78071	Parathyroid planar imaging (including subtraction, when performed); with tomographic (SPECT)	Apr 2012	Parathyroid Imaging	23	CPT 2013	October 2018	In April 2011, CPT Code 78007, Thyroid imaging, with uptake; multiple determinations was identified in the Harvard Valued-Utilization over 30,000 screen. As part of the review of the entire endocrine family, the specialty societies determined that revisions to the parathyroid imaging procedures were necessary to reflect current bundling policies, guideline changes and new technology. AMA Staff reviewed the work neutrality impacts for codes reviewed in the CPT 2013 cycle. It appeared that was only one issue where there was a large growth in utilization in the first year. For CPT 2013 the Parathyroid Imaging codes were not work neutral, and it was initially estimated as a savings overall. It appears that there was 40% increase from what was projected. The specialty societies submitted an action plan indicating that literature supporting	☑

G0445	High intensity behavioral counseling to prevent sexually transmitted infection; face-to-face, individual, includes: education, skills training and guidance on how to change sexual behavior; performed semi-annually, 30 minutes		Fecal Bacteriotherapy		CPT 2013	October 2018	The specialty societies indicated that they tried to develop a category I code to replace 44705 which is not currently covered by Medicare, but the CPT Editorial Panel did not accept the coding change proposal due to a lack in literature provided. The Workgroup recommended that these services be reviewed in 2 year after additional utilization data is available (October 2018). In October 2018, the RUC recommended to remove from list , no demonstrated technology diffusion that impacts work or practice expense.	☑

New Technology/Services Timeline

1. Code is identified as a new technology/service at the RUC meeting in which it is initially reviewed.
2. Code is flagged in the next version of the RUC database with date to be reviewed
3. Code will be reviewed in 5 years (depending on what meeting in the CPT/RUC cycle it is initially reviewed) after at least three years of data are available.

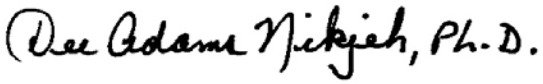
Subject: HCPAC Recommendations

Dear Ms. Verma:

The RUC Health Care Professionals Advisory Committee (HCPAC) Review Board submits the enclosed recommendations for work relative values and direct practice expense inputs to the Centers for Medicare and Medicaid Services (CMS). These recommendations relate to new and revised codes for CPT 2020, as well as to existing services identified by the RUC's Relativity Assessment Workgroup and CMS. At the January 2019 meeting, the following issues were reviewed by the HCPAC:



Trigger Point Dry Needling (20560 & 20561)
Cognitive Function Intervention (97129 & 97130)
Online Digital Evaluation Service (e-Visit) (HCPAC – 98970, 98971, 98972)
Health and Behavior Assessment and Intervention (96156, 96158-159, 96164-165, 96167-168, 96170-171)
Ultrasonic Wound Assessment (97610)

The RUC and HCPAC are fully committed to this ongoing effort to improve relativity in the work, practice expense, and professional liability insurance values. The HCPAC appreciates the opportunity to provide recommendations related to the 2020 Medicare Physician Payment Schedule. If you have any questions regarding this submission, please contact Samantha Ashley (ph: 312-464-4720; email: samantha.ashley@ama-aassn.org) at the AMA for clarification regarding these recommendations.

Sincerely,

Michael D. Bishop, MD

AMA/Specialty Society RVS Update Committee
Health Care Professionals Advisory Committee Review Board Summary of Recommendations

January 2019

Trigger Point Dry Needling – Tab 41

For CPT 2020, the CPT Editorial Panel approved two new codes to report dry needling of musculature trigger points. This technique represents an alternative to pain medication and/or surgery for myofascial pain.

20560 Needle insertion(s) without injection(s), 1 or 2 muscle(s)
The Health Care Professionals Advisory Committee (HCPAC) Review Board reviewed the survey results from 115 physical therapists and chiropractors for new CPT code 20560 and determined that the proposed work RVU of 0.45, the survey 25th percentile, appropriately accounts for the work required to perform this service. The HCPAC recommends 3 minutes of pre-service time, 10 minutes intra-service time and 3 minutes immediate post-service time. Pre-service and post-service times were reduced to 3 minutes from the survey median times to account for overlap in work if other treatment(s)s are performed on the same date. Typically, one additional treatment will occur, for example, 20560 plus 97140. With respect to pre-service work, reviewing the patient chart will not be repeated, but code 20560 has work distinctly related to the invasive service. With respect to post-service work, 20560 will require separate distinct documentation of the service and different patient instructions on home care. The HCPAC agreed that the pre- and post-service time of 3 minutes each did not duplicate the work of another service that may be performed at the same session.

The HCPAC compared the survey code to key reference service CPT code 97140 *Manual therapy techniques (eg, mobilization/ manipulation, manual lymphatic drainage, manual traction), 1 or more regions, each 15 minutes* (work RVU = 0.43, 2 minutes pre-service, 15 minutes intra-service and 2 minutes post-service time) and agreed that the survey code is more intense and complex to perform, especially requiring more mental effort, judgement and physiological stress, which justifies a higher work value even with less intra-service time. The HCPAC also compared the survey code to MPC code 93923 *Complete bilateral noninvasive physiologic studies of upper or lower extremity arteries, 3 or more levels (eg, for lower extremity: ankle/brachial indices at distal posterior tibial and anterior tibial/dorsalis pedis arteries plus segmental blood pressure measurements with bidirectional Doppler waveform recording and analysis, at 3 or more levels, or ankle/brachial indices at distal posterior tibial and anterior tibial/dorsalis pedis arteries plus segmental volume plethysmography at 3 or more levels, or ankle/brachial indices at distal posterior tibial and anterior tibial/dorsalis pedis arteries plus segmental transcutaneous oxygen tension measurements at 3 or more levels), or single level study with provocative functional maneuvers (eg, measurements with postural provocative tests, or measurements with reactive hyperemia)* (work RVU = 0.45, 3 minutes pre-service, 15 minutes intra-service and 3 minutes post-service time) and agreed that the time required to perform both services are identical and should be valued identically. **The HCPAC recommends a work RVU of 0.45 for CPT code 20560.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

20561 Needle insertion(s) without injection(s), 3 or more muscles
The HCPAC reviewed the survey results from 115 physical therapists and chiropractors for new CPT code 20561 and determined that the proposed work RVU of 0.60, the survey 25th percentile, appropriately accounts for the work required to perform this service. The HCPAC recommends 3 minutes of pre-evaluation time, 15 minutes intra-service time and 3 minutes immediate post-service time. Pre-service and post-service times were reduced to 3 minutes from the survey median times to account for overlap in work if other treatment(s)s are performed on the same date. Typically, one additional treatment will occur, for example, 20561 plus 97140. With respect to pre-service work, reviewing the patient chart will not be repeated, but code 20561 has work distinctly related to the invasive service. With respect to post-service work, 20561 will require separate distinct documentation of the service and different patient instructions on home care. The HCPAC agreed that the pre- and post-time of 3 minutes each did not duplicate the work of another service that may be performed at the same session.

The HCPAC compared the survey code to key reference service CPT code 97810 *Acupuncture, 1 or more needles; without electrical stimulation, initial 15 minutes of personal one-on-one contact with the patient* (work RVU = 0.60, 3 minutes pre-service, 15 minutes intra-service and 3 minutes post-service time) and agreed that the time required to perform both services are identical and should be valued identically. **The HCPAC recommends a work RVU of 0.60 for CPT code 20561.**

New Technology/New Services
The HCPAC recommends that CPT codes 20560 and 20561 be placed on the New Technology list and be re-reviewed by the HCPAC in three years to ensure correct valuation and utilization assumptions.

Practice Expense
The PE Subcommittee reduced the number of needles based on the typical patient for 20561 and replaced the exam table (EF023) with the hi-lo treatment table (EF033) because it is typical for a physical therapy office. **The HCPAC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
Musculoskeletal **Introduction or Removal**				
20552		*Injection(s); single or multiple trigger point(s), 1 or 2 muscle(s)*		
20553		*single or multiple trigger point(s), 3 or more muscles*		
		(Do not report 20552, 20553 in conjunction with 20560, 20561 for the same muscle[s])		
		(If imaging guidance is performed, see 76942, 77002, 77021)		
●20560	N1	Needle insertion(s) without injection(s), 1 or 2 muscle(s)	XXX	0.45
●20561	N2	3 or more muscles	XXX	0.60
Physical Medicine and Rehabilitation				
A manner of effecting change through the application of clinical skills and/or services that attempt to improve function.				
Physician or other qualified health care professional (ie, therapist) required to have direct (one-on-one) patient contact.				
97140		*Manual therapy techniques (eg, mobilization/manipulation, manual lymphatic drainage, manual traction), 1 or more regions, each 15 minutes*		
		(For needle insertion[s] without injection[s] [eg, dry needling, trigger point acupuncture], see 20560, 20561)		
Medicine **Acupuncture**				
Acupuncture is reported based on 15-minute increments of personal (face-to-face) contact with the patient, not the duration of acupuncture needle(s) placement.				
If no electrical stimulation is used during a 15-minute…				
Only one code may be reported for each 15-minute increment…				
Evaluation and management services may be reported in addition to acupuncture procedures…				
For needle insertion(s) without injection(s) (eg, dry needling, trigger point acupuncture), see 20560, 20561.				

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

97810	*Acupuncture, 1 or more needles; without electrical stimulation, initial 15 minutes of personal one-on-one contact with the patient*
	(Do not report 97810 in conjunction with 97813)
+97811	*without electrical stimulation, each additional 15 minutes of personal one-on-one contact with the patient, with re-insertion of needle(s) (List separately in addition to code for primary procedure)*
	(Use 97811 in conjunction with 97810, 97813)
97813	*with electrical stimulation, initial 15 minutes of personal one-on-one contact with the patient*
	(*Do not report 97813 in conjunction with 97810)*
+97814	*with electrical stimulation, each additional 15 minutes of personal one-on-one contact with the patient, with re-insertion of needle(s) (List separately in addition to code for primary procedure)*
	(Use 97814 in conjunction with 97810, 97813)
	(Do not report 97810, 97811, 97813, 97814 in conjunction with 20560, 20561. When both time-based acupuncture services and needle insertion[s] without injection[s] are performed, report only the time-based acupuncture codes)

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

SUMMARY OF RECOMMENDATION

CPT Code:20560 Tracking Number N1 Original Specialty Recommended RVU: **0.45**
Presented Recommended RVU: **0.45**
Global Period: XXX Current Work RVU: RUC Recommended RVU: **0.45**

CPT Descriptor: Needle insertion(s) without injection(s), 1 or 2 muscle(s)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 38-year-old female presents with diffuse right shoulder myofascial pain.

Percentage of Survey Respondents who found Vignette to be Typical: 79%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review patient chart and update with any new problems that may have arisen since the previous visit. Position patient and inspect area to be treated. Document as applicable location, color, texture, temperature, vascularity, and size and depth of the area to be targeted for needling. Palpate and mark the identified trigger points within the right shoulder musculature (eg, Supraspinatus and Teres Minor). Verify all required supplies are available. Cleanse the skin and site(s) to be needled.

Description of Intra-Service Work: The provider palpates and locates the trigger points to be needled. The first muscle is secured between the fingers of the non-needling hand. Sterile, single use, solid filament needles, varying from 32-38 gauge and 25-100 mm in length, are inserted at various depths and angles to achieve the desired result of releasing tight tissue, improving microcirculation and removing neuro-noxious chemicals. Interactive reassessments are made throughout the procedure, noting needle fibrillation, local twitch response, and/or reproduction of symptoms including but not limited to achiness, burning and electricity. This process is repeated for each additional muscle to be treated. The needles are withdrawn and pressure (hemostasis) is applied directly to the skin over the needle insertion site.

Description of Post-Service Work: Apply an appropriate dressing(s), if needed. Document procedure and subjective and objective assessments. Instruct patient and/or caregiver on appropriate home care.

SURVEY DATA

RUC Meeting Date (mm/yyyy)	01/2019		
Presenter(s):	Richard Rausch, PT, DPT, MBA; Anthony Hamm, DC

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	6%	25%	50%	16%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed	4%	26%	70%

and analyzed • Urgency of medical decision making			

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	4%	30%	66%
Physical effort required	74%	16%	10%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	6%	10%	84%

2nd Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	8%	46%	35%	12%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	12%	42%	46%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	8%	46%	46%
Physical effort required	12%	81%	8%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	8%	42%	50%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

For CPT 2020, two new codes were approved to report dry needling of musculature trigger points. This technique represents an alternative to pain medication and/or surgery for myofascial pain. The American Physical Therapy Association and the American Chiropractic Association conducted RUC surveys for these two new codes.

Recommendation

20560: We recommend the survey 25th percentile work RVU 0.45 and pre/intra/post times = 3/10/3
20561: We recommend the survey 25th percentile work RVU 0.60 and pre/intra/post times = 3/15/3

Pre- and Post-service Time

Pre-service and post-service times have been reduced to 3 minutes from the survey median time to account for overlap in work if other treatment(s)s are performed on the same date. Typically one additional treatment will occur, for example, 20560 (or 20561) plus 97140.

With respect to pre-service work, reviewing the patient chart will not be repeated, but each code has work distinctly related to the service. For example, the following pre-service work for 20560 or 20561) is distinctly different than the preservice work for 97140: *Position patient and inspect area to be treated. Document as applicable location, color, texture, temperature, vascularity, and size and depth of the area to be targeted for needling. Palpate and mark the identified trigger points within the right shoulder musculature (eg, Supraspinatus and Teres Minor). Verify all required supplies are available. Cleanse the skin and site(s) to be needled.*

With respect to post-service work, each procedure will require separate distinct documentation of the service and different patient instructions on home care.

Comparison to KRS 97140

The specialties agree that invasive trigger point dry needling is more intense than non-invasive manual therapy and patient therapy technique education. This is supported by the survey intensity / complexity measures that show all measures significantly greater except for *physical effort required*. The recommended work RVUs correctly rank the intraservice work.

Review Year	CPT	Long Descriptor	GLOB	RVW	IWPUT	Total Time	EVAL	INTRA	POST
	20560	Needle insertion(s) without injection(s), 1 or 2 muscle(s)	XXX	**0.45**	0.032	**16**	3	**10**	3
	20561	Needle insertion(s) without injection(s), 3 or more muscle(s)	XXX	**0.60**	0.031	**21**	3	**15**	3
2017	**97140**	Manual therapy techniques (eg, mobilization/ manipulation, manual lymphatic drainage, manual traction), 1 or more regions, each 15 minutes	XXX	**0.43**	0.023	**19**	2	**15**	2

Comparison to KRS 97810

The specialties agree that the intensity / complexity is similar to code 97810. This is supported by the survey intensity / complexity measures.

Review Year	CPT	Long Descriptor	GLOB	RVW	IWPUT	Total Time	EVAL	INTRA	POST
	20560	Needle insertion(s) without injection(s), 1 or 2 muscle(s)	XXX	**0.45**	0.032	**16**	3	**10**	3
	20561	Needle insertion(s) without injection(s), 3 or more muscle(s)	XXX	**0.60**	0.031	**21**	3	**15**	3
2005	**97810**	Acupuncture, 1 or more needles; without electrical stimulation, initial 15 minutes of personal one-on-one contact with the patient	XXX	**0.60**	0.031	**21**	3	**15**	3

Comparison to MPC Codes

The recommend work RVUs, time and resulting IWPUT compare well with respective MPC codes for each survey code.

Review Year	CPT	Long Descriptor	GLOB	RVW	IWPUT	Total Time	EVAL	INTRA	POST
2010	**93923**	Complete bilateral noninvasive physiologic studies of upper or lower extremity arteries, 3 or more levels…..	XXX	**0.45**	0.032	16	3	**10**	3
	20560	Needle insertion(s) without injection(s), 1 or 2 muscle(s)	XXX	**0.45**	0.032	16	3	**10**	3
2012	**92083**	Visual field examination, unilateral/ bilateral, with interpretation & report; extended examination …	XXX	**0.50**	0.043	13	3	**10**	0

Review Year	CPT	Long Descriptor	GLOB	RVW	IWPUT	Total Time	EVAL	INTRA	POST
2007	**99407**	Smoking and tobacco use cessation counseling visit; intensive, greater than 10 minutes	XXX	**0.50**	0.033	15		15	
	20561	Needle insertion(s) without injection(s), 3 or more muscle(s)	XXX	**0.60**	0.031	21	3	15	3
2006	**99213**	Office or other outpatient visit for the evaluation and management of an established patient, …Typically, 15 minutes are spent face-to-face with the patient and/or family.	XXX	**0.97**	0.053	23	3	15	5

Comparison to Other Codes 20552, 20553

Codes 20560 and 20561 (trigger point dry needling) can also be compared to codes 20552 and 20553 (trigger point injection) as demonstrated by the intraservice descriptions as shown in the table below. Codes 20560 and 20561 use the mechanics of needling instead of an injectate which would represent increased intensity related to possible side effects from the medication.

20560 (and 20561)	20552 (and 20553) DOW
The provider palpates and locates the trigger points to be needled. The first muscle is secured between the fingers of the non-needling hand. Sterile, single use, solid filament needles, varying from 32-38 gauge and 25-100 mm in length, are inserted at various depths and angles to achieve the desired result of releasing tight tissue, improving microcirculation and removing neuro-noxious chemicals. Interactive reassessments are made throughout the procedure, noting needle fibrillation, local twitch response, and/or reproduction of symptoms including but not limited to achiness, burning and electricity. This process is repeated for each additional muscle to be treated. The needles are withdrawn and pressure (hemostasis) is applied directly to the skin over the needle insertion site.	*After identifying the trigger point in the multifidus muscle left of the L5 spinous process by palpation, insert needle through the skin into the muscle. Advance the needle a short distance, about 2 cm to 4 cm, observing for any complaints of paresthesias but searching for the area of maximum tenderness. If any complaints or paresthesias are encountered, withdraw the needle slightly until the complaints stop. Infiltrate the injectant solution in a fanwise method into the trigger point after aspiration is negative for blood.*

We also believe the work RVU recommendations for 20560 and 20561 are correctly ranked relative to 20552 and 20553.

Review Year	CPT	Long Descriptor	GLOB	RVW	IWPUT	Total Time	EVAL	POSIT	SDW	INTRA	POST
	20560	Needle insertion(s) without injection(s), 1 or 2 muscle(s)	XXX	**0.45**	0.032	**16**	3			**10**	3
	20561	Needle insertion(s) without injection(s), 3 or more muscle(s)	XXX	**0.60**	0.031	**21**	3			**15**	3
2016	**20552**	Injection(s); single or multiple trigger point(s), 1 or 2 muscle(s)	000	**0.66**	0.075	**21**	5	1	5	**5**	5
2016	**20553**	Injection(s); single or multiple trigger point(s), 3 or more muscles	000	**0.75**	0.044	**27**	5	2	5	**10**	5

Comparison to Other Codes 98940, 98941

Codes 20560 and 20561 (dry needling, 1-2 and 3+ muscles) compare well to codes 98940 and 98941 (CMT, 1-2 regions and 3-4 regions). We believe the work RVU recommendations for 20560 and 20561 are correctly ranked relative to 98940 and 98941.

Review Year	CPT	Long Descriptor	GLOB	RVW	IWPUT	Total Time	EVAL	INTRA	POST
	20560	Needle insertion(s) without injection(s), 1 or 2 muscle(s)	XXX	**0.45**	0.032	**16**	3	**10**	3
	20561	Needle insertion(s) without injection(s), 3 or more muscle(s)	XXX	**0.60**	0.031	**21**	3	**15**	3
2012	**98940**	Chiropractic manipulative treatment (CMT); spinal, 1-2 regions	000	**0.46**	0.040	15	4	7	4
2012	**98941**	Chiropractic manipulative treatment (CMT); spinal, 3-4 regions	000	**0.71**	0.049	20	5	10	5

Summary

The APTA and ACA Advisors reviewed the survey data and **recommend the survey 25th percentile work RVU of 0.45 for 20560 and 0.60 for 20561**. These values compare well with the key reference codes, MPC codes and other similar code pairs 20552, 20553 and 98940, 98941.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed)
CPT instructs that dry needling should be reported with 20999 Unlisted procedure, musculoskeletal system, general

See supplemental files submitted: CPT Assistant September 2003, CPT Assistant October 2014, CPT Knowledge Base January 2010

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty physical therapy How often? Sometimes

Specialty chiropractor How often? Sometimes

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period?
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. National data not available

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?
100,000 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This service is currently not paid by Medicare as it has been considered experimental. Literature has proven it is no longer evolving or experimental and a Cat I code has been approved. We estimate Medicare utilization of 100,000, however we believe that this utilization will replace other techniques that providers (eg, physical therapists, chiropractors, physicians, QHPs) currently use for myofascial pain and not necessarily increase the overall number of claims for therapy (eg, trigger point injection) related to myofascial pain.

Specialty physical therapy Frequency 50000 Percentage 50.00 %

Specialty chiropractor Frequency 25000 Percentage 25.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment
Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Minor procedure

BETOS Sub-classification Level II:
Musculoskeletal

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 97116

CPT Descriptor: Needle insertion(s) without injection(s), 3 or more muscle(s)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 38-year-old female presents with neck pain, muscle tension headaches and diffuse right shoulder myofascial pain.

Percentage of Survey Respondents who found Vignette to be Typical: 93%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review patient chart and update with any new problems that may have arisen since the previous visit. Position patient and inspect area to be treated. Document as applicable location, color, texture, temperature, vascularity, and size and depth of the area to be targeted for needling. Palpate and mark the identified trigger points within the right shoulder (right supraspinatus and right teres minor) and cervical spine (right suboccipital and right upper trapezius) musculature. Verify all required supplies are available. Cleanse the skin and site(s) to be needled.

Description of Intra-Service Work: The provider palpates and locates the trigger points to be needled. The first muscle is secured between the fingers of the non-needling hand. Sterile, single use, solid filament needles, varying from 32-38 gauge and 25-100 mm in length, are inserted at various depths and angles to achieve the desired result of releasing tight tissue, improving microcirculation and removing neuro-noxious chemicals. Interactive reassessments are made throughout the procedure, noting needle fibrillation, local twitch response, and/or reproduction of symptoms including but not limited to achiness, burning and electricity. This process is repeated for each additional muscle to be treated. The needles are withdrawn and pressure (hemostasis) is applied directly to the skin over the needle insertion site.

Description of Post-Service Work: Apply an appropriate dressing(s), if needed. Document procedure and subjective and objective assessments. Instruct patient and/or caregiver on appropriate home care.

Modifier -51 Exempt Status

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:

Is this new/revised procedure considered to be a new technology or service? Yes

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
97140	XXX	0.43	**RUC Time**

CPT Descriptor Manual therapy techniques (eg, mobilization/ manipulation, manual lymphatic drainage, manual traction), 1 or more regions, each 15 minutes

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
97810	XXX	0.60	**RUC Time**

CPT Descriptor Acupuncture, 1 or more needles; without electrical stimulation, initial 15 minutes of personal one-on-one contact with the patient

KEY MPC COMPARISON CODES:

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
99407	XXX	0.50	**RUC Time**	96,502

CPT Descriptor 1 Smoking and tobacco use cessation counseling visit; intensive, greater than 10 minutes

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
99213	XXX	0.97	**RUC Time**	98,201,339

CPT Descriptor 2 Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: An expanded problem focused history; An expanded problem focused examination; Medical decision making of low complexity. Counseling and coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of low to moderate severity. Typically, 15 minutes are spent face-to-face with the patient and/or family.

Other Reference CPT Code	Global	Work RVU	Time Source
98941	000	0.71	**RUC Time**

CPT Descriptor Chiropractic manipulative treatment (CMT); spinal, 3-4 regions

RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:
Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by percent distribution) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Top Key Reference Code: 42 **% of respondents:** 36.5 **%**

Number of respondents who choose 2nd Key Reference Code: 22 **% of respondents:** 19.1 **%**

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	2%	21%	55%	21%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	2%	26%	71%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	2%	19%	79%
Physical effort required	69%	24%	7%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	2%	10%	88%

2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	45%	36%	18%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	50%	50%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	59%	41%
Physical effort required	18%	73%	9%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	55%	45%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

For CPT 2020, two new codes were approved to report dry needling of musculature trigger points. This technique represents an alternative to pain medication and/or surgery for myofascial pain. The American Physical Therapy Association and the American Chiropractic Association conducted RUC surveys for these two new codes.

Recommendation

20560: We recommend the survey 25th percentile work RVU 0.45 and pre/intra/post times = 3/10/3
20561: We recommend the survey 25th percentile work RVU 0.60 and pre/intra/post times = 3/15/3

Pre- and Post-service Time

Pre-service and post-service times have been reduced to 3 minutes from the survey median time to account for overlap in work if other treatment(s)s are performed on the same date. Typically one additional treatment will occur, for example, 20560 (or 20561) plus 97140.

With respect to pre-service work, reviewing the patient chart will not be repeated, but each code has work distinctly related to the service. For example, the following pre-service work for 20560 or 20561) is distinctly different than the preservice work for 97140: *Position patient and inspect area to be treated. Document as applicable location, color, texture, temperature, vascularity, and size and depth of the area to be targeted for needling. Palpate and mark the identified trigger points within the right shoulder musculature (eg, Supraspinatus and Teres Minor). Verify all required supplies are available. Cleanse the skin and site(s) to be needled.*

With respect to post-service work, each procedure will require separate distinct documentation of the service and different patient instructions on home care.

Comparison to KRS 97140

The specialties agree that invasive trigger point dry needling is more intense than non-invasive manual therapy and patient therapy technique education. This is supported by the survey intensity / complexity measures that show all measures significantly greater except for *physical effort required*. The recommended work RVUs correctly rank the intraservice work.

Review Year	CPT	Long Descriptor	GLOB	RVW	IWPUT	Total Time	EVAL	INTRA	POST
	20560	Needle insertion(s) without injection(s), 1 or 2 muscle(s)	XXX	**0.45**	0.032	**16**	3	**10**	3
	20561	Needle insertion(s) without injection(s), 3 or more muscle(s)	XXX	**0.60**	0.031	**21**	3	**15**	3
2017	**97140**	Manual therapy techniques (eg, mobilization/ manipulation, manual lymphatic drainage, manual traction), 1 or more regions, each 15 minutes	XXX	**0.43**	0.023	**19**	2	**15**	2

Comparison to KRS 97810

The specialties agree that the intensity / complexity is similar to code 97810. This is supported by the survey intensity / complexity measures.

Review Year	CPT	Long Descriptor	GLOB	RVW	IWPUT	Total Time	EVAL	INTRA	POST
	20560	Needle insertion(s) without injection(s), 1 or 2 muscle(s)	XXX	**0.45**	0.032	**16**	3	**10**	3
	20561	Needle insertion(s) without injection(s), 3 or more muscle(s)	XXX	**0.60**	0.031	**21**	3	**15**	3
2005	**97810**	Acupuncture, 1 or more needles; without electrical stimulation, initial 15 minutes of personal one-on-one contact with the patient	XXX	**0.60**	0.031	**21**	3	**15**	3

Comparison to MPC Codes

The recommend work RVUs, time and resulting IWPUT compare well with respective MPC codes for each survey code.

Review Year	CPT	Long Descriptor	GLOB	RVW	IWPUT	Total Time	EVAL	INTRA	POST
2010	**93923**	Complete bilateral noninvasive physiologic studies of upper or lower extremity arteries, 3 or more levels…..	XXX	**0.45**	0.032	16	3	**10**	3
	20560	Needle insertion(s) without injection(s), 1 or 2 muscle(s)	XXX	**0.45**	0.032	16	3	**10**	3

2007	**99407**	Smoking and tobacco use cessation counseling visit; intensive, greater than 10 minutes	XXX	**0.50**	0.033	15		15	
	20561	Needle insertion(s) without injection(s), 3 or more muscle(s)	XXX	**0.60**	0.031	21	3	15	3
2006	**99213**	Office or other outpatient visit for the evaluation and management of an established patient, …Typically, 15 minutes are spent face-to-face with the patient and/or family.	XXX	**0.97**	0.053	23	3	15	5

Comparison to Other Codes 20552, 20553

Codes 20560 and 20561 (trigger point dry needling) can also be compared to codes 20552 and 20553 (trigger point injection) as demonstrated by the intraservice descriptions as shown in the table below. Codes 20560 and 20561 use the mechanics of needling instead of an injectate which would represent increased intensity related to possible side effects from the medication.

20560 (and 20561)	20552 (and 20553) DOW
The provider palpates and locates the trigger points to be needled. The first muscle is secured between the fingers of the non-needling hand. Sterile, single use, solid filament needles, varying from 32-38 gauge and 25-100 mm in length, are inserted at various depths and angles to achieve the desired result of releasing tight tissue, improving microcirculation and removing neuro-noxious chemicals. Interactive reassessments are made throughout the procedure, noting needle fibrillation, local twitch response, and/or reproduction of symptoms including but not limited to achiness, burning and electricity. This process is repeated for each additional muscle to be treated. The needles are withdrawn and pressure (hemostasis) is applied directly to the skin over the needle insertion site.	*After identifying the trigger point in the multifidus muscle left of the L5 spinous process by palpation, insert needle through the skin into the muscle. Advance the needle a short distance, about 2 cm to 4 cm, observing for any complaints of paresthesias but searching for the area of maximum tenderness. If any complaints or paresthesias are encountered, withdraw the needle slightly until the complaints stop. Infiltrate the injectant solution in a fanwise method into the trigger point after aspiration is negative for blood.*

We also believe the work RVU recommendations for 20560 and 20561 are correctly ranked relative to 20552 and 20553.

Review Year	CPT	Long Descriptor	GLOB	RVW	IWPUT	Total Time	EVAL	POSIT	SDW	INTRA	POST
	20560	Needle insertion(s) without injection(s), 1 or 2 muscle(s)	XXX	**0.45**	0.032	**16**	3			**10**	3
	20561	Needle insertion(s) without injection(s), 3 or more muscle(s)	XXX	**0.60**	0.031	**21**	3			**15**	3
2016	**20552**	Injection(s); single or multiple trigger point(s), 1 or 2 muscle(s)	000	**0.66**	0.075	**21**	5	1	5	**5**	5
2016	**20553**	Injection(s); single or multiple trigger point(s), 3 or more muscles	000	**0.75**	0.044	**27**	5	2	5	**10**	5

Comparison to Other Codes 98940, 98941

Codes 20560 and 20561 (dry needling, 1-2 and 3+ muscles) compare well to codes 98940 and 98941 (CMT, 1-2 regions and 3-4 regions). We believe the work RVU recommendations for 20560 and 20561 are correctly ranked relative to 98940 and 98941.

Review Year	CPT	Long Descriptor	GLOB	RVW	IWPUT	Total Time	EVAL	INTRA	POST
	20560	Needle insertion(s) without injection(s), 1 or 2 muscle(s)	XXX	**0.45**	0.032	**16**	3	**10**	3
	20561	Needle insertion(s) without injection(s), 3 or more muscle(s)	XXX	**0.60**	0.031	**21**	3	**15**	3
2012	**98940**	Chiropractic manipulative treatment (CMT); spinal, 1-2 regions	000	**0.46**	0.040	15	4	7	4
2012	**98941**	Chiropractic manipulative treatment (CMT); spinal, 3-4 regions	000	**0.71**	0.049	20	5	10	5

Summary

The APTA and ACA Advisors reviewed the survey data and **recommend the survey 25th percentile work RVU of 0.45 for 20560 and 0.60 for 20561**. These values compare well with the key reference codes, MPC codes and other similar code pairs 20552, 20553 and 98940, 98941.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed)
CPT instructs that dry needling should be reported with 20999 Unlisted procedure, musculoskeletal system, general

See supplemental files submitted: CPT Assistant September 2003, CPT Assistant October 2014, CPT Knowledge Base January 2010

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty physical therapy How often? Sometimes

Specialty chiropractor How often? Sometimes

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period?
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. National data not available

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?
150,000 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This service is currently not paid by Medicare as it has been considered experimental. Literature has proven it is no longer evolving or experimental and a Cat I code has been approved. We estimate Medicare utilization of 150,000, however we believe that this utilization will replace other techniques that providers (eg, physical therapists, chiropractors, physicians, QHPs) currently use for myofascial pain and not necessarily increase the overall number of claims for therapy (eg, trigger point injection) related to myofascial pain.

Specialty physical therapy Frequency 75000 Percentage 50.00 %

Specialty chiropractor Frequency 40000 Percentage 26.66 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment
Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Minor procedure

BETOS Sub-classification Level II:
Musculoskeletal

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 97116

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Non Facility Direct Practice Expense (PE) Inputs

Meeting Date: 01-2019

CPT	Descriptor	Global
20560	Needle insertion(s) without injection(s), 1 or 2 muscle(s)	XXX
20561	Needle insertion(s) without injection(s), 3 or more muscle(s)	XXX

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   APTA and ACA Advisors and providers familiar with these services reviewed the current PE inputs for similar service and key reference code 97810.

2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here:

   The stakeholder societies selected the second key reference service (97810) as similar and more comparable than the primary KRS (97140) which is not an invasive procedure.

3. Is this code(s) typically billed with an E/M service? No
   Is this code(s) typically billed with the E/M service in the nonfacility? No
   (Please see provided data in PE Subcommittee folder)

4. What specialty is the dominant provider in the nonfacility?

   It is expected that physical therapists will be the dominant provider of these new services, although specially trained chiropractors, occupational therapists, nurse practitioners and physicians (eg, PM&R) will also likely provide these services.

   What percent of the time does the dominant provider provide the service(s) in the nonfacility? 50%

   Is the dominant provider in the nonfacility different then for the global? No
   (Please see provided data in PE Subcommittee folder)

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time: N/A

6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), you must provide compelling evidence. Please explain if the increase can be entirely accounted for because of an increase in physician time. N/A

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here: NA

8. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

   Clinical staff will be available to assist the practitioner 2/3 of the intra-service time to help with handing supplies related to cleansing skin, inserting needles, and applying pressure as needles are removed. Dry needling may also elicit a sympathetic response requiring the presence of clinical staff. Lastly, clinical staff availability is needed to assist with patient repositioning during the procedure requiring additional pillows, bolsters, etc

9. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

   Clinical staff will be available to assist the practitioner 2/3 of the intra-service time to help with handing supplies related to cleansing skin, inserting needles, and applying pressure as needles are removed.

10. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities: NA

11. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov. NA

12. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here: NA

13. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here: NA

14. List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here:

		20560	20561

AMA/Specialty Society RVS Update Committee
Health Care Professionals Advisory Committee Review Board Summary of Recommendations

January 2019

Cognitive Function Intervention – Tab 41

CPT code 97129 was originally developed to replace CPT code 97532 (cognitive skills development, each 15 minutes) in response to a 2010 RUC High Volume Growth screen and a CMS High Expenditure screen that identified several codes in the physical medicine and rehabilitation (PM&R) family. In response to CMS' concern regarding timed codes noted in the CY2019 MPFS Final Rule, the CPT Physical Medicine &Rehabilitation (PM&R) Workgroup agreed that a new procedure code for cognitive function intervention was warranted to reflect current practice and should be changed to an untimed/per day code. The PM&R family was subsequently reviewed by the Relativity Assessment Workgroup at its April 2016 meeting, and 97532 was included as part of the family. The RUC recommended that CPT code 97532 should be referred to the CPT Editorial Panel to be updated to reflect current clinical practice.

The CPT Editorial Panel approved 97129 as an untimed code at its September2016 meeting and the RUC HCPAC valued and submitted final recommendations to CMS for inclusion in the 2018 MPFS. However, in the 2018 MPFS Final Rule, CMS assigned 97129 a procedure status of "I" (Invalid) and instead established a new G-code (G0515) for cognitive therapy, which maintained the descriptor and values from former CPT code 97532 (cognitive skills development, each 15 minutes). CMS suggested that 97129, as an untimed/per day code, did not appropriately account for the variable amounts of time spent with the patient depending on the discipline (i.e., psychology, speech-language pathology, occupational therapy, or physical therapy) and/or setting (i.e., facility-based vs. outpatient). The specialties proposed to revise CPT code 97129 to make it time-based with a new add-on code to address CMS' concern regarding the time variance among providers. At the September 2018 CPT Editorial Panel meeting, the Panel revised 97129 and created one new code to describe cognitive function intervention services using time-based codes.

Compelling Evidence

The Health Care Professionals Advisory Committee (HCPAC) Review Board reviewed and accepted compelling evidence for CPT code 97129 and 97130 that incorrect assumptions were made in the previous valuation because according to utilization data the previous survey was conducted by a different specialty than the specialty that currently provides these services. Former code 97532 was last surveyed by psychology, physical therapy, and occupational therapy in 2000, but the primary providers of these services are now speech-language pathology at 69% and psychology at 21 % based on total Medicare utilization in 2017. Although the RUC database noted that speech-language pathologists also participated in the survey process for 97532, it was as clinical staff and related to the practice expense for the service. Speech-language pathologists (SLP) did not gain independent Medicare billing status until July 2009 and were not previously able to survey for professional work. In 2009 SLPs did resurvey some of their primary services, however 97532 was not surveyed at that time because it was not widely performed by speech language pathologists yet. . As such, the current value of G0515 (formerly 97532) does not accurately reflect speech-language pathology work as the primary provider. Compelling evidence approval allows for a potential increase over the 0.44 work RVUs for G0515.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

97129 Therapeutic interventions that focus on cognitive function (eg, attention, memory, reasoning, executive function, problem solving, and/or pragmatic functioning) and compensatory strategies to manage the performance of an activity (eg, managing time or schedules, initiating, organizing and sequencing tasks), direct (one-on-one) patient contact; initial 15 minutes

The HCPAC reviewed the survey results from 105 speech language pathologists and psychologists for CPT code 97129. The HCPAC determined that the proposed work RVU of 0.50, the survey 25th percentile, appropriately accounts for the work required to perform this service. The HCPAC agreed with the specialty society that the survey times of 12 minutes pre-service, 30 minutes intra-service, and 10 minutes post-service time, indicated that the survey respondents did not understand the 15 minutes base code and 15 minute add-on coding structure, and overestimated the time needed to perform this 15 minute time-based code. The HCPAC reviewed the 25th percentile times of 7 minutes pre-service, 15 minutes intra-service, and 6 minutes post-service time and concluded that the intra-service time of 15 minutes at the 25th percentile is appropriate. The HCPAC agreed with the specialty society that the pre-service and post-service time should be decreased to 5 minutes each, which is adequate time to communicate complex information and instructions to cognitively-impaired patients and their caregivers. The HCPAC recommends 5 minutes of pre-evaluation time, 15 minutes intra-service time and 5 minutes immediate post-service time.

The HCPAC compared the survey code to similar service CPT code 97760 *Orthotic(s) management and training (including assessment and fitting when not otherwise reported), upper extremity(ies), lower extremity(ies) and/or trunk, initial orthotic(s) encounter, each 15 minutes* (work RVU = 0.50, 5 minutes pre-service, 15 minutes intra-service and 5 minutes post-service time) and agreed that the time required to perform both services are identical and the work should be valued identically. **The HCPAC recommends a work RVU of 0.50 for CPT code 97129.**

97130 Therapeutic interventions that focus on cognitive function (eg, attention, memory, reasoning, executive function, problem solving, and/or pragmatic functioning) and compensatory strategies to manage the performance of an activity (eg, managing time or schedules, initiating, organizing and sequencing tasks), direct (one-on-one) patient contact; each additional 15 minutes (list separately in addition to code for primary procedure)

The HCPAC reviewed the survey results from 107 speech language pathologists and psychologists for add-on CPT code 97130. The HCPAC determined that the proposed work RVU of 0.48, the survey 25th percentile, appropriately accounts for the work required to perform this service. The HCPAC agreed with the specialty society that the survey times of 22 minutes intra-service/total time, indicated that the survey respondents did not understand the 15 minutes base code and 15-minute add-on coding structure, and overestimated the time needed to perform this 15 minute add-on time-based code. The HCPAC reviewed the 25th percentile times of 15 minutes intra-service/total time and concluded that the intra-service time of 15 minutes at the 25th percentile is appropriate. The HCPAC recommends 15 minutes intra-service time.

The HCPAC compared the survey code to similar service CPT code 97760 *Pharmacologic management, including prescription and review of medication, when performed with psychotherapy services (List separately in addition to the code for primary procedure)* (work RVU = 0.48, 15 minutes intra-service) and agreed that the time required to perform both services are identical and the work should be valued identically. **The HCPAC recommends a work RVU of 0.48 for CPT code 97130.**

Practice Expense

The HCPAC recommends the direct practice expense inputs as submitted by the specialty society.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:97129 Tracking Number Original Specialty Recommended RVU: **0.50**
Presented Recommended RVU: **0.50**
Global Period: XXX Current Work RVU: RUC Recommended RVU: **0.50**

CPT Descriptor: Therapeutic interventions that focus on cognitive function (eg, attention, memory, reasoning, executive function, problem solving, and/or pragmatic functioning) and compensatory strategies to manage the performance of an activity (eg, managing time or schedules, initiating, organizing and sequencing tasks), direct (one-on-one) patient contact; initial 15 minutes (report 971XX only once per day)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 30-year-old male presents with traumatic brain injury sustained in a vehicular accident resulting in memory problems, distractibility, depression, inappropriate social interaction, inability to self-monitor, and impaired organizational skills for executive function. He is seen for cognitive function intervention.

Percentage of Survey Respondents who found Vignette to be Typical: 79%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The clinician reviews the treatment plan and prepares for the session, including selection and set up of materials for therapy, as well as selection of materials and activities and tasks for completion between treatment sessions.

Description of Intra-Service Work: The clinician implements therapeutic activities that may include: attention tasks (eg, gradually increasing levels of distracting background noise); memory tasks (eg, visualization, mnenomics, environmental adaptations); problem solving activities (eg, techniques to define a problem, set a goal, and organize an action); and pragmatic activities to improve social communication skills and increase self-awareness of limitations and disabilities (eg, use of internal dialogue). Tools (eg, technology-assisted activities, role-playing activities) and compensatory strategies (eg, memory log) may be used to accomplish functional outcomes.

Description of Post-Service Work: The clinician reviews session results and progress toward functional goals with the patient and/or caregiver. The clinician also explains, demonstrates, and instructs the patient and/or caregiver in activities and tasks for completion between treatment sessions.

Key CPT Code	Global	Work RVU	Time Source
97535	XXX	0.45	**RUC Time**

CPT Descriptor Self-care/home management training (eg, activities of daily living (ADL) and compensatory training, meal preparation, safety procedures, and instructions in use of assistive technology devices/adaptive equipment) direct one-on-one contact, each 15 minutes

KEY MPC COMPARISON CODES:
Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
97533	XXX	0.48	**RUC Time**	11,496

CPT Descriptor 1 Sensory integrative techniques to enhance sensory processing and promote adaptive responses to environmental demands, direct (one-on-one) patient contact, each 15 minutes

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
97802	XXX	0.53	**RUC Time**	215,788

CPT Descriptor 2 Medical nutrition therapy; initial assessment and intervention, individual, face-toface with the patient, each 15 minutes

Other Reference CPT Code	Global	Work RVU	Time Source
97760	XXX	0.50	**RUC Time**

CPT Descriptor Orthotic(s) management and training (including assessment and fitting when not otherwise reported), upper extremity(ies), lower extremity(ies) and/or trunk, initial orthotic(s) encounter, each 15 minutes

RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:

Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by percent distribution) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Top Key Reference Code: 45 **% of respondents:** 42.8 **%**

Number of respondents who choose 2nd Key Reference Code: 18 **% of respondents:** 17.1 **%**

TIME ESTIMATES (Median)

	CPT Code: 97129	**Top Key Reference CPT Code:** 97530	**2nd Key Reference CPT Code:** **97535**
Median Pre-Service Time	5.00	2.00	2.50
Median Intra-Service Time	15.00	15.00	15.00
Median Immediate Post-service Time	5.00	2.00	4.00
Median Critical Care Time	0.0	0.00	0.00
Median Other Hospital Visit Time	0.0	0.00	0.00
Median Discharge Day Management Time	0.0	0.00	0.00
Median Office Visit Time	0.0	0.00	0.00
Prolonged Services Time	0.0	0.00	0.00

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	0%	33%	44%	22%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	2%	24%	74%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	2%	44%	54%
Physical effort required	20%	67%	13%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	7%	42%	51%

2nd Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	0%	17%	61%	22%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	33%	66%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	0%	22%	78%
Physical effort required	28%	67%	11%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	6%	22%	72%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Reason for Survey:
At the April 2016 meeting of the Relativity Assessment Workgroup (RAW), CPT 97532—Development of cognitive skills to improve attention, memory, problem solving (includes compensatory training), direct (one-on-one) patient contact, each 15 minutes—was referred back to the CPT Editorial Panel for update to reflect current practice as part of the larger family of physical medicine and rehabilitation (PM&R) codes (97101-97799). The CPT Editorial Panel approved CPT code 97127 (cognitive function intervention, per day) at its October 2016 meeting and the RUC HCPAC valued and submitted

final recommendations to CMS for inclusion in the 2018 MPFS. However, in the 2018 MPFS Final Rule, CMS assigned 97127 a procedure status of "I" (Invalid) and instead established a new temporary G-code (G0515) for cognitive therapy, which maintained the descriptor and values from former/deleted CPT code 97532 (cognitive skills development, each 15 minutes). CMS suggested that 97127, as an untimed/per day code, did not appropriately account for the variable amounts of time spent with the patient depending on the discipline (i.e., psychology, speech-language pathology, occupational therapy, or physical therapy) and/or setting (i.e., facility-based vs. outpatient). In order to resolve this issue, ASHA and APA submitted a proposal to revise 97127 to a timed code. At its September 2018 meeting ASHA and APA recommended a base code of 30 minutes, with a 15-minute add-on; however, the CPT Editorial Panel approved a new timed base code of 15 minutes (97129) and an add-on code of 15 minutes (97130) for reporting of cognitive function intervention.

Survey Sample:
The survey data and recommendations are based upon random samples of applicable subsets of the APA and ASHA memberships. Specifically, the random samples were drawn from established specialty society member sections from APA and ASHA. The total sample size was 5800 with 105 responses. Of those responses, 63 were provided by speech-language pathologists and 42 by psychologists.

Expert Panel Recommendations:
A panel of psychologists and speech-language pathologists was convened to consider the survey data and provide recommendations regarding appropriate times and professional work values, as outlined below.

The expert panel recommends **a work RVU of 0.50 and 5 minutes (pre), 15 minutes (intra), and 5 minutes (post) for a total of 25 minutes**. To support this recommendation, we cite **CPT code 97760**—Orthotic(s) management and training (including assessment and fitting when not otherwise reported), upper extremity(ies), lower extremity(ies) and/or trunk, initial orthotic(s) encounter, each 15 minutes—as a comparison code, also with a work RVU of 0.50 and 5 minutes (pre), 15 minutes (intra), and 5 minutes (post), for a total of 25 minutes.

Time
The expert panel reviewed the median survey times of 12 minutes (pre), 30 minutes (intra), and 10 minutes (post) and the 25th percentile times of 7 minutes (pre), 15 minutes (intra), and 6 minutes (post) and concluded that the intraservice time of 15 minutes at the 25th percentile is appropriate. However, the expert panel also concluded that the pre- and post- service times should be decreased to 5 minutes each, resulting in a **recommendation of 5 minutes (pre), 15 minutes (intra), and 5 minutes (post)**. These times more appropriately reflect the 15-minute time-based code. The expert panel also believes that the pre- and post-service times are appropriate due to the complexity of communicating information and instructions to cognitively-impaired patients and their caregivers.

Work RVU
The expert panel reviewed the median survey work RVU of 0.65 and agreed that it is not an appropriate work value. Instead, the expert panel **recommends the survey 25th percentile of 0.50**. We believe this accurately captures current practice and reflects the additional pre- and post-service activities associated with the base code. This recommendation is also supported by the key reference codes. 100% of survey respondents ranked the survey code either equal to or greater in overall complexity and intensity than the key reference codes.

Compelling Evidence
The expert panel believes there is compelling evidence for an increase in the current values for the cognitive function intervention family of codes for the following reasons:

Evidence that incorrect assumptions were made in the previous valuation of the service, specifically:

- **A previous survey was conducted by one specialty to obtain a value, but the service is currently provided primarily by qualified healthcare professionals from a different specialty according to utilization data.**

Former code 97532 was last surveyed by psychology, physical therapy, and occupational therapy in 2000, but the primary billers are now speech-language pathology at 68.70% and psychology at 21.40% of total utilization in 2017. Although the RUC database noted that speech-language pathologists also participated in the survey process for 97532, this was not possible, as speech-language pathologists did not gain independent Medicare billing status until July 2009 and were not previously able to survey for professional work. As such, the current value of G0515 (formerly 97532) does not accurately reflect speech-language pathology work as the primary biller.

Comparison to Other Codes

The following table outlines the key reference service, MPC, and other comparison codes to illustrate rank order and support the requested values for time and professional work for 97129.

CPT Code	Descriptor	RVW	IWPUT	Total Time	PRE	INTRA	POST	Note
97530	Therapeutic activities, direct (one-on-one) patient contact (use of dynamic activities to improve functional performance), each 15 minutes	0.44	0.023	19	2	15	2	1st key reference
97535	Self-care/home management training (eg, activities of daily living (ADL) and compensatory training, meal preparation, safety procedures, and instructions in use of assistive technology devices/adaptive equipment) direct one-on-one contact, each 15 minutes	0.45	0.020	21.5	2.5	15	4	2nd key reference
97533	Sensory integrative techniques to enhance sensory processing and promote adaptive responses to environmental demands, direct (one-on-one) patient contact, each 15 minutes	0.48	0.020	23	3	15	5	HCPAC MPC
97129	Cognitive function intervention; initial 15 minutes	0.50	0.018	25	5	15	5	Survey code
97760	Orthotic(s) management and training (including assessment and fitting when not otherwise reported), upper extremity(ies), lower extremity(ies) and/or trunk, initial orthotic(s) encounter, each 15 minutes	0.50	0.018	25	5	15	5	Comparison
97802	Medical nutrition therapy; initial assessment and intervention, individual, face-to-face with the patient, each 15 minutes	0.53	0.032	17	1	15	1	HCPAC MPC

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. We anticipate 97129 will typically be billed with its add-on code, 97130. 2017 Medicare utilization data for CPT code 97532 showed an average of 3.33 15-minute units of cognitive therapy billed per day. We also note that cognitive function intervention will be subject to MPPR policies, with a reduction of 50% to practice expense for subsequent units of codes with lower PE RVUs.

CPT Code	Descriptor	RVW	Global	Total Time	PRE	INTRA	POST	# of units billed	50% MPPR Reduction to PE?
97129	Cognitive function intervention; initial 15 minutes	0.50	XXX	25	5	15	5	1	No
+97130	Cognitive function intervention; each additional 15 minutes	0.48	ZZZ	15	0	15	0	2	Yes

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 97532/G0515

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Speech-language pathology How often? Commonly

Specialty Psychology How often? Sometimes

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 1398563
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. We used combined 2017 Medicare utilization and 2012 Medicaid utilization from the RUC database for CPT code 97532 (4,661,875) as the basis of our calculations. 2017 utilization data shows that 97532 was billed an average of 3.33 units per day. As such, we assumed 97129, as the base code, will make up 30% of total billing for cognitive function intervention. Percentage of utilization is also based on 2017 RUC data for 97532.

Specialty Speech-language pathology Frequency 960812 Percentage 68.69 %

Specialty Psychology Frequency 299292 Percentage 21.39 %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 78,933 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. We used 2017 Medicare utilization CPT code 97532 (263,111) as the basis of our calculations. 2017 utilization data shows that 97532 was billed an average of 3.33 units per day. As such, we assumed 97129, as the base code, will make up 30% of total billing for cognitive function intervention. Percentage of utilization is also based on 2017 RUC data for 97532.

Specialty Speech-language pathology Frequency 54227 Percentage 68.70 %

Specialty Psychology Frequency 16905 Percentage 21.41 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 96125

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:97130 Tracking Number Original Specialty Recommended RVU: **0.48**
Presented Recommended RVU: **0.48**
Global Period: ZZZ Current Work RVU: RUC Recommended RVU: **0.48**

CPT Descriptor: Therapeutic interventions that focus on cognitive function (eg, attention, memory, reasoning, executive function, problem solving, and/or pragmatic functioning) and compensatory strategies to manage the performance of an activity (eg, managing time or schedules, initiating, organizing and sequencing tasks), direct (one-on-one) patient contact; each additional 15 minutes (List separately in addition to code for primary procedure) (Use 97130 in conjunction with 97129)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 30-year-old male presents with traumatic brain injury sustained in a vehicular accident resulting in memory problems, distractibility, depression, inappropriate social interaction, inability to self-monitor, and impaired organizational skills for executive function. He is seen for cognitive function intervention and requires an additional 15 minutes of treatment beyond the initial 15 minutes.

Percentage of Survey Respondents who found Vignette to be Typical: 83%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: N/A

Description of Intra-Service Work: The clinician implements therapeutic activities that may include: attention tasks (eg, gradually increasing levels of distracting background noise); memory tasks (eg, visualization, mnenomics, environmental adaptations); problem solving activities (eg, techniques to define a problem, set a goal, and organize an action); and pragmatic activities to improve social communication skills and increase self-awareness of limitations and disabilities (eg, use of internal dialogue). Tools (eg, technology-assisted activities, role-playing activities) and compensatory strategies (eg, memory log) may be used to accomplish functional outcomes.

Description of Post-Service Work: N/A

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	2%	39%	52%	7%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	8%	39%	54%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	4%	52%	45%
Physical effort required	16%	74%	9%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	8%	50%	42%

2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	8%	31%	54%	8%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	8%	46%	46%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	15%	31%	54%
Physical effort required	39%	62%	0%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	15%	31%	54%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Reason for Survey:
At the April 2016 meeting of the Relativity Assessment Workgroup (RAW), CPT 97532—Development of cognitive skills to improve attention, memory, problem solving (includes compensatory training), direct (one-on-one) patient contact, each 15 minutes—was referred back to the CPT Editorial Panel for update to reflect current practice as part of the larger family of physical medicine and rehabilitation (PM&R) codes (97101-97799). The CPT Editorial Panel approved CPT code 97127 (cognitive function intervention, per day) at its October 2016 meeting and the RUC HCPAC valued and submitted final recommendations to CMS for inclusion in the 2018 MPFS. However, in the 2018 MPFS Final Rule, CMS assigned 97127 a procedure status of "I" (Invalid) and instead established a new temporary G-code (G0515) for cognitive therapy, which maintained the descriptor and values from former/deleted CPT code 97532 (cognitive skills development, each 15 minutes). CMS suggested that 97127, as an untimed/per day code, did not appropriately account for the variable amounts of time spent with the patient depending on the discipline (i.e., psychology, speech-language pathology, occupational therapy, or physical therapy) and/or setting (i.e., facility-based vs. outpatient). In order to resolve this issue, ASHA and APA submitted a proposal to revise 97127 to a timed code. At the September 2018 CPT Editorial Panel meeting ASHA and APA recommended a base code of 30 minutes, with a 15-minute add-on; however, the CPT Editorial Panel approved a new timed base code of 15 minutes (97129) and an add-on code of 15 minutes (97130) for reporting of cognitive function intervention.

Survey Sample:
The survey data and recommendations are based upon random samples of applicable subsets of the APA and ASHA memberships. Specifically, the random samples were drawn from established specialty society member sections from APA and ASHA. The total sample size was 5,800 with 107 responses. Of those responses, 61 were provided by speech-language pathologists and 46 by psychologists.

Expert Panel Recommendations:
A panel of psychologists and speech-language pathologists was convened to consider the survey data and provide recommendations regarding appropriate times and professional work values, as outlined below.

The expert panel recommends the **25th percentile work RVU of 0.48 and the 25th percentile times of 0 minutes (pre), 15 minutes (intra), and 0 minutes (post) for a total of 15 minutes**. To support this recommendation, we cite CPT code 90863 (Pharmacologic management, including prescription and review of medication, when performed with psychotherapy services) as a comparison code, also with a work RVU of 0.48 and 0 minutes (pre), 15 minutes (intra), and 0 minutes (post) for a total of 15 minutes.

Time
The expert panel reviewed the median survey times of 0 minutes (pre), 22 minutes (intra), and 0 minutes (post) and concluded that the intra-service time should be decreased to the **survey 25th percentile of 15 minutes**. The 25th more appropriately reflects the 15-minute time-based code.

Work RVU
The expert panel reviewed the median survey work RVU of 0.55 and agreed that it is not an appropriate work value. Instead, **we recommend the survey 25th percentile of 0.48**. This recommendation is supported by the key reference codes, which survey respondents consistently ranked less in overall complexity and intensity than the survey code. We also believe this value places the add-on code in appropriate rank order with the base code, at a proposed work RVU of 0.50.

Compelling Evidence
The expert panel believes there is compelling evidence for an increase in the current values for the cognitive function intervention family of codes for the following reasons:

Evidence that incorrect assumptions were made in the previous valuation of the service, specifically:

- **A previous survey was conducted by one specialty to obtain a value, but the service is currently provided primarily by qualified healthcare professionals from a different specialty according to utilization data.**

Former code 97532 was last surveyed by psychology, physical therapy, and occupational therapy in 2000, but the primary billers are now speech-language pathology at 68.70% and psychology at 21.40% of total utilization in 2017. Although the RUC database notes that speech-language pathologists also participated in the survey process for 97532, this was not possible, as speech-language pathologists did not gain independent Medicare billing status until July 2009 and were not

previously able to survey for professional work. As such, the current value of G0515 (formerly 97532) does not accurately reflect speech-language pathology work as the primary biller.

Comparison to Other Codes

The following table outlines the key reference service, MPC, and other comparison codes to illustrate rank order and support the requested values for time and professional work for 97130.

CPT Code	Descriptor	RVW	IWPUT	Total Time	PRE	INTRA	POST	Note
97530	Therapeutic activities, direct (one-on-one) patient contact (use of dynamic activities to improve functional performance), each 15 minutes	0.44	0.023	19	2	15	2	1st key reference
97535	Self-care/home management training (eg, activities of daily living (ADL) and compensatory training, meal preparation, safety procedures, and instructions in use of assistive technology devices/adaptive equipment) direct one-on-one contact, each 15 minutes	0.45	0.020	21.5	2.5	15	4	2nd key reference
97803	Medical nutrition therapy; re-assessment and intervention, individual, face-to-face with the patient, each 15 minutes	0.45	0.027	17	1	15	1	HCPAC MPC
97130	Cognitive function intervention; each additional 15 minutes	0.48	0.032	15	0	15	0	Survey code
90863	Pharmacologic management, including prescription and review of medication, when performed with psychotherapy services (List separately in addition to the code for primary procedure)	0.48	0.032	15	0	15	0	Comparison
97533	Sensory integrative techniques to enhance sensory processing and promote adaptive responses to environmental demands, direct (one-on-one) patient contact, each 15 minutes	0.48	0.020	23	3	15	5	HCPAC MPC Comparison
11045	Debridement, subcutaneous tissue (includes epidermis and dermis, if performed); each additional 20 sq cm, or part thereof (List separately in addition to code for primary procedure)	0.50	0.033	15	0	15	0	HCPAC MPC

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the

provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. We anticipate 97130 will typically be billed with its base code, 97129. 2017 Medicare utilization data for CPT code 97532 showed an average of 3.33 15-minute units of cognitive therapy billed per day, so we estimate that the add-on code will typically be billed twice per day, in addition to one unit of the base code. We also note that cognitive function intervention will be subject to MPPR policies, with a reduction of 50% to practice expense for subsequent units of codes with lower PE RVUs.

CPT Code	Descriptor	RVW	Global	Total Time	PRE	INTRA	POST	# of units billed	50% MPPR Reduction to PE?
97129	Cognitive function intervention; initial 15 minutes	0.50	XXX	25	5	15	5	1	No
+97130	Cognitive function intervention; each additional 15 minutes	0.48	ZZZ	15	0	15	0	2	Yes

---

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 97532/G0515

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Speech-language pathology How often? Commonly

Specialty Psychology How often? Sometimes

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 3,263,313
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. We used combined 2017 Medicare utilization and 2012 Medicaid utilization from the RUC database for CPT code 97532 (4,661,875) as the basis of our calculations. 2017 utilization data shows that 97532 was billed an average of 3.33 units per day. As such, we assumed 97130, as the add-on code, will make up 70% of total billing for cognitive function intervention. Percentage of utilization is also based on 2017 RUC data for 97532.

Specialty Speech-language pathology Frequency 2241896 Percentage 68.69 %

Specialty Psychology Frequency 698349 Percentage 21.40 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 184,178 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. We used 2017 Medicare utilization CPT code 97532 (263,111) as the basis of our calculations. 2017 utilization data shows that 97532 was billed an average of 3.33 units per day. As such, we assumed 97130, as the add-on code, will make up 70% of total billing for cognitive function intervention. Percentage of utilization is also based on 2017 RUC data for 97532.

Specialty Speech-language pathology Frequency 126530 Percentage 68.69 %

Specialty Psychology Frequency 39414 Percentage 21.39 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Minor procedure

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 96125

CPT Code: 97129, 97130
Specialty Society: ASHA (Speech-Language Pathology), APA (Psychology)

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Non Facility Direct Practice Expense (PE) Inputs

CPT Long Descriptor:

97129 Therapeutic interventions that focus on cognitive function (eg, attention, memory, reasoning, executive function, problem solving, and/or pragmatic functioning) and compensatory strategies to manage the performance of an activity (eg, managing time or schedules, initiating, organizing and sequencing tasks), direct (one-on-one) patient contact; initial 15 minutes

(Report 97129 only once per day)

97130 each additional 15 minutes (List separately in addition to code for primary procedure)

(Use 97130 in conjunction with 97129)

Global Period: **97129 - XXX 97130 - ZZZ** Meeting Date: **January 2019**

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:
   The practice expense elements were determined by a consensus panel of speech-language pathologists and psychologists from different practice settings (eg, private practice, clinic, hospital-based) and geographic regions of the country.

2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here:
   The panel drew upon the current practice expense inputs for CPT code 97127 (Cognitive function intervention, per day). The inputs were approved by the PE Subcommittee and RUC in January 2017. However, CMS did not accept CPT code 97127 and instead created a proxy G-code, G0515 (Cognitive skills development, each 15 minutes). As such, we have added 97127 as a reference code and G0515 as the current code on the spreadsheet. We are proposing to maintain the inputs for CPT code 97127, as approved by the RUC in 2017. However, we have adjusted quantities, as 97127 was an untimed code with 60 minutes of intraservice time, while 97129 and 97130 are 15-minute codes.

3. Is this code(s) typically billed with an E/M service?
   97129 – No 97130 – No

   Is this code(s) typically billed with the E/M service in the nonfacility?
   97129– No 97130 – N/A

4. What specialty is the dominant provider in the nonfacility?
   97129 – Not know 97130 – N/A

   What percent of the time does the dominant provider provide the service(s) in the nonfacility?
   97129 – Not known 97130 – N/A

Is the dominant provider in the nonfacility different then for the global?
97129 – Not known 97130 – N/A

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time: **N/A – we are not recommending clinical labor time**

6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), you must provide compelling evidence. Please explain if the increase can be entirely accounted for because of an increase in physician time. **N/A – we are not recommending an increase over the current aggregate cost.**

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here: **N/A**

8. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:* **N/A**

9. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived. **N/A**

10. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities: **N/A**

11. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov. **N/A**

12. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here: **N/A**

13. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here: **N/A**

14. List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here:

    EF027 Table, instrument, mobile – other formula
    ED038 Notebook (Dell Latitude D600) – other formula

    Because the provider of the entire service is the qualified health care professional, we are using the QHP's intraservice time to calculate the equipment time, which is in the room with the patient and QHP for the duration of the intraservice time.

15. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here: ***See the table on page 3 for further details on each recommendation.***

16. If there is any other item on your spreadsheet that needs further explanation please include here: **N/A**

17. Please include an explanation of each line item:

AMA/Specialty Society RVS Update Committee
Health Care Professionals Advisory Committee Review Board Summary of Recommendations

January 2019

Online Digital Evaluation Service (e-Visit) – Tab 41

In September 2018, the CPT Editorial Panel deleted two codes and replaced them with six new codes in the evaluation and management section to describe patient-initiated digital communications that require a clinical decision that otherwise typically would have been provided in the office. Three codes describe the physician e-visit (99421, 99422 and 99423) and three codes describe the qualified nonphysician health care professional e-visit (98970, 98971 and 98972).

The e-visit codes reviewed by the RUC and Health Care Professionals Advisory Committee (HCPAC) Review Board are one unified set of code. After a detailed discussion, the HCPAC determined that the non-physician work was equivalent to the physician work for codes 99421, 99422 and 99423 and agreed with the specialty societies that the services should be valued consistently. The separate nature of the code set (i.e., physician vs. qualified nonphysician health care professional) is artificial due to coding conventions that preclude some qualified nonphysician health care professional from billing Evaluation and Management (E/M) codes. As a result, the CPT Editorial Panel created the three nonphysician codes within this code family recognizing that the same services are rendered by providers who cannot report E/M services. The code descriptors are identical apart from the term, qualified nonphysician health care professional. RUC procedures require the codes to be surveyed separately with recommendations presented to the RUC for the physician codes and the HCPAC for the nonphysician codes. Precedent exists within HCPAC and RUC with the telephone services for valuation of the physician and qualified nonphysician health care professional codes at the same level. When the telephone services codes were valued by the RUC and HCPAC in April 2007, the HCPAC determined that the nonphysician work for codes 98966-98968 was equivalent to the physician work for codes 99441-99443. These codes (98966-98968) were identified as the top key reference services by survey respondents for each of the three nonphysician e-visit codes. In the CMS Final Rule for calendar year 2008, CMS did not express concern with the physician and nonphysician telephone services being valued equivalently, stating their agreement with the RUC recommended values for these services on page 66368 of the Federal Register Vol. 72, No. 227.

98970 ***Qualified nonphysician health care professional online digital evaluation and management service, for an established patient, for up to seven days, cumulative time during the 7 days; 5-10 minutes***
The HCPAC reviewed the survey results from 43 dietitian nutritionists for CPT code 98970 and determined that the survey 25th percentile work RVU of 0.25 appropriately accounts for the work required to perform this service. The HCPAC recommends 8 minutes intra-service time. The HCPAC noted that this service includes only intra-service time as this service starts with the qualified nonphysician health care professional (QHP) opening up the electronic communication, which differs from the top key reference service 98966 *Telephone assessment and management service provided by a qualified nonphysician health care professional to an established patient, parent, or guardian not originating from a related assessment and management service provided within the previous 7 days nor leading to an assessment and management service or procedure within the next 24 hours or soonest available appointment; 5-10 minutes of medical discussion* (work RVU = 0.25 and 8 minutes intra-service time,13 minutes total time), where the QHP may get a voicemail and may have an opportunity to review the medical record before engaging in the call. The e-visit is the documentation of the visit itself, the e-mail response. The HCPAC compared the surveyed code to the top key reference

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

service 98966 and noted that these services require the same QHP intra-service time to perform. However, 98970 is more intense than 98966 because the QHP response is documented in writing. There is a higher risk and challenge within the written response, as the QHP or patient may misinterpret something within the communication. Whereas, with a telephone call, any misinterpretations would be clarified with immediate feedback. There is also a greater legal risk in providing the service because all communication is documented in writing. Additionally, 98970 is more complex because the QHP may review multiple images some of which may be hard to decipher, as well as engage in multiple communications over seven days which adds to the intensity of this service.

For additional support the HCPAC referenced MPC codes 99406 *Smoking and tobacco use cessation counseling visit; intermediate, greater than 3 minutes up to 10 minutes* (work RVU = 0.24 and 7 minutes intra-service/total time) and 92568 *Acoustic reflex testing, threshold* (work RVU = 0.29 and 8 minutes intra-service time), which demonstrates the appropriate relativity among similar services. **The HCPAC recommends a work RVU of 0.25 for CPT code 98970.**

98971 ***Qualified nonphysician health care professional online digital evaluation and management service, for an established patient, for up to seven days, cumulative time during the 7 days; 11-20 minutes***
The HCPAC reviewed the survey results from 48 dietitian nutritionists for CPT code 98971 and determined that the survey median work RVU of 0.50 appropriately accounts for the work required to perform this service. The HCPAC recommends 15 minutes intra-service time. The HCPAC noted that this service includes only intra-service time as this service starts with the qualified nonphysician health care professional (QHP) opening up the electronic communication, which differs from the top key reference service 98967 *Telephone assessment and management service provided by a qualified nonphysician health care professional to an established patient, parent, or guardian not originating from a related assessment and management service provided within the previous 7 days nor leading to an assessment and management service or procedure within the next 24 hours or soonest available appointment; 11-20 minutes of medical discussion* (work RVU = 0.50 and 15 minutes intra-service time, 21 minutes total time), where the QHP may get a voicemail and may have an opportunity to review the medical record before engaging in the call. The e-visit is the documentation of the visit itself, the e-mail response. The HCPAC compared the surveyed code to the top key reference code 98967 and noted that these services require the same QHP intra-service time to perform. However, 98971 is more intense than 98967 because the QHP response is documented in writing. There is a higher risk and challenge within the written response, as the QHP or patient may misinterpret something within the communication. Whereas, with a telephone call, any misinterpretations would be clarified with immediate feedback. There is also a greater legal risk in providing the service because all communication is documented in writing. Additionally, 98971 is more complex because the QHP may review multiple images some of which may be hard to decipher, as well as engage in multiple communications over seven days which adds to the intensity of this service.

For additional support the HCPAC referenced MPC code 97803 *Medical nutrition therapy; re-assessment and intervention, individual, face-to-face with the patient, each 15 minutes* (work RVU = 0.45 and 15 minutes intra-service), which demonstrates the appropriate relativity with a similar service. **The HCPAC recommends a work RVU of 0.50 for CPT code 98971.**

98972 ***Qualified nonphysician health care professional online digital evaluation and management service, for an established patient, for up to seven days, cumulative time during the 7 days; 21 or more minutes***
The HCPAC reviewed the survey results from 48 dietitian nutritionists for CPT code 98972 and determined that the survey median of 0.75 was too low compared to the physician code 99423 *Online digital evaluation and management service, for an established patient, for up to 7 days,*

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

cumulative time during the 7 days; 21 or more minutes (RUC work RVU recommendation = 0.80). The HCPAC chose to recommend the same time and work values as the code described to define physician work. The HCPAC agreed that the physician work survey 25th percentile work RVU of 0.80 appropriately accounts for the work required to perform this service. The HCPAC recommends the physician work survey intra-service time of 25 minutes. The HCPAC noted that this service includes only intra-service time as this service starts with the QHP opening up the electronic communication, which differs from the top key reference service 98968 *Telephone assessment and management service provided by a qualified nonphysician health care professional to an established patient, parent, or guardian not originating from a related assessment and management service provided within the previous 7 days nor leading to an assessment and management service or procedure within the next 24 hours or soonest available appointment; 21-30 minutes of medical discussion* (work RVU = 0.75 and 25 minutes intra-service time, 36 minutes total time) and noted that these services require similar intra-service time to perform and should be valued similarly. The HCPAC noted that 98972 requires more physician work to perform and is more intense than 98968 because it describes 21 minutes or more, rather than a range of 21-30 minutes. The service will likely require more than 21 minutes, potentially much more. Additionally, the typical patient receiving 98972 has problems and concerns greater than the average patient. The RUC HCPAC Review Board agreed that 98972 is more intense than 98968 because the physician response is documented in writing with higher risk and challenges with multiple communications, not a verbal response with immediate clarifications as detailed in the rationale for CPT code 98970.

For additional support the RUC HCPAC Review Board referenced MPC codes 99231 *Subsequent hospital care, per day, for the evaluation and management of a patient,…*(work RVU = 0.76 and 10 minutes intra-service, 20 minutes total time) and 99213 *Office or other outpatient visit for the evaluation and management of an established patient,…*(work RVU = 0.97 and 15 minutes intra-service, 23 minutes total time), which demonstrates the appropriate relativity among similar services. **The HCPAC recommends a work RVU of 0.80 for CPT code 98972.**

Practice Expense
The RUC recommends the direct practice expense inputs as submitted by the specialty society.

New Technology/New Services
The HCPAC recommends that CPT codes 98970, 98971, 98972 be placed on the New Technology list and be re-reviewed by the HCPAC in three years to ensure correct valuation and utilization assumptions.

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
Evaluation and Management **Home Services** **Domiciliary, Rest Home (eg, Assisted Living Facility), or Home Care Plan Oversight Services** *(For instructions on the use of 99339, 99340, see introductory notes for 99374-99380)* *(For care plan oversight services for patients under the care of a home health agency, hospice, or nursing facility, see 99374-99380)*

Non-Face-to-Face-Services
Telephone Services

Telephone services are non-face-to-face evaluation and management (E/M) services provided to a patient using the telephone by a physician or other qualified health care professional, who may report evaluation and management services. These codes are used to report episodes of patient care initiated by an established patient or guardian of an established patient. If the telephone service ends with a decision to see the patient within 24 hours or next available urgent visit appointment, the code is not reported; rather the encounter is considered part of the preservice work of the subsequent E/M service, procedure, and visit. Likewise if the telephone call refers to an E/M service performed and reported by that individual within the previous seven days (either requested or unsolicited patient follow-up) or within the postoperative period of the previously completed procedure, then the service(s) are considered part of that previous E/M service or procedure. (Do not report 99441-99443 if ~~99441~~ 99421, 99422, 99423 ~~-99444~~ have been reported by the same provider in the previous seven days for the same problem.)

~~**On-Line Medical Evaluation**~~

~~An on-line electronic medical evaluation is a non-face-to-face evaluation and management (E/M) service by a physician to a patient using Internet resources in response to a patient's on-line inquiry. Reportable services involve the physician's personal timely response to the patient's inquiry and must involve permanent storage (electronic or hard copy) of the encounter. This service is reported only once for the same episode of care during a seven-day period, although multiple physicians could report their exchange with the same patient. If the on-line medical evaluation refers to an E/M service previously performed and reported by the physician within the previous seven days (either physician requested or unsolicited patient follow-up) or within the postoperative period of the previously completed procedure, then the service(s) are considered covered by the previous E/M service or procedure. A reportable service encompasses the sum of communication (eg, related telephone calls, prescription provision, laboratory orders) pertaining to the on-line patient encounter.~~

~~(For an on-line medical evaluation provided by a qualified nonphysician health care professional, use 98969)~~

~~**D**~~99444	-	~~Online evaluation and management service provided by a physician or other qualified health care professional who may report evaluation and management services provided to an established patient or guardian, not originating from a related E/M service provided within the previous 7 days, using the Internet or similar electronic communications network~~ ~~(Do not report 99444 when using 99339, 99340, 99374-99380 for the same communication[s])~~ ~~(Do not report 99444 for home and outpatient INR monitoring when reporting 93792, 93793)~~ ~~(Do not report 99444 during the same month with 99487-99489)~~	XXX	N/A

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

		~~(Do not report 99444 when performed during the service time of codes 99495 or 99496)~~		

Online Digital Evaluation and Management Services

Online digital evaluation and management services (99421, 99422, 99423) are patient-initiated services with physicians or qualified health care professionals. Online digital evaluation and management services require physician or qualified health care professional's evaluation, assessment, and management of the patient. These services are not for the non-evaluative electronic communication of test results, scheduling of appointments, or other communication that does not include evaluation and management. While the patient's problem may be new to the physician or qualified healthcare professional, the patient is an established patient. Patients initiate these services through Health Insurance Portability and Accountability Act compliant secure platforms, such as electronic health record portals, secure email, or other digital applications, which allow digital-communication with the physician or qualified health care professional.

Online digital evaluation and management services are reported once for the physician or qualified health care professional cumulative time devoted to the service during a seven-day period. The seven-day period begins with the physician's or qualified health care professional's initial, personal review of the patient-generated inquiry. Physician or qualified health care professional's cumulative service time includes review of the initial inquiry, review of patient records or data pertinent to assessment of the patient's problem, personal physician or qualified health care professional interaction with clinical staff focused on the patient's problem, development of management plans including physician or qualified health care professional generation of prescriptions or ordering of tests, and subsequent communication with the patient through either online, telephone, email, or other digitally-supported communication that does not otherwise represent a separately reported evaluation and management (E/M) service. All professional decision making, assessment, and subsequent management by physicians or qualified health care professionals in the same group contribute to the cumulative service time of the patient's online digital evaluation and management service. Online digital evaluation and management services require permanent documentation storage (electronic or hard copy) of the encounter.

If within seven-days of the initiation of an online digital evaluation and management service, a separately reported E/M visit occurs, then the physician or qualified health care professional work devoted to the online digital evaluation and management service is incorporated into the other E/M visit (eg, additive of visit time for a time-based E/M visit, or additive of decision-making complexity for a key component-based E/M visit). This includes E/M visits and procedures that are provided through synchronous telemedicine visits using interactive audio and video telecommunication equipment which are reported with modifier 95 appended to the E/M service. If the patient initiates an online digital inquiry for the same or a related problem within seven days of a previous E/M service, then the online digital visit is not reported. If the online digital inquiry is related to a surgical procedure and occurs during the postoperative period of a previously completed procedure, then the online digital evaluation and management service is not reported separately. If the patient generates the initial online digital inquiry for a new problem within seven days of a previous E/M visit that addressed a different problem, then the online digital evaluation and management service is reported separately. If during the seven-day period of an online digital evaluation and management service, the patient presents a new unrelated problem, then the time of the physician or qualified health care professional's evaluation, assessment, and management of the additional problem is added to the cumulative service time of the online digital evaluation and management service for that seven-day period.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

(For online digital evaluation and management services provided by a qualified nonphysician health care professional who may not report the physician or other qualified health care professional evaluation and management services [eg, speech-language pathologists, physical therapists, occupational therapists, social workers, dietitians], see 98970, 98971, and 98972) (99444 has been deleted. To report, see 99421, 99422, 99423)				
● 99421	DD1	Online digital evaluation and management service, for an established patient, for up to 7 days, cumulative time during the 7 days; 5-10 minutes	XXX	0.25 (RUC Recommendation)
● 99422	DD2	11-20 minutes	XXX	0.50 (RUC Recommendation)

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

● 99423	DD3	21 or more minutes (Report 99421, 99422, 99423 once per 7-day period) (Do not report online digital evaluation and management services for cumulative service time less than 5 minutes) (Clinical staff time is not calculated as part of cumulative time for 99421, 99422, 99423) (Do not report 99421, 99422, 99423 when using 99339, 99340, 99374, 99375, 99377, 99378, 99379, 99380, 99487, 99489, 99495, 99496, 99091 for the same communication[s]) (Do not report 99421, 99422, 99423 for home and outpatient INR monitoring when reporting 93792, 93793) (Do not report 99421, 99422, 99423 on a day when the physician or other qualified health care professional reports E/M services: [99201, 99202, 99203, 99204, 99205, 99212, 99213, 99214, 99215, 99241, 99242, 99243, 99244, 99245]) (Do not count 99421, 99422, 99423 time otherwise reported with other services)	XXX	0.80 (RUC Recommendation)

Interprofessional Telephone/Internet/Electronic Health Record Consultations

The consultant should use codes 99446, 99447, 99448, 99449, 994X6 to report interprofessional telephone/Internet/electronic health record consultations. An interprofessional telephone/Internet/electronic health record consultation is an assessment and management service in which a patient's treating (eg, attending or primary) physician or other qualified health care professional requests the opinion and/or treatment advice of a physician with specific specialty expertise (the consultant) to assist the treating physician or other qualified health care professional in the diagnosis and/or management of the patient's problem patient face-to-face contact with the consultant.

The patient for whom the interprofessional telephone/Internet/electronic health record consultation is requested may be either a new patient to the consultant or an established patient with a new problem or an exacerbation of an existing problem. However, the consultant should not have seen the patient in a face-to-face encounter within the last 14 days. When the telephone/Internet/electronic health record consultation leads to a transfer of care or other face-to-face service (eg, a surgery, a hospital visit, or a scheduled office evaluation of the patient) within the next 14 days or next available appointment date of the consultant, these codes are not reported.

Review of pertinent medical records, laboratory studies, imaging studies, medication profile, pathology specimens, etc is included in the telephone/Internet/electronic health record consultation service and should not be reported separately when reporting 99446, 99447, 99448, 99449, 994X6. The majority of the service time reported (greater than 50%) must be devoted to the medical consultative verbal/ or Internet discussion. If greater than 50% of the time for the service is devoted to data review and/or analysis, 99446, 99447, 99448, 99449 should not be reported. However, the service time for 994X6 is based on total review and interprofessional-communication time.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

If more than one telephone/Internet/electronic health record contact(s) is required to complete the consultation request (eg, discussion of test results), the entirety of the service and the cumulative discussion and information review time should be reported with a single code. Codes 99446, 99447, 99448, 99449, 994X6 should not be reported more than once within a seven-day interval.

The written or verbal request for telephone/Internet/electronic health record advice by the treating/requesting physician or other qualified health care professional should be documented in the patient's medical record, including the reason for the request. Codes 99446, 99447, 99448, 99449 conclude with a verbal opinion report and written report from the consultant to the treating/requesting physician or other qualified health care professional. Code 994X6 concludes with only a written report.

Telephone/Internet/electronic health record consultations of less than five minutes should not be reported. Consultant communications with the patient and/or family may be reported using ~~99441~~98966, ~~99442~~98967, ~~99443~~98968, ~~99444~~ 99421, 99422, 99423 *, ~~98966~~99441, ~~98967~~99442, ~~98968~~99443, ~~98969~~, and the time related to these services is not used in reporting 99446, 99447, 99448, 99449. Do not report 99358, 99359 for any time within the service period, if reporting 99446, 99447, 99448, 99449, 994X6.*

When the sole purpose of the telephone/Internet/electronic health record communication is to arrange a transfer of care or other face-to-face service, these codes are not reported.

