.4.1.2A A report of the Doppler evaluation must include, but not be limited to:

- i. evaluation of peak and mean gradients (if stenotic);
- ii. valve area (if stenotic);

- iii. degree of regurgitation;
- iv. right ventricular systolic pressure value reported when tricuspid regurgitation is present; and
- v. other pathology.

3.4.1.3A Report text must include comments on:

- i. left ventricle (LV size, ejection fraction and regional dysfunction, if present);  
([See Guidelines on Page 16 for further recommendations](#))
- ii. right ventricle (size and function);
- iii. right atrium;
- iv. left atrium;
- v. mitral valve;
- vi. aortic valve;
- vii. tricuspid valve;
- viii. pulmonic valve;
- ix. pericardium; and
- x. aorta.

Comment: If any structure is not well visualized this must be noted. The report text must be consistent with the quantitative data. Where appropriate, this must include localization and quantification of abnormal findings.

3.5A Adult Transesophageal Echocardiogram Report Components

3.5.1A The report must accurately reflect the content and results of the study. The report must include, but may not be limited to:

3.5.1.1A Report text (including procedure comments) must include:

- i. medication used for the procedure;
- ii. ease of transducer insertion;
- iii. complications (if any); and
- iv. components of procedure (i.e., color flow Doppler, PW/CW Doppler, contrast administration).

3.5.1.2A Report text must include comments on:

- i. left ventricle;
- ii. right ventricle;
- iii. right atrium;
- iv. left atrium;
- v. left atrial appendage;
- vi. interatrial septum;
- vii. mitral valve;
- viii. aortic valve;
- ix. tricuspid valve;
- x. pulmonic valve;
- xi. pericardium; and
- xii. aorta.

Comment: If any structure is not well visualized this must be noted.

3.5.1.3A Measurements and Doppler (if obtained):

- i. Linear and/or volume/area measurements
- ii. Color and spectral Doppler interpretation statements regarding antegrade and retrograde flow abnormalities for each valve, along with any other Doppler velocity, gradient and/or volume measurements generally accepted as needed for documentation of pathology.

3.6A Stress Echocardiogram Report Components

3.6.1A The report must accurately reflect the content and results of the study. The report must include, but may not be limited to:

3.6.1.1A Report text must include the following non-imaging data:

- i. exercise time, or maximum dose of pharmacologic agent (if used);
- ii. target heart rate;
- iii. maximum heart rate achieved;
- iv. whether or not target HR was achieved and/or stress adequate;
- v. blood pressure response;
- vi. reason for termination;
- vii. patient's cardiac symptoms, if any, during the examination; and
- viii. summary of stress ECG findings.

Comment: If the electrocardiographic portion of the stress test is reported separately, the imaging report must include the items listed in 3.6.1.1A. Image description must include:

- Pre-exercise segmental wall motion and global systolic function
- Post-exercise wall motion comparison and global systolic function

3.6.1.2A A summary of the results of the examination, including any pertinent positive (e.g., ischemia, viability and coronary distribution, LV cavity size and EF response) and negative findings.

Comment: An accurate, succinct impression (e.g., normal, abnormal, stable). This must clearly communicate the result of the study and, when possible, answer the clinical question that was the cause for the examination. This final conclusion must resolve any inconsistencies or discrepancies (e.g., abnormal stress test with normal images) or provide guidance for further studies to do so.

3.6.1.3A Any need for additional studies based on the results of the procedure being reported.

([See Guidelines on Page 16 for further recommendations.](#))

## Section 3A: Examination Reports and Records

### *Guidelines*

#### 3.1.3A *Archiving media:*

- i. *Videotape: When utilizing videotape for archiving, at least 5-10 cardiac cycles of each portion of the M-Mode, 2-D and Doppler study should be recorded in real time.*
- ii. *Digital storage: The number of cardiac cycles acquired must be sufficient to allow for adequate review, generally one or more cycles are recommended.<sup>4</sup>*

#### 3.2.2A *Suggested method for reporting life-threatening findings: Optimally, the interpreting physician in the facility will call the appropriate physician. Alternatively, the sonographer may call the appropriate physician after conferring with the interpreting physician.*

#### 3.2.4A *Comment: An interpretation can be in the form of paper, digital storage or an accessible voice system.*

#### 3.4.1.1A *Additional measurements may be indicated and when performed, should be included.*

#### 3.4.1.3Ai *Diastolic function should be commented on if assessed.*

#### 3.6.1A *Comment: Stress echocardiography interpretation includes at a minimum an assessment of regional and global LV function at rest and stress. Depending on the reason for the study, the stress echocardiogram may require quantitation of valvular regurgitation, stenosis and RV systolic pressure. The electrocardiographic portion of the stress test may be interpreted as part of the stress echocardiogram or separately.*

## Section 4A: Facility Safety

### STANDARD – Patient and Facility Safety

- 4.1A Patient and employee safety is ensured by written policies and procedures approved by the Medical Director.
- 4.1.1A Personnel Safety Policy (Ergonomics) – A policy must be in place to address technical staff safety, comfort and avoidance of work-related musculoskeletal disorders (MSD).
- ([See Guidelines below for further recommendations](#)).
- 4.1.2A Standard echocardiograms are considered to be safe to both patients and sonographers. However, special echocardiographic procedures, such as transesophageal echocardiograms and stress echocardiograms, pose potential risks to the safety of the patient due to either their semi-invasive nature, or the physiologic stress placed on the cardiovascular system of the patient. For this reason, an echocardiography facility providing special echocardiographic procedures must have an emergency procedure plan, and the following emergency supplies must be readily available for transesophageal echocardiograms and stress echocardiograms:
- 4.1.2.1A a fully equipped cardiac arrest cart (crash cart);
  - 4.1.2.2A a defibrillator;
  - 4.1.2.3A equipment for starting and maintaining intravenous access;
  - 4.1.2.4A oxygen tanks or wall mounted oxygen sources with appropriate cannulae and/or masks; and
  - 4.1.2.5A suction equipment.
- 4.1.3A The facility must meet the standards set forth by the Occupational Safety and Health Administration (OSHA) and by the Joint Commission (JC), where applicable.
- 4.1.4A The facility must have a written procedure in place for handling acute medical emergencies.

([See Guidelines below for further recommendations](#)).

## Section 4A: Facility Safety Guidelines

- 4.1A *Sonographer Radiation Exposure: Sonographers may be exposed to significant levels of radiation from patients who have both a nuclear test and an echocardiogram on the same day, and also from spending time in catheterization/hybrid laboratories. For this reason, it is recommended that facilities have a formal policy to address radiation safety for sonographers.<sup>7</sup>*
- 4.1.1A *Comment: For additional information regarding MSD, please visit:*  
[www.cdc.gov/niosh/docs/wp-solutions/2006-148/](http://www.cdc.gov/niosh/docs/wp-solutions/2006-148/)  
[www.sdms.org/pdf/wrmsd2003.pdf](http://www.sdms.org/pdf/wrmsd2003.pdf)

## Section 5A: Administrative

### STANDARD – Patient Confidentiality

- 5.1A All facility personnel must ascribe to professional principles of patient-physician confidentiality as legally required by federal, state, local or institutional policy or regulation.

### STANDARD – Patient or Other Customer Complaints

- 5.2A There must be a policy in place outlining the process for patients or other customers to issue a complaint/grievance in reference to the care/services they received at the facility/facility and how the facility handles complaints/grievances.

### STANDARD – Primary Source Verification

- 5.3A There must be a policy in place identifying how the facility verifies the medical education, training, appropriate licenses and certifications of all physicians as well as, the certification and training of all technical staff members and any other direct patient care providers.

## Section 5A: Administrative Guidelines

*Sample documents are available for each of the required policies listed in Section 5A on the IAC Echocardiography website at [intersocietal.org/echo/seeking/sample\\_policies.htm](http://intersocietal.org/echo/seeking/sample_policies.htm).*

## **Section 6A: Multiple Sites (Fixed and/or Mobile)**

### **STANDARD – Multiple Sites**

- 6.1A When testing is performed at more than one physical facility, the facility may be eligible to apply for a single accreditation as a multiple site facility.
  - 6.1.1A All facilities have the same Medical Director.
  - 6.1.2A All facilities have the same Technical Director.
  - 6.1.3A Identical testing protocols are used at all sites.
  - 6.1.4A Identical diagnostic criteria are used at all sites.
  - 6.1.5A Quality Improvement (QI) must be evaluated for each site for all areas of testing performed at the site.
  - 6.1.6A Equipment of similar quality and capability must be used at all sites.

