AMA/Specialty Society RVS Update Committee Summary of Recommendations

October 2018

Genicular Injection and RFA

In May 2018 the CPT Editorial Panel approved the addition of two codes to report injection of anesthetic and destruction of genicular nerves by neurolytic agent.

In October 2018, the RUC facilitated this tab and thoroughly discussed the issues surrounding the survey of this family of services. The specialties noted their concern that many survey respondents appeared to be confused about the number of nerve branch injections involved with these three codes. The RUC supports the specialty societies' request for CPT codes 64454, 64640, and 64624 to be resurveyed and presented at the January 2019 RUC meeting. **The RUC recommends resurveying these services for January 2019.**

Practice Expense:
The RUC also discussed the practice expense and noted that the change in intra-service time for codes 64450 would need to also be made to the clinical labor time.

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
Nervous System **Extracranial Nerves, Peripheral Nerves, and Autonomic Nervous System** **Introduction/Injection of Anesthetic Agent (Nerve Block), Diagnostic or Therapeutic** *(For destruction by neurolytic agent or chemodenervation, see 62280-62282, 64600-64681)* *(For epidural or subarachnoid injection, see 62320, 62321, 62322, 62323, 62324, 62325, 62326, 62327)* *(64479-64487, 64490-64495 are unilateral procedures. For bilateral procedures, use modifier 50)* **Somatic Nerves**				
64400		*Injection, anesthetic agent; trigeminal nerve, any division or branch*		

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

(f)64450	G1	Injection, anesthetic agent; other peripheral nerve or branch	000	0.75 (See Tab 9 October 2018)
●64454	G2	Injection(s), anesthetic agent(s) and/or steroid; genicular nerve branches including imaging guidance, when performed (Do not report 64454 in conjunction with 64624) (64454 requires injecting all of the following genicular nerve branches: superolateral, superomedial, and inferomedial. If all three of these genicular nerve branches are not injected, report 64454 with modifier 52)	000	Resurvey for January 2019
Destruction by Neurolytic Agent (eg, Chemical, Thermal, Electrical or Radiofrequency), Chemodenervation *Codes 64600-64681 include the injection of other therapeutic agents (eg, corticosteroids). Do not report diagnostic/therapeutic injections separately. Do not report a code labeled as destruction when using therapies that are not destructive of the target nerve (eg, pulsed radiofrequency), use 64999. For codes labeled as chemodenervation, the supply of the chemodenervation agent is reported separately.* *(For chemodenervation of internal anal sphincter, use 46505)* *(For chemodenervation of the bladder, use 52287)* *(For chemodenervation for strabismus involving the extraocular muscles, use 67345)* *(For chemodenervation guided by needle electromyography or muscle electrical stimulation, see 95873, 95874)* **Somatic Nerves** *64600 Destruction by neurolytic agent, trigeminal nerve; supraorbital, infraorbital, mental, or inferior alveolar branch*				
(f)64640	G3	Destruction by neurolytic agent; other peripheral nerve or branch	010	Resurvey for January 2019
●64624	G4	Destruction by neurolytic agent genicular nerve branches including imaging guidance, when performed (64624 requires the destruction of each of the following genicular nerve branches: superolateral, superomedial, and inferomedial. If a neurolytic agent for the purposes of destruction is not applied to all of these nerve branches, report 64624 with modifier 52) (Do not report 64624 in conjunction with 64454)	010	Resurvey for January 2019

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

COMPELLING EVIDENCE

Tab 10 (Genicular Injection and RFA), October 2018 RUC

64454**,** Injection(s), anesthetic agent(s) and/or steroid; genicular nerve branches including imaging guidance, when performed

Currently, clinicians are reported services described by code 64454 with code 64450 *(Injection, anesthetic agent; other peripheral nerve or branch*). Code 64450 was surveyed for this meeting as part of Tab 9. It was previously surveyed back in 2011. The American Society of Anesthesiologists (ASA), the American Academy of Pain Medicine (AAPM), the American Academy of Physical Medicine & Rehabilitation (AAPM&R), and the Spine Intervention Society (SIS) are submitting compelling evidence for code 64454.

Change in physician work due to change in patient population

There is a change in physician work due to a change in the typical patient. When 64450 was surveyed in 2011, the typical patient had chronic burning pain and a tingling sensation in the plantar aspect of their right foot.

- 64450 Vignette: A 52-year-old female complains of chronic burning pain and a tingling sensation in the plantar aspect of her right foot. Clinical examination is consistent with tarsal tunnel syndrome. The decision is made to perform a therapeutic injection about the posterior tibial nerve utilizing local anesthetic and anti-inflammatory agent.[1]

In contrast, the typical patient for 64454 is experiencing persistent right knee pain.

- 64454 Vignette: A 78-year-old female has a 5-year history of persistent right knee pain that is interfering with her ability to complete activities of daily living. She has had poor control of her pain despite multiple medication trials and physical therapy. Due to her persistent, debilitating pain, a trial of genicular nerve blocks is scheduled to relieve her pain and improve her function.[2]

Code 64454 was created because existing nerve block procedure codes are not specific to the genicular nerve block procedures that have recently emerged as a novel alternative treatment for chronic knee pain. Superomedial, inferomedial, and superolateral genicular nerve branches have been targeted for RF neurotomy in previous studies.[3,4] These nerves have been selected for 2 reasons. First, the genicular nerves are the main innervating articular branches for the knee joint, and second, as these nerves are adjacent to the periosteum connecting the bone, they can be located using bony landmarks under fluoroscopic imaging. Needle placement has been successfully applied under fluoroscopic guidance with reference to bony landmarks.[1,2] These blocks can be performed under ultrasound guidance as well.[5]

Change in physician work due to change in technique

There is a change in physician work due to a change in technique. The work description for code 64450 describes a single injection. Code 64454, involves blocks for 3 different nerve branches (superomedial, inferomedial, and superolateral genicular nerve branches) at three locations (adjacent to the periosteum on the medial aspect of the tibia, and at both the medial and lateral aspects of the femur) in order to achieve analgesia for the respective knee. Additionally, code 64450, does not include imaging guidance when utilized.

---

[5] Evren Yasar, MD , Serdar Kesikburun, MD , Cenk Kılıç, MD , Ümüt Güzelküçük, MD , Fatih Yazar, MD , and Arif Kenan Tan, MD, Accuracy of Ultrasound-Guided Genicular Nerve Block: A Cadaveric Study Pain Physician 2015; 18:E899-E904 • ISSN 2150-1149

Specialties surveyed
All of the specialties that currently perform the 64454, were not included in the survey for 64450. The specialties that surveyed the code in 2011 included podiatry, anesthesia, pain management and interventional pain management. For the new code 64454, the specialty of podiatry does not perform the service and their inclusion would not be appropriate. Additionally, physical medicine and rehabilitation was not included in the 2011 survey. They are included in the 2018 survey.

64624 Destruction by neurolytic agent genicular nerve branches (includes imaging guidance, when performed)
Currently, clinicians are reported services described by code 64624 with code 64640 Destruction by neurolytic agent; other peripheral nerve or branch). Code 64640 is currently being surveyed for this meeting as part of this tab (10). It was previously surveyed back in 2011. The American Society of Anesthesiologists (ASA), the American Academy of Pain Medicine (AAPM), the American Academy of Physical Medicine & Rehabilitation (AAPM&R), and the Spine Intervention Society (SIS) are submitting compelling evidence for code 64624.

Change in physician work due to change in patient population
There is a change in physician work due to a change in the typical patient. When 64640 was surveyed in 2011, the typical patient had a history of neuritis of the medial calcaneal nerve.

- 64640 Vignette: A 50-year-old female has a history of neuritis of the medial calcaneal nerve. Her symptoms, including paresthesia on per-cussion and ambulation, have failed to improve following administration of multiple conservative treatment modalities. The decision is made to perform a percutaneous alcohol nerve sclerosing (PANS) injection.[6]

In contrast, the typical patient for 64624 is experiencing persistent right knee pain.

- 64624 Vignette: A 78-year-old female has a 5-year history of persistent right knee pain that is interfering with her ability to complete activities of daily living. She has had poor control of her pain despite multiple medication trials and physical therapy. Due to her persistent, debilitating pain, a trial of genicular nerve blocks was conducted and found to temporarily relieve her pain and improve her function. She is now scheduled for genicular nerve radiofrequency lesioning to provide longer term sustained pain relief.

Similar to the rationale for the creation of 64454, existing codes are not specific to the genicular RFA procedure where the genicular nerve branches are targeted for radiofrequency ablation. This service is performed on a subset of patients who experienced temporary relief from pain from a previous genicular nerve block procedure.

Change in physician work due to change in technique
There is a change in physician work. The work description for code 64640 describes a single injection. Code 64624, involves ablation for 3 different nerve branches (superomedial, inferomedial, and superolateral genicular nerve branches) at three locations (adjacent to the periosteum on the medial aspect of the tibia, and at both the medial and lateral aspects of the femur) in order to achieve analgesia for the respective knee.

Specialties surveyed
All of the specialties that currently perform the 64624, were not included in the survey for 64640. The specialties that surveyed the code in 2011 included podiatry, anesthesia, pain management and interventional pain management. For the new code 64454, the specialty of podiatry does not perform the service and their inclusion would not be appropriate. Additionally, physical medicine and rehabilitation was not included in the 2011 survey. They are included in the 2018 survey.

64640, Destruction by neurolytic agent; other peripheral nerve or branch
Code 64640 was previously surveyed back in 2011. The American Society of Anesthesiologists (ASA), the American Academy of Pain Medicine (AAPM), the American Academy of Physical Medicine & Rehabilitation (AAPM&R), and the Spine Intervention Society (SIS) are submitting compelling evidence for code 64640.

[6] RUC Database 2018v2

Change in physician work due to change in patient population
There is a change in physician work due to a change in the typical patient. When 64640 was surveyed in 2011, the typical patient had a history of neuritis of the medial calcaneal nerve.

- 64640 Vignette: A 50-year-old female has a history of neuritis of the medial calcaneal nerve. Her symptoms, including paresthesia on percussion and ambulation, have failed to improve following administration of multiple conservative treatment modalities. The decision is made to perform a percutaneous alcohol nerve sclerosing (PANS) injection.[7]

As the RUC database indicates, the current top diagnosis codes for code 64640 are not related to the calcaneal nerve. The top 5 diagnosis codes from the 2018v2 RUC database for code 64640 are:

M46	Other inflammatory spondylopathies	17.11%
G57	Mononeuropathies of lower limb	15.17%
M25	Other joint disorder, not elsewhere classified	12.42%
M47	Spondylosis	11.91%
M53	Other and unspecified dorsopathies, not elsewhere classified	11.86%

Specialties surveyed
All of the specialties that currently perform the 64624, were not included in the survey for 64640. The specialties that surveyed the code in 2011 included podiatry, anesthesia, pain management and interventional pain management. For the new code 64454, the specialty of podiatry does not perform the service and their inclusion would not be appropriate. Additionally, physical medicine and rehabilitation was not included in the 2011 survey. They are included in the 2018 survey.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:64454 Tracking Number Original Specialty Recommended RVU: **2.50**
Presented Recommended RVU: **1.90**
Global Period: 000 Current Work RVU: RUC Recommended RVU:

CPT Descriptor: Injection(s), anesthetic agent(s) and/or steroid; genicular nerve branches including imaging guidance, when performed

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 78-year-old female has a 5-year history of persistent right knee pain that is interfering with her ability to complete activities of daily living. She has had poor control of her pain despite multiple medication trials and physical therapy. Due to her persistent, debilitating pain, a trial of genicular nerve blocks is scheduled to relieve her pain and improve her function.

Percentage of Survey Respondents who found Vignette to be Typical: 97%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The clinician obtains and reviews the medical record and any pertinent imaging studies, laboratory studies and medical information. The proposed site of the procedure is identified and marked. The patient is moved to the procedure room. The clinician gowns, gloves and prepares supplies. The injection is prepared. The skin is cleansed with an antiseptic solution, sterile drapes are applied. The universal protocol ("time out") is performed with the care team.

Description of Intra-Service Work: The appropriate skin and bony landmarks are identified. The procedure is performed under fluoroscopic guidance. The superolateral, superomedial and inferomedial genicular nerves are targeted adjacent to the periosteum on the medial aspect of the tibia, and at both the medial and lateral aspects of the femur at the junctions of the shaft and the epicondyle. The skin around the planned entry point is injected with local anesthetic. Under imaging guidance, the target areas are approached by introducing a spinal needle from either an anteroposterior or lateral entry point with the final position residing adjacent to the bone. After negative aspiration, local anesthetic is deposited at each of the sites. The needle and stylet are removed, and the sites are covered with a sterile occlusive dressing.

Description of Post-Service Work: The patient is observed for bleeding or any adverse effects and for evidence of successful block. A procedure note is dictated/written and medical record entries are made.

Overall intensity/complexity	0%	10%	50%	30%	10%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	20%	40%	40%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	10%	60%	30%
Physical effort required	0%	60%	40%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	10%	50%	40%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Recommendation
Code 64454 (*Injection(s), anesthetic agent(s) and/or steroid; genicular nerve branches including imaging guidance, when performed*) is a new code that describes the performance of genicular nerve blocks with image guidance. This service is performed for pain management of chronic knee osteoarthritis. It was approved at the May 2018 CPT Editorial Panel meeting and surveyed for the October 2018 RUC meeting.

Code 64454 was surveyed by the American Society of Anesthesiologists (ASA), the American Academy of Pain Medicine (AAPM), the American Academy of Physical Medicine & Rehabilitation (AAPM&R), and the Spine Intervention Society (SIS). A total of 76 responses were received from a random sample of 3,256 clinicians (2.3 percent response rate).

The societies convened an Expert Panel to review the survey data. Based on review of the survey results, the societies agree that there may have been some confusion by survey respondents that the new code described the performance of three injections. The societies are recommending and interim value and requesting to resurvey the code for the January 2018 RUC meeting. It was also noted that this code was being reconsidered at the September 2018 CPT meeting, so the code descriptor may be updated.

The societies are recommending an interim value of 1.90 wRVUs with time of pre (7/1/1), intra (15 min) and post (10 min). This results in an IWPUT of 0.099.

Vignette
97% of the survey respondents found the vignette to be typical.

Survey Data: wRVU and Time
The Expert Panel reviewed the survey data.

64454 Highlights from Survey Data			
	25th Percentile	**Median**	**75th Percentile**
Work	1.40	1.60	2.00
Pre		24/5/5	
Intra	10	15	20
Post		9	

After review of the reviewer comments of the societies original recommended wRVU of 2.50 and time inputs, the Expert Panel agreed to recommend the following revised work RVU and time recommendations as interim and to resurvey for the January 2019 RUC meeting:

The expert panel is recommending:
- wRVU of 1.90
- Non-facility pre-service package #5, 1 minute was added for positioning (7/1/1)
- Median survey time of 15 minutes for intra-time
- 10 minutes for post-time

Subsequent to the initial recommendations, reviewer comments were unanimous in recommending 64454 along with 64624 and 64640 be valued as interim and resurveyed for the January 2019 RUC meeting. The societies agree and recommend the wRVU and times as interim and will resurvey for the January 2019 RUC meeting.

The Expert Panel discussed how in general the treatment for pain conditions has become more complex as the opioid crisis has escalated, and treatment and coverage for other non-pharmacologic and non-interventional

strategies has been limited. With worsening pain, this impacts mobility, and in general has led to a more sedentary population with increase in co-morbidities of diabetes, hypertension and obesity. These findings, particularly the increase in BMI, have led to increases in the technical skill and judgment necessary to perform the procedure as well as the associated psychological stress to reduce risk of complications, such as pneumothorax or intravascular complication.

The Expert Panel concluded that the survey RVWs were too low and did not appropriately account for the work of the 64454. Although the survey respondents indicated that they thought the vignette was for a typical patient, the Expert Panel believed the survey respondents did not understand the new code. Currently, since there is no code that specifically describes genicular nerve blocks, clinicians are reporting code 64450 which is a non-specific code used to report nerve block procedures to any peripheral nerve or branch. Code 64450 describes a single injection while an effective and complete genicular nerve block requires multiple injections. Additionally, code 64450, does not include imaging guidance and 64454 does.

Code 64454 involves blocks for 3 different nerve branches (superomedial, inferomedial, and superolateral genicular nerve branches) at three locations (adjacent to the periosteum on the medial aspect of the tibia, and at both the medial and lateral aspects of the femur) in order to achieve analgesia for the respective knee. It includes image guidance, when performed. The Expert Panel believes the survey respondents did not take the multiple nerve blocks and imaging into consideration when completing the survey. The Expert Panel therefore recommends that code 64454 be resurveyed.

Crosswalk

As an interim value, the societies recommend a crosswalk to RUC reviewed 2015 CPT code *62327 Injection(s), including indwelling catheter placement, continuous infusion or intermittent bolus, of diagnostic or therapeutic substance(s) (eg, anesthetic, antispasmodic, opioid, steroid, other solution), not including neurolytic substances, interlaminar epidural or subarachnoid, lumbar or sacral (caudal); with imaging guidance (ie, fluoroscopy or CT)* with wRVU 1.90, with times 20/15/10 with resultant IWPUT 0.10. This crosswalk is appropriate because it includes imaging and the same intra-service time as the survey.

Second Key Reference Code

The Expert Panel also noted that this recommendation also aligned well with the second key reference code, *64483 Injection(s), anesthetic agent and/or steroid, transforaminal epidural, with imaging guidance (fluoroscopy or CT); lumbar or sacral, single level* with wRVU 1.90, with times 24/15/10 with resultant IWPUT of 0.0816.

In conclusion, the societies are recommending for code 64454 an interim value of 1.90 wRVUs with time of pre (7/1/1), intra (15 min) and post (10 min).

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.

☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) Code 64450

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Anesthesiology How often? Commonly

Specialty Pain Management How often? Commonly

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 87616
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on relative volume of Medicare utilization

Specialty Anesthesiology Frequency 29000 Percentage 33.09 %

Specialty Pain Management Frequency 16000 Percentage 18.26 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 35,046 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on 2017 Medicare utilization

Specialty Anesthesiology Frequency 12228 Percentage 34.89 %

Specialty Pain Management Frequency 10556 Percentage 30.12 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number N/A

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 64450

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:64624 Tracking Number Original Specialty Recommended RVU: **3.50**
Presented Recommended RVU: **2.33**
Global Period: 010 Current Work RVU: RUC Recommended RVU:

CPT Descriptor: Destruction by neurolytic agent genicular nerve branches (includes imaging guidance, when performed)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 78-year-old female has a 5-year history of persistent right knee pain that is interfering with her ability to complete activities of daily living. She has had poor control of her pain despite multiple medication trials and physical therapy. Due to her persistent, debilitating pain, a trial of genicular nerve blocks was conducted and found to temporarily relieve her pain and improve her function. She is now scheduled for genicular nerve radiofrequency lesioning to provide longer term sustained pain relief.

Percentage of Survey Respondents who found Vignette to be Typical: 99%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 32% , In the ASC 34%, In the office 34%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 100% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The clinician obtains and reviews the medical record and any pertinent imaging studies, laboratory studies and medical information. The proposed site of the procedure is identified and marked. The patient is moved to the procedure room. The clinician gowns, gloves and prepares supplies. The injection is prepared. The skin is cleansed with an antiseptic solution, sterile drapes are applied. The universal protocol ("time out") is performed with the care team.

Description of Intra-Service Work: The appropriate skin and bony landmarks are identified. The procedure is performed under fluoroscopic guidance. The superolateral, superomedial and inferomedial genicular nerves are targeted adjacent to the periosteum on the medial aspect of the tibia, and at both the medial and lateral aspects of the femur at the junctions of the shaft and the epicondyle. The skin around the planned entry point is injected with local anesthetic. Following local anesthetic infiltration and under imaging guidance, a radiofrequency cannula is guided from either an anteroposterior or lateral entry point with the final position residing adjacent to the bone. Motor stimulation is also performed to ensure the absence of adjacent motor fibers. After positive confirmation of sensory placement and negative motor testing, local anesthetic is administered adjacent to the nerve to mitigate pain associated with radiofrequency lesioning. Radiofrequency ablation is performed. The target tissue should reach 80 degrees for 90 seconds. The needle and stylet are removed, and the sites are covered with a sterile occlusive dressing.

Description of Post-Service Work: The patient is observed for bleeding or any adverse effects and for evidence of successful block. A procedure note is dictated/written and medical record entries are made. The patient is discharged after a period of monitoring and when there is independent ambulation. At the follow-up office visit, the patient is examined and treatment success or adverse reactions that may have occurred after the procedure are discussed. Revise the treatment plan(s) as necessary. Dictate notes for the patient’s medical record.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	2%	8%	56%	25%	8%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	10%	61%	29%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	8%	65%	27%

Physical effort required	0%	56%	43%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	16%	63%	20%

2nd Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	0%	60%	40%	0%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	20%	20%	60%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	0%	80%	20%
Physical effort required	0%	60%	40%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	80%	20%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Recommendation

Code 644X1 (*Destruction by neurolytic agent genicular nerve branches (includes image guidance, when performed*) is a new code that describes destruction of 3 different nerve branches (superomedial, inferomedial, and superolateral genicular nerve branches) at three locations (adjacent to the periosteum on the medial aspect of the tibia, and at both the medial and lateral aspects of the femur) in order to achieve analgesia for the respective knee. The code was approved at the May 2018 CPT Editorial Panel meeting and surveyed for the October 2018 RUC meeting.

The 64624 was surveyed by the American Society of Anesthesiologists (ASA), the American Academy of Pain Medicine (AAPM), the American Academy of Physical Medicine & Rehabilitation (AAPM&R), and the Spine Intervention Society (SIS). A total of 71 responses were received from a random sample of 3,256 clinicians (2.1 percent response rate).

The societies convened an Expert Panel to review the survey data. Based on review of the survey results, the societies agree that there may have been some confusion by survey respondents that the new code described the performance of three injections. The societies are recommending and interim value and requesting to resurvey the code for the January 2018 RUC meeting. It was also noted that this code was being reconsidered at the September 2018 CPT meeting, so the code descriptor may be updated.

The societies convened an Expert Panel to review the survey data. Based on review of the survey results, the societies agree that the survey respondents did not properly understand the code being surveyed. ***The societies are recommending an interim crosswalk value of 2.33 wRVUs with time of pre (7/1/1), intra (20 min) and post (10 min) and 1- 99212 office visit***. This results in an IWPUT of 0.072.

Vignette

99% of the survey respondents found the vignette to be typical.

Survey Data: wRVU and Time

The Expert Panel reviewed the survey data.

64624 Highlights from Survey Data			
	25th Percentile	**Median**	**75th Percentile**
Work	2.10	3.5	3.90
Pre		26/5/5	
Intra	15	20	30
Post		9	

After review of the reviewer comments of the societies original recommended wRVU of 3.50 and time inputs, the Expert Panel agreed to recommend the following revised work RVU and time recommendations as interim and to resurvey for the January 2019 RUC meeting:

The expert panel is recommending:

- wRVU of 2.33
- Non-facility pre-service package #5, 1 minute was added for positioning (7/1/1)
- Median survey time of 20 minutes for intra-time
- 10 minutes for post-time
- 1-99212 office visit

The Expert Panel discussed how in general the treatment for pain conditions has become more complex as the opioid crisis has escalated, and treatment and coverage for other non-pharmacologic and non-interventional

strategies has been limited. With worsening pain, this impacts mobility, and in general has led to a more sedentary population with increase in co-morbidities of diabetes, hypertension and obesity. These findings, particularly the increase in BMI, have led to increases in the technical skill and judgment necessary to perform the procedure as well as the associated psychological stress to reduce risk of complications, such as pneumothorax or intravascular complication.

Similar to the survey response for 64454, the Expert Panel was concerned that the survey respondents did not understand the new code and how it differed from the code currently used to report the service, 64640 (*Destruction by neurolytic agent; other peripheral nerve or branch*. Code 64640 describes destruction of a single nerve and does not include image guidance. In contrast the new code describes the destruction of three different nerve branches and includes image guidance when performed. The Expert Panel agreed that it would be most appropriate to resurvey the code, clarifying the number of nerves and the inclusion of imaging guidance.

Crosswalk

The Expert Panel considered an appropriate interim value for 64624. While the 25th percentile survey value (2.1 wRVU) was determined to be too low, the median value (3.5 wRVU) based on reviewer feedback, was not justifiable at this time. The Expert Panel recommends an interim value based a crosswalk with a wRVU between the 25th percentile and median values. As an interim value, the societies recommend a crosswalk to RUC reviewed 2010 CPT code ***12051*** *Repair, intermediate, wounds of face, ears, eyelids, nose, lips and/or mucous membranes; 2.5 cm or less* with RVU 2.33, with times 14/20/8 and one 99212 visit, with resultant IWPUT 0.0714.

Comparison to Other Codes

The Expert Panel compared the recommendation for 64624 to other codes and identified other 10-day global codes with similar intra-time.

CPT Code	Long Desc	Work RVU	Intra Time	IWPUT	2017 Utilization
30802	Ablation, soft tissue of inferior turbinates, unilateral or bilateral, any method (eg, electrocautery, radiofrequency ablation, or tissue volume reduction); intramural (ie, submucosal)	2.08	20	0.0576	5324
17282	Destruction, malignant lesion (eg, laser surgery, electrosurgery, cryosurgery, chemosurgery, surgical curettement), face, ears, eyelids, nose, lips, mucous membrane; lesion diameter 1.1 to 2.0 cm	2.09	25	0.053	90800
67840	Excision of lesion of eyelid (except chalazion) without closure or with simple direct closure	2.09	15	0.0748	48690
12041	Repair, intermediate, wounds of neck, hands, feet and/or external genitalia; 2.5 cm or less	2.1	21	0.0571	20108
17273	Destruction, malignant lesion (eg, laser surgery, electrosurgery, cryosurgery, chemosurgery, surgical curettement), scalp, neck, hands, feet, genitalia; lesion diameter 2.1 to 3.0 cm	2.1	26	0.0513	14952
68816	Probing of nasolacrimal duct, with or without irrigation; with transluminal balloon catheter dilation	2.1	20	0.0261	243

CPT Code	Long Desc	Work RVU	Intra Time	IWPUT	2017 Utilization
11641	Excision, malignant lesion including margins, face, ears, eyelids, nose, lips; excised diameter 0.6 to 1.0 cm	2.17	20	0.0376	37,517
11602	Excision, malignant lesion including margins, trunk, arms, or legs; excised diameter 1.1 to 2.0 cm	2.27	25	0.0341	22,0175
36589	Removal of tunneled central venous catheter, without subcutaneous port or pump	2.28	13	0.0522	93,823
12051	Repair, intermediate, wounds of face, ears, eyelids, nose, lips and/or mucous membranes; 2.5 cm or less	2.33	20	0.0714	57,255
64624	**Destruction by neurolytic agent genicular nerve branches (includes image guidance, when performed**	**2.33**	**20**	**0.072**	**13,0645**
46221	Hemorrhoidectomy, internal, by rubber band ligation(s)	2.36	15	0.0479	76,203
40812	Excision of lesion of mucosa and submucosa, vestibule of mouth; with simple repair	2.37	20	0.0575	6,060
11622	Excision, malignant lesion including margins, scalp, neck, hands, feet, genitalia; excised diameter 1.1 to 2.0 cm	2.41	25	0.0397	59,479

In conclusion, the societies are recommending an interim crosswalk value of 2.33 wRVUs with time of pre (7/1/1), intra (20 min) and post (10 min) and 1- 99212 office visit.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 64640

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Anesthesiology How often? Commonly

Specialty Interventional Pain How often? Commonly

Specialty Pain Management How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 52569
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on relative volume of Medicare utilizationn

Specialty Anesthesiology Frequency 13842 Percentage 26.33 %

Specialty Interventional Pain Frequency 6834 Percentage 13.00 %

Specialty Pain Management Frequency 6429 Percentage 12.22 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 21,028 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on 2017 Medicare utilization

Specialty Anesthesiology Frequency 5537 Percentage 26.33 %

Specialty Interventional Pain Frequency 2734 Percentage 13.00 %

Specialty Pain Management Frequency 2572 Percentage 12.23 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

SUMMARY OF RECOMMENDATION

CPT Code:64640 Tracking Number Original Specialty Recommended RVU: **1.28**
Presented Recommended RVU: **1.22**
Global Period: 010 Current Work RVU: **1.23** RUC Recommended RVU:

CPT Descriptor: Destruction by neurolytic agent; other peripheral nerve or branch

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 50-year-old female has a history of neuritis of the medial calcaneal nerve. Her symptoms, including paresthesia on per-cussion and ambulation, have failed to improve following administration of multiple conservative treatment modalities. The decision is made to perform a percutaneous alcohol nerve sclerosing (PANS) injection.

Percentage of Survey Respondents who found Vignette to be Typical: 62%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 36% , In the ASC 34%, In the office 30%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 100% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The clinician obtains and reviews the medical record and any pertinent imaging studies, laboratory studies and medical information. The proposed site of the procedure is identified and marked. The patient is moved to the procedure room. The clinician gowns, gloves and prepares supplies. The injection is prepared. The skin is cleansed with an antiseptic solution, sterile drapes are applied. The universal protocol ("time out") is performed with the care team.

Description of Intra-Service Work: The appropriate skin and bony landmarks are identified. Palpate the medial calcaneal nerve and identify the point of maximal tenderness. Utilize a medial approach and insert the needle. Deposit a portion of the injectable solution. Redirect the needle proximally and deposit a portion of the injectable solution. Again redirect the needle distally and deposit the final portion of the injectable solution. The needle and stylet are removed, and the site is covered with a sterile occlusive dressing.

Description of Post-Service Work: The patient is observed for bleeding or any adverse effects and for evidence of successful block. A procedure note is dictated/written and medical record entries are made. The patient is discharged after a period of monitoring and when there is independent ambulation. At the follow-up office visit, examine the patient and discuss treatment success or adverse reactions that may have occurred after the procedure. Revise the treatment plan(s) as necessary. Dictate notes for the patient’s medical record.

• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	18%	55%	27%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

CPT code 64640 (*Destruction by neurolytic agent; other peripheral nerve or branch*) is a 10-day global code which was surveyed for the October 2018 RUC meeting by the American Society of Anesthesiologists (ASA), the American

Academy of Pain Medicine (AAPM), the American Academy of Physical Medicine & Rehabilitation (AAPM&R), and the Spine Intervention Society (SIS). It was previously surveyed in 2011.

A total of 58 responses were received from a random sample of 3,256 clinicians (1.7 percent response rate). The societies convened an Expert Panel to review the survey data. ***The societies are recommending as interim values 1.22 wRVUs and time of pre (7/1/1), intra (20 min) and post (10 min) and (1) 99212 office visit***.

Vignette

62% of survey respondents found the patient vignette to be their typical patient.

Survey Data: wRVU and Time

The Expert Panel reviewed the survey data in the table below.

64640 Highlights from Survey Data			
	25th Percentile	**Median**	**75th Percentile**
Work	1.88	2.35	3.73
Pre		24.5/6/5	
Intra	15	20	29.5
Post		10	

After review of the reviewer comments of the societies original recommended wRVU of 1.28 and time inputs, the Expert Panel agreed to recommend the following revised work RVU and time recommendations as interim and to resurvey for the January 2019 RUC meeting:

- wRVU
  - 1.22 wRVUs (crosswalk)
- Time
  - Pre-time: Facility pre-service package #5 adjusted (7/1/1)
  - Intra-time: 20 minutes (survey median)
  - Post-time 10 minutes (survey median)
  - 1-office visit (99212)
  - Total Time: 55 minutes

Subsequent to the initial recommendations, reviewer comments were unanimous in recommending 64640 along with 64454 and 64624 be valued as interim and resurveyed for the January 2019 RUC meeting. The societies agree and recommend the wRVU and times as interim and will resurvey for the January 2019 RUC meeting.

Crosswalk

The Expert Panel agreed to recommend as an interim value-1.22 wRVU. The Expert Panel is basing its recommendation on a crosswalk to code 17261 (Destruction, malignant lesion (eg, laser surgery, electrosurgery, cryosurgery, chemosurgery, surgical curettement), trunk, arms or legs; lesion diameter 0.6 to 1.0 cm) This 10-day global code was reviewed by the RUC in 2010, with wRVU of 1.22, pre-time of 7 minutes, intra time of 17 minutes, immediate post-service time of 5 minutes, one 99212, total time of 47 minutes and an IWPUT of 0.027.

Current Value

The current value of code 64640 is 1.23 wRVU, and had been surveyed in 2011.

The interim recommended wRVU of 1.22 is virtually and effectively identical.

Comparison to Other Codes

The Expert Panel compared the recommendation for 64640 to other codes and identified other 10-day global codes with similar intra-time

CPT Code	Long Descriptor	Global	Work RVU	Intra Time	IWPUT	2017 Utilization
54200	Injection procedure for Peyronie disease;	010	1.11	20	-0.0077	6,495
17261	Destruction, malignant lesion (eg, laser surgery, electrosurgery, cryosurgery, chemosurgery, surgical curettement), trunk, arms or legs; lesion diameter 0.6 to 1.0 cm	010	1.22	17	0.0268	136,140
64640	Destruction by neurolytic agent; other peripheral nerve or branch	010	1.22	20	0.016	130,645
17280	Destruction, malignant lesion (eg, laser surgery, electrosurgery, cryosurgery, chemosurgery, surgical curettement), face, ears, eyelids, nose, lips, mucous membrane; lesion diameter 0.5 cm or less	010	1.22	15	0.0303	30,930
40800	Drainage of abscess, cyst, hematoma, vestibule of mouth; simple	010	1.23	15	0.0007	1,731
11401	Excision, benign lesion including margins, except skin tag (unless listed elsewhere), trunk, arms or legs; excised diameter 0.6 to 1.0 cm	010	1.28	20	0.0232	67,925
40804	Removal of embedded foreign body, vestibule of mouth; simple	010	1.3	20	-0.0072	73
40820	Destruction of lesion or scar of vestibule of mouth by physical methods (eg, laser, thermal, cryo, chemical)	010	1.34	20	0.006	1,360
11402	Excision, benign lesion including margins, except skin tag (unless listed elsewhere), trunk, arms or legs; excised diameter 1.1 to 2.0 cm	010	1.45	25	0.0254	113,267
11421	Excision, benign lesion including margins, except skin tag (unless listed elsewhere), scalp, neck, hands, feet, genitalia; excised diameter 0.6 to 1.0 cm	010	1.47	20	0.0327	32,010
11441	Excision, other benign lesion including margins, except skin tag (unless listed elsewhere), face, ears, eyelids, nose, lips, mucous membrane; excised diameter 0.6 to 1.0 cm	010	1.53	20	0.0357	34,826
64616	Chemodenervation of muscle(s); neck muscle(s), excluding muscles of the larynx, unilateral (eg, for cervical dystonia, spasmodic torticollis)	010	1.53	15	0.0721	104,541

In summary, the societies are recommending an interim value of 1.22 wRVUs and time of pre (7/1/1), intra (20 min) and post (10 min) and (1) 99212 office visit.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.

- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) Existing code 64640

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Anesthesiology How often? Commonly

Specialty Pain Management How often? Commonly

Specialty Interventional Pain Management How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 328852
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on relative volume of Medicare utilization

Specialty Anesthesiology Frequency 77050 Percentage 23.42 %

Specialty Pain Managemnet Frequency 74485 Percentage 22.65 %

Specialty Interventional Pain Management Frequency 55313 Percentage 16.82 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 109,617 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on 2017 Medicare utilization

Specialty Anesthesiology Frequency 25683 Percentage 23.42 %

Specialty Pain Management Frequency 24828 Percentage 22.64 %

Specialty Interventional Pain Management Frequency 18438 Percentage 16.82 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Procedures

BETOS Sub-classification:
Minor procedure

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 64640

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. N/A

SS Rec Summary

INSTRUCTIONS

Insert information and data into all applicable cells except IWPUT and TOTAL TIME. These cells will automatically calculate.

Hide columns and rows that do not contain data.

1st REF = Top Key Reference code data

2st REF = Second Highest Key Reference code data

CURRENT = Current data (Harvard or RUC) for code being surveyed. If this is a new code, this row will be blank.

SVY = Survey data - as it appears on the Summary of Recommendation form.

REC = Specialty Society recommended data as it appears on the Summary of Recommendation form.

Tab 10 Practice Expense Compelling Evidence

The specialties are reviewing the comments received on practice expense inputs. We appreciate the efforts of the reviewers. We are currently updating our spreadsheets to address the issues raised by reviewers. Reviewers requested compelling evidence for our recommendations for an increase in practice expense inputs. Our practice expense compelling evidence is described below.

64454

We are requesting an increase over the aggregate current practice expense cost for clinical staff time, equipment and supplies. Code 64454 is currently billed using code 64450. Code 64450 describes a single injection, whereas the new code 64454 describes injections to three different nerve branches at three locations. Further, the new code, 64454 includes imaging when performed, whereas imaging used with 64450 is billed separately. This change in technique results in additional practice expense needs. Specifically, the change has resulted in increased pre-service time, as well as the need to include additional staff, specifically a radiology tech, in the performance of the procedure as well as some elements of the pre and post-service work. An expanded list of supplies is necessary to accommodate the three injections. Finally, an expanded list of equipment is supported by the inclusion of imaging in code 64454.

64624

We are requesting an increase over the aggregate current practice expense cost for clinical staff time, equipment and supplies. Code 64624 is currently billed using code 64640. Code 64640 describes RFA for a single nerve or branch, while the new code, 64624 describes RFA for three different nerve branches at three locations. Further, the new code, 64624 includes imaging when performed, whereas imaging used with 64640 is billed separately. This change in technique results in additional practice expense needs. Specifically, the change has resulted in increased time on the part of the radiology tech, who is needed for the imaging portion of the service. An expanded list of supplies is necessary to accommodate the increase in RFA sites from one to three. Finally, an expanded list of equipment is supported by the inclusion of imaging in code 64454.

64640

We are requesting an increase over the aggregate current practice expense cost for clinical staff time, equipment and supplies. Based on our Expert Panel review we identified a number of direct PE inputs (largely supplies) that are typically used when providing this service in the non-facility environment that are not currently included. We have confirmed that the added PE clinical labor tasks, supplies, and equipment are not included in the current inputs or packages.

CPT Code:___64454_____
Specialty Society_____AAPM, AAPM&R, ASA, SIS_____

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Non Facility Direct Practice Expense (PE) Inputs

CPT Long Descriptor: Injection(s), anesthetic agent(s) and/or steroid; genicular nerve branches including imaging guidance, when performed

Global Period:__0___ Meeting Date: __October 2018_____

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   A panel of clinicians representing each specialty society involved in the RUC survey process for the code collaborated to develop and approve the PE recommendations.

2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here:

   Using the current direct PE inputs of code 64450 as the reference code

3. Is this code(s) typically billed with an E/M service?

   No.

   Is this code(s) typically billed with the E/M service in the nonfacility?
   (Please see provided data in PE Subcommittee folder)

   No.

4. What specialty is the dominant provider in the nonfacility? *New code- N/A*
   What percent of the time does the dominant provider provide the service(s) in the nonfacility? *New code- N/A*
   Is the dominant provider in the nonfacility different then for the global? *New code- N/A*
   (Please see provided data in PE Subcommittee folder)

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time: *N/A*

6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), you must provide compelling evidence. Please explain if the increase can be entirely accounted for because of an increase in physician time. *N/A*

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here: *N/A*

8. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? (please use this time rather than 5 minutes in your reference code)

The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

We recommend 5 minutes for obtaining vital signs. The following vital signs are collected: heart rate, blood pressure, body mass index, temperature, and oxidation level.

9. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

   Staff is present and assisting physician during the entire procedure. Staff supports the physician throughout the procedure by handing over the necessary supplies (syringes, gauzes etc.), acts as a second pair of hands during the procedure assisting with supplies/equipment or directly with the patient as needed, helps to make sure patient is comfortable and monitors the patient throughout the procedure.

10. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived. *N/A*

11. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities: *N/A*

12. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov. *N/A*

13. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here: *N/A*

14. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here: *N/A*

15. List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here:

    Table, exam – default
    Room, radiographic – fluoroscopic – default
    Pulse oximeter w-printer – default
    Light, exam - default
    Technology PACS workstation – PACS
    Mayo stand - default

16. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here: *N/A*

17. If there is any other item on your spreadsheet that needs further explanation please include here:
Consent is obtained in the pre-service period of the service period on the day of the procedure (CA011), in addition to being obtained in the pre-service period (CA004).

18. Please include an explanation of each line item:

Code	**Supply**	**64454**
SA041	pack, basic injection	For performing the procedure
SB037	pillow case	For performing the procedure
SB004	cover, thermometer probe	For performing the procedure
SB026	gown, patient	For the patient
SC057	syringe 5-6ml	For performing the procedure
SH021	bupivacaine 0.25% inj (Marcaine)	For performing the procedure
SK075	skin marking pen, sterile (Skin Skribe)	For performing the procedure
SB019	drape-towel, sterile 18in x 26in	For sterile prep
SB008	drape, sterile, c-arm, fluoro	For performing the procedure
SC028	needle, 18-26g 1.5-3.5in, spinal	For performing the procedure

3. Is this code(s) typically billed with an E/M service?

   No.

   Is this code(s) typically billed with the E/M service in the nonfacility?
   (Please see provided data in PE Subcommittee folder)

   No.

4. What specialty is the dominant provider in the nonfacility? *Podiatry*
   What percent of the time does the dominant provider provide the service(s) in the nonfacility? *27%*
   Is the dominant provider in the nonfacility different then for the global? *For the global, the dominant specialty is Anesthesiology (23%)*

   (Please see provided data in PE Subcommittee folder)

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time: *N/A*

6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), you must provide compelling evidence. Please explain if the increase can be entirely accounted for because of an increase in physician time. *N/A*

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here:

8. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? (please use this time rather than 5 minutes in your reference code)
   The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

   We recommend 5 minutes for obtaining vital signs. The following vital signs are collected: heart rate, blood pressure, body mass index, temperature, and oxidation level.

9. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

   Staff is present and assisting physician during the entire procedure. Staff supports the physician throughout the procedure by handing over the necessary supplies (syringes, gauzes etc.), acts as a second pair of hands during the procedure assisting with supplies/equipment or directly with the patient as needed, helps to make sure patient is comfortable and monitors the patient throughout the procedure.

10. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived. *N/A*

11. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities: *N/A*

12. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov. *N/A*

13. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here: *N/A*

14. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here: *N/A*

15. List all the equipment included in your recommendation and the equipment formula chosen (see document titled “Calculating equipment time”). If you have selected “other formula” for any of the equipment please explain here:

    Table, exam – default
    Room, radiographic – fluoroscopic – default
    Pulse oximeter w-printer – default
    Printer, dye sublimation (photo, color) – default
    Radiofrequency kit for destruction by neurolytic agent – default
    Light, exam – default
    Technologist PACS workstation - PACS
    Radiofrequency generator (NEURO) – default

Nerve stimulator (eg, for nerve block) - default
Mayo stand - default

16. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here: *N/A*

17. If there is any other item on your spreadsheet that needs further explanation please include here: *Consent is obtained in the pre-service period of the service period on the day of the procedure (CA011), in addition to being obtained in the pre-service period (CA004).*

18. Please include an explanation of each line item:

Code	**Supply**	**64624**
SA048	pack, minimum multi-specialty visit	For day of procedure and follow up visit
SH023	chlorhexidine 0.12% (Peridex)	For sterile prep
SH022	bupivacaine 0.5% inj (Marcaine)	For performing the procedure
SH047	lidocaine 1%-2% inj (Xylocaine)	For performing the procedure
SK075	skin marking pen, sterile (Skin Skribe)	For performing the procedure
SB019	drape-towel, sterile 18in x 26in	For sterile prep
SB008	drape, sterile, c-arm, fluoro	For performing the procedure
SD087	guide, needle, for localization	For performing the procedure
SD011	cannula (radiofrequency denervation) (SMK-C10)	For performing the procedure
SA088	tray, surgical skin prep, sterile	For sterile prep
SD269	Grounding pad	For performing the procedure
SC028	needle, 18-26g 1.5-3.5in, spinal	For performing the procedure
SC051	syringe 10-12ml	For performing the procedure

AMA/Specialty Society RVS Update Committee Summary of Recommendations
Codes Reported Together 75% or More

January 2019

Cyclophotocoagulation Cataract Surgery – Tab 11

In October 2017, CPT codes 66711 and 66984 were identified as codes reported together 75% of the time or more. The RUC reviewed action plans to determine whether a code bundle solution should be developed for these services. In January 2018, the RUC recommended to refer to CPT to bundle 66711 with 66984 for CPT 2020. In May 2018, the CPT Editorial Panel revised three codes and created two new codes to differentiate cataract procedures performed with and without endoscopic cyclophotocoagulation.

66711 ***Ciliary body destruction; cyclophotocoagulation, endoscopic, without concomitant removal of crystalline lens***
The RUC reviewed the survey results from 40 ophthalmologists and determined to crosswalk the work RVU of 6.36 from key reference service code 67210 *Destruction of localized lesion of retina (eg, macular edema, tumors), 1 or more sessions; photocoagulation* (work RVU = 6.36 and 15 minutes intra-service time) to CPT code 66711. The RUC conducted a thorough search of all other potential crosswalk codes and ran into a lack of potential crosswalk codes due to the lack of similarly intense major surgical procedures with a comparable amount of skin-to-skin time, OR time and amount of post-operative care. The RUC noted that the survey intra-service time decreased 10 minutes from the current time and that the only appropriate crosswalk for this intense intraocular service is CPT code 67210. The survey respondents indicated that 66711 is more intense and complex to perform than 67210 on all measures examined (mental effort/judgment, technical skill/physical effort and psychological stress). Additionally, both services use laser ablation of tissue, making it the most clinically relatable service for comparison.

The RUC recommends 25 minutes pre-service evaluation, 3 minutes pre-service positioning, 6 minutes pre-service scrub/dress/wait pre-service time, 20 minutes intra-service time, 10 minutes immediate post-time, half a discharge day management (99238), four 99213 office visits and one 99212 office visit. The first post-operative visit is a 99212 visit on the first day after surgery in which the physician performs an exam on an un-dilated eye, checking visual acuity, intraocular pressure, incision integrity, and level of inflammation. The remaining four post-operative visits are 99213 visits approximately 1 week, 2 weeks, 1 month and 6-8 weeks postoperatively, in which the physician performs an exam on a dilated eye, checking visual acuity, intraocular pressure, incision integrity, corneal clarity, level of inflammation, and detailed examination of the central retina for cystoid macular edema. These exams must be performed on a dilated eye, as specified by practice guidelines, to check for macular edema and ensure that retinal detachment has not occurred. **The RUC recommends a work RVU of 6.36 for CPT code 66711.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Complex Cataract Removal

66982 ***Extracapsular cataract removal with insertion of intraocular lens prosthesis (1-stage procedure), manual or mechanical technique (eg, irrigation and aspiration or phacoemulsification), complex, requiring devices or techniques not generally used in routine cataract surgery (eg, iris expansion device, suture support for intraocular lens, or primary posterior capsulorrhexis) or performed on patients in the amblyogenic developmental stage; without endoscopic cyclophotocoagulation***

The RUC reviewed the survey results from 92 ophthalmologists and determined to crosswalk the work RVU of 10.25 from CPT code 67110 *Repair of retinal detachment; by injection of air or other gas (eg, pneumatic retinopexy)* (work RVU = 10.25 and 30 minutes intra-service time) to CPT code 66982. The RUC noted that the survey top key reference codes 67036 *Vitrectomy, mechanical, pars plana approach;* (work RVU = 12.13, IWPUT = 0.1075) and 65850 *Trabeculotomy ab externo* (work RVU = 11.39, IWPUT = 0.1109) have a much lower physician work intensity than the surveyed code and therefore it would be appropriate for the survey code to have a higher intra-service work per unit of time (IWPUT). The intensity of cataract surgery has not changed and the magnitude estimation in the survey data supports that the intensity of this service is high. All the intra-service time for cataract surgery is spent with both the physicians' hands inside the eye and both feet managing ultrasound and microscope foot pedals, where a slight misstep can lead to serious complications such as endophthalmitis or retinal detachment with permanent loss of vision, which contributes to the intensity of the procedure. The RUC conducted a thorough search of all other potential crosswalk codes and ran into a lack of potential crosswalk codes due to the lack of similarly intense major surgical procedures with a comparable amount of skin-to-skin time, OR time and amount of post-operative care. The RUC noted that the only appropriate crosswalk for this intense service is 67110. CPT code 66982 has less total time than 67110, but that is due to the difference in post-operative visits required for these services. Both CPT codes 66982 and 67110 require the same intra-service time of 30 minutes and CPT code 66982 is appropriately more intense than CPT code 67110. CPT code 67110 involves an injection of air into the vitreous to tamponade the retinal detachment and there is relativity less intraocular manipulation. Whereas, the intra-service work for 66982 includes work all performed inside the eye.

The RUC recommends 25 minutes evaluation, 3 minutes positioning, 7 minutes scrub/dress/wait pre-service time, 30 minutes intra-service time, 6 minutes immediate post-time, half a discharge day management (99238), three 99213 office visits and one 99212 office visit. The first post-operative visit is a 99212 visit on the first day after surgery in which the physician performs an exam on an un-dilated eye, checking visual acuity, intraocular pressure, incision integrity, and level of inflammation. The remaining three post-operative visits are 99213 visits approximately 1 week, 2-4 weeks, and 6-8 weeks postoperatively, in which the physician performs an exam on a dilated eye, checking visual acuity, intraocular pressure, incision integrity, corneal clarity, level of inflammation, and detailed examination of the central retina for cystoid macular edema and peripheral retina for tears or detachments. These exams must be performed on a dilated eye, as specified by practice guidelines, to ensure that retinal detachment has not occurred. **The RUC recommends a work RVU of 10.25 for CPT code 66982.**

66987 ***Extracapsular cataract removal with insertion of intraocular lens prosthesis (1-stage procedure), manual or mechanical technique (eg, irrigation and aspiration or phacoemulsification), complex, requiring devices or techniques not generally used in routine cataract surgery (eg, iris expansion device, suture support for intraocular lens, or primary posterior capsulorrhexis) or performed on patients in the amblyogenic developmental stage; with endoscopic cyclophotocoagulation***

The RUC reviewed the survey results from 31 ophthalmologists and determined a work RVU of 13.15 appropriately accounts for the work required to perform this service. The RUC conducted a thorough search of all other potential crosswalk codes and noted a lack of potential crosswalk codes due to the complete lack of similarly intense major surgical procedures with a comparable amount of skin-to-skin time, OR time

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

and amount of post-operative care. There are no available crosswalks to the physician work, time and intensity of this service. Therefore, the RUC used an increment approach by adding the RUC recommended difference of the standard cataract removal with endoscopic cyclophotocoagulation (CPT code 66988 RUC recommended work RVU = 10.25) compared to the standard cataract removal without endoscopic cyclophotocoagulation (CPT code 66984, RUC recommended work RVU = 7.35), which results in 2.90 (10.25 - 7.35 = 2.90). Therefore, adding the work of the endoscopic cyclophotocoagulation (2.90) to the RUC recommendation for CPT code 66982 complex cataract removal without endoscopic cyclophotocoagulation (RUC recommended work RVU = 10.25), (10.25 + 2.90 = 13.15) results in 13.15 work RVUs.

The RUC noted that the survey top key reference codes 66179 *Aqueous shunt to extraocular equatorial plate reservoir, external approach; without graft* (work RVU = 14.00, 55 minutes intra-service time and IWPUT = 0.1156) and 65285 *Repair of laceration; cornea and/or sclera, perforating, with reposition or resection of uveal tissue* (work RVU = 15.36, 90 minutes intra-service time and IWPUT = 0.0743) have a much higher intra-service time and lower IWPUT than what would be appropriate for the much more intense surveyed code. The intensity of cataract surgery has not changed and the magnitude estimation in the survey data supports that the intensity of this service is high. All the intra-service time for cataract surgery is spent with both the physicians' hands inside the eye and both feet managing ultrasound and microscope foot pedals, where a slight misstep can lead to serious complications such as endophthalmitis or retinal detachment with permanent loss of vision, which contributes to the intensity of the procedure.

The RUC recommends 30 minutes pre-service evaluation, 3 minutes pre-service positioning, 10 minutes pre-service scrub/dress/wait time, 36 minutes intra-service time, 10 minutes immediate post-time, half a discharge day management (99238), five 99213 office visits and one 99212 office visit. The first post-operative visit is a 99212 visit on the first day after surgery in which the physician performs an exam on an un-dilated eye, checking visual acuity, intraocular pressure, incision integrity, and level of inflammation. The remaining five post-operative visits are 99213 visits approximately 1, 2, 3-4, 6-8, and 10-12 weeks postoperatively, in which the physician performs an exam on a dilated eye, to check visual acuity, intraocular pressure, incision integrity, corneal clarity, level of inflammation, and detailed examination of the central retina for cystoid macular edema and peripheral retina for tears or detachments. These exams must be performed on a dilated eye, as specified by practice guidelines, to check for macular edema and ensure that retinal detachment has not occurred. **The RUC recommends a work RVU of 13.15 for CPT code 66987.**

Cataract Removal

66983 ***Intracapsular cataract extraction with insertion of intraocular lens prosthesis (1 stage procedure)***
This service is performed less than 150 times in the Medicare population and the specialty society, with the RUC's approval, did not attempt to survey this service. Based on the Medicare Provider Utilization and Payment Data: Physician and Other Supplier PUF CY2016 file, only one ophthalmologist reported this service more than 10 times. **The RUC recommends that this service be contractor priced.**

66984 ***Extracapsular cataract removal with insertion of intraocular lens prosthesis (1 stage procedure), manual or mechanical technique (eg, irrigation and aspiration or phacoemulsification); without endoscopic cyclophotocoagulation***
The RUC reviewed the survey results from 93 ophthalmologists and determined a work RVU of 7.35 appropriately accounts for the work required to perform this service. The RUC used an incremental approach by taking the value of similar service 67210 *Destruction of localized lesion of retina (eg, macular edema, tumors), 1 or more sessions; photocoagulation* (work RVU = 6.36 and 15 minutes intra-service time, IWPUT = 0.1991) and added the intensity for 5 additional intra-service minutes associated with 66984 (20 minutes intra-service time). (5 minutes x 0.1991

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

intensity of CPT code 67210 = 0.99, 6.36 + 0.99 = 7.35). The RUC conducted a thorough search of all other potential crosswalk codes and ran into a lack of potential crosswalk codes due to the complete lack of similarly intense major surgical procedures with a comparable amount of skin-to-skin time, OR time and amount of post-operative care. The RUC noted there are no distinct crosswalks to support the intensity of this service and the only appropriate code to reference with similar intensity is 67210. A minority of those surveyed, chose CPT code 67210 as a top key reference service and ranked the intensity and complexity of 66984 as somewhat more to much more than 67210. The specialty societies indicated that as an intraocular procedure, 66984 is much more intense and complex than 67210, which is an extraocular laser procedure with a contact lens placed on the eye.

The RUC noted that the survey top key reference codes 65850 *Trabeculotomy ab externo* (work RVU = 11.39, IWPUT = 0.1109) and 66184 *Revision of aqueous shunt to extraocular equatorial plate reservoir; without graft* (work RVU = 9.58, IWPUT = 0.0485) have a much lower IWPUT than what would be appropriate for the much more intense surveyed code. The intensity of cataract surgery has not changed and the magnitude estimation in the survey data supports that the intensity of this service is high. All the intra-service time for cataract surgery is spent with both the physicians' hands inside the eye and both feet managing ultrasound and microscope foot pedals, where a slight misstep can lead to serious complications such as endophthalmitis or retinal detachment with permanent loss of vision, which contribute to the intensity of the procedure.

The RUC recommends 13 minutes pre-service evaluation, 1 minutes pre-service positioning, 6 minutes pre-service scrub/dress/wait time, 20 minutes intra-service time, 5 minutes immediate post-service time, half a discharge day management (99238), two 99213 office visits and one 99212 office visit. The first post-operative visit is a 99212 visit on the first day after surgery in which the physician performs an exam on an un-dilated eye, checking visual acuity, intraocular pressure, incision integrity, and level of inflammation. The remaining two post-operative visits are 99213 visits approximately one week and one month postoperatively to check visual acuity, intraocular pressure, incision integrity, corneal clarity, level of inflammation, and detailed examination of the central retina for cystoid macular edema and peripheral retina for tears or detachments. These exams must be performed on a dilated eye as specified by practice guidelines, to check for macular edema and ensure that retinal detachment has not occurred. **The RUC recommends a work RVU of 7.35 for CPT code 66984.**

66988 ***Extracapsular cataract removal with insertion of intraocular lens prosthesis (1 stage procedure), manual or mechanical technique (eg, irrigation and aspiration or phacoemulsification); with endoscopic cyclophotocoagulation***

The RUC reviewed the survey results from 31 ophthalmologists and determined to crosswalk the work RVU of 10.25 from CPT code 67110 *Repair of retinal detachment; by injection of air or other gas (eg, pneumatic retinopexy)* (work RVU = 10.25 and 30 minutes intra-service time) to this service. The RUC noted that the survey top key reference codes 66179 *Aqueous shunt to extraocular equatorial plate reservoir, external approach; without graft* (work RVU = 14.00, 55 minutes intra-service time and IWPUT = 0.1156) and 65285 *Repair of laceration; cornea and/or sclera, perforating, with reposition or resection of uveal tissue* (work RVU = 15.36, 90 minutes intra-service time and IWPUT = 0.0743) have much higher intra-service time and lower IWPUT than what would be appropriate for the much more intense surveyed code. The intensity of cataract surgery has not changed and the magnitude estimation in the survey data supports that the intensity of this service is high. All the intra-service time for cataract surgery is spent with both the physicians' hands inside the eye and both feet managing ultrasound and microscope foot pedals, where a slight misstep can lead to serious complications such as endophthalmitis or retinal detachment with permanent loss of vision, which contributes to the intensity of the procedure. The RUC conducted a thorough search of all other potential crosswalk codes and ran into a lack of potential crosswalk codes due to the lack of similarly intense major surgical procedures with a comparable amount of skin-to-skin time, OR

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

time and amount of post-operative care. The RUC noted the only appropriate crosswalk for this intense service is 67110. CPT code 66988 has similar total time and the same intra-service time of 30 minutes. CPT code 66988 is appropriately more intense than CPT code 67110. CPT code 67110 involves an injection of air into the vitreous to tamponade the retinal detachment and there is relativity less intraocular manipulation. Whereas, the intra-service work for 66988 includes work all performed inside the eye.

The RUC recommends 25 minutes pre-service evaluation, 3 minutes pre-service positioning, 10 minutes pre-service scrub/dress/wait time, 30 minutes intra-service time, 7 minutes immediate post-time, half a discharge day management (99238), four 99213 office visits and one 99212 office visit. The first post-operative visit is a 99212 visit on the first day after surgery in which the physician performs an exam on an undilated eye, checking visual acuity, intraocular pressure, incision integrity, and level of inflammation. The remaining four post-operative visits are 99213 visits approximately 1, 2, 4, and 6-8 weeks postoperatively, in which the physician performs an exam on a dilated eye, to check visual acuity, intraocular pressure, incision integrity, corneal clarity, level of inflammation, and detailed examination of the central retina for cystoid macular edema and peripheral retina for tears or detachments. These exams must be performed on a dilated eye, as specified by practice guidelines, to check for macular edema and ensure that retinal detachment has not occurred. **The RUC recommends a work RVU of 10.25 for CPT code 66988.**

Flag
The value for CPT codes 66984 and 66987 were established using a building block methodology, the RUC notes that they should be flagged as "**Do not use to validate for physician work."**

Practice Expense
The RUC recommends the standard 090-day global period direct practice expense inputs as submitted by the specialty society.

Work Neutrality
The RUC's recommendation for this code will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
Surgery Eye and Ocular Adnexa				
▲66711	I1	Ciliary body destruction; cyclophotocoagulation, endoscopic, without concomitant removal of crystalline lens (For endoscopic cyclophotocoagulation performed at same encounter as extracapsular cataract removal with intraocular lens insertion, see 66987, 66988) *(Do not report 66711 in conjunction with 66990)*	090	6.36

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

▲66982	I2	Extracapsular cataract removal with insertion of intraocular lens prosthesis (1-stage procedure), manual or mechanical technique (eg, irrigation and aspiration or phacoemulsification), complex, requiring devices or techniques not generally used in routine cataract surgery (eg, iris expansion device, suture support for intraocular lens, or primary posterior capsulorrhexis) or performed on patients in the amblyogenic developmental stage; without endoscopic cyclophotocoagulation *(For insertion of ocular telescope prosthesis including removal of crystalline lens, use 0308T)* (For complex extracapsular cataract removal with concomitant endoscopic cyclophotocoagulation, use 66987)	090	10.25
●66987	I3	with endoscopic cyclophotocoagulation (For complex extracapsular cataract removal without endoscopic cyclophotocoagulation, use 66982) (For insertion of ocular telescope prosthesis including removal of crystalline lens, use 0308T)	090	13.15

SUMMARY OF RECOMMENDATION

CPT Code:66711 Tracking Number I1 Original Specialty Recommended RVU: **7.40**
Presented Recommended RVU: **7.35**
Global Period: 090 Current Work RVU: **7.93** RUC Recommended RVU: **6.36**

CPT Descriptor: Ciliary body destruction; cyclophotocoagulation, endoscopic, without concomitant removal of crystalline lens

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 66-year-old patient with a history of chronic glaucoma has progressive optic nerve damage and elevated intraocular pressure (IOP) that has not been controlled by medical therapy and a previous filtering operation. The patient is pseudo-phakic with a miotic pupil.

Percentage of Survey Respondents who found Vignette to be Typical: 90%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 35% , In the ASC 63%, In the office 2%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 100% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review the patient record and preoperative diagnostic testing. Discuss the planned procedure with the patient and obtain informed consent. Identify and mark the eye for surgery. Write preoperative orders for medications and pupillary dilation. Check adequacy of pupillary dilation. Perform a surgical time out. Administer sub-Tenon or retrobulbar anesthetic. Reposition the patient. Prep and drape the ocular surface. Check the settings of the photocoagulation unit and function of the light pipe.

Description of Intra-Service Work: Insert a lid speculum to allow adequate visualization. Make a multiplanar temporal clear corneal incision into the anterior chamber. Inject a small amount of viscoelastic into the anterior chamber, over the pupil and lens to protect the cornea. Then inject viscoelastic under the iris root for 180°. Use viscodissection to carefully separate the iris adhesions to the lens capsule and IOL, to facilitate visualization of the ciliary body processes with the endoscope. Insert the endoscope/laser probe through the temporal incision viewing the nasal ciliary processes on the heads-up display across the bed from the operating microscope. Reinject viscoelastic to those areas that need additional release of adhesions under direct visualization with the endoscope. While periodically viewing the position of the handpieces through the operating microscope, and continually having the OR staff manually adjusting and orienting the focus of the image on the endocyclophotocoagulation display from the lightpipe/endoscope laser probe, coagulate the ciliary processes through the endoscope.

Move the endoscope slowly in an arc of 180° allowing treatment of each individual ciliary process for several seconds with an endpoint of shrinkage and whitening. Reposition the probe to slowly apply a second row of cyclophotocoagulation to the portion of the pars plicata immediately inferior to the ciliary processes and remove the probe. Make a second multiplanar corneal incision 90° away from the first. Insert the endoscope/laser probe through this second incision and treat the contralateral ciliary processes and pars plicata to complete treatment of 270° of the processes. After completion of laser therapy, remove the viscoelastic material from the anterior segment of the eye with an irrigation and aspiration handpiece, with careful attention to remove viscoelastic trapped behind the iris. Confirm that the IOL remains in proper position. Remove the iris hooks one by one. Perform a peripheral iridectomy as necessary.

Inject a miotic drug into the anterior chamber to produce pupillary miosis as needed. Inject a corticosteroid drug into the anterior chamber and subconjunctival space. Reform the eye with balanced salt solution. Test the incisions for leaks. Suture any incisions that leak. Remove the lid speculum. Place an antibiotic ointment on the eye as necessary. Place a soft patch and a rigid shield on the operative eye.

Description of Post-Service Work: Immediate post-service work: Write post-operative orders and prescriptions for post-operative medications. Complete an operative report. Discuss the surgical procedure and post op instructions with the patient and family. Necessary follow up testing and exams as well as medications, activity and restrictions are reviewed. Communicate with the referring physician.

Postoperative visits: Patient is seen for a level 2 visit on day 1 to check visual acuity, intraocular pressure, incision integrity, and level of inflammation. The patient is seen again for dilated level 3 visits approximately 1 week, 2 weeks, 1 month, and 6-8 weeks postoperatively to check visual acuity, intraocular pressure, incision integrity, corneal clarity, level of inflammation, and detailed examination of the central retina for cystoid macular edema.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	12%	19%	50%	19%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	6%	31%	62%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	6%	31%	62%
Physical effort required	0%	31%	69%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	6%	19%	75%

2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	17%	50%	33%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	67%	33%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	33%	50%	17%
Physical effort required	50%	17%	33%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	100%	0%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

CPT 66711, *Ciliary body destruction; cyclophotocoagulation, endoscopic, without concomitant removal of crystalline lens* is being revalued as part of the family of endoscopic ciliary ablation codes associated with new CPT codes 66987 and 66988, which describe combined cataract surgery/endoscopic ciliary ablation procedures. The new codes were created because endoscopic ciliary ablation is performed over 75% of the time with cataract surgery. CPT 66711 was last reviewed by the RUC in 2004.

A random survey of American Academy of Ophthalmology, American Society of Cataract and Refractive Surgeons, and American Glaucoma Society members had 40 respondents, 90% of whom found the vignette to be typical. The median WRVU was 9.01 and the 25th percentile was 7.85. The median IST was 20 minutes. The survey showed four 99213 and one 99212 postoperative visits. The current work value of 66711 is 7.93 WRVU, with an IST of 30 minutes and the same number and level of postoperative visits.

The top key reference service, chosen by 40% of respondents, was CPT 67210, *Destruction of localized lesion of retina (eg, macular edema, tumors), 1 or more sessions; photocoagulation* (RUC 2010), with a WRVU of 6.36, an IST of 15 minutes, and three level 3 postoperative visits. The second reference service, chosen by 15% of respondents, was CPT 66185, *Revision of aqueous shunt to extraocular equatorial plate reservoir; with graft* (RUC 2014), with a WRVU of 10.58, an IST of 65 minutes, three level 2 and four level 3 postoperative visits. The respondents ranked the surveyed code as more intense and complex on all intensity and complexity measures compared to the top key reference service.

The expert panel of the AAO, ASCRS, and AGS, which is familiar with the procedure and the RUC process, reviewed the survey findings. The panel agreed with the median IST of 20 minutes and the number and level of postoperative visits. A level 2 visit is done on the first postoperative day to check vision, pressure, incision integrity, and level of inflammation. Subsequent visits at 1, 2, 4, and 6-8 weeks are dilated level 3 visits. These patients typically have significant postoperative inflammation due to the ablation of the ciliary processes, necessitating frequent dilated examinations in the postoperative period to perform a detailed examination of the posterior retina for cystoid macular edema (CME). CME occurs more commonly in the presence of postoperative inflammation. The sooner CME is detected and treated, the lower the likelihood of permanent macular changes resulting in reduced visual acuity.

We chose pre-service package 3 (straightforward patient, difficult procedure) as these are typically complex, difficult to operate eyes with a history of multiple prior procedures and miotic pupils. We reduced the package pre-service evaluation time from 33 minutes to match the survey time of 25 minutes, reduced the survey positioning time from 5 minutes to match the package time of 3 minutes, and reduced the package pre-service scrub, dress and wait time from 15 minutes to the survey time of 6 minutes. This is an increase in pre-time of 9 minutes compared to the current value. The extra time in the preoperative are is necessary for the physician to review the patient's prior surgical interventions, which are typically multiple, including cataract surgery and one or more prior failed glaucoma procedures. There are also more options available than there were in 2004, when the code was last valued, for supporting an intraocular lens that may be found to be loose or may be dislocated intraoperatively. In the past, these lenses were typically left alone if they covered the visual axis or removed if badly dislocated, but now they are supported with one of a variety of rings or sutures. While the need to use these devices intraoperatively is not typical, a discussion of and re-emphasis of prior office discussions regarding their potential use is typical in the preoperative area.

We used the survey post-service time median of 10 minutes, which is less than the 21 minutes of post-service time package 7B (local anesthesia, complex procedure) and unchanged from the current value, and one-half of a 99238 for discharge day management. Total time for the procedure is 191 minutes, with an IST of 20 minutes. Despite the 10-minute decrease in IST, the total time remains almost identical due to recognition of the increased time spent reviewing the complex past history and explaining the procedure in the pre-operative area.

As with CPT 66984 in this family, we were unable to find adequate crosswalk codes for the 25th percentile work value. In the absence of a crosswalk, we initially chose a work value recommendation of 7.40 WRVU, below the 25th percentile, based on matching the IWPUT to the current value. The reviewers were concerned with this atypical methodology and recommended pre-facilitation.

As a result of pre-facilitation, we are now recommending a crosswalk to the work value of the top key reference service, CPT 67210, *Destruction of localized lesion of retina (eg, macular edema, tumors), 1 or more sessions; photocoagulation* (RUC 2010), with 6.36 WRVU, an IST of 15 minutes, and total time of 106 minutes. While the IST and total times don't match exactly, laser ablation of tissue is used in both CPT 67111 and our primary KRS, CPT 67210, making it a logical crosswalk from a clinical perspective. **Therefore, our recommended work value for CPT 66711 is 6.36 WRVU (IWPUT is 0.023), well below the survey's 25th percentile, with times of 34/20/10 minutes and a total time of 191 minutes.**

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☒ Other reason (please explain) CPT 66711 is frequently billed in conjunction with 66982 or 66984, cataract surgery. New CPT codes have been established to capture the combined services, which should reduce the reporting of 66711 with other CPT codes.

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. N/A

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) N/A

How often do physicians <u>in your specialty</u> perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Ophthalmology How often? Sometimes

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 4500
If the recommendation is from multiple specialties, please provide the frequency and <u>percentage</u> for each specialty. Please explain the rationale for this estimate. Estimation Only

Specialty Opthalmology Frequency 4500 Percentage 100.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 3,000
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC Database

CPT Descriptor: Extracapsular cataract removal with insertion of intraocular lens prosthesis (1-stage procedure), manual or mechanical technique (eg, irrigation and aspiration or phacoemulsification), complex, requiring devices or techniques not generally used in routine cataract surgery (eg, iris expansion device, suture support for intraocular lens, or primary posterior capsulorrhexis) or performed on patients in the amblyogenic developmentalstage; without endoscopic cyclophotocoagulation

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 71-year-old female presents with chronic angle closure glaucoma and posterior synechiae with fixed miotic pupil who has now developed a cataract. Cataract removal with IOL placement is recommended with iris hooks to open the small pupil.

Percentage of Survey Respondents who found Vignette to be Typical: 91%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 27% , In the ASC 72%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 100% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review the patient record and preoperative diagnostic testing. Discuss the planned procedure with the patient and family and obtain informed consent. Identify and mark the eye for surgery. Write preoperative orders for medications and pupillary dilation. Perform a surgical time out. Administer topical, sub-Tenon or retrobulbar anesthetic. Reposition the patient. Prep and drape the ocular surface.

Description of Intra-Service Work: : Insert a lid speculum. Position the microscope. Make a side-port incision 45 to 90 degrees away from the intended site of the surgical incision. Fill the anterior chamber with a viscoelastic. Create a temporal multiplanar limbal/corneal incision into the anterior chamber. Make four additional 1-mm incisions at the limbus in order to place iris hooks in a diamond pattern around the eye. One by one, insert the iris hooks into the incisions and manipulate to retract the iris. Reposition the iris hooks in the areas of loose zonules to better support the iris and the capsule during subsequent steps of cataract removal.

Enter the eye through the main incision with a sharp bent needle to open the anterior capsule, followed by forceps to fashion a circular opening in the anterior capsule of the cataract. Insert a cannula into the eye to perform hydrodissection by injecting balanced salt solution between the lens cortex and capsule, loosening the nuclear and cortical layers of the lens in the process, while maintaining the integrity of the capsule. Hydrodelineate as needed by injecting balanced salt solution between the lens cortex and nucleus. Inject additional viscoelastic into the anterior chamber of the eye prior to phacoemulsification. Check the function of the phacoemulsification handpiece and the machine settings. Remove bubbles by tapping the handpiece with irrigation on. Insert the phacoemulsification tip into the eye and a second instrument through the side port incision.

Using both hands as well as the foot actuated phaco pedal, carefully perform phacoemulsification with simultaneous aspiration of the lens nuclear material. Rotate and dis-assemble the lens to avoid inadvertent trauma to the cornea, lens

capsule or iris. Add viscoelastic as needed to maintain a safe working space. Remove the phacoemulsification tip and the second instrument from the eye once all of the nuclear material has been removed. Introduce an irrigation and aspiration tip into the eye to aspirate the remainder of the cortical lens material. Then carefully vacuum and polish the interior surface of the thin lens capsule in an attempt to avoid future secondary membrane formation.

Assess the integrity of the capsule and zonules and determine how much additional support the capsular bag and intraocular lens (IOL) will require. Enlarge incisions and create scleral flaps as needed for the IOL and support system chosen. Insert and suture a capsular tension ring or segment as needed. While maintaining traction on the eye via the side port incision, insert the tip of the IOL injection device into the main incision and place the IOL in the eye. Once in the eye, allow the IOL to unfold without damage to the cornea. Properly position and center the IOL using a lens hook. Suture the IOL and/or capsular bag/zonular complex as needed. Remove the viscoelastic material from the anterior segment of the eye with an irrigation and aspiration handpiece. Remove the iris hooks one by one. Perform a peripheral iridectomy as necessary.

Inject a miotic drug into the anterior chamber to produce pupillary miosis as needed. Reform the eye with balanced salt solution and adjust the intraocular pressure to a physiologic range. Test the incisions for leaks. Suture any incisions that leak. Remove the lid speculum. Place an antibiotic ointment on the eye as necessary. Place a soft patch and a rigid shield on the operative eye.

Description of Post-Service Work: Immediate post-service work: Write post-operative orders and prescriptions for post-operative medications. Complete an operative report. Discuss the surgical procedure and post op instructions with the patient and family. Necessary follow up testing and exams as well as medications, activity and restrictions are reviewed. Communicate with the referring physician.

Postoperative visits: Patient is seen for a level 2 visit on day 1 to check visual acuity, intraocular pressure, incision integrity, and level of inflammation. The patient is seen again for dilated level 3 visits approximately 1 week, 2-4 weeks, and 6-8 weeks postoperatively to check visual acuity, intraocular pressure, incision integrity, corneal clarity, level of inflammation, and detailed examination of the central retina for cystoid macular edema and peripheral retina for tears or detachments.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	21%	47%	32%	0%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	21%	53%	26%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	0%	74%	26%
Physical effort required	5%	69%	26%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	53%	47%

2nd Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	28%	33%	28%	11%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	33%	39%	28%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	11%	28%	61%
Physical effort required	11%	61%	28%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	22%	39%	39%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

CPT 66982, *Extracapsular cataract removal with insertion of intraocular lens prosthesis (1-stage procedure), manual or mechanical technique (eg, irrigation and aspiration or phacoemulsification), complex, requiring devices or techniques not generally used in routine*
cataract surgery (eg, iris expansion device, suture support for intraocular lens, or primary posterior capsulorrhexis) or performed on patients in the amblyogenic developmental stage; without endoscopic

cyclophotocoagulation is being revalued as part of the family of cataract surgery codes associated with new CPT codes 66987 and 66988, which describe combined cataract surgery/endoscopic ciliary ablation procedures. The new codes were created because endoscopic ciliary ablation is performed over 75% of the time with cataract surgery. CPT 66982 was last valued by the RUC in 2012.

A random survey of American Academy of Ophthalmology, American Society of Cataract and Refractive Surgeons, and American Glaucoma Society members had 92 respondents, 91% of whom found the vignette to be typical. The median WRVU was 12.89 and the 25th percentile was 11.50. The median IST was 30 minutes. The survey showed four 99213 postoperative visits. The current work value of 66982 is 11.08 WRVU, with an IST of 33 minutes, two level 2 and two level 3 postoperative visits.

The expert panel of the AAO, ASCRS, and AGS, which is familiar with the procedure and the RUC process, reviewed the survey findings. The key reference service comparisons proved problematic as only 21% of respondents chose the primary reference service, CPT 67036, *Vitrectomy, mechanical, pars plana approach* (RUC 2013), with a WRVU of 12.13, an IST of 50 minutes, and five level 3 postoperative visits. Only 20% of respondents chose CPT 65850, *Trabeculotomy ab externo* (RUC 2005), with 11.39 WRVU, an IST of 60 minutes, and five level 2 postoperative visits as a reference service. While respondents who ranked the intensity and complexity of the reference codes similar to that of the surveyed code, an almost equal number (17%) chose CPT 66179 *Aqueous shunt to extraocular equatorial plate reservoir, external approach; without graft* (RUC 2015), with 14.00 WRVU, an IST of 55 minutes, and 8 postoperative visits. Respondents ranked CPT 66179, which has a similar IWPUT as the top 2 reference codes, as lower in intensity and complexity than the surveyed code. As with the survey for CPT 66984, the panel believes that the low percentage of respondents who chose each reference service reflect the dissimilarity between cataract surgery and other intraocular procedures, and that respondents picked reference codes based primarily on similarity to their chosen work value estimates. That they ranked CPT 66982 as more intense than CPT 66179 (aqueous shunt, IWPUT 0.1156) but similar in intensity to CPT 67036 (vitrectomy, IWPUT 0.108) and CPT 65850 (trabeculectomy, IWPUT 0.111) highlights the inconsistency between the intensity/complexity metrics and the actual intensities of the reference codes, making it problematic to use the key reference services to compare complexity in this survey.

The panel agreed with the median IST of 30 minutes and the survey findings of four postoperative visits. However, the panel felt that rather than four 99213 visits as supported by the survey, the first postoperative visit should be a level 2, which is typical of the work associated with an undilated examination to check vision, pressure, incision integrity, and inflammation. The subsequent postoperative visits at 1 week, 2-4 weeks, and 6-8 weeks are all dilated level 3 visits to assess IOL position and presence of macular edema and peripheral retinal tears or detachments in addition to the portions of the exam that can be performed without dilation (checking vision, intraocular pressure, and status of the anterior segment of the eye). The Academy's Preferred Practice Pattern recommends dilated examinations in the postoperative period, specifically to assess for macular edema. The largest professional liability insurer of ophthalmologists (OMIC) emphasizes the importance of dilated examinations to their insureds because in their claims database, the most common missed diagnosis leading to claims is retinal detachment due to failure to perform a dilated examination. An additional visit compared to CPT 66984 is necessary in these patients with more complex eyes and greater degrees of inflammation and risk of lens implant dislocation and retinal disease. The increase in one of the postoperative visits from level 2 to level 3 compared to the current value of the code is also supported by the survey and is consistent with the typical postoperative course.

We chose pre-service package 3 (straightforward patient, difficult procedure) as these are complex cases with multiple potential variants of the procedure that may be necessary as the procedure develops, and these need to be re-reviewed by the surgeon and discussed with the patient immediately prior to surgery in the preoperative area. We reduced the package pre-service evaluation time from 33 minutes to match the survey time of 25 minutes, reduced the survey positioning time from 5 minutes to match the package time of 3 minutes, and reduced the package pre-service scrub, dress and wait time from 15 minutes to the survey time of 7 minutes.

This represents a 10-minute increase in pre-service time compared to the current value of the code, and is necessary because of the increased number of options for lens fixation that may arise during surgery and the need to discuss their potential effect on planned visual outcome. We used the survey post-service time median of 6 minutes, which is less than the 21 minutes of post-service time package 7B (local anesthesia, complex procedure) and a 4-minute decrease compared to the current value, and one-half of a 99238 for discharge day management. Total time for the procedure is 175 minutes, with an IST of 30 minutes.

Despite the 3-minute decrease in IST and 10-minute increase in total time, the panel felt that the overall work of the procedure was unchanged, and initially recommended maintaining the work value at 11.04 WRVU. The expert panel believes that cataract surgery has not decreased in intensity since last valued. It is almost entirely an intraocular procedure. Nearly all of the 30 minutes of IST is spent working inside the eye, where a miniscule error can result in a ruptured capsule with a dropped nucleus, leading to an increased risk of serious complications such as endophthalmitis or retinal detachment with permanent loss of vision. The lens capsule is less than 5 microns thick posteriorly. That thin, mobile membrane serves as the only barrier between an uncomplicated case and a complicated one. While those complications are uncommon, they are always only a few microns away and contribute to the technical skill requirements and intensity of the intraservice work. Cataract surgery has not become any less intense over the years and remains intense throughout the course of the procedure. If anything, the intensity of the work has increased over time as patient expectations for "perfect vision" after cataract surgery have become typical. However, there are no crosswalks to support this work value because of its high intensity. Further, the low number of respondents choosing each reference service and the inconsistency of their intensity rankings made use of the KRS problematic. The reviewers were concerned with these issues, and for that reason we sought pre-facilitation.

As a result of pre-facilitation, we have chosen a crosswalk to CPT 67110, *Repair of retinal detachment; by injection of air or other gas (eg, pneumatic retinopexy)* (RUC 2015), with 10.25 WRVU, 30 minutes IST and 196 minutes total time. Although somewhat shorter in total time due to fewer postoperative visits, the intraservice portion of CPT 66982 is of greater intensity than CPT 67110, making for a reasonable work value crosswalk. **We recommend a work value of 10.25 WRVU for CPT 66982, below the survey's 25th percentile value, crosswalked to CPT 67110, and with times of 35/30/6 and a total time of 175 minutes.**

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. N/A

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) N/A

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Ophthalmology How often? Sometimes

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 245175

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 163,451 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC database

Specialty Ophthalmology Frequency 163451 Percentage 100.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment
Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Eye procedure

BETOS Sub-classification Level II:
Cataract removal/lens insertion

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 66982

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:66987 Tracking Number I3 Original Specialty Recommended RVU: **13.50**
Presented Recommended RVU: **13.15**
Global Period: 090 Current Work RVU: **N/A** RUC Recommended RVU: **13.15**

CPT Descriptor: Extracapsular cataract removal with insertion of intraocular lens prosthesis (1-stage procedure), manual or mechanical technique (eg, irrigation and aspiration or phacoemulsification), complex, requiring devices or techniques not generally used in routine cataract surgery (eg, iris expansion device, suture support for intraocular lens, or primary posterior capsulorrhexis) or performed on patients in the amblyogenic developmental stage; with endoscopic cyclophotocoagulation

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 66-year-old female with a history of visually significant cataract and chronic glaucoma and that is not controlled by current therapy. Combined cataract removal, intraocular lens implantation, and treatment of the ciliary processes with endoscopic cyclophotocoagulation to reduce aqueous production is recommended. Iris hooks are needed to open the small pupil.

Percentage of Survey Respondents who found Vignette to be Typical: 97%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 23% , In the ASC 77%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 100% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review the patient record and preoperative diagnostic testing. Discuss the planned procedure with the patient and obtain informed consent. Identify and mark the eye for surgery. Write preoperative orders for medications and pupillary dilation. Check adequacy of pupillary dilation. Perform a surgical time out. Administer sub-Tenon or retrobulbar anesthetic. Reposition the patient. Prep and drape the ocular surface. Check the settings of the photocoagulation unit and function of the light pipe.

Description of Intra-Service Work: Insert a lid speculum. Make a side-port incision remote from the anticipated surgical incision. Fill the anterior chamber with a viscoelastic. Create a temporal multiplanar limbal/corneal incision into the anterior chamber. Make four additional 1-mm incisions at the limbus in order to place iris hooks in a diamond pattern around the eye. One by one, insert the iris hooks into the incisions and manipulate to retract the iris. Reposition the iris hooks in the areas of loose zonules to better support the iris and the capsule during subsequent steps of cataract removal.

Use sharp bent needle and forceps to fashion an opening in the anterior capsule of the cataract. Perform hydrodissection by injecting fluid between the lens cortex and capsule, loosening the lens in the process. Hydrodelineate as needed by injecting fluid between the lens cortex and nucleus. Inject additional viscoelastic into the anterior chamber prior to phacoemulsification. Check the function of the phacoemulsification handpiece and the machine settings. Remove bubbles by tapping the handpiece with irrigation on. Insert the phacoemulsification tip into the eye. Perform phacoemulsification with simultaneous aspiration of the lens nuclear material. Rotate and dis-assemble the lens to avoid inadvertent trauma to the cornea, lens capsule or iris. Use the side-port incision to allow access for a second instrument to aid in the disassembly process. Remove the phacoemulsification tip from the eye once all of the nuclear material has been removed. Introduce an irrigation-aspiration tip into the eye to aspirate the remainder of the cortical lens material. Then carefully vacuum and polish the thin posterior lens capsule in an attempt to avoid future secondary membrane formation.

Assess the integrity of the capsule and zonules and determine how much additional support the capsular bag and intraocular lens (IOL) will require. Enlarge incisions and create scleral flaps as needed for the IOL and support system chosen. Insert and suture a capsular tension ring or segment as needed. Place the IOL in the eye using an injection device. Once in the eye, position and center the lens properly using a lens hook. Suture the IOL and/or capsular bag/zonular complex as needed.

Re-inject a small amount of viscoelastic into the anterior chamber, over the pupil and lens to protect the cornea. Then inject viscoelastic under the iris root for 180° to facilitate visualization of the ciliary body processes with the endoscope. Insert the endoscope/laser probe through the temporal incision viewing the nasal ciliary processes on the heads-up display across the bed from the operating microscope. While periodically viewing the position of the handpieces through the operating microscope, and continually having the OR staff manually adjusting and orienting the focus of the image on the endocyclophotocoagulation display from the lightpipe probe, coagulate the ciliary processes through the endoscope with the endpoint of shrinkage and whitening. Move the endoscope slowly in an arc allowing treatment of each individual process over an arc of 180° and remove the probe. Make a second corneal incision 90° away from the first or enlarge the prior side-port incision if it is properly positioned. Insert the endoscope/laser probe through this second incision and treat the contralateral ciliary processes to complete treatment of 270° to 360° of the processes. After completion of laser therapy, remove the viscoelastic material from the anterior segment of the eye with an irrigation and aspiration handpiece, with careful attention to remove viscoelastic trapped behind the iris. Confirm that the IOL remains in the proper position. Remove the iris hooks one by one. Perform a peripheral iridectomy as necessary.