The treating/requesting physician or other qualified health care professional may report 994X0 if spending 16-30 minutes in a service day preparing for the referral and/or communicating with the consultant. Do not report 994X0 more than once in a 14-day period. The treating/requesting physician or other qualified health care professional may report the prolonged service codes 99354, 99355, 99356, 99357 for the time spent on the interprofessional telephone/Internet/electronic health record discussion with the consultant (eg, specialist) if the time ***exceeds 30 minutes*** *beyond the typical time of the appropriate E/M service performed and the patient is present (on-site) and accessible to the treating/requesting physician or other qualified health care professional. If the interprofessional telephone/Internet/electronic health record assessment and management service occurs when the patient is not present, and the time in a day* ***exceeds 30 minutes****, then the non-face-to-face prolonged service codes 99358, 99359 may be reported by the treating/requesting physician or other qualified health care professional.*

(For telephone services provided by a physician to a patient, see 99441, 99442, 99443)

(For telephone services provided by a qualified health care professional to a patient, see 98966, 98967, 98968)

(For online digital evaluation and management services provided by a physician or other qualified health care professional to a patient, see 99421, 99422, 99423)

~~(For an on-line medical evaluation provided by a physician to a patient, use 99444)~~

~~(For an on-line assessment and management service provided by a qualified health care professional to a patient, use 98969)~~

Care Management Services

Care management services are….

A plan of care must….

Code 99487, 99489…

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Care management activities…..

- *communication and engagement with patient, family members, guardian or caretaker,*
- *surrogate decision makers, and/or other professionals regarding aspects of care;*
- *communication with home health agencies and other community services utilized by the patient;*
- *collection of health outcomes data and registry documentation;*
- *patient and/or family/caregiver education to support self-management, independent living, and activities of daily living;*
- *assessment and support for treatment regimen adherence and medication management;*
- *identification of available community and health resources;*
- *facilitating access to care and services needed by the patient and/or family;*
- *management of care transitions not reported as part of transitional care management (99495, 99496);*
- *ongoing review of patient status, including review of laboratory and other studies not reported as part of an E/M service, noted above;*
- *development, communication, and maintenance of a comprehensive care plan*

The care management office/practice must have the following capabilities:

- *provide 24/7 access to physicians or other qualified health care professionals or clinical staff including providing patients/caregivers with a means to make contact with health care professionals in the practice to address urgent needs regardless of the time of day or day of week;*
- *provide continuity of care with a designated member of the care team with whom the patient is able to schedule successive routine appointments;*
- *provide timely access and management for follow-up after an emergency department visit or facility discharge;*
- *utilize an electronic health record system so that care providers have timely access to clinical information;*
- *use a standardized methodology to identify patients who require care management services;*
- *have an internal care management process/function whereby a patient identified as meeting the requirements for these services starts receiving them in a timely manner;*
- *use a form and format in the medical record that is standardized within the practice;*
- *be able to engage and educate patients and caregivers as well as coordinate care among all service professionals, as appropriate for each patient.*

E/M services may be reported separately by the same physician or other qualified health care professional during the same calendar month. A physician or other qualified health care professional who reports codes 99487, 99489, 99490, may not report care plan oversight services (99339, 99340, 99374-99380), prolonged services without direct patient contact (99358, 99359), home and outpatient INR monitoring (93792, 93793), medical team conferences (99366, 99367, 99368), education and training (98960, 98961, 98962, 99071, 99078), telephone services (99366, 99367, 99368, 99441, 99442, 99443), ~~*on-line medical evaluation (98969, 99444)*~~*, preparation of special reports (99080), analysis of data (99091), transitional care management services (99495, 99496), medication therapy management services (99605, 99606, 99607) and, if performed, these services may not be reported separately during the month for which 99487, 99489, 99490 are reported. All other services may be reported. Do not report 99487, 99489, 99490, 994X7 if reporting ESRD services (90951-90970) during the same*

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

month. If the care management services are performed within the postoperative period of a reported surgery, the same individual may not report 99487, 99489, 99490, 994X7. When reporting 99487, 99489, 99490, do not use time reported with 99421, 99422, 99423.

Complex Chronic Care Management Services

99487 *Complex chronic care management services, with the following required elements:*

- *multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient,*
- *chronic conditions place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline,*
- *establishment or substantial revision of a comprehensive care plan,*
- *moderate or high complexity medical decision making;*
- *60 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month.*

(Complex chronic care management services of less than 60 minutes duration, in a calendar month, are not reported separately)

+99489 *each additional 30 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month (List separately in addition to code for primary procedure)*

(Report 99489 in conjunction with 99487)

(Do not report 99489 for care management services of less than 30 minutes additional to the first 60 minutes of complex chronic care management services during a calendar month)

(Do not report 99487, 99489, 99490 during the same month with 90951-90970, 93792, 93793, 98960-98962, 98966, 98967, 98968-98969, 99071, 99078, 99080, 99091, 99339, 99340, 99358, 99359, 99366-99368, 99374-99380, 99441, 99442, 99443-99444-*, 99495, 99496, 99605-99607)*

Only one individual may report these services ...

A physician or other qualified health care professional who reports codes 99495, 99496 may not report care plan oversight services (99339, 99340, 99374-99380), prolonged services without direct patient contact (99358, 99359), home and outpatient INR monitoring (93792, 93793), medical team conferences (99366-99368), education and training (98960-98962, 99071, 99078), telephone services (98966-98968, 99441-99443), end stage renal disease services (90951-90970), ~~online medical evaluation services (98969, 99444),~~ *preparation of special reports (99080), analysis of data (*~~99090,~~ *99091), complex chronic care coordination services (99487-99489), medication therapy management services (99605-99607), during the time period covered by the transitional care management services codes.* When reporting 99487, 99489, 99490, do not use time reported with 99421, 99422, 99423.

★*99496* ***Transitional Care Management Services*** *with the following required elements:*

- *Communication (direct contact, telephone, electronic) with the patient and/or caregiver within 2 business days of discharge*
- *Medical decision making of high complexity during the service period*
- *Face-to-face visit, within 7 calendar days of discharge*

(Do not report 99495, 99496 in conjunction with 93792, 93793)

(Do not report 90951-90970, 98960-98962, 98966, 98967, 98968, ~~*98969*~~*, 99071, 99078, 99080, 99091, 99339, 99340, 99358, 99359, 99366-99368, 99374-99380, 99441,* 99442, 99443-~~99444~~*, 99487-99489, 99605-99607, when performed during the service time of codes 99495 or 99496)*

Medicine
Psychiatry
Psychiatric Diagnostic Procedures

90792 *Psychiatric diagnostic evaluation with medical services*

*(Do not report 90791 or 90792 in conjunction with 99201-99337, 99341-99350, 99366-99368, 99401-*9944~~99444~~*, 97X51, 97X52, 97X53, 97X54, 97X55, 97X56, 97X57, 97X58, 0362T, 0373T)*

(Use 90785 in conjunction with 90791, 90792 when the diagnostic evaluation includes interactive complexity services)

Home and Outpatient International Normalized Ratio (INR) Monitoring Services

Home and outpatient international normalized ratio (INR) monitoring services describe the management of warfarin therapy, including ordering, review, and interpretation of new INR test result(s), patient instructions, and dosage adjustments as needed.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

If a significantly, separately identifiable evaluation and management (E/M) service is performed on the same day as 93792, the appropriate E/M service may be reported using modifier 25.

Do not report 93793 on the same day as an E/M service.

Do not report 93792, 93793 in conjunction with 98966, 98967, 98968, ~~98969~~, 99441, 99442, 99443, ~~99444~~, 99421, 99422, 99423, when telephone or online digital evaluation and management services address home and outpatient INR monitoring.

Do not report 93792, 93793 when performed during the service time of 99487, 99489, 99490, 99495, 99496.

Non-Face-to-Face Nonphysician Services
~~On-line Medical Evaluation~~
~~Online Digital Evaluation~~
Qualified Nonphysician Health Care Professional Online Digital Evaluation and Management Service (Red Heading)

~~An on-line electronic medical evaluation is a non-face-to-face assessment and management service by a qualified health care professional to a patient using Internet resources in response to a patient's on-line inquiry.~~

~~Reportable services involve the qualified health care professional's personal timely response to the patient's inquiry and must involve permanent storage (electronic or hard copy) of the encounter. This service is reported only once for the same episode of care during a seven-day period, although multiple qualified health care professionals could report their exchange with the same patient. If the on-line medical evaluation refers to an assessment and management service previously performed and reported by the qualified health care professional within the previous seven days (either qualified healthcare professional requested or unsolicited patient follow-up) or within the postoperative period of the previously completed procedure, then the service(s) are considered covered by the previous assessment and management office service or procedure. A reportable service encompasses the sum of communication (eg, related telephone calls, prescription provision, laboratory orders) pertaining to the on-line patient encounter.~~

~~(For an on-line medical evaluation provided by a physician, use 99444)~~

D*~~98969~~*	-	*~~Online assessment and management service provided by a qualified nonphysician health care professional to an established patient or guardian, not originating from a related assessment and management service provided within the previous 7 days, using the Internet or similar electronic communications network~~* *~~(Do not report 98969 when using 99339-99340, 99374-99380 for the same communication[s])~~* *~~(Do not report 98969 for home and outpatient INR monitoring when reporting 93792, 93793)~~* *~~(Do not report 98969 during the same month with 99487-99489)~~*	XXX	N/A

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

		~~*(Do not report 98969 when performed during the service time of codes 99495, 99496)*~~ Qualified nonphysician health care professional online digital evaluation and management services are patient-initiated digital services with qualified nonphysician health care professionals which require qualified nonphysician health care professional patient evaluation and decision-making to generate an assessment and subsequent management of the patient. These services are not for the non-evaluative electronic communication of test results, scheduling of appointments, or other communication that does not include evaluation and management. While the patient's problem may be new to the qualified nonphysician health care professional, the patient is established. Patients initiate these services through Health Insurance Portability and Accountability Act compliant, secure platforms such as through the electronic health record portal, email, or other digital applications which allow digital communication with the qualified nonphysician health care professional. Qualified nonphysician health care professional online digital evaluation and management services are reported once for the qualified nonphysician health care professional's cumulative time devoted to the service during a seven-day period. The seven-day period begins with the qualified nonphysician health care professional's initial, personal review of the patient-generated inquiry. Qualified nonphysician health care professional cumulative service time includes review of the initial inquiry, review of patient records or data pertinent to assessment of the patient's problem, personal qualified nonphysician health care professional interaction with clinical staff focused on the patient's problem, development of management plans including qualified nonphysician health care professional generation of prescriptions or ordering of tests, and subsequent communication with the patient through either online, telephone, email, or other digitally-supported communication. All qualified nonphysician health care professionals in the same group that are involved in the online digital evaluation and management service contribute to the cumulative service time devoted to the patient's online digital evaluation and management service. Qualified nonphysician health care professional online digital evaluation and		

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

		management services require visit documentation and permanent storage (electronic or hard copy) of the encounter. If the patient generates the initial online digital inquiry within seven days of a previous treatment or evaluation and management service, and if both services relate to the same problem, or if the online digital inquiry occurs within the postoperative period of a previously completed procedure, then the qualified nonphysician health care professional online digital evaluation and management service is not reported separately. If the patient generates an initial online digital inquiry for a new problem within seven days of a previous service that addressed a different problem, then the qualified nonphysician health care professional online digital evaluation and management service is reported separately. If within seven days of the nonphysician qualified health care professional's initial review of the online digital evaluation management service a separately reported evaluation service occurs, then 98970, 98971, 98972 are not reported. If the patient presents a new unrelated problem during the seven days period of an online digital evaluation and management service, then the time of the qualified nonphysician health care professional's evaluation and management of the additional problem is added to the cumulative service time of the online digital evaluation and management service for that seven-day period. (For an online digital evaluation and management service provided by a physician or qualified health care professional, see 99421, 99422, 99423) (98969 has been deleted. To report, see 98970, 98971, 98972)		
● 98970	DD4	Qualified nonphysician health care professional online digital evaluation and management service, for an established patient, for up to seven days, cumulative time during the 7 days; 5-10 minutes	XXX	0.25 (HCPAC Recommendation)
● 98971	DD5	11-20 minutes	XXX	0.50 (HCPAC Recommendation)

CPT Descriptor:
Qualified nonphysician healthcare professional online digital evaluation and management service, for an established patient, for up to seven days, cumulative time during the 7 days; 5-10 minutes

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 70-year-old male with insulin dependent diabetes submits an online query through his registered dietitian nutritionist's (RDN) EHR portal reporting nausea and vomiting due to the flu and seeking guidance on diabetes self-management.

Percentage of Survey Respondents who found Vignette to be Typical: 77%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work:

Description of Intra-Service Work: • Reviewing the initial patient inquiry, reviewing the medical history, reviewing documents sent by the patient, and checking online data registries/information exchanges
• Assessing medical/nutrition condition described in the patient query
• Reviewing current medications and laboratory test results
• Formulating and sending the registered dietitian response (eg, a nutrition diagnosis and intervention plan and/or requests for additional information) to the patient
• Implementing, initiating, or modifying orders for therapeutics diets, pharmacotherapy management, or nutrition-related services (eg, medical foods/nutrition/dietary supplements, enteral and parenteral nutrition, laboratory test, medications) using approved clinical privileges, delegated orders, protocols or other organization-approved processes
• Follow up communication with the patient
• Communicating with patient's physician to coordinate care
• Completing necessary referrals to programs and/or providers as indicated
• Completing medical record documentation of all communications

New Technology/Service:

Is this new/revised procedure considered to be a new technology or service? Yes

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
98966	XXX	0.25	**RUC Time**

CPT Descriptor

Telephone evaluation and management service provided by a qualified nonphysician health care professional to an established patient, parent, or guardian not originating from a related assessment and management service provided within the previous 7 days nor leading to an assessment or management service or procedure within the next 24 hours or soonest available appointment; 5-10 minutes of medical discussion

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
99446	XXX	0.35	**RUC Time**

CPT Descriptor

Interprofessional telephone/Internet assessment and management service provided by a consultative physician including a verbal and written report to the patient's treating/requesting physician or other qualified health care professional; 5-10 minutes of medical consultative discussion and review

KEY MPC COMPARISON CODES:

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
99211	XXX	0.18	**RUC Time**	3,884,402

CPT Descriptor 1 Office or other outpatient visit for the evaluation and management of an established patient, that may not require the presence of a physician or other qualified health care professional. Usually, the presenting problem(s) are minimal. Typically, 5 minutes are spent performing or supervising these services.

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
99212	XXX	0.48	**RUC Time**	12,807,980

CPT Descriptor 2 Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A problem focused history; A problem focused examination; Straightforward medical decision making. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs.

Usually, the presenting problem(s) are self limited or minor. Typically, 10 minutes are spent face-to-face with the patient and/or family.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	13%	52%	22%	13%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	13%	57%	30%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	9%	52%	39%
Physical effort required	22%	61%	17%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	13%	57%	30%

2nd Key Reference Code

	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	75%	25%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	37%	38%	25%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	37%	50%	13%
Physical effort required	62%	38%	0%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	25%	38%	37%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

The key reference services are 98966 (0.25 wRVU; times of 1/8/4/13) and 99446 (0.35 wRVU; times of 3/8/5/16).

The time range for 98970 is 5-10 minutes. Therefore, the expert panel recommends the median survey intra-service time of 8 minutes which is the midpoint of the range. For work, the expert panel believes that the NPP work for 98970 which extends over 7 days and has the same amount of intra-service time as 98966, should have a work value equivalent to 98966. Over half of the survey respondents selected 98966 as the key reference service code and considered the intensity and complexity of the work identical to this code. Based on the fact that the survey was robust and the respondents thought the vignettes were typical, we are recommending the 25th percentile wRVU of 0.25.

General Consideration:
The eVisit codes presented for valuation to the RUC and HCPAC are one unified set of codes and thus the expert panel feels should be valued consistently. The separate nature of the code set (i.e., physician vs. NPP) is artificial due to coding conventions that preclude some NPPs from billing E/M codes. As a result, the CPT panel created the 3 NPP codes within this code family recognizing that the same services are rendered by providers who cannot bill E/M services. RUC procedures require the codes to be surveyed separately with recommendations presented to the RUC for the physician codes and the HCPAC for the NPP codes. Precedent exists within HCPAC and RUC with the telephone services codes for valuation of the physician and NPP codes at the same level. When the telephone services codes were valued by the RUC and HCPAC, the HCPAC determined that the non-physician work for codes 98966-98968 was equivalent to the physician work for codes 99441-99443 (see RUC database). These codes (98966-98968) were identified as the top key reference service codes by survey respondents.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the

provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Academy of Nutrition and Dietetics How often? Sometimes

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 59158
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. This estimate is based on the most recent Medicare utilization data (2016) for MNT and DSMT services to established patients. That data indicates 176,089 unique Medicare beneficiaries receiving such services. Assuming 20% of patients will initiate such services (based on the general rule that 20% of patients consume 80% of resources), we estimate a patient base of 35,218 Medicare patients. Applying the proportion of median utilization response data from our survey for the 3 codes in the NPP code set, we estimated the service would be provided to 42% of these Medicare patients. We then estimated the national utilization to be 4 times that of Medicare utilization to encompass pediatric patients as well as the full range of conditions for which MNT is medically-necessary (Medicare currenlty limits MNT services to beneficiaries with diabetes and chronic kidney disease).

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:

Is this new/revised procedure considered to be a new technology or service? Yes

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
98967	XXX	0.50	**RUC Time**

CPT Descriptor

Telephone evaluation and management service provided by a qualified nonphysician health care professional to an established patient, parent, or guardian not originating from a related assessment and management service provided within the previous 7 days nor leading to an assessment or management service or procedure within the next 24 hours or soonest available appointment; 11-20 minutes of medical discussion

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
99447	XXX	0.70	**RUC Time**

CPT Descriptor Interprofessional telephone/Internet/electronic health record assessment and management service provided by a consultative physician including a verbal and written report to the patient's treating/requesting physician or other qualified healthcare professional; 11-20 minutes of medical consultative discussion and review

KEY MPC COMPARISON CODES:

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
97803	XXX	0.45	**RUC Time**	199,738

CPT Descriptor 1 Medical nutrition therapy; re-assessment and intervention, individual, face-to-face with the patient, each 15 minutes

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
99213	XXX	0.97	**RUC Time**	98,201,339

CPT Descriptor 2 Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: An expanded problem focused history; An expanded problem focused examination; Medical decision making of low complexity. Counseling and coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of low to moderate severity. Typically, 15 minutes are spent face-to-face with the patient and/or family.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

The key reference services are 98967 (0.50 wRVU; times 1/15/5/21) and 99447 (0.70 wRVU; times of 3/15/5/23).

The time range for 98971 is 10-20 minutes. Therefore, the expert panel recommends the median survey intra-service time of 15 minutes which is the midpoint of the range. For work, the expert panel believes that the NPP work for 98971 which extends over 7 days and has the same amount of intra-service time as 98967, should have a work value equivalent to or higher than 98967. Based on the fact that the survey was robust and the respondents thought the vignettes were typical, we are recommending the 50th percentile wRVU of 0.50. The expert panel feels this value is justified for the following reasons: (1) survey respondents consistently reported the overall time/intensity of 98971, as well as all of the individual work components, as identical to or more intense than the key reference service code; and (2) creates appropriate rank order within the 3 codes based on work and intra-service time.

General Consideration:
The eVisit codes presented for valuation to the RUC and HCPAC are one unified set of codes and thus the expert panel feels should be valued consistently. The separate nature of the code set (i.e., physician vs. NPP) is artificial due to coding conventions that preclude some NPPs from billing E/M codes. As a result, the CPT panel created the 3 NPP codes within this code family recognizing that the same services are rendered by providers who cannot bill E/M services. RUC procedures require the codes to be surveyed separately with recommendations presented to the RUC for the physician codes and the HCPAC for the NPP codes. Precedent exists within HCPAC and RUC with the telephone services codes for valuation of the physician and NPP codes at the same level. When the telephone services codes were valued by the RUC and HCPAC, the HCPAC determined that the non-physician work for codes 98966-98968 was equivalent to the physician work for codes 99441-99443 (see RUC database). These codes (98966-98968) were identified as the top key reference service codes by survey respondents.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and

accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

• Reviewing current medications and laboratory test results
• Formulating and sending the registered dietitian response (eg, a nutrition diagnosis and intervention plan and/or requests for additional information) to the patient
• Implementing, initiating, or modifying orders for therapeutics diets, pharmacotherapy management, or nutrition-related services (eg, medical foods/nutrition/dietary supplements, enteral and parenteral nutrition, laboratory test, medications) using approved clinical privileges, delegated orders, protocols or other organization-approved processes
• Follow up communication with the patient
• Communicating with patient's physician to coordinate care
• Completing necessary referrals to programs and/or providers as indicated
• Completing medical record documentation of all communications

Description of Post-Service Work:

SURVEY DATA

RUC Meeting Date (mm/yyyy)	01/2019		
Presenter(s):	Karen Smith, MS, MBA, RD, LD, FAND		
Specialty Society(ies):	Academy of Nutrition and Dietetics		
CPT Code:	98972		
Sample Size:	15000	**Resp N:** 48	**Response:** 0.3 %
Description of Sample:	Random sample		

	Low	25th pctl	Median*	75th pctl	High

Modifier -51 Exempt Status

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:

Is this new/revised procedure considered to be a new technology or service? Yes

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
98968	XXX	0.75	**RUC Time**

CPT Descriptor

Telephone evaluation and management service provided by a qualified nonphysician health care professional to an established patient, parent, or guardian not originating from a related assessment and management service provided within the previous 7 days nor leading to an assessment or management service or procedure within the next 24 hours or soonest available appointment; 21-30 minutes of medical discussion

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
99448	XXX	1.05	**RUC Time**

CPT Descriptor Interprofessional telephone/Internet/electronic health record assessment and management service provided by a consultative physician including a verbal and written report to the patient's treating/requesting physician or other qualified healthcare professional; 21-30 minutes of medical consultative discussion and review

KEY MPC COMPARISON CODES:

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
99212	XXX	0.48	**RUC Time**	12,807,980

CPT Descriptor 1 Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A problem focused history; A problem focused examination; Straightforward medical decision making. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are self limited or minor. Typically, 10 minutes are spent face-to-face with the patient and/or family.

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
99214	XXX	1.50	**RUC Time**	103,181,579

CPT Descriptor 2 Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A detailed history; A detailed examination; Medical decision making of

moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 25 minutes are spent face-to-face with the patient and/or family.

CPT Descriptor

RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:
Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by percent distribution) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Top Key Reference Code: 25 **% of respondents:** 52.0 **%**

Number of respondents who choose 2nd Key Reference Code: 6 **% of respondents:** 12.5 **%**

TIME ESTIMATES (Median)

	CPT Code: 98972	**Top Key Reference CPT Code:** 98968	**2nd Key Reference CPT Code:** **99448**
Median Pre-Service Time	0.00	1.00	5.00
Median Intra-Service Time	25.00	25.00	25.00
Median Immediate Post-service Time	0.00	10.00	5.00
Median Critical Care Time	0.0	0.00	0.00
Median Other Hospital Visit Time	0.0	0.00	0.00
Median Discharge Day Management Time	0.0	0.00	0.00
Median Office Visit Time	0.0	0.00	0.00
Prolonged Services Time	0.0	0.00	0.00
Median Subsequent Observation Care Time	0.0	0.00	0.00
Median Total Time	**25.00**	**36.00**	**35.00**
Other time if appropriate			

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	4%	44%	32%	20%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	8%	36%	56%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	4%	40%	56%
Physical effort required	8%	64%	28%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	40%	60%

2nd Key Reference Code

	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	50%	33%	17%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	50%	50%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	33%	67%
Physical effort required	0%	67%	33%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	33%	67%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

The key reference services are 98968 (0.75 wRVU; times of 1/25/10/36) and 99448 (1.05 wRVU; times of 5/25/5/35).

The time for 98972 is 21 or more minutes. Therefore, the expert panel recommends the median intra-service time of 26 minutes which the expert panel agrees is typical. For work, the expert panel believes that the NPP work for 98972 which extends over 7 days and has the same amount of intra-service time as 98968 and 99448 should have a work value similar to or higher than 98968. Based on the fact that the survey respondents thought the vignettes were typical and consistently reported the overall time/intensity of 98972, as well as all of the individual work components, as identical to or more intense than the key reference service code, we are recommending a wRVU of 0.80, which is slightly above the 50th percentile. The expert panel feels this value is justified because survey respondents consistently reported the overall time/intensity of 98972, as well as all of the individual work components, as more intense than the key reference service code. This wRVU also creates appropriate rank order with the two key reference service codes, both of which have the same intra-service time.

General Consideration:
The eVisit codes presented for valuation to the RUC and HCPAC are one unified set of codes and thus the expert panel feels should be valued consistently. The separate nature of the code set (i.e., physician vs. NPP) is artificial due to coding conventions that preclude some NPPs from billing E/M codes. As a result, the CPT panel created the 3 NPP codes within this code family recognizing that the same services are rendered by providers who cannot bill E/M services. RUC procedures require the codes to be surveyed separately with recommendations presented to the RUC for the physician codes and the HCPAC for the NPP codes. Precedent exists within HCPAC and RUC with the telephone services codes for valuation of the physician and NPP codes at the same level. When the telephone services codes were valued by the RUC and HCPAC, the HCPAC determined that the non-physician work for codes 98966-98968 was equivalent to the physician work for codes 99441-99443 (see RUC database). These codes (98966-98968) were identified as the top key reference service codes by survey respondents.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.

☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 98969

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Academy of Nutrition and Dietetics How often? Sometimes

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 36628
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. This estimate is based on the most recent Medicare utilization data (2016) for MNT and DSMT services to established patients. That data indicates 176,089 unique Medicare beneficiaries receiving such services. Assuming 20% of patients will initiate such services (based on the general rule that 20% of patients consume 80% of resources), we estimate a patient base of 35,218 Medicare patients. Applying the proportion of median utilization response data from our survey for the 3 codes in the NPP code set, we estimated the service would be provided to 26% of Medicare patients. We then estimated the national utilization to be 4 times that of Medicare utilization to encompass pediatric patients as well as the full range of conditions for which MNT is medically-necessary (Medicare currenlty limits MNT services to beneficiaries with diabetes and chronic kidney disease).

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 9,157
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This estimate is based on the most recent Medicare utilization data (2016) for MNT and DSMT services to established patients. That data indicates 176,089 unique Medicare beneficiaries receiving such services. Assuming 20% of patients will initiate such services (based on the general rule that 20% of patients consume 80% of resources), we estimate a patient base of 35,218 Medicare patients. Applying the proportion of median utilization response data from our survey for the 3 codes in the NPP code set, we estimated the service would be provided to 26% of Medicare patients.

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Evaluation Management

BETOS Sub-classification:
Specialist

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 97803

CPT Code: 98970-98972
Specialty Society: AND

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Non Facility Direct Practice Expense (PE) Inputs

CPT Long Descriptor:

98970	Qualified nonphysician healthcare professional online digital evaluation and management service, for an established patient, cumulative time during 7 days; 5-10 minutes
98971	11-20 minutes
98972	21 or more minutes

Global Period: XXX Meeting Date: January 2019

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   An expert panel composed of the society's RUC advisors, CPT advisors, and members providing such services was convened for purposes of developing recommended PE inputs for these codes. The expert panel of advisors conferred by email and met by conference call to develop their recommendations.

2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here:

   Reference code for non-physician healthcare professional services:
   98969 (Online assessment and management service provided by a qualified non-physician health care professional to an established patient or guardian, not originating from a related assessment and management service provided within the previous 7 days, using the Internet or similar electronic communications network)

   The expert panel considered the direct practice expense inputs for 98969 as recommended to the HCPAC in 2007, the most recent date the HCPAC considered this code. The expert panel is aware that, when CMS chose not to cover 98969, it disregarded both the non-physician healthcare professional work and direct practice expense inputs. Thus, the practice expense spreadsheet accompanying this summary of recommendation shows both the current inputs (none) for 98969 in columns S and T and the inputs as recommended to the HCPAC in 2007 (columns Q and R).

3. Is this code(s) typically billed with an E/M service?
   Is this code(s) typically billed with the E/M service in the nonfacility?
   (Please see provided data in PE Subcommittee folder)

   No

4. What specialty is the dominant provider in the nonfacility?
   What percent of the time does the dominant provider provide the service(s) in the nonfacility?
   Is the dominant provider in the nonfacility different then for the global?
   (Please see provided data in PE Subcommittee folder)

These are new codes, and the reference code (98969) is not covered by Medicare, so we have no data on utilization. For new codes 98970-98972, we anticipate registered dieticians will be the dominant provider in the non-facility setting and provide the service more than 50% of the time. We anticipate that the dominant provider in non-facility setting will be the same as the dominant provider in all settings.

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:

   (not applicable)

6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), you must provide compelling evidence. Please explain if the increase can be entirely accounted for because of an increase in physician time.

   (not applicable)

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here:

   (not applicable)

8. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? (please use this time rather than 5 minutes in your reference code)
   The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

   (not applicable)

9. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

No clinical staff is utilized during the intra-service period as it is not typical for non-physician providers to have access to clinical staff to assist with this service.

10. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

    (not applicable)

11. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities:

    (not applicable)

12. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

    (not applicable)

13. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here:

    (not applicable)

14. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here:

    (not applicable)

15. List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here:

    ED021 - computer, desktop, w-monitor
    This equipment is used solely by the non-physician healthcare professional to provide service. The time entered on the practice expense spreadsheet represents the non-physician healthcare professional's intra-service time and is not linked to any cell on the spreadsheet, because there is no clinical staff time. The time for equipment is the entire time that it takes the non-physician healthcare professional to perform the services.

16. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here:

    (not applicable)

17. If there is any other item on your spreadsheet that needs further explanation, please include here:

    (not applicable)

18. Please include an explanation of each line item:

    (not applicable)

January 2019

Health and Behavior Assessment and Intervention – Tab 41

In September 2018, CPT replaced six codes with nine new codes to more accurately reflect current clinical practices in describing health behavior assessment services.

Compelling Evidence
The nine codes used to describe Health Behavior Assessment and Intervention in this family reflect significant changes in the healthcare delivery system since they were originally described and valued in 2001. During that time there has been an increasing focus on the role of psychosocial factors in health, as well as a shift toward explicit assessment and intervention in these factors, particularly in primary care. The RUC rationale for the original valuation of this family was a flawed methodology. The RUC valued these services primarily based on the psychiatric interview code 90801, a 60-minute service with 2.80 RVU. RUC divided the value by 4, yielding a 15-minute service at 0.70 RVUs. That was based on the expectation that each of the new codes, reported in 15-minute increments, would typically be reported four (4) times per patient encounter, comprising a comparable 60-minute service to 90801. However, the values are within the 0.44-0.50 range which is not consistent with the methodology. It should also be noted that 90801, the primary service on which the existing Health and Behavior codes were built upon, is no longer an existing or valid code and the comparable service has different valuation today.

The assumption that every code would typically be reported for 60 minutes (four (4) 15-minute increments) was incorrect. Below is the current utilization, based on the actual 2016 Medicare Units of Service Performed on Same Date, for the code set. As detailed in the chart, there is considerable variability across the code set in the mean number of units per encounter across all the 15-minute codes in the family.

		Number of Unique Occurrences (Same Day, Same Patient, Same Provider)			
CPT® Code	**Description**	**Mean**	**25th Percentile**	**Median**	**75th Percentile**
96150	Health and behavior assessment	**3.29**	2	**3**	4
96151	Health and behavior re-assessment	**2.30**	1	**2**	3

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

96152	Health and behavior individual intervention	**3.11**	2	**4**	4
96153	Health and behavior group intervention	**4.78**	4	**4**	6
96154	Health and behavior family intervention, with patient present	**5.31**	3	**5**	8
96155	Health and behavior family intervention, without patient present	**N/A**	N/A	**N/A**	N/A

It is also clear that there is an anomalous relationship in the surveyed family of codes when compared to the psychotherapy family of codes, on which it was based in 2001. The original and current surveys show that health and behavior services are very similar to the parallel mental health service, in terms of the modality by which the service is delivered as well as intensity. Differences in comparable code values between the two families were greatly increased when the psychotherapy code set was reevaluated by the RUC in 2012. As detailed in the chart below, all the codes in current Health and Behavior code set are valued significantly lower when times and work RVUs are calculated to match those parallel services in the updated psychotherapy code set.

Psychotherapy				**Health Behavior Assessment and Intervention**			
CPT® Code	**Units of Time**	**RVU**		**CPT® Code**	**Calculated Time**	**RVU**	**Calculated RVU**
90791	60 mins	**3.00**		**96150**	15 min x 4 units = 60 mins	0.50	**2.00**
90832	30 mins	**1.50**		**96152**	15 mins x 2 units = 30 mins	0.48	**0.92**
90853	60 mins	**0.59**		**96153**	15 min x 4 units = 60 mins	0.10	**0.40**
90847	50 mins	**2.50**		**96154**	15 mins x 3.33 units = 50 mins	0.45	**1.50**
90846	50 mins	**2.40**		**96155**	15 mins x 3.33 units = 50 mins	0.44	**1.47**

For the family there is increasing intensity and complexity based on the service and number of patients involved. The HCPAC work recommendations for this family as outlined below have the appropriate rank order for the typical length of service starting with the lowest total

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

work RVU for the health behavior assessment, including reassessment and moving through the individual intervention, group intervention, family intervention without patient present and family intervention with patient present.

Health and Behavior Assessment & Intervention Recommendations						
CPT Code	**Code Descriptor**	**Intra**	**Proposed RVW**	**Converted Units**	**Total Time (mins)**	**Total RVWs**
Assessment						
96156	**Health behavior assessment, including re-assessment**	45	2.10	**1**	**45**	**2.10**
Individual Intervention						
96158	**Health behavior individual intervention, initial 30 minutes**	30	1.45	**1**	**60**	**2.45**
96159	**each additional 15 minutes**	15	0.5	**2**		
Group Intervention						
Per Patient

96165	each additional 15 minutes	15	0.10	**2**		
Per Session (x 7 typical patients/group)						
96164	Health behavior group intervention; initial 30 minutes	30	0.21	**1**	**420**	**2.87**
96165	each additional 15 minutes	15	0.10	**2**		

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Family Intervention WITH patient present						
96167	Health behavior family intervention (with patient present); initial 30 minutes	30	1.55	**1**	**75**	**3.20**
96168	each additional 15 minutes	15	0.55	**3**		
Family Intervention WITHOUT patient present						
96170	Health behavior family intervention (without the patient present); initial 30 minutes	30	1.50	**N/A**	**N/A**	**N/A**
96171	each additional 15 minutes	15	0.54			

96156 ***Health behavior assessment, including re-assessment (ie, health-focused clinical interview, behavioral observations, clinical decision making)***

The HCPAC reviewed the survey results from 90 psychologists and determined that the survey median work RVU of 3.00 overestimates the work required to perform this service. The HCPAC agreed with the specialty society that the survey respondents had estimated the value of the survey code that has 45 minutes of intra-service time, to be equal to that of the key reference service CPT code 90791 *Psychiatric diagnostic evaluation* (work RVU = 3.00 and 60 minutes intra-service time) that has 60 minutes of intra-service time. Further, the HCPAC agreed with the specialty society that the survey 25th percentile work RVU of 1.87 was too low of a value and did not accurately capture the complexity and intensity of current practice. The HCPAC determined that a direct crosswalk to CPT code 90845 *Psychoanalysis* (work RVU = 2.10 and 45 minutes intra-service time) is appropriate. The HCPAC recommends 10 minutes pre-service time, 45 minutes intra-service time and 15 minutes post-service time.

The HCPAC compared the surveyed code to MPC code 90834 *Psychotherapy, 45 minutes with patient* (work RVU = 2.00 and 45 minutes intra-service time) and 99215 *Office or other outpatient visit for the evaluation and management of an established patient,…* (work RVU = 2.11 and 35 minutes intra-service time), which demonstrates the appropriate relativity among similar services. **The HCPAC recommends a work RVU of 2.10 for CPT code 96156.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

96158 ***Health behavior intervention, individual, face-to-face; initial 30 minutes***
The HCPAC reviewed the survey results from 116 psychologists and determined that the survey 25th percentile work RVU of 1.45 appropriately accounts for the work required to perform this service. The HCPAC recommends 5 minutes pre-service time, 30 minutes intra-service time and 10 minutes post-service time. The HCPAC compared the surveyed code to the top key reference service 90832 *Psychotherapy, 30 minutes with patient* (work RVU = 1.50, 5 pre-service, 30 intra and 10 post-service time) and noted that these services require similar work and should be valued similarly.

For additional support the HCPAC referenced CPT code 99491 *Chronic care management services, provided personally by a physician or other qualified health care professional, at least 30 minutes of physician or other qualified health care professional time, per calendar month,…* (work RVU = 1.45 and 30 minutes intra-service time) and noted that the services have identical intra-service time and should be valued identically. **The HCPAC recommends a work RVU of 1.45 for CPT code 96158.**

96159 ***Health behavior intervention, individual, face-to-face; each additional 15 minutes (list separately in addition to code for primary service)***
The HCPAC reviewed the survey results from 113 psychologists and determined that both the survey median value of 0.80 and the 25th percentile value of 0.66 were valued too high for this add-on service. The HCPAC determined that the survey respondents did not select ZZZ codes as their top key reference or second key reference services because the base and add-on code structure is not common to psychologists and they are not yet familiar with their usage. Because most of the survey respondents did not utilize any of the ZZZ codes available on the reference service list, the value of the add-on codes was overestimated. The HCPAC determined that a direct crosswalk to CPT code 11045 *Debridement, subcutaneous tissue (includes epidermis and dermis, if performed); each additional 20 sq cm, or part thereof (List separately in addition to code for primary procedure)* (work RVU = 0.50 and 15 minutes intra-service time) is appropriate. The HCPAC recommends 15 minutes intra-service time.

The HCPAC compared the surveyed code to CPT code 88177 *Cytopathology, evaluation of fine needle aspirate; immediate cytohistologic study to determine adequacy for diagnosis, each separate additional evaluation episode, same site (List separately in addition to code for primary procedure)* (work RVU = 0.42 and 15 minutes intra-service time) and 11107 *Incisional biopsy of skin (eg, wedge) (including simple closure, when performed); each separate/additional lesion (List separately in addition to code for primary procedure)* (work RVU = 0.54 and 15 minutes intra-service time), which demonstrates the appropriate relativity among similar services. **The HCPAC recommends a work RVU of 0.50 for CPT code 96159.**

96164 ***Health behavior intervention, group (2 or more patients), face-to-face; initial 30 minutes***
The HCPAC reviewed the survey results from 41 psychologists with the understanding that the survey respondents were asked to evaluate the group service in total and not based on an individual group participant. Also, a custom survey question was added that asked respondents to provide the average number of patients that attend a typical health behavior group intervention session. The question yielded a median response of seven patients. The intent was to obtain per session data on the service, that could then be divided by the average number of patients to yield the

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

per patient data. The HCPAC agreed with the specialty that the median per session work value of 1.25 RVUs converted to the per patient work value of 0.18 RVUs was too low. The HCPAC determined that a direct crosswalk to CPT code 96365 *Intravenous infusion, for therapy, prophylaxis, or diagnosis (specify substance or drug); initial, up to 1 hour* (work RVU = 0.21 and 2 minutes pre-service, 5 minutes intra-service and 2 minutes post-service time) is appropriate. The HCPAC recommends 2 minutes pre-service time, 5 minutes intra-service time, 2 minutes post-service time, for 9 minutes total time for surveyed code 96164.

The HCPAC compared the surveyed code to CPT code 96401 *Chemotherapy administration, subcutaneous or intramuscular; non-hormonal anti-neoplastic* (work RVU = 0.21 and 4 minutes pre-service, 3 minutes intra-service, 2 minutes post-service time and 9 minutes total time), noting that the total time is identical to the surveyed code and should be valued identically. The HCPAC also compared the survey code to CPT code 97804 *Medical nutrition therapy; group (2 or more individual(s)), each 30 minutes* (work RVU = 0.25 and 2 minutes pre-service, 6 minutes intra-service and 2 minutes post-service time), which is a smaller group of typically 5 patients and an appropriately lower total work value per session at 1.25 work RVUs. **The HCPAC recommends a work RVU of 0.21 for CPT code 96164.**

96165 ***Health behavior intervention, group (2 or more patients), face-to-face; each additional 15 minutes (list separately in addition to code for primary service)***
The HCPAC reviewed the survey results from 40 psychologists and determined that the survey respondents did not select ZZZ codes as their top key reference or second key reference services because the base and add-on code structure is not common to psychologists and they are not yet familiar with their usage. The HCPAC determined that a direct crosswalk to add-on code 96375 *Therapeutic, prophylactic, or diagnostic injection (specify substance or drug); each additional sequential intravenous push of a new substance/drug (List separately in addition to code for primary procedure)* (work RVU = 0.10 and 4 minutes intra-service time) is appropriate. The HCPAC recommends 4 minutes intra-service time for add-on code 96165.

The HCPAC compared the surveyed code to CPT code 96411 *Chemotherapy administration; intravenous, push technique, each additional substance/drug (List separately in addition to code for primary procedure)* (work RVU = 0.20 and 4 minutes intra-service and 7 minutes total), which is an add-on code for each additional substance/drug administered requiring pre- and post-service time and should be valued higher than the surveyed code. **The HCPAC recommends a work RVU of 0.10 for CPT code 96165.**

96167 ***Health behavior intervention, family (with the patient present), face-to-face; initial 30 minutes***
The HCPAC reviewed the survey results from 52 psychologists and determined that both the survey median value of 2.18 and the 25th percentile value of 1.58 were valued too high for this service. The HCPAC determined that a direct crosswalk to CPT code 76873 *Ultrasound, transrectal; prostate volume study for brachytherapy treatment planning (separate procedure)* (work RVU = 1.55 and 30 minutes intra-service time) is appropriate. The HCPAC recommends 5 minutes pre-service time, 30 minutes intra-service time, and 10 minutes post-service time for surveyed code 96167.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

The HCPAC compared the surveyed code to CPT code 99203 *Office or other outpatient visit for the evaluation and management of a new patient,…*(work RVU = 1.42 and 30 minutes intra-service time) and 99492 *Initial psychiatric collaborative care management, first 70 minutes in the first calendar month of behavioral health care manager activities, in consultation with a psychiatric consultant, and directed by the treating physician or other qualified health care professional, with the following required elements…* (work RVU = 1.70 and 40 minutes intra-service time), which demonstrates the appropriate relativity among similar services. **The HCPAC recommends a work RVU of 1.55 for CPT code 96167.**

96168 ***Health behavior intervention, family (with the patient present), face-to-face; each additional 15 minutes (list separately in addition to code for primary service)***

The HCPAC reviewed the survey results from 52 psychologists and determined that the survey respondents did not select ZZZ codes as their key reference or second key reference services because the base and add-on code structure is not common to psychologists and they are not yet familiar with their usage. Also, if the survey respondent was attempting to value this service relative to the base code, 96167, there is a very limited number of ZZZ codes that fall within the appropriate range. The HCPAC determined that a direct crosswalk to add-on code 96571 *Photodynamic therapy by endoscopic application of light to ablate abnormal tissue via activation of photosensitive drug(s); each additional 15 minutes (List separately in addition to code for endoscopy or bronchoscopy procedures of lung and gastrointestinal tract)* (work RVU = 0.55 and 15 minutes intra-service time) is appropriate. The HCPAC recommends 15 minutes intra-service time for add-on code 96168.

The HCPAC compared the surveyed code to MPC code 11045 *Debridement, subcutaneous tissue (includes epidermis and dermis, if performed); each additional 20 sq cm, or part thereof (List separately in addition to code for primary procedure)* (work RVU = 0.50 and 15 minutes intra-service time) and 77003 *Fluoroscopic guidance and localization of needle or catheter tip for spine or paraspinous diagnostic or therapeutic injection procedures (epidural or subarachnoid) (List separately in addition to code for primary procedure)* (work RVU = 0.60 and 15 minutes intra-service time and 17 minutes total time), which demonstrates the appropriate relativity among similar services. **The HCPAC recommends a work RVU of 0.55 for CPT code 96168.**

96170 ***Health behavior intervention, family (without the patient present), face-to-face; initial 30 minutes***

The HCPAC reviewed the survey results from 36 psychologists and determined that the survey 25th percentile work RVU of 1.50 appropriately accounts for the work required to perform this service. The HCPAC recommends 5 minutes pre-service time, 30 minutes intra-service time and 10 minutes post-service time. The HCPAC compared the surveyed code to the second key reference service 90832 *Psychotherapy, 30 minutes with patient* (work RVU = 1.50, 5 pre-service, 30 intra-service and 10 post-service time) and noted that these services require identical work and should be valued identically.

For additional support the HCPAC referenced CPT code 99497 *Advance care planning including the explanation and discussion of advance directives such as standard forms (with completion of such forms, when performed), by the physician or other qualified health care professional; first 30 minutes, face-to-face with the patient, family member(s), and/or surrogate* (work RVU = 1.50 and 30 minutes intra-service time) and noted

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

that the services have identical intra-service time and should be valued identically. **The HCPAC recommends a work RVU of 1.50 for CPT code 96170.**

96171 ***Health behavior intervention, family (without the patient present), face-to-face; each additional 15 minutes (list separately in addition to code for primary service)***
The HCPAC reviewed the survey results from 36 psychologists and determined that both the survey median value of 0.90 and the 25th percentile value of 0.59 were valued too high for this add-on service. The HCPAC determined that the survey respondents did not select ZZZ codes as their key reference or second key reference services because the base and add-on code structure is not common to psychologists and they are not yet familiar with their usage. The HCPAC determined that a direct crosswalk to CPT code 11107 *Incisional biopsy of skin (eg, wedge) (including simple closure, when performed); each separate/additional lesion (List separately in addition to code for primary procedure)* (work RVU = 0.54 and 15 minutes intra-service time) is appropriate. The HCPAC recommends 15 minutes intra-service time for add-on code 96171.

The HCPAC compared the surveyed code to MPC code 11045 *Debridement, subcutaneous tissue (includes epidermis and dermis, if performed); each additional 20 sq cm, or part thereof (List separately in addition to code for primary procedure)* (work RVU = 0.50 and 15 minutes intra-service time) and 77003 *Fluoroscopic guidance and localization of needle or catheter tip for spine or paraspinous diagnostic or therapeutic injection procedures (epidural or subarachnoid) (List separately in addition to code for primary procedure)* (work RVU = 0.60 and 15 minutes intra-service time and 17 minutes total time), which demonstrates the appropriate relativity among similar services. **The HCPAC recommends a work RVU of 0.54 for CPT code 96171.**

Practice Expense
The PE Subcommittee removed supply item SA034, *kit, therapeutic toys-games (50% of the time)* from the codes where it was recommended because although it is required to provide the service it is reusable and would be considered an indirect supply. The PE Subcommittee did add supply item SM022, *sanitizing cloth-wipe (surface, instruments, equipment)* to clean the toys and games for reuse. The HCPAC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
Evaluation and Management **Preventive Medicine Services** **Counseling Risk Factor Reduction and Behavior Change Intervention** **New or Established Patient** *These codes are used to report services provided face-to-face…* *Preventive medicine counseling and risk factor reduction…* *Behavior change interventions are for persons who have a behavior…* *For counseling groups of patients with symptoms or established…* Health ~~and~~ Behavior Assessment~~/~~and Intervention services (~~96150-96155~~96156, 96158, 96159, 96164, 96165, 96167, 96168, 96170, 96171) should not be reported on the same day as codes 99401-99412.

Medicine
Adaptive Behavior Assessments

#●*97X52* ***Behavior identification–supporting assessment,*** *administered by one technician under the direction of a physician or other qualified health care professional, face-to-face with the patient, each 15 minutes*

(For health and behavior assessment/intervention, see ~~96150, 96151, 96152, 96153, 96154, 96155~~ 96156, 96158, 96159, 96164, 96165, 96167, 96168, 96170, 96171)

Health ~~and~~ Behavior Assessment~~/~~ and Intervention

Health ~~and~~ behavior assessment and intervention procedures are used to identify and address the psychological, behavioral, emotional, cognitive, and ~~social~~ interpersonal factors important to the ~~prevention~~ assessment, treatment, or management of physical health problems.

The patient's primary diagnosis is physical in nature and the focus of the assessment and interventions is ~~not~~ on ~~mental health but on the biopsychosocial important to physical health problems~~ factors complicating medical conditions and treatments. ~~The focus of the intervention is~~ These codes describe assessments and interventions to improve the patient's health and wellbeing utilizing ~~cognitive, behavioral, social and/or psychophysiological~~ psychological and/or psychosocial interventions ~~procedures~~ designed to ameliorate specific disease-related problems.

Health behavior assessment: includes evaluation of the patient's responses to disease, illness or injury, outlook, coping strategies, motivation, and adherence to medical treatment. Assessment is conducted through health-focused clinical interviews, observation and clinical decision-making.

Health behavior intervention: include promotion of functional improvement, minimizing psychological and/or psychosocial barriers to recovery, and management of and improved coping with medical conditions. These services emphasize active patient/family engagement and involvement. These interventions may be provided individually, to a group (2 or more patients), and/or to the family, with or without the patient present.

Codes ~~96150-96155,~~ 96156, 96158, 96159, 96164, 96165, 96167, 96168, 96170, 96171 describe services offered to patients who present with primary physical illnesses, diagnoses, or symptoms and may benefit from assessments and interventions that focus on the ~~biopsychosocial~~ psychological and/or psychosocial factors related to the patient's health status. These services do not represent preventive medicine counseling and risk factor reduction interventions.

For patients that require psychiatric services (90785-90899), adaptive behavior services (97X51, 97X52, 97X53, 97X54, 97X55, 97X56, 97X57, 97X58, 0362T, 0373T) as well as health ~~and~~ behavior assessment~~/~~and intervention (~~96150-96155,~~ 96156, 96158,

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

96159, 96164, 96165, 96167, 96168, 96170, 96171), report the predominant service performed. Do not report ~~96150-96155~~ 96156, 96158, 96159, 96164, 96165, 96167, 96168, 96170, 96171 in conjunction with 90785-90899 on the same date.

Evaluation and management services codes (including counseling risk factor reduction and behavior change intervention [99401-99412]), should not be reported on the same day *as health ~~and~~ behavior assessment~~/~~and intervention codes* ~~96150, 96151, 96152, 96153, 96154, 96155~~ 96156, 96158, 96159, 96164, 96165, 96167, 96168, 96170, 96171 by the same provider.

Health behavior assessment and intervention services (96156, 96158, 96159, 96164, 96165, 96167, 96168, 96170, 96171) can occur and be billed on the same date of service as evaluation and management services codes (including counseling risk factor reduction and behavior change intervention [99401-99412]), as long as the health behavior assessment and intervention service is billed by a physician or other qualified health care professional and the evaluation and management service is performed by a physician or other qualified health care professional who may report evaluation and management services.

Do not report 96158, 96164, 96167 and 96170 for less than 16 minutes of service.

(For health ~~and~~ behavior assessment and~~/or~~ intervention *services [~~96150, 96151, 96152, 96153, 96154, 96155~~* 96156, 96158, 96159, 96164, 96165, 96167, 96168, 96170, 96171*]* performed by a physician or other qualified health care professional who may report evaluation and management services, see **Evaluation and Management** or **Preventive Medicine Services** codes)

(Do not report ~~96150, 96151, 96152, 96153, 96154, 96155~~ 96156, 96158, 96159, 96164, 96165, 96167, 96168, 96170, 96171 in conjunction with *~~0364T~~ 97X51, 97X52, 97X53, 97X54, 97X55, ~~0365T~~ 97X56, ~~0366T~~ 97X57, ~~0367T~~ 97X58, ~~0373T~~ 0362T, ~~0374T~~ 0373T)*

Category III Codes
Adaptive Behavior Assessments and Treatment

◢*0362T* ~~*Exposure behavioral follow-up*~~*Behavior identification supporting assessment, ~~includes physician or other qualified health care professional direction with interpretation and report, administered by physician or other qualified health care professional with the assistance of one or more technicians~~each 15 minutes of technicians' time face-to-face with a patient, requiring the following components:*

- *administration by the physician or other qualified health care professional who is on site;*
- *with the assistance of two or more technicians;*
- *for a patient who exhibits destructive behavior;*
- *completion in an environment that is customized to the patient's behavior.*

(0362T is reported based on a single technician's face-to-face time with the patient and not the combined time of multiple technicians [eg, one hour with three technicians equals one hour of service])

(0362T may be repeated on different days until the behavior identification assessment [97X51] and, if necessary, supporting assessment[s] [97X52, 0362T], is complete)

(For psychiatric diagnostic evaluation, see 90791, 90792)

(For speech evaluations, see 92521, 92522, 92523, 92524)

(For occupational therapy evaluation, see 97165, 97166, 97167, 97168)

(For medical team conference, see 99366, 99367, 99368)

*(For health ~~and~~ behavior assessment~~/~~and intervention, see ~~96150, 96151, 96152, 96153, 96154, 96155~~*96156, 96158, 96159, 96164, 96165, 96167, 96168, 96170, 96171*)*

(For neurobehavioral status examination, see 96116, 963X2X)

(For neuropsychological testing, see 963X5X, 963X6X, 963X7X, 963X8X, 963X9X, 96X10X, 96X12X)

◢*0373T* ~~*Exposure adaptive behavior treatment with protocol modification*~~*Adaptive behavior treatment with protocol modification, each 15 minutes of technicians' time face-to-face with a patient, requiring ~~two or more technicians for severe maladaptive behavior(s)~~the following components:*

- *administration by the physician or other qualified health care professional who is on site;*
- *with the assistance of two or more technicians;*

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

- *for a patient who exhibits destructive behavior;*
- *completion in an environment that is customized to the patient's behavior.*

(0373T, ~~0374T are~~ is reported based on a single technician's face-to-face time with the patient and not the combined time of multiple technicians)

(Do not report 0373T, ~~0374T~~ in conjunction with 90785-90899, 96105, 96110, 96116, 963X2, ~~96150, 96151, 96152, 96153, 96101~~96154, ~~96155~~96156, 96158, 96159, 96164, 96165, 96167, 96168, 96170, 96171)

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:96156 Tracking Number Z1 Original Specialty Recommended RVU: **2.10**
Presented Recommended RVU: **2.10**
Global Period: XXX Current Work RVU: RUC Recommended RVU: **2.10**

CPT Descriptor: Health behavior assessment, including re-assessment (ie, health-focused clinical interview, behavioral observations, clinical decision making)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 65-year-old male with osteoarthritis, chronic back pain, and medication-related somnolence is referred for health behavior assessment to determine the psychological factors requiring intervention as part of the patient's overall treatment plan.

Percentage of Survey Respondents who found Vignette to be Typical: 75%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review patient records, including those from the patient’s physician and other team members.

Description of Intra-Service Work: Qualified health care professional meets with patient to assess adjustment to the medical illness or injury, psychological, motivational and interpersonal factors affecting medical management, outlook, coping strategies, treatment compliance and health risk behaviors.

Description of Post-Service Work: Qualified health care professional documentation in the medical record includes results of health behavior assessment, recommended services to be provided, coordination of feedback to interdisciplinary team members and family. The qualified health care professional facilitates treatment planning and follow-up care with the team members and family.

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
99203	XXX	1.42	**RUC Time**

CPT Descriptor Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: A detailed history; A detailed examination; Medical decision making of low complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate severity. Typically, 30 minutes are spent face-to-face with the patient and/or family.

KEY MPC COMPARISON CODES:

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

Physical effort required	12%	63%	25%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	6%	56%	38%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background
This existing code family (CPT® codes 96150-96155) describes health behavior assessment and intervention services primarily performed by non-physician qualified healthcare professionals who cannot report Evaluation and Management services. In October 2017, CPT code 96154; *Health and behavior intervention, each 15 minutes, face-to-face; family (with the patient present)*, was identified through a code screen as having a negative IWPUT of 0.0058.

At the April 2018 RUC meeting, the code was discussed at the Relativity Assessment Workgroup (RAW) meeting. It was noted that code 96154 has an intra-service time of 15 minutes but is listed as having a post-service time of 20 minutes, which was likely a data entry error (i.e. the 20 minutes should have been divided by the typical 4 units and entered as 5 minutes of post-service time). The RAW entertained a motion to make an editorial change to drop the post-time to 5 minutes to be consistent with the rest of the family; however, further discussion revealed that the family of codes had not been reviewed since their inception in 2001. As a result, the RAW recommended that 96154 and the related family of codes be referred back to CPT for revision.

The new code family was approved at the September 2018 CPT Editorial Panel meeting and surveyed by the American Psychological Association (APA) for the January 2019 RUC HCPAC meeting.

New/revised code 96156; Health behavior assessment, including re-assessment (ie, health-focused clinical interview, behavioral observations, clinical decision making), has previously been reported with CPT code 96150; *Health and behavior assessment (eg, health-focused clinical interview, behavioral observations, psychophysiological monitoring, health-oriented questionnaires), each 15 minutes face-to-face with the patient; initial assessment* and 96151; *Health and behavior assessment (eg, health-focused clinical interview, behavioral observations, psychophysiological monitoring, health-oriented questionnaires), each 15 minutes face-to-face with the patient; re-assessment*.

Compelling Evidence

These codes reflect significant changes in the healthcare delivery system over the past 20 years. During that time there has been an increasing focus on the role of psychosocial factors in health, as well as a shift toward explicit assessment and intervention in these factors, particularly in primary care. The Health Behavior Assessment and Intervention codes were originally described and valued in 2001, but they have never been re-evaluated since their inception almost 20 years ago.

There are several factors comprising compelling evidence for this family of codes, including: flawed methodology and anomalous relationship; change in technique and knowledge; change in site of service; and change in patient population. As a result, we are requesting that compelling evidence be considered for the entire family of codes.

Flawed Methodology and Anomalous Relationship
RUC rationale for the original valuation of this family shows that the RUC valued these services primarily based on the psychiatric interview code 90801, a 60-minute service with 2.80 wRVU. RUC divided the value by 4, yielding a 15-minute service at 0.70 RVUs. That was based on the expectation that each of the new codes, reported in 15-minute increments, would typically be billed four (4) times per patient encounter, comprising a comparable 60-minute service to 90801.

The documented history provides evidence that incorrect assumptions were made in the initial valuation of the family of Health and Behavior codes. The RUC used the flawed building block methodology, in a manner that is no longer a RUC-accepted process, to value each 15-minute Health and Behavior diagnostic and treatment code, yielding wRVUs ranging from 0.44-0.50. It should also be noted that 90801, the primary service on which the existing Health and Behavior codes were built upon, is no longer an existing or valid code and the comparable service has different valuation today.

It is clear from current data that the assumption that every code would typically be billed for 60 minutes (four (4) 15-minute increments) was at best a gross estimation. Below is the current utilization, based on the actual

2016 Medicare Units of Service Performed on Same Date, for the code set. As can be seen in the chart, there is considerable variability across the code set in the mean number of units per encounter across all the 15-minute codes in the family.

CPT® Code	**Description**	**Mean**	**25th Percentile**	**Median**	**75th Percentile**
96150	Health and behavior assessment	**3.29**	2	**3**	4
96151	Health and behavior re-assessment	**2.30**	1	**2**	3
96152	Health and behavior individual intervention	**3.11**	2	**4**	4
96153	Health and behavior group intervention	**4.78**	4	**4**	6
96154	Health and behavior family intervention, with patient present	**5.31**	3	**5**	8
96155	Health and behavior family intervention, without patient present	**N/A**	N/A	**N/A**	N/A

It should also be noted that 96154 was valued in such a manner that it yielded a negative IWPUT (-0.0006), providing further evidence of flawed methodology in the original valuation of the services.

It is also clear that there is an anomalous relationship in the surveyed family of codes when compared to the Psychotherapy family of codes, on which it was based in 2001. The original and current surveys show that health and behavior services are very similar to the parallel mental health service, in terms of the modality by which the service is delivered as well as intensity. Differences in comparable code values between the two families were greatly increased when the Psychotherapy code set was reevaluated by the RUC in 2012. As can be seen below, all of the codes in current Health and Behavior code set are valued significantly lower when times and wRVUs are calculated to match those parallel services in the updated Psychotherapy code set.

Psychotherapy			**Health Behavior Assessment and Intervention**

90853	60 mins	**0.59**	**96153**	15 min x 4 units = 60 mins	0.10	**0.40**
90847	50 mins	**2.50**	**96154**	15 mins x 3.33 units = 50 mins	0.45	**1.50**
90846	50 mins	**2.40**	**96155**	15 mins x 3.33 units = 50 mins	0.44	**1.47**

<u>Technique and Knowledge – Assessment</u>

When the Health and Behavior Assessment code (96150) was initially developed, assessment for comorbid mental health and substance use was not typically part of the work. Since 1998 there has been an increased recognition and prevalence of the comorbidity between mental health and physical health[13,14] with significant associations between mental illness and physical health conditions such as cardiovascular disease, diabetes, obesity, asthma, and pain. Now the typical Health Behavior Assessment includes the assessment for both the psychological and behavioral factors impacting physical health as well as the assessment for co-morbid mental health conditions. Psychological and behavioral domains include: health beliefs and perception; coping strategies; motivation and self-efficacy, treatment compliance; daily activities, behavioral activation, and

functional impairment; sleep; family and interpersonal relations; academic history and vocational history; mood; and quality of life.

Like the diagnostic interview (CPT code 90791), the health behavior assessment also requires diagnostic skills to assess for both past and current mental health conditions and substance use and abuse. While Health and Behavior codes focus on the medical diagnoses, this mental health comorbidity adds to the complexity of the appropriate assessment of these patients. Thus, providers must assess for the psychological and behavioral factors impacting physical health as well as assessing for traditional mental health and substance use issues and integrate this data into their assessment and clinical decision making, as well as referral to mental health providers to address the co-morbid mental health and substance use issues.

Site of Service

Since the implementation of the codes in 2002, there has been a significant change in site of service with increasing use of the codes in outpatient settings for both primary care and specialty care. An examination of the Medicare claims data (2002 – 2017) supports the increased use in outpatient settings. For example, in 2002 9% of the claims for the Health and Behavior Assessment CPT Code were in General Outpatient compared to 24% in 2017. In 2002 only 4% of the claims for the Health and Behavior Individual CPT Code were in General Outpatient compared to 24% in 2017 and in 2002 only 30% of the claims for the Health and Behavior Individual Therapy CPT Code were in Physician Offices compared to 40% in 2017. This increase in the outpatient settings can be attributed to the increased focus of integrating behavioral health services into both primary care and specialty care settings.[11,12]

Patient Population

Since the development of the codes in 1998, the population of patients with chronic non-communicable diseases have been increasing[13] and this has also resulted in a significant increase in complexity and cost. At this time 5% of patients account for 50% of costs. The National Academy of Medicine[14] has identified the core groups of high cost patients, including children with severe disabilities, adults with significant chronic illness (Two or more complex conditions, and one complex plus one to five noncomplex conditions), frail elderly, and disabled patients under 65. Within those high cost groups, there is a subgroup of high needs patient. This subgroup is defined as complex medical high cost patients who also have circumstances requiring behavioral services, and who have functional limitations.[15,16] Effective and efficient treatment of these high cost and high need patients requires additional assessment to determine their behavioral and other service needs.

Of these conditions, *Heart Disease* is the number one cause of mortality and increased morbidity in the US. Poor adherence to cardiovascular disease medications carries significant psychological, physical, and economic costs, including failure to achieve therapeutic goals, high rates of hospitalization and health care costs, and incidence of death. Recent advances in psychological science and practice can effectively address these complex behavioral needs.[6] The six risk factors contributing to over a third of all health care costs are tobacco use, *poor diet*, substance abuse, *high Body Mass Index*, high *systolic blood pressure* and *high resting glucose levels*.[13] All have clear behavioral determinants that can be addressed for treatment.

Our health care system is now faced with an increasing opioid epidemic, which is derived from inappropriate pain management. Population level surveys indicate that between 11% and 40% of the U.S. population report some level of chronic pain, with millions suffering from daily, severe, and disabling pain.[16] Access to safe and effective care for people suffering from pain remains a priority that needs to be balanced in parallel with efforts to curb inappropriate opioid prescribing and use practices. Lastly, the number of bariatric surgeries is estimated to have increased 40% from 2011 to 2017.[17]

A review of the Medicare claims data from 2006 – 2014 for the existing H&B codes reveals increased use with patients with presentations focusing on pain, cardiovascular disease, diabetes, and obesity. For example, in 2006 only 5% of the utilization for the Health and Behavior Assessment CPT Code was for pain compared to 24% in 2014 and in 2006 only 3% of the utilization for the Health and Behavior Individual CPT Code was for cardiovascular disease compared to 11% in 2014.

Survey Process

The APA sought the approval of the RUC's Research Subcommittee prior to fielding their surveys. The subcommittee granted approval for the following items:

- Modification of the survey tools, including:
  - Detailed survey cover memo to respondents
  - A common reference service list for use for the entire family of codes.
  - Replacing the term "physician" with "qualified health care professional".

- Adding a link to a PDF of the revisions approved by the CPT Editorial Panel at the September 2018 meeting
- Modifying the XXX – Evaluation and Management survey tool used to survey assessment including reassessment code, 96156
- Combining the XXX – Therapy survey tool with the standard ZZZ survey template and the time-based code template to survey the Intervention services for Individual (96158-96159), Group (96164-96165), Family with patient (96167-96168), and Family without patient present (96170-96171)
    - Adding a custom question to each of the time-based surveys (96158-96171) asking for survey participants to indicate the total amount of time they spend performing the entire service from start to finish (including the base code and all units of the add-on code) to allow capturing the total time and work involved in each clinical service.
    - Adding a custom question to the survey for Group intervention (96164-96165) asking for survey participants to indicate the typical number of patients they see in a group session, as well as minor language changes throughout to ask the survey participants to base the time and RVU estimates on the entire group session rather than calculating them on a per patient basis.

The surveys were sent to a random sample of applicable subsets which included APA members in Division 38 – Society for Health Psychology and Division 54 – Society for Pediatric Psychology. Our overall sample size included 2,285 people.

A common reference service list was used for the entire family of codes and was reviewed and approved by the RUC Research Subcommittee. APA developed new vignettes for each code in the family to reflect changes in current practice and the typical patients.

As noted in our submission to the Practice Expense Subcommittee, there has been a shift in practice over the years, and while the majority of these services are provided to adult patients, there is a prevalent use of these codes in pediatric practice.

Analysis and Recommendations from the Expert Panel – 96156:

Analysis and Recommendations from the Expert Panel – 96156:
The APA convened an expert panel with representation from solo, academic, and hospital-based practices, as well as adult and pediatric psychologists, to review the survey data and make recommendations.

The typical patient for this service was a 65-year-old male with osteoarthritis, chronic back pain, and medication-related somnolence referred for health behavior assessment to determine the psychological factors requiring intervention as part of the patient's overall treatment plan.

The expert panel reviewed the survey results citing that 75% of the 90 survey respondents found the vignette typical and the median service performance rate was 50, which is a reasonable number for this service.

The median survey results regarding time are 13 minutes pre-service, 45 minutes intra-service, and 15 minutes post-service, and the median RVW was 3.00.

The expert panel and our survey respondents agreed that this code describes a service that is parallel to the service in the mental health code set, 90791; *Psychiatric diagnostic evaluation* (3.00 RVUs; 10/60/20). 59% of the survey respondents chose 90791 as the key reference service.

The expert panel strongly agreed with the survey median intra-service time of 45 minutes and post-time of 15 minutes. These time values are supported by Medicare unique occurrences data which show that the existing 15-minute code, 96150 (3/15/5), is typically billed three (3) times per patient encounter, resulting in a total of 45 minutes of intra- and 15 minutes of post-service time. However, the expert panel believed that a decrease in the survey median pre-service time of 13 down to 10 minutes more accurately represented the amount of time required prepare for the assessment, review their own patient records, as well as obtain, review and discuss records from the patient’s physician and other members of the indiciplinary team.represented of the what would

typically occur with 96156. These times align with the typical billing patterns of the existing code as well as with the key reference service. **Therefore, the expert panel recommends 10 minutes pre-, 45 minutes intra-, and 15 minutes post-service times for a total of 70 minutes**.

The expert panel reviewed the survey median RVW of 3.00 and agreed that it was not appropriate work value. It was concluded that survey respondents had estimated the value of the survey code that has 45 minutes of intra-service time, to be equal to that of the key reference service, 90791, that has 60 minutes of intra-service time. Further, the expert panel also agreed that the survey 25th percentile value of 1.87 was too low of a value and did not accurately capture the complexity and intensity of current practice. To determine an appropriate RVU value, the expert panel calculated the relationship between the 60-minute parallel service, 90791 with 3.00 RVUs, and our 45 minute surveyed code which yielded a value of 2.25.

To identify an appropriate crosswalk, a search of the RUC Database (2019 v1.1) was conducted for RUC-reviewed XXX codes between RVW value of2.00-2.25, and an intra-time of 45 minutes that are not currently being surveyed at this meeting. Of the nine codes identified, only three had an intra-service time of 45 minutes: 77262; *Radiation therapy planning* (2.00 RVUs; 3/45/6; 0.0400); 90834; *Psychotherapy with patient, 45 minutes* (2.00 RVUs; 5/45/10; 0.037); and 90845; *Psychoanalysis* (2.10; 5/45/11; 0.0387).

The expert panel determined that the best candidate for crosswalk was 90845; *Psychoanalysis* because it's IWPUT of 0.0387 most closely aligned with that of 90791 (0.039). Additionally, when we incorporate our recommended pre-time of 10 minutes, the new IWPUT of 0.034 still stays in line with that our key reference service. The additional 5 minutes is appropriate to accurately captures current practice and is appropriate due to the increased complexity of reviewing multiple patient records and coordinating with the patient's physician and other members of the team in preparation for the assessment service.

Comparison to Other Services

The Expert Panel compared 96167 to other codes across the fee schedule. The recommended work RVUs and resulting IWPUT seem to provide relativity when compared to other service in the fee schedule.

CPT Code	Descriptor	Work RVU	Pre	Intra Time	Post Time	Total Time	Most Recent RUC Review	IWPUT	2017 Utilization
99203	Office outpatient visit/new	1.42	4	20	5	29	Feb 2006	0.0609	11,296,961
90834	Psychotherapy, 45 minutes with patient	2.00	5	45	10	60	April 2012	0.0370	5,148,441
96156	**Health behavior assessment, including reassessment**	**2.10**	**10**	**45**	**15**	**70**	***	**0.034**	**NEW**
99336	Domiciliary or rest home visit for the evaluation and management of an established patient	2.46	10	40	15	65	Feb 2007	0.0475	1,438,435
90791	Psychiatric diagnostic evaluation	3.00	10	60	20	90	April 2012	0.0388	906,879

Recommendations

In summary, based on the comparisons to the key reference service and crosswalk code 90845; *Psychoanalysis* (2.10; 5/45/11; 0.0387) **we recommend an RVW of 2.10 with 10 minutes pre-, 45 minutes intra-, and 15 minutes post-time for a total time of 70 minutes for 96156.**

We believe the changes are substantial and meet compelling evidence for the above recommended increase in time and RVU value.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 96150 and 96151

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Clinical Psychology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 165000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Our estimation is based upon current Medicare utilization, divided by 3 units, the typical number of times this service is billed per patient encounter. Further, Medicare represents about 1/5 of the utilization in the country's healthcare system; therefore, these estimates are approximately 5 times the Medicare utilization for the existing codes.

Specialty Clinical Psychology Frequency 110000 Percentage 66.66 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 66,000 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This is the current utilization for 96150 and 96151.

Specialty Clinical Psychology Frequency 64000 Percentage 96.96 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Tests

BETOS Sub-classification:
Office visit

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 96150 and 96151

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:96158 Tracking Number Z2 Original Specialty Recommended RVU: **1.45**
Presented Recommended RVU: **1.45**
Global Period: XXX Current Work RVU: RUC Recommended RVU: **1.45**

CPT Descriptor: Health behavior intervention, individual, face-to-face; initial 30 minutes

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 55-year-old female with heart disease, migraines, and hypertension is referred for health behavior services to improve patient treatment compliance and engagement in self-management.

Percentage of Survey Respondents who found Vignette to be Typical: 74%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review patient records, including those from the patient's physician and other team members, review results of any prior health behavior assessments.

Description of Intra-Service Work: Qualified health care professional actively promotes the patient's compliance and full participation in medical treatment by engaging the patient in jointly reviewing treatment progress, outlook, understanding of the medical condition(s), and attitudes toward treatment goals and care team members. Employs psychological and behavioral treatment approaches to address health risk behaviors, factors impeding adjustment to, management of, and recovery from the patient's medical condition. Qualified health care professional documentation includes describing the patient's status, services provided and progress toward and/or modification of treatment goals based on patient progress or other confounding factors that arise.

Description of Post-Service Work: Coordinates and provides feedback to interdisciplinary team members and family. Facilitates follow-up care with team members and family.

Modifier -51 Exempt Status

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:

Is this new/revised procedure considered to be a new technology or service? No

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
90832	XXX	1.50	**RUC Time**

CPT Descriptor Psychotherapy, 30 minutes with patient

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
99203	XXX	1.42	**RUC Time**

CPT Descriptor Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: A detailed history; A detailed examination; Medical decision making of low complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate severity. Typically, 30 minutes are spent face-to-face with the patient and/or family.

KEY MPC COMPARISON CODES:

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
90853	XXX	0.59	**RUC Time**	1,006,592

CPT Descriptor 1 Group psychotherapy (other than of a multiple-family group)

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
90834	XXX	2.00	**RUC Time**	5,148,441

CPT Descriptor 2 Psychotherapy, 45 minutes with patient

Other Reference CPT Code	Global	Work RVU	Time Source
99491	XXX	1.45	**RUC Time**

CPT Descriptor Chronic care management services, provided personally by a physician or other qualified health care professional, at least 30 minutes of physician or other qualified health care professional time, per calendar month, with the following required elements: multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient; chronic conditions place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline; comprehensive care plan established, implemented, revised, or monitored.

RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:
Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by percent distribution) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Top Key Reference Code: 58 **% of respondents:** 50.0 **%**

Number of respondents who choose 2nd Key Reference Code: 12 **% of respondents:** 10.3 **%**

• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	17%	33%	50%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background
This existing code family (CPT® codes 96150-96155) describes health behavior assessment and intervention services primarily performed by non-physician qualified healthcare professionals who cannot report Evaluation and Management services. In October 2017, CPT code 96154; *Health and behavior intervention, each 15 minutes, face-to-face; family (with the patient present)*, was identified through a code screen as having a negative IWPUT of 0.0058.

At the April 2018 RUC meeting, the code was discussed at the Relativity Assessment Workgroup (RAW) meeting. It was noted that code 96154 has an intra-service time of 15 minutes but is listed as having a post-service time of 20 minutes, which was likely a data entry error (i.e. the 20 minutes should have been divided by the typical 4 units and entered as 5 minutes of post-service time). The RAW entertained a motion to make an editorial change to drop the post-time to 5 minutes to be consistent with the rest of the family; however, further discussion revealed that the family of codes had not been reviewed since their inception in 2001. As a result, the RAW recommended that 96154 and the related family of codes be referred back to CPT for revision.

The new code family was approved at the September 2018 CPT Editorial Panel meeting and surveyed by the American Psychological Association (APA) for the January 2019 RUC HCPAC meeting.

New/revised code 96158; *Health behavior intervention, individual, face-to-face; initial 30 minutes*, has previously been reported as 96152; *Health and behavior intervention, each 15 minutes, face-to-face; individual*. 96158 is also the base code of a base code/add-on code combination:

- 96158; *Health behavior intervention, individual, face-to-face; initial 30 minutes*
- +96159; *Health behavior intervention, individual, face-to-face; each additional 15 minutes (List separately in addition to code for primary service)*

Compelling Evidence

These codes reflect significant changes in the healthcare delivery system over the past 20 years. During that time there has been an increasing focus on the role of psychosocial factors in health, as well as a shift toward explicit assessment and intervention in these factors, particularly in primary care. The Health Behavior Assessment and Intervention codes were originally described and valued in 2001, but they have never been re-evaluated since their inception almost 20 years ago.

There are several factors comprising compelling evidence for this family of codes, including: flawed methodology and anomalous relationship; change in technique and knowledge; change in site of service; and change in patient population. As a result, we are requesting that compelling evidence be considered for the entire family of codes.

Flawed Methodology and Anomalous Relationship
RUC rationale for the original valuation of this family shows that the RUC valued these services primarily based on the psychiatric interview code 90801, a 60-minute service with 2.80 wRVU. RUC divided the value by 4, yielding a 15-minute service at 0.70 RVUs. That was based on the expectation that each of the new codes, reported in 15-minute increments, would typically be billed four (4) times per patient encounter, comprising a comparable 60-minute service to 90801.

The documented history provides evidence that incorrect assumptions were made in the initial valuation of the family of Health and Behavior codes. The RUC used the flawed building block methodology, in a manner that is no longer a RUC-accepted process, to value each 15-minute Health and Behavior diagnostic and treatment code, yielding wRVUs ranging from 0.44-0.50. It should also be noted that 90801, the primary service on which the existing Health and Behavior codes were built upon, is no longer an existing or valid code and the comparable service has different valuation today.

It is clear from current data that the assumption that every code would typically be billed for 60 minutes (four (4) 15-minute increments) was at best a gross estimation. Below is the current utilization, based on the actual 2016 Me*dicare Units of Service Performed on Same Date, for the code set. As can be seen in the chart, there is considerable variability across the code set in the mean number of units per encounter across all the 15-minute codes in the family.

		Number of Unique Occurrences (Same Day, Same Patient, Same Provider)			
CPT® Code	**Description**	**Mean**	**25th Percentile**	**Median**	**75th Percentile**
96150	Health and behavior assessment	**3.29**	2	**3**	4
96151	Health and behavior re-assessment	**2.30**	1	**2**	3
96152	Health and behavior individual intervention	**3.11**	2	**4**	4
96153	Health and behavior group intervention	**4.78**	4	**4**	6
96154	Health and behavior family intervention, with patient present	**5.31**	3	**5**	8
96155	Health and behavior family intervention, without patient present	**N/A**	N/A	**N/A**	N/A

It should also be noted that 96154 was valued in such a manner that it yielded a negative IWPUT (-0.0006), providing further evidence of flawed methodology in the original valuation of the services.

It is also clear that there is an anomalous relationship in the surveyed family of codes when compared to the Psychotherapy family of codes, on which it was based in 2001. The original and current surveys show that health and behavior services are very similar to the parallel mental health service, in terms of the modality by which the service is delivered as well as intensity. Differences in comparable code values between the two families were greatly increased when the Psychotherapy code set was reevaluated by the RUC in 2012. As can be seen below, all of the codes in current Health and Behavior code set are valued significantly lower when times and wRVUs are calculated to match those parallel services in the updated Psychotherapy code set.

Psychotherapy			**Health Behavior Assessment and Intervention**			
CPT® Code	**Units of Time**	**wRVU**	**CPT® Code**	**Calculated Time**	**wRVU**	**Calculated wRVU**
90791	60 mins	**3.00**	**96150**	15 min x 4 units = 60 mins	0.50	**2.00**
90832	30 mins	**1.50**	**96152**	15 mins x 2 units = 30 mins	0.48	**0.92**
90853	60 mins	**0.59**	**96153**	15 min x 4 units = 60 mins	0.10	**0.40**
90847	50 mins	**2.50**	**96154**	15 mins x 3.33 units = 50 mins	0.45	**1.50**
90846	50 mins	**2.40**	**96155**	15 mins x 3.33 units = 50 mins	0.44	**1.47**

<u>Technique and Knowledge – Intervention/Treatment</u>

Since 1998 there has been a significant increase in provider specialization and the development and adaptation of cognitive and other behavioral techniques to address psychological factors impacting physical health[1,2,3,4]. Treatment techniques have changed dramatically from simply applying behavioral expertise to physical health conditions to the development and adaptation of specific cognitive behavioral techniques and other treatments for specific physical health conditions.

These evidence-based techniques and treatments include cognitive restructuring, operant behavior therapy and contingency management, stimulus control, graded activation and behavioral activation, coping skills training, problem solving training, functional and structural family therapy, acceptance and commitment therapy, family communication training, relaxation skills training, motivational interviewing, behavior therapy. This change in technique and knowledge results in the work involved in Health and Behavior Intervention to be parallel and comparable to the work involved in traditional mental health therapy.

What differs in this particular service, when compared to others in this code set is the modality by which the service is delivered. There are three (3) different modalities of Health Behavior Interventions: Individual; Group, or Family Interventions. Each of these modalities can be used to deliver the evidence-based treatments described above.

With these changes in technique, there has been specialization in training, as well as the development of treatment guidelines for psychologists providing these services in both the primary care[5] and specialty care settings such as cardiovascular disease,[6] obesity,[7] pain,[8] diabetes,[9] and bariatrics.[10]

Site of Service

Since the implementation of the code set in 2002, there has been a significant change in site of service with increasing use of the codes in outpatient settings for both primary care and specialty care. An examination of the Medicare claims data (2002 – 2017) supports the increased use in outpatient settings. For example, in 2002 9% of the claims for the Health and Behavior Assessment CPT Code were in General Outpatient compared to 24% in 2017. In 2002 only 4% of the claims for the Health and Behavior Individual CPT Code were in General Outpatient compared to 24% in 2017 and in 2002 only 30% of the claims for the Health and Behavior Individual Therapy CPT Code were in Physician Offices compared to 40% in 2017. This increase in the outpatient settings can be attributed to the increased focus of integrating behavioral health services into both primary care and specialty care settings.[11,12]

Patient Population

Since the development of the codes in 1998, the population of patients with chronic non-communicable diseases have been increasing[13] and this has also resulted in a significant increase in complexity and cost. At this time 5% of patients account for 50% of costs. The National Academy of Medicine[14] has identified the core groups of high cost patients, including children with severe disabilities, adults with significant chronic illness (Two or more complex conditions, and one complex plus one to five noncomplex conditions), frail elderly, and disabled patients under 65. Within those high cost groups, there is a subgroup of high needs patient. This subgroup is defined as complex medical high cost patients who also have circumstances requiring behavioral services, and who have functional limitations.[15,16] Effective and efficient treatment of these high cost and high need patients requires additional assessment to determine their behavioral and other service needs.

