Reference Committee B

BOT Report(s)

14  Reforming the Orphan Drug Act; An Optional National Prescription Drug Formulary; Reform of Pharmaceutical Pricing: Negotiated Payment Schedules
17  Ban on Medicare Advantage "No Cause" Network Terminations
18  Increased Use of Body-Worn Cameras by Law Enforcement Officers
19  FDA Conflict of Interest
20  Safe and Efficient E-Prescribing
21  Augmented Intelligence in Health Care
22  Inappropriate Use of CDC Guidelines for Prescribing Opioids
23  Prior Authorization Requirements for Post-Operative Opioids
30  Opioid Treatment Programs Reporting to Prescription Monitoring Programs

Resolution(s)

201   Assuring Patient Access to Kidney Transplantation
202   Reducing the Hassle Factor in Quality Improvement Programs
203   Medicare Part B and Part D Drug Price Negotiation
204   Holding the Pharmaceutical Industry Accountable for Opioid-Related Costs
205   Use of Patient or Co-Worker Experience/Satisfaction Surveys Tied to Employed Physician Salary
206   Changing the Paradigm: Opposing Present and Obvious Restraint of Trade
207   Direct-to-Consumer Genetic Tests
208   Repeal or Modification of the Sunshine Act
209   Mandates by ACOs Regarding Specific EMR Use
210   Air Ambulances
211   Use of FAIR Health
212   Pharmacy Benefit Managers
213   Financial Penalties and Clinical Decision-Making
214   The Term Physician
215   Reimbursement for Health Information Technology
216   Eliminate the Word Provider from Healthcare Contracts
217   Medicare Vaccine Billing
218   Payment for Medications Used Off Label for Treatment of Pain
219   Medical Marijuana License Safety
220   Study of Confidentiality and Privacy Protection in the Treatment of Substance Disorders
221   Extending Medicaid Coverage to 12-Months Postpartum
222   Protecting Patients from Misleading and Potentially Harmful "Bad Drug" Ads
223   Simplification and Clarification of Smoking Status Documentation in the Electronic Health Record
224   Extending Pregnancy Medicaid to One Year Postpartum
225   DACA in GME
226   Physician Access to Their Medical and Billing Records
227   Controlled Substance Management
228   Truth in Advertising
229   Clarification of CDC Opioid Prescribing Guidelines

# Contained in the Handbook Addendum
Reference Committee B

Resolution(s)

230# State Legislation Mandating Electrocardiogram (ECG) and/or Echocardiogram Screening of Scholastic Athletes
231# Alignment of Federal Privacy Law and Regulations Governing Substance Use Disorder Treatment (42 CFR Part 2) with the Health Insurance Portability and Accountability Act
232# COPD National Action Plan
233# GME Cap Flexibility
234# Improved Access to Non-Opioid Therapies
235# Prescription Coverage of the Lidocaine Transdermal Patch
236# Support for Universal Basic Income Pilot Studies
237# Opportunities in Blockchain for Healthcare
238# Coverage Limitations and Non-Coverage of Interventional Pain Procedures Correlating to the Worsening Opioid Epidemic and Public Health Crisis
239# Improving Access to Medical Care Through Tax Treatment of Physicians
240# Formation of Collective Bargaining Workgroup
241# Facilitation of Research with Medicare Claims Data

# Contained in the Handbook Addendum
At its 1984 Interim Meeting, the House of Delegates established a sunset mechanism for House policies (Policy G-600.110). Under this mechanism, a policy established by the House ceases to be viable after 10 years unless action is taken by the House to retain it.

The objective of the sunset mechanism is to help ensure that the American Medical Association (AMA) policy database is current, coherent, and relevant. By eliminating outmoded, duplicative, and inconsistent policies, the sunset mechanism contributes to the ability of the AMA to communicate and promote its policy positions. It also contributes to the efficiency and effectiveness of House of Delegates deliberations.

At its 2002 Annual Meeting, the House modified Policy G-600.110 to change the process through which the policy sunset review is conducted. The process now includes the following steps:

- In the spring of each year, the House policies that are subject to review under the policy sunset mechanism are identified.
- Using the areas of expertise of the AMA Councils as a guide, the staffs of the AMA Councils determine which policies should be reviewed by which Councils.
- For the Annual Meeting of the House, each Council develops a separate policy sunset report that recommends how each policy assigned to it should be handled. For each policy it reviews, a Council may recommend one of the following actions: (a) retain the policy; (b) rescind the policy; or (c) retain part of the policy. A justification must be provided for the recommended action on each policy.
- The Speakers assign the policy sunset reports for consideration by the appropriate reference committees.

Although the policy sunset review mechanism may not be used to change the meaning of AMA policies, minor editorial changes can be accomplished through the sunset review process.

In this report, the Board of Trustees presents the Council on Legislation’s recommendations on the disposition of the House policies that were assigned to it. The Council on Legislation’s recommendations on policies are presented in the Appendix to this report.

RECOMMENDATION

The Board of Trustees recommends that the House of Delegates policies listed in the Appendix to this report be acted upon in the manner indicated and the remainder of this report be filed.
## APPENDIX - RECOMMENDED ACTIONS ON 2009 HOUSE POLICIES

</thead>
<tbody>
<tr>
<td>D-160-939</td>
<td>Physician Supervision Over Certified Registered Nurse Anesthetists</td>
<td>Our American Medical Association will urge the federal government to repeal the opt-out provision of the Medicare Conditions of Participation that eliminated the long-standing requirement that certified registered nurse anesthetists practice under direct physician supervision. Citation: (Res. 213, I-09)</td>
<td>Retain. This policy remains relevant.</td>
</tr>
<tr>
<td>D-270.998</td>
<td>Oppose Scope of Limited English Proficiency Guidance</td>
<td>Our AMA BOT, to the fullest extent appropriate, will authorize further efforts necessary to actively oppose the inappropriate extension of the Limited English Proficiency Guidance issued by the US Department of Health and Human Services’ Office of Civil Rights’ to physicians in private practice who receive Federal financial assistance from HHS. Citation: (Res. 216, I-00; Reaffirmation A-09)</td>
<td>Retain, but make a technical edit.</td>
</tr>
<tr>
<td>D-275.996</td>
<td>Creation of AMA Data Bank on Interstate Practice of Medicine</td>
<td>Our AMA will: (1) continue to study interstate practice of medicine issues as they relate to the quality of care available to patients; (2) explore the provision of information on physician licensure, including telemedicine, to members and others through the World Wide Web internet and other media; and (3) continue to make information on state legal parameters on the practice of medicine, including telemedicine, available for members and others. Citation: (BOT Rep. 6, I-99; Reaffirmed: CLRPD Rep. 1, A-09)</td>
<td>Retain. This policy remains relevant, but modify the term “World Wide Web” for “internet.”</td>
</tr>
<tr>
<td>D-315.993</td>
<td>Physicians as Patients: Their Right to Confidentiality</td>
<td>Our AMA will consider for possible intervention pending and future court cases in which the principles of informed consent are inappropriately expanded to require disclosure of a physician’s impairment, including substance abuse problems, or information otherwise protected by laws governing patient privacy and confidentiality. Citation: (BOT Rep. 17, I-99; Reaffirmed: CEJA Rep. 8, A-09)</td>
<td>Retain. This policy remains relevant.</td>

<tr>
<td>D-330.993</td>
<td>Explanation of Public-Private Partnerships that Exist between Government and the AMA</td>
<td>Our AMA: (1) continues to employ a variety of tactics to advocate CMS adoption of AMA policy positions; (2) continues to work cooperatively with CMS, when possible, to achieve its policy objectives; (3) when advocacy efforts directed at CMS fall short of achieving AMA policy objectives, the AMA continue to seek congressional action, including oversight hearings and enactment of legislation; and (4) use appropriate legal means, including suing CMS, when appropriate and warranted. Citation: (BOT Rep. 17, A-99; Reaffirmed: CLRPD Rep. 1, A-09)</td>
<td>Retain. This policy remains relevant.</td>
</tr>
<tr>
<td>D-385.965</td>
<td>Insurance Companies Use of Contractors to Recover Payments</td>
<td>1. Our AMA will seek legislation to limit insurance companies, their agents, or any contractors from requesting payment back on paid claims to no more than 90 days after payment is made. (a) Such legislation would require insurance companies, their agents, or any contractors to have a defined and acceptable process for physicians to dispute these maneuvers to get payment back on claims already processed, verified, and paid. (b) Such legislation would ban insurance companies, their agents or contractors from using re-pricers and re-reviewers and to adhere to their own pricing and reviewing guidelines as agreed upon in their contracts with physicians. 2. Our AMA will pursue legislation to regulate self-insured plans in this regard and apply the same rules to Medicare and other federal plans. Citation: (Res. 215, A-09)</td>
<td>Retain. This policy remains relevant.</td>
</tr>
<tr>
<td>D-435.973</td>
<td>Quantifying Medical Tort Reform</td>
<td>Our American Medical Association will study the true costs of defensive medicine and the financial impact that tort reform would have on the entire health care system, with a report back and to be updated every ten years. Citation: (Res. 216, I-09)</td>
<td>Rescind. Policy is implemented. AMA on an annual basis publicly issues MLR Now!, which includes costs of defensive medicine, financial impact, and state and federal efforts in liability reform.</td>

| D-455.994     | Standardizing Portable Medical Imaging Formats to Enhance Safe, Timely, Efficient Care | 1. Our American Medical Association will participate in efforts to ensure implementation of the recommendations for imaging standards developed by the AMA-convened imaging safety and standards Panel, that the Radiological Society of North American (RSNA) endorsed and Integrating the Healthcare Enterprise (IHE) adopted and wrote into the portable data initiative standards.  
2. Our AMA will develop a strategy to inform the health care and imaging communities of the AMA’s work to improve Imaging Safety and Standards that includes the following:  
a. Disseminate (widely) the AMA-convened Panel’s statement, “All medical imaging data distributed should be a complete set of images of diagnostic quality in compliance with those found in the IHE PDI (Portable Data for Imaging) Integration Profile;”  
b. Publish the Panel’s work;  
c. Increase hospital group, deeming organization, medical group, and survey certification group awareness of the AMA’s work; determine their role in developing infrastructure support for medical imaging safety per AMA recommendations and IHE-PDI standards;  
d. Expose the AMA’s work to the Office of the National Coordinator;  
e. Encourage industry to view physicians as developers rather than solely as adopters of technology and to include physicians, as end users, in the development and implementation of technology solutions; and,  
f. Encourage physicians, as end users of technology, to participate in development and implementation of technology to ensure its appropriate use and application at the point of care.  
Citation: (BOT Rep. 1, I-09) | Retain. This policy remains relevant. |
<p>| D-478.986     | Information Technology and Stimulus Money | Our AMA: will (1) caution health care policy makers that the Health Care Information Technology stimulus money, as outlined in the American Recovery and Reinvestment Act, will cause a sudden rise in the demand for health care IT products | Retain. This policy remains relevant. |</p>

<tr>
<td>D-65.993</td>
<td>Pain and Suffering in Darfur</td>
<td>Our American Medical Association will write to Secretary of State Hillary Rodham Clinton, the World Medical Association, and the World Health Organization in reference to the complex situations in Darfur and Sri Lanka, stating (1) our concerns related to the health costs of war on civilian populations generally and the adverse effects of physician persecution in particular, (2) that we support the efforts of physicians around the world to practice medicine ethically in any and all circumstances, including during wartime or episodes of civil strife, and that we condemn the military targeting of health care facilities and personnel and using denial of medical services as a weapon of war, as has occurred in Darfur and Sri Lanka, and (3) that our AMA will advocate for the protection of physicians’ rights to provide ethical care without fear of persecution. Citation: (BOT Action in response to referred for decision Res. 620, A-09)</td>
<td>Rescind. This directive has been accomplished.</td>
</tr>
<tr>
<td>D-70.997</td>
<td>Negotiated Rulemaking for Lab Tests</td>
<td>Our AMA: (1) reaffirms its policy to seek repeal of Section 4317 of the Balanced Budget Act of 1997 granting the Secretary of HHS authority to require submission of diagnosis codes with every lab test claim and with all claims for services provided by an entity other than the ordering physician; (2) continues to urge CMS to clarify and improve the Advanced Beneficiary Notice process; and (3) will work to modify the regulations forthcoming in the implementation of the Health Insurance Portability and Accountability Act (HIPAA) to conform with AMA policy. Citation: (BOT Rep. 11, A-99; Reaffirmed: BOT Rep. 23, A-09)</td>
<td>Retain. This policy remains relevant.</td>

<tr>
<td>H-120.941</td>
<td>e-Prescribing of Scheduled Medications</td>
<td>Our American Medical Association supports action requiring that the US Drug Enforcement Administration move expeditiously to establish reasonable requirements enabling the use of e-prescribing for controlled substances. Citation: (Res. 211, I-09)</td>
<td>Rescind. The SUPPORT Act (Public Law 115-271) mandates DEA to improve its EPICS regulations.</td>
</tr>
<tr>
<td>H-120.959</td>
<td>DVA Non-Physician Prescribing Authority</td>
<td>Our AMA will continue to pursue appropriate regulatory, legislative and legal means to oppose any efforts to permit non-physician health care professionals to prescribe medications. Citation: (Sub. Res. 220, A-99; Reaffirmed: CMS Rep. 11, I-99; Reaffirmed: BOT Rep. 23, A-09)</td>
<td>Retain. This policy remains relevant.</td>
</tr>
<tr>
<td>H-120.996</td>
<td>Prescribing Eye Medications</td>
<td>Our AMA (1) reaffirms its policy that only physicians licensed to practice medicine and surgery are qualified to prescribe or apply eye medications; and (2) continues to urge that state medical societies oppose legislation or administrative attempts to give optometrists a license to prescribe or apply medications or to diagnose disease or injury or to diagnose the absence of disease or injury. Citation: (Sub. Res. 76, A-76; Reaffirmed: CLRDPD Rep. C, A-89; Reaffirmation A-99; Reaffirmed: BOT Rep. 23, A-09)</td>
<td>Retain. This policy remains relevant.</td>
</tr>
<tr>
<td>H-125.999</td>
<td>Drug Substitutes</td>
<td>Our AMA (1) supports continued efforts to inform the public and the profession of the potential problems and risks should a physician’s choice of therapeutic agents be delegated to non-physicians; and (2) asks that state medical associations provide scientific and economic reasons in support of this position to state legislatures considering enactment of laws on substitution of drug products other than those prescribed or agreed upon by an attending physician.</td>
<td>Retain. This policy remains relevant.</td>
</tr>
<tr>
<td>H-160.917</td>
<td>Federation Payment for Emergency Services for Undocumented Immigrants</td>
<td>Our American Medical Association supports federal legislation to extend Section 1011 of the Medicare Modernization Act (MMA, P.L. 108-173), which provides for federal funding to the states for emergency services provided to undocumented immigrants. Citation: (Res. 212, I-09)</td>
<td>Rescind. This directive is no longer needed. MMA §1011 provided $250M per year for federal fiscal years 2005 through 2008 for payment to hospitals, physicians</td>

<tr>
<td>H-160.936</td>
<td>Comprehensive Physical Examinations by Appropriate Practitioners</td>
<td>AMA policy supports the position that performance of comprehensive physical examinations to diagnose medical conditions be limited to licensed MDs/DOs or those practitioners who are directly supervised by licensed MDs/DOs; and the AMA will actively work with state medical societies and medical specialty associations, both in the courts and in the legislative and regulatory spheres, to oppose any proposed or adopted law or policy that would inappropriately expand the scope of practice of practitioners other than MDs/DOs. Citation: (Sub. Res. 210, I-96; Reaffirmed: BOT Rep. 34, A-06; Reaffirmed in lieu of Res. 235, A-09)</td>
<td>Retain. This policy remains relevant.</td>
</tr>
<tr>
<td>H-160.972</td>
<td>Physician Representation on State and National Health Care Advisory Bodies</td>
<td>The AMA urges Congress, and others who select members of state and national health advisory bodies, to increase the proportion of physicians in active clinical practice serving on these bodies, with selected members being recommended by state or national medical associations. Citation: (Sub. Res. 110, A-88; Reaffirmed: Sunset Report, I-98; Reaffirmed: BOT Rep. 23, A-09)</td>
<td>Retain. This policy remains relevant.</td>
</tr>
<tr>
<td>H-175.980</td>
<td>Anti-Kickback Implications of Ambulance Restocking</td>
<td>Our AMA: (1) supports federal legislation to create a safe harbor under the anti-kickback statute for ambulance restocking by hospitals, such as H.R. 3247, the “Community Safety Act of 1998;” and (2) urges the Office of the HHS Inspector General to change its position, as expressed in two existing advisory opinions, that hospital restocking of ambulances on a gratis basis may constitute a violation of the anti-kickback statute.</td>
<td>Rescind. This policy has been implemented. In 2001, the Office of Inspector General finalized a regulatory safe harbor regarding ambulance restocking by hospitals (42 C.F.R. 1001.952(v); 66 Fed. Reg. 62979). This safe harbor is available for</td>

| H-405.968    | Clarification of the Term “Provider” in Advertising, Contracts and Other Communications | 1. Our AMA supports requiring that health care entities, when using the term “provider” in contracts, advertising and other communications, specify the type of provider being referred to by using the provider’s recognized title which details education, training, license status and other recognized qualifications; and supports this concept in state and federal health system reform.  
2. Our AMA: (a) considers the generic terms “health care providers” or “providers” as inadequate to describe the extensive education and qualifications of physicians licensed to practice medicine in all its branches; (b) will institute an editorial policy prohibiting the use of the term “provider” in lieu of “physician” or other health professionals for all AMA publications not otherwise covered by the existing JAMA Editorial Governance Plan, which protects editorial independence of the Editor in Chief of JAMA and The JAMA Network journals; and (c) will forward to the editorial board of JAMA the recommendation that the term “physician” be used in lieu of “provider” when referring to MDs and DOs. Citation: (Sub. Res. 712, I-94; Reaffirmed: Res. 226, I-98; Reaffirmation I-99; Res. 605, A-09; Reaffirmed: CLRPD Rep. 1, A-09; Modified: Speakers Rep., A-15) | Retain. REPORT OF THE BOARD OF TRUSTEES

B of T Report 14-A-19

Subject: Reforming the Orphan Drug Act
(Resolution 217-A-18)
An Optional National Prescription Drug Formulary
(Resolution 227-A-18)
Reform of Pharmaceutical Pricing: Negotiated Payment Schedules
(Resolution 238-A-18)

Presented by: Jack Resneck, Jr., MD, Chair

Referred to: Reference Committee B
(Charles Rothberg, MD, Chair)

At the 2018 Annual Meeting, the American Medical Association’s (AMA) House of Delegates (HOD) referred three resolutions for a combined Board of Trustees (BOT) Report (Report) at the 2019 Annual Meeting. The first resolution, Resolution 217-A-18, “Reforming the Orphan Drug Act,” was introduced by the Medical Student Section and asks that:

Our AMA: (1) support efforts to reform the Orphan Drug Act (ODA) by closing loopholes identified by the Food and Drug Administration ([FDA]) in order to protect the Act’s original intent of promoting therapies targeting rare diseases; (2) support increased transparency in development costs, post-approval regulation and overall earnings for pharmaceuticals designated as “Orphan Drugs” and (3) support modifications to the exclusivity period of “Orphan Drugs” to increase access to these pharmaceutical drugs for patients with rare diseases.

The second resolution, Resolution 227-A-18, “An Optional National Prescription Drug Formulary,” was introduced by the Florida Delegation and asks that:

Our AMA: (1) develop a set of principles for a National Prescription Drug Formulary (NPD Formulary) that are designed to lower prescription drug prices to the patient, and be transparent, independent, non-profit, and fee-based, with a report back to the AMA HOD at the 2018 Interim Meeting; (2) produce model legislation for an NPD Formulary with input from appropriate stakeholders based on a set of principles for such a Formulary that the AMA will develop; and (3) that our AMA join with appropriate stakeholders to advocate that Congress authorize the establishment of this NPD Formulary that will be available to all Americans as an option to their healthcare insurance program in an actuarially appropriate manner.

The third resolution, Resolution 238-A-18, “Reform of Pharmaceutical Pricing: Negotiated Payment Schedules,” was introduced by the Illinois Delegation and asks that:

Our AMA: (1) support federal legislation that modifies the Hatch-Waxman Act and the Biologics Price Competition and Innovation Act (Biosimilars Act) to institute the replacement of time-specific patent protections with negotiated payment schedules and indefinite

© 2019 American Medical Association. All rights reserved.
The reference committee heard varying testimony on Resolutions 217, 227, and 238. There was testimony providing strong support for the current strategic focus of AMA advocacy and initiatives to increase market competition as well as increased transparency of cost and price along the pharmaceutical supply chain. There was testimony in response to Resolution 217 noting that incentives are needed to support innovation in drug development for rare diseases and general exclusivities and may be driving higher drug costs to vulnerable patient populations. The reference committee heard testimony on Resolution 227 that a new national not-for-profit pharmaceutical benefit manager (which is referred to in the resolution as a national formulary) would not necessarily promote innovation and competition and could substantially limit patient access to medically necessary options. The reference committee heard testimony on Resolution 238 that it did not accurately identify the federal laws that would have to be amended in order to institute the replacement of time-specific patent protections with negotiated payment schedules and indefinite exclusivity for FDA-approved drugs in the Medicare Part D benefit prescription drug program. Testimony was offered noting it would require marked changes to the U.S. Patent Act, the U.S. Food, Drug, and Cosmetic Act (FDCA), and the Social Security Act (SSA). Furthermore, testimony was offered that such changes could limit patient access to clinically necessary alternative options and depress innovation while interjecting significant confusion and complexity in the patent system and the FDA regulatory regime. The reference committee found that all three resolutions are either a potentially complex solution to address the high cost of prescription drugs, or too narrowly crafted. Given these concerns, the reference committee recommended referral for a consolidated report.

AMA STRATEGIC FOCUS: INCREASING TRANSPARENCY AND COMPETITION

The varied contributing causes fueling the rise in prescription medication prices and the proliferation in barriers faced by patients who need medically necessary medication have resulted in the HOD adopting a wide-range of policies concerning prescription medication affordability and access. In order to prioritize impactful and viable policies that would enable the AMA to effectively advocate at the federal and state levels, Policy H-110.987, “Pharmaceutical Costs,” adopted in 2015 directed the AMA to convene a task force of appropriate AMA Councils, state medical societies, and national medical specialty societies to develop principles to guide advocacy and grassroots efforts aimed at addressing pharmaceutical costs and improving patient access and adherence to medically necessary prescription drug regimens. Accordingly, the AMA convened a Task Force on Pharmaceutical Costs, which met four times in the first six months of 2016 to develop principles to guide advocacy and grassroots efforts aimed at addressing pharmaceutical costs. The Task Force agreed that increasing transparency among pharmaceutical companies, health plans, and pharmacy benefit managers (PBMs) should be the initial focus of the campaign, which led to the launch of a grassroots campaign in the third quarter of 2016, and the launch of the TruthinRx website, TruthinRx.org, on November 1, 2016. The foregoing was done in concert with the AMA’s long-standing advocacy to increase competition. Based on the foregoing the AMA has vigorously supported the focus of policymakers at the federal and state levels to address pharmaceutical supply chain transparency and accelerated and expanded legislative and regulatory action to increase pharmaceutical market competition by, among other things, combating anti-competitive practices.
Increase Pharmaceutical Market Competition and Combat Anticompetitive Practices

Policymakers have increased scrutiny of laws enacted to ensure drug safety and efficacy and to promote innovation that have been manipulated by pharmaceutical manufacturers to delay or block competition. Building on policy raising concerns with anti-competitive practices, the AMA has focused on increasing the authorities and resources of the Federal Trade Commission (FTC) to combat anti-competitive actions of manufacturers as well as changes to the FDA’s oversight of the FDCA provisions that have been misused by manufacturers to delay the entry of more affordable generics as outlined below. In addition, the AMA has urged changes to the U.S. Patent Act that are inviting misuse for anti-competitive reasons by manufacturers.

Consistent with long-standing advocacy, the AMA continues to support the FTC’s actions to stop pay-for-delay settlements, whereby a brand-name pharmaceutical manufacturer pays a potential generic competitor to abandon its challenge and delay offering a generic drug product for a number of years, for anti-competitive purposes. The AMA is also urging the FTC and Congress to evaluate certain uses of U.S. Patent Act and market exclusivities conferred under the FDCA by pharmaceutical companies that appear primarily designed to increase litigation costs for generic manufacturers and delay market competition. The AMA is also urging more rigorous FTC evaluation of mergers and consolidations among pharmaceutical companies and their impact on competition as well as consumer access by, among other things, expanding clinical expertise within the FTC and consulting with the relevant national medical specialty societies. The AMA is also expressing strong support of enforcement action referrals by the FTC against manufacturers that engage in anticompetitive actions to the U.S. Department of Justice.

In addition, the AMA continues to support measures to address the misuse of FDCA provisions for anti-competitive purposes. The AMA continues to urge Congress and federal agencies to take action to: (1) end the ability of generic manufacturers to indefinitely “park” the 180-day exclusivity period authorized by the FDCA by delaying final approval of their application by the FDA as part of a settlement agreement with a brand manufacturer; (2) further expand the ability of the FDA to address anticompetitive abuse of risk evaluation and mitigation strategies by brand manufacturers—particularly voluntary elements to assure safe use that involve proprietary measures that pose barriers to use by generic competitors; (3) make necessary amendments to the U.S. Patent Act and the FDCA to prevent the inappropriate extension of the exclusivity and patent life of pharmaceuticals. The AMA also strongly supports passage of legislation to increase competition and thus access to some of the most-costly prescription medications: biologicals. The AMA supported the original legislation establishing the follow-on biological pathway and it is now evident that there is a need to shorten the exclusivity period for biological products in order to spur competition which will not decrease the impetus to innovate.

Require Pharmaceutical Supply Chain Transparency

The second component of AMA advocacy has been to encourage transparency throughout the pharmaceutical supply chain. The ability of patients and physicians to have the information they need to make key decisions regarding medication, and of policymakers to craft viable solutions to high and escalating pharmaceutical costs, has been hampered by the often byzantine and confidential arrangements that are driving increased medication prices without a clear and justifiable reason. The practices and policies of pharmaceutical manufacturers, pharmacy benefit managers (PBMs), and health insurers warrant steps by Congress to interject much needed transparency. To that end the AMA strongly supports: (1) requiring pharmaceutical manufacturers to provide public notice before increasing the price of any drug by 10 percent or more each year or per course of treatment and provide justification for the price increase; (2) requiring pharmaceutical
manufacturers to publicly disclose a variety of information, which could include research and
development costs, expenditures on clinical trials, total costs incurred in production, and marketing
and advertising costs; (3) requiring PBMs to apply manufacturer rebates and pharmacy price
concessions to drug prices at the point-of-sale to ensure that patients benefit from discounts as well
as eliminate some incentives for higher drug list prices; (4) requiring insurers to provide increased
transparency in formularies, prescription drug cost-sharing, and utilization management
requirements for patients and physicians at the point-of-prescribing as well as when beneficiaries
make annual enrollment elections; and (5) prohibiting removal of drugs from a formulary or
moving to a higher cost tier during the duration of the patient’s plan year unless a change is made
for safety reasons.

AMA POLICY

The AMA has extensive policy relevant to the issues raised in all three resolutions. In general, the
AMA opposes the use of price controls in any segment of the health care industry, and continues to
promote market-based strategies to achieve access to and affordability of health care goods and
services (Policy H-155.962, “Maximum Allowable Cost of Prescription Medications”).1 The AMA
has adopted comprehensive policy to address anti-competitive measures by manufacturers and to
promote increased cost and price transparency (Policy H-110-987, “Pharmaceutical Costs”). AMA
policy provides support for action by federal agencies to address manufacturer price gouging.
AMA policy also outlines support for the FTC in its efforts to stop “pay for delay” arrangements by
pharmaceutical companies and federal legislation to expand the FTC’s existing authorities to stop
such arrangements (Policy H-110.989, “Pay for Delay Arrangement by Pharmaceutical
Companies”). The AMA also supports FDA implementation of the biosimilar pathway established
under the Biologics Price Competition and Innovation Act of 2009 in order to ensure patient
access, protect patient safety, and preserve market competition and innovation (Policy H-125.980,
“Abbreviated Pathway for Biosimilar Approval”).

In support of driving increased competition, AMA policy provides for ongoing evaluation of
strategies by manufacturers to extend the patent life of pharmaceuticals, and to work with Congress
and the Administration where such actions are pursued for anti-competitive purposes (Policy D-
110.994, “Inappropriate Extension of Patent Life of Pharmaceuticals”). The AMA also continues to
advocate that the FDA and Congress ascertain the pervasiveness of brand manufacturers forcing
switching from an established drug formulation about to lose market exclusivity and patent
protection to another formulation that retains such protections. This practice is called evergreening
and AMA policy provides that a balance must be struck between incentivizing innovation (superior
formulations) versus anti-competitive practices designed to slow generic competition (Policy H-
125.978, “Patient Protection from Forced Switching of Patent-Protected Drugs”). AMA policy also
provides that physicians who develop medical innovations may ethically patent their discoveries or
products but should uphold the following guidelines: (a) Not use patents (or other means, such as
trade secrets or confidentiality agreements) to limit the availability of medical innovations and
patent protection should not hinder the goal of achieving better medical treatments and
technologies; and (b) Not allow patents to languish and physicians who hold patents should
negotiate and structure licensing agreements in such a way as to encourage the development of
better medical technology (Policy H-110.988, “7.2.3 Patents & Dissemination of Research
Products”).

The AMA supports collaboration with federal and state agencies, policymakers and key
stakeholders (e.g., the FTC, FDA, and the Generic Pharmaceutical Association) to identify and
promote adoption of policies to address the already high and escalating costs of generic
prescription drugs (Policy H-110.988, “Controlling the Skyrocketing Costs of Generic Prescription
Drugs”). The same policy provides that the AMA will also seek to advance with interested parties legislation to ensure fair and appropriate pricing of generic medications. The policy also provides that the AMA encourages the development of methods that increase choice and competition in the development and pricing of generic prescription drugs and the AMA supports measures that increase price transparency for generic prescription drugs.

The AMA has policy to support programs that are designed to contain the rising costs of prescription drugs, provided that physicians have significant input into the development and maintenance of such programs and such programs must encourage optimum prescribing practices and quality of care (Policy H-110.997, “Cost of Prescription Drugs”). Furthermore, under this AMA policy all patients must have access to all prescription drugs necessary to treat their illnesses and physicians must have the freedom to prescribe the most appropriate drug(s) and method of delivery for the individual patient; and the freedom to use either generic or brand name pharmaceuticals in prescribing drugs for their patients. In addition, AMA policy provides support for consumer choice of at least two options for their pharmaceutical benefits program. This must include a fee-for-service option where restrictions on patient access and physician autonomy to prescribe any FDA-approved medication are prohibited and reaffirms support for physicians to use either generic or brand name pharmaceuticals in prescribing drugs for their patients. Finally, the AMA policy provides support for a managed pharmaceutical benefit option with market-driven mechanisms to control costs, provided cost control strategies satisfy AMA policies and standards defined in AMA Policy H-125.991 (Policy H-100.964, “Drug Issues in Health System Reform”).

The AMA also has a growing body of policy concerning PBMs given growing concerns with their role on patient costs. Policy adopted last year provides that the AMA will gather more data on the erosion of physician-led medication therapy management in order to assess the impact PBM tactics may have on patients’ timely access to medications, patient outcomes, and the physician-patient relationship (Policy D-120.933, “Pharmacy Benefit Managers Impact on Patients”). In addition, the same AMA policy provides for an examination of PBM-related clawbacks and direct and indirect remuneration (DIR) fees to better inform existing advocacy efforts. AMA policy further provides that physicians should report to the FDA MedWatch reporting program any instances of adverse consequences (including therapeutic failures and adverse drug reactions) that have resulted from the switching of therapeutic alternates precipitated by PBM actions (Policy H-125.986, “Pharmaceutical Benefits Management Companies”). The policy provides support for increased oversight by the FTC to assess the relationships between pharmaceutical manufacturers and PBMs, especially with regard to manufacturers’ influences on PBM drug formularies and drug product switching programs, and to take enforcement actions as appropriate where there are indicia of anti-trust and anti-competitive practices. Further, AMA policy provides that certain actions/activities by PBMs and others constitute the practice of medicine without a license and interfere with appropriate medical care to patients. The policy also outlines support for effort to ensure that reimbursement policies established by PBMs are based on medical need; these policies include, but are not limited to, prior authorization, formularies, and tiers for compounded medication.

**DISCUSSION**

The AMA is engaged in a comprehensive advocacy campaign at the state and federal level to advance legislation and agency action to increase patient access to affordable prescription medication by increasing market competition and increasing price and cost transparency along the pharmaceutical supply chain. Two of the resolutions and associated resolves would materially depart from this strategy and existing policy. The two resolutions are Resolution 227-A-18, which would involve a major initiative to advance the creation of a not-for-profit PBM fashioned as a national formulary, and Resolution 238-A-18, which would require substantial changes to the
U.S. Patent Act, the FDCA (to alter FDA conferred market exclusivities) and the Social Security Act (to alter relevant Medicare Part D drug benefit provisions). In the case of Resolution 227-A-18, the lack of transparency among the existing commercial PBMs hampers any effort to assess the true value of PBMs in driving affordable pricing and there are widespread concerns, as demonstrated by AMA policies summarized above, that PBM practices have negatively impacted medical practice and patient access to the most appropriate treatment options.

Continued efforts to increase transparency are gaining support from the Trump Administration and Congress. Diverting current AMA efforts to shine a light on PBM practices in order to instead advocate for the creation of a not-for-profit version would be hindered by a lack of information on the measures and mechanisms used by PBMs. Similarly, adoption of Resolution 238-A-18 would represent support for government-imposed price controls in the Medicare program and involve massive disruptions to established patent law and alterations to FDCA conferred exclusivities without addressing drug prices in the commercial market as the resolve calls for government negotiated prices for Medicare Part D drugs, but makes no mention of the commercial market. It would be expected many brand manufacturers would increase prices in the commercial market to offset lower payments in the Medicare program. This would be successful as under this proposed policy, brand manufacturers would not have generic competition as they would receive “indefinite” FDCA exclusivities per the resolve. Perversely, if adopted as policy Resolution 238-A-18 would drive rapid escalation of drug prices in all commercial markets.

Finally, for the most part, AMA policy already addresses Resolution 217-A-18. There are legitimate concerns that the ODA exclusivities have been misused by manufacturers. In November 2018, the Government Accountability Office (GAO) issued a report, Orphan Drugs: FDA Could Improve Designation Review Consistency; Rare Disease Drug Development Challenges Continue. The GAO found that FDA reviewers evaluating a manufacturer’s application seeking orphan drug status were not consistently recording or evaluating the required background information needed to assess the appropriateness of the designation. For example, 48 of 148 cases reviewed by the GAO were missing information on the drug’s U.S. marketing history. The GAO concluded that the FDA could not be sure that reviewers are conducting complete evaluations that include all critical information needed for assessing its criteria. The FDA has indicated that steps will be taken to ensure such information is included and evaluated. While such steps are meaningful, reportedly, by 2024, orphan drugs are projected to capture a fifth of worldwide prescription drug sales ($262 billion) and the compound annual growth rate is forecasted to grow by 11.3 percent, which is double the rate forecast for the non-orphan drug market. Thus, continued scrutiny is warranted of how ODA exclusivities are conferred and careful consideration to the impact on market competition will remain essential.

RECOMMENDATIONS

In light of these considerations, your Board of Trustees recommends that the following be adopted in lieu of Resolutions 217-A-18, 227-A-18, and 238-A-18, and the remainder of this report be filed.

1. That our AMA reaffirm Policy H-110.987, “Pharmaceutical Costs,” which outlines a series of measures to address anti-competitive actions by pharmaceutical manufacturers as well as policies to promote increased transparency along the pharmaceutical supply chain including among PBMs. (Reaffirm HOD Policy)

2. That our AMA support legislation to shorten the exclusivity period for FDA pharmaceutical products where manufacturers engage in anti-competitive behaviors or unwarranted price escalations. (New HOD Policy)
Fiscal Note: Less than $500

NOTES

1 While the AMA has policy that provides support for federal legislation which would confer the Secretary of the Department of Health and Human Services (HHS) with the authority to negotiate contracts with manufacturers for covered Medicare Part D prescription drugs, and provides that the AMA will work toward eliminating Medicare prohibition on drug price negotiation (Policy D-330.954), the taskforce prioritized strategies to increase transparency and to combat the pervasive anti-competitive practices by pharmaceutical manufacturers that are blocking or delaying lower cost, affordable alternative options.

2 An orphan drug is a prescription medication that treats a rare condition or disease affecting fewer than 200,000 nationwide. The development of orphan drugs has been financially incentivized by the market exclusivities provided under FDCA as amended by the ODA as well as tax credits on research and development, grants for phase I and II clinical trials, and, in some cases, waiver of FDA user fees.

3 In 2017, it was reported that 70, out of 450, prescription medications with orphan drug status were first approved by the FDA for mass-market use. Early in 2017, Senators Orrin Hatch (R-UT), Charles Grassley (R-IA) and Tom Cotton (R-AR) requested that the U.S. Government Accountability Office (GAO) evaluate the performance of the FDA’s Office of Orphan Products Development (OOPD) and to identify “any regulatory or legislative changes may be needed in order to preserve the intent of this vital law.” Later in 2017, the new FDA Commissioner urged Congress to implement two new ODA requirements in order to curb abuses of the ODA. REPORT OF THE BOARD OF TRUSTEES

B of T Report 17-A-19

Subject: Ban on Medicare Advantage “No Cause” Network Terminations

Presented by: Jack Resneck, Jr., MD, Chair

Referred to: Reference Committee B
(Charles Rothberg, MD, Chair)

INTRODUCTION

At the 2018 Annual Meeting, the House of Delegates (HOD) adopted Policy D-285.961, “Ban on Medicare Advantage ‘No Cause’ Network Terminations,” with a progress report back at the 2019 Annual Meeting. This policy asks that:

Our American Medical Association (AMA) develop a set of reform proposals addressing the way that Medicare Advantage plans develop and modify their physician networks with the aim of improving the stability of networks, the ability of patients to obtain needed primary and specialty care from in-network physicians, physician satisfaction, and communication with patients about network access with report back to the House of Delegates at the 2019 Annual Meeting.

This report provides background on the issues involved in Medicare Advantage (MA) physician networks and concerns that physicians have raised about the ways that plans form and manage these networks, as well as their communications with patients about their networks. The report recommends that the AMA adopt a set of reform proposals and advocate their adoption. The HOD also reaffirmed existing AMA Policies D-285.998, “Creation of Joint AMA Committee with Representatives from the America's Health Insurance Plans,” which it further strengthened, Policy H-285.908, “Network Adequacy,” and Policy H-285.991, “Qualifications and Credentialing of Physicians Involved in Managed Care,” which directly dealt with termination issues as part of the overall action and consideration of this whole issue.

BACKGROUND

MA plans are health insurance plans offered to people with Medicare by private companies that contract with the Medicare program. MA plans must provide all Medicare Parts A and B benefits, they may provide Part D prescription drug coverage, and they often offer extra benefits that traditional Medicare does not cover, such as vision, hearing and dental care coverage. In 2018, over 20 million Medicare beneficiaries, or 34 percent, were enrolled in MA. The Congressional Budget Office estimates that MA enrollment will continue expanding its market share with MA plans projected to include about 42 percent of beneficiaries by 2028.1

There are relatively few insurers in the MA market, with most MA enrollees in plans operated by UnitedHealthcare, Humana, or BCBS affiliates.2 On average, seniors have a choice of 21 plans,3 with up to 40 in some large metropolitan areas and fewer in rural areas.
Narrow Networks

Narrow network plans have become increasingly common in private health insurance markets, including MA. Generally, such plans offer enrollees a narrow set of physicians and hospitals in a geographic area in exchange for lower premiums. Traditional Medicare allows seniors to access any physician or hospital that accepts Medicare patients, but MA access is limited to physicians and hospitals within plan networks. More than one in three MA enrollees are in a narrow physician network, which is defined as less than 30 percent of physicians in the county participating in the plan. Another 43 percent of enrollees are in medium networks, defined as 30 to 69 percent of physicians in the county participating. On average, MA networks include less than half of all physicians in a given county.

Narrow networks give insurers greater leverage to negotiate physician payment rates and to select those providers that the insurer believes deliver high quality of care. However, MA plans state that, because they already pay providers at or near Medicare fee schedule rates, negotiating lower payment rates is not a significant consideration. Instead, they achieve lower total costs by focusing on utilization.

The AMA and other physician groups have raised concerns that narrow physician networks create challenges for patients seeking care and pose potential patient protection issues. Specifically, a narrow network might have shortages of specific specialties, and plans may purposefully understaff specialties to avoid attracting enrollees with expensive pre-existing conditions like cancer and mental illness. Access to psychiatrists is more restricted than other specialties. On average, only 23 percent of psychiatrists in a county participate in MA plans, and 36 percent of plans include less than 10 percent of psychiatrists in their county. Limited access to specialists extends beyond psychiatry to cardiothoracic surgeons, neurosurgeons, radiation oncologists, and others.

Star Ratings

Star ratings are a key reason for forming narrow networks. MA plans’ star ratings affect payment and enrollment, and higher star ratings help increase plan revenues. Plans with high star ratings receive bonuses to their benchmarks and payments from the Centers for Medicare & Medicaid Services (CMS). Total bonuses paid to MA plans have more than doubled over the last four years from $3 billion to $6.3 billion, due to increases in MA enrollment and in the number of plans receiving bonuses. Importantly, MA plans with five-star ratings can enroll beneficiaries at any time throughout the year, not simply during open enrollment or initial eligibility, which is a competitive advantage.

MA plans rely on physicians to achieve their high star ratings by delivering services such as screening tests and vaccines, managing chronic conditions, and cooperating with the plan. Because plans have broad authority to exclude physicians as long as they meet CMS network adequacy requirements, insurers may form narrow networks around already high-performing physicians that have proven track records of quality and utilization management. CMS data show that five-star ratings have been achieved only by vertically integrated and provider-led narrow networks.

Insurers recognize that risk adjustment is another critical component of star ratings. Narrow networks can limit the number of physicians that plans need to coordinate with and educate about diagnosis coding for risk adjustment, which increases plan revenues by increasing the apparent severity of patient conditions compared to traditional Medicare.
DISCUSSION

To improve the way that MA plans develop and modify their physician networks, the Board offers several policy proposals focused on network directory accuracy, network adequacy, network stability, communications with patients, and establishment of an external advisory group to better inform CMS regarding MA network issues.

Enhance CMS Efforts to Ensure Directory Accuracy

MA plans are required to maintain accurate provider directories on a real-time basis, but they are currently only required to submit provider directories to CMS when the plan first begins operations in an area, and then every three years unless CMS requests a review based on significant terminations of contracts or complaints. Since CMS has begun conducting triennial reviews of directories, it has found significant inaccuracies, which justifies more frequent reviews and more significant penalties. MA plans could reduce the administrative burden on themselves and on physicians if they would use a common system for updating provider directory information, such as the AMA/Lexis-Nexis VerifyHCP system.15

The AMA could urge CMS to enhance its efforts to ensure directory accuracy by:

- Requiring MA plans to submit provider directories to CMS every year prior to the Medicare open enrollment period and whenever there is a significant change in the physicians included in the network;
- Auditing directory accuracy more frequently for plans that have had deficiencies;
- Publicly reporting accuracy scores on Medicare Plan Finder;
- Taking enforcement action against plans that fail to maintain complete and accurate directories, or to have a sufficient number of physician practices open and accepting new patients; and
- Offering plans the option of using AMA/Lexis-Nexis VerifyHCP system to update provider directory information.

Ensure That CMS Network Adequacy Standards Provide Adequate Access for Beneficiaries and Support Coordinated Care Delivery

Current standards do not assess the extent to which physicians in the network are willing and able to see new patients or the extent to which patients want to use the physicians in the network. If most plan members are receiving services only from a subset of physicians in the network, that subset may not represent the “true” network that is available to patients. Additionally, CMS has not released or sought public comments on the standards for the Minimum Provider Ratios and Maximum Time/Distance. In addition, current adequacy standards are established separately for each specialty and there is no requirement that physicians who work together must all be included. For example, there is a requirement to include at least one hospital which offers cardiac catheterization services and at least one cardiologist, but there is no requirement that the network cardiologist be able to perform cardiac catheterizations or that the network cardiologist has privileges at the network hospital.

Ensure Lists of Contracted Physicians Are Made More Easily Accessible

Finding out whether a patient’s physicians are in each plan’s network requires going separately to each health plan’s website, finding the directory, and searching it. If a patient receives care from multiple physicians, this requires considerable time and effort. The plans are already required to submit their initial list to CMS in an electronic form that includes the physician’s National Provider
Identifier (NPI), so it should be feasible to not only make the lists downloadable, but also to link the information in the lists to Physician Compare. There is also currently no simple way for a physician to determine whether they are being accurately reported as in-network by the plans with which they currently contract and as out-of-network by other plans. A physician could use a Physician Compare linkage to find which plans say they have contracts with the physician.

*Simplify the Process for Beneficiaries to Compare Network Size and Accessibility*

It is difficult for patients to determine which plans will have physicians available nearby if new conditions arise or their existing conditions worsen. It is very difficult to compare plans based on the relative size and specialty structure of their networks.

*Measure the Stability of Networks*

Patients need to know whether they are likely to need to keep changing physicians if they choose a particular plan. There is currently no way to determine if MA plans tend to have the same physicians in-network each year or their networks change significantly from year-to-year.

Physicians have outlined many concerns with the processes that MA plans use to narrow their networks. Plans often send notices to physicians terminating their participation in the network with no explanation, and they do not take steps to ensure that patients can complete their treatment plan and/or find an in-network physician who can take over their care. The lack of explanation for the change, often referred to as “no cause terminations,” also makes it impossible for physicians to successfully challenge plans’ decisions. As transitions in care are where many adverse events occur, a more cautious approach with more active management of the transition process and more emphasis on supporting established physician-patient relationships would be a major improvement.

There is another side to this story, though, and there are also medical practices who see great benefit in the move to narrower networks. Participants in accountable care organizations (ACOs), for example, may find that they have better opportunities to appropriately manage care for patients assigned to the ACO if the network is largely comprised of other ACO-participating practices. Other practices may benefit from having a higher volume of patients insured by a particular MA plan, and may find that they have more leverage to negotiate better terms and conditions with the plan because the plan’s subscribers cannot easily move to a different, out-of-network practice.

The AMA could urge CMS to ensure that network adequacy standards provide adequate access for beneficiaries and support coordinated care delivery by: Requiring plans to report the percentage of the physicians in the network who actually provided services to plan members during the prior year:

- Publishing the research supporting the adequacy of the ratios and distance requirements CMS currently uses to determine network adequacy;
- Conducting a study of the extent to which networks maintain or disrupt teams of physicians and hospitals that work together; and
- Evaluating alternative/additional measures of adequacy.

*CMS Needs to Develop an Effective Communication Plan*

CMS should create a plan to effectively communicate with patients about network access and any changes to the network that may directly or indirectly impact patients. Additionally, CMS should update the Medicare Plan Finder Website to ensure the website is user-centered.
Oscar Health Care is a New York-based health insurance company focused on delivering care through telemedicine, health care focused technological interfaces, and transparent claims pricing systems.16 Recently, the America’s Health Insurance Plans (AHIP) highlighted “How Oscar Guides Its Members Through the Health System,” noting the ease with which users can enroll. Members can sign-up for health insurance in under 10 minutes using the Oscar-created platform (as opposed to brokers or exchanges), which showed a 30 percent increased probability of matching with a plan that optimizes for expected behavior. In an interview with the Oscar Health Care Head of Product, Eddie Segal noted that in building the online platform the company prioritized simplicity, incremental navigation, information reduction, and informed, data-driven design.

