1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee: The AAO-HNS and ACS RUC Advisors reviewed the current PE details for 31600, 31601, and 31603.

2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison. You must provide an explanation for the selection of reference codes. Reference Code Rationale: N/A

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time: N/A

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence: N/A

5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities: N/A

Intra-Service Clinical Labor Activities: N/A

Post-Service Clinical Labor Activities N/A

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation
Facility Direct Inputs

31610	Tracheostomy, fenestration procedure with skin flaps

Global Period: 090 Meeting Date: April 2016

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee: The AAO-HNS and ACS RUC Advisors reviewed the current PE details for 31610.

2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison. You must provide an explanation for the selection of reference codes. Reference Code Rationale: N/A

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:

Post-operative office visit time has been adjusted to match the current survey.

Time to clean a basic surgical instrument pack at each office visit has been added to the post-service period.

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:

Clinical Staff Time
Post-operative office visit time has been adjusted to match the current survey.
Time to clean a basic surgical instrument pack that is utilized at each office visit has been added to the post-service period.

Supplies
Tracheostomy replacement and stoma care is provided at every post op office visit. The quantities for supplies have been adjusted to match the number of post operative visits (3) where the item is used. Three new items necessary for tracheostomy replacement and stoma care have been added; (1) hydrogen peroxide for cleaning tracheostomy tube and associated materials; (2) suction canister; and cleaning pack for instruments.

Equipment time
Times for the fiberoptic headlight, exam chair, and suction cabinet have been adjusted to correspond to the new post op visit time. These three items are in the procedure / exam room from the time the patient enters the office until the patient leaves. These items are not used by any other patient during this time.

A basic instrument pack required at each office visit has been added. Per CMS instructions regarding simultaneous cleaning room and cleaning instruments, the calculated time for each office visit is equal to POV time minus 3 minutes for cleaning room plus 10 minutes for cleaning instruments). This was multiplied by 3 visits to equal 129 minutes.

5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

Clinical staff will coordinate diagnostic and referral forms, pre-surgery services, and scheduling space and equipment in the facility. In addition, clinical staff will communicate with the patient's family/caregiver regarding the procedure, after care including home health care, necessary supplies, etc.

Intra-Service Clinical Labor Activities:

Staff will assist with coordination of care post-discharge, communicating with the patient's family/caregiver regarding questions about home care, supplies and follow-up.

Post-Service Clinical Labor Activities:

At each office visit, clinical staff will greet and gown the patient, assure all records are available, set up room with necessary supplies and instruments, set up the suctioning equipment and confirm it is functioning, assist the physician 100% of the time with changing of the tracheostomy tube and cleaning of the stoma, cleaning the room, instruments, and suction machine, and reviewing home care of the tracheostomy with the patient and family/caregiver.

AMA/Specialty Society RVS Update Committee Summary of Recommendations
CMS High Expenditure Procedures

October 2016

Insertion of Catheter

In the Final Rule for 2016 CMS re-ran the high expenditure services across specialties with Medicare allowed charges of $10 million or more. CMS identified the top 20 codes by specialty in terms of allowed charges, excluding 010 and 090-day global services, anesthesia and Evaluation and Management services and services reviewed since CY 2010. Prior to the January 2016 RUC meeting, the specialty societies notified the RUC that CPT code 36556 *Insertion of non-tunneled centrally inserted central venous catheter; age 5 years or older* (work RVU=2.50) was to be reviewed by the RUC at the October 2016 meeting. The specialty requested that codes 93503 *Insertion and placement of flow directed catheter (eg, Swan-Ganz) for monitoring purposes* (work RVU=2.91) and 36620 *Arterial catheterization or cannulation for sampling, monitoring or transfusion (separate procedure); percutaneous* (work RVU=1.15) be postponed to the October 2016 meeting so that they could survey all three codes together. The RUC recommended deferring CPT codes 36556, 93503, and 36620 to the October 2016 RUC meeting. The family was expanded to include CPT code 36555 *Insertion of non-tunneled centrally inserted central venous catheter; younger than 5 years of age* (work RVU=2.68).

36555 Insertion of non-tunneled centrally inserted central venous catheter; younger than 5 years of age
The RUC reviewed the survey results from 40 anesthesiologists and recommends the following physician time components: pre-service time of 23 minutes, intra-service time of 15 minutes and immediate post-service time of 10 minutes.

The RUC reviewed the survey respondents' estimated work RVU values and agreed with the specialty society that the respondents did not adequately account for the increased complexity of the physician work involved in this pediatric code 36555 compared to the adult code 36556. While both services have the same intra-service time, there is increased risk of nerve or arterial injury due to the limited space in a child. Therefore, the RUC reviewed the current increment between these two codes (0.18) and agreed that this value accurately captures the intensity difference. The RUC added the increment of 0.18 to the recommended work RVU of 1.75 for CPT code 36556 to arrive at a recommended work RVU of 1.93 for CPT code 36555. To justify a work RVU of 1.93, the RUC compared the surveyed code to CPT code 54150 *Circumcision, using clamp or other device with regional dorsal penile or ring block* (work RVU= 1.90, intra time= 15 minutes) and agreed that these two services have nearly identical physician time and should be valued similarly. The RUC also reviewed CPT code 49451 *Replacement of duodenostomy or jejunostomy tube, percutaneous, under fluoroscopic guidance including contrast injection(s), image documentation and report* (work RVU= 1.84, intra time= 15 minutes) and agreed that this service, with identical intra time and analogous work, also provided support that the recommended value is accurate. **The RUC recommends a work RVU of 1.93 for CPT code 36555.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

36556 Insertion of non-tunneled centrally inserted central venous catheter; age 5 years or older
The RUC reviewed the survey results from 141 anesthesiologists and radiologists and recommends the following physician time components: pre-service time of 20 minutes, intra-service time of 15 minutes and immediate post-service time of 5 minutes.

The RUC reviewed the survey respondents' estimated work RVU values and agreed that the 25th percentile work RVU of 1.75 is appropriate for this code. To justify a work RVU of 1.75, the RUC compared the surveyed code to several 000-day global codes with identical intra-service time: CPT code 64461 *Paravertebral block (PVB) (paraspinous block), thoracic; single injection site (includes imaging guidance, when performed)* (work RVU= 1.75), 64483 *Injection(s), anesthetic agent and/or steroid, transforaminal epidural, with imaging guidance (fluoroscopy or CT); lumbar or sacral, single level* (work RVU= 1.90), and 53855 *Insertion of a temporary prostatic urethral stent, including urethral measurement* (work RVU= 1.64). The RUC agreed that the recommended work RVU of 1.75 accurately placed code 36556 in the range of these similar services. **The RUC recommends a work RVU of 1.75 for CPT code 36556.**

36620 Arterial catheterization or cannulation for sampling, monitoring or transfusion (separate procedure); percutaneous
The RUC reviewed the survey results from 101 anesthesiologists and radiologists and recommends the following physician time components: pre-service time of 7 minutes, intra-service time of 7 minutes and immediate post-service time of 3 minutes.

The RUC reviewed the survey respondents' estimated work RVU values and agreed that the 25th percentile work RVU of 1.00 is appropriate for this code. To justify a work RVU of 1.00, the RUC compared the surveyed code to the top key reference service 64450 *Injection, anesthetic agent; other peripheral nerve or branch* (work RVU= 0.75, intra time= 5 minutes) and noted that code 36620 has more intra-service time and additional complexity compared to the reference code and is justifiably valued higher. The RUC also reviewed codes 31231 *Nasal endoscopy, diagnostic, unilateral or bilateral (separate procedure)* (work RVU= 1.10) and 64405 *Injection, anesthetic agent; greater occipital nerve* (work RVU= 0.94) and agreed that both these analogous codes provide additional support to the recommended value. **The RUC recommends a work RVU of 1.00 for CPT code 36620.**

93503 Insertion and placement of flow directed catheter (eg, Swan-Ganz) for monitoring purposes
The RUC reviewed the survey results from 76 anesthesiologists and radiologists and recommends the following physician time components: pre-service time of 12 minutes, intra-service time of 15 minutes and immediate post-service time of 10 minutes.

The RUC reviewed the survey respondents' estimated work RVU values and agreed that the 25th percentile work RVU of 2.00 is appropriate for this code. To justify a work RVU of 2.00, the RUC compared the surveyed code to CPT codes 62318 *Injection(s), including indwelling catheter placement, continuous infusion or intermittent bolus, of diagnostic or therapeutic substance(s) (including anesthetic, antispasmodic, opioid,*

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

steroid, other solution), not including neurolytic substances, includes contrast for localization when performed, epidural or subarachnoid; cervical or thoracic (work RVU= 2.04, intra time= 15 minutes) and 69801 *Labyrinthotomy, with perfusion of vestibuloactive drug(s), transcanal* (work RVU= 2.06, intra time= 15 minutes) and agreed that both services have nearly identical physician time and support the recommended value. **The RUC recommends a work RVU of 2.00 for CPT code 93503.**

Practice Expense:
The RUC accepted the direct PE inputs as slightly modified by the PE Subcommittee.

Work Neutrality:
The RUC's recommendation for these codes will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
36555 (f)	Insertion of non-tunneled centrally inserted central venous catheter; younger than 5 years of age	000	1.93
36556	Insertion of non-tunneled centrally inserted central venous catheter; age 5 years or older	000	1.75
36620	Arterial catheterization or cannulation for sampling, monitoring or transfusion (separate procedure); percutaneous	000	1.00
93503	Insertion and placement of flow directed catheter (eg, Swan-Ganz) for monitoring purposes	000	2.00

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:36555 Tracking Number

Original Specialty Recommended RVU: **2.38**
Presented Recommended RVU: **1.93**
RUC Recommended RVU: **1.93**

Global Period: 000

CPT Descriptor: Insertion of non-tunneled centrally inserted central venous catheter; younger than 5 years of age

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 2 year-old male needs a central venous catheter. A percutaneous non-tunneled centrally inserted central venous catheter is inserted.

Percentage of Survey Respondents who found Vignette to be Typical: 78%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The procedure is explained to the patient's parents and consent obtained. Prior medical records, including any history of prior CV catheter placements/attempts, are reviewed. Arrangements are made with OR/angio suite and anesthesia. Physician assists with patient positioning and scrubs in standard fashion. After gowning, access site is prepped and draped in usual fashion.

Description of Intra-Service Work: Local lidocaine anesthesia is administered. The subclavian/jugular vein is punctured and a guidewire passed centrally. The CV catheter is then placed over the guidewire. The catheter is sutured in position and dressed in standard fashion, and attached to IV infusion fluids.

Description of Post-Service Work: Orders are written for catheter care as well as for portable CXR. Catheter position is confirmed and no pneumothorax is detected. Catheter and insertion site wound care is prescribed. A note is placed in the patient chart and report dictated.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Intensity & Complexity Rating Scale: (much less= -2.00, somewhat less= -1.00, identical= 0.00, somewhat more= 1.00, much more= 2.00)

	Top Key Ref Code	2nd Key Ref Code
Mental Effort and Judgment (Mean)		
The number of possible diagnosis and/or the number of management options that must be considered	0.63	0.14
The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed	0.38	0.57
Urgency of medical decision making	0.63	0.71
Technical Skill/Physical Effort (Mean)		
Technical skill required	0.88	1.29
Physical effort required	0.38	0.43

Psychological Stress (Mean)

The risk of significant complications, morbidity and/or mortality	1.00	1.00
Outcome depends on the skill and judgment of physician	0.50	0.86
Estimated risk of malpractice suit with poor outcome	0.38	1.14

INTENSITY/COMPLEXITY MEASURES	Top Key Ref Code	2nd Key Ref Code
Time Segment (Mean)		
Overall intensity/complexity	1.13	1.00

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

Code 36555 was brought forward for review as part of the code family of 36556, which CMS identified on its 2016 MPFS NPRM Table 8 High Expenditure by Specialty screen and requested that the RUC survey this code. The specialties expanded the family to include CPT code 36555, the companion code for patients younger than 5 years of age.

Survey Process

The American Society of Anesthesiologists (ASA) conducted a random survey of members and assembled an expert panel to review the data to develop the following recommendations. The response rate for 36555 was not as robust as it was for 36556. This was expected, as there are fewer doctors who perform central venous catheter placement procedures on patients under 5 yrs. of age. This is also apparent in the performance rate where the minimum and 25th percentile were 0, and the median had a performance rate of 3. Because of this relative inexperience with the procedure, we believe the respondents likely underestimated both the times and the work RVUs for this procedure.

Work RVU Recommendation:

ASA recommends a work value of 2.38 wRVUs for this code. We suggest this is an appropriate value as it preserves the current differential of 0.18 wRVUs between central line placement in a patient over 5 years of age and those under 5 years of age. This differential recognizes the inherent increased difficulties and risks of central line placements in young children. This recommended value also avoids creating a rank order anomaly with other line placement codes, such as 36556. The recommended value of 2.38 wRVUs results in a reduction of 0.30 wRVUs from its current value.

Time Recommendations:

We recommend pre-service package 1A with an additional 2 minutes of pre-service evaluation time for a total of 15 minutes due to patient age, an additional 2 minutes for positioning for a total of 3 minutes, and 5 minutes for scrub, dress, and wait. These times parallel the pre-service times for both Key Reference Services, and are

supported by the survey times. This represents a 7 minute reduction compared to the current pre-service times. We recommend 15 minutes of intra-service time and 10 minutes of post-service time. This is a 5 minute reduction in the intra-service time and the same post-service time as the current procedure times.

Key Reference Services:
Our recommendation compares favorably to the two most commonly chosen key reference services (KRS): 32556 *(Pleural drainage, percutaneous, with insertion of indwelling catheter; without imaging guidance)* chosen by 20% of respondents, and 32554 *(Thoracentesis, needle or catheter, aspiration of the pleural space; without imaging guidance)* chosen by 17.5% of respondents.

Our recommendation for 36555 has a work RVU bracketed by the two KRS codes, which each have slightly longer intra-service times compared to the surveyed code (see Table below). The valuation and time differences are clinically appropriate given the patient population, technical difficulty, and physician work intensity differences between these codes. For example, the surveyed code (36555) has lower service period times than 32556, but the survey code involves inserting catheters into small children, so the value difference is appropriate. Additionally, the surveyed code is valued higher relative to 32554 because of the differences in risk and technical skill in accessing the vasculature versus the pleural space. Even though 32554 has a longer intra-service time, some of that work is less intense (i.e. time for draining fluid).

CPT	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
32554	Thoracentesis, needle or catheter, aspiration of the pleural space; without imaging guidance	1.82	56	21	20	15	0.054
36555	Insertion of non-tunneled centrally inserted central venous catheter; younger than 5 years of age	2.38	48	23	15	10	0.114
32556	Pleural drainage, percutaneous, with insertion of indwelling catheter; without imaging guidance	2.50	60	22	20	18	0.084

MPC Codes:
The surveyed code compares well with two MPC codes: 64479 *(Injection(s), anesthetic agent and/or steroid, transforaminal epidural, with imaging guidance (fluoroscopy or CT); cervical or thoracic, single level)*, and 51102 *(Aspiration of bladder; with insertion of suprapubic catheter).*

One of these MPC codes has 1 minute more of total time but the same intra-service and post-service times. The slightly greater wRVU value for the survey code represents the differences in intensity based on patient age. The second MPC code has a significantly greater wRVU value with greater pre-service, intra-service and post-service times. However, most of the increase in total time is due to pre-service and post-service times, which explains why the IWPUT for this MPC code is less than the other codes. The surveyed code is appropriately valued between the values of these two comparison codes.

CPT	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
64479	Injection(s), anesthetic agent and/or steroid, transforaminal epidural, with imaging guidance (fluoroscopy or CT); cervical or thoracic, single level	2.29	49	24	15	10	0.108
36555	Insertion of non-tunneled centrally inserted central venous catheter; younger than 5 years of age	2.38	48	23	15	10	0.114
51102	Aspiration of bladder; with insertion of suprapubic catheter	2.70	60	25	20	15	0.0938

Summary:
Our recommendations for 36555 are supported by the expert panel, comparisons with Key Reference Services, and relativity to appropriate MPC codes.

Updated Information 10-6-2016:

Rank order relativity between 36555 & 36556.
36556 is the code used for inserting non-tunneled central line catheter in older children (5 years and older) and adults, while 36555 is the code used for inserting the same type of catheter on infants, toddlers, and very young children (less than 5 years of age). Although the procedure is the same in both, the intensity of work is greater when placing central lines in infants and toddlers. Rank order relativity within the codes means wRVU for 36555 should be higher. Therefore we would like to present 36556 and determine its value then discuss 36555.

Again, we wish to thank the RUC reviewers for their feedback. As a result, we again convened an expert panel to address this feedback.

It should be noted that the median wRVU from 36555 survey data (2.13 wRVUs) is lower than the median wRVU from 36556 survey (2.2 wRVUs). These work RVU survey values are inconsistent with the rank order relativity of these procedures. As such, the expert panel agrees that the work RVU survey data is not reflective of the service. The expert panel posits that the cause of this rank order relativity issue is due to the respondents' very low performance rate.

To address this rank order relativity issue the expert panel agreed that the *current* incremental value between 36555 and 36556 of 0.18 wRVU is appropriate. Therefore, to preserve Rank Order Relativity, the panel recommends a wRVU of 2.38 for 36555 (2.20 (recommended value for 36556) + 0.18), which reflects a decrease from the current value of this service, 2.68 RVUs. To support this value, we provide crosswalks to two codes, MPC code 52000 *Cystourethroscopy* and 43239 *Esophagogastroduodenoscopy, flexible, transoral; with biopsy, single or multiple,* to bracket this recommendation. Please review time and work comparisons listed below in Table 3.

Table 3: 36555

CPT Code	MPC	Work RVU	Intra-Time	Total Time	Global
52000	Yes	2.23	15	42	0
36555		2.38	15	48	0
43239		2.49	15	54	0

wRVU recommendation. We respectfully recommend 2.38 wRVUs (lower than current value) for code 36555 with no change in times from the SOR (pre-service time of 23 min, 15 min intra, 10 minutes post-service time).

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 36555

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Anesthesiology How often? Rarely

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 75,000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. expert panel estimate

Specialty Anesthesiology	Frequency 41663	Percentage 55.55 %
Specialty General Surgery	Frequency 11108	Percentage 14.81 %
Specialty Pediatric Medicine	Frequency 8328	Percentage 11.10 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 27 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC database, 2015 utilization

Specialty Anesthesiology	Frequency 15	Percentage 55.55 %

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:36556 Tracking Number Original Specialty Recommended RVU: **2.20**
Presented Recommended RVU: **2.20**
Global Period: 000 RUC Recommended RVU: **1.75**

CPT Descriptor: Insertion of non-tunneled centrally inserted central venous catheter; age 5 years or older

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 40-year-old female needs a central venous (CV) catheter. A centrally inserted, nontunneled, CV catheter is inserted.

Percentage of Survey Respondents who found Vignette to be Typical: 87%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Explain the procedure to the patient and obtain informed consent. Review prior medical records, including any history of prior CV catheter placements and/or attempts. Assist with patient positioning and scrub in standard fashion. Prepare the access site and drape in standard fashion.

Description of Intra-Service Work: The patient is placed in Trendelenburg position and the side of neck is prepped, draped, and infiltrated with local anesthetic. An IV catheter is inserted into the internal jugular vein and the needle is withdrawn. A guide wire is inserted through the IV catheter and the IV catheter is withdrawn leaving the guide wire in place. A dilator is introduced over the guide wire and then withdrawn. The central venous catheter is then inserted over the guide wire. The guide wire is removed and the CV line is sutured in place. The wound is dressed in standard fashion. The line is either flushed and capped or connected to an IV infusion line. The catheter is sutured in place and a sterile dressing is applied.

Description of Post-Service Work: Write orders for catheter care as well as for a portable chest X ray. Confirm catheter position, and confirm no pneumothorax is detected. Place a note in the patient's chart and dictate report.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Intensity & Complexity Rating Scale: (much less= -2.00, somewhat less= -1.00, identical= 0.00, somewhat more= 1.00, much more= 2.00)

	Top Key Ref Code	2nd Key Ref Code
Mental Effort and Judgment (Mean)		
The number of possible diagnosis and/or the number of management options that must be considered	0.35	0.10
The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed	0.22	0.30
Urgency of medical decision making	0.68	0.85
Technical Skill/Physical Effort (Mean)		
Technical skill required	0.51	0.80
Physical effort required	0.43	0.30

Psychological Stress (Mean)

The risk of significant complications, morbidity and/or mortality	0.52	0.85
Outcome depends on the skill and judgment of physician	0.46	0.65
Estimated risk of malpractice suit with poor outcome	0.48	0.65

INTENSITY/COMPLEXITY MEASURES	Top Key Ref Code	2nd Key Ref Code
Time Segment (Mean)		
Overall intensity/complexity	0.54	0.75

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

CMS identified CPT code 36556 on its 2016 MPFS NPRM Table 8 High Expenditure by Specialty screen and requested that the RUC survey this code. The specialties expanded the family to include CPT code 36555, the companion code for patients younger than 5 years of age.

Survey Process

The American College of Radiology (ACR) and American Society of Anesthesiologists (ASA) conducted a random survey of members and assembled an expert panel to review the data to develop the following recommendations.

Work RVU Recommendation:

We recommend a work RVU of 2.20, which is the survey median, and a 0.30 work RVU reduction from the current value of 2.50.

Time Recommendations:

We recommend pre-service package 1A with 12 minutes of pre-service evaluation time, an additional 2 minutes for positioning for a total of 3 minutes, and 5 minutes for scrub, dress, and wait. These times parallel the pre-service times for both Key Reference Services, and are supported by the survey times. This represents a 5 minute reduction compared to the current times.

We recommend the median survey intra- and post-service time of 15 minutes and 5 minutes, respectively. This is the same intra-service time as the current procedure, but a 5 minute reduction in the post-service period.

Key Reference Services:
Our recommendation compares favorably to the two most commonly chosen key reference services (KRS): 32556 *(Pleural drainage, percutaneous, with insertion of indwelling catheter; without imaging guidance)* chosen by 33% of respondents, and 49083 *(Abdominal paracentesis (diagnostic or therapeutic); with imaging guidance)* chosen by 14% of respondents.

Our recommendation for 36556 has a work RVU bracketed by the two KRS codes, which each have slightly longer intra-service times compared to the surveyed code (see Table below). The valuation and time differences are clinically appropriate given the patient population, technical difficulty, and physician work intensity differences between these codes. For example, the surveyed code (36556) has lower service period times than 32556, but both involve inserting catheters, so the value difference is appropriate. Additionally, the surveyed code is valued higher relative to 49083 because of the differences in risk and technical skill in accessing the vasculature versus the peritoneal space, even though 49083 has a longer intra-service time, some of that work is less intense (i.e. time for draining fluid).

CPT	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
49083	Abdominal paracentesis (diagnostic or therapeutic); with imaging guidance	2.00	60	25	25	10	0.052
36556	Insertion of non-tunneled centrally inserted central venous catheter; age 5 years or older	2.20	40	20	15	5	0.114
32556	Pleural drainage, percutaneous, with insertion of indwelling catheter; without imaging guidance	2.50	60	22	20	18	0.084

MPC Codes:
The surveyed code compares well with two MPC codes: 64479 *(Injection(s), anesthetic agent and/or steroid, transforaminal epidural, with imaging guidance (fluoroscopy or CT); cervical or thoracic, single level)*, and 52000 *Cystourethroscopy (separate procedure).*

Both of these MPC codes have slightly higher total times, but identical intra-service times, compared with the surveyed code. The surveyed code is appropriately valued in between both of these comparison codes.

CPT	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
64483	Injection(s), anesthetic agent and/or steroid, transforaminal epidural, with imaging guidance (fluoroscopy or CT); lumbar or sacral, single level	1.90	49	24	15	10	0.082
36556	Insertion of non-tunneled centrally inserted central venous catheter; age 5 years or older	2.20	40	20	15	5	0.114
64479	Injection(s), anesthetic agent and/or steroid, transforaminal epidural, with imaging guidance (fluoroscopy or CT); cervical or thoracic, single level	2.29	49	24	15	10	0.108

Summary:
Our recommendations for 36556 are supported by the survey data, comparisons with Key Reference Services, and relativity to appropriate MPC codes.

Updated Information 10-6-2016:

Again, we thank the reviewers for their comments and feedback. To address that feedback, we would like to provide the following information.

With respect to the wRVU Recommendation: We would like to recommend maintaining the recommended value of 2.20 wRVUs, which is lower than current value of 2.50 wRVUs with no change in times from the SOR (pre-service time of 20 min, 15 min intra, 5 minutes post-service time).

To address the feedback provided by the Primary Reviewers, an expert panel reconvened and agreed that the recommended value of 2.20 wRVUs appropriately reflects the work associated with providing this service. To support the recommendation, we would like to reference MPC code 52000 *Cystourethroscopy* for a crosswalk. In addition, the intra-service times between 36556 and 52000 are the same, 15 minutes, and the total service time is very similar, 40 minutes and 42 minutes respectively.

We also offer two additional reference codes to further substantiate the recommended value of this service. The codes are 69801 *Labyrinthotomy, with perfusion of vestibuloactive drug(s), transcanal* and 32555 *Thoracentesis, needle or catheter, aspiration of the pleural space; with imaging guidance*. It should be noted that despite 69801 having the same intra service time as the surveyed code, the expert panel agreed that this reference code was less intense a service to perform. Further, the expert panel agreed that the surveyed code had less intra service time and total service time than the 32555 reference code, 15/20 minutes and 40/57 minutes, respectively. The specialty recommends 2.20 wRVUs for 36556. (See Table 2)

Table 2: 36556

CPT Code	MPC	Work RVU	Intra-Time	Total Time	Global
69801		2.06	15	43	0
52000	Yes	2.23	15	42	0
36556		2.2	15	40	0
32555		2.27	20	57	0

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 36556

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Anesthesiology How often? Commonly

Specialty Radiology How often? Sometimes

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 1,370,000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. National frequency is estimated at 3 times Medicare utilization.

Specialty Anesthesiology Frequency 395519 Percentage 28.87 %

Specialty Radiology Frequency 167688 Percentage 12.24 %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 456,455 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC database, 2015 utilization

Specialty Anesthesiology Frequency 131779 Percentage 28.87 %

Specialty Radiology Frequency 55871 Percentage 12.24 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

SUMMARY OF RECOMMENDATION

CPT Code:36620 Tracking Number Original Specialty Recommended RVU: **1.10**
Presented Recommended RVU: **1.00**
Global Period: 000 RUC Recommended RVU: **1.00**

CPT Descriptor: Arterial catheterization or cannulation for sampling, monitoring or transfusion (separate procedure); percutaneous

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 65-year-old female is admitted to the hospital because of chest pain and shortness of breath. An arterial catheter is inserted, both to monitor blood pressure and to obtain frequent arterial blood samples.

Percentage of Survey Respondents who found Vignette to be Typical: 67%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Explain reason for procedure to patient and/or family. Inform patient of benefits, possible complications, and risks of procedure. Examine potential access sites.

Description of Intra-Service Work: Prepare puncture site with appropriate antiseptic. Locate artery using ultrasound guidance (separately reportable). Insert needle with intra-catheter into the target artery. Thread the catheter into the artery and withdraw the needle. Take a blood sample for ABG analysis. Irrigate the catheter with saline and insert an obturator into the catheter, which is then fixed to the skin. Depending upon hospital protocol, this fixation may include sutures. If the arterial catheter is to be used for monitoring, connect the catheter to a transducer and flush system. Inspect the catheter and puncture site and palpate the radial pulse and hand perfusion.

Description of Post-Service Work: Document placement of the catheter in a procedure note in the medical chart and write appropriate orders for care of the catheter site.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

CMS identified CPT code 36620 on its 2016 MPFS NPRM Table 8 High Expenditure by Specialty screen and requested that the RUC survey this code.

Survey Process

The American Society of Anesthesiologists (ASA) conducted a random survey of members and assembled an expert panel to review the data to develop the following recommendations. ASA sent out approximately 3500 surveys and received 101 responses for a response rate of 2.8%

Work RVU Recommendation:

The median survey value was 1.37 wRVUs, which is greater than the current value of 1.15 wRVUs. ASA recommends that code 36220 maintain its current value of 1.15 wRVUs.

Time Recommendations:

We recommend that this code maintain the pre-service times in the current RUC data base, which are markedly less than the survey results for these times. Specifically, we recommend Evaluation time of 2 minutes, Positioning time of 2 minutes and SDW time of 3 minutes. These are less than the survey results because this code is modifier-51 exempt. As such, the pre-service and post-service times are reduced, as noted in the RUC data base for this code. We also recommend the immediate post-service time of 3 minutes and intra-service time of 7 minutes, which are consistent with the survey results.

Key Reference Services:

Our recommendation for 36620 is bracketed by the two KRS codes selected by survey respondents: 64450 *(Injection, anesthetic agent; other peripheral nerve or branch)* chosen by 19.8% of respondents and 64448 *(Injection, anesthetic agent; femoral nerve, continuous infusion by catheter (including catheter placement))* chosen by 15.8%. The Intra-service time for 36620 is also bracketed by the two KRS codes. It is difficult to

compare pre-service and post-service times to the KRS codes because those times for 36620 have been reduced to maintain this code's modifier-51 exempt status.

CPT	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
64450	Injection, anesthetic agent; other peripheral nerve or branch	0.75	20	10	5	5	0.083
36620	Arterial catheterization or cannulation for sampling, monitoring or transfusion (separate procedure); percutaneous	1.15	17	7	7	3	0.138
64448	Injection, anesthetic agent; femoral nerve, continuous infusion by catheter (including catheter placement)	1.63	55	25	15	15	0.054

MPC Codes:
The surveyed code compares well with two MPC codes: 12011 *(Simple repair of superficial wounds of face, ears, eyelids, nose, lips and/or mucous membranes; 2.5 cm or less)* and 12013 *(Simple repair of superficial wounds of face, ears, eyelids, nose, lips and/or mucous membranes; 2.6 cm to 5.0 cm).*

Both of these MPC codes have higher total times compared with the surveyed code. However, as noted before, the pre-service and post-service times of the surveyed code have been significantly reduced to maintain its modifier-51 exempt status. If survey times are used, the total times are comparable. The requested value for the surveyed code is appropriate compared to the MPC codes.

CPT	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
12011	Simple repair of superficial wounds of face, ears, eyelids, nose, lips and/or mucous membranes; 2.5 cm or less	1.07	24	7	12	5	0.068
36620	Arterial catheterization or cannulation for sampling, monitoring or transfusion (separate procedure); percutaneous	1.15	17	7	7	3	0.138
12013	Simple repair of superficial wounds of face, ears, eyelids, nose, lips and/or mucous membranes; 2.6 cm to 5.0 cm	1.22	27	7	15	5	0.064

Summary:
Our recommendations for 36620 are supported by the survey data, time comparisons, comparisons with Key Reference Services, and relativity to appropriate MPC codes.

Updated information (10-6-2016)
We appreciate the reviewers' comments and feedback. To address that feedback, we would like to make the following recommendations.

With respect to the Intra-service and post-service descriptions: We will edit the SOR as suggested:

- "Inspect the catheter and puncture site and palpate the radial pulse and hand perfusion." Delete from post-service work and move into intra-service work.
- "Note that as long as the catheter is in place, daily monitoring of hand perfusion and withdrawal of blood samples will take place." Delete the sentence.

With respect to the wRVU Recommendation: We would like to recommend revising our recommendation to wRVU of 1.10 RVUs, from 1.15 wRVUs (the current value of the service). We recommend that the surveyed times stay the same (times of 7 minutes pre-service, 7 minutes intra-service, and 3 minutes post-service time).

Upon further reflection of the Primary Reviewer Comments, an expert panel was convened and agreed with the Primary reviewers that this SOR did not present sufficient support to maintain the current value. However, the panel also agreed that the 25th percentile is too low.

Therefore, we would like to propose a value of 1.10 wRVU based on a direct crosswalk to CPT code 31231 *Nasal endoscopy, diagnostic, unilateral or bilateral*. The intensities of these two codes are similar and the intra-service time is exactly the same, 7 minutes.

We also provide two additional reference codes to bracket our recommendation. These codes are 20527 I*njection, enzyme (eg, collagenase), palmar fascial cord (ie, Dupuytren's contracture)* and 64486 *Transversus abdominis plane (TAP) block (abdominal plane block, rectus sheath block) unilateral; by injection(s) (includes imaging guidance, when performed)*. Please see Table 1 below for time and work RVU comparisons. The specialty recommends 1.10 wRVUs for 36620.

Table 1. 36620 Arterial Catheter

CPT Code	MPC	Work RVU	Intra-Time	Total Time	Global
20527		1.00	5	18	0
31231		1.10	7	21	0
36620		1.10	7	17	0
64486		1.27	10	35	0

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☒ Other reason (please explain) on modifier 51 exempt list

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. Per CPT, "Procedures on this list are typically performed with another procedure but may be a stand alone procedure and not always be performed with other specified procedures."

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 36620

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Anesthesiology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 1652649
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. National frequency is estimated at 3 times Medicare utilization.

Specialty Anesthesiology Frequency 1438466 Percentage 87.04 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 550,883 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC database, 2015 utilization

SUMMARY OF RECOMMENDATION

CPT Code:93503 Tracking Number Original Specialty Recommended RVU: **2.58**
Presented Recommended RVU: **2.00**
Global Period: 000 RUC Recommended RVU: **2.00**

CPT Descriptor: Insertion and placement of flow directed catheter (eg, Swan-Ganz) for monitoring purposes

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 65-year-old male with coronary artery disease following failure of lithotripsy to relieve ureteral obstruction from a stone develops circulatory failure. A pulmonary artery catheter is inserted to guide therapy secondary to urosepsis. He is hypotensive and exhibiting difficulty breathing.

Percentage of Survey Respondents who found Vignette to be Typical: 71%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review records and laboratory and diagnostic tests. Communicate with other professionals and patient and/or family. Scrub and prepare patient and instruments and supplies for the procedure. Position patient for the procedure, which is often difficult because of unstable nature of patient. Assess status of antibiotic administration and order interventions if needed.

Description of Intra-Service Work: The patient is placed in Trendelenburg position and the side of neck is prepped, draped, and infiltrated with local anesthetic. An IV catheter is inserted into the internal jugular vein and the needle is withdrawn. A guide wire is inserted through the IV catheter and the IV catheter is withdrawn leaving the guide wire in place. A large bore introducer is inserted over the guide wire into the jugular vein and the guide wire is removed. The PA catheter is inserted in sterile fashion through the introducer. Pass the tip of the catheter down through the right atrium and right ventricle and into the pulmonary artery, sometimes with the use of fluoroscopy for direction (reported separately). On the tip of the catheter is a balloon that when inflated will occlude the pulmonary artery. Inflate the balloon during passage of the catheter through the heart. The interaction between right heart blood flow and the resistance created by the balloon facilitates passage of the catheter into the pulmonary artery. As the catheter tip passes through the heart into the lungs, it measures the pressures within the cardiac chambers and pulmonary artery. Obtain an estimate of left ventricular end-diastolic pressure (LVEDP) when the balloon is inflated and occludes the pulmonary artery. LVEDP correlates with preload, an important factor in determining adequacy of intravascular volume status. In addition, the PA catheter helps facilitate measurement of intermittent or continuous cardiac output, typically using a thermodilution technique. Some catheters also allow continuous measurement of mixed venous oxygen saturation (SvO2). Changes in SvO2 may indicate changes in oxygen supply-demand balance, a particularly important factor in the critically ill. The catheter is sutured in place and a sterile dressing is applied.

Description of Post-Service Work: The catheter is sutured in place and a sterile dressing is applied. Obtain a chest X-ray to confirm catheter placement and the absence of a pneumothorax. A procedure note is written in the medical record. Initial pressure readings are obtained and recorded in the chart. Because the PA catheter may remain in place for several days, there is a significantly increased risk of sepsis, venous thrombosis, and pulmonary infarction.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Intensity & Complexity Rating Scale: (much less= -2.00, somewhat less= -1.00, identical= 0.00, somewhat more= 1.00, much more= 2.00)

	Top Key Ref Code	2nd Key Ref Code
Mental Effort and Judgment (Mean)		
The number of possible diagnosis and/or the number of management options that must be considered	0.85	0.72
The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed	0.92	0.54
Urgency of medical decision making	1.28	1.36
Technical Skill/Physical Effort (Mean)		
Technical skill required	1.00	0.91
Physical effort required	0.71	0.45

Psychological Stress (Mean)

The risk of significant complications, morbidity and/or mortality	1.28	1.00
Outcome depends on the skill and judgment of physician	1.21	1.09
Estimated risk of malpractice suit with poor outcome	1.21	1.09

INTENSITY/COMPLEXITY MEASURES	Top Key Ref Code	2nd Key Ref Code
Time Segment (Mean)		
Overall intensity/complexity	1.28	1.00

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

CMS identified CPT code 93503 on its 2016 MPFS NPRM Table 8 High Expenditure by Specialty screen and requested that the RUC survey this code.

Survey Process

The American Society of Anesthesiologists (ASA) conducted a random survey of members and assembled an expert panel to review the data to develop the following recommendations. ASA sent out approximately 3500 surveys and received 76 responses for a response rate of 2.1%

Work RVU Recommendation:

The median survey value was 2.58 wRVUs, which is 0.33 wRVUs less than the current value of 2.91 wRVUs. This represents a decrease of about 11.5%. ASA recommends that code 93503 be assigned the median survey value of 2.58 wRVUs. This recommendation is supported by the survey times, KRS codes and MPC comparisons

Time Recommendations:

The survey respondents indicated that the surveyed code has the same intra-service and post-service times as currently in the RUC data base, 15 minutes and 10 minutes respectively. ASA recommends that the RUC accept these times for the intra-service and post-service portions of the procedure.

The survey respondents also recommend a total of 25 minutes for pre-service times. However, ASA recommends that this code maintain the pre-service times in the current RUC data base, which are markedly less than the survey results. Specifically, we recommend Evaluation time of 5 minutes, Positioning time of 2 minutes and SDW time of 5 minutes. These are less than the survey results because this code is modifier-51 exempt. As such, the pre-service and post-service times have been reduced and ASA requests that this code maintain its modifier-51 exempt status.

Key Reference Services:
Our recommendation for code 93503 is bracketed by the two KRS codes selected by survey respondents: 32556 *(Pleural drainage, percutaneous, with insertion of indwelling catheter; without imaging guidance)* chosen by 18.4% of respondents and 62267 *(Percutaneous aspiration within the nucleus pulposus, intervertebral disc, or paravertebral tissue for diagnostic purposes)* chosen by 14.4%. It is difficult to compare pre-service and post-service times to the KRS codes because those times for 93503 have been reduced to maintain this code's modifier-51 exempt status.

CPT	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
32556	Pleural drainage, percutaneous, with insertion of indwelling catheter; without imaging guidance	2.50	60	22	20	18	0.0845
93503	Insertion and placement of flow directed catheter (eg, Swan-Ganz) for monitoring purposes	2.58	37	12	15	10	0.1440
62267	Percutaneous aspiration within the nucleus pulposus, intervertebral disc, or paravertebral tissue for diagnostic purposes	3.00	79	34	30	15	0.0680

MPC Codes:
The surveyed code compares well with two MPC codes: 64479 *(Injections, transforaminal epidural, cervical or thoracic)* and 51102 *(Aspiration of bladder; with insertion of suprapubic catheter).*

Both of these MPC codes have higher total times compared with the surveyed code. However, as noted before, the pre-service times of the surveyed code have been significantly reduced to maintain its modifier-51 exempt status, which makes direct comparisons of times to the MPC codes difficult. If the survey pre-service times were included for this code, the total time would be bracketed by the total times of the two MPC codes. The requested value for the surveyed code is appropriate compared to the MPC codes.

CPT	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
64479	Injection(s), anesthetic agent and/or steroid, transforaminal epidural, with imaging guidance (fluoroscopy or CT); cervical or thoracic, single level	2.29	49	24	15	10	0.1076
93503	Insertion and placement of flow directed catheter (eg, Swan-Ganz) for monitoring purposes	2.58	37	12	15	10	0.1440
51102	Aspiration of bladder; with insertion of suprapubic catheter	2.70	60	25	20	15	0.0938

Summary:
Our recommendations for 93503 are supported by the survey data, survey times, comparisons with Key Reference Services, and relativity to appropriate MPC codes.

Updated Information 10-6-2016:

Rank Order Between 36556 & 93503.
93503 is placement of PA catheter which entails first placing an introducer and then the PA catheter. Since the introducer is a non-tunneled central line, the work involved is the work of 36556 + work of PA catheter through transducer. Therefore, rank order relativity with 36556 is necessary as well.

We appreciate the reviewers' comments and feedback. To address the feedback of the reviewers, an expert panel was convened. It was immediately evident that there was a rank order relativity issue that needed to be resolved. As outlined above, the work involved

in the placing of a flow directed catheter involves all the work of placing a non-tunneled CVP line ***plus*** the work of floating the PA catheter. Therefore, to maintain rank order relativity, we support the recommendation at the median value of 2.58 wRVUs.

Relative Complexity/Intensity. It should be noted that both 36556 *Insertion of non-tunneled centrally inserted central venous catheter; age 5 years or older* and 93503 *Insertion and placement of flow directed catheter (eg, Swan-Ganz) for monitoring purposes* used 32556 *Pleural drainage, percutaneous, with insertion of indwelling catheter; without imaging guidance* as a key reference code. The respondents ranked 36556 as overall complexity/intensity of 0.54 while 93503 as 1.28 as compared to this key reference service. These relative complexity/intensity values both support a higher complexity/intensity for similar intra-service time for 93503.

Service Time Recommendations.
The Expert Panel recommends the following times for 93503 pre-service 12 min, intra-service 20 min, and post-service 10 min. Below are explanations for recommended changes in service times.

> Intra-service time. Because 93503 is by definition more work than 36556, it is not possible that the intra-service time is identical, and hence the expert panel recommends an increase to 20 min from 15 minutes -- an increase in intra-service time of 5 min over median survey value to preserve the proper rank order with 36556.
>
> Total time. Unlike 36556, 93503 is a modifier 51-exempt code. As such, the expert panel recommended reductions to the surveyed pre-service and post-service time as reflected in the SOR.

wRVU recommendation.
We recommend the median survey value of 2.58 wRVUs (lower than current value of 2.91 RVUs). We recommend a crosswalk to 31237 *Nasal/sinus endoscopy, surgical; with biopsy, polypectomy or debridement (separate procedure)* which also has 20 min intra-service time and wRVU of 2.60.

To further substantiate this proposed value, we also would like to provide two other codes 90870 *Electroconvulsive therapy (includes necessary monitoring)* and 52281 *Cystourethroscopy, with calibration and/or dilation of urethral stricture or stenosis, with or without meatotomy, with or without injection procedure for cystography, male or female* to bracket the current value. Please see table below for time and RVU comparisons. The specialty recommends 2.58 wRVUS for 93503.

See Table 4.

Table 4: 93503

CPT Code	MPC	Work RVU	Intra-Time	Total Time	Global
90870		2.5	20	36	0
93503		2.58	20	42	0
31237		2.6	20	48	0
52281		2.75	20	46	0

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☒ Other reason (please explain) on modifier 51 exempt list

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. Per CPT, "Procedures on this list are typically performed with another procedure but may be a stand alone procedure and not always be performed with other specified procedures."

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 285462
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. National frequency is estimated at 3 times Medicare utilization.

Specialty Anesthesiology Frequency 263738 Percentage 92.39 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 95,154 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC database, 2015 utilization

Specialty Anesthesiology Frequency 87922 Percentage 92.39 %

Specialty Frequency Percentage %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States?

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Minor procedure

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 93503

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SURVEY INTENSITY & COMPLEXITY ADDENDUM TABLE

Survey Code:	93503	**# of Respondents:**	76
Survey Code Descriptor:	Insertion and placement of flow directed catheter (eg, Swan-Ganz) for monitoring purposes		

Top Ref Code:	32556	**# of Respondents:**	14	**% of Respondents:**	18.4%
Top Ref Code Descriptor:	Pleural drainage, percutaneous, with insertion of indwelling catheter; without imaging guidance				

Survey Code Compared to Top Ref Code

Survey Code is:

	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall Intensity and Complexity:	0%	0%	14%	43%	43%

		Less	Identical	More
Mental Effort and Judgment:	The number of possible diagnosis and/or number of management options that must be considered	0%	43%	57%
	The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed	0%	36%	64%
	Urgency of medical decision making	0%	14%	86%
Technical Skill:		14%	7%	79%
Physical Effort:		7%	21%	72%
Psychological Stress:	The risk of significant complications, morbidity and/or mortality	0%	14%	86%
	Outcome depends on the skill and judgment of physician	0%	21%	79%
	Estimated risk of malpractice suite with poor outcome	0%	14%	86%

Attestation Statement

This form needs to be completed by any **RUC Advisor** whose specialty society is developing a recommendation to be reviewed by the RUC.

As a RUC Advisor, I attest that the integrity of the RUC survey, summary of recommendation forms and practice expense recommendations are based on accurate and complete data to the best of my knowledge. As a RUC advisor, I acknowledge that violations would be addressed by the executive committee (i.e., RUC Chair , AMA Representative and Alternate AMA Representative.)

CPT Code: 36555
Specialty Society('s): American Society of Anesthesiologists (ASA)

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation
Facility Direct Inputs

CPT Long Descriptor: Insertion of non-tunneled centrally inserted central venous catheter; younger than 5 years of age

Global Period: **000** Meeting Date: October **2016**

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee: **The ASA RUC advisors reviewed the current PE details for 36555. No adjustments were made for the facility setting.**

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale: **Current inputs for 36555 were used as a reference.**

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time: **N/A**

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence: **N/A**

5. Please describe in detail the clinical activities of your staff: **Clinical Type L037D – RN/LPN/MTA**

Pre-Service Clinical Labor Activities: **N/A**

Intra-Service Clinical Labor Activities: **N/A**

Post-Service Clinical Labor Activities:
Phone calls/call in prescriptions – 3 minutes

CPT Code: 36556
Specialty Society('s): American College of Radiologists (ACR), American Society of Anesthesiologists (ASA)

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation
Facility Direct Inputs

CPT Long Descriptor: Insertion of non-tunneled centrally inserted central venous catheter; age 5 years or older

Global Period: 000 Meeting Date: October 2016

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee: **The Advisors from ACR and ASA reviewed the current PE details for 36556. No adjustments were made for the facility setting.**

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale: **Current inputs for 36556 were used as a reference.**

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time: **N/A**

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence: **N/A**

5. Please describe in detail the clinical activities of your staff: **Clinical staff type L037D - RN/LPN/MTA**

Pre-Service Clinical Labor Activities: **N/A**

Intra-Service Clinical Labor Activities: **N/A**

Post-Service Clinical Labor Activities:
Phone calls/call in prescriptions – 3 minutes

CPT Code: 36555
Specialty Society('s): American Society of Anesthesiologists

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation
Non Facility Direct Inputs

CPT Long Descriptor: Insertion of non-tunneled centrally inserted central venous catheter; younger than 5 years of age

Global Period: **000** Meeting Date: **October 2016**

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee: **The Advisors from ACR and ASA reviewed the current PE details for 36556 and made adjustments as appropriate.**

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale: **Current inputs for 36555 were used as a reference.**

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:

- Prepare and position patient/ monitor patient/ set up IV – Additional time is required to position extremity to imaging equipment.

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:
Clinical Labor:

- Follow-up phone calls & prescriptions – For non-tunneled catheters, close follow up is required in the outpatient setting to monitor for function and developing complications.
- Obtain vital signs – clinically necessary prior to an invasive procedure.
- Prepare and position patient/ monitor patient/ set up IV – Additional time is required to position extremity relative to imaging equipment.
- Assist physician in performing procedure – It is typical for an assistant to be scrubbed and available to help with catheters and lines during insertion so as not to contaminate the field or the catheter.
- Monitor pt following procedure/check tubes, monitors, drains, multitasking 1:4 – Clinically necessary after an invasive procedure in the outpatient setting.

Supplies: Added additional supplies for clinical staff assisting physician in performing procedure:

- Surgical cap (1)
- Pair of sterile gloves (1)
- Impervious staff gown (1)
- Surgical mask w/ face shield (1)
- Surgical shoe covers (1)
- Added (4) additional mL of lidocaine (current input is not sufficient)

Equipment:
The following equipment is required for clinical assessment prior to the procedure, including post-procedure monitoring, as well as to actually perform the procedure in the office setting:

- ECG, 3-channel (wth SpO2, NIBP, temp, resp)
- Table, exam

- Light, exam

5. Please describe in detail the clinical activities of your staff: **Clinical Type L037D – RN/LPN/MTA**

Pre-Service Clinical Labor Activities:
No pre-service clinical time requested.

Service Clinical Labor Activities:
Greet patient, provide gowning, ensure appropriate medical records are available – 3 minutes
Obtain vital signs – 5 minutes
Provide pre-service education/obtain consent – 5 minutes
Prepare room, equipment, supplies – 2 minutes
Prepare and position patient/ monitor patient/ set up IV – 3 minutes (Additional time is required to position extremity to imaging equipment).
Assist physician in performing procedure – 15 minutes (100%)
Monitor pt. following procedure/check tubes, monitors, drains, multitasking 1:4 – 7.5 minutes
Clean room/equipment by physician staff – 3 minutes
Check dressings & wound/ home care instructions /coordinate office visits /prescriptions – 3 minutes

Post-Service Clinical Labor Activities:
Conduct phone calls/call in prescriptions – 3 minutes

AMA/Specialty Society RVS Update Committee Summary of Recommendations
CMS High Expenditure Procedures

October 2016

Insertion of PICC Catheter

In the Final Rule for 2016, CMS re-ran the high expenditure services across specialties with Medicare allowed charges of $10 million or more. CMS identified the top 20 codes by specialty in terms of allowed charges, excluding 010 and 090-day global services, anesthesia and Evaluation and Management services and services reviewed since CY 2010. CPT code 36569 was identified as part of this screen. The specialty societies indicated they will survey these services for the October 2016 RUC meeting.

36569 Insertion of peripherally inserted central venous catheter (PICC), without subcutaneous port or pump; age 5 years or older
The RUC reviewed the survey results from 74 interventional and diagnostic radiologists and recommends the following physician time components: pre-service time of 19 minutes, intra-service time of 15 minutes and immediate post-service time of 10 minutes.

The RUC reviewed the survey respondents' estimated physician work values and determined that, since the intra-service time decreased by 5 minutes, the work RVU should be lower than the current work RVU of 1.82. To find an appropriate work value, the RUC compared the surveyed code to CPT code 10035 *Placement of soft tissue localization device(s) (eg, clip, metallic pellet, wire/needle, radioactive seeds), percutaneous, including imaging guidance; first lesion* (work RVU= 1.70, intra time= 15 minutes) and agreed that these two services have nearly identical physician time components and should be valued the same. Therefore, the RUC agreed to directly crosswalk the physician work RVU of 1.70 from code 10035 to CPT code 36569. To further justify a work RVU of 1.70, the RUC reviewed CPT code 19285 *Placement of breast localization device(s) (eg, clip, metallic pellet, wire/needle, radioactive seeds), percutaneous; first lesion, including ultrasound guidance* (work RVU= 1.70, intra time= 15 minutes) and again agreed that with nearly identical physician time and analogous physician work, the surveyed code, 36569, should be valued the same as 19285. Finally, the RUC noted the increased intensity of this procedure since it was last value 13 years ago. The experts explained that previously this code was always provided by a radiologist. Now this service is only performed in cases where the nurse has failed in an initial attempt to insert the catheter and a physician is then required. This has increased the complexity of the typical patient seen by the physician and has, in parallel, caused the intensity of the overall procedure to increase. **The RUC recommends a work RVU of 1.70 for CPT code 36569.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

CPT Referral:
The RUC noted that CPT code 36569 is typically reported with codes 76937 *Ultrasound guidance for vascular access requiring ultrasound evaluation of potential access sites, documentation of selected vessel patency, concurrent realtime ultrasound visualization of vascular needle entry, with permanent recording and reporting* (work RVU= 0.30) and 77001 *Fluoroscopic guidance for central venous access device placement, replacement (catheter only or complete), or removal (includes fluoroscopic guidance for vascular access and catheter manipulation, any necessary contrast injections through access site or catheter with related venography radiologic supervision and interpretation, and radiographic documentation of final catheter position)* (work RVU= 0.38).

These codes are commonly reported together because the current code contains a bimodal clinical scenario. The first scenario is when a clinical staff member performs the procedure without imaging. The second scenario is when a radiologist performs the procedure with imaging guidance. Therefore, CPT code 36569 should be referred to the CPT Editorial Panel to have the two common imaging codes bundled into the code. The current coding language should remain for clinical staff, but a new bundled code should be created. CMS also noted two family codes should be added to the CCA: (36568 *Insertion of peripherally inserted central venous catheter (PICC), without subcutaneous port or pump; younger than 5 years of age* and 36584 *Replacement, complete, of a peripherally inserted central venous catheter (PICC), without subcutaneous port or pump, through same venous access*). **The RUC recommends CPT codes 36569, 36568 and 36584 be referred to the CPT Editorial Panel.**

Relativity Assessment Workgroup Flag:
Due to the different patient population and providers for CPT code 36569 after it undergoes CPT changes, the RAW should flag this procedure to monitor the utilization after two years of available data and review who are providing these services.

RUC Database Flag:
The RUC recommends this code receive a note in the RUC Database that it should not be used to validate for physician work.

Practice Expense:
The Practice Expense Subcommittee noted that CPT codes 77001 and 76937 are typically reported on the same day of service as 36569. Therefore, the Subcommittee asked the specialties to include a revised spreadsheet which included the current PE inputs for these two imaging codes and assessed whether or not there was duplication in clinical staff time between the codes. From this analysis, 2 minutes from *Prepare and position patient/ monitor patient/ set up IV* and 3 minutes from *Clean room/equipment by physician staff* were removed for code 36569. The RUC accepted the direct practice expense inputs as modified by the PE Subcommittee.

Work Neutrality:
The RUC's recommendation for these codes will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
36569	Insertion of peripherally inserted central venous catheter (PICC), without subcutaneous port or pump; age 5 years or older	000	1.70

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:36569 Tracking Number Original Specialty Recommended RVU: **1.82**
Presented Recommended RVU: **1.82**
Global Period: 000 RUC Recommended RVU: **1.70**

CPT Descriptor: Insertion of peripherally inserted central venous catheter (PICC), without subcutaneous port or pump; age 5 years or older

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 62-year-old male requires long-term antimicrobial therapy. A peripherally inserted central venous catheter (PICC) is inserted.

Percentage of Survey Respondents who found Vignette to be Typical: 93%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Moderate Sedation

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No
Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 16%

Is moderate sedation inherent to this procedure in the office setting? No
Percent of survey respondents who stated moderate sedation is typical in the office setting? 9%

Description of Pre-Service Work: Explain procedure to the patient and obtain informed consent. Review prior medical records, including any history of prior CV catheter placements and/or attempts. After gowning, prepare access site and drape in standard fashion.

Description of Intra-Service Work: Administer local anesthesia. Puncture the target vein and pass a guidewire centrally. Advance the catheter over the wire, confirm catheter tip position and cut to appropriate length. Remove guidewire and confirm appropriate position of the central catheter. Suture the catheter in position, dress in standard fashion, and flush per local protocol or attach to IV infusion fluids.

Description of Post-Service Work: Write orders for catheter maintenance. Prescribe wound site care and catheter management. Place a note in the patient chart and dictate report.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Intensity & Complexity Rating Scale: (much less= -2.00, somewhat less= -1.00, identical= 0.00, somewhat more= 1.00, much more= 2.00)

	Top Key Ref Code	2nd Key Ref Code
Mental Effort and Judgment (Mean)		
The number of possible diagnosis and/or the number of management options that must be considered	-0.21	-0.11
The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed	-0.19	-0.11
Urgency of medical decision making	-0.21	-0.44
Technical Skill/Physical Effort (Mean)		
Technical skill required	0.48	0.67
Physical effort required	0.36	0.56

Psychological Stress (Mean)

The risk of significant complications, morbidity and/or mortality	-0.29	-0.89
Outcome depends on the skill and judgment of physician	0.31	0.67
Estimated risk of malpractice suit with poor outcome	-0.33	-0.67

INTENSITY/COMPLEXITY MEASURES	Top Key Ref Code	2nd Key Ref Code
Time Segment (Mean)		
Overall intensity/complexity	0.07	0.44

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background
CPT Code 36569 was identified on Table 8 of the 2016 MPFS NPRM, a list of potentially misvalued codes identified through the High Expenditure by Specialty Screen.

Survey Process
The American College of Radiology (ACR) conducted a simple random sample and a separate random sample of members subspecializing in interventional radiology. The Society of Interventional Radiology (SIR) conducted a random survey of members. The societies assembled an expert panel to review the data to develop the following recommendations.

Work RVU Recommendation:
We recommend maintaining the current work RVU of 1.82, which is below the 25th percentile survey value of 2.25.

Time Recommendations:
We recommend pre-service package 1A (straightforward patient/procedure) for the facility setting, with an additional 2 minutes of positioning for the use of ultrasound and fluoroscopy.

We recommend the median intra-service and post-service times of 15 minutes and 10 minutes, respectively.

Key Reference Services:
Our recommendation compares favorably to the two most commonly chosen key reference services (KRS): 36010 *(Introduction of catheter, superior or inferior vena cava)* chosen by 57% of respondents and 32555 *(Thoracentesis, needle or catheter, aspiration of the pleural space; with imaging guidance)* chosen by 12% of respondents.

Our recommendation for 36569 has a significantly lower work RVU compared to the two KRS codes, both of which have longer intra-service times. The surveyed code was judged to be of similar intensity and complexity compared with the KRS codes.