Of these conditions, *Heart Disease* is the number one cause of mortality and increased morbidity in the US. Poor adherence to cardiovascular disease medications carries significant psychological, physical, and economic costs, including failure to achieve therapeutic goals, high rates of hospitalization and health care costs, and incidence of death. Recent advances in psychological science and practice can effectively address these complex behavioral needs.[6] The six risk factors contributing to over a third of all health care costs are tobacco use, *poor diet*, substance abuse, *high Body Mass Index*, high *systolic blood pressure* and *high resting glucose levels*.[13] All have clear behavioral determinants that can be addressed for treatment.

Our health care system is now faced with an increasing opioid epidemic, which is derived from inappropriate pain management. Population level surveys indicate that between 11% and 40% of the U.S. population report some level of chronic pain, with millions suffering from daily, severe, and disabling pain.[16] Access to safe and effective care for people suffering from pain remains a priority that needs to be balanced in parallel with efforts to curb inappropriate opioid prescribing and use practices. Lastly, the number of bariatric surgeries is estimated to have increased 40% from 2011 to 2017.[17]

A review of the Medicare claims data from 2006 – 2014 for the existing H&B codes reveals increased use with patients with presentations focusing on pain, cardiovascular disease, diabetes, and obesity. For example, in 2006 only 5% of the utilization for the Health and Behavior Assessment CPT Code was for pain compared to 24% in

2014 and in 2006 only 3% of the utilization for the Health and Behavior Individual CPT Code was for cardiovascular disease compared to 11% in 2014.

Survey Process

The APA sought the approval of the RUC's Research Subcommittee prior to fielding their surveys. The subcommittee granted approval for the following items:

- Modification of the survey tools, including:
  - Detailed survey cover memo to respondents
  - A common reference service list for use for the entire family of codes.
  - Replacing the term "physician" with "qualified health care professional".
  - Adding a link to a PDF of the revisions approved by the CPT Editorial Panel at the September 2018 meeting
  - Modifying the XXX – Evaluation and Management survey tool used to survey assessment including reassessment code, 96156
  - Combining the XXX – Therapy survey tool with the standard ZZZ survey template and the time-based code template to survey the Intervention services for Individual (96158-96159), Group (96164-96165), Family with patient (96167-96168), and Family without patient present (96170-96171)
    - Adding a custom question to each of the time-based surveys (96158-96171) asking for survey participants to indicate the total amount of time they spend performing the entire service from start to finish (including the base code and all units of the add-on code) to allow capturing the total time and work involved in each clinical service.
    - Adding a custom question to the survey for Group intervention (96164-96165) asking for survey participants to indicate the typical number of patients they see in a group session, as well as minor language changes throughout to ask the survey participants to base the time and RVU estimates on the entire group session rather than calculating them on a per patient basis.

The surveys were sent to a random sample of applicable subsets which included APA members in Division 38 – Society for Health Psychology and Division 54 – Society for Pediatric Psychology. Our overall sample size included 2,285 people.

A common reference service list was used for the entire family of codes and was reviewed and approved by the RUC Research Subcommittee. APA developed new vignettes for each code in the family to reflect changes in current practice and the typical patients.

As noted in our submission to the Practice Expense Subcommittee, there has been a shift in practice over the years, and while the majority of these services are provided to adult patients, there is a prevalent use of these codes in pediatric practice.

Analysis and Recommendations from the Expert Panel – 96158

The APA convened an expert panel with representation from solo, academic, and hospital-based practices, as well as adult and pediatric psychologists, to review the survey data and make recommendations.

The typical patient for this service was a 55-year-old female with heart disease, migraines, and hypertension is referred for health behavior services to improve patient treatment compliance and engagement in self-management.

The expert panel reviewed the survey results citing that 74% of the 116 survey respondents found the vignette typical and the median service performance rate was 50, which is a reasonable number for this service.

CPT code 90832; *Psychotherapy, 30 minutes with patient* (1.50 RVUs; 5/30/10; 0.0388) was selected as the key reference service by 50% of the survey respondents. The expert panel agreed that the surveyed code aligned perfectly with the key reference service.

The median survey results regarding time are 10 minutes pre-, 36 minutes intra-, and 10 minutes post-service. The expert panel did not agree with the median survey intra-service time of 36 minutes, but fully supported the 25th percentile intra-service time of 30 minutes. Utilization analysis of the existing single-unit code, 96152, that has 15-minutes of intra-time, shows that it is typically billed 3.11 times per patient encounter, accounting for a

typical intra-service time of 47 minutes (11 minutes over the survey median time); therefore, 36 minutes is not a typical terminal timeframe for this service. The panel also agreed that the median survey post-service time of 10 minutes is representative of what would typically occur with 96158 and reflects current practice of the existing service; however, they believe that the median survey pre-time of 10 minutes should be decreased to 5 minutes to mirror the pre-service time of the key reference service since the actions being taken, as described in the pre-service descriptors for both codes, are very similar in nature. **Therefore, the expert panel recommends 5 minutes pre, 30 minutes intra, and 10 minutes post-service times for a total of 45 minutes**.

The expert panel reviewed the RVW survey data and determined that the 25th percentile value of 1.45 was appropriate for this service. Support for the 25th value can be found in comparing the survey data with the parallel mental health service, 90832 valued at 1.50 RVWs, which is also the survey key reference service. Analysis of the intensity and complexity measures shows that the respondents rated the surveyed code as identical or just slightly higher in every measure, except mental effort and judgement. The expert panel also calculated the relativity of the recommended values for 96156 and 96158 [(30/40) x 2.10 = 1.40] and compared it to the relativity of the parallel services in the psychotherapy code set, 90791 to 90832 [(30/60) x 3.00 = 1.50], further supports the recommended 1.45 RVWs.

In addition, the panel compared the surveyed code to, 99491; *Chronic care management services, provided personally by a physician or other qualified health care professional, at least 30 minutes of physician or other qualified health care professional time, per calendar month, with the following required elements: multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient; chronic conditions place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline; comprehensive care plan established, implemented, revised, or monitored* (1.45 RVUs; 0/30/0; 0.0483), a new code in CY2019 that provides support for recommended intra-time and RVU value for 96158.

Custom Question – Total Time/Units for XXX base survey code and ZZZ add-on survey code(s)
Major structural changes were made to the majority of the existing codes. Because each of the revised codes reflect significant changes to the units of time that must reported, and because these services were previously reported in multiple units, APA requested the addition of the following custom question to capture data on the total time and work involved in each clinical service.

For the typical patient, how much total time do you personally spend performing this entire service from start to finish (i.e. base survey code 96158 and all increments of add-on survey code 96159)? Please answer in minutes (whole number). *Note, the intent of this question is to determine the typical number of units you would report for these time-based survey codes by measuring the full length of time it typically takes for you to perform the service described.*

The responses to this custom question regarding the total time it takes, in minutes, to perform the surveyed base code, 96158, and all units of the surveyed add-on code, 96159, are summarized below:

Min.	25th Percentile	Median	75th Percentile	Max.
1.7	45	60	69	500

Recommendations
In summary, based on the comparisons to the key reference service and additional reference codes **we recommend the 25th percentile RVW of 1.45 with 5 minutes pre-, 30 minutes intra-, and 10 minutes post-time for a total time of 45 minutes for 96158.**

We believe the changes are substantial and meet compelling evidence for the above recommended increase in time and RVU value.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

CPT Code	Global	Work RVU	Pre-	Intra-	Post-
96158	XXX	1.45	5	30	10
+96159	ZZZ	0.54	0	15	0

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 96152

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Clinical Psychology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 184000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Medicare represents about 1/5 of the utilization in the country's healthcare system; therefore, these estimates are approximately 5 times the Medicare utilization for the existing codes, which totals approx. 560,000 units. We then calculated that 2/3 of the units would be represented by 96158 and the remaining 1/3 will be represented by the add-code, 96159.

Specialty Clinical Psychology Frequency 122000 Percentage 66.30 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 36,850 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This is the current utilization for 96152, however we have calculated based on the typical number of unique occurences and then distributed the numbers appropriately between 96158 and it's add-on code, 96159.

Specialty Clinical Psychology Frequency 24000 Percentage 65.12 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Evaluation Management

BETOS Sub-classification:
Office visit

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 96152

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

SUMMARY OF RECOMMENDATION

CPT Code:96159 Tracking Number Z3 Original Specialty Recommended RVU: **0.54**
Presented Recommended RVU: **0.50**
Global Period: ZZZ Current Work RVU: RUC Recommended RVU: **0.50**

CPT Descriptor: Health behavior intervention, individual, face-to-face; each additional 15 minutes (list separately in addition to code for primary service)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 55-year-old female with heart disease, migraines, and hypertension is referred for health behavior services to improve patient treatment compliance and engagement in self-management. patient requires an additional 15 minutes of health behavior services beyond the first 30 minutes.

Percentage of Survey Respondents who found Vignette to be Typical: 77%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: N/A

Description of Intra-Service Work: Qualified health care professional actively promotes the patient's compliance and full participation in medical treatment by engaging the patient in jointly reviewing treatment progress, outlook, understanding of the medical condition(s), and attitudes toward treatment goals and care team members. Employs psychological and behavioral treatment approaches to address health risk behaviors, factors impeding adjustment to, management of, and recovery from the patient's medical condition.

Description of Post-Service Work: N/A

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	12%	39%	39%	10%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	17%	36%	47%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	10%	46%	44%

Physical effort required	12%	78%	10%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	15%	46%	39%

2nd Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	14%	21%	36%	29%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	14%	21%	65%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	7%	36%	57%
Physical effort required	0%	93%	7%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	21%	36%	43%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background:
This existing code family (CPT® codes 96150-96155) describes health behavior assessment and intervention services primarily performed by non-physician qualified healthcare professionals who cannot report Evaluation and Management services. In October 2017, CPT code 96154; *Health and behavior intervention, each 15 minutes,*

face-to-face; family (with the patient present), was identified through a code screen as having a negative IWPUT of 0.0058.

At the April 2018 RUC meeting, the code was discussed at the Relativity Assessment Workgroup (RAW) meeting. It was noted that code 96154 has an intra-service time of 15 minutes but is listed as having a post-service time of 20 minutes, which was likely a data entry error (i.e. the 20 minutes should have been divided by the typical 4 units and entered as 5 minutes of post-service time). The RAW entertained a motion to make an editorial change to drop the post-time to 5 minutes to be consistent with the rest of the family; however, further discussion revealed that the family of codes had not been reviewed since their inception in 2001. As a result, the RAW recommended that 96154 and the related family of codes be referred back to CPT for revision.

The new code family was approved at the September 2018 CPT Editorial Panel meeting and surveyed by the American Psychological Association (APA) for the January 2019 RUC HCPAC meeting.

New/revised code 96159; Health behavior intervention, individual, face-to-face; each additional 15 minutes (List separately in addition to code for primary service), is the add-on code of a base code/add-on code combination:

- 96158; *Health behavior intervention, individual, face-to-face; initial 30 minutes*
- +96159; *Health behavior intervention, individual, face-to-face; each additional 15 minutes (List separately in addition to code for primary service)*

Compelling Evidence

These codes reflect significant changes in the healthcare delivery system over the past 20 years. During that time there has been an increasing focus on the role of psychosocial factors in health, as well as a shift toward explicit assessment and intervention in these factors, particularly in primary care. The Health Behavior Assessment and Intervention codes were originally described and valued in 2001, but they have never been re-evaluated since their inception almost 20 years ago.

There are several factors comprising compelling evidence for this family of codes, including: flawed methodology and anomalous relationship; change in technique and knowledge; change in site of service; and change in patient population. As a result, we are requesting that compelling evidence be considered for the entire family of codes.

Flawed Methodology and Anomalous Relationship

RUC rationale for the original valuation of this family shows that the RUC valued these services primarily based on the psychiatric interview code 90801, a 60-minute service with 2.80 wRVU. RUC divided the value by 4, yielding a 15-minute service at 0.70 RVUs. That was based on the expectation that each of the new codes, reported in 15-minute increments, would typically be billed four (4) times per patient encounter, comprising a comparable 60-minute service to 90801.

The documented history provides evidence that incorrect assumptions were made in the initial valuation of the family of Health and Behavior codes. The RUC used the flawed building block methodology, in a manner that is no longer a RUC-accepted process, to value each 15-minute Health and Behavior diagnostic and treatment code, yielding wRVUs ranging from 0.44-0.50. It should also be noted that 90801, the primary service on which the existing Health and Behavior codes were built upon, is no longer an existing or valid code and the comparable service has different valuation today.

It is clear from current data that the assumption that every code would typically be billed for 60 minutes (four (4) 15-minute increments) was at best a gross estimation. Below is the current utilization, based on the actual 2016 Medicare Units of Service Performed on Same Date, for the code set. As can be seen in the chart, there is considerable variability across the code set in the mean number of units per encounter across all the 15-minute codes in the family.

		Number of Unique Occurrences (Same Day, Same Patient, Same Provider)			
CPT® Code	**Description**	**Mean**	**25th Percentile**	**Median**	**75th Percentile**

96150	Health and behavior assessment	**3.29**	2	**3**	4
96151	Health and behavior re-assessment	**2.30**	1	**2**	3
96152	Health and behavior individual intervention	**3.11**	2	**4**	4
96153	Health and behavior group intervention	**4.78**	4	**4**	6
96154	Health and behavior family intervention, with patient present	**5.31**	3	**5**	8
96155	Health and behavior family intervention, without patient present	**N/A**	N/A	**N/A**	N/A

It should also be noted that 96154 was valued in such a manner that it yielded a negative IWPUT (-0.0006), providing further evidence of flawed methodology in the original valuation of the services.

It is also clear that there is an anomalous relationship in the surveyed family of codes when compared to the Psychotherapy family of codes, on which it was based in 2001. The original and current surveys show that health and behavior services are very similar to the parallel mental health service, in terms of the modality by which the service is delivered as well as intensity. Differences in comparable code values between the two families were greatly increased when the Psychotherapy code set was reevaluated by the RUC in 2012. As can be seen below, all of the codes in current Health and Behavior code set are valued significantly lower when times and wRVUs are calculated to match those parallel services in the updated Psychotherapy code set.

Psychotherapy			**Health Behavior Assessment and Intervention**			
CPT® Code	**Units of Time**	**wRVU**	**CPT® Code**	**Calculated Time**	**wRVU**	**Calculated wRVU**
90791	60 mins	**3.00**	**96150**	15 min x 4 units = 60 mins	0.50	**2.00**
90832	30 mins	**1.50**	**96152**	15 mins x 2 units = 30 mins	0.48	**0.92**
90853	60 mins	**0.59**	**96153**	15 min x 4 units = 60 mins	0.10	**0.40**
90847	50 mins	**2.50**	**96154**	15 mins x 3.33 units = 50 mins	0.45	**1.50**
90846	50 mins	**2.40**	**96155**	15 mins x 3.33 units = 50 mins	0.44	**1.47**

Technique and Knowledge – Intervention/Treatment:

Since 1998 there has been a significant increase in provider specialization and the development and adaptation of cognitive and other behavioral techniques to address psychological factors impacting physical health[1,2,3,4]. Treatment techniques have changed dramatically from simply applying behavioral expertise to physical health conditions to the development and adaptation of specific cognitive behavioral techniques and other treatments for specific physical health conditions.

These evidence-based techniques and treatments include cognitive restructuring, operant behavior therapy and contingency management, stimulus control, graded activation and behavioral activation, coping skills training, problem solving training, functional and structural family therapy, acceptance and commitment therapy, family communication training, relaxation skills training, motivational interviewing, behavior therapy. This change in technique and knowledge results in the work involved in Health and Behavior Intervention to be parallel and comparable to the work involved in traditional mental health therapy.

What differs in this particular service, when compared to others in this code set is the modality by which the service is delivered. There are three (3) different modalities of Health Behavior Interventions: Individual; Group, or Family Interventions. Each of these modalities can be used to deliver the evidence-based treatments described above.

With these changes in technique, there has been specialization in training, as well as the development of treatment guidelines for psychologists providing these services in both the primary care[5] and specialty care settings such as cardiovascular disease,[6] obesity,[7] pain,[8] diabetes,[9] and bariatrics.[10]

Site of Service

Since the implementation of the code set in 2002, there has been a significant change in site of service with increasing use of the codes in outpatient settings for both primary care and specialty care. An examination of the Medicare claims data (2002 – 2017) supports the increased use in outpatient settings. For example, in 2002 9% of the claims for the Health and Behavior Assessment CPT Code were in General Outpatient compared to 24% in 2017. In 2002 only 4% of the claims for the Health and Behavior Individual CPT Code were in General Outpatient compared to 24% in 2017 and in 2002 only 30% of the claims for the Health and Behavior Individual Therapy CPT Code were in Physician Offices compared to 40% in 2017. This increase in the outpatient settings can be attributed to the increased focus of integrating behavioral health services into both primary care and specialty care settings.[11,12]

Patient Population

Since the development of the codes in 1998, the population of patients with chronic non-communicable diseases have been increasing[13] and this has also resulted in a significant increase in complexity and cost. At this time 5% of patients account for 50% of costs. The National Academy of Medicine[14] has identified the core groups of high cost patients, including children with severe disabilities, adults with significant chronic illness (Two or more complex conditions, and one complex plus one to five noncomplex conditions), frail elderly, and disabled patients under 65. Within those high cost groups, there is a subgroup of high needs patient. This subgroup is defined as complex medical high cost patients who also have circumstances requiring behavioral services, and who have functional limitations.[15,16] Effective and efficient treatment of these high cost and high need patients requires additional assessment to determine their behavioral and other service needs.

Of these conditions, *Heart Disease* is the number one cause of mortality and increased morbidity in the US. Poor adherence to cardiovascular disease medications carries significant psychological, physical, and economic costs, including failure to achieve therapeutic goals, high rates of hospitalization and health care costs, and incidence of death. Recent advances in psychological science and practice can effectively address these complex behavioral needs.[6] The six risk factors contributing to over a third of all health care costs are tobacco use, *poor diet*, substance abuse, *high Body Mass Index*, high *systolic blood pressure* and *high resting glucose levels*.[13] All have clear behavioral determinants that can be addressed for treatment.

Our health care system is now faced with an increasing opioid epidemic, which is derived from inappropriate pain management. Population level surveys indicate that between 11% and 40% of the U.S. population report some level of chronic pain, with millions suffering from daily, severe, and disabling pain.[16] Access to safe and effective care for people suffering from pain remains a priority that needs to be balanced in parallel with efforts to curb inappropriate opioid prescribing and use practices. Lastly, the number of bariatric surgeries is estimated to have increased 40% from 2011 to 2017.[17]

A review of the Medicare claims data from 2006 – 2014 for the existing H&B codes reveals increased use with patients with presentations focusing on pain, cardiovascular disease, diabetes, and obesity. For example, in 2006 only 5% of the utilization for the Health and Behavior Assessment CPT Code was for pain compared to 24% in 2014 and in 2006 only 3% of the utilization for the Health and Behavior Individual CPT Code was for cardiovascular disease compared to 11% in 2014.

Survey Process

The APA sought the approval of the RUC's Research Subcommittee prior to fielding their surveys. The subcommittee granted approval for the following items:

- Modification of the survey tools, including:
  - Detailed survey cover memo to respondents
  - A common reference service list for use for the entire family of codes.
  - Replacing the term "physician" with "qualified health care professional".

- Adding a link to a PDF of the revisions approved by the CPT Editorial Panel at the September 2018 meeting
- Modifying the XXX – Evaluation and Management survey tool used to survey assessment including reassessment code, 96156
- Combining the XXX – Therapy survey tool with the standard ZZZ survey template and the time-based code template to survey the Intervention services for Individual (96158-96159), Group (96164-96165), Family with patient (96167-96168), and Family without patient present (96170-96171)
    - Adding a custom question to each of the time-based surveys (96158-96171) asking for survey participants to indicate the total amount of time they spend performing the entire service from start to finish (including the base code and all units of the add-on code) to allow capturing the total time and work involved in each clinical service.
    - Adding a custom question to the survey for Group intervention (96164-96165) asking for survey participants to indicate the typical number of patients they see in a group session, as well as minor language changes throughout to ask the survey participants to base the time and RVU estimates on the entire group session rather than calculating them on a per patient basis.

The surveys were sent to a random sample of applicable subsets which included APA members in Division 38 – Society for Health Psychology and Division 54 – Society for Pediatric Psychology. Our overall sample size included 2,285 people.

A common reference service list was used for the entire family of codes and was reviewed and approved by the RUC Research Subcommittee. APA developed new vignettes for each code in the family to reflect changes in current practice and the typical patients.

As noted in our submission to the Practice Expense Subcommittee, there has been a shift in practice over the years, and while the majority of these services are provided to adult patients, there is a prevalent use of these codes in pediatric practice.

Analysis and Recommendations from the Expert Panel – 96159

The APA convened an expert panel with representation from solo, academic, and hospital-based practices, as well as adult and pediatric psychologists, to review the survey data and make recommendations.

A 55-year-old female with heart disease, migraines, and hypertension is referred for health behavior services to improve patient treatment compliance and engagement in self-management. Patient requires an additional 15 minutes of health behavior services beyond the first 30 minutes.

The expert panel reviewed the survey results citing that 77% of the 113 survey respondents found the vignette typical and the median service performance rate was 25.

CPT code 90832; *Psychotherapy, 30 minutes with patient* (1.50 RVUs; 5/30/10) was selected as the key reference service by 36% of the survey respondents. CPT code 90834; *Psychotherapy, 45 minutes with patient* (2.00 RVUs; 5/45/10), was chosen as the second key reference service. The expert panel determined that the survey respondents did not select ZZZ codes as their key reference or second key reference services because the base and add-on code structure is not common to psychologists and they are not yet familiar with their usage.

The median survey results regarding time are 0 minutes pre-, 15 minutes intra-, and 0 minutes post-service. The panel was in full agreement with the survey median times, as they support proper pre- and post-times for ZZZ codes and the 15-minutes of intra-service time is the stated time in the code descriptor. **Therefore, the expert panel recommends 0 minutes pre, 15 minutes intra, and 0 minutes post-service times for a total of 15 minutes for 96159**.

The expert panel then reviewed the RVW survey data and determined that both the survey median value of 0.80 and the 25th percentile value of 0.66 were valued too high for this add-on service. It was concluded that because

the majority of the survey respondents did not utilize any of the ZZZ codes available on the Reference Service List, that the value of the add-on codes had been overestimated. Therefore, to identify an appropriate crosswalk, a search of the RUC Database (2019 v1.1) was conducted for RUC-reviewed ZZZ codes with an intra-time of 15 minutes, and an IWPUT between 0.025-0.040, similar to the base code (96158) IWPUT of 0.037. Of the nine codes identified, two are being reviewed by the HCPAC at this meeting and two had pre-time built in, leaving us with the following five potential codes: 93320; *Doppler echo heart exam* (0.38, 0.0253); 88177; *Cytopathology, evaluation of fine needle aspirate* (0.42, 0.0280); 11045; *Debridement, subcutaneous tissue* (0.50, 0.0333); 11107; *Incisional biopsy of skin* (0.54, 0.0360); and 96571; *Photodynamic therapy* (0.55; 0.0367).

The expert panel determined that the best candidate for crosswalk was 11107; *Incisional biopsy of skin (eg, wedge) (including simple closure, when performed); each separate/additional lesion (List separately in addition to code for primary procedure)*, because it's IWPUT of 0.0360 most closely aligned with that of 96158, and the service was just evaluated by the RUC in April 2017.

Custom Question – Total Time/Units for XXX base survey code and ZZZ add-on survey code(s)
Major structural changes were made to the majority of the existing codes. Because each of the revised codes reflect significant changes to the units of time that must reported, and because these services were previously reported in multiple units, APA requested the addition of the following custom question to capture data on the total time and work involved in each clinical service.

For the typical patient, how much total time do you personally spend performing this entire service from start to finish (i.e. base survey code 96158 and all increments of add-on survey code 96159)? Please answer in minutes (whole number). *Note, the intent of this question is to determine the typical number of units you would report for these time-based survey codes by measuring the full length of time it typically takes for you to perform the service described.*

The responses to this custom question regarding the total time, in minutes, it takes to perform the surveyed base code, 96158, and all units of the surveyed add-on code, 96159, are summarized below:

Min.	25th Percentile	Median	75th Percentile	Max.
1.7	45	60	69	500

Recommendations:
In summary, based on the comparison to a more appropriate ZZZ code as our direct crosswalk, and it's values compared to the corresponding base-code (96158) **we recommend an RVW of 0.54, with 0 minutes pre-, 15 minutes intra-, and 0 minutes post-time for a total time of 15 minutes for 96159.**

We believe the changes are substantial and meet compelling evidence for the above recommended increase in time and RVU value.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

CPT Code	Global	Work RVU	Pre-	Intra-	Post-
96156	XXX	2.10	10	45	15
96158	XXX	1.45	5	30	10
+96159	ZZZ	0.54	0	15	0

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 96152

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Clinical Psychology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 187000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Medicare represents about 1/5 of the utilization in the country's healthcare system; therefore, these estimates are approximately 5 times the Medicare utilization for the existing codes.

Specialty Clinical Psychology Frequency 124000 Percentage 66.31 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 37,000 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This is the current utilization for 96152, however we have calculated based on the typical number of unique occurences and then distributed the numbers appropriately between the 96159 and it's base-code, 96158.

Specialty Clinical Psychology Frequency 25000 Percentage 67.56 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Evaluation Management

BETOS Sub-classification:
Office visit

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 96152

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:96164 Tracking Number Z4 Original Specialty Recommended RVU: **0.21**
Presented Recommended RVU: **0.21**
Global Period: XXX Current Work RVU: RUC Recommended RVU: **0.21**

CPT Descriptor: Health behavior intervention, group (2 or more patients), face-to-face; initial 30 minutes

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 26-year-old obese female post-bariatric surgery with poor adherence to treatment regimens and multiple medical complications is referred for group health behavior intervention.

Percentage of Survey Respondents who found Vignette to be Typical: 68%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Reviews patient records, including those from the patient's physician and other team members, review results of any prior health behavior assessments.

Description of Intra-Service Work: Initiate or continue health behavior interventions within the group setting, including providing educational information about the disease process or injury, training members in psychologically based self-management procedures, and improving social support. Qualified health care professional documents in the medical record for each patient, describing the patient's status, services provided and progress toward and/or modification of treatment goals based on patient progress or other confounding factors that arise.

Description of Post-Service Work: Coordinates and provides feedback to interdisciplinary team members and family. Facilitates follow-up care with team members and family.

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	0%	40%	60%
Physical effort required	0%	80%	2%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	0%	100%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

This existing code family (CPT® codes 96150-96155) describes health behavior assessment and intervention services primarily performed by non-physician qualified healthcare professionals who cannot report Evaluation and Management services. In October 2017, CPT code 96154; *Health and behavior intervention, each 15 minutes,*

face-to-face; family (with the patient present), was identified through a code screen as having a negative IWPUT of -0.0058.

At the April 2018 RUC meeting, the code was discussed at the Relativity Assessment Workgroup (RAW) meeting. It was noted that code 96154 has an intra-service time of 15 minutes but is listed as having a post-service time of 20 minutes, which was likely a data entry error (i.e. the 20 minutes should have been divided by the typical 4 units and entered as 5 minutes of post-service time). The RAW entertained a motion to make an editorial change to drop the post-time to 5 minutes to be consistent with the rest of the family; however, further discussion revealed that the family of codes had not been reviewed since their inception in 2001. As a result, the RAW recommended that 96154 and the related family of codes be referred back to CPT for revision.

The new code family was approved at the September 2018 CPT Editorial Panel meeting and surveyed by the American Psychological Association (APA) for the January 2019 RUC HCPAC meeting.

New/revised code 96164; *Health behavior intervention, group (2 or more patients), face-to-face; initial 30 minutes*, has previously been reported as 96153; *Health and behavior intervention, each 15 minutes, face-to-face; group (2 or more patients)*. 96164 is also the base code of a base code/add-on code combination:

- 96164; *Health behavior intervention, group (2 or more patients), face-to-face; initial 30 minutes*
- +96165; *Health behavior intervention, group (2 or more patients), face-to-face; each additional 15 minutes (List separately in addition to code for primary service)*

Compelling Evidence

These codes reflect significant changes in the healthcare delivery system over the past 20 years. During that time there has been an increasing focus on the role of psychosocial factors in health, as well as a shift toward explicit assessment and intervention in these factors, particularly in primary care. The Health Behavior Assessment and Intervention codes were originally described and valued in 2001, but they have never been re-evaluated since their inception almost 20 years ago.

There are several factors comprising compelling evidence for this family of codes, including: flawed methodology and anomalous relationship; change in technique and knowledge; change in site of service; and change in patient population. As a result, we are requesting that compelling evidence be considered for the entire family of codes.

Flawed Methodology and Anomalous Relationship

RUC rationale for the original valuation of this family shows that the RUC valued these services primarily based on the psychiatric interview code 90801, a 60-minute service with 2.80 wRVU. RUC divided the value by 4, yielding a 15-minute service at 0.70 RVUs. That was based on the expectation that each of the new codes, reported in 15-minute increments, would typically be billed four (4) times per patient encounter, comprising a comparable 60-minute service to 90801.

The documented history provides evidence that incorrect assumptions were made in the initial valuation of the family of Health and Behavior codes. The RUC used the flawed building block methodology, in a manner that is no longer a RUC-accepted process, to value each 15-minute Health and Behavior diagnostic and treatment code, yielding wRVUs ranging from 0.44-0.50. It should also be noted that 90801, the primary service on which the existing Health and Behavior codes were built upon, is no longer an existing or valid code and the comparable service has different valuation today.

It is clear from current data that the assumption that every code would typically be billed for 60 minutes (four (4) 15-minute increments) was at best a gross estimation. Below is the current utilization, based on the actual 2016 Medicare Units of Service Performed on Same Date, for the code set. As can be seen in the chart, there is considerable variability across the code set in the mean number of units per encounter across all the 15-minute codes in the family.

	Number of Unique Occurrences (Same Day, Same Patient, Same Provider)

CPT® Code	Description	Mean	25th Percentile	Median	75th Percentile
96150	Health and behavior assessment	**3.29**	2	**3**	4
96151	Health and behavior re-assessment	**2.30**	1	**2**	3
96152	Health and behavior individual intervention	**3.11**	2	**4**	4
96153	Health and behavior group intervention	**4.78**	4	**4**	6
96154	Health and behavior family intervention, with patient present	**5.31**	3	**5**	8
96155	Health and behavior family intervention, without patient present	**N/A**	N/A	**N/A**	N/A

It should also be noted that 96154 was valued in such a manner that it yielded a negative IWPUT (-0.0006), providing further evidence of flawed methodology in the original valuation of the services.

It is also clear that there is an anomalous relationship in the surveyed family of codes when compared to the Psychotherapy family of codes, on which it was based in 2001. The original and current surveys show that health and behavior services are very similar to the parallel mental health service, in terms of the modality by which the service is delivered as well as intensity. Differences in comparable code values between the two families were greatly increased when the Psychotherapy code set was reevaluated by the RUC in 2012. As can be seen below, all of the codes in current Health and Behavior code set are valued significantly lower when times and wRVUs are calculated to match those parallel services in the updated Psychotherapy code set.

Psychotherapy			Health Behavior Assessment and Intervention			
CPT® Code	**Units of Time**	**wRVU**	**CPT® Code**	**Calculated Time**	**wRVU**	**Calculated wRVU**
90791	60 mins	**3.00**	**96150**	15 min x 4 units = 60 mins	0.50	**2.00**
90832	30 mins	**1.50**	**96152**	15 mins x 2 units = 30 mins	0.48	**0.92**
90853	60 mins	**0.59**	**96153**	15 min x 4 units = 60 mins	0.10	**0.40**
90847	50 mins	**2.50**	**96154**	15 mins x 3.33 units = 50 mins	0.45	**1.50**
90846	50 mins	**2.40**	**96155**	15 mins x 3.33 units = 50 mins	0.44	**1.47**

<u>Technique and Knowledge – Intervention/Treatment</u>

Since 1998 there has been a significant increase in provider specialization and the development and adaptation of cognitive and other behavioral techniques to address psychological factors impacting physical health[1,2,3,4]. Treatment techniques have changed dramatically from simply applying behavioral expertise to physical health conditions to the development and adaptation of specific cognitive behavioral techniques and other treatments for specific physical health conditions.

These evidence-based techniques and treatments include cognitive restructuring, operant behavior therapy and contingency management, stimulus control, graded activation and behavioral activation, coping skills training, problem solving training, functional and structural family therapy, acceptance and commitment therapy, family communication training, relaxation skills training, motivational interviewing, behavior therapy. This change in technique and knowledge results in the work involved in Health and Behavior Intervention to be parallel and comparable to the work involved in traditional mental health therapy.

What differs in this particular service, when compared to others in this code set is the modality by which the service is delivered. There are three (3) different modalities of Health Behavior Interventions: Individual; Group, or Family Interventions. Each of these modalities can be used to deliver the evidence-based treatments described above.

With these changes in technique, there has been specialization in training, as well as the development of treatment guidelines for psychologists providing these services in both the primary care[5] and specialty care settings such as cardiovascular disease,[6] obesity,[7] pain,[8] diabetes,[9] and bariatrics.[10]

Site of Service

Since the implementation of the code set in 2002, there has been a significant change in site of service with increasing use of the codes in outpatient settings for both primary care and specialty care. An examination of the Medicare claims data (2002 – 2017) supports the increased use in outpatient settings. For example, in 2002 9% of the claims for the Health and Behavior Assessment CPT Code were in General Outpatient compared to 24% in 2017. In 2002 only 4% of the claims for the Health and Behavior Individual CPT Code were in General Outpatient compared to 24% in 2017 and in 2002 only 30% of the claims for the Health and Behavior Individual Therapy CPT Code were in Physician Offices compared to 40% in 2017. This increase in the outpatient settings can be attributed to the increased focus of integrating behavioral health services into both primary care and specialty care settings.[11,12]

Patient Population

Since the development of the codes in 1998, the population of patients with chronic non-communicable diseases have been increasing[13] and this has also resulted in a significant increase in complexity and cost. At this time 5% of patients account for 50% of costs. The National Academy of Medicine[14] has identified the core groups of high cost patients, including children with severe disabilities, adults with significant chronic illness (Two or more complex conditions, and one complex plus one to five noncomplex conditions), frail elderly, and disabled patients under 65. Within those high cost groups, there is a subgroup of high needs patient. This subgroup is defined as complex medical high cost patients who also have circumstances requiring behavioral services, and who have functional limitations.[15,16] Effective and efficient treatment of these high cost and high need patients requires additional assessment to determine their behavioral and other service needs.

Of these conditions, *Heart Disease* is the number one cause of mortality and increased morbidity in the US. Poor adherence to cardiovascular disease medications carries significant psychological, physical, and economic costs, including failure to achieve therapeutic goals, high rates of hospitalization and health care costs, and incidence of death. Recent advances in psychological science and practice can effectively address these complex behavioral needs.[6] The six risk factors contributing to over a third of all health care costs are tobacco use, *poor diet*, substance abuse, *high Body Mass Index*, high *systolic blood pressure* and *high resting glucose levels*.[13] All have clear behavioral determinants that can be addressed for treatment.

Our health care system is now faced with an increasing opioid epidemic, which is derived from inappropriate pain management. Population level surveys indicate that between 11% and 40% of the U.S. population report some level of chronic pain, with millions suffering from daily, severe, and disabling pain.[16] Access to safe and effective care for people suffering from pain remains a priority that needs to be balanced in parallel with efforts to curb inappropriate opioid prescribing and use practices. Lastly, the number of bariatric surgeries is estimated to have increased 40% from 2011 to 2017.[17]

A review of the Medicare claims data from 2006 – 2014 for the existing H&B codes reveals increased use with patients with presentations focusing on pain, cardiovascular disease, diabetes, and obesity. For example, in 2006 only 5% of the utilization for the Health and Behavior Assessment CPT Code was for pain compared to 24% in 2014 and in 2006 only 3% of the utilization for the Health and Behavior Individual CPT Code was for cardiovascular disease compared to 11% in 2014.

Survey Process

The APA sought the approval of the RUC's Research Subcommittee prior to fielding their surveys. The subcommittee granted approval for the following items:

- Modification of the survey tools, including:
  - Detailed survey cover memo to respondents
  - A common reference service list for use for the entire family of codes.
  - Replacing the term "physician" with "qualified health care professional".
  - Adding a link to a PDF of the revisions approved by the CPT Editorial Panel at the September 2018 meeting

- Modifying the XXX – Evaluation and Management survey tool used to survey assessment including reassessment code, 96156
- Combining the XXX – Therapy survey tool with the standard ZZZ survey template and the time-based code template to survey the Intervention services for Individual (96158-96159), Group (96164-96165), Family with patient (96167-96168), and Family without patient present (96170-96171)
    - Adding a custom question to each of the time-based surveys (96158-96171) asking for survey participants to indicate the total amount of time they spend performing the entire service from start to finish (including the base code and all units of the add-on code) to allow capturing the total time and work involved in each clinical service.
    - Adding a custom question to the survey for Group intervention (96164-96165) asking for survey participants to indicate the typical number of patients they see in a group session, as well as minor language changes throughout to ask the survey participants to base the time and RVU estimates on the entire group session rather than calculating them on a per patient basis.

The surveys were sent to a random sample of applicable subsets which included APA members in Division 38 – Society for Health Psychology and Division 54 – Society for Pediatric Psychology. Our overall sample size included 2,285 people.

A common reference service list was used for the entire family of codes and was reviewed and approved by the RUC Research Subcommittee. APA developed new vignettes for each code in the family to reflect changes in current practice and the typical patients.

Analysis and Recommendations from the Expert Panel – 96164

The APA convened an expert panel with representation from solo, academic, and hospital-based practices, as well as adult and pediatric psychologists, to review the survey data and make recommendations.

The typical patient for this service was a 26-year-old obese female post-bariatric surgery with poor adherence to treatment regimens and multiple medical complications is referred for group health behavior intervention.

The expert panel reviewed the survey results citing that 68% of the 41 survey respondents found the vignette typical and the median service performance rate was 1.

CPT code 90853; *Group psychotherapy (other than of a multiple-family group)*, (0.59 RVWs; 2/14/8) was selected as the key reference service by 63% of the survey respondents.

The existing health and behavior group intervention service, 96153, is a 15-minute code with an RVW of 0.10. The code is billed in multiple units for each patient in the group, and is typically billed 4.78 times per patient, per encounter.

The instrument used to survey for this group service contained numerous and significant changes. As discussed and approved with the RUC Research Subcommittee, these revisions were necessary to ensure that the time-based group service was valued appropriately. Instructions provided in the cover letter and in wording changes to several of the survey questions, asked the respondents to evaluate the group service <u>as a whole</u> and NOT on the basis of an individual group participant. Additionally, a custom survey question was added that asked respondents to provide the average number of patients that attend a typical health behavior group intervention session. The question yielded a median response of seven (7) patients (*additional response data provided below*).

The intent of the above stated revisions to the survey tool, offered and approved by the RUC Research Subcommittee, was to obtain a per session data on the service, that could then be divided by the average number of patients to yield the per patient data.

The expert panel reviewed the per session survey times and also converted them to per-patient time by dividing each value by 7 which is the typical number of patient in a group. The expert panel agreed with the **survey median 15 minutes of per session pre-time (2 minutes per patient), and the median per session post-**

service time of 10 minutes (1 minute per patient) needed to coordinate and provide feedback to interdisciplinary team members and members of the family as well as facilitate follow-up care following the group session. The panel, did not agree however, with the survey median intra-service time of 45 minutes as the code descriptor clearly states that this is a 30-minute service; therefore, **the 25th percentile per session intra-service time of 30 minutes (4 minutes per patient) is recommended. These calculated times align almost perfectly with the per patient survey median time values (2/6/1)**.

The expert panel reviewed the RVW survey data and determined that when the median per session value of 1.25 RVWs is converted to per patient, the value of 0.18 was too low; therefore, to determine what the appropriate RVW and units of time for 96164 should be, the expert panel used the per patient inputs for the existing 15-minute group intervention service (96153: 0.10 RVUs; 1/3/1) and multiplied it by 7 (typical number of patients in the group), which showed that the per session inputs would be of 0.70 RVWs, 7/21/7. To then account for the change in intra-time from 15 minutes in the existing code to 30 minutes in the new code, the calculated per session inputs were multiplied by 2 to yield per session values of 1.40 RVWs 14/42/14. To then convert back to per patient, at the new 30-minute intra-service time, each of the values were divided by 7 to yield an RVW of 0.20 with 2 minutes of pre-, 6 intra, and 2-minutes of post-service time. The expert panel felt that these values were within an appropriate range.

To identify an appropriate crosswalk code, a search of the RUC Database (2019 v1.1) was conducted for RUC-reviewed XXX codes with an intra-time of 4-7 minutes, and an RVU between 0.19-0.25. The search resulted in a list of 14 codes; however, not one of them had 6 minutes of intra-time. Therefore, the expert panel added total time of 9 minutes which was in alignment with the per patient survey median total time. The search resulted in the identification of 5 codes, with intra times ranging between 3-5 minutes an RVU range of 0.19-0.20, and the expert panel determined that the most appropriate candidate for crosswalk was code 96365 (per-patient: 0.21 RVUs; 2/5/2 = 9; 0.0241 / per session (96170): 1.47 RVUs (14/35/14).

As further support, the expert panel looked at the relativity of these values in comparison to the parallel mental health service and survey key reference service, 90853, *Group psychotherapy*; (0.59 RVUs; 2/14/8; 0.0261). This group service typically has 5 participating patients; therefore, the per patient inputs are multiplied by 5 to yield 2.95 RVUs with 10/70/40 for the entire group. When the per session inputs for crosswalk code 96365 (1.47 RVUs; 14/35/14) are multiplied by 2, it yields an RVW of 2.94 and an intra time of 70 minutes, both of which are perfectly aligned with the per session intra-time and RVW of 90853.

And finally, the chart below provides a snapshot of how the per patient and per session inputs compare to other group services across the fee schedule.

		Per Patient						Per Session				
CPT Code	**Description**	**RVW**	**Pre**	**Intra**	**Post**	**Total Time**	**Typical # of patients per grp**	**RVW**	**Pre**	**Intra**	**Post**	**Total Time**

96164	***Health behavior intervention, group (2 or more patients), face-to-face; initial 30 minutes***	**0.2**	**2**	**5**	**2**	**9**	**7**	**1.5**	**14**	**35**	**14**	**63**
97804	*Medical nutrition therapy; group (2 or more individual(s)), each 30 minutes*	0.25	2	6	2	10	5	1.25	10	30	10	50
97150	*Therapeutic procedure(s), group (2 or more individuals)*	0.29	0	10	0	10	3	0.87	0	30	0	30
92508	*Treatment of speech, language, voice, communication, and/or auditory processing disorder; group, 2 or more individuals*	0.33	2	17	3	22	3	0.99	6	51	9	66

90853	*Group psychotherapy (other than of a multiple-family group)*	0.59	2	14	8	24		5		2.95	10	70	40	120

Custom Question 1 – Typical Number of Patients that Attend Group Intervention Sessions
Per the request of the Research Subcommittee, the following custom question was added to the survey for group intervention services (96164 and 96165):

What is the average number of patients that attend your typical group session for survey base code 96164; *Health behavior intervention, group (2 or more patients), face-to-face; initial 30 minutes* and survey add-on code 96165; *Health behavior intervention, group (2 or more patients), face-to-face; each additional 15 minutes* (*List separately in addition to code for primary service*)?

The responses to this custom question regarding the typical number of patients that attend a group session are summarized below:

Min.	25th Percentile	Median	75th Percentile	Max.
4	6	7	9.25	12

Custom Question 2 – Total Time/Units for XXX base survey code and ZZZ add-on survey code(s)
Major structural changes were made to the majority of the existing codes. Because each of the revised codes reflect significant changes to the units of time that must reported, and because these services were previously reported in multiple units, APA requested the addition of the following custom question to capture data on the total time and work involved in each clinical service.

For the typical patient, how much total time do you personally spend performing this entire service from start to finish (i.e. base survey code 96164 and all increments of add-on survey code 96165)? Please answer in minutes (whole number). Note, the intent of this question is to determine the typical number of units you would report for these time-based survey codes by measuring the full length of time it typically takes for you to perform the service described.

The responses to this custom question regarding the total time, in minutes, it takes to perform the surveyed base code, 96164, and all units of the surveyed add-on code, 96165, are summarized below:

Min.	25th Percentile	Median	75th Percentile	Max.
3.17	60	90	120	240

Recommendations
In summary, based on the comparisons to the key reference service and additional reference codes **we recommend an RVW of 0.21 with 2 minutes pre-, 5 minutes intra-, and 2 minutes post-time for a total time of 9 minutes for 96164.**

We believe the changes are substantial and meet compelling evidence for the above recommended increase in time and RVU value.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

CPT Code	Global	Work RVU	Pre-	Intra-	Post-
96164	XXX	0.21	2	5	2
+96165	ZZZ	0.10	0	4	0

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 96153

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Clinical Psychology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 27500
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Medicare represents about 1/5 of the utilization in the country's healthcare system; therefore, these estimates are approximately 5 times the Medicare utilization for the existing code, which totals approx. 45,000 units. This utilization is corrected to account for the new coding structure of a 30-minute base code with a 15 minute add-on code.

Specialty Clinical Psychology Frequency 26600 Percentage 96.72 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 11,000 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This is the Medicare utilization for the existing code, that has been corrected to take into account that the new code is now a 30-minute base code, with a 15-minute add-on.

Specialty Clinical Psychology Frequency 10700 Percentage 97.27 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Evaluation Management

BETOS Sub-classification:

BETOS Sub-classification Level II:

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 96153

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	5%	38%	48%	9%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	9%	38%	53%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	5%	33%	62%

Physical effort required	10%	66%	24%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	14%	52%	34%

2nd Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	16%	17%	0%	67%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	17%	83%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	17%	50%	33%
Physical effort required	33%	50%	17%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	17%	0%	83%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

This existing code family (CPT® codes 96150-96155) describes health behavior assessment and intervention services primarily performed by non-physician qualified healthcare professionals who cannot report Evaluation and Management services. In October 2017, CPT code 96154; *Health and behavior intervention, each 15 minutes,*

face-to-face; family (with the patient present), was identified through a code screen as having a negative IWPUT of - 0.0058.

At the April 2018 RUC meeting, the code was discussed at the Relativity Assessment Workgroup (RAW) meeting. It was noted that code 96154 has an intra-service time of 15 minutes but is listed as having a post-service time of 20 minutes, which was likely a data entry error (i.e. the 20 minutes should have been divided by the typical 4 units and entered as 5 minutes of post-service time). The RAW entertained a motion to make an editorial change to drop the post-time to 5 minutes to be consistent with the rest of the family; however, further discussion revealed that the family of codes had not been reviewed since their inception in 2001. As a result, the RAW recommended that 96154 and the related family of codes be referred back to CPT for revision.

The new code family was approved at the September 2018 CPT Editorial Panel meeting and surveyed by the American Psychological Association (APA) for the January 2019 RUC HCPAC meeting.

New/revised code 96165; *Health behavior intervention, group (2 or more patients), face-to-face; each additional 15 minutes (List separately in addition to code for primary service)*, is the add-on code of a base code/add-on code combination:

- 96164; *Health behavior intervention, group (2 or more patients), face-to-face; initial 30 minutes*
- +96165; *Health behavior intervention, group (2 or more patients), face-to-face; each additional 15 minutes (List separately in addition to code for primary service)*

Compelling Evidence

These codes reflect significant changes in the healthcare delivery system over the past 20 years. During that time there has been an increasing focus on the role of psychosocial factors in health, as well as a shift toward explicit assessment and intervention in these factors, particularly in primary care. The Health Behavior Assessment and Intervention codes were originally described and valued in 2001, but they have never been re-evaluated since their inception almost 20 years ago.

There are several factors comprising compelling evidence for this family of codes, including: flawed methodology and anomalous relationship; change in technique and knowledge; change in site of service; and change in patient population. As a result, we are requesting that compelling evidence be considered for the entire family of codes.

Flawed Methodology and Anomalous Relationship

RUC rationale for the original valuation of this family shows that the RUC valued these services primarily based on the psychiatric interview code 90801, a 60-minute service with 2.80 wRVU. RUC divided the value by 4, yielding a 15-minute service at 0.70 RVUs. That was based on the expectation that each of the new codes, reported in 15-minute increments, would typically be billed four (4) times per patient encounter, comprising a comparable 60-minute service to 90801.

The documented history provides evidence that incorrect assumptions were made in the initial valuation of the family of Health and Behavior codes. The RUC used the flawed building block methodology, in a manner that is no longer a RUC-accepted process, to value each 15-minute Health and Behavior diagnostic and treatment code, yielding wRVUs ranging from 0.44-0.50. It should also be noted that 90801, the primary service on which the existing Health and Behavior codes were built upon, is no longer an existing or valid code and the comparable service has different valuation today.

It is clear from current data that the assumption that every code would typically be billed for 60 minutes (four (4) 15-minute increments) was at best a gross estimation. Below is the current utilization, based on the actual 2016 Medicare Units of Service Performed on Same Date, for the code set. As can be seen in the chart, there is considerable variability across the code set in the mean number of units per encounter across all the 15-minute codes in the family.

	Number of Unique Occurrences (Same Day, Same Patient, Same Provider)

CPT® Code	Description	Mean	25th Percentile	Median	75th Percentile
96150	Health and behavior assessment	**3.29**	2	**3**	4
96151	Health and behavior re-assessment	**2.30**	1	**2**	3
96152	Health and behavior individual intervention	**3.11**	2	**4**	4
96153	Health and behavior group intervention	**4.78**	4	**4**	6
96154	Health and behavior family intervention, with patient present	**5.31**	3	**5**	8
96155	Health and behavior family intervention, without patient present	**N/A**	N/A	**N/A**	N/A

It should also be noted that 96154 was valued in such a manner that it yielded a negative IWPUT (-0.0006), providing further evidence of flawed methodology in the original valuation of the services.

It is also clear that there is an anomalous relationship in the surveyed family of codes when compared to the Psychotherapy family of codes, on which it was based in 2001. The original and current surveys show that health and behavior services are very similar to the parallel mental health service, in terms of the modality by which the service is delivered as well as intensity. Differences in comparable code values between the two families were greatly increased when the Psychotherapy code set was reevaluated by the RUC in 2012. As can be seen below, all of the codes in current Health and Behavior code set are valued significantly lower when times and wRVUs are calculated to match those parallel services in the updated Psychotherapy code set.

Psychotherapy				Health Behavior Assessment and Intervention			
CPT® Code	**Units of Time**	**wRVU**		**CPT® Code**	**Calculated Time**	**wRVU**	**Calculated wRVU**
90791	60 mins	**3.00**		**96150**	15 min x 4 units = 60 mins	0.50	**2.00**
90832	30 mins	**1.50**		**96152**	15 mins x 2 units = 30 mins	0.48	**0.92**
90853	60 mins	**0.59**		**96153**	15 min x 4 units = 60 mins	0.10	**0.40**
90847	50 mins	**2.50**		**96154**	15 mins x 3.33 units = 50 mins	0.45	**1.50**
90846	50 mins	**2.40**		**96155**	15 mins x 3.33 units = 50 mins	0.44	**1.47**

Technique and Knowledge – Intervention/Treatment

Since 1998 there has been a significant increase in provider specialization and the development and adaptation of cognitive and other behavioral techniques to address psychological factors impacting physical health[1,2,3,4]. Treatment techniques have changed dramatically from simply applying behavioral expertise to physical health conditions to the development and adaptation of specific cognitive behavioral techniques and other treatments for specific physical health conditions.

These evidence-based techniques and treatments include cognitive restructuring, operant behavior therapy and contingency management, stimulus control, graded activation and behavioral activation, coping skills training, problem solving training, functional and structural family therapy, acceptance and commitment therapy, family communication training, relaxation skills training, motivational interviewing, behavior therapy. This change in technique and knowledge results in the work involved in Health and Behavior Intervention to be parallel and comparable to the work involved in traditional mental health therapy.

What differs in this particular service, when compared to others in this code set is the modality by which the service is delivered. There are three (3) different modalities of Health Behavior Interventions: Individual; Group, or Family Interventions. Each of these modalities can be used to deliver the evidence-based treatments described above.

With these changes in technique, there has been specialization in training, as well as the development of treatment guidelines for psychologists providing these services in both the primary care[5] and specialty care settings such as cardiovascular disease,[6] obesity,[7] pain,[8] diabetes,[9] and bariatrics.[10]

Site of service

Since the implementation of the code set in 2002, there has been a significant change in site of service with increasing use of the codes in outpatient settings for both primary care and specialty care. An examination of the Medicare claims data (2002 – 2017) supports the increased use in outpatient settings. For example, in 2002 9% of the claims for the Health and Behavior Assessment CPT Code were in General Outpatient compared to 24% in 2017. In 2002 only 4% of the claims for the Health and Behavior Individual CPT Code were in General Outpatient compared to 24% in 2017 and in 2002 only 30% of the claims for the Health and Behavior Individual Therapy CPT Code were in Physician Offices compared to 40% in 2017. This increase in the outpatient settings can be attributed to the increased focus of integrating behavioral health services into both primary care and specialty care settings.[11,12]

Patient population

Since the development of the codes in 1998, the population of patients with chronic non-communicable diseases have been increasing[13] and this has also resulted in a significant increase in complexity and cost. At this time 5% of patients account for 50% of costs. The National Academy of Medicine[14] has identified the core groups of high cost patients, including children with severe disabilities, adults with significant chronic illness (Two or more complex conditions, and one complex plus one to five noncomplex conditions), frail elderly, and disabled patients under 65. Within those high cost groups, there is a subgroup of high needs patient. This subgroup is defined as complex medical high cost patients who also have circumstances requiring behavioral services, and who have functional limitations.[15,16] Effective and efficient treatment of these high cost and high need patients requires additional assessment to determine their behavioral and other service needs.

Of these conditions, *Heart Disease* is the number one cause of mortality and increased morbidity in the US. Poor adherence to cardiovascular disease medications carries significant psychological, physical, and economic costs, including failure to achieve therapeutic goals, high rates of hospitalization and health care costs, and incidence of death. Recent advances in psychological science and practice can effectively address these complex behavioral needs.[6] The six risk factors contributing to over a third of all health care costs are tobacco use, *poor diet*, substance abuse, *high Body Mass Index*, high *systolic blood pressure* and *high resting glucose levels*.[13] All have clear behavioral determinants that can be addressed for treatment.

Our health care system is now faced with an increasing opioid epidemic, which is derived from inappropriate pain management. Population level surveys indicate that between 11% and 40% of the U.S. population report some level of chronic pain, with millions suffering from daily, severe, and disabling pain.[16] Access to safe and effective care for people suffering from pain remains a priority that needs to be balanced in parallel with efforts to curb inappropriate opioid prescribing and use practices. Lastly, the number of bariatric surgeries is estimated to have increased 40% from 2011 to 2017.[17]

A review of the Medicare claims data from 2006 – 2014 for the existing H&B codes reveals increased use with patients with presentations focusing on pain, cardiovascular disease, diabetes, and obesity. For example, in 2006 only 5% of the utilization for the Health and Behavior Assessment CPT Code was for pain compared to 24% in 2014 and in 2006 only 3% of the utilization for the Health and Behavior Individual CPT Code was for cardiovascular disease compared to 11% in 2014.

Survey Process

The APA sought the approval of the RUC's Research Subcommittee prior to fielding their surveys. The subcommittee granted approval for the following items:

- Modification of the survey tools, including:
  - Detailed survey cover memo to respondents
  - A common reference service list for use for the entire family of codes.
  - Replacing the term "physician" with "qualified health care professional".
  - Adding a link to a PDF of the revisions approved by the CPT Editorial Panel at the September 2018 meeting

- Modifying the XXX – Evaluation and Management survey tool used to survey assessment including reassessment code, 96156
- Combining the XXX – Therapy survey tool with the standard ZZZ survey template and the time-based code template to survey the Intervention services for Individual (96158-96159), Group (96164-96165), Family with patient (96167-96168), and Family without patient present (96170-96171)
    - Adding a custom question to each of the time-based surveys (96158-96171) asking for survey participants to indicate the total amount of time they spend performing the entire service from start to finish (including the base code and all units of the add-on code) to allow capturing the total time and work involved in each clinical service.
    - Adding a custom question to the survey for Group intervention (96164-96165) asking for survey participants to indicate the typical number of patients they see in a group session, as well as minor language changes throughout to ask the survey participants to base the time and RVU estimates on the entire group session rather than calculating them on a per patient basis.

The surveys were sent to a random sample of applicable subsets which included APA members in Division 38 – Society for Health Psychology and Division 54 – Society for Pediatric Psychology. Our overall sample size included 2,285 people.

A common reference service list was used for the entire family of codes and was reviewed and approved by the RUC Research Subcommittee. APA developed new vignettes for each code in the family to reflect changes in current practice and the typical patients.

As noted in our submission to the Practice Expense Subcommittee, there has been a shift in practice over the years, and while the majority of these services are provided to adult patients, there is a prevalent use of these codes in pediatric practice.

Analysis and Recommendations from the Expert Panel – 96165

The APA convened an expert panel with representation from solo, academic, and hospital-based practices, as well as adult and pediatric psychologists, to review the survey data and make recommendations.

The typical patient for this service was a 26-year-old obese female post-bariatric surgery with poor adherence to treatment regimens and multiple medical complications is referred for group health behavior intervention, and the patient requires an additional 15 minutes of health behavior services beyond the first 30 minutes.

The expert panel reviewed the survey results citing that 70% of the 40 survey respondents found the vignette typical and the median service performance rate was 2.

Upon review of the survey data, it was clear to the expert panel that survey respondents did not follow the instructions provided in the cover letter and in wording changes to several of the survey questions, to evaluate the group service as a whole and NOT on the basis of an individual group participant. It appeared to the expert panel that survey respondents were confused despite the additional instruction and clarifying language.

A custom survey question had been added at the request of the RUC Research Subcommittee that asked the respondents to provide the average number of patients that attend a typical health behavior group intervention session. The question yielded a median response of seven (7) patients (*additional response data provided below*).

The intent of the revisions to the survey tool offered and approved by the RUC Research Subcommittee were that the final results on time and RVW estimates would be divided by the average number of patients that attend a typical health behavior group intervention session.

Further review of the survey data also showed that survey respondents did not select ZZZ codes as their key reference or second key reference services because the base and add-on code structure is not common to

psychologists and they are not yet familiar with their usage. 53% of the survey respondents selected XXX code 90853 as their key reference service, and the estimated RVWs were similar to that of the Group Psychotherapy service for the individual patient.

The median survey results regarding per session time are 0 minutes pre-service, 16 minutes intra-service, and 0 minutes post-service. The expert panel agreed with the survey median pre- and post-times as they support proper application and utilization of ZZZ add-on codes. However, the expert panel did not agree with the survey median intra-service time of 16-minutes, as the code descriptor clearly states that that the code represents a 15-minute service. **Therefore, the panel recommends 0 minutes pre, 15 minutes intra, and 0 minutes post-service times for a total of 15 minutes**.

The expert panel reviewed the per session RVW survey data and determined that the 25th percentile value of 0.48 was too low. If divided by 7, the typical number of patients in a group, the per patient RVVU would be 0.07. This value is 0.03 RVUs lower than the value for the existing 15 minute code, 96153 (0.10 RVUs; 1/3/1). The expert panel also reviewed the survey median per session value of 0.75, that when converted to per patient yields an RVW of 0.11. The expert panel agreed that this was an appropriate value for 96165.

A search of the RUC database was conducted to identify an appropriate crosswalk code. Search criteria included RUC reviewed, ZZZ codes, with RVW between 0.10-0.13. Only two codes were identified: 96361; *Intravenous infusion, hydration* (0.90; 0/3/0) and 96375; *Therapeutic, prophylactic, or diagnostic injection* (0.10 RVUs; 0/4/0; 0.250). The expert panel strongly agreed that 96375 was the most appropriate code to crosswalk to as its RVU was equal to that of the existing 15-minute service, while 96361 RVW of 0.09 would essentially be decrease in existing value. And finally, the IWPUT for 96375 at 0.025 aligned well with the IWPUT of the corresponding base code, 96164, at 0.241.

Custom Questions
Per the request of the Research Subcommittee, the following custom question was added to the survey for group intervention services (96164 and 96165):

What is the average number of patients that attend your typical group session for survey base code 96164; *Health behavior intervention, group (2 or more patients), face-to-face; initial 30 minutes* and survey add-on code 96165; *Health behavior intervention, group (2 or more patients), face-to-face; each additional 15 minutes* (*List separately in addition to code for primary service*)?

The responses to this custom question regarding the typical number of patients that attend a group session are summarized below:

Min.	25th Percentile	Median	75th Percentile	Max.
4	6	7	9.25	12

Custom Question – Total Time/Units for XXX base survey code and ZZZ add-on survey code(s)
Major structural changes were made to the majority of the existing codes. Because each of the revised codes reflect significant changes to the units of time that must reported, and because these services were previously reported in multiple units, APA requested the addition of the following custom question to capture data on the total time and work involved in each clinical service.

For the typical patient, how much total time do you personally spend performing this entire service from start to finish (i.e. base survey code 96164 and all increments of add-on survey code 96165)? Please answer in minutes (whole number). Note, the intent of this question is to determine the typical number of units you would report for these time-based survey codes by measuring the full length of time it typically takes for you to perform the service described.

The responses to this custom question regarding the total time, in minutes, it takes to perform the surveyed base code, 96164, and all units of the surveyed add-on code, 96165, are summarized below:

Min.	25th	Median	75th	Max.

	Percentile		Percentile	
3.17	60	90	120	240

Recommendations
In summary, based on the comparisons to crosswalk code 96375 and relativity between this add-on code to it's base code, 96164, **we recommend an RVW of 0.10 with 0 minutes pre-, 4 minutes intra-, and 0 minutes post-time for a total time of 4 minutes for 96165.**

We believe the changes are substantial and meet compelling evidence for the above recommended increase in time and RVU value.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

CPT Code	Global	Work RVU	Pre-	Intra-	Post-
96164	XXX	0.21	2	5	2
+96165	ZZZ	0.10	0	4	0

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 96153

How often do physicians <u>in your specialty</u> perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Clinical Psychology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 27500
If the recommendation is from multiple specialties, please provide the frequency and <u>percentage</u> for each specialty. Please explain the rationale for this estimate. Medicare represents about 1/5 of the utilization in the country's healthcare system; therefore, these estimates are approximately 5 times the Medicare utilization for the existing code. This utilization corrects for the fact that these are now 15-minute add-on codes that are billed following the 30-minute base code (96164).

Specialty Clinical Psychology Frequency 26600 Percentage 96.72 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 11,000 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This is the Medicare utilization for the existing code, that has been corrected to take into account that the new code is now 15-minute add-on to the primary 30-minute base code (96164)

Specialty Clinical Psychology Frequency 10700 Percentage 97.27 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Evaluation Management

BETOS Sub-classification:
Office visit

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 96153

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:96167 Tracking Number Z6 Original Specialty Recommended RVU: **1.55**
Presented Recommended RVU: **1.55**
Global Period: XXX Current Work RVU: RUC Recommended RVU: **1.55**

CPT Descriptor: Health behavior intervention, family (with the patient present), face-to-face; initial 30 minutes

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 36 year-old married female diagnosed with breast cancer and who is undergoing aggressive chemotherapy and radiation therapy with poor adherence to treatment regimens and multiple medical complications is referred for family intervention.

Percentage of Survey Respondents who found Vignette to be Typical: 67%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review patient records, including those from the patient's physician and other team members, review results of any prior health behavior assessments.

Description of Intra-Service Work: Conduct face-to-face interaction with the patient and family members. Facilitate family communication and provide education about the patient's illness or injury, engage and mobilize family support and problem-solving regarding treatment adherence and prognosis, clarify family roles and caregiver responsibilities. Qualified health care professional documents in the medical record, describing the patient's status, family involvement and progress toward and/or modification of treatment goals based on patient progress or other confounding factors that arise.

Description of Post-Service Work: Coordinates and provides feedback to interdisciplinary team members and family. Facilitates follow-up care with team members and family.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background
This existing code family (CPT® codes 96150-96155) describes health behavior assessment and intervention services primarily performed by non-physician qualified healthcare professionals who cannot report Evaluation and Management services. In October 2017, CPT code 96154; *Health and behavior intervention, each 15 minutes, face-to-face; family (with the patient present)*, was identified through a code screen as having a negative IWPUT of - 0.0058.

At the April 2018 RUC meeting, the code was discussed at the Relativity Assessment Workgroup (RAW) meeting. It was noted that code 96154 has an intra-service time of 15 minutes but is listed as having a post-service time of 20 minutes, which was likely a data entry error (i.e. the 20 minutes should have been divided by the typical 4 units and entered as 5 minutes of post-service time). The RAW entertained a motion to make an editorial change to drop the post-time to 5 minutes to be consistent with the rest of the family; however, further discussion revealed that the family of codes had not been reviewed since their inception in 2001. As a result, the RAW recommended that 96154 and the related family of codes be referred back to CPT for revision.

The new code family was approved at the September 2018 CPT Editorial Panel meeting and surveyed by the American Psychological Association (APA) for the January 2019 RUC HCPAC meeting.

New/revised code 96167; Health behavior intervention, family (with the patient present), face-to-face; initial 30 minutes, has previously been reported as 96154; Health and behavior intervention, each 15 minutes, face-to-face; family (with the patient present). 96167 is also the base code of a base code/add-on code combination:

- 96167; Health behavior intervention, family (with the patient present), face-to-face; initial 30 minutes
- +96168; Health behavior intervention, family (with the patient present), face-to-face; each additional 15 minutes (List separately in addition to code for primary service)

Compelling Evidence

These codes reflect significant changes in the healthcare delivery system over the past 20 years. During that time there has been an increasing focus on the role of psychosocial factors in health, as well as a shift toward explicit assessment and intervention in these factors, particularly in primary care. The Health Behavior Assessment and Intervention codes were originally described and valued in 2001, but they have never been re-evaluated since their inception almost 20 years ago.

There are several factors comprising compelling evidence for this family of codes, including: flawed methodology and anomalous relationship; change in technique and knowledge; change in site of service; and change in patient population. As a result, we are requesting that compelling evidence be considered for the entire family of codes.

Flawed Methodology and Anomalous Relationship
RUC rationale for the original valuation of this family shows that the RUC valued these services primarily based on the psychiatric interview code 90801, a 60-minute service with 2.80 wRVU. RUC divided the value by 4, yielding a 15-minute service at 0.70 RVUs. That was based on the expectation that each of the new codes, reported in 15-minute increments, would typically be billed four (4) times per patient encounter, comprising a comparable 60-minute service to 90801.

The documented history provides evidence that incorrect assumptions were made in the initial valuation of the family of Health and Behavior codes. The RUC used the flawed building block methodology, in a manner that is no longer a RUC-accepted process, to value each 15-minute Health and Behavior diagnostic and treatment code, yielding wRVUs ranging from 0.44-0.50. It should also be noted that 90801, the primary service on which the existing Health and Behavior codes were built upon, is no longer an existing or valid code and the comparable service has different valuation today.

It is clear from current data that the assumption that every code would typically be billed for 60 minutes (four (4) 15-minute increments) was at best a gross estimation. Below is the current utilization, based on the actual 2016 Medicare Units of Service Performed on Same Date, for the code set. As can be seen in the chart, there is

considerable variability across the code set in the mean number of units per encounter across all the 15-minute codes in the family.

		Number of Unique Occurrences (Same Day, Same Patient, Same Provider)			
CPT® Code	**Description**	**Mean**	**25th Percentile**	**Median**	**75th Percentile**
96150	Health and behavior assessment	**3.29**	2	**3**	4
96151	Health and behavior re-assessment	**2.30**	1	**2**	3
96152	Health and behavior individual intervention	**3.11**	2	**4**	4
96153	Health and behavior group intervention	**4.78**	4	**4**	6
96154	Health and behavior family intervention, with patient present	**5.31**	3	**5**	8
96155	Health and behavior family intervention, without patient present	**N/A**	N/A	**N/A**	N/A

It should also be noted that 96154 was valued in such a manner that it yielded a negative IWPUT (-0.0006), providing further evidence of flawed methodology in the original valuation of the services.

It is also clear that there is an anomalous relationship in the surveyed family of codes when compared to the Psychotherapy family of codes, on which it was based in 2001. The original and current surveys show that health and behavior services are very similar to the parallel mental health service, in terms of the modality by which the service is delivered as well as intensity. Differences in comparable code values between the two families were greatly increased when the Psychotherapy code set was reevaluated by the RUC in 2012. As can be seen below, all of the codes in current Health and Behavior code set are valued significantly lower when times and wRVUs are calculated to match those parallel services in the updated Psychotherapy code set.

Psychotherapy			**Health Behavior Assessment and Intervention**			
CPT® Code	**Units of Time**	**wRVU**	**CPT® Code**	**Calculated Time**	**wRVU**	**Calculated wRVU**
90791	60 mins	**3.00**	**96150**	15 min x 4 units = 60 mins	0.50	**2.00**
90832	30 mins	**1.50**	**96152**	15 mins x 2 units = 30 mins	0.48	**0.92**
90853	60 mins	**0.59**	**96153**	15 min x 4 units = 60 mins	0.10	**0.40**
90847	50 mins	**2.50**	**96154**	15 mins x 3.33 units = 50 mins	0.45	**1.50**
90846	50 mins	**2.40**	**96155**	15 mins x 3.33 units = 50 mins	0.44	**1.47**

<u>Technique and Knowledge – Intervention/Treatment</u>

Since 1998 there has been a significant increase in provider specialization and the development and adaptation of cognitive and other behavioral techniques to address psychological factors impacting physical health[1,2,3,4]. Treatment techniques have changed dramatically from simply applying behavioral expertise to physical health conditions to the development and adaptation of specific cognitive behavioral techniques and other treatments for specific physical health conditions.

These evidence-based techniques and treatments include cognitive restructuring, operant behavior therapy and contingency management, stimulus control, graded activation and behavioral activation, coping skills training, problem solving training, functional and structural family therapy, acceptance and commitment therapy, family communication training, relaxation skills training, motivational interviewing, behavior therapy. This change in

technique and knowledge results in the work involved in Health and Behavior Intervention to be parallel and comparable to the work involved in traditional mental health therapy.

What differs in this particular service, when compared to others in this code set is the modality by which the service is delivered. There are three (3) different modalities of Health Behavior Interventions: Individual; Group, or Family Interventions. Each of these modalities can be used to deliver the evidence-based treatments described above.

With these changes in technique, there has been specialization in training, as well as the development of treatment guidelines for psychologists providing these services in both the primary care[5] and specialty care settings such as cardiovascular disease,[6] obesity,[7] pain,[8] diabetes,[9] and bariatrics.[10]

Site of service

Since the implementation of the code set in 2002, there has been a significant change in site of service with increasing use of the codes in outpatient settings for both primary care and specialty care. An examination of the Medicare claims data (2002 – 2017) supports the increased use in outpatient settings. For example, in 2002 9% of the claims for the Health and Behavior Assessment CPT Code were in General Outpatient compared to 24% in 2017. In 2002 only 4% of the claims for the Health and Behavior Individual CPT Code were in General Outpatient compared to 24% in 2017 and in 2002 only 30% of the claims for the Health and Behavior Individual Therapy CPT Code were in Physician Offices compared to 40% in 2017. This increase in the outpatient settings can be attributed to the increased focus of integrating behavioral health services into both primary care and specialty care settings.[11,12]

Patient population

Since the development of the codes in 1998, the population of patients with chronic non-communicable diseases have been increasing[13] and this has also resulted in a significant increase in complexity and cost. At this time 5% of patients account for 50% of costs. The National Academy of Medicine[14] has identified the core groups of high cost patients, including children with severe disabilities, adults with significant chronic illness (Two or more complex conditions, and one complex plus one to five noncomplex conditions), frail elderly, and disabled patients under 65. Within those high cost groups, there is a subgroup of high needs patient. This subgroup is defined as complex medical high cost patients who also have circumstances requiring behavioral services, and who have functional limitations.[15,16] Effective and efficient treatment of these high cost and high need patients requires additional assessment to determine their behavioral and other service needs.

Of these conditions, *Heart Disease* is the number one cause of mortality and increased morbidity in the US. Poor adherence to cardiovascular disease medications carries significant psychological, physical, and economic costs, including failure to achieve therapeutic goals, high rates of hospitalization and health care costs, and incidence of death. Recent advances in psychological science and practice can effectively address these complex behavioral needs.[6] The six risk factors contributing to over a third of all health care costs are tobacco use, *poor diet*, substance abuse, *high Body Mass Index*, high *systolic blood pressure* and *high resting glucose levels*.[13] All have clear behavioral determinants that can be addressed for treatment.

Our health care system is now faced with an increasing opioid epidemic, which is derived from inappropriate pain management. Population level surveys indicate that between 11% and 40% of the U.S. population report some level of chronic pain, with millions suffering from daily, severe, and disabling pain.[16] Access to safe and effective care for people suffering from pain remains a priority that needs to be balanced in parallel with efforts to curb inappropriate opioid prescribing and use practices. Lastly, the number of bariatric surgeries is estimated to have increased 40% from 2011 to 2017.[17]

A review of the Medicare claims data from 2006 – 2014 for the existing H&B codes reveals increased use with patients with presentations focusing on pain, cardiovascular disease, diabetes, and obesity. For example, in 2006 only 5% of the utilization for the Health and Behavior Assessment CPT Code was for pain compared to 24% in 2014 and in 2006 only 3% of the utilization for the Health and Behavior Individual CPT Code was for cardiovascular disease compared to 11% in 2014.

Survey Process

The APA sought the approval of the RUC's Research Subcommittee prior to fielding their surveys. The subcommittee granted approval for the following items:

- Modification of the survey tools, including:
    - Detailed survey cover memo to respondents

- A common reference service list for use for the entire family of codes.
- Replacing the term "physician" with "qualified health care professional".
- Adding a link to a PDF of the revisions approved by the CPT Editorial Panel at the September 2018 meeting
- Modifying the XXX – Evaluation and Management survey tool used to survey assessment including reassessment code, 96156
- Combining the XXX – Therapy survey tool with the standard ZZZ survey template and the time-based code template to survey the Intervention services for Individual (96158-96159), Group (96164-96165), Family with patient (96167-96168), and Family without patient present (96170-96171)
    - Adding a custom question to each of the time-based surveys (96158-96171) asking for survey participants to indicate the total amount of time they spend performing the entire service from start to finish (including the base code and all units of the add-on code) to allow capturing the total time and work involved in each clinical service.
    - Adding a custom question to the survey for Group intervention (96164-96165) asking for survey participants to indicate the typical number of patients they see in a group session, as well as minor language changes throughout to ask the survey participants to base the time and RVU estimates on the entire group session rather than calculating them on a per patient basis.

The surveys were sent to a random sample of applicable subsets which included APA members in Division 38 – Society for Health Psychology and Division 54 – Society for Pediatric Psychology. Our overall sample size included 2,285 people.

A common reference service list was used for the entire family of codes and was reviewed and approved by the RUC Research Subcommittee. APA developed new vignettes for each code in the family to reflect changes in current practice and the typical patients.

Analysis and Recommendations from the Expert Panel – 96167

The APA convened an expert panel with representation from solo, academic, and hospital-based practices, as well as adult and pediatric psychologists, to review the survey data and make recommendations.

The typical patient for this service was a 36-year-old married female diagnosed with breast cancer and who is undergoing aggressive chemotherapy and radiation therapy with poor adherence to treatment regimens and multiple medical complications is referred for family intervention.

The expert panel reviewed the survey results citing that 67% of the 52 survey respondents found the vignette typical and the median service performance rate was 25.

CPT code 90847; *Family psychotherapy (conjoint psychotherapy) (with patient present), 50 minutes*, (5, 50, 21; RVW 2.50) was selected as the key reference service by 69% of the survey respondents.

The median survey results regarding time are 15 minutes pre-service, 44 minutes intra-service, and 15 minutes post-service. The expert panel felt that each of the median surveyed times were over-valued. For example, the intra-service time of 30 minutes is clearly stated in the code descriptor and pre- and post-time times should be consistent with recommendations for the rest of the family. **Therefore, the panel recommends 5 minutes pre, 30 minutes intra, and 10 minutes post-service times for a total of 45 minutes**.

The expert panel reviewed the RVW survey data and determined based on relativity within the family of codes as well as relativity with the parallel mental health service, 90847 which is also the survey key reference service. 90847 has 50 minutes of intra-time and an RVW of 2.50, when compared to the 30 minute service of the surveyed code the calculated appropriate RVW for 96167 is (30/50) x (2.50) = 1.50 RVUs, which aligns nicely with the survey 25th percentile value of 1.58 RVUs. The expert panel felt that the appropriate RVW value falls with this range

A search of the RUC Database was conducted to find an appropriate crosswalk code. The search criteria included RUC reviewed, XXX global codes, with an RVW range 1.50-1.58, and an intra service time of 30 minutes. The code selected by the expert panel as the best candidate for crosswalk was 76873; *Ultrasound, transrectal; prostate volume study for brachytherapy treatment planning (separate procedure)*, (1.55 RVW; 20/30/10; 0.0293). When recalculated with 5 minutes of pre-time to match the other codes within this family, IWPUT becomes 0.040, which is very similar to that of 90847.

Additional support for these values can be found in comparison RUC MPC code 95861; *Needle electromyography; 2 extremities with or without related paraspinal areas* provided another strong comparison. Identified through a query of the RUC Database (2018 v2), this RUC MPC code has 10 minutes of pre, 29 intra, and 10 minutes of post-time, an RVW of 1.54, and an IWPUT of 0.377. Elements of this comparison code support our recommended time and RVW recommendations for 96167.

Custom Question – Total Time/Units for XXX base survey code and ZZZ add-on survey code(s)
Major structural changes were made to the majority of the existing codes. Because each of the revised codes reflect significant changes to the units of time that must reported, and because these services were previously reported in multiple units, APA requested the addition of the following custom question to capture data on the total time and work involved in each clinical service.

For the typical patient, how much total time do you personally spend performing this entire service from start to finish (i.e. base survey code 96167 and all increments of add-on survey code 96168)? Please answer in minutes (whole number). Note, the intent of this question is to determine the typical number of units you would report for these time-based survey codes by measuring the full length of time it typically takes for you to perform the service described.

The responses to this custom question regarding the total time, in minutes, it takes to perform the surveyed base code, 96167, and all units of the surveyed add-on code, 96168, are summarized below:

Min.	25th Percentile	Median	75th Percentile	Max.
1.50	52.5	60	75	145

Recommendations
In summary, based on calculated relativity with the key reference service as well as within the surveyed family of codes, and comparison to crosswalk code 76873; *Ultrasound, transrectal; prostate volume study for brachytherapy treatment planning (separate procedure)*, that has an RVW of 1.55, which supports our survey 25th value of 1.58, w**e recommend an RVW of 1.55 with 5 minutes pre-, 30 minutes intra-, and 10 minutes post-time for a total time of 45 minutes for 96167.**

We believe the changes are substantial and meet compelling evidence for the above recommended increase in time and RVU value.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.

☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

CPT Code	Global	Work RVU	Pre-	Intra-	Post-
96167	XXX	1.55	5	30	10
+96168	ZZZ	0.60	0	15	0

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 96154

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Clinical Psychology How often? Commonly

Specialty Licensed Clinical Social Worker How often? Commonly

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 6000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Medicare represents about 1/5 of the utilization in the country's healthcare system; therefore, these estimates are approximately 5 times the Medicare utilization for the existing code. This utilization corrects for the fact that this is now a 30 minute base code with a 15 minute add-on.

Specialty Clinical Psychologist Frequency 3000 Percentage 50.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,200
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This is the Medicare utilization for the existing code, that has been corrected to take into account that the new code is now a 30-minute code, with a 15-minute add-on.

Specialty Clinical Psychology Frequency 600 Percentage 50.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment
Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Evaluation Management

BETOS Sub-classification:
Office visit

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	4%	44%	48%	4%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	13%	44%	43%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	4%	52%	44%
Physical effort required	13%	74%	13%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	4%	48%	48%

2nd Key Reference Code

	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	60%	20%	20%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	60%	40%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	60%	40%
Physical effort required	0%	80%	20%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	80%	20%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background
This existing code family (CPT® codes 96150-96155) describes health behavior assessment and intervention services primarily performed by non-physician qualified healthcare professionals who cannot report Evaluation and Management services. In October 2017, CPT code 96154; *Health and behavior intervention, each 15 minutes, face-to-face; family (with the patient present)*, was identified through a code screen as having a negative IWPUT of 0.0058.

At the April 2018 RUC meeting, the code was discussed at the Relativity Assessment Workgroup (RAW) meeting. It was noted that code 96154 has an intra-service time of 15 minutes but is listed as having a post-service time of 20 minutes, which was likely a data entry error (i.e. the 20 minutes should have been divided by the typical 4 units and entered as 5 minutes of post-service time). The RAW entertained a motion to make an editorial change to drop the post-time to 5 minutes to be consistent with the rest of the family; however, further discussion revealed that the family of codes had not been reviewed since their inception in 2001. As a result, the RAW recommended that 96154 and the related family of codes be referred back to CPT for revision.

The new code family was approved at the September 2018 CPT Editorial Panel meeting and surveyed by the American Psychological Association (APA) for the January 2019 RUC HCPAC meeting.