User-centered design is an iterative process in which architects of said technology or platform focus on the users and their needs, in each phase of the design process. User-centered design requires the involvement of applicable users throughout this process via a variety of research and design techniques in order to create highly usable and accessible products.

The need for user-centered design has become increasingly important, as more health care professionals and patients are exposed to, rely on, and operate within electronic platforms for information related to treatment and diagnosis, disease management, prescription drug coverage, health insurance, and general health care delivery. In 2006, 80 percent of internet users, or approximately 93 million Americans, searched for a health-related topic online, with 25 percent of that population seeking information regarding health insurance – although that number has likely increased significantly during the past 13 years.17 Of note, between 2000 and 2013, internet and technology usage among seniors rose from 14 to nearly 60 percent.18

Medicare patients continue to report frustration and difficulty comparing plans (both fee-for-service and MA) using the “Medicare Compare” tool. They avoid switching plans due to the complexity surrounding initial set-up and voice concern in accessing their preferred physicians and providers.19 Further interrogation of the Medicare Plan Finder by the National Council on Aging found that poor plan selection and patient confusion often flows from poorly presented information and outdated, misleading user design.20 Improved and intuitive user-centered design application can enable and empower patients to successfully shop for Medicare plans that meet both clinical need and financial reality.

The AMA could recommend several policy changes to improve communications with patients about MA plan networks. These could include:

- Requiring that MA plans submit their contracted provider list to CMS annually and whenever changes occur;
- Post the lists on the Medicare Plan Finder website;
- Linking the provider lists to Physician Compare so that a patient can first find a physician and then find which health plans contract with that physician;
- Expanding the information for each MA plan on Medicare Plan Finder to include number of contracted physicians in each specialty and county, extent to which networks exceed minimum standards in each specialty and county, and percent of physicians in each specialty and county who participate in Medicare that are included in the plan’s network;
- Measuring and reporting on the stability of networks; and
- Urging CMS to develop a plan to effectively communicate with patients about network access and any changes to MA networks that may directly or indirectly impact patients.
Finally, CMS should initiate a Network Adequacy Task Force to meet twice a year with relevant stakeholders, including practicing physicians, trade associations and specialty societies, to both review current policy and develop new policies to address network adequacy issues.

- The American Medical Association could urge Centers for Medicare & Medicaid Services to create a network adequacy task force in order to obtain ongoing input from physicians on needed improvements.

RECOMMENDATIONS

The Board of Trustees recommends that the following recommendations be adopted and that the remainder of the report be filed:

1. That our American Medical Association (AMA) urge Centers for Medicare & Medicaid Services (CMS) to further enhance the agency’s efforts to ensure directory accuracy by:
   a. Requiring MA plans to submit provider directories to CMS every year prior to the Medicare open enrollment period and whenever there is a significant change in the physicians included in the network.
   b. Conducting accuracy reviews on provider directories more frequently for plans that have had deficiencies.
   c. Publicly reporting the most recent accuracy score for each plan on Medicare Plan Finder.
   d. Indicating to plans that failure to maintain complete and accurate directories, as well as failure to have a sufficient number of physician practices open and accepting new patients, may subject the MA plans to one of the following: 1. civil monetary penalties; 2. enrollment sanctions; or 3. incorporating the accuracy score into the Stars rating for each plan.
   e. Offering plans the option of using AMA/Lexis-Nexis VerifyHCP system to update provider directory information. (Directive to Take Action)

2. That our AMA urge CMS to ensure that network adequacy standards provide adequate access for beneficiaries and support coordinated care delivery by:
   a. Requiring plans to report the percentage of the physicians in the network who actually provided services to plan members during the prior year.
   b. Publishing the research supporting the adequacy of the ratios and distance requirements CMS currently uses to determine network adequacy.
   c. Conducting a study of the extent to which networks maintain or disrupt teams of physicians and hospitals that work together.
   d. Evaluating alternative/additional measures of adequacy. (Directive to Take Action)

3. That our AMA urge CMS to ensure lists of contracted physicians are made more easily accessible by:
   a. Requiring that MA plans submit their contracted provider list to CMS annually and whenever changes occur, and post the lists on the Medicare Plan Finder website in both a web-friendly and downloadable spreadsheet form. (Directive to Take Action)
   b. Linking the provider lists to Physician Compare so that a patient can first find a physician and then find which health plans contract with that physician. That our AMA urge CMS to
simplify the process for beneficiaries to compare network size and accessibility by expanding the information for each MA plan on Medicare Plan Finder to include: A. the number of contracted physicians in each specialty and county; B. the extent to which a plan's network exceeds minimum standards in each specialty and county; and C. the percentage of the physicians in each specialty and county participating in Medicare who are included in the plan’s network. (Directive to Take Action)

4. That our AMA urge CMS to measure the stability of networks by calculating the percentage change in the physicians in each specialty in an MA plan’s network compared to the previous year and over several years and post that information on Plan Finder. (Directive to Take Action)

5. That our AMA urge CMS to develop a marketing/communication plan to effectively communicate with patients about network access and any changes to the network that may directly or indirectly impact patients; including updating the Medicare Plan Finder website. (Directive to Take Action)

6. That our AMA urge CMS to develop process improvements for recurring input from in-network physicians regarding network policies by creating a network adequacy task force. (Directive to Take Action)

7. That our AMA rescind Policy D-285.961, which directed the AMA to conduct the study herein. (Rescind AMA Policy)

Fiscal Note: Less than $3,500.

REPORT OF THE BOARD OF TRUSTEES

B of T Report 18-A-19

Subject: Increased Use of Body-Worn Cameras by Law Enforcement Officers  
(Resolution 208-I-17)

Presented by: Jack Resneck, Jr., MD, Chair

Referred to: Reference Committee B  
(Charles Rothberg, MD, Chair)

---------------------------------------------------------------------------------------------------------------

INTRODUCTION

At the 2018 Interim Meeting, the American Medical Association (AMA) House of Delegates (HOD) referred Board of Trustees (BOT) Report 4-I-18, “Increased Use of Body-Worn Cameras by Law Enforcement Officers.” The BOT Report 4-I-18 followed referral of Resolution 208-I-17, “Increased Use of Body-Worn Cameras by Law Enforcement Officers,” introduced by the Medical Student Section, which asked:

That our American Medical Association advocate for legislative, administrative, or regulatory measure to expand funding for (1) the purchase of body-worn cameras and (2) training and technical assistance required to implement body-worn camera programs.

The reference committee heard supportive testimony of BOT Report 4-I-18, though many requested further study into issues of confidentiality and privacy when body-worn cameras are taken into patient care areas in health care settings.

This Board report provides background, discussion of body-worn cameras by law enforcement officers, including a discussion of body-worn cameras in health care settings, and a recommendation.

BACKGROUND

Following a number of high-profile incidents involving deadly force used against minorities, law enforcement agencies have increasingly adopted body-worn cameras for their officers. Often affixed to the torso, body-worn cameras are small, wearable audio, video or photographic recording systems that record events in which law enforcement officers are involved. The recordings can be used to demonstrate transparency to the community, to document events and to deter inappropriate, illegal or unethical behavior by both the wearer of the camera and the public.

To date, 34 states and the District of Columbia have enacted laws governing the use of body-worn cameras by law enforcement, though not all law enforcement departments utilize cameras in the same manner.¹ For example, some permit officers to turn off the devices under certain circumstances; others do not. In addition, a 2016 survey of large police departments nationwide found that 95 percent intended to implement or had already implemented a body camera program. According to the survey, 18 percent had fully operational programs.²
The cost to law enforcement entities to implement and maintain a body camera program can be ongoing. Implementing a program requires an initial capital outlay to purchase the technology and ancillary equipment; law enforcement agencies must account for continuing operational costs, such as training on use, data storage, software and staff and operational costs required for reviewing the recordings, redacting as necessary, and providing recordings to courts and the public as appropriate. In Washington, DC, for example, the city spent over $1 million outfitting 2,800 officers and expects operating costs to top $2 million per year.3

In 2015, the U.S. Department of Justice (DOJ) Bureau of Justice Assistance (BJA) awarded $22.5 million in grant assistance to state and local law enforcement departments as part of the Body-Worn Camera Pilot Implementation Program. The Consolidated Appropriations Act, 2018 appropriated $22.5 million for a competitive matching grant program for purchases of body-worn cameras for state, local and tribal law enforcement. The BJA expects to make up to 28 awards for a three-year period, which began on October 1, 2018. State and local funding is also available for body-worn cameras.

DISCUSSION

Predicated on whether the AMA ought to support funding of body camera programs is the question of whether the AMA ought to support the expanded use of body cameras and whether the devices achieve their intended outcomes.

Policing Activity

The underlying theory in support of body-worn cameras is that both officers and members of the community will change their behaviors for the better if their actions are being recorded. Indeed, a large body of research suggests that people act differently when they believe they are being watched. In the context of law enforcement, body-worn cameras are expected to increase self-awareness and thus deter unprofessional, inappropriate and illegal behavior by officers and civilians alike. As law enforcement officers are more likely to use force against minority community members, many hope body-worn cameras will improve policing behavior toward minorities, using force only when warranted and de-escalation tactics have failed.4,5 In cases where law enforcement officers do use force, body-worn cameras offer contemporaneous evidence of the officers’ actions so that improper behavior can be disciplined. Evidence about the impact of cameras on policing activity generally, though not universally, supports this theory.

An early study conducted in the Rialto, California police department found use-of-force incidents declined 58.3 percent over a three-year period after a body camera program was implemented.6 Importantly, researchers later found that use of force rates were higher in the same Rialto, California police force despite the presence of a camera when officers were allowed discretion to turn off cameras.7 Another randomized controlled trial conducted between 2014 and 2015 in the Las Vegas Metropolitan Police Department found that officers wearing body cameras were 12.5 percent less likely to be involved in a use of force incident.8 Similar results were found in Orlando, Florida.9 In contrast, the largest randomized controlled study to date, conducted in 2015 with the Metropolitan Police Department of the District of Columbia, found no statistically significant difference in the rates of police use of force.10

Research has found mixed results about other forms of police activity. In the study conducted in Las Vegas, body camera use was not associated with a change in the number of police-community interactions, but body cameras were associated with a 6.8 percent increase in the number of citations issued and a 5.2 percent increase in the number of events that resulted in an arrest. A 2015
study conducted in Mesa, Arizona found officers wearing a camera were less likely to perform stop-and-frisks and make arrests, but were more likely to give citations and initiate encounters. In Phoenix, Arizona use of body-worn cameras were associated with a 17 percent increase in arrests. However, other studies have found body-worn cameras are associated with slightly lower incidents of arrest.

Community Relations

Changing policing behaviors is not the only way body-worn cameras could provide benefits. Many communities and law enforcement agencies see body cameras as a valuable way to improve policing transparency and community relations. Indeed, in 2015 when DOJ grants were announced, then-US Attorney General Loretta Lynch stated that body-worn cameras hold “tremendous promise for enhancing transparency, promoting accountability, and advancing public safety for law enforcement officers and the communities they serve.” Body cameras are lauded as a way for the public to better understand what transpires between law enforcement officers and civilians. Officers may also view body cameras positively, as recordings demonstrate to the community the difficult and dangerous job required of them.

Few studies have taken a comprehensive look at community attitudes toward police after the introduction of body-worn cameras. One such study conducted by the Urban Institute found that body-worn cameras do improve community members’ satisfaction with police encounters. Another study found that individuals viewed officers as having greater legitimacy, professionalism and satisfaction, but did not find significant differences between citizens’ perceptions of officers depending on whether the officer was wearing a camera.

The evidence is clearer, however, that body-worn cameras are associated with decreased rates of complaints filed against law enforcement officers. For example, one early study found complaints against officers dropped 88 percent following implementation of a body cameras program. In Rialto, California, citizen complaints declined by 60 percent. In the Las Vegas Metropolitan Police, officers wearing body cameras were 14 percent less likely to be the subject of a citizen complaint. In Phoenix, complaints against officers who wore the cameras declined by 23 percent, compared to a 10.6 percent increase among comparison officers. In contrast, research in the District of Columbia found no statistically significant difference in the rates of civilian complaints.

The available evidence does not identify the underlying behavioral changes responsible for the decline in complaint rates, however. It may be that body-worn cameras have the intended effect of changing officer behavior for the better, thus reducing circumstances that warrant citizen complaints. It may be that cameras have a “civilizing” effect on members of the public as well. Some evidence also suggests that frivolous complaints are less likely to be filed when recordings are available.

It is important to note, however, that use of body cameras will not automatically foster greater trust between law enforcement and members of the community and should not be viewed, as one evaluation noted, as a “plug-and-play” solution. Notably, the Urban Institute found body-worn cameras improved community satisfaction to a lesser extent than did procedurally just practices, defined in that study as behaving fairly and acting with empathy.

Privacy Considerations

Though the use of body cameras promises greater transparency of law enforcement behavior and actions, they also present new problems, namely intrusion into the privacy of victims, witnesses
and bystanders. For instance, law enforcement officers frequently enter individuals’ homes and in-home recordings would become part of the public record. Similarly, interactions and conversations with victims and witnesses could make those individuals uncomfortable or put those individuals in danger. Heavily policed communities—often minority communities—will be more heavily recorded.

These privacy concerns could be addressed with policies to limit recording during such encounters and by limiting the circumstances under which recordings are made available to the public. The American Civil Liberties Union (ACLU) recommends use of body cameras with significant privacy protections. Officer privacy may also be a concern. Some law enforcement unions have opposed body-worn cameras, arguing that adoption of the technology must be negotiated as part of the collective bargaining agreement.

This report acknowledges the significant privacy concerns raised by the ubiquitous use of body-worn cameras, but notes that questions about when cameras need to be turned on and off, how long to keep footage, when recordings will be made publicly available and other policy details are beyond the expertise of the AMA.

Privacy considerations in the health care setting

Body-worn cameras present a unique threat to privacy in a health care setting when, for example, law enforcement officers enter facilities to interview victims and witnesses or retrieve evidence. Law enforcement agencies are not covered entities under the Health Information Portability and Accountability Act (HIPAA) and do not have the same obligation to prevent the disclosure of patient health information as do health care providers and facilities. Providers and facilities, on the other hand, do have a legal obligation under HIPAA to prevent against third-party recording of individually identifiable health information (e.g., patients’ faces).

Few states regulate body-worn camera recordings of medical treatment and the preservation of privacy depends instead on cooperation between law enforcement and health care providers. According to the Leadership Conference on Civil and Human Rights, which created a scorecard of body-worn camera policies across the country, many law enforcement agencies have developed policies and procedures which generally prohibit recordings in health care settings except under certain circumstances. Such policies vary considerably in scope and specificity.

Even when privacy laws and regulations are not implicated, the patient-physician relationship is foremost based on trust and the presence of cameras may interfere with honest communication between a physician and patient, particularly when treatment involves sensitive matters such as sexual activity, substance use and mental health. Policies must ensure that recordings are not permitted when they may interfere in the patient-physician relationship, including during clinical interviews, evaluations and treatments.

Nexus with the AMA’s Mission

The AMA does not have policy specifically addressing the use of body-worn cameras among law enforcement. During the debate over Resolution 208 during the 2017 Interim Meeting, the reference committee heard testimony questioning whether this topic is within the scope of the AMA’s expertise. This concern is reasonable, as AMA has not historically delved into issues of policing and significant resources would be required to bring the AMA into the public policy debates surrounding community policing efforts. Further, while there are dozens of organizations (the Police Executive Research Forum, Leadership Conference on Civil and Human Rights, ACLU,
etc.) that are actively engaged on this issue, it does not appear that any other major medical
associations have emerged as significant stakeholders.

Nevertheless, there is a connection between health and police activity, particularly in terms of
minority fatality rates. Research has demonstrated that minority communities are disproportionately
subject to police force. Specifically, according to an analysis of FBI statistics, African-Americans
account for 31 percent of police-involved shootings, but comprise 13 percent of the U.S.
population. African-American males are particularly at risk. According to another analysis,
African-American males are three times more likely to be killed by police than non-Hispanic white
males. Research has also shown a correlation between policing and other health outcomes. In particular, a
recent study found that police killings of unarmed African-Americans were associated with
1.7 days of poor mental health annually among African-Americans. The findings were seen
regardless of whether the individual affected had a personal relationship with the victim or whether
the incident was experienced vicariously. In addition, the numbers of police stops, coupled with the
level of invasiveness during police encounters, is associated with increased levels of stress and
anxiety. African-American men report more anxiety and post-traumatic stress disorder and
more morbidity from these psychiatric conditions than Caucasian men. In addition, research of
data from the New York Police Department revealed that residents in neighborhoods with higher
rates of stop-and-frisks were more likely to be in poor health, measured in terms of high blood
pressure, diabetes, asthma and self-rated health. Research on the correlation between health and
policing, however, remains sparse and warrants further research.

RELEVANT AMA POLICIES

Existing AMA policy does not address the use or funding of body-worn cameras. However, AMA
policy does state that physical or verbal violence between law enforcement officers and the public,
particularly within ethnic and racial minority communities, is a social determinant of health and
supports research into the public health effects of violent interactions (Policy H-515.955). In
addition, Policy H-350.971 instructs the AMA to establish a mechanism to facilitate the
development and implementation of a comprehensive, long-range, coordinated strategy to address
issues and concerns affecting minorities, including minority health.

Policy adopted during the 2018 Annual Meeting encourages states to require the reporting of legal
intervention deaths and law enforcement officer homicides to public health agencies. New policy
also encourages appropriate stakeholders, including law enforcement and public health
communities, to define “serious injuries” for the purpose of systematically collecting data on law
enforcement-related non-fatal injuries among civilians and officers.

Additionally, Policy H-145.977 cautions against excessive use of conducted electrical devices
(often called Tasers) and recommends that law enforcement departments and agencies should have
in place specific guidelines, rigorous training and an accountability system for the use of conducted
electrical devices. AMA policy recommends research into the health impacts of conducted
electrical device use and development of a standardized protocol developed with the input of the
medical community for the evaluation, management and post-exposure monitoring of subjects
exposed to conducted electrical devices.
RECOMMENDATIONS

The Board recommends that the following be adopted in lieu of Resolution 208-I-17, and that the remainder of the report be filed.

1. That our American Medical Association (AMA) work with interested state and national medical specialty societies to support state legislation and/or regulation addressing implementation of body-worn camera programs for law enforcement officers, including funding for the purchase body-worn cameras, training for officers and technical assistance for law enforcement agencies. (Directive to Take Action);

2. That our AMA continue to monitor privacy issues raised by body-worn cameras in health care settings. (Directive to Take Action); and

3. That our AMA recommend that law enforcement policies governing the use of body-worn cameras in health care settings be developed and evaluated with input from the medical community and not interfere with the patient-physician relationship. (Directive to Take Action)

Fiscal Note: Less than $5,000

Subject: FDA Conflict of Interest (Resolution 216-A-18)

Presented by: Jack Resneck, Jr., MD, Chair

Referred to: Reference Committee B (Charles Rothberg, MD, Chair)

At the 2018 Annual Meeting of the House of Delegates (HOD), Resolution 216-A-18, “[Food and Drug Administration] FDA Conflict of Interest,” was referred for report back at the 2019 Annual Meeting. Resolution 216-A-18, sponsored by the Medical Student Section, asked that:

Our American Medical Association (AMA) advocate (1) that the Food and Drug Administration ([FDA]) place a greater emphasis on a candidate’s conflict of interest when selecting members for advisory committees (New HOD Policy); and (2) for a reduction in conflict of interest waivers granted to Advisory Committee candidates.

There was mixed testimony on Resolution 216 during the reference committee. Testimony was offered that disclosure and transparency into conflicts of interest (COI) are important, but on the other hand challenges may exist to find qualified individuals without COIs. Others offered that the FDA should utilize generally accepted COI policies and should limit waivers of such policies for advisory committees.

FDA AND THE ROLE OF ADVISORY COMMITTEES

The FDA utilizes advisory committees to obtain independent expert advice and recommendations on scientific, technical, and policy matters related to FDA-regulated products. There are 50 advisory committees and panels. The recommendations of advisory committees do not bind the FDA. Although the advisory committees include permanent non-voting members who are FDA employees (typically responsible for administering the meetings), the majority are external experts who are considered special government employees (SGEs) while performing their advisory committee duties. The advisory committees cover a range of products.

The FDA’s advisory committees are governed by several federal laws and regulations that: (1) establish standards for convening advisory committees; (2) specify criteria for what constitutes a COI; and (3) outline the requirements for disclosing, assessing, and managing COIs. In addition, the FDA has issued guidance documents interpreting government-wide regulations pertaining to the appearance of COIs as well as guidance related to the public availability of advisor COI disclosures and associated FDA waivers. For the most part, the federal laws, regulations, and guidance are generally the same whether a committee advisor is a permanent federal employee or SGE with some exceptions as outlined below. For over a decade, the FDA and Congress have implemented reforms to the FDA’s process for assessing COIs, managing COIs including waivers, and public disclosure. Members of the FDA’s advisory committees are subject to Federal COI laws (18 USC section 208) as well as government-wide standards of ethical conduct regulations.
(5 CFR section 2635.502). Even where a member has no financial interests that would require the member to refrain from participating in an advisory committee meeting (“recuse”) under Federal COI laws, the member may be disqualified from participation under the government-wide Federal regulation at 5 CFR section 2635.502 if the member has interests or relationships that may create the appearance that the member lacks impartiality on the issue before the advisory committee.

As specified in federal law, the FDA has a process for determining whether to grant a waiver for an advisory committee member with an actual financial COI. The FDA also has guidance outlining how the Agency evaluates whether an advisory committee member has potentially disqualifying interests or relationships that fall into the second category of interests: appearance of a COI. (In this latter case, the regulations provide that an authorization to participate would be issued as opposed to issuance of a waiver.) In both cases, the decision to permit voting, permit participation, or recusal will be made by the FDA.

PROHIBITION AGAINST FINANCIAL COI

Unless granted a waiver, a federal employee may not “personally and substantially participate” in an official capacity in any particular matter which, to the employee’s knowledge, the employee or a related person or organization (whose interests are imputed to the employee under 18 U.S.C. section 208) has a “financial interest” if the particular matter will have a “direct and predictable effect” on that interest (5 CFR section 2640.103(a)). In this analysis, federal employees includes FDA advisory committee members who are considered SGEs. A financial interest is defined as the potential for gain or loss as a result of governmental action on the particular matter which includes stock options, a salary, job offer, indebtedness, and similar interests (5 CFR section 2640.103(b)). Under this law, the financial interests of other, related persons and organizations (as defined in law and statute) are imputed to the employee and may disqualify an employee to the same extent as the employee’s own interests. Under the law, a COI arises when the employee participates in an official matter and there is a direct and predictable link between the matters in which the federal employee participates and the employee’s financial interests. The link cannot be contingent and dependent on other events.

Process for Reviewing Financial COIs and Granting Waivers

The FDA reviews financial COI disclosures made by potential advisory committee members and the member’s expertise with respect to the specific product or policy to be evaluated at a particular meeting. Each adviser is required to certify to the truth and completeness of any information provided. The Agency can issue a waiver to permit participation despite a current conflict or one that ended during the 12 months preceding a meeting consistent with applicable law. The FDA is required by law to apply different standards to SGEs (who constitute the majority of advisory committee members) and permanent government employees in order to determine if an applicable standard for granting a waiver pursuant to 18 USC section 208 is met.

If the individual is a SGE, the FDA’s “determination must be based on a certification that the need for the [SGE’s] ... services outweighs the potential for a conflict of interest created by the financial interest involved,” (5 CFR section 2640.302). The FDA considers a number of factors, including the type of interest that is creating the disqualification, the relationship of the person whose financial interest is involved to the SGE, the uniqueness of the SGE’s qualifications, the difficulty of locating a similarly qualified individual without a disqualifying financial interest, the dollar value of the disqualifying financial interest, and the extent to which the disqualifying financial interest could be affected by the actions of the advisory committee. If the individual is a permanent government employee, the FDA determines whether the member’s financial interest is
not so substantial as to be deemed likely to affect the integrity of the services provided by that
individual. In making this determination, the FDA considers a number of factors, including the type
of financial interest that is creating the disqualification, the relationship of the person whose
financial interest is involved to the member, the dollar value of the disqualifying financial interest,
the nature and importance of the employee’s role in the matter, and the need for the employee’s
services in the particular matter.7 FDA guidance provides that a common factor to be considered
for both categories of advisory committee members is the “need” for the individual’s services. In
deciding whether there is a need, the FDA will consider: (1) the uniqueness of the member’s
qualifications; (2) the difficulty locating similarly qualified individuals without a disqualifying
financial interest; (3) the value and utility of the member’s expertise to the matter being addressed
by the committee; and, (4) the nature and extent of the disqualifying financial interest.

In addition, the FDA must apply one more standard to members serving on drug or biologic
advisory committees that provide scientific advice and recommendations regarding a clinical
investigation or marketing approval. For these members, the standard for a waiver to permit voting
is whether a waiver is “necessary” to afford the committee “essential expertise.”8 Where a financial
COI exists, the FDA determines whether the member may: (1) participate as a non-voting member,
or (2) not participate in the advisory committee.9 Individuals with financial COIs are not permitted
to vote as a matter of FDA policy. A waiver may not be granted when the member’s own scientific
work is involved.10

The Food and Drug Administration Amendments Act of 2007 included a provision capping the
number of COI waivers the FDA could grant in any given year. Subsequently, this cap was
rescinded in the Food and Drug Administration Safety and Innovation Act of 2012.11 A recent
analysis of FDA COI waivers found that in fiscal year (FY) 2012, the waiver rate did not exceed
one percent and this was less than in earlier years.12 Additionally, the FDA reports COI waiver rates of less than one percent for FYs 2013, 2014, 2015, and 2016 on its online FDA-TRACK Advisory Committees Dashboard.13

Public Disclosure

The FDA publicly discloses14 on the Agency’s website the type, nature, and magnitude of the
financial interests of each advisory committee member who has received a waiver under 18 U.S.C.
section 208. The FDA also provides the reasons for granting each waiver prior to the advisory
committee meeting,15 including, as appropriate, the public health interest in having the expertise of
the member with respect to the particular matter.16

APPEARANCE OF A CONFLICT OF INTEREST – PERSONAL AND BUSINESS
RELATIONSHIPS

Federal law also contains provisions to help ensure that an employee takes appropriate steps to
avoid an appearance of loss of impartiality in the performance of his or her official duties. Under 5
CFR section 2635.502 where an agency employee (including FDA advisory committee members),
“knows that a particular matter involving specific parties is likely to have a direct and predictable
effect on the financial interest of a member” of the employee’s household, or knows that a person
with whom the employee has a “covered relationship is or represents a party to such matter,” and
“where the employee determines that the circumstances would cause a reasonable person with
knowledge of the relevant facts” to question the employee’s impartiality in the matter, the
employee should not participate in the matter unless the employee has informed the agency
designee of the appearance problem and received authorization from the agency designee. An
employee has a “covered relationship” with:
Granting a Section 502 Authorization

If the FDA concludes that an appearance issue exists, a determination is made whether the Agency’s interest in the member’s participation outweighs the concern that a reasonable person may question the integrity of the Agency’s programs and operations. If so, the FDA may grant an authorization (i.e., a waiver) before the meeting to allow the member to participate. The FDA may limit authorization or deny authorization. The Agency takes into consideration a number of factors including, but not limited to: (1) the nature of the relationship involved; (2) the effect that resolution of the matter would have upon the financial interests of the person involved in the relationship; (3) the nature and importance of the member’s role in the matter, including the extent to which the member is called upon to exercise discretion in the matter; (4) the sensitivity of the matter; (5) the difficulty of reassigning the matter to another expert; and (6) adjustments that may be made in the member’s duties that would reduce or eliminate the likelihood that a reasonable person would question her impartiality.

RESEARCH ON COI AND FDA ADVISORY COMMITTEE RECOMMENDATIONS

Despite long-standing federal laws governing COIs and waivers applicable to FDA advisory committee members, there have remained persistent concerns in the general public that waivers of COIs negatively impact the trustworthiness and independence of advisory committee recommendations. However, the research and investigations into this matter have produced mixed results. In a 2014 study of FDA advisory committee member COIs, a researcher found that, where an advisory committee member had an exclusive financial relationship with the manufacturer (referred to as a sponsor) of the product under review, the member appeared to be biased in support of the product sponsor. No similar bias was found where members had financial ties to both a sponsor and its competitors. The study author noted that “[t]hese findings point to important heterogeneities in financial ties and suggest that policymakers will need to be nuanced in their management of financial relationships of FDA advisory committee members.” In another study, the researchers found little significant evidence that advisory committee members vote in their financial interests. The authors also found that the perverse exclusion of “financially-conflicted members resulted in a sharp drop in average member expertise, and an unintended increase in approval voting.” The study authors concluded that “[e]liminating conflicts could sharply reduce the level of expertise of the decision makers and lead to unexpected voting tendencies.” More recently, an investigation of FDA advisory committee members COIs has called into question: (1) the completeness of COI disclosures submitted by members; (2) whether the FDA does enough to verify the completeness and accuracy of such disclosures; and (3) whether past or current COI assessments are inadequate as pay-later COIs may play a more significant role in influencing a member’s deliberations and vote. Specifically, a 2018 investigation found that, at the time of or in
the year leading up to the advisory committee meetings under scrutiny, many of the members received payments or other financial support from the sponsoring drug firm or key competitors for consulting, travel, lectures, or research. The investigators concluded that the FDA did not publicly disclose those ties even though this information was disclosed in scholarly journals. In the same investigation, a review was undertaken of compensation records from drug sponsors to advisory committee members who advised the FDA on whether to approve psychopharmacologic, arthritis, and cardiac or renal drugs between 2008 and 2014. The investigators concluded that there were “widespread after-the-fact payments or research support to panel members.” As correctly noted by the investigators: “[t]he agency’s safeguards against potential conflicts of interest are not designed to prevent such future financial ties.”

AMA POLICY

The AMA has policy addressing COIs applicable to FDA advisory committees (Policy H-100.992, “FDA”) as well as ethics policy concerning COIs in the areas of research (Ethics Opinion 7.1.4/AMA Principles of Medical Ethics: II, IV, V, “Conflicts of Interest in Research”) and clinical practice guidelines (Policy H-410.953, “Ethical Considerations in the Development of Clinical Practice Guidelines”).

DISCUSSION

The resolved clauses in Resolution 216 would have the AMA adopt policy that specifies that the FDA should place a greater emphasis on advisory committee member COIs and seek a further reduction in the number of COI waivers granted by the FDA. While there is widespread consensus that COI policies are appropriate and necessary along with a measured approach to granting COI waivers for FDA advisory committee members, there is also concern that an overzealous approach to waivers will undermine the actual or perceived quality of advisory committee recommendations. The FDA has reduced the number of waivers granted, but there are conflicting reports with regard to the magnitude of the challenge the Agency faces filling advisory committee vacancies. For example, one article reported that in FY 2017, “218 advisory committee positions of the 600-plus on the FDA’s 49 advisory committees had not been filled.” Yet, data disclosed by FDA indicates that in FY 2017 there were 64 vacancies out of 564 and in FY 2018 there were 57 total vacancies out of 547 members. A 10 percent vacancy is substantially lower than a nearly 50 percent vacancy. Nonetheless, the COI waiver rate has remained consistently below one percent. Lowering this percentage further is reasonably likely to increase vacancies which are hovering at 10 percent.

Existing AMA ethics policy provides a clear set of parameters concerning COIs and waivers regarding clinical practice guidelines development and clinical research that should be utilized to expand upon AMA policy concerning FDA advisory committee member COIs and waivers. Our current AMA policy related to advisory committee members provides that a FDA decision to approve a new drug, to withdraw a drug’s approval, or to change the indications for use of a drug must be based on sound scientific and medical evidence derived from controlled trials and/or postmarket incident reports as provided by statute and evidence of such should be evaluated by the FDA, in consultation with its advisory committees (Policy H-100.992, “FDA”). The policy also provides that the FDA should not let COIs overrule scientific evidence in making policy decisions. Building on the above policy, our AMA has ethics policy noting how minimizing and mitigating COIs in clinical research is imperative to justify and maintain trust in the medical research community (7.1.4, “Conflicts of Interest in Research”). This is equally true for FDA advisory committee member recommendations. This same policy provides that physicians who engage in research should disclose material ties to companies whose products they are investigating or other ties that create real or perceived COIs. Similarly, AMA ethics policy concerning clinical practice
guidelines provides that patients, the public, physicians, and other stakeholders must have
confidence that published guidelines are the ethically and scientifically credible product of
development processes that are rigorous, independent, transparent, and accountable (Policy
H-410.953, “Ethical Considerations in the Development of Clinical Practice Guidelines”). Notably,
while Policy H-410.953 specifies that published guidelines/updates are to be developed
independent of direct financial support from entities that have an interest in the recommendations,
it does specify consideration for COIs (actual and perceived) for individuals associated in the
development of the guidelines. The policy states: “ideally, all individuals associated with guideline
development will be free of conflicts of interest during the development process and will remain so
for a defined period following the publication of the guideline.” In order to ensure credibility, our
AMA policy provides that:

formal procedures would be adopted to minimize the potential for financial or other interests to
influence the process at all key steps (selection of topic, review of evidence, panel
deliberations, development and approval of specific recommendations, and dissemination of
final product). These should include: a) required disclosure of all potential conflicts of interest
by panel members, consultants, staff, and other participants; b) clearly defined criteria for
identifying and assessing the seriousness of conflicts of interest; and c) clearly defined
strategies for eliminating or mitigating the influence of identified conflicts of interest (such as
prohibiting individuals from participating in deliberations, drafting, or voting on
recommendations on which they have conflicts) in those limited circumstances when
participation by an individual with a conflicting interest cannot be avoided.

Finally, the policy provides for a clear statement of methodology, COI policy and procedures, and
disclosures of panel members’ COIs. Extending the foregoing policies to FDA advisory committee
member COIs and waivers will underscore the importance of existing FDA laws, regulations, and
policies. However, the policy does not address concerns that advisory committee members may not
be fully disclosing conflicts and independent targeted auditing for sufficiency may be warranted. In
addition, existing policy does not address the impact of pay-later COIs (e.g., where a FDA advisory
committee member develops a financial COI only after his or her initial appointment on the
advisory committee has expired). Since there is limited research on the topic, this is important area
for the FDA and researchers to more fully evaluate and craft appropriate policy.

RECOMMENDATION

In light of these considerations, your Board of Trustees recommends that the following be adopted
in lieu of Resolution 216-A-18 and the remainder of this report be filed:

1. That our AMA reaffirm Policy H-100.992, “FDA,” which supports that FDA conflicts of
   interest should not overrule scientific evidence in making policy decisions and the FDA should
   include clinical experts on advisory committees. (Reaffirm HOD Policy)

2. That our AMA adopt the following new policy:

   It is the position of the American Medical Association that decisions of the Food and Drug
   Administration (FDA) must be trustworthy. Patients, the public, physicians, other health care
   professionals and health administrators, and policymakers must have confidence that FDA
decisions and the recommendations of FDA advisory committees are ethically and
scientifically credible and derived through a process that is rigorous, independent, transparent,
and accountable. Rigorous policies and procedures should be in place to minimize the potential
for financial or other interests to influence the process at all key steps. These should include,
but not necessarily be limited to: a) required disclosure of all relevant actual or potential
conflicts of interest, both financial and personal; b) a mechanism to independently audit
disclosures when warranted; c) clearly defined criteria for identifying and assessing the
magnitude and materiality of conflicts of interest; and d) clearly defined processes for
preventing or terminating the participation of a conflicted member, and mitigating the
influence of identified conflicts of interest (such as prohibiting individuals from participating in
deliberations, drafting, or voting on recommendations on which they have conflicts) in those
limited circumstances when an individual’s participation cannot be terminated due to the
individual’s unique or rare skillset or background that is deemed highly valuable to the process.
Further, clear statements of COI policy and procedures, and disclosures of FDA advisory
committee members’ conflicts of interest relating to specific recommendations, should be
published or otherwise made public. Finally, it is recognized that, to the extent feasible in
accordance with the principles stated above, participation on advisory committees should be
facilitated through appropriate balancing of the relative scarcity or uniqueness of an
individual’s expertise and ability to contribute to the process, on the one hand, as compared to
the feasibility and effectiveness of mitigation measures including those noted above. (New
HOD Policy)

3. That our AMA adopt the following new policy:

It is the position of the American Medical Association that the FDA should undertake an
evaluation of pay-later conflicts of interest (e.g., where a FDA advisory committee member
develops a financial conflict of interest only after his or her initial appointment on the advisory
committee has expired) to assess whether these undermine the independence of advisory
committee member recommendations and whether policies should be adopted to address this
issue. (New HOD Policy)

APPENDIX: RELEVANT AMA POLICY

Policy H-100.992, “FDA”

(1) Our AMA reaffirms its support for the principles that: (a) an FDA decision to approve a new drug, to withdraw a drug’s approval, or to change the indications for use of a drug must be based on sound scientific and medical evidence derived from controlled trials and/or postmarket incident reports as provided by statute; (b) this evidence should be evaluated by the FDA, in consultation with its Advisory Committees and expert extramural advisory bodies; and (c) any risk/benefit analysis or relative safety or efficacy judgments should not be grounds for limiting access to or indications for use of a drug unless the weight of the evidence from clinical trials and postmarket reports shows that the drug is unsafe and/or ineffective for its labeled indications.

(2) The AMA believes that social and economic concerns and disputes per se should not be permitted to play a significant part in the FDA’s decision-making process in the course of FDA devising either general or product specific drug regulation.

(3) It is the position of our AMA that the Food and Drug Administration should not permit political considerations or conflicts of interest to overrule scientific evidence in making policy decisions; and our AMA urges the current administration and all future administrations to consider our best and brightest scientists for positions on advisory committees and councils regardless of their political affiliation and voting history.

7.1.4 Conflicts of Interest in Research

Increasing numbers of physicians, both within and outside academic health centers, are becoming involved in partnerships with industry to conduct biomedical and health research. As they do so, physicians must be mindful of the conflicts such engagement poses to the integrity of the research and the welfare of human participants. In addition to financial conflicts of interest created by
incentives to conduct trials and recruit subjects, physicians must be sensitive to the differing roles of clinician and investigator, which may require them to balance dual commitments to participants and science. This conflict of commitment is particularly acute when a physician-investigator has treated or continues to treat a patient who is eligible to enroll as a participant in a clinical trial the physician is conducting.

Minimizing and mitigating conflicts of interest in clinical research is imperative if the medical community is to justify and maintain trust in the medical research community.

Physicians who engage in research should:

(a) Decline financial compensation that awards in excess of the physician’s research efforts and does not reflect fair market value. Physicians should not accept payment solely for referring patients to research studies.

(b) Ensure that the research protocol includes provision for funding participants’ medical care in the event of complications associated with the research. A physician should not double-bill a third-party payer for additional expenses related to conducting the trial if he or she has already received funds from a sponsor for those expenses.

(c) As part of the informed consent process, disclose to prospective participants the nature and source of funding and financial incentives offered to the investigators. This disclosure should be included in any written consent materials.

(d) Avoid engaging in any research where there is an understanding that limitations can be placed on the presentation or publication of results by the research sponsor.

(e) Refrain from knowingly participating in a financial relationship with a commercial entity with whom they have a research relationship until the research relationship ends and the research results have been published or otherwise disseminated to the public.

(f) Disclose material ties to companies whose products they are investigating or other ties that create real or perceived conflicts of interest to:

(i) institutions where the research will be carried out;
(ii) organizations that are funding the research;
(iii) any journal or publication where the research results are being submitted.

(g) Physicians who have leadership roles in institutions that conduct biomedical and health research as well as the entities that fund research with human participants should promote the development of guidelines on conflicts of interest that clarify physician-investigators responsibilities.

AMA Principles of Medical Ethics: II,IV,V; The Opinions in this chapter are offered as ethics guidance for physicians and are not intended to establish standards of clinical practice or rules of law. Issued: 2016

Policy H-410.953, “Ethical Considerations in the Development of Clinical Practice Guidelines”

Clinical practice guidelines are statements that include recommendations intended to optimize patient care that are informed by a systematic review of evidence and an assessment of the benefits and harms of alternative care options. Clinical practice guidelines help inform physician judgment and decision making by physicians and patients. Clinical practice guidelines also have significant potential to meaningfully inform efforts to provide care of consistently high quality for all patients and to help shape development of sound public policy in health care. To achieve those ends, clinical practice guidelines must be trustworthy. Patients, the public, physicians, other health care professionals and health administrators, and policymakers must have confidence that published guidelines are the ethically and scientifically credible product of development processes that are rigorous, independent, transparent, and accountable.

To that end, the development or updating of clinical practice guidelines should meet the following expectations:
1. Guidelines/updates are developed independent of direct financial support from entities that have an interest in the recommendations to be developed.
2. Formal, scientifically rigorous methods and explicit standards are adopted for the review and weighting of evidence, the integration of expert judgment, and the strength of clinical recommendations.
3. Guideline panels have access to appropriate expertise among members or consultants, including not only relevantly qualified clinical experts but also appropriately qualified methodologists, representatives of key stakeholders, and, ideally, one or more individuals skilled in facilitating groups.
4. Ideally, all individuals associated with guideline development will be free of conflicts of interest during the development process and will remain so for a defined period following the publication of the guideline.
5. Formal procedures are adopted to minimize the potential for financial or other interests to influence the process at all key steps (selection of topic, review of evidence, panel deliberations, development and approval of specific recommendations, and dissemination of final product). These should include: a) required disclosure of all potential conflicts of interest by panel members, consultants, staff, and other participants; b) clearly defined criteria for identifying and assessing the seriousness of conflicts of interest; and c) clearly defined strategies for eliminating or mitigating the influence of identified conflicts of interest (such as prohibiting individuals from participating in deliberations, drafting, or voting on recommendations on which they have conflicts) in those limited circumstances when participation by an individual with a conflicting interest cannot be avoided.
6. Guidelines are subject to rigorous, independent peer review.
7. Clear statements of methodology, COI policy and procedures, and disclosures of panel members’ conflicts of interest relating to specific recommendations are published with any guideline or otherwise made public.
8. Guidelines are in the first instance disseminated independent of support from or participation by individuals or entities that have a direct interest in the recommendations.
EXECUTIVE SUMMARY

At the 2018 Annual Meeting Policy D-120.972, “Electronic Prescribing,” was amended by the House of Delegates (HOD) with additional directives from Resolution 237-A-18. The policy asks the American Medical Association (AMA) to study current electronic prescribing (e-prescribing) processes and make recommendations to improve these processes to make them as safe as possible for patients and as efficient as possible for prescribers. This report provides the requested study of current e-prescribing processes, including benefits and challenges, examples of interventional case studies, opportunities for improvement, and recommendations for multiple stakeholders.

The electronic exchange of prescription and medication history information between prescribers, pharmacies, and payers/pharmacy benefit managers, referred to as e-prescribing, has been shown to improve efficiency, patient safety, and cost savings. E-prescribing has also been shown to reduce medication errors and increase efficiencies in patient care. Despite the numerous advantages of e-prescribing over the former paper prescription systems, there are barriers to the safe and efficient use of e-prescribing systems, suggesting there are opportunities for improvement to maximize efficiency and safety.
REPORT OF THE BOARD OF TRUSTEES

B of T Report 20-A-19

Subject: Safe and Efficient e-Prescribing

Presented by: Jack Resneck, Jr., MD, Chair

Referred to: Reference Committee B (Charles Rothberg, MD, Chair)

INTRODUCTION

At the 2018 Annual Meeting Policy D-120.972, “Electronic Prescribing,” was amended by the House of Delegates (HOD) with additional directives from Resolution 237-A-18. The policy asks the American Medical Association (AMA) to study current electronic prescribing (e-prescribing) processes and make recommendations to improve these processes to make them as safe as possible for patients and as efficient as possible for prescribers.

This report provides the requested study of current e-prescribing processes, including benefits and challenges, examples of interventional case studies, and opportunities for improvement.

BACKGROUND

The electronic exchange of prescription and medication history information between prescribers, pharmacies, and payers/pharmacy benefit managers, referred to as e-prescribing, has been shown to improve efficiency, patient safety, and cost savings. E-prescribing has also been shown to reduce medication errors and increase efficiencies in patient care. In 2017 almost 70% of prescribers and 98% of pharmacies were utilizing e-prescribing. Despite vast increases in adoption of e-prescribing and the improvements realized thus far, there are still areas for improvement in e-prescribing. For example, functions of the electronic systems, such as excessive or unnecessary alerts,1,3 and the processes required for prescribing controlled substances, are perceived as remaining barriers to the optimal use of e-prescribing.1 The authors of Resolution 237-A-18 expressed concern that some steps required to order an e-prescription, such as selecting a pharmacy to which the prescription should be filled, are error-prone and not efficient use of physician time. The current two-factor authentication process required to electronically prescribe controlled substances (EPCS) has also been noted as a cumbersome requirement lacking efficiency and contributing to the slower adoption of EPCS compared to non-controlled substances. In 2017 21% of controlled substances were prescribed electronically compared to 90% of non-controlled substances.4 Despite the numerous advantages of e-prescribing over the former paper prescription systems, the systems and processes still have opportunities for improvement to maximize efficiency and safety.5

AMA POLICY

The AMA supports e-prescribing for both controlled and non-controlled substances and has numerous policies expressing its commitment to advocating for better regulations and better systems that enable more efficient, safe, and less burdensome use of e-prescribing. The AMA
supports programs that incentivize adoption of e-prescribing systems, but opposes a funding structure that financially penalizes physicians that have not adopted such technology (Policy H-478.991, “Federal EMR and Electronic Prescribing Incentive Program”). The AMA continues to work with the Centers for Medicare and Medicaid Services (CMS) to ensure that the e-prescribing policies and reporting procedures provide the greatest flexibility to physicians who participate in the program (Policy D-120.957, “Electronic Prescribing Incentive Program”). The AMA encourages states to implement modernized PDMPs that are seamlessly integrated into the physician's normal workflow, and provide clinically relevant, reliable information at the point of care (Policy H-95.939, “Development and Promotion of Single National Prescription Drug Monitoring Program”).

Recognizing that EPCS continues to pose administrative burdens for physicians, in 2017 the AMA modified existing policy to continue to advocate before federal and state agencies and legislative bodies for elimination of cumbersome, confusing and burdensome requirements relating to electronic transmission of physicians’ controlled substance prescriptions to pharmacies,” (Policy D-120.956, “Electronic Prescribing and Conflicting Federal Guidelines”). The AMA also supports action requiring that the U.S. Drug Enforcement Administration (DEA) establish reasonable requirements enabling the use of e-prescribing for controlled substances (Policy H-120.941, “e-Prescribing of Scheduled Medications”). In addition, the AMA is committed to reducing federal roadblocks to e-prescribing and is working with the CMS and states to remove or reduce barriers to electronic prescribing of both controlled substances and non-scheduled prescription drugs. Through this work the AMA will reduce regulatory burdens to facilitate further adoption of e-prescribing, including for controlled substances (Policy D-120.958, “Federal Roadblocks to E-Prescribing”).

