Objective. Determine if the iEMR tool could be used to deliver and evaluate the learners' ability to create a comprehensive care plan for geriatric patients established collectively by interprofessional learners.

iEMR's collaborative functionality: Multiple users can simultaneously access an iEMR patient record. This property enables synchronous and asynchronous communication by team members. This functionality also allows multiple team members to perform EHR actions in a synchronous session.

Timeline Proposed

- **Month 1**: Learners create small group content for case 1. Instructors review the content.
- **Month 2**: Learners get access to the iEMR and are able to grade and respond to a set of questions in the iEMR. 
- **Month 3**: Learners work through the case. Instructors review each student entry before class to be able to grade and discuss.