New/revised code 96168; Health behavior intervention, family (with the patient present), face-to-face; each additional 15 minutes (List separately in addition to code for primary service), is the add-on code of a base code/add-on code combination:

- 96167; Health behavior intervention, family (with the patient present), face-to-face; initial 30 minutes
- +96168; Health behavior intervention, family (with the patient present), face-to-face; each additional 15 minutes (List separately in addition to code for primary service)

Compelling Evidence

These codes reflect significant changes in the healthcare delivery system over the past 20 years. During that time there has been an increasing focus on the role of psychosocial factors in health, as well as a shift toward explicit assessment and intervention in these factors, particularly in primary care. The Health Behavior Assessment and Intervention codes were originally described and valued in 2001, but they have never been re-evaluated since their inception almost 20 years ago.

There are several factors comprising compelling evidence for this family of codes, including: flawed methodology and anomalous relationship; change in technique and knowledge; change in site of service; and change in patient population. As a result, we are requesting that compelling evidence be considered for the entire family of codes.

Flawed Methodology and Anomalous Relationship
RUC rationale for the original valuation of this family shows that the RUC valued these services primarily based on the psychiatric interview code 90801, a 60-minute service with 2.80 wRVU. RUC divided the value by 4, yielding a 15-minute service at 0.70 RVUs. That was based on the expectation that each of the new codes, reported in 15-minute increments, would typically be billed four (4) times per patient encounter, comprising a comparable 60-minute service to 90801.

The documented history provides evidence that incorrect assumptions were made in the initial valuation of the family of Health and Behavior codes. The RUC used the flawed building block methodology, in a manner that is no longer a RUC-accepted process, to value each 15-minute Health and Behavior diagnostic and treatment code, yielding wRVUs ranging from 0.44-0.50. It should also be noted that 90801, the primary service on which the existing Health and Behavior codes were built upon, is no longer an existing or valid code and the comparable service has different valuation today.

It is clear from current data that the assumption that every code would typically be billed for 60 minutes (four (4) 15-minute increments) was at best a gross estimation. Below is the current utilization, based on the actual 2016 Medicare Units of Service Performed on Same Date, for the code set. As can be seen in the chart, there is

considerable variability across the code set in the mean number of units per encounter across all the 15-minute codes in the family.

		Number of Unique Occurrences (Same Day, Same Patient, Same Provider)			
CPT® Code	**Description**	**Mean**	**25th Percentile**	**Median**	**75th Percentile**
96150	Health and behavior assessment	**3.29**	2	**3**	4
96151	Health and behavior re-assessment	**2.30**	1	**2**	3
96152	Health and behavior individual intervention	**3.11**	2	**4**	4
96153	Health and behavior group intervention	**4.78**	4	**4**	6
96154	Health and behavior family intervention, with patient present	**5.31**	3	**5**	8
96155	Health and behavior family intervention, without patient present	**N/A**	N/A	**N/A**	N/A

It should also be noted that 96154 was valued in such a manner that it yielded a negative IWPUT (-0.0006), providing further evidence of flawed methodology in the original valuation of the services.

Technique and Knowledge – Intervention/Treatment

Since 1998 there has been a significant increase in provider specialization and the development and adaptation of cognitive and other behavioral techniques to address psychological factors impacting physical health[1,2,3,4]. Treatment techniques have changed dramatically from simply applying behavioral expertise to physical health conditions to the development and adaptation of specific cognitive behavioral techniques and other treatments for specific physical health conditions.

These evidence-based techniques and treatments include cognitive restructuring, operant behavior therapy and contingency management, stimulus control, graded activation and behavioral activation, coping skills training, problem solving training, functional and structural family therapy, acceptance and commitment therapy, family communication training, relaxation skills training, motivational interviewing, behavior therapy. This change in technique and knowledge results in the work involved in Health and Behavior Intervention to be parallel and comparable to the work involved in traditional mental health therapy.

What differs in this particular service, when compared to others in this code set is the modality by which the service is delivered. There are three (3) different modalities of Health Behavior Interventions: Individual; Group, or Family Interventions. Each of these modalities can be used to deliver the evidence-based treatments described above.

With these changes in technique, there has been specialization in training, as well as the development of treatment guidelines for psychologists providing these services in both the primary care[5] and specialty care settings such as cardiovascular disease,[6] obesity,[7] pain,[8] diabetes,[9] and bariatrics.[10]

Site of service

Since the implementation of the code set in 2002, there has been a significant change in site of service with increasing use of the codes in outpatient settings for both primary care and specialty care. An examination of the Medicare claims data (2002 – 2017) supports the increased use in outpatient settings. For example, in 2002 9% of the claims for the Health and Behavior Assessment CPT Code were in General Outpatient compared to 24% in 2017. In 2002 only 4% of the claims for the Health and Behavior Individual CPT Code were in General Outpatient compared to 24% in 2017 and in 2002 only 30% of the claims for the Health and Behavior Individual Therapy CPT Code were in Physician Offices compared to 40% in 2017. This increase in the outpatient settings can be

attributed to the increased focus of integrating behavioral health services into both primary care and specialty care settings.[11,12]

Patient population

Since the development of the codes in 1998, the population of patients with chronic non-communicable diseases have been increasing[13] and this has also resulted in a significant increase in complexity and cost. At this time 5% of patients account for 50% of costs. The National Academy of Medicine[14] has identified the core groups of high cost patients, including children with severe disabilities, adults with significant chronic illness (Two or more complex conditions, and one complex plus one to five noncomplex conditions), frail elderly, and disabled patients under 65. Within those high cost groups, there is a subgroup of high needs patient. This subgroup is defined as complex medical high cost patients who also have circumstances requiring behavioral services, and who have functional limitations.[15,16] Effective and efficient treatment of these high cost and high need patients requires additional assessment to determine their behavioral and other service needs.

Of these conditions, *Heart Disease* is the number one cause of mortality and increased morbidity in the US. Poor adherence to cardiovascular disease medications carries significant psychological, physical, and economic costs, including failure to achieve therapeutic goals, high rates of hospitalization and health care costs, and incidence of death. Recent advances in psychological science and practice can effectively address these complex behavioral needs.[6] The six risk factors contributing to over a third of all health care costs are tobacco use, *poor diet*, substance abuse, *high Body Mass Index*, high *systolic blood pressure* and *high resting glucose levels*.[13] All have clear behavioral determinants that can be addressed for treatment.

Our health care system is now faced with an increasing opioid epidemic, which is derived from inappropriate pain management. Population level surveys indicate that between 11% and 40% of the U.S. population report some level of chronic pain, with millions suffering from daily, severe, and disabling pain.[16] Access to safe and effective care for people suffering from pain remains a priority that needs to be balanced in parallel with efforts to curb inappropriate opioid prescribing and use practices. Lastly, the number of bariatric surgeries is estimated to have increased 40% from 2011 to 2017.[17]

A review of the Medicare claims data from 2006 – 2014 for the existing H&B codes reveals increased use with patients with presentations focusing on pain, cardiovascular disease, diabetes, and obesity. For example, in 2006 only 5% of the utilization for the Health and Behavior Assessment CPT Code was for pain compared to 24% in 2014 and in 2006 only 3% of the utilization for the Health and Behavior Individual CPT Code was for cardiovascular disease compared to 11% in 2014.

Survey Process

The APA sought the approval of the RUC's Research Subcommittee prior to fielding their surveys. The subcommittee granted approval for the following items:

- Modification of the survey tools, including:
  - Detailed survey cover memo to respondents
  - A common reference service list for use for the entire family of codes.
  - Replacing the term "physician" with "qualified health care professional".
  - Adding a link to a PDF of the revisions approved by the CPT Editorial Panel at the September 2018 meeting
  - Modifying the XXX – Evaluation and Management survey tool used to survey assessment including reassessment code, 96156
  - Combining the XXX – Therapy survey tool with the standard ZZZ survey template and the time-based code template to survey the Intervention services for Individual (96158-96159), Group (96164-96165), Family with patient (96167-96168), and Family without patient present (96170-96171)
    - Adding a custom question to each of the time-based surveys (96158-96171) asking for survey participants to indicate the total amount of time they spend performing the entire service from start to finish (including the base code and all units of the add-on code) to allow capturing the total time and work involved in each clinical service.
    - Adding a custom question to the survey for Group intervention (96164-96165) asking for survey participants to indicate the typical number of patients they see in a group session, as well as minor language changes throughout to ask the survey participants to base the time and RVU estimates on the entire group session rather than calculating them on a per patient basis.

The surveys were sent to a random sample of applicable subsets which included APA members in Division 38 – Society for Health Psychology and Division 54 – Society for Pediatric Psychology. Our overall sample size

included 2,285 people.

A common reference service list was used for the entire family of codes and was reviewed and approved by the RUC Research Subcommittee. APA developed new vignettes for each code in the family to reflect changes in current practice and the typical patients.

Analysis and Recommendations from the Expert Panel – 96168

The APA convened an expert panel with representation from solo, academic, and hospital-based practices, as well as adult and pediatric psychologists, to review the survey data and make recommendations.

The typical patient for this service was a 36-year-old married female diagnosed with breast cancer and who is undergoing aggressive chemotherapy and radiation therapy with poor adherence to treatment regimens and multiple medical complications is referred for family intervention. The patient and family require an additional 15 minutes of health behavior services beyond the first 30 minutes.

The expert panel reviewed the survey results citing that 67% of the 52 survey respondents found the vignette typical and the median service performance rate was 12.

CPT code 90847; *Family psychotherapy (conjoint psychotherapy) (with patient present), 50 minutes* (5, 50, 21; RVW 2.50) was selected as the key reference service by 44% of the survey respondents. CPT code 99203; *Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: A detailed history; A detailed examination; Medical decision making of low complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate severity. Typically, 30 minutes are spent face-to-face with the patient and/or family* (4, 20, 5; RVW 1.42), was chosen as the second key reference service. The expert panel determined two (2) reasons why the survey respondents did not select ZZZ codes as their key reference or second key reference services. First, because the base and add-on code structure is not common to psychologists, they are not yet familiar with their usage. Second, if the survey respondent was attempting to value this service relatively to the base code, 96167, there is a very limited number of ZZZ codes that fall within the appropriate range.

The median survey results regarding time are 0 minutes pre-service, 17 minutes intra-service, and 0 minutes post-service. The expert panel did not agree with the median surveyed intra-time of 17 minutes, as the code descriptor clearly states that that the code represents a 15-minute service. **Therefore, the panel recommends 0 minutes pre, 15 minutes intra, and 0 minutes post-service times for a total of 15 minutes**.

The expert panel reviewed the RVW survey data and determined this service should be valued relative to the recommended value of it's corresponding base code, 96167 (1.55 RVW; 5/30/10; 0.041). To calculate the relativity, the values for the base code must be divided by 2 to normalize the intra-time at 15 minutes. Once pre- and post-times are backed out, the target RVW is within the range of 0.55-0.60. Support for a value within this range can be found in the comparison of the surveyed code with the base-code, 96167. The IWPUT of the base code is 0.041, and an RVW of 0.60 with 0/15/0 for the add-on code yields an IWPUT of 0.040. Additionally, when relativity of the recommended values is compared across the family of intervention services, the percent difference in RVU values between the base and add-on codes is an average of 62% - the percent difference between this add-on code valued at 0.60 and it's corresponding base code at 1.55 is 61.2% change.

A search of the RUC Database was conducted to identify an appropriate crosswalk code to support an RVW of 0.60 for a ZZZ code with 15 minutes of intra time. Due to the limited ZZZ parameters, the database search only resulted in the identification of only one (1) ZZZ code, 77003; *Fluoroscopic guidance and localization of needle or catheter tip for spine or paraspinous diagnostic or therapeutic injection procedures (epidural or subarachnoid) (List separately in addition to code for primary procedure)* with a RVW of 0.60 and 15 minutes of intra-service time, and IWPUT of 0.0370; however, due to the 2 minutes of pre-positioning time built into the code, the, the expert panel broaden the search data base search to include XXX codes, This revised search resulted in the identification of an additional code to support our recommended RVW and intra-service time. 95940; *Continuous intraoperative neurophysiology monitoring in the operating room, one on one monitoring requiring personal*

attendance, each 15 minutes (List separately in addition to code for primary procedure) is an XXX code with 0.60 RVW, 0/15/0. Further, without any pre- or post-time, the IWPUT of 0.0400 corresponds perfectly to that of the corresponding base code, 96167, at 0.041).

Custom Question – Total Time/Units for XXX base survey code and ZZZ add-on survey code(s)
Major structural changes were made to the majority of the existing codes. Because each of the revised codes reflect significant changes to the units of time that must reported, and because these services were previously reported in multiple units, APA requested the addition of the following custom question to capture data on the total time and work involved in each clinical service.

For the typical patient, how much total time do you personally spend performing this entire service from start to finish (i.e. base survey code 96167 and all increments of add-on survey code 96168)? Please answer in minutes (whole number). Note, the intent of this question is to determine the typical number of units you would report for these time-based survey codes by measuring the full length of time it typically takes for you to perform the service described.

The responses to this custom question regarding the total time it takes to perform the surveyed base code, 96167, and all units of the surveyed add-on code, 96168, are summarized below:

Min.	25th Percentile	Median	75th Percentile	Max.
1.50	52.5	60	75	145

Recommendations
In summary, based on comparison to crosswalk code 95940; *Continuous intraoperative neurophysiology monitoring in the operating room, one on one monitoring requiring personal attendance, each 15 minutes (List separately in addition to code for primary procedure)* (0.60 RVW, 0/15/0; 0.0400), support of intra-time and RVW recommendations from other comparison codes, and an IWPUT in alignment with that of it's corresponding base code, and other add-on codes in the family, **we recommend an RVW of 0.60 with 0 minutes pre-, 15 minutes intra-, and 0 minutes post-time for a total time of 15 minutes for 96168.**

We believe the changes are substantial and meet compelling evidence for the above recommended increase in time and RVU value.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

   CPT Code Global Work RVU Pre- Intra- Post-

+961X6	ZZZ	0.60	0	15	0

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 96154

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Clinical Psychology How often? Commonly

Specialty Licensed Clinical Social Worker How often? Commonly

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 9000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Medicare represents about 1/5 of the utilization in the country's healthcare system; therefore, these estimates are approximately 5 times the Medicare utilization for the existing codes. Additionally, the utilization numbers have been corrected to account for this being a 15 minute add-on code, billed subsequent to the new 30 minute base code

Specialty Clinical Psychologist Frequency 4500 Percentage 50.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,800
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Utilization is based upon current utilzation numbers for the existing service, and then corrected to account for this being a 15 minute add-on code that is billed subsequent to the 30-minute base code.

Specialty Clinical Psychologist Frequency 900 Percentage 50.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Evaluation Management

BETOS Sub-classification:
Office visit

BETOS Sub-classification Level II:

Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 96154

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

CPT Descriptor: Health behavior intervention, family (without the patient present), face-to-face; initial 30 minutes

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: The family of a 9-year-old boy diagnosed with Type I diabetes two years ago is referred for intervention because of the patient's continuing refusal to self-inject his insulin and to test his own glucose levels.

Percentage of Survey Respondents who found Vignette to be Typical: 69%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review patient records, including those from the physician and other team members, review results of any prior health behavior assessments, coordinate and strategize with interdisciplinary team members about the family's role in treatment.

Description of Intra-Service Work: Conduct face-to-face interaction with family members without the patient present. Facilitate family communication and provide education about the patient's illness or injury and resistance to change, engage and mobilize family support and problem-solving regarding treatment adherence, clarify family roles and caregiver responsibilities. Qualified health care professional documents in the medical record, describing the patient's status, family involvement and progress toward and/or modification of treatment goals based on patient progress or other confounding factors that arise.

Description of Post-Service Work: Coordinates and provides feedback to interdisciplinary team members and family. Facilitates follow-up care with team members and family.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	4%	0%	39%	57%	0%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	4%	44%	52%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	4%	57%	39%

Physical effort required	4%	87%	9%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	4%	53%	43%

2nd Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	0%	25%	75%	0%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	0%	100%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	0%	25%	75%
Physical effort required	0%	75%	25%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	0%	100%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

This existing code family (CPT® codes 96150-96155) describes health behavior assessment and intervention services primarily performed by non-physician qualified healthcare professionals who cannot report Evaluation and Management services. In October 2017, CPT code 96154; *Health and behavior intervention, each 15 minutes,*

face-to-face; family (with the patient present), was identified through a code screen as having a negative IWPUT of 0.0058.

At the April 2018 RUC meeting, the code was discussed at the Relativity Assessment Workgroup (RAW) meeting. It was noted that code 96154 has an intra-service time of 15 minutes but is listed as having a post-service time of 20 minutes, which was likely a data entry error (i.e. the 20 minutes should have been divided by the typical 4 units and entered as 5 minutes of post-service time). The RAW entertained a motion to make an editorial change to drop the post-time to 5 minutes to be consistent with the rest of the family; however, further discussion revealed that the family of codes had not been reviewed since their inception in 2001. As a result, the RAW recommended that 96154 and the related family of codes be referred back to CPT for revision.

The new code family was approved at the September 2018 CPT Editorial Panel meeting and surveyed by the American Psychological Association (APA) for the January 2019 RUC HCPAC meeting.

New/revised code 96170; Health behavior intervention, family (without the patient present), face-to-face; initial 30 minutes, has previously been reported as 96155; Health and behavior intervention, each 15 minutes, face-to-face; family (without the patient present). 96170 is also the base code of a base code/add-on code combination:

- 96170; *Health behavior intervention, family (without the patient present), face-to-face; initial 30 minutes*
- +96171; *Health behavior intervention, family (without the patient present), face-to-face; each additional 15 minutes (List separately in addition to code for primary service)*

Compelling Evidence

These codes reflect significant changes in the healthcare delivery system over the past 20 years. During that time there has been an increasing focus on the role of psychosocial factors in health, as well as a shift toward explicit assessment and intervention in these factors, particularly in primary care. The Health Behavior Assessment and Intervention codes were originally described and valued in 2001, but they have never been re-evaluated since their inception almost 20 years ago.

There are several factors comprising compelling evidence for this family of codes, including: flawed methodology and anomalous relationship; change in technique and knowledge; change in site of service; and change in patient population. As a result, we are requesting that compelling evidence be considered for the entire family of codes.

Flawed Methodology and Anomalous Relationship

RUC rationale for the original valuation of this family shows that the RUC valued these services primarily based on the psychiatric interview code 90801, a 60-minute service with 2.80 wRVU. RUC divided the value by 4, yielding a 15-minute service at 0.70 RVUs. That was based on the expectation that each of the new codes, reported in 15-minute increments, would typically be billed four (4) times per patient encounter, comprising a comparable 60-minute service to 90801.

The documented history provides evidence that incorrect assumptions were made in the initial valuation of the family of Health and Behavior codes. The RUC used the flawed building block methodology, in a manner that is no longer a RUC-accepted process, to value each 15-minute Health and Behavior diagnostic and treatment code, yielding wRVUs ranging from 0.44-0.50. It should also be noted that 90801, the primary service on which the existing Health and Behavior codes were built upon, is no longer an existing or valid code and the comparable service has different valuation today.

It is clear from current data that the assumption that every code would typically be billed for 60 minutes (four (4) 15-minute increments) was at best a gross estimation. Below is the current utilization, based on the actual 2016 Medicare Units of Service Performed on Same Date, for the code set. As can be seen in the chart, there is considerable variability across the code set in the mean number of units per encounter across all the 15-minute codes in the family.

		Number of Unique Occurrences (Same Day, Same Patient, Same Provider)			
CPT® Code	**Description**	**Mean**	**25th Percentile**	**Median**	**75th Percentile**

96150	Health and behavior assessment	**3.29**	2	**3**	4
96151	Health and behavior re-assessment	**2.30**	1	**2**	3
96152	Health and behavior individual intervention	**3.11**	2	**4**	4
96153	Health and behavior group intervention	**4.78**	4	**4**	6
96154	Health and behavior family intervention, with patient present	**5.31**	3	**5**	8
96155	Health and behavior family intervention, without patient present	**N/A**	N/A	**N/A**	N/A

It should also be noted that 96154 was valued in such a manner that it yielded a negative IWPUT (-0.0006), providing further evidence of flawed methodology in the original valuation of the services.

It is also clear that there is an anomalous relationship in the surveyed family of codes when compared to the Psychotherapy family of codes, on which it was based in 2001. The original and current surveys show that health and behavior services are very similar to the parallel mental health service, in terms of the modality by which the service is delivered as well as intensity. Differences in comparable code values between the two families were greatly increased when the Psychotherapy code set was reevaluated by the RUC in 2012. As can be seen below, all of the codes in current Health and Behavior code set are valued significantly lower when times and wRVUs are calculated to match those parallel services in the updated Psychotherapy code set.

Psychotherapy			**Health Behavior Assessment and Intervention**			
CPT® Code	**Units of Time**	**wRVU**	**CPT® Code**	**Calculated Time**	**wRVU**	**Calculated wRVU**
90791	60 mins	**3.00**	**96150**	15 min x 4 units = 60 mins	0.50	**2.00**
90832	30 mins	**1.50**	**96152**	15 mins x 2 units = 30 mins	0.48	**0.92**
90853	60 mins	**0.59**	**96153**	15 min x 4 units = 60 mins	0.10	**0.40**
90847	50 mins	**2.50**	**96154**	15 mins x 3.33 units = 50 mins	0.45	**1.50**
90846	50 mins	**2.40**	**96155**	15 mins x 3.33 units = 50 mins	0.44	**1.47**

Technique and Knowledge – Intervention/Treatment

Since 1998 there has been a significant increase in provider specialization and the development and adaptation of cognitive and other behavioral techniques to address psychological factors impacting physical health[1,2,3,4]. Treatment techniques have changed dramatically from simply applying behavioral expertise to physical health conditions to the development and adaptation of specific cognitive behavioral techniques and other treatments for specific physical health conditions.

These evidence-based techniques and treatments include cognitive restructuring, operant behavior therapy and contingency management, stimulus control, graded activation and behavioral activation, coping skills training, problem solving training, functional and structural family therapy, acceptance and commitment therapy, family communication training, relaxation skills training, motivational interviewing, behavior therapy. This change in technique and knowledge results in the work involved in Health and Behavior Intervention to be parallel and comparable to the work involved in traditional mental health therapy.

What differs in this particular service, when compared to others in this code set is the modality by which the service is delivered. There are three (3) different modalities of Health Behavior Interventions: Individual; Group,

or Family Interventions. Each of these modalities can be used to deliver the evidence-based treatments described above.

With these changes in technique, there has been specialization in training, as well as the development of treatment guidelines for psychologists providing these services in both the primary care[5] and specialty care settings such as cardiovascular disease,[6] obesity,[7] pain,[8] diabetes,[9] and bariatrics.[10]

Site of Service

Since the implementation of the code set in 2002, there has been a significant change in site of service with increasing use of the codes in outpatient settings for both primary care and specialty care. An examination of the Medicare claims data (2002 – 2017) supports the increased use in outpatient settings. For example, in 2002 9% of the claims for the Health and Behavior Assessment CPT Code were in General Outpatient compared to 24% in 2017. In 2002 only 4% of the claims for the Health and Behavior Individual CPT Code were in General Outpatient compared to 24% in 2017 and in 2002 only 30% of the claims for the Health and Behavior Individual Therapy CPT Code were in Physician Offices compared to 40% in 2017. This increase in the outpatient settings can be attributed to the increased focus of integrating behavioral health services into both primary care and specialty care settings.[11,12]

Patient Population

Since the development of the codes in 1998, the population of patients with chronic non-communicable diseases have been increasing[13] and this has also resulted in a significant increase in complexity and cost. At this time 5% of patients account for 50% of costs. The National Academy of Medicine[14] has identified the core groups of high cost patients, including children with severe disabilities, adults with significant chronic illness (Two or more complex conditions, and one complex plus one to five noncomplex conditions), frail elderly, and disabled patients under 65. Within those high cost groups, there is a subgroup of high needs patient. This subgroup is defined as complex medical high cost patients who also have circumstances requiring behavioral services, and who have functional limitations.[15,16] Effective and efficient treatment of these high cost and high need patients requires additional assessment to determine their behavioral and other service needs.

Of these conditions, *Heart Disease* is the number one cause of mortality and increased morbidity in the US. Poor adherence to cardiovascular disease medications carries significant psychological, physical, and economic costs, including failure to achieve therapeutic goals, high rates of hospitalization and health care costs, and incidence of death. Recent advances in psychological science and practice can effectively address these complex behavioral needs.[6] The six risk factors contributing to over a third of all health care costs are tobacco use, *poor diet*, substance abuse, *high Body Mass Index*, high *systolic blood pressure* and *high resting glucose levels*.[13] All have clear behavioral determinants that can be addressed for treatment.

Our health care system is now faced with an increasing opioid epidemic, which is derived from inappropriate pain management. Population level surveys indicate that between 11% and 40% of the U.S. population report some level of chronic pain, with millions suffering from daily, severe, and disabling pain.[16] Access to safe and effective care for people suffering from pain remains a priority that needs to be balanced in parallel with efforts to curb inappropriate opioid prescribing and use practices. Lastly, the number of bariatric surgeries is estimated to have increased 40% from 2011 to 2017.[17]

A review of the Medicare claims data from 2006 – 2014 for the existing H&B codes reveals increased use with patients with presentations focusing on pain, cardiovascular disease, diabetes, and obesity. For example, in 2006 only 5% of the utilization for the Health and Behavior Assessment CPT Code was for pain compared to 24% in 2014 and in 2006 only 3% of the utilization for the Health and Behavior Individual CPT Code was for cardiovascular disease compared to 11% in 2014.

Survey Process

The APA sought the approval of the RUC's Research Subcommittee prior to fielding their surveys. The subcommittee granted approval for the following items:

- Modification of the survey tools, including:
  - Detailed survey cover memo to respondents
  - A common reference service list for use for the entire family of codes.

- Replacing the term "physician" with "qualified health care professional".
- Adding a link to a PDF of the revisions approved by the CPT Editorial Panel at the September 2018 meeting
- Modifying the XXX – Evaluation and Management survey tool used to survey assessment including reassessment code, 96156
- Combining the XXX – Therapy survey tool with the standard ZZZ survey template and the time-based code template to survey the Intervention services for Individual (96158-96159), Group (96164-96165), Family with patient (96167-96168), and Family without patient present (96170-96171)
    - Adding a custom question to each of the time-based surveys (96158-96171) asking for survey participants to indicate the total amount of time they spend performing the entire service from start to finish (including the base code and all units of the add-on code) to allow capturing the total time and work involved in each clinical service.
    - Adding a custom question to the survey for Group intervention (96164-96165) asking for survey participants to indicate the typical number of patients they see in a group session, as well as minor language changes throughout to ask the survey participants to base the time and RVU estimates on the entire group session rather than calculating them on a per patient basis.

The surveys were sent to a random sample of applicable subsets which included APA members in Division 38 – Society for Health Psychology and Division 54 – Society for Pediatric Psychology. Our overall sample size included 2,285 people.

A common reference service list was used for the entire family of codes and was reviewed and approved by the RUC Research Subcommittee. APA developed new vignettes for each code in the family to reflect changes in current practice and the typical patients.

Analysis and Recommendations from the Expert Panel – 96170

The APA convened an expert panel with representation from solo, academic, and hospital-based practices, as well as adult and pediatric psychologists, to review the survey data and make recommendations.

The typical patient for this service was the family of a 9-year-old boy diagnosed with Type I diabetes two years ago is referred for intervention because of the patient's continuing refusal to self-inject his insulin and to test his own glucose levels.

The expert panel reviewed the survey results citing that 69% of the 36 survey respondents found the vignette typical and the median service performance rate was 21.

CPT code 90846; *Family psychotherapy (without the patient present), 50 minutes*, that was approved by the RUC with 5 minutes of pre, 50 minutes of intra, and 10 minutes of post-time and an RVW 2.40, was selected as the key reference service by 64% of the survey respondents.

The median survey results regarding time are 10 minutes pre-service, 41 minutes intra-service, and 15 minutes post-service. The expert panel felt that the survey median time was overvalued and that the pre-service time should be decreased to match the consistent pre-service time across the family. The intra-service time of 30 minutes is clearly stated in the code descriptor and pre- and post-time times are consistent with recommendations for the rest of the family. **Therefore, the panel recommends 5 minutes pre, 30 minutes intra, and 10 minutes post-service times for a total of 45 minutes**.

The expert panel reviewed the RVW survey data and determined that the 25th percentile value of 1.50 was appropriate for this service. Support for the 25th value can be found in the comparison of the surveyed code with the surveyed code recommendations for 96167; *Health behavior intervention, family (with the patient present), face-to-face; initial 30 minutes*. The pre-, intra-, and post time must remain consistent, as there is no difference in the activities performed prior to and/or after the family intervention service is provided. However, the decrease in the

recommended RVW for 96168 maintains relativity within the family and accounts for the patient not being present during the family intervention service.

The panel also compared the recommended time and RVW value to CPT code 90832; *Psychotherapy, 30 minutes with patient*, which has a pre-time of 5 minutes, intra-time at 30, a post time of 10 minutes, an RVW of 1.50 and an IWPUT of 0.0388. The pre-time of 5 minutes, intra-time of 30 minutes, post-time of 10 minutes and an IWPUT of 0.0388 of the comparison code are right in alignment with our recommended values.

The panel also identified CPT code 99497; *Advance care planning including the explanation and discussion of advance directives such as standard forms (with completion of such forms, when performed), by the physician or other qualified health care professional; first 30 minutes, face-to-face with the patient, family member(s), and/or surrogate* (5, 30, 10; RVW 1.50) as a comparison code that strongly supports our recommended time and RVW recommendations for 96170.

Custom Question – Total Time/Units for XXX base survey code and ZZZ add-on survey code(s)
Major structural changes were made to the majority of the existing codes. Because each of the revised codes reflect significant changes to the units of time that must reported, and because these services were previously reported in multiple units, APA requested the addition of the following custom question to capture data on the total time and work involved in each clinical service.

For the typical patient, how much total time do you personally spend performing this entire service from start to finish (i.e. base survey code 96170 and all increments of add-on survey code 96171)? Please answer in minutes (whole number). Note, the intent of this question is to determine the typical number of units you would report for these time-based survey codes by measuring the full length of time it typically takes for you to perform the service described.

The responses to this custom question regarding the total time, in minutes, it takes to perform the surveyed base code, 96170, and all units of the surveyed add-on code, 96171, are summarized below:

Min.	25th Percentile	Median	75th Percentile	Max.
2.50	45	60	73.5	115

Recommendations
In summary, based on strong support from identified comparison codes as well as comparison to similar services within the family to maintain relativity **we recommend the survey 25th percentile RVW of 1.50 with 5 minutes pre-, 30 minutes intra-, and 10 minutes post-time for a total time of 45 minutes for 96170.**

We believe the changes are substantial and meet compelling evidence for the above recommended increase in time and RVU value.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

CPT Code	Global	Work RVU	Pre-	Intra-	Post-
96170	XXX	1.50	5	30	10
+96171	ZZZ	0.59	0	15	0

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 96155

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Clinical Psychology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 6000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The existing code, 96155, is not a covered Medicare service so specific utilization data is not available. However, we believe that the utilization of these services mirror the utilzation of the family intervention sevice when the patient is present. Therefore, we used the current utilization numbers for 96154 to make the following estimates. Further, Medicare represents about 1/5 of the utilization in the country's healthcare system; therefore, these estimates are approximately 5 times the Medicare utilization for the existing code. This utilization corrects for the fact that this is now a 30 minute base code with a 15 minute add-on.

Specialty Clinical Psychology Frequency 3000 Percentage 50.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,200
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. As calculated on the national level above, we used the current Medicare utilzation for 96154 to make our estimates for 96155 and then corrected the utilization numbers to account for the fact that this is now a 30 minute base code with a 15 minute add-on code.

Specialty Clinical Psychology Frequency 600 Percentage 50.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	40%	60%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

This existing code family (CPT® codes 96150-96155) describes health behavior assessment and intervention services primarily performed by non-physician qualified healthcare professionals who cannot report Evaluation and Management services. In October 2017, CPT code 96154; *Health and behavior intervention, each 15 minutes,*

face-to-face; family (with the patient present), was identified through a code screen as having a negative IWPUT of 0.0058.

At the April 2018 RUC meeting, the code was discussed at the Relativity Assessment Workgroup (RAW) meeting. It was noted that code 96154 has an intra-service time of 15 minutes but is listed as having a post-service time of 20 minutes, which was likely a data entry error (i.e. the 20 minutes should have been divided by the typical 4 units and entered as 5 minutes of post-service time). The RAW entertained a motion to make an editorial change to drop the post-time to 5 minutes to be consistent with the rest of the family; however, further discussion revealed that the family of codes had not been reviewed since their inception in 2001. As a result, the RAW recommended that 96154 and the related family of codes be referred back to CPT for revision.

The new code family was approved at the September 2018 CPT Editorial Panel meeting and surveyed by the American Psychological Association (APA) for the January 2019 RUC HCPAC meeting.

New/revised code 96171; Health behavior intervention, family (without the patient present), face-to-face; each additional 15 minutes (List separately in addition to code for primary service), is the add-on code of a base code/add-on code combination:

- 96170; Health behavior intervention, family (without the patient present), face-to-face; initial 30 minutes
- +96171; Health behavior intervention, family (without the patient present), face-to-face; each additional 15 minutes (List separately in addition to code for primary service)

Compelling Evidence

These codes reflect significant changes in the healthcare delivery system over the past 20 years. During that time there has been an increasing focus on the role of psychosocial factors in health, as well as a shift toward explicit assessment and intervention in these factors, particularly in primary care. The Health Behavior Assessment and Intervention codes were originally described and valued in 2001, but they have never been re-evaluated since their inception almost 20 years ago.

There are several factors comprising compelling evidence for this family of codes, including: flawed methodology and anomalous relationship; change in technique and knowledge; change in site of service; and change in patient population. As a result, we are requesting that compelling evidence be considered for the entire family of codes.

Flawed Methodology and Anomalous Relationship

RUC rationale for the original valuation of this family shows that the RUC valued these services primarily based on the psychiatric interview code 90801, a 60-minute service with 2.80 wRVU. RUC divided the value by 4, yielding a 15-minute service at 0.70 RVUs. That was based on the expectation that each of the new codes, reported in 15-minute increments, would typically be billed four (4) times per patient encounter, comprising a comparable 60-minute service to 90801.

The documented history provides evidence that incorrect assumptions were made in the initial valuation of the family of Health and Behavior codes. The RUC used the flawed building block methodology, in a manner that is no longer a RUC-accepted process, to value each 15-minute Health and Behavior diagnostic and treatment code, yielding wRVUs ranging from 0.44-0.50. It should also be noted that 90801, the primary service on which the existing Health and Behavior codes were built upon, is no longer an existing or valid code and the comparable service has different valuation today.

It is clear from current data that the assumption that every code would typically be billed for 60 minutes (four (4) 15-minute increments) was at best a gross estimation. Below is the current utilization, based on the actual 2016 Medicare Units of Service Performed on Same Date, for the code set. As can be seen in the chart, there is considerable variability across the code set in the mean number of units per encounter across all the 15-minute codes in the family.

	Number of Unique Occurrences (Same Day, Same Patient, Same Provider)

CPT® Code	Description	Mean	25th Percentile	Median	75th Percentile
96150	Health and behavior assessment	**3.29**	2	**3**	4
96151	Health and behavior re-assessment	**2.30**	1	**2**	3
96152	Health and behavior individual intervention	**3.11**	2	**4**	4
96153	Health and behavior group intervention	**4.78**	4	**4**	6
96154	Health and behavior family intervention, with patient present	**5.31**	3	**5**	8
96155	Health and behavior family intervention, without patient present	**N/A**	N/A	**N/A**	N/A

It should also be noted that 96154 was valued in such a manner that it yielded a negative IWPUT (-0.0006), providing further evidence of flawed methodology in the original valuation of the services.

It is also clear that there is an anomalous relationship in the surveyed family of codes when compared to the Psychotherapy family of codes, on which it was based in 2001. The original and current surveys show that health and behavior services are very similar to the parallel mental health service, in terms of the modality by which the service is delivered as well as intensity. Differences in comparable code values between the two families were greatly increased when the Psychotherapy code set was reevaluated by the RUC in 2012. As can be seen below, all of the codes in current Health and Behavior code set are valued significantly lower when times and wRVUs are calculated to match those parallel services in the updated Psychotherapy code set.

Psychotherapy			Health Behavior Assessment and Intervention			
CPT® Code	**Units of Time**	**wRVU**	**CPT® Code**	**Calculated Time**	**wRVU**	**Calculated wRVU**
90791	60 mins	**3.00**	**96150**	15 min x 4 units = 60 mins	0.50	**2.00**
90832	30 mins	**1.50**	**96152**	15 mins x 2 units = 30 mins	0.48	**0.92**
90853	60 mins	**0.59**	**96153**	15 min x 4 units = 60 mins	0.10	**0.40**
90847	50 mins	**2.50**	**96154**	15 mins x 3.33 units = 50 mins	0.45	**1.50**
90846	50 mins	**2.40**	**96155**	15 mins x 3.33 units = 50 mins	0.44	**1.47**

<u>Technique and Knowledge – Intervention/Treatment</u>

Since 1998 there has been a significant increase in provider specialization and the development and adaptation of cognitive and other behavioral techniques to address psychological factors impacting physical health[1,2,3,4]. Treatment techniques have changed dramatically from simply applying behavioral expertise to physical health conditions to the development and adaptation of specific cognitive behavioral techniques and other treatments for specific physical health conditions.

These evidence-based techniques and treatments include cognitive restructuring, operant behavior therapy and contingency management, stimulus control, graded activation and behavioral activation, coping skills training, problem solving training, functional and structural family therapy, acceptance and commitment therapy, family communication training, relaxation skills training, motivational interviewing, behavior therapy. This change in technique and knowledge results in the work involved in Health and Behavior Intervention to be parallel and comparable to the work involved in traditional mental health therapy.

What differs in this particular service, when compared to others in this code set is the modality by which the service is delivered. There are three (3) different modalities of Health Behavior Interventions: Individual; Group, or Family Interventions. Each of these modalities can be used to deliver the evidence-based treatments described above.

With these changes in technique, there has been specialization in training, as well as the development of treatment guidelines for psychologists providing these services in both the primary care[5] and specialty care settings such as cardiovascular disease,[6] obesity,[7] pain,[8] diabetes,[9] and bariatrics.[10]

Site of Service

Since the implementation of the code set in 2002, there has been a significant change in site of service with increasing use of the codes in outpatient settings for both primary care and specialty care. An examination of the Medicare claims data (2002 – 2017) supports the increased use in outpatient settings. For example, in 2002 9% of the claims for the Health and Behavior Assessment CPT Code were in General Outpatient compared to 24% in 2017. In 2002 only 4% of the claims for the Health and Behavior Individual CPT Code were in General Outpatient compared to 24% in 2017 and in 2002 only 30% of the claims for the Health and Behavior Individual Therapy CPT Code were in Physician Offices compared to 40% in 2017. This increase in the outpatient settings can be attributed to the increased focus of integrating behavioral health services into both primary care and specialty care settings.[11,12]

Patient Population

Since the development of the codes in 1998, the population of patients with chronic non-communicable diseases have been increasing[13] and this has also resulted in a significant increase in complexity and cost. At this time 5% of patients account for 50% of costs. The National Academy of Medicine[14] has identified the core groups of high cost patients, including children with severe disabilities, adults with significant chronic illness (Two or more complex conditions, and one complex plus one to five noncomplex conditions), frail elderly, and disabled patients under 65. Within those high cost groups, there is a subgroup of high needs patient. This subgroup is defined as complex medical high cost patients who also have circumstances requiring behavioral services, and who have functional limitations.[15,16] Effective and efficient treatment of these high cost and high need patients requires additional assessment to determine their behavioral and other service needs.

Of these conditions, *Heart Disease* is the number one cause of mortality and increased morbidity in the US. Poor adherence to cardiovascular disease medications carries significant psychological, physical, and economic costs, including failure to achieve therapeutic goals, high rates of hospitalization and health care costs, and incidence of death. Recent advances in psychological science and practice can effectively address these complex behavioral needs.[6] The six risk factors contributing to over a third of all health care costs are tobacco use, *poor diet*, substance abuse, *high Body Mass Index*, high *systolic blood pressure* and *high resting glucose levels*.[13] All have clear behavioral determinants that can be addressed for treatment.

Our health care system is now faced with an increasing opioid epidemic, which is derived from inappropriate pain management. Population level surveys indicate that between 11% and 40% of the U.S. population report some level of chronic pain, with millions suffering from daily, severe, and disabling pain.[16] Access to safe and effective care for people suffering from pain remains a priority that needs to be balanced in parallel with efforts to curb inappropriate opioid prescribing and use practices. Lastly, the number of bariatric surgeries is estimated to have increased 40% from 2011 to 2017.[17]

A review of the Medicare claims data from 2006 – 2014 for the existing H&B codes reveals increased use with patients with presentations focusing on pain, cardiovascular disease, diabetes, and obesity. For example, in 2006 only 5% of the utilization for the Health and Behavior Assessment CPT Code was for pain compared to 24% in 2014 and in 2006 only 3% of the utilization for the Health and Behavior Individual CPT Code was for cardiovascular disease compared to 11% in 2014.

Survey Process

The APA sought the approval of the RUC's Research Subcommittee prior to fielding their surveys. The subcommittee granted approval for the following items:

- Modification of the survey tools, including:
  - Detailed survey cover memo to respondents
  - A common reference service list for use for the entire family of codes.
  - Replacing the term "physician" with "qualified health care professional".

- Adding a link to a PDF of the revisions approved by the CPT Editorial Panel at the September 2018 meeting
- Modifying the XXX – Evaluation and Management survey tool used to survey assessment including reassessment code, 96156
- Combining the XXX – Therapy survey tool with the standard ZZZ survey template and the time-based code template to survey the Intervention services for Individual (96158-96159), Group (96164-96165), Family with patient (96167-96168), and Family without patient present (96170-96171)
    - Adding a custom question to each of the time-based surveys (96158-96171) asking for survey participants to indicate the total amount of time they spend performing the entire service from start to finish (including the base code and all units of the add-on code) to allow capturing the total time and work involved in each clinical service.
    - Adding a custom question to the survey for Group intervention (96164-96165) asking for survey participants to indicate the typical number of patients they see in a group session, as well as minor language changes throughout to ask the survey participants to base the time and RVU estimates on the entire group session rather than calculating them on a per patient basis.

The surveys were sent to a random sample of applicable subsets which included APA members in Division 38 – Society for Health Psychology and Division 54 – Society for Pediatric Psychology. Our overall sample size included 2,285 people.

A common reference service list was used for the entire family of codes and was reviewed and approved by the RUC Research Subcommittee. APA developed new vignettes for each code in the family to reflect changes in current practice and the typical patients.

Analysis and Recommendations from the Expert Panel – 96171

The APA convened an expert panel with representation from solo, academic, and hospital-based practices, as well as adult and pediatric psychologists, to review the survey data and make recommendations.

The typical patient for this service was the family of a 9-year-old boy diagnosed with Type 1 diabetes two years ago is referred for intervention because of the patient's continuing refusal to self-inject his insulin and to test his own glucose levels. The family requires an additional 15 minutes of family health behavior services beyond the first 30 minutes.

The expert panel reviewed the survey results citing that 69% of the 36 survey respondents found the vignette typical and the median service performance rate was 14.

CPT code 90846; *Family psychotherapy (without the patient present), 50 minutes* was selected as the key reference service by 44% of the survey respondents. CPT code 90832; *Psychotherapy, 30 minutes with patient*, was chosen as the second key reference service. The expert panel determined that the survey respondents did not select ZZZ codes as their key reference or second key reference services because the base and add-on code structure is not common to psychologists and they are not yet familiar with their usage.

The median survey results regarding time are 0 minutes pre-service, 15 minutes intra-service, and 0 minutes post-service. The expert panel fully agreed with the median surveyed times as they accurately reflect proper pre- and post- times for the add-on service, and the median surveyed intra-time matches the time stated in the descriptor for 96171. **Therefore, the panel recommends the 0 minutes pre, 15 minutes intra, and 0 minutes post-service times for a total of 15 minutes**.

The expert panel reviewed the RVW survey data and determined that the 25th percentile value of 0.59 was appropriate for this service. Support for the 25th value can be found in the comparison of the surveyed code with the base-code, 96170. When relativity of the recommended values is compared across the family of intervention

services, the percent difference in RVU values between the base and add-on codes falls between 61-63% - this recommended value falls right in line with relativity, at 61%.

In a search of the RUC Database, the expert panel also identified CPT code 77003; *Fluoroscopic guidance and localization of needle or catheter tip for spine or paraspinous diagnostic or therapeutic injection procedures (epidural or subarachnoid) (List separately in addition to code for primary procedure)*, as an appropriate comparison code with a ZZZ global period. 77003 has an RVW of 0.60, 15-minutes of intra-service time, and an IWPUT of 0.0370 which compares well with our recommended values of 0.59 RVW, 15-minutes of intra-service time, and an IWPUT of 0.039.

Custom Question – Total Time/Units for XXX base survey code and ZZZ add-on survey code(s)
Major structural changes were made to the majority of the existing codes. Because each of the revised codes reflect significant changes to the units of time that must reported, and because these services were previously reported in multiple units, APA requested the addition of the following custom question to capture data on the total time and work involved in each clinical service.

For the typical patient, how much total time do you personally spend performing this entire service from start to finish (i.e. base survey code 96170 and all increments of add-on survey code 96171)? Please answer in minutes (whole number). Note, the intent of this question is to determine the typical number of units you would report for these time-based survey codes by measuring the full length of time it typically takes for you to perform the service described.

The responses to this custom question regarding the total time it takes to perform the surveyed base code, 96170, and all units of the surveyed add-on code, 96171, are summarized below:

Min.	25th Percentile	Median	75th Percentile	Max.
2.50	45	60	73.5	115

Recommendations
In summary, based on support from calculations of relativity within the family as well as identified comparison code data **we recommend the 25th percentile RVW of 0.59 with 0 minutes pre-, 15 minutes intra-, and 0 minutes post-time for a total time of 15 minutes for 96171.**

We believe the changes are substantial and meet compelling evidence for the above recommended increase in time and RVU value.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and

accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

CPT Code	Global	Work RVU	Pre-	Intra-	Post-
96170	XXX	1.50	5	30	10
+96171	ZZZ	0.59	0	15	0

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 96155

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Clinical Psychology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 9000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The existing code, 96155, is not a covered Medicare service so specific utilization data is not available. However, we believe that the utilization of these services mirror the utilzation of the family intervention sevice when the patient is present. Therefore, we used the current utilization numbers for 96154 to make the following estimates. Further, Medicare represents about 1/5 of the utilization in the country's healthcare system; therefore, these estimates are approximately 5 times the Medicare utilization for the existing code. This utilization corrects for the fact that this is now a 15 minute add-on billed subsequent to the 30 minute base code.

Specialty Clinical Psychology Frequency 4500 Percentage 50.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,800
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. As calculated on the national level above, we used the current Medicare utilzation for 96154 to make our estimates for 96155 and then corrected the utilization numbers to account for the fact that this is now a 15 minute add-on code billed subsequent to the primary 30-minute base code.

Specialty Clinical Psychology Frequency 900 Percentage 50.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Evaluation Management

BETOS Sub-classification:

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 96155

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

L:ast Updated 01/10/19

CPT Code: 96156

Specialty Society: American Psychological Association (APA)

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Non Facility Direct Practice Expense (PE) Inputs

CPT Long Descriptor: **Health behavior assessment, including re-assessment (ie, health-focused clinical interview, behavioral observations, clinical decision making)**

Global Period: **XXX** Meeting Date: **January 2019**

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:
   - **A consensus panel of experts from the American Psychological Association (APA) met by phone and email to develop the inputs.**

2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here:
   - **96156 represents a revision of CPT codes 96150; *Health and behavior assessment (eg, health-focused clinical interview, behavioral observations, psychophysiological monitoring, health-oriented questionnaires), each 15 minutes face-to-face with the patient; initial assessment* and 96151; *Health and behavior assessment (eg, health-focused clinical interview, behavioral observations, psychophysiological monitoring, health-oriented questionnaires), each 15 minutes face-to-face with the patient; re-assessment*. We have listed the current direct PE inputs for the existing services for reference.**

3. Is this code(s) typically billed with an E/M service?
   - **No**

   Is this code(s) typically billed with the E/M service in the nonfacility?
   - **No**

4. What specialty is the dominant provider in the nonfacility?
   - **Clinical Psychology**

   What percent of the time does the dominant provider provide the service(s) in the nonfacility?
   - **81%**

   Is the dominant provider in the nonfacility different then for the global?
   - **No**

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:
   - **N/A**

6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), you must provide compelling evidence. Please explain if the increase can be entirely accounted for because of an increase in physician time.
   - **N/A**

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here:
   - **N/A**

8. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? (please use this time rather than 5 minutes in your reference code)
   - **N/A**

   The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:
   - **N/A**

9. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*
   - **N/A**

10. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.
    - **N/A**

11. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities:
    - **N/A**

12. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.
    - **N/A**

13. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here:
    - **N/A**

14. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here:
    - **N/A**

15. List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here:
    - **N/A**

16. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here:
    - **N/A**

17. If there is any other item on your spreadsheet that needs further explanation please include here:
    - **N/A**

18. Please include an explanation of each line item:
    - **Unlike when the existing services were originally defined 20 years ago, the Assessment and Re-Assessment services described by the new/revised code, 96156, is now an observation and interview-based service; therefore, we did not carry over supply codes SA018 – kit, interactive materials for behavioral assessment or SK006 – assessment-monitoring instruments (50% use).**

- **However, as with the prior code set of which this is a revision, we estimate that approximately half of the utilization will be provided to pediatric patients; therefore, we did carry over supply code SA034 – kit, therapeutic toys-games (50% of the time).**
- **We have also recommended the addition of 0.05 units of SK114 – tissues (Kleenex) to the service as part of the emotional support to the patient.**

CPT Code: 96158

Specialty Society: American Psychological Association (APA)

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Non Facility Direct Practice Expense (PE) Inputs

CPT Long Descriptor: **Health behavior intervention, individual, face-to-face; initial 30 minutes**

Global Period: **XXX** Meeting Date: **January 2019**

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:
   - **A consensus panel of experts from the American Psychological Association (APA) met by phone and email to develop the inputs.**

2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here:
   - **96158 represents a revision of CPT code 96152; *Health and behavior intervention, each 15 minutes, face-to-face; individual*. We have listed the current direct PE inputs for the existing service as our reference.**

3. Is this code(s) typically billed with an E/M service?
   - **No**

   Is this code(s) typically billed with the E/M service in the nonfacility?
   - **No**

4. What specialty is the dominant provider in the nonfacility?
   - **Clinical Psychology**

   What percent of the time does the dominant provider provide the service(s) in the nonfacility?
   - **88%**

   Is the dominant provider in the nonfacility different then for the global?
   - **No**

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:
   - **N/A**

6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), you must provide compelling evidence. Please explain if the increase can be entirely accounted for because of an increase in physician time.
   - **N/A**

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here:
   - **N/A**

8. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? (please use this time rather than 5 minutes in your reference code)
   - **N/A**

   The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

- **N/A**

9. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

14. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here:
    - **N/A**

15. List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here:
    - **N/A**

16. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here:
    - N/A

17. If there is any other item on your spreadsheet that needs further explanation please include here:
    - **N/A**

18. Please include an explanation of each line item:
    - **The new/revised health behavior intervention services employ psychological and behavioral treatment approaches to address health risk behaviors, factors impeding adjustment to, management of, and recovery from the patient's medical condition. Therefore, because current clinical practice does not typically require its use, we did not carry over supply code SK006 – assessment-monitoring instruments (50% use).**
    - **We have requested the addition of 0.05 units of SK114 – tissues (Kleenex) to the service as part of the emotional support to the patient.**

CPT Code: +96165

Specialty Society: American Psychological Association (APA)

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Non Facility Direct Practice Expense (PE) Inputs

CPT Long Descriptor: **Health behavior intervention, group (2 or more patients), face-to-face; each additional 15 minutes (list separately in addition to code for primary service)**

Global Period: **ZZZ** Meeting Date: **January 2019**

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:
   - **A consensus panel of experts from the American Psychological Association (APA) met by phone and email to develop the inputs.**

2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here:
   - **96165 represents an add-on to the revision of CPT codes 96153; *Health and behavior intervention, each 15 minutes, face-to-face; group (2 or more patients)*.**

3. Is this code(s) typically billed with an E/M service?
   - **No**

   Is this code(s) typically billed with the E/M service in the nonfacility?
   - **No**

4. What specialty is the dominant provider in the nonfacility?
   - **Clinical Psychology**

   What percent of the time does the dominant provider provide the service(s) in the nonfacility?
   - **88%**

   Is the dominant provider in the nonfacility different then for the global?
   - **No**

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:
   - **N/A**

6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), you must provide compelling evidence. Please explain if the increase can be entirely accounted for because of an increase in physician time.
   - **N/A**

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here:
   - **N/A**

8. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? (please use this time rather than 5 minutes in your reference code)
   - **N/A**

The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

- **N/A**

9. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*
   - **N/A**

10. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.
    - **N/A**

11. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities:
    - **N/A**

12. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.
    - **N/A**

13. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here:
    - **N/A**

14. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here:
    - **N/A**

15. List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here:
    - **N/A**

AMA/Specialty Society RVS Update Committee
Health Care Professionals Advisory Committee Review Board Summary of Recommendations
New Technology/New Services

January 2019

Ultrasonic Wound Assessment – Tab 41

In 2005, the AMA RUC began the process of flagging services that represent new technology or new services as they were presented to the Committee. This service was flagged for CPT 2015 and reviewed at the October 2018 Relativity Assessment Workgroup meeting. The Workgroup indicated that the utilization is continuing to increase for this service. The RUC recommended that this service be resurveyed for physician work and practice expense for January 2019.

Compelling Evidence
The specialty societies indicated that there is compelling evidence that the physician work for CPT code 97610 *Low frequency, non-contact, non-thermal ultrasound, including topical application(s), when performed, wound assessment, and instruction(s) for ongoing care, per day,* has changed due to changes in the patient population. This service was last reviewed by the HCPAC in 2013. The technology was new in 2013 and the HCPAC and societies were concerned that the respondents overestimated the intra-service time and work because a wound size was not designated and therefore a crosswalk code was used to value the service. The current survey vignette specifies a wound size. With the new information regarding wound size communicated to the survey respondents, the patient population has changed as it is more clearly defined. This is reflected in the survey results with a median work value of 0.40 in comparison to a median work value of 0.51 in the survey conducted in 2013.

The HCPAC reviewed the survey results from 42 podiatrists and physical therapists for CPT code 97610 and agreed with the specialty society that the work RVU of 0.40, the survey median, appropriately accounts for the work required to perform this service. The HCPAC recommends 6 minutes of pre-service evaluation time, 15 minutes intra-service time and 5 minutes post-service time.

The HCPAC compared the surveyed code to key reference service 97035 *Application of a modality to 1 or more areas; ultrasound, each 15 minutes* (work RVU = 0.21 and 13 minutes total time), a service similar to the survey code but requiring 50% less time and estimated to be less intense and complex to perform and second key reference service 29581 *Application of multi-layer compression system; leg (below knee), including ankle and foot* (work RVU = 0.60 and 25 minutes total time), a service with similar total time, but more complex to perform. The HCPAC agreed codes 97035 and 29581 appropriately bracket code 97610. **The HCPAC recommends a work RVU of 0.40 for CPT code 97610.**

Practice Expense
The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
97610	Low frequency, non-contact, non-thermal ultrasound, including topical application(s), when performed, wound assessment, and instruction(s) for ongoing care, per day	XXX	0.40

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:97610 Tracking Number Original Specialty Recommended RVU: **0.40**
Presented Recommended RVU: **0.40**
Global Period: XXX Current Work RVU: **0.35** RUC Recommended RVU: **0.40**

CPT Descriptor: Low frequency, non-contact, non-thermal ultrasound, including topical application(s), when performed, wound assessment, and instruction(s) for ongoing care, per day

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 68-year-old female presents with a persistent lower extremity ulcer that currently measures 10 cm2. The wound is treated with low frequency, non-contact, non-thermal ultrasound therapy.

Percentage of Survey Respondents who found Vignette to be Typical: 88%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review patient chart and referral from physician. Perform an updated history of medications with special attention to current blood thinners. Review pertinent past medical problems and any new problems that may have arisen since the previous visit. Position patient and remove existing dressings. Confirm all necessary supplies are available. Prepare the ultrasound mist therapy device.

Description of Intra-Service Work: Document the wound status, classification, size, location, drainage, and depth. Inspect and palpate the surrounding skin, wound edge, and exposed soft tissue. Deliver low-frequency ultrasound mist therapy to the patient by holding the transducer and applicator 1 cm to 1.5 cm away from the wound bed and moving the applicator in a serpentine fashion along the entire wound and wound margin for the designated time based on the wound size. Wipe the wound bed with gauze. Assess the wound bed and surrounding tissue for clinical changes.

Description of Post-Service Work: Apply an appropriate surgical dressing. Provide for a moist healing environment to help assist with subsequent wound healing and granulation tissue formation. Determine type of padding and specific material needed to offload the ulcer area; cut pad to properly remove pressure; and apply padding. Instruct patient and/or caregiver on appropriate home care, including dressing changes, as necessary. Instruct on importance of controlling concomitant medical conditions. Enter patient progress notes in medical chart. Answer patient and/or family questions. Discuss (oral and written) patient progress with PCP/referring physician.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	32%	62%	5%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	26%	74%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	5%	58%	37%
Physical effort required	5%	68%	26%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	5%	47%	47%

2nd Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	0%	14%	29%	57%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	14%	29%	57%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	0%	29%	71%
Physical effort required	0%	43%	57%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	14%	86%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

In September 2005, the RUC began a process of flagging services that represent new technology as the codes were presented to the Committee. This October the RUC will review the codes that were flagged September 2013-April 2014 with three years of available claims data (2015, 2016 and preliminary 2017 data). Code 97610 was identified through this screen.

Compelling Evidence - *Flawed methodology in previous valuation.*

APMA and APTA conducted a RUC survey in 2013 and received an inadequate number of survey responses with experience. The MIST technology was new in 2013 and the HCPAC and societies were concerned that the respondents overestimated the intra-service time and work because a wound size was not designated (2013 survey median work RVU = 0.51; time = 10/25/10) and they believed the comparison code 97597 represented more work.

Therefore, it was recommended to directly crosswalk the time and work RVU from 29582 *Application of multi-layer compression system; thigh and leg, including ankle and foot, when performed* (work RVU = 0.35; time - 4/12/2). The HCPAC also noted that since 97610 represents the use of new technology, it would be placed on the new technology list to re-examine and possibly resurvey after use of the technology has diffused.

In 2018, code 29582 (the crosswalk code) was deleted because it did not represent correct medical standards. In 2016, similar code 29581 work RVU was increase from 0.25 to 0.60. In 2018, similar code 97597 work RVU was increase from 0.51 to 0.88 (RUC recommendation pending CMS determination).

We believe the previous valuation and assignment of times by direct crosswalk instead of survey data was based on concern about survey time and work estimates compared with similar procedures. Since that time, the similar procedures have been reviewed by the RUC and increased or deleted by CPT. We are more confident in the time and work estimates in the current survey and believe these data compare well with the key reference codes, MPC codes, and many other minor procedures and services performed by podiatrists and physical therapists.

Recommendation

We recommend the survey median percentile work RVU of 0.40 and the survey median pre/intra/post times 6/15/5.

Key Reference Codes

Pre and post time for code 97035 are lower than 97610 because 97035 is typically reported with 2-3 other modality or therapeutic services and times were reduced to account for overlap of work—this is not the case for 97610. Patients undergoing wound care services are typically only receiving those services. Therefore, the pre and post times for 97610 are correctly similar to reference code 29581.

CPT	DESCRIPTOR	RVW	IWPUT	TOTAL TIME	PRE	INTRA	POST
97035	Application of a modality to 1 or more areas; ultrasound, each 15 minutes	0.21	0.014	13	1	10	2
97610	Low frequency, non-contact, non-thermal ultrasound, including topical application(s), when performed, wound assessment, and instruction(s) for ongoing care, per day	0.40	0.010	26	6	15	5
29581	Application of multi-layer compression system; leg (below knee), including ankle and foot	0.60	0.025	25	7	13	5

MPC Comparison

CPT	DESCRIPTOR	RVW	IWPUT	TOTAL TIME	PRE	INTRA	POST
92250	Fundus photography with interpretation and report	0.40	0.036	12	1	10	1
97610	Low frequency, non-contact, non-thermal ultrasound, including topical application(s), when performed, wound assessment, and instruction(s) for ongoing care, per day	0.40	0.010	26	6	15	5
99407	Smoking and tobacco use cessation counseling visit; intensive, greater than 10 minutes	0.50	0.033	15	0	15	0

Other Code Comparison

The codes in the table below are familiar to podiatrist and physical therapists and have been recently reviewed. These data support the recommended times and work RVU for 97610. For example, codes that are related to wound care (11056, 29580, 97597) have similar pre and post times. The recommendation of 0.40 also compares well with therapy services that have 15 minutes of intra-time.

Year	CPT	DESCRIPTOR	Global	RVW	IWPUT	TOTAL TIME	PRE	INTRA	POST
2010	**29540**	Strapping; ankle and/or foot	000	**0.39**	0.021	18	7	9	2
	97610	Low frequency, non-contact, non-thermal ultrasound, including topical application(s), when performed, wound assessment, and instruction(s) for ongoing care, per day	XXX	**0.40**	0.010	26	6	15	5
2017	**97140**	Manual therapy techniques (eg, mobilization/ manipulation, manual lymphatic drainage, manual traction), 1 or more regions, each 15 minutes	XXX	**0.43**	0.023	19	2	15	2
2017	**97110**	Therapeutic procedure, 1 or more areas, each 15 minutes; therapeutic exercises to develop strength and endurance, range of motion and flexibility	XXX	**0.45**	0.024	19	2	15	2
2017	**97116**	Therapeutic procedure, 1 or more areas, each 15 minutes; gait training (includes stair climbing)	XXX	**0.45**	0.024	19	2	15	2
2017	**97113**	Therapeutic procedure, 1 or more areas, each 15 minutes; aquatic therapy with therapeutic exercises	XXX	**0.48**	0.026	19	2	15	2
2011	**11056**	Paring or cutting of benign hyperkeratotic lesion (eg, corn or callus); 2 to 4 lesions	000	**0.50**	0.030	19	7	10	2
2017	**97112**	Therapeutic procedure, 1 or more areas, each 15 minutes; neuromuscular reeducation of movement, balance, coordination, kinesthetic sense, posture, and/or proprioception for sitting and/or standing activities	XXX	**0.50**	0.027	19	2	15	2
2016	**29580**	Strapping; Unna boot	000	**0.55**	0.026	23	7	11	5
2018 RUC REC	**97597**	Debridement (eg, high pressure waterjet with/without suction, sharp selective debridement with scissors, scalpel and forceps), open wound, (eg, fibrin, devitalized epidermis and/or dermis, exudate, debris, biofilm), including topical application(s), wound assessment, use of a whirlpool, when performed and instruction(s) for ongoing care, per session, total wound(s) surface area; first 20 sq cm or less	000	**0.88**	0.039	29	9	15	5

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.

☐ Historical precedents.
☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 97610

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty podiatry How often? Rarely

Specialty physical therapy How often? Rarely

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period?
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. national data not available

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 5,011
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC database

Specialty podiatry Frequency 1150 Percentage 22.94 %

Specialty physical therapy Frequency 1000 Percentage 19.95 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? No

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Non Facility Direct Practice Expense (PE) Inputs

CPT Long Descriptor:
97610 Low frequency, non-contact, non-thermal ultrasound, including topical application(s), when performed, wound assessment, and instruction(s) for ongoing care, per day

Global Period XXX Meeting Date: 01-2019

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel: Society advisors reviewed the current PE details for 97610.

2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here: N/A- current direct PE inputs use as reference.

3. Is this code(s) typically billed with an E/M service? No
   Is this code(s) typically billed with the E/M service in the nonfacility? No
   (Please see provided data in PE Subcommittee folder)

4. What specialty is the dominant provider in the nonfacility? Podiatry
   What percent of the time does the dominant provider provide the service(s) in the nonfacility? 29%
   Is the dominant provider in the nonfacility different then for the global? No
   (Please see provided data in PE Subcommittee folder)

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time: N/A

6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), you must provide compelling evidence. Please explain if the increase can be entirely accounted for because of an increase in physician time. Total minutes increase from 31 to 34 reflective of the increase in intra-time from 12 to 15.

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here: N/A

8. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time:* Assist provider with performing the procedure, which includes assessment and documentation of the wound, maintain extremity position during the MIST therapy in a clean environment, and assisting with redressing the extremity.

9. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived. N/A

10. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities: N/A

11. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov. N/A

12. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here: N/A

13. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here: N/A

14. List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here:

EQ168	light, exam	Default	32	=+K33+K34+K35+K36+K37+K46+K57+K59
EF031	table, power	Default	32	=+K33+K34+K35+K36+K37+K46+K57+K59
EQ368	MIST Therapy Cart	Highly Technical	22	=+K36+K37+K46+K57
EQ372	MIST Therapy System	Highly Technical	22	=+K36+K37+K46+K57

15. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here: N/A

16. If there is any other item on your spreadsheet that needs further explanation please include here: N/A

17. Please include an explanation of each line item:

		current non-fac	recommended non-fac	
SB027	gown, staff, impervious	1	1	This is a wet procedure
SB022	globes, non-sterile		1	Both physician and staff were gloves. The multispecialty pack includes one pair, so one additional pair is needed.
SG051	gauze, non-sterile 4in x 4in	1	2	Cleansing wound after removing dressing and used to wipe up "mist" drippings from around wound during treatment
SA119	kit, low frequency ultrasound wound therapy (MIST)	1	1	Required for procedure. Each kit includes applicator, 2 disinfectant wipes (for equipment), absorbent pad (eg, chux), 100ml-1,000ml bag of saline
SJ009	basin, irrigation	1	0	delete - not typical
SG035	dressing, 3in x 4in (Telfa, Release)	2	1	post procedure dressing - cut to wound size as appropriate
SG052	gauze, self-adherent roll 0.5in to 2in (Fabco, Gauztex)	36	36	post procedure dressing
SG018	bandage, Kling, non-sterile 3in	1	1	post procedure dressing
SG079	tape, surgical paper 1in (Micropore)	12	12	post procedure dressing
EQ168	light, exam	19	30	necessary to assess wound
EF031	table, power	19	30	• A power table is standard equipment for the podiatry office and typical for all providers who would perform wound care services. That is to say that although other providers such as IM or NP may not typically have power tables in their office - if these providers

				perform wound care services, they will have a power table. • Wound care using MIST therapy is not something that would be common outside of specialized practices. These patients may need to be positioned prone or lateral while table low then height adjusted up for procedure. • PT and OT also provide this service and their hi-lo table is a power table, too. • Taken together, DPM, PT, and OT is 50% of the utilization in both the facility and non-facility. If you are only considering the office setting, then these three specialties are over 60%. **NOTE the following pricing by StrateGen indicates that a power table is less than the table used by PT and OT for these patients.:** EF031 table, power = $5,906.76 EF028 table mat hi-lo, 6.x8 = $11,850.35
EQ368	MIST Therapy Cart	19	22	required for procedure
EQ372	MIST Therapy System	19	22	required for procedure

AMA/Specialty Society RVS Update Committee Summary of Recommendations
Negative IWPUT for code 33015*

January 2019

Pericardiocentesis and Pericardial Drainage – Tab 4

In September 2018, CPT replaced four codes with four new codes to describe periodcardiocentesis drainage procedures to differentiate by age and to include imaging guidance. CPT Code 33015 was originally identified by the RUC's Relativity Assessment Workgroup for review due to its negative IWPUT.

Compelling Evidence
The RUC reviewed the specialty's presented argument for compelling evidence. While CPT code 33010 was on the RUC's first Five-Year Review agenda, no action was taken. The work RVU and times are from the Harvard study. Since that time, other similar services that involve a lower amount of physician work reviewed by the RUC and CMS, and now have higher values. This creates a rank order anomaly across families of cardiology services. The top key reference service 32557 *Pleural drainage, percutaneous, with insertion of indwelling catheter; with imaging guidance* (work RVU = 3.12) is one example of a service that involves less physician work yet is valued higher than code 33010 currently. Code 33015 currently has a very general code descriptor, was most recently valued under the Harvard study and has a negative IWPUT. Since code 33010 and 33015 were last valued, there has been a change in the patient population; patients who receive these services have become more complex, acute, and heterogeneous. These used to typically be patients who had chronic effusions during renal failure and dialysis. Today this is a heterogenous population, including malignancies, infections, iatrogenic effusions with tapenade, and other complications of implanted therapeutic devices like pacemakers and ICDs. The RUC accepted compelling evidence based on incorrect assumptions in prior valuation, rank order anomaly and a change in patient population.

33016 *Pericardiocentesis, including imaging guidance, when performed*
The RUC reviewed the survey results from 97 interventional cardiologists and agreed on the following physician time components: 18 minutes of pre-service evaluation, 1 minute of pre-service positioning, 6 minutes of pre-service scrub/dress/wait, 30 minutes of intra-service time and 20 minutes of immediate post-service time. Although this procedure is typically urgent to perform, it is not emergent.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the respondents appropriately valued the physician work involved in performing this service at the 25th percentile work RVU of 5.00. The RUC noted that this procedure is one of the more intense procedures that interventional cardiologists perform, with two of the most common complications being either lacerating the coronary artery or sticking the catheter into the right ventricle. To justify a work RVU of 5.00, the RUC compared the survey code to CPT code 45385 *Colonoscopy, flexible; with removal of tumor(s), polyp(s), or other lesion(s) by snare technique* (work RVU= 4.57, intra-service time of 30 minutes, total time of 68 minutes) and noted that both services have identical intra-service time and involve a similar intensity of physician work — the survey code involves approximately 10 percent more total time, supporting a higher valuation. The RUC also compared the survey code to CPT code 31276 *Nasal/sinus endoscopy, surgical, with frontal sinus exploration, including removal of tissue from frontal sinus, when performed* (work RVU= 6.75,

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

intra-service time of 45 minutes, total time of 98 minutes) and noted that the reference code involves more time, and is appropriately valued higher In addition, the RUC compared the survey code to CPT code 37191 *Insertion of intravascular vena cava filter, endovascular approach including vascular access, vessel selection, and radiological supervision and interpretation, intraprocedural roadmapping, and imaging guidance (ultrasound and fluoroscopy), when performed* (work RVU= 4.46, intra-service time of 30 minutes, total time of 73 minutes) and noted that although both services involve identical intra-service time, the survey code is clinically a much more intense service to perform, placing these services in the proper rank order. **The RUC recommends a work RVU of 5.00 for CPT code 33016.**

33017 ***Pericardial drainage with insertion of indwelling catheter, percutaneous, including fluoroscopy and/or ultrasound guidance, when performed; 6 years and older without congenital cardiac anomaly***

The RUC reviewed the survey results from 50 interventional cardiologists and agreed on the following physician time components: 18 minutes of pre-service evaluation, 1 minute of pre-service positioning, 6 minutes of pre-service scrub/dress/wait, 30 minutes of intra-service time and 22 minutes of immediate post-service time. The RUC agreed with the specialty society that although 33016 and 33017 involve the same amount of intra-service time and similar amounts of total time, the pericardial drainage procedure with insertion of indwelling catheter is a more intense service to perform, justifying a higher work value for a similar amount of time. This procedure includes all of the work of CPT code 33016, with the addition of suturing an indwelling catheter in place as well as the work of managing that catheter. This service is typically emergent as the patient is hemodynamically unstable. Even though this service is emergent, it is typically performed in the cardiac catheter lab and not at the bedside. With the drain left in place, the physician must provide additional documentation and additional instructions for care of the drain relative to 33016.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the respondents appropriately valued the physician work involved in performing this service at the 25th percentile work RVU of 5.50. To justify a work RVU of 5.50, the RUC compared the survey code to CPT code 93456 *Catheter placement in coronary artery(s) for coronary angiography, including intraprocedural injection(s) for coronary angiography, imaging supervision and interpretation; with right heart catheterization* (work RVU= 5.90, intra-service time of 40 minutes, total time of 108 minutes) and noted that the reference code involves more intra-service time and total time, justifying a higher valuation than the survey code. The RUC also compared the survey code to CPT code 31276 *Nasal/sinus endoscopy, surgical, with frontal sinus exploration, including removal of tissue from frontal sinus, when performed* (work RVU= 6.75, intra-service time of 45 minutes, total time of 98 minutes) and noted that the reference code involves more time and is appropriately valued higher. In addition, the RUC compared the survey to CPT code 37191 *Insertion of intravascular vena cava filter, endovascular approach including vascular access, vessel selection, and radiological supervision and interpretation, intraprocedural roadmapping, and imaging guidance (ultrasound and fluoroscopy), when performed* (work RVU= 4.46, intra-service time of 30 minutes, total time of 73 minutes) and noted that although both services involve identical intra-service time, the survey code is clinically a much more intense service to perform, placing these services in the proper rank order. **The RUC recommends a work RVU of 5.50 for CPT code 33017.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

33018 ***Pericardial drainage with insertion of indwelling catheter, percutaneous, including fluoroscopy and/or ultrasound guidance, when performed; birth through 5 years of age, or any age with congenital cardiac anomaly***
The RUC reviewed the survey results from 41 interventional cardiologists and agreed on the following physician time components: 40 minutes of pre-service evaluation, 3 minutes of pre-service positioning, 13 minutes of pre-service scrub/dress/wait, 30 minutes of intra-service time and 20 minutes of immediate post-service time. The specialty noted and the RUC agreed that unlike the other services in this family, general anesthesia is always used for this patient population. The specialty noted and the RUC agreed that, since there is less space for the fluid to accumulate in a small child, the target-zone is smaller for the needle, and therefore the procedure is more intense. Also, the patient is typically more complex relative to the typical patient for the other services in this new code family. The specialty noted that the pre-service evaluation time for this service is much longer because the physician is discussing the procedure with the parent of the patient which typically take longer than discussing the procedure with an adult patient, which is the typical patient for the other services in this family.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the survey 25th percentile work RVU of 5.00 undervalues the work of the service and the median work RVU of 7.00 overvalues the work required to perform the service. To determine an appropriate work RVU, the RUC compared the survey code to CPT code 31603 *Tracheostomy, emergency procedure; transtracheal* (work RVU= 6.00, intra-service time of 30 minutes, total time of 105 minutes) and noted that both services have identical intra-service time, involve a very similar amount of total time and an identical amount of physician work. Therefore, the RUC recommends a direct work RVU crosswalk from code 31603 to 33018. The RUC noted that this direct work RVU crosswalk would place this pediatric/congenital pericardial drainage in appropriate rank order with the other codes in the family, pericardiocentesis code 33X00 and adult pericardial drainage code 3XX01. The RUC compared the survey code to CPT code 45390 *Colonoscopy, flexible; with endoscopic mucosal resection* (work RVU= 6.04, intra-service time of 45 minutes, total time of 83 minutes) and noted that although the reference code involves more intra-service time, the survey code involves more total time and is more intense and complex to perform justifying the similar work value. In addition, the RUC compared the survey to CPT code 37191 *Insertion of intravascular vena cava filter, endovascular approach including vascular access, vessel selection, and radiological supervision and interpretation, intraprocedural roadmapping, and imaging guidance (ultrasound and fluoroscopy), when performed* (work RVU= 4.46, intra-service time of 30 minutes, total time of 73 minutes) and noted that although both services involve identical intra-service time, the survey code is clinically a much more intense service to perform, placing these services in the proper rank order. . **The RUC recommends a work RVU of 6.00 for CPT code 33018.**

33019 ***Pericardial drainage with insertion of indwelling catheter, percutaneous, including CT guidance***
The RUC reviewed the survey results from 50 radiologists and interventional radiologists and agreed on the following physician time components: 30 minutes of pre-service evaluation, 5 minutes of pre-service positioning, 6 minutes of pre-service scrub/dress/wait, 28 minutes of intra-service time and 15 minutes of immediate post-service time. The additional positioning time for this code relative to the others in the code family was due to the need to place the patient and their apparatus in the CT machine. This procedure is performed very uncommonly and only performed on patients where there is no viable approach for ultrasound due to existing scars or some other type of impediment.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the respondents appropriately valued the physician work involved in performing this service at the 25th percentile work RVU of 5.00. To justify a work RVU of 5.00, the RUC compared the survey code to CPT code 45385 *Colonoscopy, flexible; with removal of tumor(s), polyp(s), or other lesion(s) by snare technique* (work RVU= 4.57, intra-

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

service time of 30 minutes, total time of 68 minutes) and noted that although both services have similar intra-service time, the survey code involves more intense work including more complex, acutely ill patients as well as higher total time which supports a higher valuation. The RUC also compared the survey code to CPT code 31276 *Nasal/sinus endoscopy, surgical, with frontal sinus exploration, including removal of tissue from frontal sinus, when performed* (work RVU= 6.75, intra-service time of 45 minutes, total time of 98 minutes) and noted that the reference code involves more time and is appropriately valued higher. In addition, the RUC compared the survey code to CPT code 37191 *Insertion of intravascular vena cava filter, endovascular approach including vascular access, vessel selection, and radiological supervision and interpretation, intraprocedural roadmapping, and imaging guidance (ultrasound and fluoroscopy), when performed* (work RVU= 4.46, intra-service time of 30 minutes, total time of 73 minutes) and noted that although both services involve similar intra-service time, the survey code is clinically a much more intense service to perform, placing these services in the proper rank order. **The RUC recommends a work RVU of 5.00 for CPT code 33019.**

Practice Expense
The RUC recommends for this family of facility-only services to have no direct practice inputs as all services are only provided in the facility setting.

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
Surgery **Cardiovascular System** **Heart and Pericardium** **Pericardium** To report pericardial drainage with insertion of indwelling catheter (33017, 33018, 33019), the catheter needs to remain in place when the procedure is completed. Codes 33017, 33018, 33019 should not be reported when a catheter is placed to aspirate fluid and then removed at the conclusion of the procedure. Congenital cardiac anomaly for reporting percutaneous pericardial drainage with insertion of indwelling catheter ~~reporting~~ is defined as abnormal situs (heterotaxy, dextrocardia, mesocardia), single ventricle anomaly/physiology, or any patient in the first 90-day postoperative period after repair of a congenital cardiac anomaly. *(For thoracoscopic (VATS) pericardial procedures, see 32601, 32604, 32658, 32659, 32661)*

CPT Descriptor: Pericardiocentesis, including imaging guidance, when performed

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 52-year-old male with lung cancer presents with a large pericardial effusion, slowly accumulating over the past several weeks. Chest X ray shows an enlarged cardiac silhouette and ultrasound confirms presence of a large pericardial effusion. Fluid sample is requested for purpose of assisting with establishing etiology and staging.

Percentage of Survey Respondents who found Vignette to be Typical: 79%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The patient's clinical findings, history, medications, and allergies are reviewed, typically with the primary care team. All lab data is evaluated, particularly coagulation results, electrolytes, and indicators of infection. All existing imaging is reviewed, including echocardiogram, CXR, and CT/MR, if available. Procedure details are discussed with the family, including benefits versus risks, possible complications, sedation, and recovery time. All questions are answered, and a signed informed consent is obtained. The physician ensures that any necessary imaging, appropriate specimen containers, and all other necessary equipment are available. A pre-procedure time out is performed, and the physician communicates the plan with the other physicians (ICU or anesthesia) who may be present. The site is prepped and draped in sterile fashion by the physician.

Description of Intra-Service Work: Moderate sedation or general anesthesia is used, as applicable given the patient's clinical status and/or age. Depending on the clinical stability of the patient's condition, the procedure may be performed either at the bedside, often emergently, or transferred to the cardiac catheterization laboratory. Injection of local anesthetic carefully along the insertion site is made . With use of a sterile sleeve, continuous echocardiographic guidance is provided, typically by a second physician but not separately reportable. The optimal pocket of fluid is identified and percutaneous technique used to pass a needle through the skin and soft tissue, into the pericardial space, until fluid is aspirated. A thin guidewire is then passed through the needle into the pericardial space. This is often performed from the sub-xiphoid approach, however, can vary significantly to almost anywhere along the costal margin as appropriate. Fluoroscopy may or may not be used, depending on where the procedure is performed, and is not additionally reportable. Care must be taken to ensure the needle and wire are in the pericardial space. To this end this is performed with direct echocardiographic and/or fluoroscopic confirmation and an injection of agitated saline/blood mixture into the space is also performed. The needle can also be attached briefly to a pressure transducer to demonstrate absence of a ventricular waveform. Once absolutely certain of proper positioning, the needle is removed, and a small incision is made in the skin and the tract dilated with a dilator, and the larger bore wire is placed. A multi-side hole drain is then placed over that wire, within the pericardial sac, and fluid manually aspirated to expedite stabilizing the patient. Fluid continues to be withdrawn with frequent reassessment by ultrasound and adjustment of the catheter position to ensure complete and thorough drainage. The catheter is then reconnected to a pressure transducer to ensure the pericardial pressure has returned close to zero. The drain is then

removed. Fluid collected is then divided into multiple tubes for cell counts, chemistries, bacterial cultures, cytology and whatever else may be appropriate. A sterile, occlusive, dressing is applied. The extensive laboratory forms must be completed and associated with the samples.