## **Section 6A: Multiple Sites (Fixed and/or Mobile)**

### ***Guidelines***

*Facilities needing complete details on adding a multiple site should review the current IAC Policies and Procedures available on the IAC website at [intersocietal.org/iac/legal/policies.htm](http://intersocietal.org/iac/legal/policies.htm).*

# Part B:

## Examinations and Procedures

---

### Section 1B: Adult Transthoracic Echocardiography Testing

#### STANDARD – Instrumentation

##### 1.1B Cardiac Ultrasound Systems

1.1.1B Ultrasound instruments utilized for diagnostic studies must include, at a minimum, hardware and software to perform:

1.1.1.1B M-Mode imaging;

1.1.1.2B two-dimensional (2-D) imaging (the system must include harmonic capabilities);

1.1.1.3B spectral display for pulsed (PW) and continuous wave (CW) Doppler studies;

1.1.1.4B colorflow imaging;

1.1.1.5B monitor or other display method of suitable size and quality for observation and interpretation of all modalities;

Comment: The display must identify the parent institution, the name of the patient, the date and time of the study. The ECG must also be displayed.

1.1.1.6B range or depth markers must be available on all displays;

1.1.1.7B capabilities to measure the distance between two points, an area on a 2-D image, blood flow velocities, time intervals and peak and mean gradients from spectral Doppler studies;

1.1.1.8B at least two imaging transducers, one of low frequency (2-2.5 MHz) and one of high frequency (3.5 MHz or higher); or a multi-frequency transducer which includes a range of frequencies specific to the clinical needs in adult echo.

Comment: A transducer dedicated to the performance of non-imaging continuous wave Doppler must be available at each site.

1.1.1.9B an audible output must be present at the time of acquisition;

1.1.1.10B machines with some, but not all of the above, equipment may be used for limited or directed echocardiographic examinations. However, machines utilized for complete diagnostic procedures must include all of the above listed capabilities.

*([See Guidelines on Page 25 for further recommendations.](#))*

#### STANDARD – Procedure Volumes

1.2B The annual procedure volume must be sufficient to maintain proficiency in examination performance and interpretation.

*([See Guidelines on Page 25 for further recommendations.](#))*

## STANDARD – Indications, Ordering Process and Scheduling

- 1.3B Transthoracic echocardiography testing is performed for appropriate indications.<sup>1</sup>
- 1.3.1B Verification of the Indication – A process must be in place in the facility for obtaining and recording the indication. Before a study is performed, the indication must be verified and any additional information needed to direct the examination must be obtained.
- 1.4B Transthoracic echocardiography testing is appropriately ordered and scheduled. The ACC-ASE appropriate use criteria documents pertaining to echocardiography must be available for review in the facility.
- 1.4.1B Ordering Process – The echocardiogram order and requisition must clearly indicate the type of study to be performed, the reason(s) for the study and the clinical question(s) to be answered. The signed (electronic or handwritten) order/requisition must be present in the medical record of the patient.
- 1.4.2B Definition of Procedure Types and Protocols
- 1.4.2.1B Complete Studies:
- i. A complete imaging study is one that examines all of the cardiac chambers and valves and the great vessels from multiple views, then uses the available information to completely define any recognized abnormalities.
  - ii. A complete Doppler study is one that examines every cardiac valve, and the atrial and ventricular septa for antegrade and/or retrograde flow. In addition, a complete Doppler study provides functional hemodynamic data.
- 1.4.2.2B Limited Study: A limited study is generally only performed when the patient has undergone a complete recent examination and there is no clinical reason to suspect any changes outside the specific area of interest. A limited study generally examines a single area of the heart or answers a single clinical question.
- 1.4.3B Scheduling – Sufficient time must be allotted for each study according to the procedure type. The performance time allotted for a complete (imaging and Doppler) transthoracic examination is 45 to 60 minutes from patient encounter to departure. An additional 15 to 30 minutes may be required for complicated studies.
- 1.4.3.1B An urgent study must be performed in the next available time period.
- 1.4.3.2B A stat study must be performed as soon as possible, preempting routine studies.
- 1.4.3.3B Availability for Emergencies: Qualified personnel and equipment must be available for urgent or stat studies outside normal working hours in inpatient facilities or where appropriate.

*(See Guidelines on Page 25 for further recommendations.)*

## STANDARD – Techniques

- 1.5B Examination performance must include proper technique.
- 1.5.1B All procedures must be explained to the patient and/or parents or guardian. The patient's height and weight must be measured and recorded prior to the examination, so that measurements can be indexed, when appropriate, to parameters of body size.
- 1.5.2B Echocardiography examinations of the heart must examine all cardiac chambers and structures. The course and extent of disease must be documented.

- 1.5.3B Elements of study performance include, but are not limited to:
  - 1.5.3.1B proper patient positioning;
  - 1.5.3.2B transducer selection and placement;
  - 1.5.3.3B optimization of equipment gain and display settings;
  - 1.5.3.4B utilization of appropriate Doppler technique (including proper Doppler alignment) and measurements;
  - 1.5.3.5B representative image storage of all images and data;
  - 1.5.3.6B timely report generation and communication of results; and
  - 1.5.3.7B performance of a 2-D/M-Mode/Doppler examination according to the facility specific and appropriate protocol that incorporate all views and imaging planes mandated by Standards (1.5.1B, 1.5.2B).
- 1.5.4B Elements of study quality include, but are not limited to:
  - 1.5.4.1B definition of endocardium;
  - 1.5.4.2B display of standard (on axis) imaging planes (e.g., avoidance of foreshortening);
  - 1.5.4.3B delineation of the details of valvular anatomy;
  - 1.5.4.4B measurements of left ventricular dimensions from standard orthogonal imaging planes;
  - 1.5.4.5B optimal recording and evaluation of Doppler flows (which are aligned to the Doppler beam and parallel to flow);
  - 1.5.4.6B accurate spectral Doppler recording and recording of abnormal Doppler flow signals in multiple views; and
  - 1.5.4.7B adherence to the facility specific protocol including sequence with allowances for additional views.

## **STANDARD – Components of the Transthoracic Echocardiogram**

- 1.6B Transthoracic echocardiograms must be comprehensive and include standard components.
  - 1.6.1B Components of the Examination – A protocol must be in place that defines the components of the standard examination. Indications for performance of a complete and/or limited exam must be included.
    - 1.6.1.1B Complete Examination: Includes standard views from multiple planes including views of all cardiac structures and selected extracardiac structures. These include, but are not limited to:
      - i. left ventricle;
      - ii. right ventricle;
      - iii. left atrium;
      - iv. right atrium;
      - v. aortic valve;
      - vi. pulmonic valve;
      - vii. mitral valve;

- viii. tricuspid valve;
- ix. proximal ascending aorta;
- x. aortic arch (when indicated);
- xi. inferior vena cava; and
- xii. pericardium.

1.6.1.2B Complete Doppler Study: Includes spectral Doppler and/or color flow interrogation of all normal and abnormal flows within the heart including the valves, the great vessels and the atrial and ventricular septa.

1.6.1.3B Limited Examination: A limited study is generally only performed when the patient has undergone a complete recent examination and there is no clinical reason to suspect any changes outside the specific area of interest. A limited study generally examines a single area of the heart or answers a single clinical question.

*(See Guidelines on Page 25 for further recommendations.)*

1.6.2B The complete examination must include (except where technically unobtainable), but not be limited to:

1.6.2.1B The following standard 2-D views:

- i. parasternal long axis view;
- ii. parasternal short axis views (at the level of the aortic valve, left ventricle at the basal, mid and apical levels);
- iii. right ventricular inflow view (from anteriorly directed parasternal long axis view);
- iv. apical four-chamber view;
- v. apical two-chamber view;
- vi. apical five-chamber view;
- vii. apical long axis view;
- viii. subcostal four chamber view;
- ix. subcostal short axis view (when indicated);
- x. subcostal IVC/hepatic vein view; and
- xi. suprasternal notch view (when indicated).