CPT	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
36569	**Insertion of peripherally inserted central venous catheter (PICC), without subcutaneous port or pump; age 5 years or older**	**1.82**	**47**	**22**	**15**	**10**	**0.079**
36010	Introduction of catheter, superior or inferior vena cava	2.43	26		26		0.093
32555	Thoracentesis, needle or catheter, aspiration of the pleural space; with imaging guidance	2.27	57	22	20	15	0.076

The first KRS, CPT code 36010, is a Harvard valued code, which was included on the RSL by mistake. The physician work for 36010 was reviewed and approved by the RUC during the first Five Year Review; however, the times were not updated as is now the convention. We feel that this code is still useful for validating the physician work and that more recent MPC codes confirm the validity of this comparison.

MPC Codes:
The surveyed code compares well with both 54150 *(Circumcision, using clamp or other device with regional dorsal penile or ring block)*, and 64483 *(Injection(s), anesthetic agent and/or steroid, transforaminal epidural, with imaging guidance (fluoroscopy or CT); lumbar or sacral, single level)*, which both have greater work RVU value and identical intra-service time.

CPT	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
36569	**Insertion of peripherally inserted central venous catheter (PICC), without subcutaneous port or pump; age 5 years or older**	**1.82**	**47**	**22**	**15**	**10**	**0.079**
54150	Circumcision, using clamp or other device with regional dorsal penile or ring block	1.90	45	25	15	5	0.087
64483	Injection(s), anesthetic agent and/or steroid, transforaminal epidural, with imaging guidance (fluoroscopy or CT); lumbar or sacral, single level	1.90	49	24	15	10	0.082

Summary:
Our recommendation for maintaining the current value for 36569 is supported by the survey data, comparisons with Key Reference Services, and relativity to appropriate MPC codes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☒ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is

involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. 36569 is often reported with 77001 or 76937.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 36569

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Commonly

Specialty Interventional Radiology How often? Commonly

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 535500
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by CPT code 36569 provided nationally in a one-year period is estimated to be 535,500.

Specialty Diagnostic Radiology Frequency 340050 Percentage 63.50 %

Specialty Interventional radiology Frequency 53550 Percentage 10.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 178,500 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The 2015 Medicare data estimates that CPT code 36569 is billed approximately 178,500 times in total for Medicare patients nationally in a one-year period.

Specialty Diagnostic Radiology Frequency 113350 Percentage 63.50 %

Specialty Interventional Radiology Frequency 17850 Percentage 10.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Attestation Statement

This form needs to be completed by any **RUC Advisor** whose specialty society is developing a recommendation to be reviewed by the RUC.

As a RUC Advisor, I attest that the integrity of the RUC survey, summary of recommendation forms and practice expense recommendations are based on accurate and complete data to the best of my knowledge. As a RUC advisor, I acknowledge that violations would be addressed by the executive committee (i.e., RUC Chair , AMA Representative and Alternate AMA Representative.)

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation
Non Facility Direct Inputs

CPT Long Descriptor:

36569	Insertion of peripherally inserted central venous catheter (PICC), without subcutaneous port or pump; age 5 years or older

Global Period: 000 Meeting Date: Oct. 2016

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:

The American College of Radiology (ACR), and Society of Interventional Radiology (SIR) convened a consensus panel to finalize the practice expense data for the Insertion of PICC Catheter code, 36569.

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale:

The societies included the existing PE inputs for code 36569 on the spreadsheet to serve as a reference.

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:

- **Complete pre-service diagnostic & referral forms -** Required to confirm patient prior imaging (often from different sites), and appropriateness of procedure for long term central venous access.
- **Prepare room, equipment, supplies –** Additional time needed to prepare imaging equipment used for the procedure. We are recommending more than the PE standard, but decreased time relative to what was previously in the database.
- **Prepare and position patient/ monitor patient/ set up IV –** The patient's upper extremity must be positioned appropriately for access and relative to the imaging guidance equipment.

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:

- **Prepare and position patient/ monitor patient/ set up IV -** The patient's upper extremity must be positioned appropriately for access and relative to the imaging guidance equipment.
- **Assist physician in performing procedure** - It is typical for radiologists to have an assistant scrubbed to help with lines and catheters in order to preserve the sterile field.
- **Gloves, sterile (SB024)** – need two pairs, one for the staff and one for the radiologist
- **Gown, staff, impervious (SB027) -** need two, one for the staff and one for the radiologist
- **lidocaine 1%-2% inj (Xylocaine) (SH047)** – 1 mL is not clinically reasonable. Request 5 mL.
- **table, exam (EF023)** – increased time is a function of the non-highly technical equipment formula.
- **light, exam (EQ168)** - increased time is a function of the non-highly technical equipment formula.

5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

- Complete pre-service diagnostic & referral forms

Intra-Service Clinical Labor Activities:

- Greet patient, provide gowning, ensure appropriate medical records are available
- Obtain vital signs
- Provide pre-service education/obtain consent
- Prepare room, equipment, supplies
- Prepare and position patient/ monitor patient/ set up IV
- Acquire images/Assist physician in performing procedure
- Clean room/equipment by physician staff

Post-Service Clinical Labor Activities:

- Check dressings & wound/ home care instructions /coordinate office visits /prescriptions
- Follow up phone call

AMA/Specialty Society RVS Update Committee Summary of Recommendations
CMS High Expenditure Procedures

October 2016

Magnetic Resonance Angiography (MRA) Head

In the Final Rule for 2016, CMS re-ran the high expenditure services across specialties with Medicare allowed charges of $10 million or more. CMS identified the top 20 codes by specialty in terms of allowed charges, excluding 010 and 090-day global services, anesthesia and Evaluation and Management services and services reviewed since CY 2010. CPT code 70544 was identified as part of this screen.

During their RUC presentation, the specialty noted that MRA head and neck were last valued 16 years ago. The specialty noted and the RUC agreed that the assignment of RVUs during that valuation period was considered flawed methodology because the previous RVU assignment was not directly related to the surveyed times. However, the current survey demonstrates similar intra-service times compared to 16 years ago. The major changes in time have occurred in the pre and post service periods, which given the flawed methodology determination and the relatively low intensity of pre-service and post-service time, is of dubious significance. The RUC agreed with the specialty that the newly proposed RVU values and physician times maintain relativity within the MRI family, throughout radiology, and across the physician payment schedule, and correlate with the current survey times.

70544 ***Magnetic resonance angiography, head; without contrast material(s)***
The RUC reviewed the survey results from 50 radiologists and neuroradiologists and recommends the following physician time components: pre-service time of 5 minutes, intra-service time of 12 minutes and post-service time of 5 minutes.

This family of services is unique in the physics involved and how these sequences are obtained relative to most other MR services, including MRA of the Neck. Unlike much of MRI, where the post-contrast codes have multi-planar sequences that are sometimes matched and not matched to the pre-contrast, this is the exact same sequence as which is obtained in a pre-contrast study. This results in the code family's rank order being distinct, where the step-up in value is not analogous to most other MR services.

The RUC reviewed the survey 25th percentile work RVU of 1.20 and agreed that the current value is appropriate for this service. To justify a work RVU of 1.20, the RUC compared the survey code to CPT code 74150 *Computed tomography, abdomen; without contrast material* (work RVU of 1.19, intra-service time of 12 minutes and total time of 20 minutes) and noted that both services have identical intra-service time and the survey code has somewhat more total time, supporting a slightly higher work RVU for the survey code. To further support a work RVU of 1.20, the RUC compared the survey code to 2nd key reference and MPC code 70470 *Computed tomography, head or brain; without contrast material, followed*

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

by contrast material(s) and further sections (work RVU of 1.27, intra-service time of 15 minutes) and noted that the reference code has somewhat more intra-service and total time, justifying a somewhat lower RVU for the survey code. **The RUC recommends a work RVU of 1.20 for CPT code 70544.**

70545 ***Magnetic resonance angiography, head; with contrast material(s)***
The RUC reviewed the survey results from 50 radiologists and neuroradiologists and recommends the following physician time components: pre-service time of 5 minutes, intra-service time of 12 minutes and post-service time of 5 minutes.

This family of services is unique in the physics involved and how these sequences are obtained relative to most other MR services, including MRA of the Neck. Unlike much of MRI, where the post-contrast codes have multi-planar sequences that are sometimes matched and not matched to the pre-contrast, this is the exact same sequence as which is obtained in a pre-contrast study. This results in the code family's rank order being distinct, where the step-up in value is not analogous to most other MR services. This is the reason that the recommended values for 70544 and 70545 are identical.

The RUC reviewed the survey respondents estimated physician work and agreed with the specialty that maintaining the current work RVU of 1.20 is supported. To justify a work RVU of 1.20, the RUC compared the survey code to CPT code 74150 *Computed tomography, abdomen; without contrast material* (work RVU of 1.19, intra-service time of 12 minutes and total time of 20 minutes) and noted that both services have identical intra-service time and the survey code has somewhat more total time, supporting a slightly higher work RVU for the survey code. To further support a work RVU of 1.20, the RUC compared the survey code to 2nd key reference and MPC code 70470 *Computed tomography, head or brain; without contrast material, followed by contrast material(s) and further sections* (work RVU of 1.27, intra-service time of 15 minutes) and noted that the reference code has somewhat more intra-service and total time, justifying a somewhat lower RVU for the survey code. **The RUC recommends a work RVU of 1.20 for CPT code 70545.**

70546 ***Magnetic resonance angiography, head; without contrast material(s), followed by contrast material(s) and further sequences***
The RUC reviewed the survey results from 50 radiologists and neuroradiologists and recommends the following physician time components: pre-service time of 5 minutes, intra-service time of 15 minutes and post-service time of 5 minutes.

This family of services is unique in the physics involved and how these sequences are obtained relative to most other MR services, including MRA of the Neck. Unlike much of MRI, where the post-contrast codes have multi-planar sequences that are sometimes matched and not matched to the pre-contrast, this is the exact same sequence as which is obtained in a pre-contrast study. This results in the code family's rank order being distinct, where the step-up in value is not analogous to most other MR services.

The RUC Reviewed the survey 25th percentile and agreed that the survey respondents somewhat overvalued the physician work involved in performing this service. To arrive at an appropriate work RVU, the RUC compared the survey code to CPT Code 70551 *Magnetic resonance (eg,*

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

proton) imaging, brain (including brain stem); without contrast material (work RVU of 1.48, intra-service time of 18 minutes, total time of 28 minutes) and noted that although the comparator code has slightly more intra-service and total time, the survey code describes a service with somewhat more intense physician work. Therefore, the RUC recommends a direct work RVU crosswalk between the survey code and CPT code 70551. To validate a work RVU of 1.48, the RUC compared the survey code to CPT code 95865 *Needle electromyography; larynx* (work RVU of 1.57, intra-service time of 15 minutes and total time of 31.5 minutes) and noted that both services have identical intra-service time and involve a similar amount of physician work, further supporting a work RVU of 1.48 for the survey code. **The RUC recommends a work RVU of 1.48 for CPT code 70546.**

Practice Expense
The Practice Expense Subcommittee reviewed the recommended direct PE inputs and made several modifications. First, the specialties noted that the current inputs for these codes incorrectly list an angio tech as the clinical staff. This was a typo, as it is typical to have an MR tech perform MR procedures. The Subcommittee agreed had had MR tech (L047A) inserted. Second, there were several supplies missing. An IV starter kit (SA019), non-sterile drape (SB006), a needle (SC029) and a syringe (SC053) were all added. The swab-pad, alcohol (SJ053) was removed, since one is included in the IV starter kit.

The Subcommittee discussed the clinical staff time required to acquire the images and why they don't match the physician time. They must obtain clear images of the brain, with only a ghosting of the vessels "without contrast", which is different to looking at a ghost of the brain with detail of the vessel for "with contrast". Therefore, the differences in clinical staff time were appropriate. Finally, the RUC discussed whether or not it was appropriate to have 7 minutes of obtain consent for the non-contrast code (70544) and 9 minutes for the "with contrast" codes (70545, 70546). The specialty societies explained that multiple activities occur in this single line item, including obtaining consent for the procedure, educating the patient about the MRI exam, and going through a safety checklist before the patient can enter the MRI room due to the strong magnetic field. Additionally, these patients have neurologic issues (e.g. aneurysm clips and strokes), so it takes longer to consent those patients. Also, there is a cage around the patient's head, making the area much more constrained than other MR procedures. The patient is going deeper in the magnet, so there is more explanation needed as to what will be happening. The RUC reviewed an accepted the direct PE inputs as modified by Practice Expense Subcommittee.

Work Neutrality
The RUC's recommendation for this code will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:70544 Tracking Number Original Specialty Recommended RVU: **1.20**
Presented Recommended RVU: **1.20**
Global Period: XXX RUC Recommended RVU: **1.20**

CPT Descriptor: Magnetic resonance angiography, head; without contrast material(s)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: An elderly person presents with acute onset of left-sided upper extremity weakness. MR angiogram of the head without IV contrast is ordered.

Percentage of Survey Respondents who found Vignette to be Typical: 96%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Moderate Sedation

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No
Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 2%

Is moderate sedation inherent to this procedure in the office setting? No
Percent of survey respondents who stated moderate sedation is typical in the office setting? 9%

Description of Pre-Service Work: The physician reviews the request for appropriateness and reviews clinical history and any prior applicable studies. The physician reviews patient's medical history to determine if there are any contraindications for MR including pacemakers, implanted devices or retained metallic fragments. If the patient reports a history of having metal (i.e. bullet fragments), the physician may order x-rays to assess the location or presence of any metal. If the patient has implanted devices, the physician will investigate the MRI safety of the device in the MRI scanner and may adjust the protocol so that the device can be safely scanned. The physician communicates the protocol to the technologist.

Description of Intra-Service Work: The physician will determine if there are any areas of interest that will need post-processing for magnified views. The physician then interprets the axial source images, maximum intensity projections (MIP), and reformats evaluating in detail the major vascular structures for evidence of thrombosis, embolus, aneurysmal dilatation, arteriovenous malformations, dissection, vascular anomalies, vasculitis, congenital variants, or atherosclerotic calcification. The physician assesses for collateral differences between the cerebral hemispheres. Comparison is made to all pertinent available prior studies. When applicable, the physician will request or perform reconstructions of images to accurately assess the size and orientation of aneurysms or to measures arterial stenosis. The physician will also review the source images to ensure there is no mass effect, hydrocephalus, midline shift or soft tissue mass. Dictate a report.

Description of Post-Service Work: The physician reviews and signs the final report. The findings are then communicated to the referring physician, emergency department, and/or patient.

SURVEY DATA

RUC Meeting Date (mm/yyyy)	10/2016				
Presenter(s):	Kurt Schoppe, MD; Gregory Nicola, MD; Joshua Hirsch, MD				
Specialty(s):	American College of Radiology and American Society of Neuroradiology				
CPT Code:	70544				
Sample Size:	2017	**Resp N:**	50	**Response:** 2.4 %	
Description of Sample:	The ACR surveyed a total of 750 members (a random sample of 375 members and a separate random sample of 375 members who perform neuro imaging. The ASNR surveyed a random sample of 1267 members.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

CPT code 70544 *[Magnetic resonance angiography, head; without contrast material(s)*] was identified on CMS' high expenditure screen as potentially misvalued codes. The American College of Radiology (ACR) and American Society of Neuroradiology (ASNR) surveyed 70544, as well as the two other codes in the family, 70545 *[Magnetic resonance angiography, head; with contrast material(s)*] and 70546 [*Magnetic resonance angiography, head; without contrast material(s), followed by contrast material(s) and further sequences]* and convened an expert panel of physicians familiar with the services to review the survey data.

Work RVU Recommendations

The expert panel recommends maintaining value for 70544 at 1.20 RVU which is the current survey 25%. The panel recommends maintaining value of 70545 at 1.20 RVU, which is below the current survey 25%. The panel is recommending a decrease in value for 70546 to 1.48 RVU, which is below the current survey 25%.

Pre, Intra, and Post Service Times

The panel recommends the median survey service period times for all three codes. Our work and service period times are summarized in the following table:

CPT Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT

70544	Magnetic resonance angiography, head; without contrast material(s)	1.20	5	12	5	22	0.081
70545	Magnetic resonance angiography, head; with contrast material(s)	1.20	5	12	5	22	0.081
70546	Magnetic resonance angiography, head; without contrast material(s), followed by contrast material(s) and further sequences	1.48	5	15	5	25	0.084

Compelling Evidence

The panel is not recommending an increase in value for any code in the family, and, therefore, is not seeking compelling evidence at this time. However, a few substantive changes have occurred in this code family since the previous valuation.

Flawed Methodology

70545

According to the RUC database from the last RUC valuation of this code family in April of 2000, CPT code 70545 *[Magnetic resonance angiography, head; with contrast material(s)]* previously received survey times of 5 minutes of preservice work, 15 minutes of intra-service work, and 10 minutes of post-service work. This is compared to previous survey times for 70544 *[Magnetic resonance angiography, head; without contrast material(s)]* of 5 minutes of preservice work, 10 minutes of intra-service work, and 10 minutes of post-service work. The RUC rationale from this time period explains assigning work RVU of 1.20 to the base code 70544 *[Magnetic resonance angiography, head; without contrast material(s)*], but for an unknown reason also assigned an identical work value of 1.20 for 70545 *[Magnetic resonance angiography, head; with contrast material(s)*] despite the surveyed time difference. Imaging codes in the same family with different intra-service times would typically have different work RVUs reflecting these time differences. Therefore, the societies have a concern about the prior methodology not meeting current RUC standards.

70546

According to the RUC database from the last RUC valuation of this code family in April of 2000, CPT code 70546 *[Magnetic resonance angiography, head; without contrast material(s), followed by contrast material(s) and further sequences]* previously received survey times of 6 minutes of preservice work, 15 minutes of intra-service work, and 10 minutes of post-service work. This is compared to previous survey times for 70544 *[Magnetic resonance angiography, head; without contrast material(s)*] of 5 minutes of preservice work, 10 minutes of intra-service work, and 10 minutes of post-service work. The RUC rationale from this time period explains assigning work RVU of 1.20 to the base code 70544 *[Magnetic resonance angiography, head; without contrast material(s)]* based on the accepted survey times, but the work RVU for 70546 was not directly related to the assigned survey times during this session, but instead calculated using a building block methodology as follows: Code 70546 reflects the addition of the work relative value for 70544 and ½ the work relative value for 70545 (1.20+.60 = 1.80). Therefore, the societies have a concern about the prior methodology not meeting current RUC standards.

Change in Patient Population

70546

In 2002, the landmark clinical trial, International Subarachnoid Trial (ISAT) established that endovascular coiling produced better patient outcomes than open clipping in the treatment of brain aneurysms. Coiled intracranial aneurysms carry a small, but significant risk of recurring or growing even if completely treated, and even more so if not completely treated due to technical factors. A 2012 study by Dorfer and colleagues showed 24% of patients with follow-up imaging had minor post-coiling residuals and up to 22% had significant residual aneurysm or growth. 70545 and 70546 are accepted non-invasive techniques to evaluate patients after aneurysm coiling because the artifacts produced by the aneurysm coils is less on MRA than CT, and the contrast material increases the sensitivity of detecting residual filling or recurrence of the previously treated aneurysm.

Meta-analysis in 2013 by van Amerongen and colleagues confirmed that relative to the gold standard, invasive angiography, 70546 are highly accurate in the detection of recurrent coiled aneurysms. Additionally, evaluating and following previously coiled intracranial aneurysms with contrast enhanced MRA of the head has fewer associated risks and is cheaper than using invasive angiography as a follow up mechanism. Therefore, the patient population for 70546 has dramatically changed over the past decade following ISAT, with the marked increase in number of patients undergoing endovascular coiling for aneurysms.

Dorfer C, Gruber A, Standhardt H, et al.: Management of residual and recurrent aneurysms after initial endovascular treatment. Neurosurgery 70:537–554, 2012.
van Amerongen, M. J., Boogaarts, H. D., de Vries, J.,et al. (2014). MRA versus DSA for follow-up of coiled intracranial aneurysms: a meta-analysis. American Journal of Neuroradiology, 35(9), 1655–1661. http://doi.org/10.3174/ajnr.A3700

Comparison to other RUC reviewed codes

Our recommendations are consistent with the RUC-reviewed reference services detailed below and maintain relativity across the family.

CPT Code	Descriptor	Work RVU	Pre Time	Intra Time	Post Time	TOTAL Time	IWPUT	RUC Mtg Date
70450	Computed tomography, head or brain; without contrast material	0.85	4	10	5	19	0.065	2012
70460	Computed tomography, head or brain; with contrast material(s)	1.13	5	12	5	22	0.076	2012
72193	Computed tomography, pelvis; with contrast material(s)	1.16	3	10	5	18	0.098	2005
74150	Computed tomography, abdomen; without contrast material	1.19	3	12	5	20	0.084	2005
70544	Magnetic resonance angiography, head; without contrast material(s)	1.20	5	12	5	22	0.081	2016
70545	Magnetic resonance angiography, head; with contrast material(s)	1.20	5	12	5	22	0.081	2016
70470	Computed tomography, head or brain; without contrast material, followed by contrast material(s) and further sections	1.27	5	15	5	25	0.070	2011
70546	Magnetic resonance angiography, head; without contrast material(s), followed by contrast material(s) and further sequences	1.48	5	15	5	25	0.084	2016
70551	Magnetic resonance (eg, proton) imaging, brain (including brain stem); without contrast material	1.48	5	18	5	28	0.070	2013
70496	Computed tomographic angiography, head, with contrast material(s), including noncontrast images, if performed, and image postprocessing	1.75	5	20	5	30	0.076	2014
70552	Magnetic resonance (eg, proton) imaging, brain (including brain stem); with contrast material(s)	1.78	5	20	7	32	0.076	2013
70553	Magnetic resonance (eg, proton) imaging, brain (including brain stem); without contrast material, followed by contrast material(s) and further sequences	2.29	5	25	7	37	0.081	2013

Summary of Recommendation for CPT Code 70544 ***[Magnetic resonance angiography, head; without contrast material(s)]***

Our expert panel recommends maintaining the current value of 70544 at 1.20 RVU, with survey median service period times of 5, 12, and 5 minutes.

Code 70544 *[Magnetic resonance angiography, head; without contrast material(s)]* is an invaluable tool in investigating a diverse set of pathologies, which range from minor to life threatening. It is crucial in investigating subarachnoid hemorrhage, transient ischemic attack, stroke, aneurysms, vascular malformations, vasculitis, stenosis of vasculature in patients with risk factors, trauma, congenital abnormalities, or anatomy prior to surgeries. Not only is a positive result significant, a negative result is also pertinent in patient management, in relieving patient anxiety, and in providing assurance to the ordering physicians.

CPT Code 70544 *[Magnetic resonance angiography, head; without contrast material(s)]* is a technically challenging examination to interpret. Understanding of MR physics and acquisitions techniques are required to distinguish between pathology and artifact. Synthesis of the information provided on 2-dimensional and 3-dimensional reconstructions are required to make the correct diagnosis. A combination of its utility (as a positive and negative predictor of pathology), intensity, and the amount of technical training necessary to accurately interpret led us to believe that this procedure is appropriately valued as above.

Comparison to Key Reference Services for 70544

Our recommended work RVU of 1.20 compares favorably to the most commonly chosen key reference service of 70496 *[Computed tomographic angiography, head, with contrast material(s), including noncontrast images, if performed, and image postprocessing]*. 70496 has a higher work RVU of 1.75, more intra-service time, but a lower IWPUT. A larger number of structures are evaluated on CT angiography compared to MR angiography, and therefore it takes more time to interpret the study. However, the interpretation of an MR angiography is more complex due to the high number of artifacts that can be present, and requires more effort than simply evaluating the vessels by contrast on CT. Artifacts that typically appear in the exam, such as in-plane saturation, flow reversal artifact and susceptibility artifacts can mimic pathology. Understanding MR physics and the acquisition techniques of the different sequences are essential to make an accurate diagnosis.

In the surveyed intensity/complexity measures, 70544 scored similar to 70496 in all categories likely a reflection of the near identical indications and patient populations for these like studies evaluating vascular structures in the head. However, the expert panel would like to highlight the long standing view by the specialty societies that the modality of MRI is more technically challenging to interpret, requires more training, and a greater understanding of anatomy and physiology than a corresponding CT of the same body part. The expert panel would have expected MRA of the head to score higher on intensity and complexity measures than a similar CTA of the head reflecting the relative rank order differences between CT and MRI noted throughout the fee schedule.

The 8 minutes of additional intra-service time for 70496 compared to 70544 is balanced by a proportional 0.55 RVU difference when allowing for slight differences in IWPUT explained by technical challenges for interpreting MRI compared to CT.

CPT Code	Short Descriptor	Work RVU	Pre-Service	Intra-Service	Post-Service	Total Time	IWPUT
70544	**MRA head w/o contrast**	**1.20**	**5**	**12**	**5**	**22**	**0.081**
70496	CTA head w/o & w/contrast	1.75	5	20	5	30	0.076

MPC Code for 70544

Our recommendation is compared to MPC code, 70470 *[Computed tomography, head or brain; without contrast material, followed by contrast material(s) and further sections],* demonstrating similar work RVUs, intra-service time, total time, and IWPUT. The 3 minutes more of intra-service time for 70470 is appropriately balanced by the 0.07 higher work RVUs and the expected slightly lower IWPUT for CT compared to MRI.

CPT Code	Short Descriptor	Work RVU	Pre-Service	Intra-Service	Post-Service	Total Time	IWPUT
70544	**MRA head w/o contrast**	**1.20**	**5**	**12**	**5**	**22**	**0.081**
70470	CT head or brain w/o & w/contrast	1.27	5	15	5	25	0.070

Summary:

In summary, our expert panel recommends maintaining the current value of 70544 at 1.20 RVU, with median service period times of 5, 12, and 5 minutes. We believe this compares favorably with the most commonly chosen key reference service, 70496, as well as the MPC code, 70470. Relativity is also appropriate across the 3 codes for MRA of the head and across the larger family of MR codes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 70544

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 796300
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by code 70544 provided nationally in a one-year period is estimated to be 796,300.

Specialty Diagnostic Radiology Frequency 747100 Percentage 93.82 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 265,400 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The 2015 Medicare data estimates that CPT code 70544 is billed approximately 265,400 times in total for Medicare patients nationally in a one-year period.

Specialty Diagnostic Radiology Frequency 249000 Percentage 93.82 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A middle-aged person with history of an intra-cranial aneurysm status post embolization presents for evaluation of residual/recurrent aneurysms. The patient had a non-contrast study the day before which was inconclusive. MR angiogram of the head with IV contrast is ordered.

Percentage of Survey Respondents who found Vignette to be Typical: 92%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Moderate Sedation

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No
Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 2%

Is moderate sedation inherent to this procedure in the office setting? No
Percent of survey respondents who stated moderate sedation is typical in the office setting? 9%

Description of Pre-Service Work: The physician reviews the request for appropriateness and reviews clinical history and any prior applicable studies. The physician reviews patient's medical history to determine if there are any contraindications for MR including pacemakers, implanted devices or retained metallic fragments. If the patient reports a history of having metal (i.e. bullet fragments), the physician may order x-rays to assess the location or presence of any metal. If the patient has implanted devices, the physician will investigate the MRI safety of the device in the MRI scanner and may adjust the protocol so that the device can be safely scanned. The physician reviews laboratory studies to assess renal function and also reviews the medical record for allergy history, absence of contraindications to contrast injection, and factors predisposing the patient to nephrogenic systemic fibrosis and any concerns of cumulative MRI contrast administration. The physician adjusts the contrast product and amount to be injected. The physician reviews the type of MRI contrast media administered for the prior studies to optimize safety and risk for the patient's age and other comorbidities. The physician discusses the nature and risks of contrast reaction to the patient and obtains informed consent where applicable. The physician supervises the IV placement and communicates the protocol to the technologist.

Description of Intra-Service Work: The physician will determine if there are any areas of interest that will need post-processing for magnified views. The physician then interprets the axial source post contrast images, maximum intensity projections (MIP), and reformats evaluating in detail the major vascular structures for evidence of thrombosis, embolus, aneurysmal dilatation, arteriovenous malformations, dissection, vascular anomalies, vasculitis, congenital variants, or atherosclerotic calcification. The physician assesses for collateral differences between the cerebral hemispheres. Physician will also assess any previously treated aneurysms for persistent filling on post-contrast imaging. Comparison is made to all pertinent available prior studies. When applicable, the physician will request or perform reconstructions of images to accurately assess the size and orientation of aneurysms or to measures arterial stenosis. The physician will also review the

source images to ensure there is no mass effect, hydrocephalus, midline shift, abnormal enhancement, or soft tissue mass. Dictate a report.

Description of Post-Service Work: The physician confirms lack of complication from contrast agent such as allergic reaction or extravasation of contrast. The physician reviews and signs the final report. The findings are then communicated to the referring physician, emergency department, and/or patient.

SURVEY DATA

RUC Meeting Date (mm/yyyy)	10/2016				
Presenter(s):	Kurt Schoppe, MD; Gregory Nicola, MD; Joshua Hirsch, MD				
Specialty(s):	American College of Radiology and American Society of Neuroradiology				
CPT Code:	70545				
Sample Size:	2017	**Resp N:**	50	**Response:** 2.4 %	
Description of Sample:	The ACR surveyed a total of 750 members (a random sample of 375 members and a separate random sample of 375 members who perform neuro imaging. The ASNR surveyed a random sample of 1267 members.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

CPT code 70544 *[Magnetic resonance angiography, head; without contrast material(s)*] was identified on CMS' high expenditure screen as potentially misvalued codes. The American College of Radiology (ACR) and American Society of Neuroradiology (ASNR) surveyed 70544, as well as the two other codes in the family, 70545 *[Magnetic resonance angiography, head; with contrast material(s)*] and 70546 [*Magnetic resonance angiography, head; without contrast material(s), followed by contrast material(s) and further sequences]* and convened an expert panel of physicians familiar with the services to review the survey data.

Work RVU Recommendations

The expert panel recommends maintaining value for 70544 at 1.20 RVU which is the current survey 25%. The panel recommends maintaining value of 70545 at 1.20 RVU, which is below the current survey 25%. The panel is recommending a decrease in value for 70546 to 1.48 RVU, which is below the current survey 25%.

Pre, Intra, and Post Service Times

The panel recommends the median survey service period times for all three codes. Our work and service period times are summarized in the following table:

CPT Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT

70544	Magnetic resonance angiography, head; without contrast material(s)	1.20	5	12	5	22	0.081
70545	Magnetic resonance angiography, head; with contrast material(s)	1.20	5	12	5	22	0.081
70546	Magnetic resonance angiography, head; without contrast material(s), followed by contrast material(s) and further sequences	1.48	5	15	5	25	0.084

Compelling Evidence

The panel is not recommending an increase in value for any code in the family, and, therefore, is not seeking compelling evidence at this time. However, a few substantive changes have occurred in this code family since the previous valuation.

Flawed Methodology

70545

According to the RUC database from the last RUC valuation of this code family in April of 2000, CPT code 70545 *[Magnetic resonance angiography, head; with contrast material(s)]* previously received survey times of 5 minutes of preservice work, 15 minutes of intra-service work, and 10 minutes of post-service work. This is compared to previous survey times for 70544 *[Magnetic resonance angiography, head; without contrast material(s)]* of 5 minutes of preservice work, 10 minutes of intra-service work, and 10 minutes of post-service work. The RUC rationale from this time period explains assigning work RVU of 1.20 to the base code 70544 *[Magnetic resonance angiography, head; without contrast material(s)*], but for an unknown reason also assigned an identical work value of 1.20 for 70545 *[Magnetic resonance angiography, head; with contrast material(s)*] despite the surveyed time difference. Imaging codes in the same family with different intra-service times would typically have different work RVUs reflecting these time differences. Therefore, the societies have a concern about the prior methodology not meeting current RUC standards.

70546

According to the RUC database from the last RUC valuation of this code family in April of 2000, CPT code 70546 *[Magnetic resonance angiography, head; without contrast material(s), followed by contrast material(s) and further sequences]* previously received survey times of 6 minutes of preservice work, 15 minutes of intra-service work, and 10 minutes of post-service work. This is compared to previous survey times for 70544 *[Magnetic resonance angiography, head; without contrast material(s)*] of 5 minutes of preservice work, 10 minutes of intra-service work, and 10 minutes of post-service work. The RUC rationale from this time period explains assigning work RVU of 1.20 to the base code 70544 *[Magnetic resonance angiography, head; without contrast material(s)]* based on the accepted survey times, but the work RVU for 70546 was not directly related to the assigned survey times during this session, but instead calculated using a building block methodology as follows: Code 70546 reflects the addition of the work relative value for 70544 and ½ the work relative value for 70545 (1.20+.60 = 1.80). Therefore, the societies have a concern about the prior methodology not meeting current RUC standards.

Change in Patient Population

70546

In 2002, the landmark clinical trial, International Subarachnoid Trial (ISAT) established that endovascular coiling produced better patient outcomes than open clipping in the treatment of brain aneurysms. Coiled intracranial aneurysms carry a small, but significant risk of recurring or growing even if completely treated, and even more so if not completely treated due to technical factors. A 2012 study by Dorfer and colleagues showed 24% of patients with follow-up imaging had minor post-coiling residuals and up to 22% had significant residual aneurysm or growth. 70545 and 70546 are accepted non-invasive techniques to evaluate patients after aneurysm coiling because the artifacts produced by the aneurysm coils is less on MRA than CT, and the contrast material increases the sensitivity of detecting residual filling or recurrence of the previously treated aneurysm.

Meta-analysis in 2013 by van Amerongen and colleagues confirmed that relative to the gold standard, invasive angiography, 70546 are highly accurate in the detection of recurrent coiled aneurysms. Additionally, evaluating and following previously coiled intracranial aneurysms with contrast enhanced MRA of the head has fewer associated risks and is cheaper than using invasive angiography as a follow up mechanism. Therefore, the patient population for 70546 has dramatically changed over the past decade following ISAT, with the marked increase in number of patients undergoing endovascular coiling for aneurysms.

Dorfer C, Gruber A, Standhardt H, et al.: Management of residual and recurrent aneurysms after initial endovascular treatment. Neurosurgery 70:537–554, 2012.
van Amerongen, M. J., Boogaarts, H. D., de Vries, J.,et al. (2014). MRA versus DSA for follow-up of coiled intracranial aneurysms: a meta-analysis. American Journal of Neuroradiology, 35(9), 1655–1661. http://doi.org/10.3174/ajnr.A3700

Comparison to other RUC reviewed codes

Our recommendations are consistent with the RUC-reviewed reference services detailed below and maintain relativity across the family.

CPT Code	Descriptor	Work RVU	Pre Time	Intra Time	Post Time	TOTAL Time	IWPUT	RUC Mtg Date
70450	Computed tomography, head or brain; without contrast material	0.85	4	10	5	19	0.065	2012
70460	Computed tomography, head or brain; with contrast material(s)	1.13	5	12	5	22	0.076	2012
72193	Computed tomography, pelvis; with contrast material(s)	1.16	3	10	5	18	0.098	2005
74150	Computed tomography, abdomen; without contrast material	1.19	3	12	5	20	0.084	2005
70544	Magnetic resonance angiography, head; without contrast material(s)	1.20	5	12	5	22	0.081	2016
70545	Magnetic resonance angiography, head; with contrast material(s)	1.20	5	12	5	22	0.081	2016
70470	Computed tomography, head or brain; without contrast material, followed by contrast material(s) and further sections	1.27	5	15	5	25	0.070	2011
70546	Magnetic resonance angiography, head; without contrast material(s), followed by contrast material(s) and further sequences	1.48	5	15	5	25	0.084	2016
70551	Magnetic resonance (eg, proton) imaging, brain (including brain stem); without contrast material	1.48	5	18	5	28	0.070	2013
70496	Computed tomographic angiography, head, with contrast material(s), including noncontrast images, if performed, and image postprocessing	1.75	5	20	5	30	0.076	2014
70552	Magnetic resonance (eg, proton) imaging, brain (including brain stem); with contrast material(s)	1.78	5	20	7	32	0.076	2013
70553	Magnetic resonance (eg, proton) imaging, brain (including brain stem); without contrast material, followed by contrast material(s) and further sequences	2.29	5	25	7	37	0.081	2013

Summary of Recommendation for CPT Code 70545 ***[Magnetic resonance angiography, head; with IV contrast]***

Our expert panel recommends maintaining the current value of 70545 at 1.20 RVU, with survey median service period times of 5, 12, and 5 minutes.

Code 70545 *[Magnetic resonance angiography, head; with contrast material(s)]* is an invaluable tool in investigating a diverse set of pathologies, which range from minor to life threatening. It is crucial in investigating subarachnoid hemorrhage, transient ischemic attack, stroke, vasculitis, stenosis of vasculature in patients with risk factors, trauma, congenital abnormalities, or anatomy prior to surgeries. In particular, it is critical in evaluating patients after aneurysm coiling. Not only is a positive result significant, a negative result is also pertinent in patient management, in relieving patient anxiety, and in providing assurance to the ordering physicians.

CPT Code 70545 *[Magnetic resonance angiography, head; with contrast material(s)]* is a technically challenging examination to interpret. Understanding of MR physics and acquisitions techniques are required to distinguish between pathology and artifact. Synthesis of the information provided on different 3D and 2D source images are required to make the correct diagnosis. A combination of its utility (as a positive and negative predictor of pathology), intensity, and the amount of technical training necessary to accurately interpret led us to believe that this procedure is appropriately valued as above.

Comparison to Key Reference Services for 70545

Our recommended work RVU of 1.20 compares favorably to the most commonly chosen key reference service of 70496 *[Computed tomographic angiography, head, with contrast material(s), including noncontrast images, if performed, and image postprocessing]*. 70496 has a higher work RVU of 1.75, more intra-service time, but a lower IWPUT. A larger number of structures are evaluated on CT angiography compared to MR angiography, and therefore it takes more time to interpret the study. However, the interpretation of an MR angiography is more complex due to the large number of artifacts that can be present, and requires more effort than simply evaluating the vessels by contrast on CT. Artifacts that typically appear in the exam, such as in-plane saturation, flow reversal artifact and susceptibility artifacts can mimic pathology. Understanding MR physics and the acquisition techniques of the different sequences are essential to make an accurate diagnosis.

In the surveyed intensity/complexity measures, 70545 scored similar to 70496 in all categories, likely a reflection of the near identical indications and patient populations for these like studies evaluating vascular structures in the head. However, the expert panel would like to highlight the long standing view by the specialty societies that the modality of MRI is more technically challenging to interpret, requires more training, and a greater understanding of anatomy and physiology than a corresponding CT of the same body part. The expert panel would have expected MRA of the head to score higher on intensity and complexity measures than a similar CTA of the head reflecting the relative rank order differences between CT and MRI noted throughout the fee schedule.

The 8 minutes of additional intra-service time for 70496 compared to 70545 is balanced by a proportional 0.55 RVU difference when allowing for slight differences in IWPUT explained by technical challenges for interpreting MRI compared to CT.

CPT Code	Short Descriptor	Work RVU	Pre-Service	Intra-Service	Post-Service	Total Time	IWPUT
70545	**MRA head w/contrast**	**1.20**	**5**	**12**	**5**	**22**	**0.081**
70496	CTA head w/o & w/contrast	1.75	5	20	5	30	0.076

MPC Code for 70545

Our recommendation is compared to MPC code, 70470 *[Computed tomography, head or brain; without contrast material, followed by contrast material(s) and further sections],* demonstrating similar work RVUs, intra-service time, total time, and IWPUT. The 3 minutes more of intra-service time for 70470 is appropriately balanced by the 0.07 higher work RVUs and the expected slightly lower IWPUT for CT compared to MRI.

CPT Code	Short Descriptor	Work RVU	Pre-Service	Intra-Service	Post-Service	Total Time	IWPUT
70545	**MRA head w/contrast**	**1.20**	**5**	**12**	**5**	**22**	**0.081**
70470	CT head w/o & w/contrast	1.27	5	15	5	25	0.070

Summary:

In summary, our expert panel recommends maintaining the current value of 70545 at 1.20 RVU, with median service period times of 5, 12, and 5 minutes. We believe this compares favorably with the most commonly chosen key reference service, 70496, as well as the MPC code, 70470. Relativity is also appropriate across the 3 codes for MRA of the head and across the larger family of MR codes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 70545

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Description of Pre-Service Work: The physician reviews the request for appropriateness and reviews clinical history and any prior applicable studies. The physician reviews patient's medical history to determine if there are any contraindications for MR including pacemakers, implanted devices or retained metallic fragments. If the patient reports a history of having metal (i.e. bullet fragments), the physician may order x-rays to assess the location or presence of any metal. If the patient has implanted devices, the physician will investigate the MRI safety of the device in the MRI scanner and may adjust the protocol so that the device can be safely scanned. The physician reviews laboratory studies to assess renal function and also reviews the medical record for allergy history, absence of contraindications to contrast injection, and factors predisposing the patient to nephrogenic systemic fibrosis and any concerns of cumulative MRI contrast administration. The physician adjusts the contrast product and amount to be injected. The physician reviews the type of MRI contrast media administered for the prior studies to optimize safety and risk for the patient's age and other comorbidities. The physician discusses the nature and risks of contrast reaction to the patient and obtains informed consent where applicable. The physician supervises the IV placement and communicates the protocol to the technologist.

Description of Intra-Service Work: The physician will determine if there are any areas of interest that will need post-processing for magnified views. The physician then interprets the axial source images pre-contrast and post-contrast images, maximum intensity projections (MIP), and reformats evaluating in detail the major vascular structures for evidence of thrombosis, embolus, aneurysmal dilatation, arteriovenous malformations, dissection, vascular anomalies, vasculitis, congenital variants, or atherosclerotic calcification. The physician assesses for collateral differences between the cerebral hemispheres. Physician will also assess any previously treated aneurysms for persistent filling on pre-contrast or post-contrast imaging. Comparison is made to all pertinent available prior studies. When applicable, the physician will request

or perform reconstructions of images to accurately assess the size and orientation of aneurysms or to measures arterial stenosis. The physician will also review the source pre-contrast and post-contrast images to ensure there is no mass effect, hydrocephalus, midline shift, abnormal enhancement or soft tissue mass. Dictate a report.

Description of Post-Service Work: The physician confirms lack of complication from contrast agent such as allergic reaction or extravasation of contrast. The physician reviews and signs the final report. The findings are then communicated to the referring physician, emergency department, and/or patient.

SURVEY DATA

RUC Meeting Date (mm/yyyy)	10/2016				
Presenter(s):	Kurt Schoppe, MD; Gregory Nicola, MD; Joshua Hirsch, MD				
Specialty(s):	American College of Radiology and American Society of Neuroradiology				
CPT Code:	70546				
Sample Size:	2017	**Resp N:**	50	**Response:** 2.4 %	
Description of Sample:	The ACR surveyed a total of 750 members (a random sample of 375 members and a separate random sample of 375 members who perform neuro imaging. The ASNR surveyed a random sample of 1267 members.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

CPT code 70544 *[Magnetic resonance angiography, head; without contrast material(s)*] was identified on CMS' high expenditure screen as potentially misvalued codes. The American College of Radiology (ACR) and American Society of Neuroradiology (ASNR) surveyed 70544, as well as the two other codes in the family, 70545 *[Magnetic resonance angiography, head; with contrast material(s)*] and 70546 [*Magnetic resonance angiography, head; without contrast material(s), followed by contrast material(s) and further sequences]* and convened an expert panel of physicians familiar with the services to review the survey data.

Work RVU Recommendations

The expert panel recommends maintaining value for 70544 at 1.20 RVU which is the current survey 25%. The panel recommends maintaining value of 70545 at 1.20 RVU, which is below the current survey 25%. The panel is recommending a decrease in value for 70546 to 1.48 RVU, which is below the current survey 25%.

Pre, Intra, and Post Service Times

The panel recommends the median survey service period times for all three codes. Our work and service period times are summarized in the following table:

CPT Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT

70544	Magnetic resonance angiography, head; without contrast material(s)	1.20	5	12	5	22	0.081
70545	Magnetic resonance angiography, head; with contrast material(s)	1.20	5	12	5	22	0.081
70546	Magnetic resonance angiography, head; without contrast material(s), followed by contrast material(s) and further sequences	1.48	5	15	5	25	0.084

Pre-facilitation

MRA of the head is a unique family amongst **ALL** MRI/MRA code families in that there is very little differences in work when one progresses from 70544 to 70545 to 70546. This has to do with the unique acquisition not duplicated in any other MRI or MRA family (including the MRA neck family). 70544, 70545, and 70546 have little differences in work or time, in fact, visually 70544 and 70545 exams could look identical to the untrained eye. The contrast administration speeds up the acquisition time of imaging on the technical side, and may slightly increase resolution in difficult situations such as patient's whom have had prior aneurysms coiled. The survey respondents recognized these minor differences by reporting identical service times between 70544 and 70545, and only a slight increase intra-service time for 70546. The survey respondents 25% work RVU for 70546 was 1.76, which resulted in a high IWPUT of 0.102. The surveyed time difference between 70545 and 70546 was 3 minutes of intra-service time and total time, yet the 25% survey work RVU differences were 0.56. The expert panel and surveying societies felt that this was not an accurate evaluation, and hence requested a pre-facilitation meeting to better value 70546.

During pre-facilitation, a cross walk of 70551 was chosen. 70551 service period times are 5 minutes of pre-service, 18 minutes of intra-service, and 5 minutes of post-service with a work RVU of 1.48 and an IWPUT of 0.070. The surveying societies recommendations are therefore, the median surveyed service periods for 70546 of 5 minutes of pre-service, 15 minutes of intra-service, and 5 minutes of post-service time with identical work RVU to the cross-walked code of 1.48. The surveyed code has 3 minutes of less intra-service time and total service time, with a higher IWPUT of 0.084, but the patient population for 70546 is more complex reflected in the differences between these two codes vignettes. 70551 is typically done on outpatients with headaches. This vignette was deemed typical by survey respondents in January 2013. 70546 vignette, deemed typical in the current survey, is a patient receiving the examination following intra-cranial aneurysm embolization coiling, undeniably a more complex patient. This greater complexity coupled with the slightly less intra-service time for the surveyed code is reflected in the higher IWPUT.

Compelling Evidence

The panel is not recommending an increase in value for any code in the family, and, therefore, is not seeking compelling evidence at this time. However, a few substantive changes have occurred in this code family since the previous valuation.

Flawed Methodology

70545

According to the RUC database from the last RUC valuation of this code family in April of 2000, CPT code 70545 *[Magnetic resonance angiography, head; with contrast material(s)]* previously received survey times of 5 minutes of preservice work, 15 minutes of intra-service work, and 10 minutes of post-service work. This is compared to previous survey times for 70544 *[Magnetic resonance angiography, head; without contrast material(s)]* of 5 minutes of preservice work, 10 minutes of intra-service work, and 10 minutes of post-service work. The RUC rationale from this time period explains assigning work RVU of 1.20 to the base code 70544 *[Magnetic resonance angiography, head; without contrast material(s)*], but for an unknown reason also assigned an identical work value of 1.20 for 70545 *[Magnetic resonance angiography, head; with contrast material(s)*] despite the surveyed time difference. Imaging codes in the same family with different intra-service times would typically have different work RVUs reflecting these time differences. Therefore, the societies have a concern about the prior methodology not meeting current RUC standards.

70546

According to the RUC database from the last RUC valuation of this code family in April of 2000, CPT code 70546 *[Magnetic resonance angiography, head; without contrast material(s), followed by contrast material(s) and further sequences]* previously received survey times of 6 minutes of preservice work, 15 minutes of intra-service work, and 10 minutes of post-service work. This is compared to previous survey times for 70544 *[Magnetic resonance angiography, head; without contrast material(s)*] of 5 minutes of preservice work, 10 minutes of intra-service work, and 10 minutes of post-service work. The RUC rationale from this time period explains assigning work RVU of 1.20 to the base code 70544 *[Magnetic resonance angiography, head; without contrast material(s)]* based on the accepted survey times, but the work RVU for 70546 was not directly related to the assigned survey times during this session, but instead calculated using a building block methodology as follows: Code 70546 reflects the addition of the work relative value for 70544 and ½ the work relative value for 70545 (1.20+.60 = 1.80). Therefore, the societies have a concern about the prior methodology not meeting current RUC standards.

Change in Patient Population

70546

In 2002, the landmark clinical trial, International Subarachnoid Trial (ISAT) established that endovascular coiling produced better patient outcomes than open clipping in the treatment of brain aneurysms. Coiled intracranial aneurysms carry a small, but significant risk of recurring or growing even if completely treated, and even more so if not completely treated due to technical factors. A 2012 study by Dorfer and colleagues showed 24% of patients with follow-up imaging had minor post-coiling residuals and up to 22% had significant residual aneurysm or growth. 70545 and 70546 are accepted non-invasive techniques to evaluate patients after aneurysm coiling because the artifacts produced by the aneurysm coils is less on MRA than CT, and the contrast material increases the sensitivity of detecting residual filling or recurrence of the previously treated aneurysm. Meta-analysis in 2013 by van Amerongen and colleagues confirmed that relative to the gold standard, invasive angiography, 70546 are highly accurate in the detection of recurrent coiled aneurysms. Additionally, evaluating and following previously coiled intracranial aneurysms with contrast enhanced MRA of the head has fewer associated risks and is cheaper than using invasive angiography as a follow up mechanism. Therefore, the patient population for 70546 has dramatically changed over the past decade following ISAT, with the marked increase in number of patients undergoing endovascular coiling for aneurysms.

van Amerongen, M. J., Boogaarts, H. D., de Vries, J.,et al. (2014). MRA versus DSA for follow-up of coiled intracranial aneurysms: a meta-analysis. American Journal of Neuroradiology, 35(9), 1655–1661. http://doi.org/10.3174/ajnr.A3700

Comparison to other RUC reviewed codes

Our recommendations are consistent with the RUC-reviewed reference services detailed below and maintain relativity across the family.

CPT Code	Descriptor	Work RVU	Pre Time	Intra Time	Post Time	TOTAL Time	IWPUT	RUC Mtg Date
70450	Computed tomography, head or brain; without contrast material	0.85	4	10	5	19	0.065	2012
70460	Computed tomography, head or brain; with contrast material(s)	1.13	5	12	5	22	0.076	2012
72193	Computed tomography, pelvis; with contrast material(s)	1.16	3	10	5	18	0.098	2005
74150	Computed tomography, abdomen; without contrast material	1.19	3	12	5	20	0.084	2005
70544	Magnetic resonance angiography, head; without contrast material(s)	1.20	5	12	5	22	0.081	2016
70545	Magnetic resonance angiography, head; with contrast material(s)	1.20	5	12	5	22	0.081	2016
70470	Computed tomography, head or brain; without contrast material, followed by contrast material(s) and further sections	1.27	5	15	5	25	0.070	2011
70546	Magnetic resonance angiography, head; without contrast material(s), followed by contrast material(s) and further sequences	1.48	5	15	5	25	0.084	2016
70551	Magnetic resonance (eg, proton) imaging, brain (including brain stem); without contrast material	1.48	5	18	5	28	0.070	2013
70496	Computed tomographic angiography, head, with contrast material(s), including noncontrast images, if performed, and image postprocessing	1.75	5	20	5	30	0.076	2014
70552	Magnetic resonance (eg, proton) imaging, brain (including brain stem); with contrast material(s)	1.78	5	20	7	32	0.076	2013
70553	Magnetic resonance (eg, proton) imaging, brain (including brain stem); without contrast material, followed by contrast material(s) and further sequences	2.29	5	25	7	37	0.081	2013

Summary of Recommendation for CPT Code 70546 ***[Magnetic resonance angiography, head; without contrast material(s), followed by contrast material(s) and further sequences]***

Our expert panel recommends slightly decreasing the current value of 70546 to 1.48 RVU, with survey median service period times of 5, 15, and 5 minutes.

Code 70546 *[Magnetic resonance angiography, head; without contrast material(s), followed by contrast material(s) and further sequences]* is an invaluable tool in investigating a diverse set of pathologies, which range from minor to life threatening. It is crucial in investigating subarachnoid hemorrhage, transient ischemic attack, stroke, vasculitis, stenosis of vasculature in patients with risk factors, trauma, congenital abnormalities, or anatomy prior to surgeries. In particular, it is critical in evaluating patients after aneurysm coiling. Not only is a positive result significant, a negative result is also pertinent in patient management, in relieving patient anxiety, and in providing assurance to the ordering physicians.

CPT Code 70546 *[Magnetic resonance angiography, head; without contrast material(s), followed by contrast material(s) and further sequences]* is a technically challenging examination to interpret. Understanding of MR physics and acquisitions techniques are required to distinguish between pathology and artifact. Synthesis of the information provided on different 3D and 2D images are required to make the correct diagnosis. A combination of its utility (as a positive and negative predictor of pathology), intensity, and the amount of technical training necessary to accurately interpret led us to believe that this procedure is appropriately valued as above.

Comparison to Key Reference Services for 70546

Our recommended work RVU of 1.48 is less than most commonly chosen key reference service of 70496 *[Computed tomographic angiography, head, with contrast material(s), including noncontrast images, if performed, and image postprocessing]*. 70496 has slightly more intra-service time, and a slightly lower IWPUT. A larger number of structures are evaluated on CT angiography compared to MR angiography, and therefore it takes more time to interpret the study. However, the interpretation of an MR angiography is more complex due to the high number of artifacts that can be present, and requires more effort than simply evaluating the vessels by contrast on CT. Artifacts that typically appear in the exam, such as in-plane saturation, flow reversal artifact and susceptibility artifacts can mimic pathology. Understanding MR physics and the acquisition techniques of the different sequences are essential to make an accurate diagnosis.

In the surveyed intensity/complexity measures, 70546 scored similar to 70496 in all categories, likely a reflection of the near identical indications and patient populations for these like studies evaluating vascular structures in the head. However, the expert panel would like to highlight the long standing view by the specialty societies that the modality of MRI is more technically challenging to interpret, requires more training, and a greater understanding of anatomy and physiology than a corresponding CT of the same body part. The expert panel would have expected MRA of the head to score higher on intensity and complexity measures than a similar CTA of the head reflecting the relative rank order differences between CT and MRI noted throughout the fee schedule.

The 5 minutes of additional intra-service time for 70496 is balanced by a proportional decrease in work RVU of 0.27, with a resultant slightly higher IWPUT for the survey code attributed to the technical challenges for interpreting MRI compared to CT. Additionally, MRA of the head without and with IV contrast, by analysis from the expert panel, has a more intense and complex patient population, reflective of its utility in evaluating patients who have undergone endovascular treatment for intracranial aneurysms, an indication poorly assessed with CTA of the head.

CPT Code	Short Descriptor	Work RVU	Pre-Service	Intra-Service	Post-Service	Total Time	IWPUT
70546	MRA head w/o and w/contrast	1.48	5	15	5	25	0.084
70496	CTA head w/o & w/contrast	1.75	5	20	5	30	0.076

MPC Code for 70546

Our recommendation is compared to the MPC code, 70470 *[Computed tomography, head or brain; without contrast material, followed by contrast material(s) and further sections],* demonstrating identical service period

and total times, but different work RVU and IWPUT. The 0.21 more work RVUs and higher IWPUT for the surveyed code are felt to be properly balanced given the previously described technical challenges of interpreting MRI vs. CT, as well as the more intense and complex patient population encountered during performing 70546 (typically patients who have had endovascular repair of an intracranial aneurysm).

CPT Code	Short Descriptor	Work RVU	Pre-Service	Intra-Service	Post-Service	Total Time	IWPUT
70470	CT head w/o & w/contrast	1.27	5	15	5	25	0.070
70546	**MRA head w/o and with contrast**	**1.48**	**5**	**15**	**5**	**25**	**0.084**

Summary:

In summary, our expert panel recommends a decrease in the current value of 70546 to 1.48 RVU, with median service period times of 5, 15, and 5 minutes. We believe this compares favorably with the most commonly chosen key reference service, 70496, as well as the MPC code, 70470. Relativity is also appropriate across the 3 codes for MRA of the head and across the larger family of MR codes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 70546

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 47200
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by code 70546 provided nationally in a one-year period is estimated to be 47,200

Specialty Diagnostic Radiology Frequency 44400 Percentage 94.06 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 15,700 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The 2015 Medicare data estimates that CPT code 70546 is billed approximately 15,700 times in total for Medicare patients nationally in a one-year period.

Specialty Diagnostic Radiology Frequency 14800 Percentage 94.26 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Imaging

BETOS Sub-classification:
Advanced imaging

BETOS Sub-classification Level II:
MRI/MRA: Brain/Head/Neck

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 70546

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation
Non Facility Direct Inputs

CPT Long Descriptor:

Global Period: XXX Meeting Date: Oct. 2016

70544	Magnetic resonance angiography, head; without contrast material(s)
70545	Magnetic resonance angiography, head; with contrast material(s)
70546	Magnetic resonance angiography, head; without contrast material(s), followed by contrast material(s) and further sequences

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:

The American College of Radiology (ACR), and American Society of Neuroradiology (ASNR) convened a consensus panel to finalize the practice expense data for the MRA head code family, CPT codes 70544, 70545, and 70546.

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale:

The societies included the existing PE inputs for codes 70544, 70545, and 70546 on the spreadsheet to serve as a reference.

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:

- **Prepare room, equipment, supplies** - The specialty is recommending an increase in time since MR involves strong magnetic fields and ensuring patient safety is important. More specifically, all objects in the room must be MRI compatible. MR exams involve the use of MR coils which vary based on the body part studied and are specifically selected to fit the patient. These coils must be prepared for the intended exam, positioned, and attached to the MR unit. In addition, the examinations involving the use of contrast require setup of the injector apparatus and preparation of the contrast material.
- **Prepare and position patient/ monitor patient/ set up IV** – The specialty is recommending an increase in time to allow for positioning the patient to ensure they are comfortable during the lengthy procedure since motion artifact can degrade the quality of the exam. Pillows are typically positioned under the patient's knees to relieve stress off the back during the long image acquisition period. The patient's head must be properly placed into the coils. If contrast is being administered, any IV lines must be secured to prevent disengagement. The technologist must confirm the patient has no MR incompatible internal devices (such as metal in or on clothing), personal possessions and even superficial tattoos. These may be dangerous or cause artifacts while the patient is in or around the MRI magnet.
- **Technologist QC's images in PACS, checking for all images, reformats, and dose page** - CMS [2017 MPFS Proposed Rule] and the RUC [2017 MPFS Proposed Rule Comment Letter] has acknowledged that this activity may vary based on the complexity of the exam. Thus, no standard

exists for this activity. The specialty does acknowledge that our recommendation is an increase over codes reviewed before the 2016 MPFS. The specialty believes that MRA head is at the higher end of complexity for radiology services since MR involves hundreds of images in multiple planes. Interpretation of MRI findings typically requires comparison of multiple sequences. Incomplete, poor quality, or missing sequences can lead to an inconclusive exam. The number of images and importance of QC warrant the four minutes recommended.