Description of Post-Service Work: Post-procedure vital signs are assessed. If performed in the ICU, the patient's care is transferred back to the ICU team. If performed in the cardiac catheterization lab, the patient is transferred back to the ICU to resume care, and a hand off report given to the care team. A CXR is obtained (reported separately). When stable, the findings are reviewed with patient and/or legal representative. A report of the procedure is prepared for the medical record.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	0%	6%	61%	33%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	15%	85%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	6%	94%
Physical effort required	0%	45%	55%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	6%	94%

2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	21%	50%	29%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	7%	36%	57%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	29%	71%
Physical effort required	0%	21%	79%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	14%	86%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Code 33015 (Tube pericardiostomy) appeared on a recent CMS/RAW screen for codes with negative IWPUTs. The code was initially flagged for deletion by the RAW, but at CPT stakeholders realized percutaneous pericardial drainage procedures were being reported using 33015. However, the code descriptor was antiquated, and the 90-day global period is inconsistent with current practice and other drainage procedures. Work at CPT also ended up including changes to codes 33010 and 33011 that describe pericardiocentesis. These codes describe pericardiocentesis not involving the placement of an indwelling drainage catheter. It was also felt that physician work varied for percutaneous pericardial drainage for patients with congenital cardiac anatomy compared to those with normal anatomy. Each of these services may be performed with imaging guidance, though it varies by service.

SCAI and ACC distributed surveys for these three codes to two different random respondent pools. One pool of interventional cardiologists received a survey that included pericardiocentesis code 33016 and drainage code 33017. The other pool of pediatric and interventional cardiologists received a survey that included pericardiocentesis code 33016 and pediatric/congenital drainage code 33018.

Compelling Evidence that 33010 is misvalued

Incorrect Assumptions in Prior Valuation/Rank Order Anomaly: While 33010 was on the RUC's first 5-year review agenda, no action was taken. The RVU and times are Harvard values. Since that time, other similar services that would clinically and logically seem to carry lower values have been updated at CPT, reviewed by the RUC, and now have higher values. This creates a rank order anomaly across families. Survey KRS 32557 for percutaneous pleural drainage with catheter and imaging is one example. The societies believe compelling evidence exists that 33010 is misvalued. We also note that this procedure is performed a few thousand times a year in Medicare, so it would not have hit any prior screens.

Patient population has changed: Since this code was valued, the patients who receive this service have become more complex, acute, and heterogeneous. These used to typically be patients who had chronic effusions during renal failure and dialysis. Today this is a heterogenous population, including malignancies, infections, iatrogenic effusions with tapenade, and other complications of implanted therapeutic devices like pacemakers and ICDs.

Rationale

Key reference code 32557 for percutaneous pleural drainage with catheter and imaging was selected by 33 respondents. That service has an identical 30 minutes of intraservice time with slightly shorter pre- and post-service times at 3.12 work RVUs. Respondents predominantly indicated pericardiostomy to be more or much more intense/complex than pleural drainage. Second key reference code 37236 for transcatheter intravascular stent placement was selected by 14 respondents. That service is longer and has a higher value, but a similar intensity to the pleural drainage code. Respondents who selected this reference code again predominantly indicated pericardiostomy to be more or much more intense/complex.

For further comparison, MPC code 37191 for insertion of intravascular vena cava filter also has 30 minutes of intraservice time and nearly identical total time. However, by magnitude estimation, we believe it is appropriate for 33016 to have a higher work RVU than 37191. Therefore, the societies **recommend the survey 25th-percentile work RVU of 5.00 with 25 minutes preservice time from package 2, 30 minutes intraservice from the survey, and 20 minutes postservice time from package 8B with 8 minutes removed.**

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.

- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 33010

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty cardiology How often? Sometimes

Specialty interventional cardiology How often? Sometimes

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 19500
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Assuming Medicare PFS data is about a third of utilization, national use would approach be around 19,500

Specialty cardiology Frequency 8700 Percentage 44.61 %

Specialty interventional cardiology Frequency 6000 Percentage 30.76 %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 6,500
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Estimate based on 2017 Medicare PFS utilization and trend of some growth.

Specialty cardiology Frequency 2900 Percentage 44.61 %

Specialty interventional cardiology Frequency 2000 Percentage 30.76 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

SUMMARY OF RECOMMENDATION

CPT Code:33017 Tracking Number O2 Original Specialty Recommended RVU: **5.50**
Presented Recommended RVU: **5.50**
Global Period: 000 Current Work RVU: **n/a** RUC Recommended RVU: **5.50**

CPT Descriptor: Pericardial drainage with insertion of indwelling catheter, percutaneous, including fluoroscopy and/or ultrasound guidance, when performed; 6 years and older without congenital cardiac anomaly

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 62-year-old male with chronic heart failure and acute hemodynamic instability. Chest X ray shows an enlarged cardiac silhouette and ultrasound confirms presence of a large pericardial effusion. The patient is transported to the cardiac catheterization lab for pericardial drain placement.

Percentage of Survey Respondents who found Vignette to be Typical: 90%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The patient's clinical findings, history, medications, and allergies are reviewed. All lab data is evaluated, particularly coagulation results, electrolytes, and indicators of infection. All existing imaging is reviewed, including echocardiogram, CXR, and CT/MR, if available. Procedure details are discussed with the patient and/or legal representative, including benefits versus risks, possible complications, sedation, and recovery time. All questions are answered and a signed informed consent is obtained. The physician ensures that any necessary imaging, appropriate specimen containers, and all other necessary equipment are available. A pre-procedure time out is performed and the physician communicates the plan with the other members of the care team who may be present. Moderate sedation or general anesthesia is used, as applicable given the patient's clinical status and/or age. Depending on the clinical stability of the patient's condition, the procedure may be performed either at the bedside, often emergently, or transferred to the cardiac cath lab. The patient is prepped and draped in sterile fashion.

Description of Intra-Service Work: Moderate sedation or general anesthesia is used, as applicable given the patient's clinical status and/or age. Depending on the clinical stability of the patient's condition, the procedure may be performed either at the bedside, often emergently, or transferred to the cardiac catheterization laboratory. Injection of local anesthetic along the insertion site is completed. With use of a sterile sleeve, continuous echocardiographic guidance is provided, typically by a second physician but not and separately reportable. The optimal pocket of fluid is identified and percutaneous technique used to pass a needle through the skin and soft tissue, into the pericardial space, until fluid is aspirated. A thin guidewire is then passed through the needle into the pericardial space. This is often performed from the sub-xiphoid approach, however can vary significantly to almost anywhere along the costal margin as appropriate. Fluoroscopy may or may not be used, depending on where the procedure is performed, and is not additionally reportable. Care must be taken to ensure the needle and wire are in the pericardial space. This is performed with direct echocardiographic and/or fluoroscopic confirmation and, occasionally, an injection of agitated saline/blood mixture into the space is also performed. The needle can also be attached briefly to a pressure transducer to demonstrate absence of a ventricular waveform. Once absolutely certain of proper positioning, the needle is removed and a small incision is made in the skin and the tract dilated with a dilator, and the larger bore wire is placed. A multi-side hole drain is then placed over thate wire, within the pericardial sac, and fluid manually aspirated to expedite stabilizing the patient. Fluid continues to be

withdrawn with frequent reassessment by ultrasound and adjustment of the catheter position to ensure complete and thorough drainage. The catheter is then reconnected to a pressure transducer to ensure the pericardial pressure has returned close to zero. The drain is then secured with either sutures or other approved device and attached to suction. Fluid collected is then divided into multiple tubes for cell counts, chemistries, bacterial cultures, cytology and whatever else may be appropriate is sent for lab analysis. A sterile, occlusive, dressing is applied. The extensive laboratory forms must be completed and associated with the samples. The drain must be further secured against disruption by transit of the patient back to the intensive care unit.

Description of Post-Service Work: Post-procedure vital signs are assessed. If performed in the ICU, the patient's care is transferred back to the ICU team. If performed in the cardiac catheterization lab, the patient is transferred back to the ICU to resume care, and a hand off report given to the care team. A CXR is obtained (reported separately). When stable, the findings are reviewed with patient and/or legal representative. A report of the procedure is prepared for the medical record.

• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	0%	100%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Code 33015 (Tube pericardiostomy) appeared on a recent CMS/RAW screen for codes with negative IWPUTs. The code was initially flagged for deletion by the RAW, but at CPT stakeholders realized percutaneous pericardial drainage procedures were being reported using 33015. However, the code descriptor was antiquated, and the 90-day global period is inconsistent with current practice and other drainage procedures. Work at CPT also ended up including changes to codes 33010 and 33011 that describe pericardiocentesis. These codes describe pericardiocentesis not involving the placement of an indwelling drainage catheter. It was also felt that physician work varied for percutaneous pericardial drainage for patients with congenital cardiac anatomy compared to those with normal anatomy. Each of these services may be performed with imaging guidance, though it varies by service.

SCAI and ACC distributed surveys for these three codes to two different random respondent pools. One pool of interventional cardiologists received a survey that included pericardiocentesis code 33016 and drainage code 33017. The other pool of pediatric and interventional cardiologists received a survey that included pericardiocentesis code 33016 and pediatric/congenital drainage code 33018.

Rationale

Key reference code 37236 for transcatheter intravascular stent placement was selected by 17 respondents. That service is longer and has a higher value than 33017. Respondents predominantly indicated pericardial drainage to be more or much more intense/complex. Second key reference code 32557 for percutaneous pleural drainage with catheter and imaging was selected by 11 respondents. Respondents who selected this reference code again predominantly indicated pericardial drainage to be more or much more intense/complex.

For further comparison, MPC code 37191 for insertion of intravascular vena cava filter also has 30 minutes of intraservice time and nearly identical total time. However, by magnitude estimation, we believe it is appropriate for 33017 to have a higher work RVU than 37191. It should also be higher than 33016 to account for the drain placement, though we recognize that the intraservice times for both services was 30 minutes in the survey. Therefore, **the societies recommend the survey 25th-percentil work RVU of 5.50 with 25 minutes preservice time from package 2, 30 minutes intraservice from the survey, and 22 minutes postservice time from package 8B with 6 minutes removed.**

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 33015

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:33018 Tracking Number O3 Original Specialty Recommended RVU: **7.00**
Presented Recommended RVU: **7.00**
Global Period: 000 Current Work RVU: **n/a** RUC Recommended RVU: **6.00**

CPT Descriptor: Pericardial drainage with insertion of indwelling catheter, percutaneous, including fluoroscopy and/or ultrasound guidance, when performed; birth through 5 years of age, or any age with congenital cardiac anomaly

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 3-month-old, 6-kg infant male presents status post open-heart-surgery for repair of coarctation of the aorta and an atrial septal defect. Postoperative day two, the infant has rapid deterioration and hemodynamic instability. The ICU obtains a stat transthoracic echocardiogram, which confirms the presence of a large pericardial effusion, and evidence of tamponade physiology.

Percentage of Survey Respondents who found Vignette to be Typical: 73%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The patient's clinical findings, history, medications, and allergies are reviewed, typically with the primary care team. All lab data is evaluated, particularly coagulation results, electrolytes, and indicators of infection. All existing imaging is reviewed, including echocardiogram, CXR, and CT/MR, if available. Procedure details are discussed with the family, including benefits versus risks, possible complications, sedation, and recovery time. All questions are answered and a signed informed consent is obtained. The physician ensures that any necessary imaging, appropriate specimen containers, and all other necessary equipment are available. A pre-procedure time out is performed and the physician communicates the plan with the other physicians (ICU or anesthesia) who may be present. Depending on the emergent extent of the patient's condition, the procedure may be performed either at the bedside, or transferred to the cardiac cath lab. The patient is prepped and draped in sterile fashion. Application of local anesthetic may be applied.

Description of Intra-Service Work: With use of a sterile sleeve, continuous echocardiographic guidance is provided, typically by a second cardiologist and separately reportable. The optimal pocket of fluid is identified and percutaneous technique used to pass a needle through the skin and soft tissue, into the pericardial space, until fluid is aspirated. A thin guidewire is then passed through the needle into the pericardial space. This is often performed from the sub-xiphoid approach, however can vary significantly to almost anywhere along the costal margin as well as occasionally being over the right chest for patients with dextrocardia. Fluoroscopy may or may not be used, depending on where the procedure is performed, and is not additionally reportable. Due to the extremely small size of the patient's heart and pericardial sac, great care must be taken to ensure the needle and wire are in the pericardial space. This is performed with direct echocardiographic and/or fluoroscopic confirmation. Occasionally, an injection of agitated saline/blood mixture into the space is also performed. The needle can also be attached briefly to a pressure transducer to demonstrate absence of a ventricular waveform. Once absolutely certain of proper positioning, the needle is removed and a small incision is made in the skin and the tract dilated with a dilator, and removed. A multi-side hole drain is then placed over the wire, within the pericardial sac, and fluid manually aspirated to expedite stabilizing the patient. The drain is then secured with either sutures or other approved device and attached to suction. Fluid collected is sent for lab analysis. A sterile, occlusive, dressing is applied.

Description of Post-Service Work: Post-procedure vital signs are assessed. If performed in the ICU, the patient's care is transferred back to the ICU team. If performed in the cardiac catheterization lab, the patient is transferred back to the ICU to resume care, and a hand off report given to the care team. A CXR is obtained (reported separately). When stable, the findings are reviewed with patient's family. A report of the procedure is prepared for the medical record.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	0%	6%	56%	38%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	13%	87%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	0%	100%
Physical effort required	0%	56%	44%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	6%	94%

2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	14%	14%	57%	14%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	25%	75%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	25%	37%	38%
Physical effort required	13%	12%	75%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	0%	100%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Code 33015 (Tube pericardiostomy) appeared on a recent CMS/RAW screen for codes with negative IWPUTs. The code was initially flagged for deletion by the RAW, but at CPT stakeholders realized percutaneous pericardial drainage procedures were being reported using 33015. However, the code descriptor was antiquated, and the 90-day global period is inconsistent with current practice and other drainage procedures. Work at CPT also ended up including changes to codes 33010 and 33011 that describe pericardiocentesis. These codes describe pericardiocentesis not involving the placement of an indwelling drainage catheter. It was also felt that physician work varied for percutaneous pericardial drainage for patients with congenital cardiac anatomy compared to those with normal anatomy. Each of these services may be performed with imaging guidance, though it varies by service.

SCAI and ACC distributed surveys for these three codes to two different random respondent pools. One pool of interventional cardiologists received a survey that included pericardiocentesis code 33016 and drainage code 33017. The other pool of pediatric and interventional cardiologists received a survey that included pericardiocentesis code 33016 and pediatric/congenital drainage code 33018.

Rationale

Key reference code 32557 for percutaneous pleural drainage with catheter and imaging was selected by 17 respondents. Respondents who selected this reference code predominantly indicated pediatric/congenital pericardial drainage to be more or much more intense/complex than pleural drainage. Second key reference code 37236 for transcatheter intravascular stent placement was selected by 8 respondents. That service is longer and has a higher value, but a similar intensity to the pleural drainage code. Respondents who selected this reference code again predominantly indicated pericardiostomy to be more or much more intense/complex.

Building on the prior two codes, we believe it is appropriate for the work of pericardial drain placement that typically occurs in an infant or congenital patient to be valued higher than a similar procedure in a normal anatomy adult. However, we recognize that the intraservice times for each of these three codes is an identical 30 minutes and total times are also similar. We note that the pediatric interventionalists who completed the survey for 33018 are from a different pool and did not complete the survey for 33017, nor vice versa. However, we don't think mixing the two groups would have improved the survey as each group is unfamiliar with the other service and we would likely have a performance rate of 0 for both 33017 and 33018. As such, we are taking the unusual step of recommending the survey median for 33018 in order to build a work increment from pericardiocentesis to adult pericardial drainage to pediatric/congenital pericardial drainage. This change is supported by a difference in magnitude estimation, and also the use of general anesthesia in this patient population. **The societies recommend a work RVU of 7.00 with 63 minutes of preservice work from package 4, 30 minutes intraservice time from the survey, and 20 minutes postservice time from package 9B with 13 minutes removed.**

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the

provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 33015

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty cardiology How often? Sometimes

Specialty interventional cardiology How often? Sometimes

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 500
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Expert consensus

Specialty cardiology Frequency 250 Percentage 50.00 %

Specialty interventional cardiology Frequency 250 Percentage 50.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 5 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Pediatric and congenital patients are not commonly Medicare beneficiaries.

Specialty cardiology Frequency 2 Percentage 40.00 %

Specialty interventional cardiology Frequency 3 Percentage 60.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? No

CPT Descriptor: Pericardial drainage with insertion of indwelling catheter, percutaneous, including CT guidance

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 65-year-old male with a history of lymphoma, mediastinal radiation, and coronary artery bypass presents with an enlarged cardiac silhouette on chest X-ray, tamponade physiology, and a loculated posteriorly located pericardial effusion demonstrated by echocardiography.

Percentage of Survey Respondents who found Vignette to be Typical: 88%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review patient order, clinical history, and relevant prior imaging exams. Confirm appropriateness of imaging guidance and determine appropriate protocol and percutaneous approach. Assess need for contrast administration to assist guidance. Review patient history for contrast allergy, renal insufficiency or other contraindications for receiving contrast as needed. The range of devices that may be required is estimated, and all are ensured to be available for use. Discuss with the patient (and family) the risks due to radiation exposure and use of contrast dye (if needed) relative to other potential imaging modalities. Discuss the equipment being used, the close proximity of the CT gantry and potential for claustrophobia, prolonged immobility and repositioning to ensure optimal imaging for guidance and interpretation. Provide instructions for the radiologic technologists regarding patient positioning and proper settings for the imaging equipment. Confirm patient positioning and imaging setup, ensuring the entire area necessary can be imaged and that equipment and patient can be repositioned as needed during sterile procedure (i.e. the field must be clear of impediments to table motion for movement into and out of the CT gantry). The physician dresses in radiation safety attire. A surgical "time out" is performed.

Description of Intra-Service Work: Supervise and interpret scout views of area to be imaged to select appropriate field of view. Obtain and interpret preliminary CT images acquired to assess appropriate approach to the target(s), evaluate for unexpected findings, interval changes in target area(s), and adjust patient positioning or protocol as needed. The skin entry site is marked and prepped in sterile fashion. Perform intermittent or continuous CT guidance to direct needle to the pericardial space and reposition as necessary. Confirm satisfactory needle placement in the pericardial fluid collection. Fluid is aspirated and sent for appropriate laboratory analysis (eg. microbiology, chemistry, cell count) as needed.
A guide wire is passed into the collection and repeat imaging performed. The tract is serially dilated to the necessary size. A drainage catheter is advanced into the collection, and imaging (which may involve contrast injection) is performed to verify proper catheter position within the collection. The catheter is secured in place and then connected to a drainage system (eg. suction, gravity).

Obtain and interpret post-procedural CT to evaluate for complications. Interpret all images resulting from the study including dedicated review of the target(s) as well as all visualized viscera, fascial planes, vasculature, soft tissues, and osseous structures. Assess for complications or other unexpected findings.

Description of Post-Service Work: Post procedure vital signs are assessed. The results and further management are discussed with the patient and family, as well as the requesting physician as needed. The images are reviewed. Compare to all pertinent available prior studies. Dictate report for medical record. The procedure report and pertinent post procedure orders are reviewed and signed.

Modifier -51 Exempt Status
Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:
Is this new/revised procedure considered to be a new technology or service? Yes

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
49407	000	4.25	**RUC Time**

CPT Descriptor Image-guided fluid collection drainage by catheter (eg, abscess, hematoma, seroma, lymphocele, cyst); peritoneal or retroperitoneal, transvaginal or transrectal

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
49405	000	4.25	**RUC Time**

CPT Descriptor Image-guided fluid collection drainage by catheter (eg, abscess, hematoma, seroma, lymphocele, cyst); peritoneal or retroperitoneal, transvaginal or transrectal

KEY MPC COMPARISON CODES:
Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
49405	000	4.25	**RUC Time**	6,050

CPT Descriptor 1 Image-guided fluid collection drainage by catheter (eg, abscess, hematoma, seroma, lymphocele, cyst); visceral (eg, kidney, liver, spleen, lung/mediastinum), percutaneous

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
37191	000	4.46	**RUC Time**	32,181

CPT Descriptor 2 Insertion of intravascular vena cava filter, endovascular approach including vascular access, vessel selection, and radiological supervision and interpretation, intraprocedural roadmapping, and imaging guidance (ultrasound and fluoroscopy), when performed

Other Reference CPT Code	Global	Work RVU	Time Source
52441	000	4.50	**RUC Time**

CPT Descriptor Cystourethroscopy, with insertion of permanent adjustable transprostatic implant; single implant

RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:

Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by percent distribution) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Top Key Reference Code: 17 **% of respondents:** 34.0 **%**

Number of respondents who choose 2nd Key Reference Code: 14 **% of respondents:** 28.0 **%**

TIME ESTIMATES (Median)

	CPT Code: 33019	**Top Key Reference CPT Code:** 49407	**2nd Key Reference CPT Code:** **49405**
Median Pre-Service Time	41.00	35.00	35.00
Median Intra-Service Time	28.00	45.00	40.00
Median Immediate Post-service Time	15.00	20.00	20.00
Median Critical Care Time	0.0	0.00	0.00
Median Other Hospital Visit Time	0.0	0.00	0.00
Median Discharge Day Management Time	0.0	0.00	0.00
Median Office Visit Time	0.0	0.00	0.00

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	0%	6%	65%	29%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	6%	12%	82%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	24%	76%
Physical effort required	0%	76%	24%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	0%	100%

2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	14%	64%	21%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	14%	86%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	21%	79%
Physical effort required	0%	64%	36%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	0%	100%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

CPT code 33015 *(Tube pericardiostomy)* was identified on the Negative IWPUT screen. This code along with CPT codes 33010 and 33011 were deleted and replaced with four new codes (CPT codes 33016-33019) to describe pericardiocentesis drainage procedures to differentiate by age and to include imaging guidance. The American College of Radiology and Society of Interventional Radiology agreed to survey CPT code 33019 *(Pericardial drainage with insertion of indwelling catheter, percutaneous, including CT guidance)* for the January 2019 RUC meeting.

Survey Process

The ACR surveyed a total of 3752 members (a random sample of 1876 members and a separate random sample of 1876 members who perform interventional radiology procedures). The SIR surveyed a total of 1198 physicians from their membership.

Work RVU Recommendation

The specialties recommend a work RVU of 5.00 for CPT code 33019, which is the survey median value.

Time Recommendation

The specialties recommend 41 minutes of pre-service time using adjustments from pre-service package 2 (Difficult patient, Straightforward procedure). We recommend pre-service evaluation time of 30 minutes, which is 12 minutes more than the standard time of 18 minutes. This increased time is justified by the nature of the procedure and the additional evaluation time required for this subset of patients, who are unable to have a pericardial drainage procedure performed using another imaging modality because of anatomic or congenital complexities.

We recommend a pre-service positioning time of 5 minutes, which is 4 minutes more than the standard. The patients typically require non-standard positioning because of altered anatomy, which necessitated the CT guidance used in this procedure. Additionally, all support lines and tubing must be managed to allow the patient to move into and out of the CT gantry without compromising their support equipment or the guidance during the procedure.

We recommend pre-service scrub, dress, and wait time of 6 minutes, which is the standard for this time package.

We recommend the survey median times for intra-service and post-service work of 28 minutes and 15 minutes, respectively. This represents a decrease of 10 minutes from post-service package 8A.

Key Reference Services

The most commonly chosen reference codes by survey participants:

- **49407** *(Image-guided fluid collection drainage by catheter (eg, abscess, hematoma, seroma, lymphocele, cyst); peritoneal or retroperitoneal, transvaginal or transrectal),* chosen by 34% of respondents, and
- **49405** *(Image-guided fluid collection drainage by catheter (eg, abscess, hematoma, seroma, lymphocele, cyst); visceral (eg, kidney, liver, spleen, lung/mediastinum), percutaneous),* chosen by 28% respondents.

Both of the key reference service codes have longer intra-service and total times than the surveyed code; however, the surveyed code 33019 is a more intense procedure that requires both more technical skill and risk compared with the typical patients undergoing CPT codes 49405 and 49407. The patients undergoing 33019 are a difficult subset of patients who are more likely to have altered anatomy (either surgical or congenital) that requires a challenging approach to drain the pericardial fluid, which is why they could not have the fluid drained by fluoroscopy or ultrasound (33018). The codes are summarized in the table below.

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT
49405	Image-guided fluid collection drainage by catheter (eg, abscess, hematoma, seroma, lymphocele, cyst); visceral (eg, kidney, liver, spleen, lung/mediastinum), percutaneous	4.00	35	40	20	95	0.071
49407	Image-guided fluid collection drainage by catheter (eg, abscess, hematoma, seroma, lymphocele, cyst); peritoneal or retroperitoneal, transvaginal or transrectal	4.25	35	45	20	100	0.069
33019	**Pericardial drainage with insertion of indwelling catheter, percutaneous, including CT guidance**	**5.00**	**41**	**28**	**15**	**84**	**0.137**

MPC Codes

The surveyed code 33019 compares well with three other MPC codes, including second most commonly chosen key reference service, 49405 as discussed above.

Both codes 37191 and 52441 have two more minutes of intra-service work compared with the recommendation for 33019; however, both of these codes have slightly lower work RVUs. This value differential is appropriate due to the complexity of patients undergoing 33019 and the technical skill required for this specific procedure, particularly compared with 37191, which is also performed by the physicians who answered this survey. The table below summarizes these relationships.

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT
49405	Image-guided fluid collection drainage by catheter (eg, abscess, hematoma, seroma, lymphocele, cyst); visceral (eg, kidney, liver, spleen, lung/mediastinum), percutaneous	4.00	35	40	20	95	0.071
37191	Insertion of intravascular vena cava filter, endovascular approach including vascular access, vessel selection, and radiological supervision and interpretation, intraprocedural	4.46	28	30	15	73	0.119

	roadmapping, and imaging guidance (ultrasound and fluoroscopy), when performed						
52441	Cystourethroscopy, with insertion of permanent adjustable transprostatic implant; single implant	4.50	42	30	21	93	0.113
33019	**Pericardial drainage with insertion of indwelling catheter, percutaneous, including CT guidance**	**5.00**	**41**	**28**	**15**	**84**	**0.137**

Summary of Recommendations for CPT Code 33019

The societies recommend 5.00 RVU with service period times of 41, 28, and 15 minutes for CPT code 33019. The survey data, comparisons with the KRS and MPC codes, and relativity in the pericardial drainage family support these recommendations.

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT
33016	Pericardiocentesis, including imaging guidance, when performed	5.00	25	30	20	75	0.136
33019	**Pericardial drainage with insertion of indwelling catheter, percutaneous, including CT guidance**	**5.00**	**41**	**28**	**15**	**84**	**0.137**
33017	Pericardial drainage with insertion of indwelling catheter, percutaneous, including fluoroscopy and/or ultrasound guidance, when performed; 6 years and older without congenital cardiac anomaly	5.50	25	30	22	77	0.151
33018	Pericardial drainage with insertion of indwelling catheter, percutaneous, including fluoroscopy and/or ultrasound guidance, when performed; birth through 5 years of age, or any age with congenital cardiac anomaly	7.00	56	30	20	106	0.183

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions:

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 33010

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Commonly

Specialty Interventional Radiology How often? Commonly

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 17220
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The service described by CPT code 33010 is estimated to be provided 17,220 times nationally in a one-year period.

Specialty Diagnostic Radiology Frequency 541 Percentage 3.14 %

Specialty Interventional Radiology Frequency 129 Percentage 0.74 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 5,740
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The service described by CPT code 33010 is estimated to be provided 5,740 times nationally in a one-year period to Medicare patients.

Specialty Diagnostic Radiology Frequency 180 Percentage 3.13 %

Specialty Interventional Radiology Frequency 43 Percentage 0.74 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Major procedure

BETOS Sub-classification Level II:
Cardiovascular-Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 33010

AMA/Specialty Society RVS Update Committee Summary of Recommendations

January 2019

Iliac Branched Endograft Placement – Tab 5

For *CPT 2018*, the CPT Editorial Panel created a family of 20 new and revised codes that redefined coding for endovascular repair of the aorta and iliac arteries. A large part of this proposal involved bundling of services commonly performed together including catheter placement and radiologic supervision and interpretation. One part of this involved revising a Category III CPT code for the repair of an iliac artery aneurysm with an experimental iliac branched endograft (IBE) device. A separate Category III code for the supervision and interpretation was deleted as this service was bundled into the base code. Although there was one FDA-approved device available on the US market in January 2017 when the original endovascular repair (EVR) presentation was made to the CPT Editorial Panel, there was insufficient literature to support conversion of the Category III code to a Category I CPT code at that time.

Over the ensuing two years, the new endovascular repair codes have been adopted and the RUC recommendations have been confirmed by CMS. The iliac branched endograft technology has become more mainstream and the literature requirement for conversion to a CPT Category I code has been met. Two new Category I CPT codes were created to capture the work of iliac artery endovascular repair with an iliac branched endograft. Code 34717 is a ZZZ add-on code designed to be reported in conjunction with the standard endovascular repair codes for repair of an iliac artery at the same session as repair of an aortic aneurysm. Code 34718 is a 090-day global code that describes all the physician work to repair an iliac artery with an iliac branched endograft, either after previous placement of an endograft in the aorta more proximally or for the isolated repair of an iliac aneurysm.

34717 ***Endovascular repair of iliac artery at the time of aorto-iliac artery endograft placement by deployment of an iliac branched endograft including pre-procedure sizing and device selection, all ipsilateral selective iliac artery catheterization(s), all associated radiological supervision and interpretation, and all endograft extension(s) proximally to the aortic bifurcation and distally in the internal iliac, external iliac, and common femoral artery(ies), and treatment zone angioplasty/stenting, when performed, for rupture or other than rupture (eg, for aneurysm, pseudoaneurysm, dissection, arteriovenous malformation, penetrating ulcer, traumatic disruption), unilateral (List separately in addition to code for primary procedure)***

The RUC reviewed the survey results from 67 vascular surgeons and interventional radiologists and agreed on the following physician time components: 25 minutes of pre-service evaluation (all of which is for endograft planning time) and 90 minutes of intra-service time. The RUC noted that although this add-on service would be performed at the same time as an endovascular repair of an aortic pathology which also includes endovascular pre-service planning, the additional work necessary to plan for the iliac branched device repair requires additional time in order to review the aneurysm anatomy on CT angiogram, confirm the suitability of the anatomy for endovascular repair, make a large number of aortic diameter and center-line length measurements, review available endograft sizes and develop an operative plan that will successfully treat the pathology. The pre-service endograft planning is provided after evaluation in the office, but more than 24 hours prior to the procedure. The specialty society modified the survey instrument to add an additional question to capture time spent planning for endovascular repair. The

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

specialties noted that this is consistent with the code descriptors which include the phrase "including pre-procedure sizing and device selection." This is also consistent with how the RUC and CMS valued the endovascular repair family of services for CY 2018.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the respondents appropriately valued the work involved in performing this service at the 25th percentile work RVU of 9.00. To justify a work RVU of 9.00, the RUC compared the survey code to CPT code 22858 *Total disc arthroplasty (artificial disc), anterior approach, including discectomy with end plate preparation (includes osteophytectomy for nerve root or spinal cord decompression and microdissection); second level, cervical (List separately in addition to code for primary procedure)* (work RVU= 8.40, intra-service time of 75 minutes) and noted that the survey code involves more time and physician work to complete, justifying a higher work value. The RUC also compared the survey code to CPT code 35306 *Thromboendarterectomy, including patch graft, if performed; each additional tibial or peroneal artery (List separately in addition to code for primary procedure)* (work RVU= 9.25, intra-service and total time of 90 minutes) and noted that both services have identical intra-service time and should be valued similarly. The specialty noted that if this code was not created, when endovascular repair of the iliac artery was performed at the same time of aorto-iliac endograft placement, then the multiple procedure reduction would reduce the value by half, or 12.00 RVUs which is more RVUs than the value recommended for this add-on code. **The RUC recommends a work RVU of 9.00 for CPT code 34717.**

34718 ***Endovascular repair of iliac artery, not associated with placement of an aorto-iliac artery endograft at the same session, by deployment of an iliac branched endograft, including pre-procedure sizing and device selection, all ipsilateral selective iliac artery catheterization(s), all associated radiological supervision and interpretation, and all endograft extension(s) proximally to the aortic bifurcation and distally in the internal iliac, external iliac, and common femoral artery(ies), and treatment zone angioplasty/stenting, when performed, for other than rupture (eg, for aneurysm, pseudoaneurysm, dissection, arteriovenous malformation, penetrating ulcer), unilateral***
The RUC reviewed the survey results from 68 vascular surgeons and interventional radiologists and agreed on the following physician time components: 110 minutes of pre-service evaluation time (60 minutes of the pre-service evaluation time is for endograft planning time), 20 minutes for pre-service positioning time, 20 minutes for pre-service scrub/dress/wait, 120 minutes for intra-service time, 35 minutes for immediate post-time, 1 99233 visit, 1 99232 visit, 1 99238 discharge visit, 1 99213 office visit and 1 99212 office visit. The RUC noted that the additional pre-service work necessary to plan for the iliac branched device repair requires a substantial amount of planning time to review the aneurysm anatomy on CT angiogram, confirm the suitability of the anatomy for endovascular repair, make a large number of aortic diameter and center-line length measurements, review available endograft sizes and develop an operative plan that will successfully treat the pathology at hand. The endograft planning portion of pre-service evaluation time is provided after evaluation in the office, but more than 24 hours prior to the procedure. Therefore, prior to conducting their surveys, the multispecialty panel received approval to add an additional question to the RUC survey to capture time spent planning for EVAR. The specialties noted that this is consistent with the code descriptors which include the phrase "including pre-procedure sizing and device selection." This is also consistent with how the RUC and CMS valued the EVAR family of services for CY 2018.

The RUC agreed with the specialties that pre-service package 4 was appropriate for EVR procedures with adjustment to the times for addition of endovascular repair planning time. The specialties noted and the RUC agreed that the recommended pre-service times appropriately captured the additional work the day before and the day of the procedure to ensure that all necessary supplies are available for the operation, to ensure that the radiologic equipment is operational and prepared for the procedure, and to re-review the extensive anatomic imaging prior to performing the

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

procedure. An additional 17 minutes of positioning time has been added to account for positioning the imaging equipment and operating room equipment to minimize conflicts between equipment and patient during surgery, appropriately positioning the patient with arms tucked as indicated, and confirming that all EKG leads and IV, Foley and arterial catheter lines are clear from the areas to be imaged during the procedure.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the respondents appropriately valued the work involved in performing this service, at the 25th percentile work RVU of 24.00. To justify a work RVU of 24.00, the RUC compared the survey code to top key reference code 34701 *Endovascular repair of infrarenal aorta by deployment of an aorto-aortic tube endograft including pre-procedure sizing and device selection, all nonselective catheterization(s), all associated radiological supervision and interpretation, all endograft extension(s) placed in the aorta from the level of the renal arteries to the aortic bifurcation, and all angioplasty/stenting performed from the level of the renal arteries to the aortic bifurcation; for other than rupture (eg, for aneurysm, pseudoaneurysm, dissection, penetrating ulcer)* (work RVU=23.71, intra-service time of 120 minutes and total time of 482 minutes) and noted that both services have identical intra-service time, involve similar pre-service and post-service time and the same number and level of post-operative visits. The specialty noted and the RUC agreed that the key reference code involves utilizing straight tubes, whereas the survey code involves bifurcated branches, which makes 34718 more complex and intense to perform. Of the survey respondents that selected CPT code 34701 as their reference code, 90% indicated that the survey code is more intense and complex to perform. **The RUC recommends a work RVU of 24.00 for CPT code 34718.**

Practice Expense
The RUC recommends the direct practice expense inputs as submitted by the specialty society as they are consistent with standard inputs for 90 day global services.

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
Surgery **Cardiovascular System** **Arteries and Veins** **Endovascular Repair of Abdominal Aorta and/or Iliac Arteries** *Codes 34701, 34702…* <u>Add-on code 34717 is reported at the time of aorto-iliac artery endograft placement (34703, 34704, 34705, 34706) for deployment of a bifurcated endograft in the common iliac artery with extension(s) into both the internal iliac and external iliac arteries, when performed, to maintain perfusion in both vessels for treatment of iliac artery pathology (with or without rupture), such as aneurysm, pseudoaneurysm, dissection, penetrating ulcer, arteriovenous malformation or traumatic disruption. The iliac branched endograft is a multi-piece system consisting of a bifurcated device that is placed in the common iliac artery and then additional extension(s) are placed into both the internal iliac artery and external iliac/common femoral arteries as needed, as well as a proximal extension that overlaps with an aorto-iliac endograft, when</u>				

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

performed. All additional extensions proximally into the common iliac artery or distally into the external iliac and/or common femoral arteries are inherent to these codes.

Report 34705 or…

For isolated bilateral iliac artery repair using iliac artery tube endografts, report 34707 or 34708 with modifier 50 appended.

Decompressive laparotomy for…

The treatment zone for endograft procedures is defined by those vessels that contain an endograft(s) (main body, docking limb[s], and/or extension[s]) deployed during that operative session. Adjunctive procedures outside the treatment zone may be separately reported (eg, angioplasty, endovascular stent placement, embolization). For example, when an endograft terminates in the common iliac artery, any additional treatment performed in the external and/or internal iliac artery may be separately reportable. Placement of a docking limb is inherent to a modular endograft(s), and, therefore, 34709 may not be reported separately if the docking limb extends into the external iliac artery. In addition, any interventions (eg, angioplasty, stenting, additional stent graft extension[s]) in the external iliac artery where the docking limb terminates may not be reported separately. Any catheterization or treatment of the internal iliac artery, such as embolization, may be separately reported. For 34701 and 34702, the abdominal aortic treatment zone is defined as the infrarenal aorta. For 34703 and 34704, the abdominal aortic treatment zone is typically defined as the infrarenal aorta and ipsilateral common iliac artery. For 34705 and 34706, the abdominal aortic treatment zone is typically defined as the infrarenal aorta and both common iliac arteries. For 34707, ~~and~~ 34708, 34717, and 34718, the treatment zone is defined as the portion of the iliac artery(ies) (eg, common, internal, external iliac arteries) that contains the endograft. ~~For a bifurcated iliac branch device, use 0254T.~~

Codes 34702, 34704…

Code 34709 is…

Codes 34710, 34711…

If an aorto-iliac artery endograft (34703, 34704, 34705, 34706) is not being placed during the same operative session, 34718 may be reported for placement of a bifurcated endograft in the common iliac artery with extension(s) into both the internal iliac and external iliac arteries, to maintain perfusion in both vessels for treatment of iliac artery pathology (without rupture), such as aneurysm, pseudoaneurysm, dissection, arteriovenous malformation. The iliac branched endograft is a multi-piece system consisting of a bifurcated device that is placed in the common iliac artery and then additional extension(s) are placed into both the internal iliac artery and external iliac/common femoral arteries as needed as well as a proximal extension that overlaps with an aorto-iliac endograft, when performed. All additional extensions placed proximally into the common iliac artery or distally into the external iliac and/or common femoral arteries are inherent to these codes. For isolated bilateral iliac artery repair using iliac artery branched endografts, use 34718 with modifier 50 appended.

Codes 34709, 34710, 34711 may not be separately reported with 34717, 34718 for ipsilateral extension prosthesis(es). However, 34709, 34710, 34711 may be reported separately for extension prosthesis(es) in the iliac/femoral arteries contralateral to the iliac branched endograft.

Nonselective catheterization is…

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Selective arterial catheterization of the internal and external iliac arteries (eg, 36245, 36246, 36247, 36248) ipsilateral to an iliac branched endograft is included in 34717, 34718 and not separately reportable. However, selective catheterization of the renal artery(s), the contralateral hypogastric artery, and/or arterial families outside the treatment zone of the graft may be separately reported. Intravascular ultrasound (37252, 37253) performed during endovascular aneurysm repair may be separately reported. Balloon angioplasty within the target treatment zone of the endograft, either before or after endograft deployment, is not separately reportable. Fluoroscopic guidance and radiological supervision and interpretation in conjunction with endovascular iliac branched repair is not separately reportable and includes all intraprocedural imaging (eg, angiography, rotational CT) of the aorta and its branches prior to deployment of the endovascular device, fluoroscopic guidance in the delivery of the endovascular components, and intraprocedural arterial angiography (eg, confirm position, detect endoleak, evaluate runoff) performed at the time of the endovascular aorto-iliac repair).

Codes 34709, 34710…

Code 34712 describes…

Vascular access requiring...

Code 34812 describes…

Balloon angioplasty and/or…

34707 *Endovascular repair of iliac artery by deployment of an ilio-iliac tube endograft including pre-procedure sizing and device selection, all nonselective catheterization(s), all associated radiological supervision and interpretation, and all endograft extension(s) proximally to the aortic bifurcation and distally to the iliac bifurcation, and treatment zone angioplasty/stenting, when performed, unilateral; for other than rupture (eg, for aneurysm, pseudoaneurysm, dissection, arteriovenous malformation)*

(For covered stent placement[s] for atherosclerotic occlusive disease of the abdominal aorta, see 37236, 37237)

(For covered stent placement[s] for atherosclerotic occlusive disease of the iliac artery, see 37221, 37223)

34708 *for rupture including temporary aortic and/or iliac balloon occlusion, when performed (eg, for aneurysm, pseudoaneurysm, dissection, arteriovenous malformation, traumatic disruption)*

(For endovascular repair of iliac artery by deployment of an iliac branched endograft, see 34717, 34718)

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

✚●34717	P1	Endovascular repair of iliac artery at the time of aorto-iliac artery endograft placement by deployment of an iliac branched endograft including pre-procedure sizing and device selection, all ipsilateral selective iliac artery catheterization(s), all associated radiological supervision and interpretation, and all endograft extension(s) proximally to the aortic bifurcation and distally in the internal iliac, external iliac, and common femoral artery(ies), and treatment zone angioplasty/stenting, when performed, for rupture or other than rupture (eg, for aneurysm, pseudoaneurysm, dissection, arteriovenous malformation, penetrating ulcer, traumatic disruption), unilateral (List separately in addition to code for primary procedure) (Use 34717 in conjunction with 34703, 34704, 34705, 34706) (34717 may only be reported once per side. For bilateral procedure, report 34717 twice) (Do not report 34717 in conjunction with 34709 on the same side) (Do not report 34717 in conjunction with 34710, 34711) (For placement of an iliac branched endograft at a separate setting than aorto-iliac endograft placement, use 34718)	ZZZ	9.00
✚*34709*	*Placement of extension prosthesis(es) distal to the common iliac artery(ies) or proximal to the renal artery(ies) for endovascular repair of infrarenal abdominal aortic or iliac aneurysm, false aneurysm, dissection, penetrating ulcer, including pre-procedure sizing and device selection, all nonselective catheterization(s), all associated radiological supervision and interpretation, and treatment zone angioplasty/stenting, when performed, per vessel treated (List separately in addition to code for primary procedure)* *(Use 34709 in conjunction with 34701, 34702, 34703, 34704, 34705, 34706, 34707, 34708)* *(34709 may only be reported once per vessel treated [ie, multiple endograft extensions placed in a single vessel may only be reported once])* *(Do not report 34709 for placement of a docking limb that extends into the external iliac artery)* (For placement of an iliac branched endograft, see 34717, 34718) *(For endograft placement into a renal artery that is being covered by a proximal extension, see 37236, 37237)*

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:34717 Tracking Number P1 Original Specialty Recommended RVU: **10.50**
Presented Recommended RVU: **10.50**
Global Period: ZZZ Current Work RVU: RUC Recommended RVU: **9.00**

CPT Descriptor: Endovascular repair of iliac artery at the time of aorto-iliac artery endograft placement by deployment of an iliac branched endograft including pre-procedure sizing and device selection, all ipsilateral selective iliac artery catheterization(s), all associated radiological supervision and interpretation, and all endograft extension(s) proximally to the aortic bifurcation and distally in the internal iliac, external iliac, and common femoral artery(ies), and treatment zone angioplasty/stenting, when performed, for rupture or other than rupture (eg, for aneurysm, pseudoaneurysm, dissection, arteriovenous malformation, penetrating ulcer, traumatic disruption), unilateral (List separately in addition to code for primary procedure)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: During endovascular repair with an aorto-iliac artery endograft, a 75-year-old male with coronary artery disease (CAD), chronic obstructive pulmonary disease (COPD), and asymptomatic infrarenal abdominal aortic and right common iliac artery aneurysms undergoes endovascular repair of the iliac artery with an iliac branched endograft. [Note: This is an add-on service. Only consider the additional work related to endovascular repair of the iliac artery with an iliac branched endograft].

Percentage of Survey Respondents who found Vignette to be Typical: 100%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Preservice endograft planning: Extensive and detailed review of the preoperative imaging studies is required to determine the exact measurements of the aneurysm and to select the precise, correct endograft. This work is unique in that it would not be performed until after the decision for surgery. However, it must be completed several days prior to surgery to ensure that all required implants are ordered and have arrived on site before surgery begins. An accurate preoperative choice of component diameters and lengths is a primary determinant of whether the endovascular procedure will be successful, so this work must be done carefully. Cross-sectional imaging from the aortic arch to femoral vessels with fine cuts are reviewed and uploaded to a workstation, where 3D software is used, permitting iterative modeling of a virtual device within the aorta in multiplanar views and center line of flow analysis. The physician manually adjusts the modeling for altered anatomy, which is tortuous or thrombus laden. Orthogonal centerline imaging is used to determine diameter measurements of the aorta, internal, external iliac and femoral arteries for appropriate sizing of the main body endograft and limbs with extensions or branches. The iliac and femoral diameters also determine the success of the device delivery and any potential adjunctive maneuvers that may be required to facilitate delivery. Tortuosity, calcification, thrombus presence, and stenosis require consideration as they may affect device delivery. Cross section, longitudinal, and centerline of flow measurements, with manual adjustments where needed, are used to map the distances between the proximal landing zone and the distal seal zones in the internal iliac and external iliac and/or common femoral artery, depending on the extent and involvement of the iliac aneurysmal disease. A stretched/straightened view permits manual validation of the computer-generated lengths.

Description of Intra-Service Work: The iliac branch endograft, catheters, and introducer sheaths are brought onto the operating table after verification of appropriate diameters and lengths once EVR has been performed. The patient remains systemically anticoagulated. The entry wire(s) is used to enter the pre existing sheath under fluoroscopic guidance. A multi-sidehole catheter is placed and flush aorto-iliac angiography is performed with interpretation. A bifurcated iliac branch device is inserted into the common iliac limb after orientation to the internal iliac position. Selective wire access with catheter insertion into the internal iliac artery from a contralateral approach and through the iliac branch device which has been partially deployed. An internal iliac endoprosthesis is then placed through the iliac branch bifurcated graft and mated to it above and into the main internal iliac artery below. The iliac branch device is then deployed into the external iliac artery. The external iliac artery endoprosthesis is then deployed to mate with the bifurcated device and into the distal external iliac or femoral artery. A large compliant balloon is placed over the wire into the iliac endograft(s) to perform balloon dilation at the proximal and distal seal zones of the endograft.

An aortogram is performed (not separately reportable) and immediately interpreted for adequacy of the graft position, patency of appropriate branches (internal iliac, external iliac), presence or absence of endoleaks, and type of endoleak if present. The patency of collateral vessels (lumbar, internal iliac) that may contribute to persistent endoleaks is also assessed. Adjunctive balloon angioplasty is performed for endoleak treatment, as necessary.

When the graft is in appropriate position and free of endoleak on angiogram, the catheters and guidewires are removed.

Description of Post-Service Work: n/a

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

Two years ago the RUC valued a family of 20 new and revised codes that redefined coding for Endovascular Repair of the aorta and iliac arteries. Collaborators from SVS, SIR, ACS, STS, AATS, ACC, and SCAI worked for over one year to create the CPT proposal that radically changed the way the work of EVR was coded. A large part of this proposal involved bundling of services commonly performed together including catheter placement and radiologic supervision and interpretation. Another small part of the proposal revised a Category III CPT code for the repair of an iliac artery aneurysm with an experimental iliac branched endograft (IBE) device. A separate Category III code for the supervision and interpretation was deleted as this service was bundled into the base code. Although there was one FDA approved device available on the US market in January 2017 when the original EVR presentation was made to the RUC, there was insufficient literature to support conversion of the Category III code to a Category I CPT code at that time.

Over the ensuing 2 years, the new EVR codes have been adopted and the RUC recommendations have been confirmed by CMS. The IBE technology has become more mainstream and the literature requirement for conversion to Cat I has been met. Two new Category I CPT codes were created to capture the work of iliac artery endovascular repair with an iliac branched endograft. Code 34717 is a ZZZ add-on code designed to be reported in conjunction with the standard EVR codes for repair of an iliac artery at the same session as repair of an aortic aneurysm. Code 34718 is a stand alone 090 day global code that describes all of the work to repair an iliac artery with an iliac branched endograft, either after previous placement of an endograft in the aorta more proximally or for the isolated repair of an iliac aneurysm.

Survey Methodology

A multi-disciplinary workgroup included SVS and SIR. Approval to modify the survey instrument was obtained from the Research Subcommittee. Links to the surveys were distributed randomly to the members of the representative societies. The results were reviewed by the multi-specialty expert panel and the following recommendations are submitted for the codes.

Pre-Service Time

There is significant pre-service time and work that goes into providing these procedures to review the aneurysm anatomy on CT angiogram, confirm the suitability of the anatomy for EVR, make a large number of aortic diameter and center-line length measurements, review available endograft sizes and develop an operative plan that will successfully treat the pathology at hand. This service is provided after evaluation in the office, but more than 24 hours prior to the procedure. We therefore received approval from the Research Subcommittee to add an additional question to the survey to capture time spent planning for EVR. This is consistent with the code descriptors that include the phrase "including pre-procedure sizing and device selection." This is also consistent with CMS' request to include this work as bundled in the main procedure. The requested modifications to the survey were the same modifications that were made to the EVR surveys for January 2017 and were approved by the Research Subcommittee.

Although CPT code +34717 is a ZZZ add-on code, the survey respondents reported significant additional planning time for the added complexity of an iliac branched device repair done at the same time as an EVR of an aortic pathology. An average of 50 minutes of planning time was reported by the surveyees. The expert panel had a very robust discussion about this planning time. While all agreed that there was additional significant work required to plan for the successful placement of an iliac branched device, the consensus was that there was likely duplicative work in the planning for the iliac branch and for the aortic endograft that was not accounted for by the survey respondents. We therefore recommend adding one half of the reported 50 minutes of additional planning time (25 minutes) as pre-service work.

Comparison with Key Reference Services

The most commonly chosen KRS for +34717 were

+34709 *(Placement of extension prosthesis(es) distal to the common iliac artery(ies) or proximal to the renal artery(ies) for endovascular repair of infrarenal abdominal aortic or iliac aneurysm, false aneurysm, dissection, penetrating ulcer, including pre-procedure sizing and device selection, all nonselective catheterization(s), all associated radiological supervision and interpretation, and treatment zone angioplasty/stenting, when performed, per vessel treated (List separately in addition to code for primary procedure))* with 40% and

+33884 (*Placement of proximal extension prosthesis for endovascular repair of descending thoracic aorta (eg, aneurysm, pseudoaneurysm, dissection, penetrating ulcer, intramural hematoma, or traumatic disruption); each additional proximal extension (List separately in addition to code for primary procedure)* with an addition 28% of survey respondents choosing this code.

Both are ZZZ add-on codes used in endovascular aneurysm repairs and are therefore similar to +34717; however, both utilize straight tubes, not bifurcating branches, and are thus significantly less complex / intense.

	RVW	IWPUT	Total Time	Pre	INTRA	Post
+34709 KRS	6.50	0.108	60	0	60	0
+33884 KRS	8.20	0.137	60	0	60	0
+34717	**10.50**	**0.110**	**110**	**25**	**90**	**0**

Comparison to MPC codes

MPC 36476 *Endovenous ablation therapy of incompetent vein, extremity, inclusive of all imaging guidance and monitoring, percutaneous, radiofrequency; subsequent vein(s) treated in a single extremity, each through separate access sites (List separately in addition to code for primary procedure)*

***There are no existing MPC codes to bracket on the upper side of this ZZZ surgical procedure**

	RVW	IWPUT	Total Time	Eval	Posit	SDW	INTRA	Post	Hosp	Office
36476	**2.65**	**0.088**	**30**				**30**			
+34717	10.50	0.110	110	25			90			

Summary

Based on the factors outlined above, the specialties recommend a work vale of 10.50, with a total time of 110 minutes (25 eval and 90 intra) for this new add-on CPT Code 34717. This value aligns well within the EVR family, reference codes and within the fee schedule.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and

accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. (Use 34717 in conjunction with 34703, 34704, 34705, 34706)

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 0254T

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty vascular surgery How often? Sometimes

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period?
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. national data not available

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,250
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Source: MedPAR, claims used for IPPS rate calibration (IPPS discharges plus Maryland less statistical outliers). Medicare FY 2017 (Oct.1, 2016 - Sep. 30, 2017) Additional Notes: Effective October 1, 2016, the IBE device was assigned a New Technology Add-on Payment (NTAP) status by CMS. Associated ICD-10-PCS codes were created as a requirement of the NTAP and also effective Oct. 1, 2016. Utilizing the ICD-10-PCS codes associated with the use of IBE, the number of times each code was reported, by Medicare FY Quarter, has been assessed. Total cases shown = 600. There were 399 additional discharges identified with fewer than 10 cases. However, data for facilities with less than 10 discharges cannot be accessed (MedPAR limitation).

Specialty vascular surgery Frequency 1125 Percentage 90.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 0254T

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:34718 Tracking Number P2 Original Specialty Recommended RVU: **24.00**
Presented Recommended RVU: **24.00**
Global Period: 090 Current Work RVU: RUC Recommended RVU: **24.00**

CPT Descriptor: Endovascular repair of iliac artery, not associated with placement of an aorto-iliac artery endograft at the same session, by deployment of an iliac branched endograft, including pre-procedure sizing and device selection, all ipsilateral selective iliac artery catheterization(s), all associated radiological supervision and interpretation, and all endograft extension(s) proximally to the aortic bifurcation and distally in the internal iliac, external iliac, and common femoral artery(ies), and treatment zone angioplasty/stenting, when performed, for other than rupture (eg, for aneurysm, pseudoaneurysm, dissection, arteriovenous malformation, penetrating ulcer), unilateral

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 75-year-old male with coronary artery disease (CAD) and chronic obstructive pulmonary disease (COPD) who had previously undergone endovascular repair with placement of an aorto-iliac artery endograft now presents with a new right common iliac aneurysm. Endovascular repair with an iliac branched endograft is performed to preserve flow into his pelvis and right leg.

Percentage of Survey Respondents who found Vignette to be Typical: 91%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 100% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 22% , Overnight stay-more than 24 hours 78%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 53%

Description of Pre-Service Work: Preservice endograft planning: Extensive and detailed review of the preoperative imaging studies is required to determine the exact measurements of the aneurysm and to select the precise, correct endograft. This work is unique in that it would not be performed until after the decision for surgery. However, it must be completed several days prior to surgery to ensure that all required implants are ordered and have arrived on site before surgery begins. An accurate preoperative choice of component diameters and lengths is a primary determinant of whether the endovascular procedure will be successful, so this work must be done carefully. Cross-sectional imaging from the aortic arch to femoral vessels with fine cuts are reviewed and uploaded to a workstation, where 3D software is used, permitting iterative modeling of a virtual device within the aorta in multiplanar views and center line of flow analysis. The physician manually adjusts the modeling for altered anatomy, which is tortuous or thrombus laden. Orthogonal centerline imaging is used to determine diameter measurements of the aorta and iliac and femoral arteries for appropriate sizing of the limbs with extensions. The iliac and femoral diameters also determine the success of the device delivery and any potential adjunctive maneuvers that may be required to facilitate delivery. Tortuosity, calcification, thrombus presence, and stenosis require consideration as they may affect device delivery. Cross section, longitudinal, and centerline of flow measurements, with manual adjustments where needed, are used to map the distances between the proximal landing zone and the distal seal zones in the internal iliac and external iliac and/or common femoral artery, depending on the extent and involvement of the iliac aneurysmal disease. A stretched/straightened view permits manual validation of the computer-generated lengths.

Preservice work necessarily includes review of surgical indication, physical exam findings, current medications, and all laboratory test results. Careful final review of imaging is performed. The proposed procedure is discussed with the patient and family, including risks and expected recovery. Final informed consent is obtained. The physical exam, procedural plan, and consent are documented in the medical record. The access site(s) is marked. The endograft, catheters, and introducer

sheaths are brought into the OR after verification of appropriate diameters and lengths. Assessment is made for the need for stand-by devices (eg, balloons) that might be needed emergently. The surgeon ensures availability of pharmacologic and laboratory agents such as heparin, protamine, and activated coagulation time testing. In addition, the surgeon ensures all technical personnel have been familiarized with the upcoming procedure and that they are fully familiar with all required devices. Imaging studies are uploaded on the OR computers and placed on monitors for easy viewing during the operative procedure. The surgeon supervises appropriate patient positioning on the OR table and ensures that fluoroscopy is functional and that desired imaging angles are attainable with the available equipment. The surgeon changes into radiation protection gear, ensures that all who will be in the suite do likewise, and supervises sterile preparation of access site(s) and subsequent draping. The surgeon leads the preprocedural time-out.

Description of Intra-Service Work: The endograft, catheters, and introducer sheaths are brought onto the operating table after verification of appropriate diameters and lengths. The patient is systemically anticoagulated. The entry wire(s) is used to enter the introducer needle under fluoroscopic guidance. The sheaths are placed in the access vessels. A multi-sidehole catheter is placed and flush aorto-iliac angiography is performed with interpretation. A bifurcated iliac branch device is inserted into the common iliac limb after orientation to the internal iliac position. Selective wire access with catheter insertion into the internal iliac artery from a contralateral approach and through the iliac branch device which has been partially deployed. An internal iliac endoprosthesis is then placed through the iliac branch bifurcated graft and mated to it above and into the main internal iliac artery below. The iliac branch device is then deployed into the external iliac artery. The external iliac artery endoprosthesis is then deployed to mate with the bifurcated device and into the distal external iliac or femoral artery. A large compliant balloon is placed over the wire into the iliac endograft(s) to perform balloon dilation at the proximal and distal seal zones of the endograft.

An aortogram is performed (not separately reportable) and immediately interpreted for adequacy of the graft position, patency of appropriate branches (internal iliac, external iliac), presence or absence of endoleaks, and type of endoleak if present. The patency of collateral vessels (lumbar, internal iliac) that may contribute to persistent endoleaks is also assessed. Adjunctive balloon angioplasty is performed for endoleak treatment, as necessary.

When the graft is in appropriate position and free of endoleak on angiogram, the catheters and guidewires are removed.

Description of Post-Service Work: Hospital: Sterile dressings are applied. The patient is assisted with transfer from the operating table to the gurney. The patient is monitored for hemodynamic stability in transit, and adequate perfusion to the lower extremities is ensured. Postoperative orders for medications, imaging, and laboratories are written. The procedure and outcome are discussed with family. A brief operative note is written. An operative report is dictated, and a copy is sent to the referring physician. Postoperative imaging is reviewed. History-taking for any complaints of pain or neurovascular compromise is performed at postoperative in-hospital visits. Exam requires close monitoring for abdominal or lower extremity tenderness. All arterial access sites are monitored for bleeding or hematoma formation. Tight control of blood pressure is critical. Urinary output is followed closely for signs of hypovolemia. Frequent pulse and perfusion checks are performed as is neurologic evaluation for any signs of spinal cord ischemia. Lower extremities are checked for emboli. Hemoglobin and coagulation laboratory results are monitored daily. The need for routine or advanced imaging is assessed daily. Postoperative CT scans are obtained, either during the inpatient stay or early in the postdischarge time period. Progress notes are recorded daily. Patient and family questions are answered. Orders are updated daily. Rounds with nursing staff and other consultants are performed daily. Discharge day management includes communicating with all support services, such as visiting nurses and referring physicians, reviewing interval chart notes, answering patient and family questions, evaluating all predischarge laboratory results, evaluating and redressing the incisions, assessing pain score, and performing medication reconciliation. Surgeon discusses home restrictions (ie, diet, activity, bathing) with patient and family members; writes orders for home care, discharge medications and supplies; and completes all appropriate medical records, including day of discharge progress notes and final discharge instructions.

Office: At each office visit, an interval history is solicited for ongoing or new symptoms; the abdomen is examined for tenderness; arterial access sites and surgical incisions are examined for inflammation, drainage, and wound infection; and lower extremities are examined for adequate perfusion. Diagnostic blood tests and/or imaging studies are ordered based on findings. Postoperative CT scans and ultrasounds are reviewed for possible endoleak. Clinical decisions are made regarding the need for repeat surgical intervention. Wound care is provided, as needed. Staples and sutures are removed as indicated. Patient and family questions are answered. Prescriptions for medication and therapy are written, as necessary.

Progress is discussed with the referring physician (verbal and written). Progress notes are dictated/typed for the medical chart.

SURVEY DATA

Modifier -51 Exempt Status

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:

Is this new/revised procedure considered to be a new technology or service? No

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
34701	090	23.71	**RUC Time**

CPT Descriptor Endovascular repair of infrarenal aorta by deployment of an aorto-aortic tube endograft including pre-procedure sizing and device selection, all nonselective catheterization(s), all associated radiological supervision and interpretation, all endograft extension(s) placed in the aorta from the level of the renal arteries to the aortic bifurcation, and all angioplasty/stenting performed from the level of the renal arteries to the aortic bifurcation; for other than rupture (eg, for aneurysm, pseudoaneurysm, dissection, penetrating ulcer)

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
34707	090	22.28	**RUC Time**

CPT Descriptor Endovascular repair of iliac artery by deployment of an ilio-iliac tube endograft including pre-procedure sizing and device selection, all nonselective catheterization(s), all associated radiological supervision and interpretation, and all endograft extension(s) proximally to the aortic bifurcation and distally to the iliac bifurcation, and treatment zone angioplasty/stenting, when performed, unilateral; for other than rupture (eg, for aneurysm, pseudoaneurysm, dissection, arteriovenous malformation)

KEY MPC COMPARISON CODES:

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
35301	090	21.16	**RUC Time**	40,593

CPT Descriptor 1 Thromboendarterectomy, including patch graft, if performed; carotid, vertebral, subclavian, by neck incision

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	3%	7%	66%	24%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	3%	10%	86%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	10%	90%
Physical effort required	0%	45%	55%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	17%	83%

2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	0%	47%	53%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	5%	95%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	5%	95%
Physical effort required	0%	26%	74%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	5%	95%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

Two years ago the RUC valued a family of 20 new and revised codes that redefined coding for Endovascular Repair of the aorta and iliac arteries. Collaborators from SVS, SIR, ACS, STS, AATS, ACC, and SCAI worked for over one year to create the CPT proposal that radically changed the way the work of EVR was coded. A large part of this proposal involved bundling of services commonly performed together including catheter placement and radiologic supervision and interpretation. Another small part of the proposal revised a Category III CPT code for the repair of an iliac artery aneurysm with an experimental iliac branched endograft (IBE) device. A separate Category III code for the supervision and interpretation was deleted as this service was bundled into the base code. Although there was one FDA approved device available on the US market in January 2017 when the original EVR presentation was made to the RUC, there was insufficient literature to support conversion of the Category III code to a Category I CPT code at that time.

Over the ensuing 2 years, the new EVR codes have been adopted and the RUC recommendations have been confirmed by CMS. The IBE technology has become more mainstream and the literature requirement for conversion to Cat I has been met. Two new Category I CPT codes were created to capture the work of iliac artery endovascular repair with an iliac branched endograft. Code 34717 is a ZZZ add-on code designed to be reported in conjunction with the standard EVR codes for repair of an iliac artery at the same session as repair of an aortic aneurysm. Code 34718 is a stand alone 090 day global code that describes all of the work to repair an iliac artery with an iliac branched endograft, either after previous placement of an endograft in the aorta more proximally or for the isolated repair of an iliac aneurysm.

Survey Methodology

A multi-disciplinary workgroup included SVS and SIR. Approval to modify the survey instrument was obtained from the Research Subcommittee. Links to the surveys were distributed randomly to the members of the representative societies. The results were reviewed by the multi-specialty expert panel and the following recommendations are submitted for the codes.

Pre-Service Time

There is significant pre-service time and work that goes into providing these procedures to review the aneurysm anatomy on CT angiogram, confirm the suitability of the anatomy for EVR, make a large number of aortic diameter and center-line length measurements, review available endograft sizes and develop an operative plan that will successfully treat the pathology at hand. This service is provided after evaluation in the office, but more than 24 hours prior to the procedure. We therefore received approval from the Research Subcommittee to add an additional question to the survey to capture time spent planning for EVR. This is consistent with the code descriptors that include the phrase "including pre-procedure sizing and device selection." This is also consistent with CMS' request to include this work as bundled in the main procedure. The requested modifications to the survey were the same modifications that were made to the EVR surveys for January 2017 and were approved by the Research Subcommittee.

Pre-service package 4 is appropriate for EVT procedures with adjustment to the times. Surveyed planning times have been added to the pre-service evaluation time. The survey respondents also identified varying additional minutes for evaluation. We believe this to be related to the additional work the day before and the day of the procedure to ensure that all necessary supplies are available for the operation, to ensure that the radiologic equipment is operational and prepared for the procedure, and to re-review the extensive anatomic imaging prior to performing the procedure.

An additional 17 minutes of positioning time has been added to account for positioning the imaging equipment and operating room equipment to minimize conflicts between equipment and patient during surgery, appropriately positioning the patient with arms tucked as indicated, and confirming that all EKG leads and IV, Foley and arterial catheter lines are clear from the areas to be imaged during the procedure.

Post-Service Time

Post-service package 9B is appropriate, however, this package only allows 5 minutes for “operative note” which is not sufficient time for endovascular procedures that have radiologic supervision & interpretation bundled into the code. There is significantly more time involved to review all images and cines, annotate appropriate images, dictate radiologic findings, and document radiation exposure and contrast volumes. We therefore recommend accepting the survey median of 35 minutes for immediate post-service time.

Comparison with Key Reference Services

The most commonly chosen KRS for 34718 were

34701 *(Endovascular repair of infrarenal aorta by deployment of an aorto-aortic tube endograft including pre-procedure sizing and device selection, all nonselective catheterization(s), all associated radiological supervision and interpretation, all endograft extension(s) placed in the aorta from the level of the renal arteries to the aortic bifurcation, and all angioplasty/stenting performed from the level of the renal arteries to the aortic bifurcation; for other than rupture (eg, for aneurysm, pseudoaneurysm, dissection, penetrating ulcer))* with 43% and

34707 (*Endovascular repair of iliac artery by deployment of an ilio-iliac tube endograft including pre-procedure sizing and device selection, all nonselective catheterization(s), all associated radiological supervision and interpretation, and all endograft extension(s) proximally to the aortic bifurcation and distally to the iliac bifurcation, and treatment zone angioplasty/stenting, when performed, unilateral; for other than rupture (eg, for aneurysm, pseudoaneurysm, dissection, arteriovenous malformation))* with 28%.

Both are 090 day codes reported for endovascular aneurysm repairs and are similar to 34718; however, both utilize straight tubes, not bifurcating branches, and are thus significantly less complex, ie, intense.

	RVW	IWPUT	Total Time	Eval	Posit	SDW	INTRA	Post
34707	22.28	0.102	482	110	20	20	120	40
34701	23.71	0.114	482	110	20	20	120	40
34718	**24.00**	**0.117**	**477**	**110**	**20**	**20**	**120**	**35**

Comparison to MPC codes

MPC 35301, RVU 21.16
Thromboendarterectomy, including patch graft, if performed; carotid, vertebral, subclavian, by neck incision

MPC 33863, RVU 58.79
Ascending aorta graft, with cardiopulmonary bypass, with aortic root replacement using valved conduit and coronary reconstruction (eg, Bentall)

	RVW	IWPUT	Total Time	Eval	Posit	SDW	INTRA	Post	Critical Care	Oth Hosp	Office
35301	**21.16**	**0.104**	**404**	**40**	**15**	**20**	**120**	**30**		**133**	**46**
34718	24.00	0.117	477	110	20	20	120	35		133	39
33863	**58.79**	**0.121**	**905**	**60**	**15**	**20**	**287**	**40**	**140**	**303**	**40**

Summary

Based on the factors outlined above, the specialties recommend a work vale of 24.00, with a total time of 477 minutes (25 eval, 20 pos, 20 SDW, 120 intra, 35 immediate post, 133 hospital and 39 f/u office visits) for this new 090 CPT Code 34718. This value aligns well within the EVR family, reference codes and within the fee schedule.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 0254T

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty vascular surgery How often? Sometimes

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period?
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. national data not available

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 750
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Source: MedPAR, claims used for IPPS rate calibration (IPPS discharges plus Maryland less statistical outliers). Medicare FY 2017 (Oct.1, 2016 - Sep. 30, 2017) Additional Notes: Effective October 1, 2016, the IBE device was assigned a New Technology Add-on Payment (NTAP) status by CMS. Associated ICD-10-PCS codes were created as a requirement of the NTAP and also effective Oct. 1, 2016. Utilizing the ICD-10-PCS codes associated with the use of IBE, the number of times each code was reported, by Medicare FY Quarter, has been assessed. Total cases shown = 600. There were 399 additional discharges identified with fewer than 10 cases. However, data for facilities with less than 10 discharges cannot be accessed (MedPAR limitation).

Specialty vascular surgery Frequency 900 Percentage 90.00 %

Specialty Frequency Percentage %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Major procedure

BETOS Sub-classification Level II:
Cardiovascular-Aneurysm repair

CPT Code: 34717 & 34718
Specialty Society: SVS & SIR

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Facility Direct Practice Expense (PE) Inputs

Global Period: ZZZ **Meeting Date:** January 2019

34717 *Endovascular repair of iliac artery at the time of aorto-iliac artery endograft placement by deployment of an iliac branched endograft including pre-procedure sizing and device selection, all ipsilateral selective iliac artery catheterization(s), all associated radiological supervision and interpretation, and all endograft extension(s) proximally to the aortic bifurcation and distally in the internal iliac, external iliac, and common femoral artery(ies), and treatment zone angioplasty/stenting, when performed, for rupture or other than rupture (eg, for aneurysm, pseudoaneurysm, dissection, arteriovenous malformation, penetrating ulcer, traumatic disruption), unilateral (List separately in addition to code for primary procedure)*

(Use 34717 in conjunction with 34703, 34704, 34705, 34706)

(34717 may only be reported once per side. For bilateral procedure, report 34717 twice)

(Do not report 34717 in conjunction with 34709 on the same side)

Global Period: 090 **Meeting Date:** January 2019

34718 *Endovascular repair of iliac artery, not associated with placement of an aorto-iliac artery endograft at the same session, by deployment of an iliac branched endograft, including pre-procedure sizing and device selection, all ipsilateral selective iliac artery catheterization(s), all associated radiological supervision and interpretation, and all endograft extension(s) proximally to the aortic bifurcation and distally in the internal iliac, external iliac, and common femoral artery(ies), and treatment zone angioplasty/stenting, when performed, for other than rupture (eg, for aneurysm, pseudoaneurysm, dissection, arteriovenous malformation, penetrating ulcer), unilateral*

(For bilateral placement of an iliac branched endograft, report modifier 50)

(Do not report 34718 in conjunction with 34717)

(Do not report 34718 in conjunction with 34701, 34702, 34703, 34704, 34705, 34706, 34707, 34708, 34709)

(Do not report 34718 in conjunction with 34710, 34711 on the same side)

(For placement of an iliac branched endograft in the same setting as aorto-iliac endograft placement, use 34717)

(For placement of an isolated iliac branched endograft for rupture, use 37799)

---

1. **Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:**

   SVS and SIR convened a panel that included a number of experts familiar with these services to evaluate the practice expense inputs for these 'iliac branched endograft placement' procedures.

2. **You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here:**

   The specialties included CPT Code 34701 as the reference code on the PE spreadsheet. This is a recently reviewed EVR code and was selected on the work side as the key reference service code.

3. **Is this code(s) typically billed with an E/M service?**

   No

4. **If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:**

   N/A

5. **If you are requesting an increase over the current total cost for clinical staff time (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), total cost of supplies, and/or total cost of equipment you must provide compelling evidence:**

   N/A

6. **If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here:**

   N/A

7. **If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities:**

   N/A

8. **If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.**

   N/A

9. **If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here:**

   N/A

10. **If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here:**

    N/A

11. **List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here:**

    EF023 table, exam – Office Visit formula

12. **If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here:**

    N/A

13. **If there is any other item on your spreadsheet that needs further explanation please include here:**

    N/A

14. **Please include an explanation of each line item:**

SA048	pack, minimum multi-specialty visit	2	One for each f/u office visit
SA052	pack, post-op incision care (staple)	1	For the first f/u office visit

AMA/Specialty Society RVS Update Committee Summary of Recommendations
Negative IWPUT for code 35761*

January 2019

Exploration of Artery – Tab 6

CPT code 35701 was identified with 35761 in January 2018 by the Relativity Assessment Workgroup's negative IWPUT screen. At the January 2018 RUC meeting, the RUC reviewed CPT code 35761 *Exploration (not followed by surgical repair), with or without lysis of artery; other vessels* and recommended referral to CPT. The RUC recommended referring CPT code 35761 and the family of codes (35701, 35721, 35741) to the CPT Editorial Panel to revise the "with or without lysis" language and to condense the code set, where applicable, due to low frequency. The appropriate global period for exploration (not followed by surgical repair) was also considered after the CPT review. In September 2018, CPT revised one code, added two codes, and deleted three codes to report major artery exploration procedures and to condense the code set due to low frequency.

Miscoding of 35701
The CPT Editorial Panel revised code 35701, as the service was frequently misreported. The RUC understands that the 69% of claims representing services performed by otolaryngology represent miscoding as otolaryngologists do not perform this service as currently described. A new "do not report" parenthetical was added to this service to prohibit the reporting of it with several major surgical skin flap procedures to prevent the miscoding. The RUC believes that the misreporting of CPT code 35701 was likely in addition to CPT codes (i.e., 15756-15758) and not in lieu of the correct CPT code. Therefore, the remediation of this misreporting in concert with the recommended work values should result in an overall work savings for the exploration of artery family of services.

35701 ***Exploration of artery not followed by surgical repair; neck (eg, carotid, subclavian)***
The RUC reviewed the survey results from 52 vascular surgeons and agreed on the following physician time components: 40 minutes of pre-service evaluation, 10 minutes of pre-service positioning, 15 minutes of pre-service scrub/dress/wait, 60 minutes of intra-service time, 30 minutes of immediate post-service time, one 99231 post-operative hospital visit, one 99238 discharge visit and one 99212 post-operative office visit.

The RUC reviewed the survey 25th percentile work RVU of 11.82 and agreed that this value overstates the amount of physician work involved. To determine an appropriate work RVU, the RUC compared the survey code to CPT code 33271 *Insertion of subcutaneous implantable defibrillator electrode* (work RVU= 7.50, intra-service time of 60 minutes and total time of 202 minutes) and noted that both services involve identical intra-service time, similar total time and an identical overall amount of physician work. Therefore, the RUC recommends a direct work RVU crosswalk from code 33271 to code 35701. The RUC also compared the survey code to MPC code 21556 *Excision, tumor, soft tissue of neck or anterior thorax, subfascial (eg, intramuscular); less than 5 cm* (work RVU= 7.66, intra-service time of 60 minutes, total time of 234 minutes) and noted that both services involve identical intra-service time, similar total time and should be valued similarly. **The RUC recommends a work RVU of 7.50 for CPT code 35701.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

35702 ***Exploration of artery not followed by surgical repair; upper extremity (eg, axillary, brachial, radial, ulnar)***
The RUC reviewed the survey results from 52 vascular surgeons and agreed on the following physician time components: 40 minutes of pre-service evaluation, 10 minutes of pre-service positioning, 15 minutes of pre-service scrub/dress/wait, 50 minutes of intra-service time, 30 minutes of immediate post-service time, one 99231 post-operative hospital visit, one 99238 discharge visit and one 99212 post-operative office visit.

The RUC reviewed the survey 25th percentile work RVU of 11.00 and agreed that this value overstates the amount of physician work involved. To determine an appropriate work RVU, the RUC compared the survey code to CPT code 58565 *Hysteroscopy, surgical; with bilateral fallopian tube cannulation to induce occlusion by placement of permanent implants* (work RVU= 7.12, intra-service time of 50 minutes and total time of 191 minutes) and noted that both services involve identical intra-service time, similar total time and an identical overall amount of physician work. Therefore, the RUC recommends a direct work RVU crosswalk from code 58565 to 35702. The RUC also compared the survey code to MPC code 26113 *Excision, tumor, soft tissue, or vascular malformation, of hand or finger, subfascial (eg, intramuscular); 1.5 cm or greater* (work RVU= 7.13, intra-service time of 58 minutes, total time of 214) and noted that although the reference code involves somewhat more intra-service time, the survey code involves more total time and both services involve a similar overall amount of physician work. **The RUC recommends a work RVU of 7.12 for CPT code 35702.**

35703 ***Exploration of artery not followed by surgical repair; lower extremity (eg, common femoral, deep femoral, superficial femoral, popliteal, tibial, peroneal)***
The RUC reviewed the survey results from 52 vascular surgeons and agreed on the following physician time components: 40 minutes of pre-service evaluation, 10 minutes of pre-service positioning, 15 minutes of pre-service scrub/dress/wait, 60 minutes of intra-service time, 30 minutes of immediate post-service time, one 99231 post-operative hospital visit, one 99238 discharge visit and one 99212 post-operative office visit. Survey codes 35701 and 35703 involve the same pre-service, intra-service, immediate post-service times and the same post-operative care. They also involve the same amount of physician work; the RUC recommends for both services to be valued identically.

The RUC reviewed the survey 25th percentile work RVU of 12.00 and agreed that this value overstates the amount of physician work involved. To determine an appropriate work RVU, the RUC compared the survey code to CPT code 33271 *Insertion of subcutaneous implantable defibrillator electrode* (work RVU= 7.50, intra-service time of 60 minutes and total time of 202 minutes) and noted that both services involve identical intra-service time, similar total time and an identical overall amount of physician work. Therefore, the RUC recommends a direct work RVU crosswalk from code 33271 to 35703. The RUC also compared the survey code to MPC code 21556 *Excision, tumor, soft tissue of neck or anterior thorax, subfascial (eg, intramuscular); less than 5 cm* (work RVU= 7.66, intra-service time of 60 minutes, total time of 234 minutes) and noted that both services involve identical intra-service time, similar total time and should be valued similarly. **The RUC recommends a work RVU of 7.50 for CPT code 35703.**

Practice Expense
The PE Subcommittee revised the pre-service clinical staff time to the standard of 20 minutes for emergent procedures. **The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Work Neutrality
The RUC's recommendation for these codes will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
Cardiovascular System **Arteries and Veins** **Excision, Exploration, Repair, Revision**				
▲35701	Q1	Exploration of artery ~~(~~not followed by surgical repair~~,), with or without lysis of artery~~; ~~carotid~~ neck ~~artery~~ (eg, carotid, subclavian) (Do not report 35701 in conjunction with 35201, 35231, 35261, 35800 when performed on the same side of the neck)	090	7.50
●35702	Q2	upper extremity (eg, axillary, brachial, radial, ulnar)	090	7.12
●35703	Q3	lower extremity (eg, common femoral, deep femoral, superficial femoral, popliteal, tibial, peroneal) (When additional surgical procedures are performed at the same setting by the same surgeon, 35701, 35X02, 35X03 may only be reported when a nonvascular surgical procedure is performed and only when the artery exploration is performed through a separate incision) (Do not report 35702, 35703 in conjunction with 35206, 35207, 35236, 35256, 35266, 35286, 35860 in the same extremity) (Do not report 35701, 35702, 35703 to explore and identify a recipient artery [eg, external carotid artery] when performed in conjunction with 15756, 15757, 15758, 20955, 20956, 20957, 20962, 20969, 20970, 20972, 20973, 43496, 49906)	090	7.50

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:35701 Tracking Number Q1 Original Specialty Recommended RVU: **11.82**
Presented Recommended RVU: **9.19**
Global Period: 090 Current Work RVU: RUC Recommended RVU: **7.50**

CPT Descriptor: Exploration of artery not followed by surgical repair; neck (eg, carotid, subclavian)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 59-year-old male is admitted to the intensive care unit (ICU) in septic shock. At the bedside, a central venous catheter is attempted in the right internal jugular vein. Postprocedure X ray appears to show the tip of the catheter in the aortic arch. The patient is taken to the operating room where, upon exploration, the catheter is found to be misplaced in the subcutaneous space of the chest. The carotid artery is explored and found to be free of injury.

Percentage of Survey Respondents who found Vignette to be Typical: 85%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 100% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 29% , Overnight stay-more than 24 hours 71%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 58%

Description of Pre-Service Work: The appropriate antibiotic(s) are selected and ordered. Timing and administration are confirmed. Appropriate selection, timing, and administration of deep vein thrombosis (DVT) prophylaxis are ensured. Orders for preoperative medications including beta blockers, if indicated, are written. Results of admission testing and imaging are reviewed. The planned procedure and postoperative management are reviewed with the patient and family. The site and side of proposed skin incision are marked and confirmed with the patient. Informed consent is reviewed and obtained from the patient. The length and type of anesthesia are reviewed with the anesthesiologist. Availability of all required instruments and supplies is verified. Areas surrounding skin incisions to be prepared and draped are verified. The surgeon scrubs and puts on a gown. A surgical time-out is performed with operating surgical team and anesthesia team.

Description of Intra-Service Work: Under general anesthesia, the location of the catheter or injury is carefully inspected, bony and soft tissue landmarks are assessed and marked. An incision is created along the sternocleidomastoid muscle and the neck is dissected. Any hematoma is carefully evacuated and the musculature is retracted. The dissection is carefully carried down until the carotid sheath is entered. The internal jugular vein is identified and retracted for better visualization of the carotid artery. After carefully inspecting for any cranial nerves, the carotid artery is mobilized and inspected for injury. Care is taken to avoid injury to the jugular vein and cranial nerves. The carotid artery is thoroughly inspected for injury. Finding no injury, the wound bed is irrigated with warm saline and after hemostasis is achieved. The surgeon places a drain, if required. The neck is closed in layers.