Inject a miotic drug into the anterior chamber to produce pupillary miosis as needed. Inject a corticosteroid drug into the anterior chamber. Reform the eye with balanced salt solution. Test the incisions for leaks. Suture any incisions that leak. Remove the lid speculum. Place an antibiotic ointment on the eye as necessary. Place a soft patch and a rigid shield on the operative eye.

Description of Post-Service Work: Immediate post-service work: Write post-operative orders and prescriptions for post-operative medications. Complete an operative report. Discuss the surgical procedure and post op instructions with the patient and family. Necessary follow up testing and exams as well as medications, activity and restrictions are reviewed. Communicate with the referring physician.

Postoperative visits: Patient is seen for a level 2 visit on day 1 to check visual acuity, intraocular pressure, incision integrity, and level of inflammation. The patient is seen again for dilated level 3 visits approximately 1, 2, 3-4, 6-8, and 10-12 weeks postoperatively to check visual acuity, intraocular pressure, incision integrity, corneal clarity, level of inflammation, and detailed examination of the central retina for cystoid macular edema and peripheral retina for tears or detachments.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	10%	20%	60%	10%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	50%	50%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	30%	70%
Physical effort required	10%	40%	50%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	40%	60%

2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	25%	38%	37%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	13%	87%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	25%	75%
Physical effort required	0%	13%	87%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	13%	87%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

CPT 66987, *Extracapsular cataract removal with insertion of intraocular lens prosthesis (1-stage procedure), manual or mechanical technique (eg, irrigation and aspiration or phacoemulsification), complex, requiring devices or techniques not generally used in routine cataract surgery (eg, iris expansion device, suture support for intraocular lens, or primary posterior capsulorrhexis) or performed on patients in the amblyogenic developmental stage; with endoscopic cyclophotocoagulation body destruction* is a new CPT code combining

complex cataract surgery and IOL surgery with endoscopic ciliary ablation for glaucoma because the latter procedure is performed over 75% of the time with cataract surgery. This procedure was previously reported with CPT 66982 and CPT 66711, and subject to the multiple procedure payment reduction.

A random survey of American Academy of Ophthalmology, American Society of Cataract and Refractive Surgeons, and American Glaucoma Society members had 31 respondents, 97% of whom found the vignette to be typical. The median WRVU was 14.88 and the 25th percentile was 13.50. The median IST was 36 minutes. The survey showed five 99213 and one 99212 postoperative visits.

The top key reference service, chosen by 32% of respondents, was CPT 66179, *Aqueous shunt to extraocular equatorial plate reservoir, external approach; without graft* (RUC 2014), with a WRVU of 14.00, an IST of 55 minutes, and five level 3 and three level 2 postoperative visits. The second reference service, chosen by 26% of respondents, was CPT 65285, *Repair of laceration; cornea and/or sclera, perforating, with reposition or resection of uveal tissue* (RUC 2011), with a WRVU of 15.36, an IST of 90 minutes, and six level 3 and one level 2 postoperative visits. The respondents ranked the surveyed code as more intense and complex on all intensity and complexity measures compared to both key reference services.

The expert panel of the AAO, ASCRS, and AGS, which is familiar with the procedure and the RUC process, reviewed the survey findings. The panel agreed with the median IST of 36 minutes and the number and level of postoperative visits. A level 2 visit is done on the first postoperative day to check vision, pressure, incision integrity, and level of inflammation. These patients typically have significantly greater than normal postoperative inflammation and unstable IOP due to the combined nature of the procedure with ciliary body ablation, as well as the potential for IOL dislocation, necessitating more frequent dilated examinations in the postoperative period than the standalone cataract (CPT 66982) or endocyclophotocoagulation (CPT 66711) procedures. Dilated level 3 examinations are typical at 1, 2, 3-4, 6-8, and 10-12 weeks postoperatively because of the need for detailed examination of the posterior retina for macular edema, the peripheral retina for tears or detachments, and the peripheral intraocular lens implant for decentration and stability.

We chose pre-service package 3 (straightforward patient, difficult procedure) as these are typically complex, difficult to operate eyes with miotic pupils. We reduced the package pre-service evaluation time from 33 minutes to match the survey time of 30 minutes, which is necessary to review the history and explain the multiple surgical options that may be taken during the procedure. We reduced the survey positioning time from 5 minutes to match the package time of 3 minutes, and reduced the package pre-service scrub, dress and wait time from 15 minutes to the survey time of 10 minutes. As with the standalone complex cataract procedure (CPT 66982), there are an increased number of options for lens fixation that may arise during surgery which must be reviewed by the physician and discussed with the patient to explain their potential effect on the expected length of the procedure and planned visual outcome. These patients also typically require a greater wait time after the anesthetic injection than cataract surgery or ciliary ablation cases done alone because the combined cases take longer and involve direct cauterization of sensitive uveal tissue, so longer acting drugs which take longer to take effect (e.g. bupivacaine) are typically employed. The physician typically does a personal check of the settings and function of the photocoagulation unit, monitor and light pipe prior to the incision. We used the survey post-service time median of 10 minutes, which is less than the 21 minutes of post-service time package 7B (local anesthesia, complex procedure), and one-half of a 99238 for discharge day management. Total time for the procedure is 239 minutes, with an IST of 36 minutes.

We were unable to find a high-quality crosswalk for the survey's 25th percentile work value of 13.50 WRVU. After pre-facilitation of the other codes in this family, we determined that a building block type method, based on the adding the difference in work value between CPT 66984 and CPT 66988 to the work value of CPT 66982, would most fairly and appropriately value 66987. The recommended work value of CPT 66984 is 7.35 WRVU and CPT 66988 is 10.25 WRVU. The difference of 2.90 WRVU represents the work of the added ciliary photoablation portion of the procedure. Adding this work value to the recommended value for complex cataract surgery alone (CPT 66982) yields a combined procedure work value of 13.15, slightly below the survey's 25th percentile. **We recommend a work value of 13.15 WRVU for CPT 66987, with times of 43/36/10 and a total time of 239 minutes.**

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. N/A

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) N/A

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Ophthalmology How often? Sometimes

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 1500
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Estimation Only

Specialty Ophthalmology Frequency 1500 Percentage 100.00 %

Specialty Frequency 0 Percentage 0.00 %

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Eye procedure

BETOS Sub-classification Level II:
Cataract removal/lens insertion

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 66982

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:66984 Tracking Number I5 Original Specialty Recommended RVU: **8.04**
Presented Recommended RVU: **7.41**
Global Period: 090 Current Work RVU: **8.52** RUC Recommended RVU: **7.35**

CPT Descriptor: Extracapsular cataract removal with insertion of intraocular lens prosthesis (1 stage procedure), manual or mechanical technique (eg, irrigation and aspiration or phacoemulsification); without endoscopic cyclophotocoagulation

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 70-year-old female complains of vision problems. Examination reveals that a cataract in her right eye has progressed to the point of visual impairment. She has difficulty reading and recently failed a driving test.

Percentage of Survey Respondents who found Vignette to be Typical: 99%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 24% , In the ASC 73%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 96% , Overnight stay-less than 24 hours 4% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review the patient record and preoperative diagnostic testing. Discuss the planned procedure with the patient and obtain informed consent. Identify and mark the eye for surgery. Write preoperative orders for medications and pupillary dilation. Check adequacy of pupillary dilation. Perform a surgical time out. Administer topical, sub-Tenon or retrobulbar anesthetic. Reposition the patient. Prep and drape the ocular surface.

Description of Intra-Service Work: : Insert a lid speculum. Position the microscope. Make a side-port incision 45 to 90 degrees away from the intended site of the surgical incision. Fill the anterior chamber with a viscoelastic. Create a temporal multiplanar limbal/corneal incision into the anterior chamber. Enter the eye through the main incision with a sharp bent needle to open the anterior capsule, followed by forceps to fashion a circular opening in the anterior capsule of the cataract. Insert a cannula into the eye to perform hydrodissection by injecting balanced salt solution between the lens cortex and capsule, loosening the nuclear and cortical layers of the lens in the process, while maintaining the integrity of the capsule. Hydrodelineate as needed by injecting fluid between the lens cortex and nucleus. Inject additional viscoelastic into the anterior chamber prior to phacoemulsification. Check the function of the phacoemulsification handpiece and the machine settings. Remove bubbles by tapping the handpiece with irrigation on. Insert the phacoemulsification tip into the eye and a second instrument through the side port incision. Using both hands and the foot actuated phaco pedal, carefully perform phacoemulsification with simultaneous aspiration of the lens nuclear material. Rotate and dis-assemble the lens to avoid inadvertent trauma to the cornea, lens capsule or iris. Add viscoelastic as needed to maintain a safe working space. Remove the phacoemulsification tip and second instrument from the eye. Introduce an irrigation and aspiration tip into the eye to aspirate the remainder of the cortical lens material. Then carefully vacuum and polish the interior surface of the thin lens capsule in an attempt to avoid future secondary membrane formation.

Adjust the size of the incision as needed to accommodate the intraocular lens (IOL). While maintaining traction on the eye via the side port incision, insert the tip of the IOL injection device into the main incision and place the IOL in the eye. Once in the eye, allow the IOL unfold without damage to the cornea. Properly position and center the IOL into the capsular bag using a lens hook.
Remove the viscoelastic material from the anterior segment of the eye with an irrigation and aspiration handpiece. Inject a miotic drug into the anterior chamber to produce pupillary miosis as needed. Reform the eye with balanced salt solution

and adjust the intraocular pressure to a physiologic range. Test the incisions for leaks. Suture any incisions that leak. Remove the lid speculum. Place an antibiotic ointment on the eye as necessary. Place a soft patch and a rigid shield on the operative eye.

Description of Post-Service Work: Immediate post-service work: Write post-operative orders and prescriptions for post-operative medications. Complete an operative report. Discuss the surgical procedure and post op instructions with the patient and family. Necessary follow up testing and exams as well as medications, activity and restrictions are reviewed. Communicate with the referring physician.

Postoperative visits: Patient is seen for a level 2 visit on day 1 to check visual acuity, intraocular pressure, incision integrity, and level of inflammation. The patient is seen again for dilated level 3 visits approximately 1 week and 1 month postoperatively to check visual acuity, intraocular pressure, incision integrity, corneal clarity, level of inflammation, and detailed examination of the central retina for cystoid macular edema and peripheral retina for tears or detachments.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	26%	37%	37%	0%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	26%	53%	21%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	16%	32%	52%
Physical effort required	16%	63%	21%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	32%	37%	31%

2nd Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	28%	45%	22%	5%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	55%	33%	11%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	17%	28%	55%
Physical effort required	50%	33%	16%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	11%	39%	50%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

CPT 66984, *Extracapsular cataract removal with insertion of intraocular lens prosthesis (1 stage procedure), manual or mechanical technique (eg, irrigation and aspiration or phacoemulsification), without endoscopic cyclophotocoagulation* is being revalued as part of the family of cataract surgery codes associated with new

CPT codes 66X01 and 66X02, which describe combined cataract surgery/endoscopic ciliary ablation procedures. The new codes were created because endoscopic ciliary ablation is performed over 75% of the time with cataract surgery. CPT 66984 was last valued by the RUC in 2012.

A random survey of American Academy of Ophthalmology, American Society of Cataract and Refractive Surgeons, and American Glaucoma Society members had 93 respondents, 99% of whom found the vignette to be typical. The median WRVU was 11.39 and the 25th percentile was 10.10. The median IST was 20 minutes. The survey showed three 99213 postoperative visits. The current work value of 66984 is 8.52 WRVU, with an IST of 21 minutes, two level 2 and two level 3 postoperative visits.

The expert panel of the AAO, ASCRS, and AGS, which is familiar with the procedure and the RUC process, reviewed the survey findings. The key reference service comparisons proved problematic as only 20% chose the primary reference service, CPT 65850, *Trabeculotomy ab externo* (RUC 2005), with a WRVU of 11.39, an IST of 60 minutes, and five level 2 postoperative visits. Only 19% of respondents chose CPT 66184, *Revision of aqueous shunt to extraocular equatorial plate reservoir; without graft* (RUC 2014), with 9.58 WRVU, 60 minutes IST, and 3 level 2 and 4 level 3 postop visits as a reference service. While respondents who ranked the intensity and complexity of the reference codes similar to that of the surveyed code, those who chose CPT 67210, *Destruction of localized lesion of retina (eg, macular edema, tumors), 1 or more sessions; photocoagulation* (RUC 2010) as a reference ranked the surveyed code higher or much higher in intensity than the surveyed code. The wide distribution of choices among the RSL reflects the dissimilarity between cataract surgery and other intraocular procedures. The panel believes that the most popular RSL choices were made by respondents because their work values are close to the work values they selected by magnitude estimation for the surveyed code. The fact that respondents ranked CPT 66984 as more intense than CPT 67210 (IWPUT 0.199) but equal in intensity to CPT 65850 (IWPUT 0.111) and CPT 66184 (IWPUT 0.048) highlights the inconsistency between the intensity/complexity metrics and the actual intensities of the reference codes, making it problematic to use the key reference services to compare complexity in this survey.

The panel agreed with the survey median IST of 20 minutes (almost identical to the current value of 21 minutes) and the survey findings of three postoperative visits (one less than the current value). However, the panel felt that rather than three 99213 visits as supported by the survey, one 99212 and two 99213 visits more accurately reflected the work done in the postoperative period, with the level 2 visit representing the work associated with the typical one-day postop visit and the level 3 visits typical of the dilated exam performed at the second and final postop examinations. The subsequent examinations at approximately one week and one month need to include dilation to assess the macula in detail for presence of macular edema and the peripheral retina for tears or detachments. The Academy's Preferred Practice Pattern recommends dilated examinations in the postoperative period, specifically to assess for macular edema. The largest professional liability insurer of ophthalmologists (OMIC) emphasizes the importance of dilated examinations to their insureds because in their claims database, the most common missed diagnosis leading to claims is retinal detachment due to failure to perform a dilated examination

We chose pre-service package 1 (straightforward patient, straightforward procedure) with a total of 20 minutes, which is less than the survey median pre-service time of 35 minutes and 2 minutes less than the current pre-service time. We used the survey post-service time median of 5 minutes, which is less than the 18 minutes of post-service time package 7A (local anesthesia, straightforward procedure) and 2 minutes less than the current post-service time, and one-half of a 99238 for discharge day management. Total time for the procedure is 126 minutes, with an IST of 20 minutes.

We initially recommended a work value of 8.04, arrived at by a reverse building block method to subtract the work value of one less level 2 postoperative visit, as this is the only substantive change since the code was last surveyed.

As with CPT 66982, there are no crosswalks to support this work value because of its high intensity. As noted above, use of the KRS to support the intensity was problematic due to the low number choosing each reference service and the inconsistency of the intensity rankings. Nevertheless, respondents chose work values and times at a much higher IWPUT than the codes on the RSL. The expert panel believes that cataract surgery has not decreased in intensity since last valued. It is almost entirely an intraocular procedure. Nearly all of the 20 minutes of IST is spent working inside the eye, where a miniscule error can result in a ruptured capsule with a dropped nucleus, leading to an increased risk of serious complications such as endophthalmitis or retinal detachment with permanent loss of vision. The lens capsule is less than 5 microns thick posteriorly. That thin, mobile membrane serves as the only barrier between an uncomplicated case and a complicated one. While those complications are uncommon, they are always only a few microns away and contribute to the technical skill requirements and intensity of the intraservice work. Cataract surgery has not become any less intense over the years and remains intense throughout the course of the procedure. If anything, the intensity of the work has increased over time as patient expectations for "perfect vision" after cataract surgery have become typical.

While there have been examples of the RUC using reverse building block in the past (CPT 52341-52346, cystoscopy, where hospital visit values were removed with a change in site of service in 2008), the reviewers for this code were uncomfortable with that methodology. We therefore sought pre-facilitation meeting to discuss the valuation methodology.

As a result of pre-facilitation, we have chosen to use a crosswalk to CPT 67210, *Destruction of localized lesion of retina (eg, macular edema, tumors), 1 or more sessions; photocoagulation* (RUC 2010), which has 6.36 WRVU, a 15-minute IST, a total time of 106 minutes, and an IWPUT of 0.199. While a minority of those surveyed chose CPT 67210 as a reference code, those that did choose it ranked the intensity and complexity of the cataract code as greater or much greater. As an intraocular procedure, CPT 66984 is more intense than CPT 67210, which is an extraocular laser procedure.

The surveyed IST for CPT 66984 is 5 minutes longer than the IST of CPT 67210. By taking the 5-minute increment in IST and multiplying it by the current IWPUT of CPT 66984 at the time it was surveyed (0.210), we calculated a recommended work value for CPT 66984 that is 1.05 WRVU greater than the work value of CPT 67210, or 7.41 WRVU. **Therefore, our recommended work value for 66984 is 7.41 WRVU, well below the survey's 25th percentile, with times of 20/20/5 minutes and a total time of 126 minutes.**

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. N/A

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) N/A

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Ophthalmology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 2,618,000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Estimation only

Specialty Ophthalmology Frequency 2618000 Percentage 100.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,745,000 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Estimation based on RUC database

Specialty Ophthalmology Frequency 1745000 Percentage 100.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment
Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Eye procedure

BETOS Sub-classification Level II:
Cataract removal/lens insertion

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 66984

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:66988 Tracking Number I6 Original Specialty Recommended RVU: **11.08**
Presented Recommended RVU: **10.25**
Global Period: 090 Current Work RVU: RUC Recommended RVU: **10.25**

CPT Descriptor: Extracapsular cataract removal with insertion of intraocular lens prosthesis (1 stage procedure), manual or mechanical technique (eg, irrigation and aspiration or phacoemulsification); with endoscopic cyclophotocoagulation

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 66-year-old male with a history of visually significant cataract and chronic glaucoma and that is not controlled by current therapy. Combined cataract removal, intraocular lens implantation and treatment of the ciliary processes to reduce aqueous production is recommended.

Percentage of Survey Respondents who found Vignette to be Typical: 97%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 26% , In the ASC 74%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 100% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review the patient record and preoperative diagnostic testing. Discuss the planned procedure with the patient and obtain informed consent. Identify and mark the eye for surgery. Write preoperative orders for medications and pupillary dilation. Check adequacy of pupillary dilation. Perform a surgical time out. Administer sub-Tenon or retrobulbar anesthetic. Reposition the patient. Prep and drape the ocular surface. Check the settings of the photocoagulation unit and function of the light pipe.

Description of Intra-Service Work: Insert a lid speculum. Position the microscope. Make a side-port incision away from the intended site of the surgical incision. Fill the anterior chamber with a viscoelastic. Create a temporal multiplanar limbal/corneal incision into the anterior chamber. Use sharp bent needle and forceps to fashion an opening in the anterior capsule of the cataract. Perform hydrodissection by injecting fluid between the lens cortex and capsule, loosening the lens in the process. Hydrodelineate as needed by injecting fluid between the lens cortex and nucleus. Inject additional viscoelastic into the anterior chamber prior to phacoemulsification. Check the function of the phacoemulsification handpiece and the machine settings. Remove bubbles by tapping the handpiece with irrigation on. Insert the phacoemulsification tip into the eye. Perform phacoemulsification with simultaneous aspiration of the lens nuclear material. Rotate and dis-assemble the lens to avoid inadvertent trauma to the cornea, lens capsule or iris. Use the side-port incision to allow access for a second instrument to aid in the disassembly process. Remove the phacoemulsification tip from the eye. Introduce an irrigation-aspiration tip into the eye to aspirate the remainder of the cortical lens material. Then carefully vacuum and polish the thin posterior lens capsule in an attempt to avoid future secondary membrane formation.

Adjust the size of the incision as needed to accommodate the intraocular lens (IOL). Place the IOL in the eye using an injection device. Once in the eye, properly position and center the IOL using a lens hook.

Re-inject a small amount of viscoelastic into the anterior chamber, over the pupil and lens to protect the cornea. Then inject viscoelastic under the iris root for 180° to facilitate visualization of the ciliary body processes with the endoscope. Insert the endoscope/laser probe through the temporal incision viewing the nasal ciliary processes on the heads-up display across the bed from the operating microscope. While periodically viewing the position of the handpieces through the operating

microscope, and continually having the OR staff manually adjusting and orienting the focus of the image on the endocyclophotocoagulation display from the lightpipe probe, coagulate the ciliary processes through the endoscope with the endpoint of shrinkage and whitening. Move the endoscope slowly in an arc allowing treatment of each individual process over an arc of 180° and remove the probe. Make a second corneal incision 90° away from the first or enlarge the prior side-port incision if it is properly positioned. Insert the endoscope/laser probe through this second incision and treat the contralateral ciliary processes to complete treatment of 270° to 360° of the processes. After completion of laser therapy, remove the viscoelastic material from the anterior segment of the eye with an irrigation and aspiration handpiece, with careful attention to remove viscoelastic trapped behind the iris. Confirm that the IOL remains in the proper position. Remove the iris hooks one by one. Perform a peripheral iridectomy as necessary.

Inject a miotic drug into the anterior chamber to produce pupillary miosis as needed. Inject a corticosteroid drug into the anterior chamber. Reform the eye with balanced salt solution. Test the incisions for leaks. Suture any incisions that leak. Remove the lid speculum. Place an antibiotic ointment on the eye as necessary. Place a soft patch and a rigid shield on the operative eye.

Description of Post-Service Work: Immediate post-service work: Write post-operative orders and prescriptions for post-operative medications. Complete an operative report. Discuss the surgical procedure and post op instructions with the patient and family. Necessary follow up testing and exams as well as medications, activity and restrictions are reviewed. Communicate with the referring physician.

Postoperative visits: Patient is seen for a level 2 visit on day 1 to check visual acuity, intraocular pressure, incision integrity, and level of inflammation. The patient is seen again for dilated level 3 visits approximately 1, 2, 4, and 6-8 weeks postoperatively to check visual acuity, intraocular pressure, incision integrity, corneal clarity, level of inflammation, and detailed examination of the central retina for cystoid macular edema and peripheral retina for tears or detachments.

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	0%	17%	83%
Physical effort required	0%	50%	50%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	17%	83%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

CPT 66988, *Extracapsular cataract removal with insertion of intraocular lens prosthesis (1 stage procedure), manual or mechanical technique (eg, irrigation and aspiration or*

phacoemulsification); with endoscopic cyclophotocoagulation is a new CPT code combining cataract and IOL surgery with endoscopic ciliary ablation for glaucoma because the latter procedure is performed over 75% of the time with cataract surgery. This procedure was previously reported with CPT 66984 and CPT 66711, and subject to the multiple procedure payment reduction.

A random survey of American Academy of Ophthalmology, American Society of Cataract and Refractive Surgeons, and American Glaucoma Society members had 31 respondents, 97% of whom found the vignette to be typical. The median WRVU was 13.95 and the 25th percentile was 11.08. The median IST was 30 minutes. The survey showed five 99213 postoperative visits. The top key reference service, chosen by 26% of respondents, was CPT 66179, *Aqueous shunt to extraocular equatorial plate reservoir, external approach; without graft* (RUC 2014), with a WRVU of 14.00, an IST of 55 minutes, and five level 3 and three level 2 postoperative visits. The second reference service, chosen by 19% of respondents, was CPT 65285, *Repair of laceration; cornea and/or sclera, perforating, with reposition or resection of uveal tissue* (RUC 2011), with a WRVU of 15.36, an IST of 90 minutes, and six level 3 and one level 2 postoperative visits. The respondents ranked the surveyed code as similar or more intense and complex on the intensity and complexity measures compared to the key reference services.

The expert panel of the AAO, ASCRS, and AGS, which is familiar with the procedure and the RUC process, reviewed the survey findings. The panel agreed with the median IST of 30 minutes and 5 postoperative visits. These patients typically have significantly greater than normal postoperative inflammation and unstable IOP due to the ciliary body ablation, necessitating frequent dilated examinations in the postoperative period to check for macular edema and peripheral retinal tears or detachments. However, the panel felt that rather than five 99213 visits as supported by the survey, the first postoperative visit should be a level 2, which is typical of the work associated with an undilated examination to check vision, pressure, incision integrity, and inflammation. As with the standalone ciliary photoablation procedure (CPT 67111), the subsequent postoperative visits at 1, 2, 4 and 6-8 weeks are all dilated level 3 visits to assess IOL position and presence of macular edema and peripheral retinal tears or detachments in addition to the portions of the exam that can be performed without dilation (checking vision, intraocular pressure, and status of the anterior segment of the eye).

We chose pre-service package 3 (straightforward patient, difficult procedure) as these are complex combined cases. We reduced the package pre-service evaluation time from 33 minutes to match the survey time of 25 minutes, which is necessary to review the prior history and explain the multiple surgical options that may be taken during the procedure. There is a risk of dislocating the lens implant during the ciliary ablation portion of the procedure, and the options to fixate the lens should that occur and its implications for planned outcome must be reviewed with the patient. We reduced the survey positioning time from 5 minutes to match the package time of 3 minutes, and reduced the package pre-service scrub, dress and wait time from 15 minutes to the survey time of 10 minutes. These patients typically require a greater wait time after the anesthetic injection than cataract surgery or ciliary ablation cases done alone because the combined cases take longer and involve direct cauterization of sensitive uveal tissue, so longer acting drugs which take longer to take effect (e.g. bupivacaine) are typically employed. The physician typically does a personal check of the settings and function of the photocoagulation unit and monitor and function of the light pipe prior to the incision. We used the survey post-service time median of 7 minutes, which is less than the 21 minutes of post-service time package 7B (local anesthesia, complex procedure), and one-half of a 99238 for discharge day management. Total time for the procedure is 202 minutes, with an IST of 30 minutes.

We were unable to find an adequate crosswalk for our initial recommendation of the survey's 25th percentile work value of 11.08. After pre-facilitation, we concluded that a crosswalk to CPT 67110, *Repair of retinal*

detachment; by injection of air or other gas (eg, pneumatic retinopexy) (RUC 2015), with 10.25 WRVU, 30 minutes IST and 196 minutes total time was appropriate. CPT 669871 has 1 less postoperative visit but more pre-time, and a greater portion of the procedure involves high-intensity intraocular manipulations compared to

CPT 67110. **Therefore, we are recommending a work value for CPT 66988 of 10.25 WRVU, below the survey's 25th percentile, with times of 38/30/7 and a total time of 202 minutes.**

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. N/A

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) N/A

How often do physicians <u>in your specialty</u> perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Ophthalmology How often? Sometimes

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 12000
If the recommendation is from multiple specialties, please provide the frequency and <u>percentage</u> for each specialty. Please explain the rationale for this estimate. Estimation Only

Specialty Ophthalmology Frequency 12000 Percentage 100.00 %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 8,000
If this is a recommendation from multiple specialties please estimate frequency <u>and percentage</u> for each specialty. Please explain the rationale for this estimate. Estimation Only

Specialty Ophthalmology Frequency 8000 Percentage 100.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Eye procedure

BETOS Sub-classification Level II:
Cataract removal/lens insertion

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 66984

CPT Code: 66711
Specialty Society: American Academy of Ophthalmology

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Facility Direct Practice Expense (PE) Inputs

CPT Long Descriptor: Ciliary body destruction; cyclophotocoagulation, endoscopic, without concomitant removal of crystalline lens

Global Period: 090 Meeting Date: January 2019

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   The Academy convenes a consensus subcommittee utilizing the appropriate subspecialty representatives who sit on our Health Policy Committee that oversees our activities at RUC and CPT. Additionally, we queried other physicians who have the appropriate expertise for this code. The consensus committee considered the survey data and PE details in order to determine clinical time and applicable standard packages were also applied. The physicians on the consensus panel familiar with the service provided input on whether or not any changes were needed for the existing supplies and equipment.

2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here: **N/A**

3. Is this code(s) typically billed with an E/M service? **No**

4. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time: **N/A**

5. If you are requesting an increase over the current total cost for clinical staff time (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), total cost of supplies, and/or total cost of equipment you must provide compelling evidence: **N/A**

6. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here: **N/A**

7. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities: **N/A**

8. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov. **N/A**

9. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here: **N/A**

10. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here: **N/A**

11. List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here:

    Exam lane: Standard office visit formula used.
    Screening lane: Standard office visit formula used.

12. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here: **N/A**

13. If there is any other item on your spreadsheet that needs further explanation please include here: **N/A**

14. Please include an explanation of each line item:

    15 – Standard facility time input for completing pre-service diagnostic and referral forms
    16 – Standard facility time input for coordinating pre-surgery services
    17 – Standard facility time input for scheduling space and equipment in the facility
    18 – Standard facility time input for providing pre-service education/obtaining consent
    19 – Standard facility time input for completing pre-procedure phone calls and prescription
    74 – Standard facility time input for discharge day management
    88 – Typical number of 99212 post-op visits as demonstrated by RUC-approved survey
    89 – Typical number of 99213 post-op visits as demonstrated by RUC-approved survey
    102 – Ophthalmology visit pack with dilation for 99213 post-op visits
    103 – Ophthalmology visit pack without dilation for 99212 post-op visits

You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here: **This new code will represent when the current 66711 and 66982 are performed together. 66711 is the primary reference, but both 66711 and 66982 are listed in parallel on the excel sheet for reference.**

3. Is this code(s) typically billed with an E/M service? **No.**

4. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time: **N/A**

5. If you are requesting an increase over the current total cost for clinical staff time (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), total cost of supplies, and/or total cost of equipment you must provide compelling evidence: **There is no current total cost for a combined code. However, the proposed total cost is marginally higher than either of the two individual current codes, exclusively because when the two codes are done in combination, there is typically one extra post-operative visit, as demonstrated by the RUC-approved survey.**

6. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here: **N/A**

7. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities: **N/A**

8. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov. **N/A**

9. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here: **N/A**

10. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here: **N/A**

11. List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here:

    Exam lane: Standard office visit formula used.
    Screening lane: Standard office visit formula used.

12. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here: **N/A**

13. If there is any other item on your spreadsheet that needs further explanation please include here: **N/A**

14. Please include an explanation of each line item:

    15 – Standard facility time input for completing pre-service diagnostic and referral forms
    16 – Standard facility time input for coordinating pre-surgery services
    17 – Standard facility time input for scheduling space and equipment in the facility
    18 – Standard facility time input for providing pre-service education/obtaining consent
    19 – Standard facility time input for completing pre-procedure phone calls and prescription
    74 – Standard facility time input for discharge day management
    88 – Typical number of 99212 post-op visits as demonstrated by RUC-approved survey
    89 – Typical number of 99213 post-op visits as demonstrated by RUC-approved survey
    102 – Ophthalmology visit pack with dilation for 99213 post-op visits
    103 – Ophthalmology visit pack without dilation for 99212 post-op visits

CPT Code: 66984
Specialty Society: American Academy of Ophthalmology

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Facility Direct Practice Expense (PE) Inputs

CPT Long Descriptor: Extracapsular cataract removal with insertion of intraocular lens prosthesis (1 stage procedure), manual or mechanical technique (eg, irrigation and aspiration or phacoemulsification); without endoscopic cyclophotocoagulation

Global Period: 090 Meeting Date: January 2019

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   The Academy convenes a consensus subcommittee utilizing the appropriate subspecialty representatives who sit on our Health Policy Committee that oversees our activities at RUC and CPT. Additionally, we queried other physicians who have the appropriate expertise for this code. The consensus committee considered the survey data and PE details in order to determine clinical time and applicable standard packages were also applied. The physicians on the consensus panel familiar with the service provided input on whether or not any changes were needed for the existing supplies and equipment.

2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here: **Existing code used as reference.**

3. Is this code(s) typically billed with an E/M service? **No**

4. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time: **N/A**

5. If you are requesting an increase over the current total cost for clinical staff time (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), total cost of supplies, and/or total cost of equipment you must provide compelling evidence: **N/A**

6. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here: **N/A**

7. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities: **N/A**

8. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov. **N/A**

9. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here: **N/A**

10. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here: **N/A**

11. List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here:

AMA/Specialty Society RVS Update Committee Summary of Recommendations
CMS/Other – Utilization over 30,000

January 2019

Upper Gastrointestinal Tract Imaging – Tab 12

In October 2017, the RAW requested that AMA staff compile a list of CMS/Other codes with Medicare utilization of 30,000 or more. CPT codes 74240 and 74246 were initially identified as part of this screen. In January 2018, the RUC referred these services to the CPT Editorial Panel to condense this family of services and combine fluoroscopy. In May 2018, the CPT Editorial Panel approved revision of nine codes, addition of two codes and deletion of five codes to conform to other families of radiologic examinations. The existing codes omitted key information regarding study types and provided inconsistent guidance on whether certain components are included in each code. The revisions will address these limitations and reflect the work inherent in each examination. The specialty society surveyed the lower GI codes (CPT codes 74250, 74251, 74270, 74280) for the October 2018 RUC meeting and requested to delay survey of the upper GI codes in this family (CPT codes 74210, 74220, 74XX0, 74230, 74240, 74246, and 74248) until January 2019.

Compelling Evidence

The specialty society presented compelling evidence based on flawed methodology in the previous valuation. The two codes identified by the screen, CPT codes 74240 and 74246, are both CMS/Other sourced. Therefore, how the times and values were established is unknown or flawed. The RUC accepted compelling evidence for these two codes based on flawed methodology.

Post-service Time

The RUC discussed the immediate post-service time for the family and noted that there were differences in the recommended post-service times while the description of post-service work is the same for all the codes. The specialty explained that, unlike the radiology codes that have a post-time of 1 minute, this family is more appropriately considered to be *procedural fluoroscopy codes using X-rays*. As such, they are not comparable for post-times to common X-ray codes or to other imaging codes, such as CT and MR, because they have their own unique procedural aspects. The additional work in the post-time period involves more and different images than a common X-ray, it includes multiple fluoroscopic images and review of a lengthier report that discusses a procedure rather than an imaging result. Recognizing the fluoroscopic image burden, the RUC determined that with the affirmation of CPT codes 74210 and 74230, with post-service times of 2 and 3 minutes respectively, there should be 3 minutes of post-service time for all other codes in the family.

74220 *Radiologic examination, esophagus, including scout chest radiograph(s) and delayed image(s), when performed; single-contrast (eg, barium) study*

The RUC reviewed the survey results from 72 radiologists and determined that the survey 25th percentile work RVU of 0.60 accurately reflects the physician work necessary for this service and falls below the existing value. This code was recently valued in April 2017 but has been split into

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

two codes (CPT codes 74221 and 74220) and thus was resurveyed. The RUC recommends 3 minutes pre-service time, 10 minutes intra-service time, and 3 minutes immediate post-service time.

The RUC compared CPT code 74220 to the top key reference code 74150 *Computed tomography, abdomen; without contrast material* (work RVU = 1.19 and 12 minutes intra-service time) and noted that the survey code has two minutes less intra-service time and half the intensity as the reference code. The esophagus study is a more focused examination evaluating a specific problem or possible etiologies in one organ system, while the CT abdomen without contrast includes a larger number of anatomic structures and a wider range of pathologic conditions, supported by the higher intensity and greater amount of physician work. The RUC also compared the survey code to the second key reference code 74160 *Computed tomography, abdomen; with contrast material(s)* (work RVU = 1.27 and 15 minutes intra-service time) and noted likewise, that the survey code is appropriately valued lower than the reference code, which has 5 minutes more intra-service time and higher intensity.

The RUC compared the survey code to MPC code 76536 *Ultrasound, soft tissues of head and neck (eg, thyroid, parathyroid, parotid), real time with image documentation* (work RVU = 0.56 and 10 minutes intra-service time) and noted that the survey code has identical intra-service and total time as the comparison code. However, the survey code is slightly more intense and complex, relating for example, to the need for patient repositioning and other maneuvers throughout the examination, accounting for the slightly higher intensity and work RVU. The RUC also compared the survey code to MPC code 99231 *Subsequent hospital care, per day, for the evaluation and management of a patient, …* (work RVU = 0.76 and 10 minutes intra-service time) and noted that the survey code has identical intra-service time as the comparison code, but two less minutes of pre-service time, as well as periods of less intense work, supporting the slightly lower work RVU.

The RUC concluded that CPT code 74220 should be valued at the 25th percentile work RVU as supported by the survey. Further, the recommendation maintains relativity within the upper and lower gastrointestinal tract X-ray family and greater RBRVS. **The RUC recommends a work RVU of 0.60 for CPT code 74220.**

74221 ***Radiologic examination, esophagus, including scout chest radiograph(s) and delayed image(s), when performed; double-contrast (eg, high-density barium and effervescent agent) study***

The RUC reviewed the survey results from 72 radiologists and determined that the survey 25th percentile work RVU of 0.70 accurately reflects the physician work necessary for this service. The RUC noted that double-contrast studies take longer to perform than the single-contrast codes in the family and require more physician work. The RUC recommends 3 minutes pre-service time, 12 minutes intra-service time, and 3 minutes immediate post-service time.

The RUC compared the survey code to the top key reference code 74160 *Computed tomography, abdomen; with contrast material(s)* (work RVU = 1.27 and 15 minutes intra-service time) and noted that the survey code is appropriately valued lower than the reference code which has 3 minutes more intra-service time and higher intensity. The esophagus study is a more focused examination evaluating a specific problem or possible etiologies in one organ system, while the CT abdomen with contrast includes a larger number of anatomic structures and a wider range of pathologic conditions, supported by the higher value.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

For additional support, the RUC compared the survey code to MPC code 99231 *Subsequent hospital care, per day, for the evaluation and management of a patient, …* (work RVU = 0.76 and 10 minutes intra-service time) and noted that the survey code has greater intra-service time but overall less intense work when compared to the low-complexity E/M encounter, therefore the recommended work RVU is slightly lower than the comparison code. The RUC concluded that CPT code 74221 should be valued at the 25th percentile work RVU as supported by the survey. Further, the recommendation maintains relativity within the upper and lower gastrointestinal tract X-ray family and greater RBRVS. **The RUC recommends a work RVU of 0.70 for CPT code 74221.**

74240 ***Radiologic examination, upper gastrointestinal tract, including scout abdominal radiograph(s) and delayed image(s), when performed; single-contrast (eg, barium) study***
The RUC reviewed the survey results from 72 radiologists and determined that the survey 25th percentile work RVU of 0.80 accurately reflects the physician work necessary for this service. The RUC recommends 4 minutes pre-service time, 12 minutes intra-service time, and 3 minutes immediate post-service time.

The RUC compared the survey code to MPC code 76700 *Ultrasound, abdominal, real time with image documentation; complete* (work RVU = 0.81, 11 minutes intra-service time) and noted that these services require similar physician time, and intensity to perform and thus should be valued similarly. For additional support, the RUC compared the survey code to CPT code 76641 *Ultrasound, breast, unilateral, real time with image documentation, including axilla when performed; complete* (work RVU = 0.73, 12 minutes intra-service time, 22 minutes total time), which has identical intra-service time. The survey code is more intense and complex to perform and is appropriately valued higher. The RUC also compared the survey code to CPT code 93282 *Programming device evaluation (in person) with iterative adjustment of the implantable device to test the function of the device and select optimal permanent programmed values with analysis, review and report by a physician or other qualified health care professional; single lead transvenous implantable defibrillator system* (work RVU = 0.85, 12 minutes intra-service time, 28 minutes total time), which has identical intra-service time. The survey code is appropriately valued lower given the greater total time of the comparison code.

The RUC concluded that CPT code 74240 should be valued at the 25th percentile work RVU as supported by the survey. Further, the recommendation maintains relativity within the upper and lower gastrointestinal tract X-ray family and greater RBRVS. **The RUC recommends a work RVU of 0.80 for CPT code 74240.**

74246 ***Radiologic examination, upper gastrointestinal tract, including scout abdominal radiograph(s) and delayed image(s), when performed; double-contrast (eg, high-density barium and effervescent agent) study, including glucagon, when administered***
The RUC reviewed the survey results from 72 radiologists and determined that the survey 25th percentile work RVU of 0.90 accurately reflects the physician work necessary for this service. The RUC noted that the double-contrast study takes longer to perform than the single-contrast codes in the family. The RUC recommends 4 minutes pre-service time, 15 minutes intra-service time, and 3 minutes immediate post-service time.

The RUC compared CPT code 74246 to the top key reference code 74160 *Computed tomography, abdomen; with contrast material(s)* (work RVU = 1.27, 15 minutes intra-service time, 23 minutes total time) and noted that the two examinations have identical intra-service time and nearly

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

identical total time. However, the reference code has higher intensity, accounting for the higher work RVU. The upper GI study is a more focused examination evaluating a specific problem or possible etiologies in one organ system while the CT abdomen with contrast includes a larger number of anatomic structures and a wider range of pathologic conditions, supported by the higher intensity.

For additional support, the RUC compared the survey code to MPC code 92012 *Ophthalmological services: medical examination and evaluation, with initiation or continuation of diagnostic and treatment program; intermediate, established patient* (work RVU = 0.92, 15 minutes intra-service time) and noted that these services require the same intra-service time and similar intensity and complexity to perform and thus should be valued similarly. The RUC concluded that CPT code 74246 should be valued at the 25th percentile work RVU as supported by the survey. Further, the recommendation maintains relativity within the upper and lower gastrointestinal tract X-ray family and greater RBRVS. **The RUC recommends a work RVU of 0.90 for CPT code 74246.**

74248 ***Radiologic examination, upper gastrointestinal tract, including scout abdominal radiograph(s) and delayed image(s), when performed; with small intestine follow-through study, including multiple serial images (List separately in addition to code for primary procedure)***
The RUC reviewed the survey results from 72 radiologists and determined that the survey 25th percentile work RVU of 0.70 accurately reflects the physician work necessary for this service. The RUC recommends 12 minutes of intra-service time and total time for this new add-on code. The intra-service time also represents the survey 25th percentile. It is below the survey median time of 20 minutes because this service was previously reported as part of CPT codes 74245 or 74249, both of which are being deleted, and that were CMS/Other codes with a total of 18 minutes of physician work. The new add-on code will have a similar intra-service time as the base services with which it is being performed, codes 74240 or 74246, which have survey median intra-service times of 12 minutes and 15 minutes, respectively.

The RUC compared CPT code 74248 to the top key reference code 76810 *Ultrasound, pregnant uterus, real time with image documentation, fetal and maternal evaluation, after first trimester (> or = 14 weeks 0 days), transabdominal approach; each additional gestation (List separately in addition to code for primary procedure)* (work RVU = 0.98, 20 minutes intra-service time) and noted that the survey code requires 8 minutes less intra-service time, accounting for the lower work RVU. However, code 74248 requires imaging of an entirely different region of anatomic structures than the base codes, requiring patient repositioning and additional maneuvers, accounting for the slightly higher IWPUT than the reference code.

For additional support, the RUC compared CPT code 74248 to MPC code 64484 *Injection(s), anesthetic agent and/or steroid, transforaminal epidural, with imaging guidance (fluoroscopy or CT); lumbar or sacral, each additional level (List separately in addition to code for primary procedure)* (work RVU = 1.00, 10 minutes intra-service time) and noted that the survey code requires 2 more minutes of intra-service time than the comparison code, and is appropriately valued lower since it is a less intense non-invasive procedure. The RUC concluded that CPT code 74248 should be valued at the 25th percentile work RVU as supported by the survey. Further, the recommendation maintains relativity within the upper and lower gastrointestinal tract X-ray family and greater RBRVS. **The RUC recommends a work RVU of 0.70 for CPT code 74248.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

CPT Referral
The RUC determined that CPT code 74248 should be referred to the CPT Editorial Panel to correct the add-on code descriptor to clearly delineate the small bowel follow-through as a procedure reported in addition to the preceding upper GI code. Some RUC members expressed concern that there may be confusion in reporting this code that might be mistaken as inclusive of the preceding upper GI code. **The RUC recommends CPT code 74248 be referred to the CPT Editorial Panel for editorial revision.**

Practice Expense
The Practice Expense Subcommittee reviewed and made slight changes in the clinical staff time in one of the codes, 74230, which carried through and created a minor change in the equipment minutes. In response to an inquiry from CMS, the specialty society clarified that speech pathologists use CPT codes 92610 and 92611 to bill for non-fluoroscopic and fluoroscopic evaluations. **The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.**

Affirmation of RUC Recommendations
The RUC affirmed the recent RUC recommendations for CPT code 74210 (work RVU= 0.59, 3 minutes pre-service time, 10 minutes intra-service time and 2 minutes immediate post-service time) and CPT code 74230 (work RVU= 0.53, 2 minutes pre-service time, 10 minutes intra-service time and 3 minutes immediate post-service time). The relativity within the family remains correct.

Subject: ACR Request to Reaffirm Code Value Recommendations for CPT Codes 74210 and 74230

Dear Dr. Smith,

CPT code 74220 *(Radiologic examination; esophagus)* was identified on the CMS/Other - Utilization Over 100,000 screen, and the family was expanded to include CPT codes 74210 *(Radiologic examination; pharynx and/or cervical esophagus)* and 74230 *(Swallowing function, with cineradiography/videoradiography)*. All three codes were surveyed for the April 2017 RUC meeting, and the times and values were recently finalized by the Centers for Medicare & Medicaid Services (CMS) in the 2019 Medicare Physician Fee Schedule.

While the codes were still pending at CMS, this family of codes was included as part of a CCP involving the Gastrointestinal Tract Imaging family, which included some revisions to the descriptors for some of the existing codes, as well as the creation of two new codes. Upon review of the new code structure, the ACR is surveying CPT code 74220 for the January 2019 meeting, as the physician work for this procedure will change. However, the changes to the descriptors for CPT codes 74210 and 74230 are editorial. We feel that the physician work for CPT codes 74210 and 74230 remain unchanged, and we are confident that the recent survey values from April 2017 (approved by CMS) are accurate.

Therefore, the ACR would like to request that the values for CPT codes 74210 and 74230 be reaffirmed at the January 2019 RUC meeting. There is appropriate relativity between these codes, the codes in the gastrointestinal tract imaging family (as recommended), and within the larger RBRVS.

Please contact ACR staff Stephanie Le at (703) 648-8900, ext. 4584 if you have any questions.

Thank you for your consideration of this request.

Sincerely,

Kurt A. Schoppe, MD

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:74220 Tracking Number J2 Original Specialty Recommended RVU: **0.67**
Presented Recommended RVU: **0.60**
Global Period: XXX Current Work RVU: **0.67** RUC Recommended RVU: **0.60**

CPT Descriptor: Radiologic examination, esophagus, including scout chest radiograph(s) and delayed image(s), when performed; single-contrast (eg, barium) study

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 65-year-old female presents with dysphagia and odynophagia. A single-contrast esophagus study is requested for evaluation of possible esophageal spasm or achalasia.

Percentage of Survey Respondents who found Vignette to be Typical: 79%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review the reason for the examination and any pertinent clinical history. Confirm that single contrast only examination is appropriate. Determine the type of contrast to use. Review any prior applicable plain film or imaging studies. Provide patient with examination instructions and confirm understanding.

Description of Intra-Service Work: Position the patient. Obtain scout fluoroscopic image of the chest and upper abdomen. Direct the administration of oral contrast agents by the patient. Observe patient under fluoroscopic guidance swallow contrast liquids,using different consistencies as needed, in multiple positions for the thoracic esophagus, and take multiple additional spot views. Direct the patient to various positions to better visualize the thoracic esophagus and continue to perform intermittent fluoroscopy with spot radiographs and dynamic fluoroscopic recording as needed until contrast passes the gastro-esophageal junction. Observe patient under fluoroscopic guidance and additional maneuvers as needed swallow water to assess for gastroesophageal reflux. Observe patient under fluoroscopic guidance swallow a 13 mm barium tablet, if needed. Supervise the acquisition of overhead radiographs obtained by the technologist. Review final images and appropriate comparisons while dictating the final report.

Description of Post-Service Work: Review, edit, and sign report for the medical record. Discuss findings with the patient and referring provider as needed.

SURVEY DATA

New Technology/Service:
Is this new/revised procedure considered to be a new technology or service? No

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
74150	XXX	1.19	**RUC Time**

CPT Descriptor Computed tomography, abdomen; without contrast material

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
74160	XXX	1.27	**RUC Time**

CPT Descriptor Computed tomography, abdomen; with contrast material(s)

KEY MPC COMPARISON CODES:
Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
76536	XXX	0.56	**RUC Time**	868,983

CPT Descriptor 1 Ultrasound, soft tissues of head and neck (eg, thyroid, parathyroid, parotid), real time with image documentation

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
99231	XXX	0.76	**RUC Time**	7,877,777

CPT Descriptor 2 Subsequent hospital care, per day, for the evaluation and management of a patient, which requires at least 2 of these 3 key components: A problem focused interval history; A problem focused examination; Medical decision making that is straightforward or of low complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the patient is stable, recovering or improving. Typically, 15 minutes are spent at the bedside and on the patient's hospital floor or unit.

Other Reference CPT Code	Global	Work RVU	Time Source

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	29%	47%	24%	0%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	76%	18%	6%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	18%	29%	53%
Physical effort required	0%	6%	94%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	47%	24%	29%

2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	42%	25%	25%	8%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	67%	33%	0%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	17%	83%
Physical effort required	0%	0%	100%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	50%	33%	17%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

CPT codes 74240 and 74246 were identified on the screen for CMS/Other codes with utilization over 30,000. The family was expanded to include four other x-ray codes pertaining to the upper gastrointestinal tract, 74241, 74245, 74247, and 74249. These codes were referred to the April 2018 CPT meeting. CPT codes 74241 *(Radiologic examination, gastrointestinal tract, upper; with or without delayed images, with KUB),* 74245 *(Radiologic examination, gastrointestinal tract, upper; with small intestine, includes multiple serial images),* 74247 *(Radiological examination, gastrointestinal tract, upper, air contrast, with specific high density barium, effervescent agent, with or without glucagon; with or without delayed images, with KUB),* and 74249 *(Radiological examination, gastrointestinal tract, upper, air contrast, with specific high density barium, effervescent agent, with or without glucagon; with small intestine follow-through)* were deleted. The CPT Team further expanded the family to include CPT codes 74210, 74220, and 74230, which were surveyed in April 2017, and two new codes were created. The following codes were surveyed for January 2019.

- **74220** *(Radiologic examination, esophagus, including scout chest radiograph(s) and delayed image(s), when performed; single-contrast (eg, barium) study),*
- **74221** *(Radiologic examination, esophagus, including scout chest radiograph(s) and delayed image(s), when performed; double-contrast (eg, high-density barium and effervescent agent) study)*
- **74240** *(Radiologic examination, upper gastrointestinal tract, including scout abdominal radiograph(s) and delayed image(s), when performed; single-contrast (eg, barium) study),*
- **74246** *(Radiologic examination, upper gastrointestinal tract, including scout abdominal radiograph(s) and delayed image(s), when performed; double-contrast (eg, high-density barium and effervescent agent) study, including glucagon, when administered),* and
- **74248** *(Radiologic examination, upper gastrointestinal tract, including scout abdominal radiograph(s) and delayed image(s), when performed; with small intestine follow-through study, including multiple serial images (List separately in addition to code for primary procedure))*

The specialty is requesting that the RUC reaffirm the CY2019 times and values for the recently-surveyed codes 74210 *(Radiologic examination, pharynx and/or cervical esophagus, including scout neck radiograph(s) and delayed image(s), when performed, contrast (eg, barium) study*) and 74230 *(Radiologic examination, swallowing function, with cineradiography/videoradiography, including scout neck radiograph(s) and delayed image(s), when performed, contrast (eg, barium) study),* which underwent editorial changes to the descriptor at CPT.

Survey Process

The ACR surveyed a total of 3,250 members (a random sample of 1,625 members and a separate random sample of 1,625 members who perform radiography or gastrointestinal procedures).

Compelling Evidence

The society is requesting compelling evidence for all existing codes in the code family to support the proposed work RVUs and times. The two codes identified on the screen, 74240 and 74246, are both CMS/Other, and were valued using flawed methodology. While code 74220 was most recently surveyed in April 2017, its patient population is being distributed to the new code, 74221. For all codes in this family, there have been changes in technology, patient population, and physician work, compared with earlier years. Healthy, routine patients are increasingly evaluated with endoscopy or CT, while patients undergoing fluoroscopic examinations are increasingly being evaluated for more complex problem-solving of chronic, unexplained symptoms when other investigations have been inconclusive, as well as increasingly for complex pre-operative anatomy and post-operative complications.

Work RVU Recommendation

The specialty recommends a work RVU of 0.60 for CPT code 74220, which is the survey 25th percentile and below the current value of 0.67.

Time Recommendation

The specialty recommends the following median survey times: 3 minutes of pre-service time, 10 minutes of intra-service time, and a reduction from the survey median to 3 minutes of post-service time. This is a total time of 16 minutes compared to the existing 15 minutes.

Key Reference Services

The most commonly chosen reference codes by survey participants are two CT of the abdomen procedures:

- **74150** *(Computed tomography, abdomen; without contrast material)*, chosen by 24% of respondents, and
- **74160** *(Computed tomography, abdomen; with contrast material(s))*, chosen by 17% of respondents.

The recommended work RVU and survey times are appropriate compared to the most commonly chosen key reference service, 74150 *(Computed tomography, abdomen; without contrast material(s))*, which has 2 minutes more intra-service time, as well as higher IWPUT. The esophagus study is a more focused examination evaluating a specific problem or possible etiologies in one organ system. The CT abdomen without contrast includes a larger number of anatomic structures and a wider range of pathologic conditions, supported by the higher IWPUT and work RVU.

The recommended value and service times for code 74220 are also appropriately lower compared to the second key reference service, 74160 *(Computed tomography, abdomen; with contrast material)*, which has 5 minutes more intra-service time and higher IWPUT. The esophagus study is a more focused examination evaluating a specific problem or possible etiologies in one organ system. However, the CT abdomen with contrast includes a larger number of anatomic structures and a wider range of potential pathologic conditions.

CPT Code	Descriptor	Work RVU	Total Time	Pre	Intra	Post	IWPUT	% chosen
74220	**X-Ray, esophagus; single-contrast study**	**0.60**	**16**	**3**	**10**	**3**	**0.0466**	
74150	CT, abdomen; w/o contrast	1.19	20	3	12	5	0.0842	24%
74160	CT, abdomen; w/contrast	1.27	23	3	15	5	0.0727	17%

MPC Codes

The surveyed code compares well with three MPC codes:

- **76536** *(Ultrasound, soft tissues of head and neck (eg, thyroid, parathyroid, parotid), real time with image documentation)*
- **99231** *(Subsequent hospital care, per day, for the evaluation and management of a patient, which requires at least 2 of these 3 key components: A problem focused interval history; A problem focused examination; Medical decision making that is straightforward or of low complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the patient is stable, recovering or improving. Typically, 15 minutes are spent at the bedside and on the patient's hospital floor or unit.)*
- **76700** *(Ultrasound, abdominal, real time with image documentation; complete)*

The surveyed code, 74220, has identical intra-service and similar total time as MPC code 76536. However, the surveyed code requires slightly more intense work, relating, for example, to the need for patient repositioning and other maneuvers throughout the examination, accounting for the slightly higher IWPUT and work RVU. The surveyed code, 74220, has identical intra-service time as MPC code 99231, but two less minutes of pre-service time, as well as periods of less intense work, supporting the lower IWPUT and slightly lower work RVU recommendation. Similarly, the surveyed code requires 1 less minute of intra-service time and 2 less minutes of pre-service time compared to MPC code 76700, real-time abdominal ultrasound. The overall less intense work supports the lower IWPUT and lower recommended work RVU for CPT code 74220. The relationships are summarized in the following table.

CPT Code	Descriptor	Work RVU	Total Time	Pre	Intra	Post	IWPUT
76536	US, soft tissues of head & neck, real time w/img doc	0.56	18	4	10	4	0.0381
74220	**X-Ray, esophagus; single-contrast study**	**0.60**	**16**	**3**	**10**	**3**	**0.0466**
99231	Subseq. hospital care, per day, for E&M of pt w/MDM of low complexity. Typically, 15 minutes bedside with patient.	0.76	20	5	10	5	0.0536
76700	US, abdominal, real time with image documentation; complete	0.81	21	5	11	5	0.0533

Summary

The specialty recommends 0.60 RVUs with 3 minutes pre-, 10 minutes intra-, and 3 minutes post-service time for CPT code 74220. The recommendation maintains relativity within the upper and lower gastrointestinal tract X-ray family, as well as the greater RBRVS.

CPT Code	Descriptor	Work RVU	Total Time	Pre	Intra	Post	IWPUT	RUC Meeting
74230	X-ray, swallowing function w/cine or videoradiography, incl. scout neck x-rays, contrast study	0.53	15	2	10	3	0.0417	Apr 2017
74210	X-Ray, pharynx and/or cervical esophagus, incl. scout neck x-rays, contrast study	0.59	15	3	10	2	0.0478	Apr 2017

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 74220

How often do physicians <u>in your specialty</u> perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 473480
If the recommendation is from multiple specialties, please provide the frequency and <u>percentage</u> for each specialty. Please explain the rationale for this estimate. The overall number of services described by code 74220 provided nationally in a one-year period is estimated to be 473,480.

Specialty Diagnostic Radiology Frequency 451120 Percentage 95.27 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 157,830 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. CPT code 74220 is estimated to be provided to Medicare patients 157,830 times in a one-year period.

Specialty Diagnostic Radiology Frequency 150375 Percentage 95.27 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Imaging

BETOS Sub-classification:
Standard imaging

BETOS Sub-classification Level II:
Contrast Gastrointestinal

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 74220

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

SUMMARY OF RECOMMENDATION

CPT Code:74221 Tracking Number J3 Original Specialty Recommended RVU: **0.70**
Presented Recommended RVU: **0.70**
Global Period: XXX Current Work RVU: **0.67** RUC Recommended RVU: **0.70**

CPT Descriptor: Radiologic examination, esophagus, including scout chest radiograph(s) and delayed image(s), when performed; double-contrast (eg, high-density barium and effervescent agent) study

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 71-year-old male with history of gastro-esophageal reflux presents with worsening odynophagia and chest pain. A double-contrast esophagram is requested for evaluation of possible esophageal ulcer or mass.

Percentage of Survey Respondents who found Vignette to be Typical: 92%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review the reason for the examination and any pertinent clinical history. Confirm that double contrast examination is appropriate. Determine the type of contrast to use. Review any prior applicable plain film or imaging studies. Provide patient with examination instructions and confirm understanding.

Description of Intra-Service Work: Position the patient. Obtain scout fluoroscopic image of the chest. Direct the administration of effervescent sodium bicarbonate crystals and water. Direct the administration of oral contrast agents by the patient. Observe patient under fluoroscopic guidance swallow thin and thick liquids in multiple positions for the thoracic esophagus, and take multiple additional spot views. Repeat swallowing attempts, and direct the patient to various positions to distribute barium along all mucosal surfaces. Direct the patient to various positions to better visualize the thoracic esophagus and continue to perform intermittent fluoroscopy with spot radiographs and dynamic fluoroscopic recording as needed until contrast passes the gastro-esophageal junction. Observe patient under fluoroscopic guidance and additional maneuvers as needed swallow water to assess for gastroesophageal reflux. Observe patient under fluoroscopic guidance swallow a 13 mm barium tablet, if needed. Supervise the acquisition of overhead radiographs obtained by the technologist. Review final images and appropriate comparisons while dictating the final report.

Description of Post-Service Work: Review, edit, and sign report for the medical record. Discuss findings with the patient and referring provider as needed.

SURVEY DATA

Modifier -51 Exempt Status

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:

Is this new/revised procedure considered to be a new technology or service? No

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
74160	XXX	1.27	**RUC Time**

CPT Descriptor Computed tomography, abdomen; with contrast material(s)

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
74170	XXX	1.40	**RUC Time**

CPT Descriptor Computed tomography, abdomen; without contrast material, followed by contrast material(s) and further sections

KEY MPC COMPARISON CODES:

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
76536	XXX	0.56	**RUC Time**	868,983

CPT Descriptor 1 Ultrasound, soft tissues of head and neck (eg, thyroid, parathyroid, parotid), real time with image documentation

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
99231	XXX	0.76	**RUC Time**	7,877,777

CPT Descriptor 2 Subsequent hospital care, per day, for the evaluation and management of a patient, which requires at least 2 of these 3 key components: A problem focused interval history; A problem focused examination; Medical decision making that is straightforward or of low complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the patient is stable, recovering or improving. Typically, 15 minutes are spent at the bedside and on the patient's hospital floor or unit.

Other Reference CPT Code	Global	Work RVU	Time Source
76700	XXX	0.81	**RUC Time**

CPT Descriptor Ultrasound, abdominal, real time with image documentation; complete

RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:
Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by percent distribution) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Top Key Reference Code: 19 **% of respondents:** 26.3 **%**

Number of respondents who choose 2nd Key Reference Code: 11 **% of respondents:** 15.2 **%**

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	26%	37%	26%	11%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	63%	32%	5%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	5%	37%	58%
Physical effort required	0%	11%	89%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	37%	37%	26%

2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	27%	36%	9%	27%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	36%	27%	36%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	9%	91%
Physical effort required	0%	0%	100%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	36%	36%	27%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

CPT codes 74240 and 74246 were identified on the screen for CMS/Other codes with utilization over 30,000. The family was expanded to include four other x-ray codes pertaining to the upper gastrointestinal tract, 74241, 74245, 74247, and 74249. These codes were referred to the April 2018 CPT meeting. CPT codes 74241 *(Radiologic examination, gastrointestinal tract, upper; with or without delayed images, with KUB),* 74245 *(Radiologic examination, gastrointestinal tract, upper; with small intestine, includes multiple serial images),* 74247 *(Radiological examination, gastrointestinal tract, upper, air contrast, with specific high density barium, effervescent agent, with or without glucagon; with or without delayed images, with KUB),* and 74249 *(Radiological examination, gastrointestinal tract, upper, air contrast, with specific high density barium, effervescent agent, with or without glucagon; with small intestine follow-through)* were deleted. The CPT Team further expanded the family to include CPT codes 74210, 74220, and 74230, which were surveyed in April 2017, and two new codes were created. The following codes were surveyed for January 2019.

- **74220** *(Radiologic examination, esophagus, including scout chest radiograph(s) and delayed image(s), when performed; single-contrast (eg, barium) study),*
- **74221** *(Radiologic examination, esophagus, including scout chest radiograph(s) and delayed image(s), when performed; double-contrast (eg, high-density barium and effervescent agent) study)*
- **74240** *(Radiologic examination, upper gastrointestinal tract, including scout abdominal radiograph(s) and delayed image(s), when performed; single-contrast (eg, barium) study),*
- **74246** *(Radiologic examination, upper gastrointestinal tract, including scout abdominal radiograph(s) and delayed image(s), when performed; double-contrast (eg, high-density barium and effervescent agent) study, including glucagon, when administered),* and
- **74248** *(Radiologic examination, upper gastrointestinal tract, including scout abdominal radiograph(s) and delayed image(s), when performed; with small intestine follow-through study, including multiple serial images (List separately in addition to code for primary procedure))*

The specialty is requesting that the RUC reaffirm the CY2019 times and values for the recently-surveyed codes 74210 *(Radiologic examination, pharynx and/or cervical esophagus, including scout neck radiograph(s) and delayed image(s), when performed, contrast (eg, barium) study*) and 74230 *(Radiologic examination, swallowing function, with cineradiography/videoradiography, including scout neck radiograph(s) and delayed image(s), when performed, contrast (eg, barium) study),* which underwent editorial changes to the descriptor at CPT.

Survey Process

The ACR surveyed a total of 3,250 members (a random sample of 1,625 members and a separate random sample of 1,625 members who perform radiography or gastrointestinal procedures).

Compelling Evidence

The society is requesting compelling evidence for all existing codes in the code family to support the proposed work RVUs and times. The two codes identified on the screen, 74240 and 74246, are both CMS/Other, and were valued using flawed methodology. While code 74220 was most recently surveyed in April 2017, its patient population is being distributed to the new code, 74221. For all codes in this family, there have been changes in technology, patient population, and physician work, compared with earlier years. Healthy, routine patients are increasingly evaluated with endoscopy or CT, while patients undergoing fluoroscopic examinations are increasingly being evaluated for more complex problem-solving of chronic, unexplained symptoms when other investigations have been inconclusive, as well as increasingly for complex pre-operative anatomy and post-operative complications.

Work RVU Recommendation

The specialty recommends the survey 25th percentile work RVU of 0.70 for CPT code 74221.

Time Recommendation

The specialty recommends the following median survey times: 3 minutes of pre-service time, 12 minutes of intra-service time, and a reduction from the survey median to 3 minutes of post-service time. This is a total time of 18 minutes for CPT code 74221.

Key Reference Services

The most commonly chosen reference codes by survey participants are two CT of the abdomen procedures:

- **74160** *(Computed tomography, abdomen; with contrast material(s))*, chosen by 26% of respondents, and
- **74170** *(Computed tomography, abdomen; without contrast material, followed by contrast material(s) and further sections)*, chosen by 15% of respondents.

The recommended work RVU and survey times are appropriate compared to the most commonly chosen key reference service, 74160 *(Computed tomography, abdomen; with contrast material(s))*, which has 3 minutes more intra-service time, as well as higher IWPUT. The esophagus study is a more focused examination evaluating a specific problem or possible etiologies in one organ system. The CT abdomen with contrast includes a larger number of anatomic structures and a wider range of pathologic conditions, supported by the higher IWPUT.

The recommended value and service times for 74221 are also appropriately lower compared to the second key reference service, 74170 *(Computed tomography, abdomen; without contrast material, followed by contrast material(s) and further sections)*, which has 6 minutes more intra-service time and higher IWPUT. The esophagus study is a more focused examination evaluating a specific problem or possible etiologies in one organ system. However, the CT abdomen without and with contrast includes a larger number of anatomic structures, a wider range of potential pathologic conditions, and review of two entire CT examinations.

CPT Code	Descriptor	Work RVU	Total Time	Pre	Intra	Post	IWPUT	% chosen
74221	**X-ray, esophagus; double-contrast study**	**0.70**	**18**	**3**	**12**	**3**	**0.0471**	
74160	CT, abdomen; w/contrast	1.27	23	3	15	5	0.0727	26%
74170	CT, abdomen; w/o & w/contrast	1.40	28	5	18	5	0.0653	15%

MPC Codes

The surveyed code compares well with three MPC codes:

- **76536** *Ultrasound, soft tissues of head and neck (eg, thyroid, parathyroid, parotid), real time with image documentation*
- **99231** *(Subsequent hospital care, per day, for the evaluation and management of a patient, which requires at least 2 of these 3 key components: A problem focused interval history; A problem focused examination; Medical decision making that is straightforward or of low complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the patient is stable, recovering or improving. Typically, 15 minutes are spent at the bedside and on the patient's hospital floor or unit.)*

- **76700** *(Ultrasound, abdominal, real time with image documentation; complete)*

The surveyed code, 74221, has two more minutes of intra-service and identical total time compared to MPC code 76536. In addition, the surveyed code requires slightly more intense work, relating for example, to the need for patient repositioning and other maneuvers throughout the examination, accounting for the slightly higher IWPUT. The higher IWPUT accounts for the higher work RVU. While 74221 requires 1 more minute of intra-service time than 76700, it includes periods of less intense work, supporting the lower IWPUT and lower work RVU recommendation. Similarly, the surveyed code requires 2 more minutes of intra-service time than 99231, but overall less intense work when compared to the low-complexity E&M encounter, code 99231, supporting the lower IWPUT and slightly lower recommended work RVU.

The relationships are summarized in the following table.

CPT Code	Descriptor	Work RVU	Total Time	Pre	Intra	Post	IWPUT
76536	US, soft tissues of head & neck, real time w/img doc	0.56	18	4	10	4	0.0381
74221	**X-ray, esophagus; double-contrast study**	**0.70**	**18**	**3**	**12**	**3**	**0.0471**
99231	Subseq. hospital care, per day, for E&M of pt w/MDM of low complexity. Typically, 15 minutes bedside with patient.	0.76	20	5	10	5	0.0536
76700	US, abdominal, real time with image documentation; complete	0.81	21	5	11	5	0.0533

Summary

The specialty recommends 0.70 RVUs with 3 minutes pre-, 12 minutes intra-, and 3 minutes post-service time for CPT code 74221. The recommendation maintains relativity within the upper and lower gastrointestinal tract X-ray family, as well as the greater RBRVS.

CPT Code	Descriptor	Work RVU	Total Time	Pre	Intra	Post	IWPUT	RUC Meeting
74230	X-ray, swallowing function w/cine or videoradiography, incl. scout neck x-rays, contrast study	0.53	15	2	10	3	0.0417	Apr 2017
74210	X-Ray, pharynx and/or cervical esophagus, incl. scout neck x-rays, contrast study	0.59	15	3	10	2	0.0478	Apr 2017
74220	X-Ray, esophagus; single-contrast study	0.60	16	3	10	3	0.0466	Jan 2019
74248	X-ray, upper GI tract; w/small intestine follow-through study, incl mult serial imgs (List in addn to primary proc)	0.70	12		12		0.0583	Jan 2019

74240	X-ray, upper GI tract; single-contrast study	0.80	19	4	12	3	0.0536	Jan 2019
74250	X-Ray, small intestine; single-contrast study	0.81	23	3	15	5	0.0421	Oct 2018

74246	X-ray, upper GI tract; double-contrast study, incl glucagon, when admin	0.90	22	4	15	3	0.0495	Jan 2019
74270	X-ray, colon; single-contrast study	1.04	24	4	15	5	0.0559	Oct 2018
74251	X-ray, small intestine; double-contrast study	1.17	32	5	22	5	0.0430	Oct 2018
74280	X-ray, colon; double-contrast study	1.26	29	4	20	5	0.0529	Oct 2018

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 74220

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Specialty How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 118370
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by code 74X00 provided nationally in a one-year period is estimated to be 118,370.

Specialty Diagnostic Radiology Frequency 112780 Percentage 95.27 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 39,460 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. CPT code 74X00 is estimated to be provided to Medicare patients 39,460 times in a one-year period.

Specialty Diagnostic Radiology Frequency 37595 Percentage 95.27 %

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Imaging

BETOS Sub-classification:
Standard imaging

BETOS Sub-classification Level II:
Contrast Gastrointestinal

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 74220

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:74240 Tracking Number J5 Original Specialty Recommended RVU: **0.80**
Presented Recommended RVU: **0.80**
Global Period: XXX Current Work RVU: **0.69** RUC Recommended RVU: **0.80**

CPT Descriptor: Radiologic examination, upper gastrointestinal tract, including scout abdominal radiograph(s) and delayed image(s), when performed; single-contrast (eg, barium) study

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 76-year-old female presents with dysphagia. A single-contrast upper gastrointestinal examination is requested for evaluation of possible esophageal dysmotility or hiatal hernia.

Percentage of Survey Respondents who found Vignette to be Typical: 76%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review the reason for the examination and any pertinent clinical history. Confirm that single contrast only examination is appropriate. Determine the type of contrast to use. Review any prior applicable plain film or imaging studies. Provide patient with examination instructions and confirm understanding.

Description of Intra-Service Work: Position the patient. Obtain scout fluoroscopic image of the abdomen. Direct the administration of oral contrast agents by the patient. Observe patient under fluoroscopic guidance swallow liquids, of different consistencies as needed, in multiple positions for the thoracic esophagus, stomach, and duodenum, and take multiple additional spot views. Repeat swallowing attempts, and direct the patient to various positions to distribute barium along all mucosal surfaces. Direct the patient to various positions to better visualize the thoracic esophagus, stomach, and duodenum, and continue to perform intermittent fluoroscopy with spot radiographs and dynamic fluoroscopic recording as needed until contrast has passed the duodenojejunal junction. Observe patient under fluoroscopic guidance and additional maneuvers as needed swallow water to assess for gastroesophageal reflux. Supervise the acquisition of overhead radiographs obtained by the technologist. Review final images and appropriate comparisons while dictating the final report.

Description of Post-Service Work: Review, edit, and sign report for the medical record. Discuss findings with the patient and referring provider as needed.

Modifier -51 Exempt Status

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:

Is this new/revised procedure considered to be a new technology or service? No

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
74160	XXX	1.27	**RUC Time**

CPT Descriptor Computed tomography, abdomen; with contrast material(s)

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
74170	XXX	1.40	**RUC Time**

CPT Descriptor Computed tomography, abdomen; without contrast material, followed by contrast material(s) and further sections

KEY MPC COMPARISON CODES:

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
76536	XXX	0.56	**RUC Time**	868,983

CPT Descriptor 1 Ultrasound, soft tissues of head and neck (eg, thyroid, parathyroid, parotid), real time with image documentation

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
99231	XXX	0.76	**RUC Time**	7,877,777

CPT Descriptor 2 Subsequent hospital care, per day, for the evaluation and management of a patient, which requires at least 2 of these 3 key components: A problem focused interval history; A problem focused examination; Medical decision making that is straightforward or of low complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the patient is stable, recovering or improving. Typically, 15 minutes are spent at the bedside and on the patient's hospital floor or unit.

Other Reference CPT Code	Global	Work RVU	Time Source
76700	XXX	0.81	**RUC Time**

CPT Descriptor Ultrasound, abdominal, real time with image documentation; complet

RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:
Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by percent distribution) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Top Key Reference Code: 17 **% of respondents:** 23.6 **%**

Number of respondents who choose 2nd Key Reference Code: 13 **% of respondents:** 18.0 **%**

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	18%	35%	41%	6%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	59%	35%	6%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	6%	18%	76%
Physical effort required	0%	0%	100%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	29%	41%	29%

2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	15%	38%	31%	15%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	38%	31%	31%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	8%	15%	77%
Physical effort required	0%	8%	92%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	8%	62%	31%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

CPT codes 74240 and 74246 were identified on the screen for CMS/Other codes with utilization over 30,000. The family was expanded to include four other x-ray codes pertaining to the upper gastrointestinal tract, 74241, 74245, 74247, and 74249. These codes were referred to the April 2018 CPT meeting. CPT codes 74241 *(Radiologic examination, gastrointestinal tract, upper; with or without delayed images, with KUB),* 74245 *(Radiologic examination, gastrointestinal tract, upper; with small intestine, includes multiple serial images),* 74247 *(Radiological examination, gastrointestinal tract, upper, air contrast, with specific high density barium, effervescent agent, with or without glucagon; with or without delayed images, with KUB),* and 74249 *(Radiological examination, gastrointestinal tract, upper, air contrast, with specific high density barium, effervescent agent, with or without glucagon; with small intestine follow-through)* were deleted. The CPT Team further expanded the family to include CPT codes 74210, 74220, and 74230, which were surveyed in April 2017, and two new codes were created. The following codes were surveyed for January 2019.

- **74220** *(Radiologic examination, esophagus, including scout chest radiograph(s) and delayed image(s), when performed; single-contrast (eg, barium) study),*
- **74221** *(Radiologic examination, esophagus, including scout chest radiograph(s) and delayed image(s), when performed; double-contrast (eg, high-density barium and effervescent agent) study)*
- **74240** *(Radiologic examination, upper gastrointestinal tract, including scout abdominal radiograph(s) and delayed image(s), when performed; single-contrast (eg, barium) study),*
- **74246** *(Radiologic examination, upper gastrointestinal tract, including scout abdominal radiograph(s) and delayed image(s), when performed; double-contrast (eg, high-density barium and effervescent agent) study, including glucagon, when administered),* and
- **74248** *(Radiologic examination, upper gastrointestinal tract, including scout abdominal radiograph(s) and delayed image(s), when performed; with small intestine follow-through study, including multiple serial images (List separately in addition to code for primary procedure))*

The specialty is requesting that the RUC reaffirm the CY2019 times and values for the recently-surveyed codes 74210 *(Radiologic examination, pharynx and/or cervical esophagus, including scout neck radiograph(s) and delayed image(s), when performed, contrast (eg, barium) study*) and 74230 *(Radiologic examination, swallowing function, with cineradiography/videoradiography, including scout neck radiograph(s) and delayed image(s), when performed, contrast (eg, barium) study),* which underwent editorial changes to the descriptor at CPT.

Survey Process

The ACR surveyed a total of 3,250 members (a random sample of 1,625 members and a separate random sample of 1,625 members who perform radiography or gastrointestinal procedures).

Compelling Evidence

The society is requesting compelling evidence for all existing codes in the code family to support the proposed work RVUs and times. The two codes identified on the screen, 74240 and 74246, are both CMS/Other, and were valued using flawed methodology. While code 74220 was most recently surveyed in April 2017, its patient population is being distributed to the new code, 74221. For all codes in this family, there have been changes in technology, patient population, and physician work, compared with earlier years. Healthy, routine patients are increasingly evaluated with endoscopy or CT, while patients undergoing fluoroscopic examinations are increasingly being evaluated for more complex problem-solving of chronic, unexplained symptoms when other investigations have been inconclusive, as well as increasingly for complex pre-operative anatomy and post-operative complications.

Work RVU Recommendation

The specialty recommends the survey 25th percentile work RVU of 0.80 for CPT code 74240.

Time Recommendation

The specialty recommends the following median survey times: 4 minutes of pre-service time, 12 minutes of intra-service time, and a reduction from the survey median to 3 minutes of post-service time. This is a total time of 19 minutes for CPT code 74240.

Key Reference Services

The most commonly chosen reference codes by survey participants are two CT of the abdomen procedures:

- **74160** *(Computed tomography, abdomen; with contrast material(s))*, chosen by 24% of respondents, and
- **74170** *(Computed tomography, abdomen; without contrast material, followed by contrast material(s) and further sections)*, chosen by 18% of respondents.

The recommended work RVU and survey times are appropriate compared to the most commonly chosen key reference service, 74160 *(Computed tomography, abdomen; with contrast material(s))*, which has 3 minutes more intra-service time, as well as higher IWPUT. The esophagus study is a more focused examination evaluating a specific problem or possible etiologies in one organ system. The CT abdomen with contrast includes a larger number of anatomic structures and a wider range of pathologic conditions, supported by the higher IWPUT.

The recommended value and service times are also appropriately lower compared to the second key reference service, 74170 *(Computed tomography, abdomen; without contrast material, followed by contrast material(s) and further sections)*, which has 6 minutes more intra-service time and higher IWPUT. The esophagus study is a more focused examination evaluating a specific problem or possible etiologies in one organ system. However, the CT abdomen without and with contrast includes a larger number of anatomic structures, a wider range of potential pathologic conditions, and review of two entire CT examinations.

CPT Code	Descriptor	Work RVU	Total Time	Pre	Intra	Post	IWPUT	% chosen
74240	**X-ray, upper GI tract; single-contrast study**	**0.80**	**19**	**4**	**12**	**3**	**0.0536**	
74160	CT, abdomen; w/contrast	1.27	23	3	15	5	0.0727	24%
74170	CT, abdomen; w/o & w/contrast	1.40	28	5	18	5	0.0653	18%

MPC Codes

The surveyed code compares well with three MPC codes:

- **76536** *Ultrasound, soft tissues of head and neck (eg, thyroid, parathyroid, parotid), real time with image documentation*
- **99231** *(Subsequent hospital care, per day, for the evaluation and management of a patient, which requires at least 2 of these 3 key components: A problem focused interval history; A problem focused examination; Medical decision making that is straightforward or of low complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the patient is stable, recovering or improving. Typically, 15 minutes are spent at the bedside and on the patient's hospital floor or unit.)*

- **76700** *(Ultrasound, abdominal, real time with image documentation; complete)*

The surveyed code, 74240, has two more minutes of intra-service time and one more minute of total time than MPC code 76536. In addition, the surveyed code requires slightly more intense work, relating for example, to the need for patient repositioning and other maneuvers throughout the examination, accounting for the slightly higher IWPUT. The greater time and IWPUT together account for the greater work RVU. While 74240 requires 1 more minute of intra-service time than MPC code 76700, it includes periods of less intense work, supporting the lower IWPUT and lower work RVU recommendation. Similarly, the surveyed code requires 2 more minutes of intra-service time than 99231, supporting the slightly higher work RVU.

The relationships are summarized in the following table.

CPT Code	Descriptor	Work RVU	Total Time	Pre	Intra	Post	IWPUT
76536	US, soft tissues of head & neck, real time w/img doc	0.56	18	4	10	4	0.0381
99231	Subseq. hospital care, per day, for E&M of pt w/MDM of low complexity. Typically, 15 minutes bedside with patient.	0.76	20	5	10	5	0.0536
74240	**X-ray, upper GI tract; single-contrast study**	**0.80**	**19**	**4**	**12**	**3**	**0.0536**
76700	US, abdominal, real time with image documentation; complete	0.81	21	5	11	5	0.0533

Summary

The specialty recommends 0.80 RVUs with 4 minutes pre-, 12 minutes intra-, and 3 minutes post-service time for CPT code 74240. The recommendation maintains relativity within the upper and lower gastrointestinal tract X-ray family, as well as the greater RBRVS.

CPT Code	Descriptor	Work RVU	Total Time	Pre	Intra	Post	IWPUT	RUC Meeting
74230	X-ray, swallowing function w/cine or videoradiography, incl. scout neck x-rays, contrast study	0.53	15	2	10	3	0.0417	Apr 2017

74280	X-ray, colon; double-contrast study	1.26	29	4	20	5	0.0529	Oct 2018

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☒ Other reason (please explain) CPT code 74240 is typically reported with an E/M code. It may also be reported with CPT codes 70360, 72040, or 74230.

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Imaging

BETOS Sub-classification:
Standard imaging

BETOS Sub-classification Level II:
Contrast Gastrointestinal

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 74240

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:74246 Tracking Number J6 Original Specialty Recommended RVU: **0.90**
Presented Recommended RVU: **0.90**
Global Period: XXX Current Work RVU: **0.69** RUC Recommended RVU: **0.90**

CPT Descriptor: Radiologic examination, upper gastrointestinal tract, including scout abdominal radiograph(s) and delayed image(s), when performed; double-contrast (eg, high-density barium and effervescent agent) study, including glucagon, when administered

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 65-year-old male presents with chronic anemia and abdominal pain. A double-contrast upper gastrointestinal examination is requested for evaluation of possible gastric or duodenal ulcer or mass.

Percentage of Survey Respondents who found Vignette to be Typical: 88%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review the reason for the examination and any pertinent clinical history. Confirm that double contrast examination is appropriate. Determine the type of contrast to use and whether glucagon is indicated. Review any prior applicable plain film or imaging studies. Provide patient with examination instructions and confirm understanding.

Description of Intra-Service Work: Position the patient. Obtain scout fluoroscopic image of the chest and abdomen. Direct the administration of effervescent sodium bicarbonate crystals and water. Direct the administration of glucagon as needed. Direct the administration of oral contrast agents by the patient. Observe patient under fluoroscopic guidance swallow thin and thick liquids in multiple positions for the thoracic esophagus, stomach, and duodenum, and take multiple additional spot views. Repeat swallowing attempts and direct the patient to various positions to distribute barium along all mucosal surfaces. Direct the patient to various positions to better visualize the thoracic esophagus, stomach, and duodenum, and continue to perform intermittent fluoroscopy with spot radiographs and dynamic fluoroscopic recording as needed until contrast has passed the duodenojejunal junction. Use paddle palpation to assist visualization of gastric and proximal small bowel folds, as needed. Observe patient under fluoroscopic guidance and additional maneuvers as needed swallow water to assess for gastroesophageal reflux. Supervise the acquisition of overhead radiographs obtained by the technologist. Review final images and appropriate comparisons while dictating the final report.

Description of Post-Service Work: Review, edit, and sign report for the medical record. Discuss findings with the patient and referring provider as needed.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	20%	32%	40%	8%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	36%	40%	24%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	8%	16%	76%
Physical effort required	0%	4%	96%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	24%	36%	40%

2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	18%	32%	36%	14%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	36%	36%	27%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	9%	14%	77%
Physical effort required	0%	0%	100%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	32%	41%	27%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

CPT codes 74240 and 74246 were identified on the screen for CMS/Other codes with utilization over 30,000. The family was expanded to include four other x-ray codes pertaining to the upper gastrointestinal tract, 74241, 74245, 74247, and 74249. These codes were referred to the April 2018 CPT meeting. CPT codes 74241 *(Radiologic examination, gastrointestinal tract, upper; with or without delayed images, with KUB),* 74245 *(Radiologic examination, gastrointestinal tract, upper; with small intestine, includes multiple serial images),* 74247 *(Radiological examination, gastrointestinal tract, upper, air contrast, with specific high density barium, effervescent agent, with or without glucagon; with or without delayed images, with KUB),* and 74249 *(Radiological examination, gastrointestinal tract, upper, air contrast, with specific high density barium, effervescent agent, with or without glucagon; with small intestine follow-through)* were deleted. The CPT Team further expanded the family to include CPT codes 74210, 74220, and 74230, which were surveyed in April 2017, and two new codes were created. The following codes were surveyed for January 2019.

- **74220** *(Radiologic examination, esophagus, including scout chest radiograph(s) and delayed image(s), when performed; single-contrast (eg, barium) study),*
- **74221** *(Radiologic examination, esophagus, including scout chest radiograph(s) and delayed image(s), when performed; double-contrast (eg, high-density barium and effervescent agent) study)*
- **74240** *(Radiologic examination, upper gastrointestinal tract, including scout abdominal radiograph(s) and delayed image(s), when performed; single-contrast (eg, barium) study),*
- **74246** *(Radiologic examination, upper gastrointestinal tract, including scout abdominal radiograph(s) and delayed image(s), when performed; double-contrast (eg, high-density barium and effervescent agent) study, including glucagon, when administered),* and
- **74248** *(Radiologic examination, upper gastrointestinal tract, including scout abdominal radiograph(s) and delayed image(s), when performed; with small intestine follow-through study, including multiple serial images (List separately in addition to code for primary procedure))*

The specialty is requesting that the RUC reaffirm the CY2019 times and values for the recently-surveyed codes 74210 *(Radiologic examination, pharynx and/or cervical esophagus, including scout neck radiograph(s) and delayed image(s), when performed, contrast (eg, barium) study*) and 74230 *(Radiologic examination, swallowing function, with cineradiography/videoradiography, including scout neck radiograph(s) and delayed image(s), when performed, contrast (eg, barium) study),* which underwent editorial changes to the descriptor at CPT.

Survey Process

The ACR surveyed a total of 3,250 members (a random sample of 1,625 members and a separate random sample of 1,625 members who perform radiography or gastrointestinal procedures).

Compelling Evidence

The society is requesting compelling evidence for all existing codes in the code family to support the proposed work RVUs and times. The two codes identified on the screen, 74240 and 74246, are both CMS/Other, and were valued using flawed methodology. While code 74220 was most recently surveyed in April 2017, its patient population is being distributed to the new code, 74221. For all codes in this family, there have been changes in technology, patient population, and physician work, compared with earlier years. Healthy, routine patients are increasingly evaluated with endoscopy or CT, while patients undergoing fluoroscopic examinations are increasingly being evaluated for more complex problem-solving of chronic, unexplained symptoms when other investigations have been inconclusive, as well as increasingly for complex pre-operative anatomy and post-operative complications.