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:

- **Obtain vital signs** – clinically necessary for 70545 and 70546; related to contrast administration.
- **Provide pre-service education/obtain consent –** These times parallel other recent MRI codes, including, MRI brain and MRI face. This time is necessary to educate the patient about the MRI and specific risks, including an extensive evaluation for implanted or external devices, as well as any ferromagnetic objects on or around the patient, including certain types of clothing if they are to be worn in addition to the gown.
- **Gown, patient (SB026) –** clinically necessary supply item
- **Paper, exam table (SB036)** – clinically necessary supply
- **PACS Professional Workstation (ED053) -** in the CY 2016 MPFS Final Rule, CMS acknowledged that the costs of the professional workstation may be analogous to costs previously incorporated as direct PE inputs. In the CY 2017 MPFS Proposed Rule, CMS indicates that they will allow the addition of the professional PACS workstation to 70000 series codes that use the current technical PACS workstation and include professional work for which such a workstation would be used. The ACR, as approved by the RUC at the April 2016 meeting, is recommending that this equipment time equal the sum of the physician work pre-service time and intra-service time.

5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

- Availability of prior images confirmed
- Patient clinical information and questionnaire reviewed by technologist, order from physician confirmed and exam protocoled by radiologist

Intra-Service Clinical Labor Activities:

- Greet patient, provide gowning, ensure appropriate medical records are available
- Obtain vital signs
- Provide pre-service education/obtain consent
- Prepare room, equipment, supplies
- Prepare and position patient/ monitor patient/ set up IV
- Acquire Images
- Computer post-processing
- Clean room/equipment by physician staff
- Technologist QC's images in PACS, checking for all images, reformats, and dose page
- Review examination with interpreting MD
- Exam documents scanned into PACS. Exam completed in RIS system to generate billing process and to populate images into Radiologist work queue

Post-Service Clinical Labor Activities:

AMA/Specialty Society RVS Update Committee Summary of Recommendations
CMS High Expenditure Procedures

October 2016

Magnetic Resonance Angiography (MRA) Neck

In the Final Rule for 2016, CMS re-ran the high expenditure services across specialties with Medicare allowed charges of $10 million or more. CMS identified the top 20 codes by specialty in terms of allowed charges, excluding 010 and 090-day global services, anesthesia and Evaluation and Management services and services reviewed since CY 2010. CPT code 70549 was identified as part of this screen.

Comparing this family of codes to MRA Head, the specialty clarified to the RUC that there is larger step-up in physician work for each code in the MRA neck family since the pre-contrast images are acquired using a totally different technique in the axial plane, whereas the post-contrast images are different technique in the coronal plane with bolus tracking. The field of view is larger on the post-contrast images and more structures are visualized and need to be evaluated, including the aorta and origin of the great vessels. Therefore, the work increment between each MRA neck code is greater.

During their RUC presentation, the specialty noted that MRA head and neck were last valued 16 years ago. The specialty noted and the RUC agreed that the assignment of RVUs during that valuation period was considered flawed methodology because the previous RVU assignment was not directly related to the surveyed times. However, the current survey demonstrates similar intraservice times compared to 16 years ago. The major changes in time have occurred in the pre and post service periods, which given the flawed methodology determination and the relatively low intensity of pre-service and post-service time, is of dubious significance. The RUC agreed with the specialty that the newly proposed RVU values and physician times maintain relativity within the MRI family, throughout radiology, and across the fee schedule, and correlate with the current survey times.

70547 ***Magnetic resonance angiography, neck; without contrast material(s)***
The RUC reviewed the survey results from 37 radiologists and neuroradiologists and recommends the following physician time components: pre-service time of 5 minutes, intra-service time of 12 minutes and post-service time of 5 minutes.

The RUC reviewed the current value and survey 25th percentile work RVU of 1.20 and agreed that it is appropriate for this service. To justify a work RVU of 1.20, the RUC compared the survey code to 2nd Key Reference code 74150 *Computed tomography, abdomen; without contrast material* (work RVU of 1.19, intra-service time of 12 minutes and total time of 20 minutes) and noted that both services have identical intra-service time and the survey code has somewhat more total time, supporting a slightly higher work RVU for the survey code. To further support a work RVU of 1.20, the RUC compared the survey code to MPC code 70470 *Computed tomography, head or brain; without contrast material,*

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

followed by contrast material(s) and further sections (work RVU of 1.27, intra-service time of 15 minutes) and noted that the reference code has somewhat more intra-service and total time, justifying a somewhat lower RVU for the survey code. **The RUC recommends a work RVU of 1.20 for CPT code 70547.**

70548 ***Magnetic resonance angiography, neck; with contrast material(s)***
Prior to reviewing the survey data for this service, the RUC considered compelling evidence that the current work RVU of 1.20 may be incorrect. The specialty presented a compelling evidence argument that a flawed methodology was used to value this service when it was last valued. CPT code 70548 previously received survey times of 10 minutes of preservice work, 15 minutes of intra-service work, and 10 minutes of post-service work. This is compared to previous survey times for 70547 of 5 minutes of preservice work, 10 minutes of intra-service work, and 10 minutes of post-service work. The RUC rationale from the time period explained assigning work RVU of 1.20 to the base code 70547 based on the survey, but for an unknown reason also assigned an identical work value of 1.20 for 70548 despite the surveyed time difference. Imaging codes in the same family with different intra-service times would typically have different work RVUs reflecting these time differences. Therefore, the societies expressed concern about the prior methodology not meeting current RUC standards. Given this information, the RUC approved compelling evidence that the current work value for CPT code 70548 may be incorrect.

The RUC reviewed the survey results from 37 radiologists and neuroradiologists and recommends the following physician time components: pre-service time of 5 minutes, intra-service time of 15 minutes and post-service time of 5 minutes.

The RUC reviewed the survey 25th percentile work RVU of 1.50 and agreed it is appropriate for this service. To justify a work RVU of 1.50, the RUC compared the survey code to CPT Code 70551 *Magnetic resonance (eg, proton) imaging, brain (including brain stem); without contrast material* (work RVU of 1.48, intra-service time of 18 minutes, total time of 28 minutes) and noted that although the comparator code has slightly more intra-service and total time, the survey code describes a service with somewhat more intense physician work. To further validate a work RVU of 1.50, the RUC compared the survey code to CPT code 95865 *Needle electromyography; larynx* (work RVU of 1.57, intra-service time of 15 minutes and total time of 31.5 minutes) and noted that both services have identical intra-service time and involve a similar amount of physician work, further supporting a work RVU of 1.50 for the survey code. **The RUC recommends a work RVU of 1.50 for CPT code 70548.**

70549 ***Magnetic resonance angiography, neck; without contrast material(s), followed by contrast material(s) and further sequences***
The RUC reviewed the survey results from 37 radiologists and neuroradiologists and recommends the following physician time components: pre-service time of 5 minutes, intra-service time of 20 minutes and post-service time of 5 minutes.

The RUC reviewed the survey 25th percentile work RVU of 1.80 and agreed that the current value of 1.80 is appropriate for this service. To justify a work RVU of 1.80, the RUC compared the survey code to top key reference code 70498 *Computed tomographic angiography, neck, with contrast material(s), including noncontrast images, if performed, and image postprocessing* (work RVU of 1.75, intra-service time of 20 minutes, total time of 30 minutes) and noted that with identical times and 67 percent of the survey respondents ranking the survey code as being more

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

intense/complex relative to the reference code, a slightly higher work RVU is justified for the survey code. To further support a work RVU of 1.80, the RUC compared the survey code to CPT code 70552 *Magnetic resonance (eg, proton) imaging, brain (including brain stem); with contrast material(s)* (work RVU of 1.78, intra-service time of 20 minutes, total time of 32 minutes) and noted that both services have identical intraservice times and similar total time, justifying a similar valuation. **The RUC recommends a work RVU of 1.80 for CPT code 70549.**

Practice Expense
The Practice Expense Subcommittee reviewed the recommended direct PE inputs and made several modifications. First, the specialties noted that the current inputs for these codes incorrectly list an angio tech as the clinical staff. This was a typo, as it is typical to have an MR tech perform MR procedures. The Subcommittee agreed and had MR tech (L047A) inserted. Second, there were several supplies missing. An IV starter kit (SA019), non-sterile drape (SB006), a needle (SC029) and a syringe (SC053) were all added. Finally, the intercom (EQ139) equipment was removed. The swab-pad, alcohol (SJ053) was removed, since one is included in the IV starter kit.

The Subcommittee discussed the clinical staff time required to acquire the images and why they don't match the physician time. They must obtain clear images of the neck, with only a ghosting of the vessels "without contrast", which is different to looking at a ghost of the neck with detail of the vessel for "with contrast". Therefore, the differences in clinical staff time were appropriate. Finally, the RUC discussed whether or not it was appropriate to have 7 minutes of obtain consent for the non-contrast code (70547) and 9 minutes for the "with contrast" codes (70548, 70549). The specialty societies explained that multiple activities occur in this single line item, including obtaining consent for the procedure, educating the patient about the MRI exam, and going through a safety checklist before the patient can enter the MRI room due to the strong magnetic field. Additionally, these patients have neurologic issues (e.g. aneurysm clips and strokes), so it takes longer to consent those patients. Also, there is a cage around the patient's head, making the area much more constrained than other MR procedures. The patient is going deeper in the magnet, so there is more explanation needed as to what will be happening. The RUC reviewed an accepted the direct PE inputs as modified by Practice Expense Subcommittee.

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
70547 (f)	Magnetic resonance angiography, neck; without contrast material(s)	XXX	1.20 (No Change)
70548 (f)	Magnetic resonance angiography, neck; with contrast material(s)	XXX	1.50

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:70547 Tracking Number Original Specialty Recommended RVU: **1.20**
Presented Recommended RVU: **1.20**
Global Period: XXX RUC Recommended RVU: **1.20**

CPT Descriptor: Magnetic resonance angiography, neck; without contrast material(s)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: An elderly person with chronic renal failure presents with transient right facial numbness and weakness concerning for a transient ischemic attack. MR angiogram of the neck without IV contrast is ordered.

Percentage of Survey Respondents who found Vignette to be Typical: 97%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Moderate Sedation

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No
Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 9%

Is moderate sedation inherent to this procedure in the office setting? No
Percent of survey respondents who stated moderate sedation is typical in the office setting? 6%

Description of Pre-Service Work: The physician reviews the request for appropriateness and reviews clinical history and any prior applicable studies. The physician reviews patient's medical history to determine if there are any contraindications for MR including pacemakers, implanted devices or retained metallic fragments. If the patient reports a history of having metal (i.e. bullet fragments), the physician may order x-rays to assess the location or presence of any metal. If the patient has implanted devices, the physician will investigate the MRI safety of the device in the MRI scanner and may adjust the protocol so that the device can be safely scanned. The physician communicates the protocol to the technologist.

Description of Intra-Service Work: The physician will determine if there are any areas of interest that will need post-processing for magnified views. The physician then interprets the axial source images, maximum intensity projections (MIP), and reformats evaluating in detail the major vascular structures of the neck for stenosis (based on North American Symptomatic Carotid Endarterectomy Trial [NASCET] criteria) requiring either direct (obtaining measurements of diameters) or indirect comparison of the segment of stenosis with a normal segment distal to area of stenosis. Evaluate for thrombosis, embolus, aneurysms and/or pseudoaneurysms, vascular anomalies, vascular loops, dissections, and external compressions of the major arteries in the neck. Assess right innominate artery, bilateral common carotid, external carotid, internal carotid, and vertebral arteries. Evaluate aortic arch, visualized subclavian arteries, and visualized pulmonary vessels. Assess for arterialization of any jugular veins, innominate veins, and subclavian veins for patency, thrombus, or fistulas. Interpret the axial source images, the multiplanar images, and three-dimensional reformats. Evaluate visualized brain parenchyma, cervical cord and vertebrae, and visualized lung apices. Compare to all pertinent available prior studies. Dictate report.

Description of Post-Service Work: The physician reviews and signs the final report. The findings are then communicated to the referring physician, emergency department, and/or patient.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Intensity & Complexity Rating Scale: (much less= -2.00, somewhat less= -1.00, identical= 0.00, somewhat more= 1.00, much more= 2.00)

	Top Key Ref Code	2nd Key Ref Code
Mental Effort and Judgment (Mean)		
The number of possible diagnosis and/or the number of management options that must be considered	0.08	1.00
The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed	0.08	0.67
Urgency of medical decision making	0.08	0.33
Technical Skill/Physical Effort (Mean)		
Technical skill required	-0.08	-0.33
Physical effort required	-0.15	0.83

Psychological Stress (Mean)

The risk of significant complications, morbidity and/or mortality	0.00	-0.33
Outcome depends on the skill and judgment of physician	0.15	0.83
Estimated risk of malpractice suit with poor outcome	0.23	0.17

INTENSITY/COMPLEXITY MEASURES	Top Key Ref Code	2nd Key Ref Code
Time Segment (Mean)		
Overall intensity/complexity	0.15	0.17

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

CPT code 70549 *[Magnetic resonance angiography, neck; without followed by contrast material(s) and further sequences]* was identified on CMS' high expenditure screen as potentially misvalued codes. The American College of Radiology (ACR) and American Society of Neuroradiology (ASNR) surveyed 70549, as well as the other 2 codes in the family, 70547 *[Magnetic resonance angiography, neck; without contrast material(s)]* and 70548 *[Magnetic resonance angiography, neck; with contrast material(s)]* and convened an expert panel of physicians familiar with the services to review the survey data.

Work RVU Recommendations

The expert panel recommends the 25th percentile survey data for 70547, 70548, and 70549. This represents current value for 70547 and 70549, and an increase in value for 70548.

Pre, Intra, and Post Service Times

The panel recommends the median survey service period times for all three codes. Our work and service period times are summarized in the following table:

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT
70547	MRA neck w/o contrast	1.20	5	12	5	22	0.081
70548	MRA neck w/contrast	1.50	5	15	5	25	0.085
70549	MRA neck w/o & w/contrast	1.80	5	20	6	31	0.078

Comparison to other RUC reviewed codes

Our recommendations are consistent with the RUC-reviewed reference services detailed below and maintain relativity across the family.

Code	Descriptor	Work RVU	Pre Time	Intra Time	Post Time	TOTAL Time	IWPUT	RUC reviewed
70450	Computed tomography, head or brain; without contrast material	0.85	4	10	5	19	0.065	2012
70460	Computed tomography, head or brain; with contrast material(s)	1.13	5	12	5	22	0.076	2012
70547	**Magnetic resonance angiography, neck; without contrast material(s)**	**1.20**	**5**	**12**	**5**	**22**	**0.081**	**2016**
70470	Computed tomography, head or brain; without contrast material, followed by contrast material(s) and further sections	1.27	5	15	5	25	0.070	2011
72141	Magnetic resonance (eg, proton) imaging, spinal canal and contents, cervical; without contrast material	1.48	5	20	5	30	0.063	2013
70548	**Magnetic resonance angiography, neck; with contrast material(s)**	**1.50**	**5**	**15**	**5**	**25**	**0.085**	**2016**
70498	Computed tomographic angiography, neck, with contrast material(s), including noncontrast images, if performed, and image postprocessing	1.75	5	20	5	30	0.076	2014
70549	**Magnetic resonance angiography, neck; without contrast material(s), followed by contrast material(s) and further sequences**	**1.80**	**5**	**20**	**6**	**31**	**0.078**	**2016**
72156	Magnetic resonance (eg, proton) imaging, spinal canal and contents, without contrast material, followed by contrast material(s) and further sequences; cervical	2.29	5	25	5	35	0.083	2013

Summary of Recommendation for CPT Code 70547 *[Magnetic resonance angiography, neck; without contrast material(s)]*

Our expert panel recommends maintaining the current value of 70547 at 1.20 RVU, with survey median service period times of 5, 12, and 5 minutes.

Code 70547 *[Magnetic resonance angiography, neck; without contrast material(s)]* is an invaluable tool in investigating a diverse set of pathologies, which range from minor to life threatening. It is pivotal in investigating transient ischemic attack, stroke, stenosis of vasculature in patients with risk factors, trauma, congenital abnormalities, or anatomy prior to surgeries. Not only is a positive result significant, a negative result is also pertinent in patient management, in relieving patient anxiety, and in providing assurance to the ordering physicians.

CPT Code 70547 *[Magnetic resonance angiography, neck; without contrast material(s)]* is a technically challenging examination to interpret. Understanding of MR physics and acquisitions techniques are required to distinguish between pathology and artifact. Synthesis of the information provided on different two dimension and three dimensional images are required to make the correct diagnosis. A combination of its utility (as a positive and negative predictor of pathology), intensity, and the amount of technical training necessary to accurately interpret led us to believe that this procedure is appropriately valued as above.

Comparison to Key Reference Services for 70547

Our recommended work RVU of 1.20 compares favorably to the most commonly chosen key reference service of 70498 *[Computed tomographic angiography, neck, with contrast material(s), including noncontrast images, if performed, and image postprocessing]*. 70498 has a higher work RVU of 1.75, more intra-service time, and a slightly lower IWPUT. A larger number of structures are evaluated on CT angiography compared to MR angiography, and therefore it takes more time to interpret the study. However, the interpretation of an MR angiography is more complex due to the high number of artifacts, interpretation of flow dynamics, and the technical training required to interpret MRI compared to CT. Artifacts that typically appear in the exam, such as in-plane saturation, flow reversal artifact and susceptibility artifacts can mimic pathology. Understanding MR physics and the acquisition techniques of the different sequences are essential to make an accurate diagnosis.

In the surveyed intensity/complexity measures, 70547 scored similar to 70498 in all categories, likely a reflection of the near identical indications and patient populations for these like studies evaluating vascular structures in the neck. However, the expert panel would like to highlight the long standing view by the specialty societies that the modality of MRI is more technically challenging to interpret, requires more training, and a greater understanding of anatomy and physiology than a corresponding CT of the same body part. The expert panel would have expected MRA of the neck to score higher on intensity and complexity measures than a similar CTA of the neck reflecting the relative rank order differences between CT and MRI noted throughout the fee schedule.

The 8 minutes of additional intra-service time for 70498 compared to 70547 is balanced by a proportional 0.55 RVU difference when allowing for slight differences in IWPUT explained by technical challenges for interpreting MRI compared to CT.

CPT Code	Short Descriptor	Work RVU	Pre-Service	Intra-Service	Post-Service	Total Time	IWPUT
70547	**MRA neck w/o contrast**	**1.20**	**5**	**12**	**5**	**22**	**0.081**
70498	CTA neck w/o & w/contrast	1.75	5	20	5	30	0.076

MPC Code for 70547

Our recommendation is compared to the MPC code, 70470 *[Computed tomography, head or brain; without contrast material, followed by contrast material(s) and further sections]*, demonstrating similar work RVUs, intra-service time, total time, and IWPUT. The 3 minutes more of intra-service time for 70470 is appropriately balanced by the 0.07 higher work RVUs and the expected slightly lower IWPUT for CT compared to MRI.

CPT Code	Short Descriptor	Work RVU	Pre-Service	Intra-Service	Post-Service	Total Time	IWPUT
70547	**MRA neck w/o contrast**	**1.20**	**5**	**12**	**5**	**22**	**0.081**
70470	CT head w/o & w/contrast	1.27	5	15	5	25	0.070

Summary:

In summary, our expert panel recommends maintaining the current value of 70547 at 1.20 RVU, with median service period times of 5, 12, and 5 minutes. We believe this compares favorably with the most commonly chosen key reference service, 70498, as well as the MPC code, 70470. Relativity is also appropriate across the 3 codes for MRA of the neck and across the larger family of MR codes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 70547

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 234500
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by code 70547 provided nationally in a one-year period is estimated to be 234,500.

Specialty Diagnostic Radiology Frequency 216840 Percentage 92.46 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 78,200 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The 2015 Medicare data estimates that CPT code 70547 is billed approximately 78,200 times in total for Medicare patients nationally in a one-year period.

Specialty Diagnostic Radiology Frequency 72300 Percentage 92.45 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Imaging

BETOS Sub-classification:
Advanced imaging

BETOS Sub-classification Level II:
MRI/MRA: Brain/Head/Neck

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 70547

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:70548 Tracking Number Original Specialty Recommended RVU: **1.50**
Presented Recommended RVU: **1.50**
Global Period: XXX RUC Recommended RVU: **1.50**

CPT Descriptor: Magnetic resonance angiography, neck; with contrast material(s)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: An elderly person with acute onset of intermittent right facial numbness and weakness concerning for a transient ischemic attack. The patient had a non-contrast study the day before which was inconclusive. MR angiogram of the neck with IV contrast is ordered.

Percentage of Survey Respondents who found Vignette to be Typical: 95%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Moderate Sedation

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No
Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 9%

Is moderate sedation inherent to this procedure in the office setting? No
Percent of survey respondents who stated moderate sedation is typical in the office setting? 6%

Description of Pre-Service Work: The physician reviews the request for appropriateness and reviews clinical history and any prior applicable studies. The physician reviews patient's medical history to determine if there are any contraindications for MR including pacemakers, implanted devices or retained metallic fragments. If the patient reports a history of having metal (i.e. bullet fragments), the physician may order x-rays to assess the location or presence of any metal. If the patient has implanted devices, the physician will investigate the MRI safety of the device in the MRI scanner and may adjust the protocol so that the device can be safely scanned. The physician reviews laboratory studies to assess renal function and also reviews the medical record for allergy history, absence of contraindications to contrast injection, and factors predisposing the patient to nephrogenic systemic fibrosis. The physician adjusts the contrast product and amount to be injected. The physician discusses the nature and risks of contrast reaction to the patient and obtains informed consent where applicable. The physician supervises the IV placement and communicates the protocol to the technologist.

Description of Intra-Service Work: The physician will determine if there are any areas of interest that will need post-processing for magnified views. The physician then interprets the axial source post-contrast images, maximum intensity projections (MIP), and reformats evaluating in detail the major vascular structures of the neck for stenosis (based on North American Symptomatic Carotid Endarterectomy Trial [NASCET] criteria) requiring either direct (obtaining measurements of diameters) or indirect comparison of the segment of stenosis with a normal segment distal to area of stenosis. Evaluate for thrombosis, embolus, aneurysms and/or pseudoaneurysms, vascular anomalies, vascular loops, dissections, and external compressions of the major arteries in the neck. Assess right innominate artery, bilateral common carotid, external carotid, internal carotid, and vertebral arteries. Evaluate aortic arch, visualized subclavian arteries, and visualized pulmonary vessels. Assess for arterialization of any jugular veins, innominate veins, and subclavian veins for patency, thrombus, or fistulas. Interpret the axial source images, the multiplanar images, and three-dimensional reformats. Evaluate visualized

brain parenchyma, cervical cord and vertebrae, and visualized lung apices. Evaluate for any abnormal enhancing areas in the visualized brain or soft tissue. Compare to all pertinent available prior studies. Dictate report.

Description of Post-Service Work: The physician confirms lack of complication from contrast agent such as allergic reaction or extravasation of contrast. The physician reviews and signs the final report. The findings are then communicated to the referring physician, emergency department, and/or patient.

SURVEY DATA

RUC Meeting Date (mm/yyyy)	10/2016				
Presenter(s):	Kurt Schoppe, MD; Gregory Nicola, MD; Joshua Hirsch, MD

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Intensity & Complexity Rating Scale: (much less= -2.00, somewhat less= -1.00, identical= 0.00, somewhat more= 1.00, much more= 2.00)

	Top Key Ref Code	2nd Key Ref Code
Mental Effort and Judgment (Mean)		
The number of possible diagnosis and/or the number of management options that must be considered	0.25	0.25
The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed	0.10	0.50
Urgency of medical decision making	0.00	1.00
Technical Skill/Physical Effort (Mean)		
Technical skill required	0.15	0.75
Physical effort required	0.30	0.50

Psychological Stress (Mean)

The risk of significant complications, morbidity and/or mortality	-0.10	0.50
Outcome depends on the skill and judgment of physician	0.35	1.00
Estimated risk of malpractice suit with poor outcome	0.20	1.00

INTENSITY/COMPLEXITY MEASURES	**Top Key Ref Code**	**2nd Key Ref Code**
Time Segment (Mean)		
Overall intensity/complexity	0.45	0.75

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

CPT code 70549 *[Magnetic resonance angiography, neck; without followed by contrast material(s) and further sequences]* was identified on CMS' high expenditure screen as potentially misvalued codes. The American College of Radiology (ACR) and American Society of Neuroradiology (ASNR) surveyed 70549, as well as the other 2 codes in the family, 70547 *[Magnetic resonance angiography, neck; without contrast material(s)]* and 70548 *[Magnetic resonance angiography, neck; with contrast material(s)]* and convened an expert panel of physicians familiar with the services to review the survey data.

Work RVU Recommendations

The expert panel recommends the 25th percentile survey data for 70547, 70548, and 70549. This represents current value for 70547 and 70549, and an increase in value for 70548.

Pre, Intra, and Post Service Times

The panel recommends the median survey service period times for all three codes. Our work and service period times are summarized in the following table:

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT
70547	MRA neck w/o contrast	1.20	5	12	5	22	0.081
70548	MRA neck w/contrast	1.50	5	15	5	25	0.085
70549	MRA neck w/o & w/contrast	1.80	5	20	6	31	0.078

Compelling Evidence

The panel recommends an increase in value in only one code in the family, 70548, based on flawed methodology.

Flawed Methodology

According to the RUC database from the last RUC valuation of this code family in April of 2000, CPT code 70548 *[Magnetic resonance angiography, neck; with contrast material(s)]* previously received survey times of 10 minutes of preservice work, 15 minutes of intra-service work, and 10 minutes of post-service work. This is compared to previous survey times for 70547 *[Magnetic resonance angiography, neck; without contrast material(s)]* of 5 minutes of preservice work, 10 minutes of intra-service work, and 10 minutes of post-service work. The RUC rationale from this time period explains assigning work RVU of 1.20 to the base code 70547 based on survey, but for an unknown reason also assigned an identical work value of 1.20 for 70548 *[Magnetic resonance angiography, neck; with contrast material(s)]* despite the surveyed time difference. Imaging codes in the same family with different intra-service times would typically have different work RVUs reflecting these time differences. Therefore, the societies have a concern about the prior methodology not meeting current RUC standards.

Comparison to other RUC reviewed codes

Our recommendations are consistent with the RUC-reviewed reference services detailed below and maintain relativity across the family.

Code	Descriptor	Work RVU	Pre Time	Intra Time	Post Time	TOTAL Time	IWPUT	RUC reviewed
70450	Computed tomography, head or brain; without contrast material	0.85	4	10	5	19	0.065	2012
70460	Computed tomography, head or brain; with contrast material(s)	1.13	5	12	5	22	0.076	2012
70547	**Magnetic resonance angiography, neck; without contrast material(s)**	**1.20**	**5**	**12**	**5**	**22**	**0.081**	**2016**
70470	Computed tomography, head or brain; without contrast material, followed by contrast material(s) and further sections	1.27	5	15	5	25	0.070	2011
72141	Magnetic resonance (eg, proton) imaging, spinal canal and contents, cervical; without contrast material	1.48	5	20	5	30	0.063	2013
70548	**Magnetic resonance angiography, neck; with contrast material(s)**	**1.50**	**5**	**15**	**5**	**25**	**0.085**	**2016**
70498	Computed tomographic angiography, neck, with contrast material(s), including noncontrast images, if performed, and image postprocessing	1.75	5	20	5	30	0.076	2014
70549	**Magnetic resonance angiography, neck; without contrast material(s), followed by contrast material(s) and further sequences**	**1.80**	**5**	**20**	**6**	**31**	**0.078**	**2016**
72156	Magnetic resonance (eg, proton) imaging, spinal canal and contents, without contrast material, followed by contrast material(s) and further sequences; cervical	2.29	5	25	5	35	0.083	2013

Summary of Recommendation for CPT Code 70548 *[Magnetic resonance angiography, neck; with IV contrast]*

Our expert panel recommends increasing the value of 70548 at 1.50 RVU, with survey median service period times of 5, 15, and 5 minutes.

Code 70548 *[Magnetic resonance angiography, neck; with contrast material(s)]* is an invaluable tool in investigating a diverse set of pathologies, which range from minor to life threatening. It is pivotal in investigating transient ischemic attack, stroke, stenosis of vasculature in patients with risk factors, trauma, congenital abnormalities, or anatomy prior to surgeries. Not only is a positive result significant, a negative result is also pertinent in patient management, in relieving patient anxiety, and in providing assurance to the ordering physicians.

CPT Code 70548 *[Magnetic resonance angiography, neck; with contrast material(s)]* is a technically challenging examination to interpret. Understanding of MR physics and acquisitions techniques are required to distinguish between pathology and artifact. Synthesis of the information provided on different 3D and 2D source images are required to make the correct diagnosis. A combination of its utility (as a positive and negative predictor of pathology), intensity, and the amount of technical training necessary to accurately interpret led us to believe that this procedure is appropriately valued as above.

Comparison to Key Reference Services for 70548

Our recommended work RVU of 1.50 compares favorably to the most commonly chosen key reference service, 70498 *[Computed tomographic angiography, neck, with contrast material(s), including noncontrast images, if performed, and image postprocessing]*. 70498 has a higher work RVU of 1.75, more intra-service time, and a lower IWPUT. A larger number of structures are evaluated on CT angiography compared to MR angiography, and therefore it takes more time to interpret the study. However, the interpretation of an MR angiography is more complex due to the high number of artifacts that can be present, and requires more effort than simply evaluating the vessels by contrast on CT. Artifacts that typically appear in the exam, such as in-plane saturation, flow reversal artifact and susceptibility artifacts can mimic pathology. Understanding MR physics and the acquisition techniques of the different sequences are essential to make an accurate diagnosis.

In the surveyed intensity/complexity measures, 70548 scored similar to 70498 in all categories, likely a reflection of the near identical indications and patient populations for these like studies evaluating vascular structures in the neck. However, the expert panel would like to highlight the long standing view by the specialty societies that the modality of MRI is more technically challenging to interpret, requires more training, and a greater understanding of anatomy and physiology than a corresponding CT of the same body part. The expert panel would have expected MRA of the neck to score higher on intensity and complexity measures than a similar CTA of the neck reflecting the relative rank order differences between CT and MRI noted throughout the fee schedule.

The 5 minutes of additional intra-service time for 70498 compared to 70548 is balanced by a proportional 0.25 RVU difference when allowing for slight differences in IWPUT explained by technical challenges for interpreting MRI compared to CT.

CPT Code	Short Descriptor	Work RVU	Pre-Service	Intra-Service	Post-Service	Total Time	IWPUT
70548	**MRA neck w/contrast**	**1.50**	**5**	**15**	**5**	**25**	**0.085**
70498	CTA neck w/o & w/contrast	1.75	5	20	5	30	0.076

MPC Code for 70548

Our recommendation is compared to the MPC code, 70470 *[Computed tomography, head or brain; without contrast material, followed by contrast material(s) and further sections],* demonstrating identical service period and total times, but different work RVU and IWPUT. The 0.23 more work RVUs and higher IWPUT for the surveyed code are felt to be properly balanced given the previously described technical challenges of interpreting MRI vs. CT.

CPT Code	Short Descriptor	Work RVU	Pre-Service	Intra-Service	Post-Service	Total Time	IWPUT

70548	**MRA neck w/contrast**	**1.50**	**5**	**15**	**5**	**25**	**0.085**
70470	CT head w/o & w/contrast	1.27	5	15	5	25	0.070

Summary:

In summary, our expert panel recommends increasing the current value of 70548 to 1.50 RVU, with median service period times of 5, 15, and 5 minutes. The societies presented compelling evidence for previous misvaluation of this code at 1.20 work RVU secondary to flawed methodology. We believe the recommended work RVU and times compare favorably with the most commonly chosen key reference service, 70498, as well as the MPC code, 70470. Relativity is also appropriate across the 3 codes for MRA of the neck and across the larger family of MR codes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 70548

How often do physicians <u>in your specialty</u> perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 76800
If the recommendation is from multiple specialties, please provide the frequency and <u>percentage</u> for each specialty. Please explain the rationale for this estimate. The overall number of services described by code 70548 provided nationally in a one-year period is estimated to be 76,800.

Specialty Diagnostic Radiology Frequency 72200 Percentage 94.01 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 25,600 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The 2015 Medicare data estimates that CPT code 70548 is billed approximately 25,600 times in total for Medicare patients nationally in a one-year period.

Specialty Diagnostic Radiology Frequency 24100 Percentage 94.14 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Imaging

BETOS Sub-classification:
Advanced imaging

BETOS Sub-classification Level II:
MRI/MRA: Brain/Head/Neck

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 70548

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

CPT Descriptor: Magnetic resonance angiography, neck; without contrast material(s), followed by contrast material(s) and further sequences

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: An elderly person with acute onset of right hemiparesis concerning for stroke. MR angiogram of the neck with and without IV contrast is ordered.

Percentage of Survey Respondents who found Vignette to be Typical: 95%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Moderate Sedation

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No
Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 6%

Is moderate sedation inherent to this procedure in the office setting? No
Percent of survey respondents who stated moderate sedation is typical in the office setting? 6%

Description of Pre-Service Work: The physician reviews the request for appropriateness and reviews clinical history and any prior applicable studies. The physician reviews patient's medical history to determine if there are any contraindications for MR including pacemakers, implanted devices or retained metallic fragments. If the patient reports a history of having metal (i.e. bullet fragments), the physician may order x-rays to assess the location or presence of any metal. If the patient has implanted devices, the physician will investigate the MRI safety of the device in the MRI scanner and may adjust the protocol so that the device can be safely scanned. The physician reviews laboratory studies to assess renal function and also reviews the medical record for allergy history, absence of contraindications to contrast injection, and factors predisposing the patient to nephrogenic systemic fibrosis. The physician adjusts the contrast product and amount to be injected. The physician discusses the nature and risks of contrast reaction to the patient and obtains informed consent where applicable. The physician supervises the IV placement and communicates the protocol to the technologist.

Description of Intra-Service Work: The physician will determine if there are any areas of interest that will need post-processing for magnified views. The physician then interprets the axial source pre-contrast and post-contrast images, maximum intensity projections (MIP), and reformats evaluating in detail the major vascular structures of the neck for stenosis (based on North American Symptomatic Carotid Endarterectomy Trial [NASCET] criteria) requiring either direct (obtaining measurements of diameters) or indirect comparison of the segment of stenosis with a normal segment distal to area of stenosis. Evaluate for thrombosis, embolus, aneurysms and/or pseudoaneurysms, vascular anomalies, vascular loops, dissections, and external compressions of the major arteries in the neck. Assess right innominate artery, bilateral common carotid, external carotid, internal carotid, and vertebral arteries. Evaluate aortic arch, visualized subclavian arteries, and visualized pulmonary vessels. Assess for arterialization of any jugular veins, innominate veins, and subclavian veins for patency, thrombus, or fistulas. Interpret the axial source images, the multiplanar images, and three-dimensional

reformats. Evaluate visualized brain parenchyma, cervical cord and vertebrae, and visualized lung apices. Evaluate for any abnormal enhancing areas in the visualized brain or soft tissue. Compare to all pertinent available prior studies. Dictate report.

Description of Post-Service Work: The physician confirms lack of complication from contrast agent such as allergic reaction or extravasation of contrast. The physician reviews and signs the final report. The findings are then communicated to the referring physician, emergency department, and/or patient.

SURVEY DATA

RUC Meeting Date (mm/yyyy)	10/2016				
Presenter(s):	Kurt Schoppe, MD; Gregory Nicola, MD; Joshua Hirsch, MD				
Specialty(s):	American College of Radiology and American Society of Neuroradiology				
CPT Code:	70549				
Sample Size:	2017	**Resp N:**	37	**Response:** 1.8 %	
Description of Sample:	The ACR surveyed a total of 750 members (a random sample of 375 members and a separate random sample of 375 members who perform neuro imaging. The ASNR surveyed a random sample of 1267 members.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Intensity & Complexity Rating Scale: (much less= -2.00, somewhat less= -1.00, identical= 0.00, somewhat more= 1.00, much more= 2.00)

	Top Key Ref Code	2nd Key Ref Code
Mental Effort and Judgment (Mean)		
The number of possible diagnosis and/or the number of management options that must be considered	-0.07	0.38
The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed	0.00	0.50
Urgency of medical decision making	-0.07	1.25
Technical Skill/Physical Effort (Mean)		
Technical skill required	0.73	0.25
Physical effort required	0.60	0.38

Psychological Stress (Mean)

The risk of significant complications, morbidity and/or mortality	0.20	0.63
Outcome depends on the skill and judgment of physician	0.40	0.88
Estimated risk of malpractice suit with poor outcome	0.20	1.00

INTENSITY/COMPLEXITY MEASURES	Top Key Ref Code	2nd Key Ref Code
Time Segment (Mean)		
Overall intensity/complexity	0.73	0.75

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

CPT code 70549 *[Magnetic resonance angiography, neck; without followed by contrast material(s) and further sequences]* was identified on CMS' high expenditure screen as potentially misvalued codes. The American College of Radiology (ACR) and American Society of Neuroradiology (ASNR) surveyed 70549, as well as the other 2 codes in the family, 70547 *[Magnetic resonance angiography, neck; without contrast material(s)]* and 70548 *[Magnetic resonance angiography, neck; with contrast material(s)]* and convened an expert panel of physicians familiar with the services to review the survey data.

Work RVU Recommendations

The expert panel recommends the 25th percentile survey data for 70547, 70548, and 70549. This represents current value for 70547 and 70549, and an increase in value for 70548.

Pre, Intra, and Post Service Times

The panel recommends the median survey service period times for all three codes. Our work and service period times are summarized in the following table:

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT
70547	MRA neck w/o contrast	1.20	5	12	5	22	0.081
70548	MRA neck w/contrast	1.50	5	15	5	25	0.085
70549	MRA neck w/o & w/contrast	1.80	5	20	5	31	0.079

Comparison to other RUC reviewed codes

Our recommendations are consistent with the RUC-reviewed reference services detailed below and maintain relativity across the family.

Code	Descriptor	Work RVU	Pre Time	Intra Time	Post Time	TOTAL Time	IWPUT	RUC reviewed
70450	Computed tomography, head or brain; without contrast material	0.85	4	10	5	19	0.065	2012
70460	Computed tomography, head or brain; with contrast material(s)	1.13	5	12	5	22	0.076	2012
70547	**Magnetic resonance angiography, neck; without contrast material(s)**	**1.20**	**5**	**12**	**5**	**22**	**0.081**	**2016**
70470	Computed tomography, head or brain; without contrast material, followed by contrast material(s) and further sections	1.27	5	15	5	25	0.070	2011
72141	Magnetic resonance (eg, proton) imaging, spinal canal and contents, cervical; without contrast material	1.48	5	20	5	30	0.063	2013
70548	**Magnetic resonance angiography, neck; with contrast material(s)**	**1.50**	**5**	**15**	**5**	**25**	**0.085**	**2016**
70498	Computed tomographic angiography, neck, with contrast material(s), including noncontrast images, if performed, and image postprocessing	1.75	5	20	5	30	0.076	2014
70549	**Magnetic resonance angiography, neck; without contrast material(s), followed by contrast material(s) and further sequences**	**1.80**	**5**	**20**	**5**	**30**	**0.079**	**2016**
72156	Magnetic resonance (eg, proton) imaging, spinal canal and contents, without contrast material, followed by contrast material(s) and further sequences; cervical	2.29	5	25	5	35	0.083	2013

Summary of Recommendation for CPT Code 70549 *[Magnetic resonance angiography, neck; without contrast material(s), followed by contrast material(s) and further sequences]*

Our expert panel recommends maintaining the current value of 70549 at 1.80 RVU with survey median service period times of 5, 20, and 5 minutes.

Code 70549 *[Magnetic resonance angiography, neck; without contrast material(s), followed by contrast material(s) and further sequences]* is an invaluable tool in investigating a diverse set of pathologies, which range from minor to life threatening. It is pivotal in investigating transient ischemic attack, stroke, stenosis of vasculature in patients with risk factors, trauma, congenital abnormalities, or anatomy prior to surgeries. Not only is a positive result significant, a negative result is also pertinent in patient management, in relieving patient anxiety, and in providing assurance to the ordering physicians.

CPT Code 70549 *[Magnetic resonance angiography, neck; without contrast material(s), followed by contrast material(s) and further sequences]* is a technically challenging examination to interpret. Understanding of MR physics and acquisitions techniques are required to distinguish between pathology and artifact. Synthesis of the information provided on different 3D and 2D images are required to make the correct diagnosis. A combination of its utility (as a positive and negative predictor of pathology), intensity, and the amount of technical training necessary to accurately interpret led us to believe that this procedure is appropriately valued as above.

Comparison to Key Reference Services for 70549

Our recommended work RVU of 1.80 is slightly higher than the most commonly chosen key reference service, 70498 *[Computed tomographic angiography, neck, with contrast material(s), including noncontrast images, if performed, and image postprocessing]*. 70498 has an identical intra-service time, and a slightly lower IWPUT. A larger number of structures are evaluated on CT angiography compared to MR angiography, and therefore it takes more time to interpret the study. However, the interpretation of an MR angiography is more complex due to the high number of artifacts that can be present, and requires more effort than simply evaluating the vessels by contrast on CT. Artifacts that typically appear in the exam, such as in-plane saturation, flow reversal artifact and susceptibility artifacts can mimic pathology. Understanding MR physics and the acquisition techniques of the different sequences are essential to make an accurate diagnosis. Specialized knowledge is required know which sequence will help diagnose a particular pathology or evaluate a vessel at a particular level in the neck. Additionally, more sequences are available to evaluate the vessels, and this requires complex synthesis of multiple data sources.

In the surveyed intensity/complexity measures, 70549 scored similar to 70498 in all categories, likely a reflection of the near identical indications and patient populations for these like studies evaluating vascular structures in the neck. However, the expert panel would like to highlight the long standing view by the specialty societies that the modality of MRI is more technically challenging to interpret, requires more training, and a greater understanding of anatomy and physiology than a corresponding CT of the same body part. The expert panel would have expected MRA of the neck to score higher on intensity and complexity measures than a similar CTA of the neck reflecting the relative rank order differences between CT and MRI noted throughout the fee schedule.

The 0.05 more work RVUs for 70549 compared to 70498 is balanced by the expected higher IWPUT for MRI over CT confirmed by our survey respondents.

CPT Code	Short Descriptor	Work RVU	Pre-Service	Intra-Service	Post-Service	Total Time	IWPUT
70549	**MRA neck w/o & w/contrast**	**1.80**	**5**	**20**	**5**	**30**	**0.079**
70498	CTA neck w/o & w/contrast	1.75	5	20	5	30	0.076

MPC Code for 70549

Our recommendation is compared to the MPC code, 70470 *[Computed tomography, head or brain; without contrast material, followed by contrast material(s) and further sections],* with 70549 demonstrating 5 minutes more of intra-service/total time and a slightly more than proportional 0.53 work RVU, which can be explained given the previously described technical challenges of interpreting MRI vs. CT.

CPT Code	Short Descriptor	Work RVU	Pre-Service	Intra-Service	Post-Service	Total Time	IWPUT
70549	**MRA neck w/o & w/contrast**	**1.80**	**5**	**20**	**5**	**30**	**0.079**
70470	CT head w/o & w/contrast	1.27	5	15	5	25	0.070

Summary:

In summary, our expert panel recommends maintaining the current value of 70549 at 1.80 RVU, with median service period times of 5, 20, and 5 minutes. We believe this compares favorably with the most commonly chosen key reference service, 70498, as well as the MPC code, 70470. Relativity is also appropriate across the 3 codes for MRA of the neck and across the larger family of MR codes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 70549

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 214000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by code 70549 provided nationally in a one-year period is estimated to be 214,000.

Specialty Diagnostic Radiology Frequency 200000 Percentage 93.45 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 71,300 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The 2015 Medicare data estimates that CPT code 70549 is billed approximately 71,300 times in total for Medicare patients nationally in a one-year period.

Specialty Diagnostic Radiology Frequency 66600 Percentage 93.40 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Imaging

BETOS Sub-classification:
Advanced imaging

BETOS Sub-classification Level II:
MRI/MRA: Brain/Head/Neck

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 70549

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation
Non Facility Direct Inputs

CPT Long Descriptor:

Global Period: XXX Meeting Date: Oct. 2016

70547	Magnetic resonance angiography, neck; without contrast material(s)
70548	Magnetic resonance angiography, neck; with contrast material(s)
70549	Magnetic resonance angiography, neck; without contrast material(s), followed by contrast material(s) and further sequences

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:

The American College of Radiology (ACR), and American Society of Neuroradiology (ASNR) convened a consensus panel to finalize the practice expense data for the MRA Neck code family, 70547, 70548, and 70549.

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale:

The society included the existing PE inputs for codes 70547, 70548, and 70549 on the spreadsheet to serve as a reference.

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:

- **Prepare room, equipment, supplies** - The specialty is recommending an increase in time since MR involves strong magnetic fields and ensuring patient safety is important. More specifically, all objects in the room must be MRI compatible. MR exams involve the use of MR coils which vary based on the body part studied and are specifically selected to fit the patient. These coils must be prepared for the intended exam, positioned, and attached to the MR unit. In addition, the examinations involving the use of contrast require setup of the injector apparatus and preparation of the contrast material.
- **Prepare and position patient/ monitor patient/ set up IV** – The specialty is recommending an increase in time to allow for positioning the patient to ensure they are comfortable during the lengthy procedure since motion artifact can degrade the quality of the exam. Pillows are typically positioned under the patient's knees to relieve stress off the back during the long image acquisition period. The patient's neck must be properly placed into the coils. If contrast is being administered, any IV lines must be secured to prevent disengagement. The technologist must confirm the patient has no MR incompatible internal devices (such as metal in or on clothing), personal possessions and even superficial tattoos. These may be dangerous or cause artifacts while the patient is in or around the MRI magnet.

- **Technologist QC's images in PACS, checking for all images, reformats, and dose page** - CMS [2017 MPFS Proposed Rule] and the RUC [2017 MPFS Proposed Rule Comment Letter] has acknowledged that this activity may vary based on the complexity of the exam. Thus, no standard exists for this activity. The specialty does acknowledge that our recommendation is an increase over codes reviewed before the 2016 MPFS. The specialty believes that MRA neck is at the higher end of complexity for radiology services since MR involves hundreds of images in multiple planes. Interpretation of MRI findings typically requires comparison of multiple sequences. Incomplete, poor quality, or missing sequences can lead to an inconclusive exam. The number of images and importance of QC warrant the four minutes recommended.

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:

- **Obtain vital signs** – clinically necessary for 70548 and 70549; related to contrast administration.
- **Provide pre-service education/obtain consent –** These times parallel other recent MRI codes, including, MRI brain and MRI face. This time is necessary to educate the patient about the MRI and specific risks, including an extensive evaluation for implanted or external devices, as well as any ferromagnetic objects on or around the patient, including certain types of clothing if they are to be worn in addition to the gown.
- **Gown, patient (SB026) –** clinically necessary supply item
- **Paper, exam table (SB036)** – clinically necessary supply
- **PACS Professional Workstation (ED053) -** in the CY 2016 MPFS Final Rule, CMS acknowledged that the costs of the professional workstation may be analogous to costs previously incorporated as direct PE inputs. In the CY 2017 MPFS Proposed Rule, CMS indicates that they will allow the addition of the professional PACS workstation to 70000 series codes that use the current technical PACS workstation and include professional work for which such a workstation would be used. The ACR, as approved by the RUC at the April 2016 meeting, is recommending that this equipment time equal the sum of the physician work pre-service time and intra-service time.

5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

- Availability of prior images confirmed
- Patient clinical information and questionnaire reviewed by technologist, order from physician confirmed and exam protocoled by radiologist

Intra-Service Clinical Labor Activities:

- Greet patient, provide gowning, ensure appropriate medical records are available
- Obtain vital signs
- Provide pre-service education/obtain consent
- Prepare room, equipment, supplies
- Prepare and position patient/ monitor patient/ set up IV
- Acquire Images
- Computer post-processing
- Clean room/equipment by physician staff
- Technologist QC's images in PACS, checking for all images, reformats, and dose page
- Review examination with interpreting MD
- Exam documents scanned into PACS. Exam completed in RIS system to generate billing process and to populate images into Radiologist work queue

AMA/Specialty Society RVS Update Committee Summary of Recommendations
CMS High Expenditure Procedures

October 2016

MRI Lower Extremity

In the Final Rule for 2016, CMS re-ran the high expenditure services across specialties with Medicare allowed charges of $10 million or more. CMS identified the top 20 codes by specialty in terms of allowed charges, excluding 010 and 090-day global services, anesthesia and Evaluation and Management services and services reviewed since CY 2010. CPT codes 73718 and 73720 were identified as part of this screen.

73718 ***Magnetic resonance (eg, proton) imaging, lower extremity other than joint; without contrast material(s)***
The RUC reviewed the survey results from 58 radiologists and recommends the following physician time components: pre-service time of 5 minutes, intra-service time of 15 minutes and post-service time of 5 minutes.

The RUC reviewed the survey 25th percentile work RVU of 1.35 and agreed that the current value of 1.35 is appropriate for this service. To justify a work RVU of 1.35, the RUC compared the survey code to 2nd key reference code 70551*Magnetic resonance (eg, proton) imaging, brain (including brain stem); without contrast material* (work RVU of 1.48, intra-service time of 18, total time of 28) and noted that with the surveyed code having slightly less time and comparable intensity of work, it would be appropriate to value the service somewhat less than the reference code. To further support a work RVU of 1.35, the RUC compared the survey code to CPT code 78454 *Myocardial perfusion imaging, planar (including qualitative or quantitative wall motion, ejection fraction by first pass or gated technique, additional quantification, when performed); multiple studies, at rest and/or stress (exercise or pharmacologic) and/or redistribution and/or rest reinjection* (work RVU of 1.34, intra-service time of 15 minutes, total time of 25 minutes) and noted that both services have identical intra-service times and involve similar amount of physician work. **The RUC recommends a work RVU of 1.35 for CPT code 73718.**

73719 ***Magnetic resonance (eg, proton) imaging, lower extremity other than joint; with contrast material(s)***
The RUC reviewed the survey results from 58 radiologists and recommends the following physician time components: pre-service time of 5 minutes, intra-service time of 20 minutes and post-service time of 5 minutes.

The RUC reviewed the survey 25th percentile work RVU of 1.62 and agreed that the current value of 1.62 is appropriate for this service. To validate a work RVU of 1.62, the RUC compared the survey code to top key reference code 73722 *Magnetic resonance (eg, proton) imaging, any joint of lower extremity; with contrast material(s)* (work RVU of 1.62, intra-service time of 20 minutes, total time of 38.5 minutes) and noted that while the reference code has more total time, both services have identical intra-service time and the survey respondents indicated that the survey code is somewhat more intense to perform, justifying similar valuation. To further justify a value of 1.62, the RUC compared the survey code to

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

CPTcode 74176 *Computed tomography, abdomen and pelvis; without contrast material* (work RVU of 1.74, intra-service time of 22 minutes and total time of 32 minutes) and noted that both services have a similar intensity of physician work, whereas the survey code has slightly less intra-service and total time, justifying a lower relative valuation for the survey code. **The RUC recommends a work RVU of 1.62 for CPT code 73719.**

73720 ***Magnetic resonance (eg, proton) imaging, lower extremity other than joint; without contrast material(s), followed by contrast material(s) and further sequences***
The RUC reviewed the survey results from 58 radiologists and recommends the following physician time components: pre-service time of 5 minutes, intra-service time of 24 minutes and post-service time of 5 minutes.

The RUC reviewed the survey 25th percentile work RVU of 2.15 and agreed that the current value of 2.15 is appropriate for this service. To justify a work RVU of 2.15, the RUC compared the survey code to 2nd key reference and MPC code 72158 *Magnetic resonance (eg, proton) imaging, spinal canal and contents, without contrast material, followed by contrast material(s) and further sequences; lumbar* (work RVU of 2.29, intra-service time of 25 minutes and total time of 35 minutes) and noted that with similar physician times and intensity of physician work, these services should be valued similarly. To further support a value of 2.15, the RUC compared the survey code to 72156 *Magnetic resonance (eg, proton) imaging, spinal canal and contents, without contrast material, followed by contrast material(s) and further sequences; cervical* (work RVU of 2.29, intra-service time of 25 minutes and total time of 35 minutes) and noted that with similar physician times and intensity of physician work, these services should also be valued similarly. **The RUC recommends a work RVU of 2.15 for CPT code 73720.**

Practice Expense
The Practice Expense Subcommittee reviewed the direct PE inputs as recommended by the specialty societies and made several modifications to the supplies and reduced the MRI tech's time for quality control of the images in the PACS to 3 minutes. The Subcommittee did have significant discussions around how long the pre-service education and obtain consent should take. Typically MR codes have received 7 minutes in the non-contrast codes and 9 minutes for each contrast code. The Subcommittee discussed that with the profusion of this technology over many years many patients have received multiple scans prior and are familiar with the question and answer process. Furthermore, while it is true that the safety check list must be read through each visit, the list is still standardized and efficiencies have been made in the process. The Subcommittee agreed that the appropriate time should be 5 minutes for non-contrast (73718) and 7 minutes for contrast (73719 and 73720). This issue will be looked at in the future so that a uniform time allocation for pre-service education and obtain consent for MR codes across the family can be established.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
73718	Magnetic resonance (eg, proton) imaging, lower extremity other than joint; without contrast material(s)	XXX	1.35 (No Change)

SUMMARY OF RECOMMENDATION

CPT Code: 73718 Tracking Number Original Specialty Recommended RVU: **1.35**
Presented Recommended RVU: **1.35**
Global Period: XXX RUC Recommended RVU: **1.35**

CPT Descriptor: Magnetic resonance (eg, proton) imaging, lower extremity other than joint; without contrast material(s)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 22-year-old male with lower extremity muscle strain is referred for MRI to assess grade of injury.

Percentage of Survey Respondents who found Vignette to be Typical: 98%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Moderate Sedation

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No
Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 5%

Is moderate sedation inherent to this procedure in the office setting? No
Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: Review patient order, clinical history, and relevant prior imaging exams. Exclude patients with contraindications to MRI. Determine appropriate protocol for clinical history and communicate protocol to technologists.

Description of Intra-Service Work: Obtain and interpret scout views of area to be imaged to select appropriate field of view and adjust anatomic planes as needed for patient positioning. Review obtained sequences for motion and repeat sequences as needed. Interpret all sequences resulting from the study. Include dedicated review of the target lesion(s) or anatomy as well as all visualized soft tissues, fascial planes, vasculature, and osseous structures. Compare to all pertintent available studies.

Description of Post-Service Work: Review and sign final report. Communicate findings to referring physician as appropriate.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Intensity & Complexity Rating Scale: (much less= -2.00, somewhat less= -1.00, identical= 0.00, somewhat more= 1.00, much more= 2.00)

	Top Key Ref Code	2nd Key Ref Code
Mental Effort and Judgment (Mean)		
The number of possible diagnosis and/or the number of management options that must be considered	0.33	-0.17
The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed	0.42	0.33
Urgency of medical decision making	0.17	-0.67
Technical Skill/Physical Effort (Mean)		
Technical skill required	0.19	-0.17
Physical effort required	0.03	0.00

Psychological Stress (Mean)

The risk of significant complications, morbidity and/or mortality	0.22	-0.33
Outcome depends on the skill and judgment of physician	0.25	-0.50
Estimated risk of malpractice suit with poor outcome	0.22	0.00

INTENSITY/COMPLEXITY MEASURES	Top Key Ref Code	2nd Key Ref Code
Time Segment (Mean)		
Overall intensity/complexity	0.22	-0.17

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background:
CPT Code 73718 *(MRI lower extremity other than joint; without contrast material)* was identified on Table 8 of the 2016 MPFS NPRM, a list of potentially misvalued codes identified through the High Expenditure by Specialty Screen.

Survey Process:
The American College of Radiology (ACR) conducted a simple random sample and a separate random sample of members subspecializing in MR. We assembled an expert panel to review the data and develop the following recommendations.

Work RVU Recommendation:
We recommend maintaining the current work RVU of 1.35 which is the same as the 25th percentile survey value.

Time Recommendation:
We recommend the median survey times of 5 minutes pre-service, 15 minutes intra-service, and 5 minutes post-service.

Key Reference Services:
Our recommendation compares favorably to the two most commonly chosen key reference services (KRS): 73721 *(MRI any joint of lower extremity; without contrast material)* chosen by 62% of respondents and 70551 *(MRI brain (including brain stem); without contrast material*) chosen by 10% of respondents.

Our recommendation for 73718 has the same wRVU as 73721. While there is a slightly lower intra-service time in the non-joint code (73718) due to the differences in search patterns between the two studies, this is accounted for by the higher intensity of the non-joint code, which is most commonly performed to evaluate malignancy or soft tissue infections. The recommended work RVU for 73718 is lower than 70551, which is appropriately accounted for by the lower intra-service time compared to 70551.

CPT	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
73718	**MRI lower extremity other than joint; without contrast material**	**1.35**	**25**	**5**	**15**	**5**	**0.075**
73721	MRI any joint of lower extremity; without contrast material	1.35	30	5	20	5	0.056
70551	MRI brain (including brain stem); without contrast material	1.48	28	5	18	5	0.070

MPC Codes:
The surveyed code is bracketed by three MPC codes:

70470 *(Computed tomography, head or brain; without contrast material, followed by contrast material(s) and further sections);*
73721 *(Magnetic resonance (eg, proton) imaging, any joint of lower extremity; without contrast material),* which is also the first KRS; and,
99283 *(Emergency department visit for the evaluation and management of a patient, which requires these 3 key components: An expanded problem focused history; An expanded problem focused examination; and Medical decision making of moderate complexity).*

The surveyed code has the same service period times as 74070, but is appropriately valued slightly higher because of the complexity of patients and number of images involved with this service. CPT codes 73721 and 99283 have slightly higher intra-service time periods with similar work RVU values. We believe this appropriately reflects the intensity differences between these services as reflected by the patient populations and diagnosis codes related to these services. For example, the surveyed code is most commonly performed for patients with malignancy or complicated soft tissue infections.

