11. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities:

    (not applicable)

12. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

    (not applicable)

13. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here:

    (not applicable)

14. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here:

    (not applicable)

15. List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here:

    ED021 - computer, desktop, w-monitor –Other formula
    This equipment is used by clinical staff to carry out the work of assisting the physician/professional. It is also used by the physician/professional to provide service, which is in addition to the clinical staff time. The formula reflects clinical staff time plus physician/professional intra-service time.

16. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here:

    (not applicable)

17. If there is any other item on your spreadsheet that needs further explanation, please include here:

As a point of comparison, the expert panel noted that, in 2007, the specialties recommended 6 minutes of clinical staff time for reference code 99444. That time was apportioned as follows:

> 2 minutes of pre-service clinical labor time for "The clinical staff receives the on-line communication from the patient. Clinical staff requests the patients chart and reviews the

patient's information. The decision is made to have the physician communicate with the patient to discuss the problem." This time is shown in cell G21 of the accompanying practice expense spreadsheet.

4 minutes of post-service clinical labor time for "The physician gives the clinical staff the patients chart or note. The clinical staff makes any necessary telephone calls to fill the physician orders (i.e. pharmacy, tests). The information is documented in the chart and the chart is ready to be filed." This time is shown in cell G85 of the accompanying practice expense spreadsheet.

18. Please include an explanation of each line item:

AMA/Specialty Society RVS Update Committee Summary of Recommendations
Surveyed by one Specialty and Now Performed by a Different Specialty*

January 2019

Bone Biopsy Trocar/Needle – Tab 22

In October 2017, CPT code 20225 was identified as being performed by a different specialty than who originally surveyed this service. In January 2018 the specialty society recommended and the RUC agreed that this service be surveyed for the 2020 CPT cycle. Image guidance (ultrasound, fluoroscopy, CT) and localization may be reported separately for this family of services.

Compelling Evidence
The RUC reviewed the argument for compelling evidence. For both services, the specialty performing the procedure has changed. Previously for code 20220, the code was surveyed only by General Surgery during the Harvard Review process. For code 20225, the code was surveyed by Orthopedic Surgery during the RUC review performed in August 1995. Since that time, Radiology has become the dominant provider for both services and was not a participant in the prior review. The RUC accepted compelling evidence based on a change in the specialty performing the procedure and the current dominant specialty not having been involved in the prior review process.

20220 ***Biopsy, bone, trocar, or needle; superficial (eg, ilium, sternum, spinous process, ribs)***
The RUC reviewed the survey results from 50 radiologists and agreed on the following physician time components: 7 minutes of pre-service evaluation, 6 minutes of pre-service positioning, 5 minutes of pre-service scrub/dress/wait, 20 minutes of intra-service time and 12 minutes of immediate post-service time. The RUC determined that the survey 25th percentile work RVU of 1.93 appropriately accounts for the physician work involved in performing this service. The RUC noted that the current times for this service are over 25 years old from the Harvard study and not valid for comparison. The IWPUT for the current times is similar to scrub/dress/wait IWPUT, which strongly implies the current times are highly inflated relative to the current work RVU and not valid for comparison to the new times. In addition, the RUC noted that this service is typically performed with image guidance. The RUC accounted for this typical overlap in both their pre-service evaluation time and 25th percentile work value recommendation.

To justify a work RVU of 1.93, the RUC compared the survey code to CPT code 30905 *Control nasal hemorrhage, posterior, with posterior nasal packs and/or cautery, any method; initial* (work RVU= 1.97, intra-service time of 20 minutes, total time of 44 minutes) and noted that the survey code involves identical intra-service time and somewhat more total time and a similar amount of physician work, justifying a similar valuation. The RUC also compared the survey code to CPT code 45334 *Sigmoidoscopy, flexible; with control of bleeding, any method* (work RVU= 2.00, intra-service time of 20 minutes, total time of 53 minutes) and noted that both services involve identical intra-service time and the reference code involves 3 more minutes of total time. **The RUC recommends a work RVU of 1.93 for CPT code 20220.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

20225 ***Biopsy, bone, trocar, or needle; deep (eg, vertebral body, femur)***
The RUC reviewed the survey results from 50 radiologists and agreed on the following physician time components: 7 minutes of pre-service evaluation, 6 minutes of pre-service positioning, 6 minutes of pre-service scrub/dress/wait, 30 minutes of intra-service time and 15 minutes of immediate post-service time. The RUC determined the survey 25th percentile work RVU of 3.00 appropriately accounts for the work involved to perform this service. The IWPUT for the current times is similar to scrub/dress/wait IWPUT, which strongly implies the current times are highly inflated relative to the current work RVU and not valid for comparison to the new times. In addition, the RUC noted that this service is typically performed with image guidance. The RUC accounted for this typical overlap in both their pre-service evaluation time and 25th percentile work value recommendation.

To justify a work RVU of 3.00, the RUC compared the survey code to CPT Code 43247 *Esophagogastroduodenoscopy, flexible, transoral; with removal of foreign body(s)* (work RVU= 3.11, intra-service time of 30 minutes, total time of 58 minutes) and noted that the survey code involves identical intra-service time and somewhat more total time and a similar amount of physician work, justifying a similar valuation. The RUC also compared the survey code to CPT code 44389 *Colonoscopy through stoma; with biopsy, single or multiple* (work RVU= 3.02, intra-service time of 30 minutes, total time of 65 minutes) and noted that both services involve identical intra-service time, similar total times and a similar amount of physician work. **The RUC recommends a work RVU of 3.00 for CPT code 20225.**

Practice Expense
The PE Subcommittee removed the supply item SF040 the vicryl suture and replaced it with a nylon suture for CPT code 20220. The PE Subcommittee added the supply item SB033 mask, surgical for both codes. **The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.**

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
20220 **(f)**	Biopsy, bone, trocar, or needle; superficial (eg, ilium, sternum, spinous process, ribs)	000	1.93
20225	Biopsy, bone, trocar, or needle; deep (eg, vertebral body, femur)	000	3.00

CPT Code:20220 Tracking Number Original Specialty Recommended RVU: **1.93**
Presented Recommended RVU: **1.93**
Global Period: 000 Current Work RVU: **1.27** RUC Recommended RVU: **1.93**

CPT Descriptor: Biopsy, bone, trocar, or needle; superficial (eg, ilium, sternum, spinous process, ribs)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 66-year-old male with pelvic pain is found to have a destructive lesion of the iliac bone. A bone biopsy is performed.

Percentage of Survey Respondents who found Vignette to be Typical: 88%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Obtain and review pre-procedural imaging, pathology, and laboratory studies (i.e., coagulation studies). Consult with referring physician and other health care professionals as necessary (e.g. tract planning/marking if biopsy for bone tumor). Communicate with patient and/or family to explain operative risks and benefits and to obtain informed consent. Arrange for intra-procedure pathology assessment as needed, particularly for potential tumor biopsies, including contingency that special consultation may be required because of frequent difficulties with bone lesions. Position patient based on lesion location, with attention to proximity of major vascular structures and organs, as well as any planned post-biopsy treatment approach. Coordinate positioning with the need for imaging and the capacity to get adequate images in all necessary planes. Mark surface anatomy for current and future localization if needed. Ensure all instruments and equipment needed for the procedure are available. Prepare and drape patient.

Description of Intra-Service Work: After images are checked for appropriate position and proposed percutaneous tract, the site is infiltrated with local anesthetic. Confirm the needle position with imaging, remove the stylet and place the biopsy device through the needle. If necessary, administer additional local anesthetic in sensitive areas. As the biopsy device penetrates the bone, acquire additional images to confirm depth, location, and proximity to the lesion. Acquire biopsy specimens as appropriate for the lesion and pathology requirements. As needed, submit tissue to the pathologist for initial assessment to confirm adequacy of biopsy. Submit additional samples for microbiologic study, as necessary. Once adequate biopsy material is obtained, withdraw the equipment and close the wound as necessary.

Description of Post-Service Work: Apply sterile dressings and complete appropriate post-procedure monitoring. Communicate (including written and oral reports and orders) with family and other health care professionals immediately following procedure. In the case of vascular lesions or biopsies in proximity to major vessels or nerves, carefully monitor neurovascular functions and hemodynamics. For thoracic lesions, monitor respiratory functions, and, as indicated, obtain X-rays to check for pneumothorax. Inform patient and family of tentative findings and apprise them of the degree of uncertainty and plans for additional care.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	29%	21%	43%	7%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	29%	36%	36%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	43%	36%	21%

Physical effort required	14%	43%	43%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	36%	43%	21%

2nd Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	21%	36%	43%	0%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	7%	50%	43%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	21%	43%	36%
Physical effort required	0%	57%	43%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	29%	64%	7%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

CPT code 20225 *(Biopsy, bone, trocar, or needle; deep (eg, vertebral body, femur))* was identified by the "Surveyed by one Specialty and Now Performed by a Different Specialty" screen. The American College of Radiology and the Society of Interventional Radiology expanded the family to include the additional biopsy code, 20220 *(Biopsy, bone, trocar, or needle; superficial (eg, ilium, sternum, spinous process, ribs)).* The specialties agreed to survey this code for the January 2019 RUC meeting.

Survey Process

The ACR surveyed a total of 750 members (a random sample of 375 members and a separate random sample of 375 members who perform muskuloskeletal and interventional radiology procedures). The SIR surveyed a total of 149 physicians from their membership.