The AMA advocates for changing the national standards for controlled substance prescriptions so that prescriptions for controlled substances can be transmitted electronically directly to the pharmacy in a secure manner and is committed to working with stakeholders to encourage the use of standards that allow direct physician/pharmacist communication within existing electronic health record (EHR) or e-prescribing systems (Policy D-120.944, “Improvement of Electronic Prescription Software”). The AMA sought from CMS and the DEA a requirement that all pharmacies and Pharmacy Benefits Managers (PBMs) acquire and implement the appropriate electronic prescribing of controlled substances software to accept electronically transmitted controlled substance prescriptions from prescriber systems that comply with CMS and DEA certification requirements (Policy D-120.945, “Completing the Electronic Prescription Loop for Controlled Substances”). The AMA also works with pharmacy benefit managers, payers and pharmacists to make accurate, real-time formulary information available at the point of care. It is AMA’s priority to promote procedural policies that ensure changes in formulary information are communicated promptly to prescribers so alternative medication can be provided to patients in a timely manner (Policy H-125.979, “Private Health Insurance Formulary Transparency”).

The AMA recognizes the importance of patient safety in the e-prescribing process, and is committed to working with pharmaceutical, e-prescribing and point of care resource stakeholders to increase physician awareness of risk evaluation and mitigation strategies to improve patient safety in the e-prescription process (Policy D-100.971, “Physician Awareness and Education About Pharmaceutical and Biological Risk Evaluation and Mitigation”). In addition, the AMA urges Congress to unify state prescription standards to facilitate further adoption of e-prescribing, and supports efforts to amend federal law to allow for the e-prescribing of a medication needed by a patient with a mental health or behavioral health diagnosis when a valid patient-physician relationship has been established through telemedicine (Policy D-120.972, “Electronic Prescribing”). Last, in support of efforts to reduce medication errors by increasing efficiency and safety in the process of cancelling electronic prescriptions, the AMA supports the creation,
standardization, and implementation of electronic prescription cancellation from all electronic medical records vendors and that these orders be accepted by pharmacies and pharmacy benefit managers (Policy H-478.983, “Electronic Prescription Cancellation”).

DISCUSSION

E-prescribing overview

E-prescribing is the computer-based electronic generation, transmission, and filling of a prescription, that replaces the need for paper and faxed prescriptions. CMS describes e-prescribing as “the ability for a prescriber to electronically send an accurate, error-free and understandable prescription directly to a pharmacy from the point-of-care.”

E-prescribing eliminates the need for paper prescriptions, which can create hazards and increase risk of medical errors. E-prescribing systems can reduce medical errors, decrease pharmacy costs, improve both prescriber and pharmacy efficiency, eliminate handwriting interpretation errors, reduce phone calls between pharmacists and physicians, reduce data entry, and expedite prescription refill requests. In addition, e-prescribing can improve efficiencies by introducing an automatic process to reconcile drug-drug interactions and patient allergies at the point of prescribing. E-prescribing platforms also facilitate the ability to monitor prescribing patterns, which can help organizations ensure high-quality and cost-effective care.

Although e-prescribing was not new and many practices had already transitioned from paper to electronic systems, in 2012 CMS implemented the Medicare eRx Incentive Program to encourage electronic prescribing by eligible professionals. The eRx program provided an incentive payment to eligible professionals who successfully e-prescribed for covered Medicare Part B services, and applied payment adjustments to those who did not. The eRx program ended in 2013 and was replaced with the Meaningful Use Incentive Program, which ended in 2017. E-prescribing measurement continues within the Merit Based Incentive Payment System track of the Medicare Quality Payment Program. In addition, CMS requires Medicare Part D sponsors, prescribers, and drug dispensers that transmit prescriptions and prescription-related information electronically to support and comply with the National Council for Prescription Drug Programs (NCPDP) SCRIPT standard when filing prescriptions electronically. CMS will adopt a revised SCRIPT standard on January 1, 2020. The new standard will include support for several functions that aim to improve efficiency, clinical decision-making and patient safety. New functionalities will include support for grouping of multiple prescriptions and the reporting of allergies and adverse events, enhancements to digital signatures, and the choice of whether or not to receive RxFill notifications.

Improvements gained from e-prescribing

With the introduction of EHRs and industry movement to leverage more technology solutions in patient care, e-prescribing has become a key component of the daily clinical workflow. E-prescribing has been shown to provide many benefits in comparison to traditional paper prescribing.

A principal benefit of e-prescribing is the improvement in quality of care and patient outcomes. Through e-prescribing, prescription accuracy, standardization and safety have improved. Prescribing through specialized pharmacy software and/or an EHR provides clinical decision support (CDS) tools and screening capabilities that alert prescribers to potential adverse drug interactions or over-prescribing. These improvements have led to a reduction in medical errors, resulting in better patient outcomes and improved quality of care. One study found error rates decreased from 42.5 per 100 prescriptions to 6.6 per 200 prescriptions. It is estimated that
medication errors have been reduced to as little as one-seventh of their previous level as a result of e-prescribing.1

The reduction in medical errors and improved quality outcomes have led to significant cost savings to the overall healthcare system. It is estimated that improved patient outcomes and decreased patient visits may result in between $140 billion and $240 billion in cost avoidance over 10 years for practices that implement e-prescribing.1 E-prescribing also assists with cost savings by reducing fraud, abuse and drug diversion. Through e-prescribing, prescriptions and usage are more effectively tracked, and the elimination of a paper script reduces the risk of fraud and illegal prescription sales. The secure and safe transfer of data and prescriptions to a pharmacy also serves as another protective safe guard in preventing drug diversion, as well as enhanced safety.

In addition, increased efficiency at the practice level has been reported. E-prescribing assists by reducing challenges with legibility problems from handwritten prescriptions.12 It also saves time for the physician and team by reducing the number of calls received from the pharmacy to clarify prescriptions.5 Although one study estimated it takes a prescriber 20 seconds longer per patient to complete an e-prescription versus paper, the long-term benefits to the prescriber and patient are overall time savings, costs savings and reduced prescription errors.11, 13, 14

E-prescribing has also been shown to improve patient satisfaction. Many patients prefer the ease and quick transmission of prescriptions to their pharmacy as well as the convenience of eliminating paper prescriptions and reduced wait time at the pharmacy. Many platforms are also providing more information on cost-effective medication options based on a patient’s particular health plan, leading to cost-savings for the patient and health system.15

Despite the potential additional time and steps required for e-prescribing, the impacts to workflow should be minimal if systems are implemented effectively.1 Most prescribers feel the benefits of e-prescribing outweigh the burdens created by additional steps, and that the extra time spent in the e-prescribing system is offset by the efficiencies gained in the overall process.1, 5

The patient safety benefits and efficiencies of e-prescribing can be further enhanced through the use of Structured and Codified Sig (short for Signatura). Structured and Codified Sig is designed to communicate prescription dosing instructions in a codified way to the pharmacy that can then be conveyed to the patient, thus reducing the opportunity for transcription errors and improving efficiencies and work flows for prescribers and pharmacists. Unfortunately, despite its potential benefits, Structured and Codified Sig has neither been widely utilized by prescribers nor supported by EHRs that allow e-prescribing. NCPDP, which develops and maintains the SCRIPT standard, convened a task group to review these utilization and support issues and developed a Structured and Codified Sig Format Implementation Guide to support Structured and Codified Sig. Greater utilization of Structured and Codified Sig will present prescribers, pharmacists, and patients with an opportunity to improve safety and enhance workflow efficiency.

**Barriers to adoption and use**

Studies show unintended consequences of e-prescribing systems include changes in communication patterns, generation of new kinds of errors, more and new work for clinicians, unfavorable workflow issues, overdependence on technology, continuous demands for system upgrades, persistence of paper, negative emotions toward the technology, and changes in power structure and work roles.16, 17
A principal barrier and challenge to e-prescription adoption is implementation. The cost of implementing e-prescribing technology can be the primary limiting factor. According to the Health Resources and Services Administration, the total cost of implementing an e-prescribing system was found to be $42,332, with annual costs after implementation of about $14,725 per year for a practice of 10 full-time equivalent psychiatrists. A 2007 study by Scalise and colleagues revealed that the cost to implement a basic e-prescribing program ranges from $1,500 to $4,000 per physician and the price for an advanced system with alerts, reminders and system integration is $29,000 per physician in the first year and $4,000 per physician every year thereafter. The DEA in 2010 estimated the costs to implement the appropriate systems for EPCS, across pharmacies, hospitals and practitioners, to be between $43 million and $1.54 billion, annualized over 15 years. In addition to the cost of implementing e-prescribing technology, the time investment and training required can also present barriers to adoption.

Another challenge associated with e-prescribing is related to system errors and network challenges. A key concern for system errors in e-prescribing is related to the impact on quality and the potential to cause medical errors. Many systems have CDS tools, but there are considerable variances of capabilities across platforms. Design issues with CDS tools can present serious risks, for example in the programming of too few or too many alerts. A lack of alert specificity can result in missing an adverse drug reaction, while an overload of alerts can produce the phenomenon known as alert fatigue, which can result in providers overlooking and ignoring important alerts. In addition, many physicians report technical problems and poor network connectivity as a key barrier in e-prescribing adoption. In some instances, pharmacies are not reliably receiving and processing prescriptions sent electronically due to poor connectivity or network issues. This also has a negative downstream effect on patients due to delays in filling medications.

Privacy and security issues also present concerns with e-prescribing processes. It is important for prescribers to have appropriate security parameters in place to safeguard protected health information (PHI). Protecting data securely is an ongoing and constant requirement and challenge for providers, especially with many web-based tools and multiple opportunities for information to be stolen or compromised. In addition, many information breaches often originate from internal employee actions, which can be costly and require additional and ongoing training and security.

Other barriers to efficient e-prescribing result from regulations of EPCS, enforced by the DEA. In 2010, the DEA legalized e-prescribing for Schedule II to Schedule V controlled substances. A dozen states have passed laws mandating the use of e-prescribing for controlled substances, some of which will be effective in 2020. The DEA ruling enforces strict standards for implementation and utilization, including identity proofing, two-factor authentication, digital certificates, monthly logs, third-party audits of software, and a requirement to keep two years of records. The SUPPORT for Patients and Communities Act, enacted in 2018, further requires that all providers use EPCS by January 1, 2021. Two-factor authentication adds multiple additional steps to a prescriber’s process. Board of Trustees Report 6-I-17 described in detail the barriers associated with two-factor authentication: While authentication through a combination of personal identification numbers (PINs), passwords, and biometrics increases the security of EPCS, it also contributes to frequent workflow disruptions and increases costs for many physicians. An AMA survey found that primary care physicians write up to 100 prescriptions per day. Other specialists usually write an average of 10 to 25 prescriptions per day. This volume of prescriptions makes compliance with two-factor authentication, particularly as a distinct process from e-prescribing of non-controlled substances onerous and a significant strain on practice workflows. Few health information technology (HIT) vendors currently support EPCS, and those that do often require physicians to purchase add-on modules or
pay separate monthly service fees outside those of normal product maintenance. In speaking with many DEA-registered physicians, the AMA has found that many methods and processes HIT vendors utilize for EPCS are not well-aligned with normal e-prescribing workflows. In most instances, physicians must initiate an entirely new set of computer programs and windows each time they wish to use EPCS. The AMA shared with the DEA that cumbersome workflows and applications that do not take physician needs into account are the primary impediment to physician EPCS uptake and should be squarely addressed by system designers and product implementers. The DEA requirement that biometric devices comply with Federal Information Processing Standards (FIPS) compounds this problem by limiting many user-friendly consumer electronics already found in physicians’ offices from being utilized. The AMA asked that the DEA reexamine the scope of technology that is compliant with EPCS requirements and allow for lower-cost, high-performing biometric devices (e.g., fingerprint readers on laptop computers and mobile phones) to be leveraged in two-factor authentication. The SUPPORT for Patients and Communities Act requires the DEA to update its regulations pertaining to how prescribers authenticate prescriptions using biometric devices.

In addition to the requirements and time to e-prescribe controlled substances, providers also cite general clinic operational inefficiencies. Commonly cited challenges are time pressure on busy clinic days and frustration with time devoted to administrative portions of the e-prescription process, such as pharmacy selection and populating e-prescribing systems with patients’ identifying information. Real-time benefit check applications integrated into the EHR can help gain efficiencies, but are not yet a universally utilized tool. Cancelling an electronic prescription often involves multiple steps and phone calls to the pharmacy, which can be burdensome and time-consuming, and can add to the risk of medication errors. Integration of state prescription drug monitoring program (PDMP) data into the e-prescribing software could also help reduce workflow burdens. CMS in 2018 encouraged states to improve their PDMP systems to enable integration of PDMP data with EHRs.

Another documented barrier is the excessive cost of complying with EPCS requirements. As reported in BOT 6-I-17, many physicians—especially those in small and solo practices—face high fees associated with the extensive technical, security, and other standard requirements (e.g., costs for identity proofing, access control training and the setting of access controls, hardware, software or application purchase and maintenance, reprogramming, and audit requirements), along with workflow adjustments needed for EPCS. In addition to the costs of compliance with EPCS, there are also monthly fees levied by HIT vendors. These fees and costs pose a significant barrier to EPCS adoption. The DEA registration fee for EPCS is $731 for three years and covers the costs of its diversion control program.

Finally, some prescribers perceive the process of searching and selecting a pharmacy each time a prescription is ordered electronically to be time-consuming and error-prone. Challenges can occur when prescriptions need to be transferred from one pharmacy to another, sometimes a result of patients relocating or changing health plans. Disruption in adherence can occur if pharmacies don’t stock particular medications and it becomes difficult for patients to fill their prescriptions. Health plan changes also sometimes result in changes in pharmacy network status, which can lead to unexpected coverage gaps. Additional costs to obtain a non-preferred pharmacy prescription may only be realized when the patient picks up the prescription, resulting in phone calls from the patient back to the prescriber for help. Most commercial e-prescription systems offer a function to select a preferred pharmacy for patients. Other systems may also feature a “previously used pharmacy” option, which keeps a list of pharmacies at which the patient has historically filled prescriptions. Use of either of these functions, and regular verification of the indicated pharmacy, saves time and reduces the risk of selecting an erroneous pharmacy.
**Interventional case studies**

Given the amount of time and resources dedicated to ensuring prescriptions are authorized, filled and renewed safely and efficiently, and in light of government focus on improving care quality, many practices have implemented changes to improve their e-prescribing processes and outcomes.

For example, researchers at Texas Children’s Hospital implemented quality improvement interventions to improve e-prescribing. Surveys and focus groups were conducted with patient families and pediatric residents to identify barriers and propose solutions to support efficient e-prescribing. These data were used to generate a series of interventions: (1) provider education; (2) changes in patient registration workflow; and (3) electronic health record changes to improve the frequency of e-prescribing on the pediatric hospital medicine (PHM) service.

One intervention was identified through the resident surveys which noted the absence of a preferred pharmacy in the patient’s EHR as a barrier to e-prescribing. Following this observation, registration personnel were trained on entering preferred pharmacy information, and it was added to their EHR workflow. Because personnel already input patients’ pediatrician information and other demographic data in the EHR, it was deemed an appropriate intervention to address this gap.

Another intervention included an EHR build that required residents to assign an authorizing attending provider for discharge prescriptions, whether printed or e-prescribed. This enhancement ensured that attending information would be linked to all prescriptions for appropriate insurance processing and follow-up, whereas prior to that, residents were limited to manually writing in the attending name on printed prescriptions only, since the functionality was not allowed in the e-prescribing system. Texas Children’s Hospital also designated e-prescribing as the default method of prescription for all providers system-wide, and forcing providers to actively opt out of e-prescribing. The build included an in-line validation to ensure that prescription orders were eligible for e-prescribing and that all necessary information was present.

This onsite research resulted in an increase in e-prescribing frequency on the PHM service from a median of 7.4% to 48.9%, which was sustained for an additional six months. The frequency of PHM prescription errors was unchanged.

Marceglia et al identified six main phases of the e-prescribing process and proposed an updated comprehensive model for the e-prescribing process able to represent, analyze, and compare current systems and to support the design of new, more general, systems. Researchers identified six key phases of the e-prescribing process: Assign, Transmit, Dispense, Administer, Monitor, and Analysis Decision. The evaluation of systems completed in developing this model identified efficiency benefits primarily in the drug management controls within the e-prescribing systems. This model-based implementation of each phase is shown to have an impact on the quality of care, access to care, and the effectiveness of care delivery.

A 2011 case study tested the effects on prescribing errors of transitioning from a local EHR with minimal CDS to a new EHR with robust CDS for e-prescribing. Overall prescribing error rates declined significantly one year after implementation, the main improvement being a reduction in inappropriate abbreviation errors. At 12 weeks post-implementation, however, rates of non-abbreviation errors peaked and there was no significant improvement after one year, suggesting that there are still safety risks in transitioning to an e-prescribing system that features more robust CDS. Prescribers in this intervention, who were experienced e-prescribers, were surveyed for a parallel qualitative study. The participants found the transition to be extremely difficult and the EHR was not perceived to improve safety.
Another case study identified an approach to simplifying the overall prescription renewal process. Synchronized, bundled prescription renewal, a systematic approach to prescription management, can decrease patient inconvenience, support medication adherence, and save one to two hours of physician and staff time each day. In this system, the prescriber renews all chronic medications (except narcotics and benzodiazepines) at the annual comprehensive care visit, allowing for sufficient refills to last until the next annual visit. This eliminates the need for the physician and staff members to repeat the work of renewing each medication at interval visits. The AMA offers a STEPS Forward module on synchronized prescription renewal that is available with CME through the AMA Education Center.

AMA efforts

In addition to comprehensive policy on e-prescribing and educational content on synchronized prescription renewal, ongoing AMA advocacy has succeeded in addressing a number of concerns about e-prescribing practices and regulations. The AMA continues concerted engagement to address specific barriers to e-prescribing of controlled substances due to overly burdensome DEA regulations. In the past, the AMA provided comments as part of the DEA’s rulemaking process, raising concerns with a number of regulations and requirements. More recently, the AMA again met with the DEA and reinforced and expanded on those recommendations that would enhance security (and decrease diversion) while streamlining the administrative burden. The AMA noted that many physicians have reported that a well-designed electronic prescription system adds value to their practice of medicine and supports better patient care.

Recommendations for improvements to e-prescribing practices

Surescripts published “E-Prescribing Quality Guidelines” which offers e-prescribing clinicians and EHR vendors comprehensive guidance on key principles and best practices to consider when initiating and transmitting electronic prescription orders. Based on these best practices, and the literature and case studies reviewed, several recommendations for improving e-prescribing processes can be offered.

Some improvement efforts are already part of AMA’s ongoing commitment to optimizing the use of e-prescribing in medical practice, as outlined in the AMA policies previously discussed. For example, the AMA advocates for:

- States to work toward unifying prescription standards and standard vocabularies
- The DEA to ease authentication requirements for prescribing controlled substances, including the scope of technology that is compliant with EPCS requirements
- HIT developers to improve interoperability between prescriber interfaces and mail-order prescription services and pharmacies

Other opportunities for improvements in e-prescribing processes are possible for a number of stakeholders.

- Implementation teams can conduct an annual audit to evaluate the number, frequency and user acknowledgment/dismissal patterns of e-prescribing system alerts and provide an audit report to the software vendors for their consideration in future releases.
- Health care organizations and implementation teams can improve prescriber end-user training and on-going education.
- Implementation teams can prioritize the adoption of features like Structured and Codified Sig formats that can help address quality issues.
• Implementation teams can enable functionality of pharmacy directories and preferred
pharmacy options. Leadership can encourage the practice of inputting a patient’s preferred
pharmacy at registration, and re-confirming it upon check-in at all subsequent visits.
• Implementation teams can enhance EHR function to require residents assign an authorizing
attending physician.
• Organizational leadership can implement e-prescribing systems that feature more robust
clinical decision support, but ensure prescriber preferences are tested and seriously
considered in implementation decisions.
• Organizational leadership can assign e-prescribing as the default prescription method.
• The DEA can allow for lower-cost, high-performing biometric devices (e.g., fingerprint
readers on laptop computers and mobile phones) to be leveraged in two-factor
authentication.
• Health insurers, pharmacies and e-prescribing software vendors should enable real-time
benefit check applications that enable more up to date prescription coverage information
and allow notification when a patient changes health plans or a health insurer has changed
a pharmacy’s network status.
• States can allow PDMP/EHR integration to reduce workflow burden and increase
efficiency.

CONCLUSION

The increase in use of e-prescribing and the incentive programs aimed at encouraging its adoption
have invigorated progress in improving the safety and efficiency of prescribing medications, but
there is still much room for improvement. While errors related to legibility issues or
misinterpretation of handwriting have been reduced, rates of medication errors have declined, and
organizations have experienced better patient satisfaction and cost savings, the trade-off is the
additional time prescribers spend maneuvering multiple platforms and completing data entry tasks
required to order prescriptions. Many physicians appreciate the benefits that e-prescribing has
provided, but recognize that improvements can still be realized to make them as safe as possible for
patients and efficient as possible for prescribers. These improvements may be possible through the
recommendations outlined in this report.

RECOMMENDATIONS

The Board of Trustees recommends that the following be adopted in lieu of Resolution 237-A-18
and that the remainder of this report be filed:

1. That our American Medical Association (AMA) reaffirm the following policies:
   a. H-125.979, “Private Health Insurance Formulary Transparency”
   c. H-120.941, “e-Prescribing of Scheduled Medications”
   d. D-120.958, “Federal Roadblocks to E-Prescribing”
   e. D-120.945, “Completing the Electronic Prescription Loop for Controlled Substances”
      (Reaffirm HOD Policy)

2. That the second paragraph of AMA Policy D-120.972, “Electronic Prescribing,” be rescinded
   as having been fulfilled by this report. (Rescind HOD Policy)

3. That our AMA encourage health care stakeholders to improve electronic prescribing practices
   in meaningful ways that will result in increased patient safety, reduced medication error,
improved care quality, and reduced administrative burden associated with e-prescribing processes and requirements. Specifically, the AMA encourages:

- E-prescribing system implementation teams to conduct an annual audit to evaluate the number, frequency and user acknowledgment/dismissal patterns of e-prescribing system alerts and provide an audit report to the software vendors for their consideration in future releases.
- Health care organizations and implementation teams to improve prescriber end-user training and on-going education.
- Implementation teams to prioritize the adoption of features like structured and codified Sig formats that can help address quality issues.
- Implementation teams to enable functionality of pharmacy directories and preferred pharmacy options.
- Organizational leadership to encourage the practice of inputting a patient’s preferred pharmacy at registration, and re-confirming it upon check-in at all subsequent visits.
- Implementation teams to establish interoperability between the e-prescribing system and the EHR to allow prescribers to easily confirm continued need for e-prescription refills and to allow for ready access to pharmacy choice and selection during the refill process.
- Implementation teams to enhance EHR and e-prescribing system functions to require residents assign an authorizing attending physician.
- Organizational leadership to implement e-prescribing systems that feature more robust clinical decision support, and ensure prescriber preferences are tested and seriously considered in implementation decisions.
- Organizational leadership to designate e-prescribing as the default prescription method.
- The DEA to allow for lower-cost, high-performing biometric devices (e.g., fingerprint readers on laptop computers and mobile phones) to be leveraged in two-factor authentication.
- States to allow integration of PDMP data into EHR systems.
- Health insurers, pharmacies and e-prescribing software vendors to enable real-time benefit check applications that enable more up to date prescription coverage information and allow notification when a patient changes health plans or a health insurer has changed a pharmacy’s network status. (New HOD Policy)

Fiscal Note: Minimal - Less than $500
REFERENCES

EXECUTIVE SUMMARY

At the 2018 Annual Meeting of the American Medical Association (AMA), the House of Delegates (HOD) adopted amended policy recommendations of Board of Trustees (BOT) Report 41, “Augmented Intelligence (AI) in Health Care,” in lieu of Resolution 205-A-18, “Augmented Intelligence,” introduced by the American Academy of Pediatrics. However, the HOD referred the following proposed additional recommendation to the report for a BOT Report at the 2019 Annual Meeting: “AI should be funded as an enhancement of the primary care medical home so that patients who really need AI can benefit from the technology and such that AI does not become a requirement that must be incorporated into the care of every patient.” The referral was prompted in part due to testimony that the resolve was too narrowly focused and should address payment policy for health care AI. Since the resolve was referred, there has been significant federal and state legislative and regulatory activity related to health care AI, including the U.S. Food and Drug Administration’s authorization of several AI-enabled software systems for clinical practice and the Centers for Medicare & Medicaid Services launch of an AI Health Outcomes Challenge in partnership with the American Academy of Family Physicians in order to incorporate AI in the implementation of both current and new payment and service delivery models. This underscores the benefit of developing AMA policy to address payment for AI systems without limits on medical specialty, practice setting, or payment model.

Existing health care AI policy provides that our AMA will “[p]romote development of thoughtfully designed, high-quality, clinically validated health care AI that is designed and evaluated in keeping with best practices in user-centered design, particularly for physicians and other members of the health care team; is transparent; conforms to leading standards for reproducibility; identifies and takes steps to address bias and avoids introducing or exacerbating health care disparities including when testing or deploying new AI tools on vulnerable populations; and safeguards patients’ and other individuals’ privacy interests and preserves the security and integrity of personal information. The policy also provides that the AMA will explore the legal implications of health care AI, such as issues of liability or intellectual property, and advocate for appropriate professional and governmental oversight for safe, effective, and equitable use of and access to health care AI.” This report summarizes the need for additional AMA policy that is relevant to payment and use of health care AI; provides definitions of related terms; and addresses key issues that impact physician adoption of new health care technologies and delivery modalities, including clinical efficacy, usability and workflow integration, and liability. The recommendations build upon existing AMA policy and will enhance our AMA’s continued engagement with a broad cross-section of stakeholders and policymakers to ensure that the perspective of physicians in various practice settings informs and influences the dialogue as this technology continues to develop.
Subject: Augmented Intelligence (AI) in Health Care

Presented by: Jack Resneck, Jr., MD, Chair

Referred to: Reference Committee B
(Charles Rothberg, MD, Chair)

At the 2018 Annual Meeting, our American Medical Association’s (AMA) House of Delegates (HOD) adopted Board of Trustees (BOT) Report (Report) 41-A-18, “Augmented Intelligence (AI) in Health Care” policy recommendations as amended in lieu of Resolution 205-A-18, “Augmented Intelligence,” introduced by the American Academy of Pediatrics. However, the HOD referred the following proposed additional recommendation to the report for a BOT Report at the 2019 Annual Meeting.

AI should be funded as an enhancement of the primary care medical home so that patients who really need AI can benefit from the technology and such that AI does not become a requirement that must be incorporated into the care of every patient.

The reference committee heard overwhelmingly supportive testimony on BOT Report 41-A-18 and mixed testimony on Resolution 205. The reference committee heard testimony that physicians must provide a clear set of policy positions on health care AI to ensure the best interests of patients are served. The reference committee noted that Resolution 205 intends to advance important goals of health care AI such as ensuring it is part of workflow, that it is not mandated for use, and it strengthens the medical home. The reference committee noted that BOT Report 41 captures those goals and establishes policy that addresses additional important issues such as guarding against bias, application to specialty care, and the legal implications of health care AI.

The reference committee heard further testimony that federal and state legislators and policymakers are already developing laws and regulations on health care AI. The reference committee agreed with testimony that physicians have a critical perspective and must engage now to ensure this technology is developed in a way that improves patient outcomes, reduces administrative and technological burdens, and contributes to physician professional satisfaction. The reference committee heard testimony offering an amendment to safeguard patients’ and individuals’ privacy interests. Finally, the reference committee recommended adoption of BOT Report 41 with amendment in lieu of Resolution 205.

TERMINOLOGY

The AMA’s BOT Report 41-A-18 and the AMA’s Council on Long Range Planning and Development’s (CLRPD) Primer on Artificial and Augmented Intelligence establish definitions related to key AI systems, methods, and techniques. In this report on payment, it is essential to specify systems that augment the work of clinicians do so by assisting the decision making or by offering fully automated (autonomous) assistance. Furthermore, it is necessary to define and
differentiate between AI systems that utilize machine learning (ML) where there is either (1) a continuous learner algorithm or (2) a locked learner algorithm. The foregoing approaches have critical implications for risk, safety, regulation, liability, and, as a result, cost of integration into clinical practice (whether in a health system or a physician practice).

Augmented Intelligence and the Human – Machine Dyad

Although AMA physician leaders considered using the term “artificial intelligence,” ultimately through the HOD process it was determined that the term augmented intelligence more accurately reflects the purpose of such systems, whether assistive or fully autonomous, because they are intended to coexist with human decision-making. As we enter what many experts view as the fourth industrial revolution, it is important to update terms to explicitly articulate the expectation that rapidly evolving technologies should complement and extend the work of humans. And, the AMA is not alone in this measured view of what current AI systems in health care are able to do and what the expectations should be for the future development of such systems. The term “augmented” intelligence has become the preferred term among key technology companies, other innovators, and physician AI experts. While one leading expert has advocated the use of the term “dyadarity” to underscore the human-machine dyad, the rationale for the use of the term dyadarity also points to the appropriateness of the use of the term “augmented intelligence:”

As we embed more and more machine learning in our clinical decision support and in our clinical workflows (face to face [and] virtual care), we will discover far more interaction and meshing between human and machine, physician and computer. The notion that the machine will acquire absolute superiority over the human in decision-making implies that the output of the machine will be strictly deterministic, as if it were just like the result of a serum sodium level. . . . Incorporating […] highly variable and contextual human considerations into the treatment plan really requires thoughtful and empathic discussion between doctor and patient. The literature is now replete with references to various types of bias associated with how machine learning is applied to different people in different contexts. Similarly, there are over 100 cognitive biases that have been well documented in human decision-making. What we will really need as physicians is assistance in how to more systematically surface and expose the biases of both the machine, also known as “thinking in silico” and the human “thinking in carbon,” in ways that allow the individual physician to manage, reconcile when possible, and mitigate those biases. This will become more of a collaborative exercise and the notion of a machine-superiority emerging after the “singularity is here” will begin to fade into a more realistic “dyadarity” where all potential bias and ethical issues are made more transparent, but ultimately the human will be responsible for making the decision.

As noted in BOT Report 41-A-18, “combining machine learning software with the best human clinician ‘hardware’ will permit delivery of care that outperforms what either can do alone.” Other physicians have noted that “the applications of AI to ‘augment’ physicians is more realistic and broader reaching than those that portend to replace existing health care services.” Other early adopters of such systems note that “[t]he difference between artificial intelligence and augmented intelligence may seem inconsequential to some; it could quite literally make a world of difference when it comes to how we approach robotics in the decades to come . . . [and] . . . it’s businesses using the technology to supplement rather than replace their employees that stand to benefit most from the further development and refinement of this technology.” In sum, whether AI systems are assistive (such as clinical decision support programs) or fully autonomous (such as software programs that provide a definitive diagnostic decision), these rapidly evolving systems should augment and scale the capabilities of physicians, the broader health care team, and patients in achieving the quadruple aim in health care.
Machine Learning (ML): Continuous Learning System and “Locked” Model

The term AI covers a range of methods, techniques, and systems. Common examples of AI systems include, but are not limited to, natural language processing, computer vision, and ML. In health care, as in other sectors, AI solutions may include a combination of these systems and methods. ML presents some of the thornier regulatory and oversight challenges that implicate cost and payment.

An AI system utilizing ML employs an algorithm programmed to learn from data referred to as “training data.” The learner algorithm will then automatically adjust the ML model based on the training data. In health care, it is important to know whether the learner algorithm is eventually locked or whether the learner algorithm continues to learn once deployed into clinical practice. A “continuous learning system” continues to update the model without human oversight as new data is presented to the learner algorithm, whereas “locked learners” will not automatically update the model with new data. There are both benefits and risks to continuous learning systems which may:

…more precisely calibrate suggestions to specific demographic or geographic areas over time, taking into account [for example] that certain diagnoses are more common in that setting and/or adjusting for local norms in the input data formatting or presentation. However, as software changes, the rate and distribution of false-positives and false-negatives may also change, potentially in ways that no longer have an acceptable benefit-risk profile. As such, there are serious concerns about the risks and ethics of deploying a continuously learning software system in the clinical setting.

Current AI systems developed utilizing ML for clinical applications that have been authorized by the U.S. Food and Drug Administration (FDA) involve a two-step process. First, the learner algorithm remains “on” until the model, a software tool, has been developed with enough “training data.” The learner algorithm is then “locked” and model is not updated in real time. In short, “once an AI system is developed utilizing a learning algorithm, it can be ‘locked’ and used without automatic updates.” Why lock the learner algorithm? When AI systems are applied to patient clinical care, it is necessary to allow developers (and regulators where the system is considered a medical device) to undertake safety and clinical efficacy testing. However, reportedly, developers may run a parallel AI system with a learner algorithm still “on” in order to assess quality and identify enhancements. The developer will update the AI system which has a locked learner on a periodic basis after validation for clinical efficacy and safety. This has been characterized by certain innovators as “discontinuous learning.” In addition, it has been noted that if these regular updates are not done, “locked models have the potential to degrade over time if inputs change significantly.”

While there are significant benefits and needed health care transformations that AI systems using ML promise to produce, careful consideration should be given to clinical applications of such systems and the attendant quality and safety challenges. A group of British and U.S. experts has proposed a general framework for identifying and addressing short-, medium-, and long-term quality and safety issues vis-à-vis AI systems utilizing ML for clinical applications including distributional shift, insensitivity to impact, black box decision-making, unsafe failure mode, automation complacency, reinforcement of outmoded practice, self-fulfilling prediction, negative side effects, reward hacking, unsafe exploration, and unscalable oversight. Furthermore, all AI systems are reliant upon data, but ML amplifies the risks associated with an incomplete understanding or disclosure of data origin (often called provenance) and bias. Data often can be incomplete and contain erroneous information and all data is biased in some manner. It is imperative to disclose and provide means to address AI system bias in order to
avoid, among other unintended outcomes, exacerbating health disparities and other inequities. Developers of AI systems used for clinical care should—as soon as there is a preliminary validation of a clinically relevant bias or potential patient safety risk associated with any of the recommendations emerging from an AI system—report the bias to the users of that software (appropriate institutional notification should suffice for institutions with many users). Developers of AI systems used in clinical care should be required to maintain an active intake process for reports of such issues from end-users, and there should be transparency into those reporting and quality assurance processes. Developers must have a process for continuous efficacy monitoring. In addition, there should be transparency into key attributes of the population that was the source of training data set while ensuring the protection of individual patient data and privacy interests. The purpose of this transparency is to enhance the understanding of risk associated with applying an AI system to individuals whose personal characteristics may diverge in significant ways from the population in the training data set. Finally, there should be transparency and “traceability” of training data.

USES AND APPLICATIONS OF AI SYSTEMS IN HEALTH CARE

A prerequisite to payment for AI systems involves identifying, at minimum, the intended use of the AI system, whether it is assistive or fully autonomous, conditions required for successful deployment, and the level of regulatory oversight required to ensure patient safety and the clinical efficacy of the system. These factors, along with associated liability risk, impact costs and sustainability. Broadly speaking, AI systems can be used in many areas of health care, including, but not limited to: (1) research; (2) education and workforce professional development; (3) finance, business processes, and health administration; (4) tools and services that improve medical practice, e.g., cybersecurity; (5) population health and public health; (6) patient and caregiver engagement and prevention; and (7) clinical care, e.g., clinical decision support or autonomous diagnostic system. Furthermore, when used in the foregoing areas, AI systems can function to automate repetitive and time-intensive tasks, improve communication and interactions, and enhance decision-making which improve efficiency and accuracy.

Key AI System Considerations, Standards Development and Ongoing Research

While overall research on clinical applications of AI systems continues to grow rapidly, there is a paucity of peer-reviewed publications of the results of head-to-head comparisons between physicians and AI systems. The specialty areas where such research exists include: radiology, neurology, pathology, dermatology, ophthalmology, gastroenterology, and cardiology. There is growing research in other areas such as oncology, but not necessarily comparative. Increased funding and support for research into AI system applications in health care, particularly for specific clinical applications, will remain a critical priority. However, research on AI system applications in the areas of population health, patient engagement, and health administration will also produce important findings of benefits and possible unintended consequences (such as inequitable impact). Experts have also noted that the following areas of research remain a priority:

• Verification. Research into methods of guaranteeing that the AI systems meet established specifications.
• Validation. Research into ensuring that the specifications, even if met, do not result in unwanted behaviors and consequences.
• Security. Research on how to build systems that are increasingly difficult to tamper with – internally or externally.
• Control. Research to ensure that AI systems can be interrupted (even with other AIs) if and when something goes wrong, and restore normal function.
Other priority areas include research into explicability (which is also referred to as explainability) which is receiving significant focus by U.S. federal agencies and Congress. Widespread deployment and scaling of advanced AI systems utilizing, for example, ML in health care has not yet occurred. Conditions of deployment will require continued attention to assess safety, efficacy, and fairness. And, while existing standards must be met, additional ones are needed to address specific issues raised by AI and ML. For example, in February 2019, the British Standards Institution (BSI) and the Association for the Advancement of Medical Instrumentation issued a position paper with recommendations to support governance and regulation of AI and ML in health care to specifically address: (1) level of autonomy; (2) changing outputs of algorithms; (3) explicability; (4) transparency; and (5) quality of data outputs. Federal agencies and Congress are also prioritizing research and standards developments (as discussed below).

Legal Requirements

Depending on the intended use of an AI system, there are several legal requirements that developers must adhere to when marketing AI-enabled software if commercializing for mass distribution or when a health system designs, develops, and implements AI-enabled software within their own health system. AI systems with clinical applications that meet the existing definition of medical device under the Food, Drug, and Cosmetic Act (FDCA) must comply with the FDA requirements related to safety and efficacy. Some of these AI systems may be subject to enforcement discretion because the FDA considers the risk of harm as it relates to a host of factors including intended use and conditions of deployment for example, sufficiently low.

Even where AI systems are not subject to the FDCA, the development, marketing, and deployment can be subject to a host of other federal and state laws. Some of the key laws include the:

- Health Insurance Portability and Accountability Act (HIPAA). HIPAA is meant to protect the privacy and security of protected health information. Certain entities are required to provide notifications of health information breaches. There are state laws that provide enhanced protections. In addition, there are newly emerging international standards such as Europe’s General Data Protection Regulation (GDPR) that impact developers that reach global markets.
- Common Rule (Protection for Human Subject Research). Each federal agency that follows the Common Rule has guidance on federally funded research involving human subjects.
- Federal Trade Commission Act (FTCA). The Federal Trade Commission (FTC) has the authority to take action against developers of AI systems that engage in deceptive and unfair trade practices. This is most relevant where the developer makes false and misleading health claims, representations regarding the performance of an AI system, or claims that impact consumer data security and privacy. The FTC also provides enforcement of the Health Breach Notification Rule which applies to certain businesses that are required to provide notifications to consumers after a breach of personal health record information.

The above laws apply to AI systems with clinical uses (though the Common Rule will not always be applicable). Developers, regulators, and standards setting bodies must identify dynamic and useful mediums and methods to ensure physicians, medical staff, third-party payers, and patients who rely on AI-enabled systems understand whether (or not) the developer has complied with the relevant federal and state laws.

HEALTH CARE AI INVESTMENTS, ACQUISITIONS, AND PATENTS

The rapid growth in health care AI investments, acquisitions, and patents is expected to continue on a steep upward trajectory. Analysts report that the AI health market investment is expected to reach
$6.6 billion by 2021, a 40 percent compound annual growth rate.\textsuperscript{21} In addition, health care AI startups have raised billions since 2013, which exceeds all other industries in AI deal activity.\textsuperscript{22} A harbinger of this interest involves one of the largest merger and acquisitions deals in health care AI. Specifically, Flatiron Health was acquired by Roche Holdings for $1.9 billion largely due to the curation of patient data by clinical experts that can be mined using AI systems employing ML.\textsuperscript{23} The rapid rise in patent applications involving AI in the health care field is also significant. There were 79,936 patents filed in the United States between 2010 and 2018, with the plurality being in the health field (32.6 percent).\textsuperscript{24} Some of the patents are very broad or seek to patent the obvious and, thus, may not ultimately be enforceable. However, such patents could create barriers to other innovators and increase costs due to litigation. While support for AI in health care is based on the promise of advancing the quadruple aim including lowering health care costs, manipulations of the patent system may result in higher health care costs and perversely chill innovation.

CONGRESS, FEDERAL AGENCIES, WHITE HOUSE AND FEDERATION OF STATE MEDICAL BOARDS (FSMB)

Since the HOD adopted the recommendation of BOT Report 41-A-18, federal and state government activity has intensified rapidly. At the federal level, Congress and the Administration are taking steps to advance the use of AI systems for national security purposes and to ensure U.S. global economic competitiveness. The following summarizes the wide-range of actions from the various congressional committees, federal agencies, the White House, and FSMB. However, this BOT Report does not detail government activities\textsuperscript{25} focused on data issues, which are broader—although germane—in scope than AI. These issues could be addressed in a future board report.

Congress

Congressional interest in AI continues to grow, although both chambers are primarily in the fact gathering and member education stages. In 2018, Representatives John Delaney (D-MD) and Pete Olson (R-TX) launched the AI Caucus to “inform policymakers of the technological, economic and social impacts of advances in AI and to ensure that rapid innovation in AI and related fields benefits Americans as fully as possible.” A number of congressional hearings concerning AI have taken place.\textsuperscript{26}

While a number of bills covering AI were introduced but not passed in the 115\textsuperscript{th} Congress,\textsuperscript{27} the John S. McCain National Defense Authorization Act for Fiscal Year 2019 (H.R. 5515) became law and had a provision regarding AI. Section 1051 of the law requires the establishment of the National Security Commission on AI to provide recommendations to Congress and the President via an annual report on AI. The law directs the Secretary of the U.S. Department of Defense (DOD), no later than one year after the date of the enactment of law, to delineate a definition of the term “artificial intelligence” for use within the DOD. However, the law provides that AI should include:

\begin{itemize}
  \item Any artificial system that performs tasks under varying and unpredictable circumstances without significant human oversight, or that can learn from experience and improve performance when exposed to data sets.
  \item An artificial system developed in computer software, physical hardware, or other context that solves tasks requiring human-like perception, cognition, planning, learning, communication, or physical action.
  \item An artificial system designed to think or act like a human, including cognitive architectures and neural networks.
\end{itemize}
• A set of techniques, including machine learning, that is designed to approximate a cognitive task.
• An artificial system designed to act rationally, including an intelligent software agent or embodied robot that achieves goals using perception, planning, reasoning, learning, communicating, decision making, and acting.28

In September 2018, the U.S. House of Representatives Oversight and Government Reform Subcommittee on Information Technology former Chairman Will Hurd (R-TX) and former Ranking Member Robin Kelly (D-IL) released a white paper, titled “Rise of the Machines: Artificial Intelligence and its Growing Impact on U.S. Policy.” The white paper outlines three areas of concern including: public safety, innovation, and investment in research and development. Notably, the report contains a recommendation that the federal government should review existing oversight of AI systems in order to assess whether it is sufficient to ensure public safety. Where oversight is not adequate, the subcommittee recommended that Congress and the Administration modernize oversight while not overregulating.

In February 2019, the House Energy and Commerce Committee Subcommittee on Consumer Protection and Commerce scheduled a hearing on diversity in the technology industry. Though it had to be rescheduled, the Committee Chairman Frank Pallone (D-NJ) and subcommittee Chairwoman Jan Schakowsky (D-IL) issued a joint statement concerning AI systems and bias. Specifically, they noted that a lack of diversity can affect the design of AI. And, the foregoing could compound the risks of AI systems as the data used to train certain AI systems may amplify bias and lead to discriminatory outcomes.

White House

In May 2018, the White House hosted a summit with business leaders, government officials, and academics to identify how the U.S. government could increase AI research and prepare the U.S. workforce for the disruptions that AI will bring. Officials from most cabinet-level agencies participated including the HHS Deputy Secretary as well as the HHS Chief Technology Officer. The health care AI panelists included representatives from CVS, Johnson & Johnson, Medtronic, Quest Diagnostics, Google, IBM, and Verily, a subsidiary of Google. At the conclusion, the Administration announced the establishment of an advisory committee comprised of federal agencies and issued a report and memorandum.29

In February 2019, a Presidential Executive Order was issued launching the American AI Initiative. The Initiative encompasses five key areas: (1) prioritization of investment by all federal agencies in AI research and development (R&D); (2) requiring federal agencies to make federal data, models, and computing resources more available to U.S.-based AI R&D experts, researchers, while maintaining the safety, security, civil liberties, privacy, and confidentiality protections of Americans; (3) establishing guidance for AI development and use across different types of technology and industrial sectors and directing the National Institute of Standards and Technology (NIST) to lead the development of appropriate technical standards for reliable, robust, trustworthy, secure, portable, and interoperable AI systems; (4) requiring federal agencies to prioritize fellowship and training programs to help U.S. workers gain AI-relevant skills through apprenticeships, skills programs, fellowships, and education in computer science and other growing Science, Technology, Engineering, and Math (STEM) fields; and (5) requiring federal agencies to develop and implement an action plan to protect the advantage of the U.S. in AI and technology critical to U.S. national and economic security interests against strategic competitors and foreign adversaries.30
In April 2018, the FDA authorized for market an “autonomous” AI system, IDx-DR, that detects more than mild diabetic retinopathy. IDx-DR was not the first AI-enabled software that the FDA has cleared or authorized for market under the existing FDA legal authorities designed to ensure safety and efficacy; however, it is the first designated as fully autonomous, meaning that it provides a diagnostic output and management recommendations without medical specialist interpretation. IDx-DR is intended for use by primary care providers who may not have expertise of diabetic retinopathy. A clinical staff member is able to upload the digital images of the patient’s retinas to the IDx-DR AI system. If the images are of sufficient quality, the system provides the medical practice with one of two diagnostic results: (1) “more than mild diabetic retinopathy detected: refer to an eye care professional” or (2) “negative for more than mild diabetic retinopathy; re-test in 12 months.” If a positive result is detected, patients should be referred to a specialist for further diagnostic and treatment evaluation.

The issue of levels of automation in the context of clinical care has become a central question from both a regulatory perspective and for purposes of payment and coverage because a clinically validated autonomous system is labeled by the FDA to perform a service without medical specialist interpretation. The FDA did not identify specific criteria it used to designate the IDx-DR system as autonomous; however, it did set precedent for autonomous AI by requiring a preregistered clinical trial to establish safety, efficacy, and equity, as reflected by the three corresponding trial endpoints. Narrowly defined, equity means that the AI is accurate and effective for all subgroups of the intended population, including age groups, races and ethnicities, not just for one or a few. It requires both design and validation of the AI to address potential bias and sources of bias. Thus, equity is a component of both safety and efficacy. The FDA also established special controls for the autonomous IDx-DR device including software documentation requirements, the requirement for clinical data to evaluate image acquisition as part of the system, the requirement for human factors validation, and the requirement for labeling to include instructions for obtaining quality images and how performance is affected by users interacting with the system.

Also last year, the FDA permitted marketing of clinical decision support software that alerts providers of a potential stroke in patients. The Viz.AI Contact application is intended for use by neurovascular specialists and other professionals with similar training. The Viz.AI Contact application analyzes CT images of the brain and sends a text notification to a neurovascular specialist if a suspected large vessel blockage has been identified. The AI system automatically notifies the specialist during the same time that the first-line provider is conducting a standard review of the images, thereby involving the specialist sooner than the usual workflow in which a radiologist reviews CT images and then notifies a neurovascular specialist. The specialist still reviews the images on a clinical workstation. The application is limited to analysis of imaging data and has not been authorized by the FDA as a replacement of a full patient evaluation or to be relied upon solely to make or confirm a diagnosis.