CPT	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
70470	Computed tomography, head or brain; without contrast material, followed by contrast material(s) and further sections	1.27	25	5	15	5	0.070
99283	Emergency department visit for the evaluation and management of a patient, which requires these 3 key components; problem(s) are of moderate severity.	1.34	30	5	18	7	0.060
73718	**MRI lower extremity other than joint; without contrast material**	**1.35**	**25**	**5**	**15**	**5**	**0.075**
73721	MRI any joint of lower extremity; without contrast material	1.35	30	5	20	5	0.056

Family of Codes:
Our recommendation for the 25th percentile for 73718 is supported by the survey data, comparisons with Key Reference Services, and relativity to appropriate MPC codes. Our recommendation also maintains relativity within the larger family of lower extremity MRI codes.

CPT	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
73718	**MRI lower extremity other than joint; without contrast material**	**1.35**	**25**	**5**	**15**	**5**	**0.075**
73719	MRI lower extremity other than joint; with contrast material	1.62	30	5	20	5	0.070
73720	MRI lower extremity other than joint; without contrast material, followed by contrast material and further sequences	2.15	34	5	24	5	0.080

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.

☐ Historical precedents.
☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 73718

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 365406
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by code 73718 provided nationally in a one-year period is estimated to be 365,406.

Specialty Diagnostic Radiology Frequency 315203 Percentage 86.26 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 121,802 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The 2015 Medicare data estimates that CPT code 73718 is billed approximately 121,802 times in total for Medicare patients nationally in a one-year period.

Specialty Diagnostic Radiology Frequency 105068 Percentage 86.26 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment
Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Imaging

BETOS Sub-classification:
Advanced imaging

BETOS Sub-classification Level II:
MRI/MRA: Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 73718

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code: 73719 Tracking Number Original Specialty Recommended RVU: **1.62**
Presented Recommended RVU: **1.62**
Global Period: XXX RUC Recommended RVU: **1.62**

CPT Descriptor: Magnetic resonance (eg, proton) imaging, lower extremity other than joint; with contrast material(s)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 63-year-old male with a soft tissue mass in the mid-thigh had an unenhanced MRI at another facility. He is being considered for surgical resection and is referred for enhanced MRI to assess vascularity and extent of mass.

Percentage of Survey Respondents who found Vignette to be Typical: 97%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Moderate Sedation

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No
Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 5%

Is moderate sedation inherent to this procedure in the office setting? No
Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: Review patient order, clinical history, and relevant prior imaging exams. Exclude patients with contraindications to MRI. Review patient history for contrast allergy, renal insufficiency or other contraindications for receiving IV contrast. Determine appropriate protocol for clinical history and communicate protocol to technologists.

Description of Intra-Service Work: Obtain and interpret scout views of area to be imaged to select appropriate field of view and adjust anatomic planes as needed for patient positioning. Supervise selection of the Gadolinium contrast agent, dose, and subsequent injection. Review obtained sequences for motion and repeat sequences as needed. Interpret all sequences resulting from the study. Include dedicated review of the target lesion(s) or anatomy as well as all visualized soft tissues, fascial planes, vasculature, and osseous structures. Compare to all pertinent available prior studies.

Description of Post-Service Work: Review and sign final report. Communicate findings to referring physician as appropriate.

Median Subsequent Observation Care Time	0.0	0.00	0.00
Median Total Time	**30.00**	**38.50**	**46.50**
Other time if appropriate			

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Intensity & Complexity Rating Scale: (much less= -2.00, somewhat less= -1.00, identical= 0.00, somewhat more= 1.00, much more= 2.00)

	Top Key Ref Code	2nd Key Ref Code
Mental Effort and Judgment (Mean)		
The number of possible diagnosis and/or the number of management options that must be considered	0.50	0.88
The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed	0.44	0.63
Urgency of medical decision making	0.35	0.13

Technical Skill/Physical Effort (Mean)

Technical skill required	0.32	0.38
Physical effort required	0.26	0.38

Psychological Stress (Mean)

The risk of significant complications, morbidity and/or mortality	0.47	0.38
Outcome depends on the skill and judgment of physician	0.38	0.75
Estimated risk of malpractice suit with poor outcome	0.56	0.38

INTENSITY/COMPLEXITY MEASURES	**Top Key Ref Code**	**2nd Key Ref Code**
Time Segment (Mean)		
Overall intensity/complexity	0.56	0.75

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background:
CPT Code 73719 *(MRI lower extremity other than joint; with contrast material)* was identified on Table 8 of the 2016 MPFS NPRM, a list of potentially misvalued codes identified through the High Expenditure by Specialty Screen.

Survey Process:
The American College of Radiology (ACR) conducted a simple random sample and a separate random sample of members subspecializing in MR. We assembled an expert panel to review the data and develop the following recommendations.

Work RVU Recommendation:
We recommend maintaining the current work RVU of 1.62 which is the same as the 25th percentile survey value.

Time Recommendation:
We recommend the median survey times of 5 minutes pre-service, 20 minutes intra-service, and 5 minutes post-service.

The decrease in total time from 40 minutes to 30 minutes is accounted for by the decrease in pre-service and post-service time from 10 minutes to 5 minutes each. These times are consistent with other recently surveyed MRI codes. Additionally, we believe the relatively less intense work from the pre- and post-service periods is balanced out by the increased intra-service intensity from improved technology (i.e. higher resolution) and increased number of images in the typical study compared to the last survey period.

Key Reference Services:
Our recommendation compares favorably to the two most commonly chosen key reference services (KRS): 73722 *(MRI any joint of lower extremity; with contrast material)* chosen by 58.6% of respondents and 73723 *(MRI any joint of lower extremity; without contrast material, followed by contrast material and further sequences)* chosen by 13.7% of respondents.

Our recommendation for 73719 has the same work RVU as 73722, which is the examination considered most similar to 73719. The difference between these two codes is only in the pre- and post-service times. Our recommendation for 73719 has a lower wRVU compared to the 73723, which is appropriately accounted for by the comparably lower service period times.

CPT	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
73719	**MRI lower extremity other than joint; with contrast material**	**1.62**	**30**	**5**	**20**	**5**	**0.070**
73722	MRI any joint of lower extremity; with contrast material	1.62	38.5	8.5	20	10	0.060
73723	MRI any joint of lower extremity; without contrast material, followed by contrast material and further sequences	2.15	46.5	10	26.5	10	0.064

MPC Codes:

The surveyed code is bracketed by three MPC codes:

99203 *(Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: A detailed history; A detailed examination; Medical decision making of low complexity)*;
93351 *(Echocardiography, transthoracic, real-time with image documentation (2D), includes M-mode recording, when performed, during rest and cardiovascular stress test using treadmill, bicycle exercise and/or pharmacologically induced stress, with interpretation and report; including performance of continuous electrocardiographic monitoring, with supervision by a physician or other qualified health care professional);* and,
74176 *(Computed tomography, abdomen and pelvis; without contrast material).*

The surveyed code has the nearly the same pre and intra service period times as both 99203 and 93351, but is appropriately valued between the two codes given the intensity differences between these services. CPT code 74176 has a slightly higher intra-service time with appropriately higher work RVU value compared with the surveyed code, 73719. We believe the triangulation between these MPC codes and the surveyed code justifies the recommended value and appropriately positions 73719 within the larger relative value scale.

CPT	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
99203	Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: decision making of low complexity.	1.42	29	4	20	5	0.061
73719	**MRI lower extremity other than joint; with contrast material**	**1.62**	**30**	**5**	**20**	**5**	**0.070**
74176	Computed tomography, abdomen and pelvis; without contrast material	1.74	32	5	22	5	0.069
93351	Echocardiography, transthoracic, real-time with image documentation (2D), includes M-mode recording, when performed, during rest and cardiovascular stress test using treadmill, bicycle exercise and/or pharmacologically induced stress, with interpretation and report	1.75	35	5	20	10	0.071

Family of Codes:

Our recommendation for the 25th percentile for 73719 is supported by the survey data, comparisons with Key Reference Services, and relativity to appropriate MPC codes. Our recommendation also maintains relativity within the larger family of lower extremity MRI codes.

CPT	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
73718	MRI lower extremity other than joint; without contrast material	1.35	25	5	15	5	0.075
73719	**MRI lower extremity other than joint; with contrast material**	**1.62**	**30**	**5**	**20**	**5**	**0.070**
73720	MRI lower extremity other than joint; without contrast material, followed by contrast material	2.15	34	5	24	5	0.080

	and further sequences						

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 73719

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 4818
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by code 73719 provided nationally in a one-year period is estimated to be 4,818.

Specialty Diagnostic Radiology Frequency 4620 Percentage 95.89 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,606
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The 2015 Medicare data estimates that CPT code 73719 is billed approximately 1,606 times in total for Medicare patients nationally in a one-year period.

Specialty Diagnostic Radiology Frequency 1540 Percentage 95.89 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Imaging

BETOS Sub-classification:
Advanced imaging

BETOS Sub-classification Level II:
MRI/MRA: Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 73719

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code: 73720 Tracking Number Original Specialty Recommended RVU: **2.15**
Presented Recommended RVU: **2.15**
Global Period: XXX RUC Recommended RVU: **2.15**

CPT Descriptor: Magnetic resonance (eg, proton) imaging, lower extremity other than joint; without contrast material(s), followed by contrast material(s) and further sequences

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 63-year-old male with a soft tissue mass in the mid-thigh is being considered for surgical resection. He is referred for MRI for pre-surgical planning.

Percentage of Survey Respondents who found Vignette to be Typical: 95%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Moderate Sedation

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No
Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 5%

Is moderate sedation inherent to this procedure in the office setting? No
Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: Review patient order, clinical history, and relevant prior imaging exams. Exclude patients with contraindications to MRI. Review patient history for contrast allergy, renal insufficiency or other contraindications for receiving IV contrast. Determine appropriate protocol for clinical history and communicate protocol to technologists.

Description of Intra-Service Work: Obtain and interpret scout views of area to be imaged to select appropriate field of view and adjust anatomic planes as needed for patient positioning. Review obtained non-contrast sequences for motion and repeat sequences as needed. Supervise selection of the Gadolinium contrast agent, dose, and subsequent injection. Review obtained sequences for motion and repeat post-contrast sequences as needed. Interpret all sequences resulting from the study. Include dedicated review of the target lesion(s) or anatomy as well as all visualized soft tissues, fascial planes, vasculature, and osseous structures. Compare to all pertinent available prior studies.

Description of Post-Service Work: Review and sign final report. Communicate findings to referring physician as appropriate.

Modifier -51 Exempt Status

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:

Is this new/revised procedure considered to be a new technology or service? No

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
73723	XXX	2.15	**RUC Time**

CPT Descriptor Magnetic resonance (eg, proton) imaging, any joint of lower extremity; without contrast material(s), followed by contrast material(s) and further sequences

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
72158	XXX	2.29	**RUC Time**

CPT Descriptor Magnetic resonance (eg, proton) imaging, spinal canal and contents, without contrast material, followed by contrast material(s) and further sequences; lumbar

KEY MPC COMPARISON CODES:

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
92004	XXX	1.82	**RUC Time**	2,252,320

CPT Descriptor 1 Ophthalmological services: medical examination and evaluation with initiation of diagnostic and treatment program; comprehensive, new patient, 1 or more visits

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
74178	XXX	2.01	**RUC Time**	548,773

CPT Descriptor 2 Computed tomography, abdomen and pelvis; without contrast material in one or both body regions, followed by contrast material(s) and further sections in one or both body regions

Other Reference CPT Code	Global	Work RVU	Time Source
99204	XXX	2.43	**RUC Time**

CPT Descriptor Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 45 minutes are spent face-to-face with the patient and/or family.

RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:
Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by the mean) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Top Key Reference Code: 36 **% of respondents:** 62.0 **%**

Number of respondents who choose 2nd Key Reference Code: 7 **% of respondents:** 12.0 **%**

INTENSITY/COMPLEXITY MEASURES	Top Key Ref Code	2nd Key Ref Code
Time Segment (Mean)		
Overall intensity/complexity	0.58	0.71

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background:
CPT Code 73720 *(MRI lower extremity other than joint; without contrast material, followed by contrast material and further sequences)* was identified on Table 8 of the 2016 MPFS NPRM, a list of potentially misvalued codes identified through the High Expenditure by Specialty Screen.

Survey Process:
The American College of Radiology (ACR) conducted a simple random sample and a separate random sample of members subspecializing in MR. We assembled an expert panel to review the data and develop the following recommendations.

Work RVU Recommendation:
We recommend maintaining the current work RVU of 2.15 which is the same as the 25th percentile survey value.

Time Recommendation:
We recommend the median survey times of 5 minutes pre-service, 24 minutes intra-service, and 5 minutes post-service.

The decrease in total time from 45 minutes to 34 minutes can be predominately explained by 5 minute decreases in the pre- and post-service time periods, while there has been only a 1 minute decrease in the intra-service time. These times are consistent with other recently surveyed MRI codes. Additionally, we believe the relatively less intense work from the pre- and post-service periods is balanced out by the increased intra-service intensity from improved technology (i.e. higher resolution, additional MRI sequences) and increased number of images in the typical study compared to the last survey period.

Key Reference Services:
Our recommendation compares favorably to the two most commonly chosen key reference services (KRS): 73723 *(MRI any joint of lower extremity; without contrast material, followed by contrast material and further sequences)* chosen by 62% of respondents, and 72158 *(MRI spinal canal and contents, without contrast material, followed by contrast material and further sequences; lumbar)* chosen by 12% of respondents.

We recommend the same work RVU as 73723, which is the examination considered most similar to 73719. While there is a slightly lower intra-service time in the non-joint code (73720) due to the differences in search patterns between the two studies, this is accounted for by the higher intensity of the non-joint code, which is most commonly performed to evaluate malignancy or complicated infections. Compared to the surveyed code 72158 has an appropriately higher work RVU given its slightly longer intra-service time.

CPT	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
73720	**MRI lower extremity other than joint; without contrast material; followed by contrast material and further sequences**	**2.15**	**34**	**5**	**24**	**5**	**0.080**
73723	MRI any joint of lower extremity; without contrast materials, followed by contrast materials and further sequences	2.15	46.5	10	26.5	10	0.064
72158	MRI spinal canal and contents, without contrast material, followed by contrast materials and further sequences; lumbar	2.29	35	5	25	5	0.083

MPC Codes:
The surveyed code is bracketed by three MPC codes:

92004 *(Ophthalmological services: medical examination and evaluation with initiation of diagnostic and treatment program; comprehensive, new patient, 1 or more visits)*;
74178 *(Computed tomography, abdomen and pelvis; without contrast material in one or both body regions, followed by contrast material(s) and further sections in one or both body regions)*; and,
99204 *(Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of moderate complexity).*

We believe the triangulation between these MPC codes and the surveyed code justifies the recommended value and appropriately positions 73720 within the larger relative value scale. Specifically, the recommend value of 73720 is appropriately less than 99204 given the lower intra-service time (i.e. 24 minutes vs. 30 minutes). Even though the intra-service time for 73720 is lower than 74178, the recommended RVU is higher because of the clinical differences between the patient populations undergoing these services, where the patients undergoing 73720 are more commonly in a hospital setting and being evaluated for complicated infection or malignancy.

CPT	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
92004	Ophthalmological services: medical examination and evaluation with initiation of diagnostic and treatment program; comprehensive, new patient, 1 or more visits	1.82	40	5	25	10	0.059
74178	Computed tomography, abdomen and pelvis; without contrast material, followed by contrast material(s) and further sections	2.01	40	5	30	5	0.060
73720	**MRI lower extremity other than joint; without contrast material, followed by contrast material and additional sequences**	**2.15**	**34**	**5**	**24**	**5**	**0.080**
99204	Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: decision making of moderate severity.	2.43	45	5	30	10	0.070

Family of Codes:
Our recommendation for the 25th percentile for 73720 is supported by the survey data, comparisons with Key Reference Services, and relativity to appropriate MPC codes. Our recommendation also maintains relativity within the larger family of lower extremity MRI codes.

CPT	Descriptor	wRVU	Total	Pre	Intra	Post	IWPUT

			Time				
73718	MRI lower extremity other than joint; without contrast material	1.35	25	5	15	5	0.075
73719	MRI lower extremity other than joint; with contrast material	1.62	30	5	20	5	0.070
73720	**MRI lower extremity other than joint; without contrast material, followed by contrast material and further sequences**	**2.15**	**34**	**5**	**24**	**5**	**0.080**

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 73720

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 163845
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by code 73720 provided nationally in a one-year period is estimated to be 163,845

Specialty Diagnostic Radiology Frequency 154384 Percentage 94.22 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 54,615 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The 2015 Medicare data estimates that CPT code 73720 is billed approximately 54,615 times in total for Medicare patients nationally in a one-year period.

Specialty Diagnostic Radiology Frequency 51461 Percentage 94.22 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Imaging

BETOS Sub-classification:
Advanced imaging

BETOS Sub-classification Level II:
MRI/MRA: Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 73720

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

Attestation Statement

This form needs to be completed by any **RUC Advisor** whose specialty society is developing a recommendation to be reviewed by the RUC.

As a RUC Advisor, I attest that the integrity of the RUC survey, summary of recommendation forms and practice expense recommendations are based on accurate and complete data to the best of my knowledge. As a RUC advisor, I acknowledge that violations would be addressed by the executive committee (i.e., RUC Chair , AMA Representative and Alternate AMA Representative.)

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation
Non Facility Direct Inputs

CPT Long Descriptor:

Global Period: XXX Meeting Date: Oct. 2016

73718	Magnetic resonance (eg, proton) imaging, lower extremity other than joint; without contrast material(s)
73719	Magnetic resonance (eg, proton) imaging, lower extremity other than joint; with contrast material(s)
73720	Magnetic resonance (eg, proton) imaging, lower extremity other than joint; without contrast material(s), followed by contrast material(s) and further sequences

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:

The American College of Radiology (ACR) convened a consensus panel to finalize the practice expense data for the MRI Lower Extremities code family 73718, 73719, 73720.

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale:

The society included the existing PE inputs for codes 73718, 73719, and 73720 on the spreadsheet to serve as a reference.

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:

- **Prepare room, equipment, supplies-** The specialty is recommending an increase in time since MR involves strong magnetic fields and ensuring patient safety is important. More specifically, all objects in the room must be MRI compatible. MR exams involve the use of MR coils which vary based on the body part studied and are specifically selected to fit the patient. These coils must be prepared for the intended exam, positioned, and attached to the MR unit. In addition, the examinations involving the use of contrast require setup of the injector apparatus and preparation of the contrast material.
- **Prepare and position patient/ monitor patient/ set up IV-** The specialty is recommending an increase in time to allow for positioning the patient to ensure they are comfortable during the lengthy procedure since motion artifact can degrade the quality of the exam. Pillows are typically positioned under the patient's knees to relieve stress off the back during the long image acquisition period. The lower extremities of the patient must be properly placed into the coils. If contrast is being administered, any IV lines must be secured to prevent disengagement. The technologist must confirm the patient has no MR incompatible internal devices (such as metal in or on clothing), personal possessions and even superficial tattoos. These may be dangerous or cause artifacts while the patient is in or around the MRI magnet.

- **Technologist QC's images in PACS, checking for all images, reformats, and dose page-** CMS [2017 MPFS Proposed Rule] and the RUC [2017 MPFS Proposed Rule Comment Letter] has acknowledged that this activity may vary based on the complexity of the exam. Thus, no standard exists for this activity. The specialty does acknowledge that our recommendation is an increase over codes reviewed before the 2016 MPFS. The specialty believes that MR is at the higher end of complexity for radiology services since MR involves hundreds of images in multiple planes. Interpretation of MRI findings typically requires comparison of multiple sequences. Incomplete, poor quality, or missing sequences can lead to an inconclusive exam. The number of images and importance of QC warrant the four minutes recommended.

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:

- **Obtain vital signs -** clinically necessary for 73719 and 73720; related to contrast administration.
- **Gown, patient (SB026)** – clinically necessary supply item for 73718.
- **Paper, exam table (SB036)** – clinically necessary supply item for 73718.
- **Professional PACS Workstation (ED053)** – In the CY 2016 MPFS Final Rule, CMS acknowledged that the costs of the professional workstation may be analogous to costs previously incorporated as direct PE inputs. In the CY 2017 MPFS Proposed Rule, CMS indicates that they will allow the addition of the professional PACS workstation to 70000 series codes that use the current technical PACS workstation and include professional work for which such a workstation would be used. The ACR, as approved by the RUC at the April 2016 meeting, is recommending that this equipment time equal the sum of the physician work pre-service time and intra-service time.

5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

- Availability of prior images confirmed
- Patient clinical information and questionnaire reviewed by technologist, order from physician confirmed and exam protocoled by radiologist

Intra-Service Clinical Labor Activities:

- Greet patient, provide gowning, ensure appropriate medical records are available
- Obtain vital signs
- Provide pre-service education/obtain consent
- Prepare room, equipment, supplies
- Prepare and position patient/ monitor patient/ set up IV
- Assist physician in performing procedure/ Acquire Images
- Clean room/equipment by physician staff
- Technologist QC's images in PACS, checking for all images, reformats, and dose page
- Review examination with interpreting MD
- Exam documents scanned into PACS. Exam completed in RIS system to generate billing process and to populate images into Radiologist work queue

Post-Service Clinical Labor Activities:

AMA/Specialty Society RVS Update Committee Summary of Recommendations
CMS High Expenditure Procedures

October 2016

MRI of Abdomen and Pelvis

In the Final Rule for 2016, CMS re-ran the high expenditure services across specialties with Medicare allowed charges of $10 million or more. CMS identified the top 20 codes by specialty in terms of allowed charges, excluding 010 and 090-day global services, anesthesia and Evaluation and Management services and services reviewed since CY 2010. CPT codes 74182 and 72196 were identified as part of this screen.

74181 ***Magnetic resonance (eg, proton) imaging, abdomen; without contrast material(s)***
The RUC reviewed the survey results from 50 radiologists and recommends the following physician time components: pre-service time of 5 minutes, intra-service time of 20 minutes and post-service time of 5 minutes.

The RUC reviewed the survey respondents' estimated physician work and agreed with the specialty that maintaining the current work RVU of 1.46 is supported. To justify a work RVU of 1.46, the RUC compared the survey code to top key reference code 70551 *Magnetic resonance (eg, proton) imaging, brain (including brain stem); without contrast material* (work RVU of 1.48, intra-service time of 18 minutes, total time of 28 minutes) and noted that with the survey code having more intra-service and total time and the survey respondents indicating that both services have similar work intensities, a value of 1.46 is supported for the survey code. The RUC also compared the survey code to CPT code 72141 *Magnetic resonance (eg, proton) imaging, spinal canal and contents, cervical; without contrast material*(work RVU of 1.48, intra-service time of 20 minutes, total time of 30 minutes) and noted that both services have identical times and involve a similar amount of physician work. **The RUC recommends a work RVU of 1.46 for CPT code 74181.**

74182 ***Magnetic resonance (eg, proton) imaging, abdomen; with contrast material(s)***
The RUC reviewed the survey results from 50 radiologists and recommends the following physician time components: pre-service time of 5 minutes, intra-service time of 25 minutes and post-service time of 5 minutes.

The RUC reviewed the survey respondents' estimated physician work and agreed with the specialty that maintaining the current work RVU of 1.73 is supported. To justify a work RVU of 1.73, the RUC compared the survey code to top key reference code 74177 *Computed tomography, abdomen and pelvis; with contrast material(s)* (work RVU of 1.82, intra-service time of 25 minutes, total time of 35 minutes) and noted that both services have identical times and 57 percent of survey respondents indicated the survey code is a somewhat more intense and complex service

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

relative to 74177. To further support a work RVU of 1.73, the RUC compared the survey code to 2nd key reference code 74176 *Computed tomography, abdomen and pelvis; without contrast material* (work RVU of 1.74, intra-service time of 22 minutes, total time of 32 minutes) and observed that the survey code has somewhat more intra-service and total time. **The RUC recommends a work RVU of 1.73 for CPT code 74182.**

74183 ***Magnetic resonance (eg, proton) imaging, abdomen; without contrast material(s), followed by with contrast material(s) and further sequences***
The RUC reviewed the survey results from 50 radiologists and recommends the following physician time components: pre-service time of 5 minutes, intra-service time of 30 minutes and post-service time of 5 minutes.

The RUC reviewed the survey 25th percentile work RVU of 2.20 and agreed that this value, which is somewhat lower than current, correctly captures the amount of physician work involved in performing this service. To justify a work RVU of 2.20, the RUC compared the survey code to MPC code 72158 *Magnetic resonance (eg, proton) imaging, spinal canal and contents, without contrast material, followed by contrast material(s) and further sequences; lumbar* (work RVU of 2.29, intra-service time of 25 minutes, total time of 35 minutes) and noted that the survey code involves both 5 minutes more of intra-service time and total time. The RUC also compared the survey code to 74174 *Computed tomographic angiography, abdomen and pelvis, with contrast material(s), including noncontrast images, if performed, and image postprocessing* (work RVU of 2.20 and noted that both services have identical times and involve a similar amount of physician work. **The RUC recommends a work RVU of 2.20 for CPT code 74183.**

72195 ***Magnetic resonance (eg, proton) imaging, pelvis; without contrast material(s)***
The RUC reviewed the survey results from 50 radiologists and recommends the following physician time components: pre-service time of 5 minutes, intra-service time of 20 minutes and post-service time of 5 minutes.

The RUC reviewed the survey respondents estimated physician work and agreed with the specialty that maintaining the current work RVU of 1.46 is supported. To justify a work RVU of 1.46, the RUC compared the survey code to top key reference code 70551 *Magnetic resonance (eg, proton) imaging, brain (including brain stem); without contrast material* (work RVU of 1.48, intra-service time of 18 minutes, total time of 28 minutes) and noted that with the survey code having more intra-service and total time and the survey respondents indicating that both services have similar work intensities, a value of 1.46 is supported for the survey code. The RUC also compared the survey code to CPT code 72141 *Magnetic resonance (eg, proton) imaging, spinal canal and contents, cervical; without contrast material*(work RVU of 1.48, intra-service time of 20 minutes, total time of 30 minutes) and noted that both services have identical times and involve a similar amount of physician work. **The RUC recommends a work RVU of 1.46 for CPT code 72195.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

72196 ***Magnetic resonance (eg, proton) imaging, pelvis; with contrast material(s)***
The RUC reviewed the survey results from 50 radiologists and recommends the following physician time components: pre-service time of 5 minutes, intra-service time of 25 minutes and post-service time of 5 minutes.

The RUC reviewed the survey respondents estimated physician work and agreed with the specialty that maintaining the current work RVU of 1.73 is supported. To justify a work RVU of 1.73, the RUC compared the survey code to top key reference code 74177 *Computed tomography, abdomen and pelvis; with contrast material(s)* (work RVU of 1.82, intra-service time of 25 minutes, total time of 35 minutes) and noted that both services have identical times and 57 percent of survey respondents indicated the survey code is a somewhat more intense and complex service relative to 74177. To further support a work RVU of 1.73, the RUC compared the survey code to 2nd key reference code 74176 *Computed tomography, abdomen and pelvis; without contrast material* (work RVU of 1.74, intra-service time of 22 minutes, total time of 32 minutes) and observed that the survey code has somewhat more intra-service and total time. **The RUC recommends a work RVU of 1.73 for CPT code 72196.**

72197 ***Magnetic resonance (eg, proton) imaging, pelvis; without contrast material(s), followed by contrast material(s) and further sequences***
The RUC reviewed the survey results from 50 radiologists and recommends the following physician time components: pre-service time of 5 minutes, intra-service time of 27 minutes and post-service time of 5 minutes.

The RUC reviewed the survey 25th percentile work RVU of 2.20 and agreed that this value, which is somewhat lower than current, correctly captures the amount of physician work involved in performing this service. To justify a work RVU of 2.20, the RUC compared the surveyed code to MPC code 72158 *Magnetic resonance (eg, proton) imaging, spinal canal and contents, without contrast material, followed by contrast material(s) and further sequences; lumbar* (work RVU of 2.29, intra-service time of 25 minutes, total time of 35 minutes) and noted that the survey code involves somewhat more intra-service and total time. The RUC also compared the survey code to 74174 *Computed tomographic angiography, abdomen and pelvis, with contrast material(s), including noncontrast images, if performed, and image postprocessing* (work RVU of 2.20 and noted that both services have similar times and involve a similar amount of physician work. **The RUC recommends a work RVU of 2.20 for CPT code 72197.**

Practice Expense
The Practice Expense Subcommittee reviewed the direct PE inputs as recommended by the specialty societies and made several modifications to the supplies and reduced the MRI tech's time for quality control of the images in the PACS to 3 minutes. The Subcommittee did have significant discussions around how long the pre-service education and obtain consent should take. Typically MR codes have received 7 minutes in the non-contrast codes and 9 minutes for each contrast code. The Subcommittee discussed that with the profusion of this technology over many years many patients have received multiple scans prior and are familiar with the question and answer process. Furthermore, while it is true that the safety check list must be read through each visit, the list is still standardized and efficiencies have been made in the process. The Subcommittee agreed that the appropriate time should be 5 minutes for non-contrast (74181 and 72195) and 7 minutes for contrast (74182, 74183, 72196 and 72197).

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

This issue will be looked at in the future so that a uniform time allocation for pre-service education and obtain consent for MR codes across the family can be established.

Work Neutrality
The RUC's recommendation for this code will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
74181	Magnetic resonance (eg, proton) imaging, abdomen; without contrast material(s)	XXX	1.46 (No Change)

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code: 74181 Tracking Number Original Specialty Recommended RVU: **1.46**
Presented Recommended RVU: **1.46**
Global Period: XXX RUC Recommended RVU: **1.46**

CPT Descriptor: Magnetic resonance (eg, proton) imaging, abdomen; without contrast material(s)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 56-year-old female presents with an indeterminate renal lesion and chronic renal insufficiency. An abdominal MRI without contrast is performed to better characterize this lesion.

Percentage of Survey Respondents who found Vignette to be Typical: 96%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Moderate Sedation

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No
Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 8%

Is moderate sedation inherent to this procedure in the office setting? No
Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: Review patient order, clinical history, and relevant prior imaging exams. Exclude patients with contraindications to MRI. Determine appropriate protocol for clinical history and communicate protocol to technologists.

Description of Intra-Service Work: Obtain and interpret scout views of area to be imaged to select appropriate field of view and adjust anatomic planes as needed for patient positioning.
Review obtained sequences for motion or other artifacts, and repeat sequences as needed.
Interpret all sequences resulting from the study. Include dedicated review of the target organ(s) as well as all visualized abdominal viscera, fascial planes, vasculature, soft tissues, and osseous structures.
Compare to all pertinent available prior studies. Dictate report for medical record.

Description of Post-Service Work: Review and sign final report. Communicate findings to referring physician as appropriate.

SURVEY DATA

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Intensity & Complexity Rating Scale: (much less= -2.00, somewhat less= -1.00, identical= 0.00, somewhat more= 1.00, much more= 2.00)

	Top Key Ref Code	2nd Key Ref Code
Mental Effort and Judgment (Mean)		
The number of possible diagnosis and/or the number of management options that must be considered	0.78	0.43
The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed	0.28	0.29
Urgency of medical decision making	-0.11	0.14
Technical Skill/Physical Effort (Mean)		
Technical skill required	0.22	0.71
Physical effort required	0.22	0.29

Psychological Stress (Mean)

The risk of significant complications, morbidity and/or mortality	0.00	0.14
Outcome depends on the skill and judgment of physician	0.06	0.57
Estimated risk of malpractice suit with poor outcome	-0.11	0.14

INTENSITY/COMPLEXITY MEASURES	Top Key Ref Code	2nd Key Ref Code
Time Segment (Mean)		
Overall intensity/complexity	0.22	0.57

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background
CPT Codes 74181 and 74183 (abdominal MRI codes) and Codes 72195 and 72197 (pelvic MRI codes) were identified on Table 8 of the 2016 MPFS NPRM, a list of potentially misvalued codes identified through the High Expenditure by Specialty Screen. We expanded the family to include codes 74182 and 72196 (the with contrast abdominal and pelvic MRI codes, respectively), and surveyed the entire family with a single array survey instrument.

Survey Process
The American College of Radiology (ACR) conducted a simple random sample and a separate random sample of members subspecializing in MR. We assembled an expert panel to review the data and develop the following recommendations.

Work RVU Recommendation:
We recommend maintaining the current work RVU of 1.46, which is below the 25th percentile survey value of 1.50.

Time Recommendations:
We recommend the median survey times of 5 minutes pre-service, 20 minutes intra-service, and 5 minutes post-service, which are the same as the current times.

Key Reference Services:
Our recommendation compares favorably to the two most commonly chosen key reference services (KRS): **70551** *(Magnetic resonance (eg, proton) imaging, brain (including brain stem); without contrast material)* chosen by 36% of respondents, and **74176** *(Computed tomography, abdomen and pelvis; without contrast material)* chosen by 14% of respondents.

Our recommendation for 74181 has a slightly lower work RVU compared to the two KRS codes, which have slightly shorter and longer intra-service times, respectively compared to the surveyed code (see Table below). The surveyed code was judged to be of similar intensity and complexity compared with the KRS codes.

CPT	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
74181	**Magnetic resonance imaging, abdomen; without contrast**	**1.46**	**30**	**5**	**20**	**5**	**0.062**
70551	Magnetic resonance (eg, proton) imaging, brain (including brain	1.48	28	5	18	5	0.070

	stem); without contrast material						
74176	Computed tomography, abdomen and pelvis; without contrast material	1.74	32	5	22	5	0.069

MPC Codes:
The surveyed code is bracketed by two MPC codes:

99203 *(Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: A detailed history; A detailed examination; Medical decision making of low complexity)*, and
74176 *(Computed tomography, abdomen and pelvis; without contrast material)*, which is also the second KRS code.

CPT	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
99203	Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: decision making of low complexity.	1.42	29	4	20	5	0.061
74181	**Magnetic resonance imaging, abdomen; without contrast**	**1.46**	**30**	**5**	**20**	**5**	**0.062**
74176	Computed tomography, abdomen and pelvis; without contrast material	1.74	32	5	22	5	0.069

Summary:
Our recommendation to maintain the current value of 1.46 RVU for 74181 is supported by the survey data, comparisons with Key Reference Services, and relativity to appropriate MPC codes.

CPT	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
72195	Magnetic resonance imaging, pelvis; without contrast	1.46	30	5	20	5	0.062
74181	**Magnetic resonance imaging, abdomen; without contrast**	**1.46**	**30**	**5**	**20**	**5**	**0.062**
72196	Magnetic resonance imaging, pelvis; with contrast	1.73	35	5	25	5	0.060
74182	Magnetic resonance imaging, abdomen; with contrast	1.73	35	5	25	5	0.060
72197	Magnetic resonance imaging, pelvis; without contrast, followed by contrast, and further sequences	2.20	37	5	27	5	0.073
74183	Magnetic resonance imaging, abdomen; without contrast, followed by contrast, and further sequences	2.20	40	5	30	5	0.066

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 74181

Global Period: XXX RUC Recommended RVU: **1.73**

CPT Descriptor: Magnetic resonance (eg, proton) imaging, abdomen; with contrast material(s)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 60-year-old female with a hepatic mass is referred for MRI of the abdomen. The patient has a known hepatic mass and brings with her an unenhanced scan.

Percentage of Survey Respondents who found Vignette to be Typical: 96%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Moderate Sedation

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No
Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 6%

Is moderate sedation inherent to this procedure in the office setting? No
Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: Review patient order, clinical history, and relevant prior imaging exams. Exclude patients with contraindications to MRI.
Review patient history for contrast allergy, renal insufficiency or other contraindications for receiving IV contrast.
Determine appropriate protocol for clinical history and communicate protocol to technologists.

Description of Intra-Service Work: Obtain and interpret scout views of area to be imaged to select appropriate field of view and adjust anatomic planes as needed for patient positioning.
Supervise selection of the Gadolinium contrast agent, dose, and subsequent injection.
Review obtained sequences for motion or other artifacts, and repeat sequences as needed.
Interpret all sequences resulting from the study. Include dedicated review of the target organ(s) as well as all visualized abdominal viscera, fascial planes, vasculature, soft tissues, and osseous structures.
Compare to all pertinent available prior studies. Dictate report for medical record.

Description of Post-Service Work: Review and sign final report. Communicate findings to referring physician as appropriate.

Modifier -51 Exempt Status

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:

Is this new/revised procedure considered to be a new technology or service? No

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
74177	XXX	1.82	**RUC Time**

CPT Descriptor Computed tomography, abdomen and pelvis; with contrast material(s)

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
74176	XXX	1.74	**RUC Time**

CPT Descriptor Computed tomography, abdomen and pelvis; without contrast material

KEY MPC COMPARISON CODES:

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
99335	XXX	1.72	**RUC Time**	993,166

CPT Descriptor 1 Domiciliary or rest home visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: An expanded problem focused interval history; An expanded problem focused examination; Medical decision making of low complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of low to moderate severity. Typically, 25 minutes are spent with the patient and/or family or caregiver.

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
74176	XXX	1.74	**RUC Time**	2,160,758

CPT Descriptor 2 2,160,758

Other Reference CPT Code	Global	Work RVU	Time Source
70553	XXX	2.29	**RUC Time**

CPT Descriptor Magnetic resonance (eg, proton) imaging, brain (including brain stem); without contrast material, followed by contrast material(s) and further sequences

RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:
Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by the mean) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Top Key Reference Code: 7 **% of respondents:** 14.0 **%**

Number of respondents who choose 2nd Key Reference Code: 7 **% of respondents:** 14.0 **%**

TIME ESTIMATES (Median)

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Intensity & Complexity Rating Scale: (much less= -2.00, somewhat less= -1.00, identical= 0.00, somewhat more= 1.00, much more= 2.00)

	Top Key Ref Code	**2nd Key Ref Code**
Mental Effort and Judgment (Mean)		
The number of possible diagnosis and/or the number of management options that must be considered	1.00	0.86
The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed	0.43	-0.14
Urgency of medical decision making	-0.29	0.57
Technical Skill/Physical Effort (Mean)		
Technical skill required	0.57	-0.14

Physical effort required	0.29	0.14

Psychological Stress (Mean)

The risk of significant complications, morbidity and/or mortality	-0.14	0.43
Outcome depends on the skill and judgment of physician	0.71	-0.14
Estimated risk of malpractice suit with poor outcome	0.43	0.00

INTENSITY/COMPLEXITY MEASURES	**Top Key Ref Code**	**2nd Key Ref Code**

Time Segment (Mean)

Overall intensity/complexity	0.43	0.57

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background
CPT Codes 74181 and 74183 (abdominal MRI codes) and Codes 72195 and 72197 (pelvic MRI codes) were identified on Table 8 of the 2016 MPFS NPRM, a list of potentially misvalued codes identified through the High Expenditure by Specialty Screen. We expanded the family to include codes 74182 and 72196 (the with contrast abdominal and pelvic MRI codes, respectively), and surveyed the entire family with a single array survey instrument.

Survey Process
The American College of Radiology (ACR) conducted a simple random sample and a separate random sample of members subspecializing in MR. We assembled an expert panel to review the data and develop the following recommendations.

Work RVU Recommendation:
We recommend maintaining the current work RVU of 1.73, which is below the 25th percentile survey value of 1.80.

Time Recommendations:
We recommend the median survey times of 5 minutes pre-service, 25 minutes intra-service, and 5 minutes post-service.

The total time has decreased from 45 minutes to 35 minutes; however, survey respondents indicated that this service now requires 5 more minutes of intra-service time (from 20 to 25 minutes), while indicating only 5 minutes each for the pre- and post-services period, which is comparable to other recently surveyed MRI codes. We believe the relative intensity of the intra-service work period and the increased time balances the decrease in pre- and post-service time.

Key Reference Services:
Our recommendation compares favorably to the most commonly chosen key reference services (KRS):

74177 *(Computed tomography, abdomen and pelvis; with contrast material(s))* chosen by 14% of respondents,
74176 *(Computed tomography, abdomen and pelvis; without contrast material(s))* chosen by 14% of respondents,
70553 *(Magnetic resonance (eg, proton) imaging, brain (including brain stem); without contrast material, followed by contrast material(s) and further sequences)*, chosen by 14% of respondents, and
74174 *(Computed tomographic angiography, abdomen and pelvis, with contrast material(s), including noncontrast images, if performed, and image postprocessing)*, chosen by 10% of respondents.

Our recommendation for 74182 has a slightly lower work RVU compared to all of the KRS codes, which represent a range of service (see Table below). We believe this heterogeneity of KRS selections represents the diverse practice patterns of radiologists and confirms the appropriateness of the recommended values within the larger family of radiology services for the surveyed code, especially given its low utilization relative to these comparisons.

CPT	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
74182	**Magnetic resonance imaging, abdomen; with contrast**	**1.73**	**35**	**5**	**25**	**5**	**0.060**
74176	Computed tomography, abdomen and pelvis; without contrast material	1.74	32	5	22	5	0.069
74177	Computed tomography, abdomen and pelvis; with contrast material(s)	1.82	35	5	25	5	0.064
74174	Computed tomographic angiography, abdomen and pelvis, with contrast material(s), including noncontrast images, if performed, and image postprocessing	2.20	40	5	30	5	0.066
70553	Magnetic resonance (eg, proton) imaging, brain (including brain stem); without contrast, followed by contrast	2.29	37	5	25	7	0.081

MPC Codes:

The surveyed code is bracketed by two MPC codes:

99335 *(Domiciliary or rest home visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components; Medical decision making of low complexity. Counseling and/or coordination of care with other physicians, Typically, 25 minutes are spent with the patient and/or family or caregiver)*, and
74176 *(Computed tomography, abdomen and pelvis; without contrast material)*, which is also the second KRS code.

CPT	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
99335	Domiciliary or rest home visit for the evaluation and management of an established patient; Medical decision making of low complexity.	1.72	44	9	25	10	0.052
74182	**Magnetic resonance imaging, abdomen; with contrast**	**1.73**	**35**	**5**	**25**	**5**	**0.060**
74176	Computed tomography, abdomen and pelvis; without contrast material	1.74	32	5	22	5	0.069

Summary:

Our recommendation to maintain the current value of 1.73 RVU for 74182 is supported by the survey data, comparisons with Key Reference Services, and relativity to appropriate MPC codes.

CPT	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
72195	Magnetic resonance imaging, pelvis; without contrast	1.46	30	5	20	5	0.062
74181	Magnetic resonance imaging, abdomen; without contrast	1.46	30	5	20	5	0.062
72196	Magnetic resonance imaging, pelvis; with contrast	1.73	35	5	25	5	0.060
74182	**Magnetic resonance imaging, abdomen; with contrast**	**1.73**	**35**	**5**	**25**	**5**	**0.060**
72197	Magnetic resonance imaging, pelvis; without contrast, followed by contrast, and further sequences	2.20	37	5	27	5	0.073
74183	Magnetic resonance imaging, abdomen; without contrast, followed by contrast, and further sequences	2.20	40	5	30	5	0.066

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.

- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Intensity & Complexity Rating Scale: (much less= -2.00, somewhat less= -1.00, identical= 0.00, somewhat more= 1.00, much more= 2.00)

	Top Key Ref Code	2nd Key Ref Code
Mental Effort and Judgment (Mean)		
The number of possible diagnosis and/or the number of management options that must be considered	1.14	0.70
The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed	0.79	0.60
Urgency of medical decision making	-0.14	0.20

Technical Skill/Physical Effort (Mean)

Technical skill required	0.64	0.80
Physical effort required	0.64	0.50

Psychological Stress (Mean)

The risk of significant complications, morbidity and/or mortality	0.50	0.30
Outcome depends on the skill and judgment of physician	0.43	0.80
Estimated risk of malpractice suit with poor outcome	0.29	0.10

INTENSITY/COMPLEXITY MEASURES	Top Key Ref Code	2nd Key Ref Code
Time Segment (Mean)		
Overall intensity/complexity	1.00	0.80

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background
CPT Codes 74181 and 74183 (abdominal MRI codes) and Codes 72195 and 72197 (pelvic MRI codes) were identified on Table 8 of the 2016 MPFS NPRM, a list of potentially misvalued codes identified through the High Expenditure by Specialty Screen. We expanded the family to include codes 74182 and 72196 (the with contrast abdominal and pelvic MRI codes, respectively), and surveyed the entire family with a single array survey instrument.

Survey Process
The American College of Radiology (ACR) conducted a simple random sample and a separate random sample of members subspecializing in MR. We assembled an expert panel to review the data and develop the following recommendations.

Work RVU Recommendation:
We recommend the 25th percentile work RVU of 2.20, which is below the current value of 2.26.

Time Recommendations:
We recommend the median survey times of 5 minutes pre-service, 30 minutes intra-service, and 5 minutes post-service.

The total time has decreased by 10 minutes, which is accounted for by reductions in only the pre- and post-service periods. The intra-service time recommendation is the same as the current time. This reduction in total time is reflected in the slightly reduced work RVU recommendation as mentioned above given the relatively low intensity of the pre- and post-service work periods.

Key Reference Services:
Our recommendation compares favorably to the most commonly chosen key reference services (KRS):

70553 *(Magnetic resonance (eg, proton) imaging, brain (including brain stem); without contrast material, followed by contrast material(s) and further sequences),* chosen by 28% of respondents,

74178 *(Computed tomography, abdomen and pelvis; without contrast material in one or both body regions, followed by contrast material(s) and further sections in one or both body regions)* chosen by 20% of respondents,
74174 *(Computed tomographic angiography, abdomen and pelvis, with contrast material(s), including noncontrast images, if performed, and image postprocessing)*, chosen by 16% of respondents, and
74263 *(Computed tomographic (CT) colonography, screening, including image postprocessing)* chosen by 14% of respondents.

Our work RVU recommendation for 74183 is bracketed by the work RVUs of the KRS selections, and maps directly to the third KRS time and work RVU values. This heterogeneity of KRS selections is consistent with the diverse practice patterns and patient populations of the radiologists surveyed and confirms the appropriateness of the recommended values within the larger family of radiology services.

CPT	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
74178	Computed tomography, abdomen and pelvis; without contrast, followed by contrast	2.01	40	5	30	5	0.060
74174	Computed tomographic angiography, abdomen and pelvis, with contrast material(s), including noncontrast images, if performed, and image postprocessing	2.20	40	5	30	5	0.066
74183	**Magnetic resonance imaging, abdomen; without contrast, followed by contrast**	**2.20**	**40**	**5**	**30**	**5**	**0.066**
74263	Computed tomographic (CT) colonography, screening, including image postprocessing	2.28	50	7	38	5	0.053
70553	Magnetic resonance (eg, proton) imaging, brain (including brain stem); without contrast, followed by contrast	2.29	37	5	25	7	0.081

MPC Codes:
The surveyed code is bracketed by two MPC codes:

74178 *(Computed tomography, abdomen and pelvis; without contrast material in one or both body regions, followed by contrast material(s) and further sections in one or both body regions)*, which is the first KRS, and
99204 *(Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of moderate complexity).*

CPT	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
74178	Computed tomography, abdomen and pelvis; without contrast material, followed by contrast material(s) and further sections	2.01	40	5	30	5	0.060
74183	**Magnetic resonance imaging, abdomen; without contrast, followed by contrast**	**2.20**	**40**	**5**	**30**	**5**	**0.066**
99204	Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: decision making of moderate severity.	2.43	45	5	30	10	0.070

Summary:
Our recommendation of 2.20 RVUs (survey 25th percentile) for 74183 is supported by the survey data, comparisons with Key Reference Services, and relativity to appropriate MPC codes.

CPT	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
72195	Magnetic resonance imaging, pelvis; without contrast	1.46	30	5	20	5	0.062
74181	Magnetic resonance imaging, abdomen; without contrast	1.46	30	5	20	5	0.062
72196	Magnetic resonance imaging, pelvis; with contrast	1.73	35	5	25	5	0.060
74182	Magnetic resonance imaging, abdomen; with contrast	1.73	35	5	25	5	0.060
72197	Magnetic resonance imaging, pelvis; without contrast, followed by contrast, and further sequences	2.20	37	5	27	5	0.073
74183	**Magnetic resonance imaging, abdomen; without contrast, followed by contrast, and further sequences**	**2.20**	**40**	**5**	**30**	**5**	**0.066**

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 74183

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 720324
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by code 74183 provided nationally in a one-year period is estimated to be 720,324.

Specialty Diagnostic Radiology Frequency 682226 Percentage 94.71 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 240,108 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The 2015 Medicare data estimates that CPT code 74183 is billed approximately 240,108 times in total for Medicare patients nationally in a one-year period.

Specialty Diagnostic Radiology Frequency 227409 Percentage 94.71 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Imaging

BETOS Sub-classification:
Advanced imaging

BETOS Sub-classification Level II:
MRI/MRA: Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 74183

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:72195 Tracking Number Original Specialty Recommended RVU: **1.46**
Presented Recommended RVU: **1.46**
Global Period: XXX RUC Recommended RVU: **1.46**

CPT Descriptor: Magnetic resonance (eg, proton) imaging, pelvis; without contrast material(s)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 75-year-old female with osteoporosis has a history of recent fall with persistent pelvic pain. X-rays are performed and do not reveal an injury. An MRI is requested to evaluate for an occult fracture.

Percentage of Survey Respondents who found Vignette to be Typical: 98%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Moderate Sedation

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No
Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 8%

Is moderate sedation inherent to this procedure in the office setting? No
Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: Review patient order, clinical history, and relevant prior imaging exams. Exclude patients with contraindications to MRI.
Determine appropriate protocol for clinical history and communicate protocol to technologists.

Description of Intra-Service Work: Obtain and interpret scout views of area to be imaged to select appropriate field of view and adjust anatomic planes as needed for patient positioning.
Review obtained sequences for motion and repeat sequences as needed.
Interpret all sequences resulting from the study. Include dedicated review of the target organ(s) as well as all visualized pelvic viscera, fascial planes, vasculature, soft tissues, and osseous structures.
Compare to all pertinent available prior studies. Dictate report for medical record.

Description of Post-Service Work: Review and sign final report. Communicate findings to referring physician as appropriate.

Outcome depends on the skill and judgment of physician	0.43	0.83
Estimated risk of malpractice suit with poor outcome	0.07	0.17

INTENSITY/COMPLEXITY MEASURES	Top Key Ref Code	2nd Key Ref Code
Time Segment (Mean)		
Overall intensity/complexity	0.57	0.67

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background
CPT Codes 74181 and 74183 (abdominal MRI codes) and Codes 72195 and 72197 (pelvic MRI codes) were identified on Table 8 of the 2016 MPFS NPRM, a list of potentially misvalued codes identified through the High Expenditure by Specialty Screen. We expanded the family to include codes 74182 and 72196 (the with contrast abdominal and pelvic MRI codes, respectively), and surveyed the entire family with a single array survey instrument.

Survey Process
The American College of Radiology (ACR) conducted a simple random sample and a separate random sample of members subspecializing in MR. We assembled an expert panel to review the data and develop the following recommendations.

Work RVU Recommendation:
We recommend maintaining the current work RVU of 1.46, which is below the 25th percentile survey value of 1.50.

Time Recommendations:
We recommend the median survey times of 5 minutes pre-service, 20 minutes intra-service, and 5 minutes post-service.

Key Reference Services:
Our recommendation compares favorably to the most commonly chosen key reference services (KRS):

70551 *(Magnetic resonance (eg, proton) imaging, brain (including brain stem); without contrast material)* chosen by 28% of respondents,
74176 *(Computed tomography, abdomen and pelvis; without contrast material)* chosen by 12% of respondents, and
73721 (*Magnetic resonance (eg, proton) imaging, any joint of lower extremity; without contrast material*) chosen by 12% of respondents.

Our work recommendation for 72195 is bracketed by the work RVUs compared to the KRS codes (see Table below). The surveyed code has the same time values as the third KRS (73721), but a slightly higher recommended work RVU. This differential is appropriate given the complexity of the pelvic anatomy and the difference between the patient populations undergoing these services.

CPT	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT

73721	Magnetic resonance (eg, proton) imaging, any joint of lower extremity; without contrast material	1.35	30	5	20	5	0.056
72195	**Magnetic resonance imaging, pelvis; without contrast**	**1.46**	**30**	**5**	**20**	**5**	**0.062**
70551	Magnetic resonance (eg, proton) imaging, brain (including brain stem); without contrast material	1.48	28	5	18	5	0.070
74176	Computed tomography, abdomen and pelvis; without contrast material	1.74	32	5	22	5	0.069

MPC Codes:
The surveyed code is bracketed by two MPC codes:

99203 *(Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: A detailed history; A detailed examination; Medical decision making of low complexity)*, and
74176 *(Computed tomography, abdomen and pelvis; without contrast material)*, which is also the second KRS code.

CPT	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
99203	Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: decision making of low complexity.	1.42	29	4	20	5	0.061
72195	**Magnetic resonance imaging, pelvis; without contrast**	**1.46**	**30**	**5**	**20**	**5**	**0.062**
74176	Computed tomography, abdomen and pelvis; without contrast material	1.74	32	5	22	5	0.069

Summary:
Our recommendation to maintain the current value of 1.46 RVU for 72195 is supported by the survey data, comparisons with Key Reference Services, and relativity to appropriate MPC codes.

CPT	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
72195	**Magnetic resonance imaging, pelvis; without contrast**	**1.46**	**30**	**5**	**20**	**5**	**0.062**
74181	Magnetic resonance imaging, abdomen; without contrast	1.46	30	5	20	5	0.062
72196	Magnetic resonance imaging, pelvis; with contrast	1.73	35	5	25	5	0.060
74182	Magnetic resonance imaging, abdomen; with contrast	1.73	35	5	25	5	0.060
72197	Magnetic resonance imaging, pelvis; without contrast, followed by contrast, and further sequences	2.20	37	5	27	5	0.073
74183	Magnetic resonance imaging, abdomen; without contrast, followed by contrast, and further sequences	2.20	40	5	30	5	0.066

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 72195

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 221652
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by code 72195 provided nationally in a one-year period is estimated to be 221,652.

Specialty Diagnostic Radiology Frequency 197835 Percentage 89.25 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 73,884 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The 2015 Medicare data estimates that CPT code 72195 is billed approximately 73,884 times in total for Medicare patients nationally in a one-year period.

Specialty Diagnostic Radiology Frequency 65945 Percentage 89.25 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

SUMMARY OF RECOMMENDATION

CPT Code:72196 Tracking Number Original Specialty Recommended RVU: **1.73**
Presented Recommended RVU: **1.73**
Global Period: XXX RUC Recommended RVU: **1.73**

CPT Descriptor: Magnetic resonance (eg, proton) imaging, pelvis; with contrast material(s)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 40-year-old male with a presacral mass is referred for an MRI of the pelvis with contrast. He provides a disc with an unenhanced pelvis MRI performed at an outside institution.

Percentage of Survey Respondents who found Vignette to be Typical: 92%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Moderate Sedation

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No
Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 10%

Is moderate sedation inherent to this procedure in the office setting? No
Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: Review patient order, clinical history, and relevant prior imaging exams. Exclude patients with contraindications to MRI.
Review patient history for contrast allergy, renal insufficiency or other contraindications for receiving IV contrast.
Determine appropriate protocol for clinical history and communicate protocol to technologists.

Description of Intra-Service Work: Obtain and interpret scout views of area to be imaged to select appropriate field of view and adjust anatomic planes as needed for patient positioning.
Supervise selection of the Gadolinium contrast agent, dose, and subsequent injection.
Review obtained sequences for motion or other artifacts, and repeat sequences as needed.
Interpret all sequences resulting from the study. Include dedicated review of the target organ(s) as well as all visualized pelvic viscera, fascial planes, vasculature, soft tissues, and osseous structures.
Compare to all pertinent available prior studies. Dictate report for medical record.

Description of Post-Service Work: Review and sign final report. Communicate findings to referring physician as appropriate.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Intensity & Complexity Rating Scale: (much less= -2.00, somewhat less= -1.00, identical= 0.00, somewhat more= 1.00, much more= 2.00)

	Top Key Ref Code	**2nd Key Ref Code**
Mental Effort and Judgment (Mean)		
The number of possible diagnosis and/or the number of management options that must be considered	0.58	0.67
The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed	0.08	1.00
Urgency of medical decision making	0.42	-0.33
Technical Skill/Physical Effort (Mean)		
Technical skill required	0.42	1.00

Physical effort required	0.17	0.33

Psychological Stress (Mean)

The risk of significant complications, morbidity and/or mortality	0.42	0.00
Outcome depends on the skill and judgment of physician	0.50	0.67
Estimated risk of malpractice suit with poor outcome	0.17	0.33

INTENSITY/COMPLEXITY MEASURES	**Top Key Ref Code**	**2nd Key Ref Code**

Time Segment (Mean)

Overall intensity/complexity	0.42	0.67

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background
CPT Codes 74181 and 74183 (abdominal MRI codes) and Codes 72195 and 72197 (pelvic MRI codes) were identified on Table 8 of the 2016 MPFS NPRM, a list of potentially misvalued codes identified through the High Expenditure by Specialty Screen. We expanded the family to include codes 74182 and 72196 (the with contrast abdominal and pelvic MRI codes, respectively), and surveyed the entire family with a single array survey instrument.

Survey Process
The American College of Radiology (ACR) conducted a simple random sample and a separate random sample of members subspecializing in MR. We assembled an expert panel to review the data and develop the following recommendations.

Work RVU Recommendation:
We recommend maintaining the current work RVU of 1.73, which is below the 25th percentile survey value of 1.74.

Time Recommendations:
We recommend the median survey times of 5 minutes pre-service, 25 minutes intra-service, and 5 minutes post-service.