Description of Post-Service Work: Application of sterile dressing. Discuss findings with family and primary service line. Write post-operative orders and dictate full operative note as well as document a brief operative note. Perform a postoperative check and document findings. Daily rounding while patient remains in the hospital including wound check and neurologic assessment relative to surgical procedure. Write daily progress note. Discuss discharge planning. Post-operative office visit to review interval chart information, including any entries by other physicians caring for the patient, assess wound healing, remove sutures, document patient progress and update PCP.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	24%	45%	27%	3%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	9%	64%	27%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	18%	61%	21%
Physical effort required	21%	58%	21%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	18%	45%	36%

2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	56%	33%	11%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	11%	67%	22%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	11%	56%	33%
Physical effort required	11%	56%	33%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	56%	44%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

BACKGROUND

The RUC identified CPT Code 35761 with a negative IWPUT and Medicare utilization over 10,000 for all services or over 1,000 for Harvard valued and CMS/Other source codes. Code 35761 was identified through this screen. At the January 2018 RUC meeting, the RUC recommended referring code 35761 and the family of codes (35701, 35721, 35741) to the CPT Editorial Panel to revise the "with or without lysis" terminology; condense the code set, where applicable, due to low frequency; and consider the appropriate global period for exploration not followed by surgical repair.

COMPELLING EVIDENCE

The specialty believes that the family of seldom used vascular explorations codes is misvalued and presents compelling evidence argument based on the following RUC guideline:

- An anomalous relationship between the code being valued and other codes. For example, if code A describes a service that requires more work than codes B, C, and D, but is nevertheless valued lower. The specialty would need to assemble evidence on service time, technical skill, patient severity, complexity, length of stay and other factors for the code being considered and the codes to which it is compared. These reference services may be both inter- and intra-specialty.

In addition, the specialty believes incorrect assumptions were made in the previous valuation of the services. A flawed mechanism or methodology was used in the previous valuation. NPRM and final rule for 1992 shows CPT Codes 35761, 35701, 35721 and 35741 were valued by Harvard around 8 wRVWs with 90-day global periods. CMS decreased the values for all 4 codes to 4.78 wRVUs, but they kept the global as 90-day. This was an error and the global should have been 0-day. This error was partially address in the second 5-year review (CY2002) as follows:

CPT Code 35701: mini survey was conducted and a work RVU of 8.50 was established.
CPT Code 35721: full survey was conducted and a work RVU of 7.18 was established.
CPT Code 35741: mini survey was conducted and a work RVU of 8.00 was established.
CPT Code 35761: no survey. RVU maintained at Harvard value. No vignette.

Note from CY2002 recommendations: The RUC reviewed the peripheral artery and vein ligations family of codes and determined that a number of rank order anomalies existed in this entire family of services. In addition, the RUC agreed that these services are undervalued when compared to CPT code 36831 Thrombectomy, arteriovenous fistula without revision, autogenous or nonautogenous dialysis graft (separate procedure) (work RVU = 8.00). The RUC agrees that these services were not accurately evaluated during the original Harvard/Hsaio extrapolations. To correct these rank order anomalies and to determine the appropriate work relative values, the RUC relied primarily on the 25th percentile survey work RVUs as determined by a survey of more than 30 surgeons. In reviewing this specific service, the RUC agreed that the survey work RVUs and the building block methodology produced work RVUs that were not appropriate. The RUC did agree that 35701 should be valued higher than 35741 (rec work RVU = 8.00). The committee recommends a work RVU of 8.50 to retain the current relativity between these two codes and to indicate that the work is greater for 35701.

The issue remained dormant after 2002 largely due to low volume until CPT code 35761 was identified on the negative IWPUT and Medicare utilization over 10,000 for all services or over 1,000 for Harvard valued and CMS/Other source codes screen. Despite the increases to CPT codes 35701, 35721, and 35741 in CY2002 by comparison to CPT 36831, review of the family shows that they remain undervalued for vascular surgical procedures. This fact is readily apparent for 35761 with it's negative IWPUT of -0.014 but the IWPUT of the existing codes is also inappropriately low for an invasive surgical procedure on vascular structures. When compared again (see table below) with the previously crosswalked CPT code of 36831, these codes all appear undervalued, both by RVU and IWPUT. Finally, comparison to other common vascular surgical and non-

vascular CPT codes in the table below further support the compelling evidence argument that this small family of exploration codes is misvalued.

CPT	Descriptor	RVW	IWPUT	Total Time
35701	Exploration, carotid artery	9.19	0.053	262
35721	Exploration, femoral artery	7.72	0.025	273
35741	Exploration, popliteal artery	8.69	0.037	272
35761	Exploration, other artery/vein	5.93	-0.014	317
36831	Open thrombectomy AVF	11.00	0.080	248
35301	Carotid endarterectomy	21.16	0.104	404
36821	AVF creation	11.90	0.104	233
35656	Bypass graft, with other than vein; femoral-popliteal	20.47	0.075	447
99204	Office/outpatient, new visit, level 4	2.43	0.070	45
99213	Office/outpatient, established visit, level 3	0.97	0.053	23
36556	Insertion of non-tunneled centrally inserted central venous catheter; age 5 years or older	1.75	0.084	40

Work RVU Recommendation

We are recommending the 25th percentile survey value of 11.82 RVU for 35701.

PreTime

We recommend pre-time package 4 with the following time adjustments:

Evaluation: Subtract 4 minutes to be consistent with the survey median.

Positioning: Add 7 minutes (total = 10 minutes): After induction of anesthesia in supine position, assist with patient positioning with shoulder roll, head extended and stabilized. Assist with adjusting the OR table and anesthesia lines so that the operative site is assessable. Re-assess position and padding of the extremities and head, adjust as needed. A total of 10 minutes (or more) is supported by numerous codes for neck operations, including: 31600-31610 (2016); 43210 (2015); 43180 (2014); and 35301 (2013)

Scrub, dress, wait: Subtract 5 minutes to be consistent with the survey median.

Comparison with Key Reference Services

The KRS chosen by the survey respondents were CPT code 35800 *(Exploration for postoperative hemorrhage, thrombosis or infection; neck)* by 63% and CPT code 35860 (*Exploration for postoperative hemorrhage, thrombosis or infection; extremity*) by another 17%. These codes are both exploration procedures similar to 35701 and compare favorably as shown in the table below.

	RVW	IWPUT	Total Time	Eval	Posit	SDW	Intra	IM-post	Visits
35800	12.00	0.053	336	30	3	5	60	30	33, 32, 31, 38, 13, 12, 12
35701	11.82	0.092	276	40	10	15	60	30	32, 31, 38, 13
35860	15.25	0.084	376	30	3	5	60	30	33, 32, 32, 31, 38, 13, 12, 12

Comparison to MPC codes

MPC 50590, RVU 9.77, IWPUT 0.091
Lithotripsy, extracorporeal shock wave

MPC 57288, RVU 12.13, IWPUT 0.108
Sling operation for stress incontinence (eg, fascia or synthetic)

	RVW	IWPUT	Total Time	Eval	Posit	SDW	Intra	IM-post	Visits
50590	9.77	0.091	227	33	3	15	60	15	38 x 0.5, 13, 13, 12
35701	11.82	0.092	276	40	10	15	60	30	32, 31, 38, 13
57288	12.13	0.108	246	33	7	15	60	27	38 x 0.5, 13, 13, 13, 12

Conclusion
Analysis of the family of vascular exploration codes relative to other common vascular and non-vascular codes supports that these codes are misvalued. The code set was revised at CPT and then surveyed by random members of SVS. Compelling evidence supports an increase in value for these codes. Strong survey data, supporting key reference services, and anchoring MPC codes support our recommended 25th percentile survey value of 11.82 RVU for CPT code 35701.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 35701

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty vascular surgery How often? Sometimes

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period?
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. national data not available

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 734
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Current code 35701 will continue to be reported by 35701 100% of the time. Current codes 35721 and 35741 will be reported by 35703 100% of the time. Current code 35761 will be reported by 35701 3%; 35702 60%; 35703 7%; and 37799 30%. However, there is belief that some of the currently reported 35701 have been coded incorrectly by ENT, so the specialties are not confident with the recommended total of 734.

Specialty vascular surgery Frequency 500 Percentage 68.11 %

Specialty Frequency Percentage %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Major procedure

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 36831

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:35X00 Tracking Number Q2 Original Specialty Recommended RVU: **11.00**
Presented Recommended RVU: **11.00**
Global Period: 090 Current Work RVU: RUC Recommended RVU: **7.12**

CPT Descriptor: Exploration of artery not followed by surgical repair; upper extremity (eg, axillary, brachial, radial, ulnar)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 74-year-old male had a left brachial artery catheter placed for arterial pressure monitoring for coronary artery bypass grafting. Two days following a successful bypass procedure, the catheter is removed and pressure is held over the insertion site. The patient complains of left hand pain and coolness. The patient is taken to the operating room where the left brachial artery is explored and found to be free of injury.

Percentage of Survey Respondents who found Vignette to be Typical: 92%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 100% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 4% , Overnight stay-less than 24 hours 29% , Overnight stay-more than 24 hours 67%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 54%

Description of Pre-Service Work: The appropriate antibiotic(s) are selected and ordered. Timing and administration are confirmed. Appropriate selection, timing, and administration of deep vein thrombosis (DVT) prophylaxis are ensured. Orders for preoperative medications including beta blockers, if indicated, are written. Results of admission testing and imaging are reviewed. The planned procedure and postoperative management are reviewed with the patient and family. The site and side of proposed skin incision are marked and confirmed with the patient. Informed consent is reviewed and obtained from the patient. The length and type of anesthesia are reviewed with the anesthesiologist. Availability of all required instruments and supplies is verified. Areas surrounding skin incisions to be prepared and draped are verified. The surgeon scrubs and puts on a gown. A surgical time-out is performed with operating surgical team and anesthesia team.

Description of Intra-Service Work: Under general anesthesia, the course of the artery (axillary, brachial, radial and/or ulnar) is palpated to determine the change in pulse exam. An incision is created along the left bicep and dissection is carried through the soft tissue. Any hematoma is carefully evacuated. The dissection is carried down until the brachial artery is identified. Care is taken to avoid injury to surrounding veins and nerves and side branches and bridging veins are carefully dissected and ligated as necessary. The brachial artery is mobilized and inspected. Once the artery has been inspected and no apparent injury is visualized, a Doppler probe is used to demonstrate multiphasic flow throughout the artery. Finding no evidence of injury, the wound bed is irrigated with warm saline and once hemostasis is achieved and the arm is closed in layers.

Description of Post-Service Work: Application of sterile dressing. Discuss findings with family and primary service line. Write post-operative orders and dictate full operative note as well as document a brief operative note. Perform a postoperative check and document findings. Daily rounding while patient remains in the hospital including wound check and musculoskeletal exam with strength and range of motion assessment relative to surgical procedure. Write daily progress note. Discuss discharge planning. Post-operative office visit to review interval chart information, including any entries by other physicians caring for the patient, assess wound healing, remove sutures, document patient progress and update PCP.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	23%	46%	23%	8%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	15%	54%	31%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	15%	69%	15%
Physical effort required	23%	54%	23%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	15%	54%	31%

2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	18%	55%	18%	9%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	18%	45%	36%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	45%	27%	27%
Physical effort required	27%	64%	9%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	18%	45%	36%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

BACKGROUND

The RUC identified CPT Code 35761 with a negative IWPUT and Medicare utilization over 10,000 for all services or over 1,000 for Harvard valued and CMS/Other source codes. Code 35761 was identified through this screen. At the January 2018 RUC meeting, the RUC recommended referring code 35761 and the family of codes (35701, 35721, 35741) to the CPT Editorial Panel to revise the "with or without lysis" terminology; condense the code set, where applicable, due to low frequency; and consider the appropriate global period for exploration not followed by surgical repair.

COMPELLING EVIDENCE

The specialty believes that the family of seldom used vascular explorations codes is misvalued and presents compelling evidence argument based on the following RUC guideline:

- An anomalous relationship between the code being valued and other codes. For example, if code A describes a service that requires more work than codes B, C, and D, but is nevertheless valued lower. The specialty would need to assemble evidence on service time, technical skill, patient severity, complexity, length of stay and other factors for the code being considered and the codes to which it is compared. These reference services may be both inter- and intra-specialty.

In addition, the specialty believes incorrect assumptions were made in the previous valuation of the services. A flawed mechanism or methodology was used in the previous valuation. NPRM and final rule for 1992 shows CPT Codes 35761, 35701, 35721 and 35741 were valued by Harvard around 8 wRVWs with 90-day global periods. CMS decreased the values for all 4 codes to 4.78 wRVUs, but they kept the global as 90-day. This was an error and the global should have been 0-day. This error was partially address in the second 5-year review (CY2002) as follows:

CPT Code 35701: mini survey was conducted and a work RVU of 8.50 was established.
CPT Code 35721: full survey was conducted and a work RVU of 7.18 was established.
CPT Code 35741: mini survey was conducted and a work RVU of 8.00 was established.
CPT Code 35761: no survey. RVU maintained at Harvard value. No vignette.

Note from CY2002 recommendations: The RUC reviewed the peripheral artery and vein ligations family of codes and determined that a number of rank order anomalies existed in this entire family of services. In addition, the RUC agreed that these services are undervalued when compared to CPT code 36831 Thrombectomy, arteriovenous fistula without revision, autogenous or nonautogenous dialysis graft (separate procedure) (work RVU = 8.00). The RUC agrees that these services were not accurately evaluated during the original Harvard/Hsaio extrapolations. To correct these rank order anomalies and to determine the appropriate work relative values, the RUC relied primarily on the 25th percentile survey work RVUs as determined by a survey of more than 30 surgeons. In reviewing this specific service, the RUC agreed that the survey work RVUs and the building block methodology produced work RVUs that were not appropriate. The RUC did agree that 35701 should be valued higher than 35741 (rec work RVU = 8.00). The committee recommends a work RVU of 8.50 to retain the current relativity between these two codes and to indicate that the work is greater for 35701.

The issue remained dormant after 2002 largely due to low volume until CPT code 35761 was identified on the negative IWPUT and Medicare utilization over 10,000 for all services or over 1,000 for Harvard valued and CMS/Other source codes screen. Despite the increases to CPT codes 35701, 35721, and 35741 in CY2002 by comparison to CPT 36831, review of the family shows that they remain undervalued for vascular surgical procedures. This fact is readily apparent for 35761 with it's negative IWPUT of -0.014 but the IWPUT of the existing codes is also inappropriately low for an invasive surgical procedure on vascular structures. When compared again (see table below) with the previously crosswalked CPT code of 36831, these codes all appear undervalued, both by RVU and IWPUT. Finally, comparison to other common vascular surgical and non-

vascular CPT codes in the table below further support the compelling evidence argument that this small family of exploration codes is misvalued.

CPT	Descriptor	RVW	IWPUT	Total Time
35701	Exploration, carotid artery	9.19	0.053	262
35721	Exploration, femoral artery	7.72	0.025	273
35741	Exploration, popliteal artery	8.69	0.037	272
35761	Exploration, other artery/vein	5.93	-0.014	317
36831	Open thrombectomy AVF	11.00	0.080	248
35301	Carotid endarterectomy	21.16	0.104	404
36821	AVF creation	11.90	0.104	233
35656	Bypass graft, with other than vein; femoral-popliteal	20.47	0.075	447
99204	Office/outpatient, new visit, level 4	2.43	0.070	45
99213	Office/outpatient, established visit, level 3	0.97	0.053	23
36556	Insertion of non-tunneled centrally inserted central venous catheter; age 5 years or older	1.75	0.084	40

Work RVU Recommendation

We are recommending the 25th percentile survey value of 11.00 RVU for 35702.

PreTime

We recommend pre-time package 4 with the following time adjustments:

Evaluation: No change to package time.

Positioning: Add 7 minutes (total = 10 minutes) for padding of bony prominences; application of thermal regulation drapes; assessing position of the extremities and head and adjusting as needed; rotating patient onto hand surgery table; appropriately positioning arm to prevent abnormal joint extension, nerve traction, or pressure on bony landmarks; marking, prepping and draping hand; applying tourniquet to the proximal arm; elevating and exsanguinating arm; and inflating pneumatic tourniquet. A total of 10 minutes is supported by codes for upper extremity operations, including: 64910-64912 (2017); 26356-36358 (2015); 25607-25609 (2014); and 36818-36833 (2013).

Scrub, dress, wait: Subtract 5 minutes to be consistent with the survey median.

Comparison with Key Reference Services

The KRS chosen by the survey respondents were CPT code 35206 *(Repair blood vessel, direct; upper extremity)* by 25% and CPT code 35860 (*Exploration for postoperative hemorrhage, thrombosis or infection; extremity*) by another 21%. These codes are both exploration procedures similar to 35702 and compare favorably as shown in the table below.

	RVW	IWPUT	Total Time	Eval	Posit	SDW	Intra	IM-post	Visits
35206	13.84	0.088	282	50			90	25	31,31,38, 13, 12
35702	11.00	0.094	266	40	10	15	50	30	32, 31, 38, 13

35860	15.25	0.084	376	30	3	5	60	30	33, 32, 32, 31, 38, 13, 12, 12

Comparison to MPC codes

MPC 50590, RVU 9.77, IWPUT 0.091
Lithotripsy, extracorporeal shock wave

MPC 57288, RVU 12.13, IWPUT 0.108
Sling operation for stress incontinence (eg, fascia or synthetic)

	RVW	IWPUT	Total Time	Eval	Posit	SDW	Intra	IM-post	Visits
50590	9.77	0.091	227	33	3	15	60	15	38 x 0.5, 13, 13, 12
35702	11.00	0.094	266	40	10	15	50	30	32, 31, 38, 13
57288	12.13	0.108	246	33	7	15	60	27	38 x 0.5, 13, 13, 13, 12

Conclusion
Analysis of the family of vascular exploration codes relative to other common vascular and non-vascular codes supports that these codes are misvalued. The code set was revised at CPT and then surveyed by random members of SVS. Compelling evidence supports an increase in value for these codes. This code in particular was never previous surveyed and currently has a negative IWPUT with Harvard inputs. Strong survey data, supporting key reference services, and anchoring MPC codes support our recommended 25th percentile survey value of 11.00 RVU for CPT code 35702.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 35761

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty vascular surgery How often? Sometimes

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period?
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. national data not available

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,100
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Current code 35701 will continue to be reported by 35701 100% of the time. Current codes 35721 and 35741 will be reported by 35703 100% of the time. Current code 35761 will be reported by 35701 3%; 35702 60%; 35703 7%; and 37799 30%.

Specialty vascular surgery Frequency 800 Percentage 72.72 %

Specialty Frequency Percentage %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 36831

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:35X01 Tracking Number Q3 Original Specialty Recommended RVU: **12.00**
Presented Recommended RVU: **12.00**
Global Period: 090 Current Work RVU: RUC Recommended RVU: **7.50**

CPT Descriptor: Exploration of artery not followed by surgical repair; lower extremity (eg, common femoral, deep femoral, superficial femoral, popliteal, tibial, peroneal)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 17-year-old male football player is brought to the emergency department with concerns of a right posterior knee dislocation. Computed tomography angiogram appears to show an abnormality in the right popliteal artery. The right popliteal artery is explored and found to be in spasm, but free of injury.

Percentage of Survey Respondents who found Vignette to be Typical: 90%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 100% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 2% , Overnight stay-less than 24 hours 31% , Overnight stay-more than 24 hours 67%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 57%

Description of Pre-Service Work: The appropriate antibiotic(s) are selected and ordered. Timing and administration are confirmed. Appropriate selection, timing, and administration of deep vein thrombosis (DVT) prophylaxis are ensured. Orders for preoperative medications including beta blockers, if indicated, are written. Results of admission testing and imaging are reviewed. The planned procedure and postoperative management are reviewed with the patient and family. The site and side of proposed skin incision are marked and confirmed with the patient. Informed consent is reviewed and obtained from the patient. The length and type of anesthesia are reviewed with the anesthesiologist. Availability of all required instruments and supplies is verified. Areas surrounding skin incisions to be prepared and draped are verified. The surgeon scrubs and puts on a gown. A surgical time-out is performed with operating surgical team and anesthesia team.

Description of Intra-Service Work: Under general anesthesia, the location of the injury is carefully inspected, bony and soft tissue landmarks are assessed and marked. A gentle S shape posterior incision is made over the popliteal artery. Any previous hematoma is carefully evacuated. The tibial nerve and popliteal vein are carefully dissected and mobilized, exposing the popliteal artery. The artery is mobilized and inspected throughout the popliteal fossa examining for injury. Once the artery has been inspected and no apparent injury is visualized, a Doppler probe is used to demonstrate multiphasic flow throughout the artery. Finding no injury, the wound is irrigated with warm saline and the incision is closed in multiple layers.

Description of Post-Service Work: Application of sterile dressing. Discuss findings with family and primary service line. Write post-operative orders and dictate full operative note as well as document a brief operative note. Perform a postoperative check and document findings. Daily rounding while patient remains in the hospital including wound check and neurologic and musculoskeletal assessment relative to surgical procedure. Write daily progress note. Discuss discharge planning. Post-operative office visit to review interval chart information, including any entries by other physicians caring for the patient, assess wound healing, remove sutures, document patient progress and update PCP.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	19%	41%	31%	9%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	6%	56%	38%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	16%	53%	31%
Physical effort required	22%	44%	34%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	22%	28%	50%

2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	100%	0%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	100%	0%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	100%	0%
Physical effort required	25%	75%	0%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	100%	0%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

BACKGROUND

The RUC identified CPT Code 35761 with a negative IWPUT and Medicare utilization over 10,000 for all services or over 1,000 for Harvard valued and CMS/Other source codes. Code 35761 was identified through this screen. At the January 2018 RUC meeting, the RUC recommended referring code 35761 and the family of codes (35701, 35721, 35741) to the CPT Editorial Panel to revise the "with or without lysis" terminology; condense the code set, where applicable, due to low frequency; and consider the appropriate global period for exploration not followed by surgical repair.

COMPELLING EVIDENCE

The specialty believes that the family of seldom used vascular explorations codes is misvalued and presents compelling evidence argument based on the following RUC guideline:

- An anomalous relationship between the code being valued and other codes. For example, if code A describes a service that requires more work than codes B, C, and D, but is nevertheless valued lower. The specialty would need to assemble evidence on service time, technical skill, patient severity, complexity, length of stay and other factors for the code being considered and the codes to which it is compared. These reference services may be both inter- and intra-specialty.

In addition, the specialty believes incorrect assumptions were made in the previous valuation of the services. A flawed mechanism or methodology was used in the previous valuation. NPRM and final rule for 1992 shows CPT Codes 35761, 35701, 35721 and 35741 were valued by Harvard around 8 wRVWs with 90-day global periods. CMS decreased the values for all 4 codes to 4.78 wRVUs, but they kept the global as 90-day. This was an error and the global should have been 0-day. This error was partially address in the second 5-year review (CY2002) as follows:

CPT Code 35701: mini survey was conducted and a work RVU of 8.50 was established.
CPT Code 35721: full survey was conducted and a work RVU of 7.18 was established.
CPT Code 35741: mini survey was conducted and a work RVU of 8.00 was established.
CPT Code 35761: no survey. RVU maintained at Harvard value. No vignette.

Note from CY2002 recommendations: The RUC reviewed the peripheral artery and vein ligations family of codes and determined that a number of rank order anomalies existed in this entire family of services. In addition, the RUC agreed that these services are undervalued when compared to CPT code 36831 Thrombectomy, arteriovenous fistula without revision, autogenous or nonautogenous dialysis graft (separate procedure) (work RVU = 8.00). The RUC agrees that these services were not accurately evaluated during the original Harvard/Hsaio extrapolations. To correct these rank order anomalies and to determine the appropriate work relative values, the RUC relied primarily on the 25th percentile survey work RVUs as determined by a survey of more than 30 surgeons. In reviewing this specific service, the RUC agreed that the survey work RVUs and the building block methodology produced work RVUs that were not appropriate. The RUC did agree that 35701 should be valued higher than 35741 (rec work RVU = 8.00). The committee recommends a work RVU of 8.50 to retain the current relativity between these two codes and to indicate that the work is greater for 35701.

The issue remained dormant after 2002 largely due to low volume until CPT code 35761 was identified on the negative IWPUT and Medicare utilization over 10,000 for all services or over 1,000 for Harvard valued and CMS/Other source codes screen. Despite the increases to CPT codes 35701, 35721, and 35741 in CY2002 by comparison to CPT 36831, review of the family shows that they remain undervalued for vascular surgical procedures. This fact is readily apparent for 35761 with it's negative IWPUT of -0.014 but the IWPUT of the existing codes is also inappropriately low for an invasive surgical procedure on vascular structures. When compared again (see table below) with the previously crosswalked CPT code of 36831, these codes all appear undervalued, both by RVU and IWPUT. Finally, comparison to other common vascular surgical and non-

vascular CPT codes in the table below further support the compelling evidence argument that this small family of exploration codes is misvalued.

CPT	Descriptor	RVW	IWPUT	Total Time
35701	Exploration, carotid artery	9.19	0.053	262
35721	Exploration, femoral artery	7.72	0.025	273
35741	Exploration, popliteal artery	8.69	0.037	272
35761	Exploration, other artery/vein	5.93	-0.014	317
36831	Open thrombectomy AVF	11.00	0.080	248
35301	Carotid endarterectomy	21.16	0.104	404
36821	AVF creation	11.90	0.104	233
35656	Bypass graft, with other than vein; femoral-popliteal	20.47	0.075	447
99204	Office/outpatient, new visit, level 4	2.43	0.070	45
99213	Office/outpatient, established visit, level 3	0.97	0.053	23
36556	Insertion of non-tunneled centrally inserted central venous catheter; age 5 years or older	1.75	0.084	40

Work RVU Recommendation

We are recommending the 25th percentile survey value of 12.00 RVU for 35703.

PreTime

We recommend pre-time package 4 with the following time adjustments:

Evaluation: Subtract 2 minutes to be consistent with the survey median.

Positioning: Add 7 minutes (total = 10 minutes) : After induction of anesthesia in supine position, assist with reportioning patient prone and assessing position of the extremities and head and padding and adjusting as needed.

Scrub, dress, wait: Subtract 5 minutes to be consistent with the survey median.

Comparison with Key Reference Services

The KRS chosen by the survey respondents were CPT code 35860 *(Exploration for postoperative hemorrhage, thrombosis or infection; extremity)* by 62% and CPT code 35800 (*Exploration for postoperative hemorrhage, thrombosis or infection; neck*) by another 8%. These codes are both exploration procedures similar to 35703 and compare favorably as shown in the table below.

	RVW	IWPUT	Total Time	Eval	Posit	SDW	Intra	IM-post	Visits
35860	15.25	0.084	376	30	3	5	60	30	33, 32, 31, 38, 13, 12, 12
35703	12.00	0.087	292	40	10	15	60	30	32, 31, 38, 13, 12
35800	12.00	0.084	376	30	3	5	60	30	32, 31, 38, 13

Comparison to MPC codes

MPC 50590, RVU 9.77, IWPUT 0.091
Lithotripsy, extracorporeal shock wave

MPC 57288, RVU 12.13, IWPUT 0.108
Sling operation for stress incontinence (eg, fascia or synthetic)

	RVW	IWPUT	Total Time	Eval	Posit	SDW	Intra	IM-post	Visits
50590	9.77	0.091	227	33	3	15	60	15	38 x 0.5, 13, 13, 12
35703	11.82	0.092	276	40	10	15	60	30	32, 31, 38, 13
57288	12.13	0.108	246	33	7	15	60	27	38 x 0.5, 13, 13, 13, 12

Conclusion
Analysis of the family of vascular exploration codes relative to other common vascular and non-vascular codes supports that these codes are misvalued. The code set was revised at CPT and then surveyed by random members of SVS. Compelling evidence supports an increase in value for these codes. Strong survey data, supporting key reference services, and anchoring MPC codes support our recommended 25th percentile survey value of 12.00 RVU for CPT code 35703.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 35721, 35741

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty vascular surgery How often? Sometimes

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period?
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. national data not available

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 930
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Current code 35701 will continue to be reported by 35701 100% of the time. Current codes 35721 and 35741 will be reported by 35703 100% of the time. Current code 35761 will be reported by 35701 3%; 35702 60%; 35703 7%; and 37799 30%.

Specialty vascular surgery Frequency 558 Percentage 60.00 %

Specialty Frequency Percentage %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment
Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Major procedure

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 36831

CPT Code: 35701, 35702 and 35703
Specialty Society: SVS

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Facility Direct Practice Expense (PE) Inputs

Global Period: 090 **Meeting Date:** January 2019

35701 *Exploration of artery (not followed by surgical repair); neck (eg, carotid, subclavian)*

(Do not report 35701 in conjunction with 35201, 35231, 35261, 35800 when performed on the same side of the neck)

35702 *Exploration of artery (not followed by surgical repair); upper extremity (eg, axillary, brachial, radial, ulnar)*

35703 *Exploration of artery (not followed by surgical repair); lower extremity (eg, common femoral, deep femoral, superficial femoral, popliteal, tibial, peroneal)*

(When additional surgical procedures are performed at the same setting by the same surgeon, 35701, 35X02, 35X03 may only be reported when a nonvascular surgical procedure is performed and only when the artery exploration is performed through a separate incision)

(Do not report 35702, 35703 in conjunction with 35206, 35207, 35236, 35256, 35266, 35286, 35860 in the same extremity)

(Do not report 35701, 35702, 35703 to explore and identify a major recipient artery [eg, external carotid artery] when performed in conjunction with 15756, 15757, 15758, 20955, 20956, 20957, 20962, 20969, 20970, 20972, 20973, 43496, 49906)

---

1. **Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:**

   SVS convened a panel that included a number of experts familiar with these services to evaluate the practice expense inputs for these 'exploration of major artery' procedures.

2. **You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here:**

   The specialties included the existing practice expense direct inputs for CPT Code 35701 on the PE spreadsheet.

3. **Is this code(s) typically billed with an E/M service?**

   No

4. **If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:**

   N/A

5. **If you are requesting an increase over the current total cost for clinical staff time (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), total cost of supplies, and/or total cost of equipment you must provide compelling evidence:**

   N/A

6. **If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here:**

   N/A

7. **If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities:**

   N/A

8. **If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.**

   N/A

9. **If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here:**

   N/A

10. **If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here:**

    N/A

11. List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here:

EF023	table, exam	Office Visit Formula

12. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here:

N/A

13. If there is any other item on your spreadsheet that needs further explanation please include here:

N/A

14. Please include an explanation of each line item:

		35701	35702	35703

AMA/Specialty Society RVS Update Committee Summary of Recommendations

January 2019

Orchiopexy – Tab 7

In September 2018, the CPT Editorial Panel revised existing code 54640 to describe an additional approach for orchiopexy (scrotal) and to clearly indicate that hernia repair is separately reportable.

54640 ***Orchiopexy, inguinal or scrotal approach***
The RUC reviewed the survey results from 96 urological and pediatric surgeons and recommends the following physician time components: 30 minutes of pre-service evaluation time, 5 minutes of pre-service positioning time, 10 minutes of pre-service scrub/dress/wait, 60 minutes of intra-service time, and 15 minutes of immediate post-service time, a half day discharge management (99238), and one 99213 office visit. The RUC agreed that this is a difficult procedure due to the infant's anatomy and that two minutes of additional positioning time is appropriate for positioning the infant in a supine frog legged position with stabilizing support for performing the procedure and to account for anesthesia lines and equipment. The RUC thoroughly reviewed the recommended work and agreed that the current work RVU of 7.73, which is below the survey 25th percentile, accounts for the physician work involved for this service.

The RUC determined the previous number of visits was flawed based the way the visits were incorrectly recorded from separate surveys by urologists and pediatric surgeons in 1993. When reviewing previous data, the specialty indicated that the dominant specialty had performed two 99212 visits, but that data did not carry over into the RUC database when it was first created. The specialties further indicated that the current survey data indicating one 99213 is approximately equal to two 99212 visits. The RUC accepted this information and agreed that the work for the survey code has not changed since the last time it was surveyed by pediatric urologists and that the recommended work RVU for the survey code appropriately accounts for the amount of physician work that is involved, warranting a recommended work RVU of 7.73 for the survey code.

To justify a work RVU of 7.73, the RUC compared the surveyed code to CPT code 33274 *Transcatheter insertion or replacement of permanent leadless pacemaker, right ventricular, including imaging guidance (eg, fluoroscopy, venous ultrasound, ventriculography, femoral venography) and device evaluation (eg, interrogation or programming), when performed* (work RVU= 7.80, pre-service time of 51 minutes, intra-service time of 60 minutes, and post-service time of 20 minutes) and noted that the survey code contains identical intra-service time and similar total time. The RUC also compared the survey code to CPT code 57295 *Revision (including removal) of prosthetic vaginal graft; vaginal approach* (work RVU= 7.82, pre-service time of 45 minutes, intra-service time of 60 minutes, and post-service time of 20 minutes) and noted that the survey code contains identical pre-service and intra-service time as well as similar post-service time, further justifying the recommended and current work RVU for the survey code. **The RUC recommends a work RVU of 7.73 for CPT code 54640.**

Practice Expense
The RUC recommends the direct practice expense inputs as submitted by the specialty society.

CPT Code:54640 Tracking Number Original Specialty Recommended RVU: **7.73**
Presented Recommended RVU: **7.73**
Global Period: 090 Current Work RVU: **7.73** RUC Recommended RVU: **7.73**

CPT Descriptor: Orchiopexy, inguinal or scrotal approach
(For inguinal hernia repair performed in conjunction with inguinal orchiopexy, see 49495-49525)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A six-month-old patient presents with a palpable undescended testis.

Percentage of Survey Respondents who found Vignette to be Typical: 92%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 80% , In the ASC 20%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 100% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The appropriate antibiotic(s) are selected and ordered. Timing and administration are confirmed. Results of admission testing and imaging are reviewed. The planned procedure and postoperative management are reviewed with the parents. The site and side of proposed skin incision is marked and confirmed with the parents. Informed consent is reviewed and obtained from the parent, including witness. The length and type of anesthesia is reviewed with the anesthesiologist. Availability of all required instruments and supplies is verified. Assistance is provided in positioning the infant. Areas surrounding skin incisions to be prepared and draped are verified. The surgeon scrubs and gowns. A surgical time-out is performed with operating surgical team and anesthesia team.

Description of Intra-Service Work: An incision is made in the scrotum or the inguinal area from the pubic bone to the upper lateral pelvic area in the skin crease made by the thigh and the lower abdomen. Dissection is carried out to find the testis in the inguinal canal. The spermatic cord is mobilized to allow positioning of the testis in the scrotum. In the scrotum, a small pouch is created for the testis where the testis is sutured in place to prevent retraction back in to the inguinal canal. The incision is closed in layers.

Description of Post-Service Work: A sterile dressing is applied. The outcome of the surgery is discussed with the patient's parents, and a brief operative note is written. Patient stabilization is monitored in the recovery room. An operative report is dictated, and medical record documentation is completed. Aftercare treatment, including home restrictions (eg, activity, bathing), is discussed with the parents. Medications are reconciled, and orders for discharge medications are written. A discharge summary and instructions are completed. The patient is examined in the office at least once within the 90-day global period. Patient and family questions about surgery outcome and progress are answered. The dressings are removed, and the wound is assessed for any signs of infection or edema. Dressings are reapplied. The parents are instructed on continue care of the wound and bathing and activity restrictions. The chart note and letter to the primary care pediatrician are completed.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	3%	38%	59%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	7%	41%	52%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	3%	52%	45%
Physical effort required	3%	76%	21%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	17%	41%	42%

2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	25%	57%	18%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	4%	21%	75%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	21%	79%
Physical effort required	0%	39%	61%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	4%	32%	64%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

An erroneous CPT Assistant article published in June 2008 resulted in coding confusion for code 54640. The coding guidance for the article was provided by gastrointestinal physicians who do not perform the procedure. Urologists and general surgeons were not consulted. The AUA sent a request to the CPT Assistant Board to correct the publication. The Board members discussed this issue and noted that there appears to be a lack of clarity in the coding guidance because code 54640 states “with or without hernia repair” but there is a parenthetical following the code that states "For inguinal hernia repair performed in conjunction with inguinal orchiopexy, see 49495-49525."

Code 54640 is a CPT legacy code (pre-1990). The inclusion of "with or without" terminology did not mean "includes when performed." This was clarified with addition of a parenthetical in 2001 as an editorial change. The CPT 2001 Changes book provided the following rationale for the change: "*To allay misinterpretation that inguinal hernia repair is an inclusive procedure of the orchiopexy code 54640, a cross-reference was added directing users to the appropriate hernia repair code (49495-49525). When an inguinal hernia repair is performed in addition to an orchiopexy, both code 54640 and the appropriate inguinal hernia repair code 49495- 49525, should be reported.*"

Given the continued coding confusion from the 2008 erroneous CPT Assistant publication, the AUA proposed further coding changes that were approved by the CPT Editorial Panel. Although the changes were editorial based on the 2001 historical information noted above, it was determined that code 54640 should be surveyed.

Discussion of current RUC database time and visit details

Code 54640 was surveyed in 1993 when new code 54650 (orchiopexy by abdominal approach) was added to CPT to describe a different orchiopexy technique performed on a very small percentage of infants. In 1993, multiple societies could survey and submit separate SORs and separate recommendations that were then adjudicated by the RUC.

For code 54640, the RUC rationale states: "*Since fewer than 1,000 claims are submitted for these services annually, the RUC did not believe a survey of practicing physicians would yield much useful information about these services. The specialty provided no compelling evidence to support their comment, so the RUC recommends that the current RVUs be maintained.*"

Further, another RUC rationale entry states: "*The physician time listed in this record reflects Medicare frequency weight averaged time, or time jointly agreed upon by the specialty societies that developed the work recommendation. At the time that the RUC reviewed the original specialty societies' work recommendations, the RUC allowed multiple recommendations for a single code.*"

Based on a review of the originally submitted SORs, we believe the office visit data in the RUC database is incorrect. We note that this information was not added in 1993 when the code was surveyed, but many years later when the RUC database was created. Therefore, this is likely a transcription error; should have been 2 x 99212 office visits and not 2 x 99214.

SOURCE	CPT		TOTAL	PRE	INTRA	POST	99238	99214	99212
1993 svy	54640	pediatric urology	**167**	30	**60**	45	0.0		2
1993 svy	54640	pediatric general surgery	**221**	45	**75**	45	0.0	1	1
The blended intra-time was weighted toward pediatric urology, the dominant provider ~90%, but the office visit was transcribed as 99214 instead of 99212.									
current database	**54640**	"weight-averaged blended data"	**220**	33	**62**	45	0.0	2	

Compelling Evidence

Flawed methodology: The RUC review in 1993 resulted in no change in work RVU from the Harvard study, but inclusion of blended survey data in the RUC database (albeit inadvertently incorrect).

Recommendation

We recommend the current work RVU of 7.73. The work for code 54640 has not changed. The 1992 PFS work RVU was 6.90. The only difference in time and visit details from the 1993 survey of pediatric urologists (the dominant provider) is 2 x 99212 versus the current 1 x 99213 postoperative office visits. Given the increases to EM office visit codes in 1997, 2007, and 2010. The current value of 7.73 approximates global code adjustments, updated pre-time and updated discharge management time and work. If the correct office visits are applied to the current database record, the total time is essentially the same as the total current survey time.

Pre-time package 3 and Post-time package 9b are selected. The patient is straightforward, but operating on an infant's anatomy to perform orchiopexy is a difficult procedure. The patient will be positioning supine frog legged with stabilizing support for both performing the procedure and to account for anesthesia lines and equipment.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 54640

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty urology How often? Sometimes

Specialty general surgery How often? Sometimes

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period?
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. National data not available.

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 307
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC database

Specialty uology Frequency 280 Percentage 87.94 %

Specialty general surgery Frequency 30 Percentage 9.77 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment
Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Facility Direct Practice Expense (PE) Inputs

CPT Long Descriptor:
54640 Orchiopexy, inguinal or scrotal approach

Global Period 090 Meeting Date: 01-2019

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel: The specialty advisors reviewed the current PE inputs for 54640.

2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here: N/A – current code used as reference

3. Is this code(s) typically billed with an E/M service? no

4. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time: n/a

5. If you are requesting an increase over the current total cost for clinical staff time (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), total cost of supplies, and/or total cost of equipment you must provide compelling evidence: n/a

6. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here: n/a

7. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities: n/a

8. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov. n/a

9. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here: n/a

10. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here: n/a

11. List all the equipment included in your recommendation and the equipment formula chosen (see document titled “Calculating equipment time”). If you have selected “other formula” for any of the equipment please explain here: Equipment time is equal to the time for one postop office visit

12. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here: n/a

13. If there is any other item on your spreadsheet that needs further explanation please include here: n/a

14. Please include an explanation of each line item:

AMA/Specialty Society RVS Update Committee Summary of Recommendations

January 2019

Radiofrequency Neurotomy Sacroiliac Joint – Tab 8

In September 2018, the CPT Editorial Panel created two new codes to describe injection and radiofrequency ablation of the sacroiliac joint with image guidance for somatic nerve procedures.

64451 ***Injection(s), anesthetic agent(s) and/or steroid; nerves innervating the sacroiliac joint, with image guidance (ie, fluoroscopy or computed tomography)***
The RUC reviewed the survey results from 72 physicians and agreed on the following physician time components: 23 minutes of pre-service time, 15 minutes of intra-service time, and 7 minutes of immediate post-service time. This service is performed under fluoroscopic guidance, the dorsal ramus nerve is targeted at the junction of the sacral ala and superior articular process. The nerves are targeted at the posterior lateral foramen and under imaging guidance, the target areas are approached by introducing a spinal needle to each of the appropriate fluoroscopic landmarks. After negative aspiration, local anesthetic is deposited at each of the sites. The RUC thoroughly reviewed the recommended work involved in this service and agreed that the survey 25th percentile of 1.52 correctly estimates the amount of physician work involved.

To justify a work RVU of 1.52, the RUC compared the survey code to the top key reference service 64493 *Injection(s), diagnostic or therapeutic agent, paravertebral facet (zygapophyseal) joint (or nerves innervating that joint) with image guidance (fluoroscopy or CT), lumbar or sacral; single level* (work RVU= 1.52 and intra-service time of 15 minutes) and noted that both codes have identical intra-service time and should be valued identically. The RUC noted that although the survey code has less pre- and post- service time, survey respondents rated the survey code identical to somewhat more intense than the top key reference service, warranting the same work RVU of 1.52. Additionally, the RUC compared the surveyed code to CPT code 43197 *Esophagoscopy, flexible, transnasal; diagnostic, including collection of specimen(s) by brushing or washing, when performed (separate procedure)* (work RVU= 1.52 and intra-service time of 15 minutes), and noted that the survey code has identical pre-service and intra-service time and nearly identical post-service time and should be valued identically. **The RUC recommends a work RVU of 1.52 for CPT code 64451.**

64625 ***Radiofrequency ablation, nerves innervating the sacroiliac joint, with image guidance (ie, fluoroscopy or computed tomography)***
The RUC reviewed the survey results from 73 physicians and agreed on the following physician time components: 19 minutes of pre-service time, 30 minutes of intra-service time, and 7 minutes of immediate post-service time. This service is performed under fluoroscopic guidance, the dorsal ramus nerve is targeted at the junction of the sacral ala and superior articular process. The nerves are targeted at multiple points along the posterior lateral foramen and the skin around the planned entry point is injected with local anesthetic. Following the local anesthetic infiltration and under imaging guidance, a radiofrequency cannula is guided to the appropriate fluoroscopic landmark. Sensory stimulation is performed and after further anesthetic is injected, radiofrequency ablation is performed at 60 degrees for 150 seconds.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

The RUC thoroughly reviewed the recommended work involved in this service and agreed that a direct work RVU crosswalk to code 67105 *Repair of retinal detachment, including drainage of subretinal fluid when performed; photocoagulation* (work RVU= 3.39, pre-service time of 11 minutes, intra-service time of 30 minutes, post-service time of 10 minutes) correctly estimates the amount of physician work involved. For additional support, the RUC also referenced CPT code 67227 *Destruction of extensive or progressive retinopathy (eg, diabetic retinopathy), cryotherapy, diathermy* (work RVU= 3.50, pre-service time of 11 minutes, intra-service time of 30 minutes, and post-service time of 10 minutes) and noted that the survey and reference code requires similar physician work to perform and should be valued similarly. **The RUC recommends a work RVU of 3.39 for CPT code 64625.**

Refer to CPT
The RUC refers codes 64451 and 64625 to the CPT Editorial Panel to clarify that these services should not be reported with electrical stimulation codes. The RUC recommends the CPT Editorial Panel editorially add codes 95873 and 95874 to the parenthetical following codes 64451 and 64625. The parenthetical following codes 64451 and 64625 should state the following:

(Do not report 64451 in conjunction with 64493, 64494, 64495, 77002, 77003, 77012, 95873, 95874)

(Do not report 64625 in conjunction with 64635, 77002, 77003, 77012, 95873, 95874)

Practice Expense
The Practice Expense (PE) Subcommittee made modifications, including correcting the clinical activity minutes for CA018, assist physician or other qualified healthcare professional---directly related to physician work time (100%) to match the intra-service time from the physician work survey, as well as to the medical supplies (SD269, SD011). PE Subcommittee members questioned including both equipment items: mobile c-ARM room (EL018) at a purchase price of $151,200 and fluoroscopy table (EF024) at a purchase price of $227,650 to perform one service with fluoroscopy. The PE Subcommittee agreed that the C-arm does not include a table, so maintained the room, mobile c-ARM (EL018), removed the table, fluoroscopy (EF024) and added in the table, power (EF031) as a proxy for fluoroscopy table until invoices can be obtained to reprice the fluoroscopy table, which PE Subcommittee members agreed should have a purchase price between $10,000 and $15,000. **The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.**

New Technology/New Services
The RUC recommends that CPT codes 64451 and 64625 be placed on the New Technology list and be re-reviewed by the RUC in three years to ensure correct valuation and utilization assumptions.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation

Nervous System
Extracranial Nerves, Peripheral Nerves, and Autonomic Nervous System
Introduction/Injection of Anesthetic Agent (Nerve Block), Diagnostic or Therapeutic

(For destruction by neurolytic agent or chemodenervation, see 62280-62282, 64600-64681)

(For epidural or subarachnoid injection, see 62320, 62321, 62322, 62323, 62324, 62325, 62326, 62327)

(64400-64455, 64461, 64462, 64463, 64479, 64480, 64483, 64484, ~~64486, 64487~~, 64490-64495 are unilateral procedures. For bilateral procedures, use modifier 50)

Somatic Nerves

Codes 64400-64489 describe the introduction/injection of an anesthetic agent and/or steroid into the somatic nervous system for diagnostic or therapeutic purposes. For injection or destruction of genicular nerve branches, see 64XX0, 64XX1 respectively.

Codes 64400-64450, 64XX0 describe the injection of an anesthetic agent(s) and/or steroid into a nerve plexus, nerve, or branch. These codes are reported once per nerve plexus, nerve, or branch as described in the descriptor regardless of the number of injections performed along the nerve plexus, nerve, or branch described by the code. Image guidance (ultrasound, fluoroscopy, CT) and localization may be reported separately.

Image guidance (ultrasound, fluoroscopy, CT) and any injection of contrast are inclusive components of 64XX0 and 64451.

Codes 64455, 64479, 64480, 64483, 64484 are reported for single or multiple injections on the same site. For 64479, 64480, 64483, 64484, image guidance (fluoroscopy or CT) and any injection of contrast are inclusive components and are not reported separately. For 64455, image guidance (ultrasound, fluoroscopy, CT) and localization may be reported separately.

Codes 64461, 64462, 64463 describe injection of a paravertebral block (PVB). Codes 64486, 64487, 64488, 64489 describe injection of a transversus abdominis plane (TAP) block. Image guidance and any injection of contrast are inclusive components of 64461, 64462, 64463 and 64486, 64487, 64488, 64489 and are not reported separately.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

◢*64400*	*Injection(s), anesthetic agent(s) and/or steroid; trigeminal nerve, each ~~any~~ ~~division or~~ branch (ie, ophthalmic, maxillary, ~~or~~ mandibular)*
~~*64402*~~	~~*facial nerve*~~
	(64402 has been deleted. To report injection of anesthetic agent and/or steroid to the facial nerve, use 64999)
◢*64405*	*greater occipital nerve*
◢*64408*	*vagus nerve*
~~*64410*~~	~~*phrenic nerve*~~
	(64412 has been deleted. To report, use 64999)
~~*64413*~~	~~*cervical plexus*~~
	(64410, 64413 have been deleted. To report injection of anesthetic agent and/or steroid to the phrenic nerve, cervical plexus, use 64999)
◢*64415*	*brachial plexus~~, single~~*
◢*64416*	*brachial plexus, continuous infusion by catheter (including catheter placement)*
	(Do not report 64416 in conjunction with 01996)
◢*64417*	*axillary nerve*
◢*64418*	*suprascapular nerve*
◢*64420*	*intercostal nerve, single level*
✚◢*64421*	*intercostal nerve~~s~~, ~~multiple, regional block,~~ each additional level (List separately in addition to code for primary procedure)*
	(Use 64421 in conjunction with 64420)
◢*64425*	*ilioinguinal, iliohypogastric nerves*
◢*64430*	*pudendal nerve*
◢*64435*	*paracervical (uterine) nerve*
◢*64445*	*sciatic nerve~~, single~~*

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

◢*64446*		*sciatic nerve, continuous infusion by catheter (including catheter placement)*		
		(Do not report 64446 in conjunction with 01996)		
◢*64447*		*femoral nerve~~, single~~*		
		(Do not report 64447 in conjunction with 01996)		
◢*64448*		*femoral nerve, continuous infusion by catheter (including catheter placement)*		
		(Do not report 64448 in conjunction with 01996)		
◢*64449*		*lumbar plexus, posterior approach, continuous infusion by catheter (including catheter placement)*		
		(Do not report 64449 in conjunction with 01996)		
◢*64450*		*other peripheral nerve or branch*		
		(For injection, anesthetic agent, nerves innervating the sacroiliac joint, use 64451)		
●64451	S1	Injection(s), anesthetic agent(s) and/or steroid*;* nerves innervating the sacroiliac joint, with image guidance (ie, fluoroscopy or computed tomography) (Do not report 64451 in conjunction with 64493, 64494, 64495, 77002, 77003, 77012) (For injection, anesthetic agent, nerves innervating the sacroiliac joint with ultrasound, use 76999) (For bilateral procedure, use 64451 with modifier 50)	000	1.52
●*64XX0*		*Injection(s), anesthetic agent(s) and/or steroid; genicular nerve branches including imaging guidance, when performed*		
		(Do not report 64XX0 in conjunction with 64XX1)		
		(64XX0 requires injecting all of the following genicular nerve branches: superolateral, superomedial, and inferomedial. If all three of these genicular nerve branches are not injected, report 64XX0 with modifier 52)		
Paravertebral Spinal Nerves and Branches				
64493		*Injection(s), diagnostic or therapeutic agent, paravertebral facet (zygapophyseal) joint (or nerves innervating that joint) with image guidance (fluoroscopy or CT), lumbar or sacral; single level*		
		(For injection, anesthetic agent, nerves innervating the sacroiliac joint, use 64451)		

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Nervous System
Extracranial Nerves, Peripheral Nerves, and Autonomic Nervous System
Destruction by Neurolytic Agent (eg, Chemical, Thermal, Electrical or Radiofrequency), Chemodenervation

Codes 64600-64681 include the injection of other therapeutic agents (eg, corticosteroids). Do not report diagnostic/therapeutic injections separately. Do not report a code labeled as destruction when using therapies that are not destructive of the target nerve (eg, pulsed radiofrequency), use 64999. For codes labeled as chemodenervation, the supply of the chemodenervation agent is reported separately.

(For chemodenervation of internal anal sphincter, use 46505)

(For chemodenervation of the bladder, use 52287)

(For chemodenervation for strabismus involving the extraocular muscles, use 67345)

(For chemodenervation guided by needle electromyography or muscle electrical stimulation, see 95873, 95874)

Somatic Nerves

64600 *Destruction by neurolytic agent, trigeminal nerve; supraorbital, infraorbital, mental, or inferior alveolar branch*

64605 *second and third division branches at foramen ovale*

64610 *second and third division branches at foramen ovale under the radiologic monitoring*

64625	S2	Radiofrequency ablation, nerves innervating the sacroiliac joint, with image guidance (ie, fluoroscopy or computed tomography) (Do not report 64625 in conjunction with 64635, 77002, 77003, 77012) (For radiofrequency ablation, nerves innervating the sacroiliac joint with ultrasound, use 76999) (For bilateral procedure, use 64625 with modifier 50)	010	3.39

#●64XX1 *Destruction by neurolytic agent genicular nerve branches ~~(~~includ<u>inge</u>~~s~~ imaging guidance, when performed~~)~~*

<u>(64XX1 requires the destruction of each of the following genicular nerve branches: superolateral, superomedial, and inferomedial. If a neurolytic agent for the purposes of destruction is not applied to all of these nerve branches, report 64XX01 with modifier 52)</u>

<u>(Do not report 64XX1 in conjunction with 64XX0)</u>

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:64451 Tracking Number Original Specialty Recommended RVU: **1.91**
Presented Recommended RVU: **1.91**
Global Period: 000 Current Work RVU: **N/A** RUC Recommended RVU: **1.52**

CPT Descriptor: Injection(s), anesthetic agent(s) and/or steroid; nerves innervating the sacroiliac joint, with image guidance (ie, fluoroscopy or computed tomography)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 68-year-old male has a 5-year history of persistent right sacroiliac pain that is interfering with his ability to complete activities of daily living. He has had poor control of his pain despite multiple medication trials and physical therapy. Due to his persistent, debilitating pain, a trial of diagnostic nerve blocks to the sacroiliac joint is scheduled to relieve his pain and improve his function.

Percentage of Survey Respondents who found Vignette to be Typical: 100%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Informed consent is discussed and obtained from the patient. The clinician obtains and reviews the medical record and any pertinent imaging studies, laboratory studies and medical information. The proposed site of the procedure is identified and marked. The patient is moved to the procedure room. The clinician gowns, gloves and prepares supplies. The injection is prepared. The skin is cleansed with an antiseptic solution, sterile drapes are applied. The skin around the planned entry point is injected with local anesthetic. The universal protocol ("time out") is performed with the care team.

Description of Intra-Service Work: The procedure is performed under fluoroscopic guidance. The L5 dorsal ramus nerve is targeted at the junction of the sacral ala and S1 superior articular process. The S1, S2, and S3 nerves are targeted at the posterior lateral foramen of the S1, S2, and S3 foramen respectively. Under imaging guidance, the target areas are approached by introducing a spinal needle to each of the appropriate fluoroscopic landmarks. After negative aspiration, local anesthetic is deposited at each of the sites. The needle and stylet are removed.

Description of Post-Service Work: The sites are covered with a sterile occlusive dressing. The patient is observed for bleeding or any adverse effects and for evidence of successful block. A procedure note is dictated/written and medical record entries are made.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	7%	46%	44%	3%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	2%	54%	44%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	7%	39%	54%
Physical effort required	2%	78%	20%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	2%	46%	52%

2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	29%	57%	14%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	36%	72%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	21%	14%	65%
Physical effort required	29%	50%	21%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	28%	72%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

64451, Injection(s), anesthetic agent(s) and/or steroid*;* nerves innervating the sacroiliac joint, with image guidance (ie, fluoroscopy or computed tomography) and 64625, Radiofrequency ablation, nerves innervating the sacroiliac joint, with image guidance (ie, fluoroscopy or computed tomography) are new codes that describe the work involved in treating the nerves around the Sacroiliac (SI) joint. 64451 describes SI Joint nerve treatment by injection and was approved as category I at the October 2018 CPT Editorial Panel meeting and is a 000-day global.

Both 64451 and 64625 were surveyed together by the ASA, AAPM&R, AAPM, ASIPP, NANS, NASS, and SIS for the 2019 January RUC meeting via random sampling of all societies.

Survey Results

There were 72 total respondents, and all 72 agreed with the typical patient vignette. Median experience in past 12 months was 22.

Median survey times were as follows: 22.5 minutes for pre-service evaluation, 7 minutes for pre-service positioning, 7 minutes for pre-service scrub, dress, and wait. Median intra-service time was 15 minutes with 7 minutes immediate post-service time.

25th % Work RVU was 1.52 and the Median Work RVU was 1.91.

Key Reference Services

41 of the 72 respondents choose 64493, Injection(s), diagnostic or therapeutic agent, paravertebral facet (zygapophyseal) joint (or nerves innervating that joint) with image guidance (fluoroscopy or CT), lumbar or sacral; single level which has pre-times of 7/5/5, intra-service time of 15 minutes, and immediate post-service time of 10 minutes, a work RUV of 1.52 and an IWPUT of .068 and 14 of the 72 respondents choose 64479, Injection(s), anesthetic agent and/or steroid, transforaminal epidural, with imaging guidance (fluoroscopy or CT); cervical or thoracic, single level which has pre-times of 13/5/6, intra-service time of 15 minutes, and immediate post-service time of 10 minutes, a work RVU of 2.29 and an IWPUT of .108.

Recommended Time and Work RVU

An expert panel from all of the surveying societies reviewed the survey data and key reference services and recommends the following times and Work RVU.

We are recommending pre-service package 5, non-facility no anesthesia time (7, 0, 1), with an additional minute for positioning (7, 1, 1). This pre-service package is consistent with other recently and/or currently reviewed nerve treatment by injection codes such as the family of Somatic nerves and the family of Genicular nerves.

We are recommending the survey median intra-service time of 15 minutes.

We are recommending the survey median immediate post-service time of 7 minutes.

Our recommended total time is 31 minutes.

We are recommending the survey median Work RVU of 1.91. The resulting IWPUT is .104.

Comparison to Key Reference Services

CPT Code	Descriptor	Work RVU	Total Time	Total Pre-Time	Intra-Time	IWPUT
64493	Injection(s), diagnostic or therapeutic agent, paravertebral facet (zygapophyseal) joint (or nerves innervating that joint) with image guidance (fluoroscopy or CT), lumbar or sacral; single level	1.52	42	17	15	0.066
64483	Injection(s), anesthetic agent and/or steroid, transforaminal epidural, with imaging guidance (fluoroscopy or CT); lumbar or sacral, single level	1.9	49	24	15	0.082
6XX00	Injection(s), anesthetic agent(s) and/or steroid; nerves innervating the sacroiliac joint, with image guidance (ie, fluoroscopy or computed tomography)	1.91	31	9	15	0.104
64479	Injection(s), anesthetic agent and/or steroid, transforaminal epidural, with imaging guidance (fluoroscopy or CT); cervical or thoracic, single level	2.29	49	24	15	0.108

We believe the survey conducted was robust and captured a wide variety of specialists who regularly perform the procedure and who showed a significant amount of recent experience with the procedure. We believe the median survey times and Work RVU are well supported by the key reference services like 64493 and 64483 (3rd most commonly chosen reference service from survey), and 64479. The Work RVU is higher than 64493, the most commonly chosen key reference service, but the expert panel believes it is considerably more work to treat the nerves closer to the SI joint as described by the CPT code descriptor than to treat the lumbar facets as described in 64493 which have well defined anatomical landmarks and are located further away from the joint structure and therefore are less difficult to innervate. Further, the time differences between 64451 and 64493 are a result of current RUC standard pre-time packages which not were used when 64493 was last valued when pre-times were typically the same as the median survey times. The median survey pre-times for 64451 were actually greater than the pre-times for 64493 but were adjusted to pre-service time package 5. And the survey intensity/complexity questions indicated that for many of the components, survey respondents felt 64451 to be more complex or intense than 64493.

We are recommended a work RVU that is essentially identical for 64451 as compared to 64483 with a work RVU of 1.90. 64483 has greater pre-service times, but, similar to 64493, the most recent review of 64483 occurred prior to the use of pre-service time packages and the survey median pre-service times for 64451 were actually greater than 64483 but were adjusted to pre-service package 5.

The recommended work RVU of 1.91 is lower than reference service 64479 which has a work RVU of 2.29, and the same intra-time of 15 minutes, but greater pre-service times as 64479 was last valued prior to the use of pre-service time packages. The IWPUT for 64479 -.0108- is slightly greater than the resulting IWPUT for 64451 -.104- although survey respondents indicated they considered 64451 to be more complex and intense than 64479 for most complexity/intensity questions.

These comparators indicate that the survey median Work RVU of 1.91 with pre-service package 5 (with an additional 1 minute for positioning, intra-service time of 15 minutes, and 7 minutes immediate post-service is the correct Work RVU for 64451 with the appropriate time inputs.

As an additional, final comparison, 64451 when currently performed is billed with CPT code 64450, Injection, anesthetic agent; other peripheral nerve or branch with a work RVU of 0.75. Because 64450 describes a single injection and does not include imaging guidance which is separately reportable and 64451 involves a minimum of injecting 4 nerves and includes imaging guidance, the total work RVUs are 2.15 (.75+.375+.375+.375+.27) which is higher than the median survey work RVU.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) Majority of the time 64451 was reported with 64450, Injection, anesthetic agent; other peripheral nerve or branch with a smaller percentage reported with 64493, Injection(s), diagnostic or therapeutic agent, paravertebral facet (zygapophyseal) joint (or nerves innervating that joint) with image guidance (fluoroscopy or CT), lumbar or sacral; single level or 64499, Unlisted procedure, nervous system

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pain Management How often? Commonly

Specialty Inteventional Pain Management How often? Commonly

Specialty Anesthesiology How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 2500
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. estimates crosswalked from CPT code 64493

Specialty Pain Management Frequency 600 Percentage 24.00 %

Specialty Interventional Pain Management Frequency 575 Percentage 23.00 %

Specialty Anesthesiology Frequency 550 Percentage 22.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 2500
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. estimates crosswalked from CPT code 64493

Specialty Pain Management Frequency 600 Percentage 24.00 %

Specialty Interventional Pain Management Frequency 575 Percentage 23.00 %

Specialty Anesthesiology Frequency 550 Percentage 22.00 %

Do many physicians perform this service across the United States? Yes

CPT Code:64625 Tracking Number Original Specialty Recommended RVU: **3.91**
Presented Recommended RVU: **3.84**
Global Period: 010 Current Work RVU: **N/A** RUC Recommended RVU: **3.39**

CPT Descriptor: Radiofrequency ablation, nerves innervating the sacroiliac joint, with image guidance (ie, fluoroscopy or computed tomography)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 68-year-old male has a 5-year history of persistent right sacroiliac joint pain and struggles to complete activities of daily living. He has had poor pain control despite multiple medication trials and physical therapy. Subsequently, a trial of diagnostic nerve blocks was conducted which temporarily relieved his pain and improved his function. He is now scheduled for radiofrequency ablation of the nerves innervating the sacroiliac joint to provide longer term, sustained pain relief.

Percentage of Survey Respondents who found Vignette to be Typical: 97%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 29% , In the ASC 38%, In the office 33%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 100% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Informed consent is discussed and obtained from the patient. The clinician obtains and reviews the medical record and any pertinent imaging studies, laboratory studies and medical information. The proposed site of the procedure is identified and marked. The patient is moved to the procedure room. The clinician gowns, gloves and prepares supplies. The injection is prepared. The skin is cleansed with an antiseptic solution, sterile drapes are applied. The skin around the planned entry point is injected with local anesthetic. The universal protocol ("time out") is performed with the care team..

Description of Intra-Service Work: The procedure is performed under fluoroscopic guidance. The L5 dorsal ramus nerve is targeted at the junction of the sacral ala and S1 superior articular process. The S1, S2, and S3 nerves are targeted at multiple points along the posterior lateral foramen of the S1, S2, and S3 foramen respectively. Under imaging guidance, a radiofrequency cannula is guided to the appropriate fluoroscopic landmark. Sensory stimulation is performed. After further anesthetic is injected, radiofrequency ablation is performed at 60 degrees for 150 seconds. The needle and stylet are removed.

Description of Post-Service Work: The sites are covered with a sterile occlusive dressing. The patient is observed for bleeding or any adverse effects and for evidence of successful radiofrequency ablation. A procedure note is dictated/written and medical record entries are made. The patient is discharged after a period of monitoring and when there is independent ambulation. At the follow-up office visit, the patient is examined and treatment success or adverse reactions that may have occurred after the procedure are discussed. Revise the treatment plan(s) as necessary. Dictate notes for the patient's medical record..

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	2%	34%	61%	13%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	3%	56%	31%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	8%	34%	58%
Physical effort required	2%	26%	72%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	19%	42%	39%

2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	14%	43%	29%	14%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	14%	57%	29%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	14%	71%	14%
Physical effort required	14%	43%	43%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	43%	43%	14%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

64451, Injection(s), anesthetic agent(s) and/or steroid; nerves innervating the sacroiliac joint, with image guidance (ie, fluoroscopy or computed tomography) and 64625, Radiofrequency ablation, nerves innervating the sacroiliac joint, with image guidance (ie, fluoroscopy or computed tomography) are new codes that describe the work involved in treating the nerves around the Sacroiliac (SI) joint. 64625 describes SI Joint nerve treatment by radiofrequency ablation and was approved as category I at the October 2018 CPT Editorial Panel meeting and is a 010-day global.

Both 64451 and 64625 were surveyed together by the ASA, AAPM&R, AAPM, ASIPP, NANS, NASS, and SIS for the 2019 January RUC meeting via random sampling of all societies.

Survey Results

There were 73 total respondents, and 71 of the 73 respondents agreed with the typical patient vignette. Median experience in past 12 months was 10.

Median survey times were as follows: 22 minutes for pre-service evaluation, 7 minutes for pre-service positioning, 7 minutes for pre-service scrub, dress, and wait. Median intra-service time was 30 minutes with 7 minutes immediate post-service time. Survey respondents indicated the most typical site of service to be the Ambulatory Surgical Center (ASC) with the patient being discharged on the same day in 100% of the cases. Survey respondents indicated one post-operative follow up visit in the office setting in the global period at a 99213 level.

25th % Work RVU was 3.00 and the Median Work RVU was 3.91.

Key Reference Services

57 of the 73 respondents choose 64633, Destruction by neurolytic agent, paravertebral facet joint nerve(s), with imaging guidance (fluoroscopy or CT); cervical or thoracic, single facet joint which has pre-times of 18/5/6, intra-service time of 30 minutes, and immediate post-service time of 15 minutes, half day discharge, 1 post-operative office visit, 99213, a work RUV of 3.84, and an IWPUT of .044.

7 of the 73 respondents choose 64561, Percutaneous implantation of neurostimulator electrode array; sacral nerve (transforaminal placement) including image guidance, if performed which has pre-times of 13/5/6, intra-service time of 45 minutes, immediate post-service time of 19 minutes, one level 99214 post-operative office visit, a work RVU of 5.44 and an IWPUT of .064.

Recommended Time and Work RVU

An expert panel from surveying societies reviewed the survey data and key reference services and recommends the following times and Work RVU.

We are recommending pre-service package 1-Facility, straightforward patient, no general anesthesia, with a reduction of one minute for scrub, dress, and wait to reflect survey median times (13, 1, 5). This pre-service package is consistent with other recently and/or currently reviewed nerve treatment by injection codes such as the family of Somatic nerves and the family of Genicular nerves.

We are recommending the survey median intra-service time of 30 minutes.

We are recommending the survey median immediate post-service time of 7 minutes with a corresponding reduction from post-service package 7A of -11 minutes to reflect median survey responses. We are also

recommending a half-day discharge-99238 to reflect the typical site of service from the survey, and one post-operative office visit-99213 to reflect the survey responses.

Our recommended total time is 98 minutes.

We are recommending the survey median Work RVU of 3.91. The resulting IWPUT is .060.

Comparison to Key Reference Services

CPT Code	Descriptor	Work RVU	Total Time	Total Pre-Time	Intra-Time	IWPUT	SVY
64633	Destruction by neurolytic agent, paravertebral facet joint nerve(s), with imaging guidance (fluoroscopy or CT); cervical or thoracic, single facet joint	3.84	116	29	30	0.044	SVY
6XX01	Radiofrequency ablation, nerves innervating the sacroiliac joint, with image guidance (ie, fluoroscopy or computed tomography)	3.91	98	19	30	0.06	SVY
64561	Percutaneous implantation of neurostimulator electrode array; sacral nerve (transforaminal placement) including image guidance, if performed	5.44	136	32	45	0.064	SVY

We believe the survey conducted was robust and captured a wide variety of specialists who regularly perform the procedure and who showed a significant amount of recent experience with the procedure. We believe the median survey times and recommended Work RVU are well supported by the key reference service 64633 which was chosen by 78% of the respondents. The recommended Work RVU is slightly higher than 64633, the most commonly chosen key reference service. The expert panel believes it is more work to treat the nerves closer to the SI joint as described by the CPT code descriptor than to treat the cervical or thoracic medial branch nerves as described in 64633 which are which have well defined anatomical landmarks and are located further away from the joint structure and therefore are less difficult to innervate. Further, the time differences between 64625 and 64633 are a result of current RUC standard pre-time packages which were not used when 64633 was last valued when pre-times were typically the same as the median survey times. The median survey pre-times for 64625 were actually greater than the pre-times for 64633 but were adjusted to pre-service time package 1. And the survey intensity/complexity questions indicated that for most of the components, survey respondents felt 64625 to be more complex or intense than 64633.

These comparators indicate that the survey median Work RVU of 3.91 with pre-service package 1 (with a subtraction of 1 minute for scrub, dress and wait, intra-service time of 15 minutes, post-service package 7a with 11 minutes subtracted, a half-day discharge-99238, and one post-operative office visit 99213 are the correct and appropriate Work RVU and times for 64625.

Compelling Evidence Rationale for 64625

Currently, clinicians are reported services described by code 64625 either with code 64640 Destruction by neurolytic agent; other peripheral nerve or branch) or 64633, Destruction by neurolytic agent, paravertebral facet joint nerve(s), with imaging guidance (fluoroscopy or CT); cervical or thoracic, single facet joint. Code 64640 is currently being surveyed for this meeting as part of a different tab (tab 10). It was previously surveyed back in 2011. The American Society of Anesthesiologists (ASA), the American Academy of Pain Medicine (AAPM), the American Academy of Physical Medicine & Rehabilitation (AAPM&R), the American Society of Interventional Pain Physicians (ISIPP), the North American Neuromodulation Society (NANS), the North American Spine Society (NASS) and the Spine Intervention Society (SIS) are submitting compelling evidence for code 64625.

Change in physician work due to change in patient population

There is a change in physician work due to a change in the typical patient. When 64640 was surveyed in 2011, the typical patient had a history of neuritis of the medial calcaneal nerve.

- 64640 Current Vignette: A 50-year-old female has a history of neuritis of the medial calcaneal nerve. Her symptoms, including paresthesia on percussion and ambulation, have failed to improve following administration of multiple conservative treatment modalities. The decision is made to perform a percutaneous alcohol nerve sclerosing (PANS) injection.

In contrast, the typical patient for 64625 is experiencing persistent SI right sacroiliac joint pain.

- 64625 Vignette: A 68-year-old male has a 5-year history of persistent right sacroiliac joint pain and struggles to complete activities of daily living. He has had poor pain control despite multiple medication trials and physical therapy. Subsequently, a trial of diagnostic nerve blocks was conducted which temporarily relieved his pain and improved his function. He is now scheduled for radiofrequency ablation of the nerves innervating the sacroiliac joint to provide longer term, sustained pain relief.

Existing codes are not specific to the SI Joint Nerve RFA procedure where the SI Joint Nerve branches are targeted for radiofrequency ablation. This service is performed on a subset of patients who experienced temporary relief from pain from a previous SI Joint Nerve block procedure.

Change in physician work due to change in technique

There is a change in physician work due to change in technique. The work description for code 64640 describes a single ablation. Code 64625, involves ablation for a minimum of 4 SI joint nerve branches in order to achieve analgesia for the SI Joint.

Specialties surveyed

All of the specialties that currently perform the 64625, were not included in the 2011 survey for 64640. The specialties that surveyed the code in 2011 included podiatry, anesthesia, pain management and interventional pain management. For the new code 64625, the specialty of podiatry does not perform the service and their inclusion would not be appropriate. Additionally, physical medicine and rehabilitation was not included in the 2011 survey. They are included in the 2018 survey along with specialists in neuromodulation (NANS), and spine surgery (NASS).

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 64640, 64633

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pain Management How often? Commonly

Specialty Inteventional Pain Management How often? Commonly

Specialty Anesthesiology How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 2000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. estimated crosswalk from 64633

Specialty Pain Management Frequency 560 Percentage 28.00 %

Specialty Interventional Pain Management Frequency 540 Percentage 27.00 %

Specialty Anesthesiology Frequency 520 Percentage 26.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 2,000
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. estimated crosswalk from 64633

Specialty Pain Management Frequency 560 Percentage 28.00 %

Specialty Interventional Pain Management Frequency 540 Percentage 27.00 %

Specialty Ansethsiology Frequency 520 Percentage 26.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment
Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Minor procedure

BETOS Sub-classification Level II:
Musculoskeletal

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 64633

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Facility Direct Practice Expense (PE) Inputs

CPT Long Descriptor:

Global Period: 0 days (64451) 010 days (64625) Meeting Date: January 2019

64451: Injection(s), anesthetic agent(s) and/or steroid*;* nerves innervating the sacroiliac joint, with image guidance (ie, fluoroscopy or computed tomography)

64625: Radiofrequency ablation, nerves innervating the sacroiliac joint, with image guidance (ie, fluoroscopy or computed tomography)

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   A panel of clinicians representing each specialty society involved in the RUC survey process for the collaborated to develop and approve the PE recommendations.

2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here:

   Code 64451: Using the current direct PE inputs of code 64493 as the reference code. 64493 was the primary reference code from the RUC survey.
   Code 64625: Using the current direct PE inputs of code 64633 as the reference code. 64633 was the primary reference code from the RUC survey.

3. Is this code(s) typically billed with an E/M service? *No*

4. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time: *N/A*

5. If you are requesting an increase over the current total cost for clinical staff time (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), total cost of supplies, and/or total cost of equipment you must provide compelling evidence: *N/A*

6. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here: *N/A*

7. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities: *N/A*

8. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov. *N/A*

9. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here: *N/A*

10. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here: *N/A*

11. List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here:

Code 64625: Table, exam (default formula)

12. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here: *N/A*

13. If there is any other item on your spreadsheet that needs further explanation please include here: *N/A*

14. Please include an explanation of each line item:

Code	Description	Explanation
CA002	Coordinate pre-surgery services (including test results)	Staff ensures all clinicians and providers have the relevant test results and other necessary components to delivery service
CA003	Schedule space and equipment in facility	Staff schedules and reviews space in facility as well as necessary equipment for performance of the procedure
CA005	Complete pre-procedure phone calls and prescription	Staff explains where to come for the appointment, checks medications, runs through list of medical conditions, makes sure the patient is off anti-coagulation drugs, confirms if patient uses BP medications, walks the patient through the procedure, confirms whether a driver is available for a ride home and answers patient questions.
CA006	Confirm availability of prior images/studies	Staff review medical records and confirm that all relevant prior images and studies are available for provider and obtains prior images and studies when necessary
CA039	Post-operative visits (total time)	
EF023	Table, exam	Used during follow-up procedure
EQ354	Radiofrequency kit for destruction by neurolytic agent	Used for the destruction procedure

CPT Code:__64451, 64625_____
Specialty Society__ASA, AAPM&R, AAPM, ASIPP, SIS, NASS, NANS__

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Non Facility Direct Practice Expense (PE) Inputs

CPT Long Descriptor:

64451: Injection(s), anesthetic agent(s) and/or steroid*;* nerves innervating the sacroiliac joint, with image guidance (ie, fluoroscopy or computed tomography)

64625: Radiofrequency ablation, nerves innervating the sacroiliac joint, with image guidance (ie, fluoroscopy or computed tomography)

Global Period: 0 days (64451) 010 days (64625) Meeting Date: January 2019

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   A panel of clinicians representing each specialty society involved in the RUC survey process for the collaborated to develop and approve the PE recommendations.

2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here:

   Code 64451: Using the current direct PE inputs of code 64493 as the reference code. 64493 was the primary reference code from the RUC survey.
   Code 64625: Using the current direct PE inputs of code 64633 as the reference code. 64633 was the primary reference code from the RUC survey.

3. Is this code(s) typically billed with an E/M service? *No.*
   Is this code(s) typically billed with the E/M service in the nonfacility? *No.*
   (Please see provided data in PE Subcommittee folder)

4. What specialty is the dominant provider in the nonfacility?
   Codes 64451 and 64625: New codes- N/A

   What percent of the time does the dominant provider provide the service(s) in the nonfacility?
   Codes 64451 and 64625: New codes- N/A

   Is the dominant provider in the nonfacility different then for the global?
   Codes 64451 and 64625: New codes- N/A

   (Please see provided data in PE Subcommittee folder)

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time: *N/A*

6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), you must provide compelling evidence. Please explain if the increase can be entirely accounted for because of an increase in physician time.

   Codes 64451 and 64625: N/A

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here: *N/A*

8. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? (please use this time rather than 5 minutes in your reference code)
   The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

   We recommend 5 minutes for obtaining vital signs. The following vital signs are collected: BP, RR, Pulse, Temp, O2 sat.

9. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

   Staff is present and assisting physician during the entire procedure. Staff supports the physician throughout the procedure by handing over the necessary supplies (syringes, gauzes etc.), acts as a second pair of hands during the procedure assisting with supplies/equipment or directly with the patient as needed, helps to make sure patient is comfortable and monitors the patient throughout the procedure.

10. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived. *N/A*

11. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities: *N/A*

12. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov. *N/A*

13. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here: *N/A*

14. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here: *N/A*

15. List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here:

Code 64451:

Technologist PACS workstation	*PACS*
mayo stand	*Default*
table, fluoroscopy	*Default*
room, mobile c-ARM	*Highly technical*
ECG, 3-channel (with SpO2, NIBP, temp, resp)	*Other*
light, exam	*Default*

The formula for ECG, 3-channel is the sum of the values included in the default formula, plus the time that the patient is monitored post-service of the service period.

Code 64625

Technologist PACS workstation	*PACS*
mayo stand	*Default*
table, fluoroscopy	*Default*
ECG, 3-channel (with SpO2, NIBP, temp, resp)	*Other*
light, exam	*Default*
nerve stimulator (eg, for nerve block)	*Default*
radiofrequency generator (NEURO)	*Default*
radiofrequency kit for destruction by neurolytic agent	*Default*

The formula for ECG, 3-channel is the sum of the values included in the default formula, plus the time that the patient is monitored post-service of the service period.

16. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here: *N/A*

17. If there is any other item on your spreadsheet that needs further explanation please include here: *N/A*

18. Please include an explanation of each line item:

Code	Description	Explanation
CA005	Complete pre-procedure phone calls and prescription	Staff explains where to come for the appointment, checks medications, runs through list of medical conditions, makes sure the patient is off anti-coagulation drugs, confirms if patient uses BP medications, walks the patient through the procedure, confirms whether a driver is available for a ride home and answers patient questions.
CA006	Confirm availability of prior images/studies	
CA009	Greet patient, provide gowning, ensure appropriate medical records are available	

CA010	Obtain vital signs	Blood pressure, respiratory rate, pulse, temperature, O2 saturation are all measured
CA011	Provide education/obtain consent	Patient and/or caregiver education on procedure, risks, complications, and requirements; obtain consent signature/approval subsequent to education
CA013	Prepare room, equipment and supplies	Separate preparations are made by the nursing and rad tech staff for the XX00 and XX01 codes
CA014	Confirm order, protocol exam	Confirm order is correct
CA016	Prepare, set-up and start IV, initial positioning and monitoring of patient	For both the XX00 and XX01, initiate IV, assist in patient positioning and monitor patient IV feed, and patient position
CA018	Assist physician or other qualified healthcare professional - directly	For the XX00 and XX01 codes, this is completed by both the nurse and the rad tech
CA022	Monitor the patient following procedure/service, multitasking 1:4	Patient is monitored for 20 minutes while multitasking (total of 5 minutes)
CA024	Clean room/equipment by clinical staff	Room and equipment are cleaned after patient encounter
CA029	Check dressings, catheters, wounds	Patient's dressings and wounds checked
CA030	Technologist QCs images in PACS, checking for all images, reformats, and dose page	Images are required for the XX00 and XX01 codes
CA031	Review examination with interpreting MD/DO	Images are required for the XX00 and XX01 codes
CA032	Scan exam documents in PACS. Complete exam in RIS system to populate images into work queue	Images are required for the XX00 and XX01 codes
CA035	Review home care instructions, coordinate visits/prescriptions	Post procedure review of care instructions with patient and/or caregiver and coordination of future visits and related precriptions
CA039	Post-operative visits (total time)	
SB001	Cap, surgical	Sterile attire for the MD. For the destruction codes, a cap is also required for the nurse and rad tech.
SB024	Gloves, sterile	Sterile attire for the MD
SB028	Gown, surgical, sterile	Sterile attire for the MD
SB033	Mask, surgical	Sterile attire required for the MD and other staff present in the room
SB027	Gown, staff, impervious	Sterile attire for staff
SB022	Gloves, non-sterile	Sterile attire for staff
SK075	Skin marking pen, sterile (Skin Skribe)	Used to mark injection sites
SB026	Gown, patient	Used to cover patient while allowing access to injection site.
SB004	Cover, thermometer probe	Used for taking vitals
SB036	Paper, exam table	
SB044	Underpad 2ft x 3ft (Chux)	Used under patient to collect fluid that may drain during the procedure to the table

SB037	Pillow case	Two pillows are needed for the XX00 and XX01 procedures – one under the head and one between the knees
SJ081	Swab, patient prep, 1.5 ml (chloraprep)	Used to prep the injection sites
SB011	Drape, sterile, fenestrated 16in x 29in	
SB019	Drape-towel, sterile 18in x 26 in	
SB008	Drape, sterile, c-arm, fluoro	Used only for the XX00 and XX01 codes that require fluoroscopic guidance
SD269	Grounding pad	
SB012	Drape, sterile, for Mayo stand	Used to hold supplies during the procedures
SC051	Syringe 10-12ml	Used for the anesthetic and injectate for XX00 and XX01
SH047	Lidocaine 1%-2% inj (Xylocaine)	Local anesthetic –for XXX000 and XXX000 (4 nerves) 10cc are used as anesthetic only.
SD050	Electrode needle, injectable (Myoject)	
SD087	Guide, needle, for localization	
SD011	Cannula (radiofrequency denervation) (SMK-C10)	Used for denervation procedures
SC028	Needle, 18-26g, 1.5-3.5in, spinal	Used for injectate for XX00 code
SH021	Bupivacaine 0.25% inj (Marcaine)	Injectate, increased amount required for XX00 and XX01 to account for 4 nerves.
SJ001	Alcohol isopropyl 70%	Used to clean skin post-procedure
SG021	Bandage, strip 0.75in x 3in (Bandaid)	Used post-procedure for site(s) of injection
SG056	Gauze, sterile 4in x 4in (10 pack)	Used for multiple injections (XX00 and XX01)
SL259	Bleach cleaning wipe	Used to clean the table
EF024	Table, fluoroscopy	Used for image guided procedures XX00 and XX01
EL018	Room, mobile c-Arm	Used for injection procedure XX00
EQ354	Radiofrequency kit for destruction by neurolytic agent	Used for destruction procedure XX01
EQ168	Light, exam	
ED050	Technologist PACS workstation	Used for capturing and storing images for the XX00 and XX01 codes
EQ214	Radiofrequency generator (NEURO)	Used during denervation procedure XX01
EQ184	Nerve stimulator (eg, for nerve block)	Used during denervation procedure XX01
EF015	Mayo stand	Used to hold supplies for the procedures
EQ011	ECG, 3-channel (with SpO2, NIBP, temp, resp)	Used both during the procedures and during monitoring time

AMA/Specialty Society RVS Update Committee Summary of Recommendations
Different Performing Specialty from Survey*

January 2019

Lumbar Puncture – Tab 9

In October 2017, these services were identified as being performed by a different specialty than the specialty that originally surveyed this service. In January 2018, the RUC recommended that these services be referred to CPT to bundle image guidance. At the September 2018 CPT Editorial Panel meeting, the Panel created two new codes to bundle diagnostic and therapeutic lumbar puncture with fluoroscopic or CT image guidance and revised the existing diagnostic and therapeutic lumbar puncture codes so they would only be reported without fluoroscopic or CT guidance.