Although AI system developers are able to utilize existing FDA regulatory pathways to secure approval, or de novo authorization for AI systems, the FDA has indicated that the Agency’s alternative framework for oversight of software as a medical device (SaMD) could also serve as potential pathway to market AI systems considered medical devices. Software that is intended for use in the diagnosis of disease or other conditions, or in the cure, mitigation, treatment, or prevention of disease, in humans meets the definition of medical device and is FDA regulated. However, certain software that would have met this definition of medical device is no longer subject to FDA oversight due to passage of the 21st Century Cures Act of 2016.
The FDA has two categories for software that qualifies as a medical device: SaMD and software in a medical devices (SiMD). The FDA is dedicating a substantial amount of time to develop a new voluntary SaMD oversight pathway for developers called the Precertification Program. The precertification designation would be analogous to the Pre-Check program used by airline travelers. Once initially vetted, a developer would go through a streamlined process. Simply stated, given the rate of modifications to software and with the advent of software based on continuous learning algorithms powered by deep learning and neural networks, the current oversight framework may be strained by the volume of software and entrance of new software developers.

Early in 2019, the FDA issued an updated version of the proposed Precertification Program. The FDA states that it contemplates that AI systems would be able to use the Precertification Program. Throughout 2019, the FDA intends to pilot the Precertification Program in order to assess how the program could maintain FDA standards for assuring safe and effective products, while still achieving its aim of modernizing and streamlining the FDA’s review of novel digital health products. The FDA will test how the Precertification Program approach utilizing the streamlined de novo authorization pathway compares to the traditional FDA submission pathway. The AMA continues to provide comments and evaluate carefully the Precertification Program to assess whether it will ensure the safety and efficacy of software, particularly AI-enabled software that would be cleared, authorized, or approved through this pathway.

Centers for Medicare & Medicaid Services (CMS)

In November 2018, the CMS Center for Medicare & Medicaid Innovation (CMMI) announced a cross-industry challenge competition to innovate how AI can be implemented in current and future health care models dubbed the AI Health Outcomes Challenge. CMS noted it would seek applications for AI and analytics that can boost clinical care and improve overall patient health. The competition is open to technology vendors, clinicians, scientists, academics and patients who are innovating their uses of AI for quality improvement. In February 2019, it was announced that the challenge was being launched in partnership with the American Academy of Family Physicians. Reportedly, CMS is “brainstorming how [the Agency] can incorporate AI in the implementation of both our current and new payment and service delivery models.”

National Institutes of Health (NIH)

In July 2018, the NIH hosted a full-day public workshop titled Harnessing Artificial Intelligence and Machine Learning to Advance Biomedical Research. Subsequently, the NIH established an AI Working Group comprised of twelve members—drawn primarily from industry and universities. The AI Work Group is co-chaired by an engineering director at Verily, and the NIH’s Principal Deputy Director. In December 2018 the AI Work Group provided an update as part of the Meeting of the Advisory Committee to the NIH Director. The charge of the AI Work Group includes making recommendations to address the following questions: (1) Are there opportunities for cross-NIH effort in AI? How could these efforts reach broadly across biomedical topics and have positive effects across many diverse fields? (2) How can NIH help build a bridge between the computer science community and the biomedical community? (3) What can NIH do to facilitate training that marries biomedical research with computer science? and (4) Identify the major ethical considerations as they relate to biomedical research and using AI/ML/deep learning for health-related research and care, and suggest ways that NIH can build these considerations into its AI-related programs and activities.

The AI Work Group will offer interim recommendations in June 2019 and final recommendations will be issued in December 2019. There are a range of additional NIH activities such as the NIH AI
Interest Group (AIIG) that is charged with facilitating communication among the scientists of NIH, FDA, universities and industries with interest in the development of AI systems to improve medical treatments. In August 2018, the NIH’s National Institute of Biomedical Imaging and Bioengineering (NIBIB) hosted an Artificial Intelligence and Medical Imaging Workshop to discuss AI systems used for medical imaging and the challenges with regard to quality, reproducibility, and reliability of AI in medical imaging for clinical use. The meeting also sought to address how AI systems might improve the value of medical imaging and health care overall. In addition to ongoing NIH research, peer publications, and meetings, the Director of NIH also blogs concerning the research and evidence related to AI system applications to clinical care. In January 2019, for example, the Director posted a blog on Using Artificial Intelligence to Detect Cervical Cancer.

Federal Trade Commission (FTC)

In November 2018, the FTC held a two-day hearing on Algorithms, Artificial Intelligence, and Predictive Analytics. The hearing focused on: (1) the current and potential uses of these technologies; (2) the ethical and consumer protection issues that are associated with the use of these technologies; (3) how the competitive dynamics of firm and industry conduct are affected by the use of these technologies; and, (4) policy, innovation, and market considerations associated with the use of these technologies.

The developer of the IDx-DR program, a practicing physician, was invited by the FTC to provide testimony on the panel titled Understanding Algorithms, Artificial Intelligence, and Predictive Analytics Through Real World Applications. While he remarked that FDA has not set specific criteria for autonomous AI, the developer described proposed minimum criteria for autonomous AI and emphasized the need for rigorous FDA processes before deployment into clinical practice, including the three principles of safety, efficacy and equity. He also noted that AI developers with autonomous AI systems used for clinical applications must assume medical liability. The IDx-DR developer emphasized the importance of transparency; agreement on enforceable definitions; the minimum requirements for AI system validation, including human factors validation; requirements for addressing age, racial, and ethnic bias in the design; and validation of the AI system. He discussed the need for the highest-level reference standard based on patient outcomes, and aligned to the specialty preferred practice pattern, the importance of a pre-registered clinical trial reflecting the intended use, cybersecurity, training data stewardship, and other aspects unique to autonomous AI. The AMA filed comments which included the AMA policy on health care AI and expressing agreement that there is a need for: (1) clinical validation by regulators, (2) appropriate assignment of legal liability to developers for autonomous AI systems; and (3) transparency to support clinical decision-making.

Defense Advanced Research Projects Agency (DARPA)

In August 2016, DARPA launched the Explainable Artificial Intelligence (XAI) program. The program focuses on ML systems in order to: (1) produce more explainable models, while maintaining a high level of learning performance (prediction accuracy); and (2) enable human users to understand, appropriately trust, and effectively manage the emerging generation of artificially intelligent partners. In July 2018, DARPA launched the Artificial Intelligence Exploration (AIE) Program. And, then, in September 2018 the Agency announced a multi-year investment of more than $2 billion in new and existing programs called the “AI Next” campaign. Key areas of the campaign include automating critical DOD business processes, such as security clearance vetting or accrediting software systems for operational deployment; improving the robustness and reliability of AI systems; enhancing the security and resiliency of ML and AI technologies;
reducing power, data, and performance inefficiencies; and pioneering the next generation of AI
algorithms and applications, such as “explainability” and common sense reasoning.

Federation of State Medical Boards

In April 2018, the FSMB House of Delegates resolved to convene relevant stakeholders, subject
to matter experts, including representatives from state medical boards, the AMA, and the American
Osteopathic Association to discuss AI and its potential impact on patient safety, decision-making
and regulation.32 In November 2018, FSMB hosted AI in Health Care: The Role of Medical
Boards. The Summit was comprised of a cross-section of stakeholders including representatives
from the AMA and various state medical boards, FSMB leadership, staff, and industry. The
discussion centered on the regulatory environment in which health related AI technology is
deployed, the mission of state medical boards and approaches to AI regulation taken in other
jurisdictions, and the appropriate role and function of medical boards in the deployment of health
AI technology.

POLICY

The AMA’s foundational Policy H-480.940, “Augmented Intelligence in Health Care,” provides
that the perspective of practicing physicians should be included in the development, design,
validation, and implementation of health care AI. Furthermore, the policy provides that
thoughtfully designed, high-quality, clinically validated health care AI must be designed and
evaluated in keeping with best practices in user-centered design, particularly for physicians and
other members of the health care team; be transparent; conform to leading standards for
reproducibility; identify and take steps to address bias and avoid introducing or exacerbating health
care disparities including when testing or deploying new AI tools on vulnerable populations; and
safeguard patients’ and other individuals’ privacy interests and preserves the security and integrity
of personal information. The policy also provides that our AMA will address the legal implications
of health care AI, such as issues of liability or intellectual property, and advocate for appropriate
professional and governmental oversight for safe, effective, and equitable use of and access to
health care AI.

In addition, AMA policy concerning payment for digital medicine and integration of health
information technology are related to payment and use of AI systems in health care as the latter are
a subset of the former.

AMA Policy H-480.946, “Coverage of and Payment for Telemedicine,” provides that payment and
coverage should only occur when delivered consistent with applicable regulatory and oversight
requirements designed to ensure patient safety and consistent with clinical practice guidelines
developed by national medical specialty societies and other evidence-based practice guidelines, to
ensure patient safety, quality of care and positive health outcomes. Furthermore, the policy
specifies appropriate disclosure, informed consent, and care coordination must be in place. The
policy also provides that digital modalities should comply with laws addressing privacy and
security of patients’ medical information and urges physicians to verify that their medical liability
insurance policy covers use of such technologies. In this latter regard, it will be important that
physicians verify that AI system developers have taken steps to be legally responsible and
accountable for the AI system where there is a lack of transparency or the developer is providing or
marketing a fully autonomous AI system.

AMA policies (H-480.946 and H-480.940) outline the importance of: research to build the
evidence base for digital medicine; federally funded pilots to assess new delivery models, scaling,
quality, and payment; and physician organizations and national medical specialty societies in
particular in developing standards and clinical practice guidelines. The policies provide that
physician organizations should collaborate with other key stakeholders in the development of
technical standards for digital medicine, to the extent practicable, and to take the lead in the
development of clinical practice guidelines. AMA policy also provides support for research to
develop appropriate practice parameters to address the various applications of digital medicine
modalities and to guide quality assessment and liability issues.

In addition to outlining essential prerequisites to payment such as evidence of clinical usefulness,
compliance with state and federal legal requirements to ensure patient safety, and adherence to
support for pathways to payment under existing payment and delivery models while also specifying
that the AMA will work with CMS and other payers to develop and test through demonstration
projects appropriate reimbursement mechanisms.

AMA also has policy concerning the acquisition and cost of health information technology. AMA
Policy D-478.990, “Clinical Information Technology Assistance,” provides that the AMA will seek
a full refundable federal tax credit or equivalent financial mechanism to indemnify physician
practices for the cost of purchasing and implementing clinical information technology, including
electronic medical record systems, e-prescribing and other clinical information technology tools, in
compliance with applicable safe harbors. And, a related Policy D-478.996, “Information
Technology Standards and Cost,” provides that our AMA will work with Congress and insurance
companies to appropriately align incentives as part of the development of a National Health
Information Infrastructure (NHII), so that the financial burden on physicians is not disproportionate
when they implement these technologies in their offices and to take into account the cost to
physicians at the office-based level; and to continue to advocate for and support initiatives that
minimize the financial burden to physician practices of adopting and maintaining electronic
medical records. Finally, the policy provides that our AMA will advocate that physicians not be
financially penalized for certified EHR technology not meeting current standards.

DISCUSSION

The recommendation referred for report raises many of the same questions and concerns that
physicians across medical specialty and practice sites have expressed when adopting new digital
medicine modalities or when acquiring, implementing, and maintaining health information
technology, as discussed below. In addition, since the referral, payment and use of AI systems in
health care has rapidly taken on relevance as the FDA has authorized or cleared for use AI-enabled
systems for clinical practice, including, as detailed above, the first autonomous AI-system. And,
CMS in collaboration with the American Academy of Family Physicians has launched a challenge
competition to innovate how AI can be implemented in current and future health care payment and
delivery models.

AMA policies related to payment and coverage of digital medicine and acquisition of health
information technology are directly applicable to funding, payment, and access to AI systems for
health administration, population health, practice management, clinical care, and related use.
However, AI systems do raise additional issues. Also, these challenges (and potential benefits) may
impact physicians and their patients differently depending on the practice size, setting, and
specialty and these are germane.
Advancing the Quadruple Aim for All Patients, Medical Specialties and Care Setting

The referred recommendation would establish AMA policy to support funding for AI systems as an “enhancement of the primary care medical home so that patients who really need AI can benefit from the technology.” While this should be one of the outcomes of payment and funding policy for AI systems, it is not the only one. Instead, our AMA should support payment and funding for the range of practice types and specialties where different AI system uses will advance the quadruple aim. The quadruple aim seeks to advance simultaneously the improvement of the health of populations, the enhancement of the patient experience of care, the reduction of the per capita cost of health care, and the improvement the work life of health care clinicians and staff.33

In 2016, the AMA commissioned a survey of physicians from varied medical specialties and practice settings in order to investigate their motivations, current usage, and expectations for integrating digital medicine tools into their practice (Digital Health Study). The surveyed physicians were optimistic that digital medicine tools would improve medical practice and patient care. Surveyed physicians in larger practices tended to use digital medicine tools more. Key factors relevant to increased adoption included practice size and setting which suggests economies of scale and the ability of relatively larger practices to scale infrastructure may play a role in adoption. More physicians reported adoption of telehealth visits than use of remote patient monitoring. Physicians, however, have greater enthusiasm for the clinical benefit and work efficiencies of remote patient monitoring and management systems. It is anticipated that this latter modality will utilize increasingly advanced AI systems and methods. In addition, utilization of remote patient monitoring is expected to increase as a result of Medicare expanded coverage of remote patient monitoring for chronic conditions as of January 1, 2019.

In addition to needing credible evidence that a digital modality is clinically effective, surveyed physicians ranked in order of importance the key issues that must be addressed to support their adoption of these technologies including: (1) appropriate measures to address liability; (2) data privacy/security assured by experts; (3) workflow integration with electronic health record systems; and then, (4) coverage and payment. Similarly, our AMA policies specify that digital medicine payment and integration are subject to: (1) appropriate regulatory oversight; (2) accountability by technology developers for adverse events caused by such technologies; and (3) patient privacy and security protections.

The foregoing underscores that AMA policy should address payment for AI systems without limits on medical specialty, practice setting, or payment model. Furthermore, payment for such systems should ensure key issues and considerations are addressed as with all digital medicine modalities when incorporating these systems into practice, while also accounting for the additional risks that AI systems may pose.

Mandates, Penalties, Interference with Medical Practice, and Liability

The referred also would have established AMA policy that AI systems should not be “a requirement that must be incorporated into the care of every patient.” If adopted, it would have only partially addressed a range of long-standing physician concerns related to technology mandates, penalties, and other similar requirements that interfere with the patient-physician relationship and medical practice while exposing physicians to increased liability. When technologies are well-designed and clinically validated and useful, mandates are not needed. Where technologies are poorly designed, mandates and penalties have been used to drive adoption. However, the approach to include mandates and penalties has stymied innovation and fueled physician burnout. As a result, it is important that payment policies incentivize development of AI
systems that: (1) are informed by real-world workflow and human-centered design principles; (2) enable physicians and other health care stakeholders to prepare for and transition to changes in care delivery; (3) support effective communication and engagement among patients, physicians, and the health care team; (4) seamlessly integrate into the clinical and administrative workflow; and (5) enable frictionless end-user feedback to support iterative product improvement.

Furthermore, mandated use of AI systems for specific clinical uses or health administration raise concerns as to the validation and scaling of AI systems for a range of applications that remain a work in progress. As detailed in this report, there is an ongoing need for standards development and wide-spread adoption of such standards, regulatory modernization, research, and experience with varied deployment models. There are significant risks associated with AI systems that are not properly designed, developed, validated and deployed as previously detailed in BOT Report 41-A-18. In brief, AI systems utilizing ML present pronounced risk of bias. Physicians, health systems, developers, or regulators may not be in a position to understand the risks due to black-box systems due to design or for proprietary reasons. Thus, mandated or required uses of such systems should be disfavored and liability should be borne by the developer and/or the entity mandating use of such systems whether fully autonomous or assistive.

Building Evidence Base

The foregoing underscores that there is the need to build the evidence base for health care AI. Research should prioritize evaluation of AI systems that utilize ML in clinical practice to assess safety, efficacy, performance, equity, privacy, and security under varied conditions of deployment. Public and private funding and other resources should be prioritized to support research that expands the evidence base for applications of health care AI systems.

RECOMMENDATION

In light of these considerations, your Board of Trustees recommends that the following be adopted in lieu of the recommendation and the remainder of this report be filed:

Our AMA supports the use and payment of augmented intelligence (AI) systems that advance the quadruple aim. AI systems should enhance the patient experience of care and outcomes, improve population health, reduce overall costs for the health care system while increasing value, and support the professional satisfaction of physicians and the health care team. To that end our AMA will advocate that:

1. Oversight and regulation of health care AI systems must be based on risk of harm and benefit accounting for a host of factors, including but not limited to: intended and reasonably expected use(s); evidence of safety, efficacy, and equity including addressing bias; AI system methods; level of automation; transparency; and, conditions of deployment.

2. Payment and coverage for all health care AI systems must be conditioned on complying with all appropriate federal and state laws and regulations, including, but not limited to those governing patient safety, efficacy, equity, truthful claims, privacy, and security as well as state medical practice and licensure laws.

3. Payment and coverage for health care AI systems intended for clinical care must be conditioned on (a) clinical validation; (b) alignment with clinical decision-making that is familiar to physicians; and (c) clinical evidence.
4. Payment and coverage for health care AI systems must (a) be informed by real world workflow and human-centered design principles; (b) enable physicians to prepare for and transition to new care delivery models; (c) support effective communication and engagement between patients, physicians, and the health care team; (d) seamlessly integrate clinical, administrative, and population health management functions into workflow; and (e) seek end-user feedback to support iterative product improvement.

5. Payment and coverage policies must advance affordability and access to AI systems that are designed for small physician practices and patients and not limited to large practices and institutions. Government-conferred exclusivities and intellectual property laws are meant to foster innovation, but constitute interventions into the free market, and therefore, should be appropriately balanced with the need for competition, access, and affordability.

6. Physicians should not be penalized if they do not use AI systems while regulatory oversight, standards, clinical validation, clinical usefulness, and standards of care are in flux. Furthermore, our AMA opposes:
   a. Policies by payers, hospitals, health systems, or governmental entities that mandate use of health care AI systems as a condition of licensure, participation, payment, or coverage.
   b. The imposition of costs associated with acquisition, implementation, and maintenance of healthcare AI systems on physicians without sufficient payment.

7. Liability and incentives should be aligned so that the individual(s) or entity(ies) best positioned to know the AI system risks and best positioned to avert or mitigate harm do so through design, development, validation, and implementation. Our AMA will further advocate:
   a. Where a mandated use of AI systems prevents mitigation of risk and harm, the individual or entity issuing the mandate must be assigned all applicable liability.
   b. Developers of autonomous AI systems with clinical applications (screening, diagnosis, treatment) are in the best position to manage issues of liability arising directly from system failure or misdiagnosis and must accept this liability with measures such as maintaining appropriate medical liability insurance and in their agreements with users.
   c. Health care AI systems that are subject to non-disclosure agreements concerning flaws, malfunctions, or patient harm (referred to as gag clauses) must not be covered or paid and the party initiating or enforcing the gag clause assumes liability for any harm.

8. Our AMA, national medical specialty societies, and state medical associations—
   a. Identify areas of medical practice where AI systems would advance the quadruple aim;
   b. Leverage existing expertise to ensure clinical validation and clinical assessment of clinical applications of AI systems by medical experts;
   c. Outline new professional roles and capacities required to aid and guide health care AI systems; and
   d. Develop practice guidelines for clinical applications of AI systems.

9. There should be federal and state interagency collaboration with participation of the physician community and other stakeholders in order to advance the broader infrastructural capabilities and requirements necessary for AI solutions in health care to be sufficiently inclusive to benefit all patients, physicians, and other health care stakeholders. (New HOD Policy)

Fiscal Note: Less than $5000

There has been significant government activity involving the work the National Institute of Standards and Technology (NIST) and certain operating and staffing divisions of the Department of Health and Human Services (HHS) including the Office of the National Coordinator for Health Information Technology (ONC), the Office of Civil Rights (OCR), and the Centers for Medicare and Medicaid Services (CMS) related to data uses and access.

The U.S. House of Representatives, Oversight and Government Reform Committee Subcommittee on Information Technology has held a series of hearings captioned: Game Changer: Artificial Intelligence; Artificial Intelligence and Public Policy; and Artificial Intelligence and the Federal Government. The U.S. Senate Commerce Committee’s Subcommittee on Space, Science and Competitiveness has also held a series of hearings including The Dawn of Artificial Intelligence (a broad overview of the state of AI and the policy implications and the effects on commerce), The Promise and Perils of Emerging Technologies for Cybersecurity (an exploration of the impact of emerging technologies, including AI, the internet of things, blockchain, and quantum computing on the future of cybersecurity), and The Digital Decision Making: The Building Blocks of Machine Learning and Artificial Intelligence (a review of the new and emerging role of AI in the nation’s growing digital environment). Both the U.S. House of Representatives Energy and Commerce Committee and the U.S. Senate Committee on the Judiciary held hearings Facebook: Transparency and Use of Consumer Data and Facebook, Social Media Privacy, and Use and Abuse of Data, respectively. Facebook CEO and Chairman Mark Zuckerberg mentioned AI tools more than 30 times as a way to monitor and ban hate speech on the platform in the future. However, the Co-Chairs of the congressional AI Caucus subsequently released a statement that in part provided: “While AI can be utilized to help Facebook and other entities tackle problems on a massive scale, we also need to make sure that AI is implemented in an unbiased way. As the Co-Chairs of the AI Caucus, we believe that Facebook should provide more information to Congress on how they plan to use AI and what steps they are taking to make sure that AI is being used in an unbiased manner that also respects users’ privacy.” AI Caucus Co-Chairs: Facebook Should Clarify Plans to Use AI, Address Bias and Privacy Concerns, Congressional Artificial Intelligence Caucus Press Release, April 13, 2018 Accessed February 20, 2019.

Other bills that were introduced, but not passed in the 115th Congress include: (1) H.R. 4829, the Artificial Intelligence Job Opportunities and Background Summary Act of 2018 (AI JOBS) Act of 2018 introduced by Rep. Darren Soto (D-FL) would direct Department of Labor to prepare report on Congress on AI and its impact on the workforce. Rep. Soto has reintroduced the AI JOBS Act of 2019 which is now H.R. 827 in the 116th Congress (2019-2020); (2) S. 2217/H.R. 4625, the Fundamentally Understanding the Usability and Realistic Evolution of Artificial Intelligence Act of 2017 (FUTURE of AI Act) introduced by Senators Maria Cantwell (D-WA) and Todd Young (R-IN) and Representative John Delaney, respectively, would have established the Federal Advisory Committee on the development and implementation of AI; (3) S. 3502, the Artificial Intelligence in Government Act introduced by Senators Gardner (R -CO), Schatz (D-HI), Portman (R-OH), and Harris (D- CA) would have promoted the use of AI by the federal government through increased executive agency coordination through an advisory board and development of a strategy for investing and deploying AI as part of the federal government.

H.R. 5515, the John S. McCain National Defense Authorization Act for Fiscal Year 2019

The advisory committee is the Select Committee under National Science and Technology Council’s (“NSTC”) and is tasked with “improv[ing] the coordination of federal efforts related to AI and ensur[ing] continued U.S. leadership in AI.” As part of this effort, the Networking and Information Technology Research and Development Subcommittee (NITRD) and the new Select Committee were charged with updating “The National Artificial Intelligence Research and Development Strategic Plan” (the “Strategic Plan”) that was created in 2016 in order to establish a set of objectives for federally-funded AI research. The ultimate goal of this federally-funded research is to “produce new AI knowledge and technologies that provide a range of positive benefits to society, while minimizing the negative impacts.” The plan identifies seven priorities to achieve this goal: (1) Make long-term investments in AI research; (2) Develop effective
methods for human-AI collaboration; (3) Understand and address the ethical, legal, and societal implications of AI; (4) Ensure the safety and security of AI systems; (5) Develop shared public datasets and environments for AI training and testing; (6) Measure and evaluate AI technologies through standards and benchmarks; and, (7) Better understand the national AI research and development workforce needs.

APPENDIX: RELEVANT AMA POLICY

Policy H-480.940, “Augmented Intelligence in Health Care”
As a leader in American medicine, our AMA has a unique opportunity to ensure that the evolution of augmented intelligence (AI) in medicine benefits patients, physicians, and the health care community.
To that end our AMA will seek to:
1. Leverage its ongoing engagement in digital health and other priority areas for improving patient outcomes and physicians’ professional satisfaction to help set priorities for health care AI.
2. Identify opportunities to integrate the perspective of practicing physicians into the development, design, validation, and implementation of health care AI.
3. Promote development of thoughtfully designed, high-quality, clinically validated health care AI that:
   a. is designed and evaluated in keeping with best practices in user-centered design, particularly for physicians and other members of the health care team;
   b. is transparent;
   c. conforms to leading standards for reproducibility;
   d. identifies and takes steps to address bias and avoids introducing or exacerbating health care disparities including when testing or deploying new AI tools on vulnerable populations; and
   e. safeguards patients’ and other individuals’ privacy interests and preserves the security and integrity of personal information.
4. Encourage education for patients, physicians, medical students, other health care professionals, and health administrators to promote greater understanding of the promise and limitations of health care AI.
5. Explore the legal implications of health care AI, such as issues of liability or intellectual property, and advocate for appropriate professional and governmental oversight for safe, effective, and equitable use of and access to health care AI.

Policy H-480.946, “Coverage of and Payment for Telemedicine”
1. Our AMA believes that telemedicine services should be covered and paid for if they abide by the following principles:
   a. A valid patient-physician relationship must be established before the provision of telemedicine services, through:
      - A face-to-face examination, if a face-to-face encounter would otherwise be required in the provision of the same service not delivered via telemedicine; or
      - A consultation with another physician who has an ongoing patient-physician relationship with the patient. The physician who has established a valid physician-patient relationship must agree to supervise the patient's care; or
- Meeting standards of establishing a patient-physician relationship included as part of evidence-based clinical practice guidelines on telemedicine developed by major medical specialty societies, such as those of radiology and pathology. Exceptions to the foregoing include on-call, cross coverage situations; emergency medical treatment; and other exceptions that become recognized as meeting or improving the standard of care. If a medical home does not exist, telemedicine providers should facilitate the identification of medical homes and treating physicians where in-person services can be delivered in coordination with the telemedicine services.

b. Physicians and other health practitioners delivering telemedicine services must abide by state licensure laws and state medical practice laws and requirements in the state in which the patient receives services.

c. Physicians and other health practitioners delivering telemedicine services must be licensed in the state where the patient receives services, or be providing these services as otherwise authorized by that state's medical board.

d. Patients seeking care delivered via telemedicine must have a choice of provider, as required for all medical services.

e. The delivery of telemedicine services must be consistent with state scope of practice laws.

f. Patients receiving telemedicine services must have access to the licensure and board certification qualifications of the health care practitioners who are providing the care in advance of their visit.

g. The standards and scope of telemedicine services should be consistent with related in-person services.

h. The delivery of telemedicine services must follow evidence-based practice guidelines, to the degree they are available, to ensure patient safety, quality of care and positive health outcomes.

i. The telemedicine service must be delivered in a transparent manner, to include but not be limited to, the identification of the patient and physician in advance of the delivery of the service, as well as patient cost-sharing responsibilities and any limitations in drugs that can be prescribed via telemedicine.

j. The patient's medical history must be collected as part of the provision of any telemedicine service.

k. The provision of telemedicine services must be properly documented and should include providing a visit summary to the patient.

l. The provision of telemedicine services must include care coordination with the patient's medical home and/or existing treating physicians, which includes at a minimum identifying the patient's existing medical home and treating physicians and providing to the latter a copy of the medical record.

m. Physicians, health professionals and entities that deliver telemedicine services must establish protocols for referrals for emergency services.

2. Our AMA believes that delivery of telemedicine services must abide by laws addressing the privacy and security of patients' medical information.

3. Our AMA encourages additional research to develop a stronger evidence base for telemedicine.

4. Our AMA supports additional pilot programs in the Medicare program to enable coverage of telemedicine services, including, but not limited to store-and-forward telemedicine.

5. Our AMA supports demonstration projects under the auspices of the Center for Medicare and Medicaid Innovation to address how telemedicine can be integrated into new payment and delivery models.
6. Our AMA encourages physicians to verify that their medical liability insurance policy covers telemedicine services, including telemedicine services provided across state lines if applicable, prior to the delivery of any telemedicine service.

7. Our AMA encourages national medical specialty societies to leverage and potentially collaborate in the work of national telemedicine organizations, such as the American Telemedicine Association, in the area of telemedicine technical standards, to the extent practicable, and to take the lead in the development of telemedicine clinical practice guidelines.

Policy H-480.974, “Evolving Impact of Telemedicine”
Our AMA:
1. will evaluate relevant federal legislation related to telemedicine;
2. urges CMS, AHRQ, and other concerned entities involved in telemedicine to fund demonstration projects to evaluate the effect of care delivered by physicians using telemedicine-related technology on costs, quality, and the physician-patient relationship;
3. urges professional organizations that serve medical specialties involved in telemedicine to develop appropriate practice parameters to address the various applications of telemedicine and to guide quality assessment and liability issues related to telemedicine;
4. encourages professional organizations that serve medical specialties involved in telemedicine to develop appropriate educational resources for physicians for telemedicine practice;
5. encourages development of a code change application for CPT codes or modifiers for telemedical services, to be submitted pursuant to CPT processes;
6. will work with CMS and other payers to develop and test, through these demonstration projects, appropriate reimbursement mechanisms;
7. will develop a means of providing appropriate continuing medical education credit, acceptable toward the Physician's Recognition Award, for educational consultations using telemedicine;
8. will work with the Federation of State Medical Boards and the state and territorial licensing boards to develop licensure guidelines for telemedicine practiced across state boundaries; and
9. will leverage existing expert guidance on telemedicine by collaborating with the American Telemedicine Association (www.americantelemed.org) to develop physician and patient specific content on the use of telemedicine services—encrypted and unencrypted.

Policy D-478.990, “Clinical Information Technology Assistance”
Our AMA will seek a full refundable federal tax credit or equivalent financial mechanism to indemnify physician practices for the cost of purchasing and implementing clinical information technology, including electronic medical record systems, e-prescribing and other clinical information technology tools, in compliance with applicable safe harbors.

Policy D-478.996, “Information Technology Standards and Costs”
1. Our AMA will:
(a) encourage the setting of standards for health care information technology whereby the different products will be interoperable and able to retrieve and share data for the identified important functions while allowing the software companies to develop competitive systems;
(b) work with Congress and insurance companies to appropriately align incentives as part of the development of a National Health Information Infrastructure (NHII), so that the financial burden on physicians is not disproportionate when they implement these technologies in their offices;
(c) review the following issues when participating in or commenting on initiatives to create a NHII: (i) cost to physicians at the office-based level;
(ii) security of electronic records; and
(iii) the standardization of electronic systems;
(d) continue to advocate for and support initiatives that minimize the financial burden to physician
practices of adopting and maintaining electronic medical records; and
(e) continue its active involvement in efforts to define and promote standards that will facilitate the
interoperability of health information technology systems.

2. Our AMA advocates that physicians:
(a) are offered flexibility related to the adoption and use of new certified Electronic Health Records
   (EHRs) versions or editions when there is not a sufficient choice of EHR products that meet the
   specified certification standards; and
(b) not be financially penalized for certified EHR technology not meeting current standards.

**Policy D-480.970, “Access and Equity in Telemedicine Payments”**
Our AMA will advocate that the Centers for Medicare & Medicaid Services pay for telemedicine
services for patients who have problems accessing physician specialties that are in short supply in
areas that are not federally determined shortage areas, if that area can show a shortage of those
physician specialists.
REPORT OF THE BOARD OF TRUSTEES

B of T Report 22-A-19

Subject: Inappropriate Use of CDC Guidelines for Prescribing Opioids
(Resolution 235-I-18)

Presented by: Jack Resneck, Jr., MD, Chair

Referred to: Reference Committee B
(Charles Rothberg, MD, Chair)

INTRODUCTION

At the 2018 Annual Meeting, the House of Delegates (HOD) referred the second resolve of
alternate Resolution 235, “Inappropriate Use of CDC Guidelines for Prescribing Opioids.” The
second resolve in the alternate resolution asked:

[T]hat our AMA actively continue to communicate and engage with the nation’s largest
pharmacy chains, pharmacy benefit managers, National Association of Insurance
Commissioners, Federation of State Medical Boards, and National Association of Boards of
Pharmacy in opposition to communications being sent to physicians that include a blanket
proscription against filing prescriptions for opioids that exceed numerical thresholds without
taking into account the diagnosis and previous response to treatment for a patient and any
clinical nuances that would support such prescribing as falling within standards of good quality
patient care.

This report provides an update on those communications, highlights complementary AMA
advocacy and provides recommendations.

DISCUSSION

The nation’s opioid epidemic has led to extensive policy development in multiple areas—from
several hundred new state laws and regulations to hundreds of millions of dollars earmarked by
federal legislation for treatment of opioid use disorder, harm reduction efforts and other initiatives.
Debating the merits of the new laws and regulations would go beyond the scope of this report, but
it should be noted that each new law or regulation occurred within a notice and comment period as
well as extensive public debate informed by stakeholder advocacy that underpins the lawmaking
process. Medical societies may not have supported each piece of legislation or agreed with the
regulatory agencies charged with rulemaking, but organized medicine has been an active
participant in every state, in Congress and with the relevant federal agencies.

That is not, however, the only type of policymaking that has occurred. Health insurance companies,
national pharmacy chains and pharmacy benefit management companies (PBMs) all have—to
varying degrees—implemented their own policies governing physician prescribing of controlled
substances as well as patients’ abilities to have a controlled substance prescription dispensed to
them. The result of this type of quasi-regulation is incredibly difficult to quantify on a large scale
basis due to the lack of transparency in the public sphere, but the AMA and many medical societies
continue to receive concerns from physicians and patients as to the disruptive nature of health plan, pharmacy chain or PBM interference in the patient-physician relationship. The concern and/or perceived interference has included pharmacists calling to ask about a patient’s diagnosis or request patient records, a pharmacist asking for clarification about a prescription or alerting the physician to red flags, a pharmacist recommending a different medication strategy, and in some cases, a pharmacist informing the physician that the prescription will not be filled. This concern and/or interference has even gone so far as a pharmacist demanding patients taper their opioid prescriptions, telling them that the U.S. Drug Enforcement Administration (DEA) identified the patient’s prescription as “exceeding the maximum Morphine Milligram Equivalents (MME) as defined by the Centers for Disease Control and Prevention (CDC).”¹ In response to this last incident, the DEA and CDC, among others, stated to the AMA (and the Medical Association of Georgia) that the pharmacist’s actions and interpretation of CDC and DEA rules and guidelines were incorrect and inappropriate. MAG informed the AMA of this situation, and the AMA, in turn, reached out to the DEA, CDC, National Association of Boards of Pharmacy and others—all of whom quickly engaged with the AMA to register their disapproval of the pharmacy action and state that they would take all relevant actions in Georgia. Your Board appreciates the fact that DEA, CDC, NABP and others took action to support the concerns of MAG and the AMA.

These different physician-pharmacist interactions, however, are often the inevitable result of policies mainly focused on the dose and/or number of days for a prescription for opioid analgesics. It should be noted at the outset that the AMA strongly supports physicians’ efforts to ensure that if a prescription for an opioid analgesic is warranted to help treat a patient’s pain, physicians should prescribe the lowest effective dose only for the shortest duration of time. The AMA also supports pharmacists as key partners in helping ensure medication safety and as part of the patient-physician-pharmacist therapeutic triad. The Board and the AMA Opioid Task Force point out that physicians’ efforts to make more judicious prescribing decisions have led to a more than 22 percent reduction in retail opioid prescriptions dispensed between 2013-2017, and that these reductions began prior to nearly all legislative, regulatory and other efforts focused on reducing opioid supply.

Concurrent with and despite this progress, national pharmacy chains, health insurance companies and PBMs have implemented their own restrictive opioid prescribing policies. This report will not detail every iteration and difference between the policies except to say that most of the policies are some variation of the “CDC Guideline for Prescribing Opioids for Chronic Pain—United States, 2016” (the CDC Guideline).² In the CDC Guideline’s introduction, CDC stated:

[T]he recommendations in the guideline are voluntary, rather than prescriptive standards. They are based on emerging evidence, including observational studies or randomized clinical trials with notable limitations. Clinicians should consider the circumstances and unique needs of each patient when providing care.

Yet, the CDC Guideline goes on to make two recommendations that appear in nearly all the pharmacy, payer and PBM policies:

[Recommendation] 5. When opioids are started, clinicians should prescribe the lowest effective dosage. Clinicians should use caution when prescribing opioids at any dosage, should carefully reassess evidence of individual benefits and risks when considering increasing dosage to ≥ 50 morphine milligram equivalents (MME)/day, and should avoid increasing dosage to ≥ 90 MME/day or carefully justify a decision to titrate dosage to ≥ 90 MME/day.
[Recommendation] 6. Long-term opioid use often begins with treatment of acute pain. When opioids are used for acute pain, clinicians should prescribe the lowest effective dose of immediate-release opioids and should prescribe no greater quantity than needed for the expected duration of pain severe enough to require opioids. Three days or less will often be sufficient; more than seven days will rarely be needed.

The AMA is concerned by the fact that policymakers, health plans, corporate pharmacy chains and PBMs have used these recommendations to restrict or refuse patients (with few exceptions) to receive a prescription greater than 90 MME or for more than seven days. It is important to note that CDC Guideline Recommendations 5 and 6 were intended guidelines for acute pain episodes, not a hard threshold, and not intended for chronic pain patients. The U.S. Department of Health and Human Services Interagency Pain Care Task Force draft report commented:

At least 28 states have enacted legislation related to opioid prescription limits, and many states and organizations have implemented the guideline without recognizing that the intended audience was [primary care providers]; have used legislation for what should be medical decision making by healthcare professionals; and have applied them to all physicians, dentists, NPs, and PAs, including pain specialists. Some stakeholders have interpreted the guideline as intended to broadly reduce the amounts of opioids prescribed for treating pain; some experts have noted that the guideline emphasizes the risk of opioids while minimizing the benefit of this medication class when properly managed. The CDC guideline was not intended to be model legislation for state legislators to enact.

Many of the state legislative and other policies enacted and/or implemented since then, however, justify the dosage limit for acute pain based on the CDC Guideline. The HOD addressed this in Policy D-120.932, “Inappropriate Use of CDC Guidelines for Prescribing Opioids.” While it is common for state opioid prescribing restriction policies to allow for exceptions for patients with cancer, in hospice or who require palliative care, to name a few, exceptions are highly variable regarding post-operative surgical care, chronic pain, cancer remission-related pain, sickle cell or other conditions for which a patient might require a prescription for a greater dosage than a state law might allow.

AMA has consistently stated its opposition to these hard thresholds because of the potential danger they pose if a patient does not neatly fit into an exception category (e.g., hospice, cancer, palliative care). At the same time, multiple national pharmacy chains implemented some variation of the CDC Guideline as their policy—a move the AMA warned would occur. AMA President Barbara L. McAneny, MD, shared with the HOD at the 2018 Interim Meeting that a pharmacy denied an opioid prescription to one of her prostate cancer patients—claiming he was a drug seeker. Additionally, the AMA “FixPriorAuth” campaign heard from a patient’s wife that:

This happened to my sweetheart, changing insurance companies. He was on pain meds for an extended period and they wouldn’t authorize his meds in time so his current prescription ran out and we had to go to the hospital for pain control. They are heartless!!

The AMA’s first engagement with this issue dates to discussions that occurred in 2013-2014 with the National Association of Boards of Pharmacy (NABP), the Federation of State Medical Boards (FSMB) and many other stakeholders. Those discussions were born from concerns physicians and others raised with respect to early precursors of opioid prescription restriction policies. The result of those discussions was not only a consensus statement highlighting the legal and professional obligations of physicians, but also the corresponding responsibility of pharmacists.
The AMA’s work with the FSMB, moreover, also pre-dated the issuance of the CDC Guideline. One prominent outcome from the FSMB was adoption, in 2017, of an updated “Guidelines for the Chronic Use of Opioid Analgesics.” The AMA was a member of the workgroup that provided input to the FSMB during its deliberations and strongly voiced its concern about “one-size-fits-all” thresholds. The FSMB, to its great credit, supported those concerns and the resulting policy reflects support for ensuring patient-focused care. For example, the FSMB states:

[T]he “focus of the [FSMB] Guidelines that follow is on the general overall safe and evidence-based prescribing of opioids and treatment of chronic, non-cancer pain with the specific limitation and restriction that these Guidelines do not operate to create any specific standard of care, which standard must depend upon fact-specific totality of circumstances surrounding specific quality-of-care events.”

In addition to the FSMB’s ongoing support for patient-focused care, the development of the NABP consensus statement also resulted in the development of close relationships with pharmacy counterparts at several national chain pharmacies. When issues have arisen in select states where a physician reports a concern with the dispensing decision of a pharmacy, these relationships have enabled AMA to work directly with the national chain and the state medical society to resolve the issue—a resolution based on specific facts rather than a one-size-fits-all approach. The AMA also has remained in close contact with the NABP to share information and work collaboratively where interests align, including efforts to bolster constructive relationships between physicians and pharmacists. It also is worth highlighting that some pharmacy boards are taking steps to remind their licensees about the need to ensure dispensing determinations are made on an individualized patient basis.

Despite continued efforts by AMA to constructively engage Walmart, Inc. (Walmart), however, the national pharmacy chain has taken a markedly different course. Specifically, Walmart has sent an unknown number of what can be considered “blacklist” letters to physicians. These unsigned letters from Walmart’s corporate headquarters have been sent in multiple states and only include a generic email address for the physician to respond to if the letter was believed to be sent in error. The letter typically states that the physician in question had his or her “prescribing patterns and practices” reviewed and as a result, “[Walmart] determined that we will not be able to continue filling your controlled substance prescriptions.” AMA has sent multiple letters, email and voice messages to Walmart opposing its policy and seeking explanation—all without meaningful response. Others, including the Texas Medical Association, also have not received a meaningful response from Walmart. In one instance, the overly broad and vague Walmart policy targeted a rural Idaho addiction medicine physician who prescribed buprenorphine, but did not prescribe opioid analgesics. As CDC has stated, buprenorphine for the treatment of opioid use disorder should not be used in an MME calculation, but resolution of this matter required extensive commitment from the Idaho Medical Association and Idaho Board of Pharmacy—and resulted in patients being forced to find alternate pharmacies to continue their care.

With respect to health insurance companies, the AMA has made inquiries but is not aware of any widespread action by payers to send physicians letters or other communication “that include a blanket proscription against filing prescriptions for opioids that exceed numerical thresholds without taking into account the diagnosis and previous response to treatment for a patient and any clinical nuances would support such prescribing as falling within standards of good quality patient care.” Rather, AMA is acutely aware of health insurance companies implementing hard-threshold guidelines based on the CDC guideline.
AMA President-elect and Chair of the AMA Opioid Task Force, Patrice A. Harris, MD, MA, raised concerns about these payer policies directly to the National Association of Insurance Commissioners (NAIC) at its Regulatory Framework Task Force hearing on Saturday, March 24, 2018. AMA Chair Jack Resneck, Jr., MD, raised similar concerns about patients facing restrictions on receiving opioid analgesics without payers removing prior authorization and other restrictions on non-opioid behavioral, restorative, surgical and other non-opioid modalities at the November 16, 2018 hearing of the NAIC Health Insurance and Managed Care Committee. Both Drs. Harris and Resneck highlighted patients’ need for greater access to comprehensive, multidisciplinary, multimodal pain care. The AMA has continued this advocacy directly to state regulators—a primary feature of new, spotlight analyses of state responses to the opioid epidemic.\[14\]

AMA POLICY

The AMA has extensive and wide-ranging policy in support of ensuring patients receive optimal pain care and removal of arbitrary restrictions on the provision of that care. This includes having AMA “oppose legislative or other policies that arbitrarily restrict a patient's ability to receive effective, patient-specific, evidence-based, comprehensive pain care. (Policy H-95.930, “Legislative Pain Care Restrictions”). It also includes AMA’s “strong commitment to better access and delivery of quality pain care through the promotion of enhanced research, education and clinical practice in the field of pain medicine,” as well as the AMA’s “commitment to delivering compassionate and ethical pain management, promoting safe opioid prescribing, reducing opioid-related harm and the diversion of controlled substances, improving access to treatment for substance use disorders, and fostering a public health based-approach to addressing opioid-related morbidity and mortality.” (Policy D-160.981, “Promotion of Better Pain Care”). AMA policy also supports “the position that physicians who appropriately prescribe and/or administer controlled substances to relieve intractable pain should not be subject to the burdens of excessive regulatory scrutiny, inappropriate disciplinary action, or criminal prosecution.” (Policy H-120.960, “Protection for Physicians Who Prescribe Pain Medication”). As noted above, AMA policy supports ensuring that patients are not harmed by the “misapplication of the CDC Guideline for Prescribing Opioids for Chronic Pain by pharmacists, health insurers, pharmacy benefit managers, legislatures, and governmental and private regulatory bodies in ways that prevent or limit patients’ medical access to opioid analgesia.” (Policy D-120.932, “Inappropriate Use of CDC Guidelines for Prescribing Opioids”).

RECOMMENDATIONS

The Board recommends that the following recommendations be adopted in lieu of the second resolve of alternate Resolution 235-I-18, and that the remainder of the report be filed.

1. That our American Medical Association (AMA) support balanced opioid-sparing policies that are not based on hard thresholds, but on patient individuality, and help ensure safe prescribing practices, minimize workflow disruption, and ensure patients have access to their medications in a timely manner, without additional, cumbersome documentation requirements. (New HOD Policy)

2. That our AMA oppose the use of “high prescriber” lists used by national pharmacy chains, pharmacy benefit management companies or health insurance companies when those lists do not provide due process and are used to blacklist physicians from writing prescriptions for controlled substances and preventing patients from having the prescription filled at their pharmacy of choice. (New HOD Policy)

Fiscal Note: Less than $500.

REPORT OF THE BOARD OF TRUSTEES

B of T Report 23-A-19

Subject: Prior Authorization Requirements for Post-Operative Opioids (Resolution 208-A-18)

Presented by: Jack Resneck, Jr., MD, Chair

Referred to: Reference Committee B (Charles Rothberg, MD, Chair)

INTRODUCTION

At the 2018 Annual Meeting, the American Medical Association (AMA) House of Delegates (HOD) referred Resolution 208-A-18, “Prior Authorization Requirements for Post-Operative Analgesia,” introduced by the Pennsylvania Delegation, which asked:

That our American Medical Association strongly oppose prior authorization requirements for postoperative analgesia equivalent to five days or less so as to prevent patient suffering.

Reference committee testimony generally was supportive of the original resolution given physicians’ and patients’ experiences with legislative and other policies focused on hard thresholds for opioid prescribing post-surgery and other acute care settings. Yet, there was concern raised regarding taking a position to oppose all prior authorization or other utilization management protocols. The AMA Council on Medical Service and Council on Legislation were among those who asked that our Board take this resolution back for consideration, discussion and present clear recommendations to further the intent of the original resolution.

DISCUSSION

There are multiple, competing and often contradictory trends that define the nation’s opioid epidemic. Opioid-related mortality continues to increase, but data from the Centers for Disease Control and Prevention (CDC)\(^1\) show that the nation’s opioid overdose and death epidemic continues to be driven by increases in death due to illicit fentanyl. Deaths due to prescription opioid- and heroin-related causes appear to have plateaued but remain at historic highs. In 2017:

- 28,466 died from illicit fentanyl-related overdose (19,413 in 2016).
- 15,482 died from heroin-related overdose (15,469 in 2016).
- 14,495 died from prescription opioid-related overdose (14,487 in 2016). (More than 60 percent of people who misused prescription opioids steal them or obtain them from a family member or friend.\(^2\))
- 3,194 died from methadone-related causes—the lowest number since 2003. (The data does not distinguish whether methadone was used for pain or for the treatment of opioid use disorder.\(^3\))

At the same time, opioid prescribing in the United States continues to decrease. Between 2013-2017, retail filled opioid prescriptions decreased by 22.2 percent with a total of 196 million opioid
prescriptions filled in 2017. Decreases occurred in every state. The most common opioid prescription was for less than 30 days and less than 50 morphine milligram equivalents (MME).