1.6.2.2B The following 2-D or M-Mode measurements of the left heart:

- i. left ventricular internal dimension at end-diastole;
- ii. left ventricular internal dimension at end-systole;
- iii. left ventricular posterobasal free wall thickness at end-diastole;
- iv. ventricular septal thickness at end-diastole;
- v. left atrial dimension at end-systole or left atrial volume index; and
- vi. aortic root dimension at end-diastole.

1.6.2.3B The following standard Doppler flow evaluations:

- i. four cardiac valves – forward flow spectra for each valve, and any regurgitation, shown in at least two imaging planes with color Doppler;
- ii. also use of non-imaging Doppler Transducer to assess stenotic valves, valvular regurgitation or whenever indicated;
- iii. tricuspid regurgitation spectrum must always be sought with CW Doppler from multiple views for estimation of systolic right ventricular pressure when tricuspid regurgitation is present;

- iv. atrial and ventricular septa – color Doppler screening for defects;
- v. left ventricular outflow tract velocity;
- vi. velocity-time integrals and hepatic and pulmonary vein flow spectra are optional; and
- vii. For aortic stenosis, the systolic velocity must be evaluated from multiple transducer positions (e.g., apical, suprasternal and right parasternal). This must include interrogation from multiple views with a dedicated non-imaging continuous wave Doppler transducer (at least one clear envelope must be obtained).

*(See Guidelines below for further recommendations.)*

**1.6.3B** Use of Contrast for Suboptimal Image Quality – Contrast is indicated for use when two contiguous segments are not visualized in any three of the apical views (poor endocardial border definition) as it provides greater accuracy in determining left ventricular function.<sup>7</sup>

**1.6.3.1B** If contrast is used, there must be a written policy for the use of contrast agents.

**1.6.3.2B** If contrast is not able to be used there must be a policy for alternative imaging.

Comment: Poor endocardial border definition is defined as the inability to detect two or more contiguous segments in any three of the apical views.

*(See Guidelines below for further recommendations.)*

## **Section 1B: Adult Transthoracic Echocardiography Testing Guidelines**

### **1.1.1B** Cardiac Ultrasound Systems

- Instrument settings to enable optimization of ultrasound contrast agents.
- There should be a system setting to display low frequency Doppler filtering for tissue Doppler display.

**1.2B** A facility should perform a minimum of 600 echocardiograms annually. Each member of the medical staff should interpret a minimum of 300 studies annually. Each member of the technical staff should perform a minimum of 300 studies annually. The total volume of studies interpreted and performed by each staff member may be combined from sources other than the applicant facility. Lower volumes than those recommended here, however, should not dissuade a facility that is otherwise compliant with the IAC Echocardiography Standards from applying for accreditation.

**1.4.3B** A routine study on an inpatient should be performed on the same working day as ordered, unless otherwise specified. Outpatient studies should be assigned priority as defined by the referring physician and/or the indication of the study.

**1.6.1B** For all imaging protocols, if any required view or Doppler signal cannot be adequately obtained, it should be recorded and labeled in order to demonstrate that it was attempted.

**1.6.2.3B** Doppler flow evaluations:

- Tissue Doppler, strain, strain-rate are optional Doppler studies
- Contrast studies are not required but should be considered when patients are technically difficult.
- LV diastolic function should be evaluated through a combination of PW and tissue Doppler techniques.

**1.6.3B** Contrast should be used in the presence of poor endocardial border definition for quantification of chamber dimensions, volumes, ejection fraction and assessment of regional wall motion.

Contrast should also be used to assess conditions such as hypertrophic cardiomyopathy or when left ventricular thrombus is suspected.

## Section 2B: Adult Transesophageal Echocardiography Testing

### STANDARD – Instrumentation

#### 2.1B Cardiac Ultrasound Systems

- 2.1.1B Ultrasound instruments utilized for transesophageal echocardiographic studies (TEEs) must include the echocardiographic imaging system requirements, as outlined in the [Section 1B: Adult Transthoracic Echocardiography Testing, STANDARD – Instrumentation](#).

#### 2.2B Transesophageal Ultrasound Transducer

- 2.2.1B Transesophageal ultrasound transducers must be those manufactured for the ultrasound system of the facility.
- 2.2.2B Transesophageal ultrasound transducers must incorporate multiplane imaging capabilities.
- 2.2.3B The manufacturer's guidelines must be followed for the appropriate care and cleansing of the TEE transducer and adhere to the appropriate infectious disease standards to prevent the transmission of disease. Effective December 31, 2015, the structural and electrical integrity of the transducer must be checked between each use, using an ultrasound transducer leakage tester. "Passed" or "Failed" must be documented in the routine TEE probe cleaning / maintenance log along with action taken if "Failed."

### STANDARD – Procedure Volumes

- 2.3B The annual procedure volume must be sufficient to maintain proficiency in examination performance and interpretation.

*(See Guidelines on Page 31 for further recommendations.)*

### STANDARD – Indications, Ordering Process and Scheduling

- 2.4B Transesophageal echocardiographic testing is performed for appropriate indications.<sup>1</sup>
  - 2.4.1B Verification of the Indication – A process must be in place in the facility for obtaining and recording the indication. Before a study is performed, the indication must be verified and any additional information, including pertinent clinical history, needed to direct the examination must be obtained.<sup>1</sup> If the indication for the examination and/or clinical history are not clear, the physician performing the TEE must verify the clinical history and an appropriate indication before proceeding with the examination.
- 2.5B Transesophageal echocardiographic studies are appropriately ordered and scheduled.
  - 2.5.1B Ordering Process – The TEE order and/or requisition must clearly indicate the type of study to be performed, reason(s) for the study and the clinical question(s) to be answered. The order/requisition must be present in the medical record of the patient.

## 2.5.2B Definition of Procedure Types and Protocols

2.5.2.1B A TEE examination is one that examines all of the cardiac chambers, valves and great vessels from multiple imaging planes and then uses the information to completely define any recognized abnormalities. This study must include appropriate Doppler interrogation of all cardiac valves and structures (e.g., pulmonary veins and atrial appendage) and provide any hemodynamic data felt to be of importance for patient care. It is recognized that in some instances “limited” TEEs are performed (i.e., in the OR with time constraints or when a follow up examination is performed to evaluate specific pathology) that may limit or prevent a complete evaluation.

*(See Guidelines on Page 31 for further recommendations.)*

2.5.2.2B The TEE is an invasive examination and usually is performed using conscious sedation. The facility must demonstrate that all medical and technical staff routinely adhere to the global conscious sedation policies in place for the medical facility as required by the Joint Commission or other appropriate accrediting organizations.

2.5.3B Scheduling – Sufficient time must be allotted for each study according to the procedure type. The performance time allotted for an uncomplicated, complete study (outside of the OR) is estimated to be 45 to 60 minutes, with an additional 15 to 30 minutes for complicated studies from patient encounter to departure. Sufficient time must be included in the scheduling process for adequate post-sedation monitoring.

*(See Guidelines on Page 31 for further recommendations.)*

## **STANDARD – Training**

2.6B Transesophageal echocardiography is an invasive examination, which, if performed incorrectly, can lead to serious harm to patients and therefore, must be performed by appropriately trained physicians.

2.6.1B All performing physicians must be adequately trained and experienced to perform and interpret the study.<sup>2</sup>

2.6.2B All assisting sonographers and nurses must be adequately trained and validated as competent in procedures and policies for assisting in invasive procedures using conscious sedation.

## **STANDARD – Techniques**

2.7B Examination performance must include proper technique.

2.7.1B Elements of study performance include, but are not limited to:

2.7.1.1B transducer insertion;

2.7.1.2B optimization of equipment gain and display settings;

2.7.1.3B utilization of appropriate Doppler technique and measurements;

2.7.1.4B optimization of image orientation to enhance Doppler display; and

2.7.1.5B performance of a 2-D/Doppler transesophageal examination according to the facility specific and appropriate protocol that incorporates all views and imaging planes mandated by Standard 2.8.6B (in any sequence).

- 2.7.2B Elements of study quality include, but are not limited to:
  - 2.7.2.1B demonstration of cardiac structure and function;
  - 2.7.2.2B evaluation of atrial and ventricular septal integrity;
  - 2.7.2.3B evaluation of left atria and left atrial appendage;
  - 2.7.2.4B evaluation of ascending aorta, descending aorta and aortic arch;
  - 2.7.2.5B delineation of the details of valvular anatomy;
  - 2.7.2.6B optimal recording and evaluation of spectral and color flow Doppler;
  - 2.7.2.7B adherence to the facility specific and appropriate protocol (except for sequence); and
  - 2.7.2.8B imaging of at least one right and one left pulmonary vein, with Doppler when appropriate.