The total time has decreased from 43 minutes to 35 minutes; however, survey respondents indicated that this service now requires 5 more minutes of intra-service time (from 20 to 25 minutes), while indicating only 5 minutes each in the pre- and post-services period, which is comparable to other recently surveyed MRI codes. We believe the relative intensity of the intra-service work period and the increased intra-service time balances the decrease in pre- and post-service times.

Key Reference Services:
Our recommendation compares favorably to the most commonly chosen key reference services (KRS):

74177 *(Computed tomography, abdomen and pelvis; with contrast material(s))* chosen by 24% of respondents,
70553 *(Magnetic resonance (eg, proton) imaging, brain (including brain stem); without contrast material, followed by contrast material(s) and further sequences)*, chosen by 12% of respondents,
73722 *(Magnetic resonance (eg, proton) imaging, any joint of lower extremity; with contrast material(s))* chosen by 10% of respondents, and
74174 *(Computed tomographic angiography, abdomen and pelvis, with contrast material(s), including noncontrast images, if performed, and image postprocessing)*, chosen by 10% of respondents.

Our work recommendation for 72196 is bracketed by the work RVUs compared to the KRS codes (see Table below). The surveyed code has the same time values as both the first and second most commonly chosen KRS (74177 and 70553), but a lower recommended work RVU, which appropriate, especially given the comparison to 70553, which include both pre- and post-contrast imaging.

CPT	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
73722	Magnetic resonance imaging, any joint of lower extremity; with contrast	1.62	39	8.5	20	10	0.060
72196	**Magnetic resonance imaging, pelvis; with contrast**	**1.73**	**35**	**5**	**25**	**5**	**0.060**
74177	Computed tomography, abdomen and pelvis; with contrast material(s)	1.82	35	5	25	5	0.064
74174	Computed tomographic angiography, abdomen and pelvis, with contrast material(s), including noncontrast images, if performed, and image postprocessing	2.20	40	5	30	5	0.066
70553	Magnetic resonance (eg, proton) imaging, brain (including brain stem); without contrast, followed by contrast	2.29	37	5	25	7	0.081

MPC Codes:

The surveyed code is bracketed by two MPC codes:

99335 (*Domiciliary or rest home visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components; Medical decision making of low complexity. Counseling and/or coordination of care with other physicians, Typically, 25 minutes are spent with the patient and/or family or caregiver)*, and
74176 *(Computed tomography, abdomen and pelvis; without contrast material).*

CPT	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
99335	Domiciliary or rest home visit for the evaluation and management of an established patient; Medical decision making of low complexity.	1.72	44	9	25	10	0.052
72196	**Magnetic resonance imaging, pelvis; with contrast**	**1.73**	**35**	**5**	**25**	**5**	**0.060**
74176	Computed tomography, abdomen and pelvis; without contrast material	1.74	32	5	22	5	0.069

Summary:

Our recommendation to maintain the current value of 1.73 RVU for 72196 is supported by the survey data, comparisons with Key Reference Services, and relativity to appropriate MPC codes.

CPT	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
72195	Magnetic resonance imaging, pelvis; without contrast	1.46	30	5	20	5	0.062
74181	Magnetic resonance imaging, abdomen; without contrast	1.46	30	5	20	5	0.062
72196	**Magnetic resonance imaging, pelvis; with contrast**	**1.73**	**35**	**5**	**25**	**5**	**0.060**
74182	Magnetic resonance imaging, abdomen; with contrast	1.73	35	5	25	5	0.060
72197	Magnetic resonance imaging, pelvis; without contrast, followed by contrast, and further sequences	2.20	37	5	27	5	0.073
74183	Magnetic resonance imaging, abdomen; without contrast, followed by contrast, and further sequences	2.20	40	5	30	5	0.066

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.

- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 72196

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:72197 Tracking Number Original Specialty Recommended RVU: **2.20**
Presented Recommended RVU: **2.20**
Global Period: XXX RUC Recommended RVU: **2.20**

CPT Descriptor: Magnetic resonance (eg, proton) imaging, pelvis; without contrast material(s), followed by contrast material(s) and further sequences

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 65-year-old male was recently diagnosed with prostate cancer on transrectal biopsy. He is referred for high resolution pelvic MRI for treatment planning.

Percentage of Survey Respondents who found Vignette to be Typical: 88%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Moderate Sedation

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No
Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 9%

Is moderate sedation inherent to this procedure in the office setting? No
Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: Review patient order, clinical history, and relevant prior imaging exams. Exclude patients with contraindications to MRI.
Review patient history for contrast allergy, renal insufficiency or other contraindications for receiving IV contrast.
Determine appropriate protocol for clinical history and communicate protocol to technologists.

Description of Intra-Service Work: Obtain and interpret scout views of area to be imaged to select appropriate field of view and adjust anatomic planes as needed for patient positioning.
Review obtained non-contrast sequences for motion or other artifacts, and repeat sequences as needed.
Supervise selection of the Gadolinium contrast agent, dose, and subsequent injection.
Review obtained sequences for motion or other artifacts, and repeat post-contrast sequences as needed.
Interpret all sequences resulting from the study. Include dedicated review of the target organ(s) as well as all visualized pelvic viscera, fascial planes, vasculature, soft tissues, and osseous structures.
Compare to all pertinent available prior studies. Dictate report for medical record.

Description of Post-Service Work: Review and sign final report. Communicate findings to referring physician as appropriate.

SURVEY DATA

RUC Meeting Date (mm/yyyy)	10/2016		
Presenter(s):	Kurt Schoppe, MD; Jonathan Flug, MD; Daniel Wessell, MD		
Specialty(s):	American College of Radiology		
CPT Code:	72197		
Sample Size:	1000	**Resp N:** 50	**Response:** 5.0 %
Description of Sample:	The ACR surveyed a random sample of 500 members and an additional random sample of 500 members who perform abdominal imaging, for a total of 1000.

Modifier -51 Exempt Status

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:

Is this new/revised procedure considered to be a new technology or service? No

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
74263	XXX	2.28	**RUC Time**

CPT Descriptor Computed tomographic (CT) colonography, screening, including image postprocessing

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
70553	XXX	2.29	**RUC Time**

CPT Descriptor Magnetic resonance (eg, proton) imaging, brain (including brain stem); without contrast material, followed by contrast material(s) and further sequences

KEY MPC COMPARISON CODES:

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
74178	XXX	2.01	**RUC Time**	548,773

CPT Descriptor 1 Computed tomography, abdomen and pelvis; without contrast material in one or both body regions, followed by contrast material(s) and further sections in one or both body regions

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
99204	XXX	2.43	**RUC Time**	9,511,952

CPT Descriptor 2 Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 45 minutes are spent face-to-face with the patient and/or family.

Other Reference CPT Code	Global	Work RVU	Time Source

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Intensity & Complexity Rating Scale: (much less= -2.00, somewhat less= -1.00, identical= 0.00, somewhat more= 1.00, much more= 2.00)

	Top Key Ref Code	2nd Key Ref Code
Mental Effort and Judgment (Mean)		
The number of possible diagnosis and/or the number of management options that must be considered	0.09	0.63
The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed	0.18	0.88
Urgency of medical decision making	-0.09	-0.25
Technical Skill/Physical Effort (Mean)		
Technical skill required	0.27	0.88

Physical effort required	-0.27	0.25

Psychological Stress (Mean)

The risk of significant complications, morbidity and/or mortality	0.18	0.25
Outcome depends on the skill and judgment of physician	0.00	0.50
Estimated risk of malpractice suit with poor outcome	0.18	0.13

INTENSITY/COMPLEXITY MEASURES	**Top Key Ref Code**	**2nd Key Ref Code**
Time Segment (Mean)		
Overall intensity/complexity	0.36	1.13

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background
CPT Codes 74181 and 74183 (abdominal MRI codes) and Codes 72195 and 72197 (pelvic MRI codes) were identified on Table 8 of the 2016 MPFS NPRM, a list of potentially misvalued codes identified through the High Expenditure by Specialty Screen. We expanded the family to include codes 74182 and 72196 (the with contrast abdominal and pelvic MRI codes, respectively), and surveyed the entire family with a single array survey instrument.

Survey Process
The American College of Radiology (ACR) conducted a simple random sample and a separate random sample of members subspecializing in MR. We assembled an expert panel to review the data and develop the following recommendations.

Work RVU Recommendation:
We recommend the 25th percentile work RVU of 2.20, which is below the current value of 2.26.

Time Recommendations:
We recommend the median survey times of 5 minutes pre-service, 27 minutes intra-service, and 5 minutes post-service.

The total time has decreased by 8 minutes, which is accounted for by reductions in only the pre- and post-service periods. The respondents indicated the intra-service time is now 2 minutes longer (27 minutes vs. 25 minutes). This reduction in total time is partially balanced by the increase in the high intensity intra-service time relative to the low intensity of the pre- and post-service work periods. As well, the recommended value represents a decreased work RVU compared to the current value.

Key Reference Services:
Our recommendation compares favorably to the most commonly chosen key reference services (KRS):

74263 *(Computed tomographic (CT) colonography, screening, including image postprocessing)* chosen by 22% of respondents,
70553 *(Magnetic resonance (eg, proton) imaging, brain (including brain stem); without contrast material, followed by contrast material(s) and further sequences),* chosen by 16% of respondents,
74178 *(Computed tomography, abdomen and pelvis; without contrast material in one or both body regions, followed by contrast material(s) and further sections in one or both body regions)* chosen by 14% of respondents, and

74174 *(Computed tomographic angiography, abdomen and pelvis, with contrast material(s), including noncontrast images, if performed, and image postprocessing)*, chosen by 14% of respondents.

Our work RVU recommendation for 72197 is bracketed by the work RVUs and intra-service times of the KRS selections (see table below). This heterogeneity of KRS selections is consistent with the diverse practice patterns and patient populations served by the participating radiologists and confirms the appropriateness of the recommended values within the larger family of radiology services.

CPT	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
74178	Computed tomography, abdomen and pelvis; without contrast, followed by contrast	2.01	40	5	30	5	0.060
72197	**Magnetic resonance imaging, pelvis; without contrast, followed by contrast, and further sequences**	**2.20**	**37**	**5**	**27**	**5**	**0.073**
74174	Computed tomographic angiography, abdomen and pelvis, with contrast material(s), including noncontrast images, if performed, and image postprocessing	2.20	40	5	30	5	0.066
74263	Computed tomographic (CT) colonography, screening, including image postprocessing	2.28	50	7	38	5	0.053
70553	Magnetic resonance (eg, proton) imaging, brain (including brain stem); without contrast, followed by contrast	2.29	37	5	25	5	0.081

Two comparisons are important to highlight. The recommended value for the surveyed code (72197) is the same as the recommended value for another code in the larger abdominal MRI family (74183, MRI Abdomen with and without contrast) and 74174, one of the KRS codes. We believe the recommended value for 72197 is accurate because it appropriately reflects the intensity of work in the Pelvic MRI code, which is most commonly performed for prostate cancer patients. This study usually has more than 1000 images and requires analysis of the tissue perfusion characteristics of the prostate and any lesions therein. These activities require additional expertise and training such that the intensity of work being performed justifies the value at the median survey time relative to these comparison codes.

MPC Codes:
The surveyed code is bracketed by two MPC codes:

74178 *(Computed tomography, abdomen and pelvis; without contrast material in one or both body regions, followed by contrast material(s) and further sections in one or both body regions)*, and
99204 *(Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of moderate complexity).*

Of note, the surveyed code has a lower intra-service time than both codes, but a recommended work RVU almost exactly between these two MPC services.

CPT	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
74178	Computed tomography, abdomen and pelvis; without contrast material, followed by contrast material(s) and further sections	2.01	40	5	30	5	0.060
72197	**Magnetic resonance imaging, pelvis; without contrast, followed by contrast, and further sequences**	**2.20**	**37**	**5**	**27**	**5**	**0.073**
99204	Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: decision making of moderate severity.	2.43	45	5	30	10	0.070

Summary:
Our recommendation of 2.20 RVUs (survey 25th percentile) for 72197 is supported by the survey data, comparisons with Key Reference Services, and relativity to appropriate MPC codes.

CPT	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
72195	Magnetic resonance imaging, pelvis; without contrast	1.46	30	5	20	5	0.062
74181	Magnetic resonance imaging, abdomen; without contrast	1.46	30	5	20	5	0.062
72196	Magnetic resonance imaging, pelvis; with contrast	1.73	35	5	25	5	0.060
74182	Magnetic resonance imaging, abdomen; with contrast	1.73	35	5	25	5	0.060
72197	**Magnetic resonance imaging, pelvis; without contrast, followed**	**2.20**	**37**	**5**	**27**	**5**	**0.073**

	by contrast, and further sequences						
74183	Magnetic resonance imaging, abdomen; without contrast, followed by contrast, and further sequences	2.20	40	5	30	5	0.066

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 72197

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 326517
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by code 72197 provided nationally in a one-year period is estimated to be 326517.

Specialty Diagnostic Radiology Frequency 307406 Percentage 94.14 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 108,839 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty.

Please explain the rationale for this estimate. The 2015 Medicare data estimates that CPT code 72197 is billed approximately 108,839 times in total for Medicare patients nationally in a one-year period.

Specialty Diagnostic Radiology Frequency 102472 Percentage 94.15 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

Attestation Statement

This form needs to be completed by any **RUC Advisor** whose specialty society is developing a recommendation to be reviewed by the RUC.

As a RUC Advisor, I attest that the integrity of the RUC survey, summary of recommendation forms and practice expense recommendations are based on accurate and complete data to the best of my knowledge. As a RUC advisor, I acknowledge that violations would be addressed by the executive committee (i.e., RUC Chair , AMA Representative and Alternate AMA Representative.)

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation
Non Facility Direct Inputs

CPT Long Descriptor:

Global Period: XXX Meeting Date: Oct. 2016

74181	Magnetic resonance (eg, proton) imaging, abdomen; without contrast material(s)
74182	Magnetic resonance (eg, proton) imaging, abdomen; with contrast material(s)
74183	Magnetic resonance (eg, proton) imaging, abdomen; without contrast material(s), followed by with contrast material(s) and further sequences

72195	Magnetic resonance (eg, proton) imaging, pelvis; without contrast material(s)
72196	Magnetic resonance (eg, proton) imaging, pelvis; with contrast material(s)
72197	Magnetic resonance (eg, proton) imaging, pelvis; without contrast material(s), followed by contrast material(s) and further sequences

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:

The American College of Radiology (ACR) convened a consensus panel to finalize the practice expense data for the MRI Abdomen (74181, 74182, 74183) and MRI Pelvis (72195, 72196, 72197) code families.

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale:

The ACR included the existing PE inputs for codes 74181, 74182, 74183 and 72195, 72196, 72197 on the spreadsheet to serve as a reference.

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:

- **Prepare room, equipment, supplies** - The specialty is recommending an increase in time since MR involves strong magnetic fields and ensuring patient safety is important. More specifically, all objects in the room must be MRI compatible. MR exams involve the use of MR coils which vary based on the body part studied and are specifically selected to fit the patient. These coils must be prepared for the intended exam, positioned, and attached to the MR unit. In addition, the examinations involving the use of contrast require setup of the injector apparatus and preparation of the contrast material.
- **Prepare and position patient/ monitor patient/ set up IV** - The specialty is recommending an increase in time to allow for positioning the patient to ensure they are comfortable during the lengthy procedure since motion artifact can degrade the quality of the exam. Pillows are typically

positioned under the patient's knees to relieve stress off the back during the long image acquisition period. The patient's abdomen or pelvis must be properly placed into the coils. If contrast is being administered, any IV lines must be secured to prevent disengagement. The technologist must confirm the patient has no MR incompatible internal devices (such as metal in or on clothing), personal possessions and even superficial tattoos. These may be dangerous or cause artifacts while the patient is in or around the MRI magnet.

- **Technologist QC's images in PACS, checking for all images, reformats, and dose page** - CMS [2017 MPFS Proposed Rule] and the RUC [2017 MPFS Proposed Rule Comment Letter] has acknowledged that this activity may vary based on the complexity of the exam. Thus, no standard exists for this activity. The specialty does acknowledge that our recommendation is an increase over codes reviewed before the 2016 MPFS. The specialty believes that abdominal and pelvic MR is at the higher end of complexity for radiology services since MR involves hundreds of images in multiple planes. Interpretation of MRI findings typically requires comparison of multiple sequences. Incomplete, poor quality, or missing sequences can lead to an inconclusive exam. The number of images and importance of QC warrant the four minutes recommended.

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:

- **Obtain vital signs –** clinically necessary for 74182, 74183, 72196, and 72197; related to contrast administration.
- **Gown, patient (SB026)** – clinically necessary supply item for 74181 and 72195
- **Paper, exam table (SB036)** – clinically necessary supply item for 74181 and 72195
- **Professional PACS Workstation (ED053)** – in the CY 2016 MPFS Final Rule, CMS acknowledged that the costs of the professional workstation may be analogous to costs previously incorporated as direct PE inputs. In the CY 2017 MPFS Proposed Rule, CMS indicates that they will allow the addition of the professional PACS workstation to 70000 series codes that use the current technical PACS workstation and include professional work for which such a workstation would be used. The ACR, as approved by the RUC at the April 2016 meeting, is recommending that this equipment time equal the sum of the physician work pre-service time and intra-service time.

5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

- Availability of prior images confirmed
- Patient clinical information and questionnaire reviewed by technologist, order from physician confirmed and exam protocoled by radiologist

Intra-Service Clinical Labor Activities:

- Greet patient, provide gowning, ensure appropriate medical records are available
- Obtain vital signs
- Provide pre-service education/obtain consent
- Prepare room, equipment, supplies
- Prepare and position patient/ monitor patient/ set up IV
- Assist physician in performing procedure/ Acquire Images
- Clean room/equipment by physician staff
- Technologist QC's images in PACS, checking for all images, reformats, and dose page
- Review examination with interpreting MD
- Exam documents scanned into PACS. Exam completed in RIS system to generate billing process and to populate images into Radiologist work queue

Post-Service Clinical Labor Activities:

AMA/Specialty Society RVS Update Committee Summary of Recommendations
CMS High Expenditure Procedures

October 2016

Angiography of Extremities

In the Final Rule for 2016, CMS re-ran the high expenditure services across specialties with Medicare allowed charges of $10 million or more. CMS identified the top 20 codes by specialty in terms of allowed charges, excluding 010 and 090-day global services, anesthesia and Evaluation and Management services and services reviewed since CY 2010. CPT code 75710 was identified as part of this screen.

Compelling Evidence

The specialty societies presented several points of compelling evidence to support that CPT codes 75710 and 75716 are potentially misvalued. CPT codes 75710 and 75716 have never been surveyed and are the result of CMS/other inputs, which is considered by the RUC as a flawed methodology since it can not be substantiated. There has also been a change in the dominant specialty over time. When values were first assigned in 1992, radiology was the dominant provider; however, vascular surgery is now the dominant provider of the professional component of CPT code 75710. Furthermore, there has been a change in physician work for CPT codes 75710 and 75716 due to changes in technique, technology and patient population. In 1992, the typical patient for an extremity angiogram was a patient suspected of having peripheral arterial disease. Imaging focused mainly on the aorta, iliac and femoral vessels with less attention to the distal runoff. Today, the patient population has changed. The evaluation of inflow is no longer performed with an invasive procedure but is imaged with CT Angiography or MR Angiography as the accuracy of these modalities has improved significantly over the past two decades. The improvement in technology also allows for more detailed imaging of the distal runoff and pedal vasculature for diagnostic angiography. The transition from analog to digital imaging has not only improved the visualization but has increased the number of images to be reviewed and interpreted for CPT codes 75710 and 75716. Thus, the changes in patient population, technique and technology have resulted in a change in the complexity of physician work and total time since 1992 and constitute compelling evidence for a change in value. The RUC agreed that there is compelling evidence that these services are potentially misvalued based on flawed methodology, change in the dominant provider, change in technique, change in technology and a change in the patient population.

75710 ***Angiography, extremity, unilateral, radiological supervision and interpretation***
The RUC reviewed the survey results from 124 physicians and recommends the following physician time components: pre-service time of 15 minutes, intra-service time of 40 minutes and post-service time of 15 minutes.

The RUC reviewed the survey 25th percentile work RVU of 1.75 and agreed that this value is appropriate for this service. To justify a work RVU of 1.75, the RUC compared the survey code to MPC code 95861 *Needle electromyography; 2 extremities with or without related paraspinal areas*

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

(work RVU = 1.54 and 29 minutes intra-service time) and noted that the survey code has somewhat more intra-service time and total time. To further support a work RVU of 1.75, the RUC compared the survey code to top key reference code 75791 *Angiography, arteriovenous shunt (eg, dialysis patient fistula/graft), complete evaluation of dialysis access, including fluoroscopy, image documentation and report (includes injections of contrast and all necessary imaging from the arterial anastomosis and adjacent artery through entire venous outflow including the inferior or superior vena cava), radiological supervision and interpretation* (work RVU of 1.71, intra-service time of 25 minutes, total time of 55 minutes) and noted that the survey code involves much more intra-service and total time, and 89% of the survey respondents indicated that the surveyed code is an overall more intense and complex service to perform. **The RUC recommends a work RVU of 1.75 for CPT code 75710.**

75716 ***Angiography, extremity, bilateral, radiological supervision and interpretation***
The RUC reviewed the survey results from 124 physicians and recommends the following physician time components: pre-service time of 15 minutes, intra-service time of 50 minutes and post-service time of 15 minutes.

The RUC reviewed the survey 25th percentile work RVU of 1.97 and agreed that this value is appropriate for this service. To justify a work RVU of 1.97, the RUC compared the survey code to CPT code 90834 *Psychotherapy, 45 minutes with patient and/or family member* (work RVU of 2.00, intra-service time of 45 minutes, total time of 60 minutes) and noted that the survey code involves more intra-service and total time. To further support a work RVU of 1.97, the RUC compared the survey code to MPC code 74178 *Computed tomography, abdomen and pelvis; without contrast material in one or both body regions, followed by contrast material(s) and further sections in one or both body regions* (work RVU of 2.01, intra-service time of 30 minutes, total time of 40 minutes) and noted that the survey code requires much more time to perform, though is less intense to perform, supporting similar valuation between the two services. **The RUC recommends a work RVU of 1.97 for CPT code 75716.**

Practice Expense
The Practice Expense Subcommittee reviewed the recommended direct PE inputs and noted that nephrology is the primary specialty in the non-facility setting. The nephrologist representatives indicated that they weren't part of the work survey and weren't sure about the new process in which the dominant providers of a service in the non-facility setting will be required to participate in the development of practice expense recommendations. However, it was articulated that the utilization for these two codes will be dropping significantly due to the bundling in the Dialysis Circuit series of codes that CPT approved, and the RUC valued, for CPT 2017. After this occurs, it is unlikely that nephrology will remain the dominant specialty.

The Subcommittee also made several minor modifications to the clinical staff, including: reducing the confirmation of prior images and review of patient clinical information to 2 minutes, respectively and removing any minutes relating to preparing and positioning the patient. The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

F**lag for Review of Specialty Mix**

With the newly bundled dialysis access maintenance codes that were approved in January 2016 as part of Dialysis Circuit code family 36901-36909, the specialties project that a significant portion of the nephrology volume for 75710 will instead be reported with applicable Dialysis Circuit codes. Currently, nephrology represented 17.8 percent of the 2015 Medicare claims for 75710. **The RUC will add a flag for review to confirm that nephrology utilization volume has decreased once 2017 Medicare utilization data is available for review.**

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
75710	Angiography, extremity, unilateral, radiological supervision and interpretation	XXX	1.75
75716 (f)	Angiography, extremity, bilateral, radiological supervision and interpretation	XXX	1.97

SUMMARY OF RECOMMENDATION

CPT Code:75710 Tracking Number Original Specialty Recommended RVU: **1.75**
Presented Recommended RVU: **1.75**
Global Period: XXX RUC Recommended RVU: **1.75**

CPT Descriptor: Angiography, extremity, unilateral, radiological supervision and interpretation

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 67-year-old male with hypertension, hyperlipidemia, and diabetes presents with right lower extremity calf claudication following minimal exertion. His femoral pulses are strong, however, his right popliteal and right distal pulses are asymmetrically weak. Noninvasive study is abnormal on the right with decreased ankle brachial index and waveform suggesting right superficial femoral or popliteal obstruction. CT angiogram confirms normal inflow, however, evaluation of the right popliteal artery and tibial vasculature was inconclusive due to heavy arterial calcification. Catheter angiogram is requested to further define anatomy so that treatment options can be presented to the patient.

Percentage of Survey Respondents who found Vignette to be Typical: 80%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Based on patient's symptoms, signs, physical findings and any preprocedural studies, determine the area of potential disease within the extremity. Ensure the total region of the potentially affected limb(s) can be fully visualized using angiographic imaging in the interventional suite. Take into consideration the total length of extremity, the body habitus, limitation on movement due to underlying conditions and positioning in order to ensure the best imaging of the entire extremity(ies). In addition to assessing the affected limb(s); ensure imaging equipment can be rotated to provide complete imaging from multiple angles prior to patient positioning. Discuss with the patient and family the risks due to the exposure to radiation and use of contrast dye or other potential imaging modality (i.e. CO2). Also discuss the equipment being used, the close proximity of the image intensifier and potential for claustrophobia, prolonged immobility and repositioning to ensure optimal imaging for interpretation.

Description of Intra-Service Work: X-ray is utilized to determine the best and safest access site for the limb of interest. This requires static x-ray visualization of access site and anatomic landmarks to ensure direct anterior access to the access vessel. Upon access, multiple imaging angles will be required to ensure complete visualization of the vasculature as this is a 2-D representation of a 3-D object. Complete visualization of angiography of the affected extremety in stations or with a complete runoff if performed, which will require a test run prior to angiographic imaging. During angiographic interpretation, different angles will be required due to the course of the vasculature as well as interference from overlapping vessels and bony prominences. This will require prolonged visualization and interpretation due to multiple images. Magnified imaging will be utilized as necessary for best visualization of potential vascular lesions as well as reformatting pixilation due to movement of the limb. Visualization of the vasculature above and below the area of potential disease is imperative to determine the best treatment modality and to ensure iatrogenic injury (wire manipulation, embolization) has not occurred beyond the location of disease as well as to assess all levels of disease.

Description of Post-Service Work: Storage of all imaging studies into PACS. This includes reformatting due to movement or poor contrast flow into affected region with peak opacification. Selection of key digital subtraction angiography images

of areas of significant disease or for preoperative planning to be used intraoperatively. Copying and sending of key images to referring physician through a secure portal.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Intensity & Complexity Rating Scale: (much less= -2.00, somewhat less= -1.00, identical= 0.00, somewhat more= 1.00, much more= 2.00)

	Top Key Ref Code	2nd Key Ref Code
Mental Effort and Judgment (Mean)		
The number of possible diagnosis and/or the number of management options that must be considered	1.15	0.84
The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed	1.28	0.91

Urgency of medical decision making	0.68	1.05

Technical Skill/Physical Effort (Mean)

Technical skill required	1.13	1.54
Physical effort required	0.80	1.45

Psychological Stress (Mean)

The risk of significant complications, morbidity and/or mortality	1.30	1.59
Outcome depends on the skill and judgment of physician	1.03	1.24
Estimated risk of malpractice suit with poor outcome	1.35	1.41

INTENSITY/COMPLEXITY MEASURES	Top Key Ref Code	2nd Key Ref Code
Time Segment (Mean)		
Overall intensity/complexity	1.43	1.57

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

In the Final Rule for 2016 CMS re-ran the high expenditure services across specialties with Medicare allowed charges of $10 million or more. Code 75710 was identified in this screen and code 75716 was added as a family code for review.

Methodology

A survey was distributed randomly to the members of ACR, SIR, ACC, SCAI and SVS. There were 124 surveys completed.

Work RVU Recommendation

We are recommending the 25th percentile survey work RVU of 1.75 for CPT code 75710, which is an increase from the existing value of 1.14.

Compelling Evidence

We believe that there is compelling evidence to recommend an increase in the value for CPT code 75710 based on evidence that incorrect assumptions were made in the previous valuation and that physician work has increased due to changes in technique, knowledge/technology, and patient population.

(1) Incorrect assumptions. CPT code 75710 has never been surveyed and is the result of CMS/other inputs. While this alone does not amount to compelling evidence, comparison of the survey time results and other RUC reviewed supervision and interpretation codes show that the existing value greatly underestimates the work of CPT code 75710. There has also been a change in the dominant specialty over time. When values were first assigned in 1992, radiology was the dominant provider; however, Vascular Surgery is now the dominant provider of the professional component of CPT code 75710.

(2) Changes in physician work. We believe that there has been a change in physician work for CPT code 75710 since CMS assigned a value and time in 1992 due to changes in technique, technology, and patient population. In 1992, the typical patient for an extremity angiogram was a patient suspected of having peripheral arterial disease. Imaging focused mainly on the aorta, iliac, and femoral vessels with less attention to the distal runoff. Today, the patient population has changed. The evaluation of inflow is no longer performed with an invasive procedure but is imaged with CTA or MRA as the accuracy of these modalities has improved significantly over the past 2 decades. The improvement in technology also allows for more detailed imaging of the distal runoff and pedal vasculature. The transition from analog to digital imaging has not only improved the visualization but has increased the number of images to be reviewed and interpreted for CPT code 75710. Thus the changes in patient population, technique, and technology have resulted in a change in the complexity of physician work and total time since 1992 and constitutes compelling evidence for a change in value.

Pre-, Intra- and Post-Service Time

The survey respondents identified 30 minutes of pre-service time, 40 minutes of intra-service time, and 20 minutes of post-service time for CPT code 75710. It is an XXX global code and, as such, there are no applicable pre- and post-service time packages. We are recommending 15 minutes of pre and post time, similar to the reference service codes.

Our recommended times are 15, 40, 15, resulting in a total time of 70 minutes.

Comparison to MPC codes

Comparison with MPC List Code, CPT 95861 – RVW 1.54

CPT code 95861 *Needle electromyography; 2 extremities with or without related paraspinal areas* is an XXX global MPC service with similar times and intensity to CPT code 75710. CPT code 75710 has more intra-service time than CPT code 95861 supporting our recommendation for the 25th percentile survey value of 1.75 RVW for CPT code 75710.

Comparison with MPC List Code, CPT 74178 – RVW 2.01

CPT code 74178 *Computed tomography, abdomen and pelvis; without contrast material in one or both body regions, followed by contrast material(s) and further sections in one or both body regions* is an XXX global MPC. Both CPT code 74178 and 75710 are imaging codes but are of different modalities. CPT code 74178 has less time at a higher intensity supporting our recommendation for the 25th percentile survey value of 1.75 RVW for CPT code 75710.

95861 MPC	1.54	0.038	49	10	29	10
75710 Survey	1.75	0.027	70	15	40	15
74178 MPC	2.01	0.060	40	5	30	5

Conclusion

A multi-disciplinary survey of CPT code 75710 was performed with strong survey results and a high degree of concordance between specialties. When comparing the survey results to the key reference service, two MPC codes, and RUC reviewed supervision codes, we believe that the 25th percentile survey RVW of 1.75 is the correct value for CPT code 75710.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☒ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. An angiography code is reported along with this S&I code (i.e. 36215, 36246, 36247)

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 75710

How often do physicians <u>in your specialty</u> perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Vascular Surgery How often? Commonly

Specialty Interventional/Cardiology How often? Commonly

Specialty Interventional/Radiology How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period?
If the recommendation is from multiple specialties, please provide the frequency and <u>percentage</u> for each specialty. Please explain the rationale for this estimate. A national number is not known.

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 145,000 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Medicare reported data for 2015 (current RUC database)

Specialty Vascular Surgery	Frequency 54000	Percentage 37.24 %
Specialty Interventional/Cardiology	Frequency 45000	Percentage 31.03 %
Specialty Interventional/Radiology	Frequency 26500	Percentage 18.27 %

Do many physicians perform this service across the United States? Yes

SUMMARY OF RECOMMENDATION

CPT Code:75716 Tracking Number Original Specialty Recommended RVU: **1.97**
Presented Recommended RVU: **1.97**
Global Period: XXX RUC Recommended RVU: **1.97**

CPT Descriptor: Angiography, extremity, bilateral, radiological supervision and interpretation

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 67-year-old male with hypertension, hyperlipidemia, and diabetes presents with bilateral lower extremity calf claudication following minimal exertion. His femoral pulses are strong, however, popliteal and distal pulses are weak on both sides. Noninvasive study is abnormal with decreased ankle brachial index bilaterally and waveforms suggesting bilateral femoral or popliteal obstruction. CT angiogram confirms normal inflow, however, evaluation of bilateral popliteal and tibial arteries was inconclusive due to heavy arterial calcification. Catheter angiogram is requested to further define anatomy so that treatment options can be presented to the patient.

Percentage of Survey Respondents who found Vignette to be Typical: 85%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Based on patient's symptoms, signs, physical findings and any preprocedural studies, determine the area of potential disease within each extremity. Ensure the total region of the potentially affected limbs can be fully visualized using angiographic imaging in the interventional suite. Take into consideration the total length of extremities, the body habitus, limitation on movement due to underlying conditions and positioning in order to ensure the best imaging of the entire extremities. In addition to assessing the affected limbs; ensure imaging equipment can be rotated to provide complete imaging from multiple angles prior to patient positioning. Discuss with the patient and family the risks due to the exposure to radiation and use of contrast dye or other potential imaging modality (i.e. CO2). Also discuss the equipment being used, the close proximity of the image intensifier and potential for claustrophobia, prolonged immobility and repositioning to ensure optimal imaging for interpretation.

Description of Intra-Service Work: X-ray is utilized to determine the best and safest access site for each limb. This requires static x-ray visualization of access site and anatomic landmarks to ensure direct anterior access to the access vessel. Upon access, multiple imaging angles will be required to ensure complete visualization of the vasculature as this is a 2-D representation of a 3-D object. Complete visualization of angiography of the affected extremeties in stations or with a complete runoff is performed, which will require a test run prior to angiographic imaging. During angiographic interpretation, different angles will be required due to the course of the vasculature as well as interference from overlapping vessels and bony prominences. This will require prolonged visualization and interpretation due to multiple images. Magnified imaging will be utilized as necessary for best visualization of potential vascular lesions as well as reformatting pixilation due to movement of the limbs. Visualization of the vasculature above and below the area of potential disease is imperative to determine the best treatment modality and to ensure iatrogenic injury (wire manipulation, embolization) has not occurred beyond the location of disease as well as assess all levels of disease.

Description of Post-Service Work: Storage of all imaging studies into PACS. This includes reformatting due to movement or poor contrast flow into affected region with peak opacification. Selection of key digital subtraction angiography images

for areas of significant disease or for preoperative planning to be used intraoperatively. Copying and sending of key images to referring physician through a secure portal.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Intensity & Complexity Rating Scale: (much less= -2.00, somewhat less= -1.00, identical= 0.00, somewhat more= 1.00, much more= 2.00)

	Top Key Ref Code	2nd Key Ref Code
Mental Effort and Judgment (Mean)		
The number of possible diagnosis and/or the number of management options that must be considered	0.84	1.15
The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed	0.91	1.28

Urgency of medical decision making	1.05	0.68

Technical Skill/Physical Effort (Mean)

Technical skill required	1.54	1.13
Physical effort required	1.45	0.80

Psychological Stress (Mean)

The risk of significant complications, morbidity and/or mortality	1.59	1.30
Outcome depends on the skill and judgment of physician	1.24	1.03
Estimated risk of malpractice suit with poor outcome	1.41	1.35

INTENSITY/COMPLEXITY MEASURES	**Top Key Ref Code**	**2nd Key Ref Code**
Time Segment (Mean)		
Overall intensity/complexity	1.57	1.43

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

In the Final Rule for 2016 CMS re-ran the high expenditure services across specialties with Medicare allowed charges of $10 million or more. Code 75710 was identified in this screen and code 75716 was added as a family code for review.

Methodology

A survey was distributed randomly to the members of ACC, ACR, SCAI, SIR and SVS. There were 124 surveys completed.

Work RVU Recommendation

We are recommending the 25th percentile survey work RVU of 1.97 RVW for CPT code 75716, which is an increase from the existing value of 1.31.

Compelling Evidence

We believe that there is compelling evidence to recommend an increase in the value for CPT code 75716 based on evidence that incorrect assumptions were made in the previous valuation and that physician work has increased due to changes in technique, knowledge/technology, and patient population.

(1) Incorrect assumptions. CPT code 75716 has never been surveyed and is the result of CMS/other inputs. While this alone does not amount to compelling evidence, comparison of the survey time results and other RUC reviewed supervision and interpretation codes show that the existing value greatly underestimates the work of CPT code 75716. There has also been a change in the dominant specialty over time. When values were first assigned in 1992, radiology was the dominant provider; however, cardiology is now the dominant provider of CPT code 75716.

(2) Changes in physician work. We believe that there has been a change in physician work for CPT code 75716 since CMS assigned a value and time in 1992 due to changes in technique, technology, and patient population. In 1992, the typical patient for an extremity angiogram was a patient suspected of having peripheral arterial disease. Imaging focused mainly on the aorta, iliac, and femoral vessels with less attention to the distal runoff. Today, the patient population has changed. The evaluation of inflow is no longer performed with an invasive procedure but is imaged with CTA or MRA as the accuracy of these modalities has improved significantly over the past 2 decades. The improvement in technology also allows for more detailed imaging of the distal runoff and pedal vasculature. The transition from analog to digital imaging has not only improved the visualization but has increased the number of images to be reviewed and interpreted for CPT code 75716. Thus the changes in patient population, technique, and technology have resulted in a change in the complexity of physician work and total time since 1992 and constitutes compelling evidence for a change in value.

Pre-, Intra- and Post-Service Time

The survey respondents identified 30 minutes of pre-service time, 50 minutes of intra-service time, and 20 minutes of post-service time for CPT code 75716. It is an XXX global code and, as such, there are no applicable pre- and post-service time packages. We are recommending 15 minutes of pre and post time, similar to the reference service codes.

Our recommended times are 15, 50, 15, resulting in a total time of 80 minutes.

Comparison to MPC codes

Comparison with MPC List Code, CPT 95861 – RVW 1.54

CPT code 95861 *Needle electromyography; 2 extremities with or without related paraspinal areas* is an XXX global MPC service with similar times and intensity to CPT code 75716. CPT code 75716 has more intra-service time than CPT code 95861 supporting our recommendation for the 25th percentile survey value of 1.97 RVW for CPT code 75716.

Comparison with MPC List Code, CPT 74178 – RVW 2.01

CPT code 74178 *Computed tomography, abdomen and pelvis; without contrast material in one or both body regions, followed by contrast material(s) and further sections in one or both body regions* is an XXX global MPC. Both CPT code 74178 and 75716 are imaging codes but are of different modalities. CPT code 74178 has less time at a higher intensity supporting our recommendation for the 25th percentile survey value of 1.97 RVW for CPT code 75716.

CPT	RVW	IWPUT	Total Time	Pre	Intra	Post
95861 MPC	1.54	0.038	49	10	29	10
75716 Survey	1.97	0.026	80	15	50	15
74178 MPC	2.01	0.060	40	5	30	5

Conclusion

A multi-disciplinary survey of CPT code 75716 was performed with strong survey results and a high degree of concordance between specialties. When comparing the survey results to the key reference service, two MPC codes, and RUC reviewed supervision codes, we believe that the 25th percentile survey RVW of 1.97 is the correct value for CPT code 75716.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☒ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. An angiography code is reported along with this S&I code (i.e. 36215, 36246, 36247)

CPT Code: 75710 & 75716
Specialty Society('s): SVS, SIR, ACR, ACC & SCAI

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation
Non Facility Direct Inputs

Global Period: XXX **Meeting Date:** October 2016

75710 *Angiography, extremity, unilateral, radiological supervision and interpretation*

75716 *Angiography, extremity, bilateral, radiological supervision and interpretation*

---

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:

SVS, SIR, ACR, ACC and SCAI convened a panel that included a number of experts familiar with these services to evaluate the direct practice expense inputs for these two angiography of extremities supervision and interpretation codes (75710 & 75716).

2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison. You must provide an explanation for the selection of reference codes. Reference Code Rationale:

CPT Codes 75710 and 75716 have existing direct PE inputs. As such, we included the current inputs on the excel spreadsheet as a reference. We also included CPT Code 36247 on the spreadsheet, which would be a typical lower extremity base code.

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:

N/A

5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

- Confirm availability of prior imaging studies
- Review clinical information and questionnaire
- Confirm order from physician and exam protocoled by radiologist

Intra-Service Clinical Labor Activities:

- Prepare room, equipment, supplies
- Greet patient and escort into procedure room
- Prepare and position patient prone on table / obtain vitals / set up IV / monitor patient
- Position ruler or relative measurement tool under sterile field
- Assist physician with acquisition of digital subtraction angiography and fluoroscopy
- Assist physician with set up of step table or sequential imaging of lower extremity
- Perform post processing of angiography runs, including masking and pixel shifting to archive optimal images
- Performs quality control of images in PACS, checking for all images and dose page
- Review examination with interpreting MD
- Exam documents scanned into PACS. Exam completed in RIS system to generate billing process and to populate images into Radiologist work queue

Post-Service Clinical Labor Activities:

- Clean room/equipment by physician staff

AMA/Specialty Society RVS Update Committee Summary of Recommendations
CMS High Expenditure Procedures

October 2016

Ophthalmic Ultrasound

In the Final Rule for 2016 CMS re-ran the high expenditure services across specialties with Medicare allowed charges of $10 million or more. CMS identified the top 20 codes by specialty in terms of allowed charges, excluding 010 and 090-day global services, anesthesia and Evaluation and Management (E/M) services and services reviewed since CY 2010. CPT code 76512 was identified via this screen and codes 76510 and 76511 were added for review as part of this family of services.

The specialty societies indicated a scheduling conflict for the American Society of Retina Specialists (ASRS) to be able to survey for the April 2016 RUC meeting. The RUC inquired about the delay and learned that ASRS had a meeting conflict which would have prohibited their involvement in the survey process. The RUC agreed that it was important for the appropriate specialties to be involved and that the delay would not impact the ability of the RUC to value the codes within the current cycle. Therefore, the RUC agreed that these services be surveyed for the October 2016 RUC meeting.

76510 Ophthalmic ultrasound, diagnostic; B-scan and quantitative A-scan performed during the same patient encounter
The RUC reviewed the survey data from 66 ophthalmologists and optometrists for CPT coded 76510 and determined that a work RVU of 0.70, which is between the median and 25th% of the survey results, appropriately accounts for the work required to perform this service . The RUC recommends the following physician time: pre-service time of 3 minutes, intra-service time of 15 minutes, and immediate post-service time of 2 minutes. The RUC noted that the specialty society appropriately decreased in the pre-service and immediate post-service time since this service is typically performed with an Evaluation and Management (E/M) visit. The RUC noted that the median work RVU was too high given the decrease in intra-service time. The RUC recommends directly crosswalking CPT code 76510 to 93970 *Duplex scan of extremity veins including responses to compression and other maneuvers; complete bilateral study* (work RVU=0.70, intra-service time of 15 minutes) as both services require the same physician work and intra-service time of 15 minutes.

The RUC compared the surveyed service to reference service 92083 *Visual field examination, unilateral or bilateral, with interpretation and report; extended examination (eg, Goldmann visual fields with at least 3 isopters plotted and static determination within the central 30 deg;, or quantitative, automated threshold perimetry, Octopus program G-1, 32 or 42, Humphrey visual field analyzer full threshold programs 30-2, 24-2, or 30/60-2)* (work RVU = 0.50 and 10 minutes intra-service time) and agreed that the surveyed service is more intense and complex on all measures examined, requires more physician work and time, thus is appropriately valued higher. The RUC also compared this service to 76770

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Ultrasound, retroperitoneal (eg, renal, aorta, nodes), real time with image documentation; complete (work RVU=0.74, intra-service time of 11 minutes) and 99231 *Subsequent hospital care, per day, for the evaluation and management of a patient,* (work RVU = 0.76, intra-service time of 10 minutes) and determined that these services are similar and support the recommended value for 76510.**The RUC recommends a work RVU of 0.70 for CPT code 76510.**

76511 Ophthalmic ultrasound, diagnostic; quantitative A-scan only
The RUC reviewed the survey data from 36 ophthalmology physicians and optometric providers and determined that the survey 25th percentile work RVU of 0.64 appropriately accounts for the work required to perform this service. RUC discussed that the median survey response was too high given the 5 minute decrease in intra-service time. The RUC recommends the following physician time: pre-service time of 3 minutes, intra-service time of 10 minutes, and immediate post-service time of 2 minutes. The RUC noted that the specialty society appropriately decreased in the pre-service and immediate post-service time since this service is typically performed with an Evaluation and Management (E/M) visit.

To validate a work RVU of 0.64, the RUC compared the survey code to top key reference code 92002 *Ophthalmological services: medical examination and evaluation with initiation of diagnostic and treatment program; intermediate, new patient* (work RVU = 0.88 and 15 minutes intra-service time) and noted that the survey code has lower intra-service time, and the survey respondents indicated that the survey code is somewhat more to much more intense to perform, further justifying this valuation. The RUC compared the surveyed service to reference service 92100 *Serial tonometry (separate procedure) with multiple measurements of intraocular pressure over an extended time period with interpretation and report, same day (eg, diurnal curve or medical treatment of acute elevation of intraocular pressure)* (work RVU = 0.61 and 20 minutes intra-service time) and agreed that the surveyed service is more intense as indicated by 84% of the survey respondents and this appropriately valued slightly higher. The RUC also compared the surveyed code to MPC code 76815 *Ultrasound, pregnant uterus, real time with image documentation, limited (eg, fetal heart beat, placental location, fetal position and/or qualitative amniotic fluid volume), 1 or more fetuses* (work RVU=0.65, intra-service time of 5.5 minutes) and similar service 76856 *Ultrasound, pelvic (nonobstetric), real time with image documentation; complete* (work RVU=0.69, intra-service time of 10 minutes). **The RUC recommends a work RVU of 0.64 for CPT code 76511.**

76512 Ophthalmic ultrasound, diagnostic; B-scan (with or without superimposed non-quantitative A-scan)
The RUC reviewed the survey data from 94 ophthalmology physicians and optometric providers and determined that the survey 25th percentile work RVU of 0.56 appropriately accounts for the work required to perform this service. RUC discussed that the median survey value was too high given the 5 minute decrease in intra-service time. The RUC recommends the following physician time: pre-service time of 3 minutes, intra-service time of 11 minutes, and immediate post-service time of 2 minutes. The RUC noted that the specialty society appropriately decreased in the pre-service and immediate post-service time since this service is typically performed with an Evaluation and Management (E/M) visit. The

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

RUC compared the surveyed service to MPC codes 76815 *Ultrasound, pregnant uterus, real time with image documentation, limited (eg, fetal heart beat, placental location, fetal position and/or qualitative amniotic fluid volume), 1 or more fetuses* (work RVU=0.65, intra-service time of 5.5 minutes) and 88112 *Cytopathology, selective cellular enhancement technique with interpretation (eg, liquid based slide preparation method), except cervical or vaginal* (work RVU = 0.56 and 15 minutes intra-service time) and determined that these services all require similar physician work and support the recommended value. For additional support, the RUC referenced similar service 76856 *Ultrasound, pelvic (nonobstetric), real time with image documentation; complete* (work RVU=0.69, intra-service time of 10 minutes). **The RUC recommends a work RVU of 0.56 for CPT code 76512.**

Practice Expense:
The RUC reviewed and accepted the direct PE inputs as modified by the Practice Expense Subcommittee.

Work Neutrality:
The RUC's recommendation for these codes will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation

SUMMARY OF RECOMMENDATION

CPT Code:76510 Tracking Number Original Specialty Recommended RVU: **0.76**
Presented Recommended RVU: **0.70**
Global Period: XXX RUC Recommended RVU: **0.70**

CPT Descriptor: Ophthalmic ultrasound, diagnostic; B-scan and quantitative A-scan performed during the same patient encounter

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 67-year-old male is found to have a mass in the temporal retina and is referred for diagnositc ultrasound evaluation.

Percentage of Survey Respondents who found Vignette to be Typical: 97%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Moderate Sedation

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No
Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 5%

Is moderate sedation inherent to this procedure in the office setting? No
Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: Study all retinal photographs, retinal drawings, scans, and fluorescein angiograms. Assess the referring physician's clinical impression. Calibrate ultrasound A and B probes. Place patient in supine position on examination table. Anesthetize patient's cornea. Apply ultrasound gel to the cornea/sclera.

Description of Intra-Service Work: Place the B-scan probe on the cornea/sclera and localize the lesion. Take multiple views in all quadrants. Document any shadowing and reflected patterns. Evaluate the shape, internal nature of the mass, and document possible scleral extension. Evaluate and document the presence and nature of vitreous cells and overlying retinal detachment. Obtain multiple images and perform clinical correlation. Remove the B-scan probe and irrigate the patient's cornea and lid to remove the ultrasound gel. Place a scleral shell with tubing on the patient's globe between the lids, fill the shell with coupling fluid, then place an A-scan probe in the shell with the beam passing perpendicularly through the lesion. Examine multiple images in all quadrants to determine diameter, elevation, and nature of internal reflectivity. Determine possible breach of Bruch's membrane and retinal or scleral extension. Document appropriate views during the scan. Integrate ultrasound findings with clinical presentation and formulate clinical diagnosis. Clean and dry the eyelids.

Description of Post-Service Work: Provide lubricants and instruct the patient to call if symptoms of corneal irritation occur. Review results with the patient and/or family. Review the images and provide a report for the referring physician, which includes interpretation, possible diagnoses, and recommendations for additional diagnostic studies.

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
92083	XXX	0.50	**RUC Time**

CPT Descriptor Visual field examination, unilateral or bilateral, with interpretation and report; extended examination (eg, Goldmann visual fields with at least 3 isopters plotted and static determination within the central 30 deg;, or quantitative, automated threshold perimetry, Octopus program G-1, 32 or 42, Humphrey visual field analyzer full threshold programs 30-2, 24-2, or 30/60-2)

KEY MPC COMPARISON CODES:

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
76700	XXX	0.81	**RUC Time**	981,043

CPT Descriptor 1 Ultrasound, abdominal, real time with image documentation; complete

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
99231	XXX	0.76	**RUC Time**	9,045,179

CPT Descriptor 2 Subsequent hospital care, per day, for the evaluation and management of a patient, which requires at least 2 of these 3 key components: A problem focused interval history; A problem focused examination; Medical decision making that is straightforward or of low complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the patient is stable, recovering or improving. Typically, 15 minutes are spent at the bedside and on the patient's hospital floor or unit.

Other Reference CPT Code	Global	Work RVU	Time Source
99224	XXX	0.76	**RUC Time**

CPT Descriptor Subsequent observation care, per day, for the evaluation and management of a patient, which requires at least 2 of these 3 key components: Problem focused interval history; Problem focused examination; Medical decision making that is straightforward or of low complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the patient is stable, recovering, or improving. Typically, 15 minutes are spent at the bedside and on the patient's hospital floor or unit.

RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:
Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by the mean) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Top Key Reference Code: 25 **% of respondents:** 37.8 **%**

Number of respondents who choose 2nd Key Reference Code: 13 **% of respondents:** 19.6 **%**

TIME ESTIMATES (Median)

	CPT Code: 76510	Top Key Reference CPT Code: 92014	2nd Key Reference CPT Code: **92083**

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Intensity & Complexity Rating Scale: (much less= -2.00, somewhat less= -1.00, identical= 0.00, somewhat more= 1.00, much more= 2.00)

	Top Key Ref Code	2nd Key Ref Code
Mental Effort and Judgment (Mean)		
The number of possible diagnosis and/or the number of management options that must be considered	0.44	1.00

The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed	0.64	1.08
Urgency of medical decision making	1.08	1.62

Technical Skill/Physical Effort (Mean)

Technical skill required	1.36	1.38
Physical effort required	0.92	1.15

Psychological Stress (Mean)

The risk of significant complications, morbidity and/or mortality	1.20	1.38
Outcome depends on the skill and judgment of physician	1.48	1.31
Estimated risk of malpractice suit with poor outcome	1.52	1.38

INTENSITY/COMPLEXITY MEASURES	Top Key Ref Code	2nd Key Ref Code
Time Segment (Mean)		
Overall intensity/complexity	1.24	1.46

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

CPT 76510 *Ophthalmic ultrasound, diagnostic; B-scan and quantitative A-scan performed during the same patient encounter* is part of a family of codes associated with 76512, which was identified by CMS as a high expenditure XXX procedure. CPT 76510 combines the imaging performed in 76511 and 76512. It was last reviewed by the RUC in 2004.

A random survey of AAO and ASRS members had 66 respondents, 97% of whom found the vignette typical. The median WRVU was 0.98 and the 25th percentile was 0.65. Median IST was 15 minutes. The current value of the code is 1.55 WRVU. The primary reference service, chosen by 38%, was 92014, *Ophthalmological services: medical examination and evaluation, with initiation or continuation of diagnostic and treatment program; comprehensive, established patient, 1 or more visits* (RUC February 2007) with a WRVU of 1.42 and 24 minutes IST. The second reference service, chosen by 20%, was 92083, *Visual field examination, unilateral or bilateral, with interpretation and report; extended examination …* (RUC April 2012) with a WRVU of 0.50 and 10 minutes IST. The low percentages likely reflect the diverse number of XXX reference codes with similar WRVU values, none of which are particularly similar to the type of work performed with 76510. The intensity and complexity metrics for the surveyed code were higher than those of the reference codes.

The expert panel of the AAO and ASRS, which is familiar with the procedure and the RUC process, reviewed the survey findings. The median survey IST of 15 minutes is half of the current time of 30 minutes. We reduced the pre-time to describe the test and review its purpose, risks and benefits with the patient from the survey value of 7 minutes to

2 minutes because the procedure is typically done in conjunction with an office visit. Similarly, we reduced the survey post-service time from 10 to 2 minutes. **We recommend a WRVU of 0.76, between the survey's 25th percentile and median.**

This value is supported by MPC code 99231 *Subsequent hospital care… straightforward or of low complexity* (RUC February 2006) with 0.76 WRVU, an IST of 10 minutes and total time of 20 minutes. The value is also supported by CPT code 76770, *Ultrasound, retroperitoneal (eg, renal, aorta, nodes), real time with image documentation; complete* (RUC October 2013) with 0.74 WRVU and CPT code 99224, *Subsequent observation care, per day… straightforward or of low complexity* (RUC June 2009), with 0.76 WRVU. Both of these codes have an IST of 10 minutes and total time of 20 minutes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☒ Other reason (please explain) Billed with an office visit

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. E/M or the ophthalmalogic exam codes

3.	4.	CPT Code	Pre-	Intra-	Post-	Total Time	Work RVU	Global Period
4.	5.	92002	5	15	5	25	.88	XXX
5.	6.	92004	5	25	10	40	1.82	XXX
6.	7.	92012	5	15	5	25	.92	XXX
7.	8.	92014	5	24	8	37	1.42	XXX

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:76511 Tracking Number Original Specialty Recommended RVU: **0.64**
Presented Recommended RVU: **0.64**
Global Period: XXX RUC Recommended RVU: **0.64**

CPT Descriptor: Ophthalmic ultrasound, diagnostic; quantitative A-scan only

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 68-year old white male is found to have a mass in the temporal retina and is referred for a diagnostic A-scan to include measurement of the height, internal reflectivity, and dimensions of the lesion.

Percentage of Survey Respondents who found Vignette to be Typical: 92%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Moderate Sedation

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No
Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 10%

Is moderate sedation inherent to this procedure in the office setting? No
Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: All retinal photographs, retinal drawings, scans, and fluorescein angiograms are studied. The referring physician's clinical impression is assessed. The ultrasound machine is calibrated. The patient's cornea is anesthetized.

Description of Intra-Service Work: The lesion is inspected. The physician places a scleral shell with tubing on the patient’s globe between the lids, fills the shell with coupling fluid, then places an A-scan probe in the shell with the beam passing perpendicularly through the lesion. Multiple images in all quadrants are examined to determine diameter, elevation, and nature of internal reflectivity. Possible breach of Bruch's membrane and scleral extension is determined. Appropriate views are documented during the scan. Obtain multiple images and perform clinical correlation. Integration of ultrasound findings with clinical presentation is evaluated and clinical diagnosis is formulated. The patient’s eyelids are cleaned and dried.

Description of Post-Service Work: Lubricants are provided and the patient is told to call if symptoms of corneal irritation occur. The results are reviewed with the patient and family. The physician reviews the images and provides a report for the referring physician which includes interpretation, possible diagnoses, and recommendations for further diagnostic studies.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Intensity & Complexity Rating Scale: (much less= -2.00, somewhat less= -1.00, identical= 0.00, somewhat more= 1.00, much more= 2.00)

	Top Key Ref Code	**2nd Key Ref Code**
Mental Effort and Judgment (Mean)		
The number of possible diagnosis and/or the number of management options that must be considered	0.58	1.17
The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed	1.00	1.17
Urgency of medical decision making	1.42	1.00
Technical Skill/Physical Effort (Mean)		
Technical skill required	1.58	1.33

Physical effort required	1.08	0.83

Psychological Stress (Mean)

The risk of significant complications, morbidity and/or mortality	1.08	1.33
Outcome depends on the skill and judgment of physician	1.67	1.50
Estimated risk of malpractice suit with poor outcome	1.50	1.67

INTENSITY/COMPLEXITY MEASURES	**Top Key Ref Code**	**2nd Key Ref Code**

Time Segment (Mean)

Overall intensity/complexity	1.25	1.33

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

CPT 76511 *Ophthalmic ultrasound, diagnostic; quantitative A-scan only* is part of a family of codes associated with 76512, which was identified by CMS as a high expenditure XXX procedure. It was last reviewed by the RUC in 2004.