Compelling Evidence
The specialty societies indicated and the RUC agreed that there is compelling evidence that the physician work has changed for code 62270 based on a different performing specialty from the survey. When code 62270 was last surveyed in 2005, the primary specialty conducting that survey was pediatrics, with a letter of support from diagnostic radiology. Diagnostic radiology was at the time and continues to be the top performing specialty for code 62270. However, with CPT's creation of codes including imaging guidance, it is anticipated that emergency medicine will now be the dominant provider of code 62270. In 2005, code 62270 was reviewed as potentially misvalued and increased 21% from 1.13 to 1.37, and family code 62272 was not reviewed. This resulted in a rank order anomaly where code 62272 is now valued less than code 62270. The RUC agreed that there is compelling evidence for code 62270 because a different specialty will perform this service compared from when the service was last surveyed and rank order anomaly in the family of codes.

Therapy and Diagnosis
In a diagnostic lumbar puncture, approximately 8-10 cc of cerebral spinal fluid (CSF) is withdrawn from the thecal sac for diagnostic purposes. In a diagnostic lumbar puncture, the CSF is needed for a range of diagnostic purposes such as to assess for causes of infection or inflammation or to assess whether the patient has leptomeningeal spread of tumor. The patient population for a therapeutic lumbar puncture is different. The typical patient is a female patient with pseudotumor cerebri. Many of these patients can have visual symptoms because of the increased intracranial pressure compromising the optic nerves. Emergent decompression with drainage of CSF is required to preserve vision. When removing this larger volume of CSF, typically >20 cc of fluid, patients are often symptomatic. The physician will often need to make decisions about if it is safe to continue the removal of CSF. In addition, multiple needle manipulations will occur when the CSF stops flowing. The needle will have to be advanced or rotated while ensuring the needle is in the correct positioning. Often the patient's positioning will have to be adjusted to ensure the flow of CSF. During these adjustments, patients will often have symptoms such as radicular pain or paresthesia that physicians monitor and use to make decisions about whether positioning of needle is correct or when the procedure should end.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

As such, the complexity of therapeutic lumbar tap is increased over a diagnostic tap for the following reasons: 1) There is increased time involved in draining more fluid over a diagnostic tap. 2) Additional physical effort is required in the additional patient position and needle manipulations. 3) Mental effort and judgement is also increased because of the additional patient positioning and manipulation and also deciding if it is safe to continue to remove additional CSF. 4) Finally, there is additional psychological stress because of the increased risk of complications due to the larger amount of CSF removed and the increased possibility of patient pain.

62270 ***Spinal puncture, lumbar, diagnostic***
The RUC reviewed the survey results from 77 physicians and recommends the following physician time components: 12 minutes of pre-service time, 15 minutes of intra-service time, and 5 minutes of post-service time. The RUC noted that the survey 25th percentile work RVU of 2.10 and the survey median work RVU of 2.52 overestimated the work required to perform this service. Therefore, the specialty society recommended and the RUC agreed that CPT code 62270 should be crosswalked to MPC code 12004 *Simple repair of superficial wounds of scalp, neck, axillae, external genitalia, trunk and/or extremities (including hands and feet); 7.6 cm to 12.5 cm* (work RVU= 1.44, pre-service time of 7 minutes, intra-service time of 17 minutes, and post-service time of 5 minutes). These services require the same physician work and similar intra-service time. The RUC agreed that although the current times of CPT code 62270 have changed, the overall intensity and complexity has increased due to expected change in dominant specialty to emergency medicine. The RUC agreed that the recommended work RVU of 1.44 for the surveyed code maintains relativity within the lumbar puncture family. **The RUC recommends a work RVU of 1.44 for CPT code 62270.**

62328 ***Spinal puncture, lumbar, diagnostic; with fluoroscopic or CT guidance***
The RUC reviewed the survey results from 101 physicians and recommends the following physician time components: 23 minutes of pre-service time, 18 minutes of intra-service time, and 5 minutes of post-service time for code 62328. The RUC determined that the survey 25th percentile work RVU of 1.95 appropriately accounts for the work required to perform this service.

The RUC compared the survey code to the second key reference code 64483 *Injection(s), anesthetic agent and/or steroid, transforaminal epidural, with imaging guidance (fluoroscopy or CT); lumbar or sacral, single level* (work RVU= 1.90, pre-service time of 24 minutes, intra-service time of 15 minutes, and post-service time of 10 minutes), noting that CPT code 62328 requires slightly more intra-service time because it requires more time to drain the CSF compared to an injection. Additionally, based on the survey respondents, CPT code 62328 requires identical to somewhat more overall intensity and complexity than code 64483, justifying the slightly higher work RVU of 0.05. For additional support, the RUC compared the survey code to CPT code 49084 *Peritoneal lavage, including imaging guidance, when performed* (work RVU= 2.00 and intra-service time of 20 minutes) and noted that these services require similar physician work and time to perform. The RUC noted that the survey code is appropriately bracketed by codes 64483 and 49084 in terms of intra-service time and work RVUs. The RUC also agreed that the recommended work RVU of 1.95 places this service in the proper rank order with CPT code 62270, which does not include guidance, and in relation to the therapeutic spinal puncture codes. **The RUC recommends a work RVU of 1.95 for CPT code 62328.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

62272 ***Spinal puncture, therapeutic, for drainage of cerebrospinal fluid (by needle or catheter);***
The RUC reviewed the survey results from 31 physicians and recommends the following physician time components: 22 minutes of pre-service time, 15 minutes of intra-service time, and 15 minutes of immediate post-service time for CPT code 62272. The RUC determined the survey 25th percentile work RVU of 1.80 correctly accounts for the physician work involved in this service.

To justify a work RVU of 1.80, the RUC compared the survey code to the second key reference code 64490 *Injection(s), diagnostic or therapeutic agent, paravertebral facet (zygapophyseal) joint (or nerves innervating that joint) with image guidance (fluoroscopy or CT), cervical or thoracic; single level* (RVU= 1.82 and intra-service time of 15 minutes) and noted that both services require the same intra-service time and similar amount of physician work. The RUC agreed that the survey code is adequately valued at 1.80 considering that the survey respondents indicated that the survey code is somewhat more intense and complex than code 64490. Additionally, the RUC reviewed code 62323 *Injection(s), of diagnostic or therapeutic substance(s) (eg, anesthetic, antispasmodic, opioid, steroid, other solution), not including neurolytic substances, including needle or catheter placement, interlaminar epidural or subarachnoid, lumbar or sacral (caudal); with imaging guidance (ie, fluoroscopy or CT)* (work RVU=1.80 and intra-service time of 15 minutes) and noted that the survey code and the comparator code have identical intra-service times. The RUC agreed that the recommended work RVU of 1.80 for the surveyed code maintains relativity within the lumbar puncture family. **The RUC recommends a work RVU of 1.80 for CPT code 62272.**

62329 ***Spinal puncture, therapeutic, for drainage of cerebrospinal fluid (by needle or catheter); with fluoroscopic or CT guidance***
The RUC reviewed the survey results from 131 physicians and recommends the following physician time components: 23 minutes of pre-service time, 20 minutes of intra-service time, and 10 minutes of immediate post-service time for CPT code 62329. The RUC determined the survey median work RVU of 2.25 appropriately accounts for the work required to perform this service.

To justify a work RVU of 2.25, the RUC compared the survey code to CPT code 32555 *Thoracentesis, needle or catheter, aspiration of the pleural space; with imaging guidance* (work RVU= 2.27 and intra-service time of 20 minutes) and noted that these services require the same intra-service time and similar physician work. For support, the RUC referenced similar service 43216 *Esophagoscopy, flexible, transoral; with removal of tumor(s), polyp(s), or other lesion(s) by hot biopsy forceps* (work RVU= 2.30 and intra-service time of 22 minutes) and noted that these services require similar physician work and time to perform. The RUC also agreed that the recommended work RVU of 2.25 places this service in the proper rank order with CPT code 62272, which does not include guidance, and in relation to the diagnostic spinal puncture codes. **The RUC recommends a work RVU of 2.25 for CPT code 62329.**

Practice Expense
The Practice Expense (PE) Subcommittee removed the pre-service clinical staff time in the facility setting because the service is a 000-day global code. The Subcommittee decreased clinical staff time in the non-facility setting for code 62270 to eliminate overlap with Evaluation and Management (E/M) services, and made minor corrections to the equipment time. The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

New Technology/New Services
The RUC recommends that CPT codes 62328 and 62329 be placed on the New Technology list and will be re-reviewed by the RUC in three years to ensure correct valuation and utilization assumptions.

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
Surgery/Nervous System **Spine and Spinal Cord** **Injection, Drainage, or Aspiration** Injection of contrast during fluoroscopic guidance and localization is an inclusive component of 62263, 62264, 62267, ~~62270, 62272~~, 62328, 62329, 62273, 62280, 62281, 62282, 62302, 62303, 62304, 62305, 62321, 62323, 62325, 62327. Fluoroscopic guidance and localization is reported with 77003, unless a formal contrast study (myelography, epidurography, or arthrography) is performed, in which case the use of fluoroscopy is included in the supervision and interpretation codes or the myelography via lumbar injection code. Image guidance and the injection of contrast are inclusive components and are required for the performance of myelography, as described by codes 62302, 62303, 62304, 62305.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:62270 Tracking Number

Original Specialty Recommended RVU: **1.47**
Presented Recommended RVU: **1.44**
RUC Recommended RVU: **1.44**

Global Period: 000 Current Work RVU: **1.37**

CPT Descriptor: Spinal puncture, lumbar, diagnostic

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: a 25-year-old female presents with fever and severe headache.

Percentage of Survey Respondents who found Vignette to be Typical: 85%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review the risks and benefits of the recommended lumbar puncture. Obtain informed consent. Place the patient on a monitoring device, position and restrain as necessary. Prepare the lumbar spine and using antimicrobial agent and drape the surrounding area. Using palpation, identify the area for the lumbar puncture and anesthetized using local anesthesia, changing needles for deeper infiltration.

Description of Intra-Service Work: Insert a spinal needle and advance until cerebrospinal fluid is obtained, repositioning as necessary. Attach a pressure gauge to the spinal needle. Obtain cerebrospinal fluid samples in sterile tubes to be sent for analysis. Then withdraw the needle and apply direct pressure for one minute. Apply a bandage and place the patient placed on his or her back.

Description of Post-Service Work: Observe the patient for any postprocedural complications. Counsel patient and/or family about possible headaches and how to manage them. Treat post-procedural spinal headache as necessary. Complete a detailed procedural note and write orders directing analysis of the cerebrospinal samples.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	29%	41%	29%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	11%	89%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	41%	58%
Physical effort required	23%	58%	17%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	11%	89%

2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	0%	86%	14%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	0%	100%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	7%	93%
Physical effort required	0%	77%	23%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	14%	86%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Code 62270 was targeted for review as part of a revaluation of its code family due to the recent adoption of new codes by CPT that differentiate between lumbar punctures performed with or without imaging.

ACEP surveyed a random selection of 244 members with 77 responses.

Compelling Evidence

The last time that Code 62270 was surveyed in 2005, the primary specialty conducting that survey was pediatrics, with a letter of support from diagnostic radiology. Since the previous survey, there has been a change in the dominant specialty, as evidenced by the utilization data. This service was reported 81,867 times in the 2017 Medicare database, with emergency medicine accounting for 17.56% - currently the second highest provider of the service, with diagnostic radiology as the current dominant provider of code 62270, approaching 50% utilization in the Medicare database. However, with CPT's creation of codes including imaging guidance, it is anticipated that emergency medicine will now be the dominant provider of code 62270.

The survey results support increasing the work value of 62270. The majority of respondents thought the overall intensity and complexity of code 62270 was somewhat (41%) or much more (29%) than that of the top KRS, 12044. The wRVU and times for 12044 exceed those of 62270, however – and when considering 62270 as part of its new code family, the median value, as well as even the 25th percentile, are likely too high.

Key Reference Codes

KRS	Descriptor	RVW	IWPUT	Total Time	PRE	INTRA	POST
12044	Repair, intermediate, wounds of neck, hands, feet and/or external genitalia; 7.6 cm to 12.5 cm	**3.19**	0.0499	**69**	14	**45**	10
62770	Spinal Puncture lumbar, diagnostic	**1.45**	0.070	**35**	15	**15**	5
12041	Repair, intermediate, wounds of neck, hands, feet and/or external genitalia; 2.5 cm or less	**2.10**	0.0571	**43**	14	**21**	8

Previous RUC rationale has indicated that 62270 should not exceed code 62284, which is unchanged since 2005 with wRVU of 1.54 and times of 24/15/10 and IWPUT of 0.0576.

Previous RUC rationale also indicates that the work of 62270 closely approximates, but is not equivalent to, code 27096 (Injection procedure for sacroiliac joint, arthrography and/or anesthetic/steroid) with a current RUC wRVU value of 1.48 and times of 17/11/10.

The physician work represented by code 62270 has increased since the last survey. The former dominant provider was pediatrics, so their patient population is obviously comprised of children – a change in that population to older children allowed for an increase in the wRVU on the 2005 RUC survey. With emergency medicine as the new dominant provider, the patient population is now much broader, representing the continuum of patients from newborns to elderly adults. As such, the indications for code 62270 are extensive as well. The procedure is employed in the evaluation of multiple chief complaints, including but not limited to, headache, altered mental status, and fever of unknown origin - with timely, emergent diagnosis required for such concerning pathology as CNS infection and subarachnoid hemorrhage. Emergency medicine represents a unique practice setting, such as potentially altered or combative patients, anticoagulation or other hematologic derangements, and the potential for interruptions or other emergency patients to require emergent attention.

While the times of 27096 (17/11/10) correlate well with those of the 62270 survey (17/15/5). Emergency medicine also recognizes that the code will almost always be billed with an E/M code, and as such recommends additional preservice time be removed. Although the intra service descriptor used in the survey from the RUC database contains traditional preservice activity such as positioning the patient.

We had previously recommended a value based on a direct crosswalk to code 51703 (Insertion of temporary indwelling bladder catheter; complicated (eg, altered anatomy, fractured catheter/balloon) with a wRVU of 1.47 and times of 20/15/10 and an IWPUT of 0.0580, which was last surveyed in 2016. It is a similar service in that they require a high level of physician skill on a patient that is awake and uncomfortable. Although the pre and post times of code 51703 are longer, the spinal puncture is more intense procedure, performed as an emergent procedure in the ED.

Code	Descriptor	RVW	IWPUT	Total Time	PRE	INTRA	POST
51703	Insertion of temporary indwelling bladder catheter; complicated (eg, altered anatomy, fractured catheter/balloon	**1.47**	0.0580	**45**	20	**15**	10
62270	Spinal Puncture Lumbar, diagnostic	**1.47**	0.071	**35**	15	**15**	5

However, at prefacilitation the reviewers strongly suggested that code 12004, one of our MPC comparators, was a better direct crosswalk based on time and intensity. That code, a simple laceration repair, is frequently performed

by emergency physicians and we are comfortable with that crosswalk. It reduces the work RVU and IWPUT and would maintain relatively across the rest of the codes in the lumbar puncture family.

Code	Descriptor	RVW	IWPUT	Total Time	PRE	INTRA	POST
12004	Simple repair of superficial wounds of scalp, neck, axillae, external genitalia, trunk and/or extremities (including hands and feet); 7.6 cm to 12.5 cm	**1.44**	0.0697	**29**	7	**17**	5
62270	Spinal Puncture Lumbar, diagnostic	**1.44**	0.069	**35**	15	**15**	5

MPC Comparison

MPC	Descriptor	RVW	IWPUT	Total Time	PRE	INTRA	POST
12013	Simple repair of superficial wounds of face, ears, eyelids, nose, lips and/or mucous membranes; 2.6 cm to 5.0 cm	**1.22**	0.0644	**27**	7	**15**	5
62270	Spinal Puncture Lumbar, diagnostic	**1.44**	0.069	**35**	15	**15**	5
12004	Simple repair of superficial wounds of scalp, neck, axillae, external genitalia, trunk and/or extremities (including hands and feet); 7.6 cm to 12.5 cm	**1.44**	0.0697	**29**	7	**17**	5

We recommend 62270 be valued at 1.44 with listed times of 15/15/5 and an IWPUT of 0.069.

Practice expense inputs were included in the spreadsheet for the entire family submitted by ACR.

Although the code remains the same for PLI, because the specialty utilization mix will change we recommend a crosswalk to code 30901 (Control nasal hemorrhage, anterior, simple (limited cautery and/or packing) any method) with current PLI RVUs of 0.16 as opposed to 0.19 for 62270. Emergency medicine reported this code 31.21 percent of the time according to the 2017 Medicare database.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☒ Other reason (please explain) An E/M code with a -25 modifier appended is typically reported on the same day of service.

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. If an ED E/M code is reported on the same day, it will be an XXX code with the OOO global period procedure.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 81867

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Emeregncy Medcine How often? Commonly

Specialty Neuorlogy How often? Sometimes

Specialty Physician Assisatnts How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 105380
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Assuming Medciare patients account for 25 percent of code reporting

Specialty Emeregncy Medcine Frequency 57504 Percentage 5.45 %

Specialty Neurology Frequency 29440 Percentage 2.79 %

Specialty Physician Assistants Frequency 18436 Percentage 1.74 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 26,345 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Adjusting current Medicare data witout Diagnostic Radilogy included in the utilization.

Specialty Emergency Medicine Frequency 14376 Percentage 54.56 %

Specialty Neurology Frequency 7360 Percentage 27.93 %

Specialty Physician Assistants Frequency 4609 Percentage 17.49 %

Do many physicians perform this service across the United States? Yes

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 62270

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:62328 Tracking Number T2 Original Specialty Recommended RVU: **1.95**
Presented Recommended RVU: **1.95**
Global Period: 000 Current Work RVU: RUC Recommended RVU: **1.95**

CPT Descriptor: Spinal puncture, lumbar, diagnostic; with fluoroscopic or CT guidance

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 60-year-old female with severe degenerative disk disease, scoliosis and prior failed bedside lumbar puncture presents with fever and severe headache.

Percentage of Survey Respondents who found Vignette to be Typical: 91%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review patient orders, clinical history, and relevant prior imaging exams. Confirm appropriateness of imaging guidance and determine appropriate protocol and approach. Discuss with the patient (and family) the risks due to radiation exposure. Discuss the equipment being used, the close proximity of the CT or fluoroscopic gantry, and the potential for claustrophobia, prolonged immobility, and repositioning to ensure optimal imaging for guidance and interpretation. Discuss the risks and benefits of the spinal puncture, potential for unsuccessful procedure, and potential risks including (but not limited to) pain, infection, bleeding, headache, numbness, weakness, and severe neurological sequelae. Answer all patient (and family) questions related to risks and benefits. Obtain written, informed consent from the patient (or family). Provide instructions for the radiologic technologists regarding patient positioning and proper settings for the imaging equipment. Confirm patient positioning and imaging setup, ensuring the entire area necessary can be imaged and that equipment and patient can be repositioned as needed during sterile procedure. Ensure that all necessary intra service equipment is immediately available. The performing physician and assisting technologist dress in radiation safety attire. Perform hand hygiene. A surgical “time-out” is performed. Place the patient on a monitoring device (with screen within easy view of the performing physician) and position patient upon the CT/fluoroscopic gantry. Use padding, wedges, or restraints as necessary.

Description of Intra-Service Work: Supervise and interpret scout views of the lower back/lumbar spine to select the appropriate field of view. Obtain and interpret preliminary CT/fluoroscopic images of the lower back/lumbar spine to assess the appropriate approach and spinal level(s), evaluate for unexpected findings or interval changes, and adjust patient positioning or protocol as needed. Mark the appropriate skin entry site, sterilize the skin in the standard fashion, and place sterile drapes as necessary. Anesthetize the skin and subcutaneous tissues using local anesthesia, changing needles as necessary for deeper infiltration. Under intermittent or continuous CT/fluoroscopic guidance, direct the spinal needle to the appropriate position/lumbar level. Reposition as necessary. Confirm satisfactory needle position with CT/fluoroscopic imaging and return of cerebrospinal fluid. Attach a pressure gauge to the spinal needle if opening pressures desired. Obtain cerebrospinal fluid (volume based on indication and clinical judgement). Store samples in sterile tubes for further analysis as necessary. Withdraw the spinal needle and apply direct pressure to the puncture site for one minute.

Description of Post-Service Work: Apply a bandage. Place the patient on his or her back. Transport/observe the patient in the appropriate recovery area for any postoperative complications. Counsel the patient (and family) about possible side

effects, particularly headaches and pain at the procedure site, and appropriate management. Counsel the patient (and family) about return precautions. Ensure orders for CSF fluid analysis are entered as appropriate. Review and interpret all images resulting from the study including dedicated review of the target lumbar level as well as all visualized viscera, fascial planes, vasculature, soft tissues, and osseous structures. Assess for complications or other unexpected findings. Dictate detailed report for the medical record. Communicate findings to the referring physician as appropriate.

SURVEY DATA

RUC Meeting Date (mm/yyyy)	01/2019

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	27%	55%	16%	2%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	34%	57%	9%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	16%	73%	11%

Physical effort required	23%	70%	7%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	25%	59%	16%

2nd Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	31%	46%	15%	8%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	54%	23%	23%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	31%	54%	15%
Physical effort required	23%	54%	23%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	15%	46%	38%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

In October 2017, the RUC identified CPT code 62270 as originally surveyed by one specialty (neurology) but now performed by a different specialty (diagnostic radiology). The specialty societies requested referral to CPT to bundle imaging guidance, which was reported more than 50% of the time with 62270. CPT code 62272 was added as a family code. After CPT Panel review of proposed coding changes, codes 62270 and 62272 were revised and two new codes were added (CPT codes 62328 and 62329) that bundle fluoroscopic or CT guidance.

62270 Spinal puncture, lumbar, diagnostic;

62328 with fluoroscopic or CT guidance

62272 Spinal puncture, therapeutic, for drainage of cerebrospinal fluid (by needle or catheter);

62329 with fluoroscopic or CT guidance

Survey Process

The codes were surveyed in different combinations by different specialties:

62270: ACEP

62328: ACR, SIR, ASNR

62272: AANS/CNS

62329: ACR, SIR, ASNR, AANS/CNS

The ACR surveyed a total of 750 members (a random sample of 375 members and a separate random sample of 375 members who perform radiography and neuro imaging procedures). The ASNR surveyed a random sample of 1819 physicians from their membership. The SIR surveyed a random sample of 150 physicians from their membership. The AANS and CNS collectively surveyed a random sample of 300 physyicans from their membership. The ACEP surveyed a random sample of 244 physicians from their membership.

Work RVU Recommendation

The specialties recommend a work RVU of 1.95 for CPT code 62328, which is the 25th survey percentile value.

Time Recommendation

The specialties recommend the times of 23 minutes of pre-service using adjustments from pre-service package 1 (straightforward patient, straightforward procedure).

We recommend the standard 13 minutes of pre-service evaluation. We recommend 5 minutes of pre-service positioning time, which is 4 minutes more than the standard. The patient is typically positioned in a prone and angled position to ensure adequate view of the spinal canal, which requires more time.

We are recommending 5 minutes of preservice scrub, dress and wait time, which is one minute less than the standard of 6 minutes.

We recommend 18 minutes of intra-service, which is the median survey time, and 5 minutes of post-service.

This is a total recommended time of 46 minutes for CPT code 62328.

Key Reference Services

The most commonly chosen reference codes by survey participants:

- **62304** *(Myelography via lumbar injection, including radiological supervision and interpretation; lumbosacral)*, chosen by 44% of respondents, and
- **64483** *(Injection(s), anesthetic agent and/or steroid, transforaminal epidural, with imaging guidance (fluoroscopy or CT); lumbar or sacral, single level)*, chosen by 13% respondents.

The first key reference code 62304 has more intraservice time than the surveyed code 62328 because of the extra time it takes to ensure contrast has moved through the cerebrospinal fluid (CSF) space adequately. The procedure has similar pre-service times and as this is a less intense procedure in comparison to the surveyed code, this relationship is appropriately reflected in its lower IWPUT.

The surveyed code 62328 has more intraservice time than the second key reference code 64483, which is related to the extra time it takes to drain the CSF compared to an injection and this extra time of lower intensity work accounts for the lower IWPUT relative to the reference code.

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT
64483	Injection(s), anesthetic agent and/or steroid, transforaminal epidural, with imaging guidance (fluoroscopy or CT); lumbar or sacral, single level	1.90	24	15	10	49	0.082
62328	**Spinal puncture, lumbar, diagnostic; with fluoroscopic or CT guidance**	**1.95**	**23**	**18**	**5**	**46**	**0.077**
62304	Myelography via lumbar injection, including radiological supervision and interpretation; lumbosacral	2.25	24	25	10	59	0.063

MPC Codes

The surveyed code 62328 compares well with three other MPC codes. All of the MPC codes (CPT codes 55876, 36514, and 51102) have identical intra service times of 20 minutes, slightly higher than the surveyed code. 62328 is more intense and technically challenging compared to 55876 and 36514 due to the anatomy of performing a spinal puncture in patients with obesity or bony spinal degenerative changes, which is reflected in the higher IWPUT. MPC code 51102 is a difficult procedure in comparison to the surveyed code involving puncture of the bladder while avoiding other organs in the pelvis and this is demonstrated in the higher RVU and IWPUT compared to 62328. The table below summarizes these relationships.

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT
55876	Placement of interstitial device(s) for radiation therapy guidance (eg, fiducial markers, dosimeter), prostate (via needle, any approach), single or multiple	1.73	29	20	10	59	0.043
36514	Therapeutic apheresis; for plasma pheresis	1.81	29	20	15	64	0.041
62328	**Spinal puncture, lumbar, diagnostic; with fluoroscopic or CT guidance**	**1.95**	**23**	**18**	**5**	**46**	**0.077**
51102	Aspiration of bladder; with insertion of suprapubic catheter	2.70	25	20	15	60	0.094

Summary of Recommendations for CPT Code 62328

The societies recommend 1.95 RVU with service period times of 23, 18, and 5 minutes for CPT code 62328.

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT
62270	Spinal puncture, lumbar, diagnostic;	1.44	12	15	5	32	0.073
62272	Spinal puncture, therapeutic, for drainage of cerebrospinal fluid (by needle or catheter);	1.80	22	15	15	52	0.070
62328	**Spinal puncture, lumbar, diagnostic; with fluoroscopic or CT guidance**	**1.95**	**23**	**18**	**5**	**46**	**0.077**
62329	Spinal puncture, therapeutic, for drainage of cerebrospinal fluid (by needle or catheter); with fluoroscopic or CT guidance	2.25	23	20	10	53	0.079

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions:

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 62270

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Commonly

Specialty Interventional Radiology How often? Commonly

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 245601
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The service described by CPT code 62270 is estimated to be provided 245,601 times nationally in a one-year period.

Specialty Diagnostic Radiology Frequency 123783 Percentage 50.40 %

Specialty Interventional Radiology Frequency 11470 Percentage 4.67 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 81,867 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The service described by CPT code 62270 is estimated to be provided 81,867 times nationally in a one-year period to Medicare patients.

Specialty Diagnostic Radiology Frequency 41261 Percentage 50.40 %

Specialty Interventional Radiology Frequency 3823 Percentage 4.66 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:62272 Tracking Number T3 Original Specialty Recommended RVU: **1.80**
Presented Recommended RVU: **1.80**
Global Period: 000 Current Work RVU: **1.35** RUC Recommended RVU: **1.80**

CPT Descriptor: Spinal puncture, therapeutic, for drainage of cerebrospinal fluid (by needle or catheter);

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 25-year-old female presents with severe headache, visual difficulties and neck stiffness.

Percentage of Survey Respondents who found Vignette to be Typical: 71%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Pre-procedure labs and films are reviewed. The planned procedure and postoperative management are reviewed with the patient. Informed consent is reviewed and obtained. Availability of all required instruments and supplies is verified. Assistance is provided to position the patient lateral so that the lumbar spine is in maximal flexion. The puncture site is marked, prepped and draped. The puncture site is injected with local anesthetic. The physician scrubs and gowns. A time-out is performed.

Description of Intra-Service Work: The spinal needle is inserted at the appropriate position in the lumbar spine and cerebrospinal fluid is obtained . A manometer is connected and used to measure CSF pressure, and a volume of CSF is removed for analysis and/or therapeutic treatment (volume based on indication and clinical judgement). A catheter may be inserted along the needle tract into the subarachnoid space as necessary for greater volume of fluid. Therapeutic agents are injected as necessary. A final CSF pressure is measured using the manometer as necessary. The spinal needle/catheter is withdrawn and direct pressure is applied to the puncture site for one minute.

Description of Post-Service Work: A sterile dressing is applied. The outcome of the procedure is discussed with the patient and a brief operative note is written. Patient stabilization is monitored in the recovery room, and the patient is kept supine to prevent spinal fluid leak. An operative report is dictated, and medical record documentation is completed. Based on lab findings, the patient will either be admitted, observed overnight or discharged. Depending on the status of the patient, orders are written for transfer to the medical floor and for postop care. Alternatively, medications are reconciled and orders for post-op care and discharge are written for the patient. A discharge summary and instructions are completed.. The medical record is completed and findings are communicated to the referring physician or PCP as appropriate.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	38%	38%	23%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	31%	46%	23%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	15%	54%	31%
Physical effort required	8%	85%	8%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	15%	54%	31%

2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	25%	25%	50%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	75%	25%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	25%	75%
Physical effort required	0%	75%	25%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	25%	0%	75%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

In October 2017, the RUC identified code 62270 as originally surveyed by one specialty (neurology) but now performed by a different specialty (diagnostic radiology). The specialty societies requested referral to CPT to bundle imaging guidance which was reported more than 50% of the time with 62270. Code 62272 was added as a family code. After CPT Panel review of coding changes, codes 62270 and 62272 were revised and two new codes were added (622X0 and 622X1) that bundle fluoroscopic or CT guidance.

62270 Spinal puncture, lumbar, diagnostic;
622X0 with fluoroscopic or CT guidance
62272 Spinal puncture, therapeutic, for drainage of cerebrospinal fluid (by needle or catheter);
622X1 with fluoroscopic or CT guidance

Survey Process

The codes were surveyed in different combinations by different specialties:

62270 ACEP
622X0 ACR, SIR, ASNR
62272 AANS/CNS
622X1 ACR, SIR, ASNR, AANS/CNS

The survey distribution was:

ACR: 750 members (a random sample of 375 members and a separate random sample of 375 members who perform radiography and neuro imaging procedures)
ASNR: random sample of 1819 physicians from membership
SIR: random sample of 150 physicians from membership
AANS/CNS: random sample of 300 physicians from membership
ACEP: random sample of 244 physicians from membership

Compelling Evidence – 62272

Flawed methodology and anomalous relationship:

1. Codes 62270 and 62272 were reviewed by neurosurgeons during the Harvard study with a 90-day global period and refined by CMS prior to the 1992 PFS to a 0-day global code. There was no discussion in the rule about how CMS arrived at the assigned reduced value. It was only noted that: "Physician work value established by HCFA. It may have been a refinement of a Harvard value, or a gap fill for a code for which Harvard did not provide a value. These include codes reviewed by carrier medical directors.

2. In the first PFS in 1992, codes 62270 and 62272 were valued at 1.18 and 1.43, respectively, which is a 21% difference. This recognized the difference in time, intensity and complexity between the two procedures. In 2005, code 62270 was reviewed as potentially misvalued and increased 21% from 1.13 to 1.37. Family code 62272 was not reviewed. This resulted in a rank order anomaly where code 62272 is now valued less than 62270.

Recommendations

We recommend a work RVU of 1.80 for CPT code 62272, which is the survey 25th percentile value.

Pre-time package 1: Three minutes are added to the positioning time to position the patient lateral so that the lumbar spine is in maximal flexion and the patient is padded to remain in this position. One minute is removed from scrub, dress, wait time to be consistent with the survey median.

Post-time package 7a: Three minutes is removed from the package to be consistent with the survey median. The typical patient treated by a neurosurgeon will be followed by the neurosurgeon on the day of the procedure either on the medical floor including orders for continued care or will be discharged by the neurosurgeon including discharge orders. Fifteen minutes is less than the package time and reasonably accounts for the work of the neurosurgeon on the day of the procedure including immediate postop recovery work and floor or discharge work.

Key Reference Code Comparison

Year	CPT	Long Descriptor	RVW	IWPUT	Total Time	EVAL	POSIT	SDW	INTRA	POST
2009	**64490**	Injection(s), diagnostic or therapeutic agent, paravertebral facet (zygapophyseal) joint (or nerves innervating that joint) with image guidance (fluoroscopy or CT), cervical or thoracic; single level	**1.82**	0.086	42	7	5	5	15	10
	62272	Spinal puncture, therapeutic, for drainage of cerebrospinal fluid (by needle or catheter);	**1.80**	0.070	52	13	4	5	15	15

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 62272

Global Period: 000 Current Work RVU: RUC Recommended RVU: **2.25**

CPT Descriptor: Spinal puncture, therapeutic, for drainage of cerebrospinal fluid (by needle or catheter); with fluoroscopic or CT guidance

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 25-year-old female with scoliosis and prior failed bedside lumbar puncture presents with severe headache, visual difficulties and neck stiffness.

Percentage of Survey Respondents who found Vignette to be Typical: 81%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review patient orders, clinical history, and relevant prior imaging exams.
Confirm appropriateness of imaging guidance and determine appropriate protocol and approach.
Discuss with the patient (and family) the risks due to radiation exposure and use of contrast dye (if needed) relative to other potential imaging modalities. Discuss the equipment being used, the close proximity of the CT or fluoroscopic gantry, and the potential for claustrophobia, prolonged immobility, and repositioning to ensure optimal imaging for guidance and interpretation. Discuss the risks and benefits of the spinal puncture, potential for unsuccessful procedure, and potential risks including (but not limited to) pain, infection, bleeding, headache, numbness, weakness, and severe neurological sequelae. Answer all patient (and family) questions related to risks and benefits. Obtain written, informed consent from the patient (or family). Provide instructions for the radiologic technologists regarding patient positioning and proper settings for the imaging equipment. Confirm patient positioning and imaging setup, ensuring the entire area necessary can be imaged and that equipment and patient can be repositioned as needed during sterile procedure.
Ensure that all necessary intra service equipment is immediately available. The performing physician and assisting technologist dress in radiation safety attire. Perform hand hygiene. A surgical “time-out” is performed. Place the patient on a monitoring device (with screen within easy view of the performing physician) and position patient upon the CT/fluoroscopic gantry. Use padding, wedges, or restraints as necessary.

Description of Intra-Service Work: Supervise and interpret scout views of the lower back/lumbar spine to select the appropriate field of view. Obtain and interpret preliminary CT/fluoroscopic images of the lower back/lumbar spine to assess the appropriate approach and spinal level(s), evaluate for unexpected findings or interval changes, and adjust patient positioning or protocol as needed. Mark the appropriate skin entry site, sterilize the skin in the standard fashion, and place sterile drapes as necessary. Anesthetize the skin and subcutaneous tissues using local anesthesia, changing needles as necessary for deeper infiltration. Under intermittent or continuous CT/fluoroscopic guidance, direct the spinal needle to the appropriate position/lumbar level. Reposition as necessary. Confirm satisfactory needle position with CT/fluoroscopic imaging and return of cerebrospinal fluid. Insert catheter along the needle tract into the subarachnoid space as necessary if greater volume of cerebrospinal fluid removal is required. Attach a pressure gauge to the spinal needle or catheter if opening pressures desired. Obtain cerebrospinal fluid (volume based on indication and clinical judgement). Store samples in sterile tubes for further analysis as necessary. Inject indicated therapeutic agents when requested. Attach a pressure

gauge to the spinal needle or catheter to obtain catheter pressure if desired. Withdraw the spinal needle/catheter and apply direct pressure to the puncture site for one minute.

Description of Post-Service Work: Apply a bandage. Obtain and interpret post-procedural CT/fluoroscopic images to assess for complications. Place the patient on his or her back. Assess patient for change in neurologic symptoms and resolution of symptoms. Transport/observe the patient in the appropriate recovery area for any postoperative complications. Counsel the patient (and family) about possible side effects, particularly headaches and pain at the procedure site, and appropriate management. Counsel the patient (and family) about return precautions.
Ensure orders for CSF fluid analysis are entered as appropriate. Interpret all images resulting from the study including dedicated review of the target lumbar level as well as all visualized viscera, fascial planes, vasculature, soft tissues, and osseous structures. Assess for complications or other unexpected findings. Compare to all pertinent available prior studies. Dictate detailed report for the medical record. Communicate findings to the referring physician as appropriate.

SURVEY DATA

RUC Meeting Date (mm/yyyy)	01/2019

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	23%	55%	23%	0%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	25%	64%	11%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	11%	70%	19%
Physical effort required	15%	68%	17%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	23%	57%	21%

2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	28%	33%	39%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	22%	50%	28%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	22%	56%	22%
Physical effort required	11%	67%	22%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	22%	39%	39%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

In October 2017, the RUC identified CPT code 62270 as originally surveyed by one specialty (neurology) but now performed by a different specialty (diagnostic radiology). The specialty societies requested referral to CPT to bundle imaging guidance, which was reported more than 50% of the time with 62270. CPT code 62272 was added as a family code. After CPT Panel review of proposed coding changes, codes 62270 and 62272 were revised and two new codes were added (CPT codes 62328 and 62329) that bundle fluoroscopic or CT guidance.

62270 Spinal puncture, lumbar, diagnostic;

62328 with fluoroscopic or CT guidance

62272 Spinal puncture, therapeutic, for drainage of cerebrospinal fluid (by needle or catheter);

62329 with fluoroscopic or CT guidance

Survey Process

The codes were surveyed in different combinations by different specialties:

62270: ACEP

62328: ACR, SIR, ASNR

62272: AANS/CNS

62329: ACR, SIR, ASNR, AANS/CNS

The ACR surveyed a total of 750 members (a random sample of 375 members and a separate random sample of 375 members who perform radiography and neuro imaging procedures). The ASNR surveyed a random sample of 1819 physicians from their membership. The SIR surveyed a random sample of 150 physicians from their membership. The AANS and CNS collectively surveyed a random sample of 300 physyicans from their membership. The ACEP surveyed a random sample of 244 physicians from their membership.

Compelling Evidence

The societies are recommending compelling evidence for CPT code 62329 to support the proposed wRVUs and times.

The base code for this procedure, CPT code 62272, was a Harvard-valued code, and when 62270 was re-surveyed in August 2005, it created a rank order anomaly across the code family. This appropriately reflects how CPT code 62272 is a more complex and intense procedure than 62270.

Work RVU Recommendation

The specialties recommend the current work RVU of 2.25 for CPT code 62329, which is the survey median value.

Time Recommendation

The specialties recommend the times of 23 minutes of pre-service using adjustments from pre-service package 1 (straightforward patient, straightforward procedure).

We recommend the standard 13 minutes of pre-service evaluation. We recommend 5 minutes of pre-service positioning time, which is 4 minutes more than the standard. We are requesting more time as the patient is typically positioned in a prone and angled position to ensure adequate view of the spinal canal.

We recommend 5 minutes of preservice scrub, dress and wait time, which is one minute less than the standard.

We are recommending 20 minutes of intra-service, which is the median survey time, and 10 minutes of post-service for appropriate monitoring of the patient after administered medication to ensure there are no immediate complications.

This is a total recommended time of 53 minutes for CPT code 62329.

Key Reference Services

The most commonly chosen reference codes by survey participants:

- **62304** *(Myelography via lumbar injection, including radiological supervision and interpretation; lumbosacral),* chosen by 40% of respondents, and
- **64483** *(Injection(s), anesthetic agent and/or steroid, transforaminal epidural, with imaging guidance (fluoroscopy or CT); lumbar or sacral, single level),* chosen by 14% respondents.

The first key reference code 62304 has more intraservice time because it will typically take longer to ensure that the contrast agent has moved to the appropriate location for evaluation of the spinal canal following the injection. This involves less intense physician work compared to the surveyed drainage code which typically requires multiple needle manipulations while in the spinal canal during the intraservice period to obtain a sufficiently large volume of cerebrospinal fluid (25-50 cc) and these differences contribute to an overall lower IWPUT compared to the surveyed code. Both codes have an identical RVU. As nearly half of the survey respondents selected CPT code 62304 as the first key reference code, this is an appropriate comparator code.

The second key reference code 64483 has less intraservice time than the surveyed code. The complexity and intensity of the procedure is similar to 62329 in which therapeutic agents are being administered at the same time as the procedure and precise placement is critical to avoid potential complications. This is reflected in fairly similar IWPUTs between the surveyed code and the second key reference code.

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT
64483	Injection(s), anesthetic agent and/or steroid, transforaminal epidural, with imaging guidance (fluoroscopy or CT); lumbar or sacral, single level	1.90	24	15	10	49	0.082
62329	**Spinal puncture, therapeutic, for drainage of cerebrospinal fluid (by needle or catheter); with fluoroscopic or CT guidance**	**2.25**	**23**	**20**	**10**	**53**	**0.079**
62304	Myelography via lumbar injection, including radiological supervision and interpretation; lumbosacral	2.25	24	25	10	59	0.063

MPC Codes

The surveyed code 62329 compares well with two other MPC codes. Both MPC codes (CPT codes 51102 and 52281) as well as the surveyed code have identical intra service times of 20 minutes. In comparison to the MPC codes, 62329 is a less intense procedurally based on the technical skill required for the MPC code services. MPC code 51102 requires knowledge of anatomy and technical skill to avoid puncturing vital abdominal organs and important arteries. MPC code 52281 is also a more intense and technical procedure in which multiple catheters are placed sequentially to dilate a stricture compared to placement of a single needle and manipulation of that needle after it is in the spinal canal. The table below summarizes these relationships.

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT
62329	**Spinal puncture, therapeutic, for drainage of cerebrospinal fluid (by needle or catheter) with fluoroscopic or CT guidance**	**2.25**	**23**	**20**	**10**	**53**	**0.079**
51102	Aspiration of bladder; with insertion of suprapubic catheter	2.70	25	20	15	60	0.094
52281	Cystourethroscopy, with calibration and/or dilation of urethral stricture or stenosis, with or without meatotomy, with or without injection procedure for cystography, male or female	2.75	16	20	10	46	0.112

Summary of Recommendations for CPT Code 62329

The societies recommend 2.25 RVU with service period times of 23, 20, and 10 minutes for CPT code 62329.

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT
62270	Spinal puncture, lumbar, diagnostic;	1.44	12	15	5	32	0.073
62272	Spinal puncture, therapeutic, for drainage of cerebrospinal fluid (by needle or catheter);	1.80	22	15	15	52	0.070
62328	Spinal puncture, lumbar, diagnostic; with fluoroscopic or CT guidance	1.95	23	18	5	46	0.077
62329	**Spinal puncture, therapeutic, for drainage of cerebrospinal fluid (by needle or catheter); with fluoroscopic or CT guidance**	**2.25**	**23**	**20**	**10**	**53**	**0.079**

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions:

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 62272

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Commonly

Specialty Interventional Radiology How often? Commonly

Specialty Neurosurgery How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 19578
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The service described by CPT code 62272 is estimated to be provided 19,578 times nationally in a one-year period.

Specialty Diagnostic Radiology Frequency 5186 Percentage 26.48 %

Specialty Interventional Radiology Frequency 607 Percentage 3.10 %

Specialty Neurosurgery Frequency 7140 Percentage 36.46 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 6,526
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The service described by CPT code 62272 is estimated to be provided 6,526 times nationally in a one-year period to Medicare patients.

Specialty Diagnostic Radiology Frequency 1729 Percentage 26.49 %

Specialty Interventional Radiology Frequency 202 Percentage 3.09 %

Specialty Neurosurgery Frequency 2380 Percentage 36.46 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Major procedure

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 62272

CPT Code: 62270, 62328, 62272 & 62329
Specialty Society: ACR, ASNR, SIR, AANS/CNS, AAN, ACEP

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Facility Direct Practice Expense (PE) Inputs

Global Period: 000 **Meeting Date:** January 2019

CPT Long Descriptor:

▲62270	Spinal puncture, lumbar, diagnostic;
●62328	with fluoroscopic or CT guidance (Do not report 62270, 62328 in conjunction with 77003, 77012) (If ultrasound or MRI guidance is performed, see 76942, 77021)
▲62272	Spinal puncture, therapeutic, for drainage of cerebrospinal fluid (by needle or catheter);
●62329	with fluoroscopic or CT guidance (Do not report 62272, 62329 in conjunction with 77003, 77012) (If ultrasound or MRI guidance is performed, see 76942, 77021)

---

1. **Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:**

   ACR, ASNR, SIR, AANS/CNS and AAN created a consensus panel of practicing physicians, familiar with the procedures to review the existing direct practice expense inputs and develop recommendations for the new lumbar puncture codes.

2. **You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here:**

   The specialties included the direct practice expense inputs for CPT Codes 62270, 62272, 77003 and 77012 on the PE spreadsheet.

3. **Is this code(s) typically billed with an E/M service?**

   NO

   62270 – 2%
   62272 – 2%

4. **If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:**

   The specialties are recommending pre-service clinical time (less than the amount for "extensive use").

   CA001 - The time is needed to review the referral request from the referring physician (diagnosis, reason for procedure, tests to be ordered on samples).

   CA002 – This time is required to make sure the patient is a candidate for our procedure, labs are reviewed and within accepted range, and additional labs are ordered if necessary.

   CA003 – The office staff uses this time to coordinate with hospital/facility staff to schedule the procedure.

   CA004 – This time is needed to discuss the potential complications and post procedure side effects of this procedure. The consent for the procedure is obtained at that time.

   CA005 – This time is used to answer any additional questions prior to the patient's visit, confirm that certain medications are being held before the procedure.

5. **If you are requesting an increase over the current total cost for clinical staff time (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), total cost of supplies, and/or total cost of equipment you must provide compelling evidence:**

   N/A

6. **If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here:**

   N/A

7. **If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities:**

   N/A

8. **If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.**

   N/A

9. **If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here:**

   N/A

10. **If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here:**

    N/A

11. **List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here:**

    N/A

12. **If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here:**

    N/A

13. **If there is any other item on your spreadsheet that needs further explanation please include here:**

    N/A

14. **Please include an explanation of each line item:**

    See Q#4

CPT Code: 62270, 62328, 62272 & 62329
Specialty Society: ACR, ASNR, SIR, AANS/CNS, AAN, ACEP

1. **Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:**

   ACR, ASNR, SIR, AANS/CNS and AAN created a consensus panel of practicing physicians, familiar with the procedures to review the existing direct practice expense inputs and develop recommendations for the new lumbar puncture codes.

2. **You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here:**

   The specialties included the direct practice expense inputs for CPT Codes 62270, 62272, 77003 and 77012 on the PE spreadsheet.

3. Is this code(s) typically billed with an E/M service?

NO

62270 – 2%
62272 – 2%

Is this code(s) typically billed with the E/M service in the nonfacility?
(Please see provided data in PE Subcommittee folder)

NO

62270 – 26%
62272 – 26%

4. What specialty is the dominant provider in the nonfacility?
What percent of the time does the dominant provider provide the service(s) in the nonfacility?
Is the dominant provider in the nonfacility different then for the global?
(Please see provided data in PE Subcommittee folder)

62270
Global - Diagnostic Radiology, NF Setting – Neurology

62272
Global – Neurosurgery, NF Setting - Neurology

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:

The specialties are recommending pre-service clinical time (less than the amount for "extensive use").

CA001 - The time is needed to review the referral request from the referring physician (diagnosis, reason for procedure, tests to be ordered on samples).

CA002 – This time is required to make sure the patient is a candidate for our procedure, labs are reviewed and within accepted range, and additional labs are ordered if necessary.

CA004 – This time is needed to discuss the potential complications and post procedure side effects of this procedure. The consent for the procedure is obtained at that time.

CA005 – This time is used to answer any additional questions prior to the patient's visit, confirm that certain medications are being held before the procedure.

CA008 – Pre-procedure QA of Fluoroscopy equipment and adjusting radiation protection equipment.

The specialties are recommending 3 minutes for CA013 prepare room, equipment and supplies. The standard is 2 minutes. The extra time is needed to set up the imaging equipment.

6. **If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), you must provide compelling evidence. Please explain if the increase can be entirely accounted for because of an increase in physician time.**

   CPT Code 62270 will be rarely performed in the office setting. There are current direct practice expense inputs. The multispecialty group recommends that the service be priced in an office, in the rare occasions it is performed in that setting. As such, the recommendations include items to perform the procedure in a sterile fashion (e.g. cap, gown, mask, mayo-stand drape, etc). With the addition of these items, the aggregate DPEI increased from $62.32 to $73.28. The multispecialty group believes the PE compelling evidence guidelines for the adoption of standards/packages would apply to these changes.

7. **If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here:**

   N/A

8. **How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? (please use this time rather than 5 minutes in your reference code)**
   The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

   CPT Codes 62270 and 62272 included 3 minutes for CA010 Obtain Vital signs prior to CMS updating the time to 5 minutes. The specialties are recommending 3 minutes for CA010.

9. **Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:***

   For CPT Codes 62328 and 622 there is a blended staff member that is 75% rad tech (L041B) and 25% Nurse blend (L037D RN/LPN/MTA). The radiology tech is assisting in prepping patient, manipulating imaging equipment, obtaining imaging and assisting the procedure for part of the procedure. The Nurse blend attends to the patient and circulates. These activities add up to 100% of intraservice time.

10. **If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.**

    CPT Codes 62328 and 62329 include recommendations for a second clinical staff person to assist with image acquisition during the with-imaging procedures. The current convention is to include the radiology technologist at 75% of the intra time and a nurse blend at the remaining 25%.

11. **If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities:**

    N/A

12. **If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.**

    N/A

13. **If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here:**

    N/A

14. **If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here:**

    N/A

15. **List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here:**

    ED050 table, exam – default
    EL014 room, radiographic-fluoroscopic– highlight technical
    EF023 Technologist PACS workstation - PACS
    EL014 Professional PACS workstation – other (1/2 physician pre time + physician pre time)

16. **If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here:**

    N/A

17. **If there is any other item on your spreadsheet that needs further explanation please include here:**

    N/A

18. Please include an explanation of each line item:

AMA/Specialty Society RVS Update Committee Summary of Recommendations

January 2019

Genicular Injection and RFA – Tab 10

In May 2018, the CPT Editorial Panel approved the addition of two codes to report injection of anesthetic and destruction of genicular nerves by neurolytic agent. In October 2018, the RUC thoroughly discussed the issues surrounding the survey of this family of services. The RUC supported the specialty societies' request for CPT codes 64454, 64640, and 64624 to be resurveyed and presented at the January 2019 RUC meeting based on their concern that many survey respondents appeared to be confused about the number of nerve branch injections involved with these three codes. The RUC recommended resurveying these services for January 2019.

Compelling Evidence
The specialty societies presented compelling evidence for this family of codes based on a change in physician work due to changes in technique and change in patient population. CPT codes 64450 and 64640 both describe a single injection/ablation. In contrast, CPT code 64454 involves blocks for three different nerve branches (superomedial, inferomedial, and superolateral genicular nerve branches) at three locations (adjacent to the periosteum on the medial aspect of the tibia, and at both the medial and lateral aspects of the femur) in order to achieve analgesia for the respective knee. CPT code 64624 involves ablation for three different nerve branches (superomedial, inferomedial, and superolateral genicular nerve branches) at three locations (adjacent to the periosteum on the medial aspect of the tibia, and at both the medial and lateral aspects of the femur) in order to achieve analgesia for the respective knee. The two new codes include imaging guidance. Imaging, which is typical and necessary to perform these genicular nerve branch procedures, is bundled into codes 64454 and 64624.

Regarding the change in patient population, when CPT code 64640 was surveyed in 2011, the typical patient had a history of neuritis of the medial calcaneal nerve. The current top diagnosis codes for code 64640 are not related to the calcaneal nerve but to other inflammatory spondylopathies; mononeuropathies of lower limb; other joint disorders; spondylosis; and other unspecified dorsopathies. The change in patient population is a result of coding changes between the 2011 and 2019 surveys where the typical podiatric patient is now reported with a different code. The RUC concluded that the change in the typical patient now made the typical service described by code 64640 more intense and complex. Currently, clinicians are reporting services described by code 64624 with code 64640. Therefore, the typical patient has changed for code 64640. The RUC approved compelling evidence for the family based on change in patient population and a change in technique.

64454 ***Injection(s), anesthetic agent(s) and/or steroid; genicular nerve branches including imaging guidance, when performed***
The RUC reviewed the survey results from 69 physicians and determined that the survey 25th percentile work RVU of 1.52 accurately reflects the physician work necessary for this service for pain management of chronic knee osteoarthritis. The RUC recommends 17 minutes pre-service evaluation time, 1 minute pre-service positioning time, 5 minutes pre-service scrub/dress/wait time, 18 minutes intra-service time and 10 minutes immediate post-service time.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

The RUC compared CPT code 64454 to the top key reference code 64493 *Injection(s), diagnostic or therapeutic agent, paravertebral facet (zygapophyseal) joint (or nerves innervating that joint) with image guidance (fluoroscopy or CT), lumbar or sacral; single level* (work RVU = 1.52 and 15 minutes intra-service time) and noted the solid comparison with same amount of physician work and similar intra-service times. Over 3/4 of survey respondents indicated that the surveyed code was identical in overall intensity/complexity to the key reference code. For additional support, the RUC referenced CPT code 43197 *Esophagoscopy, flexible, transnasal; diagnostic, including collection of specimen(s) by brushing or washing, when performed (separate procedure)* (work RVU = 1.52 and 15 minutes intra-service time) and noted similarly that this code has the same amount of physician work and nearly identical intra-service time. Further, the RUC compared the survey code to another injection code 62284 *Injection procedure for myelography and/or computed tomography, lumbar* (work RVU= 1.54 and 15 minutes intra-service time) and noted that this code involves similar physician work and intra-service time.

The RUC concluded that CPT code 64454 should be valued at the 25th percentile work RVU of 1.52 as supported by the survey and top key reference service and which is also consistent with the recommendation for the sacroiliac joint. **The RUC recommends a work RVU of 1.52 for CPT code 64454.**

64640 *Destruction by neurolytic agent; other peripheral nerve or branch*

The RUC reviewed the survey results from 60 physicians and determined that the survey 25th percentile work RVU of 1.98 accurately reflects the physician work necessary for this service which now involves a more complex patient. The RUC questioned the intra-service time which increased from 5 minutes to 20 minutes, and ultimately supported the survey results. It noted that since both the October 2018 and the January 2019 survey resulted in a median intra-service time of 20 minutes, this increase in time was appropriate and reflected the change in the intensity and complexity of the typical patient from the 2011 RUC survey to the current 2019 RUC survey. Furthermore, the increase in intra-service time supports an increase in work RVU. The RUC recommends 13 minutes pre-service evaluation time, 1 minute pre-service positioning time, 5 minutes pre-service scrub/dress/wait time, 20 minutes intra-service time and 9 minutes immediate post-service time, and 1-99212 office visit. While the survey data resulted in 1-99213 office visit, the RUC agreed that a 99212 was more appropriate and better reflected current practice.

The RUC compared CPT code 64640 to the top key reference code 64633 *Destruction by neurolytic agent, paravertebral facet joint nerve(s), with imaging guidance (fluoroscopy or CT); cervical or thoracic, single facet joint* (work RVU = 3.84 and 30 minutes intra-service time) and noted that it was appropriate for the reference code to be valued higher than the surveyed code because code 64633 includes imaging guidance while code 64640 does not. Survey respondents indicated that the survey code was either the same or of greater intensity than the reference code. The RUC also compared the survey code to the second key reference service code 64632 (*Destruction by neurolytic agent; plantar common digital nerve*) (work RVU = 1.23 and 5 minutes intra-service time) and noted that the survey code should be valued higher than code 64632 given the differences in intra-service times. CPT code 64632 has an intra time of 5 minutes versus 20 minutes for the survey code. The typical patient for code 64632 is a patient receiving an injection in the sole of their foot while the typical patient for code 64640 is a patient with severe pain involving the left chest wall. Survey respondents indicated that the survey code was either the same or of greater intensity than the reference code.

For additional support, the RUC referenced CPT code 17272 *Destruction, malignant lesion (eg, laser surgery, electrosurgery, cryosurgery, chemosurgery, surgical curettement), scalp, neck, hands, feet, genitalia; lesion diameter 1.1 to 2.0 cm*) (work RVU = 1.82 and 22 minutes intra-service time) and CPT code 12031 *Repair, intermediate, wounds of scalp, axillae, trunk and/or extremities (excluding hands and feet); 2.5 cm or less*) (work RVU = 2.00 and 20 minutes intra-service time) and agreed that these codes appropriately bracket the survey code. The RUC

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

concluded that CPT code 64640 should be valued at the 25th percentile work RVU as supported by the survey. **The RUC recommends a work RVU of 1.98 for CPT code 64640.**

64624 ***Destruction by neurolytic agent genicular nerve branches including imaging guidance, when performed***
The RUC reviewed the survey results from 69 physicians and recommends a work RVU of 2.62 which is supported by a direct work RVU crosswalk to MPC code 11642 *Excision, malignant lesion including margins, face, ears, eyelids, nose, lips; excised diameter 1.1 to 2.0 cm* (work RVU = 2.62, 25 minutes intra-service time and 68 minutes total time) and falls slightly above the survey 25th percentile. CPT code 64624 describes the destruction of three different nerve branches at three locations in order to *provide* analgesia for the respective knee. The crosswalked code describes excision of a malignant lesion. The physician work involved in the survey code is slightly more intense in that the destruction of three different nerve branches, if performed incorrectly would have the potential to produce irreversible tissue damage to other motor or sensory nerves in the vicinity of the knee. The RUC determined that the crosswalk is reasonable and appropriate in terms of times, intensity and physician work.

The RUC recommends 17 minutes pre-service evaluation time, 1 minute pre-service positioning time, 5 minutes pre-service scrub/dress/wait time, 25 minutes intra-service time and 10 minutes immediate post-service time, and 1-99212 office visit. The intra-service time of 25 minutes represents an increase of 5 minutes or 25 percent from the October 2018 survey. The RUC concluded that there was better understanding by survey respondents that the code described multiple injections in the more recent survey versus the October 2018 survey. While both the crosswalk code and the survey data had a 1-99213 office visit, the RUC agreed that a 99212 was more appropriate and better reflected current practice.

To further support a work RVU of 2.62, the RUC referenced CPT code 10061 *Incision and drainage of abscess (eg, carbuncle, suppurative hidradenitis, cutaneous or subcutaneous abscess, cyst, furuncle, or paronychia); complicated or multiple* (work RVU = 2.45, 25 minutes intra-service time) and noted that the intra-service times are identical but the reference code has a lower intensity than both the crosswalk and survey code, and the survey code is therefore appropriately valued higher than the reference code. The RUC agrees with the direct crosswalk recommendation of 2.62 work RVUs and believes that it appropriately ranks this procedure within the family. **The RUC recommends a work RVU of 2.62 for CPT code 64624.**

Practice Expense
The Practice Expense Subcommittee accepted compelling evidence and made substantial changes to the equipment and the equipment minutes, corrected intra-service times, added minutes to code 64450 for CA006, and made changes to supplies. PE Subcommittee members questioned including both equipment items: mobile c-ARM room (EL018) at a purchase price of $151,200 and fluoroscopy table (EF024) at a purchase price of $227,650 to perform one service with fluoroscopy. The PE Subcommittee agreed that the C-arm does not include a table, so maintained the room, mobile c-ARM (EL018), removed the table, fluoroscopy (EF024) and added in the table, power (EF031) as a proxy for fluoroscopy table until invoices can be obtained to reprice the fluoroscopy table, which PE Subcommittee members agreed should have a purchase price between $10,000 and $15,000. **The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Affirmation of RUC Recommendations
The RUC affirmed the recent RUC recommendation for CPT code *64450 Injection, anesthetic agent; other peripheral nerve or branch* (work RVU= 0.75, 7 minutes pre-service evaluation time, 1 minute pre-service positioning time, 1 minute pre-service scrub/dress/wait time, 5 minutes intra-service time and 5 minutes immediate post-service time). The relativity within the family remains correct. **The RUC affirms the work RVU of 0.75 for CPT code 64450.**

New Technology
The RUC recommends that this family of codes be placed on the New Technology/New Services list and be re-reviewed by the RUC in three years in order to verify utilization assumptions.

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
Nervous System **Extracranial Nerves, Peripheral Nerves, and Autonomic Nervous System** **Introduction/Injection of Anesthetic Agent (Nerve Block), Diagnostic or Therapeutic** *(For destruction by neurolytic agent or chemodenervation, see 62280-62282, 64600-64681)* *(For epidural or subarachnoid injection, see 62320, 62321, 62322, 62323, 62324, 62325, 62326, 62327)* *(64479-64487, 64490-64495 are unilateral procedures. For bilateral procedures, use modifier 50)* **Somatic Nerves** *64400 Injection, anesthetic agent; trigeminal nerve, any division or branch*				
(f)64450	H18	Injection, anesthetic agent; other peripheral nerve or branch	000	0.75 (Affirmed October 2018 RUC recommendation)
●64454	G1	Injection(s), anesthetic agent(s) and/or steroid; genicular nerve branches including imaging guidance, when performed (Do not report 64454 in conjunction with 64624) (64454 requires injecting all of the following genicular nerve branches: superolateral, superomedial, and inferomedial. If all three of these genicular nerve branches are not injected, report 64454 with modifier 52)	000	1.52

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Destruction by Neurolytic Agent (eg, Chemical, Thermal, Electrical or Radiofrequency), Chemodenervation

Codes 64600-64681 include the injection of other therapeutic agents (eg, corticosteroids). Do not report diagnostic/therapeutic injections separately. Do not report a code labeled as destruction when using therapies that are not destructive of the target nerve (eg, pulsed radiofrequency), use 64999. For codes labeled as chemodenervation, the supply of the chemodenervation agent is reported separately.

(For chemodenervation of internal anal sphincter, use 46505)

(For chemodenervation of the bladder, use 52287)

(For chemodenervation for strabismus involving the extraocular muscles, use 67345)

(For chemodenervation guided by needle electromyography or muscle electrical stimulation, see 95873, 95874)

Somatic Nerves

64600 *Destruction by neurolytic agent, trigeminal nerve; supraorbital, infraorbital, mental, or inferior alveolar branch*

Re: Code 64450, Injection, anesthetic agent; other peripheral nerve or branch

Dear Dr. Smith:

At the October 2018 RUC meeting the RUC reviewed the survey results for code 64450 (*Injection, anesthetic agent; other peripheral nerve or branch*) from 88 physicians and agreed on the following physician time components: 7 minutes of pre-service evaluation, 1 minute of pre-service positioning, 1 minute of pre-service scrub/dress/wait, 5 minutes of intra-service time and 5 minutes of immediate post-service time. The RUC recommended a work RVU of 0.75 for this code.

At this meeting the RUC also facilitated a tab composed of CPT codes 64XX0 (*Injection(s), anesthetic agent(s) and/or steroid; genicular nerve branches including imaging guidance, when performed*), 64640 (*Destruction by neurolytic agent; other peripheral nerve or branch*), and 64XX1 (*Destruction by neurolytic agent genicular nerve branches (including imaging guidance, when performed*)). The RUC facilitated this tab and thoroughly discussed the issues surrounding the survey of this family of services. The specialties noted their concern that many survey respondents appeared to be confused about the number of nerve branch injections involved with these three codes. The RUC supported the specialty societies' request for CPT codes 64XX0, 64640, and 64XX1 to be resurveyed and recommended resurveying these services for January 2019 RUC meeting.

Since the services described by code 64XX0 are currently reported by code 64450, the RUC requested the specialties to also survey code 64450 for the January 2019 RUC meeting. There has been no change in the physician work for this code since the October 2018 meeting and the issues related to the resurvey of 644X0, 64640 and 64XX1 do not apply to this code. We do not believe a re-survey of code 64450 is necessary. The joint societies therefore recommend that the recently recommended RUC value and inputs for code 64450 (0.75 work RVU) are reaffirmed at the January 2019 RUC meeting.

We look forward to presenting our recommendations for codes 64XX0, 64640 and 64XX1 at the upcoming RUC meeting. Please contact Sharon Merrick, M.S. CCS-P, staff for the American Society of Anesthesiologists at 202-289-2222 or via email at s.merrick@asahq.org. Thank you for your consideration of this request.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code: 64454 Tracking Number Original Specialty Recommended RVU: **1.90**
Presented Recommended RVU: **1.52**
Global Period: 000 Current Work RVU: RUC Recommended RVU: **1.52**

CPT Descriptor: Injection(s), anesthetic agent(s) and/or steroid; genicular nerve branches including imaging guidance, when performed

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 78-year-old female has a 5-year history of persistent right knee pain that is interfering with her ability to complete activities of daily living. She has had poor control of her pain despite multiple medication trials and physical therapy. Due to her persistent, debilitating pain, a trial of genicular nerve blocks is scheduled to relieve her pain and improve her function.

Percentage of Survey Respondents who found Vignette to be Typical: 97%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The clinician obtains and reviews the medical record and any pertinent imaging studies, laboratory studies and medical information. The proposed site of the procedure is identified and marked. The patient is moved to the procedure room. The clinician gowns, gloves and prepares supplies. The injection is prepared. The skin is cleansed with an antiseptic solution, sterile drapes are applied. The skin around the planned entry point is injected with local anesthetic. Perform a universal timeout procedure.

Description of Intra-Service Work: The appropriate skin and bony landmarks are identified. The procedure is performed under fluoroscopic guidance. The superolateral, superomedial and inferomedial genicular nerves are targeted adjacent to the periosteum on the medial aspect of the tibia, and at both the medial and lateral aspects of the femur at the junctions of the shaft and the epicondyle. Under imaging guidance, the target areas are approached by introducing a spinal needle from either an anteroposterior or lateral entry point with the final position residing adjacent to the bone. After negative aspiration, local anesthetic is deposited at each of the sites. The needle and stylet are removed.

Description of Post-Service Work: The sites are covered with a sterile occlusive dressing. The patient is observed for bleeding or any adverse effects and for evidence of successful block. A procedure note is dictated/written and medical record entries are made.

• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	27%	36%	36%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

CPT code 64454 (*Injection(s), anesthetic agent(s) and/or steroid; genicular nerve branches including imaging guidance, when performed*) is a 0-day global code which was surveyed for the January 2019 RUC meeting by the American Society of Anesthesiologists (ASA), the American Academy of Pain Medicine (AAPM), the American Academy of Physical Medicine & Rehabilitation (AAPM&R), the American Society of Interventional Pain Physicians (ASIPP) and the Spine Intervention Society (SIS).

Code 64454 involves blocks for 3 different nerve branches (superomedial, inferomedial, and superolateral genicular nerve branches) at three locations (adjacent to the periosteum on the medial aspect of the tibia, and at both the medial and lateral aspects of the femur) in order to achieve analgesia for the respective knee. It includes image guidance, when performed. The code was approved at the May 2018 CPT Editorial Panel meeting.

This code was previously surveyed for the October 2018 meeting. At the October 2018 RUC meeting, the specialties noted their concern that many survey respondents appeared to be confused about the number of nerve branch injections involved with two codes in the tab: 64454 and 64624. The RUC recommended resurveying the entire tab for the January 2019 RUC meeting. Unlike the October 2018 survey, the January 2019 survey included the code's parenthetical language which indicated that code 64454 involved blocks of three different nerve branches.

A total of 69 responses were received from a random sample of 7,773 clinicians (0.8% response rate). The survey conducted was robust and captured a wide variety of specialists who regularly perform the procedure and who showed recent experience with the procedure. The societies convened an expert panel to review the survey data. ***The societies are recommending the survey median of 1.90 wRVUs and a time of pre (7/1/1), intra (18 min) and post (10 min).*** This results in an IWPUT of: 0.083.

Survey Data: wRVU and Time

The expert panel reviewed the survey data for the January 2019 RUC meeting.

64454 Highlights from January 2018 Survey Data			
	25th Percentile	**Median**	**75th Percentile**
Work	1.52	1.90	2.20
Pre		17/5/5	
Intra	13	18	22
Post		10	

97 percent of the survey respondents found the vignette to be typical.

The expert panel also reviewed the survey data from the October 2018 survey.

64454 Highlights from October 2018 Survey Data			
	25th Percentile	**Median**	**75th Percentile**
Work	1.40	1.60	2.00
Pre		24/5/5	
Intra	10	15	20
Post		9	

Survey Time Data

The expert panel reviewed the survey data in developing their time recommendations.

- Pre-time: The expert panel is recommending an adjusted Non-Facility Pre Time Package 5 (adjusted) of 7/1/1. This pre-service package is consistent with other recently and/or currently reviewed nerve treatment by injection codes such as the family of somatic nerves reviewed at the October 2018 RUC meeting.
- Intra-time: The expert panel is recommending the survey median intra time of 18 minutes. This represents an increase of 3 minutes or 20 percent from the October 2018 survey which had a median intra time of 15 minutes.

The expert panel concluded that there was better understanding by survey respondents that the code described multiple injections in the more recent survey versus the October 2018 survey.

- Post time: The expert panel is recommending the survey median post time of 10 minutes. They felt this was also in-line with the post time of other recently and/or currently reviewed nerve treatment by injection codes such as the family of somatic nerves reviewed at the October 2018 RUC meeting.

wRVU Recommendation

After a robust discussion, the specialties are recommending the survey median of 1.90 wRVUs and physician time of pre (7/1/1), intra (18) and post (10). The expert panel considered a number of factors in determining the appropriateness of the recommendation.

- Reference codes: The top key reference code selected by survey respondents was code **64493** (*Injection(s), diagnostic or therapeutic agent, paravertebral facet (zygapophyseal) joint (or nerves innervating that joint) with image guidance (fluoroscopy or CT), lumbar or sacral; single level*) valued at 1.52 wRVUs and the second key reference code was code **64483** (*Injection(s), anesthetic agent and/or steroid, transforaminal epidural, with imaging guidance (fluoroscopy or CT); lumbar or sacral, single level*) valued at 1.90 wRVUs. The expert panel concluded that the recommended wRVU was supported by the reference codes selected by survey respondents.
  - 64493: The expert panel agreed that it was appropriate for the surveyed code 64454 to be valued more than the top reference code 64493 which was selected by 35 survey respondents. The survey respondents indicated that the surveyed code was either identical or of greater intensity than the reference code. The expert panel also noted that the reference code had intra time of three minutes less than the surveyed code
  - 64483: The expert panel agreed that is was appropriate for the surveyed code to be valued the same as the 2nd top key reference code 64483 which was selected by 11 survey respondents. The typical patient for 64483 presents with recurrent leg pain and the typical patient for 64454 presents with persistent knee pain. They noted that survey respondents indicated that the surveyed code was either the same or of greater intensity than the reference code.

- Building block comparison: The expert panel also considered the appropriateness of the recommendation by considering a building block approach. Code 64454 describes 3 injections which are described by code 64450 (*Injection, anesthetic agent; other peripheral nerve or branch*) valued at 0.75 wRVUs and imaging which is described by 77002 (*Fluoroscopic guidance for needle placement (eg, biopsy, aspiration, injection, localization device) (List separately in addition to code for primary procedure*)) which is valued at 0.54 wRVUs. Applying the multi-procedure reduction policy all of these services add up to 2.04 wRVUs which is more than the recommended value of 1.90 wRVUs. The expert panel concluded that this provided further evidence of the appropriateness of the recommendation.
  - $0.75 + (.5\ (0.75 + 0.75)) + 0.54 = 2.04$ wRVUs

- Other comparison codes: The expert panel also identified comparison code reference codes which support the recommended value of 1.90 wRVUs.

Code #	Long Descriptor	Global	Work RVU	IWPUT	Intra Time
64490	Injection(s), diagnostic or therapeutic agent, paravertebral facet (zygapophyseal) joint (or nerves innervating that joint) with image guidance (fluoroscopy or CT), cervical or thoracic; single level	000	1.82	0.0858	15
62327	Injection(s), including indwelling catheter placement, continuous infusion or intermittent bolus, of diagnostic or therapeutic substance(s) (eg, anesthetic, antispasmodic, opioid, steroid, other solution), not including neurolytic substances, interlaminar epidural or subarachnoid, lumbar or sacral (caudal); with imaging guidance (ie, fluoroscopy or CT)	000	1.90	0.0866	15
64454	Injection(s), anesthetic agent(s) and/or steroid; genicular nerve branches including imaging guidance, when performed	**000**	**1.90**	**0.083**	**18**
62321	Injection(s), of diagnostic or therapeutic substance(s) (eg,	000	1.95	0.0900	15

Code #	Long Descriptor	Global	Work RVU	IWPUT	Intra Time
	anesthetic, antispasmodic, opioid, steroid, other solution), not including neurolytic substances, including needle or catheter placement, interlaminar epidural or subarachnoid, cervical or thoracic; with imaging guidance (ie, fluoroscopy or CT)				
64479	Injection(s), anesthetic agent and/or steroid, transforaminal epidural, with imaging guidance (fluoroscopy or CT); cervical or thoracic, single level	000	2.29	0.1076	15

In summary, for code 64454 the societies are recommending 1.90 wRVUs and time of pre (7/1/1), intra (18 min) and post (10 min).

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) Code 64450

How often do physicians <u>in your specialty</u> perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Anesthesiology How often? Commonly

Specialty Pain Management How often? Commonly

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 87616
If the recommendation is from multiple specialties, please provide the frequency and <u>percentage</u> for each specialty. Please explain the rationale for this estimate.

Specialty Anesthesiology Frequency 29000 Percentage 33.09 %

Specialty Pain Management Frequency 16000 Percentage 18.26 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 35,046 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on 2017 Medicare utilization

Specialty Anesthesiology Frequency 12228 Percentage 34.89 %

Specialty Pain Management Frequency 10556 Percentage 30.12 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States?

SUMMARY OF RECOMMENDATION

CPT Code:64640 Tracking Number Original Specialty Recommended RVU: **1.98**
Presented Recommended RVU: **1.98**
Global Period: 010 Current Work RVU: **1.23** RUC Recommended RVU: **1.98**

CPT Descriptor: Destruction by neurolytic agent; other peripheral nerve or branch

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 60-year-old female presents with severe pain involving the left chest wall due to metastatic lung cancer with invasion of the chest wall. She is nearing the end of life and has failed multiple interventions and management. A diagnostic intercostal nerve block provided short term relief. The decision is made to perform a percutaneous neurolytic procedure of the intercostal nerve in order to obtain more prolonged relief.

Percentage of Survey Respondents who found Vignette to be Typical: 88%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 28% , In the ASC 33%, In the office 38%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Discuss and review the treatment options with the patient. Review X-rays and appropriate diagnostic studies. Review the procedure with the patient and any family members as appropriate, discuss possible complications and obtain patient consent. Apply monitors, obtain and review vital signs, examine proposed injection site and apply a grounding pad. Don hair cover, mask and sterile gloves. Prepare the injection by setting up the sterile tray with the appropriate supplies and drawing up local anesthetics. Place the patient in a prone position, cleanse the site of the proposed injection and place a sterile barrier on the patient. Inject local anesthetic to numb the skin and subcutaneous issues. Perform a universal time-out procedure.

Description of Intra-Service Work: Palpate the ribs to identify the affected intercostal nerve level. Palpate the inferior border of the rib and mark the proposed injection site. Insert a radiofrequency needle and direct it until it contacts the inferior border of the rib. Pull the radiofrequency needle back slightly and advance the needle under the inferior border of the rib. Aspirate carefully prior to injection to assure the absence of blood or air prior to the injection. Inject local anesthetic to numb the intercostal nerve prior to performing the radiofrequency ablation. Radiofrequency ablation is performed. The target tissue should reach 80 degrees for 90 seconds. Remove the needle.

Description of Post-Service Work: Apply a bandage. Obtain and review immediate post injection vital signs. Monitor the patient for any potential complications related to the injection. Instruct the patient and/or care giver on appropriate activities and home care. Discuss future management of the condition. Dictate notes for the patient's medical record. Dictate a procedure note and a letter to the patient's PCP/Referring Physician and/or insurance company. At the follow-up office visit, examine the patient and discuss treatment success or adverse reactions that may have occurred after the procedure. Revise the treatment plan(s) as necessary.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	2%	70%	23%	5%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	2%	74%	23%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	5%	63%	33%
Physical effort required	7%	72%	21%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	16%	51%	34%

2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	50%	33%	17%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	67%	33%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	50%	50%
Physical effort required	0%	67%	33%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	50%	50%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

CPT code 64640 (*Destruction by neurolytic agent; other peripheral nerve or branch*) is a 10-day global code which was surveyed for the January 2019 RUC meeting by the American Society of Anesthesiologists (ASA), the American Academy of Pain Medicine (AAPM), the American Academy of Physical Medicine & Rehabilitation (AAPM&R), the American Society of Interventional Pain Physicians (ASIPP) and the Spine Intervention Society (SIS). This code was previously surveyed for the October 2018 meeting and prior to that was surveyed in 2011.

At the October 2018 RUC meeting, the specialties noted their concern that many survey respondents appeared to be confused about the number of nerve branch injections involved with two of the other codes in the tab: 64454 and 64624. The RUC recommended resurveying the entire tab for the January 2019 RUC meeting.

A total of 60 responses were received from a random sample of 7,773 clinicians (0.7% response rate). The survey conducted was robust and captured a wide variety of specialists who regularly perform the procedure and who showed a significant amount of recent experience with the procedure. The societies convened an expert panel to review the survey data. ***The societies are recommending the survey 25th percentile of 1.98 wRVUs and a time of pre (13/1/5), intra (20 min) and post (8.5 min) and (1) 99212 office visit.*** This results in an IWPUT of: 0.048.

Survey Data: wRVU and Time

The expert panel reviewed the survey data for the January 2019 RUC meeting.

64640 Highlights from January 2018 Survey Data

Work	1.98	3.10	3.84
Pre		18/5/5	
Intra	15	20	30
Post		8.50	

The expert panel also reviewed the survey data from the October 2018 survey.

64640 Highlights from October 2018 Survey Data			
	25th Percentile	**Median**	**75th Percentile**
Work	1.88	2.35	3.73
Pre		24.5/6/5	
Intra	15	20	29.25
Post		10	

Survey Time Data

The expert panel reviewed the survey data in developing their time recommendations.

- Pre-time: The expert panel is recommending the adjusted Facility Pre Time Package 1 (adjusted) of 13/1/5. This pre-service package is consistent with other recently and/or currently reviewed nerve treatment by injection codes such as the family of somatic nerves reviewed at the October 2018 RUC meeting.
- Intra-time: The expert panel is recommending the survey median intra time of 20 minutes. This represents an increase from the current intra time of 5 minutes. The expert Panel noted that since both the October 2018 and the January 2019 survey resulted in a median intra time of 20 minutes, they were comfortable that this increase in time was appropriate and reflected the change in the intensity and complexity of the typical patient from the 2011 RUC survey to the current 2019 RUC survey.
- Post time: The expert panel is recommending the survey median post time of 8.5 minutes. They felt this was probably a little low but still in-line with the post time of other recently and/or currently reviewed nerve treatment by injection codes such as the family of Somatic nerves reviewed at the October 2018 RUC meeting.

- Office visit: The expert panel is recommending 1-99212 office visit. While the survey data resulted in 1-99213 office visit, the expert panel concluded that a 99212 was more appropriate and better reflected current practice.