Work RVU Recommendation

The specialty recommends the survey 25th percentile work RVU of 0.90 for CPT code 74246.

Time Recommendation

The specialty recommends the following median survey times: 4 minutes of pre-service time, 15 minutes of intra-service time, and a reduction from the survey median to 3 minutes of post-service time. This is a total time of 22 minutes for CPT code 74246.

Key Reference Services

The most commonly chosen reference codes by survey participants are two CT of the abdomen procedures:

- **74160** *(Computed tomography, abdomen; with contrast material(s))*, chosen by 35% of respondents, and
- **74170** *(Computed tomography, abdomen; without contrast material, followed by contrast material(s) and further sections)*, chosen by 31% of respondents.

The recommended work RVU and survey times are appropriate compared to the most commonly chosen key reference service, 74160 *(Computed tomography, abdomen; with contrast material(s))*. The two examinations have identical intra-service time and nearly identical total time. However, 74160 has higher IWPUT, accounting for the higher work RVU. The upper GI study is a more focused examination evaluating a specific problem or possible etiologies in one organ system. The CT abdomen with contrast includes a larger number of anatomic structures and a wider range of pathologic conditions, supported by the higher IWPUT.

The recommended value and service times are also appropriately lower compared to the second key reference service, 74170 *(Computed tomography, abdomen; without contrast material, followed by contrast material(s) and further sections)*, which has 3 minutes more intra-service time and higher IWPUT. The upper GI study is a more focused examination evaluating a specific problem or possible etiologies in one organ system. However, the CT abdomen without and with contrast includes a larger number of anatomic structures, a wider range of potential pathologic conditions, and review of two entire CT examinations.

CPT Code	Descriptor	Work RVU	Total Time	Pre	Intra	Post	IWPUT	% chosen
74246	**X-ray, upper GI tract; double-contrast study, incl glucagon, when admin**	**0.90**	**22**	**4**	**15**	**3**	**0.0495**	
74160	CT, abdomen; w/contrast	1.27	23	3	15	5	0.0727	35%
74170	CT, abdomen; w/o & w/contrast	1.40	28	5	18	5	0.0653	31%

MPC Codes

The surveyed code compares well with two MPC codes:

- **76700** *(Ultrasound, abdominal, real time with image documentation; complete)*
- **92012** *(Ophthalmological services: medical examination and evaluation, with initiation or continuation of diagnostic and treatment program; intermediate, established patient)*
- **99213** *(Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: An expanded problem focused history; An expanded problem focused examination; Medical decision making of low complexity. Counseling and coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of low to moderate severity. Typically, 15 minutes are spent face-to-face with the patient and/or family.)*

The surveyed code, 74246, includes periods of slightly less intense work than MPC code 76700, a real-time ultrasound code. However, 74246 requires 4 more minutes of intra-service time, leading to the overall slightly higher work RVU recommendation. The work RVU for CPT code 74246 also compares well with two non-radiology code, 92012 and 99213. Both of these E&M codes have the same intra-service time and similar pre-service and post-service times, but are valued slightly higher than 74246.

The relationships are summarized in the following table.

CPT Code	Descriptor	Work RVU	Total Time	Pre	Intra	Post	IWPUT
76700	US, abdominal, real time with image documentation; complete	0.81	21	5	11	5	0.0533
74246	**X-ray, upper GI tract; double-contrast study, incl glucagon, when admin**	**0.90**	**22**	**4**	**15**	**3**	**0.0495**
92012	Ophthalmological services: medical exam & eval, with initiation or continuation of dx and treatment program; intermed, establ pt	0.92	25	5	15	5	0.0464
99213	Office or OP visit for E&M of establ pt. MDM of low complexity, with problems of low to moderate severity. 15 mins face to face with pt.	0.97	23	3	15	5	0.0527

Summary

The specialty recommends 0.90 RVUs with 4 minutes pre-, 15 minutes intra-, and 3 minutes post-service time for CPT code 74246. The recommendation maintains relativity within the upper and lower gastrointestinal tract X-ray family, as well as the greater RBRVS.

CPT Code	Descriptor	Work RVU	Total Time	Pre	Intra	Post	IWPUT	RUC Meeting
74230	X-ray, swallowing function w/cine or videoradiography, incl. scout neck x-rays, contrast study	0.53	15	2	10	3	0.0417	Apr 2017

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 74246, and shifting utilizations from 74247 and 74249

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 213690
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by code 74246 provided nationally in a one-year period is estimated to be 213,690.

Specialty Diagnostic Radiology Frequency 197465 Percentage 92.40 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 71,230 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. CPT code 74246 is estimated to be provided to Medicare patients 71,230 times in a one-year period.

Specialty Diagnostic Radiology Frequency 65820 Percentage 92.40 %

Specialty Frequency Percentage %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: During a single-contrast upper gastrointestinal study, a 67-year-old male with abdominal pain and concern for hiatal hernia also requires additional evaluation of dilated small bowel loops discovered during the study undergoes small intestine follow-through study. Note: This is an add-on service. Only consider the additional work related to small intestine follow-through study.

Percentage of Survey Respondents who found Vignette to be Typical: 82%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work:

Description of Intra-Service Work: Position the patient. Direct the administration of effervescent sodium bicarbonate crystals and water as needed. Direct the administration of glucagon as needed. Direct the administration of oral contrast agents by the patient. Direct the patient to various positions to better visualize the duodenum, and proximal, mid, and distal small bowel in all four quadrants and distribute barium along all mucosal surfaces, and continue to perform intermittent fluoroscopy with spot radiographs and dynamic fluoroscopic recording as needed until contrast has passed the terminal ileum and reached the cecum. Use paddle palpation to assist visualization of small bowel segments. Supervise the acquisition of overhead radiographs obtained by the technologist. Review final images and appropriate comparisons while dictating the final report.

Description of Post-Service Work:

SURVEY DATA

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	13%	50%	31%	6%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	25%	50%	25%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	19%	31%	50%
Physical effort required	0%	13%	88%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	50%	19%	31%

2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	18%	45%	36%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	36%	45%	18%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	27%	18%	55%
Physical effort required	27%	9%	64%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	27%	64%	9%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

CPT codes 74240 and 74246 were identified on the screen for CMS/Other codes with utilization over 30,000. The family was expanded to include four other x-ray codes pertaining to the upper gastrointestinal tract, 74241, 74245, 74247, and 74249. These codes were referred to the April 2018 CPT meeting. CPT codes 74241 *(Radiologic examination, gastrointestinal tract, upper; with or without delayed images, with KUB),* 74245 *(Radiologic examination, gastrointestinal tract, upper; with small intestine, includes multiple serial images),* 74247 *(Radiological examination, gastrointestinal tract, upper, air contrast, with specific high density barium, effervescent agent, with or without glucagon; with or without delayed images, with KUB),* and 74249 *(Radiological examination, gastrointestinal tract, upper, air contrast, with specific high density barium, effervescent agent, with or without glucagon; with small intestine follow-through)* were deleted. The CPT Team further expanded the family to include CPT codes 74210, 74220, and 74230, which were surveyed in April 2017, and two new codes were created. The following codes were surveyed for January 2019.

- **74220** *(Radiologic examination, esophagus, including scout chest radiograph(s) and delayed image(s), when performed; single-contrast (eg, barium) study),*
- **74221** *(Radiologic examination, esophagus, including scout chest radiograph(s) and delayed image(s), when performed; double-contrast (eg, high-density barium and effervescent agent) study)*
- **74240** *(Radiologic examination, upper gastrointestinal tract, including scout abdominal radiograph(s) and delayed image(s), when performed; single-contrast (eg, barium) study),*
- **74246** *(Radiologic examination, upper gastrointestinal tract, including scout abdominal radiograph(s) and delayed image(s), when performed; double-contrast (eg, high-density barium and effervescent agent) study, including glucagon, when administered),* and
- **74248** *(Radiologic examination, upper gastrointestinal tract, including scout abdominal radiograph(s) and delayed image(s), when performed; with small intestine follow-through study, including multiple serial images (List separately in addition to code for primary procedure))*

The specialty is requesting that the RUC reaffirm the CY2019 times and values for the recently-surveyed codes 74210 *(Radiologic examination, pharynx and/or cervical esophagus, including scout neck radiograph(s) and delayed image(s), when performed, contrast (eg, barium) study*) and 74230 *(Radiologic examination, swallowing function, with cineradiography/videoradiography, including scout neck radiograph(s) and delayed image(s), when performed, contrast (eg, barium) study),* which underwent editorial changes to the descriptor at CPT.

Survey Process

The ACR surveyed a total of 3,250 members (a random sample of 1,625 members and a separate random sample of 1,625 members who perform radiography or gastrointestinal procedures).

Compelling Evidence

The society is requesting compelling evidence for all existing codes in the code family to support the proposed work RVUs and times. The two codes identified on the screen, 74240 and 74246, are both CMS/Other, and were valued using flawed methodology. While code 74220 was most recently surveyed in April 2017, its patient population is being distributed to the new code, 74221. For all codes in this family, there have been changes in technology, patient population, and physician work, compared with earlier years. Healthy, routine patients are increasingly evaluated with endoscopy or CT, while patients undergoing fluoroscopic examinations are increasingly being evaluated for more complex problem-solving of chronic, unexplained symptoms when other investigations have been inconclusive, as well as increasingly for complex pre-operative anatomy and post-operative complications.

Work RVU Recommendation

The specialty recommends the survey 25th percentile work RVU of 0.70 for CPT code 74248.

Time Recommendation

The specialty recommends 12 minutes of intra-service time for add-on code 74248. This is below the survey median time of 20 minutes. We are recommending a time less than the survey median of 20 minutes because this service was previously reported as part of code 74245 or 74249, both of which are being deleted, and that were CMS/Other codes with a total of 18 minutes of physician work. The new add-on code, 74248, will have a similar intra-service time as the base services with which it is being performed, code 74240 or 74246, which have survey median intra-service times of 12 minutes or 15 minutes, respectively.

Key Reference Services

The most commonly chosen reference codes by survey participants:

- **76810** *(Ultrasound, pregnant uterus, real time with image documentation, fetal and maternal evaluation, after first trimester (> or = 14 weeks 0 days), transabdominal approach; each additional gestation (List separately in addition to code for primary procedure))*, chosen by 22% of respondents, and
- **19282** *(Placement of breast localization device(s) (eg, clip, metallic pellet, wire/needle, radioactive seeds), percutaneous; each additional lesion, including mammographic guidance (List separately in addition to code for primary procedure))*, chosen by 15% of respondents.

The recommended work RVU and survey times are appropriate compared to the most commonly chosen key reference service, 76810 *(US, pregnant uterus, real time with image documentation, fetal and maternal evaluation, after first trimester, transabdominal approach; each additional gestation)*. 74248 requires imaging of an entirely different region of anatomic structures than the base codes, requiring patient repositioning and additional maneuvers, accounting for the slightly higher IWPUT than 76810. However, 74248 requires 8 less minutes of intra-service time, accounting for the overall lower work RVU recommendation.

The recommended value and service times are also appropriately lower compared to the second key reference service, 19282 *(Placement of breasts localization device percutaneous; each additional lesion, including mammographic guidance)*. 74248 requires imaging of an entirely different region of anatomic structures than the base codes, requiring patient repositioning and additional maneuvers, accounting for the slightly higher IWPUT than 19282. However, 74248 requires 8 less minutes of intra-service time, accounting for the overall lower work RVU recommendation.

CPT Code	Descriptor	Work RVU	Total Time	Pre	Intra	Post	IWPUT	% chosen
74248	**X-ray, upper GI tract; w/small intestine follow-through study, incl mult serial imgs (List in addn to primary proc)**	**0.70**	**12**		**12**		**0.0583**	
76810	US, preg uterus, fetal & maternal eval, after 1st tri, transabd; ea addl gestation (List in addn to primary proc)	0.98	20		20		0.0490	22%
19282	Plcmnt of breast localization evice; ea addl lesion, incl mammo guidance (List in addn to primary proc)	1.00	25	5	20		0.0444	15%

MPC Codes

The surveyed code compares well with two MPC codes:

- **64484** *(Injection(s), anesthetic agent and/or steroid, transforaminal epidural, with imaging guidance (fluoroscopy or CT); lumbar or sacral, each additional level (List separately in addition to code for primary procedure))*
- **51797** *(Voiding pressure studies, intra-abdominal (ie, rectal, gastric, intraperitoneal) (List separately in addition to code for primary procedure))*

The surveyed code, 74248, requires 2 more minutes of intra-service time than MPC code 64484, but is appropriately valued less since it is not an invasive procedure like 64484. CPT code 74248 has 3 less minutes of intra-service time compared with MPC code 51797, and is appropriately valued at a lower RVU. Both of these services have similar IWPUT, which is appropriate for these diagnostic exams.

CPT Code	Descriptor	Work RVU	Total Time	Pre	Intra	Post	IWPUT
74248	**X-ray, upper GI tract; w/small intestine follow-through study, incl mult serial imgs (List in addn to primary proc)**	**0.70**	**12**		**12**		**0.0583**
51797	Voiding pressure studies, intra-abd (List in addn to primary proc)	0.80	15		15		0.0533
64484	Inj anesthetic and/or steroid, transforaminal epidural w/img guid; lumbar or sacral, ea addl lvl (List in addn to primary proc)	1.00	10		10		0.1000

Summary

The specialty recommends 0.70 RVUs with 12 minutes intra-service time for CPT code 74248. The recommendation maintains relativity within the upper and lower gastrointestinal tract X-ray family, as well as the greater RBRVS.

CPT Code	Descriptor	Work RVU	Total Time	Pre	Intra	Post	IWPUT	RUC Meeting
74230	X-ray, swallowing function w/cine or videoradiography, incl. scout neck x-rays, contrast study	0.53	15	2	10	3	0.0417	Apr 2017

74210	X-Ray, pharynx and/or cervical esophagus, incl. scout neck x-rays, contrast study	0.59	15	3	10	2	0.0478	Apr 2017
74220	X-Ray, esophagus; single-contrast study	0.60	16	3	10	3	0.0466	Jan 2019
74248	**X-ray, upper GI tract; w/small intestine follow-through study, incl mult serial imgs (List in addn to primary proc)**	**0.70**	**12**		**12**		**0.0583**	**Jan 2019**
74221	X-ray, esophagus; double-contrast study	0.70	18	3	12	3	0.0471	Jan 2019
74240	X-ray, upper GI tract; single-contrast study	0.80	19	4	12	3	0.0536	Jan 2019
74250	X-Ray, small intestine; single-contrast study	0.81	23	3	15	5	0.0421	Oct 2018
74246	X-ray, upper GI tract; double-contrast study, incl glucagon, when admin	0.90	22	4	15	3	0.0495	Jan 2019
74270	X-ray, colon; single-contrast study	1.04	24	4	15	5	0.0559	Oct 2018
74251	X-ray, small intestine; double-contrast study	1.17	32	5	22	5	0.0430	Oct 2018
74280	X-ray, colon; double-contrast study	1.26	29	4	20	5	0.0529	Oct 2018

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. CPT code 74X01 is an add-on procedure and will be billed with either 74240 or 74246.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 74245 or 74249

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 48975
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by code 74X01 provided nationally in a one-year period is estimated to be 48,975.

Specialty Diagnostic Radiology Frequency 46720 Percentage 95.39 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 16,325 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. CPT code 74X01 is estimated to be provided to Medicare patients 16,325 times in a one-year period.

Specialty Diagnostic Radiology Frequency 15575 Percentage 95.40 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Imaging

BETOS Sub-classification:
Standard imaging

BETOS Sub-classification Level II:
Contrast Gastrointestinal

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 74220

CPT Code: 74210, 74220, 74221, 74230, 74240, 74246, 74248
Specialty Society: ACR

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Non Facility Direct Practice Expense (PE) Inputs

CPT Long Descriptor:

74210	Radiologic examination, pharynx and/or cervical esophagus, including scout neck radiograph(s) and delayed image(s), when performed, contrast (eg, barium) study	XXX
74220	Radiologic examination, esophagus, including scout chest radiograph(s) and delayed image(s), when performed; single-contrast (eg, barium) study	XXX
74221	Radiologic examination, esophagus, including scout chest radiograph(s) and delayed image(s), when performed; double-contrast (eg, high-density barium and effervescent agent) study	XXX
74230	Radiologic examination, swallowing function, with cineradiography/videoradiography, including scout neck radiograph(s) and delayed image(s), when performed, contrast (eg, barium) study	XXX
74240	Radiologic examination, upper gastrointestinal tract, including scout abdominal radiograph(s) and delayed image(s), when performed; single-contrast (eg, barium) study	XXX
74246	Radiologic examination, upper gastrointestinal tract, including scout abdominal radiograph(s) and delayed image(s), when performed; double-contrast (eg, high-density barium and effervescent agent) study, including glucagon, when administered	XXX
74248	Radiologic examination, upper gastrointestinal tract, including scout abdominal radiograph(s) and delayed image(s), when performed; with small intestine follow-through study, including multiple serial images (List separately in addition to code for primary procedure)	ZZZ

Global Period: XXX and ZZZ Meeting Date: January 2019

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   The American College of Radiology (ACR) convened a consensus panel to finalize the practice expense data for the X-Ray Upper GI Tract code family, CPT codes 74210, 74220, 74221, 74230, 74240, 74246, 74248.

2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here:

   The society included the existing PE inputs for codes 74210, 74220, 74230, 74240, and 74246 on the spreadsheet to serve as a reference. We have also included the to-be-deleted codes, 74241, 74245, 74247, and 74249, whose services will be redistributed to the new or existing codes.

3. Is this code(s) typically billed with an E/M service?
   Is this code(s) typically billed with the E/M service in the nonfacility?
   (Please see provided data in PE Subcommittee folder)

   These codes are not typically billed with an E/M.

CPT codes 74230 and 72340 are typically billed with an E/M in the nonfacility.

4. What specialty is the dominant provider in the nonfacility?
   What percent of the time does the dominant provider provide the service(s) in the nonfacility?
   Is the dominant provider in the nonfacility different then for the global?
   (Please see provided data in PE Subcommittee folder)

	Nonfacility		Global	
74210	DIAGNOSTIC RADIOLOGY	49%	DIAGNOSTIC RADIOLOGY	98%
74220	DIAGNOSTIC RADIOLOGY	84%	DIAGNOSTIC RADIOLOGY	95%
74230	DIAGNOSTIC RADIOLOGY	34%	DIAGNOSTIC RADIOLOGY	89%
74240	GENERAL SURGERY	21%	DIAGNOSTIC RADIOLOGY	59%
74246	DIAGNOSTIC RADIOLOGY	66%	DIAGNOSTIC RADIOLOGY	90%

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:

6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), you must provide compelling evidence. Please explain if the increase can be entirely accounted for because of an increase in physician time.

   The increase in aggregate cost is a result of the increase in physician time, per the multispecialty RUC survey. This correlates to the increase in professional PACS workstation time.

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here:

8. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? (please use this time rather than 5 minutes in your reference code)
   The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

9. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

   X-ray, pharynx and/or cervical esophagus (74210)
   Bring patient into x-ray room and have patient stand or lay on x-ray table as appropriate. Position patient for the first view at the direction of the physician. Step behind shielding to control panel. Set appropriate exposure parameters. Instruct patient to hold still. Take exposure for first view. Step from behind shielding. Review the image with the supervising physician and adjust patient positioning and parameters as needed. The above steps are repeated for all subsequent views to be obtained under supervision by the physician performing the procedure as needed to demonstrate the relevant anatomy and any pertinent pathology. For each image after the initial image, assist the supervising physician in administering oral contrast and effervescent agents as needed to demonstrate pertinent anatomy and findings. All cassettes are taken to the image reader and run through reader. Check all images for

adequate exposure, positioning, coverage, etc. Discuss with the radiologist and repeat any views as needed.

X-ray, esophagus single contrast (74220)
Bring patient into x-ray room and have patient stand or lay on x-ray table as appropriate. Position patient for the first view at the direction of the physician. Step behind shielding to control panel. Set appropriate exposure parameters. Instruct patient to hold still. Take exposure for first view. Step from behind shielding. Review the image with the supervising physician and adjust patient positioning and parameters as needed. The above steps are repeated for all subsequent views to be obtained under supervision by the physician performing the procedure as needed to demonstrate the relevant anatomy and any pertinent pathology. For each image after the initial image, assist the supervising physician in administering oral contrast as needed to demonstrate pertinent anatomy and findings. All cassettes are taken to the image reader and run through reader. Check all images for adequate exposure, positioning, coverage, etc. Discuss with the radiologist and repeat any views as needed.

X-ray, esophagus double contrast (74221)
Bring patient into x-ray room and have patient stand or lay on x-ray table as appropriate. Position patient for the first view at the direction of the physician. Step behind shielding to control panel. Set appropriate exposure parameters. Instruct patient to hold still. Take exposure for first view. Step from behind shielding. Review the image with the supervising physician and adjust patient positioning and parameters as needed. The above steps are repeated for all subsequent views to be obtained under supervision by the physician performing the procedure as needed to demonstrate the relevant anatomy and any pertinent pathology. For each image after the initial image, assist the supervising physician in administering oral contrast and effervescent agents as needed to demonstrate pertinent anatomy and findings. All cassettes are taken to the image reader and run through reader. Check all images for adequate exposure, positioning, coverage, etc. Discuss with the radiologist and repeat any views as needed.

X-ray, swallowing function with cineradiography/videoradiography (74230)
Bring patient into x-ray room and have patient stand on x-ray table or sit in a specially modified chair, as appropriate. Position patient's neck for the first view. Step behind shielding to control panel. Set appropriate exposure parameters. Instruct patient to hold still. Take exposure for first view. Step from behind shielding. Review the image with the supervising physician and adjust patient positioning and parameters as needed. The above steps are repeated for all subsequent views to be obtained under supervision by the physician or speech pathologist performing the procedure as needed to demonstrate the relevant anatomy and any pertinent pathology. For each image after the initial image, assist the supervising physician and speech pathologist in administering oral contrast and effervescent agents as needed to demonstrate pertinent anatomy and findings. Check all images for adequate exposure, positioning, coverage, etc. Discuss with the radiologist or speech pathologist and repeat any views as needed.

X-ray, upper GI single-contrast (74240)
Bring patient into x-ray room and have patient stand or lay on x-ray table as appropriate. Position patient for the first view at the direction of the physician. Step behind shielding to control panel. Set appropriate exposure parameters. Instruct patient to hold still. Take exposure for first view. Step from behind shielding. Review the image with the supervising physician and adjust patient positioning and parameters as needed. The above steps are repeated for all subsequent views to be obtained under supervision by the physician performing the procedure as needed to demonstrate the relevant anatomy and any pertinent pathology. For each image after the initial image, assist the supervising physician in administering oral contrast as needed to demonstrate pertinent anatomy and findings. All cassettes are

taken to the image reader and run through reader. Check all images for adequate exposure, positioning, coverage, etc. Discuss with the radiologist and repeat any views as needed.

X-ray, upper GI double contrast (74246)
Bring patient into x-ray room and have patient stand or lay on x-ray table as appropriate. Position patient for the first view at the direction of the physician. Step behind shielding to control panel. Set appropriate exposure parameters. Instruct patient to hold still. Take exposure for first view. Step from behind shielding. Review the image with the supervising physician and adjust patient positioning and parameters as needed. The above steps are repeated for all subsequent views to be obtained under supervision by the physician performing the procedure as needed to demonstrate the relevant anatomy and any pertinent pathology. For each image after the initial image, assist the supervising physician in administering oral contrast and effervescent agents as needed to demonstrate pertinent anatomy and findings. All cassettes are taken to the image reader and run through reader. Check all images for adequate exposure, positioning, coverage, etc. Discuss with the radiologist and repeat any views as needed.

X-ray, upper GI with small intestine follow-through (list separately in addition to primary procedure) (74248)
Bring patient into x-ray room and have patient stand or lay on x-ray table as appropriate. Position patient for the first view at the direction of the physician. Step behind shielding to control panel. Set appropriate exposure parameters. Instruct patient to hold still. Take exposure for first view. Step from behind shielding. Review the image with the supervising physician and adjust patient positioning and parameters as needed. The above steps are repeated for all subsequent views to be obtained under supervision by the physician performing the procedure as needed to demonstrate the relevant anatomy and any pertinent pathology. For each image after the initial image, assist the supervising physician in administering oral contrast as needed to demonstrate pertinent anatomy and findings. Assist the supervision physician in administering glucagon as needed. Assist the supervision physician in performing paddle compression of small bowel segments as needed. All cassettes are taken to the image reader and run through reader. Check all images for adequate exposure, positioning, coverage, etc. Discuss with the radiologist and repeat any views as needed.

10. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

11. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities:

12. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

13. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here:

14. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here:

15. List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here:

    - **Technologist PACS Workstation Proxy (ED050)** –PACS formula; Equals total service period time
    - **Professional PACS Workstation (ED053)** – Equals physician work intra time + 1/2 physician work pre-time
    - **Room, basic radiology (EL012)** – Highly technical formula

16. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here:

17. If there is any other item on your spreadsheet that needs further explanation please include here:

18. Please include an explanation of each line item:

AMA/Specialty Society RVS Update Committee Summary of Recommendations
CMS/Other Source – Utilization over 100,000

April 2017

X-Ray Esophagus

In October 2016, the Relativity Assessment Workgroup expanded the CMS/Other Source codes screen, lowering the Medicare utilization threshold from 250,000 to 100,000 based on 2015 Medicare utilization data; CPT code 74220 was identified by this screen and 74210 and 74230 were identified as part of the same family of services. The Workgroup recommended the specialty societies survey these services for April 2017.

Compelling Evidence
The specialty society presented compelling evidence for codes 74210 and 74220. The society noted that the prior methodology for valuing these codes is unknown and considered flawed, as the source is CMS/Other. As the RUC has noted previously during review of other services, codes with the CMS/Other designation were never surveyed by the RUC or any other stakeholder; their physician time and work were assigned by CMS in rulemaking over 20 years ago using an unknown methodology. The specialty society also noted that an increase in value for these codes is justified by the survey data, comparisons with the key reference services, and to maintain relativity within the family and other x-ray examinations of the digestive system. The RUC accepted that there is compelling evidence that CPT codes 74210 and 74220 were originally valued using a flawed methodology.

74210 ***Radiologic examination; pharynx and/or cervical esophagus***
The RUC reviewed the survey results from 50 radiologists and agreed with following physician time components: pre-service time of 3 minutes, intra-service time of 10 minutes and post-service time of 2 minute, resulting in a total of 15 minutes.

The RUC reviewed the survey 25th percentile work RVU of 0.59and agreed that this value appropriately accounts for the physician work involved. To justify a work RVU of 0.59, the RUC compared the survey code to MPC code 92083 *Visual field examination, unilateral or bilateral, with interpretation and report; extended examination (eg, Goldmann visual fields with at least 3 isopters plotted and static determination within the central 30 deg, or quantitative, automated threshold perimetry, Octopus program G-1, 32 or 42, Humphrey visual field analyzer full threshold programs 30-2, 24-2, or 30/60-2)* (work RVU = 0.50, intra-service time of 10 minutes, total time of 13 minutes) and noted that both services have identical intra-service time, whereas the survey code involves more total time, justifying a somewhat higher valuation. To further support a work RVU of 0.59, the RUC compared the survey code to MPC code 76830 *Ultrasound, transvaginal* (work RVU =0.69, intra-service time of 10 minutes, total time of 23 minutes) and noted that both services have identical intra-service time, whereas CPT code 76830 involves somewhat more total time. The RUC agreed that the proposed valuation is appropriately bracketed by both MPC codes. **The RUC recommends a work RVU of 0.59 for CPT code 74210.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

74220 ***Radiologic examination; esophagus***
The RUC reviewed the survey results from 50 radiologists and agreed with following physician time components: pre-service time of 3 minutes, intra-service time of 10 minutes and post-service time of 2 minutes, resulting in a total of 15 minutes.

The RUC reviewed the survey 25th percentile work RVU of 0.67 and agreed that this value appropriately accounts for the physician work involved. The specialty noted and the RUC agreed that although both 74220 and 74210 take a similar amount of time to perform, 74220 is a more intense service to perform, indicating a somewhat higher work RVU is warranted. To justify a work RVU of 0.67, the RUC compared the survey code to MPC code 99282 *Emergency department visit for the evaluation and management of a patient, which requires these 3 key components: An expanded problem focused history; An expanded problem focused examination; and Medical decision making of low complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of low to moderate severity* (work RVU = 0.88, intra-service time of 10 minutes, total time of 18 minutes) and noted that both services have identical intra-service time, whereas the reference code involves somewhat more total time, justifying a somewhat lower valuation for the survey code. To further support a work RVU of 0.67, the RUC compared the survey code to MPC code 76830 *Ultrasound, transvaginal* (work RVU of 0.69, intra-service time of 10 minutes, total time of 23 minutes) and noted that both services have identical intra-service time, whereas the survey code is a more intense service to perform. **The RUC recommends a work RVU of 0.67 for CPT code 74220.**

74230 ***Swallowing function, with cineradiography/videoradiography***
The RUC reviewed the survey results from 50 radiologists and agreed with following physician time components: pre-service time of 2 minutes, intra-service time of 10 minutes and post-service time of 3 minutes, resulting in a total of 15 minutes. During the post-service period, the specialty explained and the RUC agreed that it is typical for the radiologist to discuss the study with the speech therapist, justifying a post-service time of 3 minutes.

The RUC reviewed the current work RVU of 0.53 recommended by the specialties and agreed that this value appropriately accounts for the physician work involved. To justify a work RVU of 0.53, the RUC compared the survey code to MPC code 92083 *Visual field examination, unilateral or bilateral, with interpretation and report; extended examination (eg, Goldmann visual fields with at least 3 isopters plotted and static determination within the central 30 deg, or quantitative, automated threshold perimetry, Octopus program G-1, 32 or 42, Humphrey visual field analyzer full threshold programs 30-2, 24-2, or 30/60-2)* (work RVU =0.50, intra-service time of 10 minutes, total time of 13 minutes) and noted that both services have identical intra-service time, whereas the survey code involves more total time, justifying a somewhat higher valuation. To further support a work RVU of 0.53, the RUC compared the survey code to MPC code 76830 *Ultrasound, transvaginal* (work RVU = 0.69, intra-service time of 10 minutes, total time of 23 minutes) and noted that both services have identical intra-service time, whereas 76830 involves somewhat more total time. The RUC agreed that the proposed valuation of 0.53 is appropriately bracketed by both MPC codes. **The RUC recommends a work RVU of 0.53 for CPT code 74230.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Practice Expense
The RUC recommends the direct practice expense inputs as submitted by the specialty societies and reviewed and approved by the Practice Expense Subcommittee.

SUMMARY OF RECOMMENDATION

CPT Code:74210 Tracking Number Original Specialty Recommended RVU: **0.59**
Presented Recommended RVU: **0.59**
Global Period: XXX Current Work RVU: **0.36** RUC Recommended RVU: **0.59**

CPT Descriptor: Radiologic examination; pharynx and/or cervical esophagus

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: An elderly patient with a history of oral cancer complains of difficulty swallowing and neck pain. A radiologic evaluation of the hypopharynx and upper esophagus is requested.

Percentage of Survey Respondents who found Vignette to be Typical: 88%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review the request for appropriateness and review available clinical documentation. Obtain updated clinical history and discuss examination with the patient. Review any prior applicable imaging studies.

Description of Intra-Service Work: Obtain scout fluoroscopic image of the neck in anteroposterior (AP) and lateral views prior to administration of oral substances. Observe patient under fluoroscopic guidance swallow thin and/or thick contrast material liquids in AP and lateral positions for pharynx and AP and oblique positions for cervical esophagus. Observe fluoroscopic real time images evaluating: (1) oral phase (moistening, mastication, trough formation, movement of bolus posteriorly); (2) pharyngeal phase (closure of nasopharynx, oropharynx preparation to receive bolus, closure of larynx, hyoid elevation, bolus transit to pharynx); and (3) esophageal phase (esophageal peristalsis, pharyngeal/laryngeal relaxation). Assess for common abnormalities, including: poor airway coverage (epiglottis dysfunction), penetration, aspiration, reflux, Zenker's/Killian Jamieson diverticula, cricopharyngeal achalasia, filling defects suggesting mass or retained foreign bodies, external compression (large thyroid, retropharyngeal carotid artery, large cervical osteophytes). Review saved images and dictate report.

Description of Post-Service Work: Review and sign final report. Communicate findings to referring physician and/or patient and patient's family as needed.

The risk of significant complications, morbidity and/or mortality	50%	0%	50%
Outcome depends on the skill and judgment of physician	0%	63%	38%
Estimated risk of malpractice suit with poor outcome	100%	0%	0%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

CPT Code 74220 *(Radiologic examination; esophagus)* was identified as potentially mis-valued through the CMS/Other utilization greater than 100,000 screen. The survey was expanded to include two other codes in this family, 74210 *(Radiologic examination; pharynx and/or cervical esophagus)*, and 74230 *(Swallowing function, with cineradiography/videoradiography)*, even though 74230 was surveyed for the January 2014 RUC meeting.

The times and work values of the existing codes are shown in the table below.

CPT Code	Descriptor	Current Work RVU	Pre-Service	Intra-Service	Post-Service	Total Time	IWPUT
74210	Radiologic examination; pharynx and/or cervical esophagus	0.36				9*	
74220	Radiologic examination; esophagus	0.46				10*	
74230	Swallowing function, with cineradiography	0.53	3	10	4	17	0.037

***** CMS/Other valued.

Survey Process

The American College of Radiology (ACR) conducted both a random sample and a random sample of a subset of members who indicated they performed x-ray imaging procedures. We assembled an expert panel to review the data and develop the following recommendations.

Summary of Recommendations for the Family

We are recommending the 25th percentile survey values for codes 74210 and 74220, which are increased from their current valuation of CMS/Other, but in line with other x-ray examinations of the digestive system. We recommend maintaining the current value for code 74230. We believe these work values and median times are supported by the survey data and comparison codes.

Compelling Evidence

We are requesting an increased value for two codes within this family, 74210 and 74220. The prior methodology for valuing these codes is unknown and considered flawed, as the source is CMS/Other. An increase in value for these codes is justified by the survey data, comparisons with the KRS codes, and to maintain relativity within the family and other x-ray examinations of the digestive system.

Work RVU Recommendation:

We recommend a work RVU of 0.59 for 74210, which is the 25th percentile survey value.

Time Recommendation:

We recommend the median survey times of 3 minutes pre-service, 10 minutes intra-service, and 4 minutes post-service.

Key Reference Services:

Our recommendation compares favorably to the two most commonly chosen key reference services (KRS): 74280 *(Radiologic examination, colon; air contrast with specific high density barium, with or without glucagon)* chosen by 34% of respondents, and 70450 *(Computed tomography, head or brain; without contrast material)* chosen by 16% of respondents.

Our recommendation for 74210 is less than both KRS. The surveyed code scored a similar or lower level of complexity on the majority of complexity measurements compared with the two KRS codes. These comparisons and relative values are appropriate given the less intense work in 74210, as indicated by the survey respondents compared with 70450 and the longer time in 74280 for similarly intense work in a comparable fluoroscopy study of the lower digestive tract.

CPT Code	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
74210	**Radiologic examination; pharynx and/or cervical esophagus**	0.59	**17**	**3**	**10**	**4**	**0.043**
70450	Computed tomography, head or brain; without contrast material	0.85	19	4	10	5	0.065
74280	Radiologic examination, colon; air contrast with specific high density barium, with or without glucagon	0.99	32	5	20	7	0.036

MPC Codes:

The surveyed code compares well with two MPC codes: 76830 *(Ultrasound, transvaginal)*, which has a slightly higher wRVU of 0.69 and total time of 23 minutes (pre-, intra-, and post-service times of 5, 10, and 8 minutes, respectively), and 92083 *(Visual field examination, unilateral or bilateral, with interpretation and report; extended examination (eg, Goldmann visual fields with at least 3 isopters plotted and static determination within the central 30 deg, or quantitative, automated threshold perimetry, Octopus program G-1, 32 or 42, Humphrey visual field analyzer full threshold programs 30-2, 24-2, or 30/60-2))*, which has the same intra-service time, but less post-service time.

CPT Code	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT

92083	Visual field exam, extended	0.50	13	3	10	0	0.043
74210	**Radiologic examination; pharynx and/or cervical esophagus**	0.59	**17**	**3**	**10**	**4**	**0.043**
76830	Ultrasound, transvaginal	0.69	23	5	10	8	0.040

Conclusion

Our recommendations for 74210 maintain relativity in the family of esophageal fluoroscopy codes and are supported by both the survey data and comparison with other codes across the RBRVS.

CPT Code	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
74230	Swallowing function, with cineradiography	0.53	15	2	10	3	0.042
74210	**Radiologic examination; pharynx and/or cervical esophagus**	**0.59**	**17**	**3**	**10**	**4**	**0.043**
74220	Radiologic examination; esophagus	0.67	17	3	10	4	0.051

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 74210

CPT Descriptor: Radiologic examination; esophagus

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: An elderly patient with history of gastroesophageal reflux disease presents with progressive dysphagia. A radiologic evaluation of the esophagus is requested.

Percentage of Survey Respondents who found Vignette to be Typical: 90%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review the request for appropriateness and review available clinical documentation. Obtain updated clinical history and discuss examination with the patient. Review any prior applicable imaging studies.

Description of Intra-Service Work: Obtain scout fluoroscopic image of the neck, chest, and upper abdomen prior to administration of oral substances. Administer effervescent sodium bicarbonate crystals and water. Observe patient under fluoroscopic guidance swallow thin liquids and/or thick liquids while evaluating the pharynx and esophagus.
Assessment of the esophagus includes evaluation for aspiration, reflux, Zenker's/Killian Jamieson diverticula, Schatzk's ring, strictures, cricopharyngeal achalasia, filling defects suggesting mass or retained foreign bodies, mucosal abnormalities, hiatal hernia, external compression (large thyroid, retropharyngeal carotid artery, large cervical osteophytes). Observe patient under fluoroscopic guidance swallow water to assess for gastroesophageal reflux.
Observe patient under fluoroscopic guidance swallow a 13 mm barium tablet (if clinical concern for stricture or visible evidence of stricture). Obtain single AP fluoroscopic image of the abdomen (KUB). Review saved images and dictate report.

Description of Post-Service Work: Review and sign final report. Communicate findings to referring physician and/or patient and patient's family as needed.

The risk of significant complications, morbidity and/or mortality	45%	0%	55%
Outcome depends on the skill and judgment of physician	18%	55%	27%
Estimated risk of malpractice suit with poor outcome	100%	0%	0%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

CPT Code 74220 *(Radiologic examination; esophagus)* was identified as potentially mis-valued through the CMS/Other utilization greater than 100,000 screen. The survey was expanded to include two other codes in this family, 74210 *(Radiologic examination; pharynx and/or cervical esophagus)*, and 74230 *(Swallowing function, with cineradiography/videoradiography)*, even though 74230 was surveyed for the January 2014 RUC meeting.

The times and work values of the existing codes are shown in the table below.

CPT Code	Descriptor	Current Work RVU	Pre-Service	Intra-Service	Post-Service	Total Time	IWPUT
74210	Radiologic examination; pharynx and/or cervical esophagus	0.36				9*	
74220	Radiologic examination; esophagus	0.46				10*	
74230	Swallowing function, with cineradiography	0.53	3	10	4	17	0.037

***** CMS/Other valued.

Survey Process

The American College of Radiology (ACR) conducted both a random sample and a random sample of a subset of members who indicated they performed x-ray imaging procedures. We assembled an expert panel to review the data and develop the following recommendations.

Summary of Recommendations for the Family

We are recommending the 25th percentile survey values for codes 74210 and 74220, which are increased from their current valuation of CMS/Other, but in line with other x-ray examinations of the digestive system. We recommend maintaining the current value for code 74230. We believe these work values and median times are supported by the survey data and comparison codes.

Compelling Evidence

We are requesting an increased value for two codes within this family, 74210 and 74220. The prior methodology for valuing these codes is unknown and considered flawed, as the source is CMS/Other. An increase in value for these codes is justified by the survey data, comparisons with the KRS codes, and to maintain relativity within the family and other x-ray examinations of the digestive system.

Work RVU Recommendation:

We recommend a work RVU of 0.67 for 74220, which is also the 25th percentile survey value.

Time Recommendation:

We recommend the median survey times of 3 minutes pre-service, 10 minutes intra-service, and 4 minutes post-service.

Key Reference Services:

Our recommendation compares favorably to the two most commonly chosen key reference services (KRS): 74280 *(Radiologic examination, colon; air contrast with specific high density barium, with or without glucagon)* chosen by 38% of respondents, and 70450 *(Computed tomography, head or brain; without contrast material)* chosen by 22% of respondents.

Our survey value recommendation for 74220 is less than both KRS. The surveyed code scored a slightly lower level of complexity on the majority of complexity measurements compared with the two KRS codes. These comparisons and relative values are appropriate given the less intense work in 74220 as indicated by the survey respondents compared with 70450 and the longer time in 74280 for similarly intense work in a comparable fluoroscopy study of the lower digestive tract.

CPT Code	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
74220	**Radiologic examination; esophagus**	**0.67**	**17**	**3**	**10**	**4**	**0.051**
70450	Computed tomography, head or brain; without contrast material	0.85	19	4	10	5	0.065
74280	Radiologic examination, colon; air contrast with specific high density barium, with or without glucagon	0.99	32	5	20	7	0.036

MPC Codes:

The surveyed code compares well with two MPC codes: 76830 *(Ultrasound, transvaginal)*, which has a slightly higher wRVU of 0.69 and total time of 23 minutes (pre-, intra-, and post-service times of 5, 10, and 8 minutes, respectively), and 99282 *(Emergency department visit for the evaluation and management of a patient, which requires these 3 key components: An expanded problem focused history; An expanded problem focused examination; and Medical decision making of low complexity)*, which has similar times as 74220, but is appropriately valued higher given the higher intensity and complexity of the work in this code.

CPT Code	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
74220	**Radiologic examination;**	**0.67**	**17**	**3**	**10**	**4**	**0.051**

	esophagus						
76830	Ultrasound, transvaginal	0.69	23	5	10	8	0.040
99282	Emergency department E&M, low complexity	0.88	18	3	10	5	0.070

Conclusion

Our recommendations for 74220 maintain relativity in the family of esophageal fluoroscopy codes and are supported by both the survey data and comparison with other codes across the RBRVS.

CPT Code	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
74230	Swallowing function, with cineradiography	0.53	15	2	10	3	0.042
74210	Radiologic examination; pharynx and/or cervical esophagus	0.59	17	3	10	4	0.043
74220	**Radiologic examination; esophagus**	**0.67**	**17**	**3**	**10**	**4**	**0.051**

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 74220

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review the request for appropriateness and review clinical history. Review any prior applicable studies. Confirm protocol with speech pathologist.

Description of Intra-Service Work: Obtain scout fluoroscopic image of the neck in anteroposterior (AP) and lateral views prior to administration of oral substances. Observe patient under fluoroscopic guidance swallow thin liquids, thick liquids, nectar thick liquids, soft solids, and hard solids in lateral position (and AP position when needed). Additional fluoroscopic observations frequently performed include observing: patient swallowing solids followed by liquid wash, and/or patient swallowing liquids with chin tuck positioning. Observe fluoroscopic real time and fluoroscopic video recordings evaluating: (1) oral phase (moistening, mastication, trough formation, movement of bolus posteriorly); (2) pharyngeal phase (closure of nasopharynx, oropharynx preparation to receive bolus, closure of larynx, hyoid elevation, bolus transit to pharynx); and (3) esophageal phase (esophageal peristalsis, pharyngeal/laryngeal relaxation). Assess for poor airway coverage (epiglottis dysfunction), penetration, aspiration, reflux, Zenker's/Killian Jamieson diverticula, cricopharyngeal achalasia, filling defects suggesting mass or retained foreign bodies, external compression (large thyroid, retropharyngeal carotid artery, large cervical osteophytes). Review obtained images and stored cinegraphic clips while dictating the report.

Description of Post-Service Work: Review and sign final report. Communicate findings to referring physician and/or patient and patient's family as needed.

SURVEY DATA

RUC Meeting Date (mm/yyyy)	04/2017					
Presenter(s):	Kurt Schoppe, MD; Daniel Wessell, MD					
Specialty(s):	American College of Radiology					
CPT Code:	74230					
Sample Size:	1000	**Resp N:**	50	**Response:** 5.0 %		
Description of Sample:	The ACR surveyed a total of 1000 members (a random sample of 500 members and a separate random sample of 500 members who perform radiography).					

	Low	25th pctl	Median*	75th pctl	High
Service Performance Rate	0.00	16.00	**40.00**	100.00	400.00

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	17%	39%	17%	22%	6%

Mental Effort and Judgment	**Less**	**Identical**	**More**
The number of possible diagnosis and/or the number of management options that must be considered	50%	28%	22%
The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed	45%	33%	22%
Urgency of medical decision making	28%	56%	17%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	45%	33%	22%
Physical effort required	61%	17%	22%

Psychological Stress	Less	Identical	More
The risk of significant complications, morbidity and/or mortality	44%	28%	28%
Outcome depends on the skill and judgment of physician	50%	28%	22%
Estimated risk of malpractice suit with poor outcome	50%	33%	17%

2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	50%	17%	33%	0%

Mental Effort and Judgment	Less	Identical	More
The number of possible diagnosis and/or the number of management options that must be considered	83%	0%	17%
The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed	83%	17%	0%
Urgency of medical decision making	67%	33%	0%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	17%	17%	67%
Physical effort required	0%	17%	83%

Psychological Stress	Less	Identical	More
The risk of significant complications, morbidity and/or mortality	67%	0%	33%
Outcome depends on the skill and judgment of physician	33%	67%	0%
Estimated risk of malpractice suit with poor outcome	83%	0%	17%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

CPT Code 74220 *(Radiologic examination; esophagus)* was identified as potentially mis-valued through the CMS/Other utilization greater than 100,000 screen. The survey was expanded to include two other codes in this family, 74210 *(Radiologic examination; pharynx and/or cervical esophagus)*, and 74230 *(Swallowing function, with cineradiography/videoradiography)*, even though 74230 was surveyed for the January 2014 RUC meeting.

The times and work values of the existing codes are shown in the table below.

CPT Code	Descriptor	Current Work RVU	Pre-Service	Intra-Service	Post-Service	Total Time	IWPUT
74210	Radiologic examination; pharynx and/or cervical esophagus	0.36				9*	
74220	Radiologic examination; esophagus	0.46				10*	
74230	Swallowing function, with cineradiography	0.53	3	10	4	17	0.037

***** CMS/Other valued.

Survey Process

The American College of Radiology (ACR) conducted both a random sample and a random sample of a subset of members who indicated they performed x-ray imaging procedures. We assembled an expert panel to review the data and develop the following recommendations.

Summary of Recommendations for the Family

We are recommending the 25th percentile survey values for codes 74210 and 74220, which are increased from their current valuation of CMS/Other, but in line with other x-ray examinations of the digestive system. We recommend maintaining the current value for code 74230. We believe these work values and median times are supported by the survey data and comparison codes.

Compelling Evidence

We are requesting an increased value for two codes within this family, 74210 and 74220. The prior methodology for valuing these codes is unknown and considered flawed, as the source is CMS/Other. An increase in value for these codes is justified by the survey data, comparisons with the KRS codes, and to maintain relativity within the family and other x-ray examinations of the digestive system.

Work RVU Recommendation:

We recommend a work RVU of 0.53 for 74230, which is the current value of this code.

Time Recommendation:

We recommend the median survey times of 2 minutes pre-service, 10 minutes intra-service, and 3 minutes post-service.

Key Reference Services:

Our recommendation compares favorably to the two most commonly chosen key reference services (KRS): 74280 *(Radiologic examination, colon; air contrast with specific high density barium, with or without glucagon)* chosen by 36% of respondents, and 70450 *(Computed tomography, head or brain; without contrast material)* chosen by 12% of respondents. Our recommendation for 74230 is less than both KRS. The surveyed code scored uniformly lower on all of the intensity/complexity measurements compared with the two KRS codes.

CPT Code	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
74230	**Swallowing function, with cineradiography**	**0.53**	**15**	**2**	**10**	**3**	**0.042**
70450	Computed tomography, head or brain; without contrast material	0.85	19	4	10	5	0.065
74280	Radiologic examination, colon; air contrast with specific high density barium, with or without glucagon	0.99	32	5	20	7	0.036

MPC Codes:

The surveyed code compares well with two MPC codes: 76830 *(Ultrasound, transvaginal),* which has a slightly higher wRVU of 0.69 and total time of 23 minutes (pre-, intra-, and post-service times of 5, 10, and 8 minutes, respectively), and 92083 *(Visual field examination, unilateral or bilateral, with interpretation and report; extended examination (eg, Goldmann visual fields with at least 3 isopters plotted and static determination within the central 30 deg, or quantitative, automated threshold),* which has the same intra-service time, but less post-service time.

CPT Code	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
92083	Visual field exam, extended	0.50	13	3	10	0	0.043
74230	**Swallowing function, with cineradiography**	**0.53**	**15**	**2**	**10**	**3**	**0.042**
76830	Ultrasound, transvaginal	0.69	23	5	10	8	0.0399

Conclusion

Our recommendations for 74230 maintain relativity in the family of esophageal fluoroscopy codes and are supported by both the survey data and comparison with other codes across the RBRVS.

CPT Code	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
74230	**Swallowing function, with cineradiography**	**0.53**	**15**	**2**	**10**	**3**	**0.042**
74210	Radiologic examination; pharynx and/or cervical esophagus	0.59	17	3	10	4	0.043
74220	Radiologic examination; esophagus	0.67	17	3	10	4	0.051

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 74230

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 1061223

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by code 74230 provided nationally in a one-year period is estimated to be 1,061,223.

Specialty Diagnostic Radiology Frequency 948018 Percentage 89.33 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 353,741 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by code 74230 provided nationally in a one-year period is estimated to be 353,741.

Specialty Diagnostic Radiology Frequency 316006 Percentage 89.33 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Imaging

BETOS Sub-classification:
Standard imaging

BETOS Sub-classification Level II:
Contrast Gastrointestinal

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 74230

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

CPT Code: 74210, 74220, 74230
Specialty Society: ACR

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SOR)
Non Facility Direct Practice Expense (PE) Inputs

CPT Long Descriptor:

74210	Radiologic examination; pharynx and/or cervical esophagus
74220	Radiologic examination; esophagus
74230	Swallowing function, with cineradiography/videoradiography

Global Period: XXX Meeting Date: April 2017

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

The American College of Radiology (ACR) convened a consensus panel to finalize the practice expense data for the x-ray esophagus CPT codes 74210, 74220, and 74230.

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code.** You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here:

The societies included the existing PE inputs for CPT codes 74210, 74220, and 74230 on the spreadsheet to serve as a reference.

3. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:

- **Prepare, set-up and start IV, initial positioning and monitoring of patient:** For 74230, extra time is required due to the complex nature of the patient, who is often debilitated and requires assistance.

4. Please provide rationale for the minutes you are recommending for clinical activities that do not have PE Subcommittee standards:

5. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:

- **Prepare, set-up and start IV, initial positioning and monitoring of patient (CA016):** time increased to the standard 2 minutes.
- **Clean room/equipment by clinical staff (CA024):** time increased to the standard 3 minutes.
- **Technologist QC's images in PACS, checking for all images, reformats, and dose page (CA030):** The specialty feels that this was an oversight by CMS in transposing the January 2014 RUC-approved PE inputs into their database, as no PE refinements were indicated in the 2015 MPFS. This is a standard clinical activity for radiologists, for which CMS has allotted a minimum standard of 2 minutes.
- **Barium suspension (Polibar) (SH016):** the amounts of barium allocated to 74210 and 74220 are clinically necessary.

- **Professional PACS Workstation (ED053):** In the CY 2017 MPFS Final Rule, CMS finalized an equipment time for the PACS Professional Workstation which is equal to half the preservice physician work time and the full intra-service physician work time.
- **PACS Workstation Proxy (ED050):** CMS finalized an equipment time for the PACS Workstation Proxy which is equal to the clinical staff service period time.

6. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Spreadsheet Update Workgroup and listed in tab 2, please explain the difference here:

7. Please describe in detail the clinical activities of your staff below:

Pre-Service Period Clinical Activities:

Service Period Clinical Activities:
Pre-Service (of Service Period):

- Greet patient, provide gowning, ensure appropriate medical records are available
- Prepare room, equipment and supplies
- Prepare, set-up and start IV, initial positioning and monitoring of patient

Intra-Service (of Service Period):

- Perform procedure/service—NOT directly related to physician work

Post-Service (of Service Period):

- Clean room/equipment by clinical staff
- Technologist QC's images in PACS, checking for all images, reformats, and dose page
- Review examination with interpreting MD/DO
- Scan exam documents into PACS. Complete exam in RIS system to populate images into work queue.

Post-Service Period Clinical Activities:

8. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

For X-ray esophagus (74210, 74220):
Bring patient into x-ray room and have patient stand on x-ray table or sit in a specially modified chair, as appropriate. Position patient for the first view at the direction of the physician. Step behind shielding to control panel. Set appropriate exposure parameters. Instruct patient to hold still. Take exposure for first view. Step from behind shielding. Review the image with the supervising physician and adjust patient positioning and parameters as needed. The above steps are repeated for all subsequent views to be obtained under supervision by the physician performing the procedure as needed to demonstrate the relevant anatomy and any pertinent pathology. For each image after the initial image, assist the supervising physician in administering oral contrast and effervescent agents as needed to demonstrate pertinent anatomy and findings. Check all images for adequate exposure, positioning, coverage, etc. Discuss with the radiologist and repeat any views as needed.

For swallowing function (74230):
Bring patient into x-ray room and have patient stand on x-ray table or sit in a specially modified chair, as appropriate. Position patient's neck for the first view. Step behind shielding to control panel. Set appropriate exposure parameters. Instruct patient to hold still. Take exposure for first

view. Step from behind shielding. Review the image with the supervising physician and adjust patient positioning and parameters as needed. The above steps are repeated for all subsequent views to be obtained under supervision by the physician or speech pathologist performing the procedure as needed to demonstrate the relevant anatomy and any pertinent pathology. For each image after the initial image, assist the supervising physician and speech pathologist in administering oral contrast and effervescent agents as needed to demonstrate pertinent anatomy and findings. Check all images for adequate exposure, positioning, coverage, etc. Discuss with the radiologist or speech pathologist and repeat any views as needed.

9. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

10. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities:

11. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

12. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here:

13. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here:

14. List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here:

- **PACS Workstation Proxy (ED050)** [Other formula]: Equal to the total clinical service period time
- **Professional PACS Workstation Proxy (ED053)** [Other formula]: Equal to the physician work intra service time + ½ of the physician work pre-service time.
- **Room, radiographic-fluoroscopic (EL014)** [Highly technical equipment formula]
- **Chair with headrest, exam, reclining (EF008)** [Highly technical equipment formula]

15. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here:

16. If there is any other item on your spreadsheet that needs further explanation please include here:

AMA/Specialty Society RVS Update Committee Summary of Recommendations
High Volume Growth

January 2019

Myocardial PET – Tab 13

In January 2017, CPT code 78492 was identified via the High Volume Growth screen with total Medicare utilization over 10,000 which increased by at least 100% from 2009 through 2014. The RUC recommended referring this code to the CPT Editorial Panel to undergo substantive descriptor changes to reflect newer technology aspects such as wall motion, ejection fraction, flow reserve, and technology updates for hardware and software. In May 2018 the CPT Editorial Panel approved deletion of a Category III code, addition of six Category I codes, and revision of three codes to separately identify component services included for myocardial imaging using positron emission tomography.

In October 2018, the RUC pre-facilitated this tab and thoroughly discussed the issues surrounding the survey of this family of services. The RUC recognized significant problems, such as these services are essentially incremental studies, of myocardial PET metabolic, myocardial PET perfusion, with or without CT studies. However, the surveyed work RVUs were non-consistent increments and the physician time increments were only 0, 2, 3 or 5 minutes different. Noting that if these were stand-alone services, the differences would most likely be larger, like 5 or 10 minutes. Likewise, the difference of work was also not consistent. The RUC explored various alternative accepted methodologies and nothing produced an appropriate valuation of these services. The RUC also noted there are limited crosswalk codes to develop work RVUs for these services. Due to the survey outcome and concern with relativity among this family of services, the RUC recommended resurveying these services for January 2019. The specialty societies indicated they would request via the Research Subcommittee to resurvey using a custom survey tool where the work RVU and physician time question would be on the same page of the survey in a tabular format — the custom survey would include additional explanatory language.

In January 2019, the specialty societies presented new survey data and recommendations that demonstrated the appropriate rank order for this family of services.

Compelling Evidence

The specialty societies indicated and the RUC agreed that there is compelling evidence that the physician work has changed for these services due to a change in technology. Myocardial PET imaging has evolved in the past two decades. There have been changes in instrumentation, computer processing, and software since the mid 1990's that allow extraction of greater clinically valuable information on metabolic, perfusion and function. Of note, when these legacy PET services were originally developed, the technology to perform wall motion or ejection fraction for myocardial PET perfusion did not exist, these new services now include this work. These changes have enhanced the acquisition, processing, quality control, and interpretation while also adding new variables for analysis and review by the physician or qualified healthcare professional.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

PET Metabolic – Single Study

78459 ***Myocardial imaging, positron emission tomography (PET), metabolic evaluation study (including ventricular wall motion(s), and/or ejection fraction(s), when performed) single study;***
The RUC reviewed the survey results from 63 cardiologists and nuclear medicine physicians and determined that the survey 25th percentile work RVU of 1.61 appropriately accounts for the work required to perform CPT code 78459. The RUC recommends 10 minutes pre-service time, 15 minutes intra-service time and 8 minutes immediate post-service time. This is a PET scan instead of examining at blood flow, as with the perfusion PET, it examines metabolism using a tracer, such as glucose. The RUC agreed that CPT code 78459 requires slightly more physician work than code 78491 *Myocardial imaging PET perfusion, single study* (RUC recommended work RVU = 1.56) because the metabolic codes examine glucose uptake by the myocardium. The heart is a peculiar organ, as its primary energy source is fatty acid, not glucose like the brain and skeletal muscle. Therefore, the physician needs certain metabolic conditions to be met at the time of the tracer injection for glucose levels and patients must adhere to a specific diet prior to the injections. The metabolic scans are more interactive to insure a quality uptake scan occurs. The RUC compared the surveyed code to the key reference services 78452 *Myocardial perfusion imaging, tomographic (SPECT) (including attenuation correction, qualitative or quantitative wall motion, ejection fraction by first pass or gated technique, additional quantification, when performed); multiple studies, at rest and/or stress (exercise or pharmacologic) and/or redistribution and/or rest reinjection* (work RVU = 1.62 and total time of 40 minutes) and 78811 *Positron emission tomography (PET) imaging; limited area (eg, chest, head/neck)* (work RVU = 1.54 and total time of 40 minutes) and noted that CPT code 78459 requires less total time but is more intense and complex to perform. Thus, appropriately valued similarly to the reference services. For additional support, the RUC also compared the surveyed code to MPC code 74176 *Computed tomography, abdomen and pelvis; without contrast material* (work RVU = 1.74 and total time of 32 minutes). **The RUC recommends a work RVU of 1.61 for CPT code 78459.**

78429 ***Myocardial imaging, positron emission tomography (PET), metabolic evaluation study (including ventricular wall motion(s), and/or ejection fraction(s), when performed) single study; with concurrently acquired computed tomography transmission scan***
The RUC reviewed the survey results from 66 cardiologists and nuclear medicine physicians and determined that the survey 25th percentile work RVU of 1.76 appropriately accounts for the work required to perform CPT code 78429. The RUC recommends 10 minutes pre-service time, 18 minutes intra-service time and 10 minutes immediate post-service time. The RUC confirmed that CPT code 78429, which includes CT, appropriately requires 3 more minutes intra-service time and 2 more minutes immediate post-service time than the myocardial PET without CT (78459). Likewise, the recommended work RVU for the *with and without CT* demonstrates the appropriate relativity. The RUC compared the surveyed code to the second key reference service 93351 *Echocardiography, transthoracic, real-time with image documentation (2D), includes M-mode recording, when performed, during rest and cardiovascular stress test using treadmill, bicycle exercise and/or pharmacologically induced stress, with interpretation and report; including performance of continuous electrocardiographic monitoring, with supervision by a physician or other qualified health care professional* (work RVU = 1.75 and total time of 40 minutes) noting that both services require similar physician work, time and intensity to perform and thus should be valued similarly. For additional support, the RUC also compared the surveyed code to similar service 70552 *Magnetic resonance (eg, proton) imaging, brain (including brain stem); with contrast material(s)* (work RVU = 1.78 and total time of 32 minutes). **The RUC recommends a work RVU of 1.76 for CPT code 78429.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

PET Perfusion – Single Study

78491 ***Myocardial imaging, positron emission tomography, perfusion study (including ventricular wall motion(s), and/or ejection fractions(s), when performed); single study, at rest or stress (exercise or pharmacologic)***
The RUC reviewed the survey results from 64 cardiologists and nuclear medicine physicians and determined that the survey 25th percentile work RVU of 1.56 appropriately accounts for the work required to perform CPT code 78491. The RUC recommends 8 minutes pre-service time, 15 minutes intra-service time and 7 minutes immediate post-service time. The RUC compared the surveyed code to the key reference services 78452 *Myocardial perfusion imaging, tomographic (SPECT) (including attenuation correction, qualitative or quantitative wall motion, ejection fraction by first pass or gated technique, additional quantification, when performed); multiple studies, at rest and/or stress (exercise or pharmacologic) and/or redistribution and/or rest reinjection* (work RVU = 1.62 and total time of 40 minutes) and 78811 *Positron emission tomography (PET) imaging; limited area (eg, chest, head/neck)* (work RVU = 1.54 and total time of 40 minutes) and noted that CPT code 78491 requires less total time but is more intense and complex to perform. CPT code 78491 is slightly more intense than the key reference codes because it involves PET isotopes, whereas CPT code 78452 does not and is performed on complex patients that are high risk with multiple previous stents and CABGs. Thus, appropriately valued similarly to the reference services and maintains the relativity among these services. For additional support, the RUC also compared the surveyed code to MPC code 74176 *Computed tomography, abdomen and pelvis; without contrast material* (work RVU = 1.74 and total time of 32 minutes). **The RUC recommends a work RVU of 1.56 for CPT code 78491.**

78430 ***Myocardial imaging, positron emission tomography, perfusion study (including ventricular wall motion(s), and/or ejection fractions(s), when performed); single study, at rest or stress (exercise or pharmacologic), with concurrently acquired computed tomography transmission scan***
The RUC reviewed the survey results from 61 cardiologists and nuclear medicine physicians and determined that the survey 25th percentile work RVU of 1.67 appropriately accounts for the work required to perform CPT code 78430. The RUC recommends 8 minutes pre-service time, 17 minutes intra-service time and 7 minutes immediate post-service time. The RUC confirmed that CPT code 78430, which includes concurrent CT, appropriately requires 2 more minutes intra-service time than the myocardial PET perfusion single study without CT (78491). Likewise, the recommended work RVU for the *with and without CT* demonstrates the appropriate relativity. The RUC compared the surveyed code to the key reference services 78814 *Positron emission tomography (PET) with concurrently acquired computed tomography (CT) for attenuation correction and anatomical localization imaging; limited area (eg, chest, head/neck)* (work RVU = 2.20 and total time of 60 minutes) and noted that the survey code requires less physician time. The RUC also compared the service to second key reference code 78072 *Parathyroid planar imaging (including subtraction, when performed); with tomographic (SPECT), and concurrently acquired computed tomography (CT) for anatomical localization* (work RVU = 1.60 and total time of 30 minutes) and noted that CPT code 78430 is slightly more intense and complex to perform. CPT code 78430 requires less physician time and work than top key reference service 78814 and slightly more physician time and work than the second key reference service 78072. Thus, appropriately valued compared to the reference services. For additional support, the RUC also compared the surveyed code to similar code 53855 *Insertion of a temporary prostatic urethral stent, including urethral measurement* (work RVU = 1.64 and total time of 32 minutes). **The RUC recommends a work RVU of 1.67 for CPT code 78430.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

PET Perfusion – Multiple Studies

78492 ***Myocardial imaging, positron emission tomography, perfusion study (including ventricular wall motion(s), and/or ejection fractions(s), when performed); multiple studies at rest and stress (exercise or pharmacologic)***
The RUC reviewed the survey results from 71 cardiologists and nuclear medicine physicians and determined that the survey 25th percentile work RVU of 1.80 appropriately accounts for the work required to perform CPT code 78492. CPT code 78492 is a myocardial PET perfusion study comparing perfusion immediately following exercise and at rest. The RUC recommends 8 minutes pre-service time, 20 minutes intra-service time and 10 minutes immediate post-service time. The RUC compared the surveyed code to the key reference services 78452 *Myocardial perfusion imaging, tomographic (SPECT) (including attenuation correction, qualitative or quantitative wall motion, ejection fraction by first pass or gated technique, additional quantification, when performed); multiple studies, at rest and/or stress (exercise or pharmacologic) and/or redistribution and/or rest reinjection* (work RVU = 1.62 and total time of 40 minutes) and 78812 *Positron emission tomography (PET) imaging; skull base to mid-thigh* (work RVU = 1.93 and total time of 50 minutes) and noted that CPT code 78492 requires less total physician time but is slightly more intense and complex to perform, thus, appropriately valued compared to the reference services. For additional support, the RUC also compared the surveyed code to MPC code 93351 *Echocardiography, transthoracic, real-time with image documentation (2D), includes M-mode recording, when performed, during rest and cardiovascular stress test using treadmill, bicycle exercise and/or pharmacologically induced stress, with interpretation and report; including performance of continuous electrocardiographic monitoring, with supervision by a physician or other qualified health care professional* (work RVU = 1.75 and total time of 40 minutes) and similar service code 70552 *Magnetic resonance (eg, proton) imaging, brain (including brain stem); with contrast material(s)* (work RVU = 1.78 and total time of 32 minutes). **The RUC recommends a work RVU of 1.80 for CPT code 78492.**

78431 ***Myocardial imaging, positron emission tomography, perfusion study (including ventricular wall motion(s), and/or ejection fractions(s), when performed); multiple studies at rest and stress (exercise or pharmacologic), with concurrently acquired computed tomography transmission scan***
The RUC reviewed the survey results from 64 cardiologists and nuclear medicine physicians and determined that it is appropriate to crosswalk CPT code 78431 to the work RVU of CPT code 64617 *Chemodenervation of muscle(s); larynx, unilateral, percutaneous (eg, for spasmodic dysphonia), includes guidance by needle electromyography, when performed* (work RVU = 1.90 and 15 minutes pre-service evaluation pre-time, 1 minute pre-service positioning pre-time, 15 minutes intra-service time and 5 minutes immediate post-service time). The RUC determined the survey 25th percentile work RVU of 2.00 was slightly high for the addition of concurrent CT in comparison with CPT code 78492 PET, perfusion, multiple studies without CT. The RUC determined a work RVU of 1.90 and 8 minutes pre-service time, 21 minutes intra-service time and 10 minutes immediate post-service time appropriately accounts for the work and time required to perform code 78431. Therefore, the crosswalk maintains the rank order and relativity among this family of services.

The RUC compared the surveyed code to the key reference services 75574 *Computed tomographic angiography, heart, coronary arteries and bypass grafts (when present), with contrast material, including 3D image postprocessing (including evaluation of cardiac structure and morphology, assessment of cardiac function, and evaluation of venous structures, if performed)* (work RVU = 2.40 and total time of 50 minutes) and 78814 *Positron emission tomography (PET) with concurrently acquired computed tomography (CT) for attenuation correction and anatomical localization imaging; limited area (eg, chest, head/neck)* (work RVU = 2.20 and total time of 60 minutes) and noted that CPT code

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

78431 requires less total physician work and time to perform. Thus, appropriately valued compared to the reference services. For additional support, the RUC referenced similar service 56821 *Simple repair of superficial wounds of face, ears, eyelids, nose, lips and/or mucous membranes; 7.6 cm to 12.5 cm* (work RVU = 1.98 and total time of 37 minutes). **The RUC recommends a work RVU of 1.90 for CPT code 78431.**

PET Perfusion Single Study + Metabolic Study

78432 ***Myocardial imaging, positron emission tomography, combined perfusion with metabolic evaluation study (including ventricular wall motion(s), and/or ejection fraction(s), when performed), dual radiotracer (eg, myocardial viability);***
The RUC reviewed the survey results from 59 cardiologists and nuclear medicine physicians and determined that the survey 25th percentile work RVU of 2.07 appropriately accounts for the work required to perform CPT code 78432. The RUC recommends 10 minutes pre-service time, 22 minutes intra-service time and 10 minutes immediate post-service time. CPT code 78432 includes the myocardial PET perfusion and metabolic studies. This service is intense and is performed on complicated patients, with injection fractions less than 30% and multi-vessel coronary disease, where the physician is trying to decide if there is enough tissue that is worth re-vascularizing. The physician tries to match the perfusion flow to the metabolism to look for areas of mismatch where there is decreased flow but retained increased metabolism.

The RUC compared the surveyed code to the key reference services 75574 *Computed tomographic angiography, heart, coronary arteries and bypass grafts (when present), with contrast material, including 3D image postprocessing (including evaluation of cardiac structure and morphology, assessment of cardiac function, and evaluation of venous structures, if performed)* (work RVU = 2.40 and total time of 50 minutes) and 78815 *Positron emission tomography (PET) with concurrently acquired computed tomography (CT) for attenuation correction and anatomical localization imaging; skull base to mid-thigh* (work RVU = 2.44 and total time of 65 minutes) and noted that CPT code 78432 requires less total physician time and work but is slightly more intense and complex to perform, thus, appropriately valued lower compared to the reference services. For additional support, the RUC also compared the surveyed code to similar service CPT code 56821 *Colposcopy of the vulva; with biopsy(s)* (work RVU = 12.05 and total time of 45 minutes). **The RUC recommends a work RVU of 2.07 for CPT code 78432.**

78433 ***Myocardial imaging, positron emission tomography, combined perfusion with metabolic evaluation study (including ventricular wall motion(s), and/or ejection fraction(s), when performed), dual radiotracer (eg, myocardial viability); with concurrently acquired computed tomography transmission scan***
The RUC reviewed the survey results from 61 cardiologists and nuclear medicine physicians and determined to crosswalk CPT code 78433 to CPT code 71552 *Magnetic resonance (eg, proton) imaging, chest (eg, for evaluation of hilar and mediastinal lymphadenopathy); without contrast material(s), followed by contrast material(s) and further sequences* (work RVU = 2.26 and 7.5 minutes evaluation pre-time, 24 minutes intra-service time and 10 minutes immediate post-service time). The RUC determined the survey 25th percentile work RVU of 2.30 was slightly high for the addition of CT in comparison with CPT code 78432 PET perfusion single study + metabolic study, without concurrent CT. The RUC determined a work RVU of 2.26 and 10 minutes pre-service time, 24 minutes intra-service time and 10 minutes immediate post-service time appropriately accounts for the work and time required to perform code 78433. Therefore, the crosswalk maintains the rank order and relativity among this family of services.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

The RUC compared the surveyed code to the key reference services 75561 *Cardiac magnetic resonance imaging for morphology and function without contrast material(s), followed by contrast material(s) and further sequences;* (work RVU = 2.60 and total time of 65 minutes) and 78815 *Positron emission tomography (PET) with concurrently acquired computed tomography (CT) for attenuation correction and anatomical localization imaging; skull base to mid-thigh* (work RVU = 2.44 and total time of 65 minutes) and noted that CPT code 78433 requires less total physician work and time to perform. Thus, appropriately valued compared to the reference services. **The RUC recommends a work RVU of 2.26 for CPT code 78433.**

Add-on

78434 ***Absolute quantitation of myocardial blood flow (AQMBF), positron emission tomography, rest and pharmacologic stress (List separately in addition to code for primary procedure)***

The RUC reviewed the survey results from 51 cardiologists and nuclear medicine physicians and determined that the survey 25th percentile work RVU of 0.63 appropriately accounts for the work required to perform CPT code 78434. The RUC recommends 11 minutes of intra-service time. This service involves a complex integration of clinical information — it is a dynamic flow study performed real-time with an electrocardiogram. The physician must assess the flow data and ensure the quality is good enough to interpret and report since it will make major clinical differences. There are a variety of regions of interest to review and a variety of curves to match for differences between rest and stress and the physician must attempt to adjudicate those values in three different vascular beds. This is not simply the reporting of a number nor physician validation of a computer-generated number.

The RUC compared the surveyed code to the key reference services 78496 *Cardiac blood pool imaging, gated equilibrium, single study, at rest, with right ventricular ejection fraction by first pass technique (List separately in addition to code for primary procedure)* (work RVU = 0.50 and intra-service/total time of 19 minutes) and 93567 *Injection procedure during cardiac catheterization including imaging supervision, interpretation, and report; for supravalvular aortography (List separately in addition to code for primary procedure)* (work RVU = 0.97 and intra-service/total time of 15 minutes) and noted that CPT code 78434 requires similar physician work and time to perform. Thus, appropriately bracketed by the reference services. The RUC noted that the survey 25th percentile work RVU of 0.63 falls appropriately in the broader range relative to many other services. For additional support, the RUC referenced MPC codes 51797 *Voiding pressure studies, intra-abdominal (ie, rectal, gastric, intraperitoneal) (List separately in addition to code for primary procedure)* (work RVU = 0.80 and total time of 15 minutes) and 96411 *Chemotherapy administration; intravenous, push technique, each additional substance/drug (List separately in addition to code for primary procedure)* (work RVU = 0.20 and total time of 7 minutes). **The RUC recommends a work RVU of 0.63 for CPT code 78434.**

Practice Expense

The Practice Expense Subcommittee accepted the compelling evidence as explained, based on a change in technology. The PE Subcommittee corrected the equipment minutes associated with the standard formula for highly technical equipment. The PE Subcommittee reviewed the software packages submitted and ensured only the software used per individual CPT code, per patient, per day, was included in the direct practice expense inputs. The Subcommittee discussed how the radioisotopes were transported to the lab and determined that the lead-lined transport is part

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

of the indirect practice expense and removed the equipment item, *safe storage, lead-lined* (ER058). Lastly, the PE Subcommittee reduced the clinical staff time for 78432 and 78433 since the patient comes back a second time. The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.

New Technology
The RUC recommends that these services be placed on the New Technology list and be re-reviewed by the RUC in three years to ensure correct valuation and utilization assumptions.

Radiology
Nuclear Medicine
Cardiovascular System

Myocardial perfusion (SPECT and PET) and cardiac blood pool imaging studies may be performed at rest and/or during stress. When performed during exercise and/or pharmacologic stress, the appropriate stress testing code from the 93015-93018 series should be reported in addition to 78451-78454,78472~~.~~, 78491,78430, 78492, 78431, 78432, 78433. PET can be performed on either a dedicated PET machine (which uses a PET source for attenuation correction) or a combination PET/CT camera (78429, 78430, 78431, 78433). A cardiac PET study performed on a PET/CT camera includes examination of the CT transmission images for review of anatomy in the field of view.

CPT Descriptor: Myocardial imaging, positron emission tomography (PET), metabolic evaluation study (including ventricular wall motion(s), and/or ejection fraction(s), when performed) single study;

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 66-year-old male patient with ischemic cardiomyopathy and reduced LV function is being considered for coronary revascularization. PET myocardial metabolic evaluation is requested to determine viability of some left ventricular segments to guide therapy.

Percentage of Survey Respondents who found Vignette to be Typical: 97%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The physician reviews the clinical request, pertinent medical records, X rays, any prior imaging data, and interim medical history, including medications and concurrent medical problems. The decision is made as to the appropriateness and protocol for this patients PET scan. The ordering physician is consulted, (when necessary) to clarify the indications, and whether the study is being performed for evaluation of hibernation or inflammation. The protocol for administering glucose and insulin is determined depending on the patient's history, patient's glucose level, specifically the presence or absence of diabetes, and patient specific medication and patient specific diet instructions for the day of the study are determined and provided to the patient. The physician instructs the nuclear medicine technologists to order the appropriate radiopharmaceutical and dose and ensures by oversight that appropriate records are maintained per Nuclear Regulatory Commission (NRC) and/or state regulations.

Description of Intra-Service Work: The physician evaluates the adequacy of the patient diet preparation and reviews the current glucose level for the patient with the nuclear medicine technologist or nurse and directs technologist or nurse to adjust as necessary. Blood glucose is checked for all patients prior to the administration of F-18 FDG. The physician is available to prescribe, oversee, and direct the oral or IV administration of glucose, iv doses of insulin and heparin, as appropriate. The physician instructs and oversees the nuclear medicine technologists in the administration of the radiopharmaceutical including verifying the dosage per Nuclear Regulatory Commission (NRC) and/or state regulations. After the radiopharmaceutical is administered the patient leaves the area for approximately 1 hour. The physician directs the nuclear medicine technologist to adjust the acquisition protocol as necessary for the individual patient. If wall motion and/or ejection fraction are performed, the patient's cardiac rhythm is assessed. The physician is available to answer questions for the technologist and to review components of the study throughout the procedure.

The study consists of an acquisition of tomographic PET data set and synchronized (gated) to the patient's ECG when performed. Verify the completeness and adequacy of the data sets before completion of the study and order additional imaging as necessary.

The physician reviews the PET images for artifacts and abnormal extracardiac distribution and verifies registration of the attenuation maps. Assess ventricular function, when performed, by obtaining an overall ejection fraction and evaluating regional wall motion, using a standardized segment model for the data set with each segment scored as normal, mildly hypokinetic, moderately hypokinetic, severely hypokinetic, akinetic, or dyskinetic. Analyze wall motion, when performed, qualitatively for motion and thickening. The extent and distribution of wall motion abnormalities is used to judge the amount of underlying myocardial scar. Next, the distribution of radiopharmaceutical uptake and the relationship to vascular geographic territories is assessed. For viability assessment, regions with lack of uptake or uptake less than 50% of normal segments are recorded as nonviable. For inflammation assessment, regions with myocardial uptake are recorded as consistent with inflammation. Potential sources of error are examined including correct region of interest for ventricular wall motion and digitally obtained ejection fraction and patient factors such as incomplete dietary preparation or persistent insulin resistance that would explain unanticipated distribution of radiotracer. Results of wall motion assessment, radiotracer uptake pattern and prior perfusion data, when available, are integrated to determine the presence of viability, hibernating myocardium, scar/fibrosis, and inflammation, as appropriate. Results are attributed to vascular territories. Comparison is made to relevant prior studies. A formal consultative report is produced for the medical record.

Description of Post-Service Work: The report is reviewed and signed. The imaging results may be discussed with the referring physician and with the patient. Additional tests or studies are ordered, as necessary, after discussion with the referring physician. Regulatory (NRC/state) review and oversight are provided throughout the procedure.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

Code 78492 for multiple study myocardial perfusion PET was flagged by the RAW at the January 2017 meeting as a high-volume growth service with >10,000 utilization and 100% increase from 2009 through 2014. The societies

referred this code, including companion codes 74891, to CPT for review due to changes in technology since the codes were developed in the mid-1990s. The codes underwent substantive descriptor changes, resulting in the creation of a new 9-code family of services that includes wall motion, ejection fraction, the incorporation of CT, and the addition of one add-on code for quantitation of myocardial blood flow that is currently reported with a Category III code. As this package of revisions was put together, code 78459 for myocardial metabolic PET was also incorporated to the updates for completeness.

There have been changes in instrumentation, computer processing, and software since the mid 1990's that allow extraction of greater clinically valuable information on metabolic, perfusion and function. Some of these changes have enhanced the acquisition, processing, quality control, and interpretation while also adding new variables for analysis. This has had the most impact on current code 78492 for multiple perfusion studies. The referral of patients with advanced and complex heart failure, valvular heart disease, and suspected myocardial inflammation has increased the use of 78459 in combination with 78491 and, less frequently, with 78492. This dual-tracer approach, with proposed combined codes 78431 or 78433, adds additional preservice and intraservice time for dietary instructions, for the need to measure serum glucose levels, and for the frequent need to treat with additional glucose or insulin. While technologic advances have altered the times from the 1990's. More complex patients being referred currently requiring additional expertise to accommodate the greater extent of debilitation and intraservice management.

Keeping in mind several key components that are assembled in different combinations will help the RUC understand and value this family. The eight base codes are detailed below:

- Two contain a single PET study,
- Two contain a single PET plus the corresponding CTs,
- Two contain two PET studies, and
- Two contain two PET studies plus the corresponding CT's.

These components are presented below in an order that demonstrates the various components clearly.

Table 1: Code Family Structure

Code	Component 1	Component 2	Component 3
78491	PET perfusion (rubidium rest or stress study)		
78430	PET perfusion (rubidium rest or stress study)	CT	
78459	PET metabolic (FDG)		
78429	PET metabolic (FDG)	CT	
78492	PET perfusion (rubidium stress study)	PET perfusion (rubidium rest study)	
78431	PET perfusion (rubidium stress study)	PET perfusion (rubidium rest study)	CTs
78432	PET perfusion (rubidium rest study)	PET metabolic (FDG)	
78433	PET perfusion (rubidium rest study)	PET metabolic (FDG)	CTs

This structure with one, two, or three components in each code would logically lend itself to a hierarchy where codes with three components require more time and work than codes with two components, which require more time and work than codes with one component. That expectation was somewhat born out in the October survey and more clearly existent in the resurvey that was performed for the January 2019 meeting.

Resurvey

As the RUC and RUC members who prefacilitated this tab at the October 2018 meeting well know, this family of codes was resurveyed for the January 2019 meeting. October survey results (Table 2) failed to make a clear and consistent distinction between several of the codes in terms of time in relation to work RVUs, despite the fact that survey respondents indicated increasing work RVUs through the family.

Table 2: October RUC Survey Results

Code	Component 1	Component 2	Component 3	25th-RVU	Total Time

78459	PET metabolic (FDG study)			1.60	33
78430	PET perfusion (rubidium rest or stress study)	CT		1.79	33
78491	PET perfusion (rubidium rest or stress study)			1.66	28
78429	PET metabolic (FDG study)	CT		1.80	40
78492	PET perfusion (rubidium stress study)	PET perfusion (rubidium rest study)		1.90	35
78431	PET perfusion (rubidium stress study)	PET perfusion (rubidium resting study)	CTs	2.00	38
78432	PET perfusion (rubidium rest study)	PET metabolic (FDG study)		1.95	40
78433	PET perfusion (rubidium resting study)	PET metabolic (FDG study)	CTs	2.30	40

The societies worked with the Research Subcommittee to develop an array survey and to streamline/remove several questions in an effort to simplify the response time, reduce respondents survey burden, and attempt to obtain more cohesive survey results. That includes answering only the overall intensity/complexity question, not each of the individual components; thus, those fields are blank in the SOR. The January survey DOES consistently indicate small increases in work RVU paired with small increases in intraservice or total time (Table 3). The societies recognize it is not a perfect result with large and consistent increments between modalities that brightly pairs significant differences in time with differences in work, but it is an improvement from the first survey—it consistently shows a work and time increment throughout the family and we believe it is reasonable to build recommendations around those results.

Table 3: January Resurvey Results

Code	Component 1	Component 2	Component 3	25th-RVU	Intra Time	Total Time
78491	PET perfusion (rubidium rest or stress study)			1.56	15	30
78430	PET perfusion (rubidium rest or stress study)	CT		1.67	17	32
78459	PET metabolic (FDG study)			1.61	15	33
78429	PET metabolic (FDG study)	CT		1.76	18	38
78492	PET perfusion (rubidium stress study)	PET perfusion (rubidium rest study)		1.80	20	38
78431	PET perfusion (rubidium stress study)	PET perfusion (rubidium rest study)	CTs	2.00	21	39
78432	PET perfusion (rubidium rest study)	PET metabolic (FDG study)		2.07	22	42
78433	PET perfusion (rubidium resting study)	PET metabolic (FDG study)	CTs	2.35	24	44

Compelling Evidence

Three of the services in the revised family—78459, 78491, and 78492—are existing codes with longstanding times and RVUs. The societies believe compelling evidence exists to indicate the current times and values may be incorrect.

***Change in technology*:** As noted above, myocardial PET imaging has evolved in the past two decades. That is a significant reason for the new and complex family of codes before you. There have been changes in instrumentation, computer processing, and software since the mid 1990's that allow extraction of greater clinically valuable information on metabolic, perfusion and function. Of note, when these legacy PET services were originally developed we did not have the technology to perform wall motion or ejection fraction for myocardial PET perfusion, these new services now include this work. These changes have enhanced the acquisition, processing, quality control, and interpretation while also adding new variables for analysis and review by the physician or QHP. We recognize that it would therefore be sensible to expect to see longer physician service times for these enhanced services. We do see an increment in time through the family, though we also expected those differences in time between services to be greater and acknowledge that may complicate valuation.

Incorrect assumptions/flawed methodology*:* The 1994 and 1997 valuations do not include any preservice or postservice time. While it was the norm at the time, it would now be unthinkable for imaging services to be valued without delineated preservice and postservice work and time. That flaw makes any comparison to those old times and values flawed as well. Were 15 or 18 minutes of total time moved out of the intraservice period, it the old codes still have longer times, but the discrepancy is more plausible. The technologic changes described above have produced both enhanced services but also an increased intensity as this technology has dispersed beyond those initial, small numbers decades ago.

A determination that compelling evidence exists to suggest the current code values are incorrect opens the door for the family to be valued based entirely on survey data, following the progression noted in Table 3.

78459 Rationale

78459 is an existing code that was updated to describe single cardiac PET metabolic study as it is performed in 2018, including wall motion(s) and ejection fraction(s) when they are performed. Survey respondents estimated this single PET study to take 10 minutes preservice, 15 minutes intraservice, and 8 minutes postservice. The median performance rate for this code was 0, so results are also broken out to show results from respondents that indicated experience with the service versus those without (recent) experience. The two groups' responses show that those who performed the service gave higher times, while those that did not provided lower times. Our experience tells us that those who perform the service did a better job at valuing the RVW and times than those that did not perform the service. As is the standard for RUC we relied on the combined data to develop our recommendations.

Twelve respondents (19%) selected code 78452 for myocardial SPECT as the KRS. Respondents generally indicated 78459 to be identical or more intense/complex in comparison to the KRS. Eleven respondents (17%) selected 78811 for limited PET as the second KRS. Respondents indicated 78459 to be identical or more intense/complex in comparison to the KRS.