From 2014 to 2016, opioid prescriptions written for fewer than 30 days decreased from 150.4 million to 126.5 million; and opioid prescriptions of less than 50 MME decreased from 175.6 million in 2014 to 158.0 million in 2016.

Policymakers for the past several years have focused almost entirely on mandating a few specific policies or approaches that they believe would help end the epidemic. These include enacting legislation in nearly four out of five states to require physicians to use a state prescription drug program (PDMP); mandating content-specific continuing medical education (CME) in more than half of the states; and prohibiting a prescription for an opioid analgesic if it is greater than a certain number of days or for a greater than a certain MME.

Restrictions on opioid prescribing also have been implemented by health plans, national pharmacy chains and pharmacy benefit management companies. Many of these policies follow the publication from the CDC entitled, “CDC Guideline for Prescribing Opioids for Chronic Pain — United States, 2016 (the Guideline).” In the Guideline’s introduction, CDC stated:

The recommendations in the guideline are voluntary, rather than prescriptive standards. They are based on emerging evidence, including observational studies or randomized clinical trials with notable limitations. Clinicians should consider the circumstances and unique needs of each patient when providing care.

Many of the state legislative and other policies enacted and/or implemented since then, however, justify the day/dose limit for acute pain based on the CDC Guideline. The HOD addressed this in Policy D-120.932, “Inappropriate Use of CDC Guidelines for Prescribing Opioids.” And while it is common for state opioid restriction policies to allow for exceptions for patients with cancer, in hospice or who require palliative care, to name a few, there generally is no exception for when post-operative surgical care might require a prescription for a greater number of days or dose strength than a particular state might allow.

State policymaking also has resulted in no consistency between opioid restriction or other laws. For example, some states require checking the PDMP prior to prescribing any controlled substance or limited to only opioid analgesics. Other states require a PDMP check every 90 days (or another interval) for repeated prescriptions, and other states require a check only once per year. With respect to CME mandates, the number of hours and specific nature of the CME vary by state. The Board notes that the AMA Opioid Task Force has gathered more than 400 state- and specialty-specific resources to help promote the availability of education and training that is relevant and meaningful to a physician’s specific practice and patient population. The Board thanks all those Federation partners who have contributed to this effort.

With respect to opioid prescribing, physicians and other prescribers of controlled substances have borne a considerable amount of blame. The AMA and countless physician organizations have accepted responsibility for both working to reduce patients’ pain and the medical community acknowledges its role in having in the past increased opioid prescribing as one way to help alleviate patients’ pain. The AMA also has supported efforts by law enforcement and others to stop illegal activities such as pill mills and the AMA and countless physician organizations have made considerable progress in urging physicians to be more judicious in their prescribing decisions as the above data show. The Board knows, however, that there is much more work to do before the epidemic will end.
The AMA continues to stress the need for evidence-based decision making on the part of policymakers with respect to restrictions on opioid prescribing. Given that state policies have been the result of political negotiations rather than scientific evidence, it is possible that a course correction could be made. One such direction could be to follow the patient-centric recommendations of the U.S. Department of Health and Human Services, “Draft Report on Pain Management Best Practices: Updates, Gaps, Inconsistencies, and Recommendations,” which includes among its many positive recommendations, support for:

- Individualized treatment as the primary goal of acute pain management, accounting for patient variability with regard to factors such as comorbidities, severity of conditions, surgical variability, geographic considerations, and community/hospital resources.
- Improved pain control, faster recovery, improved rehabilitation with earlier mobilization, less risk for blood clots and pulmonary embolus, and mitigation of excess opioid exposure.

Similarly, as physicians continue to play a leading role in reducing opioid prescriptions and advocating for patients’ access to opioid analgesics when appropriate, there is a great need to remove prior authorization for multidisciplinary and multimodal pain care, including non-opioid alternatives. This has been one of the central findings of AMA spotlight analyses of efforts in the Medicaid agencies of several states, but the AMA also continues to hear regularly from physicians about commercial health insurance companies who resist removing prior authorization hurdles as well as their limited efforts to increase access to non-opioid alternatives. The Board strongly recommends that health insurance companies work with physicians and the nation’s medical societies to remove barriers to non-opioid pain care.

There are good examples in the pain stewardship and other comprehensive pain care programs that have been implemented in many areas of the country. This includes programs at Kaiser Permanente, Geisinger Health System, Intermountain Health Care and the University of Chicago, to name a few. There also continues to be emerging research focusing on the most appropriate length and dose of an opioid prescription post-operatively. This includes for procedures ranging from rhinoplasty, gynecologic and abdominal surgery, care delivered in the emergency department, as well as mastectomy, general surgery and musculoskeletal procedures.

There generally are three common elements to these efforts by systems and researchers. First, they all have engaged in extensive data review to determine what baseline of opioid prescribing was taking place in the system and for the specific procedures. Second, they all discovered that while opioid prescribing overall could be reduced, none put a hard threshold on the amount given post-operatively or following an acute care episode. And third, even when guidelines were established for physicians, those guidelines provided a range rather than a single number. In the systems, furthermore, and as noted above in Medicaid, there is increasing realization that while opioid sparing protocols may be beneficial, patients must not be left without sufficient forms of pain care. That is, opioid reductions may have occurred, but the focus for these physicians has been on improving patient outcomes.

AMA POLICY

AMA has extensive policy supporting the principle that utilization management policies, clinical practice guidelines and clinical quality improvement activities must be based on sound clinical evidence, data and allow for variation based on individual patient needs (e.g., Policy H-320.949, Clinical Practice Guidelines and Clinical Quality Improvement Activities). AMA policy also promotes patient access to comprehensive, multidisciplinary, multimodal pain care, including working with all stakeholders to promote research and develop evidence to support quality pain
care. This includes promoting safe opioid prescribing and promoting a public health approach to ending the nation’s opioid epidemic (e.g., Policy D-160.981, Policy H-95.990, “Promotion of Better Pain Care and Drug Abuse Related to Prescribing Practices”). And, it includes AMA strong support for “timely and appropriate access to non-opioid and non-pharmacologic treatments for pain, including removing barriers to such treatments when they inhibit a patient's access to care.” (Policy D-450.956, “Pain as the Fifth Vital Sign.”) It should also be stressed that AMA’s efforts to reduce prior authorization burdens and protect patients’ access to medically necessary therapy extend far beyond only post-operative pain care (e.g., Policy H-320.939, “Prior Authorization and Utilization Management Reform” and the grassroots advocacy campaign based on the online hub, FixPriorAuth.org).

RECOMMENDATIONS

The Board recommends that the following recommendation be adopted in lieu of Resolution 208-A-18, and that the remainder of the report be filed.

1. That our American Medical Association (AMA) advocate for state legislatures and other policymakers, health insurance companies and pharmaceutical benefit management companies to remove barriers, including prior authorization, to non-opioid pain care. (New HOD Policy)

2. That our AMA support amendments to opioid restriction policies to allow for exceptions that enable physicians, when medically necessary in the physician’s judgment, to exceed statutory, regulatory or other thresholds for post-operative care and other medical procedures or conditions. (New HOD Policy)

3. That our AMA oppose health insurance company and pharmacy benefit management company utilization management policies, including prior authorization, that restrict access to post-operative pain care, including opioid analgesics, if those policies are not based upon sound clinical evidence, data and emerging research. (New HOD Policy)

Fiscal Note: Less than $500.

REPORT OF THE BOARD OF TRUSTEES

B of T Report 30-A-19

Subject: Opioid Treatment Programs Reporting to Prescription Monitoring Programs (Resolution 507-A-18)

Presented by: Jack Resneck, Jr., MD, Chair

Referred to: Reference Committee B (Charles Rothberg, MD, Chair)

INTRODUCTION

At the 2018 American Medical Association (AMA) House of Delegates (HOD) Annual Meeting, the Medical Student Section introduced Resolution 507-A-18, asking that our AMA amend Policy D-95.980, “Opioid Treatment and Prescription Drug Monitoring Programs,” by deletion as follows:

Our AMA will seek changes to allow states the flexibility to require opioid treatment programs to report to prescription monitoring programs.

The resolution was ultimately referred. There was considerable testimony at the reference committee identifying numerous issues to both support and oppose the resolution. This report provides a current update of prescription drug monitoring programs (PDMPs), the privacy protections patients are afforded with respect to PDMPs, relevant federal laws governing opioid treatment programs (OTPs), highlights relevant AMA policy, and presents a recommendation.

DISCUSSION

Prescription drug monitoring programs

PDMPs are generally described as electronic interfaces that allow physicians and other authorized users to view a patient’s-controlled substance prescription history. Every state except Missouri has a PDMP, although some are more advanced than others. The AMA supports physicians registering for and using PDMPs as part of the clinical decision-making process.

At present, at least 44 states require physicians and other clinicians who prescribe controlled substances to query the PDMP under certain circumstances. These mandates range from requiring a query prior to prescribing any controlled substances every time a prescription for a controlled substance is issued to every six months or a year; to queries limited only to the prescribing of opioid analgesics and benzodiazepines.

Emerging data suggests that PDMPs have not led to reductions in opioid-related mortality as proponents have predicted. From 2014 and 2017, physicians’ and other health care professionals’ use of PDMPs increased from 61.4 million queries to more than 300.3 million queries; and registration to use a PDMP increased from 471,896 to more than 1.5 million registered users.\(^1\) Opioid-related mortality, however, has increased considerably. From 2012 to 2017, prescription opioid-related mortality increased from 11,134 to 14,495; heroin-related mortality increased from...
5,925 to 15,482; and illicit fentanyl-related mortality increased from 2,628 to 28,466. Meanwhile, there remains an unacceptable treatment gap for those with a substance use disorder (SUD) or co-

occurring mental illness. According to the 2017 National Survey on Drug Use and Health (NSDUH) conducted by the U.S. Substance Abuse and Mental Health Services Administration, 92.3 percent of those age 12 and older received no treatment for an SUD; and 91.7 percent of those 18 and older received no treatment for a co-occurring mental illness and SUD.2

Evaluation of PDMPs before 2012 found mixed results with respect to PDMP effects on opioid prescribing, reductions in morphine milligram equivalents (MME), per-capita opioid prescribing, mortality rates, and opioid-related admissions to the emergency department.3 A more recent, comprehensive study found that “PDMPs were not associated with reductions in drug overdose mortality rates and may be related to increased mortality from illicit drugs and other, unspecified drugs.”4 A prospective look at how PDMPs can impact the nation’s opioid epidemic found that “interventions such as prescription drug monitoring programs are unlikely to lead to major decreases in the number of deaths from opioid overdose in the near future.”5 These studies are not to suggest there is no role for PDMPs or that there is no other data showing positive effects of PDMPs—rather, that an overreliance on PDMPs to solve the nation’s opioid epidemic will not likely lead to widespread, positive impacts.

PDMPs and privacy protections

The AMA Code of Medical Ethics (the Code) states that “Protecting information gathered in association with the care of the patient is a core value in health care.” The Code further states that

Patients need to be able to trust that physicians will protect information shared in confidence. They should feel free to fully disclose sensitive personal information to enable their physician to most effectively provide needed services. Physicians in turn have an ethical obligation to preserve the confidentiality of information gathered in association with the care of the patient.

In a recent letter to the United States Office of Civil Rights,6 the AMA stated that

With respect to PDMPs, the AMA has significant privacy concerns about law enforcement and other non-health care entities using a PDMP because of the personal health information (PHI) contained within a PDMP. PHI may include a patient’s controlled substance prescription history, which can potentially cause someone to learn a patient is being treated for gender dysphoria, a substance use disorder, mental illness, HIV/AIDS or other medical condition that has historically been subject to stigmatization. The AMA believes that an appropriate balance between law enforcement access and a patient’s right to privacy occurs when law enforcement obtains a court-issued warrant or other judicially authorized access. That occurs, however, in fewer than 20 states.7 Only four states have granted authority for third-party payers other than Medicaid access to PDMPs8 despite third-party payer state legislative efforts.
In the courts, the AMA and nine state medical societies argued to the Ninth Circuit Court of Appeals against the United States Drug Enforcement Administration efforts to access the Oregon PDMP with only an administrative warrant that “patients have a basic right to privacy of their medical information. That privacy should be honored unless there is meaningful waiver by the patient or a strong countervailing public health or safety interest, and then only with stringent safeguards.” The AMA and California Medical Association also argued against unfettered access to patients’ prescription information in Lewis v. Medical Board of California, where “a Medical Board of California investigator testified that the board routinely obtains confidential prescribing records from [the California PDMP] for all patients of physicians subject to medical board investigations, even where the complaint is unrelated to the patients or the physician’s prescribing practices.”

Additionally, before enacting a law requiring that police and prosecutors obtain warrants before searching in sensitive patient information in the state’s prescription monitoring database, Massachusetts allowed police and prosecutors to view patient medical records without warrants nearly 11,000 times—or about 20 times per day—between August 2016 and March 2018.

Unauthorized access also can occur when law enforcement inappropriately pressures pharmacists to query a PDMP without judicial oversight. The American Pharmacists Association counsels that:

The information in PDMP reports is personal and private. Patients expect that pharmacists will maintain the confidentiality of this information, and this is a key aspect of the professional relationship of trust between pharmacists and patients.

Unauthorized access and inappropriate use of an individual’s person health information can have devastating effects, such as occurred to a Utah firefighter whose PDMP information was accessed and misinterpreted at multiple steps during several year long legal battle. Ultimately, all charges were dismissed, but not before the damage had been done.

Notwithstanding the legal requirements, case law and news items noted above, states generally have strong protections regarding the unauthorized use of information within a PDMP. While important work is being done to remove stigma and regard SUD as a medical condition like any other, the fact remains that illicit substance use is illegal, which is decidedly unlike any other medical issue. Inappropriate disclosure of SUD data can result in consequences exponentially more harmful to a patient than the improper disclosure of his or her hypertension (e.g., loss of housing, loss of child custody, discrimination from medical professionals, loss of benefits or loss of employment, among others). Any discussion of increasing the exchange of SUD information must contemplate the potential for such outcomes.

The AMA supports the refinement of PDMPs and development and implementation of technology that assists physicians with sharing information on prescriptions for controlled substances among states. AMA also calls for appropriate balance when the information in question relates to patients who receive treatment in an OTP—patients who often experience a much higher degree of stigmatization and prejudice than other patients with a chronic medical disease.

Further, even if a patient receiving care in an OTP authorized the disclosure of prescription information to be entered into a PDMP, it is unclear how that authorization would protect the patient against further re-disclosure. That is, proponents of removing OTP privacy and disclosure protections suggest that the PDMP already has sufficient safeguards against unauthorized use, but as noted above, that is not actually the reality. In addition, the patient privacy and consent provisions of relevant federal law (often referred to as Part 2) allow for a case-by-case
determination by the patient to whom disclosure may be made. Thus, while the patient may authorize and provide specific consent for disclosure to other health care professionals who treat the patient, any authorized user of a PDMP could view the OTP patient’s prescription history once it is entered into the PDMP. Until a PDMP has much more advanced controls and sufficient privacy protections for OTP users, entering a patient’s prescription history into the PDMP would almost certainly mean widespread disclosure well beyond those involved in the patient’s care.

It should further be emphasized that Part 2 written consents prohibit the recipient from further disclosure of the information. In other words, it would be neither operationally feasible nor legally logical to send information to a PDMP—the PDMP would not be allowed to redisclose it to anyone, regardless of whether they are authorized to access the PDMP, absent additional written patient consent. That is key because PDMPs are not set up to prevent re-disclosure. As explained at the outset of this report, they are databases that contain considerable information and can be accessed by any authorized user.

**OTPs and PDMPs**

Part 2 does not permit information about a patient in an OTP to be entered into the PDMP without the patient’s specific consent, even if the OTP dispenses medication. The rationale for this rule is that identifying individuals with an SUD could lead to discrimination against the individual, and part of the original purpose of Part 2 was a decision by lawmakers to promote and protect individuals seeking SUD treatment. The AMA supports this rationale and has heard from front line clinicians who agree that identifying patients who receive SUD treatment could have a chilling effect on patients seeking care.

Adopting policy that requires OTPs to report to PDMPs would necessitate a change to the statute underlying Part 2. Most stakeholders who support such a change want OTPs (and other practice settings to which Part 2 applies) to disclose information in accordance with the Health Insurance Portability and Accountability Act (HIPAA)—that is, in a less-restricted manner. HIPAA allows disclosure of a patient’s health information without a patient’s consent for treatment, payment and health care operations (TPO) purposes, as defined by HIPAA. Purportedly, to address concerns that patients will maintain control over how their information is shared, proponents of changing Part 2 to allow OTPs to enter information into PDMPs claim that patients diagnosed with an SUD will still have the “same consent requirements” when his or her information is disclosed for TPO purposes as any other patient does under HIPAA. However, while patients may be asked for consent to share their information for TPO purposes under HIPAA, patient consent is not required. This is a critical distinction, and if Part 2 is changed, would immediately change patients’ privacy protections for the hundreds of thousands of patients currently receiving care in an OTP.

Changing Part 2 to require OTPs to report to PDMPs would effectively remove the very privacy protections that were created to encourage SUD treatment. Indeed, 113 patient advocacy groups have stated that such a change will discourage individuals struggling with addiction from seeking treatment if they know that their information will not be protected. The 2017 NSDUH reported that among the top reasons for those with an SUD not receiving treatment: “Might Cause Neighbors/Community to Have Negative Opinion;” “Might Have Negative Effect on Job;” and “Did Not Want Others to Find Out.” At a time when the nation’s opioid epidemic is worse than ever, policymakers must balance greater access to information with potential effects of undermining patient privacy when attempting to increase access to care. Given the lack of data showing the benefits of additional information or use of the PDMP to mitigate the epidemic’s harms, the AMA believes that the balance clearly edges toward patient privacy as opposed to
opening the door to adverse effects on patients who receive—or might be deterred from seeking—
care in an OTP.

AMA POLICY

AMA policy strongly supports patient privacy and confidentiality protections in all areas of health
care. This includes calling for “safeguards and protections of state databases by limiting database
access by non-health care individuals to only those instances in which probable cause exists that an
unlawful act or breach of the standard of care may have occurred” (Policy H-95.946, “Prescription
Drug Monitoring Program Confidentiality”). AMA policy also makes clear that the AMA
“considers PDMP data to be protected health information, and thus protected from release outside
the healthcare system unless there is a HIPAA exception or specific authorization from the
individual patient to release personal health information, and recommends that others recognize that
PDMP data is health information” (Policy H-95.945, “Prescription Drug Diversion, Misuse and
Addiction”). The AMA also “supports legislation and regulatory action that would authorize all
prescribers of controlled substances, including residents, to have access to their state prescription
drug monitoring program.” (Policy H-95.927, “Universal Prescriber Access to Prescription Drug
Monitoring Programs”). Despite the impression given by the title of the policy, the AMA broadly
supports physicians using PDMPs only “when clinically appropriate” as well as sharing information
“within the safeguards applicable to protected health information.” AMA policy also calls for using
PDMPs as part of the effort to identify and reduce “multiple provider events” that can occur when
patients receive multiple controlled substance prescriptions from multiple pharmacies or other
dispensers in a short time frame to help ensure continuity of care.” (Policy H-95.928, Model State
Legislation “Promoting the Use of Electronic Tools to Mitigate Risk with Prescription Opioid
Prescribing”).

Finally, as noted throughout this report, AMA policy regarding patients’ rights to privacy and
confidentiality of their personal health information is robust. (Policy H-315.983, “Patient Privacy
and Confidentiality”). A strong, representative sample includes provisions that state:

does not exist a basic right of patients to privacy of their medical information and records, and
that this right should be explicitly acknowledged; That patients’ privacy should be honored
unless waived by the patient in a meaningful way or in rare instances when strong
countervailing interests in public health or safety justify invasions of patient privacy or
breaches of confidentiality, and then only when such invasions or breaches are subject to
stringent safeguards enforced by appropriate standards of accountability.

It goes on to state that in such instances that “breaches of confidentiality are compelled by concerns
for public health and safety, those breaches must be as narrow in scope and content as possible,
must contain the least identifiable and sensitive information possible, and must be disclosed to the
fewest possible to achieve the necessary end.” Finally, AMA Policy H-315.983, “Patient Privacy
and Confidentiality,” states that:

Employers and insurers should be barred from unconsented access to identifiable medical
information lest knowledge of sensitive facts form the basis of adverse decisions against
individuals,” and that “[t]he fundamental values and duties that guide the safekeeping of
medical information should remain constant in this era of computerization. Whether they are in
computerized or paper form, it is critical that medical information be accurate, secure, and free
from unauthorized access and improper use.
RECOMMENDATION

The Board of Trustees recommends that Resolution 507-A-18 not be adopted and the remainder of this report be filed.

Fiscal Note: Less than $500.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 201
(A-19)

Introduced by: American Society of Transplant Surgeons

Subject: Assuring Patient Access to Kidney Transplantation

Referred to: Reference Committee B
(Charles Rothberg, MD, Chair)

Whereas, Kidney transplantation is often the best and most cost-effective treatment for patients with End Stage Renal Disease (ESRD); and

Whereas, Some for-profit health-care entities have sought to remove control of kidney transplantation decision-making from many physicians and their patients¹; and

Whereas Some for-profit health care entities have sought to create monetary incentives that would sharply curtail patient access to transplantation; and

Whereas, There exists comprehensive patient-oriented care models such as the Centers for Medicare and Medicaid Innovation Comprehensive ESRD Care Model² that do not threaten access to transplantation; and

Whereas, Dialysis and transplant professional³-⁵ as well as patient-centered groups⁵,⁶ oppose limitations on physician-advised patient choice of kidney transplantation in ESRD treatment; therefore be it

RESOLVED, That our American Medical Association work with professional and patient-centered organizations to advance patient and physician-directed coordinated care for End Stage Renal Disease (ESRD) patients (Directive to Take Action); and be it further

RESOLVED, That our AMA actively oppose any legislative or regulatory efforts to remove patient choice and physician involvement in ESRD care decisions (Directive to Take Action); and be it further

RESOLVED, That our AMA actively oppose any legislative or regulatory effort that would create financial incentives that would curtail the access to organ transplantation (Directive to Take Action); and be it further

RESOLVED, That our AMA House of Delegates be advised in a timely fashion regarding any legislative or regulatory efforts to abrogate patient and physician-advised decision-making regarding modality of care for ESRD. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000.

Received: 04/30/19

RELEVANT AMA POLICY

Equal Access to Organ Transplantation for Medicaid Beneficiaries H-370.962
Our AMA supports federal funding of organ transplants for Medicaid patients.
Citation: (BOT Rep. 15, A-13)

Ethical Procurement of Organs for Transplantation H-370.967
Our AMA will continue to monitor ethical issues related to organ transplantation and develop additional policy as necessary.
Citation: BOT Rep. 13, A-08; Reaffirmed: CEJA Rep. 06, A-18

UNOS Kidney Paired Donation Program H-370.960
Our AMA: (1) encourages the continued expansion of the United Network for Organ Sharing's (UNOS) Kidney Paired Donation program which provides a national registry of living donors, carries out ongoing data collection on key issues of concern in transplantation from living donors, and through its operational guidelines provides consistent, national standards for the transplant community; and (2) encourages voluntary coordination among private donor registries and UNOS to enhance the availability of organs for transplantation.
Citation: (BOT Action in response to referred for decision Res. 2, A-13)

Cost-Saving Public Coverage for Renal Transplant Patients H-370.963
1. Our AMA supports private and public mechanisms that would extend insurance coverage for evidence-based treatment of renal transplant care for the life of the transplanted organ.
2. Our AMA will continue to offer technical assistance to individual state and specialty societies when those societies lobby state or federal legislative or executive bodies to implement evidence-based cost-saving policies within public health insurance programs.
Citation: (Res. 104, A-13)
Whereas, The Center for Medicare and Medicaid Services (CMS) is soliciting suggestions for improving the current Merit-Based Incentive Payment System (MIPS) in the Quality Payment Program (QPP) to reduce administrative burdens as part of their “Patients Over Paperwork” Initiative; and

Whereas, Physicians are asked to participate in Certification/Maintenance of Certification by the American Board of Medical Specialties (ABMS) including the American Board of Internal Medicine (ABIM); and

Whereas, The CMS-stated goal of MIPS is to improve quality of care and the MOC program goals are to maintain and improve quality of care with emphasis on knowledge base, and

Whereas, Both MIPS and MOC take a significant amount of time away from patient care, and have increased the administrative burden and stress on the practicing physician; and

Whereas, Our AMA, the state medical associations, and the national specialty societies all agree on the importance of reducing the hassle factor for physicians; therefore be it

RESOLVED, That our American Medical Association recommend to the Centers for Medicare and Medicaid Services (CMS) and physician certifying boards, such as the American Board of Medical Specialties, that maintenance of certification (MOC) participation count toward satisfying the quality category of the Merit-Based Incentive Payment Program (MIPS) (Directive to Take Action); and be it further

RESOLVED, That our AMA also recommend that successful reporting in the quality category of the Merit-Based Incentive Payment Program (MIPS) count toward satisfying the practice performance assessment section of a certifying board’s MOC requirements) (Directive to Take Action); and be it further

RESOLVED, That our AMA study MOC and Medicare MIPS reciprocity and work with the state and national specialty societies to develop a plan to reduce quality measure duplication and administrative burdens in both the MIPS and MOC programs. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000.

RELEVANT AMA POLICY

Maintenance of Certification and Osteopathic Continuous Certification D-275.954

Our AMA will:
1. Continue to monitor the evolution of Maintenance of Certification (MOC) and Osteopathic Continuous Certification (OCC), continue its active engagement in discussions regarding their implementation, encourage specialty boards to investigate and/or establish alternative approaches for MOC, and prepare a yearly report to the House of Delegates regarding the MOC and OCC process.
2. Continue to review, through its Council on Medical Education, published literature and emerging data as part of the Council's ongoing efforts to critically review MOC and OCC issues.
3. Continue to monitor the progress by the American Board of Medical Specialties (ABMS) and its member boards on implementation of MOC, and encourage the ABMS to report its research findings on the issues surrounding certification and MOC on a periodic basis.
4. Encourage the ABMS and its member boards to continue to explore other ways to measure the ability of physicians to access and apply knowledge to care for patients, and to continue to examine the evidence supporting the value of specialty board certification and MOC.
5. Work with the ABMS to streamline and improve the Cognitive Expertise (Part III) component of MOC, including the exploration of alternative formats, in ways that effectively evaluate acquisition of new knowledge while reducing or eliminating the burden of a high-stakes examination.
6. Work with interested parties to ensure that MOC uses more than one pathway to assess accurately the competence of practicing physicians, to monitor for exam relevance and to ensure that MOC does not lead to unintended economic hardship such as hospital de-credentialing of practicing physicians.
7. Recommend that the ABMS not introduce additional assessment modalities that have not been validated to show improvement in physician performance and/or patient safety.
8. Work with the ABMS to eliminate practice performance assessment modules, as currently written, from MOC requirements.
9. Encourage the ABMS to ensure that all ABMS member boards provide full transparency related to the costs of preparing, administering, scoring and reporting MOC and certifying examinations.
10. Encourage the ABMS to ensure that MOC and certifying examinations do not result in substantial financial gain to ABMS member boards, and advocate that the ABMS develop fiduciary standards for its member boards that are consistent with this principle.
11. Work with the ABMS to lessen the burden of MOC on physicians with multiple board certifications, particularly to ensure that MOC is specifically relevant to the physician's current practice.
12. Work with key stakeholders to (a) support ongoing ABMS member board efforts to allow multiple and diverse physician educational and quality improvement activities to qualify for MOC; (b) support ABMS member board activities in facilitating the use of MOC quality improvement activities to count for other accountability requirements or programs, such as pay for quality/performance or PQRS reimbursement; (c) encourage ABMS member boards to enhance the consistency of quality improvement programs across all boards; and (d) work with specialty societies and ABMS member boards to develop tools and services that help physicians meet MOC requirements.
13. Work with the ABMS and its member boards to collect data on why physicians choose to maintain or discontinue their board certification.
14. Work with the ABMS to study whether MOC is an important factor in a physician's decision to retire and to determine its impact on the US physician workforce.
15. Encourage the ABMS to use data from MOC to track whether physicians are maintaining certification and share this data with the AMA.
16. Encourage AMA members to be proactive in shaping MOC and OCC by seeking leadership positions on the ABMS member boards, American Osteopathic Association (AOA) specialty certifying boards, and MOC Committees.
17. Continue to monitor the actions of professional societies regarding recommendations for modification of MOC.
18. Encourage medical specialty societies' leadership to work with the ABMS, and its member boards, to identify those specialty organizations that have developed an appropriate and relevant MOC process for its members.
19. Continue to work with the ABMS to ensure that physicians are clearly informed of the MOC requirements for their specific board and the timelines for accomplishing those requirements.
20. Encourage the ABMS and its member boards to develop a system to actively alert physicians of the due dates of the multi-stage requirements of continuous professional development and performance in practice, thereby assisting them with maintaining their board certification.
21. Recommend to the ABMS that all physician members of those boards governing the MOC process be required to participate in MOC.
22. Continue to participate in the National Alliance for Physician Competence forums.
23. Encourage the PCPI Foundation, the ABMS, and the Council of Medical Specialty Societies to work together toward utilizing Consortium performance measures in Part IV of MOC.

24. Continue to assist physicians in practice performance improvement.

25. Encourage all specialty societies to grant certified CME credit for activities that they offer to fulfill requirements of their respective specialty board's MOC and associated processes.

26. Support the American College of Physicians as well as other professional societies in their efforts to work with the American Board of Internal Medicine (ABIM) to improve the MOC program.

27. Oppose those maintenance of certification programs administered by the specialty boards of the ABMS, or of any other similar physician certifying organization, which do not appropriately adhere to the principles codified as AMA Policy on Maintenance of Certification.

28. Ask the ABMS to encourage its member boards to review their maintenance of certification policies regarding the requirements for maintaining underlying primary or initial specialty board certification in addition to subspecialty board certification, if they have not yet done so, to allow physicians the option to focus on maintenance of certification activities relevant to their practice.

29. Call for the immediate end of any mandatory, secured recertifying examination by the ABMS or other certifying organizations as part of the recertification process for all those specialties that still require a secure, high-stakes recertification examination.

30. Support a recertification process based on high quality, appropriate Continuing Medical Education (CME) material directed by the AMA recognized specialty societies covering the physician's practice area, in cooperation with other willing stakeholders, that would be completed on a regular basis as determined by the individual medical specialty, to ensure lifelong learning.

31. Continue to work with the ABMS to encourage the development by and the sharing between specialty boards of alternative ways to assess medical knowledge other than by a secure high stakes exam.

32. Continue to support the requirement of CME and ongoing, quality assessments of physicians, where such CME is proven to be cost-effective and shown by evidence to improve quality of care for patients.

33. Through legislative, regulatory, or collaborative efforts, will work with interested state medical societies and other interested parties by creating model state legislation and model medical staff bylaws while advocating that Maintenance of Certification not be a requirement for: (a) medical staff membership, privileging, credentialing, or recredentialing; (b) insurance panel participation; or (c) state medical licensure.

34. Increase its efforts to work with the insurance industry to ensure that maintenance of certification does not become a requirement for insurance panel participation.

35. Advocate that physicians who participate in programs related to quality improvement and/or patient safety receive credit for MOC Part IV.

36. Continue to work with the medical societies and the American Board of Medical Specialties (ABMS) member boards that have not yet moved to a process to improve the Part III secure, high-stakes examination to encourage them to do so.

37. Through its Council on Medical Education, continue to be actively engaged in following the work of the ABMS Continuing Board Certification: Vision for the Future Commission.

38. (a) Submit commentary to the American Board of Medical Specialties (ABMS) Continuing Board Certification: Vision for the Future initiative, asking that junior diplomates be given equal opportunity to serve on ABMS and its member boards; and (b) work with the ABMS and member boards to encourage the inclusion of younger physicians on the ABMS and its member boards.

39. Continue studying the certifying bodies that compete with the American Board of Medical Specialties and provide an update in the Council on Medical Education's annual report on maintenance of certification at the 2019 Annual Meeting.

MIPS and MACRA Exemption H-390.838

Our AMA will advocate for an exemption from the Merit-Based Incentive Payment System (MIPS) and Medicare Access and CHIP Reauthorization Act of 2015 (MACRA) for small practices.

Reducing MIPS Reporting Burden D-395.999

Our AMA will work with the Centers for Medicare and Medicaid Services (CMS) to advocate for improvements to Merit-Based Incentive Payment System (MIPS) that have significant input from practicing physicians and reduce regulatory and paperwork burdens on physicians. In the interim, our AMA will work with CMS to shorten the yearly MIPS data reporting period from one-year to a minimum of 90-days (of the physicians choosing) within the calendar year.
Whereas, In 2016, total prescription drug spending reached $328 billion, more than double what was spent in 2002 and physicians are concerned that patients cannot afford necessary medications that will improve their health; and

Whereas, One in four patients report that they or another family member did not fill a prescription in the last year because of cost. One in four patients with cancer are choosing not to fill a prescription or are taking less due to cost; and

Whereas, Prices for commonly used brand name drugs increased 164% and Medicare Part D spending doubled over the last decade; and

Whereas, Under the current Medicare program, drug manufacturers set the price for Medicare Part D and Part B prescription drugs while all other providers (physicians, hospitals, home health, nursing homes) are subject to a government fee schedule; and

Whereas, According to an analysis published in *JAMA Internal Medicine*, if Medicare Part D paid prices for prescription medications similar to what the Department of Veterans Affairs pays, there could be an estimated annual savings of 38-50% because the VA has the ability to directly negotiate with pharmaceutical manufacturers; and

Whereas, Under Medicare Part B, a pharmaceutical manufacturer can charge physicians as much as it wants for physician-administered drugs—unconstrained by any fee schedule or price limits. Moreover, physicians do not have access to the discounted drug prices that pharmacies and health plans enjoy, which make these drugs more costly; and

Whereas, Many policy-makers are considering proposals to make it more difficult for physicians to provide important Medicare Part B medications in their offices; and

Whereas, Medicaid is authorized to negotiate best prices for drugs and thus, allowing Medicare to negotiate drug prices with drug-makers would make a meaningful difference in controlling costs in both the Medicare program and the private sector; and

Whereas, According to the Centers for Disease Control and Prevention (CDC), about 500,000 Americans age 60 and older get shingles (caused by the varicella zoster virus) every year. Individuals aged 60 and older are vulnerable to certain diseases that could be prevented by vaccines; and
Whereas, Both the Medicare Part D and Part B programs have made it difficult for physicians to administer and patients to gain access to important vaccines; and

Whereas, Elderly patients should have the choice of receiving important vaccines and other medications in their physicians office, thereby allowing physicians to efficiently provide comprehensive care, particularly to those high-risk, chronically-ill patients; therefore be it RESOLVED, That our American Medical Association advocate for Medicare to cover all physician-recommended adult vaccines in both the Medicare Part D and the Medicare Part B programs (Directive to Take Action); and be it further RESOLVED, That our AMA make it a priority to advocate for a mandate on pharmaceutical manufacturers to negotiate drug prices with the Centers for Medicare and Medicaid Services for Medicare Part D and Part B covered drugs (Directive to Take Action); and be it further RESOLVED, That our AMA explore all options with the state and national specialty societies to ensure that physicians have access to reasonable drug prices for the acquisition of Medicare Part B physician-administered drugs and that Medicare reimburse physicians for their actual drug acquisition costs, plus appropriate fees for storage, handling, and administration of the medications, to ensure access to high-quality, cost-effective care in a physician’s office. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000.

Received: 04/29/19

RELEVANT AMA POLICY

Appropriate Reimbursements and Carve-outs for Vaccines D-440.981
Our AMA will: (1) continue to work with the Centers for Medicare and Medicaid Services (CMS) and provide comment on the Medicare Program payment policy for vaccine services; (2) continue to pursue adequate reimbursement for vaccines and their administration from all public and private payers; (3) encourage health plans to recognize that physicians incur costs associated with the procurement, storage and administration of vaccines that may be beyond the average wholesale price of any one particular vaccine; and (4) seek legislation mandating that health insurance companies in applicable states either adequately pay for vaccines recommended by the Advisory Committee on Immunization Practices, or clearly state in large bold font in their notices to patients and businesses that they do not follow the federal advisory body on vaccine recommendations, the Advisory Committee on Immunization Practices. Citation: (BOT Rep. 20, A-03; Reaffirmation A-07; Res. 128, A-09; Reaffirmation I-10; Reaffirmed: Res. 807, I-11

Financing of Adult Vaccines: Recommendations for Action H-440.860
1. Our AMA supports the concepts to improve adult immunization as advanced in the Infectious Diseases Society of America's 2007 document "Actions to Strengthen Adult and Adolescent Immunization Coverage in the United States," and support the recommendations as advanced by the National Vaccine Advisory Committee's 2008 white paper on pediatric vaccine financing.
2. Our AMA will advocate for the following actions to address the inadequate financing of adult vaccination in the United States:
   Provider-related
   a. Develop a data-driven rationale for improved vaccine administration fees.
   b. Identify and explore new methods of providing financial relief for adult immunization providers through, for example, vaccine company replacement systems/deferred payment/funding for physician inventories, buyback for unused inventory, and patient assistance programs.
   c. Encourage and facilitate adult immunization at all appropriate points of patient contact; e.g., hospitals, visitors to long-term care facilities, etc.
d. Encourage counseling of adults on the importance of immunization by creating a mechanism through which immunization counseling alone can be reimbursed, even when a vaccine is not given.

Federal-related

a. Increase federal resources for adult immunization to: (i) Improve Section 317 funding so that the program can meet its purpose of improving adult immunizations; (ii) Provide universal coverage for adult vaccines and minimally, uninsured adults should be covered; (iii) Fund an adequate universal reimbursement rate for all federal and state immunization programs.

b. Optimize use of existing federal resources by, for example: (i) Vaccinating eligible adolescents before they turn 19 years of age to capitalize on VFC funding; (ii) Capitalizing on public health preparedness funding.

c. Ease federally imposed immunization burdens by, for example: (i) Providing coverage for Medicare-eligible individuals for all vaccines, including new vaccines, under Medicare Part B; (ii) Creating web-based billing mechanisms for physicians to assess coverage of the patient in real time and handle the claim, eliminating out-of-pocket expenses for the patient; (iii) Simplifying the reimbursement process to eliminate payment-related barriers to immunization.

d. The Centers for Medicare & Medicaid Services should raise vaccine administration fees annually, synchronous with the increasing cost of providing vaccinations.

State-related

a. State Medicaid programs should increase state resources for funding vaccines by, for example: (i) Raising and funding the maximum Medicaid reimbursement rate for vaccine administration fees; (ii) Establishing and requiring payment of a minimum reimbursement rate for administration fees; (iii) Increasing state contributions to vaccination costs; and (iv) Exploring the possibility of mandating immunization coverage by third party payers.

b. Strengthen support for adult vaccination and appropriate budgets accordingly.

Insurance-related

1. Provide assistance to providers in creating efficiencies in vaccine management by: (i) Providing model vaccine coverage contracts for purchasers of health insurance; (ii) Creating simplified rules for eligibility verification, billing, and reimbursement; (iii) Providing vouchers to patients to clarify eligibility and coverage for patients and providers; and (iv) Eliminating provider/public confusion over insurance payment of vaccines by universally covering all Advisory Committee on Immunization Practices (ACIP)-recommended vaccines.

b. Increase resources for funding vaccines by providing first-dollar coverage for immunizations.

c. Improve accountability by adopting performance measurements.

d. Work with businesses that purchase private insurance to include all ACIP-recommended immunizations as part of the health plan.

e. Provide incentives to encourage providers to begin immunizing by, for example: (i) Including start up costs (freezer, back up alarms/power supply, reminder-recall systems, etc.) in the formula for reimbursing the provision of immunizations; (ii) Simplifying payment to and encouraging immunization by nontraditional providers; (iii) Facilitating coverage of vaccines administered in complementary locations (e.g., relatives visiting a resident of a long-term care facility).

Manufacturer-related

Market stability for adult vaccines is essential. Thus: (i) Solutions to the adult vaccine financing problem should not deter research and development of new vaccines; (ii) Solutions should consider the maintenance of vibrant public and private sector adult vaccine markets; (iii) Liability protection for manufacturers should be assured by including Vaccine Injury Compensation Program coverage for all ACIP-recommended adult vaccines; (iv) Educational outreach to both providers and the public is needed to improve acceptance of adult immunization.

3. Our AMA will conduct a survey of small- and middle-sized medical practices, hospitals, and other medical facilities to identify the impact on the adult vaccine supply (including influenza vaccine) that results from the large contracts between vaccine manufacturers/distributors and large non-government purchasers, such as national retail health clinics, other medical practices, and group purchasing programs, with particular attention to patient outcomes for clinical preventive services and chronic disease management.

Citation: (CSAPH Rep. 4, I-08; Reaffirmation I-10; Reaffirmation: I-12; Reaffirmation I-14}
**Prescription Drug Prices and Medicare D-330.954**
1. Our AMA will support federal legislation which gives the Secretary of the Department of Health and Human Services the authority to negotiate contracts with manufacturers of covered Part D drugs.
2. Our AMA will work toward eliminating Medicare prohibition on drug price negotiation.
3. Our AMA will prioritize its support for the Centers for Medicare & Medicaid Services to negotiate pharmaceutical pricing for all applicable medications covered by CMS.

*Citation: Res. 211, A-04; Reaffirmation I-04; Reaffirmed in lieu of Res. 201, I-11; Appended: Res. 206, I-14; Reaffirmed: CMS Rep. 2, I-15; Appended: Res. 203, A-17*

**Cuts in Medicare Outpatient Infusion Services D-330.960**
1. Our AMA will actively support efforts to seek legislation to ensure that Medicare payments for drugs fully cover the physician's acquisition, inventory and carrying cost and that Medicare payments for drug administration and related services are adequate to ensure continued patient access to outpatient infusion services.
2. Our AMA will continue strong advocacy efforts working with relevant national medical specialty societies to ensure adequate physician payment for Part B drugs and patient access to biologic and pharmacologic agents.

*Citation: Res. 926, I-03; Reaffirmed and Modified: CMS Rep. 3, I-08; Reaffirmation A-15; Reaffirmed: CMS Rep. 10, A-16; Reaffirmation: I-18*

**Opposition to the CMS Medicare Part B Drug Payment Model D-330.904**
1. Our AMA will request that the Centers for Medicare & Medicaid Services (CMS) withdraw the proposed Part B Drug Payment Model.
2. Our AMA will support and actively work to advance Congressional action to block the proposed Part B Drug Payment Model if CMS proceeds with the proposal.
3. Our AMA will advocate against policies that are likely to undermine access to the best course of treatment for individual patients and oppose demonstration programs that could lead to lower quality of care and do not contain mechanisms for safeguarding patients.
4. Our AMA will advocate for ensuring that CMS solicits and takes into consideration feedback from patients, physicians, advocates, or other stakeholders in a way that allows for meaningful input on any Medicare coverage or reimbursement policy that impacts patient access to medical therapies, including policies on coverage and reimbursement.

*Citation: Res. 241, A-16*

**Restoring High Quality Care to the Medicare Part D Prescription Drug Program D-330.933**
Our AMA will:

a. work to eliminate prior authorizations under the Medicare Part D Prescription Drug Program which undermine a physician's best medical judgment;
b. work with the Centers for Medicare and Medicaid Services (CMS) to enforce the Medicare Part D Prescription Drug Program statutory requirement that all Part D plans include at least two drugs proven to be equally effective in each therapeutic category or pharmacologic class, if available, to be used by the physician in deciding the best treatment options for their patients;
c. work with CMS to place reasonable copays in the Medicare Part D Prescription Drug Program;
d. work with other interested parties to simplify the CMS prior authorization process such that a diagnosis or reason written on the prescription should be accepted as documentation for non formulary request; and

e. work with CMS to develop a one-page form for physicians and patients to utilize in appealing a prescription coverage denial.

*Citation: (Res. 106, A-07; Reaffirmation A-08; Reaffirmation A-14*
Whereas, The ongoing opioid epidemic in the United States has been labeled a public health crisis by the President of the United States, with significant attendant financial costs to hospitals, health systems, insurers, communities, families, patients, and many others; and

Whereas, It has been alleged that the pharmaceutical industry has long promoted overuse of opioids through a wide range of tactics to misbrand and misrepresent the risk of addiction and abuse; and

Whereas, A new NPR/IPSOS poll found that 57% of Americans now say pharmaceutical companies should be held responsible for making the opioid crisis worse. An even larger majority of those polled (70%) said even after companies pay fines and penalties, they should be forced to publicly disclose details of the role they played in fueling the epidemic; and

Whereas, When “big tobacco” was shown to have known of and promoted harmful products, eventual legal action compelled large financial settlements to be distributed to those negatively impacted by their products; and

Whereas, Similar legal actions are now being pursued against pharmaceutical manufacturers around the nation to hold drug-makers accountable and to assist negatively impacted providers, patients and state and local governments; therefore be it

RESOLVED, That our American Medical Association advocate that the relevant pharmaceutical industry organizations be held financially responsible for the health care and other economic costs related to their unethical and deceptive misbranding, marketing, and advocacy of opioids. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000.

Received: 04/29/19
RELEVANT AMA POLICY

Prevention of Opioid Overdose D-95.987
1. Our AMA: (A) recognizes the great burden that opioid addiction and prescription drug abuse places on patients and society alike and reaffirms its support for the compassionate treatment of such patients; (B) urges that community-based programs offering naloxone and other opioid overdose prevention services continue to be implemented in order to further develop best practices in this area; and (C) encourages the education of health care workers and opioid users about the use of naloxone in preventing opioid overdose fatalities; and (D) will continue to monitor the progress of such initiatives and respond as appropriate.
2. Our AMA will: (A) advocate for the appropriate education of at-risk patients and their caregivers in the signs and symptoms of opioid overdose; and (B) encourage the continued study and implementation of appropriate treatments and risk mitigation methods for patients at risk for opioid overdose.
3. Our AMA will support the development and implementation of appropriate education programs for persons in recovery from opioid addiction and their friends/families that address how a return to opioid use after a period of abstinence can, due to reduced opioid tolerance, result in overdose and death.

Citation: Res. 526, A-06; Modified in lieu of Res. 503, A-12; Appended: Res. 909, I-12; Reaffirmed: BOT Rep. 22, A-16; Modified: Res. 511, A-18; Reaffirmed: Res. 235, I-18

Prescription Drug Monitoring to Prevent Abuse of Controlled Substances H-95.947
Our AMA:
(1) supports the refinement of state-based prescription drug monitoring programs and development and implementation of appropriate technology to allow for Health Insurance Portability and Accountability Act (HIPAA)-compliant sharing of information on prescriptions for controlled substances among states;
(2) policy is that the sharing of information on prescriptions for controlled substance with out-of-state entities should be subject to same criteria and penalties for unauthorized use as in-state entities;
(3) actively supports the funding of the National All Schedules Prescription Electronic Reporting Act of 2005 which would allow federally funded, interoperative, state based prescription drug monitoring programs as a tool for addressing patient misuse and diversion of controlled substances;
(4) encourages and supports the prompt development of, with appropriate privacy safeguards, treating physician’s real time access to their patient’s controlled substances prescriptions;
(5) advocates that any information obtained through these programs be used first for education of the specific physicians involved prior to any civil action against these physicians;
(6) will conduct a literature review of available data showing the outcomes of prescription drug monitoring programs (PDMP) on opioid-related mortality and other harms; improved pain care; and other measures to be determined in consultation with the AMA Task Force to Reduce Opioid Abuse;
(7) will advocate that U.S. Department of Veterans Affairs pharmacies report prescription information required by the state into the state PDMP;
(8) will advocate for physicians and other health care professionals employed by the VA to be eligible to register for and use the state PDMP in which they are practicing even if the physician or other health care professional is not licensed in the state; and
(9) will seek clarification from SAMHSA on whether opioid treatment programs and other substance use disorder treatment programs may share dispensing information with state-based PDMPs.