Compelling Evidence

The specialty performing this procedure has changed. Previously, the code was surveyed by General Surgery during the Harvard Review process. Since that time, Radiology has become the dominant provider and was not a participant in the prior review.

Work RVU Recommendation

The specialties recommend a work RVU of 1.93 for CPT code 20220, which is the 25th percentile survey value.

Time Recommendation

The specialties recommend the times of 29 minutes of pre-service using adjustments from pre-service package 2 (difficult patient, straightforward procedure).

We recommend the standard 18 minutes of pre-service evaluation. We recommend 6 minutes of pre-service positioning time, which is 5 minutes more than the standard. We are recommending 5 minutes of preservice scrub, dress and wait time, which is one minute less than the standard of 6 minutes.

We recommend survey median times of 20 minutes for intra-service and 5 minutes of post-service.

This is a total recommended time of 61 minutes for CPT code 20220.

Key Reference Services

The most commonly chosen reference codes by survey participants:

- **62267** *(Percutaneous aspiration within the nucleus pulposus, intervertebral disc, or paravertebral tissue for diagnostic purposes)*, chosen by 28% of respondents, and
- **47000** *(Biopsy of liver, needle; percutaneous)*, chosen by 28% respondents.

The surveyed code involves biopsy of a superficial lesion and survey respondents appropriately assigned this code less total time and intra service time compared to the first key reference service, CPT code 62267, which involves aspiration of a deeper musculoskeletal structure in the spine which is a more complex area. Compared to the second key reference service, CPT code 47000 which is a liver biopsy, the respondents reported that the surveyed code had identical intra time although the biopsy of a bone lesion for a potentially infectious or malignant lesion was assigned an appropriately higher RVU and IWPUT as the indication results in a greater intensity of work compared to the liver biopsy. Additionally, there is more total time

(predominately pre-service) in 20220 compared to 47000, which accounts for a portion of the RVU differential. The relationships are summarized in the following table:

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT
47000	Biopsy of liver, needle; percutaneous	1.65	20	20	15	55	0.0469
20220	**Biopsy, bone, trocar, or needle; superficial (eg, ilium, sternum, spinous process, ribs)**	**1.93**	**29**	**20**	**12**	**61**	**0.0542**
62267	Percutaneous aspiration within the nucleus pulposus, intervertebral disc, or paravertebral tissue for diagnostic purposes	3.00	34	30	15	79	0.0682

MPC Codes

The surveyed code is bracketed by two MPC codes 36514 *(Therapeutic apheresis; for plasma pheresis)* and 51102 *(Aspiration of bladder; with insertion of suprapubic catheter).* The therapeutic apheresis code has the same intra-service time and an appropriately lower RVU and IWPUT compared to the surveyed code, which is invasive procedure with similar total time. Both the surveyed code and 51102 are invasive procedures with the same intra-service time. While 51102 has lower total time, it does require placement of an indwelling device (catheter), which is more intense work than a biopsy, and so is valued appropriately higher. The relationships are summarized in the following table:

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT
36514	Therapeutic apheresis; for plasma pheresis	1.81	29	20	15	64	0.0412
20220	**Biopsy, bone, trocar, or needle; superficial (eg, ilium, sternum, spinous process, ribs)**	**1.93**	**29**	**20**	**12**	**61**	**0.0542**
51102	Aspiration of bladder; with insertion of suprapubic catheter	2.70	25	20	15	60	0.0938

Summary of Recommendations for CPT Code 20220

The societies recommend 1.93 RVU with service period times of 29, 20, and 12 minutes for CPT code 20220.

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT
20220	**Biopsy, bone, trocar, or needle; superficial (eg, ilium, sternum, spinous process, ribs)**	**1.93**	**29**	**20**	**12**	**61**	**0.0542**
20225	Biopsy, bone, trocar, or needle; deep (eg, vertebral body, femur)	3.00	20	30	15	75	0.0693

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☒ Other reason (please explain) CPT code 20220 is typically billed with CPT code 77012 (Computed tomography guidance for needle placement (eg, biopsy, aspiration, injection, localization device), radiological supervision and interpretation).

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 20220

How often do physicians <u>in your specialty</u> perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Commonly

Specialty Interventional Radiology How often? Commonly

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 34827
If the recommendation is from multiple specialties, please provide the frequency and <u>percentage</u> for each specialty. Please explain the rationale for this estimate. The service described by CPT code 20220 is estimated to be provided 34,827 times nationally in a one-year period.

Specialty Diagnostic Radiology Frequency 22369 Percentage 64.22 %

Specialty Interventional Radiology Frequency 4799 Percentage 13.77 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 11,609
If this is a recommendation from multiple specialties please estimate frequency <u>and percentage</u> for each specialty. Please explain the rationale for this estimate. The service described by CPT code 70480 is estimated to be provided 11,609 times nationally in a one-year period to Medicare patients.

Specialty Diagnostic Radiology Frequency 7456 Percentage 64.22 %

Specialty Interventional Radiology Frequency 1600 Percentage 13.78 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Minor procedure

BETOS Sub-classification Level II:
Musculoskeletal

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 20220

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

Description of Pre-Service Work: Obtain and review pre-procedural imaging, pathology, and laboratory studies (i.e., coagulation studies). Consult with referring physician and other health care professionals as necessary (e.g. tract planning/marking if biopsy for bone tumor). Communicate with patient and/or family to explain operative risks and benefits and to obtain informed consent. Arrange for intra-procedure pathology assessment as needed, particularly for potential tumor biopsies, including contingency that special consultation may be required because of frequent difficulties with bone lesions. Position patient based on lesion location, with attention to proximity of major vascular structures and organs, as well as any planned post-biopsy treatment approach. Coordinate positioning with the need for imaging and the capacity to get adequate images in all necessary planes. Mark surface anatomy for current and future localization if needed.
Ensure all instruments and equipment needed for the procedure are available. Prepare and drape patient.

Description of Intra-Service Work: After images are checked for appropriate position and proposed percutaneous tract, the site is infiltrated with local anesthetic. Confirm the needle position with imaging, remove the stylet and place the biopsy device through the needle. If necessary, administer additional local anesthetic in sensitive areas.
As the biopsy device penetrates the bone, acquire additional images to confirm depth, location, and proximity to the lesion. Acquire biopsy specimens as appropriate for the lesion and pathology requirements. As needed, submit tissue to the pathologist for initial assessment to confirm adequacy of biopsy. Submit additional samples for microbiologic study, as necessary. Once adequate biopsy material is obtained, withdraw the equipment and close the wound as necessary.

Description of Post-Service Work: Apply sterile dressings and complete appropriate post-procedure monitoring. Communicate (including written and oral reports and orders) with family and other health care professionals immediately following procedure. In the case of vascular lesions or biopsies in proximity to major vessels or nerves, carefully monitor neurovascular functions and hemodynamics. For thoracic lesions, monitor respiratory functions, and, as indicated, obtain X-rays to check for pneumothorax. Inform patient and family of tentative findings and apprise them of the degree of uncertainty and plans for additional care.

SURVEY DATA

RUC Meeting Date (mm/yyyy)	01/2019		
Presenter(s):	Kurt Schoppe, MD, Daniel Wessell, MD, PhD, Andrew Moriarity, MD, Curtis Anderson, MD		
Specialty(s):	ACR, SIR		
CPT Code:	20225		
Sample Size:	899	**Resp N:** 50	**Response:** 5.5 %
Description of Sample:	The ACR surveyed a total of 750 members (a random sample of 375 members and a separate random sample of 375 members who perform muskuloskeletal and interventional radiology procedures). The SIR surveyed a total of 149 physicians of their membership.		

	Low	25th pctl	Median*	75th pctl	High

Modifier -51 Exempt Status
Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:
Is this new/revised procedure considered to be a new technology or service? No

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
62267	000	3.00	**RUC Time**

CPT Descriptor Percutaneous aspiration within the nucleus pulposus, intervertebral disc, or paravertebral tissue for diagnostic purposes

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
32550	000	3.92	**RUC Time**

CPT Descriptor Insertion of indwelling tunneled pleural catheter with cuff

KEY MPC COMPARISON CODES:
Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
10030	000	2.75	**RUC Time**	8,261

CPT Descriptor 1 Image-guided fluid collection drainage by catheter (eg, abscess, hematoma, seroma, lymphocele, cyst), soft tissue (eg, extremity, abdominal wall, neck), percutaneous

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
37191	000	4.46	**RUC Time**	32,181

CPT Descriptor 2 Insertion of intravascular vena cava filter, endovascular approach including vascular access, vessel selection, and radiological supervision and interpretation, intraprocedural roadmapping, and imaging guidance (ultrasound and fluoroscopy), when performed

Other Reference CPT Code	Global	Work RVU	Time Source
52332	000	2.82	**RUC Time**

CPT Descriptor Cystourethroscopy, with insertion of indwelling ureteral stent (eg, Gibbons or double-J type)

RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:
Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by percent distribution) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Top Key Reference Code: 30 **% of respondents:** 60.0 **%**

Number of respondents who choose 2nd Key Reference Code: 8 **% of respondents:** 16.0 **%**

TIME ESTIMATES (Median)

	CPT Code: 20225	**Top Key Reference CPT Code:** 62267	**2nd Key Reference CPT Code:** **32550**
Median Pre-Service Time	19.00	34.00	35.00
Median Intra-Service Time	30.00	30.00	30.00
Median Immediate Post-service Time	15.00	15.00	20.00
Median Critical Care Time	0.0	0.00	0.00
Median Other Hospital Visit Time	0.0	0.00	0.00
Median Discharge Day Management Time	0.0	0.00	0.00
Median Office Visit Time	0.0	0.00	0.00
Prolonged Services Time	0.0	0.00	0.00

Median Total Time	**64.00**	**79.00**	**85.00**
Other time if appropriate			

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	0%	43%	50%	7%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	3%	63%	33%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	3%	53%	43%

Physical effort required	0%	50%	50%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	63%	37%

2nd Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	0%	13%	38%	50%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	0%	100%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	0%	38%	63%
Physical effort required	0%	38%	63%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	13%	88%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

CPT code 20225 *(Biopsy, bone, trocar, or needle; deep (eg, vertebral body, femur))* was identified by the "Surveyed by one Specialty and Now Performed by a Different Specialty" screen. The American College of

Radiology and the Society of Interventional Radiology expanded the family to include the additional biopsy code, 20220 *(Biopsy, bone, trocar, or needle; superficial (eg, ilium, sternum, spinous process, ribs))*. The specialties agreed to survey this code for the January 2019 RUC meeting.