Recommendation

The specialties are recommending the 25th percentile of 1.98 wRVUs and physician time of pre (13/1/5), intra 20 and post (8.5) and 1-99212 office visit. Code 64640 is currently valued at 1.23 wRVUs with physician time of pre (10), intra (5) and post (5) and 1-99212 office visit.

- wRVU: The specialties recognize that their recommendation represents an increase of the current value from 1.23 wRVUs to 1.98 wRVUs. The expert panel concluded that this increase was appropriate because of the change in the typical patient which now made the typical service described by code 64640 more intense and complex.
    - Change in typical patient: The current vignette for the typical patient is a 50-year-old female who has a history of neuritis of the medial calcaneal nerve. This vignette was from the 2011 survey. For the January 2019 survey the typical patient is a 60-year-old female with severe pain involving the left chest wall due to metastatic lung cancer with invasion of the chest wall. The change in patient population is a result of coding changes in the intervening years where the typical podiatric patient is now reported with a different code. The new vignette is based on the current top diagnosis codes listed in the RUC database.
- Intra-service time: The expert panel also noted that the increase of intra-service time from 5 minutes to 20 minutes which likely reflected the change in the typical patient also provided additional justification for the increase in wRVUs. The recommended wRVU resulted in an IWPUT of 0.048 which seemed reasonable to the expert panel and aligns well with other similar codes.

Reference codes: The top key reference code selected by survey respondents was code **64633** (*Destruction by neurolytic agent, paravertebral facet joint nerve(s), with imaging guidance (fluoroscopy or CT); cervical or thoracic, single facet joint*) valued at 3.84 wRVUs and the second key reference code was code **64632** (*Destruction by neurolytic agent; plantar common digital nerve*) valued at 1.23 wRVUs. The expert panel concluded that the recommended wRVU was supported by the reference codes selected by survey respondents.

- 64633: The expert panel agreed that it was appropriate for 64633 to be valued more than the surveyed code 64640. Code 64633 included imaging guidance while 64640 did not. They noted that survey respondents indicated that the surveyed code was either the same or of greater intensity than the reference code.
- 64632: The expert panel agreed that is was appropriate for the surveyed code to be valued higher than code 64632. Code 64632 has an intra time of 5 minutes versus 20 minutes for the surveyed code. The typical patient for code 64632 is someone getting an injection in the sole of their foot while the typical patient for 64640 is someone with severe pain involving the left chest wall. They noted that survey respondents indicated that the surveyed code was either the same or of greater intensity than the reference code.

Other comparison codes: The expert panel also identified comparison code reference codes which support the recommended value of 1.98 wRVUs.

Code #	Long Descriptor	Global	Work RVU	IWPUT	Intra Time

Code #	Long Descriptor	Global	Work RVU	IWPUT	Intra Time
10061	Incision and drainage of abscess (eg, carbuncle, suppurative hidradenitis, cutaneous or subcutaneous abscess, cyst, furuncle, or paronychia); complicated or multiple	010	2.45	0.0392	25

In summary, the societies are recommending 1.98 wRVUs and time of pre (13/1/5), intra (20 min) and post (8.5 min) and (1) 99212 office visit.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) Existing code 64640

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Anesthesiology How often? Commonly

Specialty Pain Management How often? Commonly

Specialty Interventional Pain Management How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 328852
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on relative volume of Medicare utilization

Specialty Anesthesiology Frequency 77050 Percentage 23.42 %

Specialty Pain Management Frequency 74485 Percentage 22.65 %

Specialty Interventional Pain Management Frequency 55313 Percentage 16.82 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 109,617 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on 2017 Medicare utilization

Specialty Anesthesiology	Frequency 25683	Percentage 23.42 %
Specialty Pain Management	Frequency 24828	Percentage 22.64 %
Specialty Interventional Pain Management	Frequency 18438	Percentage 16.82 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. N/A

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:64624 Tracking Number Original Specialty Recommended RVU: **3.80**
Presented Recommended RVU: **3.29**
Global Period: 010 Current Work RVU: RUC Recommended RVU: **2.62**

CPT Descriptor: Destruction by neurolytic agent genicular nerve branches (including imaging guidance, when performed)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 78-year-old female has a 5-year history of persistent right knee pain that is interfering with her ability to complete activities of daily living. She has had poor control of her pain despite multiple medication trials and physical therapy. Due to her persistent, debilitating pain, a trial of genicular nerve blocks was conducted and found to temporarily relieve her pain and improve her function. She is now scheduled for genicular nerve radiofrequency lesioning to provide longer term sustained pain relief.

Percentage of Survey Respondents who found Vignette to be Typical: 99%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 29% , In the ASC 36%, In the office 35%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The clinician obtains and reviews the medical record and any pertinent imaging studies, laboratory studies and medical information. The proposed site of the procedure is identified and marked. The patient is moved to the procedure room. The clinician gowns, gloves and prepares supplies. The injection is prepared. The skin is cleansed with an antiseptic solution, sterile drapes are applied. The skin around the planned entry point is injected with local anesthetic. Perform a universal time-out procedure.

Description of Intra-Service Work: The appropriate skin and bony landmarks are identified. The procedure is performed under fluoroscopic guidance. The superolateral, superomedial and inferomedial genicular nerves are targeted adjacent to the periosteum on the medial aspect of the tibia, and at both the medial and lateral aspects of the femur at the junctions of the shaft and the epicondyle. Under imaging guidance, a radiofrequency cannula is guided from either an anteroposterior or lateral entry point with the final position residing adjacent to the bone. Motor stimulation is also performed to ensure the absence of adjacent motor fibers. After positive confirmation of sensory placement and negative motor testing, local anesthetic is administered adjacent to the nerve to mitigate pain associated with radiofrequency lesioning. Radiofrequency ablation is performed. The target tissue should reach 80 degrees for 90 seconds. The needle and stylet are removed,.

Description of Post-Service Work: The sites are covered with a sterile occlusive dressing. The patient is observed for bleeding or any adverse effects and for evidence of successful block. A procedure note is dictated/written and medical record entries are made. The patient is discharged after a period of monitoring and when there is independent ambulation. At the follow-up office visit, the patient is examined and treatment success or adverse reactions that may have occurred after the procedure are discussed. Revise the treatment plan(s) as necessary. Dictate notes for the patient's medical record.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	9%	60%	28%	2%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	9%	73%	18%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	21%	61%	19%
Physical effort required	13%	57%	30%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	29%	53%	18%

2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	0%	100%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	100%	0%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	33%	0%	67%
Physical effort required	0%	0%	100%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	33%	33%	33%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Code 64624 (*Destruction by neurolytic agent genicular nerve branches (includes image guidance, when performed*) is a new 10-day global code which was surveyed for the January 2019 RUC meeting by the American Society of Anesthesiologists (ASA), the American Academy of Pain Medicine (AAPM), the American Academy of Physical Medicine & Rehabilitation (AAPM&R), the American Society of Interventional Pain Physicians (ASIPP) and the Spine Intervention Society (SIS).

Code 64624 describes the destruction of 3 different nerve branches (superomedial, inferomedial, and superolateral genicular nerve branches) at three locations (adjacent to the periosteum on the medial aspect of the tibia, and at both the medial and lateral aspects of the femur) in order to achieve analgesia for the respective knee. The code was approved at the May 2018 CPT Editorial Panel meeting.

At the October 2018 RUC meeting, the specialties noted their concern that many survey respondents appeared to be confused about the number of nerve branch injections involved with two codes in the tab: 64454 and 64624. The RUC recommended resurveying the entire tab for the January 2019 RUC meeting. Unlike the October 2018 survey, the January 2019 survey included the code's parenthetical language which indicated that code 64624 involved destruction of three different nerve branches.

A total of 69 responses were received from a random sample of 7,773 clinicians (0.8% response rate). The survey conducted was robust and captured a wide variety of specialists who regularly perform the procedure and who showed recent experience with the procedure. The societies convened an expert panel to review the survey data. ***The societies are recommending a value of 3.29 wRVUs and a time of pre (13/1/5), intra (25 min), post (10 min) and (1) 99212 office visit.*** This results in an IWPUT of: 0.089. This recommendation is based on a crosswalk to code 36578 (*Replacement, catheter only, of central venous access device, with subcutaneous port or pump, central or peripheral insertion site*).

This recommendation has been reduced in response to reviewer comments from the original recommendation of the survey median of 3.80 wRVUs.

Survey Data: wRVU and Time

The expert panel reviewed the survey data for the January 2019 RUC meeting.

64624 Highlights from January 2018 Survey Data			
	25th Percentile	**Median**	**75th Percentile**
Work	2.50	3.80	4.00
Pre		20/5/5	
Intra	16	25	36
Post		10	

99 percent of the survey respondents found the vignette to be typical.

The expert panel also reviewed the survey data from the October 2018 survey.

64624 Highlights from October 2018 Survey Data			
	25th Percentile	**Median**	**75th Percentile**
Work	2.10	3.50	3.90
Pre		25/6/5	

Intra	15	20	30
Post		10	

Time Recommendations

The expert panel reviewed the survey data in developing their time recommendations.

- Pre-time: The expert panel is recommending an adjusted Facility Pre Time Package 1 (adjusted) of 13/1/5. This pre-service package is consistent with other recently and/or currently reviewed nerve treatment by injection codes such as the family of somatic nerves reviewed at the October 2018 RUC meeting.
- Intra-time: The expert panel is recommending the survey median intra time of 25 minutes. This represents an increase of 5 minutes or 25 percent from the October 2018 survey which had a median intra time of 20 minutes. The expert panel concluded that there was better understanding by survey respondents that the code described multiple injections in the more recent survey versus the October 2018 survey.
- Post time: The expert panel is recommending the survey median post time of 10 minutes. They felt this was also in-line with the post time of other recently and/or currently reviewed nerve treatment by injection codes such as the family of somatic nerves reviewed at the October 2018 RUC meeting.
- Office visit: The expert panel is recommending 1-99212 office visit. While the survey data resulted in 1-99213 office visit, the expert panel concluded that a 99212 was more appropriate and better reflected current practice.

wRVU Recommendation

In response to reviewer comments, the specialties reduced the wRVU recommendation from the original recommendation of 3.80 wRVUs (survey median) to 3.29 wRVUs.

Rationale: Crosswalk

The rationale for the recommendation of 3.29 is a crosswalk to CPT code 36578.

Code	Descriptor	Global	Pre-Time	Intra Time	Post Time	Other Hospital	Office Visits	IWPUT
36578	Replacement, catheter only, of central venous access device, with subcutaneous port or pump, central or peripheral insertion site	10	10/6/10	30	15	.5 - 99238	1-99212	0.0465

In selecting a crosswalk, the expert panel did a thorough review of the RUC database of recently reviewed, 10-day globals with intra time of around 25 minutes and found very few options. While the reviewers found that code 36578 was generally reasonable, they did find some limitations on the comparisons of these two codes. For example, while the surveyed code 64624 included imaging, the crosswalk, code 36578, does not include imaging.

Despite the limitations of this crosswalk, the expert panel did consider a number of factors in determining the reasonableness of this revised recommendation.

Building Block Analysis

In assessing the appropriateness of the value, the expert panel also considered a building block analysis of the service. Code 64624 describes ablation of three nerves (currently reported by code 64640, *Destruction by neurolytic agent; other peripheral nerve or branch*) and image guidance (currently reported by 77002, *Fluoroscopic guidance for needle placement (eg, biopsy, aspiration, injection, localization device) (List separately in addition to code for primary procedure*)).

- The specialties are recommending 1.98 wRVUs for code 64640 at the January 2019 meeting and code 77002 has a current value of 0.54 wRVU.
    - [(1.98) + 0.5(1.98 + 1.98) + 0.54] = 4.50 wRVUs

The building block analysis resulted in a value of 4.50 wRVU. The expert panel felt that this provided further evidence of the appropriateness of the recommendation of 3.29 wRVUs.

Relativity to Other Similar Codes Surveyed at this January 2019 RUC Meeting

In developing this recommendation, the expert panel considered a similar code being presented at this meeting. Code 6XX01 (*Radiofrequency ablation, nerves innervating the sacroiliac joint, with image guidance (ie, fluoroscopy or computed tomography*) is part of Tab 8. The recommendation for this code is 3.91 wRVUs. Code 6XX01 is a 10-day global that describes the ablation of four nerves around the sacroiliac joint. It has intra-time of 30 minutes. Since code 64624 describes the ablation of three nerves in the genicular area, the expert panel agreed that the wRVU difference between the two codes (3.91 versus 3.29) was appropriate.

Reference Codes

The top key reference code which was selected by 43 survey respondents was code **64633** (*Destruction by neurolytic agent, paravertebral facet joint nerve(s), with imaging guidance (fluoroscopy or CT); cervical or thoracic, single facet joint*) valued at 3.84 wRVUs and the second key reference code which was selected by six survey respondents was code **64632** (*Destruction by neurolytic agent; plantar common digital nerve*) valued at 1.23 wRVUs. The expert panel concluded that the recommended wRVU was supported by the reference codes selected by survey respondents.

- 64633: Code 64633 is valued at 0.55 wRVUs more than the recommended value for the surveyed code 64624 and was selected overwhelmingly by survey respondents (43 survey respondents). Code 64633 has 5 minutes more of intra service time than 64624 (30 minutes versus 25 minutes). Both codes include imaging. The expert panel agreed that the relationship between these two codes was appropriate. They noted that survey respondents indicated that the surveyed code was either the same or of greater intensity than the reference code.
- 64632: The expert panel agreed that is was appropriate for the surveyed code to be valued higher than code 64632. Code 64632 has an intra time of 5 minutes versus 25 minutes for the surveyed code. The typical patient for code 64632 is someone getting an injection in the sole of their foot while the typical patient for 64624is someone with a history of persistent knee pain. They noted that 100% of the survey respondents indicated that the surveyed code had somewhat more overall intensity/complexity.

In summary, for code 64624 the societies are recommending 3.29 wRVUs and time of pre (13/1/5), intra (25 min), post (10 min) and (1) 99212 office visit.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 64640

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Anesthesiology How often? Commonly

Specialty Interventional Pain How often? Commonly

Specialty Pain Management How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 52569
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on relative volume of Medicare utilization

Specialty Anesthesiology Frequency 13842 Percentage 26.33 %

Specialty Interventional Pain Frequency 6834 Percentage 13.00 %

Specialty Pain Management Frequency 6429 Percentage 12.22 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 21,028 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on 2017 Medicare utilization

Specialty Anesthesiology Frequency 5537 Percentage 26.33 %

Specialty Interventional Pain Frequency 2734 Percentage 13.00 %

Specialty Pain Management Frequency 2572 Percentage 12.23 %

Do many physicians perform this service across the United States?

1st REF = Top Key Reference code data

2st REF = Second Highest Key Reference code data

CURRENT = Current data (Harvard or RUC) for code being surveyed. If this is a new code, this row will be blank.

SVY = Survey data - as it appears on the Summary of Recommendation form.

REC = Specialty Society recommended data as it appears on the Summary of Recommendation form.

ISSUE: Genicular Injection and RFA

CPT Code:__64454, 64640, 64624_____
Specialty Society__ASA, AAPM&R, AAPM, ASIPP, SIS__

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Facility Direct Practice Expense (PE) Inputs

CPT Long Descriptor:

- 64454, Injection(s), anesthetic agent(s) and/or steroid; genicular nerve branches including imaging guidance, when performed
- 64624, Destruction by neurolytic agent genicular nerve branches (including imaging guidance, when performed)
- 64640, Destruction by neurolytic agent; other peripheral nerve or branch

Global Period: 0 days (64454) 010 days (64640 and 64624) Meeting Date: January 2019

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   A panel of clinicians representing each specialty society involved in the RUC survey process for the code collaborated to develop and approve the PE recommendations.

2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here:

   Code 64454: Using the current direct PE inputs of code 64450 as the reference code
   Code 64640 and 64624: Using the current direct PE inputs of code 64640 as the reference code

3. Is this code(s) typically billed with an E/M service? *No*

4. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time: *N/A*

5. If you are requesting an increase over the current total cost for clinical staff time (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), total cost of supplies, and/or total cost of equipment you must provide compelling evidence: *N/A*

6. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here: *N/A*

7. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities: *N/A*

8. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov. *N/A*

9. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here: *N/A*

10. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here: *N/A*

11. List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here:

Codes 64640 and 64624: Table, exam (default formula)

12. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here: *N/A*

13. If there is any other item on your spreadsheet that needs further explanation please include here: *N/A*

14. Please include an explanation of each line item:

Code	Description	Explanation
CA002	Coordinate pre-surgery services (including test results)	
CA003	Schedule space and equipment in facility	
CA005	Complete pre-procedure phone calls and prescription	Staff explains where to come for the appointment, checks medications, runs through list of medical conditions, makes sure the patient is off anti-coagulation drugs, confirms if patient uses BP medications, walks the patient through the procedure, confirms whether a driver is available for a ride home and answers patient questions.
CA006	Confirm availability of prior images/studies	
CA039	Post-operative visits (total time)	
EF023	Table, exam	Used during follow-up procedure
EQ354	Radiofrequency kit for destruction by neurolytic agent	Used for the two destruction procedures

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Non Facility Direct Practice Expense (PE) Inputs

CPT Long Descriptor:

- 64454, Injection(s), anesthetic agent(s) and/or steroid; genicular nerve branches including imaging guidance, when performed
- 64624, Destruction by neurolytic agent genicular nerve branches (including imaging guidance, when performed)
- 64640, Destruction by neurolytic agent; other peripheral nerve or branch

Global Period: 0 days (64454) 010 days (64640 and 64624) Meeting Date: January 2019

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   A panel of clinicians representing each specialty society involved in the RUC survey process for the code collaborated to develop and approve the PE recommendations.

2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here:

   Code 64454: Using the current direct PE inputs of code 64450 as the reference code
   Code 64640 and 64624: Using the current direct PE inputs of code 64640 as the reference code

3. Is this code(s) typically billed with an E/M service? *No.*
   Is this code(s) typically billed with the E/M service in the nonfacility? *No.*
   (Please see provided data in PE Subcommittee folder)

4. What specialty is the dominant provider in the nonfacility?
   Codes 64454 and 64624: New codes- N/A
   Code 64640: Podiatry 27%

   What percent of the time does the dominant provider provide the service(s) in the nonfacility?
   Codes 64454 and 64624: New codes- N/A
   Code 64640: 45%

   Is the dominant provider in the nonfacility different then for the global?
   Codes 64454 and 64624: New codes- N/A
   Code 64640: Yes. For the global, the dominant specialty is Anesthesiology (23%)

   (Please see provided data in PE Subcommittee folder)

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time: *N/A*

6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies (This does not include minutes to assist physician and the number of post-op visits, as they

are directly related to physician work), you must provide compelling evidence. Please explain if the increase can be entirely accounted for because of an increase in physician time.

Codes 64454 and 64624: N/A
Code 64640: We are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies. Based on our Expert Panel review we identified a number of direct PE inputs (largely supplies) that are typically used when providing this service in the non-facility environment that are not currently included. We have confirmed that the added PE clinical labor tasks, supplies, and equipment are not included in the current inputs or packages and that there is no duplication.

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here: *N/A*

8. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? (please use this time rather than 5 minutes in your reference code)
   The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

   We recommend 5 minutes for obtaining vital signs. The following vital signs are collected: BP, RR, Pulse, Temp, O2 sat.

9. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

   Staff is present and assisting physician during the entire procedure. Staff supports the physician throughout the procedure by handing over the necessary supplies (syringes, gauzes etc.), acts as a second pair of hands during the procedure assisting with supplies/equipment or directly with the patient as needed, helps to make sure patient is comfortable and monitors the patient throughout the procedure.

10. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived. *N/A*

11. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities: *N/A*

12. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov. *N/A*

13. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here: *N/A*

14. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here: *N/A*

15. List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here:

Code 64454:

Technologist PACS workstation	*PACS*
mayo stand	*Default*
table, fluoroscopy	*Default*
room, mobile c-ARM	*Highly technical*
ECG, 3-channel (with SpO2, NIBP, temp, resp)	*Other*
light, exam	*Default*

The formula for ECG, 3-channel is the sum of the values included in the default formula, plus the time that the patient is monitored post-service of the service period.

Code 64640

mayo stand	*Default*
Table, power	*Default*
ECG, 3-channel (with SpO2, NIBP, temp, resp)	*Other*
light, exam	*Default*
nerve stimulator (eg, for nerve block)	*Default*
radiofrequency generator (NEURO)	*Default*
radiofrequency kit for destruction by neurolytic agent	*Default*

The formula for ECG, 3-channel is the sum of the values included in the default formula, plus the time that the patient is monitored post-service of the service period.

Code 64624

Technologist PACS workstation	*PACS*
mayo stand	*Default*
table, fluoroscopy	*Default*
room, mobile c-ARM	*Highly technical*
ECG, 3-channel (with SpO2, NIBP, temp, resp)	*Other*
light, exam	*Default*
nerve stimulator (eg, for nerve block)	*Default*
radiofrequency generator (NEURO)	*Default*
radiofrequency kit for destruction by neurolytic agent	*Default*

The formula for ECG, 3-channel is the sum of the values included in the default formula, plus the time that the patient is monitored post-service of the service period.

16. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here: *N/A*

17. If there is any other item on your spreadsheet that needs further explanation please include here: *N/A*

18. Please include an explanation of each line item:

Code	Description	Explanation
CA005	Complete pre-procedure phone calls and prescription	Staff explains where to come for the appointment, checks medications, runs through list of medical conditions, makes sure the patient is off anti-coagulation drugs, confirms if patient uses BP medications, walks the patient through the procedure, confirms whether a driver is available for a ride home and answers patient questions.
CA006	Confirm availability of prior images/studies	
CA009	Greet patient, provide gowning, ensure appropriate medical records are available	
CA010	Obtain vital signs	Blood pressure, respiratory rate, pulse, temperature, O2 saturation are all measured
CA011	Provide education/obtain consent	
CA013	Prepare room, equipment and supplies	Separate preparations are made by the nursing and rad tech staff for the X0 and X1 codes
CA014	Confirm order, protocol exam	
CA016	Prepare, set-up and start IV, initial positioning and monitoring of patient	
CA018	Assist physician or other qualified healthcare professional - directly	For the X0 and X1 codes, this is completed by both the nurse and the rad tech
CA022	Monitor the patient following procedure/service, multitasking 1:4	Patient is monitored for 20 minutes while multitasking (total of 5 minutes)
CA024	Clean room/equipment by clinical staff	
CA029	Check dressings, catheters, wounds	
CA030	Technologist QCs images in PACS, checking for all images, reformats, and dose page	Images are required for the X0 and X1 codes
CA031	Review examination with interpreting MD/DO	Images are required for the X0 and X1 codes
CA032	Scan exam documents in PACS. Complete exam in RIS system to populate images into work queue	Images are required for the X0 and X1 codes
CA035	Review home care instructions, coordinate visits/prescriptions	
CA039	Post-operative visits (total time)	
SB001	Cap, surgical	Sterile attire for the MD. For the destruction codes, a cap is also required for the nurse and rad tech.
SB024	Gloves, sterile	Sterile attire for the MD
SB028	Gown, surgical, sterile	Sterile attire for the MD
SB033	Mask, surgical	Sterile attire required for the MD and other staff present in the room
SB027	Gown, staff, impervious	Sterile attire for staff

SB022	Gloves, non-sterile	Sterile attire for staff
SK075	Skin marking pen, sterile (Skin Skribe)	Used to mark injection sites
SB026	Gown, patient	Used to cover patient while allowing access to injection site.
SB004	Cover, thermometer probe	Used for taking vitals
SB036	Paper, exam table	
SB044	Underpad 2ft x 3ft (Chux)	Used under patient to collect fluid that may drain during the procedure to the table
SB037	Pillow case	Two pillows are needed for the X0 and X1 procedures – one under the head and one between the knees
SJ081	Swab, patient prep, 1.5 ml (chloraprep)	Used to prep the injection sites
SB011	Drape, sterile, fenestrated 16in x 29in	
SB019	Drape-towel, sterile 18in x 26 in	
SB008	Drape, sterile, c-arm, fluoro	Used only for the X0 and X1 codes that require fluoroscopic guidance
SD269	Grounding pad	
SB012	Drape, sterile, for Mayo stand	Used to hold supplies during the procedures
SC029	Needle, 18-27g	Used for local anesthetic for all codes and used for the injectate for code 64640
SC051	Syringe 10-12ml	Used for the anesthetic and injectate for X0 and X1
SH047	Lidocaine 1%-2% inj (Xylocaine)	Local anesthetic – for 64640 (1 nerve) 5cc are used as well as 3cc for the injectate (8 total), for X0 and X1 (3 nerves) 10cc are used as anesthetic only.
SD050	Electrode needle, injectable (Myoject)	
SD087	Guide, needle, for localization	
SD011	Cannula (radiofrequency denervation) (SMK-C10)	Used for denervation procedures
SC028	Needle, 18-26g, 1.5-3.5in, spinal	Used for injectate for X0 code
SC057	Syringe 5-6ml	Used for anesthetic and injectate for 64640 (lower volume for single injection code)
SH021	Bupivacaine 0.25% inj (Marcaine)	Injectate, increased amount required for X0 and X1 to account for 3 nerves.
SJ001	Alcohol isopropyl 70%	Used to clean skin post-procedure
SG021	Bandage, strip 0.75in x 3in (Bandaid)	Used post-procedure for site(s) of injection
SG055	Gauze, sterile 4in x 4in	Used for the single injection (64640)
SG056	Gauze, sterile 4in x 4in (10 pack)	Used for multiple injections (X0 and X1)
SL259	Bleach cleaning wipe	Used to clean the table
EF024	Table, fluoroscopy	Used for image guided procedures X0 and X1
EF031	Table, power	Used for 64640 since imaging is not performed
EL018	Room, mobile c-Arm	
EQ354	Radiofrequency kit for destruction by neurolytic agent	Used for the two destruction procedures
EQ168	Light, exam	
ED050	Technologist PACS workstation	Used for capturing and storing images for the X0 and X1 codes

EQ214	Radiofrequency generator (NEURO)	Used during denervation procedures
EQ184	Nerve stimulator (eg, for nerve block)	Used during denervation procedures
EF015	Mayo stand	Used to hold supplies for the procedure
EQ011	ECG, 3-channel (with SpO2, NIBP, temp, resp)	Used both during the procedure and during monitoring time

AMA/Specialty Society RVS Update Committee Summary of Recommendations

October 2018

Somatic Nerve Injection

In May 2018 the CPT Editorial Panel approved the revision of descriptors and guidelines for codes 64400- 64450 and deletion of 3 codes to clarify reporting (ie, separate reporting of imaging guidance, number of units, change of CPT codes 64421 from a 0-day global to ZZZ). Codes 64400-64450 describe the injection of an anesthetic agent(s) and/or steroid into a nerve plexus, nerve, or branch. These codes are reported once per nerve plexus, nerve, or branch as described in the descriptor regardless of the number of injections performed along the nerve plexus, nerve, or branch described by the code. Image guidance (ultrasound, fluoroscopy, CT) and localization may be reported separately. The physician work for this family of services varies based on the anatomic location of each nerve, whether the services is typically performed in the facility setting, the typical approach used by the dominant specialty to access the nerve that performs each service and whether the service involves continuous infusion by catheter.

64400 ***Injection(s), anesthetic agent(s) and/or steroid; trigeminal nerve, each branch (ie, ophthalmic, maxillary, mandibular)***
The RUC reviewed the survey results from 56 physicians and agreed on the following physician time components: 7 minutes of pre-service evaluation, 1 minute of pre-service positioning, 1 minute of pre-service scrub/dress/wait, 6 minutes of intra-service time and 5 minutes of immediate post-service time. The RUC noted that the current times for this service are over 25 years old from the Harvard study and not valid for comparison. The IWPUT for the current times is similar to scrub/dress/wait IWPUT, which strongly implies the current times are highly inflated relative to the current work RVU and not valid for comparison to the new times.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the respondents somewhat overvalued the work involved in performing this service, with a 25th percentile work RVU of 1.14. To find an appropriate work RVU, the RUC reviewed the survey 25th percentile for only the neurologist survey respondents of 1.00, noting that neurology is the top performing specialty yet there were fewer survey responses from neurology than from anesthesiology. Neurology is 47 percent of the 2017 Medicare claims whereas anesthesiology is only 10 percent of the claims, the RUC noted that it would be appropriate to value the service at the Neurology 25th percentile of 1.00. To justify a work RVU of 1.00, the RUC compared the survey code to CPT code 31575 *Laryngoscopy, flexible; diagnostic* (work RVU = 0.94, intra-service time of 5 minutes) and noted that the reference code more intra-service time and involves slightly more physician work. The RUC also compared the survey code to MPC code 36620 *Arterial catheterization or cannulation for sampling, monitoring or transfusion (separate procedure); percutaneous* **(**work RVU = 1.00, intra-service time of 7 minutes, total time of 17 minutes) and noted that although the survey code has 1 minute less of intra-service time, it has 3 more minutes of total time and both services involve a similar amount of physician work. **The RUC recommends a work RVU of 1.00 for CPT code 64400.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

64408 ***Injection(s), anesthetic agent(s) and/or steroid; vagus nerve***
The RUC reviewed the survey results from 37 physicians and agreed on the following physician time components: 7 minutes of pre-service evaluation, 3 minutes of pre-service positioning, 5 minutes of intra-service time and 5 minutes of immediate post-service time.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the respondents appropriately valued the physician work involved in performing this service at the 25th percentile work RVU of 0.90. To justify a work RVU of 0.90, the RUC compared the survey code to CPT code 31575 *Laryngoscopy, flexible; diagnostic* (work RVU = 0.94, intra-service time of 5 minutes) and noted that both services have identical intra-service times and involve a similar amount of physician work, and therefore should be valued similarly. The RUC also compared the survey code to MPC code 36620 *Arterial catheterization or cannulation for sampling, monitoring or transfusion (separate procedure); percutaneous* **(**work RVU = 1.00, intra-service time of 7 minutes, total time of 17 minutes) and noted that the survey code involves 2 minutes less of intra-service time and it would be appropriate to value the survey code somewhat less as it involves somewhat less overall work. **The RUC recommends a work RVU of 0.90 for CPT code 64408.**

64415 ***Injection(s), anesthetic agent(s) and/or steroid; brachial plexus***
The RUC reviewed the survey results from 57 physicians and agreed on the following physician time components: 13 minutes of pre-service evaluation, 1 minute of pre-service positioning, 4 minutes of pre-service scrub/dress/wait, 12 minutes of intra-service time and 10 minutes of immediate post-service time. This service is typically performed in the facility setting and requires more pre-service evaluation and scrub/dress/wait time than services in this family that are typically performed in the non-facility setting.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the respondents appropriately valued the physician work involved in performing this service at the 25th percentile work RVU of 1.42. To justify a work RVU of 1.42, the RUC compared the survey code to CPT code 64612 *Chemodenervation of muscle(s); muscle(s) innervated by facial nerve, unilateral (eg, for blepharospasm, hemifacial spasm)* (work RVU = 1.41, intra-service time of 10 minutes) and noted that the survey code involves slightly more intra-service time and slightly less total time and both services include a similar amount of physician work. The RUC also compared the survey code to CPT code 30903 *Control nasal hemorrhage, anterior, complex (extensive cautery and/or packing) any method* (work RVU = 1.54, intra-service time of 15 minutes, total time of 39 minutes) and noted that the survey code involves less intra-service time and valuing the survey code at 1.42 would maintain appropriate relativity with the reference code. **The RUC recommends a work RVU of 1.42 for CPT code 64415.**

64416 ***Injection(s), anesthetic agent(s) and/or steroid; brachial plexus, continuous infusion by catheter (including catheter placement)***
The RUC reviewed the survey results from 42 physicians and agreed on the following physician time components: 13 minutes of pre-service evaluation, 1 minute of pre-service positioning, 5 minutes of pre-service scrub/dress/wait, 20 minutes of intra-service time and 10 minutes of immediate post-service time. This service is typically performed in the facility setting and requires more pre-service evaluation and scrub/dress/wait time than services in this family that are typically performed in the non-facility setting.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the respondents appropriately valued the physician work involved in performing this service at the 25th percentile work RVU of 1.81 To justify a work RVU of 1.81, the RUC compared the survey

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

code to CPT code 32554 *Thoracentesis, needle or catheter, aspiration of the pleural space; without imaging guidance* (work RVU = 1.82, intra-service time of 20 minutes) and noted that both services involve identical intra-service time and have typically require a similar amount of physician work. **The RUC recommends a work RVU of 1.81 for CPT code 64416.**

64417 ***Injection(s), anesthetic agent(s) and/or steroid; axillary nerve***
The RUC reviewed the survey results from 45 physicians and agreed on the following physician time components: 13 minutes of pre-service evaluation, 1 minute of pre-service positioning, 4 minutes of pre-service scrub/dress/wait, 10 minutes of intra-service time and 10 minutes of immediate post-service time. This service is typically performed in the facility setting and requires more pre-service evaluation and scrub/dress/wait time than services in this family that are typically performed in the non-facility setting. The RUC noted that the current times for this service are over 25 years old from the Harvard study and not valid for comparison.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the respondents appropriately valued the physician work involved in performing this service at the 25th percentile work RVU of 1.27. To justify a work RVU of 1.27, the RUC compared the survey code to CPT code 49082 *Abdominal paracentesis (diagnostic or therapeutic); without imaging guidance* (work RVU = 1.24, intra-service time of 10 minutes) and noted that both services involve identical intra-service time and total time and a similar amount of physician work. The RUC also compared the code to CPT code 32562 *Instillation(s), via chest tube/catheter, agent for fibrinolysis (eg, fibrinolytic agent for break up of multiloculated effusion); subsequent day* (work RVU = 1.24, intra-service time of 10) and noted that both services have identical intra-service times and involve a similar amount of physician work. The RUC noted that 64417 has appropriate relativity with the rest of the family. For example, 64415 and 64417 involve a similar work intensity and therefore the RUC recommendations for both services have similar IWPUTs. **The RUC recommends a work RVU of 1.27 for CPT code 64417.**

64420 ***Injection(s), anesthetic agent(s) and/or steroid; intercostal nerve, single level***
The RUC reviewed the survey results from 60 physicians and agreed on the following physician time components: 13 minutes of pre-service evaluation, 1 minute of pre-service positioning, 5 minutes of pre-service scrub/dress/wait, 10 minutes of intra-service time and 5 minutes of immediate post-service time. This service is typically performed in the facility setting and requires more pre-service evaluation and scrub/dress/wait time than services in this family that are typically performed in the non-facility setting. The RUC noted that the current times for this service are from the Harvard study more than 20 years ago; in 1994, the RVU for this service was lowered substantially but the intra-service time was not changed to reflect the decrease. Therefore, a reduction in time would not necessarily imply a reduction in work value as the previous times used a flawed methodology.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the respondents somewhat overvalued the work involved in performing this service, with a 25th percentile work RVU of 1.24. The RUC also reviewed the current value for this service of 1.18 and noted that would continue to be the appropriate value for this service. To verify a value of 1.18, the RUC compared the survey code to CPT code 49082 *Abdominal paracentesis (diagnostic or therapeutic); without imaging guidance* (work RVU = 1.24, intra-service time of 10 minutes) and noted that both codes involve identical intra-service time, whereas the reference code involves somewhat more total time and that the survey code should be valued somewhat lower. The RUC also compared the code to CPT code 32562 *Instillation(s), via chest tube/catheter, agent for*

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

fibrinolysis (eg, fibrinolytic agent for break up of multiloculated effusion); subsequent day (work RVU = 1.24, intra-service time of 10) and noted that both services have identical intra-service times and involve a similar amount of physician work. The RUC noted that 64417 has appropriate relativity with the rest of the family. For example, 64420 and 64417 involve a similar work intensity and therefore the RUC recommendations for both services have similar IWPUTs. **The RUC recommends a work RVU of 1.18 for CPT code 64420.**

64421 ***Injection(s), anesthetic agent(s) and/or steroid; intercostal nerves, each additional level (List separately in addition to code for primary procedure)***
The RUC reviewed the survey results from 60 physicians and agreed on the following physician time components: 10 minutes of intra-service time. The RUC noted that the coding structure for 64421 changed when the code was revised by CPT; 64421 switched from a 000-day global code that code only be reported a single time to an add-on code for 64420. Furthermore, the current physician times for 64421 are over 25 years old and from the Harvard study.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the respondents overvalued the work involved in performing this service, with a 25th percentile work RVU of 1.00. To find an appropriate work RVU crosswalk, the RUC compared the survey code to CPT code 77063 *Screening digital breast tomosynthesis, bilateral (List separately in addition to code for primary procedure)* (work RVU = 0.60, intra-service time of 8 minutes) and noted that although the survey code involves somewhat more intra-service time, both services require a very similar amount of physician work. Therefore, the RUC recommends a direct work RVU crosswalk from 77063 to 64421. **The RUC recommends a work RVU of 0.60 for CPT code 64421.**

64425 ***Injection(s), anesthetic agent(s) and/or steroid; ilioinguinal, iliohypogastric nerves***
The RUC reviewed the survey results from 54 physicians and agreed on the following physician time components: 7 minutes of pre-service evaluation, 1 minute of pre-service positioning, 1 minute of pre-service scrub/dress/wait, 11 minutes of intra-service time and 5 minutes of immediate post-service time. The RUC noted that the current times for this service are over 25 years old from the Harvard study and not valid for comparison.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the respondents appropriately valued the physician work involved in performing this service at the 25th percentile work RVU of 1.19. To justify a work RVU of 1.19, the RUC compared the survey code to CPT code 49082 *Abdominal paracentesis (diagnostic or therapeutic); without imaging guidance* (work RVU = 1.24, intra-service time of 10 minutes) and noted that both services involve identical intra-service time and whereas the reference code involves somewhat more total time and it would be appropriate to value the survey code somewhat lower than the reference code at a value of 1.19. The RUC also compared the code to CPT code 32562 *Instillation(s), via chest tube/catheter, agent for fibrinolysis (eg, fibrinolytic agent for break up of multiloculated effusion); subsequent day* (work RVU = 1.24, intra-service time of 10) and noted that both services have similar intra-service times and the survey code should be valued slightly less than the reference code to maintain appropriate relativity. **The RUC recommends a work RVU of 1.19 for CPT code 64425.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

64430 ***Injection(s), anesthetic agent(s) and/or steroid; pudendal nerve***
The RUC reviewed the survey results from 67 physicians and agreed on the following physician time components: 13 minutes of pre-service evaluation, 5 minutes of pre-service positioning, 5 minutes of pre-service scrub/dress/wait, 10 minutes of intra-service time and 10 minutes of immediate post-service time. The specialty noted and the RUC agreed that this service requires more post-time than CPT code 64425 as the pudendal nerve is deeper. This service is typically performed in the facility setting and requires more pre-service evaluation and scrub/dress/wait time than services in this family that are typically performed in the non-facility setting. The post-service time is longer for 64430 compared to 64435 because the approach involves going much deeper and the physician typically stays longer as the patient tends to have pelvic muscle weakness. Unlike for 64435, for 64430, the patient is then re-examined digitally to confirm pelvic stability and pelvic floor tonicity during the post-service period. The patient is then evaluated for safety in ambulation.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the respondents appropriately valued the physician work involved in performing this service at the 25th percentile work RVU of 1.15. To justify a work RVU of 1.15, the RUC compared the survey code to CPT code 49082 *Abdominal paracentesis (diagnostic or therapeutic); without imaging guidance* (work RVU = 1.24, intra-service time of 10 minutes) and noted that both services involve identical intra-service time and whereas the reference code involves somewhat more total time and it would be appropriate to value the survey code somewhat lower than the reference code at a value of 1.15. The RUC also compared the code to CPT code 32562 *Instillation(s), via chest tube/catheter, agent for fibrinolysis (eg, fibrinolytic agent for break up of multiloculated effusion); subsequent day* (work RVU = 1.24, intra-service time of 10) and noted that both services have identical intra-service times and the survey code should be valued slightly less than the reference code to maintain appropriate relativity. **The RUC recommends a work RVU of 1.15 for CPT code 64430.**

64435 ***Injection(s), anesthetic agent(s) and/or steroid; paracervical (uterine) nerve***
The RUC reviewed the survey results from 42 physicians and agreed on the following physician time components: 7 minutes of pre-service evaluation, 3 minutes of pre-service positioning, 5 minutes of intra-service time and 5 minutes of immediate post-service time.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the respondents appropriately valued the physician work involved in performing this service at the 25th percentile work RVU of 0.75. To justify a work RVU of 0.75, the RUC compared the survey code to top key reference code 20551 *Injection(s); single tendon origin/insertion* (work RVU = 0.75, intra-service time of 5, total time of 20 minutes) and noted that both services involve identical intra-service time and total time and the same amount of physician work. The RUC also compared the survey code to CPT code 31575 *Laryngoscopy, flexible; diagnostic* (work RVU = 0.94, intra-service time of 5 minutes) and noted that although both services have identical intra-service time, the reference code involves more total time, justifying a somewhat lower valuation for the survey code. **The RUC recommends a work RVU of 0.75 for CPT code 64435.**

64445 ***Injection(s), anesthetic agent(s) and/or steroid; sciatic nerve***
The RUC reviewed the survey results from 68 physicians and agreed on the following physician time components: 7 minutes of pre-service evaluation, 1 minutes of pre-service positioning, 1 minutes of pre-service scrub/dress/wait, 10 minutes of intra-service time and 5 minutes of immediate post-service time.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the respondents overvalued the work involved in performing this service, with a 25th percentile work RVU of 1.30. To find an appropriate work RVU crosswalk, the RUC compared the survey code to CPT code 67810 *Incisional biopsy of eyelid skin including lid margin* (work RVU = 1.18, intra-service time of 13 minutes, total time of 27 minutes and noted that although the survey code involves somewhat less intra-service time, it involves somewhat more total time and a very similar amount of physician work. The RUC recommends a direct work RVU crosswalk from CPT code 67810 to CPT code 64445. The RUC also compared the code to CPT code 32562 *Instillation(s), via chest tube/catheter, agent for fibrinolysis (eg, fibrinolytic agent for break up of multiloculated effusion); subsequent day* (work RVU = 1.24, intra-service time of 10) and noted that both services have identical intra-service times and whereas the survey code involves slightly more overall physician work. **The RUC recommends a work RVU of 1.18 for CPT code 64445.**

64446 ***Injection(s), anesthetic agent(s) and/or steroid; sciatic nerve, continuous infusion by catheter (including catheter placement)***
The RUC reviewed the survey results from 48 physicians and agreed on the following physician time components: 13 minutes of pre-service evaluation, 1 minute of pre-service positioning, 5 minutes of pre-service scrub/dress/wait, 15 minutes of intra-service time and 6 minutes of immediate post-service time. This service is typically performed in the facility setting and requires more pre-service evaluation and scrub/dress/wait time than services in this family that are typically performed in the non-facility setting.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the respondents overvalued the work involved in performing this service, with a 25th percentile work RVU of 1.80. To find an appropriate work RVU crosswalk, the RUC compared the survey code to CPT code 30903 *Control nasal hemorrhage, anterior, complex (extensive cautery and/or packing) any method* (work RVU = 1.54, intra-service time of 15 minutes, total time of 39 minutes) and noted that both services have identical intra-service time and total time and involve an identical amount of physician work. The RUC recommends a direct work RVU crosswalk from CPT code 30903 to CPT code 64446. **The RUC recommends a work RVU of 1.54 for CPT code 64446.**

64447 ***Injection(s), anesthetic agent(s) and/or steroid; femoral nerve***
The RUC reviewed the survey results from 62 physicians and agreed on the following physician time components: 12 minutes of pre-service evaluation, 1 minute of pre-service positioning, 3 minutes of pre-service scrub/dress/wait, 6 minutes of intra-service time and 5 minutes of immediate post-service time. This service is typically performed in the facility setting and requires more pre-service evaluation and scrub/dress/wait time than services in this family that are typically performed in the non-facility setting.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the respondents overvalued the work involved in performing this service, with a 25th percentile work RVU of 1.29. To find an appropriate work RVU crosswalk, the RUC compared the survey code to CPT code 31231 *Nasal endoscopy, diagnostic, unilateral or bilateral (separate procedure)* (work RVU = 1.10, intra-service time of 7 minutes, total time of 21 minutes) and noted that although the survey code involves slightly less intra-service time, it requires more total time and a very similar amount of physician work. The RUC recommends a direct work RVU crosswalk from CPT code 31231 to CPT code 64447. **The RUC recommends a work RVU of 1.10 for CPT code 64447.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

64448 ***Injection(s), anesthetic agent(s) and/or steroid; femoral nerve, continuous infusion by catheter (including catheter placement)***
The RUC reviewed the survey results from 51 physicians and agreed on the following physician time components: 13 minutes of pre-service evaluation, 1 minute of pre-service positioning, 5 minutes of pre-service scrub/dress/wait, 13 minutes of intra-service time and 6 minutes of immediate post-service time. This service is typically performed in the facility setting and requires more pre-service evaluation and scrub/dress/wait time than services in this family that are typically performed in the non-facility setting.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the respondents overvalued the work involved in performing this service, with a 25th percentile work RVU of 1.78. To find an appropriate work RVU crosswalk, the RUC compared the survey code to CPT code 62322 *Injection(s), of diagnostic or therapeutic substance(s) (eg, anesthetic, antispasmodic, opioid, steroid, other solution), not including neurolytic substances, including needle or catheter placement, interlaminar epidural or subarachnoid, lumbar or sacral (caudal); without imaging guidance* (work RVU = 1.55, intra-service time of 11 minutes, total time of 39 minutes) and noted that the survey code involves somewhat more intra-service time whereas both services only differ on total time by 1 minute and require a very similar total amount of physician work. The RUC recommends a direct work RVU crosswalk from CPT code 62322 to CPT code 64448. The RUC also compared the survey code to MPC code 57452 *Colposcopy of the cervix including upper/adjacent vagina;* (work RVU = 1.50, intra-service time of 15 minutes, total time of 40 minutes) and noted that both services involve similar intra-service time and total time and should be valued similarly. **The RUC recommends a work RVU of 1.55 for CPT code 64448.**

64449 ***Injection(s), anesthetic agent(s) and/or steroid; lumbar plexus, posterior approach, continuous infusion by catheter (including catheter placement)***
The RUC reviewed the survey results from 36 physicians and agreed on the following physician time components: 13 minutes of pre-service evaluation, 1 minutes of pre-service positioning, 5 minutes of pre-service scrub/dress/wait, 14 minutes of intra-service time and 5 minutes of immediate post-service time. This service is typically performed in the facility setting and requires more pre-service evaluation and scrub/dress/wait time than services in this family that are typically performed in the non-facility setting.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the respondents overvalued the work involved in performing this service, with a 25th percentile work RVU of 1.80. To find an appropriate work RVU crosswalk, the RUC compared the survey code to CPT code 62322 *Injection(s), of diagnostic or therapeutic substance(s) (eg, anesthetic, antispasmodic, opioid, steroid, other solution), not including neurolytic substances, including needle or catheter placement, interlaminar epidural or subarachnoid, lumbar or sacral (caudal); without imaging guidance* (work RVU = 1.55, intra-service time of 11 minutes, total time of 39 minutes) and noted that the survey code involves somewhat more intra-service time whereas both services only differ on total time by 1 minute and require a very similar total amount of physician work. The RUC recommends a direct work RVU crosswalk from CPT code 62322 to CPT code 64449. The RUC also compared the survey code to MPC code 57452 *Colposcopy of the cervix including upper/adjacent vagina;* (work RVU = 1.50, intra-service time of 15 minutes, total time of 40 minutes) and noted that both services involve similar intra-service time and total time and should be valued similarly. The RUC noted that survey codes 64448 and 64449 have identical total times, only one minute difference in intra-service time and involve the same amount of physician work. **The RUC recommends a work RVU of 1.55 for CPT code 64449.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

64450 ***Injection(s), anesthetic agent(s) and/or steroid; other peripheral nerve or branch***
The RUC reviewed the survey results from 88 physicians and agreed on the following physician time components: 7 minutes of pre-service evaluation, 1 minute of pre-service positioning, 1 minute of pre-service scrub/dress/wait, 5 minutes of intra-service time and 5 minutes of immediate post-service time.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the respondents somewhat overvalued the work involved in performing this service, with a 25th percentile work RVU of 1.00. The RUC also reviewed the current value for this service of 0.75 and noted that would continue to be the appropriate value for this service. To justify a work RVU of 0.75, the RUC compared the survey code to CPT code 20551 *Injection(s); single tendon origin/insertion* (work RVU = 0.75, intra-service time of 5, total time of 20 minutes) and noted that both services involve identical intra-service time and very similar total time and the same amount of physician work. The RUC also compared the survey code to CPT code 31575 *Laryngoscopy, flexible; diagnostic* (work RVU = 0.94, intra-service time of 5 minutes) and noted that although both services have identical intra-service time, the reference code involves more total time and somewhat more intensity, justifying a somewhat lower valuation for the survey code. **The RUC recommends a work RVU of 0.75 for CPT code 64450.**

RUC Referral to CPT
During the October 2018 RUC presentation for this family of services, the specialty societies stated that codes 64415, 64416, 64417, 64446, 66447, and 64448 were reported with code 76942 *Ultrasonic guidance for needle placement (eg, biopsy, aspiration, injection, localization device), imaging supervision and interpretation* more than 50 percent of the time. Specifically, 76 percent with 64415, 85 percent with 64416, 68 percent with 64417, 77 percent with 64446, 77 percent with 66447, and 79 percent with 64448. The societies indicated they would submit a code change application to bundle 76942 into codes 64415, 64416, 64417, 64446, 64447, and 64448 for the 2021 cycle. This overlap was accounted for in the above RUC recommendations for these services. **The RUC refers CPT codes 64415, 64416, 64417, 64446, 64447 and 64448 to be bundled with ultrasound guidance, CPT code 76942 to the CPT Editorial Panel for CPT 2021.**

Practice Expense
The RUC reviewed and approved the direct practice expense inputs as approved by the Practice Expense Subcommittee, with the only revision to account for the reduction in procedure time for codes 64400 and 64450.

Work Neutrality
The RUC's recommendation for these codes will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

Affirmation of RUC Recommendations
The RUC affirmed the recent RUC recommendations for CPT codes 64405 (work RVU= 0.94, pre-evaluation time of 5 minutes, pre-positioning time of 1 minute, intra-service time of 5 minutes and post-service time of 5 minutes) and 64418 (work RVU= 1.10, pre-evaluation time of 6

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

minutes, pre-positioning time of 3 minutes, pre-scrub/dress/wait time of 3 minutes, intra-service time of 10 minutes, post-service time of 10 minutes). The relativity within the family remains correct.

Do Not Use to Validate for Physician Work
The RUC agreed that CPT codes 64400 and 64418 should be labeled in the RUC database with a flag that it should not be used to validate physician work.

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
Nervous System **Extracranial Nerves, Peripheral Nerves, and Autonomic Nervous System** **Introduction/Injection of Anesthetic Agent (Nerve Block), Diagnostic or Therapeutic** *(For destruction by neurolytic agent or chemodenervation, see 62280-62282, 64600-64681)* *(For epidural or subarachnoid injection, see 62320, 62321, 62322, 62323, 62324, 62325, 62326, 62327)* (64400-64455, 64461, 64462, 64463, 64479, 64480, 64483, 64484~~7~~, 64490-64495 are unilateral procedures. For bilateral procedures, use modifier 50) **Somatic Nerves** Codes 64400-64489 describe the introduction/injection of an anesthetic agent and/or steroid into the somatic nervous system for diagnostic or therapeutic purposes. For injection or destruction of genicular nerve branches, see 644X0, 644X1. Codes 64400-64450, 644X0 describe the injection of an anesthetic agent(s) and/or steroid into a nerve plexus, nerve, or branch. These codes are reported once per nerve plexus, nerve, or branch as described in the descriptor regardless of the number of injections performed along the nerve plexus, nerve, or branch described by the code. Image guidance (ultrasound, fluoroscopy, CT) and localization may be reported separately.				

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Image guidance (ultrasound, fluoroscopy, CT) and any injection of contrast are inclusive components of 644X0.

Codes 64455, 64479, 64480, 64483, 64484 are reported for ~~a~~ single or multiple injections at the same site. For 64479, 64480, 64483, 64484, image guidance (fluoroscopy or CT) and any injection of contrast are inclusive components and are not reported separately. For 64455, image guidance (ultrasound, fluoroscopy, CT) and localization may be reported separately.

Codes 64461, 64462, 64463 describe injection of a paravertebral block (PVB). Codes 64486, 64487, 64488, 64489 describe injection of a transversus abdominis plane (TAP) block. Image guidance and any injection of contrast are inclusive components of 64461, 64462, 64463 and 64486, 64487, 64488, 64489 and are not reported separately.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:64450 Tracking Number Original Specialty Recommended RVU: **0.84**
Presented Recommended RVU: **0.84**
Global Period: 000 Current Work RVU: **0.75** RUC Recommended RVU: **0.75**

CPT Descriptor: Injection(s), anesthetic agent(s) and/or steroid; other peripheral nerve or branch

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 52-year-old female complains of chronic burning pain and a tingling sensation in the plantar aspect of her right foot. Clinical examination is consistent with tarsal tunnel syndrome. The decision is made to perform a therapeutic injection about the posterior tibial nerve utilizing local anesthetic and a steroid.

Percentage of Survey Respondents who found Vignette to be Typical: 78%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The clinician obtains and reviews the medical record and any pertinent imaging studies, laboratory studies and medical information. The site of the proposed injection is identified and marked. The patient is moved to the procedure room. The clinician gowns, gloves and prepares supplies. The injectate is prepared. The skin is cleansed with an antiseptic solution and sterile drapes are applied. A universal protocol ("time out") is performed with the care team.

Description of Intra-Service Work: The appropriate skin and bony landmarks are identified. A local anesthetic skin wheal is created and placed at injection site. Palpate the posterior tibial artery. Direct the needle slightly posterior and inferior to the posterior tibial artery. Prior to injecting, aspirate the needle to ensure that vascular structures are not injected. Redirect the needle proximally and distally and repeat aspiration and injection. The needle is removed, and the site is observed for bleeding and covered with a sterile occlusive dressing. .

Description of Post-Service Work: The patient is observed for bleeding or any adverse effects and for evidence of successful block. A procedure note is dictated/written and medical record entries are made.

Modifier -51 Exempt Status
Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:
Is this new/revised procedure considered to be a new technology or service? No

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
64486	000	1.27	**RUC Time**

CPT Descriptor Transversus abdominis plane (TAP) block (abdominal plane block, rectus sheath block) unilateral; by injection(s) (includes imaging guidance, when performed)

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
64493	000	1.52	**RUC Time**

CPT Descriptor Injection(s), diagnostic or therapeutic agent, paravertebral facet (zygapophyseal) joint (or nerves innervating that joint) with image guidance (fluoroscopy or CT), lumbar or sacral; single level

KEY MPC COMPARISON CODES:
Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
20553	000	0.75	**RUC Time**	346,970

CPT Descriptor 1 Injection(s); single or multiple trigger point(s), 3 or more muscles

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
23350	000	1.00	**RUC Time**	37,824

CPT Descriptor 2 Injection procedure for shoulder arthrography or enhanced CT/MRI shoulder arthrography

Other Reference CPT Code	Global	Work RVU	Time Source
20526	000	0.94	**RUC Time**

CPT Descriptor Injection, therapeutic (eg, local anesthetic, corticosteroid), carpal tunnel

RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:

Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by percent distribution) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Top Key Reference Code: 20 **% of respondents:** 22.7 **%**

Number of respondents who choose 2nd Key Reference Code: 18 **% of respondents:** 20.4 **%**

TIME ESTIMATES (Median)

	CPT Code: 64450	**Top Key Reference CPT Code:** 64486	**2nd Key Reference CPT Code:** **64493**
Median Pre-Service Time	9.00	15.00	17.00
Median Intra-Service Time	5.00	10.00	15.00
Median Immediate Post-service Time	5.00	10.00	10.00
Median Critical Care Time	0.0	0.00	0.00
Median Other Hospital Visit Time	0.0	0.00	0.00
Median Discharge Day Management Time	0.0	0.00	0.00
Median Office Visit Time	0.0	0.00	0.00

Median Total Time	**19.00**	**35.00**	**42.00**
Other time if appropriate			

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	0%	63%	32%	5%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	10%	60%	30%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	5%	80%	15%

Physical effort required	0%	85%	15%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	10%	65%	25%

2nd Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	11%	56%	33%	0%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	17%	72%	11%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	11%	61%	28%
Physical effort required	6%	59%	35%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	6%	83%	11%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

CPT Code 64450 (*Injection(s), anesthetic agent(s) and/or steroid; other peripheral nerve or branch*) is part of Tab 9 which includes changes and revisions to the Somatic Nerve Injection family (codes 64400- 64450). CPT staff, at the request of the Editorial Board of the *CPT Assistant*, reached out to several specialties to request a code change

application to provide further definition and descriptor transparency around the use of these codes. The new code family was approved at the May 2018 CPT Editorial Panel meeting and surveyed for the October 2018 RUC meeting.

Code 64450 was previously surveyed by the RUC in 2011. It was surveyed for the October 2018 RUC meeting by the American Academy of Neurology (AAN), the American Academy of Pain Medicine (AAPM), the American Academy of Physical Medicine & Rehabilitation (AAPM&R) and the American Society of Anesthesiologists (ASA).

October 2018 RUC Meeting Recommendation Rationale

A total of 88 responses were received from a random sample of 3,256 clinicians (2.7 percent response rate). ASA convened an Expert Panel to review the survey data. ***The society is recommending 0.84 wRVUs and time of pre (7/0/1), intra (10 min) and post (5 min)***. This results in an IWPUT of 0.056.

Vignette

The vignette describes a typical patient experiencing a chronic burning pain and a tingling sensation in the plantar aspect of her right foot. Clinical examination is consistent with tarsal tunnel syndrome. The decision is made to perform a therapeutic injection about the posterior tibial nerve utilizing local anesthetic and a steroid.

78% of the survey respondents found the vignette to be typical.

Survey Data: wRVU and Time

The Expert Panel reviewed the survey data.

64450 Highlights from Survey Data			
	25th Percentile	**Median**	**75th Percentile**
Work	1.00	1.34	1.80
Pre		21/5/5	
Intra	5	10	15
Post		5	

The survey 25th percentile is higher than the current value of 0.75 wRVUs. The Expert Panel considered recommending the 25th percentile which they felt to be approximating a reasonable value for the service. They also noted that the intra-time doubled from 5 minutes to 10 minutes since the last survey. The Expert Panel concluded that this increase in intra-time supported a higher wRVU.

After a robust discussion the Expert Panel agreed to recommend:

- wRVU
  - 0.84 work RVUs based on a crosswalk to code 12001
- Time
  - Pre-time: Non-facility pre-service package #5 (7/0/1)
  - Intra-time: 10 minutes (survey median)
  - Post-time 5 minutes (survey median)

The Expert Panel discussed how in general the treatment for pain conditions has become more complex as the opioid crisis has escalated, and treatment and coverage for other non-pharmacologic and non-interventional strategies has been limited. With worsening pain, this impacts mobility, and in general has led to a more sedentary population with increase in co-morbidities of diabetes, hypertension and obesity. These findings, particularly the increase in BMI, have led to increases in the technical skill and judgment necessary to perform the procedure as well as the associated psychological stress to reduce risk of complications, such as pneumothorax or intravascular complication.

The Expert Panel concluded that these values and times appropriately reflected how the service is currently performed. In drafting their recommendations, the Expert Panel considered a number of factors.

Crosswalk

- The Expert Panel selected a value that was less than the survey 25th percentile of 1.00 wRVUs; crosswalking the recommendation of 0.84 wRVUs to code 12001 (*Simple repair of superficial wounds of scalp, neck, axillae, external genitalia, trunk and/or extremities (including hands and feet); 2.5 cm or less*). This 0-day global code

was reviewed by the RUC in 2010 and also has 10 minutes intra-service. It has an IWPUT of 0.0585. The Expert Panel believes that this is an appropriate crosswalk not only because it matches intra-service time but also because of similarity in complexity and intensity. The Expert Panel does believe that the surveyed code 64450 is a somewhat more intense/complex than 12001.

Reference Code

- The Expert Panel also concluded that the recommendation aligned well with the top reference code 64486 (*Transversus abdominis plane (TAP) block (abdominal plane block, rectus sheath block) unilateral; by injection(s) (includes imaging guidance, when performed)*) which has a wRVU of 1.27, IWPUT of 0.0781 and intra time of 10 minutes. The Expert Panel noted that the codes had the same intra time and the reference code had a slightly higher IWPUT. The recommended value represents an appropriate rank order and alignment.

Other Codes in the Somatic Nerve Injection Family

- The Expert Panel also concluded the recommendation maintained rank order in the Somatic Nerve Injection family.

Code#	Description	Proposed wRVU
+64421	N block inj intercost sng, addl level	0.60
64435	N block inj paracervical	0.75
64450	**N block other peripheral**	**0.84**
64405	N block inj occipital	0.94
64408	N block inj vagus	0.94
64418	N block inj suprascapular	1.10
64400	N block inj trigeminal	1.14
64430	N block inj pudendal	1.15
64425	N block inj ilio-ing/hypogi	1.19
64420	N block inj intercost sng	1.24
64417	N block inj axillary	1.27
64447	N block inj fem single	1.40
64415	N block inj brachial plexus	1.42
64445	N block inj sciatic sng	1.47
64448	N block inj fem cont inf	1.78
64446	N blk inj sciatic cont inf	1.80
64449	N block inj lumbar plexus	1.80
64416	N block cont infuse b plex	1.81

Rank Order

- The Expert Panel also considered other 0-day, RUC reviewed codes outside of the Somatic Nerve Injection family with similar intra-time and concluded that the recommendation aligned well with these codes and provided further evidence of the appropriateness of the recommendation.

CPT Code	Long Descriptor	Global	Work RVU	Intra Time	IWPUT	2017 Utilization
20553	Injection(s); single or multiple trigger point(s), 3 or more muscles	000	0.75	10	0.0441	346,970

12001	Simple repair of superficial wounds of scalp, neck, axillae, external genitalia, trunk and/or extremities (including hands and feet); 2.5 cm or less	000	0.84	10	0.0585	189,564
45330	Sigmoidoscopy, flexible; diagnostic, including collection of specimen(s) by brushing or washing, when performed (separate procedure)	000	0.84	10	0.0217	54,322
11950	Subcutaneous injection of filling material (eg, collagen); 1 cc or less	000	0.84	15	0.0261	7
51720	Bladder instillation of anticarcinogenic agent (including retention time)	000	0.87	5	0.1199	192,279
20604	Arthrocentesis, aspiration and/or injection, small joint or bursa (eg, fingers, toes); with ultrasound guidance, with permanent recording	000	0.89	10	0.0581	40,141

CPT Code	Long Descriptor	Global	Work RVU	Intra Time	IWPUT	2017 Utilization
	and reporting					
57160	Fitting and insertion of pessary or other intravaginal support device	000	0.89	15	0.0268	90,878

In summary, for CPT code CPT Code 64450 (*Injection(s), anesthetic agent(s) and/or steroid; other peripheral nerve or branch*) ***the societies recommend 0.84 wRVUs and 8/10/5 for time.***

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) Existing code 64450

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Anesthesiology How often? Commonly

Specialty Nurse Practitioners How often? Commonly

Specialty Pain Management How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 945589
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on relative volume of Medicare utilization

Specialty Anesthesiology	Frequency 248974	Percentage 26.33 %
Specialty Nurse Practitioners	Frequency 122927	Percentage 13.00 %
Specialty Pain Management	Frequency 115646	Percentage 12.23 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 378,236 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on 2017 Medicare utilization

Specialty Anesthesiology	Frequency 99589	Percentage 26.32 %
Specialty Nurse Practitioners	Frequency 49171	Percentage 13.00 %
Specialty Pain Management	Frequency 46258	Percentage 12.22 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Minor procedure

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 64450

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. N/A

CPT Code:___64400_____
Specialty Society_____AAN, ASA_____

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Non Facility Direct Practice Expense (PE) Inputs

CPT Long Descriptor: Injection(s), anesthetic agent(s) and/or steroid; trigeminal nerve, each branch (ie, ophthalmic, maxillary, mandibular)

Global Period:__0___ Meeting Date: __October 2018_____

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   An Expert Panel of clinicians representing each specialty society involved in the RUC survey process for the code collaborated to develop and approve the PE recommendations. The Expert Panel was composed of clinicians from across the US practicing in small and large private practices and academic settings.

2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here:

   Using the current direct PE inputs of code 64400 as the reference code

3. Is this code(s) typically billed with an E/M service?

   No.

   Is this code(s) typically billed with the E/M service in the nonfacility?
   (Please see provided data in PE Subcommittee folder)

   No it is billed with an E/M office visit 32% of the time.

4. What specialty is the dominant provider in the nonfacility? *Neurology – 59%*
   What percent of the time does the dominant provider provide the service(s) in the nonfacility? *67%*
   Is the dominant provider in the nonfacility different then for the global? *No.*
   (Please see provided data in PE Subcommittee folder)

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:

   N/A

6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), you must provide compelling evidence. Please explain if the increase can be entirely accounted for because of an increase in physician time.

   We are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies. Based on our Expert Panel review we identified a number of direct PE inputs (largely supplies) that are typically used when providing this service in the non-facility environment that are

not currently included. We have confirmed that the added PE clinical labor tasks, supplies, and equipment are not included in the current inputs or packages and that there is no duplication.

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here:

   N/A

8. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? (please use this time rather than 5 minutes in your reference code). *5 minutes*
   The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here: *We recommend 5 minutes for obtaining vital signs. The following vital signs are collected: heart rate, blood pressure, body mass index, temperature, and oxidation level.*

9. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

   Staff is present and assisting physician during the entire procedure. Staff supports the physician throughout the procedure by handing over the necessary supplies (syringes, gauzes etc.), acts as a second pair of hands during the procedure assisting with supplies/equipment or directly with the patient as needed, helps to make sure patient is comfortable and monitors the patient throughout the procedure.

10. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

    N/A

11. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities:

    N/A

12. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

    N/A

13. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here:

    N/A

14. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here:

    N/A

15. List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here:

    Table, exam - default

16. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here: *N/A*

17. If there is any other item on your spreadsheet that needs further explanation please include here: *Consent is obtained in the pre-service period of the service period on the day of the procedure (CA011), in addition to being obtained in the pre-service period (CA004).*

18. Please include an explanation of each line item:

Code	**Supply**	**64400**
SA041	pack, basic injection	For performing the procedure
SA048	pack, minimum multi-specialty visit	For day of procedure
SK075	skin marking pen, sterile (Skin Skribe)	For performing the procedure
SH023	chlorhexidine 0.12% (Peridex)	For sterile prep
SC028	needle, 18-26g 1.5-3.5in, spinal	For performing the procedure
SH021	bupivacaine 0.25% inj (Marcaine)	For performing the procedure
SC053	syringe 20ml	For performing the procedure
SA088	tray, surgical skin prep, sterile	For sterile prep
SJ081	swab, patient prep, 1.5 ml (chloraprep)	For sterile prep

CPT Code:___64415_____
Specialty Society_____ASA_____

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Non Facility Direct Practice Expense (PE) Inputs

CPT Long Descriptor: Injection(s), anesthetic agent(s) and/or steroid; brachial plexus, single

Global Period:__0___ Meeting Date: __October 2018_____

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   An Expert Panel of clinicians representing each specialty society involved in the RUC survey process for the code collaborated to develop and approve the PE recommendations. The Expert Panel was composed of clinicians from across the US practicing in small and large private practices and academic settings.

2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here:

   Using the current direct PE inputs of code 64415 as the reference code

3. Is this code(s) typically billed with an E/M service?

   No.

   Is this code(s) typically billed with the E/M service in the nonfacility?
   (Please see provided data in PE Subcommittee folder)

   No it is billed with an E/M office visit 1% of the time.

4. What specialty is the dominant provider in the nonfacility? *Neurology – 34%*
   What percent of the time does the dominant provider provide the service(s) in the nonfacility? *This service is provided in the non-facility setting 2% of the time.*
   Is the dominant provider in the nonfacility different then for the global? *Yes. For the global, the dominant specialty is Anesthesiology (87%)*
   (Please see provided data in PE Subcommittee folder)

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time: *N/A*

6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), you must provide compelling evidence. 12. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov. *N/A*

13. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here: *N/A*

14. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here: *N/A*

15. List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here:

    Table, exam – default
    Nerve stimulator (eg, for nerve block) – default
    ECG, 3-channel (with SpO2, NIBP, temp, respt) – default
    Mayo stand - default

16. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here: *N/A*

17. If there is any other item on your spreadsheet that needs further explanation please include here: *Consent is obtained in the pre-service period of the service period on the day of the procedure (CA011), in addition to being obtained in the pre-service period (CA004).*

18. Please include an explanation of each line item:

Code	**Supply**	**64415**
SA041	pack, basic injection	For performing the procedure
SA048	pack, minimum multi-specialty visit	For day of procedure
SK075	skin marking pen, sterile (Skin Skribe)	For performing the procedure
SH023	chlorhexidine 0.12% (Peridex)	For sterile prep
SH047	lidocaine 1%-2% inj (Xylocaine)	For performing the procedure
SH022	bupivacaine 0.5% inj (Marcaine)	For performing the procedure
SC038	needle, epidural (RK)	For performing the procedure
SC053	syringe 20ml	For performing the procedure
SA088	tray, surgical skin prep, sterile	For sterile prep
SD269	Grounding pad	For performing the procedure
SB019	drape-towel, sterile 18in x 26in	For sterile prep
SJ081	swab, patient prep, 1.5 ml (chloraprep)	For sterile prep

CPT Code:___64417_____
Specialty Society_____ASA_____

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Non Facility Direct Practice Expense (PE) Inputs

CPT Long Descriptor: Injection(s), anesthetic agent(s) and/or steroid; axillary nerve

Global Period:__0___ Meeting Date: __October 2018_____

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   An Expert Panel of clinicians representing each specialty society involved in the RUC survey process for the code collaborated to develop and approve the PE recommendations. The Expert Panel was composed of clinicians from across the US practicing in small and large private practices and academic settings.

2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here:

   Using the current direct PE inputs of code 64417 as the reference code

3. Is this code(s) typically billed with an E/M service?

   No.

   Is this code(s) typically billed with the E/M service in the nonfacility?
   (Please see provided data in PE Subcommittee folder)

   No it is billed with an E/M office visit 2% of the time.

4. What specialty is the dominant provider in the nonfacility? *Neurology – 48%*
   What percent of the time does the dominant provider provide the service(s) in the nonfacility? *This service is provided in the non-facility setting less than 10% of the time.*

   Is the dominant provider in the nonfacility different then for the global? *For the global, the dominant specialty is Anesthesiology (79%)*

   (Please see provided data in PE Subcommittee folder)

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time: *N/A*

6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), you must provide compelling evidence. Please explain if the increase can be entirely accounted for because of an increase in physician time.

   We are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies. Based on our Expert Panel review we identified a number of direct PE inputs (largely

supplies) that are typically used when providing this service in the non-facility environment that are not currently included. We have confirmed that the added PE clinical labor tasks, supplies, and equipment are not included in the current inputs or packages and that there is no duplication.

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here: *N/A*

8. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? (please use this time rather than 5 minutes in your reference code) *5 minutes*
   The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here: *We recommend 5 minutes for obtaining vital signs. The following vital signs are collected: heart rate, blood pressure, body mass index, temperature, and oxidation level.*

9. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

   Staff is present and assisting physician during the entire procedure. Staff supports the physician throughout the procedure by handing over the necessary supplies (syringes, gauzes etc.), acts as a second pair of hands during the procedure assisting with supplies/equipment or directly with the patient as needed, helps to make sure patient is comfortable and monitors the patient throughout the procedure.

10. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived. *N/A*

11. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities: *N/A*

12. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov. *N/A*

13. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here: *N/A*

14. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here: *N/A*

15. List all the equipment included in your recommendation and the equipment formula chosen (see document titled “Calculating equipment time”). If you have selected “other formula” for any of the equipment please explain here:

16. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here: *N/A*

    Table, exam – default

Nerve stimulator (eg, for nerve block) – default
Mayo stand - default

17. If there is any other item on your spreadsheet that needs further explanation please include here: *Consent is obtained in the pre-service period of the service period on the day of the procedure (CA011), in addition to being obtained in the pre-service period (CA004).*

18. Please include an explanation of each line item:

Code	**Supply**	**64417**
SA041	pack, basic injection	For performing the procedure
SA048	pack, minimum multi-specialty visit	For day of procedure
SK075	skin marking pen, sterile (Skin Skribe)	For performing the procedure
SH023	chlorhexidine 0.12% (Peridex)	For sterile prep
SH021	bupivacaine 0.25% inj (Marcaine)	For performing the procedure
SD050	electrode needle, injectable (Myoject)	For performing the procedure
SC038	needle, epidural (RK)	For performing the procedure
SC053	syringe 20ml	For performing the procedure
SA088	tray, surgical skin prep, sterile	For sterile prep
SJ081	swab, patient prep, 1.5 ml (chloraprep)	For sterile prep

Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

   Staff is present and assisting physician during the entire procedure. Staff supports the physician throughout the procedure by handing over the necessary supplies (syringes, gauzes etc.), acts as a second pair of hands during the procedure assisting with supplies/equipment or directly with the patient as needed, helps to make sure patient is comfortable and monitors the patient throughout the procedure.

10. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived. *N/A*

11. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities: *N/A*

12. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov. *N/A*

13. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here: *N/A*

14. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here: *N/A*

15. List all the equipment included in your recommendation and the equipment formula chosen (see document titled “Calculating equipment time”). If you have selected “other formula” for any of the equipment please explain here:

    Table, exam – default
    Nerve stimulator (eg, for nerve block) – default
    ECG, 3-channel (with SpO2, NIBP, temp, respt) – default
    Mayo stand - default

16. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here: *N/A*

17. If there is any other item on your spreadsheet that needs further explanation please include here: *Consent is obtained in the pre-service period of the service period on the day of the procedure (CA011), in addition to being obtained in the pre-service period (CA004).*

18. Please include an explanation of each line item:

Code	**Supply**	**64445**
SA041	pack, basic injection	For performing the procedure
SA048	pack, minimum multi-specialty visit	For day of procedure
SK075	skin marking pen, sterile (Skin Skribe)	For performing the procedure
SH023	chlorhexidine 0.12% (Peridex)	For sterile prep
SH022	bupivacaine 0.5% inj (Marcaine)	For performing the procedure
SC053	syringe 20ml	For performing the procedure
SA088	tray, surgical skin prep, sterile	For sterile prep
SD050	electrode needle, injectable (Myoject)	For performing the procedure
SJ081	swab, patient prep, 1.5 ml (chloraprep)	For sterile prep

CPT Code:___64447_____
Specialty Society_____ASA_____

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Non Facility Direct Practice Expense (PE) Inputs

CPT Long Descriptor: Injection(s), anesthetic agent(s) and/or steroid; femoral nerve, single

Global Period:__0___ Meeting Date: __October 2018_____

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   An Expert Panel of clinicians representing each specialty society involved in the RUC survey process for the code collaborated to develop and approve the PE recommendations. The Expert Panel was composed of clinicians from across the US practicing in small and large private practices and academic settings.

2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here:

   Using the current direct PE inputs of code 64447 as the reference code

3. Is this code(s) typically billed with an E/M service?

   No.

   Is this code(s) typically billed with the E/M service in the nonfacility?
   (Please see provided data in PE Subcommittee folder)

   No it is billed with an E/M office visit 1% of the time.

4. What specialty is the dominant provider in the nonfacility? *Internal Medicine – 61%*
   What percent of the time does the dominant provider provide the service(s) in the nonfacility? *This service is provided in the non-facility setting 13% of the time.*

   Is the dominant provider in the nonfacility different then for the global? *For the global, the dominant specialty is Anesthesiology (77%)*

   (Please see provided data in PE Subcommittee folder)

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time: *N/A*

6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), you must provide compelling evidence. Please explain if the increase can be entirely accounted for because of an increase in physician time. *N/A*

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here: *N/A*

8. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? (please use this time rather than 5 minutes in your reference code) *5 minutes*
   The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here: *We recommend 5 minutes for obtaining vital signs. The following vital signs are collected: heart rate, blood pressure, body mass index, temperature, and oxidation level.*

9. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

   Staff is present and assisting physician during the entire procedure. Staff supports the physician throughout the procedure by handing over the necessary supplies (syringes, gauzes etc.), acts as a second pair of hands during the procedure assisting with supplies/equipment or directly with the patient as needed, helps to make sure patient is comfortable and monitors the patient throughout the procedure.

10. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived. *N/A*

11. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities: *N/A*

12. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov. *N/A*

13. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here: *N/A*

14. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here: *N/A*

15. List all the equipment included in your recommendation and the equipment formula chosen (see document titled “Calculating equipment time”). If you have selected “other formula” for any of the equipment please explain here:

16. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here: *N/A*

    Table, exam – default
    Nerve stimulator (eg, for nerve block) – default
    ECG, 3-channel (with SpO2, NIBP, temp, respt) – default
    Mayo stand - default

17. If there is any other item on your spreadsheet that needs further explanation please include here:
Consent is obtained in the pre-service period of the service period on the day of the procedure (CA011), in addition to being obtained in the pre-service period (CA004).

18. Please include an explanation of each line item:

Code	**Supply**	**64447**
SA041	pack, basic injection	For performing the procedure
SA048	pack, minimum multi-specialty visit	For day of procedure
SK075	skin marking pen, sterile (Skin Skribe)	For performing the procedure
SH023	chlorhexidine 0.12% (Peridex)	For sterile prep
SH047	lidocaine 1%-2% inj (Xylocaine)	For performing the procedure
SH022	bupivacaine 0.5% inj (Marcaine)	For performing the procedure
SC053	syringe 20ml	For performing the procedure
SC051	syringe 10-12ml	For performing the procedure
SA088	tray, surgical skin prep, sterile	For sterile prep
SJ081	swab, patient prep, 1.5 ml (chloraprep)	For sterile prep

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Non Facility Direct Practice Expense (PE) Inputs

CPT Long Descriptor: Injection(s), anesthetic agent(s) and/or steroid; other peripheral nerve or branch

Global Period:__0___ Meeting Date: __October 2018_____

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   An Expert Panel of clinicians representing each specialty society involved in the RUC survey process for the code collaborated to develop and approve the PE recommendations. The Expert Panel was composed of clinicians from across the US practicing in small and large private practices and academic settings.

2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here:

   Using the current direct PE inputs of code 64450 as the reference code

3. Is this code(s) typically billed with an E/M service?

   No.

   Is this code(s) typically billed with the E/M service in the nonfacility?
   (Please see provided data in PE Subcommittee folder)

   No it is billed with an E/M office visit 32% of the time.

4. What specialty is the dominant provider in the nonfacility? *Nurse Practitioners – 20%*
   What percent of the time does the dominant provider provide the service(s) in the nonfacility? *63%*
   Is the dominant provider in the nonfacility different then for the global? *For the global, the dominant specialty is Anesthesiology (26%)*

   (Please see provided data in PE Subcommittee folder)

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time: *N/A*

6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), you must provide compelling evidence. Please explain if the increase can be entirely accounted for because of an increase in physician time.

   We are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies. Based on our Expert Panel review we identified a number of direct PE inputs (largely supplies) that are typically used when providing this service in the non-facility environment that are

not currently included. We have confirmed that the added PE clinical labor tasks, supplies, and equipment are not included in the current inputs or packages and that there is no duplication.

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here: *N/A*

8. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? (please use this time rather than 5 minutes in your reference code) *5 minutes*

13. If there is any other item on your spreadsheet that needs further explanation please include here: *N/A*

14. Please include an explanation of each line item: *N/A*

CPT Code:____64425____
Specialty Society_____AAPM, AAPM&R, ASA_____

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Facility Direct Practice Expense (PE) Inputs

CPT Long Descriptor: Injection(s), anesthetic agent(s) and/or steroid; ilioinguinal, iliohypogastric nerves

Global Period:__0___ Meeting Date: _October 2018_____

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   An Expert Panel of clinicians representing each specialty society involved in the RUC survey process for the code collaborated to develop and approve the PE recommendations. The Expert Panel was composed of clinicians from across the US practicing in small and large private practices and academic settings.

2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here:

   Using the current direct PE inputs of code 64425 as the reference code

3. Is this code(s) typically billed with an E/M service?

   No.

4. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time: *N/A*

5. If you are requesting an increase over the current total cost for clinical staff time (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), total cost of supplies, and/or total cost of equipment you must provide compelling evidence: *N/A*

6. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here: *N/A*

7. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities: *N/A*

8. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov. *N/A*

9. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here: *N/A*

10. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here: *N/A*

11. List all the equipment included in your recommendation and the equipment formula chosen (see document titled “Calculating equipment time”). If you have selected “other formula” for any of the equipment please explain here: *N/A*

12. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here: *N/A*

13. If there is any other item on your spreadsheet that needs further explanation please include here: *N/A*

14. Please include an explanation of each line item: *N/A*

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Facility Direct Practice Expense (PE) Inputs

CPT Long Descriptor: Injection(s), anesthetic agent(s) and/or steroid; sciatic nerve, single

Global Period:__0___ Meeting Date: _October 2018_____

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   An Expert Panel of clinicians representing each specialty society involved in the RUC survey process for the code collaborated to develop and approve the PE recommendations. The Expert Panel was composed of clinicians from across the US practicing in small and large private practices and academic settings.

2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here:

   Using the current direct PE inputs of code 64445 as the reference code

3. Is this code(s) typically billed with an E/M service?

   No.

4. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time: *N/A*

5. If you are requesting an increase over the current total cost for clinical staff time (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), total cost of supplies, and/or total cost of equipment you must provide compelling evidence:

   We are requesting an increase over the current total cost for clinical staff time. Based on our Expert Panel review we identified a number of areas where clinical staff time is involved when providing this service in a facility environment that are not currently included.

6. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here: *N/A*

7. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities: *N/A*