9.6.7 Direct-to-Consumer Advertisement of Prescription Drugs

Direct-to-consumer advertising may raise awareness about diseases and treatment and may help inform patients about the availability of new diagnostic tests, drugs, treatments, and devices. However, direct-to-consumer advertising also carries the risk of creating unrealistic expectations for patients and conflicts of interest for physicians, adversely affecting patients' health and safety, and compromising patient physician relationships.

In the context of direct-to-consumer advertising of prescription drugs, physicians individually should:

(a) Remain objective about advertised tests, drugs, treatments, and devices, avoiding bias for or against advertised products.
(b) Engage in dialogue with patients who request tests, drugs, treatments, or devices they have seen advertised to:
   (i) assess and enhance the patients understanding of the test, drug or device;
   (ii) educate patients about why an advertised test, drug, or device may not be suitable for them, including providing cost-effectiveness information about different options.
(c) Resist commercially induced pressure to prescribe tests, drugs, or devices that may not be indicated.
(d) Obtain informed consent before prescribing an advertised test, drug, or device, in keeping with professional standards.
(e) Deny requests for an inappropriate test, drug, or device.
(f) Consider reporting to the sponsoring manufacturer or appropriate authorities direct-to-consumer advertising that:
   (i) promotes false expectations;
   (ii) does not enhance consumer education;
   (iii) conveys unclear, inaccurate, or misleading health education messages;
   (iv) fails to refer patients to their physicians for additional information;
   (v) does not identify the target population at risk;
   (vi) encourages consumer self-diagnosis and treatment.

Collectively, physicians should:

(g) Encourage and engage in studies that examine the impact of direct-to-consumer advertising on patient health and medical care.
(h) Whenever possible, assist authorities to enforce existing law by reporting advertisements that do not:
   (i) provide a fair and balanced discussion of the use of the drug product for the disease, disorder, or condition;
   (ii) clearly explain warnings, precautions, and potential adverse reactions associated with the drug product;
   (iii) present summary information in language that can be understood by the consumer
   (iv) comply with applicable regulations;
   (v) provide collateral materials to educate both physicians and consumers.

AMA Principles of Medical Ethics: II, III

The Opinions in this chapter are offered as ethics guidance for physicians and are not intended to establish standards of clinical practice or rules of law.

Issued: 2016
Whereas, Patient or coworker observation experience surveys are increasingly used by healthcare centers in evaluating physician clinical care and are often tied to physician salaries; and

Whereas, These patient surveys focus on patient perspectives and brand management while not addressing any specific quality metrics of complicated clinical care; and

Whereas, Coworker observation metrics have not been validated as a reliable monitoring tool for patient care or clinical professional behavior; and

Whereas, Patient or coworker experience surveys depend upon active responses and thus may exhibit reporting bias due to complaints frequently unrelated to the providers’ actual clinical care; and

Whereas, It has been demonstrated that higher patient satisfaction scores are associated with higher health care and prescription expenditures; and

Whereas, Patient satisfaction utilization can promote job dissatisfaction, attrition, and inappropriate clinical care (the very opposite of high-value clinical care); and

Whereas, Patient surveys or coworker observation metrics are not conducted nor evaluated in a peer-review environment; and

Whereas, These surveys and metrics are performed anonymously and thus cannot be adequately addressed by the clinician; and

Whereas, These metrics are usually utilized only to negatively impact an employed physician’s salary in a punitive manner (with no potential for positive impact); and

Whereas, A clinician’s overall work product cannot be distilled to a few numerical metrics; and

Whereas, Health care centers may publish the results of patient or coworker surveys regarding individual providers in an effort to be “transparent”; and

Whereas, It is apparent that patient satisfaction surveys or coworkers’ observation reporting symptoms produce “scores” that are not related to any clinical quality metric, have questionable validity, and are often taken out of context; therefore be it
RESOLVED, That our American Medical Association adopt policy opposing any association
between anonymous patient satisfaction scores (e.g. “loyalty scores”) or the coworkers’
observation reporting system, and employed physicians’ salaries (New HOD Policy); and be it
further

RESOLVED, That our AMA adopt policy opposing any publication of anonymous patient
satisfaction scores or coworkers’ observation reporting system information directed at an
individual physician (New HOD Policy); and be it further

RESOLVED, That our AMA adopt policy opposing the use of any anonymous patient
satisfaction scores or any individually and anonymously posted patient or co-worker comments
in formulating or impacting employed physician salaries or in relation to any other physician
compensation program. (New HOD Policy)

Fiscal Note: Minimal - less than $1,000.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 206
(A-19)

Introduced by: Illinois

Subject: Changing the Paradigm: Opposing Present and Obvious Restraint of Trade

Referred to: Reference Committee B
(Charles Rothberg, MD, Chair)

Whereas, Many healthcare providers and established, quality-based referral patterns are threatened or already overtaken by monopoly network interests; and

Whereas, Many private and employed physicians’ voices are not being heard clearly because of some degree of risk of network exclusion/termination; and

Whereas, Despite the fact that the most valuable part within the network is the group of physicians, large provider systems will continue to commoditize physicians and physician services, and continue to compete on price, negatively impacting the already diminishing and set value share (compensation) of physicians in and out of large networks; and

Whereas, Delivering compassionate and personalized care to a patient is the most agreed-upon interest that we serve, and the foundation of this is a trusting doctor patient relationship, and now increasingly other interests are entering into and compromising this relationship; and

Whereas, Insurance providers and health delivery systems have inadvertently, or intentionally, added incredible levels of “red tape” to true health service; therefore be it

RESOLVED, That our American Medical Association seek legislative or regulatory changes to allow physicians to collectively negotiate professional fees, compensation and contract terms without integration. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000.

Received: 04/25/19
Whereas, Direct-to-consumer genetic testing, such as 23andMe and AncestryDNA.com, is publicly promoted and commercially available to bring personal insight into ancestry, genealogy, and inherited traits by means of a genetic blueprint (Personal Genome Service or PGS); and

Whereas, The genetic testing may or may not reveal variants associated with a higher risk of certain diseases such as Alzheimer's, Parkinson's, or Macular Degeneration, which may not have clinical merit, but could result in emotional distress upon discovery; and

Whereas, The PGS is deemed a medical device by the US Food and Drug Administration, but is also a mechanism for massive information-gathering whereby personal, self-disclosed information, including a person's genome, can be used by the company or third parties for selling the consumer products and services; and

Whereas, PGS companies have different policies regarding managing and disseminating information for research purposes, including academic institutions, non-profit foundations, and pharmaceutical companies for journal publications, and some have indicated that their database-sifting scientific work does not constitute research on human subjects; and

Whereas, Some genetic testing companies have direct financial relationships with pharmaceutical (GlaxoSmithKline, Pfizer) and biotechnology (Genentech) companies and universities (University of Chicago) to name a few; and

Whereas, Privacy breaches have occurred, including the hacking of a genetic testing company, MyHeritage, which affected 92,000,000 individuals, with the potential for other abuse by governments, companies, or criminals with direct or indirect access (e.g. hacking, sale by unauthorized persons, release by disgruntled employees); and

Whereas, In up to 12-18% of cases, the consumers using information on recreational genetic genealogy databases are at risk for re-identification in the event of a data breach if their genetic information were cross-referenced against other information, such as their date of birth and state of residence; and

Whereas, The Health Information Portability and Accountability Act (HIPAA) allows the transfer of date of birth and state of residence information without penalty; and
Whereas, The Genetic Information Non-Discrimination Act (GINA, 2008)\(^5\) prevents discrimination by health insurance companies and employers based on acquired genetic information, but these restrictions do not apply to life, disability, or long-term care insurance companies, possibly causing some insurance application rejections; and

Whereas, Only 17 states have additional laws restricting the use of genetic information in determining life and disability insurance coverage, and only eight states for long-term care insurance; and

Whereas, Genetic information and research continues to evolve, resulting in technology advancements whereby past user information may be used negatively against those individuals; therefore be it

RESOLVED, That our American Medical Association regard research using consumer genome data derived from saliva or cheek swab samples as research on human subjects requiring consents in compliance with the Health and Human Services (HHS) Office for Human Research Protection (OHRP), and recommend an "opt in" option to allow more consumer choice in the consent process (Directive to Take Action); and be it further

RESOLVED, That our AMA amend Policy H-315.983, “Patient Privacy and Confidentiality,” by addition to align with current research and privacy infringement findings, as follows:

1. Our AMA affirms the following key principles that should be consistently implemented to evaluate any proposal regarding patient privacy and the confidentiality of medical information: (a) That there exists a basic right of patients to privacy of their medical information and records, and that this right should be explicitly acknowledged; (b) That patients' privacy should be honored unless waived by the patient in a meaningful way or in rare instances when strong countervailing interests in public health or safety justify invasions of patient privacy or breaches of confidentiality, and then only when such invasions or breaches are subject to stringent safeguards enforced by appropriate standards of accountability; (c) That patients' privacy should be honored in the context of gathering and disclosing information for clinical research and quality improvement activities, and that any necessary departures from the preferred practices of obtaining patients' informed consent and of de-identifying all data be strictly controlled; (d) That any information disclosed should be limited to that information, portion of the medical record, or abstract necessary to fulfill the immediate and specific purpose of disclosure; and (e) That the Health Insurance Portability and Accountability Act of 1996 (HIPAA) be the minimal standard for protecting clinician-patient privilege, regardless of where care is received, while working with the Department of Health and Human Services (HHS) to stop the transfer of birthdates and state of residence by genetic testing companies and their affiliates, unless there is explicit user approval, to prevent re-identification of the test user by way of surname inference methods.

2. Our AMA affirms: (a) that physicians and medical students who are patients are entitled to the same right to privacy and confidentiality of personal medical information and medical records as other patients, (b) that when patients exercise their right to keep their personal medical histories confidential, such action should not be regarded as fraudulent or inappropriate concealment, and (c) that physicians and medical students should not be required to report any aspects of their patients' medical history to governmental agencies or other entities, beyond that which would be required by law.
3. Employers and insurers should be barred from unconsented access to identifiable medical information lest knowledge of sensitive facts form the basis of adverse decisions against individuals. (a) Release forms that authorize access should be explicit about to whom access is being granted and for what purpose, and should be as narrowly tailored as possible. (b) Patients, physicians, and medical students should be educated about the consequences of signing overly-broad consent forms. (c) Employers and insurers should adopt explicit and public policies to assure the security and confidentiality of patients' medical information. (d) A patient's ability to join or a physician's participation in an insurance plan should not be contingent on signing a broad and indefinite consent for release and disclosure.

4. Whenever possible, medical records should be de-identified for purposes of use in connection with utilization review, panel credentialing, quality assurance, and peer review.

5. The fundamental values and duties that guide the safekeeping of medical information should remain constant in this era of computerization. Whether they are in computerized or paper form, it is critical that medical information be accurate, secure, and free from unauthorized access and improper use.

6. Our AMA recommends that the confidentiality of data collected by race and ethnicity as part of the medical record, be maintained.

7. Genetic information should be kept confidential and should not be disclosed to third parties without the explicit informed consent of the tested individual. Our AMA regards studies using consumer genome data derived from saliva, cheek swab, or other human tissue samples as research on human subjects requiring consents in compliance with the HHS Office for Human Research Protections (OHRP). An “opt in” option is recommended to allow more consumer choice in the consent process.

8. When breaches of confidentiality are compelled by concerns for public health and safety, those breaches must be as narrow in scope and content as possible, must contain the least identifiable and sensitive information possible, and must be disclosed to the fewest possible to achieve the necessary end.

9. Law enforcement agencies requesting private medical information should be given access to such information only through a court order. This court order for disclosure should be granted only if the law enforcement entity has shown, by clear and convincing evidence, that the information sought is necessary to a legitimate law enforcement inquiry; that the needs of the law enforcement authority cannot be satisfied by non-identifiable health information or by any other information; and that the law enforcement need for the information outweighs the privacy interest of the individual to whom the information pertains. These records should be subject to stringent security measures.
10. Our AMA must guard against the imposition of unduly restrictive barriers to patient records that would impede or prevent access to data needed for medical or public health research or quality improvement and accreditation activities. Whenever possible, de-identified data should be used for these purposes. In those contexts where personal identification is essential for the collation of data, review of identifiable data should not take place without an institutional review board (IRB) approved justification for the retention of identifiers and the consent of the patient. In those cases where obtaining patient consent for disclosure is impracticable, our AMA endorses the oversight and accountability provided by an IRB.

11. Marketing and commercial uses of identifiable patients' medical information may violate principles of informed consent and patient confidentiality. Patients divulge information to their physicians only for purposes of diagnosis and treatment. If other uses are to be made of the information, patients must first give their uncoerced permission after being fully informed about the purpose of such disclosures.

12. Our AMA, in collaboration with other professional organizations, patient advocacy groups and the public health community, should continue its advocacy for privacy and confidentiality regulations, including: (a) The establishment of rules allocating liability for disclosure of identifiable patient medical information between physicians and the health plans of which they are a part, and securing appropriate physicians' control over the disposition of information from their patients' medical records. (b) The establishment of rules to prevent disclosure of identifiable patient medical information for commercial and marketing purposes; and (c) The establishment of penalties for negligent or deliberate breach of confidentiality or violation of patient privacy rights.

13. Our AMA will pursue an aggressive agenda to educate patients, the public, physicians and policymakers at all levels of government about concerns and complexities of patient privacy and confidentiality in the variety of contexts mentioned.

14. Disclosure of personally identifiable patient information to public health physicians and departments is appropriate for the purpose of addressing public health emergencies or to comply with laws regarding public health reporting for the purpose of disease surveillance.

15. In the event of the sale or discontinuation of a medical practice, patients should be notified whenever possible and asked for authorization to transfer the medical record to a new physician or care provider. Only de-identified and/or aggregate data should be used for "business decisions," including sales, mergers, and similar business transactions when ownership or control of medical records changes hands.

16. The most appropriate jurisdiction for considering physician breaches of patient confidentiality is the relevant state medical practice act. Knowing and intentional breaches of patient confidentiality, particularly under false pretenses, for malicious harm, or for monetary gain, represents a violation of the professional practice of medicine.
17. Our AMA Board of Trustees will actively monitor and support legislation at the federal level that will afford patients protection against discrimination on the basis of genetic testing. The AMA will work with Congress and HHS to modify the Genetic Information Nondiscrimination Act of 2008 (GINA), which bans genome-based policy and hiring decisions by health insurance companies and employers, by adding Long-Term Care, Life Insurance, and Disability Insurance to the Act to prevent applicant rejection based on their genetic make up.

18. Our AMA supports privacy standards that would require pharmacies to obtain a prior written and signed consent from patients to use their personal data for marketing purposes.

a. Our AMA supports privacy standards that would prohibit pharmaceutical companies, biotechnology companies, universities, and all other entities with financial ties to the genetic testing company from sharing identified information with other parties without the consent of the user. An exception would be made when requested by law enforcement authorities or when keeping the information would seriously threaten their health or that of others. If a data security breach occurs with the Direct-To-Consumer genetic company or its collaborators, then the company has the responsibility to inform all users of the breach and the impact of the unprotected private data on those individuals;

19. Our AMA supports privacy standards that require pharmacies and drug store chains to disclose the source of financial support for drug mailings or phone calls.

20. Our AMA supports privacy standards that would prohibit pharmacies from using prescription refill reminders or disease management programs as an opportunity for marketing purposes.

21. Our AMA will draft model state legislation requiring consent of all parties to the recording of a physician-patient conversation (Modify Current HOD Policy); and be it further

RESOLVED, That our AMA work with the Department of Health and Human Services or other relevant parties to modify the rules to prevent genetic testing entities from transferring information about the user's date of birth and state of residence to third parties which may result in the re-identification of the user based on surname inference (Directive to Take Action); and be it further

RESOLVED, That our AMA work with Congress and the Department of Health and Human Services to extend the consumer protections of the Genetic Information Non-Discrimination Act (GINA) of 2008 by adding long-term care, disability insurance, and life insurance to the Act, modeled after the laws of other states, such as California. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 208
(A-19)

Introduced by: Illinois

Subject: Repeal or Modification of the Sunshine Act

Referred to: Reference Committee B
(Charles Rothberg, MD, Chair)

Whereas, The Physician Payments Sunshine Act was part of the 2010 Affordable Care Act as a way to document publicly the financial interactions between industry and physicians by requiring the medical industry, including Pharma, device manufacturers, and group purchasing organizations, to document any payments and gifts valued above $10; and

Whereas, The Sunshine Act data includes cash, in-kind items or services, stock, consulting fees, honoraria, gifts, entertainment, food, travel, research, charitable contributions, royalties or licenses, current or prospective ownership or investment interest, speaker compensation for CME, and grants; and

Whereas, The Centers for Medicare and Medicaid Services (CMS) maintains the CMS Open Payments website, which has been up and running since 2014, with data collection having begun in 2013; and

Whereas, Advocates of the Sunshine Act sought to make the public aware of the relationship between industry and the medical community, such that physicians would become less willing to accept payments from industry in order to reduce the influence of industry on the practice of medicine; and

Whereas, Recent data from the CMS website shows the number of records published has remained at about 12 million since 2014; the total value, including research and investments, was $7.86 billion in 2014 and has increased to almost $8 billion in subsequent years; and the number of physicians with payment records was roughly 625,000 in 2014 and has continued to climb to 631,000 in 2016, the most recent year for which data has been published; showing that the number of physicians and the value of payment records has not had the anticipated effect of reduced industry-physician relationship and influence; and

Whereas, The Sunshine Act has created an undue burden on practicing physicians to maintain records and review the accuracy of the data submitted, and has not been shown to curtail the financial interactions between manufacturers and group purchasing organizations with physicians; therefore be it

RESOLVED, That our American Medical Association adopt as policy opposition to the Physician Payments Sunshine Act as it currently is written and implemented (New HOD Policy); and be it

further
RESOLVED, That our AMA support either repeal of the current Sunshine Act or significant
modifications to the Sunshine Act, such as substantially increasing the monetary threshold for
reporting, that will decrease the burden and “hassle factor” and support efforts at administrative
simplification for physicians, which the Center for Medicare and Medicaid Services and the
organized medical community has supported, if any portion of the Act is maintained. (New HOD
Policy)

Fiscal Note: Minimal - less than $1,000.

Received: 04/25/19
Whereas, The private practice of medicine has protected the relationship between doctor and patient; and

Whereas, The patient chart and its data are protected under HIPAA; and

Whereas, The ownership of the chart rests with the doctor originating the chart; and

Whereas, The continued art and science of the practice of medicine depends on the protected relationship of the doctor and the patient, and the documentation of that relationship; and

Whereas, Electronic medical records have improved the documentation of the doctor-patient relationship; and

Whereas, The access to the patient chart is protected by HIPAA; and

Whereas, The private practice is affected by forces in the free marketplace; and

Whereas, The access and ownership of the patient chart has effect on its value in the marketplace; and

Whereas, The ownership of the chart has not been ruled on in most states; and

Whereas, The spread of Accountable Care Organizations (ACOs) may direct referrals within a geographic area and have restricted trade; and

Whereas, All electronic medical records are to move to interoperability as defined and mandated by the Centers for Medicare and Medicaid Services (CMS) for compliance with federal programs; and

Whereas, There are means of sharing data between organizations in accordance with HIPAA via alliances like CommonWell Health Alliance and Carequality Interoperability Framework that are in common usage for patient data and its interoperability; and

Whereas, The use of alliances such as CommonWell Health Alliance and Carequality Interoperability Framework have accelerated the ability of unrelated healthcare entities including inpatient and outpatient facilities to share data through interoperability; and
Whereas, ACOs have begun to mandate the use of single and specific EMR software vendors; therefore be it

RESOLVED, That our American Medical Association adopt policy stating that Accountable Care Organizations cannot mandate their membership to use a single specific Electronic Medical Record (EMR) (New HOD Policy); and be it further

RESOLVED, That our AMA move to effect legislation that prevents Accountable Care Organizations from imposing EMR mandates. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000.

Received: 04/25/19
Whereas, Across the country, less populated areas are being served by both not-for-profit and for-profit air medevac services; and

Whereas, Most communities in the US are serviced by land-based non-profit providers such as police or fire departments; and

Whereas, In urban communities, hospitals frequently offer air ambulance services while rural communities must rely heavily on privately owned medevac ambulance service companies; and

Whereas, For-profit companies compete with land-based, non-profit services by cleverly monitoring police and fire department emergency radio bands; and

Whereas, States face poor regulation of air ambulance business overseen by the FAA; and

Whereas, There is a concern about the excessive costs of the private medevac sector; and

Whereas, Research states that 60% of patients transported by air would not have suffered a lower standard of medical care if they had been transported by land; and

Whereas, Land-based services are less expensive and less dangerous; and

Whereas, Exorbitant, poorly regulated fees can leave a patient with an out-of-pocket bill of upwards of $40,000-$60,000 after insurance payments which has caused some patients to file bankruptcy; and

Whereas, Several states have introduced legislation to limit the predatory behaviors of private medevac companies but some states believe that legislation should be addressed at the federal level; therefore be it

RESOLVED, That our American Medical Association support federal legislation which would:

1. Establish an expedited independent dispute resolution system to resolve payment disputes between emergency air ambulance providers and health insurers; and

2. Ensure that such independent dispute resolution process would ensure the patient be “held harmless” except for applicable insurance policy in-network cost-sharing requirements. (New HOD Policy)

Fiscal Note: Minimal - less than $1,000.
Received: 04/25/19
Whereas, For FAIR Health to serve its purpose, it must continue to report Usual and Customary Rate (UCR) data as it has been doing; and

Whereas, Tremendous effort was expended to create FAIR Health as an independent database, that would accurately report the charge data and not be influenced to alter the collected data; and

Whereas, FAIR Health’s database contains 28 billion claims collected from all 50 states; and

Whereas, FAIR Health’s database is used a reference point for charge data by numerous states; and

Whereas, There is increasing usage by states of so-called “all payer databases” (APDs) that contain payment data supplied by health insurance companies; and

Whereas, Such APDs often contain incomplete data, such as excluding data from self-insured health plan sources; and

Whereas, Congress is currently debating whether to enact legislation that would set forth payment standards and/or processes to determine payments for out of network surprise hospital medical bills; and

Whereas, Some legislators have indicated a preference for use of APD payment data for an out of network payment benchmark instead of use of comprehensive charge data supplied by physicians; and

Whereas, Failure to fairly account for charge data in an out of network surprise bill benchmark could have disastrous consequences for physicians attempting to negotiate fair contracts with health insurance companies; therefore be it

RESOLVED, That our American Medical Association advocate that any legislation addressing surprise out of network medical bills use FAIR Health usual and customary data and not all payer database data. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000.

Received: 04/25/19
AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 212
(A-19)

Introduced by: New York

Subject: Pharmacy Benefit Managers

Referred to: Reference Committee B
(Charles Rothberg, MD, Chair)

Whereas, Pharmacy Benefit Managers (PBMs) choose medications based on the cost; and
Whereas, Patients have different responses to medications and need a variety of medications available to them; and
Whereas, There have been instances where health insurers and PBMs refuse to continue to continue covering needed pain management medications for severely ill patients when such patients are transitioned from a hospital to a community based care setting such as hospice; and
Whereas, Failure to sufficiently address patients’ pain control needs is one factor that leads to patients seeking medical assistance to end their life prematurely; therefore be it

RESOLVED, That our American Medical Association advocate through all appropriate means to ensure that medications used to stabilize palliative and hospice patients for pain and delirium in the hospital continue to be covered by pharmacy benefit plans after patients are transitioned out of the hospital. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000.

Received: 04/25/19
Whereas, Physicians along with other stakeholders share the goal of providing cost effective care; and
Whereas, Other stakeholders (such as payers – who as a group have access to enormous amounts of utilization data) can be helpful in identifying cost centers and even in the development of targets to work toward in order to achieve the shared goal of providing cost effective care; and
Whereas, It is physicians who have a perspective unique among the stakeholders to assess the clinical course and outcomes (the other variables in calculating cost effectiveness) – particularly when outcomes data is insufficient to draw objective conclusions; and
Whereas, Recently a New York insurer (one with significant market share) observed that despite increasing reimbursement for a less expensive injectable drug (although one unapproved for this indication), physicians did not change their utilization patterns in favor of this drug in the manner sought by that insurer; and
Whereas, This insurer is now being investigated by the New York Department of Financial Services for this practice; and
Whereas, In response, rather than assess all the factors (rather than just the economic ones) that contribute to physician preferences in their choice of therapy (such as indication, effectiveness, therapeutic failure/responses, dosing, safety), the company elected to instead impose financial penalties on practices that have a member that is a statistical outlier when compared to the aggregate of physicians within the plan; and
Whereas, Those penalties apply not only to the individual outlier physician but to all the services rendered by all of the members of the practice – the penalties extend even to those physicians whose utilization is within the target (and, presumably, to those who do not even use these drugs); therefore be it
RESOLVED, That our American Medical Association oppose the practice of a payer utilizing statistical targets alone (and not outcomes data) to determine ‘cost effectiveness’ of a therapeutic choice (New HOD Policy); and be it further
RESOLVED, That our AMA oppose the practice of a payer imposing financial penalties upon physicians and/or associated physicians based upon the use of statistical targets without first considering the clinical factors unique to each patient’s claim. (New HOD Policy)

Fiscal Note: Minimal - less than $1,000.
Received: 04/25/19
Whereas, Allied health professionals are continually trying to extend their scope of service; and

Whereas, There needs to be transparency for patients to know who is treating them and to be able to evaluate the credentials of that provider of care; and

Whereas, There are doctorate degrees being granted to many allied health professionals and the term doctor in the clinical setting may be misinterpreted by patients; therefore be it

RESOLVED, That our American Medical Association seek the passage of federal regulation and/or legislation that mandates that the term physician be limited to those people trained in accordance with Accreditation Council for Graduate Medical Education guidelines and have an MD, DO or a recognized equivalent physician degree and that the term not be used by any other organization or person involved in healthcare. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000.

Received: 04/25/19
Whereas, The delivery of healthcare is being transformed through the use of technology; and

Whereas, Physician practices need to keep up with new technology; and

Whereas, Technology has resulted in an increase in costs to physician practices that did not exist 10 years ago and these costs include transactional costs for each E prescription that is sent, monthly fees for the electronic medical record, the purchase of hardware, financing and staff support needed to maintain this technology; and

Whereas, Reimbursement for physicians has not kept pace with these increased expenses; and

Whereas, Physician practices need to innovate; and

Whereas, E/M codes were never designed to support these expenses or innovation; therefore be it

RESOLVED, That our American Medical Association seek the passage of federal regulation and/or legislation that mandates that third party payers allow physician practices to charge a technology fee equal to the copayment of the patient's plan. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000.

Received: 04/25/19
Whereas, Many healthcare contracts from insurers and government agencies use the word “provider” to mean “physicians” and all other “healthcare professionals”; and
Whereas, The word “provider” is dictionary defined as one of the following: “wage earner”, “income producer”, “job holder”, “laborer”, “meal ticket”, and “one who brings home the bacon”; and
Whereas, It is demeaning to call a highly-educated physicians and healthcare professionals “providers”; therefore be it
RESOLVED, That our American Medical Association seek legislation to ensure that all references to physicians in government and insurance contracts, agreements, published descriptions, and printed articles eliminate the word “provider” and substitute the accurate and proper term “physician”. (Directive to Take Action)

Fiscal Note: Minimal - less than $1,000.

(A-19)

Introduced by: New York

Subject: Medicare Vaccine Billing

Referred to: Reference Committee B
(Charles Rothberg, MD, Chair)

Whereas AMA Policy D-440.981, “Appropriate Reimbursements and Carve-outs for Vaccines,” states:

Our AMA will: (1) continue to work with the Centers for Medicare and Medicaid Services (CMS) and provide comment on the Medicare Program payment policy for vaccine services; (2) continue to pursue adequate reimbursement for vaccines and their administration from all public and private payers; (3) encourage health plans to recognize that physicians incur costs associated with the procurement, storage and administration of vaccines that may be beyond the average wholesale price of any one particular vaccine; and (4) seek legislation mandating that health insurance companies in applicable states either adequately pay for vaccines recommended by the Advisory Committee on Immunization Practices, or clearly state in large bold font in their notices to patients and businesses that they do not follow the federal advisory body on vaccine recommendations, the Advisory Committee on Immunization Practices; and

Whereas, Medicare continues to not reimburse physicians for the cost of some immunizations; and

Whereas, Medicare will reimburse pharmacies for those immunizations, creating an incentive to go to a pharmacy for all vaccinations; therefore be it

RESOLVED, That our American Medical Association advocate that a physician’s office can bill Medicare for all vaccines and that the patient shall only pay the applicable copay to prevent fragmentation of care. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000.

Whereas, There is an epidemic of opioid abuse in America; and

Whereas, The efforts to combat that epidemic is to restrict the use of opioids; and

Whereas, Insurance companies and government programs restrict the off-label use of medications to Federal Drug Administration (FDA) approved indications and many current pain medications were not approved by the FDA for pain management or have a very narrow indication for pain treatment; and

Whereas, Many pharmacy benefit plans will not cover these medications, leaving a treatment gap for patients with pain; therefore be it

RESOLVED, That our American Medical Association petition the Centers for Medicare and Medicaid Services to allow reimbursement for off label use of medications like gabapentin or lidocaine patches at the lowest copayment tier for the indication of pain so that patients can be effectively treated for pain and decrease the number of opioid prescriptions written. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000.

Received: 04/25/19
Whereas, Our American Medical Association supports the voluntary use of state-based prescription drug monitoring programs (PDMP) when clinically appropriate; and

Whereas, Our AMA encourages states to implement modernized PDMPs that are seamlessly integrated into the physician’s normal workflow, and provide clinically relevant, reliable information at the point of care within the safeguards applicable to protected health information; and

Whereas, Our AMA encourages all states to determine how to use a PDMP to enhance treatment for substance use disorder and pain management; and

Whereas, Our AMA encourages states to share access to PDMP data across state lines; and

Whereas, By 2018, 33 states, the District of Columbia, Guam, and Puerto Rico, have passed legislation to legalize medical marijuana, including Oklahoma; and

Whereas, In 2018, Oklahoma State Question 788, Medical Marijuana Legalization Initiative, became law of the land and lacks adequate patient safeguards in multiple areas; and

Whereas, Patient safety standards have not been implemented in all state legislation that have legalized medical marijuana; and

Whereas, Physicians need accurate and reliable information to give high-level care to their patients; therefore be it

RESOLVED, That our American Medical Association draft model state legislation to amend states’ prescription drug monitoring programs to include a medical marijuana license registry. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 220
(A-19)

Introduced by: Pennsylvania
Subject: Study of Confidentially and Privacy Protection in the Treatment of Substance Disorders
Referred to: Reference Committee B
(Charles Rothberg, MD, Chair)

Whereas, Privacy rules are established in the “Health Information Protection and Accountability Act” (HIPAA, 1996). These rules protect personal health information, setting conditions on disclosures and allowing patient information to be shared to coordinate care without obtaining additional consents; and

Whereas, Confidentiality regulations were established in 1972 in the “Confidentiality of Alcohol and Drug Abuse Patient Records Act” (42 CFR Part 2). These regulations are applied to the disclosure and re-disclosure of patient information. Part 2, (not HIPAA), prohibits sharing of information that could identify a patient seeking treatment for a substance related disorder; and

Whereas, Because of Part 2, treatment records for substance related disorders are separated from a patient’s medical record, acting as a life-threatening barrier preventing medical providers from having access to their patients’ full medical histories, limiting integration, hindering coordination and resulting in less robust, whole person, safe, and optimally effective care; and

Whereas, The opioid epidemic (among other substance related disorders) which has resulted in excess mortality in every community across the country, and costs in the billions of dollars annually, may indicate that these protections have failed to reduce reluctance to enter treatment; and

Whereas, It is not clear nearly 50 years later, that Part 2 confidentiality is a concern preventing individuals from seeking treatment for their addictions, or that patients considering treatment, care more about confidentiality than coordination of care; therefore be it

RESOLVED, That our American Medical Association study whether the confidentiality protections of 42 CFR Part 2 outweigh the potential benefits of coordinating care with HIPAA privacy protections in the treatment of substance related disorders. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000.

Resolution: 221
(A-19)

Subject: Extending Medicaid Coverage to 12-Months Postpartum

Referred to: Reference Committee B
(Charles Rothberg, MD, Chair)

1 Whereas, Medicaid is the largest single payer of maternity care in the United States, covering 42.6 percent of births and playing a critical role in ensuring healthy moms and babies; and
2 Whereas, Medicaid is a women's health success story and is the pathway to jobs and financial stability for women and girls. Girls enrolled in Medicaid as children are more likely to attend college, and Medicaid coverage during pregnancy and a newborn’s first year of life increases the likelihood that the child will experience upward mobility; and
3 Whereas, Medicaid pregnancy coverage lapses at the end of the month after 60-days postpartum; and
4 Whereas, The postpartum period is simultaneously a time of vulnerability and maternal health risk, and a transition period with often unmet maternal health needs; and
5 Whereas, The American College of Obstetricians and Gynecologists emphasize the importance of the “fourth trimester” and optimizing postpartum care to improve maternal health outcomes and support ongoing health and well-being; and
6 Whereas, The United States is the only industrialized nation with a rising maternal mortality rate; and
7 Whereas, A report from nine maternal mortality review committees estimated that more than 60 percent of maternal deaths are preventable; and
8 Whereas, Findings from state maternal mortality review committees reveal a growing number of maternal deaths linked to cardiovascular disease, cardiomyopathy, and overdose and suicide, with many of these deaths occurring during the postpartum period; and
9 Whereas, Missouri was the first state to pass legislation extending Medicaid coverage to 12-months postpartum for women in active treatment for a substance use disorder; and
10 Whereas, The Texas Maternal Mortality and Morbidity Task Force recommended extending Medicaid coverage to 12-months postpartum to ensure that “medical and behavioral health conditions can be managed and treated before becoming progressively severe.”; and
Whereas, Legislation in several states, including Texas, Illinois, California, and New Jersey, has been introduced in 2019 to extend Medicaid coverage to 12-months postpartum; and

Whereas, Federal legislation has been introduced in 2019 to extend Medicaid coverage to 12-months postpartum; therefore be it

RESOLVED That our American Medical Association support and actively work toward enactment of state legislation, Section 1115 waiver applications, and federal legislation to extend Medicaid coverage to 12-months postpartum. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000.

Resolution: 222
(A-19)

Introduced by: Kentucky, Mississippi, Oklahoma, West Virginia

Subject: Protecting Patients from Misleading and Potentially Harmful "Bad Drug" Ads

Referred to: Reference Committee B
(Charles Rothberg, MD, Chair)

Whereas, In 2016, the American Medical Association House of Delegates adopted Resolution 208 relating to patients being potentially endangered by ubiquitous television commercials that seek plaintiffs regarding medications; and

Whereas, Since that time the issue has become even more pervasive, and new research in addition to direct physician experiences has indicated that actual patient harm is occurring; and

Whereas, Many of these advertisements utilize misleading techniques, including the use of terms like “Medical Alert” to imply the advertisement is some kind of public service advertisement, the use of the term “recall” even when a drug or other device remains approved by the US Food and Drug Administration, or the use of governmental logos to imply that the advertisement is associated with a governmental agency; and

Whereas, Few of the advertisements fairly identify the sponsor and purpose of the advertisement in any meaningful or understandable manner, leading individuals to potentially provide their private and protected health information to third parties under misleading circumstances; and

Whereas, While there is clearly a potential for danger when stopping or altering a course of care agreed upon with a physician or seeking to modify or remove a medical device without first consulting a physician about that change, few of the advertisements provide this very important safety information in any meaningful way; and

Whereas, The state of Tennessee has recently adopted new rules creating common-sense regulations to protect patient health and fairly address these other concerns; therefore be it

RESOLVED, That our American Medical Association encourage state legislatures to consider and adopt legislation that helps protect patient health by creating fair rules and regulations around attorney advertisements that:

1. Prohibit misuse of governmental logos or the term “recall”
2. Provide clear warning of the dangers in stopping a course of treatment without consulting with a physician and
3. Require written consent before sharing personal health information. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000.
Received: 05/01/19
RELEVANT AMA POLICY

**Attorney Ads on Drug Side Effects H-105.985**
Our AMA will advocate for a requirement that attorney advertising which may cause patients to discontinue medically necessary medications have appropriate and conspicuous warnings that patients should not discontinue medications without seeking the advice of their physician.
Citation: Res. 208, A-16
Whereas, Addiction involving tobacco use remains our nation’s leading cause of preventable
death; and

Whereas, Adult cigarette smoking rates have dropped to about 14%, certain populations e.g.,
the poor, and persons with behavioral health conditions, continue to smoke at much higher
rates, and still about 20% of adult deaths each year are attributable to tobacco use; and

Whereas, Passive exposure to tobacco smoke contributes about 10% of the tobacco-related
mortality in our nation so that even non-smokers experience potentially lethal health impacts
from the tobacco smoking of others; and

Whereas, Aligned with the first step in quality improvement is measurement (to know the current
state before interventions that might improve it are implemented), the first step in disease
control is surveillance--knowing baseline levels of disease incidence and prevalence so that the
results of interventions to reduce disease onset, duration and impact can be accurately
measured against a reference point; and

Whereas, Case definitions, and the words used to make up those definitions, are of critical
importance in epidemiology and in clinical medicine, so that there is concurrence and
consistency in the description and enumeration of clinical states, and so that public health
surveillance efforts are accurate; and

Whereas, Health records in North America have shifted predominantly to electronic health
records (EHRs), in which words used by clinicians are transformed into computer language and
stored as digital information that comprise chart documents; and

Whereas, The Office of National Coordinator of Health Information Technology (ONC) is a
component of the federal Department of Health and Human Services (DHHS) and is charged by
Congress, among other things, with recommending uniform standards for computer language in
EHRs to interface with the human language of physicians and other members of health care
clinical teams; and

Whereas, SNOMED is the systematized standard nomenclature format for terms used in EHR
software designed and sold by health information technology (HIT) vendors, and provides a
standardized, consistent language by which computer software designers fit human words into
categories of digitally recognized terms to describe symptoms, illnesses, medical and surgical
procedures, and even outcome measures in healthcare today; and
Whereas, Proclamations and directives from the ONC are influential in guiding HIT vendors in their design of EHR software in a standardized way across commercial EHR platforms, allowing for interoperability of software systems, standardized collation of health information into databases and information exchange platforms, and activities of health care practitioners and public health officials alike to improve health care processes to generate better outcomes for patients and populations of patients; and

Whereas, Current terminology in SNOMED\(^1\) regarding a patient’s smoking status are overlapping and therefore imprecise and confusing, and lead to problems with data analysis and, arguably more significantly, problematic data entry by clinicians as they are not sure which categorization of smoking status to enter into a patient’s electronic health record; and

Whereas, SNOMED terminology\(^1\) regarding smoking status and passive smoking exposure can be simplified by elimination of the vague, undefined, and overlapping terms “heavy tobacco smoker” and “light tobacco smoker” and consolidating the terms “smoker, current status unknown” and “unknown if ever smoked” into the single item “smoking status unknown” (Appendix A), making it more likely that clinicians will enter such data into EHRs at both higher rates and with more precision, to inform their care and inform epidemiologists about trends in improvement or worsening in our nation’s population health statistics regarding tobacco-related health conditions and their impacts\(^2\); and

Whereas, These simplifications have been developed by the Center for Tobacco Research and Intervention (CTRI) at the University of Wisconsin School of Medicine and Public Health (UWSMPH), and endorsed by the Association for the Treatment of Tobacco Use and Dependence\(^2\); therefore be it

RESOLVED, That our American Medical Association support the streamlining of the SNOMED categories for smoking status and passive smoking exposure documentation in the electronic medical record so that the categories are discrete, non-overlapping, and better understood per The Association for the Treatment of Tobacco Use and Dependence 2019 recommendations as follows:

**Smoking status categories:** Current Every Day Smoker, Current Some Day Smoker, Former Smoker, Never Smoker, and Smoking Status Unknown

**Passive smoking exposure:** Exposure to Second Hand Tobacco Smoke, Past Exposure to Second Hand Tobacco Smoke, No Known Exposure to Second Hand Tobacco Smoke (Directive to Take Action)

Fiscal Note: Minimal - less than $1,000.

Received: 05/01/19

RELEVANT AMA POLICY

Tobacco Control Content in Electronic Health Records H-478.990
Our AMA encourages: (1) physicians to capture information from all their patients on tobacco use, secondhand smoke exposure, cessation interest, and past quit attempts; and (2) the development of EHR systems that provide physicians with the ability to capture information on specific health behaviors deemed appropriate by the physician and that provide physicians the option to utilize automated reminders to benefit their patients.
Citation: (BOT Rep. 15, A-09)
Appendix A:

**Smoking Status Documentation in the Electronic Health Record Background and Context:**
The Centers for Medicare and Medicaid Services (CMS) and the Office of the National Coordinator for Health Information Technology (ONC) have played a major role in encouraging the adoption and utilization of EHRs in the United States. In part, because of CMS’s Meaningful Use of EHRs Program, outpatient and inpatient clinical settings today almost universally screen and document patients for smoking and document patient “Smoking Status” in the EHR. “Smoking Status” is a required component for ONC’s CEHRT/Health IT Certification Program EHR software certification.

However, confusion remains for many clinicians and health care systems about the categories to document smoking status. The current SNOMED CT options overlap. As a result, they often create confusion at the point of care.

**History of “Smoking Status” Classification/Documentation in the EHR**
CMS Meaningful Use (MU) recommends the following criteria for smoking status using a classification based on the National Health Interview Survey (NHIS):
- Current every day smoker
- Current some day smoker
- Former smoker
- Never smoker
- Smoker, current status unknown
- Unknown if ever smoked
- Heavy tobacco smoker
- Light tobacco smoker

2015 Health Information Technology Certification Criteria Final Rule removed the requirement that reporting entities must use the 8 SNOMED CT codes to document smoking status. Specifically, the 2015 Health Information Technology Certification Criteria Final Rule described reporting on “Smoking Status” in the following way:

“We have adopted a “smoking status” certification criterion that does not reference a standard.”…..“In consideration of the concerns expressed by commenters regarding development burden and the proper mapping of all available smoking status codes within SNOMED CT to the specified 8 SNOMED CT1 for exchange, we believe that the best path forward is the adoption of a “smoking status” criterion that would simply require a Health IT Module to demonstrate that it can enable a user to record, change, and access a patient's smoking status.”

**Looking Forward**
In an effort to further clarify and simplify “Smoking Status” documentation, we encourage ONC to advise health information technology developers, health care systems, hospitals and health care providers to use non-overlapping criteria to document smoking status. An example of such non-overlapping criteria/classifications are shown below for smoking status and passive smoke exposure:

<table>
<thead>
<tr>
<th>Smoking Status</th>
<th>SNOMED CT Code</th>
</tr>
</thead>
<tbody>
<tr>
<td>Current Every Day Smoker</td>
<td>449868002</td>
</tr>
<tr>

RELEVANT AMA POLICY

Disparities in Maternal Mortality D-420.993
Our AMA: (1) will ask the Commission to End Health Care Disparities to evaluate the issue of health disparities in maternal mortality and offer recommendations to address existing disparities in the rates of maternal mortality in the United States; (2) will work with the CDC, HHS, state and county health departments to decrease maternal mortality rates in the US; (3) encourages and promotes to all state and county health departments to develop a maternal mortality surveillance system; and (4) will work with stakeholders to encourage research on identifying barriers and developing strategies toward the implementation of evidence-based practices to prevent disease conditions that contribute to poor obstetric outcomes, maternal morbidity and maternal mortality in racial and ethnic minorities.
Citation: CSAPH Rep. 3, A-09; Appended: Res. 403, A-11; Appended: Res. 417, A-18
Whereas, There is an anticipated shortage of over 100,000 doctors by the year 2030, especially in primary care; and

Whereas, A recent study in the Journal of Graduate Medical education found that “there are simply not enough US-trained physicians to fill all the available residency and fellowship positions” in primary care specialties; and

Whereas, A 2018 study by the American Medical Association on non-US IMGs found that 64% are working in primary care, and 66% of non-US IMGs that matched in 2018 did so in primary care fields; and

Whereas, In 2014-2015, there were 1,879 physicians from Muslim-majority countries including many on the travel ban list, practicing on a J-1 visa, a visa obtained during residency training that upon completion of training, requires holders to find “J-1 waiver” jobs which recruit physicians into underserved areas; and

Whereas, A New York Times article described “changes in visa policies prevent foreign graduate (IMG) doctors from practicing and increase medical provider shortages especially in rural communities; and

Whereas, 2018 saw the lowest number of non-US IMG applicants since 2005; and

Whereas, An open-letter by ACGME described the “profound moral distress [a travel ban] has provoked within the health care community; and

Whereas, ECFMG Statement to Supreme Court (2018) “In the United States, where one-quarter of our physicians have received their medical degree outside the United States and Canada, the ability to provide accessible, high-quality health care depends on our ability to continue to attract highly qualified physicians from around the world. Anything that disrupts the flow of these talented and qualified professionals into the United States will have a negative and potentially long-term impact on patient care. We urge immigration policymakers to consider the many contributions that foreign national physicians make to our healthcare system and our economy, and to ensure that United States remains an attractive option for the best and brightest minds from around the world” ; and

Whereas, New data shows that in 2017, U.S. Citizenship and Immigration Services denied more H-1B petitions, preventing more foreign nationals from working in America, and there is concern that these rejections will affect medical residents in training in the U.S.; and
Whereas, Multiple US medical organizations including the Accreditation Council for Graduate Medical Education (ACGME), the Association of American Medical Colleges, Alliance for Academic Internal Medicine, American Academy of Pediatrics, and the American College of Physicians have expressed concern over executive orders limiting immigration and their impact on graduate medical education1, 6-11; therefore be it

RESOLVED, That American Medical Association Policy D-255.991, “Visa Complications for IMGs in GME,” be reaffirmed (Reaffirm HOD Policy); and be it further

13 Ducharme J. Trump’s immigration policies are making it harder for foreign doctors to work in the U.S. - and that could hurt patients. http://time.com/5299488/international-medical-graduates/. September 2, 2018

RELEVANT AMA POLICY

AMA Principles on International Medical Graduates H-255.988
Our AMA supports:
1. Current U.S. visa and immigration requirements applicable to foreign national physicians who are graduates of medical schools other than those in the United States and Canada.
2. Current regulations governing the issuance of exchange visitor visas to foreign national IMGs, including the requirements for successful completion of the USMLE.
3. The AMA reaffirms its policy that the U.S. and Canada medical schools be accredited by a nongovernmental accrediting body.
4. Cooperation in the collection and analysis of information on medical schools in nations other than the U.S. and Canada.
5. Continued cooperation with the ECFMG and other appropriate organizations to disseminate information to prospective and current students in foreign medical schools. An AMA member, who is an IMG, should be appointed regularly as one of the AMA’s representatives to the ECFMG Board of Trustees.
6. Working with the Accreditation Council for Graduate Medical Education (ACGME) and the Federation of State Medical Boards (FSMB) to assure that institutions offering accredited residencies, residency program directors, and U.S. licensing authorities do not deviate from established standards when evaluating graduates of foreign medical schools.
7. In cooperation with the ACGME and the FSMB, supports only those modifications in established graduate medical education or licensing standards designed to enhance the quality of medical education and patient care.
8. The AMA continues to support the activities of the ECFMG related to verification of education credentials and testing of IMGs.
9. That special consideration be given to the limited number of IMGs who are refugees from foreign governments that refuse to provide pertinent information usually required to establish eligibility for residency training or licensure.
10. That accreditation standards enhance the quality of patient care and medical education and not be used for purposes of regulating physician manpower.
11. That AMA representatives to the ACGME, residency review committees and to the ECFMG should support AMA policy opposing discrimination. Medical school admissions officers and directors of residency programs should select applicants on the basis of merit, without considering status as an IMG or an ethnic name as a negative factor.
12. The requirement that all medical school graduates complete at least one year of graduate medical education in an accredited U.S. program in order to qualify for full and unrestricted licensure.
13. Publicizing existing policy concerning the granting of staff and clinical privileges in hospitals and other health facilities.
14. The participation of all physicians, including graduates of foreign as well as U.S. and Canadian medical schools, in organized medicine. The AMA offers encouragement and assistance to state, county, and specialty medical societies in fostering greater membership among IMGs and their participation in leadership positions at all levels of organized medicine, including AMA committees and councils and state boards of medicine, by providing guidelines and non-financial incentives, such as recognition for outstanding achievements by either individuals or organizations in promoting leadership among IMGs.
15. Support studying the feasibility of conducting peer-to-peer membership recruitment efforts aimed at IMGs who are not AMA members.
16. AMA membership outreach to IMGs, to include a) using its existing publications to highlight policies and activities of interest to IMGs, stressing the common concerns of all physicians; b) publicizing its many relevant resources to all physicians, especially to nonmember IMGs; c) identifying and publicizing AMA resources to respond to inquiries from IMGs; and d) expansion of its efforts to prepare and disseminate information about requirements for admission to accredited residency programs, the availability of positions, and the problems of becoming licensed and entering full and unrestricted medical practice in the U.S. that face IMGs. This information should be addressed to college students, high school and college advisors, and students in foreign medical schools.
17. Recognition of the common aims and goals of all physicians, particularly those practicing in the U.S., and support for including all physicians who are permanent residents of the U.S. in the mainstream of American medicine.
18. Its leadership role to promote the international exchange of medical knowledge as well as cultural understanding between the U.S. and other nations.
19. Institutions that sponsor exchange visitor programs in medical education, clinical medicine and public health to tailor programs for the individual visiting scholar that will meet the needs of the scholar, the institution, and the nation to which he will return.
20. Informing foreign national IMGs that the availability of training and practice opportunities in the U.S. is limited by the availability of fiscal and human resources to maintain the quality of medical education and patient care in the U.S., and that those IMGs who plan to return to their country of origin have the opportunity to obtain GME in the United States.
21. U.S. medical schools offering admission with advanced standing, within the capabilities determined by each institution, to international medical students who satisfy the requirements of the institution for matriculation.