Survey Process

The ACR surveyed a total of 750 members (a random sample of 375 members and a separate random sample of 375 members who perform muskuloskeletal and interventional radiology procedures). The SIR surveyed a total of 149 physicians from their membership.

Compelling Evidence

The specialty performing this procedure has changed. Previously, the code was surveyed by Orthopedic Surgery during the RUC review performed in August 1995. Since that time, Radiology has become the dominant provider and was not a participant in the prior survey.

Work RVU Recommendation

The specialties recommend the current work RVU of 3.00 for CPT code 20225, which is the 25th percentile survey value.

Time Recommendation

The specialties recommend the times of 30 minutes of pre-service using adjustments from pre-service package 2 (difficult patient, straightforward procedure).

We recommend the standard 18 minutes of pre-service evaluation. We recommend 6 minutes of pre-service positioning time, which is 5 minutes more than the standard. We are recommending 6 minutes of preservice scrub, dress and wait time, which is the standard.

We recommend survey median times of 30 minutes for intra-service and 15 minutes of post-service.

This is a total recommended time of 75 minutes for CPT code 20225.

Key Reference Services

The most commonly chosen reference codes by survey participants:

- **62267** *(Percutaneous aspiration within the nucleus pulposus, intervertebral disc, or paravertebral tissue for diagnostic purposes)*, chosen by 60% respondents, and
- **32550** *(Insertion of indwelling tunneled pleural catheter with cuff)*, chosen by 16% respondents.

The surveyed code involves biopsy of a deep lesion such as a vertebral body and survey respondents appropriately assigned this code identical intra-service time and RVU compared to the first key reference service, code 62267, which also involves aspiration of a deep musculoskeletal structure in the spine, in this case the intervertebral disc. The second key reference service, code 32550, involves insertion of an indwelling catheter which unlike a biopsy has a component of more intense work involving the vasculature and planning for leaving the catheter in place after the procedure and therefore has an appropriately higher RVU and IWPUT compared to the surveyed code. The relationships are summarized in the following table:

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT
62267	Percutaneous aspiration within	3.00	34	30	15	79	0.0682

	the nucleus pulposus, intervertebral disc, or paravertebral tissue for diagnostic purposes						
20225	**Biopsy, bone, trocar, or needle; deep (eg, vertebral body, femur)**	**3.00**	**30**	**30**	**15**	**75**	**0.0693**
32550	Insertion of indwelling tunneled pleural catheter with cuff	3.92	35	30	20	85	0.0944

MPC Codes

The surveyed code is bracketed by two 000-day global MPC codes 10030 *(Image-guided fluid collection drainage by catheter (eg, abscess, hematoma, seroma, lymphocele, cyst), soft tissue (eg, extremity, abdominal wall, neck), percutaneous)* and 37191 *(Insertion of intravascular vena cava filter, endovascular approach including vascular access, vessel selection, and radiological supervision and interpretation, intraprocedural roadmapping, and imaging guidance (ultrasound and fluoroscopy), when performed).* The image guided fluid collection drainage code has the same intra-service time and nearly the same total time (76 compared to 75 minutes) and an appropriately lower RVU and IWPUT compared to the surveyed code, which is also an invasive procedure but requires increased technical skill to access deeper anatomic structures compared to 10030. The IVC filter insertion code has the same intra-service time and nearly the same total time as the surveyed code, but with a higher RVU and appropriately higher IWPUT compared to the surveyed code. While both of these codes are invasive procedures, 37191 requires more technical skill and has increased risks compared with 20225.
Additionally, MPC code 52332 (Cystourethroscopy, with insertion of indwelling ureteral stent (eg, Gibbons or double-J type)) is also a reasonable comparison with 20225. This code has slightly lower intra-service time (25 minutes compared with 30 minutes) and lower total time (56 minutes compared with 75 minutes) relative to the surveyed code, 20225. The value of 20225 is appropriately higher than 52332 for these reasons. The relationships are summarized in the following table:

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT
10030	Image-guided fluid collection drainage by catheter (eg, abscess, hematoma, seroma, lymphocele, cyst), soft tissue (eg, extremity, abdominal wall, neck), percutaneous	2.75	26	30	20	76	0.0597
52332	Cystourethroscopy, with insertion of indwelling ureteral stent (eg, Gibbons or double-J type)	2.82	21	25	10	56	0.0879
20225	**Biopsy, bone, trocar, or needle; deep (eg, vertebral body, femur)**	**3.00**	**30**	**30**	**15**	**75**	**0.0693**
37191	Insertion of intravascular vena cava filter, endovascular approach including vascular access, vessel selection, and radiological supervision and interpretation, intraprocedural roadmapping, and imaging guidance (ultrasound and fluoroscopy), when performed	4.46	28	30	15	73	0.1189

Summary of Recommendations for CPT Code 20225

The societies recommend 3.00 RVU with service period times of 30, 30, and 15 minutes for CPT code 20225.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☒ Other reason (please explain) CPT code 20225 is typically billed with CPT code 77012 (Computed tomography guidance for needle placement (eg, biopsy, aspiration, injection, localization device), radiological supervision and interpretation).

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 20225

How often do physicians <u>in your specialty</u> perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Commonly

Specialty Interventional Radiology How often? Commonly

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 42897
If the recommendation is from multiple specialties, please provide the frequency and <u>percentage</u> for each specialty. Please explain the rationale for this estimate. The service described by CPT code 20225 is estimated to be provided 42,897 times nationally in a one-year period.

Specialty Diagnostic Radiology Frequency 32392 Percentage 75.51 %

Specialty Interventional Radiology Frequency 7297 Percentage 17.01 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 14,299
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The service described by CPT code 20225 is estimated to be provided 14,299 times nationally in a one-year period to Medicare patients.

Specialty Diagnostic Radiology Frequency 10797 Percentage 75.50 %

Specialty Interventional Radiology Frequency 2432 Percentage 17.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Minor procedure

BETOS Sub-classification Level II:
Musculoskeletal

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 20225

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Facility Direct Practice Expense (PE) Inputs

Global Period: 000 **Meeting Date:** January 2019

20220 *Biopsy, bone, trocar, or needle; superficial (eg, ilium, sternum, spinous process, ribs)*

20225 *Biopsy, bone, trocar, or needle; deep (eg, vertebral body, femur)*

---

1. **Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:**

   ACR and SIR convened a panel that included a number of experts familiar with these services to evaluate the direct practice expense inputs for these bone biopsy via trocar or needle procedures.

2. **You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here:**

   CPT Codes 20220 and 20225 are current codes. As such, we included the existing direct practice expense inputs for those two codes on the PE spreadsheet. The specialties also included the direct practice expense inputs for CPT Code 77012 *Computed tomography guidance for needle placement (eg, biopsy, aspiration, injection, localization device), radiological supervision and interpretation* to ensure there is no overlap with imaging inputs.

3. **Is this code(s) typically billed with an E/M service?** No
   Is this code(s) typically billed with the E/M service in the nonfacility? 20220: 28% and 20225: 27%
   (Please see provided data in PE Subcommittee folder)

4. **If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:**

   The specialties are recommending pre-service clinical time (less than the amount for "extensive use").

   CA001 - The time is needed to review the referral request from the referring physician (diagnosis, reason for procedure, tests to be ordered on samples).

   CA002 – This time is required to make sure the patient is a candidate for our procedure, labs are reviewed and within accepted range, and additional labs are ordered if necessary.

   CA003 – The office staff uses this time to coordinate with hospital/facility staff to schedule the procedure.

   CA004 – This time is needed to discuss the potential complications and post procedure side effects of this procedure. The consent for the procedure is obtained at that time.

CA005 – This time is used to answer any additional questions prior to the patient's visit, confirm that certain medications are being held before the procedure.