A random survey of AAO and ASRS members had 36 respondents, 92% of whom found the vignette typical. The median WRVU was 0.83 and the 25th percentile was 0.64. Median IST was 10 minutes. The current value of the code is 0.94 WRVU. The primary reference service, chosen by 33%, was 92002, *Ophthalmological services: medical examination and evaluation with initiation of diagnostic and treatment program; intermediate, new patient* (RUC February 2007) with a WRVU of 0.88 and 15 minutes IST. The second reference service, chosen by 17%, was 92100, *Serial tonometry (separate procedure) with multiple measurements of intraocular pressure over an extended time period with interpretation and report, same day (eg, diurnal curve or medical treatment of acute elevation of intraocular pressure)* (RUC September 2011) with a WRVU of 0.61 and 20 minutes IST. The low percentages likely reflect the diverse number of XXX reference codes with similar WRVU values, none of which are particularly similar to the type of work performed with 76511. The intensity and complexity metrics for the surveyed code were higher than those of the reference codes.

The expert panel of the AAO and ASRS, which is familiar with the procedure and the RUC process, reviewed the survey findings. The median survey IST of 10 minutes is lower than the current time of 15 minutes. We reduced the pre-time to describe the test and review its purpose, risks and benefits with the patient from the survey value of 7.5 minutes to 3s minutes because the procedure is typically done in conjunction with an office visit. Similarly, we reduced the survey post-service time from 10 to 2 minutes. **We recommend a WRVU of 0.64, the survey's 25th percentile.**

This value is supported by MPC code 76815 *Ultrasound, pregnant uterus, real time with image documentation, limited (eg, fetal heartbeat, placental location, fetal position and/or qualitative amniotic fluid volume), 1 or more fetuses* (RUC April 2002) with 0.65 WRVU, an IST of 5.5 minutes, and total time of 15.5 minutes. It is also supported by CPT code

76856 *Ultrasound, pelvic (nonobstetric), real time with image documentation; complete* (RUC October 2013) with 0.69 WRVU, an IST of 10 minutes and total time of 20 minutes and CPT code 77300, *Basic radiation dosimetry calculation…, only when prescribed by the treating physician* (RUC April 2014) with 0.62 WRVU, and an IST and total times of 15 minutes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☒ Other reason (please explain) Billed with an office visit

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. E/M or the ophthalmalogic exam codes

3.	4.	CPT Code	Pre-	Intra-	Post-	Total Time	Work RVU	Global Period
4.	5.	92002	5	15	5	25	.88	XXX
5.	6.	92004	5	25	10	40	1.82	XXX

Description of Pre-Service Work: Study prior retinal images, retinal drawings, scans, and fluorescein angiograms. Assess referring physician's clinical impression. Calibrate the ultrasound machine. Explain test to patient. Position the patient. Anesthetize patient's cornea and apply ultrasound gel.

Description of Intra-Service Work: Place an ultrasound probe on the lids or directly on the cornea/sclera with the beam passing perpendicularly through the lesion. Examine multiple images in all quadrants to determine diameter, elevation, and nature of internal reflectivity. Evaluate and document the presence and nature of vitreous cells and overlying retinal detachment. Determine possible breach of Bruch's membrane and scleral extension. Document appropriate views during the scan. Obtain multiple images and perform clinical correlation. Irrigate patient's cornea and lid to remove ultrasound gel. Integrate ultrasound findings with clinical presentation and formulate clinical diagnosis.

Description of Post-Service Work: Provide lubricants and instruct the patient to call if symptoms of corneal irritation occur. Review results with the patient and/or family. A report for the referring physician is prepared that includes interpretation, possible diagnoses, and recommendations for additional diagnostic studies if required.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Intensity & Complexity Rating Scale: (much less= -2.00, somewhat less= -1.00, identical= 0.00, somewhat more= 1.00, much more= 2.00)

	Top Key Ref Code	**2nd Key Ref Code**
Mental Effort and Judgment (Mean)		
The number of possible diagnosis and/or the number of management options that must be considered	0.38	0.58
The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed	0.58	0.81
Urgency of medical decision making	1.15	1.27
Technical Skill/Physical Effort (Mean)		
Technical skill required	1.42	1.42

Physical effort required	0.62	0.77

Psychological Stress (Mean)

The risk of significant complications, morbidity and/or mortality	1.00	0.85
Outcome depends on the skill and judgment of physician	1.38	1.46
Estimated risk of malpractice suit with poor outcome	1.38	1.19

INTENSITY/COMPLEXITY MEASURES	**Top Key Ref Code**	**2nd Key Ref Code**

Time Segment (Mean)

Overall intensity/complexity	1.00	1.12

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

CPT 76512 *Ophthalmic ultrasound, diagnostic; B-scan (with or without superimposed non-quantitative A-scan)* was identified by CMS as a high expenditure XXX procedure. It was last reviewed by the RUC in 2004.

A random survey of AAO, ASRS and AOA members had 94 respondents, 80% of whom found the vignette typical. The median WRVU was 0.95 and the 25th percentile was 0.56. Median IST was 11 minutes. The current value of the code is 0.94 WRVU. The primary reference service, chosen by 28%, was 92002, *Ophthalmological services: medical examination and evaluation with initiation of diagnostic and treatment program; intermediate, new patient* (RUC February 2007) with a WRVU of 0.88 and 15 minutes IST. The second reference service, chosen by 28%, was 92014, *Ophthalmological services: medical examination and evaluation, with initiation or continuation of diagnostic and treatment program; comprehensive, established patient, 1 or more visits* (RUC February 2007) with a WRVU of 1.42 and 24 minutes IST. The low percentages likely reflect the diverse number of XXX reference codes with similar WRVU values, none of which are particularly similar to the type of work performed with 76512. The intensity and complexity metrics for the surveyed code were higher than those of the reference codes.

The expert panel of the AAO and ASRS, which is familiar with the procedure and the RUC process, reviewed the survey findings. The median survey IST of 11 minutes is lower than the current time of 15 minutes. We reduced the pre-time to describe the test and review its purpose, risks and benefits with the patient from the survey value of 5.5 minutes to 3 minutes because the procedure is typically done in conjunction with an office visit. Similarly, we reduced the survey post-service time from 10 to 2 minutes. When last reviewed in 2004, the RUC agreed with the specialty society's recommendation that CPT 76511 and 76512 had equivalent intensities and technical skill. We believe that that has not changed. Given the almost identical survey times for 76511 and 76512, we **recommend the same WRVU of 0.64, between the survey's 25th percentile and median.**

This value is supported by MPC code 76815 *Ultrasound, pregnant uterus, real time with image documentation, limited (eg, fetal heartbeat, placental location, fetal position and/or qualitative amniotic fluid volume), 1 or more fetuses* (RUC April 2002) with 0.65 WRVU, an IST of 5.5 minutes, and total time of 15.5 minutes. It is also supported by CPT code 76856 *Ultrasound, pelvic (nonobstetric), real time with image documentation; complete* (RUC October 2013) with 0.69 WRVU, an IST of 10 minutes and total time of 20 minutes and CPT code 77300, *Basic radiation dosimetry*

calculation…, only when prescribed by the treating physician (RUC April 2014) with 0.62 WRVU, and an IST and total times of 15 minutes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☒ Other reason (please explain) Billed with an office visit

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. E/M or the ophthalmalogic exam codes

3.	3.	CPT Code	Pre-	Intra-	Post-	Total Time	Work RVU	Global Period
4.	4.	92002	5	15	5	25	.88	XXX
5.	5.	92004	5	25	10	40	1.82	XXX
6.	6.	92012	5	15	5	25	.92	XXX
7.	7.	92014	5	24	8	37	1.42	XXX
8.	8.	99212	2	10	4	16	.48	XXX
9.	9.	99213	3	15	5	23	.97	XXX

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) N/A

How often do physicians <u>in your specialty</u> perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Ophthalmology How often? Commonly

Specialty Optometry How often? Sometimes

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 286813
If the recommendation is from multiple specialties, please provide the frequency and <u>percentage</u> for each specialty. Please explain the rationale for this estimate. Estimation Only

Specialty Ophthalmology Frequency 244278 Percentage 85.16 %

Specialty Optometry Frequency 41702 Percentage 14.53 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 191,209 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC database

Specialty Ophthalmology Frequency 162852 Percentage 85.16 %

Specialty Optometry Frequency 27801 Percentage 14.53 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Imaging

BETOS Sub-classification:
Standard imaging

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 76512

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. N/A

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation
Non Facility Direct Inputs

CPT Long Descriptor: Ophthalmic ultrasound, diagnostic; B-scan and quantitative A-scan performed during the same patient encounter

Global Period: XXX Meeting Date: October, 2016

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:

The Academy convenes a consensus subcommittee utilizing the appropriate subspecialty representatives who sit on our Health Policy Committee that oversees our activities at RUC and CPT. Additionally, we queried other physicians who have the appropriate expertise for this code. The consensus committee considered the survey data and PE details in order to determine clinical time and applicable standard packages were also applied. The physicians on the consensus panel familiar with the service provided input on whether or not any changes were needed for the existing supplies and equipment.

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale: Current code (76510).

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time: Please see below.

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence: N/A

5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

Although this code is typically done in conjunction with an office visit, there is still a significant component of pre-service labor that occurs in addition to standard office visits. Time is required to escort patient from the exam lane into the room with the ophthalmic ultrasound, to calibrate the machine in its separate room, and to provide pre-service education and consent. In addition to these activities, time is taken to position the patient properly at the ophthalmic ultrasound, prior to measurements being performed.

- Greet patient, provide gowning, ensure appropriate medical records are available: **1 min**
  - This time is spent with the technician greeting the patient, reviewing the patient records and history, and transporting the patient from the room where the E&M service was performed to the room where the ophthalmic ultrasound is housed.
- Provide pre-service education/obtain consent: **2 min**
  - The patient is informed of this procedure and educated regarding the proper fixation, positioning, and performance in order to obtain accurate readings. This education occurs in the room that houses the ultrasound.

- Prepare room, equipment, supplies: **2 min**
  - This time is spent preparing the new room where the ophthalmic ultrasound is housed, entering patient demographic information into the ultrasound machine, and preparing the scleral shell and coupling solution (typically saline).
- Other Clinical Activity - specify: Calibrate ophthalmic ultrasound machine: **2 min**
  - This time is spent prior to bringing the patient to the room, in order to ensure that the ophthalmic ultrasound is appropriately calibrated to accurately measure the lesion in question. This code requires both b-scan (EQ247) and quantitative a-scan (EQ246) technology. The a-scan machine (EQ246) must be capable of precision measurements, as the physician's management decisions can depend on small differences in tumor size.
- Prepare and position patient/ monitor patient: **2 min**
  - This time is spent positioning the patient in the chair for the ophthalmic ultrasound. The patient is placed in a supine position, looking up at the ceiling, elevated so the physician can perform the test.

Intra-Service Clinical Labor Activities:

- Although typical practice used to be combined physician and technician work with the physician performing the test while the technician actively assists, and although the technician still is involved in a large number of practices, the actual performance of the test is now typically done just by the physician.

Post-Service Clinical Labor Activities:

- Cleanup: **3 min**
  - The room and instruments are cleaned and closed.
- Label & file photos/slides w/ patient chart: **3 min**
  - This time is spent uploading and ordering photographs from the procedure into the medical record.

The a-scan machine (EQ246) must be capable of precision measurements, as the physician's management decisions can depend on small differences in tumor size.
- Prepare and position patient/ monitor patient: **2 min**
  - This time is spent positioning the patient in the chair for the ophthalmic ultrasound. The patient is placed in a supine position, looking up at the ceiling, elevated so the physician can perform the test.

Intra-Service Clinical Labor Activities:

- Although typical practice used to be combined physician and technician work with the physician performing the test while the technician actively assists, and although the technician still is involved in a large number of practices, the actual performance of the test is now typically done just by the physician.

Post-Service Clinical Labor Activities:

- Cleanup: **3 min**
  - The room and instruments are then cleaned and closed.
- Label & file photos/slides w/ patient chart: **3 min**
  - This time is spent uploading and ordering photographs from the procedure into the medical record.

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation
Non Facility Direct Inputs

CPT Long Descriptor: Ophthalmic ultrasound, diagnostic; B-scan (with or without superimposed non-quantitative A-scan)

Global Period: XXX Meeting Date: October, 2016

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:

The Academy convenes a consensus subcommittee utilizing the appropriate subspecialty representatives who sit on our Health Policy Committee that oversees our activities at RUC and CPT. Additionally, we queried many other physicians who have the appropriate expertise for this code. The consensus committee considered the survey data and PE details in order to determine clinical time and applicable standard packages were also applied. The physicians on the consensus panel familiar with the service provided input on whether or not any changes were needed for the existing supplies and equipment.

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale: Current code (76512).

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time: Please see below.

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence: N/A

5. Please describe in detail the clinical activities of your staff:

Although this code is typically done in conjunction with an office visit, there is still a significant component of pre-service labor that occurs in addition to standard office visits. Time is required to escort patient from the exam lane into the room with the ophthalmic ultrasound, to calibrate the machine in its separate room, and to provide pre-service education and consent. In addition to these activities, time is taken to position the patient properly at the ophthalmic ultrasound, prior to measurements being performed.

Pre-Service Clinical Labor Activities:

- Greet patient, provide gowning, ensure appropriate medical records are available: **1 min**
    - This time is spent with the technician greeting the patient, reviewing the patient records and history, and transporting the patient from the room where the E&M service was performed to the room where the ophthalmic ultrasound is housed.
- Provide pre-service education/obtain consent: **2 min**
    - The patient is informed of this procedure and educated regarding the proper fixation, positioning, and performance in order to obtain accurate readings. This education occurs in the room that houses the ultrasound.
- Prepare room, equipment, supplies: **2 min**

  - This time is spent preparing the new room where the ophthalmic ultrasound is housed, and entering patient demographic information into the ultrasound machine.
- Other Clinical Activity - specify: Calibrate ophthalmic ultrasound machine: **2 min**
  - This time is spent prior to bringing the patient to the room, in order to ensure that the ophthalmic ultrasound is appropriately calibrated to accurately measure the lesion in question.
- Prepare and position patient/ monitor patient: **2 min**
  - This time is spent positioning the patient in the chair for the ophthalmic ultrasound. The patient is placed in a supine position, looking up at the ceiling, elevated so the physician can perform the test.

Intra-Service Clinical Labor Activities:

- Although typical practice used to be combined physician and technician work with the physician performing the test while the technician actively assists, and although the technician still is involved in a large number of practices, the actual performance of the test is now typically done just by the physician.

Post-Service Clinical Labor Activities:

- Cleanup: **3 min**
  - The room and instruments are cleaned and closed.
- Label & file photos/slides w/ patient chart: **3 min**
  - This time is spent uploading and ordering photographs from the procedure into the medical record.

AMA/Specialty Society RVS Update Committee Summary of Recommendations
CMS High Expenditure Procedures

October 2016

MRI Breast

In the Final Rule for 2016, CMS re-ran the high expenditure services across specialties with Medicare allowed charges of $10 million or more. CMS identified the top 20 codes by specialty in terms of allowed charges, excluding 010 and 090-day global services, anesthesia and Evaluation and Management services and services reviewed since CY 2010. The specialty societies indicated they will survey these services for the October 2016 RUC meeting.

In preparation to survey CPT codes 77058 and 77059, the specialty societies noted that these codes do not parallel the structure of other breast imaging families. For instance, the unilateral and bilateral coding language is not in alignment. Also, both procedures should include computer-aided detection (CAD). The Code Change Application (CCA) will be submitted for the upcoming February 2017 CPT Editorial Panel meeting. **The RUC recommends CPT codes 77058 and 77059 be referred to the CPT Editorial Panel.**

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
77058 (f)	Magnetic resonance imaging, breast, without and/or with contrast material(s); unilateral	XXX	Refer to CPT Editorial Panel
77059	Magnetic resonance imaging, breast, without and/or with contrast material(s); bilateral	XXX	Refer to CPT Editorial Panel

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Re: Tab 24, MR Breast (77058-77059)

Dear Dr. Smith:

CPT Code 77059 (*Magnetic resonance imaging, breast, without and/or with contrast material(s); bilateral*) was identified on the CY 2016 MPFS Table 8 List of Potentially Misvalued Codes Identified Through High Expenditure by Specialty Screen. The ACR expanded the family to include CPT code 77058 (*Magnetic resonance imaging, breast, without and/or with contrast material(s); unilateral*).

While we did prepare the survey materials, the ACR instead, decided to refer the MR breast codes to CPT for further review and action. We did not survey the MR breast codes, 77058 and 77059, for the October RUC meeting. We plan to submit the CCP for the February 2017 CPT meeting.

Sincerely,

Kurt A. Schoppe, MD
ACR RUC Advisor

AMA/Specialty Society RVS Update Committee Summary of Recommendations
CMS High Expenditure Procedures

October 2016

Cardiac Electrophysiology Device Monitoring Services

In the Final Rule for 2016 CMS re-ran the high expenditure services across specialties with Medicare allowed charges of $10 million or more. CMS identified the top 20 codes by specialty in terms of allowed charges, excluding 010 and 090-day global services, anesthesia and Evaluation and Management services and services reviewed since CY 2010. CPT codes 93280, 93288, 93293, 93294, 93295, and 93296 were identified and the specialty societies indicated they will survey the entire family services for the October 2016 RUC meeting.

To survey this large family of services, the specialty societies obtained the RUC's approval to complete traditional surveys for the three benchmark codes 93280, 93283 and 93288. These services were selected because they are commonly performed and well understood, encompassing the two main devices, pacemakers and implantable cardioverter defibrillator s (ICDs). Respondents then surveyed the remaining services for physician time and work RVU.

Pacemaker Services

93279 Programming device evaluation (in person) with iterative adjustment of the implantable device to test the function of the device and select optimal permanent programmed values with analysis, review and report by a physician or other qualified health care professional; single lead pacemaker system
The RUC reviewed the survey results from 78 cardiologists and determined that the current value 0.65, below the survey 25th percentile work RVU of 0.70, appropriately accounts for the work required to perform this service. The RUC recommends 5 minutes pre-service time, 10 minutes intra-service time and 7 minutes immediate post-service time. The specialty societies indicated and the RUC agreed that the physician work and time has not changed since this service was last reviewed. For additional support the RUC referenced MPC code 76830 *Ultrasound, transvaginal* (work RVU = 0.69 and 10 minutes intra-service time) and similar service 95937 *Neuromuscular junction testing (repetitive stimulation, paired stimuli), each nerve, any 1 method* (work RVU = 0.65 and 12 minutes intra-service time). **The RUC recommends a work RVU of 0.65 for CPT code 93279.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

93280 Programming device evaluation (in person) with iterative adjustment of the implantable device to test the function of the device and select optimal permanent programmed values with analysis, review and report by a physician or other qualified health care professional; dual lead pacemaker system

The RUC reviewed the survey results from 78 cardiologists and determined that the current value 0.77, similar to the survey 25th percentile work RVU of 0.75, appropriately accounts for the work required to perform this service. The RUC recommends 7 minutes pre-service time, 15 minutes intra-service time and 10 minutes immediate post-service time. The specialty societies indicated and the RUC agreed that the physician work has not changed since this service was last reviewed. The RUC compared 93280 to the top to key reference services 93750 *Interrogation of ventricular assist device (VAD), in person, with physician or other qualified health care professional analysis of device parameters (eg, drivelines, alarms, power surges), review of device function (eg, flow and volume status, septum status, recovery), with programming, if performed, and report* (work RVU = 0.92 and 30 minutes of intra-service time) and 99213 *Office or other outpatient visit for the evaluation and management of an established patient* (work RVU = 0.97 and 15 minutes of intra-service time) and determined that this service requires slightly less physician work to complete. For additional support the RUC referenced MPC codes 93015 *Cardiovascular stress test using maximal or submaximal treadmill or bicycle exercise, continuous electrocardiographic monitoring, and/or pharmacological stress; with supervision, interpretation and report* (work RVU = 0.75 and 20 minutes intra-service time) and 76816 *Ultrasound, pregnant uterus, real time with image documentation, follow-up (eg, re-evaluation of fetal size by measuring standard growth parameters and amniotic fluid volume, re-evaluation of organ system(s) suspected or confirmed to be abnormal on a previous scan), transabdominal approach, per fetus* (work RVU = 0.85 and 15 minutes intra-service time). **The RUC recommends a work RVU of 0.77 for CPT code 93279.**

93281 Programming device evaluation (in person) with iterative adjustment of the implantable device to test the function of the device and select optimal permanent programmed values with analysis, review and report by a physician or other qualified health care professional; multiple lead pacemaker system

The RUC reviewed the survey results from 78 cardiologists and determined that a crosswalk to a work RVU of 0.85 appropriately accounts for the work required to perform this service. The RUC noted that the intra-service time had decreased by 5 minutes, therefore the current value of 0.90 and survey 25th percentile work RVU of 0.89 were slightly high given the decrease in time. The RUC recommends 7 minutes pre-service time, 15 minutes intra-service time and 10 minutes immediate post-service time. The RUC recommended to crosswalk the work RVU to MPC code 76816 *Ultrasound, pregnant uterus, real time with image documentation, follow-up (eg, re-evaluation of fetal size by measuring standard growth parameters and amniotic fluid volume, re-evaluation of organ system(s) suspected or confirmed to be abnormal on a previous scan), transabdominal approach, per fetus* (work RVU = 0.85 and 15 minutes intra-service time). **The RUC recommends a work RVU of 0.85 for CPT code 93281.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

93288 Interrogation device evaluation (in person) with analysis, review and report by a physician or other qualified health care professional, includes connection, recording and disconnection per patient encounter; single, dual, or multiple lead pacemaker system
The RUC reviewed the survey results from 78 cardiologists and determined that the current value 0.43, below the survey 25th percentile work RVU of 0.60 appropriately accounts for the work required to perform this service. The RUC recommends 5 minutes pre-service time, 10 minutes intra-service time and 7 minutes immediate post-service time. The specialty societies indicated and the RUC agreed that the physician work and time has not changed since this service was last reviewed. The RUC noted that 93288 is parallel to the other interrogation codes 93290 and 93292, which all require the same physician work and 10 minutes of intra-service time. For additional support the RUC referenced MPC code 29540 *Strapping; ankle and/or foot* (work RVU = 0.39 and 9 minutes intra-service time) and similar service 75902 *Mechanical removal of intraluminal (intracatheter) obstructive material from central venous device through device lumen, radiologic supervision and interpretation* (work RVU = 0.39 and 10 minutes intra-service time). **The RUC recommends a work RVU of 0.43 for CPT code 93288.**

Implantable Cardioverter Defibrillator (ICD) Services

93282 Programming device evaluation (in person) with iterative adjustment of the implantable device to test the function of the device and select optimal permanent programmed values with analysis, review and report by a physician or other qualified health care professional; single lead transvenous implantable defibrillator system
The RUC reviewed the survey results from 78 cardiologists and determined that the current value 0.85, which is the survey 25th percentile work as well, appropriately accounts for the work required to perform this service. The RUC recommends 6 minutes pre-service time, 12 minutes intra-service time and 10 minutes immediate post-service time. For additional support the RUC referenced MPC code 76700 *Ultrasound, abdominal, real time with image documentation; complete* (work RVU = 0.81 and 11 minutes intra-service time) which appropriately requires slightly less physician work and time. **The RUC recommends a work RVU of 0.85 for CPT code 93282.**

93283Programming device evaluation (in person) with iterative adjustment of the implantable device to test the function of the device and select optimal permanent programmed values with analysis, review and report by a physician or other qualified health care professional; dual lead transvenous implantable defibrillator system
The RUC reviewed the survey results from 78 cardiologists and determined that the current work value 1.15, in between the survey 25th percentile work RVU of 0.91 and survey median work RVU of 1.25, appropriately accounts for the work required to perform this service. The RUC recommends 10 minutes pre-service time, 15 minutes intra-service time and 10 minutes immediate post-service time. The RUC compared 93283 to the top to key reference services 93750 *Interrogation of ventricular assist device (VAD), in person, with physician or other qualified health care professional analysis of device parameters (eg, drivelines, alarms, power surges), review of device function (eg, flow and volume status, septum status, recovery), with programming, if performed, and report* (work RVU = 0.92 and 30 minutes of intra-service time) and 99238 *Hospital discharge day management; 30 minutes or less* (work RVU = 1.28 and 20 minutes of intra-service time) and determined that this service requires slightly less physician work to complete. For additional support the RUC referenced MPC codes 70460 *Computed tomography, head or brain; with contrast material(s)* (work RVU = 1.13 and 12 minutes intra-service time) and 95819 *Electroencephalogram (EEG); including recording awake and asleep* (work RVU = 1.08 and 15 minutes intra-service time). **The RUC recommends a work RVU of 1.15 for CPT code 93283.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

93284 Programming device evaluation (in person) with iterative adjustment of the implantable device to test the function of the device and select optimal permanent programmed values with analysis, review and report by a physician or other qualified health care professional; multiple lead transvenous implantable defibrillator system
The RUC reviewed the survey results from 78 cardiologists and determined that the current work value 1.25, which is between the survey 25th percentile work of 0.95 and survey median of 1.40, appropriately accounts for the work required to perform this service. The RUC recommends 9 minutes pre-service time, 18 minutes intra-service time and 10 minutes immediate post-service time. For additional support the RUC referenced MPC code 99238 *Hospital discharge day management; 30 minutes or less* (work RVU = 1.28 and 20 minutes of intra-service time), which appropriately requires similar physician work and time. **The RUC recommends a work RVU of 1.25 for CPT code 93284.**

93289 Interrogation device evaluation (in person) with analysis, review and report by a physician or other qualified health care professional, includes connection, recording and disconnection per patient encounter; single, dual, or multiple lead transvenous implantable defibrillator system, including analysis of heart rhythm derived data elements
The RUC reviewed the survey results from 78 cardiologists and determined that the survey 25th percentile work RVU of 0.75 appropriately accounts for the work required to perform this service. The intra-service time had decreased by 5 minutes from the last time it was surveyed therefore, the RUC determined that decreasing the work RVU from the current 0.92 to the 25th percentile appropriately addresses the decrease in time, while maintaining rank order among these service. The RUC recommends 5 minutes pre-service time, 10 minutes intra-service time and 9 minutes immediate post-service time. For additional support the RUC referenced MPC code 76817 *Ultrasound, pregnant uterus, real time with image documentation, transvaginal* (work RVU = 0.75 and 10 minutes intra-service time) which appropriately requires the same physician work. **The RUC recommends a work RVU of 0.75 for CPT code 93289.**

Peri-Procedural Services

93286 Peri-procedural device evaluation (in person) and programming of device system parameters before or after a surgery, procedure, or test with analysis, review and report by a physician or other qualified health care professional; single, dual, or multiple lead pacemaker system
The RUC reviewed the survey results from 78 cardiologists and determined that the current work value 0.30, which is below the survey 25th percentile work of 0.60, appropriately accounts for the work required to perform this service. The RUC recommends 5 minutes pre-service time, 10 minutes intra-service time and 7 minutes immediate post-service time, which is the same total time as it is currently. The RUC noted that 93286 is similar to 93279 (recommended work RVU =0.65) and is valued approximately half the physician work of 93279 because 93286 will be reported peri-procedurally, once before the procedure and once after the procedure. Additionally, code 93286 and 93279 are comparable because both involve interrogation and programming of a pacemaker device. The RUC determined a lesser relative value for 93286 is appropriate because this service involves only interrogating certain parameters and programming certain parameters. For additional support the RUC referenced comparable code 94726 *Plethysmography for determination of lung volumes and, when performed, airway resistance* (work RVU = 0.26 and 5 minutes of intra-service time) which requires less physician work and time. **The RUC recommends a work RVU of 0.30 for CPT code 93286.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

93287 Peri-procedural device evaluation (in person) and programming of device system parameters before or after a surgery, procedure, or test with analysis, review and report by a physician or other qualified health care professional; single, dual, or multiple lead implantable defibrillator system
The RUC reviewed the survey results from 78 cardiologists and determined that the current work value 0.45, which is below the survey 25th percentile work of 0.70, appropriately accounts for the work required to perform this service. The RUC recommends 5 minutes pre-service time, 10 minutes intra-service time and 10 minutes immediate post-service time. The RUC determined that while this service is similar to 93282 (recommended work RVU= 0.85), due to both involving interrogation and programming of a defibrillator device, the surveyed code should be valued approximately half the work because 93287 will be reported peri-procedurally, once before the procedure and once after the procedure.For additional support the RUC referenced comparable code 77002 *Fluoroscopic guidance for needle placement (eg, biopsy, aspiration, injection, localization device)* (work RVU = 0.54 and 15 minutes of intra-service time) which requires more physician work and time. **The RUC recommends a work RVU of 0.45 for CPT code 93287.**

Other Cardiac Device Services

93285 Programming device evaluation (in person) with iterative adjustment of the implantable device to test the function of the device and select optimal permanent programmed values with analysis, review and report by a physician or other qualified health care professional; implantable loop recorder system
The RUC reviewed the survey results from 78 cardiologists and determined that the current work value 0.52, which is below the survey 25th percentile work of 0.60, appropriately accounts for the work required to perform this service. The RUC recommends 5 minutes pre-service time, 10 minutes intra-service time and 5 minutes immediate post-service time. The RUC questioned why 93285 is more intense than 93292 (recommended work RVU = 0.43), as they have the same physician time. The specialty society indicated that the loop recorder, 93285, has multiple parameters to program to make sure it is sensing and detecting appropriately. There are many different ways to program depending on what type of rhythm the physician is looking for, bradyarrhythmia, tachyarrhythmia or irregular arrhythmia and sensing needs to be adjusted based on where it is placed and the movement of the patient. Given this explanation and supported by the IWPUT of 0.030, the RUC determined 93285 is more intense than 93292. For additional support the RUC referenced comparable codes 93926 *Duplex scan of lower extremity arteries or arterial bypass grafts; unilateral or limited study* (work RVU = 0.50 and 10 minutes of intra-service time) and 76820 *Doppler velocimetry, fetal; umbilical artery* (work RVU = 0.50 and 10 minutes intra-service time) which require similar physician work and time. **The RUC recommends a work RVU of 0.52 for CPT code 93285.**

93290 Interrogation device evaluation (in person) with analysis, review and report by a physician or other qualified health care professional, includes connection, recording and disconnection per patient encounter; implantable cardiovascular monitor system, including analysis of 1 or more recorded physiologic cardiovascular data elements from all internal and external sensors
The RUC reviewed the survey results from 78 cardiologists and determined that the current work value 0.43, which is below the survey 25th percentile work of 0.58, appropriately accounts for the work required to perform this service. The RUC recommends 5 minutes pre-service time,

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

10 minutes intra-service time and 8 minutes immediate post-service time. The RUC noted that 93290 is parallel to the pacemaker interrogation code 93288 and wearable defibrillator interrogation code 93292, all require the same physician work and 10 minutes of intra-service time. For additional support the RUC referenced comparable code 29540 *Strapping; ankle and/or foot* (work RVU = 0.39 and 9 minutes intra-service time) which requires similar physician work and time. **The RUC recommends a work RVU of 0.43 for CPT code 93290.**

93291 Interrogation device evaluation (in person) with analysis, review and report by a physician or other qualified health care professional, includes connection, recording and disconnection per patient encounter; implantable loop recorder system, including heart rhythm derived data analysis

The RUC reviewed the survey results from 78 cardiologists and determined that the a crosswalk to 0.37 work RVUs is appropriate due to the 5 minute decrease in intra-service time. The RUC recommends 5 minutes pre-service time, 7 minutes intra-service time and 5 minutes immediate post-service time. The RUC crosswalked 93291 to 96446 *Chemotherapy administration into the peritoneal cavity via indwelling port or catheter* (work RVU = 0.37 and 7 minutes intra-service time). For additional support the RUC referenced comparable code 92228 *Remote imaging for monitoring and management of active retinal disease (eg, diabetic retinopathy) with physician review, interpretation and report, unilateral or bilateral* (work RVU = 0.37 and 8 minutes intra-service time) which requires similar physician work and time. **The RUC recommends a work RVU of 0.37 for CPT code 93291.**

93292 Interrogation device evaluation (in person) with analysis, review and report by a physician or other qualified health care professional, includes connection, recording and disconnection per patient encounter; wearable defibrillator system

The RUC reviewed the survey results from 78 cardiologists and determined that the current work value 0.43, which is below the survey 25th percentile work of 0.60, appropriately accounts for the work required to perform this service. The RUC recommends 5 minutes pre-service time, 10 minutes intra-service time and 5 minutes immediate post-service time. The RUC noted that 93292 is parallel to the other interrogation codes 93288 and 93290, all require the same physician work and 10 minutes of intra-service time. For additional support the RUC referenced comparable code 29540 *Strapping; ankle and/or foot* (work RVU = 0.39 and 9 minutes intra-service time) which requires similar physician work and time. **The RUC recommends a work RVU of 0.43 for CPT code 93292.**

Remote Monitoring Services **(93293, 93294, 9329, 93297 & 93298)**

The specialty societies indicated and the RUC agreed that the survey respondents may have based their responses on a single transmission and not all transmissions for the 30-90 days as described. **The specialty society will resurvey the remote monitoring codes 93293, 93294, 9329, 93297 and 93298 with specific instructions vetted via the Research Subcommittee directing survey respondents to account for the work and time required for all transmissions provided. These services will be resurveyed in January 2017 and will be included in the same cycle, CPT 2018.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Practice Expense
The Practice Expense Subcommittee reviewed the direct practice expense inputs and made the following modifications:

1) Reduced vital signs from 5 to 3 minutes;
2) Reduced the assist anting the physician in performing the procedure to line 35 to reflect the physician intra-service time was at least the clinical staff intra-time or more ;
3) Revised the PE SORs to clearly distinguish the different activities of the two clinical staff on lines 44 and 45 as they are completing different forms and performing different work;
4) Adjusted all the equipment by a couple minutes based on the changes in intra-service time; and
5) Discussed a vendor issue that with all of the implanted defibrillator and pacemaker devices where there are circumstances vendor sends a technician in to interpret the devices and in those cases the practice is not bearing the cost. Also in some cases the vendor technician even brings in the device itself and interprets and the practice is not bearing these costs as well. The Subcommittee discussed this may be addressed by a modified -26 and just report the professional interpretation or a -52 modifier and represent a reduced service. However, neither modifier addresses the issue properly. Reporting the professional service only (-26) doesn't cover the physicians expenses of exam table, office and clinical staff for vital signs and the reduced modifier (-52) does not provide a good proxy. **The RUC recommends that this issue will be referred to the CPT Editorial Panel to determine how to appropriately report these cases.**

The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.

Work Neutrality
The RUC's recommendation for these codes will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
93279 (f)	Programming device evaluation (in person) with iterative adjustment of the implantable device to test the function of the device and select optimal permanent programmed values with analysis, review and report by a physician or other qualified health care professional; single lead pacemaker system	XXX	0.65 (No Change)

Overview

CMS identified several cardiac device monitoring services in CY 2016 PFS rulemaking—93280, 93288, 93293, 93294, 93295, and 93296—as potentially misvalued on its high-expenditure screen. Consistent with RUC policy, the societies expanded the review to include the entire family of cardiac device monitoring codes—19 codes with work and PE and 2 PE-only codes.

Motivated by the difficulty of surveying this many codes at once, but also a need for survey respondents to review all codes in an effort to ensure appropriate rank order, the societies sought and received Research Subcommittee approval for an alternative survey methodology. Survey respondents completed traditional RUC surveys of three benchmark services in the family—93280 (Dual pacemaker programming evaluation), 93283 (Dual ICD programming evaluation), and 93298 (30-day remote implantable loop recorder interrogation). These codes were selected because they are commonly performed and well understood, encompassing the two main devices—pacemakers and ICDs—and the two types of services—in-office programming and remote interrogation. Respondents were then taken to a table of all 19 codes divided into groups by service similarity. Time and work RVU responses from the three comprehensive surveys were transferred into that table. Survey respondents then completed the table for pre-service, intra-service, post-service times, and work RVUs. During this step, respondents also could adjust their responses from the three benchmark surveys. That survey tool is included in Tab 25 materials.

The societies also requested Research Subcommittee review of the RSL and vignettes. The Subcommittee supported the range of the RSL and appreciated the mix of MPC services. With the entire, large code-family being surveyed at once, we appreciated the Subcommittee's suggestions and applied their revisions.

Survey respondents generally appear to have understood the exercise of constructing rank order within the smaller groupings and for the most part these fit together within the larger family. However, there are exceptions where either rank order within a device family rank order across device families does not perfectly align. We identified some of these in our initial submission. Others were pointed out by preliminary reviewers. We have made some modifications to our initial recommendations in an attempt to more carefully address these inconsistencies. This rank order (as shown in Table 1) reflects the increasing intensity and decision-making complexity of these services.

One common theme we heard from reviewers was a desire to better understand differences in intensity between services and between devices. In response, we have updated the work descriptors in each SOR to eliminate errors, eliminate confusion about whether certain aspects of the services are performed by the physician or clinical staff, and to more simply present the physician work so services can be better compared. We also added vignettes to the SORs where they had previously been left out because they were not surveyed.

We note that the current values and times were often internally crosswalked or imputed by building block. Survey results at the 25th-percentile closely aligned with the current values in many instances. When possible, we have used the survey to validate work RVUs and update times. We had hoped to rely entirely on the surveys, but found that in certain instances it still made more sense to impute times for some of the services.

Finally, reviewer comments and suggestions helped us identify an issue that may address some questions service time. Reviewers noted reductions in survey intraservice time were often accompanied by increases in survey postservice times, and often that survey work RVUs did not decrease. After further scrutiny, we suggest that survey respondents are not as equipped as members of the RUC to distinguish intraservice time from postservice time for these services. Some respondents may have considered certain activities as postservice—there could be a blurring of the line as they interpret data but also prepare and finalize a report. This would explain a shift in the allocation of time from intraservice to postservice in some instances, additional increases to postservice time in some cases for devices with advanced features, and the lack of reduction in survey work RVUs.

Table 1: Recommendations in Rank Order

Code	Desc	wRVU	Intra	Total	Notes
93286	PERI-PX PACEMAKER DEVICE EV	0.30	10	21.5	Maintain. Below survey 25th 0.60.
93293	TRANSTELEPHONIC PM PHONE R-STRIP DEVICE EVAL, 90-DAY	0.32	5	15	Maintain. Below survey 25th 0.40.
93288	PM DEVICE INTERROGATION EVAL IN PERSON	0.43	10	22	Maintain. Below survey 25th 0.60.
93290	ICM DEVICE INTERROGATION EVAL IN PERSON	0.43	10	23	Maintain. Below survey 25th 0.58.
93291	ILR DEVICE INTERROGATION EVAL IN PERSON	0.43	7	17	Maintain. Below survey 25th 0.50.
93292	WCD DEVICE INTERROGATION EVAL IN PERSON	0.43	10	20	Maintain. Below survey 25th 0.60.
93287	PERI-PX ICD DEVICE EV	0.45	10	25	Maintain. Below survey 25th 0.70.
93285	ILR DEVICE PROGR EVAL	0.52	10	20	Maintain. Below survey 25th 0.60.
93297	ICM DEVICE INTERROGATION REMOTE, 30-DAY	0.52	10	46	Maintain. Below survey 25th 0.55. RUC derived current times as double 93290. We propose that method again.
93298	ILR DEVICE INTERROGATION REMOTE, 30-DAY	0.52	10	34	Maintain. Matches survey 25th 0.52. RUC derived current times as double 93290. We propose that method again, doubling 93291.
93294	PM DEVICE INTERROGATION REMOTE, 90-DAY	0.65	15	33	Maintain. RUC derived current times and values as 1.5 of 93288. We propose that method again.
93279	PM DEVICE	0.65	10	22	Maintain. Below survey 25th 0.70.

	PROGR EVAL SNGL				
93289	ICD DEVICE INTERROGATIO N EVAL IN PERSON	0.75	10	23.5	Reduce to survey 25th 0.75.
93280	PM DEVICE PROGR EVAL DUAL	0.77	15	32	Maintain. Above survey 25th 0.75. Time increase.
93282	ICD DEVICE PROGR EVAL SNGL	0.85	12	28	Maintain. Matches survey 25th 0.85.
93281	PM DEVICE PROGR EVAL MULTI	0.90	20	37	Maintain. Above survey 25th 0.89. Time increase.
93295	ICD DEVICE INTERROGATIO N REMOTE, 90-DAY	1.13	15	35.5	Reduce. RUC derived current times and values as 1.5 of 93289. We propose that method again.
93283	ICD DEVICE PROGR EVAL DUAL	1.15	15	35	Maintain. Above survey 25th 0.91. Time increase.
93284	ICD DEVICE PROGR EVAL MULTI	1.25	17.5	37.5	Maintain. Above survey 25th 0.95. Time increase.

1,500 non-duplicative members were randomly surveyed (1,000 from ACC, 500 from HRS). 78 respondents completed the survey, so each code has 78 respondents. This meets the response threshold of 75 completed surveys for services with utilization over 1,000,000; that was necessary for code 93280.

Pacemaker Office Services

93280 In this group of four codes, we used code 93280 for programming evaluation of a dual-chamber pacemaker as the benchmark survey. Respondents completed the traditional RUC survey for this code. Key reference service 93750 for Ventriclar Assist Device interrogation was selected by 18 respondents. These respondents found 93280 to be slightly more intense/complex in some measures, slightly less in others, and overall equivalent to 93750. These results are summarized in the SOR and the new intensity/complexity addendum. Second key reference code 99213 for a level-3 office visit was selected by 14 respondents. These respondents found 93280 to be slightly more intense/complex in some measures, slightly less in others, and overall slightly more intense/complex than 99213.

Despite the comparison to higher-valued key reference services and the slight increase in total time indicated by survey respondents, we do not believe we have a compelling evidence argument to recommend the survey median. As such, we are **recommending the current work RVU of 0.77 with median survey times of 7 minutes preservice, 15 minutes intraservice, and 10 minutes postservice.** These times result in a 2-minute decrease in intraservice time but a 5-minute increase in total time that we believe supports the current value. This value is near the survey 25th-percentile value of 0.75. It aligns well with identified MPC services as shown in the summary spreadsheet and the SOR—cardiovascular stress test code 93015 with a work RVU of 0.75 and times of 2 minutes preservice, 20 minutes intraservice, 4 minutes postservice, and ultrasound of pregnant uterus code 76816 with a work RVU of 0.86 and times of 6 minutes preservice, 15 minutes intraservice, 10 minutes postservice.

93279 For the second code in this group, we move down in rank order and present code 93279 for programming evaluation of a single-chamber pacemaker. Respondents indicated service times and a work RVU for this code using the table. **We recommend the current work RVU of 0.65 with median survey times of 5 minutes preservice, 10 minutes intraservice, and 7 minutes postservice.** These times result in a 2-minute increase in total time that we believe supports the current value. This value is slightly below the survey 25th-percentile value of 0.70. This is one of several instances where we followed the precedent of maintaining the current value when it falls below the 25th-percentile, as we do not have a compelling evidence argument for this code. For validation, we suggest comparing this code to MPC code 76830 for transvaginal ultrasound with a work RVU of 0.69 and times of 5 minutes preservice, 10 minutes intraservice, and 8 minutes postservice as presented in the summary spreadsheet.

93288 For the third code in this group, we move another step down in rank order and present 93288 for interrogation evaluation of a single, dual, or multi-chamber pacemaker. Respondents indicated service times and a work RVU for this code using the table. **We recommend the current work RVU of 0.43 with median survey times of 5 minutes preservice, 10 minutes intraservice, and 7 minutes postservice.** These times result in a 2-minute increase in total time that we believe supports the current value. This value is below the 25th-percentile value of 0.60. Acknowledging that survey respondents indicated this service to have the same time inputs as 93279, we note this is currently the case with these two codes and the difference based on intensity. For validation, we suggest comparing this code to MPC code 29540 for ankle strapping which is slightly shorter and lower-valued with a work RVU of 0.39 and times of 7 minutes preservice, 9 minutes intraservice, and 2 minutes postservice as presented in the summary spreadsheet.

93281 For the fourth and final code in this group, we go back above the benchmark survey code in rank order to code 93281 for programming evaluation of a multi-chamber pacemaker. This is one instance where the survey table did not provide a reasonable rank order. Respondents indicated this 93281 to have 30 seconds less preservice time and the same intraservice time as dual-chamber code 93280. **As such, we recommend the current work RVU of 0.90 with 93280's preservice time of 7 minutes, an expert consensus intraservice time of 16 minutes, and survey median postservice time of 10 minutes.** These times more sensibly align this service as the most difficult in-office pacemaker programming code, and also make sense in comparison to the multi-lead ICD code that will be presented later. This value is slightly above the survey 25th-percentile value of 0.89. For validation, we suggest comparing this code to slightly shorter MPC code 76816 for ultrasound of pregnant uterus with a work RVU of 0.86 and times of 6 minutes preservice, 15 minutes intraservice, and 10 minutes post-service.

ICD Office Services

93283 In this group of four codes, we start with benchmark survey code 93283 for programming evaluation of a dual-chamber ICD. Respondents completed the traditional RUC survey for this code. Key reference service 93750 for VAD interrogation was selected by 13 respondents. These respondents found 93283 to be slightly more intense/complex in every measure. These results are summarized in the SOR and the new intensity/complexity addendum. Second key reference code 99238 for hospital discharge day management was selected by 11 respondents. These respondents found 93283 to be more intense/complex every measure than 99238.

Reflecting the survey and reasonable alignment between key reference services and MPC comparators as shown in the summary spreadsheet, the societies recommend **the current work RVU of 1.15 with median survey times of 10 minutes preservice, 15 minutes intraservice, and 10 minutes postservice.** These times result in a 2-minute increase in total time that we believe supports the current value. This value is between the survey 25th-percentile and median values. It aligns well with identified MPC services as shown in the summary spreadsheet and the SOR—CT head code 70460 with a work RVU of 1.13 and times of 5 minutes preservice, 12 minutes intraservice, 5 minutes postservice, and asleep and awake EEG code 95819 with a work RVU of 1.08 and times of 5 minutes preservice, 15 minutes intraservice, 6 minutes postservice.

93282 For the second code in this group, we move down in rank order and present code 93282 for programming evaluation of a single-chamber ICD. Respondents indicated service times and a work RVU for this code using the table. **We recommend the current work RVU of 0.85 with median survey times of 6 minutes preservice, 12 minutes intraservice, and 10 minutes postservice.** These times result in no change in total time that we believe supports the current value. This value also happens to match the survey 25th-percentile. For validation, we suggest comparing this code to slightly shorter MPC code 76700 for complete abdominal ultrasound with a work RVU of 0.81 and times of 5 minutes preservice, 11 minutes intraservice, and 5 minutes postservice as presented in the summary spreadsheet.

93289 For the third code in this group, we move another step down in rank order and present 93289 for interrogation evaluation of a single, dual, or multi-chamber ICD. Respondents indicated service times and a work RVU for this code using the table. After considering reviewer comments that this value creates a rank order issue within the ICD codes by placing interrogation higher than single-lead programming, **we recommend the survey 25th-percentile work RVU of 0.75 with median survey times**

of 5 minutes preservice, 10 minutes intraservice, and 8.5 minutes postservice. This ICD group will now mirror the pacemaker group, with a progression in work from interrogation to single-, dual-, then multi-lead device programming services. This value also accounts for small reduction in total time that includes a shift of time from intraservice to postservice. Acknowledging that survey respondents indicated this service to have the same 10 minutes of intraservice time as 93288, we note that a difference remains in total time and intensity. For validation, we suggest comparing this code to nearly identical code 76817 for transvaginal ultrasound with a work RVU of 0.75 and times of 5 minutes preservice, 10 minutes intraservice, and 8 minutes postservice as presented in the summary spreadsheet.

93284 For the fourth and final code in this group, we go back above the benchmark survey code in rank order to code 93284 for programming evaluation of a multi-chamber ICD. Respondents indicated service times and a work RVU for this code using the table. This is a second instance where the survey table did not provide a reasonable rank order, as respondents indicated 93284 to have 1 minute less preservice time than dual-chamber code 93283. **As such, we recommend the current work RVU of 1.25 with 93283's preservice time of 10 minutes, then median survey times of 17.5 minutes intraservice and 10 minutes postservice.** These times result in a 2.5-minute increase intraservice time and 4-minute increase in total time that we believe supports the current value. This value falls between the survey 25th-percentile value of 0.95 and the median of 1.40. For validation we suggest comparing this code to slightly longer MPC code 99238 for hospital discharge day management with a work RVU of 1.28 and times of 8 minutes preservice, 20 minutes intraservice, and 10 minutes postservice as presented in the summary spreadsheet.

Pacemaker & ICD Peri-procedural Services

Two codes exist for evaluation of an implantable pacemaker or ICD to adjust device settings appropriate for the patient before and/or after a procedure or test.

93286 The first code of this pair describes peri-procedural device programming of a single, dual, or multi-chamber pacemaker. Respondents indicated service times and a work RVU for this code using the table. **We recommend the current work RVU of 0.30 with median survey times of 5 minutes preservice, 10 minutes intraservice, and 6.5 minutes postservice.** As discussed previously, we see some time shift between intraservice and postservice, which we believe supports the current value. This value is below the 25th-percentile RVU of 0.60. For validation, we suggest comparing this code to commonly performed, slightly shorter, and lower-valued code 94726 for plethysmography with a work RVU of 0.26 and times of 5 minutes preservice, 5 minutes intraservice, and 5 minutes postservice as presented in the summary spreadsheet.

93287 The second code of this pair describes peri-procedural device programming of a single, dual, or multi-chamber ICD. Respondents indicated service times and a work RVU for this code using the table. **We recommend the current work RVU of 0.45 with median survey times of 5 minutes preservice, 10 minutes intraservice, and 10 minutes postservice.** We again see some time shift between intraservice and postservice, which we believe supports the current value. This value is below the 25th-percentile RVU of 0.70. For validation, we suggest comparing this code to commonly performed, longer, and higher-valued code 77002 for fluoroscopic needle guidance with a work RVU of 0.54 and times of 7 minutes preservice, 15 minutes intraservice, and 5 minutes postservice as presented in the summary spreadsheet.

Other Device Office Services

Rounding out the services performed with the patient present is a group of four codes: three interrogation and one programming. This group is somewhat challenging because total time stays the same or goes down slightly, but the survey 25th-percentile values are still higher than the current value. We note that when these codes were previously valued, the work of the three interrogation codes was felt to be roughly the same as a crosswalk, pacemaker interrogation code 93288, even though the codes had slightly different time inputs. That work consistency remains, as does the slight time variation.

93290 The most common of these codes describes interrogation of an implantable cardiovascular monitor. Respondents indicated service times and a work RVU for this code using the table. **We recommend the current work RVU of 0.43 with median survey times of 5 minutes preservice, 10 minutes intraservice, and 8 minutes postservice.** This value is below the 25th-percentile RVU of 0.58. For validation, we suggest comparing this code to slightly shorter and lower-valued MPC code 29540 for ankle strapping with a work RVU of 0.39 and times of 7 minutes preservice, 9 minutes intraservice, and 2 minutes postservice as presented in the summary spreadsheet.

93292 The least common of these codes describes interrogation of a wearable cardiac defibrillator. Respondents indicated service times and a work RVU for this code using the table. **We recommend the current work RVU of 0.43 with median survey times of 5 minutes preservice, 10 minutes intraservice, and 5 minutes postservice.** This value is below the 25th-percentile RVU of 0.60. For validation, we again suggest comparing this code to slightly shorter and lower-valued MPC code 29540 for ankle strapping with a work RVU of 0.39 and times of 7 minutes preservice, 9 minutes intraservice, and 2 minutes postservice as presented in the summary spreadsheet.

93291 The third and fourth codes in this group are both related for implantable loop recorders. 93291 describes the in-office interrogation of that device. Respondents indicated service times and a work RVU for this code using the table. **We recommend the current work RVU of 0.43 with median survey times of 5 minutes preservice, 7 minutes intraservice, and 5 minutes postservice.** This value is below the 25th-percentile RVU of 0.50. As we noted earlier, this code and the previous two were all deemed equal to pacemaker interrogation code 93288 even though the codes had slightly different time inputs. We believe that methodology is still appropriate. For validation, we again suggest comparing this code to slightly longer and higher-valued code 93971 for limited duplex scan of extremity veins with a work RVU of 0.45 and times of 3 minutes preservice, 10 minutes intraservice, and 5 minutes postservice as presented in the summary spreadsheet.

93285 The final code in this group describes in-office programming of an implantable loop recorder. Respondents indicated service times and a work RVU for this code using the table. **We recommend the current work RVU of 0.52 with median survey times of 5 minutes preservice, 10 minutes intraservice, and 5 minutes postservice.** This value is below the 25th-percentile RVU of 0.60. For validation, we suggest comparing this code to commonly performed, and similarly-valued code 93926 for limited lower extremity duplex scan with a work RVU of 0.50 and identical times of 5 minutes preservice, 10 minutes intraservice, and 5 minutes postservice as presented in the summary spreadsheet.

Remote Monitoring Services

The final group of codes describes five remote device interrogation services. It is important to note that the times and values for these codes were imputed by societies and the RUC from other services when they were first valued in 2008. Those rationales are briefly summarized below in Table 2 for reference. Certain aspects of those assumptions still hold true. We again rely on calculated times after finding some inconsistencies within device families in our initial submission.

Table 2: Current Imputed times and values for remote services

Code	Desc	wRVU	Intra	Total	2008 RUC Rationale Notes
93293	TRANSTELEPHONIC PM PHONE R-STRIP DEVICE EVAL	0.32	10	20	1.9 transmissions per 90 days; 190% of survey times; 190% wRVU of 93010
93294	PM INTERROGATION REMOTE, 90-DAY	0.65	15	30	1.5 transmissions per 90 days; 150% of 93288 times; 150% wRVU of 93288
93295	ICD INTERROGATION REMOTE, 90-DAY	1.29	22.5	37.5	1.5 transmissions per 90 days; 150% of 93289 times; 150% wRVU of 93289 (later reduced by CMS)
93297	ICM INTERROGATION REMOTE, 30-DAY	0.52	24	50	2 transmissions per 30 days; 200% of 93290 times; wRVU crosswalk to 93228
93298	ILR INTERROGATION REMOTE, 30-DAY	0.52	24	44	2 transmissions per 30 days; 200% of 93290 times; wRVU crosswalk to 93228

93298 In this group of codes, we set code 93298 for 30-day remote interrogation evaluation of an implantable loop recorder as the benchmark survey. Respondents completed the traditional RUC survey for this code. Key reference service 93224 for 48-hour ECG recording was selected by 31 respondents. These respondents found 93298 to be somewhat more intense/complex in every measure. These results are summarized in the SOR and the new intensity/complexity addendum. Second key reference code 93015 for cardiovascular stress test was selected by 10 respondents. These respondents found 93298 to be more intense/complex every measure than 99238.

Median survey times for 93298 are 5 minutes preservice, 10 minutes intraservice, and 5 minutes postservice. In considering reviewer comments and further scrutinizing our original recommendations, we realized that these times do not reflect a large enough increment from in-office interrogation code 93291 that has times of 5 minutes preservice, 7 minutes intraservice, and 5 minutes postservice. This suggests to us that survey respondents did not correctly consider the multiple transmissions that occur in a 30-day period. The current assumption that two transmissions are reviewed per 30 days remains reasonable, if not somewhat conservative. As such, **we recommend doubling the times from 93291 and using the 93298 survey 25th-percentile work RVU of 0.52, which also happens to be the current value. This produces calculated times of 10 minutes preservice, 14 minutes intraservice, and 10 minutes postservice.** MPC codes with bracketing values but shorter times are included in the SOR and summary sheet. We would also direct the RUC's attention to additional comparator 95926 for lower limb somatosensory evoked potential study, with a work RVU of 0.54 and times of 6.5 minutes preservice, 15 minutes intraservice, and 10 minutes postservice.

93297 The second code of this group describes 30-day remote interrogation evaluation of an implantable cardiac monitor, most commonly heart failure data from a CRT-D device. Respondents indicated service times and a work RVU for this code using the table. Median survey times for 93297 are 5 minutes preservice, 7.5 minutes intraservice, and 5 minutes postservice. In considering reviewer comments and further scrutinizing our original recommendations, we realized that these times create a rank order issue with in-office interrogation code 93290 that has longer survey times of 5 minutes preservice, 10 minutes intraservice, and 8 minutes postservice. This suggests to us that survey respondents did not correctly consider the multiple transmissions that occur in a 30-day period. The current assumption that two transmissions are reviewed per 30 days remains reasonable, if not somewhat conservative. As such, **we recommend doubling the times from 93290 and using the current 93297 work RVU of 0.52. This produces calculated times of 10 minutes preservice, 20 minutes intraservice, and 16 minutes postservice.** This value is below the 25th-percentile RVU of 0.55. As with the previous code, it seems the current crosswalk value of 0.52 is about right while the imputed time was an overestimate, as suggested by the negative IWPUT. As providers of this service, we also believe it is reasonable for this service to have the same work RVU as 93298 with a slightly higher time. The decision-making for this patient population is more complex. We acknowledge this service will still have a negative IWPUT, but aside from recommending an increase in work RVU we see no way to avoid that outcome. For validation, a comparison can be made to slightly shorter and lower-valued code 92548 for computerized posturography, with a work RVU of 0.50 and times of 10 minutes preservice, 15 minutes intraservice, and 15 minutes postservice.

93293 Now that we've addressed the two 30-day remote codes, we shift to 90-day remote codes in rank order. The third remote code we'll present describes transtelephonic rhythm strip pacemaker evaluation of a single, dual, or multi-lead pacemaker. Respondents indicated service times and a work RVU for this code using the table. **We recommend the current work RVU of 0.32 with median survey times of 5 minutes preservice, 5 minutes intraservice, and 5 minutes postservice.** This value is below the 25th-percentile RVU of 0.40. For validation of our recommendations, we suggest comparing 93293 to another common cardiovascular service with slightly shorter times and values, code 93018 for interpretation of a stress test with a work RVU of 0.30 and times of 2 minutes preservice, 5 minutes intraservice, and 4 minutes postservice as presented in the summary spreadsheet.