We recommend the survey 25th-percentile work RVU of 1.61 with median survey times of 10 minutes preservice, 15 minutes intraservice, and 8 minutes postservice for 78459. This recommendation falls between MPC code 70470 for CT head that has an identical 15 minutes of intraservice time but less total time and RVUs, and MPC code 74176 for CT abdomen that has more intraservice time and work but 1 minute less total time. We think it is best supported by comparison to 70548 for MR angiography of the neck that has an identical 15 minutes of intraservice time, but slightly shorter total time (25 minutes) and lower work RVU (1.50) as indicated on the summary spreadsheet.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the

provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 78459

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Sometimes

Specialty Cardardiology How often? Sometimes

Specialty Nuclear Medicine How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 3000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC database times 3

Specialty Diagnostic Radiology Frequency 990 Percentage 33.00 %

Specialty Cardardiology Frequency 990 Percentage 33.00 %

Specialty Nuclear Medicine Frequency 930 Percentage 31.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,000
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC database

Specialty Diagnostic Radiology Frequency 330 Percentage 33.00 %

Specialty Cardardiology Frequency 330 Percentage 33.00 %

Specialty Nuclear Medicine Frequency 310 Percentage 31.00 %

Do many physicians perform this service across the United States? Yes

SUMMARY OF RECOMMENDATION

CPT Code:78429 Tracking Number K2 Original Specialty Recommended RVU: **1.76**
Presented Recommended RVU: **1.76**
Global Period: XXX Current Work RVU: RUC Recommended RVU: **1.76**

CPT Descriptor: Myocardial imaging, positron emission tomography (PET), metabolic evaluation study (including ventricular wall motion(s), and/or ejection fraction(s), when performed) single study; with concurrently acquired computed tomography transmission scan
(For CT coronary calcium scoring, use 75571)
(CT performed for other than attenuation correction and anatomical localization is reported using the appropriate site specific CT code with modifier 59)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 67-year-old male patient with chronic ischemic heart disease and probable myocardial scar on PET myocardial perfusion imaging is referred for PET cardiac metabolic imaging with combined CT localization review and registration to help determine myocardial viability.

Percentage of Survey Respondents who found Vignette to be Typical: 91%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The physician reviews the clinical request, pertinent medical records, X rays, any prior imaging data, and interim medical history, including medications and concurrent medical problems. The decision is made as to the appropriateness and protocol for this patients PET scan. The ordering physician is consulted, (when necessary) to clarify the indications, and whether the study is being performed for evaluation of hibernation or inflammation. The protocol for administering glucose and insulin is determined depending on the patient's history, patient's glucose level, specifically the presence or absence of diabetes, and patient specific medication and patient specific diet instructions for the day of the study are determined and provided to the patient. The physician instructs the nuclear medicine technologists to order the appropriate radiopharmaceutical and dose and ensures by oversight that appropriate records are maintained per Nuclear Regulatory Commission (NRC) and/or state regulations.

Description of Intra-Service Work: The physician evaluates the adequacy of the patient diet preparation and reviews the current glucose level for the patient with the nuclear medicine technologist or nurse and directs technologist or nurse to adjust as necessary. Blood glucose is checked for all patients prior to the administration of F-18 FDG. The physician is available to prescribe, oversee, and direct the oral or IV administration of glucose, iv doses of insulin and heparin, as appropriate. The physician instructs and oversees the nuclear medicine technologists in the administration of the radiopharmaceutical including verifying the dosage per Nuclear Regulatory Commission (NRC) and/or state regulations. After the radiopharmaceutical is administered the patient leaves the area for approximately 1 hour. The physician directs the nuclear medicine technologist to adjust the acquisition protocol as necessary for the individual patient. If wall motion and/or ejection fraction are performed, the patient's cardiac rhythm is assessed. The physician is available to answer questions for the technologist and to review components of the study throughout the procedure.

The study consists of an acquisition of tomographic PET and synchronized (gated) to the patient's ECG when performed. The PET acquisition data is followed by a separate limited CT study without moving the patient. Verify the completeness and adequacy of the data sets before completion of the study and order additional imaging as necessary.

The physician reviews the PET images for artifacts and abnormal extracardiac distribution. CT data are used to generate attenuation corrected images in all three planes. Additional fused images from the PET and CT are constructed to correlate the anatomic position of radiopharmaceutical accumulation with the current patient anatomy (creating an interpretation display of multiple PET images, multiple CT images, and multiple fused PET images on top of CT images). The physician reviews the CT transmission scan data for proper registration, relevant cardiovascular findings/cardiovascular diagnoses, and for anatomy. The low resolution chest CT attenuation map typically includes, but is not limited to: coronary calcifications (including a visual estimate of severity and extent), pericardial effusions, pleural effusions, pleural calcifications, ascending aortic aneurysms, descending aortic aneurysms, left atrial enlargement, dilation of the pulmonary artery, pericardial thickening and calcifications, thoracic aortic calcification, heavy aortic valve calcification (an adjunctive test for aortic valve stenosis when performed on gated non-contrast CT), large hiatal hernias, elevated hemi-diaphragms, large pneumonias and lung masses. Assess ventricular function, when performed, by obtaining an overall ejection fraction and evaluating regional wall motion, using a standardized segment model for the data set with each segment scored as normal, mildly hypokinetic, moderately hypokinetic, severely hypokinetic, akinetic, or dyskinetic. Analyze wall motion, when performed, qualitatively for motion and thickening. The extent and distribution of wall motion abnormalities is used to judge the amount of underlying myocardial scar. Next, the distribution of radiopharmaceutical uptake and the relationship to vascular geographic territories is assessed. For viability assessment, regions with lack of uptake or uptake less than 50% of normal segments are recorded as nonviable. For inflammation assessment, regions with myocardial uptake are recorded as consistent with inflammation. Potential sources of error are examined including correct region of interest for ventricular wall motion and digitally obtained ejection fraction and patient factors such as incomplete dietary preparation or persistent insulin resistance that would explain unanticipated distribution of radiotracer. Results of wall motion assessment, radiotracer uptake pattern and prior perfusion data, when available, are integrated to determine the presence of viability, hibernating myocardium, scar/fibrosis, and inflammation, as appropriate. Results are attributed to vascular territories. Comparison is made to relevant prior studies. A formal consultative report is produced for the medical record.

Description of Post-Service Work: The report is reviewed and signed. The imaging results may be discussed with the referring physician and with the patient. Additional tests or studies are ordered, as necessary, after discussion with the referring physician. Regulatory (NRC/state) review and oversight are provided throughout the procedure.

SURVEY DATA

RUC Meeting Date (mm/yyyy)	01/2019

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

Code 78492 for multiple study myocardial perfusion PET was flagged by the RAW at the January 2017 meeting as a high-volume growth service with >10,000 utilization and 100% increase from 2009 through 2014. The societies referred this code, including companion codes 74891, to CPT for review due to changes in technology since the codes were developed in the mid-1990s. The codes underwent substantive descriptor changes, resulting in the creation of a new 9-code family of services that includes wall motion, ejection fraction, the incorporation of CT, and the addition of one add-on code for quantitation of myocardial blood flow that is currently reported with a Category III code. As this package of revisions was put together, code 78459 for myocardial metabolic PET was also incorporated to the updates for completeness.

There have been changes in instrumentation, computer processing, and software since the mid 1990's that allow extraction of greater clinically valuable information on metabolic, perfusion and function. Some of these changes have enhanced the acquisition, processing, quality control, and interpretation while also adding new variables for analysis. This has had the most impact on current code 78492 for multiple perfusion studies. The referral of patients with advanced and complex heart failure, valvular heart disease, and suspected myocardial inflammation has increased the use of 78459 in combination with 78491 and, less frequently, with 78492. This dual-tracer approach, with proposed combined codes 78432 or 78433, adds additional preservice and intraservice time for dietary instructions, for the need to measure serum glucose levels, and for the frequent need to treat with additional glucose or insulin. While technologic advances have altered the times from the 1990's. More complex patients being referred currently requiring additional expertise to accommodate the greater extent of debilitation and intraservice management.

Keeping in mind several key components that are assembled in different combinations will help the RUC understand and value this family. The eight base codes are detailed below:

- Two contain a single PET study,
- Two contain a single PET plus the corresponding CTs,
- Two contain two PET studies, and
- Two contain two PET studies plus the corresponding CT's.

These components are presented below in an order that demonstrates the various components clearly.

Table 1: Code Family Structure

Code	Component 1	Component 2	Component 3
78491	PET perfusion (rubidium rest or stress study)		
78430	PET perfusion (rubidium rest or stress study)	CT	
78459	PET metabolic (FDG)		
78429	PET metabolic (FDG)	CT	
78492	PET perfusion (rubidium stress study)	PET perfusion (rubidium rest study)	
78431	PET perfusion (rubidium stress study)	PET perfusion (rubidium rest study)	CTs
78432	PET perfusion (rubidium rest study)	PET metabolic (FDG)	
78433	PET perfusion (rubidium rest study)	PET metabolic (FDG)	CTs

This structure with one, two, or three components in each code would logically lend itself to a hierarchy where codes with three components require more time and work than codes with two components, which require more time and work than codes with one component. That expectation was somewhat born out in the October survey and more clearly existent in the resurvey that was performed for the January 2019 meeting.

Resurvey

As the RUC and RUC members who prefacilitated this tab at the October 2018 meeting well know, this family of codes was resurveyed for the January 2019 meeting. October survey results (Table 2) failed to make a clear and consistent

distinction between several of the codes in terms of time in relation to work RVUs, despite the fact that survey respondents indicated increasing work RVUs through the family.

Table 2: October RUC Survey Results

Code	Component 1	Component 2	Component 3	25th-RVU	Total Time
78459	PET metabolic (FDG study)			1.60	33
78430	PET perfusion (rubidium rest or stress study)	CT		1.79	33
78491	PET perfusion (rubidium rest or stress study)			1.66	28
78429	PET metabolic (FDG study)	CT		1.80	40
78492	PET perfusion (rubidium stress study)	PET perfusion (rubidium rest study)		1.90	35
78431	PET perfusion (rubidium stress study)	PET perfusion (rubidium resting study)	CTs	2.00	38
78432	PET perfusion (rubidium rest study)	PET metabolic (FDG study)		1.95	40
78433	PET perfusion (rubidium resting study)	PET metabolic (FDG study)	CTs	2.30	40

The societies worked with the Research Subcommittee to develop an array survey and to streamline/remove several questions in an effort to simplify the response time, reduce respondents survey burden, and attempt to obtain more cohesive survey results. That includes answering only the overall intensity/complexity question, not each of the individual components; thus, those fields are blank in the SOR. The January survey DOES consistently indicate small increases in work RVU paired with small increases in intraservice or total time (Table 3). The societies recognize it is not a perfect result with large and consistent increments between modalities that brightly pairs significant differences in time with differences in work, but it is an improvement from the first survey—it consistently shows a work and time increment throughout the family and we believe it is reasonable to build recommendations around those results.

Table 3: January Resurvey Results

Code	Component 1	Component 2	Component 3	25th-RVU	Intra Time	Total Time
78491	PET perfusion (rubidium rest or stress study)			1.56	15	30
78430	PET perfusion (rubidium rest or stress study)	CT		1.67	17	32
78459	PET metabolic (FDG study)			1.61	15	33
78429	PET metabolic (FDG study)	CT		1.76	18	38
78492	PET perfusion (rubidium stress study)	PET perfusion (rubidium rest study)		1.80	20	38
78431	PET perfusion (rubidium stress study)	PET perfusion (rubidium rest study)	CTs	2.00	21	39
78432	PET perfusion (rubidium rest study)	PET metabolic (FDG study)		2.07	22	42
78433	PET perfusion (rubidium resting study)	PET metabolic (FDG study)	CTs	2.35	24	44

Compelling Evidence

Three of the services in the revised family—78459, 78491, and 78492—are existing codes with longstanding times and RVUs. The societies believe compelling evidence exists to indicate the current times and values may be incorrect.

***Change in technology*:** As noted above, myocardial PET imaging has evolved in the past two decades. That is a significant reason for the new and complex family of codes before you. There have been changes in instrumentation,

computer processing, and software since the mid 1990's that allow extraction of greater clinically valuable information on metabolic, perfusion and function. Of note, when these legacy PET services were originally developed we did not have the technology to perform wall motion or ejection fraction for myocardial PET perfusion, these new services now include this work. These changes have enhanced the acquisition, processing, quality control, and interpretation while also adding new variables for analysis and review by the physician or QHP. We recognize that it would therefore be sensible to expect to see longer physician service times for these enhanced services. We do see an increment in time through the family, though we also expected those differences in time between services to be greater and acknowledge that may complicate valuation.

Incorrect assumptions/flawed methodology*:* The 1994 and 1997 valuations do not include any preservice or postservice time. While it was the norm at the time, it would now be unthinkable for imaging services to be valued without delineated preservice and postservice work and time. That flaw makes any comparison to those old times and values flawed as well. Were 15 or 18 minutes of total time moved out of the intraservice period, it the old codes still have longer times, but the discrepancy is more plausible. The technologic changes described above have produced both enhanced services but also an increased intensity as this technology has dispersed beyond those initial, small numbers decades ago.

A determination that compelling evidence exists to suggest the current code values are incorrect opens the door for the family to be valued based entirely on survey data, following the progression noted in Table 3.

78429 Rationale

78429 is a new code that describes the work to interpret a single cardiac PET metabolic study that is performed with a concurrently acquired CT transmission scan. Survey respondents estimated a PET metabolic study with CT to take 10 minutes preservice, 20 minutes intraservice, and 10 minutes postservice.

Eighteen respondents (31%) selected code 78814 for limited PET with CT as the KRS. Respondents generally indicated 78429 to be similar to somewhat more intense/complex in comparison to the KRS. Nine respondents (16%) selected 93351 for stress echo as the second KRS. Respondents generally indicated 78429 to be more intense/complex in comparison to the KRS.

We recommend the survey 25th-percentile work RVU of 1.76 with median survey times of 10 minutes preservice, 18 minutes intraservice, and 10 minutes postservice for 78X29. This recommendation fits between MPC (and second KRS) code 93351 for stress echo with slightly longer (2 minutes) intraservice and total time that respondents felt was less intense/complex than 78429, and 92004 for a new patient ophthalmological exam.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and

accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 78459

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Sometimes

Specialty Cardiology How often? Sometimes

Specialty Nuclear Medicine How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 3000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC database times 3

Specialty Diagnostic Radiology Frequency 990 Percentage 33.00 %

Specialty Cardiology Frequency 990 Percentage 33.00 %

Specialty Nuclear Medicine Frequency 930 Percentage 31.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,000
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC database

Specialty Diagnostic Radiology Frequency 330 Percentage 33.00 %

Specialty Cardiology Frequency 330 Percentage 33.00 %

Specialty Nuclear Medcine Frequency 310 Percentage 31.00 %

Do many physicians perform this service across the United States? Yes

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:78491 Tracking Number K3 Original Specialty Recommended RVU: **1.56**
Presented Recommended RVU: **1.56**
Global Period: XXX Current Work RVU: **1.50** RUC Recommended RVU: **1.56**

CPT Descriptor: Myocardial imaging, positron emission tomography, perfusion; study (including ventricular wall motion(s), and/or ejection fractions(s), when performed); single study, at rest or stress (exercise or pharmacologic)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 68-year-old male patient has normal resting myocardial perfusion by single photon emission computed tomography (SPECT) myocardial perfusion imaging (MPI), but a previous stress SPECT MPI study was non-diagnostic because of attenuation artifact. A single study PET MPI study was requested to determine the presence and severity of obstructive coronary artery disease

Percentage of Survey Respondents who found Vignette to be Typical: 88%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The physician reviews the clinical request, pertinent medical records, X rays, any prior imaging data, and interim medical history, including medications and concurrent medical problems. The decision is made as to the appropriateness and protocol for this patients PET scan. The physician instructs the nuclear medicine technologists to order the appropriate radiopharmaceutical and dose and ensures by oversight that appropriate records are maintained per Nuclear Regulatory Commission (NRC) and/or state regulations. For stress imaging, the physician confirms absence of contraindications to stress testing.

Description of Intra-Service Work: TThe physician instructs and oversees the nuclear medicine technologists in the administration of the radiopharmaceutical including verifying the dosage per Nuclear Regulatory Commission (NRC) and/or state regulations. The physician directs the nuclear medicine technologist to adjust the acquisition protocol as necessary for the individual patient. If wall motion and/or ejection fraction are performed, assess the patient's cardiac rhythm. The physician is available to answer questions for the technologist and to review components of the study throughout the procedure.

The study consists of an acquisition of a single resting or stress tomographic PET study synchronized (gated) to the patient's ECG when performed. Verify the completeness and adequacy of the data sets before completion of the study and order additional imaging as necessary.

The physician reviews all images for artifacts and abnormal extracardiac distribution. The physician interprets the single study stress or rest PET emission data including myocardial tracer uptake, cardiac wall motion, and left ventricular ejection fraction and examines the PET data. Reconstructed images in three planes are reviewed. Verify registration of the attenuation maps. Images are semi-quantitatively scored on a standard segmental model as normal uptake, mildly reduced, moderately reduced, severely reduced or absent. Findings are attributed to coronary vascular territories. Gated images, when performed, are scored qualitatively for motion and thickening. The data set is analyzed in a standardized segmental model as normal, mildly hypokinetic, moderately hypokinetic, severely hypokinetic, akinetic, or dyskinetic. Overall left

ventricular ejection fraction, when performed, is validated visually by checking the regions of interest that were selected for the calculation. Results of LV function (when performed) and radiotracer uptake (perfusion) are correlated. Results are compared to relevant prior studies. A formal consultative report is produced for the medical record.

Description of Post-Service Work: The report is reviewed and signed. The imaging results may be discussed with the referring physician and with the patient. Additional tests or studies are ordered, as necessary, after discussion with the referring physician. Regulatory (NRC/state) review and oversight are provided throughout the procedure.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

Code 78492 for multiple study myocardial perfusion PET was flagged by the RAW at the January 2017 meeting as a high-volume growth service with >10,000 utilization and 100% increase from 2009 through 2014. The societies

referred this code, including companion codes 74891, to CPT for review due to changes in technology since the codes were developed in the mid-1990s. The codes underwent substantive descriptor changes, resulting in the creation of a new 9-code family of services that includes wall motion, ejection fraction, the incorporation of CT, and the addition of one add-on code for quantitation of myocardial blood flow that is currently reported with a Category III code. As this package of revisions was put together, code 78459 for myocardial metabolic PET was also incorporated to the updates for completeness.

There have been changes in instrumentation, computer processing, and software since the mid 1990's that allow extraction of greater clinically valuable information on metabolic, perfusion and function. Some of these changes have enhanced the acquisition, processing, quality control, and interpretation while also adding new variables for analysis. This has had the most impact on current code 78492 for multiple perfusion studies. The referral of patients with advanced and complex heart failure, valvular heart disease, and suspected myocardial inflammation has increased the use of 78459 in combination with 78491 and, less frequently, with 78492. This dual-tracer approach, with proposed combined codes 78432 or 78433, adds additional preservice and intraservice time for dietary instructions, for the need to measure serum glucose levels, and for the frequent need to treat with additional glucose or insulin. While technologic advances have altered the times from the 1990's. More complex patients being referred currently requiring additional expertise to accommodate the greater extent of debilitation and intraservice management.

Keeping in mind several key components that are assembled in different combinations will help the RUC understand and value this family. The eight base codes are detailed below:

- Two contain a single PET study,
- Two contain a single PET plus the corresponding CTs,
- Two contain two PET studies, and
- Two contain two PET studies plus the corresponding CT's.

These components are presented below in an order that demonstrates the various components clearly.

Table 1: Code Family Structure

Code	Component 1	Component 2	Component 3
78491	PET perfusion (rubidium rest or stress study)		
78430	PET perfusion (rubidium rest or stress study)	CT	
78459	PET metabolic (FDG)		
78429	PET metabolic (FDG)	CT	
78492	PET perfusion (rubidium stress study)	PET perfusion (rubidium rest study)	
78431	PET perfusion (rubidium stress study)	PET perfusion (rubidium rest study)	CTs
78432	PET perfusion (rubidium rest study)	PET metabolic (FDG)	
78433	PET perfusion (rubidium rest study)	PET metabolic (FDG)	CTs

This structure with one, two, or three components in each code would logically lend itself to a hierarchy where codes with three components require more time and work than codes with two components, which require more time and work than codes with one component. That expectation was somewhat born out in the October survey and more clearly existent in the resurvey that was performed for the January 2019 meeting.

Resurvey

As the RUC and RUC members who prefacilitated this tab at the October 2018 meeting well know, this family of codes was resurveyed for the January 2019 meeting. October survey results (Table 2) failed to make a clear and consistent distinction between several of the codes in terms of time in relation to work RVUs, despite the fact that survey respondents indicated increasing work RVUs through the family.

Table 2: October RUC Survey Results

Code	Component 1	Component 2	Component 3	25th-RVU	Total Time

78459	PET metabolic (FDG study)			1.60	33
78430	PET perfusion (rubidium rest or stress study)	CT		1.79	33
78491	PET perfusion (rubidium rest or stress study)			1.66	28
78429	PET metabolic (FDG study)	CT		1.80	40
78492	PET perfusion (rubidium stress study)	PET perfusion (rubidium rest study)		1.90	35
78431	PET perfusion (rubidium stress study)	PET perfusion (rubidium resting study)	CTs	2.00	38
78432	PET perfusion (rubidium rest study)	PET metabolic (FDG study)		1.95	40
78433	PET perfusion (rubidium resting study)	PET metabolic (FDG study)	CTs	2.30	40

The societies worked with the Research Subcommittee to develop an array survey and to streamline/remove several questions in an effort to simplify the response time, reduce respondents survey burden, and attempt to obtain more cohesive survey results. That includes answering only the overall intensity/complexity question, not each of the individual components; thus, those fields are blank in the SOR. The January survey DOES consistently indicate small increases in work RVU paired with small increases in intraservice or total time (Table 3). The societies recognize it is not a perfect result with large and consistent increments between modalities that brightly pairs significant differences in time with differences in work, but it is an improvement from the first survey—it consistently shows a work and time increment throughout the family and we believe it is reasonable to build recommendations around those results.

Table 3: January Resurvey Results

Code	Component 1	Component 2	Component 3	25th-RVU	Intra Time	Total Time
78491	PET perfusion (rubidium rest or stress study)			1.56	15	30
78430	PET perfusion (rubidium rest or stress study)	CT		1.67	17	32
78459	PET metabolic (FDG study)			1.61	15	33
78429	PET metabolic (FDG study)	CT		1.76	18	38
78492	PET perfusion (rubidium stress study)	PET perfusion (rubidium rest study)		1.80	20	38
78431	PET perfusion (rubidium stress study)	PET perfusion (rubidium rest study)	CTs	2.00	21	39
78432	PET perfusion (rubidium rest study)	PET metabolic (FDG study)		2.07	22	42
78433	PET perfusion (rubidium resting study)	PET metabolic (FDG study)	CTs	2.35	24	44

Compelling Evidence

Three of the services in the revised family—78459, 78491, and 78492—are existing codes with longstanding times and RVUs. The societies believe compelling evidence exists to indicate the current times and values may be incorrect.

***Change in technology*:** As noted above, myocardial PET imaging has evolved in the past two decades. That is a significant reason for the new and complex family of codes before you. There have been changes in instrumentation, computer processing, and software since the mid 1990's that allow extraction of greater clinically valuable information on metabolic, perfusion and function. Of note, when these legacy PET services were originally developed we did not have the technology to perform wall motion or ejection fraction for myocardial PET perfusion, these new services now include this work. These changes have enhanced the acquisition, processing, quality control, and interpretation while also adding new variables for analysis and review by the physician or QHP. We recognize that it would therefore be sensible to expect to see longer physician service times for these enhanced services. We do see an increment in time through the family, though we also expected those differences in time between services to be greater and acknowledge that may complicate valuation.

Incorrect assumptions/flawed methodology*:* The 1994 and 1997 valuations do not include any preservice or postservice time. While it was the norm at the time, it would now be unthinkable for imaging services to be valued without delineated preservice and postservice work and time. That flaw makes any comparison to those old times and values flawed as well. Were 15 or 18 minutes of total time moved out of the intraservice period, it the old codes still have longer times, but the discrepancy is more plausible. The technologic changes described above have produced both enhanced services but also an increased intensity as this technology has dispersed beyond those initial, small numbers decades ago.

A determination that compelling evidence exists to suggest the current code values are incorrect opens the door for the family to be valued based entirely on survey data, following the progression noted in Table 3.

78491 Rationale

78491 is an existing code that was updated to describe single cardiac PET perfusion as it is performed in 2018, including wall motion(s) and ejection fraction(s) when they are performed. Survey respondents estimated this single PET study to take 8 minutes preservice, 15 minutes intraservice, and 7 minutes postservice. The median performance rate for this code was 0, so results are also broken out to show results from respondents that indicated experience with the service versus those without (recent) experience. The two groups' responses show that those who performed the service gave higher times, while those that did not provided lower times. Our experience tells us that those who perform the service did a better job at valuing the RVW and times than those that did not perform the service. However, as is the standard for RUC we relied on the combined data to develop our recommendations.

Sixteen respondents (25%) selected code 78452 for myocardial SPECT as the KRS. Respondents generally indicated 78491 to be somewhat more intense/complex in comparison to the KRS. Fourteen respondents (22%) selected 78811 for limited PET as the second KRS. Most respondents indicated 78491 to be identical or more intense/complex in comparison to the KRS.

We recommend the survey 25th-percentile work RVU of 1.56 with median survey times of 8 minutes preservice, 15 minutes intraservice, and 7 minutes postservice for 78491. This recommendation falls between MPC code 70470 for CT head that has an identical 15 minutes of intraservice time but less total time and RVUs, and MPC code 74176 for CT abdomen that has more intraservice time and work but 2 more minutes total time. We think it is best supported by comparison to 70548 for MR angiography of the neck that has an identical 15 minutes of intraservice time, but 5 minutes shorter total time (25 minutes) and lower work RVU (1.50) as indicated on the summary spreadsheet.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the

provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 78491

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Sometimes

Specialty Cardardiology How often? Sometimes

Specialty Nuclear Medicine How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 4500
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC database times 3

Specialty Diagnostic Radiology Frequency 990 Percentage 22.00 %

Specialty Cardardiology Frequency 2025 Percentage 45.00 %

Specialty Nuclear Medicine Frequency 1350 Percentage 30.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,500
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC database

Specialty Diagnostic Radiology Frequency 330 Percentage 22.00 %

Specialty Cardardiology Frequency 675 Percentage 45.00 %

Specialty Nuclear Medicine Frequency 450 Percentage 30.00 %

Do many physicians perform this service across the United States? Yes

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 78491

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:78430 Tracking Number K4 Original Specialty Recommended RVU: **1.67**
Presented Recommended RVU: **1.67**
Global Period: XXX Current Work RVU: RUC Recommended RVU: **1.67**

CPT Descriptor: Myocardial imaging, positron emission tomography, perfusion; study (including ventricular wall motion(s), and/or ejection fractions(s), when performed); single study, at rest or stress (exercise or pharmacologic), with concurrently acquired computed tomography transmission scan

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 68-year-old male patient without known coronary artery disease has normal resting myocardial perfusion by single photon emission computed tomography (SPECT) myocardial perfusion imaging (MPI), a previous stress SPECT MPI study was non-diagnostic because of attenuation artifact. A single study PET MPI study with combined CT localization review and registration was requested to determine the presence and severity of obstructive coronary artery disease including an estimate of coronary atherosclerotic burden.

Percentage of Survey Respondents who found Vignette to be Typical: 88%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The physician reviews the clinical request, pertinent medical records, X rays, any prior imaging data, and interim medical history, including medications and concurrent medical problems. The decision is made as to the appropriateness and protocol for this patients PET scan. The physician instructs the nuclear medicine technologists to order the appropriate radiopharmaceutical and dose and ensures by oversight that appropriate records are maintained per Nuclear Regulatory Commission (NRC) and/or state regulations. For stress imaging, the physician confirms absence of contraindications to stress testing.

Description of Intra-Service Work: The physician instructs and oversees the nuclear medicine technologists in the administration of the radiopharmaceutical including verifying the dosage per Nuclear Regulatory Commission (NRC) and/or state regulations. The physician directs the nuclear medicine technologist to adjust the acquisition protocol as necessary for the individual patient. If wall motion and/or ejection fraction are performed, assess the patient's cardiac rhythm. The physician is available to answer questions for the technologist and to review components of the study throughout the procedure.

The study consists of an acquisition of a single resting or stress tomographic PET study and synchronized (gated) to the patient's ECG when performed. The PET acquisition data is followed by a separate limited CT study without moving the patient. Verify the completeness and adequacy of the data sets before completion of the study and order additional imaging as necessary.

The physician reviews all images for artifacts and abnormal extracardiac distribution. CT data are used to generate attenuation corrected images in all three planes. Additional fused images from the PET and CT are constructed to correlate the anatomic position of radiopharmaceutical accumulation with the current patient anatomy (creating an interpretation display of multiple PET images, multiple CT images, and multiple fused PET images on top of CT images). The physician

reviews the CT transmission scan data for proper registration, relevant cardiovascular findings/cardiovascular diagnoses, and for anatomy. The low resolution chest CT attenuation map typically includes, but is not limited to: coronary calcifications (including a visual estimate of severity and extent), pericardial effusions, pleural effusions, pleural calcifications, ascending aortic aneurysms, descending aortic aneurysms, left atrial enlargement, dilation of the pulmonary artery, pericardial thickening and calcifications, thoracic aortic calcification, heavy aortic valve calcification (an adjunctive test for aortic valve stenosis when performed on gated non-contrast CT), large hiatal hernias, elevated hemi-diaphragms, large pneumonias and lung masses. The physician interprets the single study stress or rest PET emission data including myocardial tracer uptake, cardiac wall motion, and left ventricular ejection fraction and examines the PET data. Reconstructed images in three planes are reviewed. Verify registration of the attenuation maps. Images are semi-quantitatively scored on a standard segmental model as normal uptake, mildly reduced, moderately reduced, severely reduced or absent. Findings are attributed to coronary vascular territories. Gated images, when performed, are scored qualitatively for motion and thickening. The data set is analyzed in a standardized segmental model as normal, mildly hypokinetic, moderately hypokinetic, severely hypokinetic, akinetic, or dyskinetic. Overall left ventricular ejection fraction, when performed, is validated visually by checking the regions of interest that were selected for the calculation. Results of LV function (when performed) and radiotracer uptake (perfusion) are correlated. Results are compared to relevant prior studies. A formal consultative report is produced for the medical record.

Description of Post-Service Work: The report is reviewed and signed. The imaging results may be discussed with the referring physician and with the patient. Additional tests or studies are ordered, as necessary, after discussion with the referring physician. Regulatory (NRC/state) review and oversight are provided throughout the procedure.

SURVEY DATA

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

Code 78492 for multiple study myocardial perfusion PET was flagged by the RAW at the January 2017 meeting as a high-volume growth service with >10,000 utilization and 100% increase from 2009 through 2014. The societies

referred this code, including companion codes 74891, to CPT for review due to changes in technology since the codes were developed in the mid-1990s. The codes underwent substantive descriptor changes, resulting in the creation of a new 9-code family of services that includes wall motion, ejection fraction, the incorporation of CT, and the addition of one add-on code for quantitation of myocardial blood flow that is currently reported with a Category III code. As this package of revisions was put together, code 78459 for myocardial metabolic PET was also incorporated to the updates for completeness.

There have been changes in instrumentation, computer processing, and software since the mid 1990's that allow extraction of greater clinically valuable information on metabolic, perfusion and function. Some of these changes have enhanced the acquisition, processing, quality control, and interpretation while also adding new variables for analysis. This has had the most impact on current code 78492 for multiple perfusion studies. The referral of patients with advanced and complex heart failure, valvular heart disease, and suspected myocardial inflammation has increased the use of 78459 in combination with 78491 and, less frequently, with 78492. This dual-tracer approach, with proposed combined codes 78432 or 78433 adds additional preservice and intraservice time for dietary instructions, for the need to measure serum glucose levels, and for the frequent need to treat with additional glucose or insulin. While technologic advances have altered the times from the 1990's. More complex patients being referred currently requiring additional expertise to accommodate the greater extent of debilitation and intraservice management.

Keeping in mind several key components that are assembled in different combinations will help the RUC understand and value this family. The eight base codes are detailed below:

- Two contain a single PET study,
- Two contain a single PET plus the corresponding CTs,
- Two contain two PET studies, and
- Two contain two PET studies plus the corresponding CT's.

These components are presented below in an order that demonstrates the various components clearly.

Table 1: Code Family Structure

Code	Component 1	Component 2	Component 3
78491	PET perfusion (rubidium rest or stress study)		
78430	PET perfusion (rubidium rest or stress study)	CT	
78459	PET metabolic (FDG)		
78429	PET metabolic (FDG)	CT	
78492	PET perfusion (rubidium stress study)	PET perfusion (rubidium rest study)	
78431	PET perfusion (rubidium stress study)	PET perfusion (rubidium rest study)	CTs
78432	PET perfusion (rubidium rest study)	PET metabolic (FDG)	
78433	PET perfusion (rubidium rest study)	PET metabolic (FDG)	CTs

This structure with one, two, or three components in each code would logically lend itself to a hierarchy where codes with three components require more time and work than codes with two components, which require more time and work than codes with one component. That expectation was somewhat born out in the October survey and more clearly existent in the resurvey that was performed for the January 2019 meeting.

Resurvey

As the RUC and RUC members who prefacilitated this tab at the October 2018 meeting well know, this family of codes was resurveyed for the January 2019 meeting. October survey results (Table 2) failed to make a clear and consistent distinction between several of the codes in terms of time in relation to work RVUs, despite the fact that survey respondents indicated increasing work RVUs through the family.

Table 2: October RUC Survey Results

Code	Component 1	Component 2	Component 3	25th-RVU	Total Time

78459	PET metabolic (FDG study)			1.60	33
78430	PET perfusion (rubidium rest or stress study)	CT		1.79	33
78491	PET perfusion (rubidium rest or stress study)			1.66	28
78429	PET metabolic (FDG study)	CT		1.80	40
78492	PET perfusion (rubidium stress study)	PET perfusion (rubidium rest study)		1.90	35
78431	PET perfusion (rubidium stress study)	PET perfusion (rubidium resting study)	CTs	2.00	38
78432	PET perfusion (rubidium rest study)	PET metabolic (FDG study)		1.95	40
78433	PET perfusion (rubidium resting study)	PET metabolic (FDG study)	CTs	2.30	40

The societies worked with the Research Subcommittee to develop an array survey and to streamline/remove several questions in an effort to simplify the response time, reduce respondents survey burden, and attempt to obtain more cohesive survey results. That includes answering only the overall intensity/complexity question, not each of the individual components; thus, those fields are blank in the SOR. The January survey DOES consistently indicate small increases in work RVU paired with small increases in intraservice or total time (Table 3). The societies recognize it is not a perfect result with large and consistent increments between modalities that brightly pairs significant differences in time with differences in work, but it is an improvement from the first survey—it consistently shows a work and time increment throughout the family and we believe it is reasonable to build recommendations around those results.

Table 3: January Resurvey Results

Code	Component 1	Component 2	Component 3	25th-RVU	Intra Time	Total Time
78491	PET perfusion (rubidium rest or stress study)			1.56	15	30
78430	PET perfusion (rubidium rest or stress study)	CT		1.67	17	32
78459	PET metabolic (FDG study)			1.61	15	33
78429	PET metabolic (FDG study)	CT		1.76	18	38
78492	PET perfusion (rubidium stress study)	PET perfusion (rubidium rest study)		1.80	20	38
78431	PET perfusion (rubidium stress study)	PET perfusion (rubidium rest study)	CTs	2.00	21	39
78432	PET perfusion (rubidium rest study)	PET metabolic (FDG study)		2.07	22	42
78433	PET perfusion (rubidium resting study)	PET metabolic (FDG study)	CTs	2.35	24	44

Compelling Evidence

Three of the services in the revised family—78459, 78491, and 78492—are existing codes with longstanding times and RVUs. The societies believe compelling evidence exists to indicate the current times and values may be incorrect.

***Change in technology*:** As noted above, myocardial PET imaging has evolved in the past two decades. That is a significant reason for the new and complex family of codes before you. There have been changes in instrumentation, computer processing, and software since the mid 1990's that allow extraction of greater clinically valuable information on metabolic, perfusion and function. Of note, when these legacy PET services were originally developed we did not have the technology to perform wall motion or ejection fraction for myocardial PET perfusion, these new services now include this work. These changes have enhanced the acquisition, processing, quality control, and interpretation while also adding new variables for analysis and review by the physician or QHP. We recognize that it would therefore be sensible to expect to see longer physician service times for these enhanced services. We do see an increment in time through the family, though we also expected those differences in time between services to be greater and acknowledge that may complicate valuation.

Incorrect assumptions/flawed methodology*:* The 1994 and 1997 valuations do not include any preservice or postservice time. While it was the norm at the time, it would now be unthinkable for imaging services to be valued without delineated preservice and postservice work and time. That flaw makes any comparison to those old times and values flawed as well. Were 15 or 18 minutes of total time moved out of the intraservice period, it the old codes still have longer times, but the discrepancy is more plausible. The technologic changes described above have produced both enhanced services but also an increased intensity as this technology has dispersed beyond those initial, small numbers decades ago.

A determination that compelling evidence exists to suggest the current code values are incorrect opens the door for the family to be valued based entirely on survey data, following the progression noted in Table 3.

78430 Rationale

78430is a new code that describes the work to interpret a single cardiac PET perfusion study that is performed with a concurrently acquired CT transmission scan. Survey respondents estimated this single PET perfusion study with CT to take 8 minutes preservice, 17 minutes intraservice, and 7 minutes postservice. The median performance rate for this code was 0, so results are also broken out to show results from respondents that indicated experience with the service versus those without (recent) experience. The two groups' responses show that those who performed the service gave higher times, while those that did not provided lower times. Our experience tells us that those who perform the service did a better job at valuing the RVW and times than those that did not perform the service. As is the standard for RUC we relied on the combined data to develop our recommendations.

Fourteen respondents (23%) selected code 78814 for limited PET with CT as the KRS. Respondents generally indicated 78430 to be identical or more intense/complex in comparison to the KRS. Ten respondents (16%) selected 78072 for parathyroid SPECT/CT as the second KRS. Most respondents indicated 78430 to be identical or more intense/complex in comparison to the KRS.

We recommend the survey 25th-percentile work RVU of 1.67 with median survey times of 8 minutes preservice, 17 minutes intraservice, and 7 minutes postservice for 78459. This recommendation falls between MPC code 70470 for CT head that has 2 minutes less intraservice, total time, and RVUs, and MPC code 74176 for CT abdomen that has more intraservice time and work but identical total time.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the

provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 78491

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Sometimes

Specialty Cardardiology How often? Sometimes

Specialty Nuclear Medicine How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 3600
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC database times 3

Specialty Diagnostic Radiology Frequency 792 Percentage 22.00 %

Specialty Cardardiology Frequency 1620 Percentage 45.00 %

Specialty Nuclear Medicine Frequency 1080 Percentage 30.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,200
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC database

Specialty Diagnostic Radiology Frequency 264 Percentage 22.00 %

Specialty Cardardiology Frequency 540 Percentage 45.00 %

Specialty Nuclear Medicine Frequency 360 Percentage 30.00 %

Do many physicians perform this service across the United States? Yes

---

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:78492 Tracking Number K5 Original Specialty Recommended RVU: **1.80**
Presented Recommended RVU: **1.80**
Global Period: XXX Current Work RVU: **1.87** RUC Recommended RVU: **1.80**

CPT Descriptor: Myocardial imaging, positron emission tomography, perfusion; study (including ventricular wall motion(s), and/or ejection fractions(s), when performed); multiple studies at rest and stress (exercise or pharmacologic)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 69-year-old female patient has known coronary artery disease and left bundle branch block on ECG and symptoms suggestive of angina pectoris. A rest / stress PET myocardial perfusion imaging study is requested to determine the presence and severity of cardiac ischemia.

Percentage of Survey Respondents who found Vignette to be Typical: 95%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The physician reviews the clinical request, pertinent medical records, X rays, any prior imaging data, and interim medical history, including medications and concurrent medical problems. The decision is made as to the appropriateness and protocol for this patients PET scan. The physician instructs the nuclear medicine technologists to order the appropriate radiopharmaceutical and dose and ensures by oversight that appropriate records are maintained per Nuclear Regulatory Commission (NRC) and/or state regulations. For stress imaging, the physician confirms absence of contraindications to stress testing.

Description of Intra-Service Work: The physician instructs and oversees the nuclear medicine technologists in the administration of the radiopharmaceutical including verifying the dosage per Nuclear Regulatory Commission (NRC) and/or state regulations. The physician directs the nuclear medicine technologist to adjust the acquisition protocol as necessary for the individual patient. If wall motion and/or ejection fraction are performed, assess the patient's cardiac rhythm. The physician is available to answer questions for the technologist and to review components of the study throughout the procedure.

The study consists of acquisitions of both resting and stress tomographic PET studies synchronized (gated) to the patient's ECG when performed. Verify the completeness and adequacy of the data sets before completion of the study and order additional imaging as necessary.

The physician reviews all images for artifacts and abnormal extracardiac distribution. The physician interprets and correlates both stress and rest PET emission data including myocardial tracer uptake, cardiac wall motion, and left ventricular ejection fraction and examines the PET data. Reconstructed images in three planes are reviewed. Verify registration of the attenuation maps. Images are semi-quantitatively scored on a standard segmental model as normal uptake, mildly reduced, moderately reduced, severely reduced or absent. This is performed for rest and stress images. The information derived from rest and stress images is integrated to determine the presence of normal perfusion, reversible defects indicating ischemia, fixed defects indicating infarction, or a combination thereof. Findings are attributed to coronary vascular territories. Abnormal changes in left ventricular size between rest and stress images are noted if present.

Gated images, when performed, are scored qualitatively for motion and thickening for both rest and stress images. The data set is analyzed in a standardized segmental model as normal, mildly hypokinetic, moderately hypokinetic, severely hypokinetic, akinetic, or dyskinetic. Normal increase or, If present, abnormal decline in global left ventricular function or changes in regional wall motion between rest and stress are noted. Overall left ventricular ejection fraction, when performed, is validated visually by checking the regions of interest that were selected for the calculation. Results of LV function (when performed), LV size, and radiotracer uptake (perfusion) at rest and stress are correlated to make a final assessment of myocardial perfusion, inducible ischemia, and ventricular function and determine the presence or absence of high risk findings. Results are compared to relevant prior studies. A formal consultative report is produced for the medical record.

Description of Post-Service Work: The report is reviewed and signed. The imaging results may be discussed with the referring physician and with the patient. Additional tests or studies are ordered, as necessary, after discussion with the referring physician. Regulatory (NRC/state) review and oversight are provided throughout the procedure.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

Code 78492 for multiple study myocardial perfusion PET was flagged by the RAW at the January 2017 meeting as a high-volume growth service with >10,000 utilization and 100% increase from 2009 through 2014. The societies

referred this code, including companion codes 74891, to CPT for review due to changes in technology since the codes were developed in the mid-1990s. The codes underwent substantive descriptor changes, resulting in the creation of a new 9-code family of services that includes wall motion, ejection fraction, the incorporation of CT, and the addition of one add-on code for quantitation of myocardial blood flow that is currently reported with a Category III code. As this package of revisions was put together, code 78459 for myocardial metabolic PET was also incorporated to the updates for completeness.

There have been changes in instrumentation, computer processing, and software since the mid 1990's that allow extraction of greater clinically valuable information on metabolic, perfusion and function. Some of these changes have enhanced the acquisition, processing, quality control, and interpretation while also adding new variables for analysis. This has had the most impact on current code 78492 for multiple perfusion studies. The referral of patients with advanced and complex heart failure, valvular heart disease, and suspected myocardial inflammation has increased the use of 78459 in combination with 78491 and, less frequently, with 78492. This dual-tracer approach, with proposed combined codes 78432 or 78433 adds additional preservice and intraservice time for dietary instructions, for the need to measure serum glucose levels, and for the frequent need to treat with additional glucose or insulin. While technologic advances have altered the times from the 1990's. More complex patients being referred currently requiring additional expertise to accommodate the greater extent of debilitation and intraservice management.

Keeping in mind several key components that are assembled in different combinations will help the RUC understand and value this family. The eight base codes are detailed below:

- Two contain a single PET study,
- Two contain a single PET plus the corresponding CTs,
- Two contain two PET studies, and
- Two contain two PET studies plus the corresponding CT's.

These components are presented below in an order that demonstrates the various components clearly.

Table 1: Code Family Structure

Code	Component 1	Component 2	Component 3
78491	PET perfusion (rubidium rest or stress study)		
78430	PET perfusion (rubidium rest or stress study)	CT	
78459	PET metabolic (FDG)		
78429	PET metabolic (FDG)	CT	
78492	PET perfusion (rubidium stress study)	PET perfusion (rubidium rest study)	
78431	PET perfusion (rubidium stress study)	PET perfusion (rubidium rest study)	CTs
78432	PET perfusion (rubidium rest study)	PET metabolic (FDG)	
78433	PET perfusion (rubidium rest study)	PET metabolic (FDG)	CTs

This structure with one, two, or three components in each code would logically lend itself to a hierarchy where codes with three components require more time and work than codes with two components, which require more time and work than codes with one component. That expectation was somewhat born out in the October survey and more clearly existent in the resurvey that was performed for the January 2019 meeting.

Resurvey

As the RUC and RUC members who prefacilitated this tab at the October 2018 meeting well know, this family of codes was resurveyed for the January 2019 meeting. October survey results (Table 2) failed to make a clear and consistent distinction between several of the codes in terms of time in relation to work RVUs, despite the fact that survey respondents indicated increasing work RVUs through the family.

Table 2: October RUC Survey Results

Code	Component 1	Component 2	Component 3	25th-RVU	Total Time

78459	PET metabolic (FDG study)			1.60	33
78430	PET perfusion (rubidium rest or stress study)	CT		1.79	33
78491	PET perfusion (rubidium rest or stress study)			1.66	28
78429	PET metabolic (FDG study)	CT		1.80	40
78492	PET perfusion (rubidium stress study)	PET perfusion (rubidium rest study)		1.90	35
78431	PET perfusion (rubidium stress study)	PET perfusion (rubidium resting study)	CTs	2.00	38
78432	PET perfusion (rubidium rest study)	PET metabolic (FDG study)		1.95	40
78433	PET perfusion (rubidium resting study)	PET metabolic (FDG study)	CTs	2.30	40

The societies worked with the Research Subcommittee to develop an array survey and to streamline/remove several questions in an effort to simplify the response time, reduce respondents survey burden, and attempt to obtain more cohesive survey results. That includes answering only the overall intensity/complexity question, not each of the individual components; thus, those fields are blank in the SOR. The January survey DOES consistently indicate small increases in work RVU paired with small increases in intraservice or total time (Table 3). The societies recognize it is not a perfect result with large and consistent increments between modalities that brightly pairs significant differences in time with differences in work, but it is an improvement from the first survey—it consistently shows a work and time increment throughout the family and we believe it is reasonable to build recommendations around those results.

Table 3: January Resurvey Results

Code	Component 1	Component 2	Component 3	25th-RVU	Intra Time	Total Time
78491	PET perfusion (rubidium rest or stress study)			1.56	15	30
78430	PET perfusion (rubidium rest or stress study)	CT		1.67	17	32
78459	PET metabolic (FDG study)			1.61	15	33
78429	PET metabolic (FDG study)	CT		1.76	18	38
78492	PET perfusion (rubidium stress study)	PET perfusion (rubidium rest study)		1.80	20	38
78431	PET perfusion (rubidium stress study)	PET perfusion (rubidium rest study)	CTs	2.00	21	39
78432	PET perfusion (rubidium rest study)	PET metabolic (FDG study)		2.07	22	42
78433	PET perfusion (rubidium resting study)	PET metabolic (FDG study)	CTs	2.35	24	44

Compelling Evidence

Three of the services in the revised family—78459, 78491, and 78492—are existing codes with longstanding times and RVUs. The societies believe compelling evidence exists to indicate the current times and values may be incorrect.

***Change in technology*:** As noted above, myocardial PET imaging has evolved in the past two decades. That is a significant reason for the new and complex family of codes before you. There have been changes in instrumentation, computer processing, and software since the mid 1990's that allow extraction of greater clinically valuable information on metabolic, perfusion and function. Of note, when these legacy PET services were originally developed we did not have the technology to perform wall motion or ejection fraction for myocardial PET perfusion, these new services now include this work. These changes have enhanced the acquisition, processing, quality control, and interpretation while also adding new variables for analysis and review by the physician or QHP. We recognize that it would therefore be sensible to expect to see longer physician service times for these enhanced services. We do see an increment in time through the family, though we also expected those differences in time between services to be greater and acknowledge that may complicate valuation.

***Incorrect assumptions/flawed methodology**:* The 1994 and 1997 valuations do not include any preservice or postservice time. While it was the norm at the time, it would now be unthinkable for imaging services to be valued without delineated preservice and postservice work and time. That flaw makes any comparison to those old times and values flawed as well. Were 15 or 18 minutes of total time moved out of the intraservice period, it the old codes still have longer times, but the discrepancy is more plausible. The technologic changes described above have produced both enhanced services but also an increased intensity as this technology has dispersed beyond those initial, small numbers decades ago.

A determination that compelling evidence exists to suggest the current code values are incorrect opens the door for the family to be valued based entirely on survey data, following the progression noted in Table 3.

78492 Rationale

78492 is an existing code that was updated to describe a multiple cardiac PET perfusion study as it is performed in 2018, including wall motion(s) and ejection fraction(s) when they are performed. Survey respondents estimated this multiple perfusion PET study to take 8 minutes preservice, 20 minutes intraservice, and 10 minutes postservice. The median performance rate for this code was 0, so results are also broken out to show results from respondents that indicated experience with the service versus those without (recent) experience. The two groups' responses show that those who performed the service gave higher times, while those that did not provided lower times. Our experience tells us that those who perform the service did a better job at valuing the RVW and times than those that did not perform the service. As is the standard for RUC we relied on the combined data to develop our recommendations.

Twelve respondents (23%) selected code 78452 for myocardial SPECT as the KRS. Respondents generally indicated 78492 to be more intense/complex in comparison to the KRS. Eleven respondents (15%) selected 78812 for PET from skull base to thigh as the second KRS. Most respondents indicated 78492 to be identical or more intense/complex in comparison to the KRS.

We recommend the survey 25th-percentile work RVU of 1.80 with median survey times of 8 minutes preservice, 20 minutes intraservice, and 10 minutes postservice for 78492. This recommendation fits between less intense MPC code 93351 for stress echo with identical intraservice time and slightly longer (2 minutes) total time, and 92004 for a new patient ophthalmological exam, that has more intraservice, total time, and work RVUs.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 78492

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Sometimes

Specialty Cardardiology How often? Sometimes

Specialty Nuclear Medicine How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 225000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC database times 3

Specialty Diagnostic Radiology Frequency 15750 Percentage 7.00 %

Specialty Cardardiology Frequency 180000 Percentage 80.00 %

Specialty Nuclear Medicine Frequency 24750 Percentage 11.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 75,000 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC database

Specialty Diagnostic Radiology Frequency 5250 Percentage 7.00 %

Specialty Cardardiology Frequency 60000 Percentage 80.00 %

Specialty Nuclear Medicine Frequency 8250 Percentage 11.00 %

Do many physicians perform this service across the United States? Yes

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:78431 Tracking Number K6 Original Specialty Recommended RVU: **2.00**
Presented Recommended RVU: **1.90**
Global Period: XXX Current Work RVU: RUC Recommended RVU: **1.90**

CPT Descriptor: Myocardial imaging, positron emission tomography, perfusion; study (including ventricular wall motion(s), and/or ejection fractions(s), when performed);multiple studies at rest and stress (exercise or pharmacologic), with concurrently acquired computed tomography transmission scan

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 69-year-old female patient without known coronary artery disease has symptoms suggestive of angina pectoris. A rest/stress PET myocardial perfusion imaging study with combined CT localization review and registration is requested to determine the presence and severity of cardiac ischemia as well as an estimate of coronary atherosclerotic burden

Percentage of Survey Respondents who found Vignette to be Typical: 90%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The physician reviews the clinical request, pertinent medical records, X rays, any prior imaging data, and interim medical history, including medications and concurrent medical problems. The decision is made as to the appropriateness and protocol for this patients PET scan. The physician instructs the nuclear medicine technologists to order the appropriate radiopharmaceutical and dose and ensures by oversight that appropriate records are maintained per Nuclear Regulatory Commission (NRC) and/or state regulations. For stress imaging, the physician confirms absence of contraindications to stress testing.

Description of Intra-Service Work: The physician instructs and oversees the nuclear medicine technologists in the administration of the radiopharmaceutical including verifying the dosage per Nuclear Regulatory Commission (NRC) and/or state regulations. The physician directs the nuclear medicine technologist to adjust the acquisition protocol as necessary for the individual patient. If wall motion and/or ejection fraction are performed, assess the patient's cardiac rhythm. The physician is available to answer questions for the technologist and to review components of the study throughout the procedure.

The study consists of an acquisition of both resting and stress tomographic PET studies synchronized (gated) to the patient's ECG when performed. The PET acquisition data are each followed by separate limited CT study without moving the patient. Verify the completeness and adequacy of the data sets before completion of the study and order additional imaging as necessary.

The physician reviews all images for artifacts and abnormal extracardiac distribution. CT data are used to generate attenuation corrected images in all three planes. Additional fused images from the PET and CT are constructed to correlate the anatomic position of radiopharmaceutical accumulation with the current patient anatomy (creating an interpretation display of multiple PET images, multiple CT images, and multiple fused PET images on top of CT images). The physician reviews the CT transmission scan data for proper registration, relevant cardiovascular findings/cardiovascular diagnoses,

and for anatomy. The low resolution chest CT attenuation map typically includes, but is not limited to: coronary calcifications (including a visual estimate of severity and extent), pericardial effusions, pleural effusions, pleural calcifications, ascending aortic aneurysms, descending aortic aneurysms, left atrial enlargement, dilation of the pulmonary artery, pericardial thickening and calcifications, thoracic aortic calcification, heavy aortic valve calcification (an adjunctive test for aortic valve stenosis when performed on gated non-contrast CT), large hiatal hernias, elevated hemi-diaphragms, large pneumonias and lung masses. The physician interprets and correlates both stress and rest PET emission data including myocardial tracer uptake, cardiac wall motion, and left ventricular ejection fraction and examines the PET data. Reconstructed images in three planes are reviewed. Verify registration of the attenuation maps. Images are semi-quantitatively scored on a standard segmental model as normal uptake, mildly reduced, moderately reduced, severely reduced or absent. Findings are attributed to coronary vascular territories. Gated images, when performed, are scored qualitatively for motion and thickening. The data set is analyzed in a standardized segmental model as normal, mildly hypokinetic, moderately hypokinetic, severely hypokinetic, akinetic, or dyskinetic. Overall left ventricular ejection fraction, when performed, is validated visually by checking the regions of interest that were selected for the calculation. Results of LV function (when performed) and radiotracer uptake (perfusion) are correlated. Results are compared to relevant prior studies. A formal consultative report is produced for the medical record.

Description of Post-Service Work: The report is reviewed and signed. The imaging results may be discussed with the referring physician and with the patient. Additional tests or studies are ordered, as necessary, after discussion with the referring physician. Regulatory (NRC/state) review and oversight are provided throughout the procedure.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

Code 78492 for multiple study myocardial perfusion PET was flagged by the RAW at the January 2017 meeting as a high-volume growth service with >10,000 utilization and 100% increase from 2009 through 2014. The societies referred this code, including companion codes 74891, to CPT for review due to changes in technology since the codes were developed in the mid-1990s. The codes underwent substantive descriptor changes, resulting in the creation of a new 9-code family of services that includes wall motion, ejection fraction, the incorporation of CT, and the addition of one add-on code for quantitation of myocardial blood flow that is currently reported with a Category III code. As this package of revisions was put together, code 78459 for myocardial metabolic PET was also incorporated to the updates for completeness.

There have been changes in instrumentation, computer processing, and software since the mid 1990's that allow extraction of greater clinically valuable information on metabolic, perfusion and function. Some of these changes have enhanced the acquisition, processing, quality control, and interpretation while also adding new variables for analysis. This has had the most impact on current code 78492 for multiple perfusion studies. The referral of patients with advanced and complex heart failure, valvular heart disease, and suspected myocardial inflammation has increased the use of 78459 in combination with 78491 and, less frequently, with 78492. This dual-tracer approach, with proposed combined codes 78432 or 78433, adds additional preservice and intraservice time for dietary instructions, for the need to measure serum glucose levels, and for the frequent need to treat with additional glucose or insulin. While technologic advances have altered the times from the 1990's. More complex patients being referred currently requiring additional expertise to accommodate the greater extent of debilitation and intraservice management.

Keeping in mind several key components that are assembled in different combinations will help the RUC understand and value this family. The eight base codes are detailed below:

- Two contain a single PET study,
- Two contain a single PET plus the corresponding CTs,
- Two contain two PET studies, and
- Two contain two PET studies plus the corresponding CT's.

These components are presented below in an order that demonstrates the various components clearly.

Table 1: Code Family Structure

Code	Component 1	Component 2	Component 3
78491	PET perfusion (rubidium rest or stress study)		
78430	PET perfusion (rubidium rest or stress study)	CT	
78459	PET metabolic (FDG)		
78429	PET metabolic (FDG)	CT	
78492	PET perfusion (rubidium stress study)	PET perfusion (rubidium rest study)	
78431	PET perfusion (rubidium stress study)	PET perfusion (rubidium rest study)	CTs
78432	PET perfusion (rubidium rest study)	PET metabolic (FDG)	
78433	PET perfusion (rubidium rest study)	PET metabolic (FDG)	CTs

This structure with one, two, or three components in each code would logically lend itself to a hierarchy where codes with three components require more time and work than codes with two components, which require more time and work than codes with one component. That expectation was somewhat born out in the October survey and more clearly existent in the resurvey that was performed for the January 2019 meeting.

Resurvey

As the RUC and RUC members who prefacilitated this tab at the October 2018 meeting well know, this family of codes was resurveyed for the January 2019 meeting. October survey results (Table 2) failed to make a clear and consistent

distinction between several of the codes in terms of time in relation to work RVUs, despite the fact that survey respondents indicated increasing work RVUs through the family.

Table 2: October RUC Survey Results

Code	Component 1	Component 2	Component 3	25th-RVU	Total Time
78459	PET metabolic (FDG study)			1.60	33
78430	PET perfusion (rubidium rest or stress study)	CT		1.79	33
78491	PET perfusion (rubidium rest or stress study)			1.66	28
78429	PET metabolic (FDG study)	CT		1.80	40
78492	PET perfusion (rubidium stress study)	PET perfusion (rubidium rest study)		1.90	35
78431	PET perfusion (rubidium stress study)	PET perfusion (rubidium resting study)	CTs	2.00	38
78432	PET perfusion (rubidium rest study)	PET metabolic (FDG study)		1.95	40
78433	PET perfusion (rubidium resting study)	PET metabolic (FDG study)	CTs	2.30	40

The societies worked with the Research Subcommittee to develop an array survey and to streamline/remove several questions in an effort to simplify the response time, reduce respondents survey burden, and attempt to obtain more cohesive survey results. That includes answering only the overall intensity/complexity question, not each of the individual components; thus, those fields are blank in the SOR. The January survey DOES consistently indicate small increases in work RVU paired with small increases in intraservice or total time (Table 3). The societies recognize it is not a perfect result with large and consistent increments between modalities that brightly pairs significant differences in time with differences in work, but it is an improvement from the first survey—it consistently shows a work and time increment throughout the family and we believe it is reasonable to build recommendations around those results.

Table 3: January Resurvey Results

Code	Component 1	Component 2	Component 3	25th-RVU	Intra Time	Total Time
78491	PET perfusion (rubidium rest or stress study)			1.56	15	30
78430	PET perfusion (rubidium rest or stress study)	CT		1.67	17	32
78459	PET metabolic (FDG study)			1.61	15	33
78429	PET metabolic (FDG study)	CT		1.76	18	38
78492	PET perfusion (rubidium stress study)	PET perfusion (rubidium rest study)		1.80	20	38
78431	PET perfusion (rubidium stress study)	PET perfusion (rubidium rest study)	CTs	2.00	21	39
78432	PET perfusion (rubidium rest study)	PET metabolic (FDG study)		2.07	22	42
78433	PET perfusion (rubidium resting study)	PET metabolic (FDG study)	CTs	2.35	24	44

Compelling Evidence

Three of the services in the revised family—78459, 78491, and 78492—are existing codes with longstanding times and RVUs. The societies believe compelling evidence exists to indicate the current times and values may be incorrect.

***Change in technology*:** As noted above, myocardial PET imaging has evolved in the past two decades. That is a significant reason for the new and complex family of codes before you. There have been changes in instrumentation,

computer processing, and software since the mid 1990's that allow extraction of greater clinically valuable information on metabolic, perfusion and function. Of note, when these legacy PET services were originally developed we did not have the technology to perform wall motion or ejection fraction for myocardial PET perfusion, these new services now include this work. These changes have enhanced the acquisition, processing, quality control, and interpretation while also adding new variables for analysis and review by the physician or QHP. We recognize that it would therefore be sensible to expect to see longer physician service times for these enhanced services. We do see an increment in time through the family, though we also expected those differences in time between services to be greater and acknowledge that may complicate valuation.

Incorrect assumptions/flawed methodology*:* The 1994 and 1997 valuations do not include any preservice or postservice time. While it was the norm at the time, it would now be unthinkable for imaging services to be valued without delineated preservice and postservice work and time. That flaw makes any comparison to those old times and values flawed as well. Were 15 or 18 minutes of total time moved out of the intraservice period, it the old codes still have longer times, but the discrepancy is more plausible. The technologic changes described above have produced both enhanced services but also an increased intensity as this technology has dispersed beyond those initial, small numbers decades ago.

A determination that compelling evidence exists to suggest the current code values are incorrect opens the door for the family to be valued based entirely on survey data, following the progression noted in Table 3.

78431 Rationale

79431 is a new code that describes the work to interpret a multiple cardiac PET perfusion study that is performed with a concurrently acquired CT transmission scan. Survey respondents estimated a multiple PET perfusion study with CT to take 8 minutes preservice, 21 minutes intraservice, and 10 minutes postservice.

Fourteen respondents (24%) selected code 75574 for cardiac CT angiography as the KRS. Most respondents indicated 78431 to be more intense/complex in comparison to the KRS. Ten respondents (17%) selected 78814 for limited PET with CT as the second KRS. Most respondents indicated 78X32 to be more intense/complex in comparison to the KRS.

We recommend the survey 25th-percentile work RVU of 2.00 with median survey times of 8 minutes preservice, 21 minutes intraservice, and 10 minutes postservice for 78431. This recommendation fits between MPC code 93351 for stress echo with 1 minute shorter intraservice time and slightly longer (1 minutes) total time, and 74178 for abdomen/pelvis CT that has more intraservice time with 1 minute more total time than 78431.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the

provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. 93015-93017 stress test

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:78432 Tracking Number K7 Original Specialty Recommended RVU: **2.07**
Presented Recommended RVU: **2.07**
Global Period: XXX Current Work RVU: RUC Recommended RVU: **2.07**

CPT Descriptor: Myocardial imaging, positron emission tomography, combined perfusion with metabolic evaluation study (including ventricular wall motion(s), and/or ejection fraction(s), when performed), dual radiotracer (eg, myocardial viability);

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 65-year-old female patient has an ischemic cardiomyopathy with severely diminished left ventricular contractile function and three vessel occlusive coronary artery disease. A combined metabolic and perfusion PET stud(ies) is requested to determine myocardial viability to help guide revascularization therapy.

Percentage of Survey Respondents who found Vignette to be Typical: 94%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The physician reviews the clinical request, pertinent medical records, X rays, any prior imaging data, and interim medical history, including medications and concurrent medical problems. The decision is made as to the appropriateness and protocol for this patients PET scan. The ordering physician is consulted, (when necessary) to clarify the indications, and whether the study is being performed for evaluation of hibernation or inflammation. The protocol for administering glucose and insulin is determined depending on the patient's history, patient's glucose level, specifically the presence or absence of diabetes, and patient specific medication and patient specific diet instructions for the day of the study are determined and provided to the patient. The physician instructs the nuclear medicine technologists to order the appropriate radiopharmaceutical and dose and ensures by oversight that appropriate records are maintained per Nuclear Regulatory Commission (NRC) and/or state regulations.

Description of Intra-Service Work: The physician evaluates the adequacy of the patient diet preparation and reviews the current glucose level for the patient with the nuclear medicine technologist or nurse and directs technologist or nurse to adjust as necessary. Blood glucose is checked for all patients prior to the administration of F-18 FDG. The physician is available to prescribe, oversee, and direct the oral or IV administration of glucose, iv doses of insulin and heparin, as appropriate. The physician instructs and oversees the nuclear medicine technologists in the administration of the radiopharmaceutical including verifying the dosage per Nuclear Regulatory Commission (NRC) and/or state regulations. After the radiopharmaceutical is administered the patient leaves the area for approximately 1 hour. The physician directs the nuclear medicine technologist to adjust the acquisition protocol as necessary for the individual patient. If wall motion and/or ejection fraction are performed, the patient's cardiac rhythm is assessed. The physician is available to answer questions for the technologist and to review components of the study throughout the procedure.

The dual radiopharmaceutical multiple set of studies consists of typically a resting perfusion plus a complete metabolic study with acquisitions of tomographic PET data sets and synchronized (gated) to the patient's ECG when performed.

Therefore, this service represents all aspect of CPT 78491 plus 78459. Verify the completeness and adequacy of the data sets before completion of the study and order additional imaging as necessary.

The physician reviews the PET images for artifacts and abnormal extracardiac distribution and verifies registration of the attenuation maps for both perfusion and metabolic data sets. Assess ventricular function, when performed, by obtaining an overall ejection fraction and evaluating regional wall motion, using a standardized segment model for the data set with each segment scored as normal, mildly hypokinetic, moderately hypokinetic, severely hypokinetic, akinetic, or dyskinetic. Analyze wall motion, when performed, qualitatively for motion and thickening. The extent and distribution of wall motion abnormalities is used to judge the amount of underlying myocardial scar. Next, the distribution of radiopharmaceutical uptake and the relationship to vascular geographic territories is assessed for both perfusion and metabolic images. The physician examines myocardial tracer uptake on the rest perfusion study. For this, reconstructed images in three planes are reviewed. Verify registration of the attenuation maps. Images are semi-quantitatively scored on a standard segmental model as normal uptake, mildly reduced, moderately reduced, severely reduced or absent. Findings are attributed to coronary vascular territories. The physician then examines radiotracer uptake on the metabolic images. For viability assessment, regions with lack of uptake or uptake less than 50% of normal segments are recorded as nonviable. For inflammation assessment, regions with myocardial uptake are recorded as consistent with inflammation. Potential sources of error are examined including correct region of interest for ventricular wall motion and digitally obtained ejection fraction and patient factors such as incomplete dietary preparation or persistent insulin resistance that would explain unanticipated distribution of radiotracer. Results of wall motion assessment (when performed), radiotracer uptake pattern on the metabolic image set, and myocardial uptake on the perfusion image setare integrated to determine the presence of viability, hibernating myocardium, scar/fibrosis, and inflammation, as appropriate. Results are attributed to vascular territories. Comparison is made to relevant prior studies. A formal consultative report is produced for the medical record.

Description of Post-Service Work: The report is reviewed and signed. The imaging results may be discussed with the referring physician and with the patient. Additional tests or studies are ordered, as necessary, after discussion with the referring physician. Regulatory (NRC/state) review and oversight are provided throughout the procedure.

SURVEY DATA

RUC Meeting Date (mm/yyyy)	01/2019					
Presenter(s):	Gary Dillehay, MD (SNMMI), Scott Bartley, MD (ACNM), William Van Decker, MD, (ASNC) Richard Wright, MD (ACC), Edward Tuony, MD (ACC) Kurt Schoppe, MD (ACR), Daniel Wessell, MD (ACR)

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

Code 78492 for multiple study myocardial perfusion PET was flagged by the RAW at the January 2017 meeting as a high-volume growth service with >10,000 utilization and 100% increase from 2009 through 2014. The societies referred this code, including companion codes 74891, to CPT for review due to changes in technology since the codes were developed in the mid-1990s. The codes underwent substantive descriptor changes, resulting in the creation of a new 9-code family of services that includes wall motion, ejection fraction, the incorporation of CT, and the addition of one add-on code for quantitation of myocardial blood flow that is currently reported with a Category III code. As this package of revisions was put together, code 78459 for myocardial metabolic PET was also incorporated to the updates for completeness.

There have been changes in instrumentation, computer processing, and software since the mid 1990's that allow extraction of greater clinically valuable information on metabolic, perfusion and function. Some of these changes have enhanced the acquisition, processing, quality control, and interpretation while also adding new variables for analysis. This has had the most impact on current code 78492 for multiple perfusion studies. The referral of patients with advanced and complex heart failure, valvular heart disease, and suspected myocardial inflammation has increased the use of 78459 in combination with 78491 and, less frequently, with 78492. This dual-tracer approach, with proposed combined codes 78432 or 78433, adds additional preservice and intraservice time for dietary instructions, for the need to measure serum glucose levels, and for the frequent need to treat with additional glucose or insulin. While technologic advances have altered the times from the 1990's. More complex patients being referred currently requiring additional expertise to accommodate the greater extent of debilitation and intraservice management.

Keeping in mind several key components that are assembled in different combinations will help the RUC understand and value this family. The eight base codes are detailed below:

- Two contain a single PET study,
- Two contain a single PET plus the corresponding CTs,
- Two contain two PET studies, and
- Two contain two PET studies plus the corresponding CT's.

These components are presented below in an order that demonstrates the various components clearly.

Table 1: Code Family Structure

Code	Component 1	Component 2	Component 3
78491	PET perfusion (rubidium rest or stress study)		
78430	PET perfusion (rubidium rest or stress study)	CT	
78459	PET metabolic (FDG)		
78429	PET metabolic (FDG)	CT	
78492	PET perfusion (rubidium stress study)	PET perfusion (rubidium rest study)	
78431	PET perfusion (rubidium stress study)	PET perfusion (rubidium rest study)	CTs
78432	PET perfusion (rubidium rest study)	PET metabolic (FDG)	
78433	PET perfusion (rubidium rest study)	PET metabolic (FDG)	CTs

This structure with one, two, or three components in each code would logically lend itself to a hierarchy where codes with three components require more time and work than codes with two components, which require more time and work than codes with one component. That expectation was somewhat born out in the October survey and more clearly existent in the resurvey that was performed for the January 2019 meeting.

Resurvey

As the RUC and RUC members who prefacilitated this tab at the October 2018 meeting well know, this family of codes was resurveyed for the January 2019 meeting. October survey results (Table 2) failed to make a clear and consistent

distinction between several of the codes in terms of time in relation to work RVUs, despite the fact that survey respondents indicated increasing work RVUs through the family.

Table 2: October RUC Survey Results

Code	Component 1	Component 2	Component 3	25th-RVU	Total Time
78459	PET metabolic (FDG study)			1.60	33
78430	PET perfusion (rubidium rest or stress study)	CT		1.79	33
78491	PET perfusion (rubidium rest or stress study)			1.66	28
78429	PET metabolic (FDG study)	CT		1.80	40
78492	PET perfusion (rubidium stress study)	PET perfusion (rubidium rest study)		1.90	35
78431	PET perfusion (rubidium stress study)	PET perfusion (rubidium resting study)	CTs	2.00	38
78432	PET perfusion (rubidium rest study)	PET metabolic (FDG study)		1.95	40
78433	PET perfusion (rubidium resting study)	PET metabolic (FDG study)	CTs	2.30	40

The societies worked with the Research Subcommittee to develop an array survey and to streamline/remove several questions in an effort to simplify the response time, reduce respondents survey burden, and attempt to obtain more cohesive survey results. That includes answering only the overall intensity/complexity question, not each of the individual components; thus, those fields are blank in the SOR. The January survey DOES consistently indicate small increases in work RVU paired with small increases in intraservice or total time (Table 3). The societies recognize it is not a perfect result with large and consistent increments between modalities that brightly pairs significant differences in time with differences in work, but it is an improvement from the first survey—it consistently shows a work and time increment throughout the family and we believe it is reasonable to build recommendations around those results.

Table 3: January Resurvey Results

Code	Component 1	Component 2	Component 3	25th-RVU	Intra Time	Total Time
78491	PET perfusion (rubidium rest or stress study)			1.56	15	30
78430	PET perfusion (rubidium rest or stress study)	CT		1.67	17	32
78459	PET metabolic (FDG study)			1.61	15	33
78429	PET metabolic (FDG study)	CT		1.76	18	38
78492	PET perfusion (rubidium stress study)	PET perfusion (rubidium rest study)		1.80	20	38
78431	PET perfusion (rubidium stress study)	PET perfusion (rubidium rest study)	CTs	2.00	21	39
78432	PET perfusion (rubidium rest study)	PET metabolic (FDG study)		2.07	22	42
78433	PET perfusion (rubidium resting study)	PET metabolic (FDG study)	CTs	2.35	24	44

Compelling Evidence

Three of the services in the revised family—78459, 78491, and 78492—are existing codes with longstanding times and RVUs. The societies believe compelling evidence exists to indicate the current times and values may be incorrect.

***Change in technology*:** As noted above, myocardial PET imaging has evolved in the past two decades. That is a significant reason for the new and complex family of codes before you. There have been changes in instrumentation,

computer processing, and software since the mid 1990's that allow extraction of greater clinically valuable information on metabolic, perfusion and function. Of note, when these legacy PET services were originally developed we did not have the technology to perform wall motion or ejection fraction for myocardial PET perfusion, these new services now include this work. These changes have enhanced the acquisition, processing, quality control, and interpretation while also adding new variables for analysis and review by the physician or QHP. We recognize that it would therefore be sensible to expect to see longer physician service times for these enhanced services. We do see an increment in time through the family, though we also expected those differences in time between services to be greater and acknowledge that may complicate valuation.

Incorrect assumptions/flawed methodology*:* The 1994 and 1997 valuations do not include any preservice or postservice time. While it was the norm at the time, it would now be unthinkable for imaging services to be valued without delineated preservice and postservice work and time. That flaw makes any comparison to those old times and values flawed as well. Were 15 or 18 minutes of total time moved out of the intraservice period, it the old codes still have longer times, but the discrepancy is more plausible. The technologic changes described above have produced both enhanced services but also an increased intensity as this technology has dispersed beyond those initial, small numbers decades ago.

A determination that compelling evidence exists to suggest the current code values are incorrect opens the door for the family to be valued based entirely on survey data, following the progression noted in Table 3.

78432 Rationale

78432is a new code that describes the work to interpret a dual tracer combined study, which includes a cardiac PET perfusion study and a cardiac PET metabolic study. CT is not performed as part of this service. Survey respondents estimated a dual tracer PET study with CT to take 10 minutes preservice, 22 minutes intraservice, and 10 minutes postservice. The median performance rate for this code was 0, so results are also broken out to show results from respondents that indicated experience with the service versus those without (recent) experience. The two groups' responses show that those who performed the service gave higher times, while those that did not provided lower times. Our experience tells us that those who perform the service did a better job at valuing the RVW and times than those that did not perform the service. As is the standard for RUC we relied on the combined data to develop our recommendations.

Fifteen respondents (25%) selected code 75574 for cardiac CT angiography as the KRS. Respondents generally indicated 78432 to be identical or more intense/complex in comparison to the KRS. Fourteen respondents (24%) selected 78815 for PET with CT from skull base to thigh as the second KRS. Most respondents indicated 78432 to be more intense/complex in comparison to the KRS.

We recommend the survey 25th-percentile work RVU of 2.07 with 10 minutes preservice, 20 minutes intraservice, and 10 minutes postservice time. This recommendation fits between MPC code 93351 for stress echo with less intraservice and total time, and 72158 for spinal canal MRI that has more intraservice time but less total time than 78432.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☒ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.

☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
☒ Multiple codes are used to maintain consistency with similar codes.
☒ Historical precedents.
☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. 93015-93017

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 78492 plus 78499 or 78999

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Cardiology How often? Sometimes

Specialty Nuclear Medicine How often? Sometimes

Specialty Diagnostic Radiology How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 15000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC data base x 3

Specialty Cardiology Frequency 4950 Percentage 33.00 %

Specialty Diagnostic Radiology Frequency 4950 Percentage 33.00 %

Specialty Nuclear Medicine Frequency 4650 Percentage 31.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 5,000
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC data base

Specialty Cardiology Frequency 1650 Percentage 33.00 %

Specialty Diagnostic Radiology Frequency 1650 Percentage 33.00 %

Specialty Nuclear Medicine Frequency 1550 Percentage 31.00 %

Do many physicians perform this service across the United States? Yes

CPT Descriptor: Myocardial imaging, positron emission tomography, combined perfusion with metabolic evaluation study (including ventricular wall motion(s), and/or ejection fraction(s), when performed), dual radiotracer (eg, myocardial viability); with concurrently acquired computed tomography transmission scan

(CT performed for other than attenuation correction and anatomical localization is reported using the appropriate site specific CT code with modifier 59)
(For myocardial imaging by planar or SPECT, see 78451, 78452, 78453, 78454)
(For CT coronary calcium scoring, use 75571)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 66-year-old male patient has an ischemic cardiomyopathy with severely diminished left ventricular contractile function and three vessel occlusive coronary artery disease. A combined metabolic and perfusion PET/CT study with combined localization review and registration is requested to determine myocardial viability to help guide revascularization therapy.

Percentage of Survey Respondents who found Vignette to be Typical: 95%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The physician reviews the clinical request, pertinent medical records, X rays, any prior imaging data, and interim medical history, including medications and concurrent medical problems. The decision is made as to the appropriateness and protocol for this patients PET scan. The ordering physician is consulted, (when necessary) to clarify the indications, and whether the study is being performed for evaluation of hibernation or inflammation. The protocol for administering glucose and insulin is determined depending on the patient's history, patient's glucose level, specifically the presence or absence of diabetes, and patient specific medication and patient specific diet instructions for the day of the study are determined and provided to the patient. The physician instructs the nuclear medicine technologists to order the appropriate radiopharmaceutical and dose and ensures by oversight that appropriate records are maintained per Nuclear Regulatory Commission (NRC) and/or state regulations.

Description of Intra-Service Work: The physician evaluates the adequacy of the patient diet preparation and reviews the current glucose level for the patient with the nuclear medicine technologist or nurse and directs technologist or nurse to adjust as necessary. Blood glucose is checked for all patients prior to the administration of F-18 FDG. The physician is available to prescribe, oversee, and direct the oral or IV administration of glucose, iv doses of insulin and heparin, as appropriate. The physician instructs and oversees the nuclear medicine technologists in the administration of the radiopharmaceutical including verifying the dosage per Nuclear Regulatory Commission (NRC) and/or state regulations. After the radiopharmaceutical is administered the patient leaves the area for approximately 1 hour. The physician directs the nuclear medicine technologist to adjust the acquisition protocol as necessary for the individual patient. If wall motion

and/or ejection fraction are performed, the patient's cardiac rhythm is assessed. The physician is available to answer questions for the technologist and to review components of the study throughout the procedure.

The dual radiopharmaceutical multiple set of studies consists of typically a resting perfusion plus a complete metabolic study with acquisitions of tomographic PET data sets and synchronized (gated) to the patient's ECG when performed. The PET acquisition data are each followed by separate limited CT study without moving the patient. Therefore, this service represents all aspect of CPT 78X31 plus 78X29. Verify the completeness and adequacy of the data sets before completion of the study and order additional imaging as necessary.

The physician reviews the PET images for artifacts and abnormal extracardiac distribution and verifies registration of the attenuation maps for both perfusion and metabolic data sets. CT data are used to generate attenuation corrected images in all three planes. Additional fused images from the PET and CT are constructed to correlate the anatomic position of radiopharmaceutical accumulation with the current patient anatomy (creating an interpretation display of multiple PET images, multiple CT images, and multiple fused PET images on top of CT images). The physician reviews the CT transmission scan data for proper registration, relevant cardiovascular findings/cardiovascular diagnoses, and for anatomy. The low resolution chest CT attenuation map typically includes, but is not limited to: coronary calcifications (including a visual estimate of severity and extent), pericardial effusions, pleural effusions, pleural calcifications, ascending aortic aneurysms, descending aortic aneurysms, left atrial enlargement, dilation of the pulmonary artery, pericardial thickening and calcifications, thoracic aortic calcification, heavy aortic valve calcification (an adjunctive test for aortic valve stenosis when performed on gated non-contrast CT), large hiatal hernias, elevated hemi-diaphragms, large pneumonias and lung masses. Assess ventricular function, when performed, by obtaining an overall ejection fraction and evaluating regional wall motion, using a standardized segment model for the data set with each segment scored as normal, mildly hypokinetic, moderately hypokinetic, severely hypokinetic, akinetic, or dyskinetic. Analyze wall motion, when performed, qualitatively for motion and thickening. The extent and distribution of wall motion abnormalities is used to judge the amount of underlying myocardial scar. Next, the distribution of radiopharmaceutical uptake and the relationship to vascular geographic territories is assessed for both perfusion and metabolic images. The physician examines myocardial tracer uptake on the rest perfusion study. For this, reconstructed images in three planes are reviewed. Verify registration of the attenuation maps. Images are semi-quantitatively scored on a standard segmental model as normal uptake, mildly reduced, moderately reduced, severely reduced or absent. Findings are attributed to coronary vascular territories. The physician then examines radiotracer uptake on the metabolic images. For viability assessment, regions with lack of uptake or uptake less than 50% of normal segments are recorded as nonviable. For inflammation assessment, regions with myocardial uptake are recorded as consistent with inflammation. Potential sources of error are examined including correct region of interest for ventricular wall motion and digitally obtained ejection fraction and patient factors such as incomplete dietary preparation or persistent insulin resistance that would explain unanticipated distribution of radiotracer. Results of wall motion assessment (when performed), radiotracer uptake pattern on the metabolic image set, and myocardial uptake on the perfusion image setare integrated to determine the presence of viability, hibernating myocardium, scar/fibrosis, and inflammation, as appropriate. Results are attributed to vascular territories. Comparison is made to relevant prior studies. A formal consultative report is produced for the medical record.

Description of Post-Service Work: The report is reviewed and signed. The imaging results may be discussed with the referring physician and with the patient. Additional tests or studies are ordered, as necessary, after discussion with the referring physician. Regulatory (NRC/state) review and oversight are provided throughout the procedure.

SURVEY DATA

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

Code 78492 for multiple study myocardial perfusion PET was flagged by the RAW at the January 2017 meeting as a high-volume growth service with >10,000 utilization and 100% increase from 2009 through 2014. The societies referred this code, including companion codes 74891, to CPT for review due to changes in technology since the codes were developed in the mid-1990s. The codes underwent substantive descriptor changes, resulting in the creation of a new 9-code family of services that includes wall motion, ejection fraction, the incorporation of CT, and the addition of one add-on code for quantitation of myocardial blood flow that is currently reported with a Category III code. As this package of revisions was put together, code 78459 for myocardial metabolic PET was also incorporated to the updates for completeness.

There have been changes in instrumentation, computer processing, and software since the mid 1990's that allow extraction of greater clinically valuable information on metabolic, perfusion and function. Some of these changes have enhanced the acquisition, processing, quality control, and interpretation while also adding new variables for analysis. This has had the most impact on current code 78492 for multiple perfusion studies. The referral of patients with advanced and complex heart failure, valvular heart disease, and suspected myocardial inflammation has increased the use of 78459 in combination with 78491 and, less frequently, with 78492. This dual-tracer approach, with proposed combined codes 78432 or 78433, adds additional preservice and intraservice time for dietary instructions, for the need to measure serum glucose levels, and for the frequent need to treat with additional glucose or insulin. While technologic advances have altered the times from the 1990's. More complex patients being referred currently requiring additional expertise to accommodate the greater extent of debilitation and intraservice management.

Keeping in mind several key components that are assembled in different combinations will help the RUC understand and value this family. The eight base codes are detailed below:

- Two contain a single PET study,
- Two contain a single PET plus the corresponding CTs,
- Two contain two PET studies, and
- Two contain two PET studies plus the corresponding CT's.

These components are presented below in an order that demonstrates the various components clearly.

Table 1: Code Family Structure

Code	Component 1	Component 2	Component 3
78491	PET perfusion (rubidium rest or stress study)		
78430	PET perfusion (rubidium rest or stress study)	CT	
78459	PET metabolic (FDG)		
78429	PET metabolic (FDG)	CT	
78492	PET perfusion (rubidium stress study)	PET perfusion (rubidium rest study)	
78431	PET perfusion (rubidium stress study)	PET perfusion (rubidium rest study)	CTs
78432	PET perfusion (rubidium rest study)	PET metabolic (FDG)	
78433	PET perfusion (rubidium rest study)	PET metabolic (FDG)	CTs

This structure with one, two, or three components in each code would logically lend itself to a hierarchy where codes with three components require more time and work than codes with two components, which require more time and work than codes with one component. That expectation was somewhat born out in the October survey and more clearly existent in the resurvey that was performed for the January 2019 meeting.

Resurvey

As the RUC and RUC members who prefacilitated this tab at the October 2018 meeting well know, this family of codes was resurveyed for the January 2019 meeting. October survey results (Table 2) failed to make a clear and consistent distinction between several of the codes in terms of time in relation to work RVUs, despite the fact that survey respondents indicated increasing work RVUs through the family.

Table 2: October RUC Survey Results

Code	Component 1	Component 2	Component 3	25th-RVU	Total Time
78459	PET metabolic (FDG study)			1.60	33
78430	PET perfusion (rubidium rest or stress study)	CT		1.79	33
78491	PET perfusion (rubidium rest or stress study)			1.66	28
78429	PET metabolic (FDG study)	CT		1.80	40
78492	PET perfusion (rubidium stress study)	PET perfusion (rubidium rest study)		1.90	35
78431	PET perfusion (rubidium stress study)	PET perfusion (rubidium resting study)	CTs	2.00	38
78432	PET perfusion (rubidium rest study)	PET metabolic (FDG study)		1.95	40
78433	PET perfusion (rubidium resting study)	PET metabolic (FDG study)	CTs	2.30	40

The societies worked with the Research Subcommittee to develop an array survey and to streamline/remove several questions in an effort to simplify the response time, reduce respondents survey burden, and attempt to obtain more cohesive survey results. That includes answering only the overall intensity/complexity question, not each of the individual components; thus, those fields are blank in the SOR. The January survey DOES consistently indicate small increases in work RVU paired with small increases in intraservice or total time (Table 3). The societies recognize it is not a perfect result with large and consistent increments between modalities that brightly pairs significant differences in time with differences in work, but it is an improvement from the first survey—it consistently shows a work and time increment throughout the family and we believe it is reasonable to build recommendations around those results.