5. **If you are requesting an increase over the current total cost for clinical staff time (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), total cost of supplies, and/or total cost of equipment you must provide compelling evidence:**

   N/A

6. **If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here:**

   N/A

7. **If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities:**

   N/A

8. **If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.**

   N/A

9. **If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here:**

   N/A

10. **If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here:**

    N/A

11. **List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here:**

    N/A

12. **If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here:**

N/A

13. If there is any other item on your spreadsheet that needs further explanation please include here:

N/A

14. Please include an explanation of each line item:

See Q#4

CPT Code: 20220 & 20225
Specialty Society: ACR & SIR

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Non Facility Direct Practice Expense (PE) Inputs

Global Period: 000 **Meeting Date:** January 2019

20220 *Biopsy, bone, trocar, or needle; superficial (eg, ilium, sternum, spinous process, ribs)*

20225 *Biopsy, bone, trocar, or needle; deep (eg, vertebral body, femur)*

---

1. **Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:**

   ACR and SIR convened a panel that included a number of experts familiar with these services to evaluate the direct practice expense inputs for these bone biopsy via trocar or needle procedures.

2. **You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here:**

   CPT Codes 20220 and 20225 are current codes. As such, we included the existing direct practice expense inputs for those two codes on the PE spreadsheet. The specialties also included the direct practice expense inputs for CPT Code 77012 *Computed tomography guidance for needle placement (eg, biopsy, aspiration, injection, localization device), radiological supervision and interpretation* to ensure there is no overlap with imaging inputs.

3. **Is this code(s) typically billed with an E/M service?** No
   Is this code(s) typically billed with the E/M service in the nonfacility? 20220: 28% and 20225: 27%
   (Please see provided data in PE Subcommittee folder)

4. **What specialty is the dominant provider in the nonfacility?**
   What percent of the time does the dominant provider provide the service(s) in the nonfacility?
   Is the dominant provider in the nonfacility different then for the global?
   (Please see provided data in PE Subcommittee folder)

	Global	NF
20220	Diagnostic Radiology – 64%	Podiatry – 39%
20225	Diagnostic Radiology – 72%	Diagnostic Radiology – 49%

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:

The specialties are recommending pre-service clinical time (less than the amount for "extensive use").

CA001 - The time is needed to review the referral request from the referring physician (diagnosis, reason for procedure, tests to be ordered on samples).

CA002 – This time is required to make sure the patient is a candidate for our procedure, labs are reviewed and within accepted range, and additional labs are ordered if necessary.

CA004 – This time is needed to discuss the potential complications and post procedure side effects of this procedure. The consent for the procedure is obtained at that time.

CA005 – This time is used to answer any additional questions prior to the patient's visit, confirm that certain medications are being held before the procedure.

6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), you must provide compelling evidence. Please explain if the increase can be entirely accounted for because of an increase in physician time.

The specialties are requesting an increase over the aggregate direct practice expense costs for CPT Codes 20220 and 20225. The specialties believe the PE compelling evidence guidelines for the adoption of standards/packages as well as change in practice expense costs would apply to these updates. The most notable changes are the inclusion of SC077 needle, bone biopsy for CPT Code 20220 and the inclusion of SF055 bone biopsy device for CPT Code 20225.

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here:

N/A

8. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? (please use this time rather than 5 minutes in your reference code)
The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

The original PE recommendations included 5 minutes for CA010 obtain vital signs. The specialties are requesting 5 minutes for CA010 to obtain temperature, blood pressure, heart rate, O2 saturation, respiratory rate and weight on our patients prior to biopsy procedures.

9. **Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:***

   The clinical staff is assisting with monitoring the patient, opening supplies for the scrubbed physician, circulating and handling specimens as they are obtained.

10. **If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.**

    N/A

11. **If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities:**

    N/A

12. **If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.**

    N/A

13. **If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here:**

    N/A

14. **If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here:**

    N/A

15. List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here:

			20220	20225
Default Equipment Formula	EF015 mayo stand	For sterile surgical supplies, biopsy tools and medications.	yes	yes
Default Equipment Formula	EF014 light, surgical	For visualization of the surgical field	yes	yes
Default Equipment Formula	EF031 table, power	For patient positioning during surgery.	yes	
Monitoring Formula	EF018 stretcher	Patient transport to the recovery area and recovery time	yes	yes
Highly technical	EL007 room, CT	For image guided biopsy of deep bone lesions. The vast majority of this procedure is performed under CT guidance.		yes

16. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here:

N/A

17. If there is any other item on your spreadsheet that needs further explanation please include here:

N/A

18. Please include an explanation of each line item:

Code	Description	20220	20225	Notes
SA048	pack, minimum multi-specialty visit	1	1	*Paper, exam table gloves, non-sterile (2) gown, patient pillow case cover thermometer probe*
SA062	tray, bone marrow biopsy-aspiration	1	1	*Hospital wrap, Three povidone-iodine swab sticks (1% available iodine), Towel, Fenestrated drape , Syringe, 5cc with 20G x 1 1/2" needle , Syringe, 20cc ,Needles, 25G x 5/8" and 21G x 1 1/2" , Lidocaine hydrochloride, USP, 1% (10mg/mL), 5mL , Scalpel blade , Two specimen tubes containing edetate potassium , 10 frosted slides, 1" x 3", Amber specimen bottle and label , Stirring rod , Five gauze pads , Elastic bandage*

SA069	tray, suturing	1		*(1) CSR overwrap, (1) Halsey floor grade 5" needle holder, (1) floor grade straight 4>5" ins scissors, (1) adson tissue forceps, (2) medicine cups 2oz., (8) 4" x 4" gauze sponges, (5) 2" x 2" gauze sponges, (1) polylined fenstrated drape, (1) absorbent towel.*
SB001	cap, surgical	1	2	For the non imaging code, for the MD. For the Image guided code, for both people in the procedure room. Sterile procedure.
SB012	drape, sterile, for Mayo stand	1	1	For covering working surface for supplies.
SB016	drape-cover, sterile, OR light handle	1	1	Sterile cover for light handle.
SB024	gloves, sterile	1	1	For MD during procedure.
SB027	gown, staff, impervious	1		For MD during procedure.
SB028	gown, surgical, sterile		1	For MD during procedure.
SB034	mask, surgical, with face shield	1	1	For MD during procedure.
SB033	mask, surgical		1	For circulator.
SB039	shoe covers, surgical	1	1	For MD during procedure.
SB044	underpad 2ft x 3ft (Chux)	1	1	To place under patient to protect table from body fluids.
SC051	syringe 10-12ml	1	1	To draw up Lidocaine
SF040	suture, vicryl, 3-0 to 6-0, p, ps	1		Close incision.
SG021	bandage, strip 0.75in x 3in (Bandaid)	1	1	Dressing
SH046	lidocaine 1% w-epi inj (Xylocaine w-epi)	5	10	Local anesthesia.
SJ017	DuraPrep surgical soln (26ml uou)	1	1	Sterile skin prep
SK075	skin marking pen, sterile (Skin Skribe)	1	1	Marking pen
SC028	needle, 18-26g 1.5-3.5in, spinal		1	For Administering local anesthesia
SC077	needle, bone biopsy	1		For bone biopsy (Jamshidi)
SF055	Bone Biopsy device		1	For obtaining bone biopsy sample

AMA/Specialty Society RVS Update Committee Summary of Recommendations
New Technology/New Services

January 2019

Cystourethroscopy Insertion Transprostatic Implant – Tab 23

In 2005, the AMA RUC began the process of flagging services that represent new technology or new services as they were presented to the Committee. This service was flagged for CPT 2015 and reviewed at the October 2018 Relativity Assessment Workgroup meeting. The Workgroup indicated that the utilization is increasing and questioned the time required to perform these services. The RUC recommended that these services be resurveyed for physician work and practice expense for January 2019.

52441 ***Cystourethroscopy, with insertion of permanent adjustable transprostatic implant; single implant***
The RUC reviewed the survey results from 36 urologists and determined the current work RVU of 4.50, which is below the survey 25th percentile work RVU of 4.62, appropriately accounts for the work required to perform this service. The RUC recommends 26 minutes pre-service evaluation, 5 minutes pre-service positioning and 10 minutes scrub/dress/wait pre-service time, 25 minutes intra-service time and 15 minutes post-service time. The RUC noted that the intra-service time has decreased by 5 minutes. However, the specialty society validated that the physician work is now more intense, which is supported by the FDA approval to perform this service on the median lobe of the prostate. In 2015, the implants could only be applied to the lateral lobes of the prostate, and it was contra-indicated to treat the median lobe. Implanting an anchor in the median lobe is more intense because there is a higher risk of injury to surrounding structures such as the rectum and ureteral orifices. Since this procedure may now be performed on the median lobe this allows patients with larger prostates to receive this service. Operating on larger prostates/larger median lobes requires the physician to work on a prostate that is protruding into the bladder which may be blocking the urine flow. Therefore, it is more intense to perform than previously. In addition, it was initially thought this procedure would be typically performed in an office setting under local anesthesia, however, with more experience and with the addition of a new indication, it was determined that the typical patients would require MAC anesthesia, a prostate block, and local anesthesia. This further supports a more intense procedure than previously determined.