93294 The next 90-day remote code is another pacemaker service, 90-day remote interrogation evaluation of a single, dual, or multi-lead pacemaker. Respondents indicated service times and a work RVU for this code using the table. It will be helpful for the RUC to be reminded that the current times and RVU for this code was calculated as 150% of the times and value of in-office pacemaker interrogation code 93288. Median survey times for 93294 are 5 minutes preservice, 10 minutes intraservice, and 5 minutes postservice. In considering reviewer comments and further scrutinizing our original recommendations, we realized that these times create a rank order issue with in-office interrogation code 93288 that has longer times of 5 minutes preservice, 10 minutes intraservice, and 7 minutes postservice. This suggests to us that survey respondents did not correctly consider the multiple transmissions that occur in a 90-day period. The current assumption that 1.5 transmissions are reviewed per 90 days remains reasonable. As such, **we recommend adding 50% to the times and value from 93288 as a recommendation for 93294. This produces calculated times of 7.5 minutes preservice, 15 minutes intraservice, and 10.5 minutes postservice and maintains the work RVU at 0.65.** This value is just above the survey 25th-percentile value and still makes sense since the current times and value were also imputed. For validation of our recommendations, we suggest comparing 93294 to slightly longer and higher valued code 76872 for transrectal ultrasound with a work RVU of 0.69 and times of 10

minutes preservice, 15 minutes intraservice, and 10 minutes postservice as presented in the summary spreadsheet.

93295 The final remote code is 90-day remote interrogation of a single, dual, or multi-lead ICD. Respondents indicated service times and a work RVU for this code using the table. As with the prior code, it will be helpful for the RUC to be reminded that the current times and RVU for this code were calculated as 150% of the times and value of in-office ICD interrogation code 93289. Median survey times for 93295 are 5 minutes preservice, 10 minutes intraservice, and 5 minutes postservice. In considering reviewer comments and further scrutinizing our original recommendations, we realized that these times create a rank order issue with in-office interrogation code 93289 that has longer times of 5 minutes preservice, 10 minutes intraservice, and 8.5 minutes postservice. The 25th-percentile work value would also create a rank order issue with 93289. This suggests to us that survey respondents did not correctly consider the multiple transmissions that occur in a 90-day period. The current assumption that 1.5 transmissions are reviewed per 90 days remains reasonable. As such, **we recommend adding 50% to the times and value from 93289 as a recommendation for 93295. This produces calculated times of 7.5 minutes preservice, 15 minutes intraservice, and 13 minutes postservice and results in a work RVU of 1.13.** This results in a reduction from the current value of 1.29 and incorporates the value of code 93289 where we previously used the 25th-percentile work RVU to improve rank order in the ICD family. For validation of our recommendations, we suggest comparing 93294 to slightly shorter and lower valued MPC code 95819 for awake and asleep EEG with a work RVU of 1.08 and times of 5 minutes preservice, 15 minutes intraservice, and 6 minutes postservice as presented in the summary spreadsheet.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:93279 Tracking Number Original Specialty Recommended RVU: **0.65**
Presented Recommended RVU: **0.65**
Global Period: XXX RUC Recommended RVU: **0.65**

CPT Descriptor: Programming device evaluation (in person) with iterative adjustment of the implantable device to test the function of the device and select optimal permanent programmed values with analysis, review and report by a physician or other qualified health care professional; single lead pacemaker system

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 65-year-old female with chronic atrial fibrillation and complete heart block had a single chamber (SC) rate adaptive ventricular pacemaker (VVIR (ventricular pacing, ventricular sensing, inhibition response and rate-adaptive)) implanted two years ago. The patient contacted her internist because she had "passed out." The physician has the patient come in for a symptom assessment and a programming device evaluation.

Percentage of Survey Respondents who found Vignette to be Typical: 0%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: OReview history for pacing indications and changes in symptoms or development of new symptoms. Review prior records of the implanted pacemaker, lead hardware, and programmed parameters, prior assessments of capture thresholds, sensing thresholds, and pacemaker dependency. Review interim remote monitoring results if available.

Description of Intra-Service Work: Connect patient to a single or multi-lead free running ECG monitor. Obtain a communication link between the pacemaker and the programmer. Assess and record current rhythm. Inhibit pacing to record the underlying rhythm. Pacing capture thresholds are determined for the lead by iteratively reducing the pacing voltage while maintaining a fixed pulse width (and/or by iteratively reducing the pulse width while maintaining a fixed voltage). Next, the autocapture feature (available for most pacemakers) is evaluated to ensure appropriate function for the lead.

The following data is analyzed:

1. Initial interrogation is reviewed to determine if any alert conditions have occurred (e.g. stored arrhythmia events, lead function parameter out of normal range, etc.).
2. Current interrogation results are compared to historical values and previous trends.
    a. Battery voltage, impedance and estimated longevity
    b. Lead sensing value
    c. Pacing threshold
    d. Lead impedance
3. Alert conditions are then reviewed in detail
    a. Stored arrhythmic episodes are reviewed to determine if the arrhythmia was accurately identified by the pacemaker (e.g. episode identified as atrial fibrillation is not double counting far-field ventricular activity on the atrial lead)

b. Out of range parameters are evaluated for accuracy (e.g. abnormal sensing or pacing thresholds recorded by the devices auto-sensing and autocapture algorithms).

4. Reprogramming

a. Based upon the findings above, programmed parameters are adjusted as needed (such as pacing outputs, sensing thresholds, alert parameters, etc.).

Description of Post-Service Work: Assess patient's clinical status for interim health changes, discuss results of the device interrogation and explain any programming changes to the device. Discuss status of remote monitoring to ensure patient understands importance of maintaining remote transceiver at bedside and plugged in at all times. Prepare and sign final report.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Intensity & Complexity Rating Scale: (much less= -2.00, somewhat less= -1.00, identical= 0.00, somewhat more= 1.00, much more= 2.00)

	Top Key Ref Code	2nd Key Ref Code
Mental Effort and Judgment (Mean)		
The number of possible diagnosis and/or the number of management options that must be considered		
The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed		
Urgency of medical decision making		
Technical Skill/Physical Effort (Mean)		
Technical skill required		
Physical effort required		
Psychological Stress (Mean)		
The risk of significant complications, morbidity and/or mortality		

Outcome depends on the skill and judgment of physician		
Estimated risk of malpractice suit with poor outcome		

INTENSITY/COMPLEXITY MEASURES	**Top Key Ref Code**	**2nd Key Ref Code**
Time Segment (Mean)		
Overall intensity/complexity		

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

PLEASE SEE SEPARATE RATIONALE DOCUMENT.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 93279

How often do physicians <u>in your specialty</u> perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty cardiology How often? Commonly

Specialty cardiac electrophysiology How often? Commonly

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 418000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Assuming roughly even split of Medicare & non-Medicare, this number is double the Medicare estimate below.

Specialty cardiology Frequency 250000 Percentage 59.80 %

Specialty cardiac electrophysiology Frequency 110000 Percentage 26.31 %

Specialty other Frequency 58000 Percentage 13.87 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 209,000 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on 2015 Medicare data in RUC database.

Specialty cardiology Frequency 125000 Percentage 59.80 %

Specialty cardiac electrophysiology Frequency 55000 Percentage 26.31 %

Specialty other Frequency 29000 Percentage 13.87 %

Do many physicians perform this service across the United States? Yes

---

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 93279

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:93280 Tracking Number Original Specialty Recommended RVU: **0.77**
Presented Recommended RVU: **0.77**
Global Period: XXX RUC Recommended RVU: **0.77**

CPT Descriptor: Programming device evaluation (in person) with iterative adjustment of the implantable device to test the function of the device and select optimal permanent programmed values with analysis, review and report by a physician or other qualified health care professional; dual lead pacemaker system

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 70-year-old male with acquired complete heart block had a dual chamber (DC) pacemaker (DC-PM) implanted five years ago. The patient calls his general cardiologist concerned about increasing "shortness of breath" and some "palpitations." The cardiologist orders a programming device evaluation.

Percentage of Survey Respondents who found Vignette to be Typical: 95%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review history for pacing indications and changes in symptoms or development of new symptoms. Review prior records of the implanted pacemaker, lead hardware, and programmed parameters, prior assessments of capture thresholds, sensing thresholds, and pacemaker dependency. Review interim remote monitoring results if available.

Description of Intra-Service Work: Connect patient to a single or multi-lead free running ECG monitor. Obtain a communication link between the pacemaker and the programmer. Assess and record current rhythm. Inhibit pacing to record the underlying rhythm. Pacing capture thresholds are determined for each lead individually by iteratively reducing the pacing voltage while maintaining a fixed pulse width (and/or by iteratively reducing the pulse width while maintaining a fixed voltage). Next, the autocapture feature (available for most pacemakers) is evaluated to ensure appropriate function for each lead.

The following data is analyzed for both leads:

1. Initial interrogation is reviewed to determine if any alert conditions have occurred (e.g. stored arrhythmia events, lead function parameter out of normal range, etc.).
2. Current interrogation results are compared to historical values and previous trends.
    a. Battery voltage, impedance and estimated longevity
    b. Lead sensing values
    c. Pacing thresholds
    d. Lead impedances
3. Alert conditions are then reviewed in detail
    a. Stored arrhythmic episodes are reviewed to determine if the arrhythmia was accurately identified by the pacemaker (e.g. episode identified as atrial fibrillation is not double counting far-field ventricular activity on the atrial lead)
    b. Out of range parameters are evaluated for accuracy (e.g. abnormal sensing or pacing thresholds recorded by the devices auto-sensing and autocapture algorithms).

4. Reprogramming

a. Based upon the findings above, programmed parameters are adjusted as needed (such as pacing outputs, sensing thresholds, alert parameters, etc.).

Description of Post-Service Work: Assess patient's clinical status for interim health changes, discuss results of the device interrogation and explain any programming changes to the device. Discuss status of remote monitoring to ensure patient understands importance of maintaining remote transceiver at bedside and plugged in at all times. Prepare and sign final report.

Modifier -51 Exempt Status

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:

Is this new/revised procedure considered to be a new technology or service? No

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
93750	XXX	0.92	**RUC Time**

CPT Descriptor Interrogation of ventricular assist device (VAD), in person, with physician or other qualified health care professional analysis of device parameters (eg, drivelines, alarms, power surges), review of device function (eg, flow and volume status, septum status, recovery), with programming, if performed, and report

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
99213	XXX	0.97	**RUC Time**

CPT Descriptor Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: An expanded problem focused history; An expanded problem focused examination; Medical decision making of low complexity. Counseling and coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of low to moderate severity. Typically, 15 minutes are spent face-to-face with the patient and/or family.

KEY MPC COMPARISON CODES:

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
76816	XXX	0.85	**RUC Time**	17,762

CPT Descriptor 1 Ultrasound, pregnant uterus, real time with image documentation, follow-up (eg, re-evaluation of fetal size by measuring standard growth parameters and amniotic fluid volume, re-evaluation of organ system(s) suspected or confirmed to be abnormal on a previous scan), transabdominal approach, per fetus

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
93015	XXX	0.75	**RUC Time**	1,075,476

The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed	-0.12	-0.21
Urgency of medical decision making	-0.12	0.57

Technical Skill/Physical Effort (Mean)

Technical skill required	0.24	0.57
Physical effort required	-0.24	-0.29

Psychological Stress (Mean)

The risk of significant complications, morbidity and/or mortality	0.00	0.43
Outcome depends on the skill and judgment of physician	0.18	0.50
Estimated risk of malpractice suit with poor outcome	0.12	0.50

INTENSITY/COMPLEXITY MEASURES	Top Key Ref Code	2nd Key Ref Code
Time Segment (Mean)		
Overall intensity/complexity	0.00	0.14

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

PLEASE SEE SEPARATE RATIONALE DOCUMENT.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 93280

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty cardiology How often? Commonly

Specialty cardiac electrophysiology How often? Commonly

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 2262000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Assuming roughly even split of Medicare & non-Medicare, this number is double the Medicare estimate below.

Specialty cardiology Frequency 1380000 Percentage 61.00 %

Specialty cardiac electrophysiology Frequency 882000 Percentage 38.99 %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,131,000 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on 2015 Medicare data in RUC database.

Specialty cardiology Frequency 690000 Percentage 61.00 %

Specialty cardiac electrophysiology Frequency 441000 Percentage 38.99 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

SUMMARY OF RECOMMENDATION

CPT Code:93281 Tracking Number Original Specialty Recommended RVU: **0.90**
Presented Recommended RVU: **0.85**
Global Period: XXX RUC Recommended RVU: **0.85**

CPT Descriptor: Programming device evaluation (in person) with iterative adjustment of the implantable device to test the function of the device and select optimal permanent programmed values with analysis, review and report by a physician or other qualified health care professional; multiple lead pacemaker system

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 75-year-old male with a nonischemic cardiomyopathy, a left ventricular ejection fraction (LVEF) of 35%, and sinus rhythm and QRS duration of 160 ms (millisecond) had a biventricular pacemaker implanted for treatment of moderately severe heart failure symptoms. The patient returns for a programming device evaluation of his pacemaker and lead function one year since his last programming device evaluation.

Percentage of Survey Respondents who found Vignette to be Typical: 0%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review history for pacing indications and changes in symptoms or development of new symptoms. Review prior records of the implanted pacemaker, lead hardware, and programmed parameters, prior assessments of capture thresholds, sensing thresholds, and pacemaker dependency. Review interim remote monitoring results if available.

Description of Intra-Service Work: Connect patient to a single or multi-lead free running ECG monitor. Obtain a communication link between the pacemaker and the programmer. Assess and record current rhythm. Inhibit pacing to record the underlying rhythm. Pacing capture thresholds are determined for each lead individually by iteratively reducing the pacing voltage while maintaining a fixed pulse width (and/or by iteratively reducing the pulse width while maintaining a fixed voltage). Next, the autocapture feature (available for most pacemakers) is evaluated to ensure appropriate function for each lead.

The following data is analyzed for all three leads:

1. Initial interrogation is reviewed to determine if any alert conditions have occurred (e.g. stored arrhythmia events, lead function parameter out of normal range, etc.).
2. Current interrogation results are compared to historical values and previous trends.
    a. Battery voltage, impedance and estimated longevity
    b. Lead sensing values
    c. Pacing thresholds
    d. Lead impedances
3. Alert conditions are then reviewed in detail
    a. Stored arrhythmic episodes are reviewed to determine if the arrhythmia was accurately identified by the pacemaker (e.g. episode identified as atrial fibrillation is not double counting far-field ventricular activity on the atrial lead)

b. Out of range parameters are evaluated for accuracy (e.g. abnormal sensing or pacing thresholds recorded by the devices auto-sensing and autocapture algorithms).

4. Reprogramming

a. Based upon the findings above, programmed parameters are adjusted as needed (such as pacing outputs, sensing thresholds, alert parameters, etc.).

Description of Post-Service Work: Assess patient's clinical status for interim health changes, discuss results of the device interrogation and explain any programming changes to the device. Discuss status of remote monitoring to ensure patient understands importance of maintaining remote transceiver at bedside and plugged in at all times. Prepare and sign final report.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Intensity & Complexity Rating Scale: (much less= -2.00, somewhat less= -1.00, identical= 0.00, somewhat more= 1.00, much more= 2.00)

	Top Key Ref Code	2nd Key Ref Code
Mental Effort and Judgment (Mean)		
The number of possible diagnosis and/or the number of management options that must be considered		
The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed		
Urgency of medical decision making		
Technical Skill/Physical Effort (Mean)		
Technical skill required		
Physical effort required		

Psychological Stress (Mean)

The risk of significant complications, morbidity and/or mortality		
Outcome depends on the skill and judgment of physician		
Estimated risk of malpractice suit with poor outcome		

INTENSITY/COMPLEXITY MEASURES	**Top Key Ref Code**	**2nd Key Ref Code**
Time Segment (Mean)		
Overall intensity/complexity		

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

PLEASE SEE SEPARATE RATIONALE DOCUMENT.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 93281

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty cardiology How often? Commonly

Specialty cardiac electrophysiology How often? Commonly

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 116000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Assuming roughly even split of Medicare & non-Medicare, this number is double the Medicare estimate below.

Specialty cardiology Frequency 58000 Percentage 50.00 %

Specialty cardiac electrophysiology Frequency 46000 Percentage 39.65 %

Specialty other Frequency 12000 Percentage 10.34 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 58,000 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on 2015 Medicare data in RUC database.

Specialty cardiology Frequency 29000 Percentage 50.00 %

Specialty cardiac electrophysiology Frequency 23000 Percentage 39.65 %

Specialty other Frequency 6000 Percentage 10.34 %

Do many physicians perform this service across the United States? Yes

---

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:93282 Tracking Number Original Specialty Recommended RVU: **0.85**
Presented Recommended RVU: **0.85**
Global Period: XXX RUC Recommended RVU: **0.85**

CPT Descriptor: Programming device evaluation (in person) with iterative adjustment of the implantable device to test the function of the device and select optimal permanent programmed values with analysis, review and report by a physician or other qualified health care professional; single lead transvenous implantable defibrillator system

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 65-year-old female with sinus rhythm and an ischemic cardiomyopathy with an LVEF of 30% had a SC implantable cardioverter-defibrillator (ICD), a VVI (ventricle pacing, ventricle sensing, and inhibition response) ICD, implanted. The patient tells her cardiologist that she "fainted" without palpitations, warning, or feeling a shock. The cardiologist requests a programming device evaluation.

Percentage of Survey Respondents who found Vignette to be Typical: n/a

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Assess patient history for ICD indications and for changes in symptoms or development of interval symptoms or clinical episodes of ventricular tachyarrhythmia. Review prior arrhythmia history and previous programmed settings of the device as well as interim remote assessments if available.

Description of Intra-Service Work: Connect patient to a single or multi-lead free running ECG monitor. Obtain a communication link between the pacemaker and the programmer. Assess and record current rhythm. Inhibit pacing to record the underlying rhythm. Pacing capture thresholds are determined for each lead individually by iteratively reducing the pacing voltage while maintaining a fixed pulse width (and/or by iteratively reducing the pulse width while maintaining a fixed voltage).

The following data is analyzed:

1. Initial interrogation is reviewed to determine if any alert conditions have occurred (e.g. stored arrhythmia events, lead function parameter out of normal range, etc.), and to determine if any antitachycardia therapies have been delivered.
2. Current interrogation results are compared to historical values and previous trends.
    a. Battery voltage, impedance and estimated longevity
    b. Capacitor charge time
    c. Lead sensing value
    d. Pacing threshold
    e. Lead impedance
3. Alert conditions are then reviewed in detail
    a. Stored arrhythmic episodes are reviewed to determine if the arrhythmia was accurately identified by the ICD and treated by the device.
    b. Out of range parameters are evaluated for accuracy (e.g. abnormal sensing or pacing thresholds recorded by the devices auto-sensing and autocapture algorithms).

4. Reprogramming

a. Based upon the findings above, programmed parameters are adjusted as needed (such as ventricular tachycardia and ventricular fibrillation detection zones, time to declare episode as sustained and deliver therapy, and therapies (defibrillation and antitachycardia pacing parameters are adjusted based upon findings of any treated arrhythmias since the previous interrogation.

b. Pacing output, sensing threshold, alert parameters, etc. are also adjusted based upon interrogation findings.

Description of Post-Service Work: Assess patient's clinical status for interim health changes, discuss results of the device interrogation and explain any programming changes to the device. Discuss status of remote monitoring to ensure patient understands importance of maintaining remote transceiver at bedside and plugged in at all times. Prepare and sign final report.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

PLEASE SEE SEPARATE RATIONALE DOCUMENT.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 93282

How often do physicians <u>in your specialty</u> perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty cardiology How often? Commonly

Specialty cardiac electrophysiology How often? Commonly

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 304000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Assuming roughly even split of Medicare & non-Medicare, this number is double the Medicare estimate below.

Specialty cardiology Frequency 186000 Percentage 61.18 %

Specialty cardiac electrophysiology Frequency 110000 Percentage 36.18 %

Specialty other Frequency 28000 Percentage 9.21 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 152,000 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on 2015 Medicare data in RUC database.

Specialty cardiology Frequency 83000 Percentage 54.60 %

Specialty cardiac electrophysiology Frequency 55000 Percentage 36.18 %

Specialty other Frequency 14000 Percentage 9.21 %

Do many physicians perform this service across the United States? Yes

SUMMARY OF RECOMMENDATION

CPT Code:93283 Tracking Number Original Specialty Recommended RVU: **1.15**
Presented Recommended RVU: **1.15**
Global Period: XXX RUC Recommended RVU: **1.15**

CPT Descriptor: Programming device evaluation (in person) with iterative adjustment of the implantable device to test the function of the device and select optimal permanent programmed values with analysis, review and report by a physician or other qualified health care professional; dual lead transvenous implantable defibrillator system

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 70-year-old male with intermittent complete heart block had a dual chamber pacemaker defibrillator (ddd icd) implanted. the patient had an interrogation device evaluation (remote) that noted a marked elevation of shocking impedance. the icd clinic contacted the patient to assess his current symptoms and to urge him to come to the icd clinic for a programming device evaluation.

Percentage of Survey Respondents who found Vignette to be Typical: 92%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Assess patient history for ICD indications and for changes in symptoms or development of interval symptoms or clinical episodes of ventricular tachyarrhythmia. Review prior arrhythmia history and previous programmed settings of the device as well as interim remote assessments if available.

Description of Intra-Service Work: Connect patient to a single or multi-lead free running ECG monitor. Obtain a communication link between the pacemaker and the programmer. Assess and record current rhythm. Inhibit pacing to record the underlying rhythm. Pacing capture thresholds are determined for each lead individually by iteratively reducing the pacing voltage while maintaining a fixed pulse width (and/or by iteratively reducing the pulse width while maintaining a fixed voltage). Next, the autocapture feature (available for many ICDs) is evaluated to ensure appropriate function for each lead.

The following data is analyzed for both leads:

1. Initial interrogation is reviewed to determine if any alert conditions have occurred (e.g. stored arrhythmia events, lead function parameter out of normal range, etc.), and to determine if any antitachycardia therapies have been delivered.
2. Current interrogation results are compared to historical values and previous trends.
    a. Battery voltage, impedance and estimated longevity
    b. Capacitor charge time
    c. Lead sensing values
    d. Pacing thresholds
    e. Lead impedances
3. Alert conditions are then reviewed in detail
    a. Stored arrhythmic episodes are reviewed to determine if the arrhythmia was accurately identified by the ICD and treated by the device.

b. Out of range parameters are evaluated for accuracy (e.g. abnormal sensing or pacing thresholds recorded by the devices auto-sensing and autocapture algorithms).

4. Reprogramming

a. Based upon the findings above, programmed parameters are adjusted as needed (such as ventricular tachycardia and ventricular fibrillation detection zones, time to declare episode as sustained and deliver therapy, and therapies (defibrillation and antitachycardia pacing parameters are adjusted based upon findings of any treated arrhythmias since the previous interrogation.

b. Pacing outputs, sensing thresholds, alert parameters, etc. are also adjusted based upon interrogation findings.

Description of Post-Service Work: Assess patient's clinical status for interim health changes, discuss results of the device interrogation and explain any programming changes to the device. Discuss status of remote monitoring to ensure patient understands importance of maintaining remote transceiver at bedside and plugged in at all times. Prepare and sign final report.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Intensity & Complexity Rating Scale: (much less= -2.00, somewhat less= -1.00, identical= 0.00, somewhat more= 1.00, much more= 2.00)

	Top Key Ref Code	2nd Key Ref Code
Mental Effort and Judgment (Mean)		
The number of possible diagnosis and/or the number of management options that must be considered	0.75	0.55
The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed	0.33	0.73
Urgency of medical decision making	0.33	1.18
Technical Skill/Physical Effort (Mean)		
Technical skill required	0.75	1.36
Physical effort required	0.08	0.18

Psychological Stress (Mean)

The risk of significant complications, morbidity and/or mortality	0.08	1.27
Outcome depends on the skill and judgment of physician	0.58	0.91
Estimated risk of malpractice suit with poor outcome	0.42	1.36

INTENSITY/COMPLEXITY MEASURES	Top Key Ref Code	2nd Key Ref Code
Time Segment (Mean)		
Overall intensity/complexity	0.33	1.09

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

PLEASE SEE SEPARATE RATIONALE DOCUMENT.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 93283

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty cardiology How often? Commonly

Specialty cardiac electrophysiology How often? Commonly

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 564000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Assuming roughly even split of Medicare & non-Medicare, this number is double the Medicare estimate below.

Specialty cardiology Frequency 306000 Percentage 54.25 %

Specialty cardiac electrophysiology Frequency 258000 Percentage 45.74 %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 282,000 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on 2015 Medicare data in RUC database.

Specialty cardiology Frequency 153000 Percentage 54.25 %

Specialty cardiac electrophysiology Frequency 129000 Percentage 45.74 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment
Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Tests

BETOS Sub-classification:
Other tests

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 93283

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:93284 Tracking Number Original Specialty Recommended RVU: **1.25**
Presented Recommended RVU: **1.25**
Global Period: XXX RUC Recommended RVU: **1.25**

CPT Descriptor: Programming device evaluation (in person) with iterative adjustment of the implantable device to test the function of the device and select optimal permanent programmed values with analysis, review and report by a physician or other qualified health care professional; multiple lead transvenous implantable defibrillator system

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 68-year-old male with an ischemic cardiomyopathy, LVEF of 35%, New York Heart Association (NYHA) functional class (FC) III heart failure symptoms, and a complete left bundle branch block had an ICD with biventricular pacemaker stimulation implanted. The patient returns to the ICD clinic for a programming device evaluation six months later because although the patient initially improved he is now feeling more "short of breath."

Percentage of Survey Respondents who found Vignette to be Typical: 0%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Assess patient history for ICD indications and for changes in symptoms or development of interval symptoms or clinical episodes of ventricular tachyarrhythmia. Review prior arrhythmia history and previous programmed settings of the device as well as interim remote assessments if available.

Description of Intra-Service Work: Connect patient to a single or multi-lead free running ECG monitor. Obtain a communication link between the pacemaker and the programmer. Assess and record current rhythm. Inhibit pacing to record the underlying rhythm. Pacing capture thresholds are determined for each lead individually by iteratively reducing the pacing voltage while maintaining a fixed pulse width (and/or by iteratively reducing the pulse width while maintaining a fixed voltage). Next, the autocapture feature (available for many ICDs) is evaluated to ensure appropriate function for each lead. Left ventricular lead pacing thresholds are evaluated in multiple vectors (up to 16) to determine optimal threshold and evaluate for phrenic nerve capture.

The following data is analyzed for all three leads:

1. Initial interrogation is reviewed to determine if any alert conditions have occurred (e.g. stored arrhythmia events, lead function parameter out of normal range, etc.), and to determine if any antitachycardia therapies have been delivered.
2. Current interrogation results are compared to historical values and previous trends.
    a. Battery voltage, impedance and estimated longevity
    b. Capacitor charge time
    c. Lead sensing values
    d. Pacing thresholds
    e. Lead impedances
3. Alert conditions are then reviewed in detail
    a. Stored arrhythmic episodes are reviewed to determine if the arrhythmia was accurately identified by the ICD and treated by the device.

b. Out of range parameters are evaluated for accuracy (e.g. abnormal sensing or pacing thresholds recorded by the devices auto-sensing and autocapture algorithms).

4. Reprogramming

a. Based upon the findings above, programmed parameters are adjusted as needed (such as ventricular tachycardia and ventricular fibrillation detection zones, time to declare episode as sustained and deliver therapy, and therapies (defibrillation and antitachycardia pacing parameters are adjusted based upon findings of any treated arrhythmias since the previous interrogation.

b. Pacing outputs, sensing thresholds, alert parameters, etc. are also adjusted based upon interrogation findings.

Description of Post-Service Work: Assess patient's clinical status for interim health changes, discuss results of the device interrogation and explain any programming changes to the device. Discuss status of remote monitoring to ensure patient understands importance of maintaining remote transceiver at bedside and plugged in at all times. Prepare and sign final report.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

PLEASE SEE SEPARATE RATIONALE DOCUMENT.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 93284

How often do physicians <u>in your specialty</u> perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty cardiology How often? Commonly

Specialty cardiac electrophysiology How often? Commonly

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 570000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Assuming roughly even split of Medicare & non-Medicare, this number is double the Medicare estimate below.

Specialty cardiology Frequency 300000 Percentage 52.63 %

Specialty cardiac electrophysiology Frequency 220000 Percentage 38.59 %

Specialty other Frequency 50000 Percentage 8.77 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 285,000 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on 2015 Medicare data in RUC database.

Specialty cardiology Frequency 150000 Percentage 52.63 %

Specialty cardiac electrophysiology Frequency 110000 Percentage 38.59 %

Specialty other Frequency 25000 Percentage 8.77 %

Do many physicians perform this service across the United States? Yes

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:93285 Tracking Number Original Specialty Recommended RVU: **0.52**
Presented Recommended RVU: **0.52**
Global Period: XXX RUC Recommended RVU: **0.52**

CPT Descriptor: Programming device evaluation (in person) with iterative adjustment of the implantable device to test the function of the device and select optimal permanent programmed values with analysis, review and report by a physician or other qualified health care professional; implantable loop recorder system

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 52-year-old male with coronary artery disease and diabetes who received an implantable loop recorder (ILR) implant two months ago presents for in-office device evaluation of near-syncope and palpitations and adjustment of his rhythm detection parameters with a programming device evaluation.

Percentage of Survey Respondents who found Vignette to be Typical: n/a

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review history for cardiac rhythm monitoring indications and for changes in, or the development of, new symptoms. Review programmed parameters and results of prior ILR interrogations and remote monitoring. If available, correlate diary of symptoms with manually triggered recordings.

Description of Intra-Service Work: Intraservice: The following data is analyzed:

1. Initial interrogation is reviewed to determine if any alert conditions have occurred and if electrograms have been stored.
2. Current interrogation results are compared to historical values and previous trends.
    a. Battery status
    b. Appropriate sensing
3. Alert conditions are then reviewed in detail
    a. Stored arrhythmic episodes are reviewed to determine if the arrhythmia was accurately identified by the ILR.
    b. Compare arrhythmia to historical events to determine if it is clinically significant and requires further investigation and/or treatment.
4. Programming
    a. As indication and events warrant, reprogramming of the device is performed.

Description of Post-Service Work: Assess patient's clinical status for interim health changes, discuss results of the device interrogation and explain any programming changes to the device. Discuss status of remote monitoring to ensure patient understands importance of maintaining remote transceiver at bedside and plugged in at all times. Prepare and sign final report.

Time Segment (Mean)		
Overall intensity/complexity		

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

PLEASE SEE SEPARATE RATIONALE DOCUMENT.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 93285

How often do physicians <u>in your specialty</u> perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty cardiology How often? Commonly

Specialty cardiac electrophysiology How often? Commonly

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 46000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Assuming roughly even split of Medicare & non-Medicare, this number is double the Medicare estimate below.

Specialty cardiology Frequency 24000 Percentage 52.17 %

Specialty cardiac electrophysiology Frequency 18000 Percentage 39.13 %

Specialty other Frequency 4000 Percentage 8.69 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 23,000 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on 2015 Medicare data in RUC database.

Specialty cardiology Frequency 12000 Percentage 52.17 %

Specialty cardiac electrophysiology Frequency 9000 Percentage 39.13 %

Specialty other Frequency 2000 Percentage 8.69 %

Do many physicians perform this service across the United States? Yes

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:93286 Tracking Number Original Specialty Recommended RVU: **0.30**
Presented Recommended RVU: **0.30**
Global Period: XXX RUC Recommended RVU: **0.30**

CPT Descriptor: Peri-procedural device evaluation (in person) and programming of device system parameters before or after a surgery, procedure, or test with analysis, review and report by a physician or other qualified health care professional; single, dual, or multiple lead pacemaker system

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 66-year-old patient with history of sustained VT treated with an ICD is followed with interrogation device evaluations (remote) from patient's home. The patient has dyspnea on exertion and intermittent palpitations with light-headedness.

Percentage of Survey Respondents who found Vignette to be Typical: 0%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review available records to determine need for device interrogation in advance of procedure. Obtain device hardware details (pulse generator and lead models). Obtain indications for pacemaker implant.

Description of Intra-Service Work: Connect patient to a single or multi-lead free running ECG monitor. Obtain a communication link between the pacemaker and the programmer. Assess and record current rhythm. Inhibit pacing to record the underlying rhythm. Pacing capture thresholds are determined for each lead individually by iteratively reducing the pacing voltage while maintaining a fixed pulse width (and/or by iteratively reducing the pulse width while maintaining a fixed voltage).

The following data is analyzed:

1. Initial interrogation is reviewed to determine if any alert conditions have occurred (e.g. stored arrhythmia events, lead function parameter out of normal range, etc.).
2. Current interrogation results are reviewed for:
    a. Battery voltage, impedance and estimated longevity
    b. Lead sensing values
    c. Pacing thresholds
    d. Lead impedances
3. Alert conditions are then reviewed in detail
    a. Stored arrhythmic episodes are reviewed to determine if the arrhythmia was accurately identified by the pacemaker (e.g. episode identified as atrial fibrillation is not double counting far-field ventricular activity on the atrial lead)
    b. Out of range parameters are evaluated for accuracy (e.g. abnormal sensing or pacing thresholds recorded by the devices auto-sensing and autocapture algorithms).
4. Reprogramming:

a. Preprocedure: The device is programmed to asynchronous mode if indicated based upon planned surgical procedure.

b. Postprocedure: The device is programmed to normal sensing and demand mode if indicated after planned surgical procedure.

Description of Post-Service Work: Prepare and sign final report. Place report in medical record and ensure follow-up with the patient's treating physician.

Description of Pre-Service Work: Review available records to determine need for device interrogation in advance of procedure. Obtain device hardware details (pulse generator and lead models). Obtain indications for pacemaker implant.

Description of Intra-Service Work: Connect patient to a single or multi-lead free running ECG monitor. Obtain a communication link between the pacemaker and the programmer. Assess and record current rhythm. Inhibit pacing to record the underlying rhythm. Pacing capture thresholds are determined for each lead individually by iteratively reducing the pacing voltage while maintaining a fixed pulse width (and/or by iteratively reducing the pulse width while maintaining a fixed voltage).

The following data is analyzed:

1. Initial interrogation is reviewed to determine if any alert conditions have occurred (e.g. stored arrhythmia events, lead function parameter out of normal range, etc.), and to determine if any antitachycardia therapies have been delivered.
2. Current interrogation results are reviewed:
    a. Battery voltage, impedance and estimated longevity
    b. Capacitor charge time
    c. Lead sensing values
    d. Pacing thresholds
    e. Lead impedances
3. Alert conditions are then reviewed in detail
    a. Stored arrhythmic episodes are reviewed to determine if the arrhythmia was accurately identified by the ICD and treated by the device.

b. Out of range parameters are evaluated for accuracy (e.g. abnormal sensing or pacing thresholds recorded by the devices auto-sensing and autocapture algorithms).

4. Reprogramming

a. Preprocedure: Antitachycardia therapies are disabled, and pacing reprogrammed to asynchronous mode if indicated based upon planned surgical procedure.

b. Postprocedure: Antitachycardia therapies are enabled, and pacing reprogrammed to normal sensing and demand mode.

Description of Post-Service Work: Prepare and sign final report. Place report in medical record and ensure follow-up with the patient's treating physician.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Intensity & Complexity Rating Scale: (much less= -2.00, somewhat less= -1.00, identical= 0.00, somewhat more= 1.00, much more= 2.00)

	Top Key Ref Code	2nd Key Ref Code
Mental Effort and Judgment (Mean)		
The number of possible diagnosis and/or the number of management options that must be considered		
The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed		
Urgency of medical decision making		
Technical Skill/Physical Effort (Mean)		
Technical skill required		
Physical effort required		
Psychological Stress (Mean)		
The risk of significant complications, morbidity and/or mortality		

Outcome depends on the skill and judgment of physician		
Estimated risk of malpractice suit with poor outcome		

INTENSITY/COMPLEXITY MEASURES	**Top Key Ref Code**	**2nd Key Ref Code**
Time Segment (Mean)		
Overall intensity/complexity		

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

PLEASE SEE SEPARATE RATIONALE DOCUMENT.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 93287

How often do physicians <u>in your specialty</u> perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty cardiology How often? Sometimes

Specialty cardiac electrophysiology How often? Sometimes

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 20000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Assuming roughly even split of Medicare & non-Medicare, this number is double the Medicare estimate below.

Specialty cardiology Frequency 14460 Percentage 72.30 %

Specialty cardiac electrophysiology Frequency 4200 Percentage 21.00 %

Specialty other Frequency 1140 Percentage 5.70 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 10,000 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on 2015 Medicare data in RUC database.

Specialty cardiology Frequency 7230 Percentage 72.30 %

Specialty cardiac electrophysiology Frequency 2100 Percentage 21.00 %

Specialty other Frequency 570 Percentage 5.70 %

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Tests

BETOS Sub-classification:
Other tests

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 93287

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:93288 Tracking Number Original Specialty Recommended RVU: **0.43**
Presented Recommended RVU: **0.43**
Global Period: XXX RUC Recommended RVU: **0.43**

CPT Descriptor: Interrogation device evaluation (in person) with analysis, review and report by a physician or other qualified health care professional, includes connection, recording and disconnection per patient encounter; single, dual, or multiple lead pacemaker system

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 74-year-old patient with a pacemaker for sick sinus syndrome and congestive heart failure (CHF) is followed with interrogation device evaluations (in person) for light-headedness and dyspnea.

Percentage of Survey Respondents who found Vignette to be Typical: 0%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review history for pacing indications and changes in symptoms or development of new symptoms. Review prior records of the implanted pacemaker, lead hardware, and programmed parameters, prior assessments of capture thresholds, sensing thresholds, and pacemaker dependency. Review interim remote monitoring results if available.

Description of Intra-Service Work: Connect patient to a single or multi-lead free running ECG monitor. Obtain a communication link between the pacemaker and the programmer. Assess and record current rhythm.

The following data is analyzed:

1. Initial interrogation is reviewed to determine if any alert conditions have occurred (e.g. stored arrhythmia events, lead function parameter out of normal range, etc.).
2. Current interrogation results are compared to historical values and previous trends.
    a. Battery voltage, impedance and estimated longevity
    b. Lead sensing values
    c. Pacing thresholds
    d. Lead impedances
3. Alert conditions are then reviewed in detail
    a. Stored arrhythmic episodes are reviewed to determine if the arrhythmia was accurately identified by the pacemaker (e.g. episode identified as atrial fibrillation is not double counting far-field ventricular activity on the atrial lead)
    b. Out of range parameters are evaluated for accuracy (e.g. abnormal sensing or pacing thresholds recorded by the devices auto-sensing and autocapture algorithms).

Description of Post-Service Work: Assess patient's clinical status for interim health changes, discuss results of the device interrogation. Discuss status of remote monitoring to ensure patient understands importance of maintaining remote transceiver at bedside and plugged in at all times. Prepare and sign final report.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:93289 Tracking Number Original Specialty Recommended RVU: **0.75**
Presented Recommended RVU: **0.75**
Global Period: XXX RUC Recommended RVU: **0.75**

CPT Descriptor: Interrogation device evaluation (in person) with analysis, review and report by a physician or other qualified health care professional, includes connection, recording and disconnection per patient encounter; single, dual, or multiple lead transvenous implantable defibrillator system, including analysis of heart rhythm derived data elements

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 74-year-old patient with an ICD for ventricular tachycardia is followed with interrogation device evaluations (in person) for light-headedness and dyspnea to evaluate the integrity of the device.

Percentage of Survey Respondents who found Vignette to be Typical: 0%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Assess patient history for ICD indications and for changes in symptoms or development of interval symptoms or clinical episodes of ventricular tachyarrhythmia. Review prior arrhythmia history and previous programmed settings of the device as well as interim remote assessments if available.

Description of Intra-Service Work: Connect patient to a single or multi-lead free running ECG monitor. Obtain a communication link between the pacemaker and the programmer. Assess and record current rhythm.

The following data is analyzed:

1. Initial interrogation is reviewed to determine if any alert conditions have occurred (e.g. stored arrhythmia events, lead function parameter out of normal range, etc.), and to determine if any antitachycardia therapies have been delivered.
2. Current interrogation results are compared to historical values and previous trends.
    a. Battery voltage, impedance and estimated longevity
    b. Capacitor charge time
    c. Lead sensing values
    d. Pacing thresholds
    e. Lead impedances
3. Alert conditions are then reviewed in detail
    a. Stored arrhythmic episodes are reviewed to determine if the arrhythmia was accurately identified by the ICD and treated by the device.
    b. Out of range parameters are evaluated for accuracy (e.g. abnormal sensing or pacing thresholds recorded by the devices auto-sensing and autocapture algorithms).

Description of Post-Service Work: Assess patient's clinical status for interim health changes, discuss results of the device interrogation. Discuss status of remote monitoring to ensure patient understands importance of maintaining remote transceiver at bedside and plugged in at all times. Prepare and sign final report.

The number of possible diagnosis and/or the number of management options that must be considered		
The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed		
Urgency of medical decision making		
Technical Skill/Physical Effort (Mean)		
Technical skill required		
Physical effort required		
Psychological Stress (Mean)		
The risk of significant complications, morbidity and/or mortality		

Outcome depends on the skill and judgment of physician		
Estimated risk of malpractice suit with poor outcome		

INTENSITY/COMPLEXITY MEASURES	**Top Key Ref Code**	**2nd Key Ref Code**
Time Segment (Mean)		
Overall intensity/complexity		

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

PLEASE SEE SEPARATE RATIONALE DOCUMENT.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 93289

How often do physicians <u>in your specialty</u> perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty cardiology How often? Commonly

Specialty cardiac electrophysiology How often? Commonly

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 274000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Assuming roughly even split of Medicare & non-Medicare, this number is double the Medicare estimate below.

Specialty cardiology Frequency 174000 Percentage 63.50 %

Specialty cardiac electrophysiology Frequency 70000 Percentage 25.54 %

Specialty other Frequency 30000 Percentage 10.94 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 137,000 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on 2015 Medicare data in RUC database.

Specialty cardiology Frequency 87000 Percentage 63.50 %

Specialty cardiac electrophysiology Frequency 35000 Percentage 25.54 %

Specialty other Frequency 15000 Percentage 10.94 %

Do many physicians perform this service across the United States? Yes

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 93289

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:93290 Tracking Number Original Specialty Recommended RVU: **0.43**
Presented Recommended RVU: **0.43**
Global Period: XXX RUC Recommended RVU: **0.43**

CPT Descriptor: Interrogation device evaluation (in person) with analysis, review and report by a physician or other qualified health care professional, includes connection, recording and disconnection per patient encounter; implantable cardiovascular monitor system, including analysis of 1 or more recorded physiologic cardiovascular data elements from all internal and external sensors

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 58-year-old patient with prior MI, VT, and CHF had an implantable cardioverter-defibrillator system that monitors physiologic cardiovascular data in addition to the heart rhythm device implanted. The patient has ongoing dyspnea, orthopnea, and peripheral edema and is evaluated in the heart failure clinic with interrogation device evaluations (in person).

Percentage of Survey Respondents who found Vignette to be Typical:

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review patient records to identify the indication for insertable cardiac monitor (ICM) monitoring and therapy, manufacturer and model of the ICM, leads and sensors as appropriate. Review prior records of ICM parameters and compare to prior remote and in-person interrogations.

Description of Intra-Service Work: Interrogate information from the ICM by telemetric communication and either print out for review or review on the programmer or computer monitor. Perform a critical review of the interrogated data with assessment of the appropriateness of the ICM's function and appropriateness of the current programmed parameters.

Data reviewed may include, but are not limited to: (1) weight; (2) systemic BP; (3) right atrial, right ventricular, left atrial, left ventricular, and pulmonary arterial pressures; (4) intrathoracic impedance measurements; and (5) other measures of physiologic parameters.

In addition, review stored episodes of data to assess the history and trends identified by any of the collected data. Also review alerts generated from the ICM along with battery voltage and sensor information to validate the integrity of the ICM system.

Description of Post-Service Work: After physician review of above data, make a decision as to the adequacy of the programmed parameters including the appropriate data collection set-up and the interval for the next scheduled interrogation evaluation. Modify patient's medical regimen as appropriate. Inform patient of test result(s). Prepare and sign final report.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:93291 Tracking Number Original Specialty Recommended RVU: **0.43**
Presented Recommended RVU: **0.37**
Global Period: XXX RUC Recommended RVU: **0.37**

CPT Descriptor: Interrogation device evaluation (in person) with analysis, review and report by a physician or other qualified health care professional, includes connection, recording and disconnection per patient encounter; implantable loop recorder system, including heart rhythm derived data analysis

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 41-year-old patient receives an ILR for recurrent syncopal spells. The patient has a syncopal episode resulting in a laceration to the head. The patient comes in for an interrogation device evaluation (in person).

Percentage of Survey Respondents who found Vignette to be Typical:

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review history for cardiac rhythm monitoring indications and for changes in, or the development of, new symptoms. Review programmed parameters and results of prior ILR interrogations and remote monitoring.

Description of Intra-Service Work: The following data is analyzed:

1. Initial interrogation is reviewed to determine if any alert conditions have occurred and if electrograms have been stored.
2. Current interrogation results are compared to historical values and previous trends.
    a. Battery status
    b. Appropriate sensing
3. Alert conditions are then reviewed in detail
    a. Stored arrhythmic episodes are reviewed to determine if the arrhythmia was accurately identified by the ILR.
    b. Compare arrhythmia to historical events to determine if it is clinically significant and requires further investigation and/or treatment.

Description of Post-Service Work: Assess patient's clinical status for interim health changes, discuss results of the device interrogation. Discuss status of remote monitoring to ensure patient understands importance of maintaining remote transceiver at bedside and plugged in at all times. Prepare and sign final report.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Intensity & Complexity Rating Scale: (much less= -2.00, somewhat less= -1.00, identical= 0.00, somewhat more= 1.00, much more= 2.00)

	Top Key Ref Code	2nd Key Ref Code
Mental Effort and Judgment (Mean)		
The number of possible diagnosis and/or the number of management options that must be considered		
The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed		
Urgency of medical decision making		
Technical Skill/Physical Effort (Mean)		
Technical skill required		
Physical effort required		

Psychological Stress (Mean)

The risk of significant complications, morbidity and/or mortality		
Outcome depends on the skill and judgment of physician		
Estimated risk of malpractice suit with poor outcome		

INTENSITY/COMPLEXITY MEASURES	**Top Key Ref Code**	**2nd Key Ref Code**
Time Segment (Mean)		
Overall intensity/complexity		

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

PLEASE SEE SEPARATE RATIONALE DOCUMENT.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 93291

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty cardiology How often? Commonly

Specialty cardiac electrophysiology How often? Commonly

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 84000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Assuming roughly even split of Medicare & non-Medicare, this number is double the Medicare estimate below.

Specialty cardiology Frequency 48000 Percentage 57.14 %

Specialty cardiac electrophysiology Frequency 27000 Percentage 32.14 %

Specialty other Frequency 9000 Percentage 10.71 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 42,000 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on 2015 Medicare data in RUC database.

Specialty cardiology Frequency 24000 Percentage 57.14 %

Specialty cardiac electrophysiology Frequency 13500 Percentage 32.14 %

Specialty other Frequency 4500 Percentage 10.71 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment
Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Tests

BETOS Sub-classification:
Other tests

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 93291

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:93292 Tracking Number Original Specialty Recommended RVU: **0.43**
Presented Recommended RVU: **0.43**
Global Period: XXX RUC Recommended RVU: **0.43**

CPT Descriptor: Interrogation device evaluation (in person) with analysis, review and report by a physician or other qualified health care professional, includes connection, recording and disconnection per patient encounter; wearable defibrillator system

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 66 year old patient with history of sustained VT treated with an ICD required ICD and lead extraction and IV antibiotics for three months because of a bacterial infection with intracardiac vegetations before an ICD can be reimplanted. The patient returns one month later with her wearable cardioverter defibrillator (WCD) for interrogation device evaluation (in person).

Percentage of Survey Respondents who found Vignette to be Typical:

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Patient records are reviewed to identify the indication for wearable monitoring and therapy, manufacturer and model of the wearable. Prior records of wearable parameters are reviewed and compared to prior remote and in person interrogations.

Description of Intra-Service Work: The information is interrogated from the wearable device by telemetric communication and either printed for review or reviewed on the programmer or computer monitor. Critical review of the interrogated data with the assessment of the appropriateness of the function of the wearable device and appropriateness of the current programmed parameters is performed.

Description of Post-Service Work: Review parameters including the appropriate data collection setup and the interval for the next scheduled interrogation evaluation. Modifications to the patient's medical regimen are made as appropriate. The patient is informed of the test result. Prepare and sign final report.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SURVEY INTENSITY & COMPLEXITY ADDENDUM TABLE

Survey Code:	93283	**# of Respondents:**	78
Survey Code Descriptor:	Programming device evaluation (in person) with iterative adjustment of the implantable device to test the function of the device and select optimal permanent programmed values with analysis, review and report by a physician or other qualified health care professional; dual lead transvenous implantable defibrillator system		

Top Ref Code:	93750	**# of Respondents:**	13	**% of Respondents:**	15%
Top Ref Code Descriptor:	Interrogation of ventricular assist device (VAD), in person, with physician or other qualified health care professional analysis of device parameters (eg, drivelines, alarms, power surges), review of device function (eg, flow and volume status, septum status, recovery), with programming, if performed, and report				

Survey Code Compared to Top Ref Code

Survey Code is:

Much Less	Somewhat Less	Identical	Somewhat More	Much More
0%	8%	46%	46%	0%

Overall Intensity and Complexity:

Mental Effort and Judgment:

	Less	Identical	More
The number of possible diagnosis and/or number of management options that must be considered	8%	31%	61%
The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed	15%	54%	31%
Urgency of medical decision making	8%	62%	30%

Technical Skill:

Less	Identical	More
8%	31%	61%

Physical Effort:

Less	Identical	More
15%	54%	31%

Psychological Stress:

	Less	Identical	More
The risk of significant complications, morbidity and/or mortality	31%	31%	38%
Outcome depends on the skill and judgment of physician	0%	46%	56%
Estimated risk of malpractice suite with poor outcome	8%	54%	38%

2008 RUC Rationale Notes
survey times, work neutrality calculated wRVU
survey times with modification, survey wRVU
RUC noted increasing intensity
survey times, survey 25th wRVU
survey times, survey 25th wRVU 1.18 (later reduced by CMS)
survey times, survey 25th wRVU
survey times, survey 25th wRVU; identical time to 93291, but harder
survey times, roughly half wRVU of 93279 since reported twice
survey times, roughly half wRVU of 93282 since reported twice
survey times, work neutrality calculated wRVU
survey times, wRUV crosswalk to 99213 was below survey 25th of 1.00
survey times, crosswalk to 93288/93291 wRVU
survey times, crosswalk to 93288 wRVU
survey times, crosswalk to 93288/93291/93290 wRVU
1.9 transmissions per 90 days; 190% of survey times; 190% wRVU of 93010
1.5 transmissions per 90 days; 150% of 93288 times; 150% wRVU of 93288
1.5 transmissions per 90 days; 150% of 93289 times; 150% wRVU of 93289 (later reduced by CMS)
2 transmissions per 30 days; 200% of 93290 times; wRVU crosswalk to 93228
2 transmissions per 30 days; 200% of 93290 times; wRVU crosswalk to 93228

93279 Programming device evaluation with iterative adjustment of the implantable device to test the function of the device and select optimal permanent programmed values with report; single lead pacemaker system
93280 Programming device evaluation with iterative adjustment of the implantable device to test the function of the device and select optimal permanent programmed values with report; dual lead pacemaker system
93281 Programming device evaluation with iterative adjustment of the implantable device to test the function of the device and select optimal permanent programmed values with report; multiple lead pacemaker system
93282 Programming device evaluation (in person) with iterative adjustment of the implantable device to test the function of the device and select optimal permanent programmed values with analysis, review and report by a physician or other qualified health care professional; single lead transvenous implantable defibrillator system
93283 Programming device evaluation (in person) with iterative adjustment of the implantable device to test the function of the device and select optimal permanent programmed values with analysis, review and report by a physician or other qualified health care professional; dual lead transvenous implantable defibrillator system
93284 Programming device evaluation (in person) with iterative adjustment of the implantable device to test the function of the device and select optimal permanent programmed values with analysis, review and report by a physician or other qualified health care professional; multiple lead transvenous implantable defibrillator system
93288 Interrogation device evaluation (in person) with physician analysis, review and report, includes connection, recording and disconnection per patient encounter; single, dual or multiple lead pacemaker system
93289 Interrogation device evaluation (in person) with physician analysis, review and report, includes connection, recording and disconnection per patient encounter; single, dual or multiple lead implantable cardioverter defibrillator system, including analysis of heart rhythm derived data elements
93290 Interrogation device evaluation (in person) with analysis, review and report by a physician or other qualified health care professional, includes connection, recording and disconnection per patient encounter; implantable cardiovascular monitor system, including analysis of 1 or more recorded physiologic cardiovascular data elements from all internal and external sensors
93291 Interrogation device evaluation (in person) with analysis, review and report by a physician or other qualified health care professional, includes connection, recording and disconnection per patient encounter; implantable loop recorder system, including heart rhythm derived data analysis
93292 Interrogation device evaluation (in person) with analysis, review and report by a physician or other qualified health care professional, includes connection, recording and disconnection per patient encounter; wearable defibrillator system

Global Period: XXX Meeting Date: October 2016

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee: The ACC and HRS utilized a consensus panel process to develop recommended inputs.

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale: Current PE Inputs

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:

-On line 26 we recommend the addition of ~~5~~ 3 minutes for vitals. Blood pressure, heart rate, and weight~~, and height~~ are all obtained. We believe the lack of time for vitals to be an oversight or error.
-On lines 67 and 69 we recommend increasing the number of electrodes and disks from 4 to 5. 5 is the norm, and is already present for other codes in the family (93286, 93287). We believe this to have been an error.
-Increase lines 72 and 73 for not highly technical equipment to include entire service period time.

5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

RN/LPN/MTA completes preservice diagnostic & referral forms

Intra-Service Clinical Labor Activities:

Med Tech/Asst greets patient, obtains vitals, prepares room, cleans room, and scans & files ~~PaceArt~~ report. These are clerical tasks less relevant than the highly skilled work performed by the nurse.

RN/LPN/MTA obtains consent, reviews charts, interrogates device and assists physician (line 36) using the physician intraservice time as an approximatation, prints & sends ~~PaceArt~~ report.

Post-Service Clinical Labor Activities:

AMA/Specialty Society RVS Update Committee Summary of Recommendations
CMS High Expenditure Procedures

October 2016

Stress Transthoracic Echocardiography (TTE) Complete

In the Final Rule for 2016 CMS re-ran the high expenditure services across specialties with Medicare allowed charges of $10 million or more. CMS identified the top 20 codes by specialty in terms of allowed charges, excluding 010 and 090-day global services, anesthesia and Evaluation and Management services and services reviewed since CY 2010. CPT code 93351 was identified as part of this screen.

93350 Echocardiography, transthoracic, real-time with image documentation (2D), includes M-mode recording, when performed, during rest and cardiovascular stress test using treadmill, bicycle exercise and/or pharmacologically induced stress, with interpretation and report

The RUC reviewed the survey responses from 96 cardiologists and determined that the current work RVU of 1.46, which is below the survey 25th percentile of 1.52, appropriately accounts for the work required to perform this service. The RUC recommends 5 minutes of pre-service time, 15 minutes of intra-service time and 10 minutes of post-service time. The RUC compared the surveyed code to CPT code 95865 *Needle electromyography; larynx* (work RVU=1.57 and 15 minutes intra-service time) and noted that the survey code has more intra-service and total time, while only having slightly lower intensity of physician work, justifying a similar valuation. The RUC also referenced MPC codes 12004 *Simple repair of superficial wounds of scalp, neck, axillae, external genitalia, trunk and/or extremities (including hands and feet); 7.6 cm to 12.5 cm* (work RVU = 1.44 and 17 minutes intra-service time) and *99203 Office or other outpatient visit for the evaluation and management of a new patient* (work RVU = 1.42 and 20 minutes intra-service time), which demonstrate that the surveyed service is appropriate relative to other similar services in the physician payment schedule. **The RUC recommends a work RVU of 1.46 for CPT code 93350.**

The RUC noted that if CPT code 93350 is separately reported with 93018 *Cardiovascular stress test using maximal or submaximal treadmill or bicycle exercise, continuous electrocardiographic monitoring, and/or pharmacological stress; interpretation and report only* (work RVU = 0.30 and 5 minutes intra-service time) the resulting work RVU and intra-service time equal the same as what is recommended for these services bundled together, (1.46+0.30=1.76 work RVUs and 15 minutes + 5 minutes intra-service time = 20 minutes intra-service time), which is CPT code 93351 (work RVU = 1.75 and 20 minutes intra-service time). Therefore, the RUC determined that 93350 and 93351 are correctly valued.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

93351 Echocardiography, transthoracic, real-time with image documentation (2D), includes M-mode recording, when performed, during rest and cardiovascular stress test using treadmill, bicycle exercise and/or pharmacologically induced stress, with interpretation and report; including performance of continuous electrocardiographic monitoring, with supervision by a physician or other qualified health care professional

The RUC reviewed the survey responses from 104 cardiologists and determined that the current work RVU of 1.75, which is the survey 25th percentile, appropriately accounts for the work required to perform this service. The RUC recommends 10 minutes of pre-service time, 20 minutes of intra-service time and 10 minutes of post-service time. The RUC compared the surveyed code to the top key reference service 78452 *Myocardial perfusion imaging, tomographic (SPECT) (including attenuation correction, qualitative or quantitative wall motion, ejection fraction by first pass or gated technique, additional quantification, when performed); multiple studies, at rest and/or stress (exercise or pharmacologic) and/or redistribution and/or rest reinjection* (work RVU = 1.62 and 20 minutes of intra-service time) and noted that 68% of the respondents that selected 78452 as the key reference code indicated that the surveyed code was more intense and complex. The RUC also referenced MPC codes 74176 *Computed tomography, abdomen and pelvis; without contrast material* (work RVU = 1.74 and 22 minutes intra-service time) and *92004 Ophthalmological services: medical examination and evaluation with initiation of diagnostic and treatment program; comprehensive, new patient, 1 or more visits* (work RVU = 1.82 and 25 minutes intra-service time), which demonstrate that the surveyed service is appropriate relative to other similar services in the physician payment schedule. **The RUC recommends a work RVU of 1.75 for CPT code 93351.**

The RUC noted that if CPT code 93350 is separately reported with 93018 *Cardiovascular stress test using maximal or submaximal treadmill or bicycle exercise, continuous electrocardiographic monitoring, and/or pharmacological stress; interpretation and report only* (work RVU = 0.30 and 5 minutes intra-service time), the resulting work RVU and intra-service time equal the same as what is recommended for these services bundled together, (1.46+0.30=1.76 work RVUs and 15 minutes + 5 minutes intra-service time = 20 minutes intra-service time), which is CPT code 93351. Therefore, the RUC determined that 93350 and 93351 are correctly valued.