## **STANDARD – Components of Transesophageal Echocardiograms**

- 2.8B Transesophageal echocardiograms must be comprehensive and include standard components.
  - 2.8.1B Technical Personnel – Due to the complexity of the TEE study, appropriate technical personnel must be available to assist the performing physician. These personnel may include a sonographer and a nurse. The duties of these individuals include, but are not limited to:
    - 2.8.1.1B preparing the patient for the test;
    - 2.8.1.2B assisting the physician with the ultrasound equipment;
    - 2.8.1.3B monitoring the patient during and after the examination; and
    - 2.8.1.4B administration of anesthetic medication and airway management.
  - 2.8.2B Preparation of the Patient – To perform TEE studies safely, appropriate safety guidelines must be in place. Patients must have a functioning intravenous access in place. Cardiac monitoring with standard telemetry leads must be utilized. Instrumentation to monitor the blood pressure and oxygen saturation of the patient before, during and after the examination must be available, as well as oxygen with appropriate delivery devices if needed.
  - 2.8.3B Conscious Sedation – The facility must recognize the potential need for patient sedation in order to obtain an adequate examination. During the use of conscious sedation there must be methods in place to assess the patient's level of consciousness pre procedure and throughout the procedure. All procedures must be explained to the patient and/or the parents or guardians of those unable to give informed consent. Consent must be obtained in a manner consistent with the rules and regulations required by the hospital or facility. Written policies must exist for the use of conscious sedation including, but not limited to:
    - 2.8.3.1B type of sedatives and appropriate dosing; and
    - 2.8.3.2B monitoring during and after the examination.
  - 2.8.4B Monitoring the Patient – During the procedure, the vital signs and medical stability of the patient must be periodically evaluated and recorded. The development of instability in either the vital signs or comfort of the patient must be addressed by the performing physician. Facility

guidelines for the monitoring of patients who receive intravenous anesthetic agents are required. These written guidelines must be in place and available for all facilities where TEEs are performed. A list of peri-procedural complications must be maintained.

- 2.8.5B Recovery of the Patient – Prior to discharge from the TEE facility, the patient must be monitored for a sufficient amount of time to assure that no complications have arisen either from the procedure or the medication administered. The patient and/or the family must be instructed on any post-procedure care that the physician feels is necessary. Information must be given to outpatients that will allow them to contact the performing physician or physician on call should complications arise after patient discharge. A list of post-procedural complications must be maintained.
- 2.8.6B Components of the Examination – A protocol must be in place that defines the standard views and components of a comprehensive TEE examination. Indications for performance of a TEE examination must be included. A complete TEE and TEE-Doppler examination includes standard views from multiple planes including views of all cardiac structures and selected extracardiac structures.

*([See Guidelines on Page 31 for further recommendations.](#))*

- 2.8.7B The complete examination must include the following standard views while allowing for patient tolerance and safety:
- 2.8.7.1B gastric short axis and long axis views;
  - 2.8.7.2B standard 2 and 4 chamber views;
  - 2.8.7.3B short and long axis views of the aortic valve with appropriate Doppler;
  - 2.8.7.4B multiple imaging planes of the mitral valve with appropriate Doppler;
  - 2.8.7.5B multiple imaging planes of the tricuspid valve with appropriate Doppler;
  - 2.8.7.6B longitudinal view of the pulmonic valve with appropriate Doppler;
  - 2.8.7.7B multiple imaging planes of the right atrium, left atrium and left atrial appendage with appropriate Doppler;
  - 2.8.7.8B in cases of suspected cardiac source of emboli, appropriate use of contrast methods to evaluate for the presence of intracardiac shunting;
  - 2.8.7.9B multiple imaging planes of the atrial septum and foramen ovale with appropriate Doppler
  - 2.8.7.10B imaging of the pulmonary veins with appropriate Doppler, when mitral regurgitation is present;
  - 2.8.7.11B short axis views of the ascending, descending and transverse arch of the aorta;
  - 2.8.7.12B long axis views of the main pulmonary artery and proximal portions of the right and left pulmonary arteries;
  - 2.8.7.13B images of the proximal inferior and superior vena cava; and
  - 2.8.7.14B imaging of the pericardial space and pericardium.

## Section 2B: Adult Transesophageal Echocardiography Testing *Guidelines*

### 2.3B Procedure Volumes

*A facility should perform a minimum of 50 transesophageal echocardiographic studies annually. Each member of the medical staff should perform a minimum of 50 transesophageal echocardiographic studies annually. The total volume of studies interpreted and performed by each medical staff member may be combined from sources other than the applicant facility. Competency in the performance and interpretation may be present with fewer numbers of studies. Lower volumes than those recommended here, however, should not dissuade a facility that is otherwise compliant with the IAC Echocardiography Standards from applying for accreditation.*

### 2.5.2.1B Definition of Procedure Types and Protocols

*In general, a TEE should be performed to answer clinical questions that cannot be answered by transthoracic imaging. However, the routine practice of a facility should be the performance of a comprehensive evaluation.*

### 2.5.3B Scheduling

- *An urgent or stat TEE study should be performed as soon as possible and may preempt other clinical facility activities.*
- *Availability for Emergencies: Qualified personnel and equipment should be available for urgent or stat studies outside of normal working hours in most tertiary inpatient facilities or where appropriate in other medical facilities offering TEE services.*

### 2.8.6B Components of TEE Examination

*The examination should be performed in a methodical fashion although the order of imaging plane acquisitions and Doppler may vary so as to answer the question at hand in an expeditious fashion. Although limited TEE examinations may have a role in specific clinical situations, a facility should generally perform comprehensive examinations routinely, due to the high yield of unexpected findings.*

6. Recommendations for Evaluation of Prosthetic Valves With Echocardiography and Doppler Ultrasound: A Report from the American Society of Echocardiography's Guidelines and Standards Committee and the Task Force on Prosthetic Valves. Developed in Conjunction With the American College of Cardiology Cardiovascular Imaging Committee, Cardiac Imaging Committee of the American Heart Association, the European Association of Echocardiography, a registered branch of the European Society of Cardiology, the Japanese Society of Echocardiography and the Canadian Society of Echocardiography. Endorsed by the American College of Cardiology Foundation, American Heart Association and European Association of Echocardiography, a registered branch of the European Society of Cardiology, the Japanese Society of Echocardiography and Canadian Society of Echocardiography. Zoghbi, W., et al, *J Am Soc Echocardiogr*, 2009;22(9):975-1014. [www.onlinejase.com/article/S0894-7317\(09\)00676-2/fulltext](http://www.onlinejase.com/article/S0894-7317(09)00676-2/fulltext)

# Section 3B: Adult Stress Echocardiography Testing

## STANDARD – Instrumentation

### 3.1B Cardiac Ultrasound Systems

3.1.1B Ultrasound instruments utilized for stress echocardiographic studies must include, at a minimum, hardware and software to perform:

3.1.1.1B M-Mode imaging;

3.1.1.2B two-dimensional (2-D) imaging (the system must include harmonic capabilities);

3.1.1.3B spectral display for pulsed (PW) and continuous wave (CW) Doppler studies;

3.1.1.4B colorflow imaging;

3.1.1.5B monitor or other display method of suitable size and quality for observation and interpretation of all modalities;

Comment: The display must identify the parent institution, the name of the patient, the date and time of the study. The ECG must also be displayed.

3.1.1.6B range or depth markers must be available on all displays;

3.1.1.7B capabilities to measure the distance between two points, an area on a 2-D image, blood flow velocities, time intervals, and peak and mean gradients from spectral Doppler studies;

3.1.1.8B at least two imaging transducers, one of low frequency (2-2.5 MHz) and one of high frequency (3.5 MHz or higher); or a multi-frequency transducer which includes a range of frequencies specific to the clinical needs in adult echo.

Comment: A transducer dedicated to the performance of non-imaging continuous wave Doppler must be available at each site.

3.1.1.9B an audible output must be present at the time of acquisition;

3.1.1.10B machines with some, but not all of the above, equipment may be used for limited or directed echocardiographic examinations. However, machines utilized for complete diagnostic procedures must include all of the above listed capabilities.