The RUC compared the surveyed code to the top key reference service 52234 *Cystourethroscopy, with fulguration (including cryosurgery or laser surgery) and/or resection of; SMALL bladder tumor(s) (0.5 up to 2.0 cm)* (work RVU = 4.62 and 30 minutes intra-service time) and determined based on the survey respondents that CPT code 52441 is more intense and complex on all measures examined. The RUC agreed that code 52241 is more intense than code 52234, as the implants must be precise to prevent complications. For additional support, the RUC referenced MPC codes 37191 *Insertion of intravascular vena cava filter, endovascular approach including vascular access, vessel selection, and radiological supervision and interpretation, intraprocedural roadmapping, and imaging guidance (ultrasound and fluoroscopy), when performed* (work RVU = 4.46, 30 minutes intra-service time and 73 minutes total time) and 52352 *Cystourethroscopy, with ureteroscopy and/or pyeloscopy; with removal or manipulation of calculus (ureteral catheterization is included)* (work RVU = 6.75, 45 minutes intra-service time and 118 minutes total time),

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

which validate relativity among other well-known services in the Medicare Physician Payment Schedule. **The RUC recommends a work RVU of 4.50 for CPT code 52441.**

52442 ***Cystourethroscopy, with insertion of permanent adjustable transprostatic implant; each additional permanent adjustable transprostatic implant (List separately in addition to code for primary procedure)***
The RUC reviewed the survey results from 36 urologists and determined that the current work RVU of 1.20, which is below the survey 25th percentile work RVU of 1.50, appropriately accounts for the work required to perform this service. The RUC recommends 15 minutes intra-service time. The RUC noted that the intra-service time has decreased. However, the specialty society validated that the physician work is now more intense, which is supported by the FDA approval to perform this service on the median lobe of the prostate. In 2015, the implants could only be inserted in the lateral lobes of the prostate, and it was contra-indicated to treat the median lobe. Implanting an anchor in the median lobe is more intense because there is a higher risk of injury to surrounding structures such as the rectum and ureteral orifices. Since this procedure may now be performed on the median lobe this allows patients with larger prostates to receive this service. Operating on larger prostates/larger median lobes requires the physician to work on a prostate that is protruding into the bladder which may be blocking the urine flow. Therefore, it is more intense to perform than previously. In addition, it was initially thought this procedure would be typically performed in an office setting under local anesthesia, however, with more experience and with the addition of a new indication, it was determined that the typical patients would require MAC anesthesia, a prostate block, and local anesthesia. This further supports a more intense procedure than previously determined.

The RUC compared the surveyed code to the top key reference service 49412 *Placement of interstitial device(s) for radiation therapy guidance (eg, fiducial markers, dosimeter), open, intra-abdominal, intrapelvic, and/or retroperitoneum, including image guidance, if performed, single or multiple (List separately in addition to code for primary procedure)* (work RVU = 1.50 and 20 minutes intra-service time) and determined based on the survey respondents that CPT code 52442 is somewhat more intense and complex on all measures examined. The RUC agreed that code 52242 is more intense than code 49412, as the additional implants must be precise to prevent complications. For additional support the RUC referenced MPC code 64480 *Injection(s), anesthetic agent and/or steroid, transforaminal epidural, with imaging guidance (fluoroscopy or CT); cervical or thoracic, each additional level (List separately in addition to code for primary procedure)* (work RVU = 1.20 and 15 minutes intra-service time) and noted that this reference code requires the same physician work and time to perform, thus validating the relativity of these services. **The RUC recommends a work RVU of 1.20 for CPT code 52442.**

Practice Expense
The PE Subcommittee discussed compelling evidence because the supply costs increased and recognized that the required lidocaine jelly was inadvertently left out previously. The PE Subcommittee also discussed the delineation of all the components of the different trays, eliminated any overlap in supplies, corrected the clinical staff time and equipment for the appropriate monitoring post-procedure of 5 minutes 1-1 with the patient and 10 minutes 1-4 with the patient, to allow for multi-tasking. **The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
52441	Cystourethroscopy, with insertion of permanent adjustable transprostatic implant; single implant	000	4.50 (No Change)
52442	each additional permanent adjustable transprostatic implant (List separately in addition to code for primary procedure)	ZZZ	1.20 (No Change)

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:52441 Tracking Number Original Specialty Recommended RVU: **4.50**
Presented Recommended RVU: **4.50**
Global Period: 000 Current Work RVU: **4.50** RUC Recommended RVU: **4.50**

CPT Descriptor: Cystourethroscopy, with insertion of permanent adjustable transprostatic implant; single implant

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 67-year-old male has benign prostatic hyperplasia and bothersome voiding symptoms. The patient has an elevated International Prostate Symptom Score (IPSS), a low peak urinary flow rate, and elevated postvoid residual volume. His symptoms have failed to improve on medical therapy. Cystoscopy excludes a significant median lobe component, and ultrasound shows the patient's prostate is 20 grams. After discussion of treatment options, the patient elects a permanent adjustable transprostatic implant procedure with a single implant.

Percentage of Survey Respondents who found Vignette to be Typical: 72%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The appropriate antibiotic(s) are selected and ordered. Timing and administration are confirmed. Results of admission testing and imaging are reviewed. The planned procedure and postoperative management are reviewed with the patient. Informed consent is reviewed and obtained. The length and type of anesthesia is reviewed with the anesthesiologist. Availability of all required instruments and supplies is verified. Assistance is provided in placing the patient in dorsal-lithotomy position. Padding is placed at elbows, knees, and ankles. The bladder is drained using a straight catheter. Video equipment is checked for white balance. The implant deployment device is set up. The penis and perineal area are prepped and draped. The surgeon scrubs and gowns. A surgical time-out is performed with the operating surgical team and anesthesia team.

Description of Intra-Service Work: A cystoscope sheath is inserted into the meatus and advanced toward the bladder to assess the precise location of the prostatic obstruction, the intended location for implants, and the amount of compression required to apply to the obstructing lateral lobes so as to achieve the intended result. The cystoscope is pressed against the prostate lobe to determine the level of opening that should be created. Once the locations of the implantation sites are confirmed, then proceed with placement of the first implant. With the sheath in the bladder, replace the telescope bridge with the implant delivery device, and reintroduce the telescope lens into the device. Determine the first implant site by orienting the delivery device tip in an anterolateral direction (typically 2 to 3 o'clock position) in the bladder and slowly moving the device distally within the prostatic fossa approximately 1.5 cm from the bladder neck. Angle the distal tip of the delivery device laterally at least 20 degrees at this position so as to compress the lateral lobe and assure proper needle trajectory. Prior to deploying the implant, confirm cystoscopically that adequate tissue is captured both anterior and posterior to the implant. Pull the trigger, thereby deploying a needle containing the implant through the prostate. Retract the needle, allowing one end of the implant to be delivered to the capsular surface of the prostate. Tension the implant to assure capsular seating and removal of slack monofilament. Angle the device back toward midline, and slowly advance it proximally (typically 3 to 4 mm) until cystoscopic verification of the monofilament being centered in the delivery bay. Affix the urethral end piece to the monofilament, thereby tailoring the size and tension of the implant. Sever excess filament.

After each implant is deployed, the device is advanced into the bladder, and the delivery device is replaced with the cystoscope and bridge, allowing the bladder to drain. The degree of prostatic compression achieved at the site is assessed so as to ultimately shape an anterior channel through the prostatic fossa.

If additional implants are necessary, those implants are then placed in the prostate (separately reported with 52442.) After final implant is placed, a cystoscopy is performed to inspect the location and state of the implant(s) to assure proper seating and location. Finally, a cystoscopy is performed with irrigation turned off to assure that the prostatic channel remains patent without irrigation pressure. The bladder is filled with 100 to 200 ml of saline to assist the patient in a postprocedure trial to void, prior to discharge. An indwelling urinary catheter with drainage bag is placed.

Description of Post-Service Work: Drapes are removed and the surgeon assists with transitioning the patient from dorsal-lithotomy to supine. The outcome of the surgery is discussed with the patient and a brief operative note is written. Patient stabilization is monitored in the recovery room. An operative report is dictated, and medical record documentation is completed. Aftercare treatment, including home restrictions (eg, activity, bathing), is discussed with the patient. Medications are reconciled, and orders for discharge medications are written. A discharge summary and instructions are completed.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	0%	43%	57%	0%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	29%	71%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	0%	43%	57%

Physical effort required	14%	57%	29%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	43%	14%	43%

2nd Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	0%	17%	83%	0%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	0%	100%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	0%	33%	67%
Physical effort required	17%	33%	50%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	33%	67%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

Codes 52441 and 52442 were flagged as services that represent new technology and based on three years of available Medicare claims data (2015, 2016 and preliminary 2017 data), were required for re-survey.

Recommendation

We recommend the current work RVU of 4.50. When code 52441 was reviewed as a new service, it was assumed that the procedure would be performed in an office setting using an oral sedative. This is not the case, as MAC or moderate sedation will be necessary. In addition, the work RVU results of the previous survey were not accepted by the RUC and instead a crosswalk of the work RVU to code 43244 was facilitated. The current survey data indicate a decrease of intra-time from 30 minutes to 25 minutes, however, we believe this is due to the changes in the survey instrument question that requests the responses be "precise and not to round". We do not believe this represents a diffusion of the procedure resulting in the procedure taking less time. We do, however, believe the procedure is more difficult that initially thought in that the implantation must be precise to prevent complications.