Practice Expense

The Practice Expense Subcommittee modified the direct practice expense inputs reducing monitoring from 8 minutes to 5 minutes to account for any multi-tasking; moved 3 minutes for *Check dressings & wound/ home care instructions /coordinate office visits /prescriptions* from line 61 to line 62 to represent the RN/LPM/MTA blend, changed equipment changed form a workstation to a PACS workstation and appropriate minutes of 20 minutes for the 93350 and 30 minutes for the 93351 and deleted exam table which is part of the ultrasound room. The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:93351 Tracking Number Original Specialty Recommended RVU: **1.75**
Presented Recommended RVU: **1.75**
Global Period: XXX RUC Recommended RVU: **1.75**

CPT Descriptor: Echocardiography, transthoracic, real-time with image documentation (2D), includes M-mode recording, when performed, during rest and cardiovascular stress test using treadmill, bicycle exercise and/or pharmacologically induced stress, with interpretation and report; including performance of continuous electrocardiographic monitoring, with supervision by a physician or other qualified health care professional

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 66-year-old man with systemic hypertension and ongoing tobacco abuse presents with exertional chest pressure. his resting ECG shows left ventricular hypertrophy with QRS widening, and secondary repolarization changes. A treadmill stress echocardiogram is performed to determine the extent and severity of myocardial ischemia.

Percentage of Survey Respondents who found Vignette to be Typical: 92%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The physician reviews the request for stress echocardiography and relevant clinical records to clarify the indications for the procedure and to determine the clinical questions that need to be answered. The physician provides direct supervision of the patient in the stress testing laboratory.

Description of Intra-Service Work: The physician reviews the resting echocardiographic images to be sure there is adequate visualization of all LV segments. The physician reviews the sequence of tomographic images, recorded both at baseline and again immediately following completion of treadmill exercise. Global and regional ventricular performance is evaluated carefully. Other cardiac causes of chest pain are also assessed. Where appropriate, measurements of cardiac structure and function are made. When available, prior studies are retrieved and reviewed side-by-side with the current images. A diagnostic interpretation is developed. The physician also reviews and analyzes the stress ECG, which includes starting and ending hemodynamics, arrhythmias, symptoms (especially chest pain), ST segment changes, functional capacity, and any other elements that are relevant to the interpretation of a stress ECG examination.

Description of Post-Service Work: The physician discusses the test result with the patient. The physician dictates a report, which specifies results of the resting echocardiogram, the stress echocardiogram, and the ECG/physiologic response to stress. Results are transmitted to the referring physician.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Intensity & Complexity Rating Scale: (much less= -2.00, somewhat less= -1.00, identical= 0.00, somewhat more= 1.00, much more= 2.00)

	Top Key Ref Code	2nd Key Ref Code
Mental Effort and Judgment (Mean)		
The number of possible diagnosis and/or the number of management options that must be considered	0.45	0.41
The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed	0.45	0.59
Urgency of medical decision making	0.27	0.41
Technical Skill/Physical Effort (Mean)		
Technical skill required	0.68	0.09
Physical effort required	0.45	0.14

Psychological Stress (Mean)

The risk of significant complications, morbidity and/or mortality	0.27	0.00
Outcome depends on the skill and judgment of physician	0.55	0.14
Estimated risk of malpractice suit with poor outcome	0.23	0.36

INTENSITY/COMPLEXITY MEASURES	**Top Key Ref Code**	**2nd Key Ref Code**
Time Segment (Mean)		
Overall intensity/complexity	0.73	0.41

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

93351 is the primary stress echocardiography code. It describes the work of both supervising and interpreting a cardiovascular stress test as well as acquiring/interpreting images and acquiring results of rest and stress transthoracic echocardiogram, and creating a report that incorporates resting echocardiogram, stress echocardiogram, and the ECG/physiologic response to stress. It may be helpful for the RUC to recall that 93351 resulted from the first screen of services reported together 75% of the time. Stress echo-only code 93350 and cardiovascular stress test code 93315 were combined to create 93351 in 2008. The current times and values reflect that effort.

CMS identified 93351 in CY 2016 rulemaking as potentially misvalued through its high-expenditure screen. A random survey of ACC and ASE members was executed with 104 completed surveys. The information obtained is used to develop the survey results in the SOR and the summary spreadsheet.

The key reference services were each selected by 22 respondents. Respondents who selected SPECT-MPI code 78452 found 93351 to be more intense/complex in every factor. Since the two codes have identical times under our proposal, a key reference code of slightly less intensity and work aligns well with the recommendation. Respondents who selected transesophageal echocardiography code 93312 indicated 93351 to be more intense/complex in every factor. 93312 is a longer service, but the IWPUTs still align with the perception of the respondents to support the recommendation for 93351. It is reasonable to note that in response to CMS's ongoing hunt for misvalued services the RUC also recently reviewed the family of transthoracic echocardiography codes. None of these were available for use in the reference service list. However, we believe the main TTE code, 93306, which is a component of 93351, would have been a common KRS selection had it been included.

Reflecting the robust survey, alignment with key reference services, and alignment with MPC comparators the societies recommend **maintaining the current work RVU of 1.75 with median survey times of 10 minutes preservice, 20 minutes intraservice, and 10 minutes postservice**. The recommendation to maintain the current work RVU is the same as the survey 25th-percentile work RVU.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 93351

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty cardiology How often? Commonly

Specialty internal medicine How often? Rarely

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 512000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Utilization is estimated to be roughly even between Medicare and non-medicare populations.

Specialty cardiology Frequency 480000 Percentage 93.75 %

Specialty internal medicine Frequency 32000 Percentage 6.25 %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 256,000 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. 2015 utilization

Specialty cardiology Frequency 240000 Percentage 93.75 %

Specialty internal medicine Frequency 16000 Percentage 6.25 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment
Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Imaging

BETOS Sub-classification:
Echography/ultrasonography

BETOS Sub-classification Level II:
Heart

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 93351

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:93350 Tracking Number Original Specialty Recommended RVU: **1.46**
Presented Recommended RVU: **1.46**
Global Period: XXX RUC Recommended RVU: **1.46**

CPT Descriptor: Echocardiography, transthoracic, real-time with image documentation (2D), includes M-mode recording, when performed, during rest and cardiovascular stress test using treadmill, bicycle exercise and/or pharmacologically induced stress, with interpretation and report;

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 66-year-old man with systemic hypertension and ongoing tobacco abuse presents with exertional chest pressure. his resting ECG shows left ventricular hypertrophy with QRS widening, and secondary repolarization changes. A treadmill stress echocardiogram is performed to determine the extent and severity of myocardial ischemia.

Percentage of Survey Respondents who found Vignette to be Typical: 93%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review request for stress echocardiography and relevant clinical records to clarify the indications for the procedure and to determine the clinical questions that need to be answered.

Description of Intra-Service Work: The physician reviews the sequence of tomographic images, recorded both at baseline and again immediately following completion of treadmill exercise. Global and regional ventricular performance is evaluated carefully. Other cardiac causes of chest pain are also assessed. Where appropriate, measurements of cardiac structure and function are made. When available, prior studies are retrieved and reviewed side-by-side with the current images. A diagnostic interpretation is developed.

Description of Post-Service Work: The physician may discuss the test result with the patient or referring physician. The physician dictates a report, which specifies results of the resting echocardiogram and the stress echocardiogram. Results are transmitted to the referring physician.

Modifier -51 Exempt Status

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:

Is this new/revised procedure considered to be a new technology or service? No

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
78452	XXX	1.62	**RUC Time**

CPT Descriptor Myocardial perfusion imaging, tomographic (SPECT) (including attenuation correction, qualitative or quantitative wall motion, ejection fraction by first pass or gated technique, additional quantification, when performed); multiple studies, at rest and/or stress (exercise or pharmacologic) and/or redistribution and/or rest reinjection

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
78454	XXX	1.34	**RUC Time**

CPT Descriptor Myocardial perfusion imaging, planar (including qualitative or quantitative wall motion, ejection fraction by first pass or gated technique, additional quantification, when performed); multiple studies, at rest and/or stress (exercise or pharmacologic) and/or redistribution and/or rest reinjection

KEY MPC COMPARISON CODES:

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
12004	XXX	1.44	**RUC Time**	22,458

CPT Descriptor 1 Simple repair of superficial wounds of scalp, neck, axillae, external genitalia, trunk and/or extremities (including hands and feet); 7.6 cm to 12.5 cm

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
99203	XXX	1.42	**RUC Time**	10,894,072

CPT Descriptor 2 Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: A detailed history; A detailed examination; Medical decision making of low complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate severity. Typically, 30 minutes are spent face-to-face with the patient and/or family.

Other Reference CPT Code	Global	Work RVU	Time Source
		0.00	

CPT Descriptor

RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:
Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by the mean) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Top Key Reference Code: 36 **% of respondents:** 37.5 **%**

Number of respondents who choose 2nd Key Reference Code: 18 **% of respondents:** 18.7 **%**

TIME ESTIMATES (Median)

	CPT Code: 93350	**Top Key Reference CPT Code:** 78452	**2nd Key Reference CPT Code:** **78454**
Median Pre-Service Time	5.00	10.00	5.00
Median Intra-Service Time	15.00	20.00	15.00
Median Immediate Post-service Time	10.00	10.00	5.00
Median Critical Care Time	0.0	0.00	0.00
Median Other Hospital Visit Time	0.0	0.00	0.00
Median Discharge Day Management Time	0.0	0.00	0.00
Median Office Visit Time	0.0	0.00	0.00
Prolonged Services Time	0.0	0.00	0.00
Median Subsequent Observation Care Time	0.0	0.00	0.00
Median Total Time	**30.00**	**40.00**	**25.00**
Other time if appropriate			

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Intensity & Complexity Rating Scale: (much less= -2.00, somewhat less= -1.00, identical= 0.00, somewhat more= 1.00, much more= 2.00)

	Top Key Ref Code	**2nd Key Ref Code**
Mental Effort and Judgment (Mean)		
The number of possible diagnosis and/or the number of management options that must be considered	0.42	0.89
The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed	0.31	0.56
Urgency of medical decision making	0.19	0.22

Technical Skill/Physical Effort (Mean)

Technical skill required	0.53	0.89
Physical effort required	0.42	0.56

Psychological Stress (Mean)

The risk of significant complications, morbidity and/or mortality	0.28	0.17
Outcome depends on the skill and judgment of physician	0.56	0.72
Estimated risk of malpractice suit with poor outcome	0.25	0.28

INTENSITY/COMPLEXITY MEASURES	**Top Key Ref Code**	**2nd Key Ref Code**
Time Segment (Mean)		
Overall intensity/complexity	0.50	0.72

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

93350 is the secondary stress echocardiography code. It describes the work of acquiring/interpreting images, acquiring results of rest and stress transthoracic echocardiogram, and creating a report. It is reported when the cardiovascular stress test portion of the exam is performed by a second physician.

CMS identified family code 93351 in CY 2016 rulemaking as potentially misvalued through its high-expenditure screen. A random survey of ACC and ASE members was executed with 95 completed surveys. The information obtained is used to develop the survey results in the SOR and the summary spreadsheet.

The key reference service was selected by 36 respondents. Respondents who selected multiple SPECT –MPI code 78452 found 93350 to be more intense/complex in every factor. Since 93350 has less time under our proposal than 78452, a key reference code of slightly less intensity aligns well with the recommendation. The second key reference code was selected by 18 respondents. Respondents who selected the less common multiple planar-MPI code 78454 found 93350 to be more intense/complex in every factor. It is again worth mentioning that more obvious KRS 93306 was not available due to ongoing reviews of potentially misvalued services.

Reflecting the robust survey, alignment with key reference services, and alignment with MPC comparators the societies recommend **maintaining the current work RVU of 1.46 with median survey times of 5 minutes preservice, 15 minutes intraservice, and 10 minutes postservice**. This recommendation is below the survey 25th-percentile value and forms a reasonable increment below code 93351.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 93350

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty cardiology How often? Commonly

Specialty internal medicine How often? Rarely

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 222000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Utilization is estimated to be roughly even between Medicare and non-medicare populations.

Specialty cardiology Frequency 210000 Percentage 94.59 %

Specialty internal medicine Frequency 12000 Percentage 5.40 %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 111,000 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. 2015 utilization

Specialty cardiology Frequency 105000 Percentage 94.52 %

Specialty internal medicine Frequency 6000 Percentage 5.40 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment
Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Imaging

BETOS Sub-classification:
Echography/ultrasonography

BETOS Sub-classification Level II:
Heart

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 93350

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

CPT Code: 93350-93351
Specialty Society(s) ACC, ASE

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation
Non Facility Direct Inputs

CPT Long Descriptor: **93350** Echocardiography, transthoracic, real-time with image documentation (2D), includes M-mode recording, when performed, during rest and cardiovascular stress test using treadmill, bicycle exercise and/or pharmacologically induced stress, with interpretation and report;

Global Period: XXX Meeting Date: October 2016

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee: The ACC and ASE utilized a consensus panel process to develop recommended inputs. A number of recommendations to add clinical staff time result from an attempt to be consistent within the family of two codes that have not been reviewed together before, or from requirements of the Intersocietal Accreditation Commission standards for echocardiography, the gold standards for the vast majority of echocardiography labs in the US. Those requirements are attached.

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale: Current code 93350.

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:

-On line 45 we recommend adding 2 minutes of staff time for review of history and any prior echocardiogram, consistent with clinical practice and family code 93351.
-On line 105 we recommend adding 1 minutes to the echo workstation that corresponds to line 66 for PACS scanning and is consistent with family code 93351.

5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

Intra-Service Clinical Labor Activities:

Cardiac sonographer prepares room, positions patient, reviews history & prior echocardiogram, acquires images (*The sonographer hooks up a three-lead ECG for gating, places the patient in left lateral decubitus position, and obtains a baseline echocardiogram at rest, including assessment of ventricular function, chamber sizes, wall thicknesses, wall motion, aortic root, and valves. Images are acquired from multiple cardiac windows including the parasternal long axis, parasternal short axis, apical four chamber, and apical two chamber views. Resting echocardiographic images are reviewed to ensure adequate visualization of all left ventricle (LV) segments. Cardiac sonographer is present throughout exercise protocol so that peak stress imaging can begin immediately upon cessation of exercise. The sonographer records echocardiographic images for assessment of left ventricular wall motion immediately after exercise ends. In the case of treadmill exercise, the patient must be moved onto the*

examination table and placed in the left decubitus position.), cleans room, ~~coordinates office visits/home care/prescriptions~~, QCs images in PACs consistent with IAC echo accreditation standards, reviews exam with interpreting MD, and scans exam documents into PACS.

RN/LPN/MTA coordinates office visits/home care/prescriptions.

Post-Service Clinical Labor Activities:

CPT Code: 93350-93351
Specialty Society(s) ACC, ASE

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation
Non Facility Direct Inputs

CPT Long Descriptor: **93351** Echocardiography, transthoracic, real-time with image documentation (2D), includes M-mode recording, when performed, during rest and cardiovascular stress test using treadmill, bicycle exercise and/or pharmacologically induced stress, with interpretation and report; including performance of continuous electrocardiographic monitoring, with supervision by a physician or other qualified health care professional

Global Period: XXX Meeting Date: October 2016

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee: The ACC and ASE utilized a consensus panel process to develop recommended inputs. A number of recommendations to add clinical staff time result from an attempt to be consistent within the family of two codes that have not been reviewed together before, or from requirements of the Intersocietal Accreditation Commission standards for echocardiography, the gold standards for the vast majority of echocardiography labs in the US. Those requirements are attached.

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale:

Current code 93351 as well as stress test code 93015, since, 93351 is a bundle of 93015 and 93350.

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:

-On line we recommend adding 5 minutes for scope setup to replicate 5 minutes in 93015 when RN prepares patients for 10-lead ECG.

5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

RN/LPN/MTA completes pre-service diagnostic & referral forms, preparing patient for stress test.

Intra-Service Clinical Labor Activities:

RN/LPN/MTA obtains vitals, provides education & obtains consent, prepares room, positions patient for stress test, cleans room, and coordinates office visits/home care/prescriptions.

RN sets up scope/ECG, reviews charts & prior ECG to determine stress, performs stress test (line 49) (*Monitor patient while completing treadmill protocol to acceptable clinical endpoints, including warm up, exercise and cool down)*, monitors patient, and completes forms & requisitions.

Cardiac sonographer greets patient, positions patient, positions patient for echocardiogram, reviews history & prior echocardiogram, obtains images (line 48) (*The sonographer hooks up a three-lead ECG for gating, places the patient in left lateral decubitus position, and obtains a baseline echocardiogram at rest, including assessment of ventricular function, chamber sizes, wall thicknesses, wall motion, aortic root, and valves. Images are acquired from multiple cardiac windows including the parasternal long axis, parasternal short axis, apical four chamber, and apical two chamber views. Resting echocardiographic images are reviewed to insure adequate visualization of all left ventricle (LV) segments. Cardiac sonographer is present throughout exercise protocol so that peak stress imaging can begin immediately upon cessation of exercise. The sonographer records echocardiographic images for assessment of left ventricular wall motion immediately after exercise ends. In the case of treadmill exercise, the patient must be moved onto the examination table and placed in the left decubitus position*.), QCs images in PACs consistent with IAC echo accreditation standards, reviews exam with interpreting MD, and scans exam documents into PACS.

Post-Service Clinical Labor Activities: Cardiac sonographer completes QA activities required for accreditation.

Cardiac sonographer completes QA activities required for accreditation.

AMA/Specialty Society RVS Update Committee Summary of Recommendations
CMS High Expenditure Procedures

October 2016

Percutaneous Allergy Skin Tests

In the Proposed Rule for 2016 CMS re-ran the high expenditure services across specialties with Medicare allowed charges of $10 million or more. CMS identified the top 20 codes by specialty in terms of allowed charges, excluding 010 and 090-day global services, anesthesia and Evaluation and Management services and services reviewed since CY 2010.

The RUC recommended, in its comment letter, that code 95004 be removed from the screen because it has a work RVU of 0.01 and the RUC stated that it would serve little purpose to survey physician work for this code. The RUC and CMS have previously determined that there is physician work involved in providing this service since the physician must interpret the test and prepare a report. In the Final Rule for 2016, CMS disagreed with the RUC and indicated that the work and practice expense for this service should be reviewed. The specialty societies surveyed this service for review at the October 2016 RUC meeting.

95004 Percutaneous tests (scratch, puncture, prick) with allergenic extracts, immediate type reaction, including test interpretation and report, specify number of tests

The RUC reviewed the survey data from 138 allergy and immunology physicians and noted that while the survey physician per test time is higher than the current inputs, the individual physician work per test has not changed since the last valuation in 2008. Therefore, the RUC agreed with the specialty societies that the current physician time components should be maintained. The RUC recommends the following physician time (per test): pre-service time of 0.125 minutes, intra-service time of 0.125 minutes, and post-service time of 0.125 minutes. The RUC discussed in detail that there is no duplication of work with the Evaluation and Management (E/M) service that is typically reported on the same date of service. The pre-service work includes more than just ordering the test. The physician is ordering a wide array of specific allergens at specific dosages to determine an appropriate panel for patient allergy testing. While it depends somewhat on geography, there are more than 100 available antigens that need to be distilled to fit the unique patient and their history. The RUC agreed that this requires more work than simply writing orders for such tests as a chest x-ray or urinalysis which is not variable per patient or per allergen. The RUC also agreed that physical interpretation of each test and a written report of this interpretation was also not duplicative of what would be included in an E/M service.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

The RUC reviewed the survey responses for physician work and recommends a work RVU of 0.01 (per test), which is the survey 25th percentile and current work RVU for 95004. The specialties noted that the current survey for a battery of 50 tests which is the median for Medicare patients resulted in more time than the previous survey for a battery of 40 test based on the national population, however the per test time and work did not change. The RUC agreed that accepting the current value for this code is appropriate and there is no evidence to suggest that the work per test has changed.

The RUC noted the difficulty in finding comparison codes due to the extremely low work RVU and time components. The RUC reviewed the following reference codes to support a work RVU of 0.01 for 0.375 minutes of physician time: 17003 *Destruction (eg, laser surgery, electrosurgery, cryosurgery, chemosurgery, surgical curettement), premalignant lesions (eg, actinic keratoses); second through 14 lesions, each* (work RVU=0.04, 1 minute total time), 77051 *Computer-aided detection (computer algorithm analysis of digital image data for lesion detection) with further review for interpretation, with or without digitization of film radiographic images; diagnostic mammography* (work RVU=0.06, 1 minute total time),71010 *Radiologic examination, chest; single view, frontal* (work RVU= 0.18, 5 minutes total time), 95145 *Professional services for the supervision of preparation and provision of antigens for allergen immunotherapy (specify number of doses); single stinging insect venom* (work RVU=0.06, 2 minutes total time), 96361 *Intravenous infusion, hydration; each additional hour* (work RVU=0.09, 3 minutes total time), and 95905 *Motor and/or sensory nerve conduction, using preconfigured electrode array(s), amplitude and latency/velocity study, each limb, includes F-wave study when performed, with interpretation and report* (work RVU= 0.05 and intra time = 5 minutes). Finally, the RUC noted that there is clearly defined physician work for CPT code 95004. **The RUC recommends a work RVU of 0.01 for CPT code 95004.**

Practice Expense:

The specialty societies presented compelling evidence that the current PE inputs may be inaccurate to reflect current practice patterns. First, the specialties noted a flawed methodology was used to arrive at the current inputs. CPT code 95004 was first reviewed in 2002 as part of the early PEAC process. The PE input recommendations from the specialty society were derived from survey results. However, those survey results were rejected and clinical staff times were assigned by the PEAC as if the testing was performed by the physician even though the testing is performed by clinical staff and the physician work is test interpretation and report.

Second, there has been a change in practice standards. The Practice Parameters for diagnostic allergy testing were updated in 2008, after this code was previously reviewed. In years prior to this update, tests were read using a semi-qualitative measure instead of a quantitative measure. Specifically, tests were previously read and documented using a subjective scale (0 to 4+). The new practice parameters indicated that both erythema and wheal should be measured and recorded in millimeters for appropriate comparisons with positive (ie, histamine) and negative controls (ie, 50% glycerinated extracts). This has increase clinical staff time.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

The Practice Expense Subcommittee accepted compelling evidence that the current PE inputs may be misvalued.

During the discussion of this code, it was communicated to the specialties that it would be more accurate to assign the total amount of time it takes to perform a typical panel of 50 tests and then divide this time by 50, rather than reverse calculate the time from the previously derived time fraction (per test) multiplied by 50. This also applied where clinical labor activities have standards (eg, if the standard for positioning is 2 minutes, the per test positioning time is 2 minutes divided by 50). The PE Subcommittee particularly focused on two areas: preparing the room/equipment/supplies and recording of test results. For the battery of tests, clinical staff will review the physician orders, prepare testing supplies, and document allergens, strengths, expiration dates, and lot numbers in the patient's electronic medical record. The PE Subcommittee agreed this would take 10 minutes for a battery of 50 tests or 0.2 minutes per test. With respect to measuring and recording the tests, the clinical staff will record the skin reaction to each test (longest diameter of the wheal and surrounding erythema/flare evaluation in millimeters). This will be documented in the patient chart. Clinical staff will then be present when the physician examines the skin reactions and measurements and determine if any measurements need to be redone. The PE Subcommittee agreed this would take 25 minutes for a battery of 50 tests or 0.5 minutes per test.

Finally, following the presentation at the PE Subcommittee, the specialty societies submitted detailed invoices for new and updated supply items to be included in the RUC recommendations to CMS. The RUC approved the revised PE inputs, as modified by the Practice Expense Subcommittee.

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
95004	Percutaneous tests (scratch, puncture, prick) with allergenic extracts, immediate type reaction, including test interpretation and report, specify number of tests	XXX	0.01 (No Change)

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:95004 Tracking Number Original Specialty Recommended RVU: **0.01**
Presented Recommended RVU: **0.01**
Global Period: XXX RUC Recommended RVU: **0.01**

CPT Descriptor: Percutaneous tests (scratch, puncture, prick) with allergenic extracts, immediate type reaction, including test interpretation and report, specify number of tests

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 55-year-old patient who is seen on referral from his primary care provider reports increased difficulty with head congestion, sneezing and watery eyes with recurrent episodes of wheezing and coughing that are interfering with work. The physician orders and interprets 50 percutaneous skin tests.
[Note: When completing this survey, only the physician's time should be considered. Do NOT include time spent by clinical staff.]

Percentage of Survey Respondents who found Vignette to be Typical: 94%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Instruct staff as to which allergens to test for and at what concentrations based on the patient's history, symptoms, and environmental and/or lifestyle factors.

Description of Intra-Service Work: Examine and interpret nature and extent of patient's reaction, including the size of erythema and wheal and evaluate the controls in comparison to test allergens to determine if the test is negative or positive (and if positive, the level of positivity).

Description of Post-Service Work: Synthesize the test results and prepare, review, and sign report in the medical record.

Modifier -51 Exempt Status

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:

Is this new/revised procedure considered to be a new technology or service? No

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
99214	XXX	1.50	**RUC Time**

CPT Descriptor Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A detailed history; A detailed examination; Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 25 minutes are spent face-to-face with the patient and/or family.

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
99213	XXX	0.97	**RUC Time**

CPT Descriptor Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: An expanded problem focused history; An expanded problem focused examination; Medical decision making of low complexity. Counseling and coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of low to moderate severity. Typically, 15 minutes are spent face-to-face with the patient and/or family.

KEY MPC COMPARISON CODES:

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Intensity & Complexity Rating Scale: (much less= -2.00, somewhat less= -1.00, identical= 0.00, somewhat more= 1.00, much more= 2.00)

	Top Key Ref Code	**2nd Key Ref Code**
Mental Effort and Judgment (Mean)		
The number of possible diagnosis and/or the number of management options that must be considered	0.11	-0.03
The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed	0.13	0.12
Urgency of medical decision making	0.13	0.24

Technical Skill/Physical Effort (Mean)

Technical skill required	0.47	0.55
Physical effort required	0.05	-0.15

Psychological Stress (Mean)

The risk of significant complications, morbidity and/or mortality	0.63	0.76
Outcome depends on the skill and judgment of physician	0.71	0.55
Estimated risk of malpractice suit with poor outcome	0.39	0.36

INTENSITY/COMPLEXITY MEASURES	**Top Key Ref Code**	**2nd Key Ref Code**
Time Segment (Mean)		
Overall intensity/complexity	0.53	0.33

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

In the Final Rule for 2016 CMS re-ran the high expenditure services across specialties with Medicare allowed charges of $10 million or more. CMS identified the top codes by specialty in terms of allowed charges, excluding 010 and 090-day global services, anesthesia and E/M services and services reviewed since CY 2010. Code 95004 was identified through this screen.

Code **95004** is reimbursed on a "per test" basis. The small increment of work and time related to a single test would be very difficult to capture on a survey and therefore the specialty societies requested to use a vignette and format that was used during the previous review of this codes; specifically to survey for work and time estimates related to the typical battery of testing. The survey responses would then be divided by the battery of tests (ie, 50) to reflect the per test increment. The Research Subcommittee approved this request.

Recommendation - 95004

Although the current survey data suggest a higher work RVU, we do not have compelling evidence to ask for an increase. Therefore, we recommend **maintaining the current work RVU of 0.01 and pre/intra/post service times of 0.125 / 0.125 / 0.125.** The recommended pre and post time is specific to this service and does not duplicate work that would be related to an E/M code if performed on the same day.

We note that in the final rule for 2016, CMS noted that *the criteria for many misvalued code screens, including this one, are designed to prioritize codes that may be misvalued not to identify codes that are misvalued.* Further CMS believes that supporting evidence for the accuracy of current values for particular codes is best considered as part of the review of individual codes through the misvalued code process. **We**

believe the current survey data provides supporting evidence for the accuracy of the current work RVU.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☒ Other reason (please explain) Typically reported with an E/M service

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. Typically reported with an E/M service

---

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 95004

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty allergy/immunology How often? Commonly

Specialty otolaryntology How often? Sometimes

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period?
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. national utilization is unknown

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 10,061,200 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC database

Specialty allergy/immunology Frequency 5600000 Percentage 55.65 %

Specialty otolaryntology Frequency 1150000 Percentage 11.43 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

REVISED 10-5-16

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation
Non Facility Direct Inputs

CPT Long Descriptor:

95004	Percutaneous tests (scratch, puncture, prick) with allergenic extracts, immediate type reaction, including test interpretation and report, specify number of tests

Global Period XXX Meeting Date: October 2016

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee: The Advisors from ACAAI, AAAAI, AAOA, along with other physicians in small and large practices, reviewed the current inputs for 95004 and have made adjustments to time, supplies and equipment to correct errors from the previous review and to account for changes in practice since the previous review. The typical patient will have 50 tests, but the code is still reported "per test". The recommendations are shown for a battery of 50 tests and then for "per test" to correspond to 95004.

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale: N/A, current code is referenced.

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time: See response in Question 4 below.

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:

	D	E	F	G	
	CURRENT		RECOMMEND		
CLINICAL ACTIVITIES	**40 TESTS**	**PER TEST**	**50 TESTS**	**PER TEST**	**Compelling Rationale / Discussion**
Provide pre-service education/obtain consent	**4**	**0.100**	**4**	**0.080**	This will typically be the first time a patient undergoes testing. An explanation of the testing and consent is necessary.
Prepare room, equipment, supplies	**2**	**0.050**	**10**	**0.200**	Staff will: review physician orders; prepare testing supplies; document allergens, strengths, expiration dates, and lot numbers in the patient's electronic medical record.
Prepare and position patient/ monitor patient/ set up IV	**2**	**0.050**	**2**	**0.040**	position patient prone for testing. Patient will remain prone through testing, wait time, and measurement time.
Perform Service	**5**	**0.125**	**12**	**0.240**	two minutes to clean and dry skin 5 minutes to mark skin 5 minutes to perform
Monitor pt. following procedure/check tubes, monitors, drains, multitasking	**16**	**0.400**	**5**	**0.100**	Patient is monitored for 20 minutes at a 1:4 rate before recording of test results begins.

	CURRENT		RECOMMEND		
CLINICAL ACTIVITIES	**40 TESTS**	**PER TEST**	**50 TESTS**	**PER TEST**	**Compelling Rationale / Discussion**
1:4					
Other Clinical Activity - specify: Measure and document wheal and flare in millimeters at right angle diameter. Review the test results with the physician.	**2**	**0.050**	**25**	**0.500**	The Practice Parameters1 for diagnostic allergy testing were updated in 2008 after this code was previously reviewed. In years prior to this update, tests were read using a semi-qualitative measure instead of a quantitative measure. Specifically, tests were previously read and documented using a subjective scale (0 to 4+). The new practice parameters indicated that both erythema and wheal should be measured and recorded in millimeters for appropriate comparisons with positive (ie, histamine) and negative controls (ie, 50% glycerinated extracts). The impetus behind this was a Joint Task Force on standardization of skin test procedures so that physicians across the country could read the results of each other's skin tests and know what they meant. This would obviate the need for repeat skin testing every time you saw another provider. For this activity, clinical staff will record the skin reaction to each test (longest diameter of the wheal and surrounding erythema/flare evaluation in millimeters) . This will be documented in patient chart. Physician will review the measurements and with staff present to determine if any measurements need to be redone.
Clean room/equipment by physician staff	**3**	**0.075**	**3**	**0.060**	Hazardous waste are appropriately disposed. Allergen solutions are logged back into storage. Supply items that are reusable (eg, testing wells) are cleaned.
Check dressings & wound/ home care instructions /coordinate office visits /prescriptions			**3**	**0.060**	Areas of testing on patient's arms and back will be cleaned with alcohol swabs to remove allergens and markings. Steroid cream will be applied as necessary. Patient will be instructed on care of testing areas (bathing, activity) to prevent infection.

MEDICAL SUPPLIES			**40 TESTS**	**PER TEST**	**50 TESTS**	**PER TEST**	**Compelling Rationale / Discussion**
drape, sterile, for Mayo stand	SB012	item			**1**	**0.020**	Mayo stand is necessary to hold testing allergens, test devices and other supplies that need to be readily available during testing.
swab-pad, alcohol	SJ053	item	**2**	**0.050**	**24**	**0.480**	All areas marked for testing on back and arms need to be cleaned prior to and after testing.
gauze, sterile 2in x 2in	SG053	item	**1**	**0.025**			Replaced with item below
gauze, sterile 4in x 4in (10 pack uou)	SG056	item			**2**	**0.040**	Sponges are necessary to dry skin after cleaning with alcohol in testing areas prior to testing and after testing. Sponges may also be necessary during testing.
antigen, mite	SH006	ml	**40**	**1.000**			Item replaced with new item below. Allergen testing includes significantly more allergens than just mites. In addition, "antigens" are used for immunotherapy and "allergens" are used for testing. This item is not obsolete – it is just used for different services.
allergen, diagnostic, multi (eg, pollen, mold, environmental)	**NEW**	**ml**			**12**	**0.250**	As indicated, this new item reflects the fact that multiple allergens are used in testing. Invoices and a "bundled" average price will be presented to CMS. 5 drops x **48 tests** = 240 drops 20 drops per ml 240 / 20 = 12 ml (for 50 tests) The "per test" amount is shown in Col G
negative control, allergy test	SH101	ml			**0.25**	**0.005**	All allergen testing requires a negative and positive control test that is allows for comparison to allergen reaction. 5 drops x **1 test** 20 drops per ml 5 / 20 = 0.25 ml (for 50 tests) The "per test" amount is shown in Col G
positive control, allergy test	SH102	ml			**0.25**	**0.005**	All allergen testing requires a negative and positive control test that is allows for comparison to allergen reaction. 5 drops x **1 test** 20 drops per ml 5 / 20 = 0.25 ml (for 50 tests) The "per test" amount is shown in Col G

			D	E	F	G	
			CURRENT		RECOMMEND		
MEDICAL SUPPLIES			**40 TESTS**	**PER TEST**	**50 TESTS**	**PER TEST**	**Compelling Rationale / Discussion**
multi-tine device	SC023	item	**5**	**0.125**			Item SC023 is currently priced as a single testing device. "Multi-tine" was confused previously with "multi-test" devices that have 4 to 10 individual testing devices connected to accomplish multiple tests at once. This type of multiple test device is not the typical for practitioners. Our expert panel (including physicians from large and small practices and both allergists and otolaryngologists) agree that single test devices are the typical supply. To avoid further confusion, we are recommending a new supply item that clearly describes a single test device.
allergen single-test multi-tine device	NEW	item			**50**	**1.000**	As indicated above, we recommend a new supply item with a correct description indicating the item is for a single test. Invoices and an average price will be provided to CMS.
triamcinolone acetonide 0.1% cream	SH072	gm	**5**	**0.125**	**5**	**0.100**	No change to the amount used for entire testing service.
albumin saline	SH004	ml	**40**	**1.000**			This item is used for diluting allergen concentrations for use with intra-dermal allergy testing and is typically not used for 95004.
color coded cap and vial (for antigen)	SL027	item	**40**	**1.000**			This item is used for services other than 95004.

		D	E	F	G	
		CURRENT		RECOMMEND		
MEDICAL SUPPLIES		**40 TESTS**	**PER TEST**	**50 TESTS**	**PER TEST**	**Compelling Rationale / Discussion**
NO EQUIPMENT	EZ007	**0**	**0**			
table, exam	EF023			**65**	**1.300**	An exam table is necessary. Patients will typically have testing on their back and the back of their arms while they are prone and they must remain in this position until readings are taken. A mayo stand is necessary for holding supplies and necessary recording items. These equipment items will be located in the allergy testing room for the entire service period.
mayo stand	EF015			**65**	**1.300**	

5. Please describe in detail the clinical activities of your staff:

AMA/Specialty Society RVS Update Committee Summary of Recommendations
High Volume Growth

October 2016

Continuous Glucose Monitoring

In April 2013, CPT code 95251 was identified through the High Volume Growth screen and the RUC recommended surveying 95251 and 95250 for January 2014. In May 2014, the CPT Editorial Panel created two Category I codes to report continuous glucose monitoring via patient managed "real time" monitoring device and revised two Category I codes to report continuous glucose monitoring via provider managed "retrospective" monitoring device. At the September 2014 RUC meeting, the specialty requested withdrawal of CPT codes 9525X1 and 9525X2 in order to take these codes back to CPT to restructure and better define the timeframe described. The specialty society communicated with the CPT Editorial Panel to rescind codes 9525X1 and 952X2 at the October 2014 CPT meeting to allow the specialties to submit a new coding change proposal. The RUC recommended referral to the CPT Editorial Panel. However, the most recent specialty society proposed revisions were not approved by CPT and the specialty societies indicated there is new information to present to the Relativity Assessment Workgroup. The specialty societies request that the Workgroup review its action plan at the April 2016 meeting. In April 2016, the specialty societies indicated that the growth of these services has steadied in the most recent five years and should be removed from the screen. The Workgroup noted that the 2013 Workgroup recommendation was to survey these services based on the high growth in the years examined and these services have not been reviewed in over ten years. CPT codes 95250 and 95251 were surveyed for October 2016.

95251 Ambulatory continuous glucose monitoring of interstitial tissue fluid via a subcutaneous sensor for a minimum of 72 hours; interpretation and report
The RUC reviewed the survey results from 46 endocrinologists and recommend the following physician time components: pre-service time of 2 minutes, intra-service time of 15 minutes and immediate post-service time of 3 minutes. The RUC noted that this code is typically billed with an Evaluation and Management (E/M) service on the same day. Therefore, the pre-service evaluation time was reduced from a median time of 6 minutes to 2 minutes and the immediate post-service time was reduced from a survey time of 10 minutes to 3 minutes. Finally, the RUC extensively discussed and agreed that there is still distinct work in the pre- and post-service period separate from the E/M service. Specifically the physician must spend time obtaining the CGM reports for review and in the post-service period signs off on the report and communicates with the patient and/or other healthcare professional as needed.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the survey 25th percentile work RVU of 0.70 accurately accounts for the physician work involved in code 95251. To justify a work RVU of 0.70, the RUC compared the surveyed code to the following reference codes: 93970 *Duplex scan of extremity veins including responses to compression and other maneuvers; complete bilateral study* (work RVU= 0.70), 74247 *Radiological examination, gastrointestinal tract, upper, air contrast, with specific high density barium,*

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

effervescent agent, with or without glucagon; with or without delayed images, with KUB (work RVU= 0.69) and 62368 *Electronic analysis of programmable, implanted pump for intrathecal or epidural drug infusion (includes evaluation of reservoir status, alarm status, drug prescription status); with reprogramming* (work RVU= 0.67). All three reference codes have identical intra-service time to the surveyed code (15 minutes) and represent a spectrum of services that provide reasonable brackets around the recommended value. **The RUC recommends a work RVU of 0.70 for CPT code 95251.**

CPT Referral:
At the Practice Expense Subcommittee, there was extensive discussion around the issue of what codes are appropriate to report when the patient owns the equipment versus when the practice owns the equipment. The specialties clarified that CPT code 95250 *Ambulatory continuous glucose monitoring of interstitial tissue fluid via a subcutaneous sensor for a minimum of 72 hours; sensor placement, hook-up, calibration of monitor, patient training, removal of sensor, and printout of recording*, since it is a PE-only code, should not be reported when the equipment is owned by the patient. In this scenario, only CPT code 95251 *Ambulatory continuous glucose monitoring of interstitial tissue fluid via a subcutaneous sensor for a minimum of 72 hours; interpretation and report* would be reported. The RUC agreed with the Subcommittee that it is important that either education or a CPT parenthetical be created to clarify the appropriate reporting of these services. **The RUC recommends this service be referred to the CPT Editorial Panel Executive Committee to provide a solution to ensure correct coding occurs.**

Practice Expense:
The RUC reviewed and accepted the direct PE inputs as modified by the Practice Expense Subcommittee.

Work Neutrality:
The RUC's recommendation for these codes will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
95250 (f)	Ambulatory continuous glucose monitoring of interstitial tissue fluid via a subcutaneous sensor for a minimum of 72 hours; sensor placement, hook-up, calibration of monitor, patient training, removal of sensor, and printout of recording	XXX	0.00 (PE Only)
95251	Ambulatory continuous glucose monitoring of interstitial tissue fluid via a subcutaneous sensor for a minimum of 72 hours; interpretation and report	XXX	0.70

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:95251 Tracking Number J1 Original Specialty Recommended RVU: **0.70**
Presented Recommended RVU: **0.70**
Global Period: XXX RUC Recommended RVU: **0.70**

CPT Descriptor: Ambulatory continuous glucose recording of interstitial tissue fluid via a subcutaneous sensor for a minimum of 72 hours; interpretation and report

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 45 year-old female with type I diabetes mellitus taking multiple daily insulin injections has elevated levels of hemoglobin A1c with excessive swings in blood glucose, and post-prandial hyperglycemia and nocturnal hypoglycemia. Continuous ambulatory glucose monitoring is obtained to assist in designing a treatment regimen that would improve glucose control and reduce excursions in blood glucose

Percentage of Survey Respondents who found Vignette to be Typical: 89%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work:
The physician obtains the downloaded CGM reports for review.

Description of Intra-Service Work:
Physician interprets blood sugar results from a minimum of 72 hours of monitoring, including correlation of individual data points with patient daily log. The physician dictates reports.

Description of Post-Service Work: Signing off of the report and communicating with the patient and/or other healthcare professionals.

Modifier -51 Exempt Status

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:

Is this new/revised procedure considered to be a new technology or service? No

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
99091	XXX	1.10	**RUC Time**

CPT Descriptor Collection and interpretation of physiologic data (eg, ECG, blood pressure, glucose monitoring) digitally stored and/or transmitted by the patient and/or caregiver to the physician or other qualified health care professional, qualified by education, training, licensure/regulation (when applicable) requiring a minimum of 30 minutes of time

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
93227	XXX	0.52	**RUC Time**

CPT Descriptor External electrocardiographic recording up to 48 hours by continuous rhythm recording and storage; review and interpretation by a physician or other qualified health care professional

KEY MPC COMPARISON CODES:

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
99213	XXX	0.97	**RUC Time**	99,047,534

CPT Descriptor 1 Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: An expanded problem focused history; An expanded problem focused examination; Medical decision making of low complexity. Counseling and coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of low to moderate severity. Typically, 15 minutes are spent face-to-face with the patient and/or family.

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
76536	XXX	0.56	**RUC Time**	799,425

CPT Descriptor 2 Ultrasound, soft tissues of head and neck (eg, thyroid, parathyroid, parotid), real time with image documentation

Time Segment (Mean)		
Overall intensity/complexity	0.58	0.29

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

The starting point for developing the work/time recommendation for 95251 was the current work value (0.85 RVU) and the median times from the survey (6 minutes pre, 15 minutes intra, 10 minutes post). These values were then adjusted downward, taking into account that an E&M is typically performed on the same day (removal of duplicated activities) and after comparison with other codes (maintenance of cross-specialty relativity).

Our final recommendation for 95251 is a physician work of 0.70 RVU (25th percentile of the survey) and physician times of 2 minutes pre, 15 minutes intra, and 5 minutes post (total time of 22 minutes). Three specific lines of evidence corroborating this recommendation are outlined below.

Key Reference Service: The key reference service for 95251 is 99091 (collection and interpretation of physiologic data), with physician work of 1.10 RVU, physician times of 5 minutes pre, 30 minutes intra, and 5 minutes post (total time of 40 minutes), and IWPUT of 0.0292. The vignette and service description of 99091 are virtually identical to 95251, which should make 99091 an excellent comparison code, but 99091 is a time-based code with 30 minutes intra-time, while 95251 has 15 minutes of intra-time. When we calculated what the RVU for 99091 would be if the intra-time were reduced to 15 minutes (like 95251) while the IWPUT was maintained constant, we arrived at 0.66 RVU, which is extremely close to our recommendation of 0.70 work RVU.

Other CPT Codes: When we searched for other codes in the RUC database that would support our 95251 recommendation (0.70 RVU for work and times of 2/15/5), we identified two codes that matched very closely: 93970 (duplex ultrasound of extremity) with work of 0.70 RVU and times of 3/15/5; and 74247 (upper GI contrast x-ray), with work of 0.69 RVU and times of 5/15/5.

IWPUT for Work of Similar Type: The work of 95251 is entirely analysis of data with interpretation and report only. We were able to locate 9 other codes in the RUC database that were defined as interpretation and report only. As expected, the times for these codes varied considerably, depending on the amount and type of data that had to be interpreted. However, the IWPUT for these 9 comparison codes defined a fairly narrow grouping (0.0201 – 0.0419), and the IWPUT for our 95251 recommendation (0.0360) fell well within this range.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☒ Other reason (please explain) The service itself is described by a single code, 95251. The work of 95251 is performed by the physician without the patient present. The results of this diagnostic test would need to be discussed with the patient and a new treatment protocol established at a subsequent E&M visit. 52% of the time, this E&M visit would occur on the same day as 95251, but after the work of 95251 is completed.

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. A diabetic patient with unstable glucose values, based on fingerstick measurements at home, is scheduled for an E&M visit in order to conduct a history and physical exam and to work out a new treatment protocol, with the goal of improving the glucose control. To provide additional data about the specific problems with the glucose control, the patient agrees to undergo a 72-hour continuous glucose monitoring. This procedure is completed prior to the scheduled E&M visit. On the morning of the patient's E&M visit, before the start of patient appointments, the physician sits down with the patient's chart, the patient diary, and the CGM data in order to analyze the timing and mechanism of the patient's unstable glucose control; this constitutes service 95251. Later that day, the patient returns for an office E&M visit, at which time an interval history and physical exam performed, the CGM results are explained and discussed with the patient, and a new treatment protocol is crafted. This work requires medical decision making of moderate to high complexity and corresponds to CPT code 99214. See addendum at end of SOR for requested table.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 95251

How often do physicians <u>in your specialty</u> perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Endocrinology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 340,000
If the recommendation is from multiple specialties, please provide the frequency and <u>percentage</u> for each specialty. Please explain the rationale for this estimate. Estimated Medicare usage is 34,000, from RUC database. Expert panel estimates that 10% of total national CGM usage is in the Medicare population.

Specialty Endocrinology Frequency 223480 Percentage 65.72 %

Specialty Internal Medicine Frequency 60950 Percentage 17.92 %

Specialty Nurse Practitioners Frequency 27090 Percentage 7.96 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 34,000 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Estimate is based on 2015 Medicare utilization in the RUC database.

Specialty Endocrinology Frequency 22348 Percentage 65.72 %

Specialty Internal Medicine Frequency 6095 Percentage 17.92 %

Specialty Nurse Practitioners Frequency 2709 Percentage 7.96 %

Do many physicians perform this service across the United States? Yes

Tab 28- CONTINUOUS GLUCOSE MONITORING (CGM)

(CPT Codes 95250 / 95251)

New Physician Work/Time Recommendation and Responses to RUC Reviewers' Comments

95251 New Recommendation For Physician Work and Times

We would like to recommend **0.66 work RVU for code 95251, with physician times of zero minutes pre-service, 20 minutes intra-service, and zero minutes' post-service**. The rationale for this revised recommendation is detailed in the responses to reviewers' comments (below).

95250

Reviewer 1 has questioned the rationale for our recommendation of clinical staff types RN/RD and RN/LPN rather than RN/LPN/MTA blend.

Our assignment of clinical staff types was based entirely on the prospective time-study of 41 patients undergoing CGM, as summarized on the first page of the PE SOR. In none of the 41 cases was the patient education necessary to use the CGM that is a key part of this code provided by an MTA or LPN, but rather by a highly trained professional such as an RN, or NP.

95251 – Physician Time

Reviewer 1 has questioned the validity of the two-minutes of pre-service time. We accept the reviewer's suggestion to delete the two minutes of pre–service time.

Reviewer 1 questions whether the writing/dictating of report, for which we recommended 5 minutes of post-service time, should rather be in the intra-service period for codes like 95251 that are "interpretation and report only". We confirmed with RUC staff that for "interpretation and report only" codes, the RUC rule is that writing/dictating of report belongs in the intra-service period.

Therefore, as per the reviewer's suggestion, and as confirmed by the RUC, we will transfer the work of writing/dictating from the post-service period to the intra-service period, and we will adjust our recommended times accordingly by decreasing the post-service time from 5 minutes to 0 and increasing the intra-service time from 15 minutes (survey median) to 20 minutes.

Consequently, we are now recommending **physician times of zero minutes pre-service, 20 minutes intra-service, and zero minutes post-service (total time of 20 minutes),** consistent with the reviewers' suggestions. These changes should also answer the concerns about pre-service and post-service time expressed by reviewer 2.

95251 – Physician Work

Both reviewer 1 and reviewer 2 questioned our recommendation of 0.70 work RVU, with their rationale based on comparisons of the physician work and intra-time between our 95251 recommendation and the current value of 95251, as well as comparisons between our 95251 recommendation and the two key reference services, 99091 and 93227.

Our responses to these questions are detailed below.

Key reference service #1 (99091) adjusted to intra-time of 20 minutes

99091 has a work RVU of 1.10 and intra-time of 30 minutes, while our 95251 recommendation has an intra-time of 20 minutes. To equalize the intra-times so that the two codes are directly comparable, we calculated a proxy 99091 by taking 1/3 off the values for 99091. This computation results in a proxy 99091 with a **work RVU of 0.73 and an intra-time of 20 minutes**.

Key reference service #2 (93227) adjusted to intra-time of 20 minutes

93227 has a work RVU of 0.52 and an intra-time of 15 minutes, while our 95251 recommendation has an intra-time of 20 minutes. To equalize the intra-times so that the two codes are directly comparable, we calculated a proxy 93227 by adding 1/3 to the values for 93227. This computation results in a proxy 93227 with a **work RVU of 0.69 and an intra-time of 20 minutes.**

Current value of 95251 adjusted to intra-time of 20 minutes.

At present, 95251 has a work RVU of 0.85 and an intra-time of 30 minutes, while our 95251 recommendation has an intra-time of 20 minutes. To equalize the intra-times so that the two codes are directly comparable, we calculated a proxy 95251 by taking 1/3 off the current values of 95251. This computation results in a proxy 95251 with a **work RVU of 0.57 and an intra-time of 20 minutes.**

Establishing a new 95251 work RVU recommendation

In the above paragraphs, we developed work RVUs for 3 proxy codes, all with intra-times of 20 minutes, to be used as comparators in developing a work RVU recommendation for 95251. As our recommended work RVU for 95251, we decided to take the average of the work RVU for the three proxy comparators described above (0.73, 0.69, 0.57), which comes out to 0.66 RVU.

The result is a 95251 recommendation of 0.66 RVU, with zero pre-service time, 20 minutes intra-service time, and zero minutes post-service time, with IWPUT of 0.033.

Comparison with other codes in the RUC database

There are 13 RUC-valued XXX codes in the RUC database with an intra-time of 20 minutes and a total time of 20 minutes, identical to our 95251 recommendation. The median RVU for these 13 comparison codes is 0.69 work RVU, which is above our 95251 recommendation of 0.66.

Duplication of E&M work

As of the latest RUC data release, and according to RUC definitions, 95251 is now "typically" (52% of the time) performed with a separate E&M service on the same day. Reviewer 1 questions whether the crafting of a new treatment protocol, which is listed as part of the intra-service work of 95251 in the SOR, should actually be part of the subsequent E&M.

We agree with the reviewer that the work of crafting a new treatment protocol is, indeed, a part of the work of the subsequent E&M visit; the work of 95251 is limited to interpretation of the data and report. We apologize for incorrect wording.

Importance of key reference services versus other comparator codes

Both reviewers emphasize comparisons of our 95251 recommendation with the two key reference services, while assigning the comparison with other codes in the RUC database a lesser degree of importance.

In that regard, we would point out that 11 of the 17 codes on the reference service list were selected by at least one survey participant as their key reference service, and 60% of the survey participants selected a key reference service that was NOT one of the top two key reference service codes used in the SOR. In view of this wide variation in the selection of the key reference service, we feel that, in this particular situation, it is appropriate to put significant emphasis on comparator codes other than the top two key reference services.

IWPUT analysis

The reviewers commented on differences between the IWPUT of our recommendation and the various comparators (e.g. key reference services, current values of the surveyed code).

We believe that the IWPUT of our modified 95251 recommendations (0.033) is quite comparable to the IWPUT of the three proxy comparator codes (0.029, 0.028, 0.021) described above, as well as to the IWPUT of other codes that involve pure cognitive work, such as psychotherapy (90832: IWPUT = 0.038) or cardiac stress test, interpretation and report only (93018: IWPUT = 0.033).

Survey participation rate

Reviewer 2 commented on the relatively small number of physicians surveyed for 95251.

In response, we would note that endocrinology is a very small subspecialty, and one which traditionally has had a very low participation rate for RUC surveys. The number of 46 completed surveys for 95251, which exceeds the RUC threshold of 30, is in fact the largest number of survey respondents that endocrinology has ever had in a RUC survey.

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation
Non Facility Direct Inputs

CPT® Long Descriptor: Ambulatory continuous glucose recording of interstitial tissue fluid via a subcutaneous sensor for a minimum of 72 hours; sensor placement, hook-up, calibration of monitor, patient training, removal of sensor, and printout of recording

Global Period: XXX Meeting Date: October 6, 2016

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee: The practice expense recommendations were developed following discussions by an expert panel convened by AACE and the Endocrine Society. The expert panel included the RUC and CPT® Advisers from each society as well as other society members known to have extensive experience with this service.

   Expert panel members decided to substantiate their recommendations by collecting data on the clinical staff time from their personal practices. Panel members asked their clinical staff to keep a record for several weeks of patients undergoing continuous glucose monitoring (CGM). The clinical staff recorded the total clinical staff time for each patient for the encounter as well as the type of professional who was providing the service. Separate records were kept for the day of CGM placement (when the patient is hooked up to the CGM device) and the day of return (when the patient returns the CGM device back to the physician after wearing it at home for 72 hours). All data had been stripped of all patient identifiers prior to being submitted. Standard statistical analysis was performed on the data from 41 patients that was provided by five physicians. Results are listed below:

TOTAL CLINICAL STAFF TIME

	Placement Day	Return Day
Median	55	30
Mean	57	31
Standard deviation	14	16
Number	41	41

PROVIDER TYPE

CDE*	27	17
RN/CDE	10	10
NP	4	4
LPN	0	10

* CDE = certified diabetes educator. CDEs undergo advanced training and certification. Most CDEs are registered nurses or registered dietitians. LPNs and MTAs are not eligible to become CDEs.

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes.

The reference code selected for the PE spreadsheet was the current CPT® code for this service, 95250, as per the RUC instructions.

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time: N/A

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence: NA

5. Please describe in detail the clinical activities of your staff:

Pre Service-Period Clinical Labor Activities: None

Service-Period Clinical Labor Activities:

- Prepare room, supplies
- Greet patient, gowning, check medical records
- Preparation of skin site and placement of sensor by clinical staff
- Attachment of transmitter by clinical staff and initiation of sensor session on receiver
- Clean room
- Removal of sensor
- Explanation of purpose of continuous glucose monitoring (CGM) and duration of test
- Explanation of difference between CGM and home blood glucose testing with finger sticks
- Explanation of parts of CGM device (sensor, transmitter & receiver)
- Explanation of general patient management of CGM device (placement during sleep; care during shower, exercise and other daily living activities)
- Explanation of how to maintain patient diary of activity, food, and medication
- Explanation of necessity of continuing finger sticks during CGM period and basing treatment during CGM period on the finger stick results and not on the CGM readings
- Explanation of importance of entering blood glucose results into CGM device twice daily (three times on day one)
- Explanation of how to enter blood glucose results into CGM device
- Explanation of precautions during CGM period (continue all medications, avoid acetaminophen, keep insulin injections at least 3 cm from sensor site, keep receiver within 20 feet of sensor)
- Explanation of button functions on CGM device
- Explanation of menus on CGM
- Explanation of trend graphs
- Explanation of profile choices
- Explanation of how to enter events into diary and devices and importance of doing so
- Explanation of when and how to charge receiver
- Explanation of alerts: selection of choices, programming, patient responses
- Explanation of CGM device settings
- Explanation of shutdown and stop sensor
- Explanation of placement choices for CGM sensor
- Explanation of two-hour startup period and entering startup blood glucose results
- Explanation of how to ensure accuracy of blood glucose meter and requirement to use same meter during entire period of CGM use
- Explanation of procedure if sensor site is uncomfortable or painful
- Explanation of procedure if tape or dressing begins to peel off
- Explanation of procedure if sensor falls off
- Explanation of resources available for assistance (i.e. Quick start guide, device manual, toll free numbers, educator's number/email

Post Service-Period Clinical Labor Activities:

- Recharging of CGM device
- Cleaning of CGM device
- Preparation of forms
- Downloading of data from CGM device to computer
- Downloading of events (meals, meds, etc.) from patient diary and/or blood glucose meter to computer
- Downloading of finger stick results from blood glucose meter and/or patient record to computer
- Utilizing computer to conduct appropriate data analyses
- Preparation on computer of appropriate formats for data display
- Printing out of CGM data and displays (equipment ED032, ED021)

*CPT five-digit codes, two-digit number modifiers, and descriptions only are copyright by the American Medical Association. No payment schedules, fee schedules, relative value units, scales, conversion factors, or components thereof are included in CPT. The AMA is not recommending that any specific relative values, fees, payment schedules, or related listings be attached to CPT. Any relative value scales or relative listings assigned to CPT codes are not those of the AMA, and the AMA is not recommending use of these relative values.