22. The Federation of State Medical Boards, its member boards, and the ECFMG in their willingness to adjust their administrative procedures in processing IMG applications so that original documents do not have to be recertified in home countries when physicians apply for licenses in a second state.

Evaluation of DACA-Eligible Medical Students, Residents and Physicians in Addressing Physician Shortages D-350.986

1. Our American Medical Association will study the issue of Deferred Action for Childhood Arrivals-eligible medical students, residents, and physicians and consider the opportunities for their participation in the physician profession and report its findings to the House of Delegates.

2. Our AMA will issue a statement in support of current US healthcare professionals, including those currently training as medical students or residents and fellows, who are Deferred Action for Childhood Arrivals recipients.

Strategies for Enhancing Diversity in the Physician Workforce D-200.985

1. Our AMA, independently and in collaboration with other groups such as the Association of American Medical Colleges (AAMC), will actively work and advocate for funding at the federal and state levels and in the private sector to support the following: a. Pipeline programs to prepare and motivate members of underrepresented groups to enter medical school; b. Diversity or minority affairs offices at medical schools; c. Financial aid programs for students from groups that are underrepresented in medicine; and d. Financial support programs to recruit and develop faculty members from underrepresented groups.

2. Our AMA will work to obtain full restoration and protection of federal Title VII funding, and similar state funding programs, for the Centers of Excellence Program, Health Careers Opportunity Program, Area Health Education Centers, and other programs that support physician training, recruitment, and retention in geographically-underserved areas.

3. Our AMA will take a leadership role in efforts to enhance diversity in the physician workforce, including engaging in broad-based efforts that involve partners within and beyond the medical profession and medical education community.

4. Our AMA will encourage the Liaison Committee on Medical Education to assure that medical schools demonstrate compliance with its requirements for a diverse student body and faculty.

5. Our AMA will develop an internal education program for its members on the issues and possibilities involved in creating a diverse physician population.

6. Our AMA will provide on-line educational materials for its membership that address diversity issues in patient care including, but not limited to, culture, religion, race and ethnicity.

7. Our AMA will create and support programs that introduce elementary through high school students, especially those from groups that are underrepresented in medicine (URM), to healthcare careers.

8. Our AMA will create and support pipeline programs and encourage support services for URM college students that will support them as they move through college, medical school and residency programs.

9. Our AMA will recommend that medical school admissions committees use holistic assessments of admission applicants that take into account the diversity of preparation and the variety of talents that applicants bring to their education.

10. Our AMA will advocate for the tracking and reporting to interested stakeholders of demographic information pertaining to URM status collected from Electronic Residency
Application Service (ERAS) applications through the National Resident Matching Program (NRMP).

11. Our AMA will continue the research, advocacy, collaborative partnerships and other work that was initiated by the Commission to End Health Care Disparities.

12. Our AMA opposes legislation that would undermine institutions' ability to properly employ affirmative action to promote a diverse student population.

Impact of Immigration Barriers on the Nation's Health D-255.980

1. Our AMA recognizes the valuable contributions and affirms our support of international medical students and international medical graduates and their participation in U.S. medical schools, residency and fellowship training programs and in the practice of medicine.

2. Our AMA will oppose laws and regulations that would broadly deny entry or re-entry to the United States of persons who currently have legal visas, including permanent resident status (green card) and student visas, based on their country of origin and/or religion.

3. Our AMA will oppose policies that would broadly deny issuance of legal visas to persons based on their country of origin and/or religion.

4. Our AMA will advocate for the immediate reinstatement of premium processing of H-1B visas for physicians and trainees to prevent any negative impact on patient care.

5. Our AMA will advocate for the timely processing of visas for all physicians, including residents, fellows, and physicians in independent practice.

6. Our AMA will work with other stakeholders to study the current impact of immigration reform efforts on residency and fellowship programs, physician supply, and timely access of patients to health care throughout the U.S.

Citation: Alt. Res. 308, A-17; Modified: CME Rep. 01, A-18

Visa Complications for IMGs in GME D-255.991

1. Our AMA will: (A) work with the ECFMG to minimize delays in the visa process for International Medical Graduates applying for visas to enter the US for postgraduate medical training and/or medical practice; (B) promote regular communication between the Department of Homeland Security and AMA IMG representatives to address and discuss existing and evolving issues related to the immigration and registration process required for International Medical Graduates; and (C) work through the appropriate channels to assist residency program directors, as a group or individually, to establish effective contacts with the State Department and the Department of Homeland Security, in order to prioritize and expedite the necessary procedures for qualified residency applicants to reduce the uncertainty associated with considering a non-citizen or permanent resident IMG for a residency position.

2. Our AMA International Medical Graduates Section will continue to monitor any H-1B visa denials as they relate to IMGs' inability to complete accredited GME programs.

3. Our AMA will study, in collaboration with the Educational Commission on Foreign Medical Graduates and the Accreditation Council for Graduate Medical Education, the frequency of such J-1 Visa reentry denials and its impact on patient care and residency training.

4. Our AMA will, in collaboration with other stakeholders, advocate for unfettered travel for IMGs for the duration of their legal stay in the US in order to complete their residency or fellowship training to prevent disruption of patient care.

Citation: (Res. 844, I-03; Reaffirmation A-09; Reaffirmation I-10; Appended: CME Rep. 10, A-11; Appended: Res. 323, A-12
Whereas, Contracts include language that medical and billing records are proprietary and the property of the employer and may limit access to the treating physician during employment or after separation; and

Whereas, Billing is frequently signed by physicians or billed under the physician’s identifier; and

Whereas, Physician review is crucial to any compliance program; therefore be it

RESOLVED, That our American Medical Association advocate that licensed physicians must always have access to all medical and billing records for their patients from and after date of service including after physician termination (Directive to Take Action); and be it further

RESOLVED, That our AMA press for legislation or regulation to eliminate contractual language that bars or limits the treating physician’s access to the medical and billing records such as treating these records as trade secrets or proprietary. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000.

Whereas, Physicians continue to play a key role in combatting the US opioid crisis; and  
Whereas, Physicians who prescribe controlled substances must be vigilant regarding potential  
diversion or other misuse of the medications they prescribe; and  
Whereas, Many states require physicians to access their state’s prescription monitoring  
program data for patients receiving controlled substance prescriptions from them; and  
Whereas, Pill counts can also be an effective part of a patient’s opioid management plan; and  
Whereas, Many state medical licensing boards strongly encourage physicians to conduct pill  
counts to combat diversion of controlled substances; and  
Whereas, Accessing patient data in a prescription monitoring program database and pill counts,  
whether performed by the physician or delegated to someone else in their practice, carry with  
them a labor cost borne by the physician; and  
Whereas, There is currently no mechanism for physicians to be fairly compensated for this  
additional work effort; therefore be it  
RESOLVED, That our American Medical Association work with the Centers for Medicare and  
Medicaid Services (CMS) and interested physician groups to strongly advocate for a  
mechanism by which physicians may be compensated for controlled substance management  
(Directive to Take Action); and be it further  
RESOLVED, That our AMA strongly encourage CMS and private payers to recognize and  
establish equitable payment for controlled substance management. (Directive to Take Action)  

Fiscal Note: Modest - between $1,000 - $5,000.

Received: 04/30/19
Whereas, Our American Medical Association (AMA) supports nonphysician providers’ role within the patient-centered, physician-led health care team; and

Whereas, Nonphysician providers’ contributions to the delivery of care should not be confused with being a medical specialist; and

Whereas, Physicians receive 12 to 14 years of education, including medical school, and 12,000 to 16,000 hours of clinical training to specialize in the practice of medicine with the necessary knowledge to understand and treat the entire human body; and

Whereas, In 2018 the American Association of Nurse Anesthetists (AANA) approved the descriptor “nurse anesthesiologist” as an appropriate term to refer to a nurse anesthetist; and

Whereas, In 2018 the New Hampshire Board of Nursing issued a position statement that recognizes “Nurse Anesthesiologist” and “Certified Registered Nurse Anesthesiologist” as optional, accurate descriptors;¹; and

Whereas, Having strong truth-in-advertising laws helped safeguard patients in Texas, where the Texas Association of Nurse Anesthetists shared its awareness of the AANA approval of the “nurse anesthesiologist” term and cautioned its members that any nomenclature comparing nurses to physicians that misleads patients could result in disciplinary or legal action; and

Whereas, Our AMA policy provides that anesthesiology is the practice of medicine; and

Whereas, To avoid unnecessary confusion by other health care providers, the public and especially patients and their families, efforts must be taken to prevent the misappropriation of medical specialties titles; therefore be it

RESOLVED, That our American Medical Association reaffirm support of the Scope of Practice Partnership’s Truth in Advertising Campaign to ensure patients receive accurate information about who is providing their care (AMA Policy H-405.969) (Reaffirm HOD Policy); and be it further

RESOLVED, That our AMA oppose any misappropriation of medical specialties' titles and work with state medical societies to advocate for states and administrative agencies overseeing nonphysician providers to authorize only the use of titles and descriptors that align with the nonphysician providers’ state issued licenses and national board certification. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000.

Received: 05/01/19

RELEVANT AMA POLICY

Anesthesiology is the Practice of Medicine H-160.929
It is the policy of the AMA that anesthesiology is the practice of medicine. Our AMA seeks legislation to establish the principle in federal and state law and regulation that anesthesia care requires the personal performance or supervision by an appropriately licensed and credentialed doctor of medicine, osteopathy, or dentistry.

Citation: (Sub. Res. 216, I-98; Reaffirmed: BOT Rep. 23, A-09; Reaffirmed: BOT Rep. 9, I-11

Definition of a Physician H-405.969
1. The AMA affirms that a physician is an individual who has received a “Doctor of Medicine” or a “Doctor of Osteopathic Medicine” degree or an equivalent degree following successful completion of a prescribed course of study from a school of medicine or osteopathic medicine.
2. AMA policy requires anyone in a hospital environment who has direct contact with a patient who presents himself or herself to the patient as a “doctor,” and who is not a “physician” according to the AMA definition above, must specifically and simultaneously declare themselves a "non-physician" and define the nature of their doctorate degree.
3. Our AMA actively supports the Scope of Practice Partnership in the Truth in Advertising campaign.
Whereas, The Centers for Disease Control and Prevention (CDC) published their *Guideline for Prescribing Opioids for Chronic Pain* in 2016 to provide recommendations for the prescribing of opioid pain medication for patients 18 and older in primary care settings; and

Whereas, The CDC explicitly stated in this guideline that it was developed for primary care clinicians who prescribe opioids for chronic pain outside of active cancer treatment, palliative care, and end-of-life care; and

Whereas, By February of 2019, over half of all states had enacted laws in response to these guidelines that restrict the prescribing or dispensing of opioids for acute pain, codifying 7-day prescription fill limits into statute\(^1\); and

Whereas, New Hampshire, Ohio, Oregon, Rhode Island, Utah, Vermont, Virginia, Washington and Wisconsin have all passed legislation authorizing state regulatory entities to set their own enforceable opioid prescribing limits or guidelines\(^2\); and

Whereas, A 2018 study performed by the American Cancer Society Cancer Action Network (ACS CAN) together with the Patient Quality of Life Coalition (PQLC) showed that nearly half of cancer patients (48 percent) and more than half of those with other serious illnesses (56 percent) surveyed said their doctor indicated treatment options for their pain were limited by laws, guidelines or insurance coverage;\(^3\) and

Whereas, The CDC issued a letter to the National Comprehensive Cancer Network (NCCN), the American Society of Clinical Oncology (ASCO), and the American Society of Hematology (ASH) on February 28, 2019 clarifying that clinical practice guidelines specific to cancer treatment, palliative care, and end of life care should be used to guide treatment and reimbursement decisions regarding the use of opioids as part of pain control in these circumstances\(^4\); and

---

\(^2\) Ibid.

Whereas, ASCO and NCCN have each published clinical practice guidelines addressing pain control for cancer survivors subsequent to the release of the CDC’s Guideline for Prescribing Opioids for Chronic Pain; therefore be it

RESOLVED, That our American Medical Association reaffirm Policy D-120.932, “Inappropriate Use of Centers for Disease Control and Prevention Guidelines for Prescribing Opioids”; (Reaffirm HOD Policy) and be it further

RESOLVED, That our AMA incorporate into their advocacy that clinical practice guidelines specific to cancer treatment, palliative care, and end of life be utilized in lieu of the CDC’s Guideline for Prescribing Opioids for Chronic Pain as per the CDC’s clarifying recommendation. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000.

Received: 05/01/19

RELEVANT AMA POLICY

Inappropriate Use of CDC Guidelines for Prescribing Opioids D-120.932
1. Our AMA applauds the Centers for Disease Control and Prevention (CDC) for its efforts to prevent the incidence of new cases of opioid misuse, addiction, and overdose deaths.
2. Our AMA will actively continue to communicate and engage with the nation’s largest pharmacy chains, pharmacy benefit managers, National Association of Insurance Commissioners, Federation of State Medical Boards, and National Association of Boards of Pharmacy in opposition to communications being sent to physicians that include a blanket proscription against filing prescriptions for opioids that exceed numerical thresholds without taking into account the diagnosis and previous response to treatment for a patient and any clinical nuances that would support such prescribing as falling within standards of good quality patient care. A report is due back to the House of Delegates at the 2019 Annual Meeting.
3. Our AMA affirms that some patients with acute or chronic pain can benefit from taking opioid pain medications at doses greater than generally recommended in the CDC Guideline for Prescribing Opioids for Chronic Pain and that such care may be medically necessary and appropriate.
4. Our AMA will advocate against misapplication of the CDC Guideline for Prescribing Opioids by pharmacists, health insurers, pharmacy benefit managers, legislatures, and governmental and private regulatory bodies in ways that prevent or limit patients’ medical access to opioid analgesia.
5. Our AMA will advocate that no entity should use MME (morphine milligram equivalents) thresholds as anything more than guidance, and physicians should not be subject to professional discipline, loss of board certification, loss of clinical privileges, criminal prosecution, civil liability, or other penalties or practice limitations solely for prescribing opioids at a quantitative level above the MME thresholds found in the CDC Guideline for Prescribing Opioids.

Citation: Res. 235, I-18
Whereas, No scientific evidence exists that indicates mandatory echocardiogram or ECG screening will save student athletes; and

Whereas, Operationalizing government oversight of mass screening is prohibitively expensive; and

Whereas, The risk of "false positives" in mass screening environments is high and can lead to unwarranted anxiety in normal athletes, unnecessary additional testing, and inappropriate treatments and/or exclusion from sports; and

Whereas, The American Heart Association and the American College of Cardiology issued the definitive Scientific Statement on mandatory EKG and echocardiogram screening of student athletes on Sept. 15, 2014, and reaffirmed on Dec. 1, 2015 in a Scientific Statement on Eligibility and Disqualification Recommendations for Competitive Athletes, which stated, "Mandatory and universal mass screening with 12-lead ECGs in large general populations of young healthy people 12 to 25 years of age to identify genetic/congenital and other cardiovascular abnormalities is NOT recommended for athletes and non-athletes alike (Class III, no evidence of benefit; Level of Evidence C);"¹ and

Whereas, The lowest high school death rates ever reported come from Minnesota, which mandates a comprehensive history and physical exam but not an echocardiogram or an ECG. The Minnesota evidence demonstrates that ensuring every athlete provides an accurate history and receives a quality exam is key to identifying those at greatest risk and avoiding unnecessary worry and testing of healthy students; and

Whereas, A unique natural experiment that included both ECG and echocardiogram screening identified diseases associated with sudden cardiac death in 0.38% of a large population during a 20-year period, yet most of the small number of cardiac deaths were due to cardiomyopathies not detected on screening;² therefore be it

RESOLVED, That our American Medical Association and state and specialty medical societies oppose legislation mandating echocardiograms or ECGs as a condition of participation in scholastic sports. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000.

Received: 05/09/19

RELEVANT AMA POLICY
Whereas, In 2017, an estimated 16.7 million people aged 12 or older received substance use disorder (SUD) treatment; and

Whereas, Substance use disorders (SUD) are medical conditions often co-occurring with other medical conditions; and

Whereas, Integration of substance use disorder care with other medical care can help address health disparities, reduce health care costs for both patients and family members, and improve general health outcomes; and

Whereas, Well-supported scientific evidence shows that the traditional separation of substance use disorder treatment from mainstream health care has created obstacles to successful care coordination; and

Whereas, The continued separation of substance use disorder and general health care services has been costly, often harmful, and for some individuals even fatal. A recent study showed that the presence of a substance use disorder can double the odds that a person will develop another chronic and costly medical illness, such as arthritis, chronic pain, heart disease, stroke, hypertension, diabetes, or asthma; and

Whereas, The Federal Regulations mandating privacy protections for SUD treatment contained in 42 CFR Part 2 was intended to protect SUD patient records maintained in connection with certain programs or activities, but special SUD information protection may inadvertently reinforce stigma against patients by reinforcing the belief that SUD is different from other health

---

problems and must be kept more private. In turn, this stigma may inhibit the delivery of comprehensive integrated care\(^4\); and

Whereas, The limited application of 42 CFR Part 2 to some substance use disorder treatment facilities and the discrepancies between HIPAA and Part 2 are serious issues affecting the integration and coordination of health care for patients with substance use disorders by contributing to a separation of substance use disorder specialty care\(^5\); therefore be it

RESOLVED, That our American Medical Association support the alignment of federal privacy law and regulations (42 CFR Part 2) with the Health Insurance Portability and Accountability Act (HIPAA) for the purposes of treatment, payment and health care operations, while ensuring protections are in place against the use of “Part 2” substance use disorder records in criminal proceedings (New HOD Policy); and be it further

RESOLVED, That our AMA support the sharing of substance use disorder patient records as required by the HIPAA Privacy Rule for uses and disclosures of protected health information for treatment, payment and health care operations to improve patient safety and enhance the quality and coordination of care. (New HOD Policy)

Fiscal Note: Minimal - less than $1,000.

Received: 05/09/10

RELEVANT AMA POLICY

**Modernizing Privacy Regulations for Addiction Treatment Records H-315.965**

Our AMA supports: (1) regulatory and legislative changes that better balance patients privacy protections against the need for health professionals to be able to offer appropriate medical services to patients with substance use disorders; (2) regulatory and legislative changes that enable physicians to fully collaborate with all clinicians involved in providing health care services to patients with substance use disorders; and (3) continued protections against the unauthorized disclosure of substance use disorder treatment records outside the healthcare system.

Citation: Res. 224, I-17

---

Whereas, Chronic Obstructive Pulmonary Disease, or COPD, refers to a group of diseases that cause airflow blockage and breathing-related problems. It includes emphysema, chronic bronchitis, and in some cases, asthma; and

Whereas, COPD is the fourth-leading cause of death in the US; and

Whereas, CDC reports that 15.7 million Americans (6.4%) reported that they have been diagnosed with COPD; and

Whereas, CDC report that more than 50% of adults with low pulmonary function were not aware that they had COPD so the actual number of patients with COPD may be higher; and

Whereas, The following groups are more likely to have COPD:

- People aged 65 years and older.
- American Indian/Alaska Natives and multiracial non-Hispanics.
- Women.
- Individuals who were unemployed, retired, or unable to work.
- Individuals with less than a high school education.
- Individuals who were divorced, widowed, or separated.
- Current or former smokers.
- People with a history of asthma; and

Whereas, Congress was concerned about COPD in the U.S. and directed the National Institutes of Health (NIH) and Centers for Disease Control and Prevention (CDC) to craft a comprehensive federal plan to tackle the disease; and

Whereas, In response to the Congressional request, the NIH's National Heart, Lung, and Blood Institute (NHLBI) collaborated with the CDC, other federal agencies, patient and provider organizations to develop a COPD National Action Plan; and

Whereas, NHLBI has publicly released the COPD National Action Plan that call for programs in five areas, including:

1. Empower people with COPD, their families, and caregivers to recognize and reduce the burden of COPD.
2. Improve the prevention, diagnosis, treatment, and management of COPD by improving the quality of care delivered across the health care continuum.
3. Collect, analyze, report, and disseminate COPD-related public health data that drive change and track progress.
4. Increase and sustain research to better understand the prevention, pathogenesis, diagnosis, treatment, and management of COPD.
5. Translate national policy, educational, and program recommendations into research and public health care actions; and

Whereas, Federal funding is needed to provide NHLBI and CDC funds to implement initial steps of the COPD National Action Plan; therefore be it

RESOLVED, That our American Medical Association support the inclusion of $25 million at NIH’s National Heart, Lung, and Blood Institute (NHLBI) and an additional $2 million at the Centers for Disease Control and Prevention in the FY2020 Labor Health and Human Services and Education Appropriations Bill to implement the Chronic Obstructive Pulmonary Disease (COPD) National Action Plan (Directive to Take Action); and be it further

RESOLVED, That our AMA send a letter to House and Senate Appropriators conveying its support for the COPD National Action Plan funding for fiscal year 2020. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000.

Received: 05/08/19
Whereas, Projections by the Association of American Medical Colleges (AAMC) describe a deficit of 291,500 physicians by 2020 and 130,600. According to the Georgia Physician Workforce, Georgia was ranked 39th in the nation for the number of practicing physicians per 100,000 people in 2016. According to a report by the AAMC, Georgia would need to add nearly 1,500 new residency slots to match the national rate; and

Whereas, New Graduate Medical Education teaching hospitals are allotted a five-year “cap window” allowing programs to increase the amount of residents in a program within that time frame, with the final amount of residents present in the fifth (and final) year of the cap-building window permanently determining the amount of funding from Medicare the program will receive, essentially “capping” Medicare funding, set by the Balanced Budget Act of 1997; and

Whereas, Targeting support for GME programs by extending the cap-building window for new and existing teaching hospitals in rural, underserved, under-resourced communities and/or areas currently lacking medical training infrastructure will benefit our national GME system in many ways, including, but not limited to:

(a) Providing lifesaving opportunities for new teaching institutions to further develop residency programs and secure the resources necessary to launch and/or scale-up training capabilities.

The additional time is vital to ensuring that teaching institutions in under resourced areas will be able to build-up to a level necessary to meet regional needs

(b) Alleviating regional physician shortages by providing time for institutions to add primary care and/or specialty and sub-specialty residencies in shortage;

(c) Boosting the return on investment for Medicare, local communities, states, medical schools, and the hosting teaching hospital.

(d) Helping address the disproportionate maldistribution of physicians and GME resources across the country; and

Whereas, As residents tend to practice where they train, adding, developing, and incentivizing the establishment of programs at teaching institutions located in underserved, under-resourced, and rural areas will help address the current maldistribution of physicians across the country; and therefore be it
RESOLVED, That our American Medical Association advocate for the Centers for Medicare and
Medicaid Services (CMS) to adopt the concept of “Cap-Flexibility” and allow new and current
Graduate Medical Education teaching institutions to extend their cap-building window for up to
an additional five years beyond the current window (for a total of up to ten years), giving priority
to primary care residencies (Directive to Take Action); and be it further

RESOLVED, That our AMA advocate for CMS to provide funding to hospitals and/or universities
prior to the arrival of any residents, removing the clause where “Medicare funding does not
begin until the first resident is ‘on-duty’ at the hospital.” (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000.

Received: 05/09/19

Additional Resources

RELEVANT AMA POLICY

The Preservation, Stability and Expansion of Full Funding for Graduate Medical Education D-305.967
1. Our AMA will actively collaborate with appropriate stakeholder organizations, (including Association of American Medical Colleges, American Hospital Association, state medical societies, medical specialty societies/associations) to advocate for the preservation, stability and expansion of full funding for the direct and indirect costs of graduate medical education (GME) positions from all existing sources (e.g. Medicare, Medicaid, Veterans Administration, CDC and others).
2. Our AMA will actively advocate for the stable provision of matching federal funds for state Medicaid programs that fund GME positions.
3. Our AMA will actively seek congressional action to remove the caps on Medicare funding of GME positions for resident physicians that were imposed by the Balanced Budget Amendment of 1997 (BBA-1997).
4. Our AMA will strenuously advocate for increasing the number of GME positions to address the future physician workforce needs of the nation.
5. Our AMA will oppose efforts to move federal funding of GME positions to the annual appropriations process that is subject to instability and uncertainty.
6. Our AMA will oppose regulatory and legislative efforts that reduce funding for GME from the full scope of resident educational activities that are designated by residency programs for accreditation and the board certification of their graduates (e.g. didactic teaching, community service, off-site ambulatory rotations, etc.).
7. Our AMA will actively explore additional sources of GME funding and their potential impact on the quality of residency training and on patient care.
8. Our AMA will vigorously advocate for the continued and expanded contribution by all payers for health care (including the federal government, the states, and local and private sources) to fund both the direct and indirect costs of GME.
9. Our AMA will work, in collaboration with other stakeholders, to improve the awareness of the general public that GME is a public good that provides essential services as part of the training process and serves as a necessary component of physician preparation to provide patient care that is safe, effective and of high quality.

10. Our AMA staff and governance will continuously monitor federal, state and private proposals for health care reform for their potential impact on the preservation, stability and expansion of full funding for the direct and indirect costs of GME.

11. Our AMA: (a) recognizes that funding for and distribution of positions for GME are in crisis in the United States and that meaningful and comprehensive reform is urgently needed; (b) will immediately work with Congress to expand medical residencies in a balanced fashion based on expected specialty needs throughout our nation to produce a geographically distributed and appropriately sized physician workforce; and to make increasing support and funding for GME programs and residencies a top priority of the AMA in its national political agenda; and (c) will continue to work closely with the Accreditation Council for Graduate Medical Education, Association of American Medical Colleges, American Osteopathic Association, and other key stakeholders to raise awareness among policymakers and the public about the importance of expanded GME funding to meet the nation’s current and anticipated medical workforce needs.

12. Our AMA will collaborate with other organizations to explore evidence-based approaches to quality and accountability in residency education to support enhanced funding of GME.

13. Our AMA will continue to strongly advocate that Congress fund additional graduate medical education (GME) positions for the most critical workforce needs, especially considering the current and worsening maldistribution of physicians.

14. Our AMA will advocate that the Centers for Medicare and Medicaid Services allow for rural and other underserved rotations in Accreditation Council for Graduate Medical Education (ACGME)-accredited residency programs, in disciplines of particular local/regional need, to occur in the offices of physicians who meet the qualifications for adjunct faculty of the residency program’s sponsoring institution.

15. Our AMA encourages the ACGME to reduce barriers to rural and other underserved community experiences for graduate medical education programs that choose to provide such training, by adjusting as needed its program requirements, such as continuity requirements or limitations on time spent away from the primary residency site.

16. Our AMA encourages the ACGME and the American Osteopathic Association (AOA) to continue to develop and disseminate innovative methods of training physicians efficiently that foster the skills and inclinations to practice in a health care system that rewards team-based care and social accountability.

17. Our AMA will work with interested state and national medical specialty societies and other appropriate stakeholders to share and support legislation to increase GME funding, enabling a state to accomplish one or more of the following: (a) train more physicians to meet state and regional workforce needs; (b) train physicians who will practice in physician shortage/underserved areas; or (c) train physicians in undersupplied specialties and subspecialties in the state/region.

18. Our AMA supports the ongoing efforts by states to identify and address changing physician workforce needs within the GME landscape and continue to broadly advocate for innovative pilot programs that will increase the number of positions and create enhanced accountability of GME programs for quality outcomes.

19. Our AMA will continue to work with stakeholders such as Association of American Medical Colleges (AAMC), ACGME, AOA, American Academy of Family Physicians, American College of Physicians, and other specialty organizations to analyze the changing landscape of future physician workforce needs as well as the number and variety of GME positions necessary to provide that workforce.

20. Our AMA will explore innovative funding models for incremental increases in funded residency positions related to quality of resident education and provision of patient care as evaluated by appropriate medical education organizations such as the Accreditation Council for Graduate Medical Education.

21. Our AMA will utilize its resources to share its content expertise with policymakers and the public to ensure greater awareness of the significant societal value of graduate medical education (GME) in terms of patient care, particularly for underserved and at-risk populations, as well as global health, research and education.

22. Our AMA will advocate for the appropriation of Congressional funding in support of the National Healthcare Workforce Commission, established under section 5101 of the Affordable Care Act, to provide data and healthcare workforce policy and advice to the nation and provide data that support the value of GME to the nation.

23. Our AMA supports recommendations to increase the accountability for and transparency of GME funding and continue to monitor data and peer-reviewed studies that contribute to further assess the value of GME.

24. Our AMA will explore various models of all-payer funding for GME, especially as the Institute of Medicine (now a program unit of the National Academy of Medicine) did not examine those options in its 2014 report on GME governance and financing.

25. Our AMA encourages organizations with successful existing models to publicize and share strategies, outcomes and costs.
26. Our AMA encourages insurance payers and foundations to enter into partnerships with state and local agencies as well as academic medical centers and community hospitals seeking to expand GME.

27. Our AMA will develop, along with other interested stakeholders, a national campaign to educate the public on the definition and importance of graduate medical education, student debt and the state of the medical profession today and in the future.

28. Our AMA will collaborate with other stakeholder organizations to evaluate and work to establish consensus regarding the appropriate economic value of resident and fellow services.

29. Our AMA will monitor ongoing pilots and demonstration projects, and explore the feasibility of broader implementation of proposals that show promise as alternative means for funding physician education and training while providing appropriate compensation for residents and fellows.

30. Our AMA will monitor the status of the House Energy and Commerce Committee's response to public comments solicited regarding the 2014 IOM report, Graduate Medical Education That Meets the Nation's Health Needs, as well as results of ongoing studies, including that requested of the GAO, in order to formulate new advocacy strategy for GME funding, and will report back to the House of Delegates regularly on important changes in the landscape of GME funding.

31. Our AMA will advocate to the Centers for Medicare & Medicaid Services for flexibility beyond the current maximum of five years for the Medicare graduate medical education cap-setting deadline for new residency programs in underserved areas and/or economically depressed areas.

32. Our AMA will: (a) encourage all existing and planned allopathic and osteopathic medical schools to thoroughly research match statistics and other career placement metrics when developing career guidance plans; (b) strongly advocate for and work with legislators, private sector partnerships, and existing and planned osteopathic and allopathic medical schools to create and fund graduate medical education (GME) programs that can accommodate the equivalent number of additional medical school graduates consistent with the workforce needs of our nation; and (c) encourage the Liaison Committee on Medical Education (LCME), the Commission on Osteopathic College Accreditation (COCA), and other accrediting bodies, as part of accreditation of allopathic and osteopathic medical schools, to prospectively and retrospectively monitor medical school graduates’ rates of placement into GME as well as GME completion.

33. Our AMA will investigate the status of implementation of AMA Policies D-305.973, “Proposed Revisions to AMA Policy on the Financing of Medical Education Programs” and D-305.967, “The Preservation, Stability and Expansion of Full Funding for Graduate Medical Education” and report back to the House of Delegates with proposed measures to resolve the problems of underfunding, inadequate number of residencies and geographic maldistribution of residencies.

Whereas, The opioid epidemic has led to increased emphasis on non-opioid treatment approaches to pain; and

Whereas, In response to the opioid epidemic, several new laws were passed in the State of Michigan in 2017 and became effective in 2018 which have further reduced the accessibility of opioid-containing medications for the management of pain; and

Whereas, Research is increasingly showing that opioid therapy for chronic, non-malignant pain is ineffective and may lead to hyperalgesia; and

Whereas, Patients need access to non-opioid forms of treatment to help treat their chronic, non-malignant pain; and

Whereas, The sudden reduction in access to legally prescribed opioid-containing medications has been implicated as possibly contributing to the increased use of illegal heroin and synthetic opioid-containing medications; and

Whereas, Access to other proven modalities for effective pain treatment, such as physical therapy, occupational therapy, and complementary and alternative medicine therapies which are non-opioid treatment approaches, is of increasing importance in light of the sudden reduction in access to opioid-containing medications and gabapentin; and

Whereas, Third party payers and the Centers for Medicare and Medicaid Services (CMS) have not improved access to non-opioid treatment options for chronic pain through a reduction in copayment fees, a reduction in prior authorization requirements, a reduction in required prior treatments, and/or an expanded list of acceptable indications for the various therapies; and

Whereas, This lack of improved access is leading to increased patient dissatisfaction, decreased ability for physicians to provide adequate care for their patients with chronic pain or any type of pain, possible increased use of illicit drugs by chronic pain patients as a way to cope, and possible increased opioid-related overdose deaths as a result of the sudden reduction in access to legally prescribed opioid-containing medications; therefore be it
RESOLVED, That our American Medical Association work with the Centers for Medicare and Medicaid Services to improve access to non-opioid treatment modalities including, but not limited to, physical therapy and occupational therapy as recommended by the patient’s physician. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000.

Received: 05/09/19

RELEVANT AMA POLICY

Workforce and Coverage for Pain Management H-185.931
1. Our AMA supports efforts to improve the quality of care for patients with pain, ensuring access to multiple analgesic strategies, including non-opioid options and interventional approaches when appropriate, with a focus on achieving improvement in function and activities of daily living.
2. Our AMA supports guidance on pain management for different clinical indications developed by the specialties who manage those conditions and disseminated the same way other clinical guidelines are promoted, such as through medical journals, medical societies, and other appropriate outlets.
3. Our AMA will advocate for an increased focus on comprehensive, multidisciplinary pain management approaches that include the ability to assess co-occurring mental health or substance use conditions, are physician led, and recognize the interdependency of treatment methods in addressing chronic pain.
4. Our AMA supports health insurance coverage that gives patients access to the full range of evidence-based chronic pain management modalities, and that coverage for these services be equivalent to coverage provided for medical or surgical benefits.
5. Our AMA supports efforts to expand the capacity of practitioners and programs capable of providing physician-led interdisciplinary pain management services, as well as an expanded behavioral health workforce to improve the availability of services to address the psychological, behavioral, and social aspects of pain and pain management within multidisciplinary pain clinics. Patients and their caregivers should be involved in the decision-making process.
6. Our AMA supports an expanded availability of comprehensive multidisciplinary pain medicine clinics for patients in both urban and rural areas, and an improvement in payment models for comprehensive multidisciplinary pain clinics services such that such services can become more financially viable.

Alternative Medicine H-480.964
Policy of the AMA on alternative medicine is: (1) Well-designed, controlled research should be done to evaluate the efficacy of alternative therapies. (2) Physicians should routinely inquire about the use of alternative or unconventional therapy by their patients, and educate themselves and their patients about the state of scientific knowledge with regard to alternative therapy that may be used or contemplated. (3) Patients who choose alternative therapies should be educated as to the hazards that might result from postponing or stopping conventional medical treatment.

Citation: (CSA Rep. 12, A-97; Reaffirmed: BOT Rep. 36, A-02; Modified: CSAPH Rep. 1, A-12
Whereas, The opioid epidemic has led to an increased focus on non-opioid-containing medications to treat pain, especially chronic, non-malignant pain; and

Whereas, Research is increasingly showing that opioid therapy for chronic, non-malignant pain is ineffective and may lead to hyperalgesia; and

Whereas, Topical lidocaine is effective for the treatment of pain; and

Whereas, Topical lidocaine has minimal side effects and is generally well tolerated; and

Whereas, Topical lidocaine is available over the counter in cream and transdermal patch forms; and

Whereas, Lidocaine as a transdermal patch is an effective, topical pain treatment which may be a reasonable alternative to opioid-containing medications; and

Whereas, Transdermal lidocaine has only one Food and Drug Administration-approved indication for use as a prescribed medication (for the treatment of post-herpetic neuralgia) with related limitations in insurance coverage; and

Whereas, Third-party payers will not provide prescription coverage for this medication for any off label uses; and

Whereas, Other medications are occasionally covered by third party payers for off label uses if other effective treatment options are unavailable or have limited availability; and

Whereas, Opioid and controlled substance laws and application of the Centers for Disease Control and Prevention safe opioid prescribing guidelines are making access to opioid-containing and non-opioid containing medications for the treatment of pain more limited; therefore be it

RESOLVED, That our American Medical Association encourage the US Food and Drug Administration to consider approving other indications in addition to post-herpetic neuralgia for transdermal lidocaine patches (Directive to Take Action); and be it further
RESOLVED, That our AMA urge the Centers for Medicare and Medicaid Services and third-party payers to provide insurance coverage of lidocaine transdermal patches for other indications in addition to post-herpetic neuralgia. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000.

RELEVANT AMA POLICY

Workforce and Coverage for Pain Management H-185.931
1. Our AMA supports efforts to improve the quality of care for patients with pain, ensuring access to multiple analgesic strategies, including non-opioid options and interventional approaches when appropriate, with a focus on achieving improvement in function and activities of daily living.
2. Our AMA supports guidance on pain management for different clinical indications developed by the specialties who manage those conditions and disseminated the same way other clinical guidelines are promoted, such as through medical journals, medical societies, and other appropriate outlets.
3. Our AMA will advocate for an increased focus on comprehensive, multidisciplinary pain management approaches that include the ability to assess co-occurring mental health or substance use conditions, are physician led, and recognize the interdependency of treatment methods in addressing chronic pain.
4. Our AMA supports health insurance coverage that gives patients access to the full range of evidence-based chronic pain management modalities, and that coverage for these services be equivalent to coverage provided for medical or surgical benefits.
5. Our AMA supports efforts to expand the capacity of practitioners and programs capable of providing physician-led interdisciplinary pain management services, as well as an expanded behavioral health workforce to improve the availability of services to address the psychological, behavioral, and social aspects of pain and pain management within multidisciplinary pain clinics. Patients and their caregivers should be involved in the decision-making process.
6. Our AMA supports an expanded availability of comprehensive multidisciplinary pain medicine clinics for patients in both urban and rural areas, and an improvement in payment models for comprehensive multidisciplinary pain clinics services such that such services can become more financially viable.

Whereas, The United States Office of Disease Prevention and Health Promotion recognizes economic stability as a social determinant of health\(^1\); and

Whereas, The poverty rate in the United States has ranged from 11 to 15\% over the past 50 years and, in 2016, over 95 million Americans lived below 200\% of the poverty line\(^2\); and

Whereas, There is a breadth of research that shows that people with poverty-level income have shorter life expectancies, increased rates of disease, decreased access to health care, and fewer necessary resources including clean water, nutritional food, and safe neighborhoods\(^3\)-\(^7\); and

Whereas, Universal Basic Income provides every citizen over the age of 18, regardless of income, with enough income to live just above the poverty line\(^8\)-\(^9\); and

Whereas, Need-based assistance legislation does not address racial disparities, and differences in policy across different states can worsen disparities\(^10\)-\(^13\); and

Whereas, The inclusive nature of Universal Basic Income would simplify the welfare system by consolidating current non-healthcare related assistance programs and implementing a framework in which racial and other disparities are mitigated or eliminated entirely\(^14\); and

Whereas, It is estimated that currently demonstrated technology has the capability to automate 45\% of tasks workers are paid to perform and Universal Basic Income could protect workers from financial insecurity from future technological job elimination\(^15\)-\(^18\); and

Whereas, Multiple studies have shown that cash transfer programs have led to health and education benefits, including reduction in hospitalizations, increased organ function, decreased incidence of psychiatric disorders and alcohol use, and increased educational attainment\(^19\)-\(^25\); and

Whereas, Universal Basic Income could provide the benefits of a cash transfer program, and may address one of the greatest flaws of a cash transfer program, which is that they have not been shown to have a significant impact on employment\(^26\)-\(^28\); and

Whereas, Government or private-sponsored Universal Basic Income pilot programs are ongoing or scheduled to be conducted in Finland, Canada, Spain, Scotland, Kenya, and California in order to determine the effects of Universal Basic Income including poverty reduction, better health outcomes, and improved quality of life and opportunities for recipients\(^25\),\(^29\)-\(^34\); and
Whereas, The AMA considers social determinants of health, including poverty, to be a significant predictor of health outcomes, supports their inclusion in the medical school curriculum (H-295.874), and encourages screening for these determinants to improve patient care (H-160.909); and

Whereas, The AMA supports evidence-based policy, and pilot studies will expand current knowledge on the potential health benefits of Universal Basic Income programs; therefore be it

RESOLVED, That our American Medical Association support federal, state, local, and/or private Universal Basic Income pilot studies in the United States which intend to measure health outcomes and access to care for participants. (New HOD Policy)

Fiscal Note: Minimal - less than $1,000.

RELEVANT AMA POLICY

Educatng Medical Students in the Social Determinants of Health and Cultural Competence H-295.874

Our AMA: (1) Supports efforts designed to integrate training in social determinants of health and cultural competence across the undergraduate medical school curriculum to assure that graduating medical students are well prepared to provide their patients safe, high quality and patient-centered care. (2) Supports faculty development, particularly clinical faculty development, by medical schools to assure that faculty provide medical students' appropriate learning experiences to assure their cultural competence and knowledge of social determinants of health. (3) Supports medical schools in their efforts to evaluate the effectiveness of their social determinants of health and cultural competence teaching of medical students, for example by the AMA serving as a convener of a consortium of interested medical schools to develop Objective Standardized Clinical Exams for use in evaluating medical students' cultural competence. (4) Will conduct ongoing data gathering, including interviews with medical students, to gain their perspective on the integration of social determinants of health and cultural competence in the undergraduate medical school curriculum. (5) Recommends studying the integration of social determinants of health and cultural competence training in graduate and continuing medical education and publicizing successful models.

Citation: CME Rep. 11, A-06; Reaffirmation A-11; Modified in lieu of Res. 908, I-14; Reaffirmed in lieu of Res. 306, A-15; Reaffirmed: BOT Rep. 39, A-18

Poverty Screening as a Clinical Tool for Improving Health Outcomes H-160.909

Our AMA encourages screening for social and economic risk factors in order to improve care plans and direct patients to appropriate resources.

Citation: Res. 404, A-13; Reaffirmed: BOT Rep. 39, A-18

Giving States New Options to Improve Coverage for the Poor D-165.966

Our AMA will (1) advocate that state governments be given the freedom to develop and test different models for improving coverage for patients with low incomes, including combining
refundable, advanceable tax credits inversely related to income to purchase health insurance coverage with converting Medicaid from a categorical eligibility program to one that allows for coverage of additional low-income persons based solely on financial need; (2) advocate for changes in federal rules and federal financing to support the ability of states to develop and test such alternatives without incurring new and costly unfunded federal mandates or capping federal funds; and (3) continue to work with interested state medical associations, national medical specialty societies, and other relevant organizations to further develop such state-based options for improving health insurance coverage for low-income persons.

Regulatory Standards Should be Evidence-Based H-220.930
Our AMA will work through its representatives on the Joint Commission and with other deeming authorities and the Centers for Medicare & Medicaid Services to: (1) ensure that clinical standards imposed on health care institutions and providers be evidence-based with significant efficacy and value, as demonstrated by best available evidence; and (2) require that appropriate citations(s) from the peer reviewed scientific literature be appended to the documentation for every clinical standard imposed on health care institutions and providers.

Citation: (Res. 727, A-10; Reaffirmed: BOT Rep. 7, A-11

Evidence-Based Standard Requirement for Governmental Regulation H-270.956
Our AMA supports federal mandates that all federal health care regulatory agencies (e.g., the FDA, the DEA, and the CMS) must demonstrate the benefit of existing regulations and new regulations within three years of implementation; and that the demonstration of benefit must employ evidence-based standards of care; and that any regulations that do not show measurable improved patient outcomes must be revised or rescinded.

Citation: (BOT Rep. 7, A-11

Support for Uniform, Evidence-Based Nutritional Rating System H-150.936
1. Our AMA supports the adoption and implementation of a uniform, nutritional food rating system in the US that meets, at a minimum, the following criteria: is evidence-based; has been developed without conflict of interest or food industry influence and with the primary goal being the advancement of public health; is capable of being comprehensive in scope, and potentially applicable to nearly all foods; allows for relative comparisons of many different foods; demonstrates the potential to positively influence consumers' purchasing habits; provides a rating scale that is simple, highly visible, and easy-to-understand and used by consumers at point of purchase; and is adaptable to aid in overall nutritional decision making.
2. Our AMA will advocate to the federal government - including responding to the Food and Drug Administration call for comments on use of front-of-package nutrition labeling and on shelf tags in retail stores - and in other national forums for the adoption of a uniform, evidence-based nutrition rating system that meets the above-referenced criteria.