Pre-time package 3 and Post-time package 9b are selected. The patient is straightforward and the implant procedure is difficult. Each patient's anatomy and prostate size is different and precise implantation is imperative to prevent nerve damage, damage to the GI tract or fistula formation. In addition, care is needed not to place the implants to close to the bladder neck as this could lead to encrustation requiring removal. Evaluation time and scrub, dress, wait time are reduced to be consistent with the survey median. The positioning time was increased as the patient will be positioning in dorsal-lithotomy.

Key Reference Codes

CPT	DESCRIPTOR	RVW	IWPUT	TOTAL TIME	PRE	INTRA	POST

52441	Cystourethroscopy, with insertion of permanent adjustable transprostatic implant; single implant	4.50	0.136	81	41	25	15
52315	Cystourethroscopy, with removal of foreign body, calculus, or ureteral stent from urethra or bladder (separate procedure); complicated	5.20	0.093	94	29	45	20

MPC Comparison

CPT	DESCRIPTOR	RVW	IWPUT	TOTAL TIME	PRE	INTRA	POST
37191	Insertion of intravascular vena cava filter, endovascular approach including vascular access, vessel selection, and radiological supervision and interpretation, intraprocedural roadmapping, and imaging guidance (ultrasound and fluoroscopy), when performed	4.46	0.119	73	28	30	15
52441	Cystourethroscopy, with insertion of permanent adjustable transprostatic implant; single implant	4.50	0.136	81	41	25	15
52352	Cystourethroscopy, with ureteroscopy and/or pyeloscopy; with removal or manipulation of calculus (ureteral catheterization is included)	6.75	0.118	118	53	45	20

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.

☐ Multiple codes are used to maintain consistency with similar codes.
☐ Historical precedents.
☒ Other reason (please explain) Typically more than one implant is placed, so 52441 will typically be reported with add-on code 52442

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 52441

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

SUMMARY OF RECOMMENDATION

CPT Code:52442 Tracking Number Original Specialty Recommended RVU: **1.20**
Presented Recommended RVU: **1.20**
Global Period: ZZZ Current Work RVU: **1.20** RUC Recommended RVU: **1.20**

CPT Descriptor: Cystourethroscopy, with insertion of permanent adjustable transprostatic implant; each additional permanent adjustable transprostatic implant (List separately in addition to code for primary procedure)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 67-year-old male has benign prostatic hyperplasia with bothersome voiding symptoms that have failed to improve on medical therapy. He elects to undergo implantation of a permanent adjustable transprostatic implant. After completion of the initial implant (separately reported with 52441), an additional implant is placed. [Note: This is an add-on code. Only consider the additional work related to one additional implant.]

Percentage of Survey Respondents who found Vignette to be Typical: 89%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: n/a

Description of Intra-Service Work: The additional implant site is determined by pressing the cystoscope against the prostate lobe to determine the level of opening that should be created. With the sheath in the bladder, replace the telescope bridge with the implant delivery device, and reintroduce the telescope lens into the device. Determine the next implant site by orienting the delivery device tip in an anterolateral direction in the bladder and slowly moving the device distally within the prostatic fossa approximately 1.5 cm from the bladder neck. Angle the distal tip of the delivery device laterally at least 20 degrees at this position so as to compress the lateral lobe and assure proper needle trajectory. Prior to deploying the implant, confirm cystoscopically that adequate tissue is captured both anterior and posterior to the implant. Pull the trigger, thereby deploying a needle containing the implant through the prostate. Retract the needle, allowing one end of the implant to be delivered to the capsular surface of the prostate. Tension the implant to assure capsular seating and removal of slack monofilament. Angle the device back toward midline, and slowly advance it proximally (typically 3 to 4 mm) until cystoscopic verification of the monofilament being centered in the delivery bay. Affix the urethral end piece to the monofilament, thereby tailoring the size and tension of the implant. Sever excess filament. After the implant is deployed, the device is advanced into the bladder, and the delivery device is replaced with the cystoscope and bridge, allowing the bladder to drain. The degree of prostatic compression achieved at the site is assessed so as to ultimately shape an anterior channel through the prostatic fossa.

(For additional implants, repeat the above sequence, installing the cystoscope and reinspecting successful placement of each implant and degree of lateral lobe obstruction remaining. If there is persistent obstruction distally, repeat the above sequence with further implants delivered and inspected until a satisfactory result is obtained, namely a reshaping of the prostate that offers a continuous channel through the anterior aspect of the prostatic fossa.)

Description of Post-Service Work: n/a

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

Codes 52441 and 52442 were flagged as services that represent new technology and based on three years of available Medicare claims data (2015, 2016 and preliminary 2017 data), were required for re-survey.

Recommendation

We recommend the current work RVU of 1.20.

The RUC database indicates that the specialty society indicated and the RUC agreed that the survey respondents overestimated the work required to perform 52442. The specialty society recommended that 52442 be crosswalked to 64480 (work RVU = 1.20; intra-time = 15 min). The RUC noted that 64480 has similar time and intensity measures to 52442 and appropriately accounts for the work required to perform this service. For additional support the RUC referenced code 15136 (work RVU = 1.50, 15 minutes of intraservice time), which has the same intra-service time and a similar work RVU.

It appears that the specialty and the RUC determined the correct work RVU should be 1.20 based on a time of 15 minutes (crosswalked to 64480), however, the overestimated survey time of 25 minutes was entered into the RUC database instead of 15 minutes.

The current survey median intra-time is 15 minutes. Because the RUC (and the societies) previously facilitated a work RVU of 1.20 based on 15 minutes of work, we believe that maintaining the current work RVU and correcting the database time to 15 minutes is appropriate.

Key Reference Codes

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. (Use 52442 in conjunction with 52441)

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 52442

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Re: K173087
Trade/Device Name: UroLift System (UL400 and UL500)
Regulation Number: 21 CFR§ 876.5530
Regulation Name: Implantable Transprostatic Tissue Retractor System
Regulatory Class: II
Product Code: PEW
Dated: September 29, 2017
Received: September 29, 2017

Dear Louis-Pierre Marcoux:

We have reviewed your Section 510(k) premarket notification of intent to market the device referenced above and have determined the device is substantially equivalent (for the indications for use stated in the enclosure) to legally marketed predicate devices marketed in interstate commerce prior to May 28, 1976, the enactment date of the Medical Device Amendments, or to devices that have been reclassified in accordance with the provisions of the Federal Food, Drug, and Cosmetic Act (Act) that do not require approval of a premarket approval application (PMA). You may, therefore, market the device, subject to the general controls provisions of the Act. The general controls provisions of the Act include requirements for annual registration, listing of devices, good manufacturing practice, labeling, and prohibitions against misbranding and adulteration. Please note: CDRH does not evaluate information related to contract liability warranties. We remind you, however, that device labeling must be truthful and not misleading.

If your device is classified (see above) into either class II (Special Controls) or class III (PMA), it may be subject to additional controls. Existing major regulations affecting your device can be found in the Code of Federal Regulations, Title 21, Parts 800 to 898. In addition, FDA may publish further announcements concerning your device in the Federal Register.

Please be advised that FDA's issuance of a substantial equivalence determination does not mean that FDA has made a determination that your device complies with other requirements of the Act or any Federal statutes and regulations administered by other Federal agencies.

You must comply with all the Act's requirements, including, but not limited to: registration and listing (21 CFR Part 807); labeling (21 CFR Part 801); medical device reporting (reporting of medical device-related adverse events) (21 CFR 803); good manufacturing practice requirements as set forth in the quality systems (QS) regulation (21 CFR Part 820); and if applicable, the electronic product radiation control provisions (Sections 531-542 of the Act); 21 CFR 1000-1050.

Also, please note the regulation entitled, "Misbranding by reference to premarket notification" (21 CFR Part 807.97). For questions regarding the reporting of adverse events under the MDR regulation (21 CFR Part 803), please go to http://www.fda.gov/MedicalDevices/Safety/ReportaProblem/default.htm for the CDRH's Office of Surveillance and Biometrics/Division of Postmarket Surveillance.

For comprehensive regulatory information about medical devices and radiation-emitting products, including information about labeling regulations, please see Device Advice (https://www.fda.gov/MedicalDevices/DeviceRegulationandGuidance/) and CDRH Learn (http://www.fda.gov/Training/CDRHLearn). Additionally, you may contact the Division of Industry and Consumer Education (DICE) to ask a question about a specific regulatory topic. See the DICE website (http://www.fda.gov/DICE) for more information or contact DICE by email (DICE@fda.hhs.gov) or phone (1-800-638-2041 or 301-796-7100).

Sincerely,

Charles Viviano -S

DATE PREPARED

29 September 2017

DEVICE INFORMATION

Trade Name: NeoTract® UroLift® System (UL400 and UL500)

Common Name: Implantable transprostatic tissue retractor system

Class: II

Regulation: 21 CFR 876.5530

Product Code: PEW

INTENDED USE

The UroLift System is indicated for the treatment of symptoms due to urinary outflow obstruction secondary to benign prostatic hyperplasia (BPH), including lateral and median lobe hyperplasia, in men 45 years of age or older.

PREDICATE DEVICE

The predicate device is the UroLift System, which includes two generations of the device, the UL400 and the UL500. The UL400 was previously cleared under K133281. The UL500 was previously cleared under K172359.