Table 3: January Resurvey Results

Code	Component 1	Component 2	Component 3	25th-RVU	Intra Time	Total Time
78491	PET perfusion (rubidium rest or stress study)			1.56	15	30
78430	PET perfusion (rubidium rest or stress study)	CT		1.67	17	32
78459	PET metabolic (FDG study)			1.61	15	33
78429	PET metabolic (FDG study)	CT		1.76	18	38
78492	PET perfusion (rubidium stress study)	PET perfusion (rubidium rest study)		1.80	20	38
78431	PET perfusion (rubidium stress study)	PET perfusion (rubidium rest study)	CTs	2.00	21	39
78432	PET perfusion (rubidium rest study)	PET metabolic (FDG study)		2.07	22	42
78433	PET perfusion (rubidium resting study)	PET metabolic (FDG study)	CTs	2.35	24	44

Compelling Evidence

Three of the services in the revised family—78459, 78491, and 78492—are existing codes with longstanding times and RVUs. The societies believe compelling evidence exists to indicate the current times and values may be incorrect.

***Change in technology*:** As noted above, myocardial PET imaging has evolved in the past two decades. That is a significant reason for the new and complex family of codes before you. There have been changes in instrumentation, computer processing, and software since the mid 1990's that allow extraction of greater clinically valuable information on metabolic, perfusion and function. Of note, when these legacy PET services were originally developed we did not have the technology to perform wall motion or ejection fraction for myocardial PET perfusion, these new services now include this work. These changes have enhanced the acquisition, processing, quality control, and interpretation while also adding new variables for analysis and review by the physician or QHP. We recognize that it would therefore be sensible to expect to see longer physician service times for these enhanced services. We do see an increment in time through the family, though we also expected those differences in time between services to be greater and acknowledge that may complicate valuation.

***Incorrect assumptions/flawed methodology**:* The 1994 and 1997 valuations do not include any preservice or postservice time. While it was the norm at the time, it would now be unthinkable for imaging services to be valued without delineated preservice and postservice work and time. That flaw makes any comparison to those old times and values flawed as well. Were 15 or 18 minutes of total time moved out of the intraservice period, it the old codes still have longer times, but the discrepancy is more plausible. The technologic changes described above have produced both enhanced services but also an increased intensity as this technology has dispersed beyond those initial, small numbers decades ago.

A determination that compelling evidence exists to suggest the current code values are incorrect opens the door for the family to be valued based entirely on survey data, following the progression noted in Table 3.

78433 Rationale

78433 is a new code that describes the work to interpret a dual tracer combined study, which includes a cardiac PET perfusion study, a cardiac PET metabolic study, and a concurrently acquired CT transmission scan. Survey respondents estimated a dual tracer PET study with CT to take 10 minutes preservice, 24 minutes intraservice, and 10 minutes postservice.

Twenty-three respondents (38%) selected code 75561 for cardiac MRI as the KRS. Respondents generally indicated 78433 to be identical or more intense/complex in comparison to the KRS. Fourteen respondents (23%) selected 78815 for PET with CT from skull base to thigh as the second KRS. Most respondents indicated 78433 to be more intense/complex in comparison to the KRS.

We recommend the survey 25th-percentile work RVU of 2.35 with 10 minutes preservice, 20 minutes intraservice, and 10 minutes postservice time. This recommendation fits between MPC code 72158 for spinal canal MRI that has more intraservice time but less total time than 78433, and 99204 for a level-4 new patient visit that has more intraservice time and nearly identical total time.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☒ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☒ Multiple codes are used to maintain consistency with similar codes.
   - ☒ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. 93015-93017

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 78459+78492+78499 or 78999

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Sometimes

Specialty Cardardiology How often? Sometimes

Specialty Nuclear Medicine How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 45000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC database times 3

Specialty Diagnostic Radiology Frequency 14850 Percentage 33.00 %

Specialty Cardardiology Frequency 14850 Percentage 33.00 %

Specialty Nuclear Medicine Frequency 13950 Percentage 31.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 15,000 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC database

Specialty Diagnostic Radiology Frequency 4950 Percentage 33.00 %

Specialty Cardardiology Frequency 4950 Percentage 33.00 %

Specialty Nuclear Medicine Frequency 4650 Percentage 31.00 %

Do many physicians perform this service across the United States? Yes

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 78492

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:78434 Tracking Number K9 Original Specialty Recommended RVU: **0.63**
Presented Recommended RVU: **0.63**
Global Period: ZZZ Current Work RVU: RUC Recommended RVU: **0.63**

CPT Descriptor: Absolute quantitation of myocardial blood flow (AQMBF), positron emission tomography, rest and pharmacologic stress
(List separately in addition to code for primary procedure)
(Use 78434 in conjunction with 78492, 78431)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: During a pharmacologic stress/rest PET or PET/CT myocardial perfusion imaging, a 67-year old male also requires additional physiological assessment and undergoes absolute quantitation of myocardial blood flow (AQMBF) imaging. Note: This is an add-on service. Only consider the additional work related to AQMBF.

Percentage of Survey Respondents who found Vignette to be Typical: 89%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: NONE

Description of Intra-Service Work: Under the direction of the physician, following stress/rest PET or PET/CT myocardial perfusion imaging the nuclear medicine technologist acquires images for PET myocardial perfusion imaging in a manner that will also allow quantitation of absolute quantitation myocardial blood flow (AQMBF) (for example, images are acquired in 3D and list mode). The data is then re-binned to allow AQMBF and the data set is exported to a dedicated computer/software program for AQMBF. The processed data set and quality control information is transferred to the interpreting physician. The physician then reviews the quality control for AQMBF (for example, the bolus duration, peak, and plateau waveforms) and, if quality is acceptable, reviews the numeric output for of AQMBF in ml/g/min for rest, stress, and indexed/reserve flow for each coronary bed and for the global left ventricular. The physician also reviews the interactive polar map display. The AQMBF data is then integrated with the static perfusion image data, attenuation maps, clinical data, and an overall report is generated.

Description of Post-Service Work: NONE

SURVEY DATA

RUC Meeting Date (mm/yyyy)	01/2019		
Presenter(s):	Gary Dillehay, MD (SNMMI), Scott Bartley, MD (ACNM), William Van Decker, MD, (ASNC) Richard Wright, MD (ACC), Edward Tuony, MD (ACC) Kurt Schoppe, MD (ACR), Daniel Wessell, MD (ACR)		
Specialty Society(ies):	Society of Nuclear Medicine and Molecular Imaging (SNMMI), American College of Nuclear Medicine (ACNM), American Society of Nuclear Cardiology (ASNC) American College of Cardiology (ACC), American College of Radiology (ACR)		
CPT Code:	78434		
Sample Size:	6338	**Resp N:** 51	**Response:** 0.8 %
Description of Sample:	The SNMMI surveyed a random sample of 1688 members from the cardiovascular council and general membership. The ACC and ASNC supplied a random sample of 2000 members. The ACR surveyed a total of 2,650 members (a random sample of 1,325 from the membership and a separate random sample of 1,325 members who indicated that they perform procedures related to nuclear medicine, PET, and/or cardiovascular). Total sample 6338.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	7%	20%	27%	47%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	33%	67%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	6%	27%	67%
Physical effort required	6%	67%	27%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	7%	33%	60%

2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	60%	30%	10%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	70%	30%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	70%	30%
Physical effort required	0%	90%	10%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	80%	20%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

78434 is a new add-on code that describes an additional measurement—absolute quantitation of myocardial blood flow—that is sometimes obtained with multiple stress and resting PET studies. It is currently reported using Category III code 0482T. This code describes the absolute perfusion blood flow as detailed in the description of work. It previously is reported with a category III code and with the new family, the societies believe now was a good time with increased literature and utilization to move to a category one and survey along with the entire family. It will be reported only with either CPT 78492 and 78431, the multiple perfusion study codes.

As a note, this code was not resurveyed with the rest of this family. This data is from the October survey and recommendations are again being made on this data that coherently aligned with the family and other imaging add-on services.

Survey respondents estimated this service requires 11 minutes of intraservice time. It was most commonly compared to KRS 78496, which describes a cardiac blood pool imaging add-on measurement. These 16 respondents predominantly indicated 78434 was much more or somewhat more intense/complex than 78496. The second KRS was 93567, a cardiac catheterization add-on for supravalvular aortography. 60% of these 11 respondents indicated 78434 was of identical intensity/complexity, with the remainder saying 78434 was somewhat or much more intense/complex.

We recommend the survey 25th-percentile work RVU of 0.63 with an intraservice time of 11 minutes. These values align with the two KRSs, with an IWPUT higher than 78496 and similar to 93567. Additional MPC comparator codes presented in the summary spreadsheet to bolster these recommendations include codes 51797 and 96411, which bracket 78434 in time and value, with 51797 closely approximating the IWPUT of 78434. These codes' times and values support the survey 25th-percentile work RVU with median intraservice time.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. 78X32 and 78492

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 0482T

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Sometimes

Specialty Cardardiology How often? Sometimes

Specialty Nuclear Medicine How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 63231
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. 10% of current use of 78492 13,577 plus 10% of 78X32 projection7,500 = 21077 then times 3 as we have with all other codes.

Specialty Diagnostic Radiology Frequency 4725 Percentage 7.47 %

Specialty Cardardiology Frequency 54000 Percentage 85.40 %

Specialty Nuclear Medicine Frequency 7425 Percentage 11.74 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 21,077 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. 10% of current use of 78492 13,577 plus 10% of 78X32 projection7,500 = 21077

Specialty Diagnostic Radiology Frequency 1575 Percentage 7.47 %

Specialty Cardardiology Frequency 18000 Percentage 85.40 %

Specialty Nuclear Medicine Frequency 2475 Percentage 11.74 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Imaging

BETOS Sub-classification:
Advanced imaging

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 78492

CPT Codes 78459, 78429, 78432, 78433

Specialty Societies Society of Nuclear Medicine and Molecular Imaging (SNMMI), the American College of Nuclear Medicine (ACNM), American College of Cardiology (ACC), the American College of Nuclear Cardiology (ASNC) and the American College of Radiology (ACR)

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Non Facility Direct Practice Expense (PE) Inputs

Meeting Date: October 2018 and January 2019

CPT code	CPT Long Descriptor	Global Period
78459	Myocardial imaging, positron emission tomography (PET), metabolic evaluation study (including ventricular wall motion(s), and/or ejection fraction(s), when performed) single study;	**XXX**
78429	Myocardial imaging, positron emission tomography (PET), metabolic evaluation study (including ventricular wall motion(s), and/or ejection fraction(s), when performed) single study; with concurrently acquired computed tomography transmission scan	**XXX**
78432	Myocardial imaging, positron emission tomography, combined perfusion with metabolic evaluation study (including ventricular wall motion(s), and/or ejection fraction(s), when performed), dual radiotracer (eg, myocardial viability);	**XXX**
78433	Myocardial imaging, positron emission tomography, combined perfusion with metabolic evaluation study (including ventricular wall motion(s), and/or ejection fraction(s), when performed), dual radiotracer (eg, myocardial viability); with concurrently acquired computed tomography transmission scan	**XXX**

Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel: A joint society consensus with members from the following societies participating including; Society of Nuclear Medicine and Molecular Imaging (SNMMI), the American College of Nuclear Medicine (ACNM), American College of Cardiology (ACC), the American College of Nuclear Cardiology (ASNC) and the American College of Radiology (ACR), participated in joint calls and email discussions to provide this consensus opinion. The society members included, physicians, advisors and technologist members of the societies.

1. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here: Existing codes 78459, 78491, 78492 brought forward from a CMS request for review of 78492 are listed as current inputs. Additionally, as references we have listed recently reviewed CPT 78305, 78071, 78072, 93015 and 78496 were used respectively, as the reference for the varying codes in the surveyed codes.

2. Is this code(s) typically billed with an E/M service? **N/A**
3. Is this code(s) typically billed with the E/M service in the nonfacility? **N/A**
   (Please see provided data in PE Subcommittee folder) **Not typically billed with an E/M**

4. What specialty is the dominant provider in the nonfacility? **Cardiology**
   What percent of the time does the dominant provider provide the service(s) in the nonfacility?
   63% for 78459
   97% for 78491

98% 78492

Is the dominant provider in the nonfacility different then for the global? **Yes Diagnostic Radiology**

33% Diagnostic Radiology

32% Cardiology

31% Nuclear Medicine

(Please see provided data in PE Subcommittee folder)

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:

CMS Row	Description	NM Standards	Comments
CA007 Line 26	two minutes are standard for nuclear medicine, one additional minute for nuclear medicine services in general, as patients are placed on equipment in several positions for imaging. Equipment is moving around them and will come in very close but not touch, them, nor should they touch the equipment, or it will stop ad would need to be restarted, this can be startling for patients.	2	See reference codes for recent reviewed codes
CA008 Line 27	NRC/State requirements for verification of Planar Equipment to be used in imaging *(Conducted time studies originally PE 2004, updated in 2014)*	4	
CA008 Line 27	NRC/State requirements for verification of SPECT, SPECT/CT Equipment to be used in imaging *(Conducted time studies originally PE 2004, updated in 2014)*	7	
CA008 Line 27	NRC/State requirements for verification of PET, PET/CT Equipment to be used in imaging *(Conducted time studies originally PE 2004, updated in 2014)*	**8**	Total 21 for all PET and PET/CT codes in this Tab 12
CA008 Line 27	Prepare radiopharmaceutical (s) delivered by central pharmacy with NRC and DOT required check-in of RP, survey package, wipe test of package and all recordings for required documentation by federal or state regulators. Verify ordered dosages with received dosages and store for use with patient. *(Conducted time studies originally PE 2004, updated in 2014)*	**13**	
CA011 Line 40	The standard is 3 minutes, we are adding 7 minutes to all the codes where it is typical to administer F-18 FDG as the typical is to review the glucose and the typical, more than 50% of the time the patient is given special diet to follow that is carefully reviewed, the glucose is checked at least once and commonly two or three times prior to establishing a level that is acceptable for the radiotracer to be administered. Administering FDG without this careful and labor-intensive procedure would result in a non-diagnostic study. The guidelines from ASNC and other societies clearly show the protocols for the technologists to follow under the supervision of the physician. We believe at minimum 7 minutes for these added steps are necessary and may be an underestimate of the work.	**10**	Only for studies with F-18 FDG administration
CA016 Line 49	The standard is 3 minutes, however for two separate Rps and requiring the patient to return we have added 2 minutes for a total of 5 minutes to account for the new bundled service.	**5**	for 78432 and 78433
CA024 Line 74	The standard is 3 minutes, however for two separate scan times requiring the patient to return we have added 3 minutes for a total of 6 minutes to account for the new bundled service. There are no efficiencies gained to clean a room in-between patients. The patient leaves for minimum 60	**6**	for 78432 and 78433

	minutes in between studies. There are three separate areas to clean, the injection room for FDF, and the two scan times for the imaging.		
CA030 Line 81	Technologist for PACSs, the standard is 2 minutes each code depending on if there is one set of imaging, two sets of imaging with or with out CT will require more time of the technologist therefore times are added at 3 minutes, 4 minutes and 5 minutes respectively as shown on the excel.	**3, 4 or 5 minutes**	Depends on the number of images and types, CT or no CT.
CA032 Line 83	The standard is 1 minutes to scan documents into PAC or RIS,, however for two separate Rps and rest, stress or diet forms needed to upload additional time was added respectively for the varying codes.	**2**	
CA033 Line 84	The standard is 0 minutes, however for radioactive materials there are federally mandated post procedure requirements to follow standard for one study is 3 minutes, where two complete studies are performed at different times we added one minute.	**4**	

6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), you must provide compelling evidence. Please explain if the increase can be entirely accounted for because of an increase in physician time. **N/A**

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here: **See above table.**

8. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

Pre-Service Clinical Labor Activities:

- Review x-ray, lab and past test to confirm appropriateness with physician, confirm technique / protocol to be used, obtain physician written directive, determine radiopharmaceutical dose, and order radiopharmaceutical(s) from central/commercial nuclear pharmacy.
- Verification of PET or PET/CT Equipment with documentation, following NRC/State requirements mandated prior to use of equipment.
- Prepare radiopharmaceutical (prepare and QC dose(s)) delivered by central/commercial nuclear pharmacy with NRC required check-in of RP, survey, package, wipe test of syringe, and recording all regulatory required documentation. Ready PET generator cart for Rb studies, QC. Ready dose for potential injection with in-house labels and records. Store radiopharmaceutical(s) and generators, in Hot Lab which is leaded protective shielding including the rubidium generator cart.

Intra-Service Clinical Labor Activities:

- Greet patient, ensure appropriate medical records are available
- Provide pre-service education/obtain consent including mandatory radiation education
- For FDG patients follow the patient specific protocol.
- Check glucose level with physician prior to proceeding. If necessary, instruct patient and have patient return for another glucose check prior to FDG administration.
- Prepare room, equipment, supplies (set up protocol)
- Prepare and position patient/ monitor patient, take care as camera is moving around patient.
- Obtain RP from RP storage/preparation area, prepare meal(s), recheck dose, record, resay, and ensure dose would be appropriate (following protocols) based on the written directive (correct test and patient weight)
- Acquire images and discuss imaging views with physician for potential additional instructions regarding the protocol or additional views as requested.
- Complete diagnostic forms, lab & X-ray requisitions, image processing, development hard copy or complete labeling of electronic view, archive and obtain approval to discharge patient

New Item #	Name of Equipment or Supply	Comments	Invoice A	Invoice B
New Supply 1 Rubidium IV Lines for Generator Cart	CardioGen-82® Patient Administration Sets 42"	25 per sets, use one pre-patient, even if rest and stress or if either alone. No discounting per company invoice A is the large packet, then there is an individual price, most purchase the box of 25	**$ 16.98**	**$95.50**

Post-Service Clinical Labor Activities:

- Clean room/equipment by physician staff
- Specific room clean-up of RP injection/administration areas with mandatory defacement of labels for proper RP residual disposal
- Regulatory compliance - NRC required wipe tests and survey areas used including regulatory documentation.

9. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived. **N/A**

10. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities: **N/A**

11. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov. **N/A**

12. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here:

Rubidium IV lines, one kit per patient, does not matter if this is two patient studies, rest and stress or just one, the same 1 unit is required for the study. See attachments for details. Total cost per IV line kit is 16.98 each.

13. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here:

New Item #	Name of Equipment or Supply	Invoice A	Invoice B	Invoice C
NEW Equipment 1	PET Generator Infusion Cart	**$ 78,000.00**		
NEW Equipment 2	PET Refurbished Imaging Cardiac Configuration	**$ 425,000.00**		
NEW Equipment 3	PET/CT Imaging Camera Cardiac Configuration	**$ 1,595,675.00**	**$ 1,320,931.00**	**$ 958,000.00**
NEW Equipment 4	Software and hardware package for Absolute Quantitation	**$ 33,949.00**		

14. List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here:

15. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here:

16. If there is any other item on your spreadsheet that needs further explanation please include here:

Background

Code 78492 for multiple study myocardial perfusion PET was flagged by the RAW at the January 2017 meeting as a high-volume growth service with >10,000 utilization and 100% increase from 2009 through 2014. The societies referred this code, including companion codes 74891, to CPT for review due to changes in technology since the codes were developed in the mid-1990s. The codes underwent substantive descriptor changes, resulting in the creation of a new 9-code family of services that includes wall motion, ejection fraction, the incorporation of CT, and the addition of one add-on code for quantitation of myocardial blood flow that is currently reported with a Category III code. As this package of revisions was put together, code 78459 for myocardial metabolic PET was also incorporated to the updates for completeness.

There have been changes in instrumentation, computer processing, and software since the mid 1990's that allow extraction of greater clinically valuable information on metabolic, perfusion and function. This dual-tracer approach, with proposed combined codes 78432 or 78433, adds additional preservice and intraservice time for dietary instructions, for the need to measure serum glucose levels, and for the frequent need to treat with additional glucose or insulin. While technologic advances have altered the times from the 1990's.

Keeping in mind several key components that are assembled in different combinations will help the PE subcommittee understand the times of these services. The eight base codes are detailed below:

- Two contain a single PET study,
- Two contain a single PET plus the corresponding CTs,
- Two contain two PET studies, and
- Two contain two PET studies plus the corresponding CT's.

These components are presented below in an order that we think demonstrates the various components clearly.

Code	Component 1	Component 2	Component 3
78491	PET perfusion (rubidium)		
78430	PET perfusion (rubidium)	CT	
78492	PET perfusion (rubidium stress study)	PET perfusion (rubidium rest study)	
78431	PET perfusion (rubidium stress study)	PET perfusion (rubidium resting study)	CT's
78459	PET metabolic (FDG)		
78429	PET metabolic (FDG)	CT	
78432	PET perfusion (rubidium resting study)	PET metabolic (FDG)	
78433	PET perfusion (rubidium resting study)	PET metabolic (FDG)	CT's

This structure with one, two, or three components in each code would logically lend itself to a hierarchy where codes with three components require more technologist time, supplies and equipment than codes with two components, which require more time, and supplies, than codes with one component.

17. Please include an explanation of each line item:

CPT Codes 78434

Specialty Societies Society of Nuclear Medicine and Molecular Imaging (SNMMI), the American College of Nuclear Medicine (ACNM), American College of Cardiology (ACC), the American College of Nuclear Cardiology (ASNC) and the American College of Radiology (ACR)

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Non Facility Direct Practice Expense (PE) Inputs

Meeting Date: October 2018 and January 2019

CPT code	CPT Long Descriptor	Global Period
78434	Absolute quantitation of myocardial blood flow (AQMBF), positron emission tomography, rest and pharmacologic stress (List separately in addition to code for primary procedure)	**ZZZ**

Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel: A joint society consensus with members from the following societies participating including; Society of Nuclear Medicine and Molecular Imaging (SNMMI), the American College of Nuclear Medicine (ACNM), American College of Cardiology (ACC), the American College of Nuclear Cardiology (ASNC) and the American College of Radiology (ACR), participated in joint calls and email discussions to provide this consensus opinion. The society members included, physicians, advisors and technologist members of the societies.

1. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here: Existing category III code 0482T brought forward from a CMS request for review of 78492 and as part of the survey and literature 0482T is being converted to a category I code. We chose another nuclear medicine add on code CPT 78496 as a reference to 78434.

2. Is this code(s) typically billed with an E/M service? **N/A**
3. Is this code(s) typically billed with the E/M service in the nonfacility? **N/A**
   (Please see provided data in PE Subcommittee folder) **Not typically billed with an E/M**

4. What specialty is the dominant provider in the nonfacility? **Cardiology**
   What percent of the time does the dominant provider provide the service(s) in the nonfacility?
   63% for 78459
   97% for 78491
   98% 78492
   Is the dominant provider in the nonfacility different then for the global? **Yes Diagnostic Radiology**
   33% Diagnostic Radiology
   32% Cardiology
   31% Nuclear Medicine
   (Please see provided data in PE Subcommittee folder)

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:

CMS Row	Description	NM Standards	Comments

New Item #	Name of Equipment or Supply	Comments	Invoice A	Invoice B
New Supply 1 Rubidium IV Lines for Generator Cart	CardioGen-82® Patient Administration Sets 42"	25 per sets, use one pre-patient, even if rest and stress or if either alone. No discounting per company invoice A is the large packet, then there is an individual price, most purchase the box of 25	**$ 16.98**	**$95.50**
CA011 Line	One additional minute to explain the additional add on procedure for the flow that will be performed with the standard stress and resting studies.		**1**	
CA030 Line 81	Technologist for PACSs, the standard is 2 minutes each code, we would need an additional 2 minutes for the technologist to performs the PACs that will go along with the flow studies.		**2**	

6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), you must provide compelling evidence. Please explain if the increase can be entirely accounted for because of an increase in physician time. **N/A**

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here: **See above table.**

8. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

Pre-Service Clinical Labor Activities:
- No Additional Activities

Intra-Service Clinical Labor Activities:
- Acquire images and PACs standards.

Post-Service Clinical Labor Activities:
- No Additional Actives

9. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived. **N/A**

10. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities: **N/A**

11. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov. **N/A**

12. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here:

Rubidium IV lines, one kit per patient, does not matter if this is two patient studies, rest and stress or just one, the same 1 unit is required for the study. See attachments for details. Total cost per IV line kit is 16.98 each.

13. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here:

New Item #	Name of Equipment or Supply	Invoice A	Invoice B	Invoice C
NEW Equipment 4	Software and hardware package for Absolute Quantitation	$ 33,949.00		

14. List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here:

15. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here:

16. If there is any other item on your spreadsheet that needs further explanation please include here:

Background

Code 78492 for multiple study myocardial perfusion PET was flagged by the RAW at the January 2017 meeting as a high-volume growth service with >10,000 utilization and 100% increase from 2009 through 2014. The societies referred this code, including companion codes 74891, to CPT for review due to changes in technology since the codes were developed in the mid-1990s. The codes underwent substantive descriptor changes, resulting in the creation of a new 9-code family of services that includes wall motion, ejection fraction, the incorporation of CT, and the addition of one add-on code for quantitation of myocardial blood flow that is currently reported with a Category III code. As this package of revisions was put together, code 78459 for myocardial metabolic PET was also incorporated to the updates for completeness.

There have been changes in instrumentation, computer processing, and software since the mid 1990's that allow extraction of greater clinically valuable information on metabolic, perfusion and function. This dual-tracer approach, with proposed combined codes 78432 or 78433, adds additional preservice and intraservice time for dietary instructions, for the need to measure serum glucose levels, and for the frequent need to treat with additional glucose or insulin. While technologic advances have altered the times from the 1990's.

Keeping in mind several key components that are assembled in different combinations will help the PE subcommittee understand the times of these services. The eight base codes are detailed below:

- Two contain a single PET study,
- Two contain a single PET plus the corresponding CTs,
- Two contain two PET studies, and
- Two contain two PET studies plus the corresponding CT's.

These components are presented below in an order that we think demonstrates the various components clearly.

Code	Component 1	Component 2	Component 3	Add on Code
78492	PET perfusion (rubidium stress study)	PET perfusion (rubidium rest study)		78434 potential
78431	PET perfusion (rubidium stress study)	PET perfusion (rubidium resting study)	CT's	78434 potential

17. Please include an explanation of each line item:

CPT Codes 78491, 78430, 78492, 78431

Specialty Societies Society of Nuclear Medicine and Molecular Imaging (SNMMI), the American College of Nuclear Medicine (ACNM), American College of Cardiology (ACC), the American College of Nuclear Cardiology (ASNC) and the American College of Radiology (ACR)

Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel: A joint society consensus with members from the following societies participating including; Society of Nuclear Medicine and Molecular Imaging (SNMMI), the American College of Nuclear Medicine (ACNM), American College of Cardiology (ACC), the American College of Nuclear Cardiology (ASNC) and the American College of Radiology (ACR), participated in joint calls and email discussions to provide this consensus opinion. The society members included, physicians, advisors and technologist members of the societies.

1. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here: Existing codes 78459, 78491, 78492 brought forward from a CMS request for review of 78492 are listed as current inputs. Additionally, as references we have listed recently reviewed CPT 78305, 78071, 78072, 93015 and 78496 were used respectively, as the reference for the varying codes in the surveyed codes.

2. Is this code(s) typically billed with an E/M service? **N/A**
3. Is this code(s) typically billed with the E/M service in the nonfacility? **N/A**
   (Please see provided data in PE Subcommittee folder) **Not typically billed with an E/M**

4. What specialty is the dominant provider in the nonfacility? **Cardiology**
   What percent of the time does the dominant provider provide the service(s) in the nonfacility?
   63% for 78459
   97% for 78491
   98% 78492

Is the dominant provider in the nonfacility different then for the global? **Yes Diagnostic Radiology**
33% Diagnostic Radiology
32% Cardiology
31% Nuclear Medicine
(Please see provided data in PE Subcommittee folder)

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:

CMS Row	Description	NM Standards	Comments
CA007 Line 26	two minutes are standard for nuclear medicine, one additional minute for nuclear medicine services in general, as patients are placed on equipment in several positions for imaging. Equipment is moving around them and will come in very close but not touch, them, nor should they touch the equipment, or it will stop ad would need to be restarted, this can be startling for patients.	2	See reference codes for recent reviewed codes
CA008 Line 27	NRC/State requirements for verification of Planar Equipment to be used in imaging *(Conducted time studies originally PE 2004, updated in 2014)*	4	
CA008 Line 27	NRC/State requirements for verification of SPECT, SPECT/CT Equipment to be used in imaging *(Conducted time studies originally PE 2004, updated in 2014)*	7	
CA008 Line 27	NRC/State requirements for verification of PET, PET/CT Equipment to be used in imaging *(Conducted time studies originally PE 2004, updated in 2014)*	**8**	Total 21 for all PET and PET/CT codes in this Tab 12
CA008 Line 27	Prepare radiopharmaceutical (s) delivered by central pharmacy with NRC and DOT required check-in of RP, survey package, wipe test of package and all recordings for required documentation by federal or state regulators. Verify ordered dosages with received dosages and store for use with patient. *(Conducted time studies originally PE 2004, updated in 2014)*	**13**	
CA016 Line 49	The standard is 3 minutes, however for two separate Rps and requiring the patient to return we have added 2 minutes for a total of 5 minutes to account for the new bundled service.	**5**	for 78432 and 78433
CA024 Line 74	The standard is 3 minutes, however for two separate scan times requiring the patient to return we have added 3 minutes for a total of 6 minutes to account for the new bundled service. There are no efficiencies gained to clean a room in-between patients. The patient leaves for minimum 60 minutes in between studies. There are three separate areas to clean, the injection room for FDF, and the two scan times for the imaging.	**6**	for 78432 and 78433
CA030 Line 81	Technologist for PACSs, the standard is 2 minutes each code depending on if there is one set of imaging, two sets of imaging with or with out CT will require more time of the technologist therefore times are added at 3 minutes, 4 minutes and 5 minutes respectively as shown on the excel.	**3, 4 or 5 minutes**	Depends on the number of images and types, CT or no CT.
CA032 Line 83	The standard is 1 minutes to scan documents into PAC or RIS,, however for two separate Rps and rest, stress or diet forms needed to upload additional time was added respectively for the varying codes.	**2**	

CA033 Line 84	The standard is 0 minutes, however for radioactive materials there are federally mandated post procedure requirements to follow standard for one study is 3 minutes, where two complete studies are performed at different times we added one minute.	**4**	

6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), you must provide compelling evidence. Please explain if the increase can be entirely accounted for because of an increase in physician time. **N/A**

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here: **See above table.**

8. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

Pre-Service Clinical Labor Activities:

- Review x-ray, lab and past test to confirm appropriateness with physician, confirm technique / protocol to be used, obtain physician written directive, determine radiopharmaceutical dose, and order radiopharmaceutical(s) from central/commercial nuclear pharmacy.
- Verification of PET or PET/CT Equipment with documentation, following NRC/State requirements mandated prior to use of equipment.
- Prepare radiopharmaceutical (prepare and QC dose(s)) delivered by central/commercial nuclear pharmacy with NRC required check-in of RP, survey, package, wipe test of syringe, and recording all regulatory required documentation. Ready PET generator cart for Rb studies, QC. Ready dose for potential injection with in-house labels and records. Store radiopharmaceutical(s) and generators, in Hot Lab which is leaded protective shielding including the rubidium generator cart.

Intra-Service Clinical Labor Activities:

- Greet patient, ensure appropriate medical records are available
- Provide pre-service education/obtain consent including mandatory radiation education
- Prepare room, equipment, supplies (set up protocol)
- Prepare and position patient/ monitor patient, take care as camera is moving around patient.
- Obtain RP from RP storage/preparation area, prepare meal(s), recheck dose, record, resay, and ensure dose would be appropriate (following protocols) based on the written directive (correct test and patient weight)
- Acquire images and discuss imaging views with physician for potential additional instructions regarding the protocol or additional views as requested.
- Complete diagnostic forms, lab & X-ray requisitions, image processing, development hard copy or complete labeling of electronic view, archive and obtain approval to discharge patient

Post-Service Clinical Labor Activities:

- Clean room/equipment by physician staff
- Specific room clean-up of RP injection/administration areas with mandatory defacement of labels for proper RP residual disposal
- Regulatory compliance - NRC required wipe tests and survey areas used including regulatory documentation.

9. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived. **N/A**

10. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities: **N/A**

New Item #	Name of Equipment or Supply	Comments	Invoice A	Invoice B

AMA/Specialty Society RVS Update Committee Summary of Recommendations

January 2019

SPECT-CT Procedures – Tab 14

At the September 2018 CPT Editorial Panel meeting, the Panel revised 5 codes, created 4 new codes and deleted nine codes to better differentiate between planar radiopharmaceutical localization procedures and SPECT, SPECT-CT and multiple area or multiple day radiopharmaceutical localization/distribution procedures. The code change applicants noted and the Panel agreed that the resources involves in performing these services on different organ systems and body areas were similar enough where a generic family of codes be created, modeled after the current tumor and radiopharmaceutical distribution codes.

Compelling Evidence
The RUC reviewed the specialty's presented argument for compelling evidence. Similar to PET-CT, there have been changes in SPECT and SPECT-CT instrumentation, computer processing, and software since the early 2010's that allow extraction of greater clinically valuable information regarding tumor, infection, inflammation, and distribution of a variety of radiotracers. These changes have enhanced the acquisition, processing, quality control, and interpretation while also adding new variables for acquisition protocols, analysis and a shift in the typical patients. The RUC accepted compelling evidence based on a change in technique/change in technology.

78800 ***Radiopharmaceutical localization of tumor, inflammatory process or distribution of radiopharmaceutical agent(s), (includes vascular flow and blood pool imaging when performed); planar limited single area (eg, head, neck, chest pelvis), single day of imaging***
The RUC reviewed the survey results from 77 physicians and agreed on the following physician time components: 7 minutes of pre-service, 10 minutes of intra-service time and 10 minutes of immediate post-service time. CPT code 78800 involves imaging one body area with planar technology and is the least intense imaging study to perform in this family of services.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the respondents appropriately valued the physician work involved in performing this service at the survey 25th percentile work RVU of 0.70. To justify a work RVU of 0.70, the RUC compared the survey code to CPT code 94617 *Exercise test for bronchospasm, including pre- and post-spirometry, electrocardiographic recording(s), and pulse oximetry* (work RVU= 0.70, intra-service time of 10 minutes, total time of 26 minutes) and noted that both services have identical intra-service time and very similar total time and involve a similar amount of physician work. The RUC also compared the survey code to the 2nd key reference code 78305 *Bone and/or joint imaging; multiple areas* (work RVU= 0.83, intra-service time of 10 minutes, total time of 20 minutes) and noted that both services have identical intra-service time, but the reference code is more intense and complex to perform justifying the higher work value. The RUC also compared the survey code to CPT code 93289 *Interrogation device evaluation (in person) with analysis, review and report by a physician or other qualified health care professional…* (work RVU= 0.75, intra-service time of 10 minutes, total time of 24 minutes) and noted that both services involve identical intra-service time and should be valued similarly. **The RUC recommends a work RVU of 0.70 for CPT code 78800.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

78801 ***Radiopharmaceutical localization of tumor, inflammatory process or distribution of radiopharmaceutical agent(s), (includes vascular flow and blood pool imaging when performed); planar, 2 or more areas (eg, abdomen and pelvis, head and chest), 1 or more days of imaging or single area imaging over 2 or more days***
The RUC reviewed the survey results from 77 physicians and agreed on the following physician time components: 10 minutes of pre-service, 10 minutes of intra-service time and 10 minutes of immediate post-service time. This service involves either imaging of two or more body areas using planar technology, or performing two days of imaging of the same area and comparing the studies from each day.

The RUC reviewed the survey respondents' estimated physician work values and agreed that maintaining the current work RVU of 0.79 is appropriate and is supported by the survey 25th percentile work RVU of 0.86. To justify a work RVU of 0.79, the RUC compared the survey code to top key reference code 78305 *Bone and/or joint imaging; multiple areas* (work RVU= 0.83, intra-service time of 10 minutes, total time of 20 minutes) and noted that both services have identical intra-service time and a comparable amount of physician work. The RUC also compared the survey code to CPT code 78070 *Parathyroid planar imaging (including subtraction, when performed);* (work RVU= 0.80, intra-service time of 10 minutes, total time of 20 minutes) and noted that both services have identical intra-service time and involve a similar amount of physician work. **The RUC recommends a work RVU of 0.79 for CPT code 78801.**

78802 ***Radiopharmaceutical localization of tumor, inflammatory process or distribution of radiopharmaceutical agent(s), (includes vascular flow and blood pool imaging when performed); planar, whole body, single day of imaging***
The RUC reviewed the survey results from 80 physicians and agreed on the following physician time components: 10 minutes of pre-service, 10 minutes of intra-service time and 10 minutes of immediate post-service time. The RUC noted that survey code 78802 is a more intense service to perform relative to code 78801 as the whole-body code involves reviewing more anatomy and somewhat more complex decision-making in the same amount of time. In addition to the whole body imaging, this service also includes any spot or localized planar imaging as needed.

The RUC reviewed the survey respondents' estimated physician work values and agreed that maintaining the current work RVU of 0.86 would be appropriate and is supported by the survey 25th percentile work RVU of 0.89. To justify a work RVU of 0.86, the RUC compared the survey code to top key reference code 78306 *Bone and/or joint imaging; whole body* (work RVU= 0.86, intra-service time of 10 minutes, total time of 20 minutes) and noted that both services have identical intra-service time and involve an identical amount of physician work. Ninety-two percent of the survey respondents who selected the top key reference service 78306 said that the intensity and complexity between both services is identical. The RUC also compared the survey code to CPT code 78598 *Quantitative differential pulmonary perfusion and ventilation (eg, aerosol or gas), including imaging when performed* (work RVU= 0.85, intra-service time of 10 minutes, total time of 24 minutes) and noted that both services have identical intra-service time and involve a similar amount of physician work. **The RUC recommends a work RVU of 0.86 for CPT code 78802.**

78803 ***Radiopharmaceutical localization of tumor, inflammatory process or distribution of radiopharmaceutical agent(s), (includes vascular flow and blood pool imaging when performed); tomographic (SPECT), single area (eg, head, neck, chest pelvis), single day of imaging***
The RUC reviewed the survey results from 76 physicians and agreed on the following physician time components: 10 minutes of pre-service, 22 minutes of intra-service time and 10 minutes of immediate post-service time. This survey code describes SPECT imaging and also includes any planar imaging that is performed on the same day of service. The specialty noted and the RUC agreed the SPECT and SPECT-CT services, which involves three-dimensional imaging, are relatively more intense services to perform than planar imaging codes 78800-78803 which do not involve three-dimensional imaging, and therefore would be expected to have a higher IWPUTs.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the respondents appropriately valued the physician work involved in performing this service at the 25th percentile work RVU of 1.20. To justify a work RVU of 1.20, the RUC compared the survey code to top key reference code 78071 *Parathyroid planar imaging (including subtraction, when performed); with tomographic (SPECT)* (work RVU= 1.20, intra-service time of 15 minutes, total time of 25 minutes) and noted that although the survey code involves somewhat more time, both services involve a very similar amount of physician work. The RUC also compared the survey code to CPT code 95908 *Nerve conduction studies; 3-4 studies* (work RVU= 1.25, intra-service time of 22 minutes, total time of 42 minutes) and noted that both services have identical times and should be valued similarly. **The RUC recommends a work RVU of 1.20 for CPT code 78803.**

78804 ***Radiopharmaceutical localization of tumor, inflammatory process or distribution of radiopharmaceutical agent(s), (includes vascular flow and blood pool imaging when performed); planar, whole body, requiring 2 or more days of imaging***
The RUC reviewed the survey results from 79 physicians and agreed on the following physician time components: 10 minutes of pre-service, 15 minutes of intra-service time and 15 minutes of immediate post-service time. This service includes all of the work described by code 78804, but then also conducting at least one additional whole body study on a separate day and then comparing the two or more studies performed on separate days. Additional spot planar imaging is also performed with this service, as needed.

The RUC reviewed the survey respondents' estimated physician work values and agreed that maintaining the current work RVU of 1.07 would be appropriate and is supported by the survey 25th percentile work RVU of 1.10. To justify a work RVU of 1.07, the RUC compared the survey code to 2nd key reference code 78582 *Pulmonary ventilation (eg, aerosol or gas) and perfusion imaging* (work RVU= 1.07, intra-service time of 12 minutes, total time of 27 minutes) and noted that although the survey code involves somewhat more intra-service and total time, both services involve a similar amount of physician work. The RUC also compared the survey code to MPC code 70460 *Computed tomography, head or brain; with contrast material(s)* (work RVU= 1.13, intra-service time of 12 minutes, total time of 22 minutes) and noted that the valuation of the survey code is supported when compared to the time and values of the MPC code as both services involve a comparable amount of physician work. **The RUC recommends a work RVU of 1.07 for CPT code 78804.**

78830 ***Radiopharmaceutical localization of tumor, inflammatory process or distribution of radiopharmaceutical agent(s), (includes vascular flow and blood pool imaging when performed); tomographic (SPECT) with concurrently acquired computed tomography (CT) transmission scan for anatomical review, localization and determination/detection of pathology, single area (eg, head, neck, chest or pelvis), single day of imaging***
The RUC reviewed the survey results from 78 physicians and agreed on the following physician time components: 10 minutes of pre-service, 25 minutes of intra-service time and 10 minutes of immediate post-service time. This survey code describes SPECT imaging with concurrently acquired CT imaging for combined fusion review and also includes any planar imaging that is performed on the same day of service. The specialty noted and the RUC agreed the SPECT and SPECT-CT services, which involves three-dimensional imaging, are relatively more intense services to perform than planar imaging codes 78800-78803 which do not involve three-dimensional imaging, and therefore would be expected to have a higher IWPUTs.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the respondents appropriately valued the physician work involved in performing this service at the survey 25th percentile work RVU of 1.60. To justify a work RVU of 1.60, the RUC compared the survey code to top key reference and MPC code 78072 *Parathyroid planar imaging (including subtraction, when performed); with tomographic (SPECT), and concurrently acquired computed tomography (CT) for anatomical localization* (work RVU= 1.60, intra-service time of 20 minutes, total time of 30 minutes) and noted that although the survey code typically involves somewhat more physician time, both services involve a very similar amount of physician work. The RUC also compared the survey code to MPC code 99304 *Initial nursing facility care, per day, for the evaluation and management of a patient, which requires these 3 key components…* (work RVU= 1.64, intra-service time of 23 minutes, total time of 43 minutes) and noted that the survey code involves two more minutes of intra-service and total time and both services should have similar values. **The RUC recommends a work RVU of 1.60 for CPT code 78830.**

78831 ***Radiopharmaceutical localization of tumor, inflammatory process or distribution of radiopharmaceutical agent(s), (includes vascular flow and blood pool imaging when performed); tomographic (SPECT), minimum 2 areas (eg, pelvis and knees, abdomen and pelvis), single day of imaging, or single area of imaging over 2 or more days***

The RUC reviewed the survey results from 73 physicians and agreed on the following physician time components: 10 minutes of pre-service, 30 minutes of intra-service time and 15 minutes of immediate post-service time. This service involves either imaging of two or more body areas using SPECT technology, or performing two days of imaging of the same area and comparing the studies from each day. The specialty noted and the RUC agreed the SPECT and SPECT-CT services, which involves three-dimensional imaging, are relatively more intense services to perform than planar imaging codes 78800-78803 which do not involve three-dimensional imaging, and therefore would be expected to have a higher IWPUTs in general.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the respondents appropriately valued the physician work involved in performing this service at the survey median work RVU of 1.93. To justify a work RVU of 1.93, the RUC compared the survey code to top key reference code 78812 *Positron emission tomography (PET) imaging; skull base to mid-thigh* (work RVU= 1.93, intra-service time of 30 minutes, total time of 50 minutes) and noted that both services have identical intra-service time and the same amount of physician work. The RUC also compared the survey code to CPT code 95957 *Digital analysis of electroencephalogram (EEG) (eg, for epileptic spike analysis)* (work RVU= 1.98, intra-service time of 50 minutes, total time of 55 minutes) and noted that both services involve identical intra-service and total time and a comparable amount of physician work. **The RUC recommends a work RVU of 1.93 for CPT code 78831.**

78832 ***Radiopharmaceutical localization of tumor, inflammatory process or distribution of radiopharmaceutical agent(s), (includes vascular flow and blood pool imaging when performed); tomographic (SPECT) with concurrently acquired computed tomography (CT) transmission scan for anatomical review, localization and determination/detection of pathology, minimum 2 areas (eg, pelvis and knees, abdomen and pelvis), single day of imaging, or single area of imaging over 2 or more days imaging***

The RUC reviewed the survey results from 72 physicians and agreed on the following physician time components: 10 minutes of pre-service, 35 minutes of intra-service time and 15 minutes of immediate post-service time, either performed on two or more body regions or multiple days. The specialty noted and the RUC agreed that the SPECT and SPECT-CT services, which involve three-dimensional imaging, are relatively more intense services to perform than the planar imaging codes 78800-78803 which do not involve three-dimensional imaging, and therefore would be expected to have higher IWPUTs in general.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the respondents appropriately valued the physician work involved in performing this service at the survey median work RVU of 2.23. To justify a work RVU of 2.23, the RUC compared the survey code to CPT code 95939 *Central motor evoked potential study (transcranial motor stimulation); in upper and lower limbs* (work RVU= 2.25, intra-service time of 30 minutes, total time of 60 minutes) and noted that the survey code involves somewhat more intra-service time and both codes involve the same total time and a similar amount of physician work. The RUC also compared the survey code to MPC Code 99310 *Subsequent nursing facility care, per day, for the evaluation and management of a patient, which requires at least 2 of these 3 key components…* (work RVU= 2.35, intra-service time of 35 minutes, total time of 70 minutes) and noted that both services have identical intra-service times, whereas the reference code involves somewhat more total time, supporting a somewhat lower value for the survey code. **The RUC recommends a work RVU of 2.23 for CPT code 78832.**

78835 Radiopharmaceutical quantification measurement(s) single area

The RUC reviewed the survey results from 39 physicians and agreed on the following physician time components: 17 minutes of intra-service time.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the respondents appropriately valued the physician work involved in performing this service at the survey 25th percentile work RVU of 0.51. To justify a work RVU of 0.51, the RUC compared the survey code to CPT code 77002 *Fluoroscopic guidance for needle placement (eg, biopsy, aspiration, injection, localization device) (List separately in addition to code for primary procedure)* (work RVU= 0.54, intra-service time of 15 minutes, total time of 17 minutes) and noted that both services have the same amount of total time and involve a similar amount of physician work. The RUC also compared the survey code to top key reference code 78496 *Cardiac blood pool imaging, gated equilibrium, single study, at rest, with right ventricular ejection fraction by first pass technique (List separately in addition to code for primary procedure)* (work RVU= 0.50, intra-service time of 19 minutes) and noted that both services involve a similar amount of physician work. **The RUC recommends a work RVU of 0.51 for CPT code 78835.**

Practice Expense

The PE Subcommittee corrected the equipment times based on the formulas as provided by CMS. **The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.**

New Technology/New Services

The RUC recommends that CPT codes 78830-78835 be placed on the New Technology list and be re-reviewed by the RUC in three years to ensure correct valuation and utilization assumptions.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:78800 Tracking Number U1 Original Specialty Recommended RVU: **0.70**
Presented Recommended RVU: **0.70**
Global Period: XXX Current Work RVU: RUC Recommended RVU: **0.70**

CPT Descriptor: Radiopharmaceutical localization of tumor, inflammatory process or distribution of radiopharmaceutical agent(s), (includes vascular flow and blood pool imaging when performed); planar single area (eg, head, neck, chest or pelvis), single day of imaging

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 60-year-old male with swollen digit on the right foot and positive bone scan uptake recently presents for indium labeled white blood cell (WBC) scan imaging performed at 24 hours after radiotracer re-injection. A single area of imaging is performed to evaluate for active infection and/or osteomyelitis.

Percentage of Survey Respondents who found Vignette to be Typical: 93%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The physician reviews the clinical request, pertinent medical records, X rays any prior (typically the physician reviews prior whole body bone studies, CT and MRI imaging studies), and interim medical history, including medications and concurrent medical problems. The possible treatment options (surgical vs medical) are reviewed and the choice of several radiopharmaceuticals is considered based on the information in the medical record and/or discussion with the referring physician. The physician confirms the contraindications for the varying options of radiotracers. The decision is made as to the appropriateness of the study and the different views necessary, including the typical protocol for a single area imaging study. The ordering physician is consulted to clarify the indications, when necessary. The physician instructs the nuclear medicine technologists to order the appropriate radiopharmaceutical and administered activity and provides oversight required by Nuclear Regulatory Commission (NRC) and/or state regulations.

Description of Intra-Service Work: The physician instructs and oversees the nuclear medicine technologists in the administration of the radiopharmaceutical including verifying the dosage per Nuclear Regulatory Commission (NRC) and/or state regulations. The physician directs the nuclear medicine technologist to adjust the acquisition protocol as necessary for the individual patient. The physician is available to answer questions for the technologist and to review components of the study throughout the procedure The physician determines the adequacy of the planar limited study and the patient positioning. The physician interprets the planar images obtained. The physician correlates the findings to previous imaging, medical information and clinical story and generates a report for the medical record.

Description of Post-Service Work: The report is reviewed and signed. The imaging results may be discussed with the referring physician and if necessary, with the patient. Additional imaging studies (including, but not limited to additional radiographs, CT, MRI or even additional Nuclear Medicine procedures are recommended, as necessary, after discussion with the referring physician. Required regulatory (NRC/state) review and oversight are provided throughout the procedure.

SURVEY DATA

RUC Meeting Date (mm/yyyy)	01/2018					
Presenter(s):	Gary Dillehay, MD (SNMMI), Scott Bartley, MD (ACNM), Kurt Schoppe, MD (ACR), Daniel Wessell, MD (ACR)					
Specialty Society(ies):	Society of Nuclear Medicine and Molecular Imaging (SNMMI), American College of Nuclear Medicine (ACNM), and the American College of Radiology (ACR)					
CPT Code:	78800					
Sample Size:	4801	**Resp N:**	77	**Response:** 1.6 %		
Description of Sample:	Total surveys sent to 4801 members. The SNMMI and ACNM surveyed a total of 2551 random members. The ACR surveyed a total of 2250 members (a random sample of 1125 membership and a separate random sample of 1125 members who perform nuclear medicine, PET, and SPECT procedures).

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	0%	0%	80%	20%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making			

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required			

Physical effort required			

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome			

2nd Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	0%	20%	70%	10%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making			

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required			
Physical effort required			

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome			

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

At the September 2018 CPT panel meeting the Society of Nuclear Medicine and Molecular Imaging (SNMMI) coding committee stated that they had identified a current gap in coding for several types of SPECT/CT studies. Per the applicant: "Rather than tackle these services one by one [by organ system, or body area], we reviewed the resources of the major sets of imaging and while different from parathyroid imaging, we believe that imaging Bone, Liver, etc. are similar enough in resources to create one more generic family to be used by many and modeled after the current tumor and radiopharmaceutical distribution codes." Therefore, the SNMMI along with the ACNM and ACR presented a new generic code set that would revise five codes 78800, 78801, 78802, 78803, 78804, add four new codes 788X0, 788X1, 788X2, 788X3, and delete nine codes 78205, 78206, 78320, 78607, 78647, 78710, 78805, 78806, 78807 to better differentiate between planar radiopharmaceutical localization procedures and SPECT, SPECT-CT and multiple area or multiple day radiopharmaceutical localization/distribution procedures.

Similar to PET-CT, there have been changes in SPECT and SPECT-CT instrumentation, computer processing, and software since the early 2010's that allow extraction of greater clinically valuable information regarding tumor, infection, inflammation, and distribution of a variety of radiotracers. Some of these changes have enhanced the acquisition, processing, quality control, and interpretation while also adding new variables for acquisition protocols, analysis and a shift in the typical patients.

These components are presented below to understand the logic and components of each service.
L = Localization, T = Tumor, I = Infection/Inflammation, D = Distribution

Code	Short Description	Component 1	Component 2
78800	Rp L.T.I.D. w/flow when performed, planar single area, single day imaging	One (1) body area imaging with Planar Technology	
78801	Rp L.T.I.D. w/flow when performed, planar 2+ area or two day imaging	Injection, two hour delay and first set of imaging with Planar Technology, either two areas, or second day of imaging	Second set of Imaging can be of one area or more, imaging with Planar Technology and comparison of the two days
78802	Rp L.T.I.D. w/flow when performed, wholebody	One day of whole body imaging, includes any spot, localized planar imaging	
78804	Rp L.T.I.D. w/flow when performed, wholebody 2 or more days	Review of wholebody, same as 78802.	review of (2nd) whole body plus comparison of day 1 to day 2 imaging along with any additional spot planar imaging
78803	Rp L.T.I.D. w/flow when performed, Single SPECT, includes any planar imaging done along with the SPECT	SPECT imaging, includes any planar imaging on same day	
788X0	Rp L.T.I.D. w/flow when performed, Single SPECT-CT, includes any planar imaging done along with the SPECT	SPECT Imaging, includes any planar imaging on same day	CT imaging for combine fusion review
788X1	Rp L.T.I.D. w/flow when performed, 2 or more SPECT single or multiple days	SPECT Imaging x two separate regions or areas and on same day	
788X2	Rp L.T.I.D. w/flow when performed, 2 or more SPECT-CT single or multiple days	SPECT Imaging x two separate regions or areas and on same day	CT imaging X2 for combine fusion review

This structure with one, or two physician work components in the code would logically lend itself to a hierarchy where codes with two components or a higher level of technology, require more physician time and work than codes with one component or the lowest level of technology as there are less data to review and compare.

Compelling Evidence

***Change in technology*:** As noted above, SPECT and SPECT-CT imaging has evolved in the past decades. That is a significant reason for the new, revised and generic family of codes before you. There have been changes in radiotracers, instrumentation, computer processing, and software. These changes have enhanced the acquisition,

processing, quality control, and interpretation while also adding new variables for analysis and review by the physician or QHP.
Changes in patient: With the deletion of several existing codes, the revised new codes will have shifts in the type of patients we will see for the revised codes. The survey indicated that we had indeed selected the new appropriate typical patients for each of the new or revised codes developed by our experts.

Survey Tool modified and approved by research
Similar to the PET and PET-CT survey, this 9 code survey was modified to accommodate the large number of codes; specifically moving the time questions closer to the RVW questions, showing the family together so that participants could see the code structure together as they valued time and RVW questions, this allowed them to see their answers, without having to go back and forth within the survey tool which is often a complaint we have for larger code surveys. This modified survey tool was approved by research and a copy is in the materials.

Time discussion:
The joint society expert panel reviewed all the times for all the codes in the survey. In general, our experts believe that the survey respondents recognized the time required to perform the Intra-service well. The pre service time in general is higher than many of our other organ specific nuclear medicine code pre times. We believe that for tumor and infection nuclear medicine imaging there generally is more pre-time due to these patients having more extensive medical documentation to review prior to the radiotracer selection and protocol approval to order or prepare the tracer. There are more options for radiotracers today with varying protocols (e.g. single area, multi area, one day, multiple day and multiple tracer) and there are more decisions to select the right combination for that particular patients' history. In general, for the pre times the experts selected the median time, capping the pre time to 15 minutes, as our expert did not agree with pre times for these nuclear medicine studies in excess of 15 minutes. We had a similar discussion regarding the post time. Again, the experts agreed that these tumor and infection nuclear medicine imaging studies generally have more post time then other organ or area specific nuclear medicine codes. In general, for the pre times the experts selected the median time, capping the post time to 15 or 20 minutes, as our expert did not agree with some of the post times and modified accordingly based on the complexity and the elements for the varying services.

78800
78800 is an existing code that was revised to describe single day, single area planar radiotracer imaging. Survey respondents estimated this single study to take 7 minutes preservice, 10 minutes intraservice, and 10 minutes postservice. The median performance rate for this code was 35 services per year indicating that the survey respondents had experience with this procedure.

28 respondents (36%) selected code 78300 for Bone and joint limited area as the KRS. Respondents generally indicated 78800 to be somewhat more intense/complex in comparison to the KRS. 16 respondents (21%) selected 78305 for Bone and joint multiple area as the second KRS. Most respondents indicated 78800 to be identical or more intense/complex in comparison to the KRS.

We recommend the survey 25th-percentile work RVU of 0.70 with median survey times of 7 minutes preservice, 10 minutes intraservice, and 10 minutes postservice for 78800. This recommendation falls between MPC code 76536 that has an identical 10 minutes of intraservice time but less total time and RVUs, and MPC code 93015 that has more intraservice time and 1 minute less of total time compared to the surveyed code.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.

- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 78800 and 78805

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Sometimes

Specialty independent Diag Testing How often? Sometimes

Specialty Nuclear Medicine How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 13500
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Expert panel plus review of current volumes of the existing codes and multiplied by 3 as we typically do for nuclear medicine studies.

Specialty Diagnostic Radiology Frequency 6750 Percentage 50.00 %

Specialty IDTF Frequency 4050 Percentage 30.00 %

Specialty Nuclear Medicine Frequency 2700 Percentage 20.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 4,500
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Expert panel plus review of current volumes of the existing codes.

Specialty Diagnostic Radiology Frequency 2250 Percentage 50.00 %

Specialty IDTF Frequency 1350 Percentage 30.00 %

Specialty Nuclear Medicine Frequency 900 Percentage 20.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Imaging

BETOS Sub-classification:
Imaging/procedure

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 78805

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:78801 Tracking Number U2 Original Specialty Recommended RVU: **0.79**
Presented Recommended RVU: **0.79**
Global Period: XXX Current Work RVU: RUC Recommended RVU: **0.79**

CPT Descriptor: Radiopharmaceutical localization of tumor, inflammatory process or distribution of radiopharmaceutical agent(s), (includes vascular flow and blood pool imaging when performed); planar 2 or more areas (eg, abdomen and pelvis, head and chest), 1 or more days of imaging or single area imaging over 2 or more days

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 55-year-old female with history of prior sternotomy and pain with elevated sedimentation rate and suspected infection presents for Tc99m labeled WBC planar imaging of the sternum, at 2 hours and 24 hours post radiotracer re-injection (administration) to evaluate for active infection and/or osteomyelitis

Percentage of Survey Respondents who found Vignette to be Typical: 92%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The physician reviews the clinical request, pertinent medical records, X rays any prior (typically the physician reviews prior whole body bone studies, CT and MRI imaging studies), and interim medical history, including medications and concurrent medical problems. The possible treatment options (surgical vs medical) are reviewed and the choice of several radiopharmaceuticals is considered based on the information in the medical record and/or discussion with the referring physician. The physician confirms the contraindications for the varying options of radiotracers. The decision is made as to the appropriateness of the study and the different views necessary, including the typical protocol for a study including multiple single area images, either done as multiple single imaging studies done the same day or on multiple days. The ordering physician is consulted to clarify the indications, when necessary. The physician instructs the nuclear medicine technologist to order the appropriate radiopharmaceutical and administered activity and provides oversight required by Nuclear Regulatory Commission (NRC) and/or state regulations.
After the first day of imaging, the physician reviews day 1 set of images and instructs the technologist for how many hours post injection of the tracer to begin the next set of imaging. Decisions are made as to repeat imaging versus different positioning to address findings between the day two images.

Description of Intra-Service Work: The physician instructs and oversees the nuclear medicine technologists in the administration of the radiopharmaceutical including verifying the dosage per Nuclear Regulatory Commission (NRC) and/or state regulations. The physician directs the nuclear medicine technologist to adjust the acquisition protocol as necessary for the individual patient. After review of day 1 images, the physician determines the sequence and timing of imaging for the second day (day 2). The physician is available to answer questions for the technologist and to review components of the study throughout the procedure.

The physician determines the adequacy of the day 2 planar images and the patient positioning. The physician interprets the 2 days/areas of planar images obtained. The physician correlates the findings to previous imaging, medical information and clinical story and generates a report for the medical record

Description of Post-Service Work: The report is reviewed and signed. The imaging results may be discussed with the referring physician and, if necessary, with the patient. Additional imaging studies (including, but not limited to additional radiographs, CT, MRI or even additional Nuclear Medicine procedures, are recommended as necessary, after discussion with the referring physician. Required regulatory (NRC/state) review and oversight is provided throughout the procedure.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

At the September 2018 CPT panel meeting the Society of Nuclear Medicine and Molecular Imaging (SNMMI) coding committee stated that they had identified a current gap in coding for several types of SPECT/CT studies. Per the applicant: "Rather than tackle these services one by one [by organ system, or body area], we reviewed the resources of

the major sets of imaging and while different from parathyroid imaging, we believe that imaging Bone, Liver, etc. are similar enough in resources to create one more generic family to be used by many and modeled after the current tumor and radiopharmaceutical distribution codes." Therefore, the SNMMI along with the ACNM and ACR presented a new generic code set that would revise five codes 78800, 78801, 78802, 78803, 78804, add four new codes 788X0, 788X1, 788X2, 788X3, and delete nine codes 78205, 78206, 78320, 78607, 78647, 78710, 78805, 78806, 78807 to better differentiate between planar radiopharmaceutical localization procedures and SPECT, SPECT-CT and multiple area or multiple day radiopharmaceutical localization/distribution procedures.

Similar to PET-CT, there have been changes in SPECT and SPECT-CT instrumentation, computer processing, and software since the early 2010's that allow extraction of greater clinically valuable information regarding tumor, infection, inflammation, and distribution of a variety of radiotracers. Some of these changes have enhanced the acquisition, processing, quality control, and interpretation while also adding new variables for acquisition protocols, analysis and a shift in the typical patients.

These components are presented below to understand the logic and components of each service.
L = Localization, T = Tumor, I = Infection/Inflammation, D = Distribution

Code	Short Description	Component 1	Component 2
78800	Rp L.T.I.D. w/flow when performed, planar single area, single day imaging	One (1) body area imaging with Planar Technology	
78801	Rp L.T.I.D. w/flow when performed, planar 2+ area or two day imaging	Injection, two hour delay and first set of imaging with Planar Technology, either two areas, or second day of imaging	Second set of Imaging can be of one area or more, imaging with Planar Technology and comparison of the two days
78802	Rp L.T.I.D. w/flow when performed, wholebody	One day of whole body imaging, includes any spot, localized planar imaging	
78804	Rp L.T.I.D. w/flow when performed, wholebody 2 or more days	Review of wholebody, same as 78802.	review of (2nd) whole body plus comparison of day 1 to day 2 imaging along with any additional spot planar imaging
78803	Rp L.T.I.D. w/flow when performed, Single SPECT, includes any planar imaging done along with the SPECT	SPECT imaging, includes any planar imaging on same day	
788X0	Rp L.T.I.D. w/flow when performed, Single SPECT-CT, includes any planar imaging done along with the SPECT	SPECT Imaging, includes any planar imaging on same day	CT imaging for combine fusion review
788X1	Rp L.T.I.D. w/flow when performed, 2 or more SPECT single or multiple days	SPECT Imaging x two separate regions or areas and on same day	
788X2	Rp L.T.I.D. w/flow when performed, 2 or more SPECT-CT single or multiple days	SPECT Imaging x two separate regions or areas and on same day	CT imaging X2 for combine fusion review

This structure with one, or two physician work components in the code would logically lend itself to a hierarchy where codes with two components or a higher level of technology, require more physician time and work than codes with one component or the lowest level of technology as there are less data to review and compare.

Compelling Evidence

***Change in technology*:** As noted above, SPECT and SPECT-CT imaging has evolved in the past decades. That is a significant reason for the new, revised and generic family of codes before you. There have been changes in radiotracers, instrumentation, computer processing, and software. These changes have enhanced the acquisition, processing, quality control, and interpretation while also adding new variables for analysis and review by the physician or QHP.

Changes in patient: With the deletion of several existing codes, the revised new codes will have shifts in the type of patients we will see for the revised codes. The survey indicated that we had indeed selected the new appropriate typical patients for each of the new or revised codes developed by our experts.

Survey Tool modified and approved by research
Similar to the PET and PET-CT survey, this 9 code survey was modified to accommodate the large number of codes; specifically moving the time questions closer to the RVW questions, showing the family together so that participants could see the code structure together as they valued time and RVW questions, this allowed them to see their answers, without having to go back and forth within the survey tool which is often a complaint we have for larger code surveys. This modified survey tool was approved by research and a copy is in the materials.

Time discussion:
The joint society expert panel reviewed all the times for all the codes in the survey. In general, our experts believe that the survey respondents recognized the time required to perform the Intra-service well. The pre service time in general is higher than many of our other organ specific nuclear medicine code pre times. We believe that for tumor and infection nuclear medicine imaging there generally is more pre-time due to these patients having more extensive medical documentation to review prior to the radiotracer selection and protocol approval to order or prepare the tracer. There are more options for radiotracers today with varying protocols (e.g. single area, multi area, one day, multiple day and multiple tracer) and there are more decisions to select the right combination for that particular patients' history. In general, for the pre times the experts selected the median time, capping the pre time to 15 minutes, as our expert did not agree with pre times for these nuclear medicine studies in excess of 15 minutes. We had a similar discussion regarding the post time. Again, the experts agreed that these tumor and infection nuclear medicine imaging studies generally have more post time then other organ or area specific nuclear medicine codes. In general, for the pre times the experts selected the median time, capping the post time to 15 or 20 minutes, as our expert did not agree with some of the post times and modified accordingly based on the complexity and the elements for the varying services.

78801
78801 is an existing code that was revised to describe 2 or more days, 2 or more areas planar radiotracer imaging. Survey respondents estimated this single study to take 10 minutes preservice, 10 minutes intraservice, and 10 minutes postservice. The median performance rate for this code was 25 services per year indicating that the survey respondents had experience with this procedure and less than 78800 as is consistent with the lower volume claims data.
33 respondents (43%) selected code 78305 for Bone and joint multiple area as the KRS. Respondents generally indicated 78805 to be somewhat less intense/complex in comparison to the KRS. 9 respondents (12%) selected 78306 for Bone and joint multiple area as the second KRS. Most respondents indicated 78800 to be identical or less intense/complex in comparison to the KRS.

We recommend the existing work RVU of 0.79 with median survey times of 10 minutes preservice, 10 minutes intraservice, and 10 minutes postservice for 78801. This recommendation falls between MPC code 93015 and MPC code 76700 in terms of RVU and total times.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.

- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 78801

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Sometimes

Specialty independent Diagnostic Testing Facility How often? Sometimes

Specialty Nuclear Medicine How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 3000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Expert panel plus review of current volumes of the existing codes and multiplied by 3 as we typically do for nuclear medicine studies.

Specialty DR Frequency 1500 Percentage 50.00 %

Specialty IDTF Frequency 900 Percentage 30.00 %

Specialty NM Frequency 600 Percentage 20.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,000
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Expert panel plus review of current volumes of the existing codes.

Specialty DR Frequency 500 Percentage 50.00 %

Specialty IDTF Frequency 300 Percentage 30.00 %

Specialty NM Frequency 200 Percentage 20.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment
Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Imaging

BETOS Sub-classification:
Imaging/procedure

BETOS Sub-classification Level II:
Other

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:78802 Tracking Number U3 Original Specialty Recommended RVU: **0.86**
Presented Recommended RVU: **0.86**
Global Period: XXX Current Work RVU: RUC Recommended RVU: **0.86**

CPT Descriptor: Radiopharmaceutical localization of tumor, inflammatory process or distribution of radiopharmaceutical agent(s), (includes vascular flow and blood pool imaging when performed); planar whole body, single day of imaging

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 61-year-old female with suspected sepsis of undetermined site based on fever, leukocytosis, and positive culture presents for indium-111 white blood cell (WBC) evaluation of the body, performed on one day (24 hours post radiopharmaceutical administration) to determine the locus of infection.

Percentage of Survey Respondents who found Vignette to be Typical: 95%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The physician reviews the clinical request, pertinent medical records, X rays any prior (typically the physician reviews prior whole body bone studies, CT and MRI imaging studies), and interim medical history, including medications and concurrent medical problems. The possible treatment options (surgical vs medical) are reviewed and the choice of several radiopharmaceuticals is considered based on the information in the medical record and/or discussion with the referring physician. The physician confirms the contraindications for the varying options of radiotracers. The decision is made as to the appropriateness of the study and the different views necessary, including the typical protocol for a whole body tumor, infection or radiopharmaceutical distribution, including, when necessary additional planar spot images. The ordering physician is consulted to clarify the indications, when necessary. The physician instructs the nuclear medicine technologist to order the appropriate radiopharmaceutical and administered activity and provides oversight required by Nuclear Regulatory Commission (NRC) and/or state regulations.

Description of Intra-Service Work: The physician instructs and oversees the nuclear medicine technologists in the administration of the radiopharmaceutical including verifying the dosage per Nuclear Regulatory Commission (NRC) and/or state regulations. The physician directs the nuclear medicine technologist to adjust the acquisition protocol as necessary for the individual patient clinical situation and diagnosis. The physician is available to answer questions for the technologist and patient and to review components of the study throughout the procedure.

The physician determines the adequacy of the initial planar images, the need for additional focused planar views and the patient positioning. The physician reviews any additional planar views/images and then interprets whole body planar and any additional focused images. The physician correlates the findings to previous imaging studies, medical information and clinical story and generates a report for the medical record.

Description of Post-Service Work: The report is reviewed and signed. The imaging results may be discussed with the referring physician and if necessary, with the patient. Additional imaging studies (including, but not limited to additional radiographs, CT, MRI or even additional Nuclear Medicine procedures, are recommended as necessary, after discussion with the referring physician. Required regulatory (NRC/state) review and oversight is provided throughout the procedure.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	92%	8%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making			

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required			
Physical effort required			

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome			

2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	78%	20%	2%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making			

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required			
Physical effort required			

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome			

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

At the September 2018 CPT panel meeting the Society of Nuclear Medicine and Molecular Imaging (SNMMI) coding committee stated that they had identified a current gap in coding for several types of SPECT/CT studies. Per the applicant: "Rather than tackle these services one by one [by organ system, or body area], we reviewed the resources of the major sets of imaging and while different from parathyroid imaging, we believe that imaging Bone, Liver, etc. are similar enough in resources to create one more generic family to be used by many and modeled after the current tumor and radiopharmaceutical distribution codes." Therefore, the SNMMI along with the ACNM and ACR presented a new generic code set that would revise five codes 78800, 78801, 78802, 78803, 78804, add four new codes 788X0, 788X1, 788X2, 788X3, and delete nine codes 78205, 78206, 78320, 78607, 78647, 78710, 78805, 78806, 78807 to better differentiate between planar radiopharmaceutical localization procedures and SPECT, SPECT-CT and multiple area or multiple day radiopharmaceutical localization/distribution procedures.

Similar to PET-CT, there have been changes in SPECT and SPECT-CT instrumentation, computer processing, and software since the early 2010's that allow extraction of greater clinically valuable information regarding tumor, infection, inflammation, and distribution of a variety of radiotracers. Some of these changes have enhanced the acquisition, processing, quality control, and interpretation while also adding new variables for acquisition protocols, analysis and a shift in the typical patients.

These components are presented below to understand the logic and components of each service.
L = Localization, T = Tumor, I = Infection/Inflammation, D = Distribution

Code	Short Description	Component 1	Component 2
78800	Rp L.T.I.D. w/flow when performed, planar single area, single day imaging	One (1) body area imaging with Planar Technology	
78801	Rp L.T.I.D. w/flow when performed, planar 2+ area or two day imaging	Injection, two hour delay and first set of imaging with Planar Technology, either two areas, or second day of imaging	Second set of Imaging can be of one area or more, imaging with Planar Technology and comparison of the two days
78802	Rp L.T.I.D. w/flow when performed, wholebody	One day of whole body imaging, includes any spot, localized planar imaging	
78804	Rp L.T.I.D. w/flow when performed, wholebody 2 or more days	Review of wholebody, same as 78802.	review of (2nd) whole body plus comparison of day 1 to day 2 imaging along with any additional spot planar imaging
78803	Rp L.T.I.D. w/flow when performed, Single SPECT, includes any planar imaging done along with the SPECT	SPECT imaging, includes any planar imaging on same day	
788X0	Rp L.T.I.D. w/flow when performed, Single SPECT-CT, includes any planar imaging done along with the SPECT	SPECT Imaging, includes any planar imaging on same day	CT imaging for combine fusion review
788X1	Rp L.T.I.D. w/flow when performed, 2 or more SPECT single or multiple days	SPECT Imaging x two separate regions or areas and on same day	
788X2	Rp L.T.I.D. w/flow when performed, 2 or more SPECT-CT single or multiple days	SPECT Imaging x two separate regions or areas and on same day	CT imaging X2 for combine fusion review

This structure with one, or two physician work components in the code would logically lend itself to a hierarchy where codes with two components or a higher level of technology, require more physician time and work than codes with one component or the lowest level of technology as there are less data to review and compare.

Compelling Evidence

***Change in technology*:** As noted above, SPECT and SPECT-CT imaging has evolved in the past decades. That is a significant reason for the new, revised and generic family of codes before you. There have been changes in radiotracers, instrumentation, computer processing, and software. These changes have enhanced the acquisition, processing, quality control, and interpretation while also adding new variables for analysis and review by the physician or QHP.

Changes in patient: With the deletion of several existing codes, the revised new codes will have shifts in the type of patients we will see for the revised codes. The survey indicated that we had indeed selected the new appropriate typical patients for each of the new or revised codes developed by our experts.

Survey Tool modified and approved by research

Similar to the PET and PET-CT survey, this 9 code survey was modified to accommodate the large number of codes; specifically moving the time questions closer to the RVW questions, showing the family together so that participants could see the code structure together as they valued time and RVW questions, this allowed them to see their answers, without having to go back and forth within the survey tool which is often a complaint we have for larger code surveys. This modified survey tool was approved by research and a copy is in the materials.

Time discussion:

The joint society expert panel reviewed all the times for all the codes in the survey. In general, our experts believe that the survey respondents recognized the time required to perform the Intra-service well. The pre service time in general is higher than many of our other organ specific nuclear medicine code pre times. We believe that for tumor and infection nuclear medicine imaging there generally is more pre-time due to these patients having more extensive medical documentation to review prior to the radiotracer selection and protocol approval to order or prepare the tracer. There are more options for radiotracers today with varying protocols (e.g. single area, multi area, one day, multiple day and multiple tracer) and there are more decisions to select the right combination for that particular patients' history. In general, for the pre times the experts selected the median time, capping the pre time to 15 minutes, as our expert did not agree with pre times for these nuclear medicine studies in excess of 15 minutes. We had a similar discussion regarding the post time. Again, the experts agreed that these tumor and infection nuclear medicine imaging studies generally have more post time then other organ or area specific nuclear medicine codes. In general, for the pre times the experts selected the median time, capping the post time to 15 or 20 minutes, as our expert did not agree with some of the post times and modified accordingly based on the complexity and the elements for the varying services.

78802

78802 is an existing code that was revised to describe single day, whole body radiotracer imaging. Survey respondents estimated this single study to take 10 minutes preservice, 10 minutes intraservice, and 15 minutes postservice. The median performance rate for this code was 40 services per year indicating that the survey respondents had experience with this procedure and more than 78800 as is consistent with the higher volume claims data.
56 respondents (70%) selected code 78306 for Bone and joint whole body as the KRS. Respondents generally indicated 78806 to be identical for intense/complexity in comparison to the KRS. 4 respondents (12%) selected 78582 for VQ Lung imaging as the second KRS. Most respondents indicated 78802 to be identical or less intense/complex in comparison to the KRS.

We recommend the existing work RVU of 0.86 with median survey times of 10 minutes preservice, 10 minutes intraservice, and 15 minutes postservice for 78802. This recommendation falls between MPC code 78700 and MPC code 99202 in terms of RVU. The total time of the surveyed code is higher than that of the MPC codes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 78802 and 78806

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Sometimes

Specialty independent Diagnostic Testing Facilities How often? Sometimes

Specialty Nuclear Medicine How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 45000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Expert panel plus review of current volumes of the existing codes and multiplied by 3 as we typically do for nuclear medicine studies.

Specialty DR Frequency 22500 Percentage 50.00 %

Specialty IDTF Frequency 13500 Percentage 30.00 %

Specialty NM Frequency 9000 Percentage 20.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 15,000 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Expert panel plus review of current volumes of the existing codes.

Specialty DR Frequency 7500 Percentage 50.00 %

Specialty IDTF Frequency 4500 Percentage 30.00 %

Specialty NM Frequency 3000 Percentage 20.00 %

Do many physicians perform this service across the United States? Yes

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:78803 Tracking Number U4 Original Specialty Recommended RVU: **1.20**
Presented Recommended RVU: **1.20**
Global Period: XXX Current Work RVU: RUC Recommended RVU: **1.20**

CPT Descriptor: Radiopharmaceutical localization of tumor, inflammatory process or distribution of radiopharmaceutical agent(s), (includes vascular flow and blood pool imaging when performed); tomographic (SPECT), single area (eg, head, neck, chest or pelvis), single day of imaging

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 70-year-old confused male with shortness of breath and lower extremity deep vein thrombosis is evaluated for segmental pulmonary thromboembolism and determination of extent of lung involvement. A lung perfusion SPECT study performed.

Percentage of Survey Respondents who found Vignette to be Typical: 79%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The physician reviews the clinical request, pertinent medical records and any prior imaging procedures (including nuclear medicine, CT and/or MRI imaging studies) and interim medical history, including medications and concurrent medical problems. The possible treatment options (surgical vs medical) are reviewed and the choice of several radiopharmaceuticals is considered based on the information in the medical record and/or discussion with the referring physician. The ordering physician is consulted to clarify the indications, when necessary. The physician confirms the contraindications for the varying options of radiotracers. The decision is made as to the appropriateness of the study and the different views necessary, including the typical protocol for a whole body tumor, infection or radiopharmaceutical distribution, including when necessary, additional planar spot images, including a SPECT study done of single area. This includes the specific area of the body the SPECT study is be imaged with SPECT and any necessary acquisition parameters required for the specific SPECT study (ie. number of steps and counts required for each stop on the SPECT study. The physician instructs the nuclear medicine technologist to order the appropriate radiopharmaceutical and administered activity and provides oversight required by Nuclear Regulatory Commission (NRC) and/or state regulations.

Description of Intra-Service Work: The physician instructs and oversees the nuclear medicine technologists in the administration of the radiopharmaceutical including verifying the dosage per Nuclear Regulatory Commission (NRC) and/or state regulations. The physician directs the nuclear medicine technologist to adjust the acquisition protocol as necessary for the individual patient clinical situation and diagnosis. The physician is available to answer questions for the technologist and patient and to review components of the study throughout the procedure.
The physician verifies the completeness and adequacy of the SPECT data sets before completion of the study and orders additional imaging as necessary. The physician reviews all images for artifacts and abnormal distribution. Reconstructed images in three planes are reviewed. The physician reviews the cine of images, applies filters necessary for the patient protocol. Verify registration of the attenuation maps, if utilized. Results are compared to relevant prior studies, laboratory or other electronic record information. A formal consultative report is produced for the medical record.

CPT Code: 78803

Description of Post-Service Work: The report of the whole body tumor, infection or radiopharmaceutical distribution, including a single SPECT study, including when necessary, additional planar spot images, is reviewed and signed. The imaging results may be discussed with the referring physician and if necessary, with the patient. Additional imaging studies (including, but not limited to additional radiographs, CT, MRI or even additional Nuclear Medicine procedures), are recommended as necessary, after discussion with the referring physician. Required regulatory (NRC/state) review and oversight is provided throughout the procedure.

• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome			

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

At the September 2018 CPT panel meeting the Society of Nuclear Medicine and Molecular Imaging (SNMMI) coding committee stated that they had identified a current gap in coding for several types of SPECT/CT studies. Per the applicant: "Rather than tackle these services one by one [by organ system, or body area], we reviewed the resources of

the major sets of imaging and while different from parathyroid imaging, we believe that imaging Bone, Liver, etc. are similar enough in resources to create one more generic family to be used by many and modeled after the current tumor and radiopharmaceutical distribution codes." Therefore, the SNMMI along with the ACNM and ACR presented a new generic code set that would revise five codes 78800, 78801, 78802, 78803, 78804, add four new codes 788X0, 788X1, 788X2, 788X3, and delete nine codes 78205, 78206, 78320, 78607, 78647, 78710, 78805, 78806, 78807 to better differentiate between planar radiopharmaceutical localization procedures and SPECT, SPECT-CT and multiple area or multiple day radiopharmaceutical localization/distribution procedures.

Similar to PET-CT, there have been changes in SPECT and SPECT-CT instrumentation, computer processing, and software since the early 2010's that allow extraction of greater clinically valuable information regarding tumor, infection, inflammation, and distribution of a variety of radiotracers. Some of these changes have enhanced the acquisition, processing, quality control, and interpretation while also adding new variables for acquisition protocols, analysis and a shift in the typical patients.

These components are presented below to understand the logic and components of each service.
L = Localization, T = Tumor, I = Infection/Inflammation, D = Distribution

Code	Short Description	Component 1	Component 2
78800	Rp L.T.I.D. w/flow when performed, planar single area, single day imaging	One (1) body area imaging with Planar Technology	
78801	Rp L.T.I.D. w/flow when performed, planar 2+ area or two day imaging	Injection, two hour delay and first set of imaging with Planar Technology, either two areas, or second day of imaging	Second set of Imaging can be of one area or more, imaging with Planar Technology and comparison of the two days
78802	Rp L.T.I.D. w/flow when performed, wholebody	One day of whole body imaging, includes any spot, localized planar imaging	
78804	Rp L.T.I.D. w/flow when performed, wholebody 2 or more days	Review of wholebody, same as 78802.	review of (2nd) whole body plus comparison of day 1 to day 2 imaging along with any additional spot planar imaging
78803	Rp L.T.I.D. w/flow when performed, Single SPECT, includes any planar imaging done along with the SPECT	SPECT imaging, includes any planar imaging on same day	
788X0	Rp L.T.I.D. w/flow when performed, Single SPECT-CT, includes any planar imaging done along with the SPECT	SPECT Imaging, includes any planar imaging on same day	CT imaging for combine fusion review
788X1	Rp L.T.I.D. w/flow when performed, 2 or more SPECT single or multiple days	SPECT Imaging x two separate regions or areas and on same day	
788X2	Rp L.T.I.D. w/flow when performed, 2 or more SPECT-CT single or multiple days	SPECT Imaging x two separate regions or areas and on same day	CT imaging X2 for combine fusion review

This structure with one, or two physician work components in the code would logically lend itself to a hierarchy where codes with two components or a higher level of technology, require more physician time and work than codes with one component or the lowest level of technology as there are less data to review and compare.

Compelling Evidence

***Change in technology*:** As noted above, SPECT and SPECT-CT imaging has evolved in the past decades. That is a significant reason for the new, revised and generic family of codes before you. There have been changes in radiotracers, instrumentation, computer processing, and software. These changes have enhanced the acquisition, processing, quality control, and interpretation while also adding new variables for analysis and review by the physician or QHP.

Changes in patient: With the deletion of several existing codes, the revised new codes will have shifts in the type of patients we will see for the revised codes. The survey indicated that we had indeed selected the new appropriate typical patients for each of the new or revised codes developed by our experts.

Survey Tool modified and approved by research

Similar to the PET and PET-CT survey, this 9 code survey was modified to accommodate the large number of codes; specifically moving the time questions closer to the RVW questions, showing the family together so that participants could see the code structure together as they valued time and RVW questions, this allowed them to see their answers, without having to go back and forth within the survey tool which is often a complaint we have for larger code surveys. This modified survey tool was approved by research and a copy is in the materials.

Time discussion:

The joint society expert panel reviewed all the times for all the codes in the survey. In general, our experts believe that the survey respondents recognized the time required to perform the Intra-service well. The pre service time in general is higher than many of our other organ specific nuclear medicine code pre times. We believe that for tumor and infection nuclear medicine imaging there generally is more pre-time due to these patients having more extensive medical documentation to review prior to the radiotracer selection and protocol approval to order or prepare the tracer. There are more options for radiotracers today with varying protocols (e.g. single area, multi area, one day, multiple day and multiple tracer) and there are more decisions to select the right combination for that particular patients' history. In general, for the pre times the experts selected the median time, capping the pre time to 15 minutes, as our expert did not agree with pre times for these nuclear medicine studies in excess of 15 minutes. We had a similar discussion regarding the post time. Again, the experts agreed that these tumor and infection nuclear medicine imaging studies generally have more post time then other organ or area specific nuclear medicine codes. In general, for the pre times the experts selected the median time, capping the post time to 15 or 20 minutes, as our expert did not agree with some of the post times and modified accordingly based on the complexity and the elements for the varying services.

78803

78803 is an existing code that was revised to describe single day, single area SPECT radiotracer imaging. Of note, any planar imaging would also be included in this code as are other SPECT nuclear medicine services. Survey respondents estimated this single study to take 17 minutes preservice, 22 minutes intraservice, and 26 minutes postservice. The median performance rate for this code was 30 services per year indicating that the survey respondents had experience with this procedure.

34 respondents (45%) selected code 78071 for Parathyroid SPECT as the KRS. Respondents generally indicated 78803 to be somewhat more intense/complex in comparison to the KRS. 16 respondents (12%) selected 78072 for Parathyroid SPECT-CT as the second KRS. Most respondents indicated 78803 to be identical or more intense/complex in comparison to the KRS.

We recommend the survey 25th-percentile work RVU of 1.20 with modified median survey times of 15 minutes preservice, 22 minutes intraservice, and 15 minutes postservice for 78803. This recommendation falls between MPC code 70460 that has similar minutes of intraservice time but less total time and RVUs, and MPC code 70470 that has less intraservice time and higher RVW.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.

- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed)

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Commonly

Specialty independent Diagnostic Testing Facility How often? Commonly

Specialty Nuclear Medicine How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 75000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Expert panel plus review of current volumes of the existing codes and multiplied by 3 as we typically do for nuclear medicine studies.

Specialty DR Frequency 37500 Percentage 50.00 %

Specialty IDTF Frequency 22500 Percentage 30.00 %

Specialty NM Frequency 15000 Percentage 20.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 25,000 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Expert panel plus review of current volumes of the existing codes.

