AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 909
(I-19)

Introduced by: Resident and Fellow Section

Subject: Decreasing the Use of Oximetry Monitors for the Prevention of Sudden Infant Death Syndrome

Referred to: Reference Committee K (Chair)

Whereas, A causal relationship between prolonged apnea and sudden infant death syndrome has not been established; and

Whereas, Studies have failed to document any impact of home cardiorespiratory monitoring for apnea and/or bradycardia on the incidence of sudden infant death syndrome; and

Whereas, Home cardiorespiratory monitoring with medical-grade pulse oximeters may be warranted for infants who have unstable airways, rare medical conditions affecting regulation of breathing, symptomatic chronic lung disease, or require respiratory support; and

Whereas, Home apnea monitors cause unnecessary worry due to false alarms; and

Whereas, Parents may actually feel more fear and anxiety if they often use medical equipment to check on their healthy baby, which can lead to increased parental depression; and

Whereas, The most effective ways to reduce the risk of sudden infant death syndrome is to place baby prone on a firm crib mattress with nothing else in the crib; and

Whereas, A recent study in JAMA found that non-FDA regulated oximetry monitors, such as the Owlet Sock and Baby Vida, performed inconsistently in detecting hypoxemia and also displayed falsely low pulse rates; and

Whereas, False readings from these commercially-available, non-FDA regulated, pulse oximetry monitors can lead to increased unnecessary use of the medical system; and

Whereas, Commercial monitors, such as the Owlet Smart Sock, retails for over $200, and is often a recommended baby item by most store baby registries; therefore be it

RESOLVED, That our American Medical Association oppose the sale and use of oximetry monitors to prevent sudden infant death syndrome. (New HOD Policy)

Fiscal Note: Minimal - less than $1,000

RELEVANT AMA POLICY

Standardization of Newborn Screening Programs H-245.973
Our AMA: (1) recognizes the need for uniform minimum newborn screening (NBS) recommendations; and (2) encourages continued research and discussions on the potential benefits and harms of NBS for certain diseases. (CSAPh Rep. 9, A-06; Reaffirmed in lieu of Res. 502, A-09)

Early Hearing Detection and Intervention H-245.970
Our AMA: 1) supports early hearing detection and intervention to ensure that every infant receives proper hearing screening, diagnostic evaluation, intervention, and follow-up in a timely manner; and 2) supports federal legislation that provides for the development and monitoring of statewide programs and systems for hearing screening of newborns and infants, prompt evaluation and diagnosis of children referred from screening programs, and appropriate medical, educational, and audiological interventions and follow-up for children identified with hearing loss.
Citation: (Res. 514, A-11; Reaffirmed: CMS Rep. 6, I-15)

Sudden Infant Death Syndrome H-245.977
1. The AMA encourages the education of parents, physicians and all other health care professionals involved in newborn care regarding methods to eliminate known Sudden Infant Death Syndrome (SIDS) risk factors, such as prone sleeping, soft bedding and parental smoking.
2. Our AMA will advocate for the appropriate labeling of all infant sleep products, not in compliance with the Safe Infant Sleeping Environment Guidelines, as adopted by the AAP, to adequately warn consumers of the risks of product use and prevent sudden unexpected infant death.
3. Our AMA encourages consumers to avoid commercial devices marketed to reduce the risk of SIDS, including: wedges, positioners, special mattresses, and special sleep surfaces.
4. Our AMA encourages media and manufacturers to follow safe-sleep guidelines in their messaging and advertising.
5. Our AMA encourages further research of infant safe sleeping environment programs, including, but not limited to, the study of the safety and efficacy of boxes.

Infant Mortality D-245.994
1. Our AMA will work with appropriate agencies and organizations towards reducing infant mortality by providing information on safe sleep positions and preterm birth risk factors to physicians, other health professionals, parents, and child care givers.
2. Our AMA will work with Congress and the Department of Health and Human Services to improve maternal outcomes through: (a) maternal/infant health research at the NIH to reduce the prevalence of premature births and to focus on obesity research, treatment and prevention; (b) maternal/infant health research and surveillance at the CDC to assist states in setting up maternal mortality reviews; modernize state birth and death records systems to the 2003-recommended guidelines; and improve the Safe Motherhood Program; (c) maternal/infant health programs at HRSA to improve the Maternal Child Health Block grant; (d) comparative effectiveness research into the interventions for preterm birth; (e) disparities research into maternal outcomes, preterm birth and pregnancy-related depression; and (f) the development, testing and implementation of quality improvement measures and initiatives.