*(See Guidelines on Page 38 for further recommendations.)*

### 3.2B Stress Echocardiography Acquisition Systems

3.2.1B Acquisition of the stress echocardiographic images must be available and utilized for the performance and interpretation of stress echocardiography.

3.2.1.1B The system must allow for accurate “triggered” acquisition of images and side-by-side image display.

3.2.1.2B The acquisition system must have adequate memory to allow performance of multi-stage stress echocardiogram studies.

3.2.1.3B The capability of side-by-side comparison of images from baseline and different stages of stress. Side-by-side review may be accomplished within the ultrasound stress package or on a dedicated offline workstation.

## STANDARD – Procedure Volumes

- 3.3B The annual procedure volume must be sufficient to maintain proficiency in examination performance and interpretation.

*(See Guidelines on Page 38 for further recommendations.)*

## STANDARD – Indications, Ordering Process and Scheduling

- 3.4B Stress echocardiography is performed for appropriate indications.<sup>1</sup>
- 3.4.1B Verification of the Indication – A process must be in place for obtaining and recording the indication. Before a study is performed, the indication must be verified and any additional information needed to direct the examination must be obtained.
- 3.5B Stress echocardiographic studies are appropriately ordered and scheduled.
- 3.5.1B Ordering Process – The stress echocardiogram order and/or requisition must indicate the type of study to be performed, the reason(s) for the study and the clinical question(s) to be answered. The signed order/requisition must be retained in the medical record of the patient.
- 3.5.1.1B Immediately prior to performing the test, the facility staff must assess the patient for the ability to exercise safely and to confirm that the type of stress (exercise or pharmacologic) requested is most appropriate.
- 3.5.2B Definition of Procedure Types
- 3.5.2.1B Two-phase stress echocardiography examines and compares left ventricular wall segments before stress and after stress and is usually accomplished using treadmill exercise (and are sometimes accomplished using pacing methods).
- 3.5.2.2B Three-phase stress echocardiography examines and compares left ventricular wall segments before, during, and after stress, and is usually accomplished using treadmill exercise or bicycle exercise ergometry (and is sometimes accomplished using pacing methods).
- 3.5.2.3B Four-phase stress echocardiography examines and compares left ventricular wall segments before, during and/or after stress, and is usually accomplished using pharmacological stress agents or supine bicycle ergometry (and is sometimes accomplished using pacing methods).
- 3.5.2.4B Doppler stress echocardiography compares antegrade and retrograde flows (if present) before, during and/or after stress. Doppler stress echocardiography may be performed alone or in conjunction with treadmill, bicycle, pacing or pharmacological stress.
- 3.5.2.5B Contrast agents may be used in conjunction with treadmill, bicycle, pacing or pharmacological stress to optimize endocardial border definition or enhance Doppler signals.
- 3.5.3B Scheduling – Sufficient time is allotted for each study according to the procedure type. The performance time allotted for a stress echocardiogram is 45 to 60 minutes from patient encounter to departure. An additional 15 to 30 minutes per study may be needed for the performance of a pharmacologic stress echocardiogram since these procedures require that intravenous access be obtained. Additional time will also be required when adding Doppler to any standard stress echocardiogram.

## STANDARD – Training

- 3.6B Stress echocardiography is a diagnostic test which, if performed and/or interpreted incorrectly, can lead to serious consequences for the patient.
- 3.6.1B Accurate performance of stress echocardiography requires that the performing sonographer and interpreting physician are adequately trained and experienced to perform and interpret stress echocardiograms.
- 3.6.2B All personnel directly supervising stress procedures must have appropriate training/experience. While physician presence during stress testing is not required, the facility must assure that appropriate staff is present based upon the types of procedures being performed and the patients' risks of adverse events.
- 3.6.3B If a non-physician (e.g., properly trained nurse, physician assistant, nurse practitioner, exercise physiologist) practicing under the physician's license is supervising the stress test, the Medical Director or physician director of the stress facility must provide written attestation of appropriate training and competence as outlined in the American College of Cardiology/American Heart Association Clinical Competence Statement on Stress Testing.
- Comment: For specific training and competence requirements, see [Bibliography](#).
- 3.6.4B At a minimum, at least two qualified people are required to be in attendance during stress testing.
- 3.6.5B Basic Life Support – All personnel, including physicians, directly supervising stress procedures must have appropriate training/experience and must be certified in basic life support.
- 3.6.6B Advanced Cardiac Life Support – There must be ACLS certified personnel on-site and immediately available during cardiac stress procedures.

## STANDARD – Techniques

- 3.7B Examination performance must include proper technique.
- 3.7.1B Elements of study performance include, but are not limited to:
- 3.7.1.1B proper patient positioning during image acquisition (beds with imaging drop sections are strongly recommended);
  - 3.7.1.2B appropriate transducer selection and placement;
  - 3.7.1.3B achievement of optimal heart rate;
  - 3.7.1.4B optimization of the ultrasound equipment gain and display settings;
  - 3.7.1.5B contrast is indicated for use when two contiguous segments are not visualized as it provides greater accuracy in determining left ventricular function. Contrast must be used if this is not accomplished with harmonic optimal imaging<sup>8</sup>;
  - 3.7.1.6B depth settings and view orientation must be the same at all stages for the purpose of side by side comparisons;
  - 3.7.1.7B for treadmill stress, post stress images must be obtained within 60-90 seconds of peak stress (if images are obtained beyond 90 seconds it must be noted in the report);

- 3.7.1.8B for pharmacologic echo, images must be obtained within the last 60 seconds of each stage;
- 3.7.1.9B optimization of digitized images for side by side comparison;
- 3.7.1.10B utilization of artifact-free ECG for digital triggering purposes;
- 3.7.1.11B appropriate ECG lead placement;
- 3.7.1.12B utilization of appropriate Doppler technique (including proper alignment) and measurements; and
- 3.7.1.13B performance of a stress echocardiogram according to the facility specific and appropriate protocol that incorporates all views and imaging planes mandated by Standard 3.7B.
- 3.7.2B Elements of study quality include, but are not limited to:
  - 3.7.2.1B definition of endocardium;
  - 3.7.2.2B display of standard, on axis, imaging planes (e.g., avoidance of foreshortening);
  - 3.7.2.3B measurements of left ventricular dimensions (when performed) obtained from standard orthogonal imaging planes;
  - 3.7.2.4B accurate digital triggering (from ECG R wave);
  - 3.7.2.5B appropriate side by side image display;
  - 3.7.2.6B adherence to the facility specific and appropriate protocol; and
  - 3.7.2.7B avoidance of artifacts when using contrast.

## **STANDARD – Stress Echocardiography Facility Arrangement**

- 3.8B Stress echocardiograms must be performed in a facility designed to assure patient safety.
  - 3.8.1B Elements of the stress echocardiography facility arrangement include, but are not limited to ([Section 2A: Facility, 2.1A, 2.12A](#) and [Section 4A: Facility Safety, 4.1A and 4.1.1A](#)):
    - 3.8.1.1B Proper placement of emergency equipment (crash cart and oxygen) such that they are easily accessible.

## **STANDARD – Stress Echocardiogram Components**

- 3.9B Stress echocardiograms must be comprehensive and include standard components.
  - 3.9.1B Components of the Examination – Separate protocols must be in place that defines the components of each type of stress echocardiograms performed in the facility. Indications for the performance of a pharmacologic stress echocardiogram and/or a standard exercise stress echocardiogram must be included.
 

Comment: Alternate views may be obtained if contrast is used.

    - 3.9.1.1B Treadmill Stress Echo: Images must be obtained at baseline and immediately post exercise. All LV segments need to be visualized and compared side by side (baseline vs. peak exercise). The required views are parasternal long axis view,

parasternal short axis view, apical four-chamber view and apical two-chamber view, or apical long axis, apical four-chamber view, apical two-chamber view and apical short-axis view.

3.9.1.2B      Bicycle Stress Echo Protocols: At a minimum, images must be obtained at baseline and immediately post exercise. All LV segments need to be visualized and compared side by side. The required views are parasternal long axis view, parasternal short axis view, apical four-chamber view and apical two-chamber view or apical long axis, apical four-chamber view, apical two-chamber view and apical short-axis view.

3.9.1.3B      Pharmacologic Stress Echo: Images must be obtained at baseline and three other phases. Common protocols include digitizing rest, low-dose, pre-peak and peak, or rest, low-dose, peak and recovery. All LV segments need to be visualized and compared side by side. The required views are parasternal long axis view, parasternal short axis view, apical four-chamber view and apical two-chamber view, or apical long axis, apical four-chamber view, apical two-chamber view and apical short-axis view.