Citation: (Res. 424, A-10
Whereas, Blockchain is a distributed database that stores records of all transactions and digital events carried out by its participants, called the public ledger, hosted across all participants (nodes), rather than a central entity; and

Whereas, Once something has been added to the blockchain, it is permanently stored across all nodes, and in this way, blockchain functions as a decentralized, immutable ledger capable of storing data without the need for a central responsible entity, mitigating risk from central failure; and

Whereas, Blockchain may alleviate several pain points in the current state of information sharing in health information technology, for example, allowing multiple stakeholders to agree on the “true” state of data (immutable ledger), helping decrease administrative costs regarding authorization and claims adjudication, better defining data ownership, and reducing unauthorized data use through less burdensome computer code; and

Whereas, The 21st Century Cares Act defines health information technology (HIT) interoperability as technology that “enables the secure exchange of electronic health information with, and the use of electronic health information from, other health technology without special effort on part of the user”; and

Whereas, Interoperability positively impacts health systems in a variety of ways; including by increasing operational efficiency, reducing clinical duplication/waste, and enhancing clinical care by providing access to longitudinal data at the point of care; and

Whereas, There has been a concerted effort, including through the AMA-driven Integrated Health Model Initiative, to develop data structures that promote data sharing and standardize output of data from proprietary EHRs to facilitate interoperability; and

Whereas, In considering the security advantages and risks of blockchain technology compared to contemporary approaches, each pillar of HIPAA (Administrative, Physical, Technical) must be assessed under more precise definitions of security: Confidentiality and Unforgeability; and

Whereas, Several case studies have shown that blockchain can mitigate risks related to mobile data communication with EHRs through the use of smart contracts; and

Whereas, The advent of secure data sharing between mobile platforms via blockchain platforms has potential to achieve incorporation of patient generated data routinely into daily clinical decision making due to access at the point of care; and
Whereas, There is a paucity of data regarding testing blockchain applications in the clinical setting, and additional research will be required to definitively show the utility of this technology; and

Whereas, It is recognized that blockchain remains an early stage technology, but one with the potential through technical innovation to rapidly overcome existing drawbacks health information technology interoperability faces today; and

Whereas, To date, the AMA does not have explicit policy on blockchain technology; therefore be it

RESOLVED, That our American Medical Association work with the Office of the National Health Information Technology to create official standards for the development and implementation of blockchain technologies in healthcare (Directive to Take Action); and be it further

RESOLVED, That our AMA monitor the evolution of blockchain technologies in healthcare and engage in discussion with appropriate stakeholders regarding blockchain development. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000.

RELEVANT AMA POLICY

HIPAA Law And Regulations D-190.989
(1) Our AMA shall continue to aggressively pursue modification of the Health Insurance Portability and Accountability Act (HIPAA) Privacy Rule to remove burdensome regulations that could interfere with efficient patient care.
(2) If satisfactory modification to the HIPAA Privacy Rule is not obtained, our AMA shall aggressively pursue appropriate legislative and/or legal relief to prevent implementation of the HIPAA Privacy Rule.
(3) Our AMA shall continue to oppose the creation or use of any unique patient identification number, including the Social Security number, as it might permit unfettered access by governmental agencies or other entities to confidential patient information.
(4) Our AMA shall immediately begin working with the appropriate parties and trade groups to explore ways to help offset the costs of implementing the changes required by the Health Insurance Portability and Accountability Act so as to reduce the fiscal burden on physicians.
Citation: (Sub. Res. 207, A-02; Reaffirmed: CCB/CLRPD Rep. 4, A-12

HIPAA Requirements for E-Commerce in Health Care D-478.998
Our AMA will: (1) intensify its on-going effort to inform practicing physicians about the consequences of implementation (including financial implications) of the Health Insurance Portability and Accountability Act (HIPAA) regulations for transmission of electronic information; and (2) study strategies on implementation of the HIPAA regulations, such as a limit on the frequency of modifications, which will lessen the financial impact on physicians, with a report back to the AMA House of Delegates when final regulations are promulgated.
Citation: (Res. 802, A-00; Reaffirmed: BOT Rep. 6, A-10

Health Information Technology H-478.994
Our AMA will support the principles that when financial assistance for Health IT originates from an inpatient facility: (1) it not unreasonably constrain the physician's choice of which ambulatory HIT system to purchase; and (2) it promote voluntary rather than mandatory sharing of Protected Health Information (HIPAA-PHI) with the facility consistent with the patient's wishes as well as applicable legal and ethical considerations.
Citation: (Res. 723, A-05; Reaffirmation A-10; Reaffirmed in lieu of Res. 237, A-12

Guiding Principles for the Collection, Use and Warehousing of Electronic Medical Records and Claims Data H-315.973
1. It is AMA policy that any payer, clearinghouse, vendor, or other entity that collects and uses electronic medical records and claims data adhere to the following principles:
a. Electronic medical records and claims data transmitted for any given purpose to a third party must be the minimum necessary needed to accomplish the intended purpose.
b. All covered entities involved in the collection and use of electronic medical records and claims data must comply with the HIPAA Privacy and Security Rules.
c. The physician must be informed and provide permission for any analysis undertaken with his/her electronic medical records and claims data, including the data being studied and how the results will be used.
d. Any additional work required by the physician practice to collect data beyond the average data collection for the submission of transactions (e.g., claims, eligibility) must be compensated by the entity requesting the data.
e. Criteria developed for the analysis of physician claims or medical record data must be open for review and input by relevant outside entities.
f. Methods and criteria for analyzing the electronic medical records and claims data must be provided to the physician or an independent third party so re-analysis of the data can be performed.
g. An appeals process must be in place for a physician to appeal, prior to public release, any adverse decision derived from an analysis of his/her electronic medical records and claims data.
h. Clinical data collected by a data exchange network and searchable by a record locator service must be accessible only for payment and health care operations.
2. It is AMA policy that any physician, payer, clearinghouse, vendor, or other entity that warehouses electronic medical records and claims data adhere to the following principles:
a. The warehouse vendor must take the necessary steps to ensure the confidentiality, integrity, and availability of electronic medical records and claims data while protecting against threats to the security or integrity and unauthorized uses or disclosure of the information.
b. Electronic medical records data must remain accessible to authorized users for purposes of treatment, public health, patient safety, quality improvement, medical liability defense, and research.
c. Physician and patient permission must be obtained for any person or entity other than the physician or patient to access and use individually identifiable clinical data, when the physician is specifically identified.
d. Following the request from a physician to transfer his/her data to another data warehouse, the current vendor must transfer the electronic medical records and claims data and must delete/destroy the data from its data warehouse once the transfer has been completed and confirmed.

National Health Information Technology D-478.995
1. Our AMA will closely coordinate with the newly formed Office of the National Health Information Technology Coordinator all efforts necessary to expedite the implementation of an interoperable health information technology infrastructure, while minimizing the financial burden to the physician and maintaining the art of medicine without compromising patient care.
2. Our AMA: (A) advocates for standardization of key elements of electronic health record (EHR) and computerized physician order entry (CPOE) user interface design during the ongoing development of this technology; (B) advocates that medical facilities and health systems work toward standardized login procedures and parameters to reduce user login fatigue; and (C) advocates for continued research and physician education on EHR and CPOE user interface design specifically concerning key design principles and features that can improve the quality, safety, and efficiency of health care; and (D) advocates for continued research on EHR, CPOE and clinical decision support systems and vendor accountability for the efficacy, effectiveness, and safety of these systems.
3. Our AMA will request that the Centers for Medicare & Medicaid Services: (A) support an external, independent evaluation of the effect of Electronic Medical Record (EMR) implementation on patient safety and on the productivity and financial solvency of hospitals and physicians’ practices; and (B) develop, with physician input, minimum standards to be applied to outcome-based initiatives measured during this rapid implementation phase of EMRs.
4. Our AMA will (A) seek legislation or regulation to require all EHR vendors to utilize standard and interoperable software technology components to enable cost efficient use of electronic health records across all health care delivery systems including institutional and community based settings of care delivery; and (B) work with CMS to incentivize hospitals and health systems to achieve interconnectivity and interoperability of electronic health records systems with independent physician practices to enable the efficient and cost effective use and sharing of electronic health records across all settings of care delivery.
5. Our AMA will seek to incorporate incremental steps to achieve electronic health record (EHR) data portability as part of the Office of the National Coordinator for Health Information Technology's (ONC) certification process.
6. Our AMA will collaborate with EHR vendors and other stakeholders to enhance transparency and establish processes to achieve data portability.
7. Our AMA will directly engage the EHR vendor community to promote improvements in EHR usability.
8. Our AMA will advocate for appropriate, effective, and less burdensome documentation requirements in the use of electronic health records.
9. Our AMA will urge EHR vendors to adopt social determinants of health templates, created with input from our AMA, medical specialty societies, and other stakeholders with expertise in social determinants of health metrics and development, without adding further cost or documentation burden for physicians.

Health Information Technology Principles H-478.981
Our AMA will promote the development of effective electronic health records (EHRs) in accordance with the following health information technology (HIT) principles. Effective HIT should:
1. Enhance physicians ability to provide high quality patient care;
2. Support team-based care;
3. Promote care coordination;
4. Offer product modularity and configurability;
5. Reduce cognitive workload;
6. Promote data liquidity;
7. Facilitate digital and mobile patient engagement; and
8. Expedite user input into product design and post-implementation feedback.
Our AMA will AMA utilize HIT principles to:
1. Work with vendors to foster the development of usable EHRs;
2. Advocate to federal and state policymakers to develop effective HIT policy;
3. Collaborate with institutions and health care systems to develop effective institutional HIT policies;
4. Partner with researchers to advance our understanding of HIT usability;
5. Educate physicians about these priorities so they can lead in the development and use of future EHRs that can improve patient care; and
6. Promote the elimination of Information Blocking.

Our AMA policy is that the cost of installing, maintaining, and upgrading information technology should be specifically acknowledged and addressed in reimbursement schedules.

Citation: BOT Rep. 19, A-18

Health Information Technology H-478.994
Our AMA will support the principles that when financial assistance for Health IT originates from an inpatient facility: (1) it not unreasonably constrain the physician's choice of which ambulatory HIT system to purchase; and (2) it promote voluntary rather than mandatory sharing of Protected Health Information (HIPAA-PHI) with the facility consistent with the patient's wishes as well as applicable legal and ethical considerations.

Citation: (Res. 723, A-05; Reaffirmation A-10; Reaffirmed in lieu of Res. 237, A-12

EHR Interoperability D-478.972
Our AMA:
(1) will enhance efforts to accelerate development and adoption of universal, enforceable electronic health record (EHR) interoperability standards for all vendors before the implementation of penalties associated with the Medicare Incentive Based Payment System;
(2) supports and encourages Congress to introduce legislation to eliminate unjustified information blocking and excessive costs which prevent data exchange;
(3) will develop model state legislation to eliminate pricing barriers to EHR interfaces and connections to Health Information Exchanges;
(4) will continue efforts to promote interoperability of EHRs and clinical registries;
(5) will seek ways to facilitate physician choice in selecting or migrating between EHR systems that are independent from hospital or health system mandates;
(6) will seek exemptions from Meaningful Use penalties due to the lack of interoperability or decertified EHRs and seek suspension of all Meaningful Use penalties by insurers, both public and private;
(7) will continue to take a leadership role in developing proactive and practical approaches to promote interoperability at the point of care;
(8) will seek legislation or regulation to require the Office of the National Coordinator for Health Information Technology to establish regulations that require universal and standard interoperability protocols for electronic health record (EHR) vendors to follow during EHR data transition to reduce common barriers that prevent physicians from changing EHR vendors, including high cost, time, and risk of losing patient data; and
(9) will review and advocate for the implementation of appropriate recommendations from the “Consensus Statement: Feature and Function Recommendations to Optimize Clinician Usability of Direct Interoperability to Enhance Patient Care,” a physician-directed set of recommendations, to EHR vendors and relevant federal offices such as, but not limited to, the Office of the National Coordinator, and the Centers for Medicare and Medicaid Services.

Whereas, There is a worsening opioid crisis in the United States and in 2017 there were more opioid related deaths than all other drugs, motor vehicle accidents, firearm related deaths, or suicides (1); and

Whereas, According to the Centers for Disease Control (CDC) more than 68% of the 70,200 drug overdose deaths in 2017 involved an opioid (2); and

Whereas, Significant initiatives by the CDC and state medical boards to curb the prescription of opioids has so far not resulted in a decrease in opioid related deaths (3); and

Whereas, The decreased availability of prescription opioids has contributed to an increase in the use of illicit opioids including heroin, and heroin laced with fentanyl, causing an increased number of unintentional deaths (4); and

Whereas, The marked decrease in the utilization of interventional pain procedures from 2009-2017 secondary to an increase in regulations and requirements regarding these procedures, has directly correlated with the increase in opioid related deaths during the same duration, and this is an ongoing public health crisis (5); and

Whereas, Current AMA policy supports quality care for patients with pain including patient access to non-opioid and interventional pain management treatments (H-185.931); supports timely and appropriate access to non-opioid and non-pharmacologic treatments for pain, including removing barriers to such treatments when they inhibit a patient's access to care (D-450.956); is committed to better access and delivery of quality pain care including through clinical practice (D-160.931); and opposes legislative or other policies that arbitrarily restrict a patient's ability to receive effective, patient-specific, evidence-based, comprehensive pain care (H-95.930); and

Whereas, There are multiple evidence based guidelines and studies regarding the effectiveness of interventional pain procedures based on prospective cohort and/or randomized controlled trials including but not limited to: sacroiliac joint blocks and radiofrequency ablation (6-12), medial branch blocks and radio frequency ablation (for cervical, thoracic and lumbar facet arthritis) (13-17), genicular nerve blocks and radiofrequency ablation (for non-operable knee arthritis or pain) (18-22), femoral and obturator nerve blocks and radiofrequency ablation (for non-operable hip arthritis or pain) (23, 24), suprascapular nerve blocks and radiofrequency ablation (for non-operable shoulder arthritis or pain), spinal cord and peripheral nerve stimulation; yet limitations and noncoverage decisions for these as well as many other interventional pain management procedures by multiple private insurance carriers, third party
review companies, Medicare and Medicaid contractors, and Medicare Advantage Plans exist, which have no regard to the basis and variability in severity of patient spine, nerve, and joint pathology or patient presentation (6-10); and

Whereas, There is non-inclusion of many diagnoses and conditions which have been to shown to be of benefit with regards to spinal cord stimulation and peripheral nerve stimulation that multiple private insurance carriers, third party review companies, Medicare and Medicaid contractors, and Medicare Advantage Plans are omitting from their coverage policies; therefore be it

RESOLVED, That our American Medical Association support coverage of sacroiliac joint blocks and radiofrequency ablation, facet (spine joint) medial branch blocks and radiofrequency ablation, genicular blocks and radiofrequency ablation for non-operable knee arthritis or pain, femoral and obturator nerve blocks and radiofrequency ablations for non-operable hip arthritis or pain, suprasacrapular nerve blocks and radiofrequency ablations for non-operable shoulder arthritis or pain, and other arbitrarily limited non-covered interventional pain management procedures, by all private insurance carriers, third party review companies, Medicare and Medicaid contractors, and Medicare Advantage Plans (Directive to Take Action), and be it further

RESOLVED, That our AMA support coverage of spinal cord stimulation trials and implantation, and peripheral nerve stimulation trials and implantation by all private insurance carriers, third party review companies, Medicare and Medicaid contractors, and Medicare Advantage Plans by ICD-10 codes that have been linked to the respective Current Procedural Terminology (CPT) code set as outlined in the AMA CPT Manual. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000.

RELEVANTAMA POLICY

Workforce and Coverage for Pain Management H-185.931

1. Our AMA supports efforts to improve the quality of care for patients with pain, ensuring access to multiple analgesic strategies, including non-opioid options and interventional approaches when appropriate, with a focus on achieving improvement in function and activities of daily living.

2. Our AMA supports guidance on pain management for different clinical indications developed by the specialties who manage those conditions and disseminated the same way other clinical guidelines are promoted, such as through medical journals, medical societies, and other appropriate outlets.

3. Our AMA will advocate for an increased focus on comprehensive, multidisciplinary pain management approaches that include the ability to assess co-occurring mental health or substance use conditions, are physician led, and recognize the interdependency of treatment methods in addressing chronic pain.

4. Our AMA supports health insurance coverage that gives patients access to the full range of evidence-based chronic pain management modalities, and that coverage for these services be equivalent to coverage provided for medical or surgical benefits.

5. Our AMA supports efforts to expand the capacity of practitioners and programs capable of providing physician-led interdisciplinary pain management services, as well as an expanded behavioral health workforce to improve the availability of services to address the psychological, behavioral, and social aspects of chronic pain management within multidisciplinary pain clinics. Patients and their caregivers should be involved in the decision-making process.

6. Our AMA supports an expanded availability of comprehensive multidisciplinary pain medicine clinics for patients in both urban and rural areas, and an improvement in payment models for comprehensive multidisciplinary pain clinics services such that such services can become more financially viable.

Pain as the Fifth Vital Sign D-450.956
Our AMA will: (1) work with The Joint Commission to promote evidence-based, functional and effective pain assessment and treatment measures for accreditation standards; (2) strongly support timely and appropriate access to non-opioid and non-pharmacologic treatments for pain, including removing barriers to such treatments when they inhibit a patient's access to care; (3) advocate that pain as the fifth vital sign be eliminated from professional standards and usage; and (4) advocate for the removal of the pain management component of patient satisfaction surveys as it pertains to payment and quality metrics.
Citation: BOT Rep. 19, A-16

Promotion of Better Pain Care D-160.981
1. Our AMA: (a) will express its strong commitment to better access and delivery of quality pain care through the promotion of enhanced research, education and clinical practice in the field of pain medicine; and (b) encourages relevant specialties to collaborate in studying the following: (i) the scope of practice and body of knowledge encompassed by the field of pain medicine; (ii) the adequacy of undergraduate, graduate and post graduate education in the principles and practice of the field of pain medicine, considering the current and anticipated medical need for the delivery of quality pain care; (iii) appropriate training and credentialing criteria for this multidisciplinary field of medical practice; and (iv) convening a meeting of interested parties to review all pertinent matters scientific and socioeconomic.
2. Our AMA encourages relevant stakeholders to research the overall effects of opioid production cuts.
3. Our AMA strongly urges the US Drug Enforcement Administration to base any future reductions in aggregate production quotas for opioids on actual data from multiple sources, including prescribing data, and to proactively monitor opioid quotas and supply to prevent any shortages that might develop and to take immediate action to correct any shortages.
4. Our AMA encourages the US Drug Enforcement Administration to be more transparent when developing medication production guidelines.
5. Our AMA and the physician community reaffirm their commitment to delivering compassionate and ethical pain management, promoting safe opioid prescribing, reducing opioid-related harm and the diversion of controlled substances, improving access to treatment for substance use disorders, and fostering a public health based-approach to addressing opioid-related morbidity and mortality.
Citation: Res. 321, A-08; Appended: Res. 522, A-10; Reaffirmed in lieu of Res. 518, A-12; Reaffirmed: BOT Rep. 19, A-16; Reaffirmed in lieu of Res. 117, A-16; Appended: Res. 927, I-16; Appended: Res. 526, A-17; Modified: BOT Action in response to referred for decision Res. 927, I-16; Reaffirmed: Res. 235, I-18; Reaffirmed in lieu of: Res. 228, I-18

Legislative Pain Care Restrictions H-95.930
Our AMA will oppose legislative or other policies that arbitrarily restrict a patient's ability to receive effective, patient-specific, evidence-based, comprehensive pain care.
Citation: Res. 228, A-16
Whereas, Independent physician practices, which employ many people and provide an excellent service to their communities and are vital to a viable medical profession have been going out of business at a record pace in the last 5 years because physicians cannot get adequately reimbursed to stay in practice; and

Whereas, The recent federal tax reform act of 2018 was meant specifically to help small businesses stay in business, recognizing their importance and value in a healthy economy; and

Whereas, The recent federal tax law allowed many small businesses, including small business professionals of certain professions such as real estate, architecture, and engineering to have their company “pass through” income taxed at the lower capital gains rates (rather than the higher personal income rates), but physicians were specifically excluded from this benefit; and

Whereas, One reason physicians are turning over their practices to corporations is that through a sale they can take advantage of the lower capital gains tax rates, so there is a paradoxical incentive towards fostering the corporate practice of medicine; and

Whereas, Non-physician providers, such as hospitals, can usually apply for emergency Medicaid or indigent funding to help cover their costs; therefore be it

RESOLVED, That our American Medical Association seek legislation and/or regulation that would permit physician practices to utilize ‘pass through’ tax treatment of practice income in the manner of other small businesses and professionals. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000.

RELEVANTAMA POLICY

The Preservation of the Private Practice of Medicine D-405.988
Our AMA: (1) supports preserving the value of the private practice of medicine and its benefit to patients; (2) will utilize its resources to protect and support the continued existence of solo and small group medical practice, and to protect and support the ability of these practices to provide quality care; (3) will advocate in Congress to ensure adequate payment for services rendered by private practicing physicians; (4) will work through the appropriate channels to preserve choices and opportunities, including the private practice of medicine, for new physicians whose choices and opportunities may be limited due to their significant medical education debt; (5) will work through the appropriate channels to ensure that medical students and residents during their training are educated in all of medicine's career choices, including the private practice of medicine; (6) will create, maintain, and make accessible to medical students, residents and fellows, and physicians, resources to enhance satisfaction and practice sustainability for physicians in private practice; and (7) will
create and maintain a reference document establishing principles for entering into and sustaining a private practice, and encourage medical schools and residency programs to present physicians in training with information regarding private practice as a viable option.

Citation: Res. 224, I-10; Appended: Res. 604, A-12; Reaffirmation I-13; Appended: Res. 735, A-14; Reaffirmed in lieu of Res. 223, I-14; Modified: Speakers Rep. 01, A-17

Principles of and Actions to Address Primary Care Workforce H-200.949

1. Our patients require a sufficient, well-trained supply of primary care physicians—family physicians, general internists, general pediatricians, and obstetricians/gynecologists—to meet the nation’s current and projected demand for health care services.

2. To help accomplish this critical goal, our American Medical Association (AMA) will work with a variety of key stakeholders, to include federal and state legislators and regulatory bodies; national and state specialty societies and medical associations, including those representing primary care fields; and accreditation, certification, licensing, and regulatory bodies from across the continuum of medical education (undergraduate, graduate, and continuing medical education).

3. Through its work with these stakeholders, our AMA will encourage development and dissemination of innovative models to recruit medical students interested in primary care, train primary care physicians, and enhance both the perception and the reality of primary care practice, to encompass the following components: a) Changes to medical school admissions and recruitment of medical students to primary care specialties, including counseling of medical students as they develop their career plans; b) Curriculum changes throughout the medical education continuum; c) Expanded financial aid and debt relief options; d) Financial and logistical support for primary care practice, including adequate reimbursement, and enhancements to the practice environment to ensure professional satisfaction and practice sustainability; and e) Support for research and advocacy related to primary care.

4. Admissions and recruitment: The medical school admissions process should reflect the specific institution’s mission. Those schools with missions that include primary care should consider those predictor variables among applicants that are associated with choice of these specialties.

5. Medical schools, through continued and expanded recruitment and outreach activities into secondary schools, colleges, and universities, should develop and increase the pool of applicants likely to practice primary care by seeking out those students whose profiles indicate a likelihood of practicing in primary care and underserved areas, while establishing strict guidelines to preclude discrimination.

6. Career counseling and exposure to primary care: Medical schools should provide to students career counseling related to the choice of a primary care specialty, and ensure that primary care physicians are well-represented as teachers, mentors, and role models to future physicians.

7. Financial assistance programs should be created to provide students with primary care experiences in ambulatory settings, especially in underserved areas. These could include funded preceptorships or summer work/study opportunities.

8. Curriculum: Voluntary efforts to develop and expand both undergraduate and graduate medical education programs to educate primary care physicians in increasing numbers should be continued. The establishment of appropriate administrative units for all primary care specialties should be encouraged.

9. Medical schools with an explicit commitment to primary care should structure the curriculum to support this objective. At the same time, all medical schools should be encouraged to continue to change their curriculum to put more emphasis on primary care.

10. All four years of the curriculum in every medical school should provide primary care experiences for all students, to feature increasing levels of student responsibility and use of ambulatory and community-based settings.

11. Federal funding, without coercive terms, should be available to institutions needing financial support to expand resources for both undergraduate and graduate medical education programs designed to increase the number of primary care physicians. Our AMA will advocate for public (federal and state) and private payers to a) develop enhanced funding and related incentives from all sources to provide education for medical students and resident/fellow physicians, respectively, in progressive, community-based models of integrated care focused on quality and outcomes (such as the patient-centered medical home and the chronic care model) to enhance primary care as a career choice; b) fund and foster innovative pilot programs that change the current approaches to primary care in undergraduate and graduate medical education, especially in urban and rural underserved areas; and c) evaluate these efforts for their effectiveness in increasing the number of students choosing primary care careers and helping facilitate the elimination of geographic, racial, and other health care disparities.

12. Medical schools and teaching hospitals in underserved areas should promote medical student and resident/fellow physician rotations through local family health clinics for the underserved, with financial assistance to the clinics to compensate their teaching efforts.
13. The curriculum in primary care residency programs and training sites should be consistent with the objective of training generalist physicians. Our AMA will encourage the Accreditation Council for Graduate Medical Education to (a) support primary care residency programs, including community hospital-based programs, and (b) develop an accreditation environment and novel pathways that promote innovations in graduate medical education, using progressive, community-based models of integrated care focused on quality and outcomes (such as the patient-centered medical home and the chronic care model).

14. The visibility of primary care faculty members should be enhanced within the medical school, and positive attitudes toward primary care among all faculty members should be encouraged.

15. Support for practicing primary care physicians: Administrative support mechanisms should be developed to assist primary care physicians in the logistics of their practices, along with enhanced efforts to reduce administrative activities unrelated to patient care, to help ensure professional satisfaction and practice sustainability.

16. There should be increased financial incentives for physicians practicing primary care, especially those in rural and urban underserved areas, to include scholarship or loan repayment programs, relief of professional liability burdens, and Medicaid case management programs, among others. Our AMA will advocate to state and federal legislative and regulatory bodies, among others, for development of public and/or private incentive programs, and expansion and increased funding for existing programs, to further encourage practice in underserved areas and decrease the debt load of primary care physicians. The imposition of specific outcome targets should be resisted, especially in the absence of additional support to the schools.

17. Our AMA will continue to advocate, in collaboration with relevant specialty societies, for the recommendations from the AMA/Specialty Society RVS Update Committee (RUC) related to reimbursement for E&M services and coverage of services related to care coordination, including patient education, counseling, team meetings and other functions; and work to ensure that private payers fully recognize the value of E&M services, incorporating the RUC-recommended increases adopted for the most current Medicare RBRVS.

18. Our AMA will advocate for public (federal and state) and private payers to develop physician reimbursement systems to promote primary care and specialty practices in progressive, community-based models of integrated care focused on quality and outcomes such as the patient-centered medical home and the chronic care model consistent with current AMA Policies H-160.918 and H-160.919.

19. There should be educational support systems for primary care physicians, especially those practicing in underserved areas.

20. Our AMA will urge urban hospitals, medical centers, state medical associations, and specialty societies to consider the expanded use of mobile health care capabilities.

21. Our AMA will encourage the Centers for Medicare & Medicaid Services to explore the use of telemedicine to improve access to and support for urban primary care practices in underserved settings.

22. Accredited continuing medical education providers should promote and establish continuing medical education courses in performing, prescribing, interpreting and reinforcing primary care services.

23. Practicing physicians in other specialties—particularly those practicing in underserved urban or rural areas—should be provided the opportunity to gain specific primary care competencies through short-term preceptorships or postgraduate fellowships offered by departments of family medicine, internal medicine, pediatrics, etc., at medical schools or teaching hospitals. In addition, part-time training should be encouraged, to allow physicians in these programs to practice concurrently, and further research into these concepts should be encouraged.

24. Our AMA supports continued funding of Public Health Service Act, Title VII, Section 747, and encourages advocacy in this regard by AMA members and the public.

25. Research: Analysis of state and federal financial assistance programs should be undertaken, to determine if these programs are having the desired workforce effects, particularly for students from disadvantaged groups and those that are underrepresented in medicine, and to gauge the impact of these programs on elimination of geographic, racial, and other health care disparities. Additional research should identify the factors that deter students and physicians from choosing and remaining in primary care disciplines. Further, our AMA should continue to monitor trends in the choice of a primary care specialty and the availability of primary care graduate medical education positions. The results of these and related research endeavors should support and further refine AMA policy to enhance primary care as a career choice. Citation: CME Rep. 04, I-18
Whereas, The mission of the AMA and affiliated state medical associations is to promote the art and science of medicine, and the betterment of public health; and

Whereas, There is a current consolidation of the health insurance markets wherein 73% of markets are highly concentrated and 46% have a single predominant carrier with greater than 50% of the market; and

Whereas, These predominant carriers control the market to the extent that independent physician practices cannot survive if they do not participate with these carriers; and

Whereas, These carriers are unilaterally establishing practice algorithms and reporting requirements which direct the physician work environment; and

Whereas, There is increasing national sentiment toward the development of a single payer health care system; and

Whereas, Independent physicians are currently barred from collective bargaining activities by federal antitrust law; therefore be it

RESOLVED, That our American Medical Association form a workgroup to outline the legal challenge to federal antitrust statute for physicians (Directive to Take Action); and be it further

RESOLVED, That this workgroup engage the state medical associations and other physician groups as deemed appropriate (Directive to Take Action); and be it further

RESOLVED, That our AMA report by the 2020 Annual Meeting on the viability of a strategy for the formation of a federal collective bargaining system for all physicians and, to the extent viable, a related organizational plan. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000.

RELEVANT AMA POLICY

Collective Bargaining for Physicians H-385.946
The AMA will seek means to remove restrictions for physicians to form collective bargaining units in order to negotiate reasonable payments for medical services and to compete in the current managed care environment; and will include the drafting of appropriate legislation.
Citation: (Res. 239, A-97; Reaffirmation I-98; Reaffirmation A-01; Reaffirmation A-05; Reaffirmation A-06; Reaffirmation A-08; Reaffirmation I-10

Collective Bargaining and the Definition of Supervisors D-383.988
Our AMA will support legislative efforts by other organizations and entities that would overturn the Supreme Court's ruling in *National Labor Relations Board v. Kentucky River Community Care, Inc., et al.*
Citation: (BOT Action in response to referred for decision Res. 248, A-01; Modified: BOT Rep. 22, A-11

Physician Collective Bargaining H-385.976
Our AMA's present view on the issue of physician collective negotiation is as follows: (1) There is more that physicians can do within existing antitrust laws to enhance their collective bargaining ability, and medical associations can play an active role in that bargaining. Education and instruction of physicians is a critical need. The AMA supports taking a leadership role in this process through an expanded program of assistance to independent and employed physicians.
(2) Our AMA supports continued intervention in the courts and meetings with the Justice Department and FTC to enhance their understanding of the unique nature of medical practice and to seek interpretations of the antitrust laws which reflect that unique nature.
(3) Our AMA supports continued advocacy for changes in the application of federal labor laws to expand the number of physicians who can bargain collectively.
(4) Our AMA vigorously opposes any legislation that would further restrict the freedom of physicians to independently contract with Medicare patients.
(5) Our AMA supports obtaining for the profession the ability to fully negotiate with the government about important issues involving reimbursement and patient care.
Citation: (BOT Rep. P, I-88; Modified: Sunset Report, I-98; Reaffirmation A-00; Reaffirmation I-00; Reaffirmation A-01; Reaffirmation I-03; Reaffirmation A-04; Reaffirmed in lieu of Res. 105, A-04; Reaffirmation A-05; Reaffirmation A-06; Reaffirmation A-08; Reaffirmed: BOT Rep. 17, A-09; Reaffirmation I-10; Reaffirmed: Sub. Collective Bargaining: Antitrust Immunity D-383.983
Our AMA will: (1) continue to pursue an antitrust advocacy strategy, in collaboration with the medical specialty stakeholders in the Antitrust Steering Committee, to urge the Department of Justice and Federal Trade Commission to amend the "Statements of Antitrust Enforcement Policy in Health Care" (or tacitly approve expansion of the Statements) and adopt new policy statements regarding market concentration that are consistent with AMA policy; and (2) execute a federal legislative strategy.
Citation: BOT Action in response to referred for decision Res. 209, A-07 and Res. 232, A-07; Reaffirmed: Res. 215, A-11

Physicians’ Ability to Negotiate and Undergo Practice Consolidation H-383.988
Our AMA will: (1) pursue the elimination of or physician exemption from anti-trust provisions that serve as a barrier to negotiating adequate physician payment; (2) work to establish tools to enable physicians to consolidate in a manner to insure a viable governance structure and equitable distribution of equity, as well as pursuing the elimination of anti-trust provisions that inhibited collective bargaining; and (3) find and improve business models for physicians to improve their ability to maintain a viable economic environment to support community access to high quality comprehensive healthcare.
Citation: (Res. 229, A-12

Employee Associations and Collective Bargaining for Physicians D-383.981
Our AMA will study and report back on physician unionization in the United States.
Citation: (Res. 601, I-14
Whereas, The achievement of the Quadruple Aim of enhancing patient and clinician experience of care, improving population health, and reducing costs requires evaluation and analysis of data related to patient care; and

Whereas, The Centers for Medicare and Medicaid Services (CMS) is pursuing the achievement of the Quadruple Aim through alternative payment programs, some of which involve Accountable Care Organizations (ACO), networks of providers who take responsibility for the quality and cost of care of a specified population; and

Whereas, Medicare claims data is provided to and collected by ACOs, that are combinations of HIPAA Covered Entities working together in order to advance the coordination of care as a core strategy to increase quality of care and decrease cost of care; and

Whereas, ACOs, as Business Associates of the Covered Entities in their networks, are bound by HIPAA and Business Associate Agreements; and

Whereas, Opportunities to assess the impact of ACO interventions are lacking if the data cannot be shared for research; and

Whereas, The Data Use Agreement (DUA) used by CMS’s Centers for Medicare and Medicaid Innovation (CMMI) for value based payment programs such as shared savings and Next Generation, limits the use of data provided by CMS to ACOs and other users; and

Whereas, The restrictions in a DUA are generally intended to align with the objectives for the data sharing, such as, for example, developing care models through ACOs that improve quality and decrease costs; and

Whereas, The limitations in the DUA are greater than those posed by HIPAA that allows use of similar data for research with full privacy protections and, therefore, the DUA poses an additional barrier to research; and

Whereas, The DUA requires an ACO to obtain prior written authorization from CMS to disseminate original or derived information from the files CMS shares with the ACO to anyone who is not an ACO Participant, a Business Associate of an ACO Participant or a Covered Entity in a treating relationship with the patient; and

Whereas, This limitation significantly impedes the ability of researchers to evaluate the efficacy of ACO interventions and to investigate population health questions by impeding both: (1) the
ability to produce and use de-identified data sets as permitted by HIPAA and (2) the use of
Medicare claims data held by ACOs for research as permitted by HIPAA; and

Whereas, In the current situation, ACOs may use CMS data for internal quality improvement
initiatives, but may not share their results in the descriptive, observational quality improvement
literature; and

Whereas, ACOs, governmental payers, academics, health care providers, academics and
patients would benefit from efficacy and other research; and

Whereas, The improvement of quality, cost, and patient satisfaction are all advanced by quality
improvement literature; therefore be it

RESOLVED, That our American Medical Association, in an effort to advance the feasibility of
population health research to fulfill the promise of value based care, request that the Centers for
Medicare and Medicaid Services (CMS) and CMS’s Centers for Medicare and Medicaid
Innovation (CMMI) eliminate the prohibitions on sharing data outside of the accountable care
organization contained in the CMS Data Use Agreement and allow sharing of that data: (1) in
the form of de-identified data sets as permitted by HIPAA; and (2) for purposes of research as
permitted by HIPAA. (Directive to Take Action)

Fiscal Note: Not yet determined

RELEVANT AMA POLICY

Medicare Claims Data Release D-406.993
Our AMA will: (1) continue to work with the Centers for Medicare & Medicaid Services to identify
appropriate modifications to improve the usefulness and accuracy of any existing or future provider-
specific data released by that agency; (2) engage with data experts and other stakeholders to develop
guiding principles on the data and transparency efforts that should be pursued in order to assist
physicians to improve the quality of care and reduce costs; and (3) petition the Centers for Medicare &
Medicaid Services and the Office of Health & Human Services to remove practice expense and
malpractice expense from reimbursements reported to the public.
Citation: Sub. Res. 204, A-14; Appended: Res. 226, A-17

Sharing Demographic Medicare Data with Other Public Entities by CMS H-330.934
The AMA supports continued provision of aggregate anonymous demographic information to state and
local health agencies where its use will promote community health and improve utilization of health care
dollars, as long as adequate safeguards to protect individual privacy are preserved.
Citation: Sub. Res. 810, I-96; Reaffirmed: CMS Rep. 8, A-06; Reaffirmed: CMS Rep. 01, A-16

Medicare Physician Payment Reform D-390.961
1. Our AMA will continue to advocate for adequate investment in comparative effectiveness research that
is consistent with AMA Policy H-460.909, and in effective methods of translating research findings relating
to quality of care into clinical practice.
2. Our AMA will advocate for better methods of data collection, development, reporting and dissemination
of practical clinical decision-making tools for patients and physicians, and rapid, confidential feedback
about comparative practice patterns to physicians to enable them to make the best use of the information
at the local and specialty level.
3. Our AMA urges physician organizations, including state medical associations and national medical
specialty societies, to develop and recruit groups of physicians to experiment with diverse ideas for
achieving Medicare savings, including the development of organizational structures that maximize
participation opportunities for physician practices.
4. Our AMA will continue to advocate for changes in antitrust and other laws that would facilitate shared-savings arrangements, and enable solo and small group practices to make innovations that could enhance care coordination and increase the value of health care delivery.

5. Our AMA supports local innovation and funding of demonstration projects that allow physicians to benefit from increased efficiencies based on practice changes that best fit local needs.

6. Our AMA will work with appropriate public and private officials and advisory bodies to ensure that bundled payments, if implemented, do not lead to hospital-controlled payments to physicians.

Citation: CMS 6, A-09; Reaffirmation A-10; Reaffirmation I-13; Reaffirmed: CMS Rep. 05, I-16

Health Care Reform Physician Payment Models D-385.963

1. Our AMA will: (a) work with the Centers for Medicare and Medicaid Services and other payers to participate in discussions and identify viable options for bundled payment plans, gain-sharing plans, accountable care organizations, and any other evolving health care delivery programs; (b) develop guidelines for health care delivery payment systems that protect the patient-physician relationship; (c) make available to members access to legal, financial, and ethical information, tools and other resources to enable physicians to play a meaningful role in the governance and clinical decision-making of evolving health care delivery systems; and (d) work with Congress and the appropriate governmental agencies to change existing laws and regulations (eg, antitrust and anti-kickback) to facilitate the participation of physicians in new delivery models via a range of affiliations with other physicians and health care providers (not limited to employment) without penalty or hardship to those physicians.

2. Our AMA will: (a) work with third party payers to assure that payment of physicians/healthcare systems includes enough money to assure that patients and their families have access to the care coordination support that they need to assure optimal outcomes; and (b) will work with federal authorities to assure that funding is available to allow the CMMI grant-funded projects that have proven successful in meeting the Triple Aim to continue to provide the information we need to guide decisions that third party payers make in their funding of care coordination services.

3. Our AMA advises physicians to make informed decisions before starting, joining, or affiliating with an ACO. Our AMA will provide information to members regarding AMA vetted legal and financial advisors and will seek discount fees for such services.

4. Our AMA will develop a toolkit that provides physicians best practices for starting and operating an ACO, such as governance structures, organizational relationships, and quality reporting and payment distribution mechanisms. The toolkit will include legal governance models and financial business models to assist physicians in making decisions about potential physician-hospital alignment strategies. The toolkit will also include model contract language for indemnifying physicians from legal and financial liabilities.

5. Our AMA will continue to work with the Federation to identify, publicize and promote physician-led payment and delivery reform programs that can serve as models for others working to improve patient care and lower costs.

6. Our AMA will continue to monitor health care delivery and physician payment reform activities and provide resources to help physicians understand and participate in these initiatives.

7. Our AMA will work with states to: (a) ensure that current state medical liability reform laws apply to ACOs and physicians participating in ACOs; and (b) address any new liability exposure for physicians participating in ACOs or other delivery reform models.

8. Our AMA recommends that state and local medical societies encourage the new Accountable Care Organizations (ACOs) to work with the state health office and local health officials as they develop the electronic medical records and medical data reporting systems to assure that data needed by Public Health to protect the community against disease are available.

9. Our AMA recommends that ACO leadership, in concert with the state and local directors of public health, work to assure that health risk reduction remains a primary goal of both clinical practice and the efforts of public health.

10. Our AMA encourages state and local medical societies to invite ACO and health department leadership to report annually on the population health status improvement, community health problems, recent successes and continuing problems relating to health risk reduction, and measures of health care quality in the state.

Accountable Care Organization Principles H-160.915

Our AMA adopts the following Accountable Care Organization (ACO) principles:

1. Guiding Principle - The goal of an ACO is to increase access to care, improve the quality of care and ensure the efficient delivery of care. Within an ACO, a physician's primary ethical and professional obligation is the well-being and safety of the patient.

2. ACO Governance - ACOs must be physician-led and encourage an environment of collaboration among physicians. ACOs must be physician-led to ensure that a physician's medical decisions are not based on commercial interests but rather on professional medical judgment that puts patients' interests first.

   A. Medical decisions should be made by physicians. ACOs must be operationally structured and governed by an appropriate number of physicians to ensure that medical decisions are made by physicians (rather than lay entities) and place patients' interests first. Physicians are the medical professionals best qualified by training, education, and experience to provide diagnosis and treatment of patients. Clinical decisions must be made by the physician or physician-controlled entity. The AMA supports true collaborative efforts between physicians, hospitals and other qualified providers to form ACOs as long as the governance of those arrangements ensure that physicians control medical issues.

   B. The ACO should be governed by a board of directors that is elected by the ACO professionals. Any physician-entity [e.g., Independent Physician Association (IPA), Medical Group, etc.] that contracts with, or is otherwise part of, the ACO should be physician-controlled and governed by an elected board of directors.

   C. The ACO's physician leaders should be licensed in the state in which the ACO operates and in the active practice of medicine in the ACO's service area.

   D. Where a hospital is part of an ACO, the governing board of the ACO should be separate, and independent from the hospital governing board.

3. Physician and patient participation in an ACO should be voluntary. Patient participation in an ACO should be voluntary rather than a mandatory assignment to an ACO by Medicare. Any physician organization (including an organization that bills on behalf of physicians under a single tax identification number) or any other entity that creates an ACO must obtain the written affirmative consent of each physician to participate in the ACO. Physicians should not be required to join an ACO as a condition of contracting with Medicare, Medicaid or a private payer or being admitted to a hospital medical staff.

4. The savings and revenues of an ACO should be retained for patient care services and distributed to the ACO participants.

5. Flexibility in patient referral and antitrust laws. The federal and state anti-kickback and self-referral laws and the federal Civil Monetary Penalties (CMP) statute (which prohibits payments by hospitals to physicians to reduce or limit care) should be sufficiently flexible to allow physicians to collaborate with hospitals in forming ACOs without being employed by the hospitals or ACOs. This is particularly important for physicians in small- and medium-sized practices who may want to remain independent but otherwise integrate and collaborate with other physicians (i.e., so-called virtual integration) for purposes of participating in the ACO. The ACA explicitly authorizes the Secretary to waive requirements under the Civil Monetary Penalties statute, the Anti-Kickback statute, and the Ethics in Patient Referrals (Stark) law. The Secretary should establish a full range of waivers and safe harbors that will enable independent physicians to use existing or new organizational structures to participate as ACOs. In addition, the Secretary should work with the Federal Trade Commission to provide explicit exceptions to the antitrust laws for ACO participants. Physicians cannot completely transform their practices only for their Medicare patients, and antitrust enforcement could prevent them from creating clinical integration structures involving their privately insured patients. These waivers and safe harbors should be allowed where appropriate to exist beyond the end of the initial agreement between the ACO and CMS so that any new organizational structures that are created to participate in the program do not suddenly become illegal simply because the shared savings program does not continue.

6. Additional resources should be provided up-front in order to encourage ACO development. CMS's Center for Medicare and Medicaid Innovation (CMI) should provide grants to physicians in order to finance up-front costs of creating an ACO. ACO incentives must be aligned with the physician or physician group's risks (e.g., start-up costs, systems investments, culture changes, and financial uncertainty). Developing this capacity for physicians practicing in rural communities and solo-small group practices requires time and resources and the outcome is unknown. Providing additional resources for the up-front costs will encourage the development of ACOs since the 'shared savings' model only provides for potential savings at the back-end, which may discourage the creation of ACOs (particularly among independent physicians and in rural communities).
7. The ACO spending benchmark should be adjusted for differences in geographic practice costs and risk adjusted for individual patient risk factors.
   A. The ACO spending benchmark, which will be based on historical spending patterns in the ACO's service area and negotiated between Medicare and the ACO, must be risk-adjusted in order to incentivize physicians with sicker patients to participate in ACOs and incentivize ACOs to accept and treat sicker patients, such as the chronically ill.
   B. The ACO benchmark should be risk-adjusted for the socioeconomic and health status of the patients that are assigned to each ACO, such as income/poverty level, insurance status prior to Medicare enrollment, race, and ethnicity and health status. Studies show that patients with these factors have experienced barriers to care and are more costly and difficult to treat once they reach Medicare eligibility.
   C. The ACO benchmark must be adjusted for differences in geographic practice costs, such as physician office expenses related to rent, wages paid to office staff and nurses, hospital operating cost factors (i.e., hospital wage index) and physician HIT costs.
   D. The ACO benchmark should include a reasonable spending growth rate based on the growth in physician and hospital practice expenses as well as the patient socioeconomic and health status factors.
   E. In addition to the shared savings earned by ACOs, ACOs that spend less than the national average per Medicare beneficiary should be provided an additional bonus payment. Many physicians and physician groups have worked hard over the years to establish systems and practices to lower their costs below the national per Medicare beneficiary expenditures. Accordingly, these practices may not be able to achieve significant additional shared savings to incentivize them to create or join ACOs. A bonus payment for spending below the national average would encourage these practices to create ACOs and continue to use resources appropriately and efficiently.

8. The quality performance standards required to be established by the Secretary must be consistent with AMA policy regarding quality. The ACO quality reporting program must meet the AMA principles for quality reporting, including the use of nationally-accepted, physician specialty-validated clinical measures developed by the AMA-specialty society quality consortium; the inclusion of a sufficient number of patients to produce statistically valid quality information; appropriate attribution methodology; risk adjustment; and the right for physicians to appeal inaccurate quality reports and have them corrected. There must also be timely notification and feedback provided to physicians regarding the quality measures and results.

9. An ACO must be afforded procedural due process with respect to the Secretary's discretion to terminate an agreement with an ACO for failure to meet the quality performance standards.

10. ACOs should be allowed to use different payment models. While the ACO shared-savings program is limited to the traditional Medicare fee-for-service reimbursement methodology, the Secretary has discretion to establish ACO demonstration projects. ACOs must be given a variety of payment options and allowed to simultaneously employ different payment methods, including fee-for-service, capitation, partial capitation, medical homes, care management fees, and shared savings. Any capitation payments must be risk-adjusted.

11. The Consumer Assessment of Healthcare Providers and Systems (CAHPS) Patient Satisfaction Survey should be used as a tool to determine patient satisfaction and whether an ACO meets the patient-centeredness criteria required by the ACO law.

12. Interoperable Health Information Technology and Electronic Health Record Systems are key to the success of ACOs. Medicare must ensure systems are interoperable to allow physicians and institutions to effectively communicate and coordinate care and report on quality.

13. If an ACO bears risk like a risk bearing organization, the ACO must abide by the financial solvency standards pertaining to risk-bearing organizations.