Specialty DR Frequency 12500 Percentage 50.00 %

Specialty IDTF Frequency 7500 Percentage 30.00 %

Specialty NM Frequency 5000 Percentage 20.00 %

Do many physicians perform this service across the United States? Yes

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:78804 Tracking Number U5 Original Specialty Recommended RVU: **1.07**
Presented Recommended RVU: **1.07**
Global Period: XXX Current Work RVU: RUC Recommended RVU: **1.07**

CPT Descriptor: Radiopharmaceutical localization of tumor, inflammatory process or distribution of radiopharmaceutical agent(s), (includes vascular flow and blood pool imaging when performed); planar, whole body, requiring 2 or more days of imaging

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 62-year-old man with history of metastatic well differentiated neuroendocrine cancer presents for indium-111 pentetreotide whole-body imaging performed over two days (two body scans performed), to determine response to ongoing therapy.

Percentage of Survey Respondents who found Vignette to be Typical: 96%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The physician reviews the clinical request, pertinent medical records and any prior imaging procedures (including nuclear medicine, CT and/or MRI imaging studies), and interim medical history, including medications and concurrent medical problems. The possible treatment options (surgical vs medical) are reviewed and the choice of several radiopharmaceuticals is considered based on the information in the medical record and/or discussion with the referring physician. The physician confirms the contraindications for the varying options of radiotracers. The decision is made as to the appropriateness of the study and the different views necessary, including the typical protocol for a whole body tumor, infection or radiopharmaceutical distribution, including when necessary, additional planar spot images, when done on multiple days. The ordering physician is consulted to clarify the indications, when necessary. The physician instructs the nuclear medicine technologist to order the appropriate radiopharmaceutical and administered activity and provides oversight required by Nuclear Regulatory Commission (NRC) and/or state regulations. After the first day of imaging, the physician reviews day 1 set of images and instructs the technologist for how many hours post injection of the tracer to begin the next set of imaging. Decisions are made as to repeat imaging versus different positioning to address findings between the day two images.

Description of Intra-Service Work: The physician instructs and oversees the nuclear medicine technologists in the administration of the radiopharmaceutical including verifying the dosage per Nuclear Regulatory Commission (NRC) and/or state regulations. The physician directs the nuclear medicine technologist to adjust the acquisition protocol as necessary for the individual patient clinical situation and diagnosis. The physician is available to answer questions for the technologist and patient and to review components of the study throughout the procedure.

The physician determines the adequacy of the day 1 planar images and the patient positioning and need for any additional planar images to be obtained. The physician initially correlates the findings to previous imaging, medical information and clinical story and determines the appropriateness and timing of the day 2 whole body planar imaging.

The physician determines the adequacy of the multiple day planar studies (on both days) and the patient positioning and need for additional planar or other images. The physician interprets multiple day whole body planar images obtained. The physician correlates the findings to early and late imaging, previous imaging, medical information and clinical story and generates a report for the medical record.

Description of Post-Service Work: The report of the multiple day whole body tumor, infection or radiopharmaceutical distribution, including when necessary, additional planar spot images is reviewed and signed. The imaging results may be discussed with the referring physician and if necessary, with the patient. Additional imaging studies (including, but not limited to additional radiographs, CT, MRI or even additional Nuclear Medicine procedures, are recommended as necessary, after discussion with the referring physician. Required regulatory (NRC/state) review and oversight is provided throughout the procedure.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

At the September 2018 CPT panel meeting the Society of Nuclear Medicine and Molecular Imaging (SNMMI) coding committee stated that they had identified a current gap in coding for several types of SPECT/CT studies. Per the applicant: "Rather than tackle these services one by one [by organ system, or body area], we reviewed the resources of the major sets of imaging and while different from parathyroid imaging, we believe that imaging Bone, Liver, etc. are similar enough in resources to create one more generic family to be used by many and modeled after the current tumor and radiopharmaceutical distribution codes." Therefore, the SNMMI along with the ACNM and ACR presented a new generic code set that would revise five codes 78800, 78801, 78802, 78803, 78804, add four new codes 788X0, 788X1, 788X2, 788X3, and delete nine codes 78205, 78206, 78320, 78607, 78647, 78710, 78805, 78806, 78807 to better differentiate between planar radiopharmaceutical localization procedures and SPECT, SPECT-CT and multiple area or multiple day radiopharmaceutical localization/distribution procedures.

Similar to PET-CT, there have been changes in SPECT and SPECT-CT instrumentation, computer processing, and software since the early 2010's that allow extraction of greater clinically valuable information regarding tumor, infection, inflammation, and distribution of a variety of radiotracers. Some of these changes have enhanced the acquisition, processing, quality control, and interpretation while also adding new variables for acquisition protocols, analysis and a shift in the typical patients.

These components are presented below to understand the logic and components of each service.
L = Localization, T = Tumor, I = Infection/Inflammation, D = Distribution

Code	Short Description	Component 1	Component 2
78800	Rp L.T.I.D. w/flow when performed, planar single area, single day imaging	One (1) body area imaging with Planar Technology	
78801	Rp L.T.I.D. w/flow when performed, planar 2+ area or two day imaging	Injection, two hour delay and first set of imaging with Planar Technology, either two areas, or second day of imaging	Second set of Imaging can be of one area or more, imaging with Planar Technology and comparison of the two days
78802	Rp L.T.I.D. w/flow when performed, wholebody	One day of whole body imaging, includes any spot, localized planar imaging	
78804	Rp L.T.I.D. w/flow when performed, wholebody 2 or more days	Review of wholebody, same as 78802.	review of (2nd) whole body plus comparison of day 1 to day 2 imaging along with any additional spot planar imaging
78803	Rp L.T.I.D. w/flow when performed, Single SPECT, includes any planar imaging done along with the SPECT	SPECT imaging, includes any planar imaging on same day	
788X0	Rp L.T.I.D. w/flow when performed, Single SPECT-CT, includes any planar imaging done along with the SPECT	SPECT Imaging, includes any planar imaging on same day	CT imaging for combine fusion review
788X1	Rp L.T.I.D. w/flow when performed, 2 or more SPECT single or multiple days	SPECT Imaging x two separate regions or areas and on same day	
788X2	Rp L.T.I.D. w/flow when performed, 2 or more SPECT-CT single or multiple days	SPECT Imaging x two separate regions or areas and on same day	CT imaging X2 for combine fusion review

This structure with one, or two physician work components in the code would logically lend itself to a hierarchy where codes with two components or a higher level of technology, require more physician time and work than codes with one component or the lowest level of technology as there are less data to review and compare.

Compelling Evidence

***Change in technology*:** As noted above, SPECT and SPECT-CT imaging has evolved in the past decades. That is a significant reason for the new, revised and generic family of codes before you. There have been changes in

radiotracers, instrumentation, computer processing, and software. These changes have enhanced the acquisition, processing, quality control, and interpretation while also adding new variables for analysis and review by the physician or QHP.

Changes in patient: With the deletion of several existing codes, the revised new codes will have shifts in the type of patients we will see for the revised codes. The survey indicated that we had indeed selected the new appropriate typical patients for each of the new or revised codes developed by our experts.

Survey Tool modified and approved by research

Similar to the PET and PET-CT survey, this 9 code survey was modified to accommodate the large number of codes; specifically moving the time questions closer to the RVW questions, showing the family together so that participants could see the code structure together as they valued time and RVW questions, this allowed them to see their answers, without having to go back and forth within the survey tool which is often a complaint we have for larger code surveys. This modified survey tool was approved by research and a copy is in the materials.

Time discussion:

The joint society expert panel reviewed all the times for all the codes in the survey. In general, our experts believe that the survey respondents recognized the time required to perform the Intra-service well. The pre service time in general is higher than many of our other organ specific nuclear medicine code pre times. We believe that for tumor and infection nuclear medicine imaging there generally is more pre-time due to these patients having more extensive medical documentation to review prior to the radiotracer selection and protocol approval to order or prepare the tracer. There are more options for radiotracers today with varying protocols (e.g. single area, multi area, one day, multiple day and multiple tracer) and there are more decisions to select the right combination for that particular patients' history. In general, for the pre times the experts selected the median time, capping the pre time to 15 minutes, as our expert did not agree with pre times for these nuclear medicine studies in excess of 15 minutes. We had a similar discussion regarding the post time. Again, the experts agreed that these tumor and infection nuclear medicine imaging studies generally have more post time then other organ or area specific nuclear medicine codes. In general, for the pre times the experts selected the median time, capping the post time to 15 or 20 minutes, as our expert did not agree with some of the post times and modified accordingly based on the complexity and the elements for the varying services.

78804

78804 is an existing code that was revised to describe two or more days, whole body radiotracer imaging. Survey respondents estimated this single study to take 15 minutes preservice, 15 minutes intraservice, and 20 minutes postservice. The median performance rate for this code was 25 services per year indicating that the survey respondents had experience with this procedure and similar to 78800 as is consistent with the volume in the CMS claims data.

24 respondents (30%) selected code 78306 for Bone and joint whole body as the KRS. Respondents generally indicated 78806 to be somewhat more intense/complexity in comparison to the KRS. 12 respondents (15%) selected 78582 for VQ Lung imaging as the second KRS. Most respondents indicated 78802 to be identical or somewhat more intense/complex in comparison to the KRS.

We recommend the existing work RVU of 1.07 which is just below the 25th percentile with median survey times of 15 minutes preservice, 15 minutes intraservice, and 15 minutes (reduced to 15 as noted in our time recommendations discussion above) postservice for 78804. This recommendation falls between MPC code 99202 and MPC code 70460 in terms of RVU and had a greater total time compared to the MPC codes

---

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 78804

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Sometimes

Specialty independent Diagnostic Testing Facility How often? Sometimes

Specialty Nuclear Medicine How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 10500
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Expert panel plus review of current volumes of the existing codes and multiplied by 3 as we typically do for nuclear medicine studies.

Specialty DR Frequency 5250 Percentage 50.00 %

Specialty IDTF Frequency 3150 Percentage 30.00 %

Specialty NM Frequency 2100 Percentage 20.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 3,500
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Expert panel plus review of current volumes of the existing codes.

Specialty DR Frequency 1750 Percentage 50.00 %

Specialty IDTF Frequency 1050 Percentage 30.00 %

Specialty NM Frequency 700 Percentage 20.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Imaging

BETOS Sub-classification:
Imaging/procedure

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 77804

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:78830 Tracking Number U6 Original Specialty Recommended RVU: **1.60**
Presented Recommended RVU: **1.60**
Global Period: XXX Current Work RVU: RUC Recommended RVU: **1.60**

CPT Descriptor: Radiopharmaceutical localization of tumor, inflammatory process or distribution of radiopharmaceutical agent(s), (includes vascular flow and blood pool imaging when performed); tomographic (SPECT) with concurrently acquired computed tomography (CT) transmission scan for anatomical review, localization and determination/detection of pathology, single area (eg, head, neck, chest or pelvis), single day of imaging

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 66-year-old female with chronic low back pain, status post lumbar laminectomy 18 months prior with posterolateral bone graft fusion and hardware level L2-S1, presents for bone SPECT/CT imaging of the lumbar spine (single study) performed to determine the presence of stress fractures, pseudoarthosis of the bone fusion graft and/or determination of fixation hardware motion-loosening or other pathology.

Percentage of Survey Respondents who found Vignette to be Typical: 96%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The physician reviews the clinical request, pertinent medical records and any prior imaging procedures (including nuclear medicine, CT and/or MRI imaging studies) and interim medical history, including medications and concurrent medical problems. The possible treatment options (surgical vs medical) are reviewed and the choice of several radiopharmaceuticals is considered based on the information in the medical record and/or discussion with the referring physician. The ordering physician is consulted to clarify the indications, when necessary. The physician confirms the contraindications for the varying options of radiotracers. The decision is made as to the appropriateness of the study and the different views necessary, including the typical protocol for a whole body tumor, infection or radiopharmaceutical distribution, including when necessary, additional planar spot images, including a SPECT study done of single area, including a non-optimized, non-contrast CT study acquired for attenuation correction and anatomic localization. This includes the specific area of the body the SPECT/CT study is be imaged with SPECT/CT and any necessary acquisition parameters required for the specific SPECT/CT study (ie. number of steps and counts required for each stop on the SPECT study and the CT acquisition parameters required for the specific part of the body to be imaged). The physician instructs the nuclear medicine technologist to order the appropriate radiopharmaceutical and administered activity and provides oversight required by Nuclear Regulatory Commission (NRC) and/or state regulations.

Description of Intra-Service Work: The physician instructs and oversees the nuclear medicine technologists in the administration of the radiopharmaceutical including verifying the dosage per Nuclear Regulatory Commission (NRC) and/or state regulations. The physician directs the nuclear medicine technologist to adjust the acquisition protocol as necessary for the individual patient clinical situation and diagnosis. The physician is available to answer questions for the technologist and patient and to review components of the study throughout the procedure.

The physician oversees the administration of the diagnostic radiopharmaceutical and instructs technologist with initial protocol choice based on patient history. The physician determines the adequacy of the SPECT/CT study and the patient

positioning looking for motion artifact and reviews the cinegraphic images and CT transmission for proper registration and applies filters as necessary for the individual study. The physician interprets the single area SPECT/CT images obtained; including evaluation and review of 3 planes of SPECT images for determination of radiopharmaceutical based physiology uptake and pathology. Review of 3 planes of (cross sectional) CT for anatomy, incidental findings and CT pathology (including hardware or surgical grafts, if present). The fused SPECT-CT images are correlated. The physician compares the SPECT-CT findings to previous imaging, medical information and clinical story and generates a report for the medical record; including recording any relevant CT incidental or relevant findings.

Description of Post-Service Work: The report of the whole body tumor, infection or radiopharmaceutical distribution, including a single SPECT/CT study, including when necessary, additional planar spot images, is reviewed and signed. The imaging results may be discussed with the referring physician and if necessary, with the patient. Additional imaging studies (including, but not limited to additional radiographs, CT, MRI or even additional Nuclear Medicine procedures), are recommended as necessary, after discussion with the referring physician. Required regulatory (NRC/state) review and oversight is provided throughout the procedure.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	0%	0%	80%	20%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making			

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required			
Physical effort required			

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome			

2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	5%	5%	70%	20%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making			

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required			
Physical effort required			

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome			

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

At the September 2018 CPT panel meeting the Society of Nuclear Medicine and Molecular Imaging (SNMMI) coding committee stated that they had identified a current gap in coding for several types of SPECT/CT studies. Per the applicant: "Rather than tackle these services one by one [by organ system, or body area], we reviewed the resources of the major sets of imaging and while different from parathyroid imaging, we believe that imaging Bone, Liver, etc. are similar enough in resources to create one more generic family to be used by many and modeled after the current tumor and radiopharmaceutical distribution codes." Therefore, the SNMMI along with the ACNM and ACR presented a new generic code set that would revise five codes 78800, 78801, 78802, 78803, 78804, add four new codes 78830, 78831, 78832, 78835, and delete nine codes 78205, 78206, 78320, 78607, 78647, 78710, 78805, 78806, 78807 to better differentiate between planar radiopharmaceutical localization procedures and SPECT, SPECT-CT and multiple area or multiple day radiopharmaceutical localization/distribution procedures.

Similar to PET-CT, there have been changes in SPECT and SPECT-CT instrumentation, computer processing, and software since the early 2010's that allow extraction of greater clinically valuable information regarding tumor, infection, inflammation, and distribution of a variety of radiotracers. Some of these changes have enhanced the acquisition, processing, quality control, and interpretation while also adding new variables for acquisition protocols, analysis and a shift in the typical patients.

These components are presented below to understand the logic and components of each service.
L = Localization, T = Tumor, I = Infection/Inflammation, D = Distribution

Code	Short Description	Component 1	Component 2
78800	Rp L.T.I.D. w/flow when performed, planar single area, single day imaging	One (1) body area imaging with Planar Technology	
78801	Rp L.T.I.D. w/flow when performed, planar 2+ area or two day imaging	Injection, two hour delay and first set of imaging with Planar Technology, either two areas, or second day of imaging	Second set of Imaging can be of one area or more, imaging with Planar Technology and comparison of the two days
78802	Rp L.T.I.D. w/flow when performed, wholebody	One day of whole body imaging, includes any spot, localized planar imaging	
78804	Rp L.T.I.D. w/flow when performed, wholebody 2 or more days	Review of wholebody, same as 78802.	review of (2nd) whole body plus comparison of day 1 to day 2 imaging along with any additional spot planar imaging
78803	Rp L.T.I.D. w/flow when performed, Single SPECT, includes any planar imaging done along with the SPECT	SPECT imaging, includes any planar imaging on same day	
78830	Rp L.T.I.D. w/flow when performed, Single SPECT-CT, includes any planar imaging done along with the SPECT	SPECT Imaging, includes any planar imaging on same day	CT imaging for combine fusion review
78831	Rp L.T.I.D. w/flow when performed, 2 or more SPECT single or multiple days	SPECT Imaging x two separate regions or areas and on same day	
78832	Rp L.T.I.D. w/flow when performed, 2 or more SPECT-CT single or multiple days	SPECT Imaging x two separate regions or areas and on same day	CT imaging X2 for combine fusion review

This structure with one, or two physician work components in the code would logically lend itself to a hierarchy where codes with two components or a higher level of technology, require more physician time and work than codes with one component or the lowest level of technology as there are less data to review and compare.

Compelling Evidence

***Change in technology*:** As noted above, SPECT and SPECT-CT imaging has evolved in the past decades. That is a significant reason for the new, revised and generic family of codes before you. There have been changes in radiotracers, instrumentation, computer processing, and software. These changes have enhanced the acquisition, processing, quality control, and interpretation while also adding new variables for analysis and review by the physician or QHP.

Changes in patient: With the deletion of several existing codes, the revised new codes will have shifts in the type of patients we will see for the revised codes. The survey indicated that we had indeed selected the new appropriate typical patients for each of the new or revised codes developed by our experts.

Survey Tool modified and approved by research

Similar to the PET and PET-CT survey, this 9 code survey was modified to accommodate the large number of codes; specifically moving the time questions closer to the RVW questions, showing the family together so that participants could see the code structure together as they valued time and RVW questions, this allowed them to see their answers, without having to go back and forth within the survey tool which is often a complaint we have for larger code surveys. This modified survey tool was approved by research and a copy is in the materials.

Time discussion:

The joint society expert panel reviewed all the times for all the codes in the survey. In general, our experts believe that the survey respondents recognized the time required to perform the Intra-service well. The pre service time in general is higher than many of our other organ specific nuclear medicine code pre times. We believe that for tumor and infection nuclear medicine imaging there generally is more pre-time due to these patients having more extensive medical documentation to review prior to the radiotracer selection and protocol approval to order or prepare the tracer. There are more options for radiotracers today with varying protocols (e.g. single area, multi area, one day, multiple day and multiple tracer) and there are more decisions to select the right combination for that particular patients' history. In general, for the pre times the experts selected the median time, capping the pre time to 15 minutes, as our expert did not agree with pre times for these nuclear medicine studies in excess of 15 minutes. We had a similar discussion regarding the post time. Again, the experts agreed that these tumor and infection nuclear medicine imaging studies generally have more post time then other organ or area specific nuclear medicine codes. In general, for the pre times the experts selected the median time, capping the post time to 15 or 20 minutes, as our expert did not agree with some of the post times and modified accordingly based on the complexity and the elements for the varying services.

78830

78830 is a new code to describe single day, single area SPECT-CT radiotracer imaging. Of note, any planar imaging would also be included in this code as are other SPECT nuclear medicine services. Survey respondents estimated this single study to take 30 minutes preservice, 25 minutes intraservice, and 25 minutes postservice. The median performance rate for this code was 30 services per year indicating that the survey respondents had experience with this procedure.

35 respondents (45%) selected code 78072 for Parathyroid SPECT-CT as the KRS. Respondents generally indicated 78830 to be somewhat more intense/complex in comparison to the KRS. 15 respondents (19%) selected 78814 for PET-CT limited area as the second KRS. Most respondents indicated 78830 to be more intense/complex in comparison to the KRS.

We recommend the survey 25th-percentile work RVU of 1.60 with modified median survey times of 15 minutes preservice, 25 minutes intraservice, and 15 minutes postservice for 78830. This recommendation falls between MPC code 70470 that has less intraservice time and lower RVUs, and MPC code 78072 that has less intraservice time and an identical RVW.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) New code could be any 78X99 code

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Sometimes

Specialty Independent Diagnostic Testing Facility How often? Sometimes

Specialty Nuclear Medicine How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 45000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Expert panel plus review of current volumes of the existing codes and multiplied by 3 as we typically do for nuclear medicine studies.

Specialty DR Frequency 22500 Percentage 50.00 %

Specialty IDTF Frequency 13500 Percentage 30.00 %

Specialty NM Frequency 9000 Percentage 20.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 15,000 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Expert panel plus review of current volumes of the existing codes.

Specialty DR Frequency 7500 Percentage 50.00 %

Specialty IDTF Frequency 4500 Percentage 30.00 %

Specialty NM Frequency 3000 Percentage 20.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Imaging

BETOS Sub-classification:
Imaging/procedure

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 78320

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:78831 Tracking Number U7 Original Specialty Recommended RVU: **1.93**
Presented Recommended RVU: **1.93**
Global Period: XXX Current Work RVU: RUC Recommended RVU: **1.93**

CPT Descriptor: Radiopharmaceutical localization of tumor, inflammatory process or distribution of radiopharmaceutical agent(s), (includes vascular flow and blood pool imaging when performed); tomographic (SPECT), minimum 2 areas (eg, pelvis and knees, abdomen and pelvis), single day of imaging, or single area of imaging over 2 or more days

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 58-year-old male with metastatic papillary thyroid cancer with a prior radioiodine body scan indicating suspected nodal or bone involvement in the thorax and non-specific activity in the pelvis presents for two SPECT studies performed (same day) following body scan to anatomically localize thorax pathology and to help localize pathology in the pelvis.

Percentage of Survey Respondents who found Vignette to be Typical: 99%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The physician reviews the clinical request, pertinent medical records and any prior imaging procedures (including nuclear medicine, CT and/or MRI imaging studies) and interim medical history, including medications and concurrent medical problems. The possible treatment options (surgical vs medical) are reviewed and the choice of several radiopharmaceuticals is considered based on the information in the medical record and/or discussion with the referring physician. The ordering physician is consulted to clarify the indications, when necessary. The physician confirms the contraindications for the varying options of radiotracers. The decision is made as to the appropriateness of the study and the different views necessary, including the typical protocol for a whole body tumor, infection or radiopharmaceutical distribution, including when necessary, additional planar spot images, including the SPECT studies done of two or more areas, or a single site done on 2 or more days. This includes the specific areas of the body to be imaged with SPECT and any necessary acquisition parameters required for the specific SPECT studies (ie. number of steps and counts required for each stop on the SPECT study. After the first day of imaging, the physician reviews day 1 set of images and instructs the technologist for how many hours post injection of the tracer to begin the next set of imaging. Decisions are made as to repeat imaging versus different positioning to address findings between the day two images. The physician instructs the nuclear medicine technologist to order the appropriate radiopharmaceutical and administered activity and provides oversight required by Nuclear Regulatory Commission (NRC) and/or state regulation.

Description of Intra-Service Work: The physician instructs and oversees the nuclear medicine technologists in the administration of the radiopharmaceutical including verifying the dosage per Nuclear Regulatory Commission (NRC) and/or state regulations. The physician directs the nuclear medicine technologist to adjust the acquisition protocol as necessary for the individual patient. The physician is available to answer questions for the technologist and to review components of the study throughout the procedure.

The physician reviews the history, physical exam, and prior medical records and evaluates the adequacy of patient for procedure ordered. The physician oversees the administration of the diagnostic radiopharmaceutical and instructs

technologist with protocol choice based on patient history. The physician determines the adequacy of the SPECT studies and the patient positioning looking for motion artifact. The physician reviews the two sets of cinegraphic of images, applies filters necessary for each SPECT for the patient protocol and performs visual and/or software merging of correlative prior imaging studies (eg MR, diagnostic CT). The physician interprets two sets of SPECT images obtained and correlation of the findings to previous imaging, medical information and clinical story and generates a report for the medical record.

Description of Post-Service Work: The report of the whole body tumor, infection or radiopharmaceutical distribution, including one or more SPECT studies, including when necessary, additional planar spot images, is reviewed and signed. The imaging results may be discussed with the referring physician and if necessary, with the patient. Additional imaging studies (including, but not limited to additional radiographs, CT, MRI or even additional Nuclear Medicine procedures), are recommended as necessary, after discussion with the referring physician. Required regulatory (NRC/state) review and oversight is provided throughout the procedure.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	10%	80%	5%	5%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making			

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required			
Physical effort required			

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome			

2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	5%	75%	5%	15%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making			

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required			
Physical effort required			

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome			

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

At the September 2018 CPT panel meeting the Society of Nuclear Medicine and Molecular Imaging (SNMMI) coding committee stated that they had identified a current gap in coding for several types of SPECT/CT studies. Per the applicant: "Rather than tackle these services one by one [by organ system, or body area], we reviewed the resources of the major sets of imaging and while different from parathyroid imaging, we believe that imaging Bone, Liver, etc. are similar enough in resources to create one more generic family to be used by many and modeled after the current tumor and radiopharmaceutical distribution codes." Therefore, the SNMMI along with the ACNM and ACR presented a new generic code set that would revise five codes 78800, 78801, 78802, 78803, 78804, add four new codes 78830, 78831, 78832, 78835, and delete nine codes 78205, 78206, 78320, 78607, 78647, 78710, 78805, 78806, 78807 to better differentiate between planar radiopharmaceutical localization procedures and SPECT, SPECT-CT and multiple area or multiple day radiopharmaceutical localization/distribution procedures.

Similar to PET-CT, there have been changes in SPECT and SPECT-CT instrumentation, computer processing, and software since the early 2010's that allow extraction of greater clinically valuable information regarding tumor, infection, inflammation, and distribution of a variety of radiotracers. Some of these changes have enhanced the acquisition, processing, quality control, and interpretation while also adding new variables for acquisition protocols, analysis and a shift in the typical patients.

These components are presented below to understand the logic and components of each service.
L = Localization, T = Tumor, I = Infection/Inflammation, D = Distribution

Code	Short Description	Component 1	Component 2
78800	Rp L.T.I.D. w/flow when performed, planar single area, single day imaging	One (1) body area imaging with Planar Technology	
78801	Rp L.T.I.D. w/flow when performed, planar 2+ area or two day imaging	Injection, two hour delay and first set of imaging with Planar Technology, either two areas, or second day of imaging	Second set of Imaging can be of one area or more, imaging with Planar Technology and comparison of the two days
78802	Rp L.T.I.D. w/flow when performed, wholebody	One day of whole body imaging, includes any spot, localized planar imaging	
78804	Rp L.T.I.D. w/flow when performed, wholebody 2 or more days	Review of wholebody, same as 78802.	review of (2nd) whole body plus comparison of day 1 to day 2 imaging along with any additional spot planar imaging
78803	Rp L.T.I.D. w/flow when performed, Single SPECT, includes any planar imaging done along with the SPECT	SPECT imaging, includes any planar imaging on same day	
78830	Rp L.T.I.D. w/flow when performed, Single SPECT-CT, includes any planar imaging done along with the SPECT	SPECT Imaging, includes any planar imaging on same day	CT imaging for combine fusion review
78831	Rp L.T.I.D. w/flow when performed, 2 or more SPECT single or multiple days	SPECT Imaging x two separate regions or areas and on same day	
78832	Rp L.T.I.D. w/flow when performed, 2 or more SPECT-CT single or multiple days	SPECT Imaging x two separate regions or areas and on same day	CT imaging X2 for combine fusion review

This structure with one, or two physician work components in the code would logically lend itself to a hierarchy where codes with two components or a higher level of technology, require more physician time and work than codes with one component or the lowest level of technology as there are less data to review and compare.

Compelling Evidence

***Change in technology*:** As noted above, SPECT and SPECT-CT imaging has evolved in the past decades. That is a significant reason for the new, revised and generic family of codes before you. There have been changes in

radiotracers, instrumentation, computer processing, and software. These changes have enhanced the acquisition, processing, quality control, and interpretation while also adding new variables for analysis and review by the physician or QHP.

Changes in patient: With the deletion of several existing codes, the revised new codes will have shifts in the type of patients we will see for the revised codes. The survey indicated that we had indeed selected the new appropriate typical patients for each of the new or revised codes developed by our experts.

Survey Tool modified and approved by research

Similar to the PET and PET-CT survey, this 9 code survey was modified to accommodate the large number of codes; specifically moving the time questions closer to the RVW questions, showing the family together so that participants could see the code structure together as they valued time and RVW questions, this allowed them to see their answers, without having to go back and forth within the survey tool which is often a complaint we have for larger code surveys. This modified survey tool was approved by research and a copy is in the materials.

Time discussion:

The joint society expert panel reviewed all the times for all the codes in the survey. In general, our experts believe that the survey respondents recognized the time required to perform the Intra-service well. The pre service time in general is higher than many of our other organ specific nuclear medicine code pre times. We believe that for tumor and infection nuclear medicine imaging there generally is more pre-time due to these patients having more extensive medical documentation to review prior to the radiotracer selection and protocol approval to order or prepare the tracer. There are more options for radiotracers today with varying protocols (e.g. single area, multi area, one day, multiple day and multiple tracer) and there are more decisions to select the right combination for that particular patients' history. In general, for the pre times the experts selected the median time, capping the pre time to 15 minutes, as our expert did not agree with pre times for these nuclear medicine studies in excess of 15 minutes. We had a similar discussion regarding the post time. Again, the experts agreed that these tumor and infection nuclear medicine imaging studies generally have more post time then other organ or area specific nuclear medicine codes. In general, for the pre times the experts selected the median time, capping the post time to 15 or 20 minutes, as our expert did not agree with some of the post times and modified accordingly based on the complexity and the elements for the varying services.

78831

78831 is a new code to describe 2 or more day or 2 or more area SPECT radiotracer imaging. Of note, any planar imaging would also be included in this code as are other SPECT nuclear medicine services. Survey respondents estimated this multiple study to take 30 minutes preservice, 30 minutes intraservice, and 26 minutes postservice. The median performance rate for this code was 30 services per year indicating that the survey respondents had experience with this procedure.

13 respondents (18%) selected code 78812 for PET torso imaging as the KRS. Respondents generally indicated 78831 to be somewhat more intense/complex in comparison to the KRS. 13 respondents (18%) selected 78814 for PET-CT limited area as the second KRS. Most respondents indicated 78831 to be more intense/complex in comparison to the KRS.

We recommend the survey median work RVU of 1.93 to maintain rank relativity of these services with modified median survey times of 15 minutes preservice and 30 minutes intraservice, as well as a modified 20 minutes postservice for 78831. This recommendation falls between MPC code 78072 that has less total time and lower RVUs, and MPC code 99233 that has an identical intra service and similar RVW.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) New service could be any one of the 78X99 codes

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Sometimes

Specialty Independent Diagnostic Testing Facilities How often? Sometimes

Specialty Nuclear Medicine How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 30000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Expert panel plus review of current volumes of the existing codes.

Specialty DR Frequency 15000 Percentage 50.00 %

Specialty IDTF Frequency 9000 Percentage 30.00 %

Specialty NM Frequency 6000 Percentage 20.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 10,000 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Expert panel plus review of current volumes of the existing codes.

Specialty DR Frequency 5000 Percentage 50.00 %

Specialty IDTF Frequency 3000 Percentage 30.00 %

Specialty NM Frequency 2000 Percentage 20.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Imaging

BETOS Sub-classification:
Imaging/procedure

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 78803

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:78832 Tracking Number U8 Original Specialty Recommended RVU: **2.23**
Presented Recommended RVU: **2.23**
Global Period: XXX Current Work RVU: RUC Recommended RVU: **2.23**

CPT Descriptor: Radiopharmaceutical localization of tumor, inflammatory process or distribution of radiopharmaceutical agent(s), (includes vascular flow and blood pool imaging when performed); tomographic (SPECT) with concurrently acquired computed tomography (CT) transmission scan for anatomical review, localization and determination/detection of pathology, minimum 2 areas (eg, pelvis and knees, abdomen and pelvis), single day of imaging, or single area of imaging over 2 or more days imaging
(For cerebrospinal fluid studies that require injection procedure, see 61055, 61070, 62320-62323)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 82-year-female with vascular grafts and sepsis with possible discitis in the cervical and lumbar spine suggested by prior imaging, presents for multiple (2 or more) Gallium-67 SPECT/CT studies required over one-two days to detect and anatomically localize multiple sites of infection suspected in the spine.

Percentage of Survey Respondents who found Vignette to be Typical: 94%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The physician reviews the clinical request, pertinent medical records and any prior imaging procedures (including nuclear medicine, CT and/or MRI imaging studies) and interim medical history, including medications and concurrent medical problems. The possible treatment options (surgical vs medical) are reviewed and the choice of several radiopharmaceuticals is considered based on the information in the medical record and/or discussion with the referring physician. The ordering physician is consulted to clarify the indications, when necessary. The physician confirms the contraindications for the varying options of radiotracers. The decision is made as to the appropriateness of the study and the different views necessary, including the typical protocol for a whole body tumor, infection or radiopharmaceutical distribution, including when necessary, additional planar spot images, including the SPECT/CT studies done of two or more areas, or a single site done on 2 or more days. This includes the specific areas of the body to be imaged with SPECT/CT and any necessary acquisition parameters required for the specific SPECT/CT studies (ie. number of steps and counts required for each stop on the SPECT studies and the CT acquisition parameters required for the specific parts of the body to be imaged). After the first day of imaging, the physician reviews day 1 set of images and instructs the technologist for how many hours post injection of the tracer to begin the next set of imaging. Decisions are made as to repeat imaging versus different positioning to address findings between the day two images. The physician instructs the nuclear medicine technologist to order the appropriate radiopharmaceutical and administered activity and provides oversight required by Nuclear Regulatory Commission (NRC) and/or state regulations.

Description of Intra-Service Work: The physician instructs and oversees the nuclear medicine technologists in the administration of the radiopharmaceutical including verifying the dosage per Nuclear Regulatory Commission (NRC) and/or state regulations. The physician directs the nuclear medicine technologist to adjust the acquisition protocol as necessary for the individual patient. The physician is available to answer questions for the technologist and to review components of the study throughout the procedure.

The physician oversees the administration of the diagnostic radiopharmaceutical and instructs technologist with initial protocol choice based on patient history. After completion of the initial SPECT-CT study, the physician reviews the image sets and determines the region and timing of the second (or more) SPECT-CT study. After completion, the physician determines the adequacy of the second SPECT/CT study and the patient positioning looking for motion artifact and reviews the cinegraphic images and CT transmission for proper registration and applies filters as necessary for the individual study.

The physician interprets the two (or more) areas of SPECT/CT images obtained; including evaluation and review of 3 planes of SPECT images for determination of radiopharmaceutical based physiology uptake and pathology. Review of 3 planes of (cross sectional) CT for anatomy, incidental findings and CT pathology (including hardware or surgical grafts, if present). The fused SPECT-CT images are correlated. The physician compares the two (or more) SPECT-CT studies results and findings to previous imaging, medical information and clinical story and generates a comprehensive report for the medical record; including recording any incidental or relevant CT findings.

Description of Post-Service Work: The report of the whole body tumor, infection or radiopharmaceutical distribution, including multiple SPECT/CT studies, including when necessary, additional planar spot images, is reviewed and signed. The imaging results may be discussed with the referring physician and if necessary, with the patient. Additional imaging studies (including, but not limited to additional radiographs, CT, MRI or even additional Nuclear Medicine procedures), are recommended as necessary, after discussion with the referring physician. Required regulatory (NRC/state) review and oversight is provided throughout the procedure.

SURVEY DATA

RUC Meeting Date (mm/yyyy)	01/2019					
Presenter(s):	Gary Dillehay, MD (SNMMI), Scott Bartley, MD (ACNM), Kurt Schoppe, MD (ACR), Daniel Wessell, MD (ACR)

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

At the September 2018 CPT panel meeting the Society of Nuclear Medicine and Molecular Imaging (SNMMI) coding committee stated that they had identified a current gap in coding for several types of SPECT/CT studies. Per the applicant: "Rather than tackle these services one by one [by organ system, or body area], we reviewed the resources of the major sets of imaging and while different from parathyroid imaging, we believe that imaging Bone, Liver, etc. are similar enough in resources to create one more generic family to be used by many and modeled after the current tumor and radiopharmaceutical distribution codes." Therefore, the SNMMI along with the ACNM and ACR presented a new generic code set that would revise five codes 78800, 78801, 78802, 78803, 78804, add four new codes 78830, 78831, 78832, 78835, and delete nine codes 78205, 78206, 78320, 78607, 78647, 78710, 78805, 78806, 78807 to better differentiate between planar radiopharmaceutical localization procedures and SPECT, SPECT-CT and multiple area or multiple day radiopharmaceutical localization/distribution procedures.

Similar to PET-CT, there have been changes in SPECT and SPECT-CT instrumentation, computer processing, and software since the early 2010's that allow extraction of greater clinically valuable information regarding tumor, infection, inflammation, and distribution of a variety of radiotracers. Some of these changes have enhanced the acquisition, processing, quality control, and interpretation while also adding new variables for acquisition protocols, analysis and a shift in the typical patients.

These components are presented below to understand the logic and components of each service.
L = Localization, T = Tumor, I = Infection/Inflammation, D = Distribution

Code	Short Description	Component 1	Component 2
78800	Rp L.T.I.D. w/flow when performed, planar single area, single day imaging	One (1) body area imaging with Planar Technology	
78801	Rp L.T.I.D. w/flow when performed, planar 2+ area or two day imaging	Injection, two hour delay and first set of imaging with Planar Technology, either two areas, or second day of imaging	Second set of Imaging can be of one area or more, imaging with Planar Technology and comparison of the two days
78802	Rp L.T.I.D. w/flow when performed, wholebody	One day of whole body imaging, includes any spot, localized planar imaging	
78804	Rp L.T.I.D. w/flow when performed, wholebody 2 or more days	Review of wholebody, same as 78802.	review of (2nd) whole body plus comparison of day 1 to day 2 imaging along with any additional spot planar imaging
78803	Rp L.T.I.D. w/flow when performed, Single SPECT, includes any planar imaging done along with the SPECT	SPECT imaging, includes any planar imaging on same day	
78830	Rp L.T.I.D. w/flow when performed, Single SPECT-CT, includes any planar imaging done along with the SPECT	SPECT Imaging, includes any planar imaging on same day	CT imaging for combine fusion review
78831	Rp L.T.I.D. w/flow when performed, 2 or more SPECT single or multiple days	SPECT Imaging x two separate regions or areas and on same day	
78832	Rp L.T.I.D. w/flow when performed, 2 or more SPECT-CT single or multiple days	SPECT Imaging x two separate regions or areas and on same day	CT imaging X2 for combine fusion review

This structure with one, or two physician work components in the code would logically lend itself to a hierarchy where codes with two components or a higher level of technology, require more physician time and work than codes with one component or the lowest level of technology as there are less data to review and compare.

Compelling Evidence

***Change in technology*:** As noted above, SPECT and SPECT-CT imaging has evolved in the past decades. That is a significant reason for the new, revised and generic family of codes before you. There have been changes in

radiotracers, instrumentation, computer processing, and software. These changes have enhanced the acquisition, processing, quality control, and interpretation while also adding new variables for analysis and review by the physician or QHP.

Changes in patient: With the deletion of several existing codes, the revised new codes will have shifts in the type of patients we will see for the revised codes. The survey indicated that we had indeed selected the new appropriate typical patients for each of the new or revised codes developed by our experts.

Survey Tool modified and approved by research
Similar to the PET and PET-CT survey, this 9 code survey was modified to accommodate the large number of codes; specifically moving the time questions closer to the RVW questions, showing the family together so that participants could see the code structure together as they valued time and RVW questions, this allowed them to see their answers, without having to go back and forth within the survey tool which is often a complaint we have for larger code surveys. This modified survey tool was approved by research and a copy is in the materials.

Time discussion:
The joint society expert panel reviewed all the times for all the codes in the survey. In general, our experts believe that the survey respondents recognized the time required to perform the Intra-service well. The pre service time in general is higher than many of our other organ specific nuclear medicine code pre times. We believe that for tumor and infection nuclear medicine imaging there generally is more pre-time due to these patients having more extensive medical documentation to review prior to the radiotracer selection and protocol approval to order or prepare the tracer. There are more options for radiotracers today with varying protocols (e.g. single area, multi area, one day, multiple day and multiple tracer) and there are more decisions to select the right combination for that particular patients' history. In general, for the pre times the experts selected the median time, capping the pre time to 15 minutes, as our expert did not agree with pre times for these nuclear medicine studies in excess of 15 minutes. We had a similar discussion regarding the post time. Again, the experts agreed that these tumor and infection nuclear medicine imaging studies generally have more post time then other organ or area specific nuclear medicine codes. In general, for the pre times the experts selected the median time, capping the post time to 15 or 20 minutes, as our expert did not agree with some of the post times and modified accordingly based on the complexity and the elements for the varying services.

78832
78832 is a new code to describe 2 or more days or 2 or more area SPECT-CT radiotracer imaging. Of note, any planar imaging would also be included in this code as are other SPECT nuclear medicine services. Survey respondents estimated this multiple study to take 30 minutes preservice, 35 minutes intraservice, and 26 minutes postservice. The median performance rate for this code was 30 services per year indicating that the survey respondents had experience with this procedure.

21 respondents (29%) selected code 78814 for PET-CT limited area as the KRS. Respondents generally indicated 78832 to be somewhat more intense/complex in comparison to the KRS. 14 respondents (19%) selected 78815 for PET-CT torso as the second KRS. Most respondents indicated 78832 to be more intense/complex in comparison to the KRS.

We recommend the survey median work RVU of 2.23 to maintain rank relativity of these services with modified median survey times of 15 minutes preservice, 35 minutes intraservice, and 20 minutes postservice for 78832. This recommendation falls between MPC code 99233 that has less time and lower RVUs, and MPC code 72158 that has less intraservice time and is within a similar RVW range.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) New service could be any one of the 78X99 codes

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Sometimes

Specialty Independent Diagnostic Testing Facilities How often? Sometimes

Specialty Nuclear Medicine How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 22500
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Expert panel plus review of current volumes of the existing codes and multiplied by 3 as we typically do for nuclear medicine studies.

Specialty DR Frequency 11250 Percentage 50.00 %

Specialty IDTF Frequency 6750 Percentage 30.00 %

Specialty NM Frequency 4500 Percentage 20.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 7,500
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. xpert panel plus review of current volumes of the existing codes.

Specialty DR Frequency 3750 Percentage 50.00 %

Specialty IDTF Frequency 2250 Percentage 30.00 %

Specialty NM Frequency 1500 Percentage 20.00 %

Do many physicians perform this service across the United States? Yes

Presented Recommended RVU: **0.77**
Global Period: ZZZ Current Work RVU: RUC Recommended RVU: **0.51**

CPT Descriptor: Radiopharmaceutical quantification measurement(s) single area

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 70-year-male with metastatic prostate cancer to the bones on staging/restaging bone scanning is considered for undergoing immunotherapy and other high cost therapies. Bone SPECT/CT quantification is requested to determine the extent of therapeutic response rate in the metastatic lesions, to determine whether to stop, continue or change therapeutic intervention. Note: This is an add-on service. Only consider the additional work related to quantitation.

Percentage of Survey Respondents who found Vignette to be Typical: 94%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: NONE

Description of Intra-Service Work: SPECT/CT imaging acquired by the nuclear medicine technologist in a manner that will also allow quantitation (for example, images are acquired in 3D and list mode). The data is then re-binned to allow quantitation and the data set is exported to a dedicated computer/software program. In addition to the usual SPECT/CT imaging processing, the technologist also then processes the re-binned data for quantitation using a separate software program. The technologist imports the data into a computerized quality control software program for analysis of data quality. The processed data set and quality control information is transferred to the interpreting physician. The physician then reviews the quality control for quantitation (for example, the bolus duration, peak, and plateau waveforms) and, if quality is acceptable, reviews the numeric. The quantitation data is then integrated with the SPECT/CT image data, attenuation maps, clinical data, and an overall report is generated for the medical record.

Description of Post-Service Work: NONE

• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	20%	80%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

At the September 2018 CPT panel meeting the Society of Nuclear Medicine and Molecular Imaging (SNMMI) coding committee stated that they had identified a current gap in coding for several types of SPECT/CT studies. Per the applicant: "Rather than tackle these services one by one [by organ system, or body area], we reviewed the resources of

the major sets of imaging and while different from parathyroid imaging, we believe that imaging Bone, Liver, etc. are similar enough in resources to create one more generic family to be used by many and modeled after the current tumor and radiopharmaceutical distribution codes." Therefore, the SNMMI along with the ACNM and ACR presented a new generic code set that would revise five codes 78800, 78801, 78802, 78803, 78804, add four new codes 78830, 78831, 78832, 78835, and delete nine codes 78205, 78206, 78320, 78607, 78647, 78710, 78805, 78806, 78807 to better differentiate between planar radiopharmaceutical localization procedures and SPECT, SPECT-CT and multiple area or multiple day radiopharmaceutical localization/distribution procedures.

Similar to PET-CT, there have been changes in SPECT and SPECT-CT instrumentation, computer processing, and software since the early 2010's that allow extraction of greater clinically valuable information regarding tumor, infection, inflammation, and distribution of a variety of radiotracers. Some of these changes have enhanced the acquisition, processing, quality control, and interpretation while also adding new variables for acquisition protocols, analysis and a shift in the typical patients.

These components are presented below to understand the logic and components of each service.
L = Localization, T = Tumor, I = Infection/Inflammation, D = Distribution

Code	Short Description	Component 1	Component 2
78830	Rp L.T.I.D. w/flow when performed, Single SPECT-CT, includes any planar imaging done along with the SPECT	SPECT Imaging, includes any planar imaging on same day	CT imaging for combine fusion review
78832	Rp L.T.I.D. w/flow when performed, 2 or more SPECT-CT single or multiple days	SPECT Imaging x two separate regions or areas and on same day	CT imaging X2 for combine fusion review

Of importance for 78835, the service can only be reported conjunction with 78830 or 78832 as these are the SPECT-CT codes and the quantitation cannot be reported with the SPECT alone codes.

+78835

78835 is a new add on code to be reported only with the SPECT-CT new codes 78830 or 78832 and describes quantification of one area. Survey respondents estimated 17 minutes intraservice time. The median performance rate for this code was 20 services per year indicating that the survey respondents had experience with this procedure.

28 respondents (72%) selected code 78496 GBP single study RVEF by first pass as the KRS. Respondents generally indicated 78835 to be somewhat more intense/complex in comparison to the KRS. 5 respondents (13%) selected 51797 for voiding pressure studies as the second KRS. Most respondents indicated 78832 to be similar or more intense/complex in comparison to the KRS.

We recommend the survey median work RVU of 0.77 to maintain rank relativity of these services with the median survey time of 17 minutes intraservice for 78835. This recommendation compares favorably with MPC code 51797 which is also the 2nd KRS selected.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) New Service any of the 78X99 codes.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Rarely

Specialty Nuclear Medicine How often? Sometimes

Specialty IDTF How often? Rarely

Estimate the number of times this service might be provided nationally in a one-year period? 10395
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. 20% of the two codes that it may be reported with 78830 or 78832.

Specialty DR Frequency 6750 Percentage 64.93 %

Specialty NM Frequency 4050 Percentage 38.96 %

Specialty IDTF Frequency 2700 Percentage 25.97 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 4,500
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. 20% of the two codes that it may be reported with 78830 or 78832.

Specialty DR Frequency 2250 Percentage 50.00 %

Specialty NM Frequency 1350 Percentage 30.00 %

Specialty IDTF Frequency 900 Percentage 20.00 %

Do many physicians perform this service across the United States? No

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Non Facility Direct Practice Expense (PE) Inputs

Meeting Date: January 2019

CPT code	CPT Long Descriptor	Global Period
78800	Radiopharmaceutical localization of tumor, inflammatory process or distribution of radiopharmaceutical agent(s), (includes vascular flow and blood pool imaging when performed); planar single area (eg, head, neck, chest or pelvis), single day of imaging	**XXX**
78801	planar 2 or more areas (eg, abdomen and pelvis, head and chest), 1 or more days of imaging or single area imaging over 2 or more days	**XXX**
78802	planar whole body, single day of imaging	**XXX**
78804	planar, whole body, requiring 2 or more days of imaging	**XXX**
78803	tomographic (SPECT), single area (eg, head, neck, chest or pelvis), single day of imaging	**XXX**
78830	tomographic (SPECT) with concurrently acquired computed tomography (CT) transmission scan for anatomical review, localization and determination/detection of pathology, single area (eg, head, neck, chest or pelvis), single day of imaging	**XXX**
78831	tomographic (SPECT), minimum 2 areas (eg, pelvis and knees, abdomen and pelvis), single day of imaging, or single area of imaging over 2 or more days	**XXX**
78832	tomographic (SPECT) with concurrently acquired computed tomography (CT) transmission scan for anatomical review, localization and determination/detection of pathology, minimum 2 areas (eg, pelvis and knees, abdomen and pelvis), single day of imaging, or single area of imaging over 2 or more days imaging	**XXX**

Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel: A joint society consensus with members from the following societies participating including; Society of Nuclear Medicine and Molecular Imaging (SNMMI), the American College of Nuclear Medicine (ACNM), and the American College of Radiology (ACR), participated in joint calls and email discussions to provide this consensus opinion. The society members included, physicians, advisors and technologist members of the societies.

1. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here: Existing codes 78800, 78801, 78802, 78804, 78803 are listed as current inputs. Additionally, as references we have listed recently reviewed CPT 78305, 78071, 78072 and 78496 were used respectively, as the reference for the varying codes in the surveys.

2. Is this code(s) typically billed with an E/M service? **N/A**
3. Is this code(s) typically billed with the E/M service in the nonfacility? **N/A**
   (Please see provided data in PE Subcommittee folder) **Not typically billed with an E/M**

4. What specialty is the dominant provider in the nonfacility? **Diagnostic Radiology and/or Nuclear Medicine**
   What percent of the time does the dominant provider provide the service(s) in the nonfacility?
   DR 85% for 78800 **NM 2%**
   DR 80% for 78801 **NM 17%**

DR 81% for 78802 **NM 18%**
DR 68% For 78804 **NM 27%**
DR 57% for 78803 **NM 24%**

Is the dominant provider in the nonfacility different then for the global? **No**
(Please see provided data in PE Subcommittee folder)

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:

CMS Row	Description	NM Standards	Comments
CA007 Line 21	two minutes are standard for nuclear medicine, one additional minute for nuclear medicine services in general, as patients are placed on equipment in several positions for imaging. Equipment is moving around them and will come in very close but not touch, them, nor should they touch the equipment, or it will stop ad would need to be restarted, this can be startling for patients.	2	See reference codes for recent reviewed codes
CA008 Line 22	NRC/State requirements for verification of Planar Equipment to be used in imaging *(Conducted time studies originally PE 2004, updated in 2014)*	4	Varying totals, 17 or 21 for line 22 depending if planar or SPECT over one or two days
CA008 Line 22	NRC/State requirements for verification of SPECT, SPECT/CT Equipment to be used in imaging *(Conducted time studies originally PE 2004, updated in 2014)*	7	
CA008	NRC/State requirements for verification of PET, PET/CT Equipment to be used in imaging *(Conducted time studies originally PE 2004, updated in 2014)*	**8**	
CA008 Line 22	Prepare radiopharmaceutical (s) delivered by central pharmacy with NRC and DOT required check-in of RP, survey package, wipe test of package and all recordings for required documentation by federal or state regulators. Verify ordered dosages with received dosages and store for use with patient. *(Conducted time studies originally PE 2004, updated in 2014)*	**13**	
CA024 Line 60	The standard is 3 minutes, however for two separate scan times requiring the patient to return we have added 3 minutes for a total of 6 minutes to account for either an injection done with no imaging on day of injection with a separate day return and/or patient returning on separate days for separate imaging sessions. There are no efficiencies gained to clean a room in-between patients. The patient leaves for minimum 60 minutes and in some cases days in between studies. There are three separate areas to clean, the injection room for Rp administrations, and the two scan times for the imaging when these occur.	**6 or 9**	for 7and 78802, 78802, 78804, 78831, 78832
CA030 Line 65	Technologist for PACSs, the standard is 2 minutes each code depending on if there is one set of imaging, two sets of imaging with or with out CT will require more time of the technologist therefore times are added at 3 minutes, 4 minutes and 5 minutes and up to 8 minutes respectively as shown on the excel.	**2-8 minutes**	Depends on the number of images, number of days and types, CT or no CT.
CA033 Line 68	The standard is 0 minutes, however for radioactive materials there are federally mandated post procedure requirements to follow standard for one study is 3 minutes, where two complete studies are performed at different times or on different days we added one or more minutes respectively.	**3, 4, 6**	

6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to

physician work), you must provide compelling evidence. Please explain if the increase can be entirely accounted for because of an increase in physician time. **N/A**

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here: **See above table.**

8. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

Pre-Service Clinical Labor Activities:

- Review x-ray, lab and past test to confirm appropriateness with physician, confirm technique / protocol to be used, obtain physician written directive, determine radiopharmaceutical dose, and order radiopharmaceutical(s) from central/commercial nuclear pharmacy.
- Verification of Planar, SPECT and SPECT-CT Equipment with documentation, following NRC/State requirements mandated prior to use of equipment.
- Prepare radiopharmaceutical (prepare and QC dose(s)) delivered by central/commercial nuclear pharmacy with NRC required check-in of RP, survey, package, wipe test of syringe, and recording all regulatory required documentation.. Ready dose for potential injection with in-house labels and records. Store radiopharmaceutical(s) and generators, in Hot Lab which is leaded protective shielding.

Intra-Service Clinical Labor Activities:

- Greet patient, (at times multiple times per day or on second day) ensure appropriate medical records are available
- Provide pre-service education/obtain consent including mandatory radiation education
- Prepare room, equipment, supplies (set up protocol) may occur on multiple days see chart.
- Prepare and position patient/ monitor patient, take care as camera is moving around patient.
- Obtain RP from RP storage/preparation area, prepare meal(s), recheck dose, record, resay, and ensure dose would be appropriate (following protocols) based on the written directive (correct test and patient weight)
- Acquire images and discuss imaging views with physician for potential additional instructions regarding the protocol or additional views as requested.
- Complete diagnostic forms, lab & X-ray requisitions, image processing, development hard copy or complete labeling of electronic view, archive and obtain approval to discharge patient

Post-Service Clinical Labor Activities:

- Clean room/equipment by physician staff (can occur multiple times per day, plus on different days)
- Specific room clean-up of RP injection/administration areas with mandatory defacement of labels for proper RP residual disposal (same note above occurring multiple days)
- Regulatory compliance - NRC required wipe tests and survey areas used including regulatory documentation. (Occurring on multiple days per the varying codes.)

9. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived. **N/A**

10. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities: **N/A**

11. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov. **N/A**

12. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here:

13. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here:

The cost of SPECT vs SPECT-CT in the new data base does not make sense. The cost of SPECT is currently more than SPECT-CT. We are not aware of SPECT-CT equipment at such a low cost and will be sending CMS some sample invoices prior to February deadline.

14. List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here:

    We have used the standard CMS formulas for equipment calculations, however for the record only. Some equipment ARE used during the pre-time, yet we are not allowed to include any of that time in our equipment calculations which makes no sense to us. We are performing QC ON THE equipment therefore we wish to continue to go on record that we believe those times should be included. However, following the rules, we have not added those times in our calculations.

15. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here:

16. If there is any other item on your spreadsheet that needs further explanation please include here:

The below are based on the patient typical vignettes.
These components are presented below to understand the logic for supplies or cleaning of rooms

Code	Short Description	Component 1	Component 2	Component 3
78800	Typical 1 day imaging Inj on separate day	Injection performed on different day from Imaging	Planar Imaging on different day from injection	
78801	Typical 2 Day imaging Inj 2 hr and 24 hr separate day	Injection, two hour delay and first set of imaging	Second set of Imaging on day two	
78802	Typical 1 Day Inj on separate day	Injection performed on different day from Imaging	Planar Imaging on different day from injection	
78804	Typical 2 Days	Injection, and first set of imaging on day 1	Just imaging on day two of imaging	
78803	Typical 1 Day	SPECT imaging		
78830	Typical 1 Day	SPECT Imaging	CT imaging for combine fusion review	
78831	Typical 1 Day	SPECT Imaging x two separate regions or areas and on same day		
78832	Typical 2 Days plus Inj on separate day	Injection performed on different day from Imaging	SPECT Imaging x two separate regions or areas and on same day	CT imaging X2 for combine fusion review

This structure with one, two, or three components in each code would logically lend itself to a hierarchy where codes with three components require more technologist time, supplies and equipment than codes with two components, which require more time, and supplies, than codes with one component.

17. Please include an explanation of each line item:

CPT Codes 78835

Specialty Societies Society of Nuclear Medicine and Molecular Imaging (SNMMI), the American College of Nuclear Medicine (ACNM) and the American College of Radiology (ACR)

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Non Facility Direct Practice Expense (PE) Inputs

Meeting Date: January 2019

CPT code	CPT Long Descriptor	Global Period
78835	Radiopharmaceutical quantification measurement(s) single area (Use 78835 in conjunction with 788X0, 788X2) (Report multiple units of 78835 if quantitation is more than 1 area or more than 1 day imaging)	**ZZZ**

Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel: A joint society consensus with members from the following societies participating including; Society of Nuclear Medicine and Molecular Imaging (SNMMI), the American College of Nuclear Medicine (ACNM) and the American College of Radiology (ACR), participated in joint calls and email discussions to provide this consensus opinion. The society members included, physicians, advisors and technologist members of the societies.

1. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here: We chose another nuclear medicine add on code CPT 78496 as a reference to 78835.

2. Is this code(s) typically billed with an E/M service? **N/A**
3. Is this code(s) typically billed with the E/M service in the nonfacility? **N/A**
   (Please see provided data in PE Subcommittee folder) **Not typically billed with an E/M**

4. What specialty is the dominant provider in the nonfacility? **Diagnostic Radiology and Nuclear Medicine**
   What percent of the time does the dominant provider provide the service(s) in the nonfacility?
   60% for Diagnostic Radiology
   30% for Nuclear Medicine
   Is the dominant provider in the nonfacility different then for the global? **Yes**
   (Please see provided data in PE Subcommittee folder)

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:

CMS Row	Description	NM Standards	Comments
CA030 Line	Technologist for PACSs, the standard is 2 minutes each code, we would need an additional 2 minutes for the technologist to perform the PACs for all the additional images and list mode data required for the quantitation study	**2**	

6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies (This does not include minutes to assist physician and the number of post-op visits, as they

are directly related to physician work), you must provide compelling evidence. Please explain if the increase can be entirely accounted for because of an increase in physician time. **N/A**

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here: **See above table.**

8. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

Pre-Service Clinical Labor Activities:
- No Additional Activities

Intra-Service Clinical Labor Activities:
- Acquire images and PACs standards.

Post-Service Clinical Labor Activities:
- No Additional Actives

9. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived. **N/A**

10. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities: **N/A**

11. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov. **N/A**

12. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here:

13. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here:

New Item #	Name of Equipment or Supply	Invoice A PENDING	Invoice B Pending	Invoice Pending
NEW Equipment and software for SPECT-CT	Software and hardware package for non-cardiac Quantitation	$ 50,000	$70,000	$45,000.

14. List all the equipment included in your recommendation and the equipment formula chosen (see document titled “Calculating equipment time”). If you have selected “other formula” for any of the equipment please explain here:

15. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here:

16. If there is any other item on your spreadsheet that needs further explanation please include here:

17. Please include an explanation of each line item:

AMA/Specialty Society RVS Update Committee Summary of Recommendations
Negative IWPUT

January 2019

Biofeedback Training – Tab 15

The RUC identified services with a negative IWPUT and Medicare utilization over 10,000 for all services or over 1,000 for Harvard valued and CMS/Other source codes. CPT code 90911 was identified by this screen for review. At the April 2018 meeting, the specialty societies requested for the RUC to support their decision to refer this service to the CPT Editorial Panel for revision. The specialty societies noted that CPT code 90911 was initially created in 1993 for fecal incontinence. Since then, biofeedback for pelvic floor weakness has evolved and patients require disparate amounts of time for each session. Initial sessions may indeed take longer, however follow-up sessions are typically shorter. The specialty societies explained to the RUC their plan to submit a CPT code change application to delete code 90911 and create two time-based codes using 15-minute increments. The specialties also indicated they would recommend that a maximum of 4 units be billed on the same day with clear documentation of the time in the medical record. The RUC recommended CPT code 90911 be referred to CPT. In September 2018, CPT replaced one code with two new codes to describe biofeedback training initial 15 minutes of one-on-one patient contact and each additional 15 minutes of biofeedback training (one-on-one patient contact).

Compelling Evidence

The specialty societies indicated that there is compelling evidence that the physician work for this service has changed. Deleted CPT code 90911 *Biofeedback training, perineal muscles, anorectal or urethral sphincter, including EMG and/or manometry* was created and surveyed by colorectal surgeons for fecal incontinence biofeedback training, however colorectal surgeons now represent less than 2% of the 2017 Medicare utilization and are no longer the dominant provider of this service. Additionally, in 1997, CMS significantly reduced the work RVU from 2.15 to 0.89, but maintained the colorectal surgery survey time resulting in a negative IWPUT. For these reasons, the RUC determined there is compelling evidence that the physician work described in these codes has changed.

90912 ***Biofeedback training, perineal muscles, anorectal or urethral sphincter, including EMG and/or manometry when performed; initial 15 minutes of one-on-one patient contact***

The RUC reviewed the survey results from 36 gynecologists and urologists and determined that the survey 25th percentile work RVU of 0.90 appropriately accounts for the work required to perform this service. The RUC recommends 7 minutes pre-service evaluation, 5 minutes pre-service positioning and 3 minutes pre-service scrub/dress/wait pre-service time, 15 minutes intra-service time and 5 minutes immediate post-service time. The specialty societies specified that the scrub, dress and wait time includes the physician donning gloves, shaving and cleaning the patient with soap and water and applying alcohol to clean oils from the skin and any residual soap before applying the electrodes so they adhere to the patient.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

The specialty societies noted that for a new patient the typical length of the first visit is 60 minutes total. For subsequent visits, the typical length of the session is 30 minutes total, which was confirmed by the survey respondents. The specialty societies also confirmed that if there are multiple sessions, the risks/benefits will be reiterated at the beginning of the session to remind the patient of the risks and discuss ongoing management of their expectations.

The RUC questioned if this service includes only direct physician time. The specialty societies confirmed that the physician is required to perform the service the entire 15 minutes, stimulating the correct pelvic floor muscles. The RUC recommends an editorial revision that specifies "15 minutes of one-on-one physician or qualified health care professional contact with the patient" so reporting of this service is clear. CPT will review this language at the February 2019 CPT meeting.

The RUC compared the surveyed code to the top two key reference services, CPT code 99213 *Office or other outpatient visit for the evaluation and management of an established patient,* (work RVU = 0.97, 15 minutes intra-service time and 23 minutes total time) and 57160 *Fitting and insertion of pessary or other intravaginal support device* (work RVU = 0.89, 15 minutes intra-service time and 40 minutes total time) and noted that the survey respondents indicated that the surveyed code requires identical to somewhat more intensity and complexity overall, which supports the recommendation. The RUC determined that these key reference services required similar physician work and time and established the appropriate relativity for CPT code 90912. For additional support the RUC referenced MPC code 76816 *Ultrasound, pregnant uterus, real time with image documentation, follow-up (eg, re-evaluation of fetal size by measuring standard growth parameters and amniotic fluid volume, re-evaluation of organ system(s) suspected or confirmed to be abnormal on a previous scan), transabdominal approach, per fetus* (work RVU = 0.85, 15 minutes intra-service time and 31 minutes total time). **The RUC recommends a work RVU of 0.90 for CPT code 90912.**

90913 ***Biofeedback training, perineal muscles, anorectal or urethral sphincter, including EMG and/or manometry when performed; each additional 15 minutes of one-on-one patient contact (List separately in addition to code for primary procedure)***
The RUC reviewed the survey results from 36 gynecologists and urologists and determined that the survey 25th percentile work RVU of 0.50 appropriately accounts for the work required to perform this service. The RUC recommends 15 minutes intra-service/total time. The specialty societies noted for a new patient, the typical length of the first visit is 60 minutes total. For subsequent visits, the typical length of the session is 30 minutes total, which was confirmed by the survey respondents.

The RUC questioned if this service includes only direct physician time. The specialty societies confirmed that the physician is required to perform the service the entire 15 minutes, stimulating the correct pelvic floor muscles. The RUC recommends an editorial revision that specifies "15 minutes of one-on-one physician or qualified health care professional contact with the patient" so reporting of this service is clear. CPT will review this language at the February 2019 CPT meeting.

The RUC compared the surveyed code to the top two key reference services, CPT codes 51797 *Voiding pressure studies, intra-abdominal (ie, rectal, gastric, intraperitoneal) (List separately in addition to code for primary procedure)* (work RVU = 0.80, 15 minutes intra-service/total time) and 76802 *Ultrasound, pregnant uterus, real time with image documentation, fetal and maternal evaluation, first trimester (< 14 weeks 0 days), transabdominal approach; each additional gestation (List separately in addition to code for* (work RVU = 0.83, 10 minutes intra-service/total time). The RUC determined that these key reference services require more physician work and are more intense and complex to

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

perform, justifying the higher work values. For additional support the RUC referenced similar service, CPT code 11045 *Debridement, subcutaneous tissue (includes epidermis and dermis, if performed); each additional 20 sq cm, or part thereof (List separately in addition to code for primary procedure)* (work RVU = 0.50, 15 minutes intra-service/total time), which requires the same physician work and time as 90913 and should be valued identically. **The RUC recommends a work RVU of 0.50 for CPT code 90913.**

Practice Expense
The PE Subcommittee made a minor modification, reducing the razor (SK068) from 1 to 0.2, to parallel with the 0.2 stimulation sensor (SD113) because these supplies are kept for the same patient for the initial and subsequent visits. **The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.**

Refer to CPT
The RUC recommends referral to the CPT Editorial Panel that CPT codes 90912 and 90913 be revised to clarify that the physician is performing the service the entire time. The RUC recommends an editorial revision that specifies "15 minutes of one-on-one physician or qualified health care professional contact with the patient" so reporting of this service is clear and represents what was surveyed and valued at the RUC.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:90912 Tracking Number V1 Original Specialty Recommended RVU: **0.90**
Presented Recommended RVU: **0.90**
Global Period: 000 Current Work RVU: RUC Recommended RVU: **0.90**

CPT Descriptor: Biofeedback training, perineal muscles, anorectal or urethral sphincter, including EMG and/or manometry when performed; initial 15 minutes of one-on-one patient contact

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 67-year-old female has an overactive bladder with symptoms consisting of urgency, frequency and occasional urge incontinence. The patient has responded inadequately to medical therapy now and presents for biofeedback training.

Percentage of Survey Respondents who found Vignette to be Typical: 78%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The indications and risks and benefits of the procedure are reviewed with the patient. The nurse and physician work together to position the patient appropriately, usually in the lithotomy position. The perineum is prepped appropriately. The patch electrodes are placed. The transducers are hooked up to the machine and it is checked for functionality.

Description of Intra-Service Work: The patient is instructed as to what muscles to contract to help with their symptoms and the goal of treatment. Active, minute by minute interaction with the patient helps them identify muscles and increase attention to the specific muscles of interest in the perineum. The patient views their real time progress on the feedback monitor. After adequate recognition and exercise of the muscles the treatment is terminated and electrodes removed.

Description of Post-Service Work: The provider gives immediate feedback to the patient about their performance during the treatment. Goals are set with the patient and provider for the next treatment. A report for the medical record is dictated, proofread and signed by the treating physician. The results are communicated to the referring provider.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	8%	42%	50%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	25%	33%	42%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	8%	33%	58%
Physical effort required	0%	33%	67%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	42%	33%	25%

2nd Key Reference Code

	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	80%	20%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	20%	60%	20%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	80%	20%
Physical effort required	0%	80%	20%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	20%	60%	20%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

The RUC (RAW) identified services with a negative intra-service work per unit of time (IWPUT) and Medicare utilization over 10,000 for all services or over 1,000 for Harvard valued and CMS/Other source codes. The RUC recommended that these services be surveyed for April 2018. Code 90911 was identified by this screen and an action plan was presented to the RAW to refer the code to CPT to create time based codes. The CPT Editorial Panel approved two new codes to report the initial 15 minutes of biofeedback training and each additional 15 minutes.

Discussion of current RUC database time details for 90911

Code 90911 was proposed by the American Society for Colorectal Surgeons in 1993 to report post-partum fecal incontinence anorectal biofeedback with anal manometry to decreasing volumes of rectal distension. New code 90911 was proposed because anorectal manometry and EMG are frequently bundled together. The value of the new code was obtained by adding the value for EMG to the existing value for anorectal manometry. The code was survey by colorectal surgeons and the RUC approved a work RVU of 2.20.

In 1995, a CMD nominated 90911 as misvalued. ASCRS argued that nothing changed in 2 years and the RUC recommended maintaining the value approved in 1993. CMS disagreed and reduced the value to 0.89 citing it was similar to other biofeedback codes, although they did not indicate which codes. This change in work RVU resulted in a negative IWPUT because CMS maintained the colorectal surgery time.

Compelling Evidence

1. Different Specialty: Code 90911 was created and surveyed by colorectal surgeons for fecal incontinence biofeedback training, but they now represent 2% of the utilization.

2. Flawed methodology: CMS significantly decreased the work RVU in 1997, but maintained the colorectal surgery survey time resulting in a negative IWPUT.

3. New technology: The new codes describe very different work for a different patient.

Recommendation – 90912

We recommend the survey 25th percentile work RVU of 0.90.

Pre-time package 5 is selected. The procedure is typically performed in an office setting without anesthesia. Five minutes is recommended for positioning the patient in dorsal lithotomy. Three minutes is recommended for scrub / dress time for the physician to glove and gown prior to shaving the patient's perineal area where sensors will be placed.

Key Reference Codes

CPT	DESCRIPTOR	RVW	IWPUT	TOTAL TIME	PRE	INTRA	POST
57160	Fitting and insertion of pessary or other intravaginal support device	0.89	0.027	40	20	15	5
90912	Biofeedback training, perineal muscles, anorectal or urethral sphincter, including EMG and/or manometry when performed; initial 15 minutes of one-on-one patient contact	0.90	0.033	35	15	15	5
99213	Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: An expanded problem focused history; An expanded problem focused examination; Medical decision making of low complexity. Usually, the presenting problem(s) are of low to moderate severity. Typically, 15 minutes are spent face-to-face with the patient and/or family.	0.97	0.053	23	3	15	5

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 90911

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:90913 Tracking Number V2 Original Specialty Recommended RVU: **0.50**
Presented Recommended RVU: **0.50**
Global Period: ZZZ Current Work RVU: RUC Recommended RVU: **0.50**

CPT Descriptor: Biofeedback training, perineal muscles, anorectal or urethral sphincter, including EMG and/or manometry when performed; each additional 15 minutes of one-on-one patient contact (List separately in addition to code for primary procedure)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 67-year-old female has an overactive bladder with symptoms consisting of urgency, frequency and occasional urge incontinence. The patient has undergone the first 15 minutes of biofeedback training and the clinician determines she requires additional biofeedback training. Note: This is an add-on service. Only consider the additional work related to an additional 15 minutes of biofeedback training.

Percentage of Survey Respondents who found Vignette to be Typical: 81%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: n/a

Description of Intra-Service Work: Continued active, minute by minute interaction with the patient helps them identify muscles and increase attention to the specific muscles of interest in the perineum. The patient views their real time progress on the feedback monitor. Treatment continues until provider determines that adequate recognition and exercise of the muscle has been accomplished

Description of Post-Service Work: n/a

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

The RUC (RAW) identified services with a negative intra-service work per unit of time (IWPUT) and Medicare utilization over 10,000 for all services or over 1,000 for Harvard valued and CMS/Other source codes. The RUC recommended that these services be surveyed for April 2018. Code 90911 was identified by this screen and an action plan was presented to the RAW to refer the code to CPT to create time based codes. The CPT Editorial Panel approved two new codes to report the initial 15 minutes of biofeedback training and each additional 15 minutes.

Discussion of current RUC database time details for 90911

Code 90911 was proposed by the American Society for Colorectal Surgeons in 1993 to report post-partum fecal incontinence anorectal biofeedback with anal manometry to decreasing volumes of rectal distension. New code 90911 was proposed because anorectal manometry and EMG are frequently bundled together. The value of the new code was obtained by adding the value for EMG to the existing value for anorectal manometry. The code was survey by colorectal surgeons and the RUC approved a work RVU of 2.20.

In 1995, a CMD nominated 90911 as misvalued. ASCRS argued that nothing changed in 2 years and the RUC recommended maintaining the value approved in 1993. CMS disagreed and reduced the value to 0.89 citing it was similar to other biofeedback codes, although they did not indicate which codes. This change in work RVU resulted in a negative IWPUT because CMS maintained the colorectal surgery time.

Compelling Evidence

1. Different Specialty: Code 90911 was created and surveyed by colorectal surgeons for fecal incontinence biofeedback training, but they now represent 2% of the utilization.

2. Flawed methodology: CMS significantly decreased the work RVU in 1997, but maintained the colorectal surgery survey time resulting in a negative IWPUT.

3. New technology: The new codes describe very different work for a different patient.

Recommendation – 90913

We recommend the survey 25th percentile work RVU of 0.50.

Non Facility Direct Practice Expense (PE) Inputs

Global Period: 000 **Meeting Date:** January 2019

90912 *Biofeedback training, perineal muscles, anorectal or urethral sphincter, including EMG and/or manometry when performed; initial 15 minutes of one-on-one patient contact*

(For testing of rectal sensation, tone and compliance, use 91120)

(For incontinence treatment by pulsed magnetic neuromodulation, use 53899)

Global Period: ZZZ **Meeting Date:** January 2019

90913 *Biofeedback training, perineal muscles, anorectal or urethral sphincter, including EMG and/or manometry when performed;* each additional 15 minutes of one-on-one patient contact (List separately in addition to code for primary procedure)

(Use 90913 in conjunction with 90911)

---

1. **Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:**

   ACOG and AUA convened a panel that included a number of experts familiar with these services to evaluate the direct practice expense inputs for these biofeedback training procedures.

2. **You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here:**

   The direct practice expense inputs for CPT Code 90911 were included on the PE spreadsheet, as they are the existing inputs.

3. **Is this code(s) typically billed with an E/M service?** No
   Is this code(s) typically billed with the E/M service in the nonfacility? No
   (Please see provided data in PE Subcommittee folder)

4. **What specialty is the dominant provider in the nonfacility?** urology
   What percent of the time does the dominant provider provide the service(s) in the nonfacility? 34%
   Is the dominant provider in the nonfacility different then for the global? No
   (Please see provided data in PE Subcommittee folder)

5. **If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:**

   The specialties are recommending 3 minutes for clinical activity CA023 monitor patient following procedure/service, no multi-tasking. There is currently no PE standard. The current inputs include 3 minutes to assist the patient after the procedure (e.g. stability, muscle strength, pelvic floor).

6. **If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), you must provide compelling evidence. Please explain if the increase can be entirely accounted for because of an increase in physician time.**

   N/A

7. **If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here:**

   The current inputs include 3 minutes to assist the patient after the procedure, which is included under "other". The specialties have included that activity in CA023 monitor patient following procedure/service, no multi-tasking on the PE spreadsheet. (See Q4)

8. **How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? (please use this time rather than 5 minutes in your reference code)**
   The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

   Prior to CMS increasing the clinical activity to 5 minutes for obtain vital signs, CPT Code 90911 was assigned 3 minutes. Based on the number of vital signs taken (weight, height, blood pressure), the specialty is recommending 3 minutes.

9. **Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:***

   The clinical staff inputs demographic information into the biofeedback system and performs probe preparation. The clinical staff helps with passing of conduction plates, gel application, conduction plate application, cable management and intra-corporeal probe placement. The clinical staff is with the provider the entire time due to the intimate nature of the procedure.

10. **If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.**

    N/A

11. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities:

N/A

12. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

N/A

13. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here:

N/A

14. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here:

N/A

15. List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here:

EF031	Table, power	OTHER: Default formula + post procedure monitoring	Allows for lead placement, probe placement and exercise positioning
EF027	table, instrument, mobile	Default formula	Allows for access to needed supplies and biofeedback equipment during testing
EQ168	light, exam	Default formula	Visualization of perineal and vaginal area during therapy
EQ020	EMG biofeedback continence training system (Pathway CTS2000)	Highly Technical	Physical therapy device with electrical stimulation capability

16. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here:

1. The specialties are recommending a power table (instead of the exam table previously included). A power table is typical for urology and obstetric/gynecology offices as most procedures are dorsal lithotomy with padding for extended procedure times. A power table is necessary for getting the patient into the positions for placement of the vaginal probe and to maintain position during the procedure.

2. The specialties are recommending the addition of the instrument table and the light. They believe it was an oversight that they were not included on the previous recommendations. The table is necessary

for all of the equipment and supplies. An exam light is needed for prepping the patient (eg, shaving) and placing the electrodes.

3. The specialties are recommending that the clinical staff type be updated from physical therapy assistant/aide to the nurse blend. The typical providers of these services are urology, gynecology, and other physician and QHP providers which do not typically employ physical therapist assistants/aides in their office. A nurse is the typical clinical staff type in urology/gynecology practices.

4. Supply item SD113 quantity is shown as 0.2 because there are typically 5 treatments and one sensor/probe is used per patient, not per session (ie, the sensor is labeled for a single patient's use and disposed after final treatment).

17. If there is any other item on your spreadsheet that needs further explanation please include here:

N/A

18. Please include an explanation of each line item:

	SUPPLIES	Quantity	Specific Use: BASE	Quantity	Specific Use: Add-On
SB026	Gown, patient	1	For patient		
SB036	Paper, exam table	7ft	For table		
SB037	Pillow case	1	For pillow on table		
SB022	Glove, non-sterile	2	one for nurse, one for MD		
SB044	underpad 2ft x 3ft (Chux)	1	For incontinence control during testing / stimulation	1	For incontinence control during continued testing / stimulation
SD057	electrode, external pelvic muscle	3	for nerve stimulation		
SD113	sensor, EMG, vaginal-rectal	0.2	for measurement of muscle contractility		
SG055	gauze, sterile 4in x 4in	1	Assists with gel application		
SG079	tape, surgical paper 1in (Micropore)	6	Secures external electrodes		
SJ024	electrolyte coupling gel	1	Creates conduit for electrical connectivity (for the plates)		
SK059	paper, recording (per sheet)	2	Records wave forms and muscle response		
SK068	razor	1	Hair removal for electrode application		
SB006	drape, non-sterile sheet 40in x 60in	1	Provides cover of GU area during testing and connectivity

AMA/Specialty Society RVS Update Committee Summary of Recommendations
Negative IWPUT / Different Performing Specialty from Survey

January 2019

Computerized Dynamic Posturography – Tab 16

In October 2017, the RUC identified CPT code 92548 was via the negative IWPUT screen. The specialties indicated that CPT code 92548 has not been reviewed since 1997. The code descriptor for this code is vague and current utilization may not be reflective of intended use. Practice expense includes specialized computerized equipment and audiologists are included in clinical work. Neurology and audiology agree that the code descriptor and practice expense must be updated. The specialties also believe that utilization may vary for this code with providers performing this service in different ways using different (or no) equipment. Neurology and audiology reviewed current utilization among their respective provider groups to better inform the code revision/development process. The RUC referred code 92548 to the CPT Editorial Panel for revision. The RUC notes that this service was also identified via the different performing specialty from original survey in 2017. In September 2018, CPT revised one code and added another code to more accurately describe the current clinical work and equipment necessary to provide this service.

Compelling Evidence
The RUC reviewed the compelling evidence that the work has changed for CPT code 92548. First, the specialty performing the procedure has changed. In April 1996, the code was surveyed only by otolaryngology. Since then, a plurality of other specialties now peform this service more often than otolaryngology, with internal medicine being the most common specialty. Second, the current valuation results in a negative IWPUT, signifying that the relationship between the work RVU and time is not appropriate. Additionally, audiology time is currently captured as clinical labor in practice expense. However, audiologists have been able to report Medicare independently since 2008, thus audiology time should not be captured under practice expense. Rather, a portion of audiology time should be accounted for in professional work. The RUC accepted compelling evidence based on incorrect assumptions in prior valuation resulting in a negative IWPUT and a change in the performing specialty.

92548 ***Computerized dynamic posturography sensory organization test (CDP-SOT), 6 conditions (ie, eyes open, eyes closed, visual sway, platform sway, eyes closed platform sway, platform and visual sway), including interpretation and report;***
The RUC reviewed the survey results from 70 physicians and other qualified healthcare professionals and recommends the following provider time components: pre-service time of 5 minutes, intra-service time of 20 minutes and post-service time of 10 minutes. Computerized dynamic posturography tests a patient's balance control and produces quantitative data on the degree of the patient's imbalance. The sensory organization test, which is what is described by this CPT code, involves testing a patient's level of imbalance under 6 conditions (ie, eyes open, eyes closed, visual sway, platform sway, eyes closed platform sway, platform and visual sway). This service includes performing the sensory organization test, interpretation and report.

The RUC determined that the survey 25th percentile work RVU of 0.76 appropriately accounts for work involved in performing this service. To justify a work RVU of 0.76, the RUC compared the survey code to the 2nd key reference code 95992 *Canalith repositioning procedure(s) (eg, Epley maneuver, Semont maneuver), per day* (work RVU= 0.75, intra-service time of 20 minutes, total time of 30 minutes) and noted that both services have identical intra-service time, whereas the survey code involves somewhat more total time. The RUC also compared the survey code to

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

MPC code 93015 *Cardiovascular stress test using maximal or submaximal treadmill or bicycle exercise, continuous electrocardiographic monitoring, and/or pharmacological stress; with supervision, interpretation and report* (work RVU= 0.75, intra-service time of 20 minutes, total time of 26 minutes) and noted that both services involve identical intra-service time and both services involve a comparable amount of physician work. The difference in total time is made up by the comparison code being a somewhat more intense service to perform. **The RUC recommends a work RVU of 0.76 for CPT code 92548.**

92549 *Computerized dynamic posturography sensory organization test (CDP-SOT), 6 conditions (ie, eyes open, eyes closed, visual sway, platform sway, eyes closed platform sway, platform and visual sway), including interpretation and report; with motor control test (MCT) and adaptation test (ADT)*

The RUC reviewed the survey results from 54 physicians and other qualified healthcare professionals and recommends the following provider time components: pre-service time of 5 minutes, intra-service time of 27 minutes and post-service time of 10 minutes. The RUC determined that the survey 25th percentile work RVU of 0.96 appropriately values the work involved in performing this service. In addition to all of the work described by CPT code 92548, 92549 also includes the work of performing the motor control test and the adaptation test. For the motor control test, the platform is shifted horizontally rapidly for at least three different set distances, multiple times. For the adaptation test, the platform is rotated multiple times around the ankle axis. This service includes performing the sensory organization test, the motor control test, the adaptation test, interpretation and report.

The RUC inquired whether a patient would ever be brought back just to have only the two additional tests (motor control test and the adaptation test) performed and the specialties responded that would not occur. A CMS official also inquired whether it would ever be possible for both services to be reported for the same patient, and the presenters noted that would not happen. The presenters explained that is because the qualified healthcare professional would report only 92549 (CDP-SOT, -MCT, and -ADT) if it was determined that the additional two tests were needed in addition to the sensory organization test (92548). 92548 would never be reported in addition to 92549.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the respondents appropriately valued the physician work involved in performing this service at the 25th percentile work RVU of 0.96. To justify a work RVU of 0.96, the RUC compared the survey code to CPT code 95922 *Testing of autonomic nervous system function; vasomotor adrenergic innervation (sympathetic adrenergic function), including beat-to-beat blood pressure and R-R interval changes during Valsalva maneuver and at least 5 minutes of passive tilt* (work RVU= 0.96, intra-service time of 20 minutes, total time of 40 minutes) and noted that the survey code involves more intra-service and total time, though is a somewhat less intense service, and both services involve a comparable amount of physician or other qualified healthcare provider work. The RUC also compared the service to CPT code 99448 *Interprofessional telephone/Internet/electronic health record assessment and management service provided by a consultative physician…* (work RVU= 1.05, intra-service time of 25 minutes, total time of 35 minutes) and noted that although both services involve similar intra-service time, the comparison code is a somewhat more intense service to perform and that the survey code would have appropriate rank order with this comparison code at a value of 0.96. **The RUC recommends a work RVU of 0.96 for CPT code 92549.**

Practice Expense

The RUC recommends the direct practice expense inputs as submitted by the specialty society.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:92548 Tracking Number GG1 Original Specialty Recommended RVU: **0.76**
Presented Recommended RVU: **0.76**
Global Period: XXX Current Work RVU: **0.50** RUC Recommended RVU: **0.76**

CPT Descriptor: Computerized dynamic posturography sensory organization test (CDP-SOT), 6 conditions (ie, eyes open, eyes closed, visual sway, platform sway, eyes closed platform sway, platform and visual sway), including interpretation and report;

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 65-year-old female presents with complaints of constant unsteadiness when standing or walking. Symptoms are made worse when walking in the dark or on uneven surfaces. Walking with head movement also exacerbates the symptoms.

Percentage of Survey Respondents who found Vignette to be Typical: 100%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The qualified health care professional reviews the patient's chart for relevant reports of previous laboratory testing, documentation of past medical and surgical history, and whether they are taking any centrally-acting drugs or vestibular suppressants. A detailed case history is taken and the instructions for the test provided.

Description of Intra-Service Work: The patient is prepared for the dynamic posturography testing which includes a forceplate to measure sway and a visual surround that can be stationary, move in response to the forceplate, or move independent of the forceplate.

The qualified health care professional performs testing under the following 6 distinct conditions:

- Eyes open
- Eyes closed
- Visual sway
- Platform sway
- Eyes closed platform sway
- Platform and visual sway

Before each of the 6 trials, the qualified health care professional informs the patient regarding what to expect (eg, both the visual surround and the force platform will move). The patient is also instructed to stand with their eyes open or closed and to stand as still as possible. The qualified health care professional reviews the computer-generated results of the CDP-SOT and develops a report of their impressions and recommendations. The report includes the patient's balance complaints and symptoms, the pattern of results, and the qualified health care professional's recommendations.