3.9.1.4B      Contrast Stress Echo: Facilities using contrast must have a written protocol for use of contrast agents for stress echocardiography.

3.9.1.5B      A Doppler stress echocardiogram includes interrogations of flow velocities (from the same site) before, during and/or immediately following stress. Doppler stress echocardiography may be utilized to document gradient changes that occur with stress, or to evaluate diastolic filling pattern changes that occur with stress.

3.9.2B      Patient Preparation – To adequately perform stress echocardiogram studies, appropriate safety guidelines must be in place.

3.9.2.1B      All stress echocardiogram procedures must be explained to the patient and/or the guardian of those unable to give informed consent. Consent must be obtained in a manner consistent with the rules and regulations outlined by the hospital or facility.

3.9.2.2B      Patients undergoing pharmacologic or contrast echocardiography must have a functioning intravenous access in place.

3.9.2.3B      A fully-equipped cardiac arrest cart (crash cart) as outlined in [Section 4A: Facility Safety, 4.1.2A](#) of the Standards with additional medications utilized for reversing the effect of the pharmacologic stress agent(s) must be available at all times.

3.9.3B      Patient Monitoring

3.9.3.1B      During the image acquisition phase and during the recovery phase of the examination, the vital signs of the patient must be periodically evaluated in accordance with the stress testing protocol.

3.9.3.2B      Cardiac monitoring with standard stress testing leads must be utilized.

3.9.3.3B      A list of procedural complications must be maintained.

## Section 3B: Adult Stress Echocardiography Testing *Guidelines*

### 3.1.1B Cardiac Ultrasound Systems

- *Instrument settings to enable optimization of ultrasound contrast agents.*
- *There should be a system setting to display low frequency Doppler filtering for tissue Doppler display.*

### 3.3B Procedure Volumes

*A facility should perform a minimum of 100 stress echocardiograms annually. Each member of the medical staff should interpret a minimum of 100 stress echocardiograms annually. Each member of the technical staff should perform a minimum of 100 stress echocardiograms annually. The total volume of studies interpreted and performed by each staff member may be combined from sources other than the applicant facility. Lower volumes than those recommended here, however, should not dissuade a facility that is otherwise compliant with the IAC Echocardiography Standards from applying for accreditation.*

# Part C:

## Quality Improvement

---

### Section 1C: Quality Improvement Program

#### STANDARD – QI Program

- 1.1C The facility must have a written Quality Improvement (QI) program for all imaging procedures. The QI program must include the QI measures outlined below but may not be limited to the evaluation and review of:
- 1.1.1C test appropriateness;
  - 1.1.2C technical quality and, if applicable, safety of the imaging;
  - 1.1.3C interpretive quality review;
  - 1.1.4C report completeness and timeliness; and
  - 1.1.5C correlation.

#### STANDARD – QI Oversight

- 1.2C The Medical Director, staff and/or an appointed QI Committee must provide oversight to the QI program including but not limited to review of the reports of QI evaluations and any corrective actions taken to address any deficiencies.

### Section 1C: Quality Improvement Program

#### *Guidelines*

*Sample documents are available for each of the required QI components on the IAC Echocardiography website at [intersocietal.org/echo/seeking/sample\\_documents.htm](https://intersocietal.org/echo/seeking/sample_documents.htm).*

## Section 2C: Quality Improvement Measures

### STANDARD – QI Measures

- 2.1C Facilities are required to have a process in place to evaluate the QI measures outlined in sections 2.1.1C through 2.1.5C.
- 2.1.1C Test Appropriateness
- 2.1.1.1C The facility must evaluate the appropriateness of the test performed for a minimum of 30 consecutive TTE, TEE and SE examinations annually and categorize as:
- appropriate/usually appropriate;
  - may be appropriate; or
  - rarely appropriate/usually not appropriate.
- 2.1.2C Technical Quality Review (Sonographer Performance Variability)
- 2.1.2.1C The facility must evaluate the technical quality of the images and, if applicable, the safety of the procedure. The review must include but is not limited to the evaluation of:
- the clinical images for clarity of images and/or evaluation for suboptimal images or artifact;
  - completeness of the study; and
  - adherence to the facility imaging acquisition protocols.
- 2.1.2.2C Two cases per modality (TTE, SE) per quarter must be reviewed for image quality, completeness of the study and adherence to the facility protocol to be reviewed in QI meetings. The cases must represent as many sonographers as possible. Discrepancies in acquisition quality and variability must be reconciled to achieve uniform examination quality.
- 2.1.3C Interpretive Quality Review (Physician Interpretation Variability)
- 2.1.3.1C The facility must evaluate the quality and accuracy of the interpretation based on the acquired images.
- Ejection fraction (EF), wall motion analysis or degree of regurgitation/stenosis must be assessed on a minimum of two cases per modality per quarter to be reviewed in QI meetings. The cases must represent as many physicians as possible. Differences in interpretation must be reconciled to achieve uniform examination interpretation.
- 2.1.4C Final Report Completeness and Timeliness
- 2.1.4.1C The facility must evaluate the final report for completeness and timeliness as required in the Standards.
- A minimum of 10 random reports per quarter must be evaluated for compliance with the Standards in regard to report components (demographics, 2-D and/or M-Mode numeric data, Doppler evaluation and report text comments), interpretation time and final report generation to be reviewed in QI meetings. All modalities (TTE, TEE, SE) performed in the facility must be represented in the 10 random reports. The reports must represent as many physicians as possible.

2.1.5C Correlation

- 2.1.5.1C Correlation must be performed with any appropriate imaging modality, surgical findings or clinical outcomes for a minimum of four cases annually with at least two cases per relevant testing area to be reviewed in QI meetings.

*([See Guidelines on Page 43 for further recommendations.](#))*

## Section 2C: Quality Improvement Measures

### Guidelines

Sample documents are available for each of the required QI components on the IAC Echocardiography website at [intersocietal.org/echo/seeking/sample\\_documents.htm](http://intersocietal.org/echo/seeking/sample_documents.htm).

#### 2.1.5C Correlation and Confirmation of Results

Correlation of Transthoracic Echocardiograms: For those patients who have undergone transthoracic echocardiograms and other diagnostic procedures (such as cardiac catheterization, coronary angiograms or nuclear perfusion studies) or surgical intervention, the results of transthoracic echocardiograms and other procedures must be routinely compared with regard to valvular abnormalities and left ventricular function. Correlation data for each physician responsible for the interpretation of transthoracic echocardiograms in the facility must be accumulated by the facility and distributed to the interpreting physician. A process for addressing discrepancies between echocardiogram examination results and results of other procedures must be in place. Appropriate components and areas for correlation of transthoracic studies include, but are not limited to:

- left ventricular function, regional wall motion abnormalities and ejection fraction;
- aortic stenosis;
- aortic regurgitation;
- mitral valve regurgitation;
- mitral stenosis; and
- pulmonary artery pressure.

Correlation of Transesophageal Echocardiograms (if performed): For those patients who have undergone transesophageal echocardiograms and surgical repair or other diagnostic procedures (such as coronary angiograms or nuclear perfusion studies), the results of transesophageal echocardiograms and other procedures must be routinely compared with regard to valvular abnormalities, left ventricular function and abnormalities of the aorta. Correlation data for each physician responsible for the interpretation of transesophageal echocardiograms in the facility must be accumulated by the facility and distributed to the interpreting physician. A process for addressing discrepancies between echocardiogram examination results and results of other procedures must be in place. Appropriate components and areas for correlation of transesophageal echocardiograms include, but are not limited to:

- left ventricular function and regional wall motion analysis;
- mechanism and severity of valvular dysfunction;
- presence or absence of thrombi or vegetations; and
- presence or absence of aortic dissection, atheromas, hematomas or ruptures.

Correlation of Stress Echocardiograms (if performed): For those patients who have undergone stress echocardiography and other diagnostic procedures (such as coronary angiograms or nuclear perfusion studies), the results of the stress echocardiogram and the other procedures must be routinely compared. Correlation data for each physician responsible for the interpretation of stress echocardiograms in the facility must be accumulated by the facility and distributed to the interpreting physician. Each type of stress echocardiogram performed in the facility must be included in the comparison studies. A process for addressing discrepancies between echocardiogram examination results and results of other procedures must be in place.