Description of Post-Service Work: The qualified health care professional monitors the patient's recovery from the physically provocative testing. Results are then described to the patient and family/caregivers. The contributing

components to balance and stability are reviewed in relation to performance on the various subtests. A plan of care is discussed, including recommendations for therapy. The referring physician is notified of the test outcomes and recommendations. A summary of the CDP-SOT is printed out for storage in the patient's paper chart, or electronically stored in their electronic health record.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	5%	42%	47%	6%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	8%	53%	39%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	19%	56%	25%
Physical effort required	20%	56%	25%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	6%	56%	39%

2nd Key Reference Code

	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	11%	34%	50%	5%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	11%	47%	43%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	21%	50%	29%
Physical effort required	19%	32%	50%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	3%	58%	40%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Reason for Survey
CPT code 92548 (computerized dynamic posturography) was identified by the RAW during the April 2017 meeting as having a negative IWPUT and during the October 2017 meeting as a service surveyed by one specialty and now performed by a different specialty. At the October 2017 RUC meeting, the RAW agreed with the specialty societies' recommendations to bring this code back to CPT for revision to clarify its intended use and appropriately reflect the use of specialized computerized equipment referenced in the practice expense. At its October 2018 meeting, the CPT Editorial Panel approved revisions to 92548 (computerized dynamic posturography, sensory organization test) and the addition of a new code, 92549 (computerized dynamic posturography, sensory organization test, motor control test, and adaptation test), to provide more precise descriptions for accurate reporting of computerized dynamic posturography testing.

Survey Sample
The survey data and recommendations are based upon a random sample of AAA, AAN, AAO-HNS, ACP, and ASHA memberships. Specifically, ACP sent 1500 surveys to a random sample of internists; AAA and ASHA sent 400 surveys to a random sample of a subset of audiologists indicating experience in vestibular disorders; AAN sent 806 surveys to a random sample of members of established AAN sections; and AAO-HNS sent 847 surveys to a random sample of otologists. Additionally, a targeted survey was sent to 284 members of the American Balance Society (ABS), at the approval of the Research Subcommittee. The total sample size was 3,837, with 70 completed responses. Of those 70 responses, 30 came from audiologists who received the targeted survey, 21 came from otolaryngologists, 12 came from the random sample of audiologists, and 7 came from neurologists.

Internal Medicine Response Rate
The ACP believes that it would be extremely difficult, if not impossible, to find members who perform this service via a RUC survey of this code using a random sample. According to the RUC database, this code was performed 43,768 times under Medicare in 2017. Of the 43,768 times this code was performed, 27.24% (approximately 11,922) was performed by Internists. The Medicare utilization data shows 120 different internal medicine clinicians performed posturography services in 2016, accounting for the 11,922 times the service was performed; only 43% (approximately 52) of the 120 clinicians performing the service are ACP members.

ACP has 155,000 members, meaning that only one in 2981 ACP members perform this service. Not one of the ACP members listed in the Medicare utilization data were randomly selected in the RUC survey for posturography services, accounting for zero (0) internal medicine responses.

Expert Panel Recommendations
An expert panel of neurologists, otolaryngologists, and audiologists was convened to consider the survey data and provide recommendations regarding appropriate times and professional work values, as outlined below.

We recommend the 25th percentile **work RVU of 0.76 and the median times of 10 minutes (pre), 20 minutes (intra), and 10 minutes (post) for a total of 40 minutes.** To support this recommendation, we cite **CPT code 94660** (Continuous positive airway pressure ventilation (CPAP), initiation and management) as a comparison code, also with a work RVU of 0.76 and 10 minutes (pre), 20 minutes (intra), and 10 minutes (post) for a total of 40 minutes.

Time
The expert panel agrees with the median survey times of **10 minutes (pre), 20 minutes (intra), and 10 minutes (post) for a total of 40 minutes**. We believe these times are appropriate and reflect the complexity of working with patients with balance impairments.

Work RVU
The expert panel reviewed the median survey work RVU of 1.20 and agreed that it is not an appropriate value and would create a rank order anomaly within the family of vestibular codes. Instead, **we recommend the survey 25th percentile of 0.76**, which places 92548 in appropriate rank order with the rest of the vestibular family.

Compelling Evidence
The expert panel believes there is compelling evidence for an increase in the current work RVU from 0.50 to 0.76 for the following reasons:

- Negative IWPUT. **(92548 currently has a negative IWPUT of -0.0040)**

- A previous survey was conducted by one specialty to obtain a value, but the service is currently provided primarily by physicians from a different specialty according to utilization data. **(92548 was last surveyed by otolaryngology in 1996, but the primary billers are now internal medicine and neurology)**

Additionally, audiology time is currently captured as clinical labor in practice expense. However, audiologists now bill Medicare independently and audiology time should not be captured under practice expense. As such, a portion of audiology time should be accounted for in professional work.

Comparison to Other Codes

The following table outlines the key reference service, MPC, and other comparison codes to illustrate relativity and support the requested values for time and professional work for 92548.

CPT Code	Descriptor	RVW	IWPUT	Total Time	PRE	INTRA	POST	Note
95251	Ambulatory continuous glucose monitoring of interstitial tissue fluid via a subcutaneous sensor for a minimum of 72 hours; analysis, interpretation and report	0.70	0.039	20	2	15	3	MPC
51784	Electromyography studies (EMG) of anal or urethral sphincter, other than needle, any technique	0.75	0.013	45	15	20	10	
95992	Canalith repositioning procedure(s) (eg, Epley maneuver, Semont maneuver), per day	0.75	0.026	30	0	20	10	2nd key reference
92548	Computerized dynamic posturography sensory organization test (CDP-SOT), 6 conditions (ie, eyes open, eyes closed, visual sway, platform sway, eyes closed platform sway, platform and visual sway), including interpretation and report;	0.76	0.016	40	10	20	10	Survey code
94660	Continuous positive airway pressure ventilation (CPAP), initiation and management	0.76	0.016	40	10	20	10	Comparison
95972	Electronic analysis of implanted neurostimulator pulse generator system (eg, rate, pulse amplitude, pulse duration, configuration of wave form, battery status, electrode selectability, output modulation, cycling, impedance and patient compliance measurements); complex spinal cord, or peripheral (ie, peripheral nerve, sacral nerve, neuromuscular) (except cranial nerve) neurostimulator pulse generator/transmitter, with intraoperative or subsequent programming	0.80	0.022	36	8	23	5	MPC

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 92548

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Internal Medicine How often? Rarely

Specialty Neurology How often? Rarely

Specialty Audiology How often? Rarely

Specialty Otolaryngology How often? Rarely

Estimate the number of times this service might be provided nationally in a one-year period? 52000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. We used proprietary actuarial data related to commercial billing for 92548 and 2017

Medicare data to estimate total utilization, with the assumption that approximately 20% of the billing of 92548 will transfer to new code 92549.

Specialty Internal Medicine	Frequency 14165	Percentage 27.24 %
Specialty Neurology	Frequency 10436	Percentage 20.06 %
Specialty Audiology	Frequency 6417	Percentage 12.34 %
Specialty Otolaryngology	Frequency 5710	Percentage 10.98 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 35,014 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. We used 2017 Medicare utilization data, with the assumption that approximately 20% of the billing of 92548 will transfer to new code 92549.

Specialty Internal Medicine	Frequency 9538	Percentage 27.24 %
Specialty Neurology	Frequency 7027	Percentage 20.06 %
Specialty Family Practice	Frequency 4695	Percentage 13.40 %
Specialty Audiology	Frequency 4320	Percentage 12.33 %
Specialty Otolaryngology	Frequency 3845	Percentage 10.98 %

Do many physicians perform this service across the United States? Yes

---

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:92549 Tracking Number Original Specialty Recommended RVU: **0.96**
Presented Recommended RVU: **0.96**
Global Period: XXX Current Work RVU: RUC Recommended RVU: **0.96**

CPT Descriptor: Computerized dynamic posturography sensory organization test (CDP-SOT), 6 conditions (ie, eyes open, eyes closed, visual sway, platform sway, eyes closed platform sway, platform and visual sway), including interpretation and report; with motor control test (MCT) and adaptation test (ADT)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 77-year-old man presents with complaints of constant severe unsteadiness when standing or walking and a history of falls. Symptoms are made worse when standing or walking in the dark or on uneven surfaces, as well as on soft and/or moving surfaces. Rapid movements and walking with head movement also exacerbate the symptoms.

Percentage of Survey Respondents who found Vignette to be Typical: 98%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The qualified health care professional reviews the patient's chart for relevant reports of previous laboratory testing, documentation of past medical and surgical history, and whether they are taking any centrally-acting drugs or vestibular suppressants. A detailed case history is taken and the instructions for the test provided.

Description of Intra-Service Work: The patient is prepared for the dynamic posturography testing which includes a forceplate to measure sway and a visual surround that can be stationary, move in response to the forceplate, or move independent of the forceplate.

The qualified health care professional performs testing under the following 6 distinct conditions:

- Eyes open
- Eyes closed
- Visual sway
- Platform sway
- Eyes closed platform sway
- Platform and visual sway

Before each of the 6 trials, the qualified health care professional informs the patient regarding what to expect (eg, both the visual surround and the force platform will move). The patient is also instructed to stand with their eyes open or closed and to stand as still as possible. After the 6 CDP-SOT conditions are performed, the platform is shifted rapidly horizontally (CDP-MCT), at least 3 different set distances, multiple times. Following the horizontal shifts, the platform is rapidly rotated multiple times around the ankle axis (CDP-ADT). The qualified health care professional reviews the computer-generated results of the CDP-SOT, -MCT, and -ADT and develops a report of their impressions and recommendations. The report includes the patient's balance complaints and symptoms, the pattern of results, and the qualified health care professional's recommendations.

Description of Post-Service Work: The qualified health care professional monitors the patient's recovery from the physically provocative testing. Results are then described to the patient and family/caregivers. The contributing components to balance and stability are reviewed in relation to performance on the SOT subtests. The qualified healthcare professional also reviews the MCT and ADT results and the patient's potential for therapeutic outcome. A plan of care is discussed, including recommendations for therapy. The referring physician is notified of the test outcomes and recommendations. A summary of the CDP-SOT, -MCT, and -ADT is printed out for storage in the patient’s paper chart, or electronically stored in their electronic health record.

Physical effort required	20%	60%	20%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	20%	40%	40%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Reason for Survey
CPT code 92548 (computerized dynamic posturography) was identified by the RAW during the April 2017 meeting as having a negative IWPUT and during the October 2017 meeting as a service surveyed by one specialty and now performed by a different specialty. At the October 2017 RUC meeting, the RAW agreed with the specialty societies' recommendations to bring this code back to CPT for revision to clarify its intended use and appropriately reflect the use of specialized computerized equipment referenced in the practice expense. At its October 2018 meeting, the CPT Editorial Panel approved revisions to 92548 (computerized dynamic posturography, sensory organization test) and the addition of a new code, 92549 (computerized dynamic posturography, sensory organization test, motor control test, and adaptation test), to provide more precise descriptions for accurate reporting of computerized dynamic posturography testing.

Survey Sample
The survey data and recommendations are based upon a random sample of AAA, AAO-HNS, ACP, and ASHA memberships. Specifically, ACP sent 1500 surveys to a random sample of internists; AAA and ASHA sent 400 surveys to a random sample of a subset of audiologists indicating experience in vestibular disorders and AAO-HNS sent 847 surveys to a random sample of otologists. Additionally, a targeted survey was sent to 284 members of the American Balance Society (ABS), at the approval of the Research Subcommittee. The total sample size was 3,031, with 54 completed responses. Of those 54 responses, 26 came from audiologists who received the targeted survey, 20 came from otolaryngologists, and 8 came from the random sample of audiologists.

Internal Medicine Response Rate
The ACP believes that it would be extremely difficult, if not impossible, to find members who perform this service via a RUC survey of this code using a random sample. According to the RUC database, this code was performed 43,768 times under Medicare in 2017. Of the 43,768 times this code was performed, 27.24% (approximately 11,922) was performed by Internists. The Medicare utilization data shows 120 different internal medicine clinicians performed posturography services in 2016, accounting for the 11,922 times the service was performed; only 43% (approximately 52) of the 120 clinicians performing the service are ACP members.

ACP has 155,000 members, meaning that only one in 2981 ACP members perform this service. Not one of the ACP members listed in the Medicare utilization data were randomly selected in the RUC survey for posturography services, accounting for zero (0) internal medicine responses.

Expert Panel Recommendations
An expert panel of neurologists, otolaryngologists, and audiologists was convened to consider the survey data and provide recommendations regarding appropriate times and professional work values, as outlined below.

We recommend the **25th percentile work RVU of 0.96 and the median times of 10 minutes (pre), 27 minutes (intra), and 14 minutes (post) for a total of 51 minutes.** Note that this recommendation results in an IWPUT of 0.016, which is identical to the IWPUT of 92548 (computerized dynamic posturography, sensory organization test), placing it in appropriate rank order with 92548 and the rest of the vestibular family of codes.

Time
The expert panel agrees with the median survey times of **10 minutes (pre), 27 minutes (intra), and 14 minutes (post) for a total of 51 minutes**. We believe these times are appropriate and reflect the complexity of working with patients with balance impairments.

Work RVU
The expert panel reviewed the median survey work RVU of 1.50 and agreed that it is not an appropriate value and would create a rank order anomaly within the family of vestibular codes. Instead, **we recommend the survey 25th percentile of 0.96**, which places 92549 in appropriate rank order with 92548 and the rest of the vestibular family of codes.

Compelling Evidence
The expert panel believes there is compelling evidence for an increase in work value for the computerized dynamic posturography family of codes for the following reasons:

- Negative IWPUT. **(The current code 92548 has a negative IWPUT of -0.0040)**

- A previous survey was conducted by one specialty to obtain a value, but the service is currently provided primarily by physicians from a different specialty according to utilization data. **(92548 was last surveyed by otolaryngology in 1996, but the primary billers are now internal medicine and neurology)**

Additionally, audiology time is currently captured as clinical labor in practice expense for 92548. However, audiologists now bill Medicare independently and audiology time should not be captured under practice expense. As such, a portion of audiology time should be accounted for in professional work.

Comparison to Other Codes

The following table outlines the key reference service, MPC, and other comparison codes to illustrate relativity and support the requested values for time and professional work for 92548.

CPT Code	Descriptor	RVW	IWPUT	Total Time	PRE	INTRA	POST	Note
95992	Canalith repositioning procedure(s) (eg, Epley maneuver, Semont maneuver), per day	0.75	0.026	30	0	20	10	2nd key reference
76816	Ultrasound, pregnant uterus, real time with image documentation, follow-up (eg, re-evaluation of fetal size by measuring standard growth parameters and amniotic fluid volume, re-evaluation of organ system(s) suspected or confirmed to be abnormal on a previous scan), transabdominal approach, per fetus	0.85	0.033	31	6	15	10	MPC
95803	Actigraphy testing, recording, analysis, interpretation, and report (minimum of 72 hours to 14 consecutive days of recording)	0.90	0.011	50	15	20	15	
92549	Computerized dynamic posturography sensory organization test (CDP-SOT), 6 conditions (ie, eyes open, eyes closed, visual sway, platform sway, eyes closed platform sway, platform and visual sway), including interpretation and report; with motor control test (MCT) and adaptation test (ADT)	0.96	0.016	51	10	27	14	Survey code
95922	Testing of autonomic nervous system function; vasomotor adrenergic innervation (sympathetic adrenergic function), including beat-to-beat blood pressure and R-R interval changes during Valsalva maneuver and at least 5 minutes of passive tilt	0.96	0.026	40	10	20	10	
76805	Ultrasound, pregnant uterus, real time with image documentation, fetal and maternal evaluation, after first trimester (> or = 14 weeks 0 days), transabdominal approach; single or first gestation	0.99	0.049	26	5	15	6	MPC
95805	Multiple sleep latency or maintenance of wakefulness testing, recording, analysis and interpretation of physiological measurements of sleep during multiple trials to assess sleepiness	1.20	0.026	50	15	20	15	

CPT Code	Descriptor	RVW	IWPUT	Total Time	PRE	INTRA	POST	Note
92540	Basic vestibular evaluation, includes spontaneous nystagmus test with eccentric gaze fixation nystagmus, with recording, positional nystagmus test, minimum of 4 positions, with recording, optokinetic nystagmus test, bidirectional foveal and peripheral stimulation, with recording, and oscillating tracking test, with recording	1.50	0.0187	77	7	60	10	1st key reference HCPAC MPC

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 92548

How often do physicians <u>in your specialty</u> perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Internal Medicine How often? Rarely

Specialty Neurology How often? Rarely

Specialty Audiology How often? Rarely

Specialty Otolaryngology How often? Rarely

Estimate the number of times this service might be provided nationally in a one-year period? 13000
If the recommendation is from multiple specialties, please provide the frequency and <u>percentage</u> for each specialty. Please explain the rationale for this estimate. We used proprietary actuarial data related to commercial billing for 92548 and 2017

Medicare data to estimate total utilization, with the assumption that approximately 20% of the billing of 92548 will transfer to new code 92549.

Specialty Internal Medicine	Frequency 3540	Percentage 27.23 %
Specialty Neurology	Frequency 2609	Percentage 20.06 %
Specialty Audiology	Frequency 1604	Percentage 12.33 %
Specialty Otolaryngology	Frequency 1427	Percentage 10.98 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 8,753
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. We used 2017 Medicare utilization data, with the assumption that approximately 20% of the billing of 92548 will transfer to new code 92549.

Specialty Internal Medicine	Frequency 2384	Percentage 27.23 %
Specialty Neurology	Frequency 1757	Percentage 20.07 %
Specialty Family Practice	Frequency 1173	Percentage 13.40 %
Specialty Audiology	Frequency 1080	Percentage 12.33 %
Specialty Otolaryngology	Frequency 961	Percentage 10.98 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Tests

BETOS Sub-classification:
Other tests

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 92548

CPT Code: 92548, 92549
Specialty Society: AAN (92548), AAA, ACP, AAO-HNS, ASHA

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Non Facility Direct Practice Expense (PE) Inputs

CPT Long Descriptor:

92548 Computerized dynamic posturography sensory organization test (CDP-SOT), 6 conditions (ie, eyes open, eyes closed, visual sway, platform sway, eyes closed platform sway, platform and visual sway), including interpretation and report;

92549 with motor control test (MCT) and adaption test (ADT)

Global Period: **92548 - XXX 92549 - ZZZ** Meeting Date: **January 2019**

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:
   The practice expense elements were determined by a consensus panel of neurologists, otolaryngologists, and audiologists from different practice settings (eg, private practice, clinic, hospital-based) and geographic regions of the country.

2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here:
   The panel drew upon the current practice expense inputs for CPT code 92548 (computerized dynamic posturography).

3. Is this code(s) typically billed with an E/M service?
   92548 – No 92549 – N/A

   Is this code(s) typically billed with the E/M service in the nonfacility?
   92548 – No 92549 – N/A

4. What specialty is the dominant provider in the nonfacility?
   92548 – Internal Medicine 92549 – N/A

   What percent of the time does the dominant provider provide the service(s) in the nonfacility?
   92548 - 100% 92549 – N/A

   Is the dominant provider in the nonfacility different then for the global?
   92548 – No 92549 – N/A

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time: **N/A – we are not recommending more minutes than the PE Subcommittee standards for clinical activities.**

6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), you must provide compelling evidence. Please explain if the increase can be entirely accounted for because of an increase in physician time. **N/A – we are not recommending an increase over the current aggregate cost.**

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here: **N/A**

8. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:* **N/A. We are recommending removal of clinical staff time during the intra-service (of service period).**

9. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived. **N/A**

10. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities: **N/A**

11. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov. **N/A**

12. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here: **N/A**

13. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here: **We are not requesting new equipment. However, we are submitting invoices for consideration of an update to the purchase price of EQ002 (CDP-computerized dynamic posturography system).**

    There are two types of systems now typically used by practices—CDP with an immersive visual field and CDP with a dynamic visual surround. Immersive visual field systems have emerged since the last time 92548 was reviewed in the 1990s and should be considered when pricing this equipment.

14. List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here:

    EQ002 CDP-computerized dynamic posturography system – other formula

    We used the qualified health care professional's intra-service time as the base of the calculation of total equipment time. We then added the clinical staff time for CA013 (Prepare room, equipment and supplies) and CA024 (Clean room/equipment by clinical staff), as the equipment is unavailable for use for other patients during this time.

15. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here: ***See the table on page 3 for further details on each recommendation.***

16. If there is any other item on your spreadsheet that needs further explanation please include here: **N/A**

17. Please include an explanation of each line item:

Duplex Scan Arterial Inflow-Venous Outflow – Tab 17

In September 2018, CPT replaced one G-code (G0365) with two new codes to describe the duplex scan of arterial inflow and venous outflow for preoperative vessel assessment prior to creation of hemodialysis access for complete bilateral and unilateral study.

Compelling Evidence
The RUC reviewed the specialty's presented argument for compelling evidence based on the following three criteria:

1. Documentation in the peer-reviewed medical literature or other reliable data that there have been changes in physician work due to one or more of the following: technique
2. Evidence that incorrect assumptions were made in the previous valuation of the service, as documented, such as: a flawed mechanism or methodology used in the previous valuation
3. An anomalous relationship between the code being valued and other codes.

1. Code G0365 was created by CMS in 2005 to analyze the relationship between venous mapping utilization and fistula formation. Accrediting bodies have since established detailed practice guidelines for this procedure redefining the technique and recommending additional study components that were not part of the original intention of this G-code. Pre-operative vascular imaging has since been shown to be exceedingly beneficial to the successful creation of a functional hemodialysis access and has been acceptable as standard of care. The emphasis has shifted from the relationship between mapping and fistula formation to a thorough evaluation of the veins and arteries of the upper extremity(ies) to find not a suitable vein but the patient's best option for success. This evolution in technique represents compelling evidence for a change in work, when G0365 was converted to Category I CPT codes 93985 and 93986.

2. Incorrect assumptions were made in the previous valuation: flawed methodology. The work RVU for G0365 was estimated by crosswalking to CPT 93990 *Duplex scan of hemodialysis access (including arterial inflow, body of access and venous outflow* (work RVU= 0.50) . This code was surveyed as part of the vascular lab family in April 2014 and increased in value from an RVU of 0.25 to 0.50; however, a corresponding increase was never applied to G0365 and it remained crosswalked to the previous value.

3. An anomalous relationship between the code being valued and other codes. Code G0365 and now 93985, include the evaluation of arteries and veins in both upper extremities. As currently valued at 0.25 RVU, it is the lowest of all the vascular lab studies, lower than other codes that describe limited or unilateral exams of only venous *or* arterial structures. These discrepancies support the need for RVU changes to correct the anomalies.

The RUC accepted compelling evidence based on a change in technique, incorrect assumptions were made in the previous valuation and rank order anomaly between G0365 and other vascular lab studies.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

93985 ***Duplex scan of arterial inflow and venous outflow for preoperative vessel assessment prior to creation of hemodialysis access; complete bilateral study***
The RUC reviewed the survey results from 69 vascular surgeons, nephrologists and radiologists and recommend the following physician time components: 5 minutes of pre-service, 17 minutes of intra-service time and 5 minutes of immediate post-service time.

The RUC determined the survey 25th percentile work RVU of 0.80 appropriately accounts for the physician work involved in performing this service. To justify a work RVU of 0.80, the RUC compared the survey code to top key reference code 93930 *Duplex scan of upper extremity arteries or arterial bypass grafts; complete bilateral study* (work RVU= 0.80, intra-service time of 15 minutes, total time of 25 minutes) and noted that the survey code involves slightly more intra-service and total time and a comparable amount of physician work. Also, both services are bilateral vascular lab studies of the upper extremities with analogous physician work. The RUC also compared the survey code to CPT code 93925 *Duplex scan of lower extremity arteries or arterial bypass grafts; complete bilateral study* (work RVU= 0.80, intra-service time of 15 minutes, total time of 25 minutes) and noted that the survey code involves slightly more intra-service and total time and a comparable amount of physician work. **The RUC recommends a work RVU of 0.80 for CPT code 93985.**

93986 ***Duplex scan of arterial inflow and venous outflow for preoperative vessel assessment prior to creation of hemodialysis access; complete unilateral study***
The RUC reviewed the survey results from 69 vascular surgeons, nephrologists and radiologists and recommends the following physician time components: 5 minutes of pre-service, 10 minutes of intra-service time and 5 minutes of immediate post-service time. The RUC determined the survey 25th percentile work RVU of 0.50 appropriately accounts for the physician work involved in performing this service. To justify a work RVU of 0.50, the RUC compared the survey code to top key reference code 93990 *Duplex scan of hemodialysis access (including arterial inflow, body of access and venous outflow)* (work RVU= 0.50, intra-service 11 minutes, total time of 21 minutes) and noted that both services involve similar intra-service time and total time and a comparable amount of physician work. The work between these two services are somewhat different but comparable; unlike 93990 which includes imaging only of arteries and veins in the already functioning dialysis circuit, pre-operative code 93986 includes all of the arteries and veins in the arm. The RUC also compared the survey code to 2nd key reference code 93931 *Duplex scan of upper extremity arteries or arterial bypass grafts; unilateral or limited study* (work RVU= 0.50, intra-service time of 10 minutes, total time of 20 minutes) and noted that both service have identical times and involve a similar amount of physician work. It was noted that the reference code involves only evaluating arteries in a unilateral upper extremity, whereas the survey code involves evaluating all of the arteries and veins, confirming that the value of the survey code should be at least as high as this reference code. **The RUC recommends a work RVU of 0.50 for CPT code 93986.**

Practice Expense
The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.

Extremity Arterial-Venous Studies

A complete extremity duplex scan (93985, 93986) includes evaluation of both arterial inflow and venous outflow for preoperative vessel assessment prior to creation of hemodialysis access. If only an arterial extremity duplex scan is performed, see 93925, 93926, 93930, 93931. If only a venous extremity duplex scan is performed, see 93970, 93971. If a physiologic arterial evaluation of extremities is performed, see 93922, 93923, 93924.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:93985 Tracking Number X1 Original Specialty Recommended RVU: **0.80**
Presented Recommended RVU: **0.80**
Global Period: XXX Current Work RVU: RUC Recommended RVU: **0.80**

CPT Descriptor: Duplex scan of arterial inflow and venous outflow for preoperative vessel assessment prior to creation of hemodialysis access; complete bilateral study

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 65-year-old male presents for evaluation for an autogenous arteriovenous fistula for hemodialysis. Complete bilateral duplex scans of arterial inflow and venous outflow are performed.

Percentage of Survey Respondents who found Vignette to be Typical: 89%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review the noninvasive diagnostic test requisition form, noting the patient's medical history, risk factors, and clinical history providing the indication for the examination. Review previous diagnostic studies for the patient that may be used for comparative surveillance or to diagnose disease progression.

Description of Intra-Service Work: Supervise the technologist's image acquisition and evaluation of the bilateral upper extremity arterial inflow and venous outflow structures for the potential creation of a new hemodialysis access. This includes assessment of the anatomy, internal vessel diameters, patency and flow dynamics of the bilateral subclavian, axillary, brachial, median cubital, basilic and cephalic veins; as well as the axillary, brachial, ulnar and/or radial arteries. Special attention must be paid to the superficial veins regarding their suitability for use as arterial venous fistula. Analyze images, velocities and data. Summarize findings regarding all evaluated vessels and make final recommendation regarding best fistula options. Dictate a report.

Description of Post-Service Work: Review and sign the report. Send a copy of the report to the referring physician and/or primary care provider. Archive study. Provide a verbal report of critical results directly to the referring physician.

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	14%	50%	36%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

Code G0365 was identified by the Relativity Assessment Workgroup through a screen of CMS/Other codes with Medicare utilization of 30,000 or more. After review of the specialties' Action Plan, the RAW referred code G0365 to CPT to convert to a Category I code for the 2020 CPT cycle.

In 2005 CMS created G Code G0365 *Vessel mapping of vessels for hemodialysis access (services for preoperative vessel mapping prior to creation of hemodialysis access using an autogenous hemodialysis conduit, including arterial inflow and venous outflow)* to create the opportunity for CMS to analyze the relationship between venous mapping utilization and fistula formation. The code descriptor enabled clinicians, other than the operating surgeon, who provide care to ESRD patients the opportunity to bill for this service. CMS believed that vessel mapping requires the assessment of the arterial and venous vessels in order to provide the information necessary for the creation of an autogenous conduit. CMS crosswalked G0365 to CPT code 93990 for work, malpractice, and practice expense RVUs because these RVUs appropriately reflected the work and resources of this new G-code. **Note:** CPT Code 93990 was updated for CY2015 however, the crosswalk data for G0365 was not updated at that time.

Compelling Evidence

We believe 93985 meets compelling evidence thresholds by three standards.

1. Documentation in the peer-reviewed medical literature or other reliable data that there have been changes in physician work due to one or more of the following: technique
2. Evidence that incorrect assumptions were made in the previous valuation of the service, as documented, such as: a flawed mechanism or methodology used in the previous valuation
3. An anomalous relationship between the code being valued and other codes.

1. Code G0365 was created by CMS in 2005 to analyze the relationship between venous mapping utilization and fistula formation. Accrediting bodies have since established detailed practice guidelines for this procedure redefining the technique and recommending additional study components that were not part of the original intention of this G-code. (See supplemental files: IAC 2018 Vascular Testing Standards and SVU 2012 Upper Extremity Vein Mapping for Creation of a Dialysis Access or Peripheral Vascular Bypass Graft.) Pre-operative vascular imaging has since been shown to be exceedingly beneficial to the successful creation of a functional hemodialysis access and has been acceptable as standard of care. The emphasis has shifted from the relationship between mapping and fistula formation to a thorough evaluation of the veins and arteries of the upper extremity(ies) to find not a suitable vein but the patient's *best* option for success. This evolution in technique represents compelling evidence for an increase in RVUs when G0365 is converted to category 1 CPT codes 93985 and 93986.

2. Incorrect assumptions were made in the previous valuation: flawed methodology. The RVU for G0365 were estimated by crosswalking to CPT 93990 (*Duplex scan of hemodialysis access (including arterial inflow, body of access and venous outflow*). This code was surveyed as part of the vascular lab family in April 2014 and increased in value from an RVU of 0.25 to 0.50; however, a corresponding increase was never applied to G0365 and it remained crosswalked to the previous value. We believe this represents a flawed methodology as the RUC approved the compelling evidence that 93990 was undervalued and approved the survey data increasing the RVU for 93990. If this code was truly an appropriate crosswalk for G0365, then the increase should have been appropriate as well.

3. An anomalous relationship between the code being valued and other codes. G0365 and now 93985 include the evaluation of arteries and veins in both upper extremities. As currently valued at 0.25 RVU, it is the lowest of all the vascular lab studies, lower than other codes that describe limited or unilateral exams of only venous *or* arterial structures. These discrepancies support the need for RVU changes to correct the anomalies.

Work RVU Recommendation

We are recommending the median survey value of 0.80 RVW for 93985.

Comparison with Key Reference Services

There was not one dominant KRS chosen by the survey respondents. CPT code 93930 *(Duplex scan of upper extremity arteries or arterial bypass grafts; complete bilateral study)* was chosen by 30% and CPT code 93970 (*Duplex scan of extremity veins including responses to compression and other maneuvers; complete bilateral study*) was chosen by another 20%. These codes are both bilateral vascular lab studies and compare favorably with 93985 as shown in the table below.

	RVW	IWPUT	Total Time	Pre	Intra	Post
93930	0.80	0.038	25	5	15	5
93985	0.80	0.034	27	5	17	5
93970	0.70	0.035	23	3	15	5

Comparison to MPC codes

MPC 95971, RVU 0.78
Electronic analysis of implanted neurostimulator pulse generator system (eg, rate, pulse amplitude, pulse duration, configuration of wave form, battery status, electrode selectability, output modulation, cycling, impedance and patient compliance measurements); simple spinal cord, or peripheral (ie, peripheral nerve, sacral nerve, neuromuscular) neurostimulator pulse generator/transmitter, with intraoperative or subsequent programming

MPC 76700, RVU 0.81
Ultrasound, abdominal, real time with image documentation; complete

	RVW	IWPUT	Total Time	Pre	Intra	Post
95971	0.78	0.024	33	8	20	5
93985	0.80	0.034	27	5	17	5
76700	0.81	0.053	21	5	11	5

Conclusion
CMS proposed the G-code G0365 to create the opportunity for them to analyze the relationship between venous mapping utilization and fistula formation in the 2005 MFS Final Rule. Pre-operative vascular mapping has been become the standard of care and multiple publications and guidelines have been established further defining the technique for performing the evaluation of the patients. As a result, there has been an expected increase in the utilization of this code to the point where it was identified by the RAW fur to utilization of 30,000 or more of a CMS/other code. We therefore recommended the G-code be converted to the two category 1 CPT codes presented today, mirroring other vascular lab codes with a bilateral and a unilateral version. We have presented compelling evidence for an increase in RVU along with strong multispecialty survey data supported by comparisons to key reference services and MPC codes. We therefore recommend the median survey value of 0.80 RVU for CPT code 93985.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) G0365

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty vascular surgery How often? Commonly

Specialty nephrology How often? Commonly

Specialty radiology How often? Rarely

Estimate the number of times this service might be provided nationally in a one-year period?
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. National data not available

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 11,300 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The current RUC database indicated G0365 was billed approximately 38,000 in 2017. The units of service file, circulated for the January 2019 RUC meeting, indicate that G0365 was reported greater than once in 28% of the claims. As such, the specialties estimate this service might be reported 11,300 in Medicare. However, the data remain unclear.

Specialty vascular surgery Frequency 4520 Percentage 40.00 %

Specialty nephrology Frequency 3165 Percentage 28.00 %

Specialty radiology Frequency 678 Percentage 6.00 %

Do many physicians perform this service across the United States? Yes

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:93986 Tracking Number X2 Original Specialty Recommended RVU: **0.55**
Presented Recommended RVU: **0.55**
Global Period: XXX Current Work RVU: RUC Recommended RVU: **0.50**

CPT Descriptor: Duplex scan of arterial inflow and venous outflow for preoperative vessel assessment prior to creation of hemodialysis access; complete unilateral study

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 65-year-old male presents for evaluation for an autogenous arteriovenous fistula for hemodialysis. Complete unilateral duplex scans of arterial inflow and venous outflow are performed.

Percentage of Survey Respondents who found Vignette to be Typical: 91%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review the noninvasive diagnostic test requisition form, noting the patient's medical history, risk factors, and clinical history providing the indication for the examination. Review previous diagnostic studies for the patient that may be used for comparative surveillance or to diagnose disease progression.

Description of Intra-Service Work: Supervise the technologist's image acquisition and evaluation of the selected upper extremity arterial inflow and venous outflow structures for the potential creation of a new hemodialysis access. This includes assessment of the anatomy, internal vessel diameters, patency and flow dynamics of the subclavian, axillary, brachial, median cubital, basilic and cephalic veins; as well as the axillary, brachial, ulnar and/or radial arteries. Special attention must be paid to the superficial veins regarding their suitability for use as arterial venous fistula. Analyze all images, velocities and data. Summarize findings regarding all evaluated vessels and make final recommendation regarding best fistula options. Dictate a report.

Description of Post-Service Work: Review and sign the report. Send a copy of the report to the referring physician and/or primary care provider. Archive study. Provide a verbal report of critical results directly to the referring physician.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	7%	73%	20%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	13%	60%	27%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	80%	20%
Physical effort required	0%	93%	7%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	13%	67%	20%

2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	60%	40%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	10%	50%	40%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	60%	40%
Physical effort required	0%	70%	30%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	20%	40%	40%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

Code G0365 was identified by the Relativity Assessment Workgroup through a screen of CMS/Other codes with Medicare utilization of 30,000 or more. After review of the specialties' Action Plan, the RAW referred code G0365 to CPT to convert to a Category I code for the 2020 CPT cycle

In 2005 CMS created G Code G0365 *Vessel mapping of vessels for hemodialysis access (services for preoperative vessel mapping prior to creation of hemodialysis access using an autogenous hemodialysis conduit, including arterial inflow and venous outflow)* to create the opportunity for CMS to analyze the relationship between venous mapping utilization and fistula formation. The code descriptor enabled clinicians, other than the operating surgeon, who provide care to ESRD patients the opportunity to bill for this service. CMS believed that vessel mapping requires the assessment of the arterial and venous vessels in order to provide the information necessary for the creation of an autogenous conduit. CMS crosswalked G0365 to CPT code 93990 for work, malpractice, and practice expense RVUs because these RVUs appropriately reflected the work and resources of this new G-code. **Note:** CPT Code 93990 was updated for CY2015 however, the crosswalk data for G0365 was not updated at that time.

Compelling Evidence

We believe 93986 meets compelling evidence thresholds by three standards.

1. Documentation in the peer-reviewed medical literature or other reliable data that there have been changes in physician work due to one or more of the following: technique
2. Evidence that incorrect assumptions were made in the previous valuation of the service, as documented, such as: a flawed mechanism or methodology used in the previous valuation
3. An anomalous relationship between the code being valued and other codes.

1. Code G0365 was created by CMS in 2005 to analyze the relationship between venous mapping utilization and fistula formation. Accrediting bodies have since established detailed practice guidelines for this procedure redefining the technique and recommending additional study components that were not part of the original intention of this G-code. (See supplemental files: IAC 2018 Vascular Testing Standards and SVU 2012 Upper Extremity Vein Mapping for Creation of a Dialysis Access or Peripheral Vascular Bypass Graft.) Pre-operative vascular imaging has since been shown to be exceedingly beneficial to the successful creation of a functional hemodialysis access and has been acceptable as standard of care. The emphasis has shifted from the relationship between mapping and fistula formation to a thorough evaluation of the veins and arteries of the upper extremity(ies) to find not a suitable vein but the patient's *best* option for success. This evolution in technique represents compelling evidence for an increase in RVUs when G0365 is converted to category 1 CPT codes 93985 and 93986.

2. Incorrect assumptions were made in the previous valuation: flawed methodology. The RVU for G0365 were estimated by crosswalking to CPT 93990 (*Duplex scan of hemodialysis access (including arterial inflow, body of access and venous outflow*). This code was surveyed as part of the vascular lab family in April 2014 and increased in value from an RVU of 0.25 to 0.50; however, a corresponding increase was never applied to G0365 and it remained crosswalked to the previous value. We believe this represents a flawed methodology as the RUC approved the compelling evidence that 93990 was undervalued and approved the survey data increasing the RVU for 93990. If this code was truly an appropriate crosswalk for G0365, then the increase should have been appropriate as well.

3. An anomalous relationship between the code being valued and other codes. G0365 and now 93986 include the evaluation of arteries *and* veins in the upper extremity. As currently valued at 0.25 RVU, it is the lowest of all the vascular lab studies, lower than other codes that describe limited or unilateral exams of only venous *or* arterial structures. These discrepancies support the need for RVU changes to correct the anomalies.

Work RVU Recommendation

We are recommending the median survey value of 0.55 RVW for 93986.

Comparison with Key Reference Services

There was not one dominant KRS chosen by the survey respondents. CPT code 93990 *(Duplex scan of hemodialysis access (including arterial inflow, body of access and venous outflow))* was chosen by 38% and CPT code 93931 (*Duplex scan of upper extremity arteries or arterial bypass grafts; unilateral or limited study*) was chosen by another 22%. These codes are both vascular lab studies and compare favorably with 93986 as shown in the table below.

	RVW	IWPUT	Total Time	Pre	Intra	Post

93990	0.50	0.025	21	5	11	5
93986	0.55	0.033	20	5	10	5
93931	0.50	0.028	20	5	10	5

Comparison to MPC codes

MPC 76857, RVU 0.50
Ultrasound, pelvic (nonobstetric), real time with image documentation; limited or follow-up (eg, for follicles)

MPC 76536, RVU 0.81
Ultrasound, abdominal, real time with image documentation; complete

	RVW	IWPUT	Total Time	Pre	Intra	Post
76857	0.50	0.039	17	5	7	5
93986	0.55	0.033	20	5	10	5
76536	0.56	0.038	18	4	10	4

Conclusion
CMS proposed the G-code G0365 to create the opportunity for them to analyze the relationship between venous mapping utilization and fistula formation in the 2005 MFS Final Rule. Pre-operative vascular mapping has been become the standard of care and multiple publications and guidelines have been established further defining the technique for performing the evaluation of the patients. As a result, there has been an expected increase in the utilization of this code to the point where it was identified by the RAW fur to utilization of 30,000 or more of a CMS/other code. We therefore recommended the G-code be converted to the two category 1 CPT codes presented today, mirroring other vascular lab codes with a bilateral and a unilateral version. We have presented compelling evidence for an increase in RVU along with strong multispecialty survey data supported by comparisons to key reference services and MPC codes. We therefore recommend the median survey value of 0.55 RVU for CPT code 93986.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) G0365

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty vascular surgery How often? Commonly

Specialty nephrology How often? Commonly

Specialty radiology How often? Rarely

Estimate the number of times this service might be provided nationally in a one-year period?
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. National data not available

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 28,000 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The current RUC database indicated G0365 was billed approximately 38,000 in 2017. The units of service file, circulated for the January 2019 RUC meeting, indicate that G0365 was reported greater than once in 28% of the claims. As such, the specialties estimate the bilateral service might be reported 11,300 in Medicare. Therefore, the specialties estimate that 28,000 unilateral services may be performed. However, the data remain unclear.

Specialty vascular surgery Frequency 11200 Percentage 40.00 %

Specialty nephrology Frequency 7840 Percentage 28.00 %

Specialty radiology Frequency 1680 Percentage 6.00 %

Do many physicians perform this service across the United States? Yes

CPT Code: 93985 and 93986
Specialty Society: SVS, RPA and ACR

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Non Facility Direct Practice Expense (PE) Inputs

Global Period: XXX **Meeting Date:** January 2019

93985 *Duplex scan of arterial inflow and venous outflow for preoperative vessel assessment prior to creation of hemodialysis access; complete bilateral study*

(Do not report 93985 in conjunction with 93925, 93930, 93970 for the same extremity[ies])

(Do not report 93985 in conjunction with 93990 for the same extremity)

93986 *Duplex scan of arterial inflow and venous outflow for preoperative vessel assessment prior to creation of hemodialysis access; complete unilateral study*

(Do not report 93986 in conjunction with 93926, 93931, 93971, 93990 for the same extremity)

---

1. **Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:**

   SVS, RPA and ACR convened a panel that included a number of experts familiar with these services to evaluate the direct practice expense inputs for these duplex procedures.

2. **You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here:**

   The specialties included the direct practice expense inputs for G0365 and CPT Code 93990 on the spreadsheet, as those are the current inputs. See Question #17.

3. **Is this code(s) typically billed with an E/M service?**
   Is this code(s) typically billed with the E/M service in the nonfacility?
   (Please see provided data in PE Subcommittee folder)

   G3065 is not typically billed with an E/M – 22%
   G3065 is not typically billed with an E/M in the NF setting – 31%

4. **What specialty is the dominant provider in the nonfacility?**
   What percent of the time does the dominant provider provide the service(s) in the nonfacility?
   Is the dominant provider in the nonfacility different then for the global?
   (Please see provided data in PE Subcommittee folder)

   Vascular Surgery is the dominant provider in the NF setting – 39%
   Vascular Surgery is dominant in both the NF setting and the global

5. **If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:**

   The specialties are recommending 4 minutes for CA013 – prepare room, equipment and supplies. The standard is 2 minutes. The extra time is needed to set up the equipment.

   The specialties are recommending 5 minutes (93985) and 8 minutes (93986) for CA030 – technologist QC's images in PACS, checking for all images, reformats, and dose page. The baseline time for this activity is 2 minutes. The extra time is needed to transfer real-time (i.e. movie-like images) in addition to static pictures into the PACs.

6. **If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), you must provide compelling evidence. Please explain if the increase can be entirely accounted for because of an increase in physician time.**

   N/A

7. **If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here:**

   G0365 had 1 minute allocated for CA012 – review requisition, assess for special needs. The original spreadsheet had 'patient history' and we felt CA012 was the closest existing clinical activity.

   G0365 has 8 minutes allocated for CA030 - Technologist QC's images in PACS, checking for all images, reformats, and dose page. The original spreadsheet had "collate preliminary data, arrange images, edit video tape" and we felt CA030 was the closest existing clinical activity.

8. **How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? (please use this time rather than 5 minutes in your reference code)**
   The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

Three minutes were allocated for CA010 – obtain vital signs, prior to CMS increasing the time to five minutes. CMS updated the time to 5 minutes for CPT Code 93990, but not G0365. The specialties are recommending three minutes for these services.

9. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

**Perform procedure/service-NOT directly related to physician work time*

Before the patient arrives

- Verify orders (appropriate indications)
- Review any previous test results or surgical procedures, if appropriate

At time of service

- Greet the patient, provide gowning, ensure appropriate medical records are available
- Provide education (give handout, explain procedure to the patient and answer questions)
- Obtain pertinent history (diabetes, pacemakers, central venous catheters, dominant hand)
- Position patient for procedure
- Prepare room, equipment and supplies

  Venous examination
  - *Use B-mode, color and spectral Doppler to assess anatomy, internal vessel diameters, patency and flow patterns in the following veins:*
    - *Subclavian*
    - *Axillary*
    - *Brachial*
    - *Median cubital vein*
    - *Basilic (assess for adequate length, variant anatomy)*
    - *Cephalic (ensure continuity with deep system)*
  - *If there are areas of thickening in the basilic or cephalic veins, a tourniquet may be applied to check for dilation. A soft stress ball may be used as well.*
  - *If there is continuous flow in the subclavian vein, assess for central vein stenosis*
  - *Mark veins on skin with an indelible marker*

  Arterial examination
  - *Perform pulse examination*
  - *Take blood pressure in both arms (assess for BP differential)*
  - *Use B-mode, color and spectral Doppler to assess the anatomy, internal vessel diameters, presence of calcification or stenosis, and velocities (e.g. Axillary, Brachial, Ulnar, Radial)*
  - *(Allen's test, or some assessment of arch) Assess palmar arch by insonating the superficial palmar artery and compressing the radial artery (checking for flow reversal indicative of a complete arch)*

- Clean gel from the patient
- Place bracelet on extremity (to prevent venipuncture) and give patient stress ball

After the patient leaves

- Clean room and equipment
- Complete worksheets (anatomical drawings)
- Technologist QC's images in PACS, checking for all images and making corrections

10. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

The specialties used CA021 – perform procedure/service – NOT directly related to physician work time for 93985 and 93986. The vascular technologist acquires the images and it does not directly relate to the amount of surveyed physician work time.

11. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities:

N/A

12. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

N/A

13. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here:

N/A

14. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here:

N/A

15. List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here:

ED053 Professional PACS Workstation – OTHER *(half physician pre-time and 100% physician intra time)*
ED050 Technologist PACS Workstation – PACS formula
EL016 room, ultrasound, vascular – Highly Technical

16. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here:

N/A

17. If there is any other item on your spreadsheet that needs further explanation please include here:

In 2005 CMS created G Code G0365 *Vessel mapping of vessels for hemodialysis access (services for preoperative vessel mapping prior to creation of hemodialysis access using an autogenous hemodialysis conduit, including arterial inflow and venous outflow)* to create the opportunity for CMS to analyze the relationship between venous mapping utilization and fistula formation. The code descriptor enabled clinicians, other than the operating surgeon, who provide care to ESRD patients the opportunity to bill for this service. CMS believed that vessel mapping requires the assessment of the arterial and venous vessels in order to provide the information necessary for the creation of an autogenous conduit. CMS crosswalked G0365 to CPT code 93990 for work, malpractice, and practice expense RVUs because these RVUs appropriately reflected the work and resources of this new G-code. **Note:** CPT Code 93990 was updated for CY2015 however the crosswalk data for G0365 was not updated at that time.

18. Please include an explanation of each line item:

Code	Description	CPT Code 93985		CPT Code 93986	
		Qty	Notes	Qty	Notes
SA048	*paper, exam table* *gloves, NS (2)* *gown, patient* *pillow case* *cover, therm*	1	Patient preparation	1

AMA/Specialty Society RVS Update Committee Summary of Recommendations

January 2019

Myocardial Strain Imaging – Tab 18

At the September 2018 CPT Editorial Panel meeting, the Panel deleted one Category III code and created one new Category I add-on code 93356 to describe the work of myocardial strain imaging performed in supplement to transthoracic echocardiography services 93303, 93304, 93306, 93307, 93308, 93350, and 93351.

93356 ***Myocardial strain imaging using speckle-tracking derived assessment of myocardial mechanics (List separately in addition to codes for echocardiography imaging)***
The RUC reviewed the survey results from 84 physicians and agreed on the following provider time components: 9 minutes of intra-service time.

The RUC reviewed the survey 25th percentile work RVU of 0.24 and agreed that this value appropriately accounts for the physician work involved. To justify a work RVU of 0.24, the RUC compared the survey code to top key reference code 93320 *Doppler echocardiography, pulsed wave and/or continuous wave with spectral display (List separately in addition to codes for echocardiographic imaging); complete* (work RVU= 0.38, intra-service time of 15 minutes) and noted that the survey code involves less time, though has a similar intensity of physician work, supporting the somewhat lower valuation. The RUC also compared the survey code to CPT code 75565 *Cardiac magnetic resonance imaging for velocity flow mapping (List separately in addition to code for primary procedure)* (work RVU= 0.25, intra-service time of 10 minutes) and noted that both services involve a similar amount of time and a similar amount of physician work. Both codes comprise a similar type of physician work as both describe velocity flow mapping in addition to a separate cardiac imaging study. **The RUC recommends a work RVU of 0.24 for CPT code 93356.**

Practice Expense
The PE Subcommittee removed the stretcher (EF018). **The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.**

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
Medicine **Cardiovascular** **Echocardiography** *Echocardiography includes obtaining ultrasonic signals from the heart and great vessels, with real time image and/or Doppler ultrasonic signal documentation, with interpretation and report. When interpretation is performed separately, use modifier 26.*

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:93356 Tracking Number Y1 Original Specialty Recommended RVU: **0.24**
Presented Recommended RVU: **0.24**
Global Period: ZZZ Current Work RVU: **n/a** RUC Recommended RVU: **0.24**

CPT Descriptor: Myocardial strain imaging using speckle tracking derived assessment of myocardial mechanics (List separately in addition to codes for echocardiography imaging)
(Use 93356 in conjunction with 93303, 93304, 93306, 93307, 93308, 93350, 93351)
(Report 93356 once per session)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 68-year-old woman is receiving trastuzumab in treatment of HER2 positive breast cancer. She presents for an echocardiogram to exclude chemotherapy related cardiotoxicity. A complete echocardiogram is performed with myocardial strain imaging.

Percentage of Survey Respondents who found Vignette to be Typical: 83%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work:

Description of Intra-Service Work: The physician reviews request for service to clarify the indications for the procedure and determine the clinical questions that need to be answered by the myocardial strain echo exam. Images of the acquired myocardial strain data are analyzed (static ± real time) on an appropriate software program to determine regional and global longitudinal, radial, and/or circumferential strain and/or strain rates. When available, these data are compared to previous studies. A report is dictated and the findings are reviewed in detail with the referring physician.

Description of Post-Service Work:

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	7%	30%	57%	7%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	17%	33%	50%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	10%	20%	70%

Physical effort required	3%	59%	38%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	50%	50%

2nd Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	6%	35%	35%	24%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	18%	35%	47%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	0%	29%	71%
Physical effort required	6%	76%	18%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	47%	53%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

New add-on code 93356 describes the work of myocardial strain imaging performed in supplement to transthoracic echocardiography services 93303, 93304, 93306, 93307, 93308, 93350, and 93351.

A joint RVS panel of ACC and ASE physicians familiar with the service reviewed survey data. The survey was completed by physicians who have experience with the service. The key reference service is 93320, a pulsed wave echocardiography add-on service. Respondents who selected the key reference service felt 93356 was somewhat more intense/complex as the key reference service, with measures trending toward the identical or more range. The times and RVUs for the surveyed code and the reference code also align well since respondents felt they strain was somewhat more intense/complex. The key reference service was selected by 34% of respondents.

The second KRS is 93308, a follow-up or limited transthoracic echocardiography. Respondents who selected the key reference service felt 93356 was more intense/complex as the key reference service, with measures trending toward the identical or more range. While 93308 is an XXX code, this comparison makes sense. Respondents would be familiar with the more commonly performed complete transthoracic echocardiography. 93308 would also be a code to which respondents may append 93356. The second key reference service was selected by 19% of respondents.

To further establish the current value within the cardiovascular family, we also compared 93356 to 75565, another add-on that describes velocity flow mapping in addition to a cardiac MRI. 75565 has almost identical time and RVUs.

The societies recommend the 25th-percentile RVW of 0.24 with no preservice time, 9 minutes intraservice time, and no postservice time. This value is supported by intensity comparison to the KRS, falls between the cited MPC codes, and aligns closely with additional comparator 75565.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. 93356 could be billed with 93303, 93304, 93306, 93307, 93308, 93350, or 93351.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 0399T

How often do physicians <u>in your specialty</u> perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty cardiology How often? Sometimes

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 600000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Twice the Medicare FFS estimate.

Specialty cardiology Frequency 600000 Percentage 100.00 %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 300,000 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The CCA estimates myocardial strain will be used with about 4% of TTEs in FFS.

Specialty cardiology Frequency 300000 Percentage 100.00 %

Specialty Frequency Percentage %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Imaging

BETOS Sub-classification:
Echography/ultrasonography

BETOS Sub-classification Level II:
Heart

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 93320

Specialty Society ACC, ASE

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Non Facility Direct Practice Expense (PE) Inputs

CPT Long Descriptor: Myocardial strain imaging using speckle tracking derived assessment of myocardial mechanics (List separately in addition to codes for echocardiography imaging)

Global Period: ZZZ Meeting Date: January 2019

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel: *The multispecialty RVS Committee utilized a consensus panel to develop recommended inputs.*

2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here: *93320 is another echo add-on service that has clinical and workflow parallels. It was selected as the KRS.*

3. Is this code(s) typically billed with an E/M service? *no*
   Is this code(s) typically billed with the E/M service in the nonfacility? *no*
   (Please see provided data in PE Subcommittee folder)

4. What specialty is the dominant provider in the nonfacility? *anticipate cardiology*
   What percent of the time does the dominant provider provide the service(s) in the nonfacility? *unknown*
   Is the dominant provider in the nonfacility different then for the global? *unknown*
   (Please see provided data in PE Subcommittee folder)

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:

6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), you must provide compelling evidence. Please explain if the increase can be entirely accounted for because of an increase in physician time.

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here: *Image acquisition, data processing, and reporting preliminary findings from 93320 is listed as CA018, 100% lined to physician time. However, those activities are better captured on the modern PE spreadsheet buy putting 12 minutes in CA021, procedure time not linked to physician time, then 2 minutes for CA031 to review exam with MD and 1 minutes for CA032 to scan exam into PACS.*

8. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? (please use this time rather than 5 minutes in your reference code) *N/A*
   The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here: *N/A*

9. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time: Clinical staff acquires the myocardial strain echocardiographic images.*

10. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

11. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities:

12. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

13. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here:

14. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here: *A myocardial strain system equipment add-on is necessary to provide this service. A paid invoice is attached/forthcoming.*

15. List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here:

ED0021: computer, desktop with monitor; default formula
EF018: stretcher; default formula
EL016: vascular ultrasound room; default formula
ED050: technologist PACS station; PACS formula
NEW: myocardial strain equipment package add-on; default formula

16. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here:

17. If there is any other item on your spreadsheet that needs further explanation please include here:

18. Please include an explanation of each line item:

Line 52: technologist acquires images
Line: 69: technologist reviews exam with interpreting MD/DO
Line 70: technologist scans images into PACS
Line 112: a desktop computer is used
Line 115: a stretcher is used
Line 116: the desktop and stretcher are used to acquire images in the vascular ultrasound room
Line 117: a PACS is used to acquire images, review the exam, and to store the images
Line 118: a myocardial strain equipment add-on package is necessary to provide this service

AMA/Specialty Society RVS Update Committee Summary of Recommendations

January 2019

Self-Measured Blood Pressure Monitoring – Tab 19

In September 2018, the CPT Editorial Panel created two new codes and revised four codes to describe self-measured blood pressure monitoring and differentiate from ambulatory blood pressure monitoring.

99474 ***Self-measured blood pressure using a device validated for clinical accuracy; separate self-measurements of two readings one minute apart, twice daily over a 30-day period (minimum of 12 readings), collection of data reported by the patient and/or caregiver to the physician or other qualified health care professional, with report of average systolic and diastolic pressures and subsequent communication of a treatment plan to the patient***

The RUC reviewed the survey results from 33 physicians and determined that the survey 25th percentile work RVU of 0.18 appropriately accounts for the work required to perform this service. The RUC recommends 3 minutes evaluation pre-service time, 5 minutes intra-service time and 2 minutes immediate post-service time. The RUC noted that CPT code 99474 is a self-actuated monitor in which the patient reports typically two readings each day over a 30-day period that is forwarded to the physician for clinical decision making. CPT code 99474 is typically for a patient with known or expected hypertension in order to adjust hypertension medicine as necessary. The RUC noted that this service should not be reported separately with an Evaluation and Management (E/M service on the same day by the same provider. The RUC recommends referral to the CPT Editorial Panel to add introductory language to clarify.

The RUC compared the surveyed code to the top key reference code 93793 *Anticoagulant management for a patient taking warfarin, must include review and interpretation of a new home, office, or lab international normalized ratio (INR) test result, patient instructions, dosage adjustment (as needed), and scheduling of additional test(s), when performed* (work RVU = 0.18 and 9 minutes total time) and determined that these services require the same physician work and almost the exact physician time to perform. The survey respondents indicated that this service requires identical to somewhat more technical skill, physical effort and psychological stress to perform than code 93793. For additional support, the RUC referenced MPC codes 99211 *Office or other outpatient visit for the evaluation and management of an established patient,* (work RVU = 0.18 and 7 minutes total time) and 93042 *Rhythm ECG, 1-3 leads; interpretation and report only* (work RVU = 0.15 and 7 minutes total time), which bracket the surveyed code and establish the proper relativity among other similar services. **The RUC recommends a work RVU of 0.18 for CPT code 99474.**

93790 ***Ambulatory blood pressure monitoring, utilizing report-generating software, automated, worn continuously for 24 hours or longer; review with interpretation and report***

The RUC reviewed the survey results from 31 physicians and determined that the current work RVU of 0.38 appropriately accounts for the work required to perform this service. The RUC recommends 3 minutes evaluation pre-service time, 7 minutes intra-service time and 7 minutes immediate post-service time. The RUC noted that CPT code 93790 is an auto-activated monitor provided by the physician's office. Many are ordered not by the provider of this service, but by the primary care physician, nephrologist or endocrinologist. CPT code 93784 is the professional only code for ambulatory blood pressure monitoring that is not actuated by the patient. The patient wears the monitor, which

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

records blood pressure every 15-20 minutes throughout the 24-hour reporting period and those 60-80 readings are reviewed by the physician and the physician provides an interpretation and report.
The RUC compared the surveyed code to the top key reference code 93793 *Anticoagulant management for a patient taking warfarin, must include review and interpretation of a new home, office, or lab international normalized ratio (INR) test result, patient instructions, dosage adjustment (as needed), and scheduling of additional test(s), when performed* (work RVU = 0.18 and 9 minutes total time) and 92213 *Office or other outpatient visit for the evaluation and management of an established patient,* (work RVU = 0.97 and 23 minutes total time) and noted that these services largely bracket the physician work, time and intensity of the surveyed service. The RUC compared the surveyed code to similar services 93291 *Interrogation device evaluation (in person) with analysis, review and report by a physician or other qualified health care professional, includes connection, recording and disconnection per patient encounter; subcutaneous cardiac rhythm monitor system, including heart rhythm derived data analysis* (work RVU = 0.37, 7 minutes intra-service time and 17 minutes total time) and 96446 *Chemotherapy administration into the peritoneal cavity via indwelling port or catheter* (work RVU = 0.37, 7 minutes intra-service time and 17 minutes total time), noting that these services require similar physician work and time and maintain the appropriate relativity across the Medicare Physician Payment Schedule.

For additional support, the RUC referenced MPC code 92082 *Visual field examination, unilateral or bilateral, with interpretation and report; intermediate examination (eg, at least 2 isopters on Goldmann perimeter, or semiquantitative, automated suprathreshold screening program, Humphrey suprathreshold automatic diagnostic test, Octopus program 33)* (work RVU = 0.40 and 11 minutes total time). **The RUC recommends a work RVU of 0.38 for CPT code 93790.**

93784 *Ambulatory blood pressure monitoring, utilizing report-generating software, automated, worn continuously for 24 hours or longer; including recording, scanning analysis, interpretation and report*
CPT code 93784 is a comprehensive code that is the sum of CPT codes 93786, 93788, and 93790. The specialty societies surveyed CPT code 93790 to develop a work recommendation that could be crosswalked to CPT code 93784. CPT code 93784 is ambulatory blood pressure monitoring that is not actuated by the patient. The patient wears the monitor, which records blood pressure every 15-20 minutes throughout the 24-hour reporting period and those 60-80 readings are analyzed by the physician. The specialty societies recommend a work RVU of 0.38 for CPT code 93784, based on the survey of CPT code 93790. The specialty societies indicated and the RUC agreed that these two services should have identical work RVUs. **The RUC recommends a work RVU of 0.38 for CPT code 93784.**

Practice Expense
The RUC recommends the direct practice expense inputs as submitted by the specialty society.

New Technology/New Services
The RUC recommends that CPT code 99474 be placed on the New Technology list and be re-reviewed by the RUC in three years to ensure correct valuation and utilization assumptions.

CPT Referral
The RUC recommends referral to the CPT Editorial Panel to add language that CPT code 99474 should not be reported separately with an Evaluation and Management (E/M) service on the same day by the same provider.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
Evaluation and Management **Non-Face-to-Face Services** ***Digitally Stored Data Services/Remote Physiologic Monitoring***				
Codes 99453 and 99454 are used to report remote physiologic monitoring services (eg weight, blood pressure, pulse oximetry) during a 30-day period. To report 99453 and 99454, the device used must be a medical device as defined by the FDA, and the service must be ordered by a physician or other qualified health care professional. Code 99453 may be used to report the set-up and patient education on use of the device(s). Code 99454 may be used to report supply of the device for daily recording or programmed alert transmissions. Codes 99453, 99454 are not reported if monitoring is less than 16 days. Do not report 99453 and 99454 when these services are included in other codes for the duration of time of the physiologic monitoring service (eg, 95250 for continuous glucose requires a minimum of 72 hours of monitoring).				
Code 99091 should be reported no more than once in a 30-day period to include the physician or other qualified health care professional time involved with data accession, review and interpretation, modification of care plan as necessary (including communication to patient and/or caregiver), and associated documentation.				
If the services described by 99091 are provided on the same day the patient presents for an Evaluation and Management (E/M) service, these services should be considered part of the E/M service and not separately reported.				
Do not report 99091 in the same calendar month as care plan oversight services (99374, 99375, 99377, 99378, 99379, 99380), home, domiciliary, or rest home care plan oversight services (99339, 99340), and remote physiologic monitoring services (99457). Do not report 99091 if other more specific codes exist (eg, 93227, 93272 for cardiographic services; 95250 for continuous glucose monitoring). Do not report 99091 for transfer and interpretation of data from hospital or clinical laboratory computers.				
Code 99453 is reported for each episode of care. For coding remote monitoring of physiologic parameters, an episode of care is defined as beginning when the remote monitoring physiologic service is initiated, and ends with attainment of targeted treatment goals.				
99453		*Remote monitoring of physiologic parameter(s) (eg, weight, blood pressure, pulse oximetry, respiratory flow rate), initial; set-up and patient education on use of equipment*		
		(Do not report 99453 more than once per episode of care)		
		(Do not report 99453 for monitoring of less than 16 days)		
99454		*device(s) supply with daily recording(s) or programmed alert(s) transmission, each 30 days*		
		(For physiologic monitoring treatment management services, use 99457)		

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

		(Do not report 99454 for monitoring of less than 16 days) *(Do not report 99453, 99454 in conjunction with codes for more specific physiologic parameters [eg, 93296, 94760])* (For self-measured blood pressure monitoring, see 99473, 99474)		
#▲*99091*		*Collection and interpretation of physiologic data (eg, ECG, blood pressure, glucose monitoring) digitally stored and/or transmitted by the patient and/or caregiver to the physician or other qualified health care professional, qualified by education, training, licensure/regulation (when applicable) requiring a minimum of 30 minutes of time, each 30 days* *(Do not report 99091 in conjunction with 99457)* *(Do not report 99091 if it occurs within 30 days of 99339, 99340, 99374, 99375, 99377, 99378, 99379, 99380, 99457)*		
●99473	BB1	Self-measured blood pressure using a device validated for clinical accuracy; patient education/training and device calibration (Do not report 99473 more than once per device) (For ambulatory blood pressure monitoring, see 93784, 93786, 93788, 93790)	XXX	0.00 (PE Only)
●99474	BB2	separate self-measurements of two readings one minute apart, twice daily over a 30-day period (minimum of 12 readings), collection of data reported by the patient and/or caregiver to the physician or other qualified health care professional, with report of average systolic and diastolic pressures and subsequent communication of a treatment plan to the patient (Do not report 99473, 99474 in the same calendar month as 93784, 93786, 93788, 93790, 99091, 99453, 99454, 99457, 99487, 99489, 99490, 994X7) (Do not report 99474 more than once per calendar month)	XXX	0.18

Evaluation and Management Services
Non-Face-to-Face Services
Remote Physiologic Monitoring Treatment Management Services

Remote physiologic monitoring treatment management services are provided when clinical staff/physician/other qualified health care professional use the results of remote physiological monitoring to manage a patient under a specific treatment plan. To report remote physiological monitoring, the device used must be a medical device as defined by the FDA, and the service must be ordered by a physician

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

or other qualified health care professional. Use 99457 for time spent managing care when patients or the practice do not meet the requirements to report more specific services. Code 99457 may be reported during the same service period as chronic care management services (99487, 99489, 99490), transitional care management services (99495, 99496), and behavioral health integration services (99484, 99492, 99493, 99494). However, time spent performing these services should remain separate and no time should be counted toward the required time for both services in a single month. Code 99457 may be reported during the same service period as chronic care management services (99487, 99489, 99490), transitional care management services (99495, 99496), and behavioral health integration services (99484, 99492, 99493, 99494). However, time spent performing these services should remain separate and no time should be counted toward the required time for both services in a single month. Code 99457 requires a live, interactive communication with the patient/caregiver and 20 minutes or more of clinical staff/physician/other qualified health care professional time in a calendar month. Report 99491 one time regardless of the number of physiologic monitoring modalities performed in a given calendar month.

Do not count any time on a day when the physician or other qualified health care professional reports an E/M service (office or other outpatient services 99201, 99202, 99203, 99204, 99205, 99211, 99212, 99213, 99214, 99215, domiciliary, rest home services 99324, 99325, 99326, 99327, 99328, 99334, 99335, 99336, 99337, home services 99341, 99342, 99343, 99344, 99345, 99347, 99348, 99349, 99350). Do not count any time related to other reported services (eg, 93290).

99457 *Remote physiologic monitoring treatment management services, 20 minutes or more of clinical staff/physician/other qualified healthcare professional time in a calendar month requiring interactive communication with the patient/caregiver during the month*

(Do not report 99457 in the same month as 99473, 99474)

(Report 99457 once each 30 days, regardless of the number of parameters monitored)

(Do not report 99457 in conjunction with 99091)

Chicago, IL 60611

RE: Tab 19, Self-Measured Blood Pressure Monitoring

Dear Dr. Smith:

At the September 2018 meeting, the CPT Editorial panel approved new codes describing self-measured blood pressure monitoring (SMBPM) services. Included with those changes were updates to existing ambulatory blood pressure monitoring (ABPM) codes that reflect modern technology.

99473 Self-measured blood pressure using a device validated for clinical accuracy; patient education/training and device calibration

99474 separate self-measurements of two readings one minute apart, twice daily over a 30-day period (minimum of 12 readings), collection of data reported by the patient and/or caregiver to the physician or other qualified health care professional, with report of average systolic and diastolic pressures and subsequent communication of a treatment plan to the patient

93784 Ambulatory blood pressure monitoring, utilizing ~~a system such as magnetic tape and/or computer disk, for~~ report-generating software, automated, worn continuously for 24 hours or longer; including recording, scanning analysis, interpretation and report

93786 recording only

93788 scanning analysis with report

93790 review with interpretation and report

Codes 99473, 93786, and 93788 are practice-expense only codes. Codes 99474 and 93784 contain both work and practice expense. Code 93790 is a professional-only code.

Code 93784 is a composite code that is the sum of 93786, 93788, and 93790. Societies surveyed 93790 to develop a work recommendation. We are recommending the same work RVU for 93784, based on the survey of 93790. *These two services should have identical work RVU recommendations at the conclusion of the meeting.*

Thank you for the opportunity to explain this uncommon, but precedented, approach. We look forward to presenting these recommendations at the upcoming RUC meeting. Please contact James Vavricek at jvavricek@acc.org if you have any questions.

Sincerely,

Richard Wright, MD
ACC RUC Advisor

Audrey Chun, MD
AGS RUC Advisor

Mary Newman, MD
ACP RUC Advisor

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:99474 Tracking Number BB2 Original Specialty Recommended RVU: **0.18**
Presented Recommended RVU: **0.18**
Global Period: XXX Current Work RVU: **n/a** RUC Recommended RVU: **0.18**

CPT Descriptor: Self-measured blood pressure using a device validated for clinical accuracy; separate self-measurements of two readings one minute apart, twice daily over a 30-day period (minimum of 12 readings), collection of data reported by the patient and/or caregiver to the physician or other qualified health care professional, with report of average systolic and diastolic pressures and subsequent communication of a treatment plan to the patient

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 65-year-old male presents with repeated office visit measurements of BP greater than normal/goal. Self-measured blood pressure is ordered.

Percentage of Survey Respondents who found Vignette to be Typical: 88%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The physician accesses and reviews the patient's medical record.

Description of Intra-Service Work: The physician reviews the clinical-staff developed data and report containing individual and mean systolic and diastolic blood pressures from the recording period. The physician provides instructions to the clinical staff regarding care plan information to be communicated to the patient.

Description of Post-Service Work: Document analysis and interpretation of results.

Modifier -51 Exempt Status

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:

Is this new/revised procedure considered to be a new technology or service? Yes

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
93793	XXX	0.18	**RUC Time**

CPT Descriptor Anticoagulant management for a patient taking warfarin, must include review and interpretation of a new home, office, or lab international normalized ratio (INR) test result, patient instructions, dosage adjustment (as needed), and scheduling of additional test(s), when performed

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
99213	XXX	0.97	**RUC Time**

CPT Descriptor Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: An expanded problem focused history; An expanded problem focused examination; Medical decision making of low complexity. Counseling and coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of low to moderate severity. Physicians typically spend 15 minutes face-to-face with the patient and/or family.

KEY MPC COMPARISON CODES:

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
99211	XXX	0.18	**RUC Time**	3,884,402

CPT Descriptor 1 Office or other outpatient visit for the evaluation and management of an established patient, that may not require the presence of a physician or other qualified health care professional. Usually, the presenting problem(s) are minimal. Typically, 5 minutes are spent performing or supervising these services.

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
93042	XXX	0.15	**RUC Time**	372,803

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	0%	43%	57%	0%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	14%	29%	57%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	14%	57%	29%
Physical effort required	0%	86%	14%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	43%	43%	14%

2nd Key Reference Code

	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	20%	60%	0%	20%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	20%	60%	20%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	20%	60%	20%
Physical effort required	40%	40%	20%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	20%	60%	20%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

New code 99474 was developed by the CPT Editorial Panel to be responsive to recent USPSTF recommendations regarding blood pressure diagnosis and management. Existing codes do not allow for reporting of self-measured BP monitoring, which the USPSTF supports as an effective hypertension diagnosis and management tool. 990X2 describes use of remote physiologic monitoring (RPM) devices that are used at least 16 days.

A joint RVS panel of multi-society physicians reviewed survey data. The survey was completed by physicians who have experience with the service. The key reference service is 93793 for anticoagulation management. The 21% of respondents who selected the key reference service felt 99474 was somewhat more intense/complex than the key reference service, with measures trending toward the identical or more range. The times and recommended RVUs for the surveyed code and the reference code also align well since respondents seemed to view these services fairly similarly.

The second KRS is 99213, a level-3 established patient visit. The 15% of respondents who selected the key reference service felt 99474 was more intense/complex than the key reference service, with measures trending toward the identical or less complex range. This is reasonable, and we would expect self-measured BP services to be less intense/complex than 99213.

In comparison to the KRS, societies felt survey respondents may have over-estimated preservice and postservice minutes, or struggled to divide the physician work into these separate time components. Use of the survey time results would result in a negative IWPUT. Therefore, in our recommendations, we propose to reduce these times by 1 minutes of preservice and 3 minutes of postservice to align with the KRS that has clinical similarities.

The societies recommend the 25th-percentile RVW of 0.18 with 3 minutes preservice time, 5 minutes intraservice time, and 2 minutes postservice time. This value is supported by intensity comparison to the KRS and falls between the cited MPC codes included in the SOR, 99211 and 93042.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) n/a

How often do physicians <u>in your specialty</u> perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty cardiology How often? Sometimes

Specialty other How often? Sometimes

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 33000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Triple the Medicare estiamte below, assuming Medicare PFS estimate is a third of utilization.

Specialty cardiology Frequency 16500 Percentage 50.00 %

Specialty other Frequency 16500 Percentage 50.00 %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 11,000 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Duplicating the combined utilization of 93784 and 93790, the existing ambulatory codes that include physician interpretation.

Specialty cardiology Frequency 5500 Percentage 50.00 %

Specialty other Frequency 5500 Percentage 50.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? No

---

Berenson-Eggers Type of Service (BETOS) Assignment
Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Evaluation Management

BETOS Sub-classification:
Office visit

BETOS Sub-classification Level II:
Established

Modifier -51 Exempt Status

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:

Is this new/revised procedure considered to be a new technology or service? No

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
93793	XXX	0.18	**RUC Time**

CPT Descriptor Anticoagulant management for a patient taking warfarin, must include review and interpretation of a new home, office, or lab international normalized ratio (INR) test result, patient instructions, dosage adjustment (as needed), and scheduling of additional test(s), when performed

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
99213	XXX	0.97	**RUC Time**

CPT Descriptor Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: An expanded problem focused history; An expanded problem focused examination; Medical decision making of low complexity. Counseling and coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of low to moderate severity. Typically, 15 minutes are spent face-to-face with the patient and/or family.

KEY MPC COMPARISON CODES:

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
72114	XXX	0.32	**RUC Time**	98,229

CPT Descriptor 1 Radiologic examination, spine, lumbosacral; complete, including bending views, minimum of 6 views

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
92082	XXX	0.40	**RUC Time**	131,135

CPT Descriptor 2 Visual field examination, unilateral or bilateral, with interpretation and report; intermediate examination (eg, at least 2 isopters on Goldmann perimeter, or semiquantitative, automated suprathreshold screening program, Humphrey suprathreshold automatic diagnostic test, Octopus program 33)

Other Reference CPT Code	Global	Work RVU	Time Source
		0.00	

CPT Descriptor

RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:
Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by percent distribution) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Top Key Reference Code: 6 **% of respondents:** 19.3 **%**

Number of respondents who choose 2nd Key Reference Code: 6 **% of respondents:** 19.3 **%**

TIME ESTIMATES (Median)

	CPT Code: 93790	**Top Key Reference CPT Code:** 93793	**2nd Key Reference CPT Code:** **99213**
Median Pre-Service Time	3.00	3.00	3.00
Median Intra-Service Time	7.00	4.00	15.00
Median Immediate Post-service Time	7.00	2.00	5.00
Median Critical Care Time	0.0	0.00	0.00
Median Other Hospital Visit Time	0.0	0.00	0.00
Median Discharge Day Management Time	0.0	0.00	0.00

Median Total Time	**17.00**	**9.00**	**23.00**
Other time if appropriate			

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	17%	50%	33%	0%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	17%	83%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	17%	50%	33%
Physical effort required	0%	83%	17%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	33%	50%	17%

2nd Key Reference Code

	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	33%	50%	17%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	17%	66%	17%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	17%	83%	0%
Physical effort required	17%	66%	17%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	50%	33%	17%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Existing code 93790 was updated by the CPT Editorial Panel to better reflect current technology in use for ambulatory BP monitoring as part of the CCA responding to recent USPSTF recommendations regarding blood pressure diagnosis and management. The USPSTF recommended SMBP and ABPM as effective hyptertension diagnosis and management tools.

A joint RVS panel of multi-society physicians reviewed survey data. The survey was completed by physicians who have experience with the service, but those were the minority. The median performance rate for the survey was 0. Data for those with and without experience is presented in the summary spreadsheet. The response data are not notably divergent. (The lack of familiarity with the service is not entirely surprising since Medicare and other payers only cover ABPM in limited circumstances where white coat hypertension is suspected.)

The key reference service is 93793 for anticoagulation management. The 19% of respondents who selected the key reference service felt 93790 was roughly identical in intensity/complexity to the key reference service. The times and recommended RVUs for the surveyed code and the reference code also align well in terms of intensity since respondents seemed to view these services fairly similarly.

The second KRS is 99213, a level-3 established patient visit. The 19% of respondents who selected the key reference service felt 99474 was roughly identical in intensity/complexity to the key reference service. This is reasonable, and we would expect ambulatory BP services to be less intense/complex than 99213.

The societies recommend the current RVU of 0.38 with 5 minutes preservice time, 7 minutes intraservice time, and 7 minutes postservice time. These recommendations include removal of 1 minutes of postservice from the survey, equaling the same 7 minutes postservice used for Holter monitor intperpretation code 93227 which we think should not have less postservice time than 93790. This value is supported by intensity comparison to the KRS and falls between the cited MPC codes included in the SOR, 72114 and 92082. It also accounts for the larger number of data points—typically 60-80 over the 24-hour recording period—in comparison to the prior SMBP code.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed)

How often do physicians <u>in your specialty</u> perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty cardiology How often? Rarely

Specialty internal medicine How often? Rarely

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 9000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Triple the Medicare estimate below, assuming Medicare is a third of utilization.

Specialty cardiology Frequency 6000 Percentage 66.66 %

Specialty other Frequency 3000 Percentage 33.33 %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 3,000
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on 2017 Medicare utilization data. Utilization has been consistently a bit under 3,000 in recent years.

Specialty cardiology Frequency 2000 Percentage 66.66 %

Specialty other Frequency 1000 Percentage 33.33 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? No

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Evaluation Management

BETOS Sub-classification:
Office visit

BETOS Sub-classification Level II:
Established

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 93790

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

CPT Code: 99473-99474, 93784-93788
Specialty Society ACC, ACP, AGS

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Non Facility Direct Practice Expense (PE) Inputs

CPT Long Descriptor: 93786 Ambulatory blood pressure monitoring, utilizing report-generating software, automated, worn continuously for 24 hours or longer; recording only

Global Period: XXX Meeting Date: January 2019

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel: *The multispecialty RVS Committee utilized a consensus panel to develop recommended inputs.*

2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here: *The current code is used as the reference.*

3. Is this code(s) typically billed with an E/M service? *No*
   Is this code(s) typically billed with the E/M service in the nonfacility? *No*
   (Please see provided data in PE Subcommittee folder)

4. What specialty is the dominant provider in the nonfacility? *Internal medicine*
   What percent of the time does the dominant provider provide the service(s) in the nonfacility? *40%*
   Is the dominant provider in the nonfacility different then for the global? *No*
   (Please see provided data in PE Subcommittee folder)

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time: *The 4 minutes on line 26 is a odd carryover from migration to the new PE spreadsheet activities and we propose to eliminate those minutes. Instead, we recommend 3 minutes to greet the patient and 2 minutes to prepare the room/supplies/equipment for educating the patient on the ambulatory BP collection on line 53 so they can execute the recording. Clinical staff contact the patient one time after they leave the office to ensure patient compliance and usability on line 85.*

6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), you must provide compelling evidence. Please explain if the increase can be entirely accounted for because of an increase in physician time. *N/A*

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here: *The 4 minutes on line 26 is an odd carryover from migration to the new PE spreadsheet activities and we propose to eliminate those minutes. Instead, we recommend 3 minutes to greet the patient and 2 minutes to prepare the room/supplies/equipment for educating the patient on the ambulatory BP collection on line 53 so the patient can execute the recording.*

8. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? (please use this time rather than 5 minutes in your reference code) *N/A*

The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here: *N/A*

9. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time: Clinical staff educate the patient on ambulatory BP data recording equipment and process.*

10. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived. *N/A*

11. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities: *N/A*

12. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

13. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here:

14. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here:

15. List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here:

EQ269 use of 1440 minutes is an "Other" formula. The ambulatory blood pressure monitor is worn for 24 hours, or 1440 minutes.

16. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here:

17. If there is any other item on your spreadsheet that needs further explanation please include here:

18. Please include an explanation of each line item:

Line 33: clinical staff greet and patient
Line 37: clinical staff prepare the room
Line 53: clinical staff educate the patient on the ambulatory BP data recording equipment and process
Line 85: clinical staff contact the patient one time after they leave the office to ensure patient compliance and usability
Line 113: EQ269 use of 1440 minutes is an "Other" formula. The ambulatory blood pressure monitor is worn for 24 hours, or 1440 minutes.

CPT Code: 99473-99474, 93784-93788

14. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here:

15. List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here: *EQ269 is used for the default formula to match clinical staff time of 10 minutes.*

16. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here:

17. If there is any other item on your spreadsheet that needs further explanation please include here:

18. Please include an explanation of each line item:

Line 53: clinical staff download the data and create a staff report for the clinician to interpret.
Line 113: EQ269 is used for the default formula to match clinical staff time of 10 minutes during which data download and report development occurs.

CPT Code: 99473-99474, 93784-93788
Specialty Society ACC, ACP, AGS

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Non Facility Direct Practice Expense (PE) Inputs

CPT Long Descriptor: 93790 Ambulatory blood pressure monitoring, utilizing report-generating software, automated, worn continuously for 24 hours or longer; review with interpretation and report

Global Period: XXX Meeting Date: January 2019

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel: *The multispecialty RVS Committee utilized a consensus panel to develop recommended inputs.*

2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here: *The current code is used as the reference.*

3. Is this code(s) typically billed with an E/M service? *No*
   Is this code(s) typically billed with the E/M service in the nonfacility? *No*
   (Please see provided data in PE Subcommittee folder)

4. What specialty is the dominant provider in the nonfacility? *cardiology*
   What percent of the time does the dominant provider provide the service(s) in the nonfacility? *57%*
   Is the dominant provider in the nonfacility different then for the global? *No*
   (Please see provided data in PE Subcommittee folder)

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time: *Clinical staff communicate results and care plan information on line 85.*

6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), you must provide compelling evidence. Please explain if the increase can be entirely accounted for because of an increase in physician time.

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here:

8. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? (please use this time rather than 5 minutes in your reference code) *N/A*
   The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here: *N/A*

9. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time: N/A*

10. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived. *N/A*

11. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities: *N/A*

12. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

13. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here:

14. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here:

15. List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here:

16. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here:

17. If there is any other item on your spreadsheet that needs further explanation please include here:

18. Please include an explanation of each line item:

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Non Facility Direct Practice Expense (PE) Inputs

CPT Long Descriptor: 93784 Ambulatory blood pressure monitoring, utilizing report-generating software, automated, worn continuously for 24 hours or longer; including recording, scanning analysis, interpretation and report

Global Period: XXX Meeting Date: January 2019

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel: The multispecialty RVS Committee utilized a consensus panel to develop recommended inputs.

2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here: *The current code is used as the reference. 93784 is the aggregate of the prior three codes that discretely report recording, scanning/analysis, and interpretation and report. Any changes we make to 93786, 93788, 93790 at the meeting will transfer to this code.*

3. Is this code(s) typically billed with an E/M service? *No*
   Is this code(s) typically billed with the E/M service in the nonfacility? *No*
   (Please see provided data in PE Subcommittee folder)

4. What specialty is the dominant provider in the nonfacility? *Cardiology*
   What percent of the time does the dominant provider provide the service(s) in the nonfacility? *48%*
   Is the dominant provider in the nonfacility different then for the global? *No*
   (Please see provided data in PE Subcommittee folder)

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:

6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), you must provide compelling evidence. Please explain if the increase can be entirely accounted for because of an increase in physician time.

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here:

8. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? (please use this time rather than 5 minutes in your reference code) *N/A*
   The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here: *N/A*

18. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly*

related to physician work time or *Perform procedure/service---NOT directly related to physician work time: Clinical staff educate the patient on ambulatory BP data recording equipment and process. Clinical staff download the data and create a staff report for the clinician to interpret.*

9. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived. *N/A*

10. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities:

11. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

12. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here:

13. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here:

14. List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here:

EQ269 use of 1450 minutes is an "Other" formula. The ambulatory blood pressure monitor is worn for 24 hours, or 1440 minutes. The monitor is also in use for 10 minutes when clinical staff communicate with the patient.

15. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here:

16. If there is any other item on your spreadsheet that needs further explanation please include here:

18. Please include an explanation of each line item:

From code 93786:
Line 33: clinical staff greet and patient
Line 37: clinical staff prepare the room
Line 53: clinical staff educate the patient on the ambulatory BP data recording equipment and process
Line 85: clinical staff contact the patient one time after they leave the office to ensure patient compliance and usability
Line 113: EQ269 use of 1440 minutes is an "Other" formula. The ambulatory blood pressure monitor is worn for 24 hours, or 1440 minutes.

From code 93788:
Line 53: clinical staff download the data and create a staff report for the clinician to interpret.
Line 113: EQ269 is used for the default formula to match clinical staff time of 10 minutes during which data download and report development occurs.