## Section 3C: Quality Improvement Meetings

### STANDARD – QI Meetings

#### 3.1C Quality Improvement (QI) Meetings

3.1.1C The facility must have a minimum of two QI meetings per year, one of which is to review the results of the QI analyses and any additional QI-related topics.

3.1.2C All staff must participate in at least one meeting per year.

*([See Guidelines below for further recommendations.](#))*

## Section 3C: Quality Improvement Meetings *Guidelines*

3.1C *QI meetings must not be counted as ongoing Continuing Medical Education (CME) but rather as part of the facility's ongoing QI Program. CME may be obtained in several ways including self-study materials such as approved CD, journal, Internet and videotape materials, as well as departmental, local, regional and national conferences and courses.*

## Section 4C: Quality Improvement Documentation

### STANDARD – QI Documentation

#### 4.1C QI Documentation and Record Retention

4.1.1C The facility QI documentation must include but is not limited to:

4.1.1.1C the data for all of the QI meetings;

4.1.1.2C minutes from the QI meetings; and

4.1.1.3C participant list (may include remote participation and/or review of minutes).

4.1.2C The QI documentation must be maintained and available for all appropriate personnel to review.

ACCF/ASE/AHA/ASNC/HFSA/HRS/SCAI/SCCM/SCCT/SCMR 2011 – Appropriate Use Criteria for Echocardiography: A Report of the American College of Cardiology Foundation Appropriate Use Criteria Task Force, American Society of Echocardiography, American Heart Association, American Society of Nuclear Cardiology, Heart Failure Society of America, Heart Rhythm Society, Society for Cardiovascular Angiography and Interventions, Society of Critical Care Medicine, Society of Cardiovascular Computed Tomography and Society for Cardiovascular Magnetic Resonance. Endorsed by the American College of Chest Physicians. Douglas, P., et al, *J Am Coll Cardiol*, 2011;57(9):1126-1166. [content.onlinejacc.org/article.aspx?articleid=1144231](http://content.onlinejacc.org/article.aspx?articleid=1144231)

# Appendix A

Stress test supervision by non-physician training and competency requirements:

- 1.5.1A If a non-physician (e.g., properly trained nurse, physician assistant, nurse practitioner, exercise physiologist) practicing under the physician's license is supervising the stress test, the facility or Medical Director must document appropriate training and competence as outlined in the American College of Cardiology/American Heart Association Clinical Competence Statement on Stress Testing. (See Bibliography)

## Supervision of Exercise Stress Testing:

- a. knowledge of appropriate indications for exercise testing;
- b. knowledge of alternative physiological cardiovascular tests;
- c. knowledge of appropriate contraindications, risks and risk assessment of testing (not limited to Bayes' theorem and sensitivity/specificity, including concepts of absolute and relative risk);
- d. knowledge to promptly recognize and treat complications of exercise testing;
- e. competence in cardiopulmonary resuscitation and successful completion of an AHA-sponsored course in advanced cardiovascular life support and renewal on a regular basis;
- f. knowledge of various exercise protocols and indications for each;
- g. knowledge of basic cardiovascular and exercise physiology, including hemodynamic response to exercise;
- h. knowledge of cardiac arrhythmias and the ability to recognize and treat serious arrhythmias;
- i. knowledge of cardiovascular drugs and how they can affect exercise performance, hemodynamics and the ECG;
- j. knowledge of the effects of age and disease on hemodynamic and ECG responses to exercise;
- k. knowledge of principles and details of exercise testing, including proper lead placement and skin preparation;
- l. knowledge of end points of exercise testing and indications to terminate exercise testing.

## Supervision of Pharmacologic Stress Agents:

- a. knowledge of appropriate indications;
- b. knowledge of appropriate contraindications;
- c. knowledge of advantages and disadvantages of different exercise and pharmacological stress for echocardiography;
- d. knowledge of complications and ability to recognize and appropriately treat complications, including use of adenosine/dobutamine antagonists such as theophylline and aminophylline;
- e. competence in cardiopulmonary resuscitation and successful completion of an AHA-sponsored course in advanced cardiovascular life support and renewal on a regular basis;
- f. knowledge of various vasodilator, adrenergic stress protocols;
- g. knowledge of the pharmacokinetics of vasodilator and adrenergic drugs;
- h. knowledge of basic cardiovascular physiology, including heart rate and blood pressure response to vasodilators and adrenergic-stimulating agents;
- i. knowledge of electrocardiography and changes that may occur in response to vasodilators or adrenergic-stimulating agents;
- j. knowledge of cardiac arrhythmias and their treatment, including high-grade ventricular arrhythmia and heart block;
- k. knowledge of cardiovascular drugs (and other agents, e.g., caffeine) and their effects on vasodilator and adrenergic drugs.

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
*CMS High Expenditure Procedures*

April 2016

**Photodynamic Therapy**

CPT code 96567 *Photodynamic therapy by external application of light to destroy premalignant and/or malignant lesions of the skin and adjacent mucosa (eg, lip) by activation of photosensitive drug(s), each phototherapy exposure session* was identified by Centers for Medicare and Medicaid Services (CMS) in the high expenditure services screen. The RUC recommended that this service be removed from the screen because it has a work RVU of 0.00. In the Final Rule for 2016 CMS indicated that this service should be reviewed.

In April 2001 CPT code 96567 was reviewed as new technology. The procedure involves application of a photo-sensitizing agent followed by exposure to special ultra-violet light. A survey of 39 dermatologists using this new technology indicated that there was some physician work for this XXX global period procedure. However, upon review of the survey responses, the specialty society concluded that the respondents did not accurately assess the time required by the physician for this procedure using the new technology and included a written recommendation that for the typical patient receiving this procedure, there is no physician work. The RUC agreed that the procedure, using this new technology, does not involve physician work but does involve practice expense direct inputs. Years later the service was nominated to be considered in 2005 Five-Year Review. The final Five-Year Workgroup report indicated that after extensive discussion with the RUC regarding the potential need for further CPT revisions, the RUC advised the specialty society that if physician work is part of the code then the specialty would need to submit a coding proposal to CPT to clarify the language to include physician work. At that time the specialty decided to instead withdraw the code from the Five-Year Review.

At the April 2016 RUC meeting the specialty society recommended that the service be deferred to the October 2016 RUC meeting in order for a survey of work to be conducted. The specialty explained that in reviewing the service closely, they realized that there is now physician work involved in providing this service. In order to confirm this observation, the specialty conducted an informal survey that was sent to a few dermatologists. The specialty contends that the results confirm that physicians are involved in the actual delivery of care to patients by performing tasks such as: curettage of thick lesions, real time tailoring of the PDT regimen, explaining side effects, and providing post care instructions. A RUC member questioned if any of the aforementioned services were separately billable and the specialty clarified that they are not. The specialty added that there has been no change to the service and that it is not necessary to refer to the code to the CPT Editorial Panel. A RUC member questioned why the specialty would be claiming that there is physician work now, when it was stated by the specialty that the service has not changed and in 2001 the specialty concluded that for the typical patient there is no physicians work as noted above. A RUC member suggested that there may be the need for two separate codes, one for a simple procedure that clinical staff can provide and one that is more complex and needs

physician involvement. Another RUC member stated that the RUC does not have enough information to determine if the service should or should not go to CPT and ultimately that decision is up to the specialty society. The RUC member continued that this is an unusual service in that it usually is a two encounter service yet it is a single XXX global code. If they are going to survey for work the RUC advised that they go to CPT in order to separate this into two codes or at a minimum seek advice from the Research Subcommittee about how to survey for this type of service. The specialty indicated that it would submit a code change application to split code 96567 into two codes—one to describe physician work and one to describe the when the service is provided by clinical labor only.. The specialty will submit a CCP for the September 2016 CPT meeting to address these concerns. **The RUC refers CPT code 96567 to the CPT Editorial Panel.**

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
96567	Photodynamic therapy by external application of light to destroy premalignant and/or malignant lesions of the skin and adjacent mucosa (eg, lip) by activation of photosensitive drug(s), each phototherapy exposure session	XXX	Refer to CPT Sept 2016

*American Academy of Dermatology Association*  
Excellence in Dermatology™

**Subject: Photodynamic therapy (CPT Code 96567)**

**Tab 43**

Dear Dr. Smith,

The *Photodynamic therapy code 96567* was captured by the screen for high expenditure services across specialties with Medicare allowed charges of \$10 million or more. The RUC requested the American Academy of Dermatology Association (AADA) to review the practice expense (PE) values for the April 2016 meeting. However, in reviewing the service closely, we realized that there is physician work involved in providing this service. In order to confirm our observation we created an informal survey that was sent to a few of our colleagues. The results confirmed that physicians are involved in the actual delivery of care to patients by performing tasks such as: curettage of thick lesions, real time tailoring of the PDT regimen, explaining side effects, and providing post care instructions.