CPT Code: 99473-99474, 93784-93788
Specialty Society ACC, ACP, AGS

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Non Facility Direct Practice Expense (PE) Inputs

CPT Long Descriptor: 99473 Self-measured blood pressure using a device validated for clinical accuracy; patient education/training and device calibration

Global Period: XXX Meeting Date: January 2019

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel: *The multispecialty RVS Committee utilized a consensus panel to develop recommended inputs.*

2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here: *93786 for training before initiation of ambulatory BP monitoring is also a PE-only service in which clinical staff train a patient to execute measurements at home.*

3. Is this code(s) typically billed with an E/M service? no
   Is this code(s) typically billed with the E/M service in the nonfacility? no
   (Please see provided data in PE Subcommittee folder)

4. What specialty is the dominant provider in the nonfacility? *Anticipate cardiology or internal medicine.*
   What percent of the time does the dominant provider provide the service(s) in the nonfacility? *Unknown.*
   Is the dominant provider in the nonfacility different then for the global? *Unknown.*
   (Please see provided data in PE Subcommittee folder)

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time: C*linical staff time for training the patient is captured on line 53.*

6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), you must provide compelling evidence. Please explain if the increase can be entirely accounted for because of an increase in physician time. *N/A*

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here:

8. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? (please use this time rather than 5 minutes in your reference code) *N/A*
   The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here: *N/A*

9. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time: Clinical staff educate and train the patient on the process of obtaining BP measurements, calibrate the device, and provide instructions for documenting data.*

10. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

11. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities:

12. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

13. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here: automated sphygnomometer

14. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here:

15. List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here:

16. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here:

17. If there is any other item on your spreadsheet that needs further explanation please include here: *It would be typical for the patient to purchase their own automated sphygmomanometer, therefore, that expense is not part of this submission. The AMA is working to create an online list of devices on the US market validated for clinical accuracy and are guideline recommended for upper arm devices.*

18. Please include an explanation of each line item:

Line 33: clinical staff greet the patient
Line 37: clinical staff prepare the room
Line 53: clinical staff educate and train the patient on the process of obtaining BP measurements, calibrate the device, and provide instructions for documenting data

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Non Facility Direct Practice Expense (PE) Inputs

CPT Long Descriptor: 99474 Self-measured blood pressure using a device validated for clinical accuracy; separate self-measurements of two readings one minute apart, twice daily over a 30-day period (minimum of 12 readings), collection of data reported by the patient and/or caregiver to the physician or other qualified health care professional, with report of average systolic and diastolic pressures and subsequent communication of a treatment plan to the patient

Global Period: XXX Meeting Date: January 2019

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel: *The multispecialty RVS Committee utilized a consensus panel to develop recommended inputs.*

2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here: *93788 for ambulatory BP scanning analysis and report includes time for clinical staff to collect and aggregate data for the physician, as will be necessary for 99474.*

3. Is this code(s) typically billed with an E/M service? *No*
   Is this code(s) typically billed with the E/M service in the nonfacility? *No*
   (Please see provided data in PE Subcommittee folder)

4. What specialty is the dominant provider in the nonfacility? *Anticipate cardiology or internal medicine*
   What percent of the time does the dominant provider provide the service(s) in the nonfacility? *Unknown*
   Is the dominant provider in the nonfacility different then for the global? *Unknown*
   (Please see provided data in PE Subcommittee folder)

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time: *Clinical staff communicate results and care plan information after interpretation/report. This will typically involve a medication change that precipitates an additional metabolic panel that requires a second telephone call about those results to the patient.*

6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), you must provide compelling evidence. Please explain if the increase can be entirely accounted for because of an increase in physician time. *N/A*

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here: *N/A*

AMA/Specialty Society RVS Update Committee Summary of Recommendations

January 2019

Chronic Care Remote Physiologic Monitoring – Tab 20

In September 2018, the CPT Editorial Panel revised CPT code 99457 and created a new code to describe remote physiologic monitoring treatment management services to differentiate between the first 20 minutes of management time from each additional 20 minutes.

99457 ***Remote physiologic monitoring treatment management services, clinical staff/physician/other qualified health care professional time in a calendar month requiring interactive communication with the patient/caregiver during the month; first 20 minutes***
CPT code 99457 was reviewed in January 2018 and the work RVU of 0.61 was recently finalized for the CY 2019. The RUC noted that the code was editorially revised to state "first 20 minutes" instead of "20 minutes or more". CMS approved the RUC recommended time of 20 minutes for CPT code 99457 for CY 2019. **The RUC affirmed the work RVU of 0.61 for CPT code 99457.**

99458 ***Remote physiologic monitoring treatment management services, clinical staff/physician/other qualified health care professional time in a calendar month requiring interactive communication with the patient/caregiver during the month; each additional 20 minutes (List separately in addition to code for primary procedure)***
The RUC reviewed the survey results from 31 physicians and recommends a work RVU of 0.61, a crosswalk to base code 99457. The RUC noted that the recommended work RVU falls in between the survey 25th percentile (0.50) and median (0.70). The RUC recommends 20 minutes of intra-service time. The RUC questioned why the physician work is the same for the first 20 minutes and each additional 20 minutes. The specialty societies indicated that if the patient requires more than the first 20 minutes of remote physiological monitoring treatment management, then this patient is part of a subgroup of patients that need more care and extra attention. These patients have fluctuating physiologic parameters. For example, if patients with pressure monitors data are completely consistent, then less physician work is required, but if there are great fluctuations as in code 99458, the physician will need to need to provide more work analyzing and addressing these differences with medication modifications or other adjustments.

The RUC compared CPT code 99458 to the top key reference service 99490 *Chronic care management services, at least 20 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month…* (work RVU = 0.61 and 23 minutes total time) and noted that these services required the same physician work and similar time to perform, and are appropriately valued the same. The typical patient receiving 99458 has a chronic disease, specifically, heart failure and has a chronic heart failure management device at home to prevent hospitalization. Thus, CPT code 99458 is similar to the chronic care management code 99490. Additionally, both CPT codes 99490 and 99458 include physician time and clinical staff time. For additional support, the RUC referenced MPC code 95251 *Ambulatory continuous glucose monitoring of interstitial tissue fluid via a subcutaneous sensor for a minimum of 72 hours; analysis, interpretation and report* (work RVU = 0.70 and 20 minutes total time), which requires similar work and the same total time.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

CMS questioned if the RUC was aware of any other add-on codes with the same value as the base code. The RUC notes that the comparison of base codes to add-on codes in this manner is not straightforward because typically a base code will include pre- and post-service time and the add-on codes typically include only intra-service time. The base code accounts for more minutes than the add-on service, therefore, the work RVUs are not expected to be the same. Whereas, with codes 99457 and 99458, the intra-service time and total times are the same for both the base code and add-on code. However, there are multiple codes in the Medicare Physician Payment Schedule where this occurs. One example where the services are the same are 99487 *Complex chronic care management services…; 60 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month* (work RVU = 1.00 and 26 minutes intra-service/total time) and add-on code 99489 *Complex chronic care management services…; each additional 30 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month (List separately in addition to code for primary procedure*) (work RVU = 0.50 and 13 minutes intra-service/total time). If you multiply the work RVU of code 99489 (0.50 x 2 = 1.00) to account for double the intra-service time (26 and 13 minutes respectively), the work RVUs are the same at 1.00.

Another example is CPT codes 99497 *Advance care planning including the explanation and discussion of advance directives such as standard forms (with completion of such forms, when performed), by the physician or other qualified health care professional; first 30 minutes, face-to-face with the patient, family member(s), and/or surrogate* (work RVU = 1.50, 5 minutes pre-service time, 30 minutes intra-service time and 10 minutes post-service time) and 99498 *Advance care planning including the explanation and discussion of advance directives such as standard forms (with completion of such forms, when performed), by the physician or other qualified health care professional; each additional 30 minutes (List separately in addition to code for primary procedure)* (work RUV = 1.40 and 30 minutes intra-service time). The physician work is essentially the same, 1.50 and 1.40 comparatively, once you account for the differences in pre- and post-service time.

Since CPT codes 99457 and 99458 require the same physician time, the RUC concluded that it is appropriate that both are valued the same at 0.61 work RVUs. **The RUC recommends a work RVU of 0.61 for CPT code 99458.**

Practice Expense

The PE Subcommittee noted that when CPT code 99457 was reviewed last year, the societies conducted a clinical staff survey that yielded 30 minutes of independent clinical staff time under clinical activity CA037 for the base code that specifies 20 minutes minimum. The PE Subcommittee determined that the appropriate total conglomerate clinical staff time between the base and add on code is 40 minutes for CPT code 99458. **The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.**

New Technology/New Services

The RUC noted that CPT code 99457 was new for 2019 and placed on the new technology list and was scheduled for review in 2022. The RUC recommends that 99457 be pushed back a year to be reviewed with 99458 in 2023. Otherwise, these two services would have been re-examined in different cycles. The RUC recommends that CPT codes 99457 and 99458 be placed on the new technology list and be re-reviewed by the RUC in three years (2023) to ensure correct valuation and utilization assumptions.

Chicago, IL 60611

RE: Tab 21, Remote Physiologic Monitoring

Dear Dr. Smith:

At the September 2018 meeting, the CPT Editorial panel approved changes to the family of codes describing remote physiologic monitoring services.

- 99547 Remote physiologic monitoring treatment management services, ~~20 minutes or more of~~ clinical staff/physician/other qualified healthcare professional time in a calendar month requiring interactive communication with the patient/caregiver during the month; first 20 minutes

- 99458 each additional 20 minutes (List separately in addition to code for primary procedure)

99547 is a new code for CPT® 2019 that was presented to the RUC at the January 2018 meeting. No change in the physician work for this code occurred—it has not yet been deployed as of the January 2019 RUC submission deadline—and societies did not believe resurvey was necessary. The societies therefor recommend that the RUC affirm the work RVU (0.61) and PE inputs for 99547 at the January 2019 meeting where recommendations will be presented for new, add-on code 99458.

Thank you for your consideration of this request. We look forward to presenting these recommendations at the upcoming RUC meeting. Please contact James Vavricek at jvavricek@acc.org if you have any questions.

Sincerely,

Richard Wright, MD
ACC RUC Advisor

Audrey Chun, MD
AGS RUC Advisor

Mary Newman, MD
ACP RUC Advisor

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:99458 Tracking Number CC2 Original Specialty Recommended RVU: **0.61**
Presented Recommended RVU: **0.61**
Global Period: ZZZ Current Work RVU: RUC Recommended RVU: **0.61**

CPT Descriptor: Remote physiologic monitoring treatment management services, clinical staff/physician/other qualified health care professional time in a calendar month requiring interactive communication with the patient/caregiver during the month; each additional 20 minutes

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: An 82-year-old female with systolic dysfunction heart failure is enrolled in a heart failure management program that uses remote physiologic monitoring services. During the course of monitoring, adjustments in therapy and continued monitoring and evaluation are required. This is an add-on code: This represents the services performed after 20 minutes of time reported with 99457.

Percentage of Survey Respondents who found Vignette to be Typical: 94%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work:

Description of Intra-Service Work: Based on interpreted data, the physician or other qualified health care professional uses medical decision making to assess patient's clinical stability, communicates the results to the patient, and oversees the management and/or coordination of services, as needed, for all medical conditions.

Description of Post-Service Work:

Modifier -51 Exempt Status

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? Yes

New Technology/Service:

Is this new/revised procedure considered to be a new technology or service? Yes

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
99490	XXX	0.61	**RUC Time**

CPT Descriptor Chronic care management services, at least 20 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month, with the following required elements: multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient; chronic conditions place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline; comprehensive care plan established, implemented, revised, or monitored.

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
99213	XXX	0.97	**RUC Time**

CPT Descriptor Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: An expanded problem focused history; An expanded problem focused examination; Medical decision making of low complexity. Counseling and coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of low to moderate severity. Typically, 15 minutes are spent face-to-face with the patient and/or family.

KEY MPC COMPARISON CODES:

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
99212	XXX	0.48	**RUC Time**	12,807,980

CPT Descriptor 1 Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A problem focused history; A problem focused examination; Straightforward medical decision making. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are self limited or minor. Typically, 10 minutes are spent face-to-face with the patient and/or family.

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
95251	XXX	0.70	**RUC Time**	85,342

CPT Descriptor 2 Ambulatory continuous glucose monitoring of interstitial tissue fluid via a subcutaneous sensor for a minimum of 72 hours; analysis, interpretation and report

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	0%	70%	20%	10%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	10%	50%	40%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	50%	50%
Physical effort required	30%	70%	0%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	50%	50%

2nd Key Reference Code

	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	33%	67%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	11%	67%	22%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	11%	45%	44%
Physical effort required	33%	33%	33%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	11%	33%	56%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

New code 99458 was created by the CPT Editorial Panel to enhance its initial foray into remote physiological monitoring by describing additional units of service in 20-minute increments. 2019 code 99457 for the first 20 minutes is just now being implemented.

A joint RVS panel of multi-society physicians reviewed survey data. The survey was completed by physicians who have experience with the service. The key reference service is 99490 for chronic care management. The KRS was selected by 39% of respondents. These respondents mostly indicated 99458 to be similar to somewhat more intense/complex. The second KRS is 99213, a level-3 office visit. 29% of respondents selected this reference service. These respondents mostly indicated 99458 to be similar to somewhat more intense/complex.

Since new code 99457 was only recently published in the 2019 CPT book for the first time, societies did not believe it was necessary to survey for a second time a code that had never been deployed when the RUC and CMS were both comfortable with the values resulting from the January 2018 RUC meeting for 20 minutes of remote physiologic monitoring. Survey results for new code 99458 again indicate 20 minutes of work time, with the survey 25th and median work RVUs bracketing the value of 99457 at 0.61. The RVS panel felt additional 20-minute increments of remote physiologic monitoring would be the same work as the initial 20 minutes. **Therefore, we recommend a crosswalk to the same work RVU of 0.61 currently assigned to 99457, with the same 20 minutes of intraserivce time from the survey.** (The 0.61 for 99457 was the survey 25th-percentile value and is also identical to chronic care management code 99490.) This value falls between the survey 25th-percentile value of 0.50 and the median of 0.70. Comparisons to MPC codes 99212 for a level-2 office visit and 95251 for ambulatory continuous glucose monitoring bracket this recommendation and more closely approximate intensity than reference services.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed)

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty cardiology How often? Sometimes

Specialty internal medicine How often? Commonly

Specialty geriatrics How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 240000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. This service could be performed 2-3 times as often in the total pouplation as in the Medicare FFS popoulation

Specialty cardiology Frequency 120000 Percentage 50.00 %

Specialty geriatrics Frequency 60000 Percentage 25.00 %

Specialty internal medicine Frequency 60000 Percentage 25.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 80,000 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The panel expects as many as a third of patients monitored remotely to require an additional 20 minutes of management time. The estimate for utilizaiton of 99457 is just over 240000, so this is a third of that.

Specialty cardiology Frequency 40000 Percentage 50.00 %

Specialty geriatrics Frequency 20000 Percentage 25.00 %

Specialty internal medicine Frequency 20000 Percentage 25.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment
Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Evaluation Management

BETOS Sub-classification:
Office visit

BETOS Sub-classification Level II:
Established

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 99457

Global Period: ZZZ Meeting Date: January 2019

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel: *The multispecialty RVS Committee utilized a consensus panel to develop recommended inputs.*

2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here: *99457 is the base code for 99458. Both describe the same service in 20-minute increments, but 99458 is for additional increments of 20 minutes.*

3. Is this code(s) typically billed with an E/M service? *No.*
   Is this code(s) typically billed with the E/M service in the nonfacility? *No.*
   (Please see provided data in PE Subcommittee folder)

4. What specialty is the dominant provider in the nonfacility? *Unknown, but expect cardiology.*
   What percent of the time does the dominant provider provide the service(s) in the nonfacility? *Typically.*
   Is the dominant provider in the nonfacility different then for the global? *Unknown.*
   (Please see provided data in PE Subcommittee folder)

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time: *N/A*

6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), you must provide compelling evidence. Please explain if the increase can be entirely accounted for because of an increase in physician time. *N/A*

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here: *N/A*

8. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? (please use this time rather than 5 minutes in your reference code) 0
   The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here: *N/A*

1. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time: Clinical staff review data and discuss any readings outside normal parameters with the physician. Clinical staff typically call the patient 2.5 times a week to discuss transmitted data and manage the patient based on discussions with the physician or standing orders for management.*

9. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived. *N/A*

10. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities: *N/A*

11. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

12. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here: *N/A*

13. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here: *N/A*

14. List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here: *N/A*

15. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here: *N/A*

16. If there is any other item on your spreadsheet that needs further explanation please include here: *N/A*

17. Please include an explanation of each line item:

40 minutes of clinical staff time was captured during survey of 99457 for the January 2018 meeting using a modified survey tool. Those inputs are carried forward for the add-on code at the January 2019 meeting.

CA021: 10 minutes for aggregation of data/reports and communication with the physician.

CA037: 30 minutes for patient communications, based on an estimate of 2.5 calls per week at the standard 3 minutes per call.

AMA/Specialty Society RVS Update Committee Summary of Recommendations

January 2018

Chronic Care Remote Physiologic Monitoring

In September 2017, the CPT Editorial Panel revised one code and created three new codes to describe remote physiologic monitoring and management.

99457 ***Remote physiologic monitoring treatment management services, 20 minutes or more of clinical staff/physician/other qualified healthcare professional time in a calendar month requiring interactive communication with the patient/caregiver during the month***
The RUC reviewed the survey responses from 53 cardiologists for CPT code 99457 and determined that the survey 25th percentile work RVU of 0.61 accurately accounts for the work required to perform this service. CPT code 99457 is a care management code that requires at least 20 minutes of service over a 30 day period in which the physician, qualified health care professional, or the clinical staff (i.e., nurse) interacts via communication with a patient. The typical time actually spent, however is 20 minutes by the physician or qualified health care professional and 40 minutes by the clinical staff (nurse). All data and any changes to the patients' care are documented in the electronic health record. The RUC recommends 20 minutes of intra-service time.

The RUC compared 99457 to the top key reference service 99490 *Chronic care management services, at least 20 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month…* (work RVU = 0.61 and 23 minutes total time) and noted that these services required the same physician work and similar time to perform, and are appropriately valued the same. The typical patient receiving 99457 has a chronic disease; specifically heart failure and has a chronic heart failure management device at home to prevent hospitalization. Thus, CPT code 99457 is similar to the chronic care management code 99490. Additionally, both CPT codes 99490 and 99457 include physician time and clinical staff time. For additional support, the RUC referenced MPC code 95251 *Ambulatory continuous glucose monitoring of interstitial tissue fluid via a subcutaneous sensor for a minimum of 72 hours; analysis, interpretation and report* (work RVU = 0.70 and 20 minutes total time), which requires similar work and the same total time. **The RUC recommends a work RVU of 0.61 for CPT code 99457.**

Practice Expense
The Practice Expense (PE) Subcommittee had an extensive discussion and confirmed that the devices for these services must be recognized as a medical device by the FDA and ordered by the physician or other qualified health care provider.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

99453 ***Remote monitoring of physiologic parameter(s) (eg, weight, blood pressure, pulse oximetry, respiratory flow rate), initial; set-up and patient education on use of equipment***
The PE Subcommittee discussed the specialty society's recommended supply items, shipping costs and a device reprocessing fee, and determined that they are not specifically allocable to the patient for this service, and would be considered indirect practice expenses. CMS confirmed that these items would be considered indirect practice expense under their methodology to calculate the practice expense relative value unit.

99454 ***Remote monitoring of physiologic parameter(s) (eg, weight, blood pressure, pulse oximetry, respiratory flow rate), initial; device(s) supply with daily recording(s) or programmed alert(s) transmission, each 30 days***
The PE Subcommittee maintained the specialty society's recommended supply item, a monthly service fee for the period of time being monitored. The PE Subcommittee also maintained the heart failure patient physiologic monitoring equipment, which the patient will have with them for the 30 days of the service. The RUC noted that unlike CMS' default assumption for equipment usage of 10 hours per day, 5 days per week, 50 weeks per year (for 150,000 total minutes of the year), the equipment for performing this service will be used 24 hours per day, 7 days per week, 365 days of the year (for 525,600 total minutes of the year). With this change to the utilization assumption for CMS' equipment cost formula, the net result is a rate 28.5% of the default, or 71.5% lower than the standard equipment cost per minute.

99457 ***Remote physiologic monitoring treatment management services, 20 minutes or more of clinical staff/physician/other qualified healthcare professional time in a calendar month requiring interactive communication with the patient/caregiver during the month***
The PE Subcommittee confirmed that typically both the physician and the clinical staff communicate with the patient during the month. The clinical staff is making an average of 10 phone calls over the month and the provider will make 1-2 phone calls. These phone calls are not duplicative but complimentary services. The Subcommittee removed the desktop computer (ED021) as it would be considered indirect for this service.

The RUC recommends the direct practice expense inputs as modified by the PE Subcommittee.

New Technology/New Services
These services will be placed on the New Technology/New Services list and be re-reviewed by the RUC in three years to ensure correct valuation and utilization assumptions.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation

Critical Care Services

Critical care is the direct delivery by a physician(s) or . . .

Providing medical care to a critically ill . . .

Inpatient critical care services . . .

Services for a patient who is not . . .

Critical care and other E/M services . . .

For reporting by professionals…

99291 *Critical care, evaluation and management . . .*

99292 *each additional 30 minutes . . .*

(Use 99292 in conjunction with 99291)

*----------**Coding Tip**----------*

Services Included in Critical Care Services
For reporting by professionals, the following services are included in critical care when performed during the critical period by the physician(s) providing critical care: the interpretation of cardiac output measurements (93561, 93562), chest X-rays (71045, 71046), pulse oximetry (94760, 94761, 94762), blood gases, and information data stored in computers (eg, ECGs, blood pressures, hematologic data [~~99090~~]); gastric intubation (43752, 43753); temporary transcutaneous pacing (92953); ventilatory management (94002-94004, 94660, 94662); and vascular access procedures (36000, 36410, 36415, 36591, 36600). Any services performed that are not listed above should be reported separately. Facilities may report the above services separately.

Evaluation and Management
Non-Face-to-Face Services
Interprofessional Telephone/Internet Consultation

The consultant should…

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

These services are…

99446 *Interprofessional telephone/Internet assessment and…*

99447 *11-20 minutes …*

99448 *21-30 minutes …*

99449 *31 minutes or more of medical consultative discussion and review…*

Evaluation and Management
Non-Face-to-Face Services
Digitally Stored Data Services/Remote Physiologic Monitoring

Codes 99453 and 99454 are used to report remote physiologic monitoring services (eg weight, blood pressure, pulse oximetry) during a 30 day period. To report 99453 and 99454, the device used must be a medical device as defined by the FDA, and the service must be ordered by a physician or other qualified health care professional. Code 99453 may be used to report the set up and patient education on use of the service. Code 99454 may be used to report supply of the device for daily recording or programmed alert transmissions. Codes 99453 and 99454 are not reported if monitoring is less than 16 days. Do not report 99453 and 99454 when these services are included in other CPT codes for the duration of time of the physiologic monitoring service (eg, 95250 for continuous glucose requires a minimum of 72 hours of monitoring).

Code 99091 should…

If the services described by 99091 are provided on the same day the patient presents for an Evaluation and Management (E/M) service, these services should be considered part of the E/M service and not separately reported.

Do not report 99091 in the same calendar month as care plan oversight services 99374-99380, 99399, and 99340, and remote physiologic monitoring services 99457. Do not report 99091 if other more specific CPT codes exist (eg, 93227, 93272 for cardiographic services; 95250 for continuous glucose monitoring). Do not report 99091 for transfer and interpretation of data from hospital or clinical laboratory computers.

Code 99453 is reported for each episode of care. For coding remote monitoring of physiologic parameters, an episode of care is defined as beginning when the remote monitoring physiologic service is initiated, and ends with attainment of targeted treatment goals.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
●99453	Z1	Remote monitoring of physiologic parameter(s) (eg, weight, blood pressure, pulse oximetry, respiratory flow rate), initial; set-up and patient education on use of equipment (Do not report 99453 more than once per episode of care) (Do not report 99453 for monitoring of less than 16 days)	XXX	0.00 (PE Only)
●99454	Z2	device(s) supply with daily recording(s) or programmed alert(s) transmission, each 30 days (Do not report 99454 for monitoring of less than 16 days) (For physiologic monitoring treatment management services use 99457) (Do not report 99453, 99454 in conjunction with codes for more specific physiologic parameters eg, 93296, 94760)	XXX	0.00 (PE Only)
(e)*◢*99091	-	*Collection and interpretation of physiologic data (eg, ECG, blood pressure, glucose monitoring) digitally stored and/or transmitted by the patient and/or caregiver to the physician or other qualified health care professional, qualified by education, training, licensure/regulation (when applicable) requiring a minimum of 30 minutes of time, each 30 days* *(Do not report 99091 in conjunction with 99457)* *(Do not report 99091 if it occurs within 30 days of 99374-99380, 99399, 99340, and 99457)*	*XXX*	*1.10* *(No Change)*

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Evaluation and Management Services
Non-Face-to-Face Services
Remote Physiologic Monitoring Treatment Management Services (red heading)

Remote physiologic monitoring treatment management services are provided when clinical staff/physician/qualified healthcare professional use the results of remote physiological monitoring to manage a patient under a specific treatment plan. To report remote physiological monitoring, the device used must be a medical device as defined by the FDA, and the service must be ordered by a physician or other qualified health care professional. Use 99457 for time spent managing care when patients or the practice do not meet the requirements to report 99487-99490, 99491or other more specific services. Code 99457 requires a live interactive communication with the patient/caregiver and 20 minutes or more of clinical staff/physician/qualified healthcare professional time in a calendar month. Report 99491 [2019] one time regardless of the number of physiologic monitoring modalities performed in a given calendar month.

Do not count any time on a day when the physician or other qualified healthcare professional reports an E/M service (office or other outpatient services 99201, 99202, 99203, 99204, 99205, 99211, 99212, 99213, 99214, 99215, domiciliary, rest home services 99324, 99325, 99326, 99327, 99328, 99334, 99335, 99336, 99337, home services 99341, 99342, 99343, 99344, 99345, 99347, 99348, 99349, 99350). Do not count any time related to other reported services (eg, 93290).

● 99457	Z3	Remote physiologic monitoring treatment management services, 20 minutes or more of clinical staff/physician/other qualified healthcare professional time in a calendar month requiring interactive communication with the patient/caregiver during the month (Do not report 99457 in the same month as 99487-99490, 99491) (Do not report 99457 for any time in the 30 day transitional care management period) (Do not report 99457 in conjunction with 99091) (Report once each 30 days, regardless of the number of parameters monitored)	XXX	0.61

Medicine
Special Services, Procedures and Reports
Miscellaneous Services

The procedures with code numbers 99000 through ~~99091~~ 99082 provide the reporting physician or other qualified health care professional with the means of identifying the completion of special reports and services that are an adjunct to the basic services rendered. The specific number assigned indicates the special circumstances under which a basic procedure is performed.

~~Code 99091 should be reported no more than once in a 30-day period to include the physician or other qualified health care professional time involved with data accession, review and interpretation, modification of care plan as necessary (including communication to patient and/or caregiver), and associated documentation.~~

~~If the services described by 99091 are provided on the same day the patient presents for an E/M service, these services should be considered part of the E/M service and not separately reported.~~

~~Do not report 99091 if it occurs within 30 days of in the same calendar month as care plan oversight services 99374-99380. Do not report 99091 if other more specific CPT codes exist (eg, 93227, 93272 for cardiographic services; 95250 for continuous glucose monitoring). Do not report 99091 for transfer and interpretation of data from hospital or clinical laboratory computers.~~

Codes 99050-99060…

~~**D**~~99090	-	~~Analysis of clinical data stored in computers (eg, ECGs, blood pressures, hematologic data)~~ ~~(For physician/or other qualified health care professional qualified by education, training, licensure/regulation [when applicable] collection and interpretation of physiologic data stored/transmitted by patient/caregiver, see 99091)~~ ~~(Do not report 99090 if other more specific CPT codes exist, eg, 93227, 93272, 0206T for cardiographic services; 95250 for continuous glucose monitoring; 97750 for musculoskeletal function testing)~~ (99090 has been deleted)	XXX	N/A (2018 work RVU = 0.00)

Inpatient Neonatal Intensive Care Services and Pediatric and Neonatal Critical Care Services
Pediatric Critical Care Patient Transport

Codes 99466, 99467 are used to report the . . .

Codes 99485, 99486 are used . . .

For the definition of the critically . . .

The non-face-to-face direction of emergency . . .

Emergency department services (99281-99285), initial . . .

The following services are included when performed during the pediatric patient transport by the physician providing critical care and may not be reported separately: routine monitoring evaluations (eg, heart rate, respiratory rate, blood pressure, and pulse oximetry), the interpretation of cardiac output measurements (93562), chest X-rays (71045, 71046), pulse oximetry (94760, 94761, 94762), blood gases and information data stored in computers (eg, ECGs, blood pressures, hematologic data) (~~99090~~), gastric intubation (43752, 43753), temporary transcutaneous pacing (92953), ventilatory management (94002, 94003, 94660, 94662), and vascular access procedures (36000, 36400, 36405, 36406, 36415, 36591, 36600). Any services performed which are not listed above should be reported separately.

Care Management Services

Care management services . . .

A plan of care…

E/M services may be reported separately by the same physician or other qualified health care professional during the same calendar month. Care management services include care plan oversight services (99339, 99340, 99374-99380), prolonged services without direct patient contact (99358, 99359), home and outpatient INR monitoring (99358, 99359), medical team conferences (99366, 99367, 99368), education and training (98960, 98961, 98962, 99071, 99078), telephone services (99366, 99367, 99368, 99441, 99442, 99443), on-line medical evaluation (98969, 99444), preparation of special reports (99080), analysis of data (~~99090,~~ 99091), transitional care management services (99495, 99496), medication therapy management services (99605, 99606, 99607) and, if performed, these services may not be reported separately during the month for which 99487, 99489, 99490 are reported. All other services may be reported. Do not report 99487, 99489, 99490 if reporting ESRD services (90951-90970) during the same month. If the care management services are performed within the postoperative period of a reported surgery, the same individual may not report 99487, 99489, 99490.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Complex Chronic Care Management Services

✚*99489* *Complex chronic care management services, with the following required elements: multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient, chronic conditions place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline, establishment or substantial revision of a comprehensive care plan, moderate or high complexity medical decision making; each additional 30 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month (List separately in addition to code for primary procedure)*

(Report 99489 in conjunction with 99487)

(Do not report 99489 for care management services of . . .

(Do not report 99487, 99489, 99490 during the same month with 90951-90970, 93792, 93793, 98960-98962, 98966-98969, 99071, 99078, 99080, ~~99090~~, 99091, 99339, 99340, 99358, 99359, 99366-99368, 99374-99380, 99441-99444, 99495, 99496, 99605-99607)

Transitional Care Management

. . .

A physician or other qualified health care professional who reports codes 99495, 99496 may not report care plan oversight services (99339, 99340, 99374-99380), prolonged services without direct patient contact (99358, 99359), home and outpatient INR monitoring (93792,93793) medical team conferences (99366-99368), education and training (98960-98962, 99071, 99078), telephone services (98966-98968, 99441-99443), end stage renal disease services (90951-90970), online medical evaluation services (98969, 99444), preparation of special reports (99080), analysis of data (~~99090~~, 99091), complex chronic care coordination services (99487-99489), medication therapy management services (99605-99607), during the time period covered by the transitional care management services codes.

★*99496* *Transitional Care Management Services with the following required elements: Communication (direct contact, telephone, electronic) with the patient and/or caregiver within 2 business days of discharge Medical decision making of high complexity during the service period Face-to-face visit, within 7 calendar days of discharge*

(Do not report 99495, 99496 in conjunction with 93792, 93793)

(Do not report 90951-90970, 98960-98962, 98966-98969, 99071, 99078, 99080, ~~99090~~, 99091, 99339, 99340, 99358, 99359, 99366-99368, 99374-99380, 99441-99444, 99487-99489, 99605-99607 when performed during the service time of codes 99495 or 99496)

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

SUMMARY OF RECOMMENDATION

CPT Code:99457 Tracking Number Z3 Original Specialty Recommended RVU: **0.80**
Presented Recommended RVU: **0.61**
Global Period: XXX Current Work RVU: **n/a** RUC Recommended RVU: **0.61**

CPT Descriptor: Remote physiologic monitoring treatment management services, 20 minutes or more of clinical staff/physician/other qualified healthcare professional time in a calendar month requiring interactive communication with the patient/caregiver during the month

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: An 82-year-old female with systolic dysfunction heart failure is enrolled in a heart failure management program that uses remote physiologic monitoring services.

Percentage of Survey Respondents who found Vignette to be Typical: 92%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work:

Description of Intra-Service Work: Based on interpreted data, the physician or other qualified health care professional uses medical decision making to assess patient's clinical stability, communicates the results to the patient, and oversees the management and/or coordination of services, as needed, for all medical conditions.

Description of Post-Service Work:

Modifier -51 Exempt Status

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:

Is this new/revised procedure considered to be a new technology or service? Yes

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
99490	XXX	0.61	**RUC Time**

CPT Descriptor Chronic care management services, at least 20 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month, with the following required elements: multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient; chronic conditions place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline; comprehensive care plan established, implemented, revised, or monitored.

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
99213	XXX	0.97	**RUC Time**

CPT Descriptor Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: An expanded problem focused history; An expanded problem focused examination; Medical decision making of low complexity. Counseling and coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of low to moderate severity. Typically, 15 minutes are spent face-to-face with the patient and/or family.

KEY MPC COMPARISON CODES:

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	0%	48%	43%	9%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	9%	43%	48%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	13%	48%	39%
Physical effort required	9%	65%	26%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	4%	52%	44%

2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	12%	29%	41%	18%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	6%	41%	53%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	6%	35%	59%
Physical effort required	23%	41%	36%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	23%	35%	42%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

The AMA's Digital Medicine Payment Advisory Group submitted a code change application for the September 2017 CPT Meeting creating codes for chronic care remote physiologic monitoring services to complement existing care management codes. The resulting three codes describe the initial setup and education to capture remote physiologic parameter (99453, PE-only), 30 days of supplies for the device (99454, PE-only), and management services provided by the physician and/or clinical based on the monitoring data (99457, work+PE). It should also be noted that CPT made these decisions and we began the valuation process before CMS decided to unbundle and separately pay existing code 99091 for collection and interpretation of physiologic data in the final rule.

The ACC saw these codes as a possible complement to the pulmonary wireless pressure sensor services in the related tab for wireless pulmonary pressure sensors. 994X9 describes the sort of management we believe is necessary for heart failure management based on pulmonary pressure readings to be successful and was included in our September CPT submission for that code change application. The final codes approved by CPT removed that component of our proposal, but it is included here for reference.

> ●9949X1 – Remote care management services for patients with an implanted wireless pulmonary artery pressure monitor; during the optimization phase, includes analysis of at least 4 daily transmitted data sets, with communication to the patient of results and treatment plan, at least twice during a 7-day period
>
> ●9949X2 – Remote care management services for patients with an implanted wireless pulmonary artery pressure monitor, during the continuous phase, includes analysis of at least 1 transmitted data set, with communication to the patient of results, at least once during a 7-day period

Additionally, the DMPAG envisioned physiologic data for managing heart failure as a key use case for this code. Because of the similarities between chronic care remote physiologic management and heart failure remote management based on pulmonary pressure sensor readings, we approached the Research Subcommittee with a proposal to combine survey of 99457 in this tab with 93264 in the prior tab so survey respondents could consider them in a related fashion. The Subcommittee also approved a modified survey tool that allowed respondents to estimate both their own (physician) time for work RVU estimation and also their clinical staff's time to develop PE for 99457.

Random surveys were distributed to members who indicate heart failure as an interest in their member information or through board designation. An RVS panel of ACC members reviewed the data to develop these recommendations based on the 53 responses generated by the survey.

Respondents identified 20-minute chronic care management code 99490 as they key reference service (KRS). These 23 respondents generally found 994X9 to be identical or somewhat more intense/complex in comparison to 99490. Another group of 17 respondents selected level-3 office visit code 99213 as the second KRS. Those who selected the second KRS felt 99457 was generally somewhat more intense/complex than 9213.

We recommend the survey median work RVU and times of 0.80 with 20 minutes intraservice. This value tracks closely with the intensity of the KRS but a third more time and value. It also aligns well with very recently revalued MPC code 95251 for ambulatory glucose monitoring that has less intraservice time but identical total time, as shown in the summary spreadsheet.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.

☐ Historical precedents.
☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) n/a

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty cardiology How often? Sometimes

Specialty other How often? Sometimes

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 750000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. This service could be performed two or three times as often in the total population as in the Medicare FFS population.

Specialty cardiology Frequency 375000 Percentage 50.00 %

Specialty other Frequency 375000 Percentage 50.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 242,333 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. CMS included this estimate for 99091 in addenda for the CY 2018 PFS final rule. This code is expected to supplant 99091. If heart failure management is the most common use, cardiology could be half or more of the utilizaiton.

Specialty cardiology Frequency 121167 Percentage 50.00 %

Specialty others Frequency 121166 Percentage 49.99 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? No

---

CPT Code: 99453, 99454, 99457
Specialty Society ACC

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Non Facility Direct Practice Expense (PE) Inputs

CPT Long Descriptor: 99453: Remote monitoring of physiologic parameter(s) (eg, weight, blood pressure, pulse oximetry, respiratory flow rate), initial; set-up and patient education on use of equipment

Global Period: XXX Meeting Date: January 2018

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel: *The ACC RVS Committee utilized a consensus panel to develop recommended inputs.*

2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here: *93792 is another service during which clinical staff train a patient on how to use home/remote equipment.*

3. Is this code(s) typically billed with an E/M service? *No*

4. What specialty is the dominant provider in the nonfacility? *Unknown* What percent of the time does the dominant provider provide the service(s) in the nonfacility? *Unknown* Is the dominant provider in the nonfacility different then for the global? *Unknown* (please see provided data in PE Subcommittee folder)

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time: *N/A*

6. If you are requesting an increase over the current total cost for clinical staff time (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), total cost of supplies, and/or total cost of equipment you must provide compelling evidence: *N/A*

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here: *N/A*

8. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time: Clinical staff explain the monitoring system and protocols to the patient, then assist them in obtaining initial readings. Input from physicians working in these programs is that this training takes about half an hour.*

9. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived. *N/A*

10. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities: *N/A*

11. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov. *N/A*

12. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here:

We identified two costs that effectively function as supply costs that are consumed in correlation with the initiation of the monitoring service. As of the RUC deadline, we have not yet found a provider who is able to share paid invoices due to nondisclosure agreement concerns. We have input estimated costs based on conversations with providers at two facilities performing chronic care remote physiologic monitoring and will continue working to obtain paid invoices for discreet expenses until the RUC meeting.
-The digital monitoring equipment package is transferred via overnight shipping from warehouse to patient, from patient to reprocessing center, and from reprocessing center to warehouse.
-The digital monitoring equipment package undergoes reprocessing with a data wipe and sanitation between patients for a fee that is charged to the physician practice or vendor.

13. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here: *The remote physiologic kit is a new piece of equipment. The tablet and peripherals are owned by the office or vendor that trains the patient.*

14. List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here:

-The patient monitoring equipment package is in use during the entire set-up session. Default formula.

15. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here:

16. If there is any other item on your spreadsheet that needs further explanation please include here:

CPT Code: 99453, 99454, 99457
Specialty Society ACC

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Non Facility Direct Practice Expense (PE) Inputs

CPT Long Descriptor: 99454: Remote monitoring of physiologic parameter(s) (eg, weight, blood pressure, pulse oximetry, respiratory flow rate), device(s) supply with daily recording(s) or programmed alert(s) transmission, each 30 days

Global Period: XXX Meeting Date: January 2018

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel: *The ACC RVS Committee utilized a consensus panel to develop recommended inputs.*

2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here: *93271 is a similar code in that it describes the technical component of acquiring remote data and the patient is in possession of a piece of equipment owned by the physician for the entire month.*

3. Is this code(s) typically billed with an E/M service? *No.*

4. What specialty is the dominant provider in the nonfacility? *Unknown* What percent of the time does the dominant provider provide the service(s) in the nonfacility? *Unknown* Is the dominant provider in the nonfacility different then for the global? *Unknown* (please see provided data in PE Subcommittee folder)

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time: *N/A*

6. If you are requesting an increase over the current total cost for clinical staff time (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), total cost of supplies, and/or total cost of equipment you must provide compelling evidence: *N/A*

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here: *N/A*

8. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time: N/A*

9. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived. *N/A*

10. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities: *N/A*

11. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov. *N/A*

12. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here:

We identified one cost that effectively functions as a supply cost that is consumed in correlation with the data transmission of the monitoring service. As of the RUC deadline, we have not yet found a provider who is able to share paid invoices due to nondisclosure agreement concerns. We have input estimated costs based on conversations with providers at two facilities performing chronic care remote physiologic monitoring and will continue working to obtain paid invoices for discreet expenses until the RUC meeting.
-The digital monitoring equipment package requires a monthly vendor service fee for transmission of data from patient to vendor and from vendor to physician practice with alerts for data outside parameters or for patient-activated alerts.

17. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here: *The remote physiologic kit is a new piece of equipment. The tablet and peripherals are owned by the office or vendor that receives the transmissions.*

13. List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here: Other Formula

-The patient monitoring equipment package in the possession of the patient and unable to be used for other services for the entire month. Assuming a 30-day month, that's 43,200 minutes. This is the same equipment package as used in the orientation, but we placed it on a different line as it is an "other formula."

14. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here:

15. If there is any other item on your spreadsheet that needs further explanation please include here:

CPT Code: 99453, 99454, 99457
Specialty Society ACC

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Non Facility Direct Practice Expense (PE) Inputs

CPT Long Descriptor: 99457

Global Period: XXX Meeting Date: January 2018

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel: *The ACC RVS Committee utilized a consensus panel to develop recommended inputs.*

16. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here: *99490 is a similar code in that it describes chronic care management of a patient. 99457 adds the collection and consideration of patient-provided physiologic data to that care.*

2. Is this code(s) typically billed with an E/M service? *No.*

3. What specialty is the dominant provider in the nonfacility? *Unknown* What percent of the time does the dominant provider provide the service(s) in the nonfacility? *Unknown* Is the dominant provider in the nonfacility different then for the global? *Unknown* (please see provided data in PE Subcommittee folder)

4. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time: *N/A*

5. If you are requesting an increase over the current total cost for clinical staff time (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), total cost of supplies, and/or total cost of equipment you must provide compelling evidence: *N/A*

6. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here: *N/A*

7. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time: Clinical staff review data and discuss any readings outside normal parameters with the physician. Clinical staff typically call the patient 2.5 times a week to discuss transmitted data and manage the patient based on discussions with the physician or standing orders for management.*

8. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived. *N/A*

9. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities: *N/A*

10. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov. *N/A*

11. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here: *N/A*

12. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here: *N/A*

13. List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here:

-ED021, desktop computer, is used during the 40 minutes clinical staff is managing the patient as well as during the 20 minutes the physician is managing the patient. Other formula.

14. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here:

AMA/Specialty Society RVS Update Committee Summary of Recommendations

January 2019

Online Digital Evaluation Service (e-Visit) – Tab 21

In September 2018, the CPT Editorial Panel deleted two codes and replaced them with six new non-face-to face codes to describe patient-initiated digital communications that require a clinical decision that otherwise typically would have been provided in the office. Three codes describe the physician e-visit (99421, 99422 and 99423) and three codes describe the qualified nonphysician health care professional e-visit (98970, 98971 and 98972).

99421 ***Online digital evaluation and management service, for an established patient, for up to 7 days, cumulative time during the 7 days; 5-10 minutes***

The RUC reviewed the survey results from 92 physicians and determined that the survey 25th percentile work RVU of 0.25 appropriately accounts for the work required to perform this service. The RUC recommends 8 minutes intra-service time. The RUC noted that this service includes only intra-service time as this service starts with the physician opening up the electronic communication, which differs from the top key reference code 99441 *Telephone evaluation and management service by a physician or other qualified health care professional who may report evaluation and management services provided to an established patient, parent, or guardian not originating from a related E/M service provided within the previous 7 days nor leading to an E/M service or procedure within the next 24 hours or soonest available appointment; 5-10 minutes of medical discussion* (work RVU = 0.25 and 8 minutes intra-service time, 13 minutes total time), where the physician may get a voicemail and may have an opportunity to review the medical record before engaging in the call. The e-visit is the documentation of the visit itself, the e-mail response. The RUC compared the surveyed code to the top key reference code 99441 and noted that these services require the same physician work and intra-service time to perform. However, 99421 is more intense than 99441 because the physician response is documented in writing. There is a higher risk and challenge within the written response, as the physician or patient may misinterpret something within the communication. Whereas, with a telephone call, any misinterpretations would be clarified with immediate feedback. Additionally, 99421 is more intense because the physician may review multiple images, some of which may be hard to decipher and the physician will need to engage in multiple communications over seven days that adds to the complexity of this service.

For additional support, the RUC referenced MPC codes 99406 *Smoking and tobacco use cessation counseling visit; intermediate, greater than 3 minutes up to 10 minutes* (work RVU = 0.24 and 7 minutes intra-service/total time) and 92568 *Acoustic reflex testing, threshold* (work RVU = 0.29 and 8 minutes intra-service time), which demonstrates the appropriate relativity among similar services. **The RUC recommends a work RVU of 0.25 for CPT code 99421.**

99422 ***Online digital evaluation and management service, for an established patient, for up to 7 days, cumulative time during the 7 days; 11-20 minutes***

The RUC reviewed the survey results from 96 physicians and determined that the survey 25th percentile work RVU of 0.50 appropriately accounts for the work required to perform this service. The RUC recommends 15 minutes intra-service time. The RUC compared the surveyed code to the top key reference code 99442 *Telephone evaluation and management service by a physician or other qualified health care professional who may*

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

report evaluation and management services provided to an established patient, parent, or guardian not originating from a related E/M service provided within the previous 7 days nor leading to an E/M service or procedure within the next 24 hours or soonest available appointment; 11-20 minutes of medical discussion (work RVU = 0.50 and 15 minutes intra-service time, 21 minutes total time) and noted that these services require the same physician work and intra-service time to perform. However, 99422 is more intense than 99442 because the physician response is documented in writing with higher risk and challenges with multiple communications, not a verbal response with immediate clarifications as detailed in the rationale for CPT code 99421.

For additional support, the RUC referenced MPC code 99212 *Office or other outpatient visit for the evaluation and management of an established patient,* (work RVU = 0.48 and 10 minutes intra-service, 16 minutes total time), which demonstrates the appropriate relativity among similar services. **The RUC recommends a work RVU of 0.50 for CPT code 99422.**

99423 *Online digital evaluation and management service, for an established patient, for up to 7 days, cumulative time during the 7 days; 21 or more minutes*

The RUC reviewed the survey results from 95 physicians and determined that the survey 25th percentile work RVU of 0.80 appropriately accounts for the work required to perform this service. The RUC recommends 25 minutes intra-service time. The RUC compared the surveyed code to the second top key reference code 99443 *Telephone evaluation and management service by a physician or other qualified health care professional who may report evaluation and management services provided to an established patient, parent, or guardian not originating from a related E/M service provided within the previous 7 days nor leading to an E/M service or procedure within the next 24 hours or soonest available appointment; 21-30 minutes of medical discussion* (work RVU = 0.75 and 20 minutes intra-service time, 31 minutes total time) and noted that code 99423 requires slightly more physician work to perform because it describes 21 minutes or more, emphasis on more because the service will likely require more than 21 minutes, potentially much more. Whereas, CPT code 99443 is up to 30 minutes. Additionally, the typical patient receiving 99423 has problems and concerns greater than the average patient. The RUC agreed that 99423 is more intense than 99443 because the physician response is documented in writing with higher risk and challenges with multiple communications, not a verbal response with immediate clarifications as detailed in the rationale for CPT code 99421.

For additional support, the RUC referenced MPC codes 99231 *Subsequent hospital care, per day, for the evaluation and management of a patient…* (work RVU = 0.76 and 10 minutes intra-service, 20 minutes total time) and 99213 *Office or other outpatient visit for the evaluation and management of an established patient…* (work RVU = 0.97 and 15 minutes intra-service, 23 minutes total time), which demonstrates the appropriate relativity among similar services. **The RUC recommends a work RVU of 0.80 for CPT code 99423.**

Practice Expense

The RUC recommends the direct practice expense inputs as submitted by the specialty society.

New Technology/New Services

The RUC recommends that CPT codes 99421, 99422 and 99423 be placed on the New Technology list and be re-reviewed by the RUC in three years to ensure correct valuation and utilization assumptions.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Care plan oversight services….

These codes should ……..

The work involved in providing ….

(For care plan oversight services of patients in the home, domiciliary, or rest home [eg, assisted living facility], see 99339, 99340, and for hospice agency, see 99377, 99378)

(*Do not report 99374-99380 for time reported with 98966- 98967, 98968,* ~~98969~~, *99441, 99442, 99443* ~~99444~~ 99421, 99422, 99423)

(Do not report 99374-99378 during the same month with 99487-99489)

(Do not report 99374-99380 when performed during the service time of codes 99495 or 99496)

Non-Face-to-Face-Services
Telephone Services

Telephone services are non-face-to-face evaluation and management (E/M) services provided to a patient using the telephone by a physician or other qualified health care professional, who may report evaluation and management services. These codes are used to report episodes of patient care initiated by an established patient or guardian of an established patient. If the telephone service ends with a decision to see the patient within 24 hours or next available urgent visit appointment, the code is not reported; rather the encounter is considered part of the preservice work of the subsequent E/M service, procedure, and visit. Likewise if the telephone call refers to an E/M service performed and reported by that individual within the previous seven days (either requested or unsolicited patient follow-up) or within the postoperative period of the previously completed procedure, then the service(s) are considered part of that previous E/M service or procedure. (Do not report 99441-99443 if ~~99441~~ 99421, 99422, 99423 ~~99444~~ have been reported by the same provider in the previous seven days for the same problem.)

~~**On-Line Medical Evaluation**~~

~~An on-line electronic medical evaluation is a non-face-to face evaluation and management (E/M) service by a physician to a patient using Internet resources in response to a patient's on-line inquiry. Reportable services involve the physician's personal timely response to the patient's inquiry and must involve permanent storage (electronic or hard copy) of the encounter. This service is reported only once for the same episode of care during a seven-day period, although multiple physicians could report their exchange with the same patient. If the on-line medical evaluation refers to an E/M service previously performed and reported by the physician within the previous seven days (either physician requested or unsolicited patient follow-up) or within the postoperative period of the previously completed procedure, then the service(s) are considered covered by the previous E/M service or procedure. A reportable service encompasses the sum of communication (eg, related telephone calls, prescription provision, laboratory orders) pertaining to the on-line patient encounter.~~

~~(For an on-line medical evaluation provided by a qualified nonphysician health care professional, use 98969)~~

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Online Digital Evaluation and Management Services

Online digital evaluation and management services (99421, 99422, 99423) are patient-initiated services with physicians or qualified health care professionals. Online digital evaluation and management services require physician or qualified health care professional's evaluation, assessment, and management of the patient. These services are not for the non-evaluative electronic communication of test results, scheduling of appointments, or other communication that does not include evaluation and management. While the patient's problem may be new to the physician or qualified healthcare professional, the patient is an established patient. Patients initiate these services through Health Insurance Portability and Accountability Act compliant secure platforms, such as electronic health record portals, secure email, or other digital applications, which allow digital-communication with the physician or qualified health care professional.

Online digital evaluation and management services are reported once for the physician or qualified health care professional cumulative time devoted to the service during a seven-day period. The seven-day period begins with the physician's or qualified health care professional's initial, personal review of the patient-generated inquiry. Physician or qualified health care professional's cumulative service time includes review of the initial inquiry, review of patient records or data pertinent to assessment of the patient's problem, personal physician or qualified health care professional interaction with clinical staff focused on the patient's problem, development of management plans including physician or qualified health care professional generation of prescriptions or ordering of tests, and subsequent communication with the patient through either online, telephone, email, or other digitally-supported communication that does not otherwise represent a separately reported evaluation and management (E/M) service. All professional decision making, assessment, and subsequent management by physicians or qualified health care professionals in the same group contribute to the cumulative service time of the patient's online digital evaluation and management service. Online digital evaluation and management services require permanent documentation storage (electronic or hard copy) of the encounter.

If within seven-days of the initiation of an online digital evaluation and management service, a separately reported E/M visit occurs, then the physician or qualified health care professional work devoted to the online digital evaluation and management service is incorporated into the

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

other E/M visit (eg, additive of visit time for a time-based E/M visit, or additive of decision-making complexity for a key component-based E/M visit). This includes E/M visits and procedures that are provided through synchronous telemedicine visits using interactive audio and video telecommunication equipment which are reported with modifier 95 appended to the E/M service. If the patient initiates an online digital inquiry for the same or a related problem within seven days of a previous E/M service, then the online digital visit is not reported. If the online digital inquiry is related to a surgical procedure and occurs during the postoperative period of a previously completed procedure, then the online digital evaluation and management service is not reported separately. If the patient generates the initial online digital inquiry for a new problem within seven days of a previous E/M visit that addressed a different problem, then the online digital evaluation and management service is reported separately. If during the seven-day period of an online digital evaluation and management service, the patient presents a new unrelated problem, then the time of the physician or qualified health care professional's evaluation, assessment, and management of the additional problem is added to the cumulative service time of the online digital evaluation and management service for that seven-day period.

(For online digital evaluation and management services provided by a qualified nonphysician health care professional who may not report the physician or other qualified health care professional evaluation and management services [eg, speech-language pathologists, physical therapists, occupational therapists, social workers, dietitians], see 98970, 98971, and 98972)

(99444 has been deleted. To report, see 99421, 99422, 99423)

● 99421	DD1	Online digital evaluation and management service, for an established patient, for up to 7 days, cumulative time during the 7 days; 5-10 minutes	XXX	0.25 (RUC Recommendation)

Interprofessional Telephone/Internet/Electronic Health Record Consultations

The consultant should use codes 99446, 99447, 99448, 99449, 99451 to report interprofessional telephone/Internet/electronic health record consultations. An interprofessional telephone/Internet/electronic health record consultation is an assessment and management service in which a patient's treating (eg, attending or primary) physician or other qualified health care professional requests the opinion and/or treatment advice of a physician with specific specialty expertise (the consultant) to assist the treating physician or other qualified health care professional in the diagnosis and/or management of the patient's problem patient face-to-face contact with the consultant.

The patient for whom the interprofessional telephone/Internet/electronic health record consultation is requested may be either a new patient to the consultant or an established patient with a new problem or an exacerbation of an existing problem. However, the consultant should not have seen the patient in a face-to-face encounter within the last 14 days. When the telephone/Internet/electronic health record consultation leads to a transfer of care or other face-to-face service (eg, a surgery, a hospital visit, or a scheduled office evaluation of the patient) within the next 14 days or next available appointment date of the consultant, these codes are not reported.

Review of pertinent medical records, laboratory studies, imaging studies, medication profile, pathology specimens, etc is included in the telephone/Internet/electronic health record consultation service and should not be reported separately when reporting 99446, 99447, 99448, 99449, 99451. The majority of the service time reported (greater than 50%) must be devoted to the medical consultative verbal~~/~~ or Internet discussion. If greater than 50% of the time for the service is devoted to data review and/or analysis, 99446, 99447, 99448, 99449 should not be reported. However, the service time for 99451 is based on total review and interprofessional-communication time.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

If more than one telephone/Internet/electronic health record contact(s) is required to complete the consultation request (eg, discussion of test results), the entirety of the service and the cumulative discussion and information review time should be reported with a single code. Codes 99446, 99447, 99448, 99449, 99451 should not be reported more than once within a seven-day interval.

The written or verbal request for telephone/Internet/electronic health record advice by the treating/requesting physician or other qualified health care professional should be documented in the patient's medical record, including the reason for the request. Codes 99446, 99447, 99448, 99449 conclude with a verbal opinion report and written report from the consultant to the treating/requesting physician or other qualified health care professional. Code 99451 concludes with only a written report.

Telephone/Internet/electronic health record consultations of less than five minutes should not be reported. Consultant communications with the patient and/or family may be reported using ~~99441~~98966, ~~99442~~98967, ~~99443~~98968, ~~99444~~ 99421, 99422, 99423 *, ~~98966~~99441, ~~98967~~99442, ~~98968~~99443, ~~98969~~, and the time related to these services is not used in reporting 99446, 99447, 99448, 99449. Do not report 99358, 99359 for any time within the service period, if reporting 99446, 99447, 99448, 99449, 99451.*

When the sole purpose of the telephone/Internet/electronic health record communication is to arrange a transfer of care or other face-to-face service, these codes are not reported.

The treating/requesting physician or other qualified health care professional may report 99458 if spending 16-30 minutes in a service day preparing for the referral and/or communicating with the consultant. Do not report 99458 more than once in a 14-day period. The treating/requesting physician or other qualified health care professional may report the prolonged service codes 99354, 99355, 99356, 99357 for the time spent on the interprofessional telephone/Internet/electronic health record discussion with the consultant (eg, specialist) if the time ***exceeds 30 minutes*** *beyond the typical time of the appropriate E/M service performed and the patient is present (on-site) and accessible to the treating/requesting physician or other qualified health care professional. If the interprofessional telephone/Internet/electronic health record assessment and management service occurs when the patient is not present, and the time in a day* ***exceeds 30 minutes****, then the non-face-to-face prolonged service codes 99358, 99359 may be reported by the treating/requesting physician or other qualified health care professional.*

(For telephone services provided by a physician to a patient, see 99441, 99442, 99443)

(For telephone services provided by a qualified health care professional to a patient, see 98966, 98967, 98968)

(For online digital evaluation and management services provided by a physician or other qualified health care professional to a patient, see 99421, 99422, 99423)

~~(For an on-line medical evaluation provided by a physician to a patient, use 99444)~~

~~(For an on-line assessment and management service provided by a qualified health care professional to a patient, use 98969)~~

Care Management Services

Care management services are….

A plan of care must….

Code 99487, 99489…

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Care management activities…..

- *communication and engagement with patient, family members, guardian or caretaker,*
- *surrogate decision makers, and/or other professionals regarding aspects of care;*
- *communication with home health agencies and other community services utilized by the patient;*
- *collection of health outcomes data and registry documentation;*
- *patient and/or family/caregiver education to support self-management, independent living, and activities of daily living;*
- *assessment and support for treatment regimen adherence and medication management;*
- *identification of available community and health resources;*
- *facilitating access to care and services needed by the patient and/or family;*
- *management of care transitions not reported as part of transitional care management (99495, 99496);*
- *ongoing review of patient status, including review of laboratory and other studies not reported as part of an E/M service, noted above;*
- *development, communication, and maintenance of a comprehensive care plan*

The care management office/practice must have the following capabilities:

- *provide 24/7 access to physicians or other qualified health care professionals or clinical staff including providing patients/caregivers with a means to make contact with health care professionals in the practice to address urgent needs regardless of the time of day or day of week;*
- *provide continuity of care with a designated member of the care team with whom the patient is able to schedule successive routine appointments;*
- *provide timely access and management for follow-up after an emergency department visit or facility discharge;*
- *utilize an electronic health record system so that care providers have timely access to clinical information;*
- *use a standardized methodology to identify patients who require care management services;*
- *have an internal care management process/function whereby a patient identified as meeting the requirements for these services starts receiving them in a timely manner;*
- *use a form and format in the medical record that is standardized within the practice;*
- *be able to engage and educate patients and caregivers as well as coordinate care among all service professionals, as appropriate for each patient.*

E/M services may be reported separately by the same physician or other qualified health care professional during the same calendar month. A physician or other qualified health care professional who reports codes 99487, 99489, 99490, may not report care plan oversight services (99339, 99340, 99374-99380), prolonged services without direct patient contact (99358, 99359), home and outpatient INR monitoring (93792, 93793), medical team conferences (99366, 99367, 99368), education and training (98960, 98961, 98962, 99071, 99078), telephone services (99366, 99367, 99368, 99441, 99442, 99443), ~~*on-line medical evaluation (98969, 99444)*~~*, preparation of special reports (99080), analysis of data (99091), transitional care management services (99495, 99496), medication therapy management services (99605, 99606, 99607) and, if performed, these services may not be reported separately during the month for which 99487, 99489, 99490 are reported. All other services may be reported. Do not report 99487, 99489, 99490, 99491 if reporting ESRD services (90951-90970) during the same*

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

month. If the care management services are performed within the postoperative period of a reported surgery, the same individual may not report 99487, 99489, 99490, 99491. When reporting 99487, 99489, 99490, do not use time reported with 99421, 99422, 99423.

Complex Chronic Care Management Services

99487 *Complex chronic care management services, with the following required elements:*

- *multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient,*
- *chronic conditions place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline,*
- *establishment or substantial revision of a comprehensive care plan,*
- *moderate or high complexity medical decision making;*
- *60 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month.*

(Complex chronic care management services of less than 60 minutes duration, in a calendar month, are not reported separately)

+*99489* *each additional 30 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month (List separately in addition to code for primary procedure)*

(Report 99489 in conjunction with 99487)

(Do not report 99489 for care management services of less than 30 minutes additional to the first 60 minutes of complex chronic care management services during a calendar month)

(Do not report 99487, 99489, 99490 during the same month with 90951-90970, 93792, 93793, 98960-98962, 98966, 98967, 98968-~~98969~~, 99071, 99078, 99080, 99091, 99339, 99340, 99358, 99359, 99366-99368, 99374-99380, 99441, 99442, 99443-~~99444~~-, *99495, 99496, 99605-99607)*

Only one individual may report these services ...

A physician or other qualified health care professional who reports codes 99495, 99496 may not report care plan oversight services (99339, 99340, 99374-99380), prolonged services without direct patient contact (99358, 99359), home and outpatient INR monitoring (93792, 93793), medical team conferences (99366-99368), education and training (98960-98962, 99071, 99078), telephone services (98966-98968, 99441-99443), end stage renal disease services (90951-90970), ~~online medical evaluation services (98969, 99444),~~ *preparation of special reports (99080), analysis of data (*~~99090,~~ *99091), complex chronic care coordination services (99487-99489), medication therapy management services (99605-99607), during the time period covered by the transitional care management services codes.* When reporting 99487, 99489, 99490, do not use time reported with 99421, 99422, 99423.

★*99496* ***Transitional Care Management Services*** *with the following required elements:*

- *Communication (direct contact, telephone, electronic) with the patient and/or caregiver within 2 business days of discharge*
- *Medical decision making of high complexity during the service period*
- *Face-to-face visit, within 7 calendar days of discharge*

(Do not report 99495, 99496 in conjunction with 93792, 93793)

(Do not report 90951-90970, 98960-98962, 98966, 98967, 98968, ~~*98969*~~*, 99071, 99078, 99080, 99091, 99339, 99340, 99358, 99359, 99366-99368, 99374-99380, 99441,* 99442, 99443-~~99444~~*, 99487-99489, 99605-99607, when performed during the service time of codes 99495 or 99496)*

Medicine
Psychiatry
Psychiatric Diagnostic Procedures

90792 *Psychiatric diagnostic evaluation with medical services*

*(Do not report 90791 or 90792 in conjunction with 99201-99337, 99341-99350, 99366-99368, 99401-*9944~~99444~~*, 97151, 97152, 97153, 97154, 97155, 97156, 97157, 97158, 0362T, 0373T)*

(Use 90785 in conjunction with 90791, 90792 when the diagnostic evaluation includes interactive complexity services)

Home and Outpatient International Normalized Ratio (INR) Monitoring Services

Home and outpatient international normalized ratio (INR) monitoring services describe the management of warfarin therapy, including ordering, review, and interpretation of new INR test result(s), patient instructions, and dosage adjustments as needed.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

If a significantly, separately identifiable evaluation and management (E/M) service is performed on the same day as 93792, the appropriate E/M service may be reported using modifier 25.

Do not report 93793 on the same day as an E/M service.

Do not report 93792, 93793 in conjunction with 98966, 98967, 98968, ~~98969~~, 99441, 99442, 99443, ~~99444~~, 99421, 99422, 99423, when telephone or online digital evaluation and management services address home and outpatient INR monitoring.

Do not report 93792, 93793 when performed during the service time of 99487, 99489, 99490, 99495, 99496.

Non-Face-to-Face Nonphysician Services
~~On-line Medical Evaluation~~
~~Online Digital Evaluation~~
Qualified Nonphysician Health Care Professional Online Digital Evaluation and Management Service

~~An on-line electronic medical evaluation is a non-face-to-face assessment and management service by a qualified health care professional to a patient using Internet resources in response to a patient's on-line inquiry.~~

~~Reportable services involve the qualified health care professional's personal timely response to the patient's inquiry and must involve permanent storage (electronic or hard copy) of the encounter. This service is reported only once for the same episode of care during a seven-day period, although multiple qualified health care professionals could report their exchange with the same patient. If the on-line medical evaluation refers to an assessment and management service previously performed and reported by the qualified health care professional within the previous seven days (either qualified healthcare professional requested or unsolicited patient follow-up) or within the postoperative period of the previously completed procedure, then the service(s) are considered covered by the previous assessment and management office service or procedure. A reportable service encompasses the sum of communication (eg, related telephone calls, prescription provision, laboratory orders) pertaining to the on-line patient encounter.~~

~~(For an on-line medical evaluation provided by a physician, use 99444)~~

D*~~98969~~*	-	*~~Online assessment and management service provided by a qualified nonphysician health care professional to an established patient or guardian, not originating from a related assessment and management service provided within the previous 7 days, using the Internet or similar electronic communications network~~* *~~(Do not report 98969 when using 99339-99340, 99374-99380 for the same communication[s])~~* *~~(Do not report 98969 for home and outpatient INR monitoring when reporting 93792, 93793)~~* *~~(Do not report 98969 during the same month with 99487-99489)~~*	XXX	N/A

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

		~~*(Do not report 98969 when performed during the service time of codes 99495, 99496)*~~ Qualified nonphysician health care professional online digital evaluation and management services are patient-initiated digital services with qualified nonphysician health care professionals which require qualified nonphysician health care professional patient evaluation and decision-making to generate an assessment and subsequent management of the patient. These services are not for the non-evaluative electronic communication of test results, scheduling of appointments, or other communication that does not include evaluation and management. While the patient's problem may be new to the qualified nonphysician health care professional, the patient is established. Patients initiate these services through Health Insurance Portability and Accountability Act compliant, secure platforms such as through the electronic health record portal, email, or other digital applications which allow digital communication with the qualified nonphysician health care professional. Qualified nonphysician health care professional online digital evaluation and management services are reported once for the qualified nonphysician health care professional's cumulative time devoted to the service during a seven-day period. The seven-day period begins with the qualified nonphysician health care professional's initial, personal review of the patient-generated inquiry. Qualified nonphysician health care professional cumulative service time includes review of the initial inquiry, review of patient records or data pertinent to assessment of the patient's problem, personal qualified nonphysician health care professional interaction with clinical staff focused on the patient's problem, development of management plans including qualified nonphysician health care professional generation of prescriptions or ordering of tests, and subsequent communication with the patient through either online, telephone, email, or other digitally-supported communication. All qualified nonphysician health care professionals in the same group that are involved in the online digital evaluation and management service contribute to the cumulative service time devoted to the patient's online digital evaluation and management service. Qualified nonphysician health care professional online digital evaluation and		

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

		management services require visit documentation and permanent storage (electronic or hard copy) of the encounter. If the patient generates the initial online digital inquiry within seven days of a previous treatment or evaluation and management service, and if both services relate to the same problem, or if the online digital inquiry occurs within the postoperative period of a previously completed procedure, then the qualified nonphysician health care professional online digital evaluation and management service is not reported separately. If the patient generates an initial online digital inquiry for a new problem within seven days of a previous service that addressed a different problem, then the qualified nonphysician health care professional online digital evaluation and management service is reported separately. If within seven days of the nonphysician qualified health care professional's initial review of the online digital evaluation management service a separately reported evaluation service occurs, then 98970, 98971, 98972 are not reported. If the patient presents a new unrelated problem during the seven days period of an online digital evaluation and management service, then the time of the qualified nonphysician health care professional's evaluation and management of the additional problem is added to the cumulative service time of the online digital evaluation and management service for that seven-day period. (For an online digital evaluation and management service provided by a physician or qualified health care professional, see 99421, 99422, 99423) (98969 has been deleted. To report, see 98970, 98971, 98972)		
● 98970	DD4	Qualified nonphysician health care professional online digital evaluation and management service, for an established patient, for up to seven days, cumulative time during the 7 days; 5-10 minutes	XXX	0.25 (HCPAC Recommendation)
● 98971	DD5	11-20 minutes	XXX	0.50 (HCPAC Recommendation)

Global Period: XXX Current Work RVU: RUC Recommended RVU: **0.25**

CPT Descriptor: Online digital evaluation and management service, for an established patient, for up to 7 days, cumulative time during the 7 days; 5-10 minutes

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A mother submits an online query through her child's physician's EHR portal about her six-year-old son who has developed an itchy rash two days subsequent to an outdoor hike.

A 68 year old patient submits an on-line query through his physician's EHR because he has developed an itchy rash two days subsequent to an outdoor hike.

Percentage of Survey Respondents who found Vignette to be Typical: 88%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: N/A

Description of Intra-Service Work:
•Reviewing the initial patient inquiry, reviewing the medical history, reviewing documents sent by the patient and/or obtained by clinical staff, and checking online data registries/information exchanges
•Assessing medical condition described in the patient query
•Formulating and sending the physician response (eg, a diagnosis and treatment plan, and/or request for additional information)
•Reviewing test results and other reports
•Emailing prescriptions
•Follow up communication with the patient
•Interacting with clinical staff to order diagnostic tests, coordinate care, and implement the care plan
•Completing medical record documentation of all communications
•Providing necessary care coordination, telephonic, or electronic communication assistance

Description of Post-Service Work: N/A

99212	XXX	0.48	**RUC Time**

CPT Descriptor Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A problem focused history; A problem focused examination; Straightforward medical decision making. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are self limited or minor. Typically, 10 minutes are spent face-to-face with the patient and/or family.

KEY MPC COMPARISON CODES:

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
99406	XXX	0.24	**RUC Time**	547,890

CPT Descriptor 1 Smoking and tobacco use cessation counseling visit; intermediate, greater than 3 minutes up to 10 minutes

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	6%	71%	23%	0%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	6%	68%	26%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	9%	76%	15%
Physical effort required	23%	65%	12%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	12%	53%	35%

2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	13%	64%	23%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	10%	70%	20%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	23%	50%	27%
Physical effort required	60%	37%	3%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	7%	50%	43%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

An expert panel of providers from each of the participating specialty societies (ie, AAFP, AAP, ACP, AGS, and AND) reviewed and discussed survey results for the physician (99421-99423) and non-physician provider (NPP) (98970-98972) eVisit codes.

Overview of 99421-99423 (Physician eVisits)

We are recommending the **median survey intra-service times** (8 minutes, 15 minutes, and 25 minutes, respectively) for all three codes. The median time is the midway point of the code descriptors for 99421 and 99422 and the expert panel agreed that the median time of 25 minutes for 9X0X3 was appropriate and was properly aligned with the intraservice and total times for 99443 (1/20/10/31) which was one of the two key reference services.

We also are recommending the survey **25th percentile work relative value units** (wRVU) of 0.25, 0.50, and 0.80 for 99421, 99422 and 999423, respectively. These values place the codes in proper rank order to each other, to the key reference services, and to the chronic care management codes, 99487 and 99490.

99421
The key reference services are 99441 (0.25 wRVU; times of 1/8/4/13) and 99212 (0.48 wRVU and times of 2/10/4/16).

The time range for 99421 is 5-10 minutes. Therefore, the expert panel recommends the median survey intra-service time of 8 minutes. For work, the expert panel believes that the physician work for 99421 which extends over 7 days and has the same amount of intraservice time as 99441, should have a work value equivalent to or higher than 99441. Based on the fact that the survey was robust and the respondents thought the vignettes were typical, we are recommending the 25th percentile wRVU of 0.25. While the expert panel believes that the median wRVU of 0.40 may be more accurate, it is not supported by the intraservice/total time of 8 minutes. The expert panel also reviewed the chronic care management codes 99487 and 99490 which also have only intraservice time. 99487 has a time of 26 minutes and a wRVU of 1.00 while 99490 has a time of 15 minutes and a wRVU of 0.61. As these codes include work over a month and are for patients with two or more chronic conditions, the expert panel believes that a wRVU of 0.25 places 99421 in proper rank order to the CCM codes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 99444

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Family Medicine How often? Sometimes

Specialty Pediatrics How often? Sometimes

Specialty Geriatric/Internal Medicine How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 1800000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Please see Medicare frequency estimation below. We anticipate national frequency at approximately 2 times the Medicare frequency.

Specialty Family Medicine Frequency 594000 Percentage 33.00 %

Specialty Pediatrics Frequency 594000 Percentage 33.00 %

Specialty Geriatric/Internal Medicine Frequency 594000 Percentage 33.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 900,000 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. 2019 RBRVS final rule (pages 2054-2055) estimates initial use of Medicare Virtual Check-in code at well over 1 million episodes per year, quickly increasing to over 19 million per year. The Medicare code has no frequency limitation (99421-99423 have a 7-day frequency limitation); therefore 99421-99423 volume will be less, since eVisits occurring within the same week will be cumulatively bundled. Based on this, we estimated that annual volume over first 3 years will average 1 million per year, with 90% allocated to 99421, 8% to 99422, and 2% to 99423.

Specialty Family Medicine Frequency 450000 Percentage 50.00 %

Specialty Pediatrics Frequency 0 Percentage 0.00 %

Specialty Geriatric/Internal Medicine Frequency 450000 Percentage 50.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment
Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

SUMMARY OF RECOMMENDATION

CPT Code:99422 Tracking Number DD2 Original Specialty Recommended RVU: **0.50**
Presented Recommended RVU: **0.50**
Global Period: XXX Current Work RVU: RUC Recommended RVU: **0.50**

CPT Descriptor: Online digital evaluation and management service, for an established patient, for up to 7 days, cumulative time during the 7 days; 11-20 minutes

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 16-year-old asthmatic submits an online query through her physician's EHR portal about her increase in wheezing and cough.

A 75 year old patient with COPD and CHF submits an on-line query through her physician's EHR portal about worsening shortness of breath and mild weight gain.

Percentage of Survey Respondents who found Vignette to be Typical: 87%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: N/A

Description of Intra-Service Work:
•Reviewing the initial patient inquiry, reviewing the medical history, reviewing documents sent by the patient and/or obtained by clinical staff, and checking online data registries/information exchanges
•Assessing medical condition described in the patient query
•Formulating and sending the physician response (eg, a diagnosis and treatment plan, and/or request for additional information)
•Reviewing test results and other reports
•Emailing prescriptions
•Follow up communication with the patient
•Interacting with clinical staff to order diagnostic tests, coordinate care, and implement the care plan
•Completing medical record documentation of all communications
•Providing necessary care coordination, telephonic, or electronic communication assistance

Description of Post-Service Work: N/A

• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	48%	52%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

An expert panel of providers from each of the participating specialty societies (ie, AAFP, AAP, ACP, AGS, and AND) reviewed and discussed survey results for the physician (99421-99423) and non-physician provider (NPP) (98970-98972) eVisit codes.

Overview of 99421-99423 (Physician eVisits)

We are recommending the **median survey intra-service times** (8 minutes, 15 minutes, and 25 minutes, respectively) for all three codes. The median time is the midway point of the code descriptors for 99421 and 99422 and the expert panel agreed that the median time of 25 minutes for 99423 was appropriate and was properly aligned with the intraservice and total times for 99443 (1/20/10/31) which was one of the two key reference services.

We also are recommending the survey **25th percentile work relative value units** (wRVU) of 0.25, 0.50, and 0.80 for 99421, 99422, and 99423, respectively. These values place the codes in proper rank order to each other, to the key reference services, and to the chronic care management codes, 99487 and 99490.

99422
The key reference services are 99442 (0.50 wRVU; times 1/15/5/21) and 99213 (0.97 wRVU and times of 3/15/5/23).

The time range for 99422 is 10-20 minutes. Therefore, the expert panel recommends the median survey intra-service time of 15 minutes which is the midpoint of the range. For work, the expert panel believes that the physician work for 99422 which extends over 7 days and has the same amount of intraservice time as 99442, should have a work value equivalent to or higher than 99442. Based on the fact that the survey was robust and the respondents thought the vignettes were typical, we are recommending the 25th percentile wRVU of 0.50. While the expert panel believes that the median wRVU of 0.70 may be more accurate, it is not supported by the intraservice/total time of 15 minutes. The expert panel also reviewed the chronic care management codes 99487 and 99490 which also have only intraservice time. 99487 has a time of 26 minutes and a wRVU of 1.00 while 99490 has a time of 15 minutes and a wRVU of 0.61. As these codes include work over a month and are for patients with two or more chronic conditions, the expert panel believes that a wRVU of 0.50 places 99422 in proper rank order to the CCM codes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and

accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 99444

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Family Medicine How often? Sometimes

Specialty Pediatrics How often? Sometimes

Specialty Geriatric/Internal Medicine How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 160000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Please see Medicare frequency estimation below. We anticipate national frequency at approximately 2 times the Medicare frequency.

Specialty Family Medicine Frequency 53333 Percentage 33.33 %

Specialty Pediatrics Frequency 53333 Percentage 33.33 %

Specialty Geriatric/Internal Medicine Frequency 53333 Percentage 33.33 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 80,000 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. 2019 RBRVS final rule (pages 2054-2055) estimates initial use of Medicare Virtual Check-in code at well over 1 million episodes per year, quickly increasing to over 19 million per year. The Medicare code has no frequency limitation (99421-99423 have a 7-day frequency limitation); therefore 99421-99423 volume will be less, since eVisits occurring within the same week will be cumulatively bundled. Based on this, we estimated that annual volume over first 3 years will average 1 million per year, with 90% allocated to 99421, 8% to 99422, and 2% to 99423.

Specialty Family Medicine Frequency 40000 Percentage 50.00 %

Specialty Pediatrics Frequency 0 Percentage 0.00 %

Specialty Geriatric/Internal Medicine Frequency 40000 Percentage 50.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

SUMMARY OF RECOMMENDATION

CPT Code:99423 Tracking Number DD3 Original Specialty Recommended RVU: **0.80**
Presented Recommended RVU: **0.80**
Global Period: XXX Current Work RVU: RUC Recommended RVU: **0.80**

CPT Descriptor: Online digital evaluation and management service, for an established patient, for up to 7 days, cumulative time during the 7 days; 21 or more minutes

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A mother submits an online query through her child's physician EHR portal about her six-year-old son who has ADHD with increased lability upon starting a new school.

An adult child of an 80-year-old parent submits through her parent's physician EHR portal an on-line query about her parent who has moderate dementia and has become increasingly confused.

Percentage of Survey Respondents who found Vignette to be Typical: 93%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: N/A

Description of Intra-Service Work:
•Reviewing the initial patient inquiry, reviewing the medical history, reviewing documents sent by the patient and/or obtained by clinical staff, and checking online data registries/information exchanges
•Assessing medical condition described in the patient query
•Formulating and sending the physician response (eg, a diagnosis and treatment plan, and/or request for additional information)
•Reviewing test results and other reports
•Emailing prescriptions
•Follow up communication with the patient
•Interacting with clinical staff to order diagnostic tests, coordinate care, and implement the care plan
•Completing medical record documentation of all communications
•Providing necessary care coordination, telephonic, or electronic communication assistance

Description of Post-Service Work: N/A

Modifier -51 Exempt Status

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:

Is this new/revised procedure considered to be a new technology or service? Yes

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
99214	XXX	1.50	**RUC Time**

CPT Descriptor Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A detailed history; A detailed examination; Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 25 minutes are spent face-to-face with the patient and/or family.

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
99443	XXX	0.75	**RUC Time**

CPT Descriptor Telephone evaluation and management service by a physician or other qualified health care professional who may report evaluation and management services provided to an established patient, parent, or guardian not originating from a related E/M service provided within the previous 7 days nor leading to an E/M service or procedure within the next 24 hours or soonest available appointment; 21-30 minutes of medical discussion

KEY MPC COMPARISON CODES:

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
99231	XXX	0.76	**RUC Time**	7,920,320

CPT Descriptor 1 Subsequent hospital care, per day, for the evaluation and management of a patient, which requires at least 2 of these 3 key components: A problem focused interval history; A problem focused examination; Medical decision making that is straightforward or of low complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the patient is stable, recovering or improving. Typically, 15 minutes are spent at the bedside and on the patient's hospital floor or unit.

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
99213	XXX	0.97	**RUC Time**	98,201,339

CPT Descriptor 2 Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: An expanded problem focused history; An expanded problem focused examination; Medical decision making of low complexity. Counseling and coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of low to moderate severity. Typically, 15 minutes are spent face-to-face with the patient and/or family.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	3%	37%	43%	17%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	6%	43%	51%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	17%	43%	40%
Physical effort required	48%	26%	26%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	26%	74%

2nd Key Reference Code

	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	31%	56%	13%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	28%	72%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	6%	44%	50%
Physical effort required	19%	53%	28%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	9%	22%	69%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

An expert panel of providers from each of the participating specialty societies (ie, AAFP, AAP, ACP, AGS, and AND) reviewed and discussed survey results for the physician (99421-99423) and non-physician provider (NPP) (98970-98972) eVisit codes.

Overview of 99421-99423 (Physician eVisits)

We are recommending the **median survey intra-service times** (8 minutes, 15 minutes, and 25 minutes, respectively) for all three codes. The median time is the midway point of the code descriptors for 99421 and 99422 and the expert panel agreed that the median time of 25 minutes for 99423 was appropriate and was properly aligned with the intraservice and total times for 99443 (1/20/10/31) which was one of the two key reference services.

We also are recommending the survey **25th percentile work relative value units** (wRVU) of 0.25, 0.50, and 0.80 for 99421, 99422, and 99423, respectively. These values place the codes in proper rank order to each other, to the key reference services, and to the chronic care management codes, 99487 and 99490.

99423
The key reference services are 99214 (1.50 wRVU; times of 5/25/10/40 and 99443 (0.75 wRVU; times of 1/20/10/31).

The time for 99423 is 21 or more minutes. Therefore, the expert panel recommends the median survey intra-service time of 25 minutes which is the expert panel agrees is typical. For work, the expert panel believes that the physician work for 99423 which extends over 7 days and has the same amount of intraservice time as 99214 and 5 minutes more intraservice time than 99443 should have a work value higher than 99443. Based on the fact that the survey was robust and the respondents thought the vignettes were typical, we are recommending the 25th percentile wRVU of 0.80. While the expert panel believes that the median wRVU of 1.05 may be more accurate, it is not supported by the intraservice/total time of 21 minutes. The expert panel also reviewed the chronic care management codes 99487 and 99490 which also have only intraservice time. 99487 has a time of 26 minutes and a wRVU of 1.00 while 99490 has a time of 15 minutes and a wRVU of 0.61. As these codes include work over a month and are for patients with two or more chronic conditions, the expert panel believes that a wRVU of 0.80 places 99423 in proper rank order to the CCM codes. Specifically, the time for 99423 is one minute less than 99487 but the work is less intense and occurs over a shorter period of time so the wRVU should be lower. However, 99423 has 9 more minutes of intraservice time than 99490 so the work value should be higher.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 99444

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Family Medicine How often? Sometimes

Specialty Pediatrics How often? Sometimes

Specialty Geriatric/Internal Medicine How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 40000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Please see Medicare frequency estimation below. We anticipate national frequency at approximately 2 times the Medicare frequency.

Specialty Family Medicine Frequency 13333 Percentage 33.33 %

Specialty Pediatrics Frequency 13333 Percentage 33.33 %

Specialty Geriatric/Internal Medicine Frequency 13333 Percentage 33.33 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 20,000 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. 2019 RBRVS final rule (pages 2054-2055) estimates initial use of Medicare Virtual Check-in code at well over 1 million episodes per year, quickly increasing to over 19 million per year. The Medicare code has no frequency limitation (99421-99423 have a 7-day frequency limitation); therefore 99421-99423 volume will be less, since eVisits occurring within the same week will be cumulatively bundled. Based on this, we estimated that annual volume over first 3 years will average 1 million per year, with 90% allocated to 99421, 8% to 99422, and 2% to 99423.

Specialty Family Medicine Frequency 10000 Percentage 50.00 %

Specialty Pediatrics Frequency 0 Percentage 0.00 %

Specialty Geriatric/Internal Medicine Frequency 10000 Percentage 50.00 %

Do many physicians perform this service across the United States? Yes

CPT Code: 99421-99423
Specialty Society: AAFP, AAP, ACP, AGS

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Non Facility Direct Practice Expense (PE) Inputs

CPT Long Descriptor:

99421	Online digital evaluation and management service, for an established patient, cumulative time during 7 days; 5-10 minutes
99422	11-20 minutes
99423	21 or more minutes

Global Period: XXX Meeting Date: January 2019

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   The RUC advisors for each of the participating specialty societies composed an expert panel for purposes of developing recommended PE inputs for these codes. The expert panel of advisors conferred by email and met by conference call to develop their recommendations.

2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here:

   Reference code:
   99444 (Online evaluation and management service provided by a physician or other qualified health care professional who may report evaluation and management services provided to an established patient or guardian, not originating from a related E/M service provided within the previous 7 days, using the Internet or similar electronic communications network)

   The expert panel considered the direct practice expense inputs for 99444 as recommended to the RUC in 2007, the most recent date the RUC considered this code. The expert panel is aware that, when CMS chose not to cover 99444, it disregarded both the physician work and direct practice expense inputs. Thus, the practice expense spreadsheet accompanying this summary of recommendation shows both the current inputs (none) for 99444 in columns I and J and the inputs as recommended to the RUC in 2007 (columns G and H).

3. Is this code(s) typically billed with an E/M service?
   Is this code(s) typically billed with the E/M service in the nonfacility?
   (Please see provided data in PE Subcommittee folder)

   No

4. What specialty is the dominant provider in the nonfacility?
   What percent of the time does the dominant provider provide the service(s) in the nonfacility?
   Is the dominant provider in the nonfacility different then for the global?
   (Please see provided data in PE Subcommittee folder)

These are new codes, and the reference code (99444) is not covered by Medicare, so we have no data on utilization. For new codes 99421-99423, we anticipate that primary care physicians (i.e. family physicians, general internists, general pediatricians, and geriatricians) will be the dominant providers in the non-facility setting and provide this service more than 50% of the time. We anticipate that the dominant provider in the non-facility setting will be the same as the dominant provider in all other settings.

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:

   (not applicable)

6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), you must provide compelling evidence. Please explain if the increase can be entirely accounted for because of an increase in physician time.

   (not applicable)

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here:

   (not applicable)

8. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? (please use this time rather than 5 minutes in your reference code)
   The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

   (not applicable)

9. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

   Clinical staff collect relevant information from the electronic health record for use by the physician or other qualified healthcare professional (QHP) after initial review of the communication by the physician or QHP and assist in follow-up communications and coordination of care (e.g., scheduling appointments, managing follow-up, such as obtaining prior authorization and addressing pharmacy issues).

10. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

    The specialties used 50 percent of the physician/professional intra-service time for the intra-service (of the service period) clinical staff time. The specialties derived this percentage of physician/professional time based on the experience of the expert panel. As noted, clinical staff

collect relevant information from the electronic health record for use by the physician or other QHP after initial review of the communication by the physician or QHP and assist in follow-up communications and coordination of care (e.g., scheduling appointments, managing follow-up, such as obtaining prior authorization and addressing pharmacy issues). This time will correspond to the amount of physician/QHP time, because there may be multiple communications transpiring over the seven days covered by the codes. More communications typically reflect more complexity and are associated with the need for clinical staff to spend more time on activities such as care coordination, follow-up appointments, etc.