The AADA is recommending reviewing both the PE and the work RVUs of this service, which will require surveying and developing a Summary of Recommendations. We are therefore requesting review of the CPT code 96567 at the October RUC meeting, rather than in April.

Thank you for your consideration and guidance.

Sincerely,

Daniel M. Siegel, M.D.  
AADA RUC advisor

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
*CMS High Expenditure Procedures*

April 2016

**Photo-chemotherapy – PE Only**

In the Final Rule for 2016 CMS re-ran the high expenditure services across specialties with Medicare allowed charges of \$10 million or more. CMS identified the top 20 codes by specialty in terms of allowed charges, excluding 010 and 090-day global services, anesthesia and Evaluation and Management services and services reviewed since CY 2010. The RUC recommended that this service be removed from the screen because the work RVU is 0.00. In the Final Rule for 2016 CMS indicated that this service should be reviewed.

The specialty society explained that the technology for photochemotherapy has changed since this service was last reviewed in February 2001 from broadband UVB only to predominantly narrowband UVB. Patients are treated more aggressively resulting in longer treatment sessions and increased staff requirements. Moreover, due to increased energy output of bulbs, patients must be monitored more closely. The specialty also clarified that the typical patient receiving this procedure is a 47 year-old obese male patient with severe psoriasis with extensive body surface area involvement. The specialty explained that the occlusive dressings (ie impermeable sauna suit, nonlatex impermeable gloves and saran wrap) are applied over the tar. The sauna suit is listed as 0.5 units under supplies because it is used by the same patient for two separate treatment sessions.. The specialty also verified that both the *phototherapy unit, hand-foot, UVA-UVB, EQ204* and *phototherapy unit, whole body, UVA-UVB, EQ205* are used for the typical patient and that the *phototherapy UVB measuring device EQ203* is only used for 2 minutes, rather than the entire service period.

The PE Subcommittee reviewed the direct PE inputs for CPT code 96910. The Subcommittee made the following modifications:

- Moved 2 minutes to *Other Clinical Activity - specify: Review physician orders and calculate dosage* from the post-service portion of the service period to pre-service portion of the service period.
- Verified that the sauna suit is used twice.
- Reduced the time to 2 minutes for equipment item *phototherapy UVB measuring device EQ203* because it is not used for the entire service period and only requires 2 minutes of use, not directly corresponding to a line item on the spreadsheet.
- Modified the other equipment items *table, exam, EF023 light, exam, EQ168, phototherapy unit, hand-foot, UVA-UVB, EQ204* and *phototherapy unit, whole body, UVA-UVB, EQ205* to include the entire service period for the equipment minutes.

**The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.**

### Attestation Statement

This form needs to be completed by any **RUC Advisor** whose specialty society is developing a recommendation to be reviewed by the RUC.

As a RUC Advisor, I attest that the integrity of the RUC survey, summary of recommendation forms and practice expense recommendations are based on accurate and complete data to the best of my knowledge. As a RUC advisor, I acknowledge that violations would be addressed by the executive committee (i.e., RUC Chair, AMA Representative and Alternate AMA Representative.)

**AMA/Specialty Society Update Process  
Practice Expense Summary of Recommendation  
Non Facility Direct Inputs**

CPT Long Descriptor:

Photochemotherapy; tar and ultraviolet B (Goeckerman treatment) or petrolatum and ultraviolet B

Global Period: XXX Meeting Date: April 2016

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:

AADA convened a RUC expert panel to review the current Practice Expense data and practice patterns to make a recommendation.

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale:

We are making our recommendation using the current PE direct inputs as a comparison.

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:

N/A

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:

The technology for photochemotherapy has changed from broad band UVB only to predominantly narrow band UVB. Patients are treated more aggressively resulting in longer treatment sessions and increased staff requirements. Moreover, due to increased energy output of bulbs, patients must be monitored more closely.

5. Please describe in detail the clinical activities of your staff:

**Typical Patient** – a 47 year obese male patient with severe psoriasis with extensive body surface area involvement.

Pre-Service Clinical Labor Activities:

Nurse calibrates UV bulb power output. Nurse reviews chart and medications especially for new photosensitizing meds and previous treatment protocol and reviews physician orders. Nurse interviews and examines the patient and takes vital signs. Nurse evaluates response to therapy as well as any UV burn from previous treatment and any history of UV exposure in the last 48 hours. A plan for current treatment is determined.

Nurse applies topical tar product. Occlusive dressings (ie impermeable sauna suit, nonlatex impermeable

gloves and saran wrap) are applied over the tar. The tar product is allowed to penetrate. After incubation, the tar is removed. UV protective topicals are applied to areas that physician doesn't want exposed to UV.

**Intra-Service Clinical Labor Activities:**

The nurse positions the patient in the whole body UV machine and then starts the exposure. After first exposure, the nurse moves the patient to the hand/foot UV machine, positions the patient properly and activates the second UV exposure. Nurse monitors the patient throughout treatment.

**Post-Service Clinical Labor Activities:**

After the UV treatment, the nurse applies topical steroid and UV protective topicals to appropriate areas. The nurse reviews the treatment and skin care instructions with the patient including photosensitivity and sun protection measures.

The nurse charts the treatment.

The nurse cleans both phototherapy units and the treatment room. The treatment room is cleaned three times (after tar application, after tar removal and at discharge).

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
*High Volume Growth*

April 2016

**Home INR Monitoring**

In October 2015, AMA Staff assembled a list of all services with total Medicare utilization of 10,000 or more that have increased by at least 100% from 2008 through 2013 and these services were identified. In April 2016, the specialty society indicated that they intend to develop Category I codes to describe home INR monitoring services for the September 2016 CPT meeting with review at the January 2017 RUC meeting. **The RUC recommends that codes G0248, G0249 and G0250 be referred to CPT to create Category I codes to describe these services.**

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
G0248 (f)	Demonstration, prior to initiation of home INR monitoring, for patient with either mechanical heart valve(s), chronic atrial fibrillation, or venous thromboembolism who meets Medicare coverage criteria, under the direction of a physician; includes: face-to-face demonstration of use and care of the INR monitor, obtaining at least one blood sample, provision of instructions for reporting home INR test results, and documentation of patient's ability to perform testing and report results	XXX	Refer to CPT Sept 2016
G0249 (f)	Provision of test materials and equipment for home INR monitoring of patient with either mechanical heart valve(s), chronic atrial fibrillation, or venous thromboembolism who meets Medicare coverage criteria; includes: provision of materials for use in the home and reporting of test results to physician; testing not occurring more frequently than once a week; testing materials, billing units of service include 4 tests	XXX	Refer to CPT Sept 2016

G0250	Physician review, interpretation, and patient management of home INR testing for patient with either mechanical heart valve(s), chronic atrial fibrillation, or venous thromboembolism who meets Medicare coverage criteria; testing not occurring more frequently than once a week; billing units of service include 4 tests	XXX	Refer to CPT Sept 2016

Peter Smith, M.D.

Chair, AMA/Specialty Society RVS Update Committee  
330 N. Wabash, Suite 39300  
Chicago, IL 60611

RE: Tab 45 Home INR Monitoring

Dear Dr. Smith:

Three G codes describing the initial demonstration (G0248), the provision of test materials (G0249), and physician interpretation and management (G0250) of home INR testing were identified by the RAW as potentially misvalued at the January 2016 meeting. After consultation between ACC's RUC and CPT advisors, a decision was made to write a code change proposal to create Category I CPT codes that describe these services.

A code change proposal is under development and will be submitted for consideration at the October 2016 CPT meeting. The ACC looks forward to presenting survey data and recommendations to the RUC at the January 2017 meeting. We recommend the RUC formally refer this issue to CPT.

Sincerely,

Richard F. Wright, MD  
ACC RUC Advisor