DEVICE DESCRIPTION

The UroLift System is designed to access the prostatic urethra and deliver one UroLift Implant through a lobe of the prostate. The UroLift System is inserted into the urethra through the penile

orifice and used to displace the urethra toward the prostatic capsule. The UroLift Implant is then deployed transversely through the prostatic tissue. Multiple implants are deployed in the UroLift System procedure. The implants secure the retracted position of the urethra, thereby maintaining an expanded urethral lumen, reducing fluid obstruction and improving lower urinary tract symptoms (LUTS). This is accomplished by holding the approximated position of the inner (urethral) tissue and the outer (capsular) tissue of the prostate with the UroLift Implant. The procedure typically requires 2-6 implants to retract the obstruction.

The UroLift System includes two generations of the device, the UL400 and the UL500. Both generations use the same UroLift Implant. The only differences are in the delivery device.

The UL400 (cleared in K133281), consists of two main components, the UroLift® Delivery Device (single use), and the UroLift Implants (one implant per delivery device). Each Delivery Device comes pre-loaded with one UroLift Implant.

The UL500 (UroLift 2 System, cleared in K172359) is comprised of the UroLift® Delivery Handle (single patient reusable), the UroLift Implant Cartridges (single-use) and the UroLift Implants (one implant per cartridge). Each cartridge is pre-loaded with one UroLift Implant. The cartridges fit into the delivery handle. Each patient procedure will use one dedicated handle and the number of cartridges/implants necessary to perform a typical procedure (estimated 2-6 implants). For the UL500, users are also provided with an optional Scope Seal which enables them to examine the anatomy between implant deployments without removal of the telescope from the Delivery Handle.

CLINICAL DATA

Median lobe clinical study:

NeoTract conducted a prospective, multicenter, non-blinded, single arm study to demonstrate the safety and effectiveness of the UroLift System for subjects with symptomatic benign prostatic hyperplasia with an enlarged median lobe. Study design and results are shown below:

Study Title:	Median Lobe Prostatic UroLift System Procedure (MedLift)
Study Objectives:	Evaluate the safety and effectiveness of the UroLift® System when used in symptomatic benign prostatic hyperplasia (BPH) subjects with an enlarged median lobe.
Study Design:	Prospective, multicenter, non-blinded, single arm (non-randomized) study.
Sample Size:	45 subjects were enrolled.
Subject Population:	Males 50 years or older diagnosed with symptomatic benign prostatic hyperplasia (BPH).
Number of Centers:	9 investigational sites located in the US.

Follow-up	1, 3, 6, and 12 months. For this submission, the report primarily presents results through 6 months of follow-up. A partial subset of subjects who have returned for the 12 month follow-up are included where noted (18 of 45 at time of submission).
Effectiveness Endpoint:	At 6 months, the 95% lower confidence limit of the mean percent improvement in subject's International Prostatic Symptom Score (IPSS) over baseline for the UroLift System must be ≥ 25%. **Results:** At 6 months, the 95% lower confidence limit of the mean percent improvement in subject's International Prostatic Symptom Score (IPSS) over baseline for the UroLift System was 50.8% (substantially above the goal of ≥ 25%). The mean percent change at 6 months was 57.7%.
Safety Endpoint:	The composite observed rate of post-procedure device related serious complications ≤15% at 3 months. Composite device related serious complications for this endpoint are 1) de Novo (new) severe urinary retention lasting more than 21 consecutive days post procedure, 2) device related formation of fistula between the rectum and urethra, 3) perforation of the rectum or GI tract, 4) damage to ureter or ureteral orifices, 5) damage to the trigone requiring surgical repair or 6) de novo, sustained erectile dysfunction. A Clinical Events Committee (CEC) will adjudicate adverse events and relevant subject questionnaires to evaluate against safety endpoint. **Results:** The CEC adjudicated the adverse events and relevant subject questionnaires to evaluate against the safety endpoint. The safety endpoint was achieved with 0% (5.7% CI upper limit) meeting criteria within the composite. In addition, from 3 to 6 months, there were no reported events that would meet the endpoint criteria.

Adverse Events (AE) observed through 6 months were mostly mild and occurred within the first week after procedure. The most common AEs included hematuria, dysuria, and urinary urgency. Comparison of 6 month effectiveness outcomes (IPSS, QOL, and BPHII) show similar magnitude of improvement between median lobe subjects and lateral lobe subjects (data originally presented in DEN130023), which indicates that the median lobe anatomy does not negatively impact outcomes.

The clinical study data demonstrates that treatment of the enlarged median lobe with the UroLift System is as safe and effective as treatment of the lateral lobe. As such, the UroLift System is substantially equivalent to the predicate devices (K133281 and K172359).

Reduction of Age in Indication:

The FDA Guidance for Industry and Food and Drug Administration Staff entitled "Guidance for the Non-Clinical and Clinical Investigation of Devices Used for the Treatment of Benign Prostatic Hyperplasia (BPH)" was issued on August 17, 2010 and recommended that the patient selection protocol criteria for enrollment include men over 50 "because BPH is generally

confined to older men." Approximately one month later in September 2010, the AUA released the 2010 update to the AUA Guideline on the Management of Benign Prostatic Hyperplasia. In this guideline, the index patient was updated to be a male > 45 years of age who is consulting a qualified healthcare provider for his lower urinary tract symptoms (LUTS). The AUA panel lowered the age for inclusion in this Guideline from age 50 to age 45, as this lower age group can commonly present with LUTS. Literature data demonstrates that the prevalence of BPH in ages 40-49 are not dramatically different compared to ages 50-59. The estimated difference in prevalence of histopathologic BPH is <10% between age 45 and 50. In addition, the estimated difference in volume is <2g for prostates in men age 45 and 50. Literature data also demonstrates similar incidences of lower urinary tract symptoms for men aged 40-49 compared to those aged 50-59 (8.6% and 9.5%, respectively). Based on multiple studies, the difference between the population of men age 45 and age 50 in terms of histopathology, volume, and symptomatology appears minimal for BPH. Treatment of BPH earlier at age 45 is not expected to create new or unexpected risks for the patient. As such, the reduction in age from 50 to 45 years old is substantially equivalent to the predicate devices (K133281 and K172359) based on the literature data.

COMPARISON WITH THE PREDICATE DEVICE

The UroLift System described in this submission is substantially equivalent to the previously cleared generations of the device. The UL400 was previously cleared in K133281. Minor device modifications have been made to UL400 that do not affect the overall safety and effectiveness. The UL500 was previously cleared in K172359 and has not changed since that clearance.

The UroLift System has the same intended use and employs the same technological characteristics as previously cleared in K133281 and K172359. It is still intended to retract prostate tissue by delivering implants transurethrally. The implant is the same as in the predicate devices. The clinical data demonstrates that treatment of the median lobe with the UroLift System has the same safety and effectiveness as treatment of the lateral lobes. In addition, literature data and medical opinion support lowering the age indication from 50 years old to 45 years old since there is no clinical difference between the two patient populations. The overall risk profile remains the same for the UroLift System. As such, the UroLift System is substantially equivalent to the UroLift System cleared in K133281 and K172359.

BIOCOMPATIBILITY TESTING (UL400)

For UL400, to reduce needle friction during deployment, the needle shaft has been modified to be coated with a material known as Duraglide. Duraglide is already used in patient-contacting components in the cleared UL500 (K172359) and has passed biocompatibility testing in accordance with ISO 10993. The use of Duraglide in UL400 does not raise new issues of safety or effectiveness and the overall risk profile remains the same as the predicate device.

For UL500, there has been no additional biocompatibility testing.

STERILIZATION AND SHELF-LIFE TESTING

There is no change to sterilization since the clearance of K133281 and K172359.

There is no change to shelf life for UL400 which remains at 18 months. There is no change to shelf life for UL500 which remains at 6 months.

CONCLUSION

The testing demonstrated the NeoTract UroLift System is as safe and effective, has the same intended use, technological characteristics and principles of operation as the predicate devices. Therefore, the NeoTract UroLift System is substantially equivalent to the predicate devices.

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Facility Direct Practice Expense (PE) Inputs

Meeting Date: 01-2019

CPT	Descriptor	Global
52441	Cystourethroscopy, with insertion of permanent adjustable transprostatic implant; single implant	000
52442	each additional permanent adjustable transprostatic implant (List separately in addition to code for primary procedure)	ZZZ

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   AUA advisors reviewed the current PE inputs.

2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here:

   Current codes are used for reference.

3. Is this code(s) typically billed with an E/M service? No

4. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:

   This endoscopy procedure will be performed under MAC in the facility setting and will require the standard clinical staff time for an endoscopy procedure. No time was previously requested because the procedure was expected to typically be performed a majority of the time in the office and not to require moderate sedation or MAC. This is not the case for a majority of patients.

5. If you are requesting an increase over the current total cost for clinical staff time (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), total cost of supplies, and/or total cost of equipment you must provide compelling evidence:

   This endoscopy procedure will be performed under MAC in the facility setting and will require the standard clinical staff time for an endoscopy procedure. No time was previously requested because the procedure was expected to typically be performed a majority of the time in the office and not to require moderate sedation or MAC. This is not the case for a majority of patients. Also, time has been added for a follow-up phone call the day of the procedure to contact the patient to reinforce catheter instructions and drug and activity restrictions.

6. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here: NA

7. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities: NA

8. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov. NA

9. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here: NA

10. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here: NA

11. List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here: N/A

12. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here: NA

13. If there is any other item on your spreadsheet that needs further explanation please include here: NA

14. Please include an explanation of each line item:

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Non Facility Direct Practice Expense (PE) Inputs

Meeting Date: 01-2019

CPT	Descriptor	Global
52441	Cystourethroscopy, with insertion of permanent adjustable transprostatic implant; single implant	000
52442	each additional permanent adjustable transprostatic implant (List separately in addition to code for primary procedure)	ZZZ

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   AUA advisors reviewed the current PE inputs.

2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here:

   Current codes are used for reference. AUA coding and reimbursement committee and surgeons familiar with the procedure reviewed the current PE details that were drafted when the code was new and thought to typically be an office based service.

3. Is this code(s) typically billed with an E/M service? No
   Is this code(s) typically billed with the E/M service in the nonfacility? No
   (Please see provided data in PE Subcommittee folder)

4. What specialty is the dominant provider in the nonfacility? urology
   What percent of the time does the dominant provider provide the service(s) in the nonfacility? 100%
   Is the dominant provider in the nonfacility different then for the global? No
   (Please see provided data in PE Subcommittee folder)

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:

ROW			52441 Current OFF 000	52441 REC OFF 000	Rationale
29	CA016	Prepare, set-up and start IV, initial positioning and monitoring of patient	2	5	assist positioning patient dorsal lithotomy with padding and draping - same as physician time

ROW			52441 Current OFF 000	52441 REC OFF 000	Rationale
31	CA017	Sedate/apply anesthesia		5	5 minutes to monitor the patient after instillation of lidocaine into bladder and urethra multitasking 1:4 over 20 minutes. This patient will be mildly sedated with oral antianxiety medications and positioned dorsal lithotomy. Clinical staff will monitor patient while multitasking.
35	CA023	Monitor patient following procedure/service, no multitasking		5	after scope removed, Foley cath placed and patient repositioned supine, monitor patient constantly for 5 minutes
36	CA022	Monitor patient following procedure/service, multitasking 1:4	2	2.5	following 5 minutes of constant monitoring, continue monitoring an additional 10 minutes while multitasking 1:4

6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), you must provide compelling evidence. Please explain if the increase can be entirely accounted for because of an increase in physician time.

   Please see response to details provided in Question 5 and Question 17. When the original PE inputs were recommended, this was a new service that has evolved to require more anesthetic and more monitoring that initially thought - when performed in the office setting. The additions and deletions are based on review by surgeons who perform these procedures and now know what is typically required to perform the procedure in the office setting

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here: NA

8. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

   The clinical staff will assist the surgeon with handing off supplies as the surgeon is performing the implants through a cystoscope that includes irrigation.

9. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived. NA

10. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities: NA

11. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov. NA

12. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here: NA

13. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here: NA

14. List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here:

		52441	52442
EF027	table, instrument, mobile	Default plus pre/post monitoring time =+I24+I25+I26+I27+I28+I29+I30+(4*I31)+I33+I35+(4*I36)+I37+I39	additional 15 min intra time
EF031	table, power	Default plus pre/post monitoring time =+I24+I25+I26+I27+I28+I29+I30+(4*I31)+I33+I35+(4*I36)+I37+I39	additional 15 min intra time
EF014	light, surgical	Default plus pre/post monitoring time =+I24+I25+I26+I27+I28+I29+I30+(4*I31)+I33+I35+(4*I36)+I37+I39	additional 15 min intra time
ES031	scope video system (monitor, processor, digital capture, cart, printer, LED light)	Scope Systems equation plus monitoring prior to procedure =+I27+I28+I29+I30+(4*I31)+I33+I37	additional 15 min intra time
ES018	fiberscope, flexible, cystoscopy	Scope equation plus monitoring prior to procedure =+I27+I28+I29+I30+(4*I31)+I33+I38	additional 15 min intra time

15. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here: NA

16. If there is any other item on your spreadsheet that needs further explanation please include here: N/A

17. Please include an explanation of each line item:

AMA/Specialty Society RVS Update Committee Summary of Recommendations
NPRM for 2019

January 2019

X-Ray Exam – Sinuses – Tab 24

In October 2017, the RAW requested that AMA staff compile a list of CMS/Other codes with Medicare utilization of 30,000 or more. In January 2018, the RUC recommended to crosswalk these services like other recent similar radiology recommendations for April 2018. The RUC used a similar cross-walking methodology as it did for CY 2019 codes that were rejected in the NRPM for 2019, for 7 X-ray codes that were reviewed at the April 2018 meeting for CY 2020. (CPT codes 70210, 70220, 70250, 70260, 70360, 72170 and 72190). The RUC requested that the specialties survey these seven services and review them again at the January 2019 RUC meeting (CY 2020 cycle).

Compelling Evidence
The specialty societies presented compelling evidence based on flawed methodology for CPT code 70210. Both codes in this family are CMS/Other sourced, as identified by the screen, therefore how the times and values were established is unknown. Codes with the CMS/Other designation were never surveyed by the RUC or any other stakeholder; their physician time and work were assigned by CMS in rulemaking over 20 years ago using an unknown method. Thus, the RUC accepted compelling evidence based on flawed methodology.

70210 ***Radiologic examination, sinuses, paranasal, less than 3 views***The RUC reviewed the survey results from 41 radiologists and family physicians and determined that the survey 25th percentile work RVU of 0.20 accurately reflects the physician work necessary for this service. The sinus exams include axial views that contain overlapping structures (head, neck, spine) which are more difficult images to interpret and have historically been considered more complex. The RUC recommends 1 minute pre-service time, 3 minutes intra-service time, and 1 minute immediate post-service time.

The RUC compared CPT code 70210 to the top key reference code 71046 *Radiologic examination, chest; 2 views* (work RVU = 0.22, 4 minutes intra-service time) and noted that the two axial examinations require similar amounts of physician work to perform but the reference code has one minute more of intra-service time justifying the slightly higher value. For additional support, the RUC compared CPT code 70210 to MPC code 70355 *Orthopantogram (eg, panoramic x-ray)* (work RVU = 0.20, 5 minutes intra-service time) and noted that the intra-service time is two minutes higher for the comparison code but there is no pre-service time and the work is less intense. The comparison code is a single view orthopantogram which is less intense work compared to the survey code which is typically two views of the paranasal sinuses. The RUC also compared CPT code 70210 to MPC code 96402 *Chemotherapy administration, subcutaneous or intramuscular; hormonal anti-neoplastic* (work RVU = 0.19, 3 minutes intra-service time) and noted that the intra-service times are identical and the amount of physician work is similar although the survey code has less total time and is more intense to perform than the comparison code and therefore should be appropriately valued higher.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

The RUC concluded that CPT code 70210 should be valued at the 25th percentile work RVU as supported by the survey. **The RUC recommends a work RVU of 0.20 for CPT code 70210.**

70220 ***Radiologic examination, sinuses, paranasal, complete, minimum of 3 views***
The RUC reviewed the survey results from 41 radiologists and family physicians and determined that the survey 25th percentile work RVU of 0.22 accurately reflects the physician work necessary for this service and falls below the existing value. The RUC recommends 1 minute pre-service time, 4 minutes intra-service time, and 1 minute immediate post-service time.

The RUC compared CPT code 70220 to the top key reference code 71046 *Radiologic examination, chest; 2 views* (work RVU = 0.22, 4 minutes intra-service time) and noted that these services are well-matched, requiring identical physician work, times, and intensity to perform and thus should be valued similarly. For additional support, the RUC compared CPT code 70210 to MPC code 92567 *Tympanometry (impedance testing)* (work RVU = 0.20, 4 minutes intra-service time) and noted that both services have identical intra-service time, whereas the survey code is a more intense service to perform and should be appropriately valued higher than the comparison code.

To further justify the recommendation, the RUC noted that there are multiple other CPT codes for X-ray exams with work RVU = 0.22, 4 minutes intra-service time, 6 minutes total time: 71100, 72072, 72074, 72080, 73502, 73521. The RUC concluded that CPT code 70220 should be valued at the 25th percentile work RVU as supported by the survey. **The RUC recommends a work RVU of 0.22 for CPT code 70220.**

Practice Expense
These services were reviewed and approved by the PE Subcommittee in April 2018. **The RUC recommends the direct practice expense inputs as affirmed by the Practice Expense Subcommittee.**

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
70210	Radiologic examination, sinuses, paranasal, less than 3 views	XXX	0.20
70220	Radiologic examination, sinuses, paranasal, complete, minimum of 3 views	XXX	0.22

Specialty Society Additional Rationale
X-Ray Valuation - Principles

The absolute RVUs of individual codes within the X-ray modality are relatively small; however, there are important differences comparing across these codes and code families that are important to consider when assessing their relative value within the modality and the larger fee schedule.

The codes within the X-ray modality cannot be placed in a simple ascending order, but rather should be placed on a spectrum with consideration to three primary variables:
1. **Number of views**
2. **Body area**
3. **Clinical context** (pathology and patient population)

What should not be considered when valuing the X-ray codes are derived measures of work and intensity. For example, IWPUT was not designed to accurately measure intensity at this range of the fee schedule. IWPUT was designed to assess intra-service work in 90-day global codes with more than 10 times the intra-service time that these codes possess. Additionally, small changes in pre-service or post-service time at this end of the fee schedule can change the IWPUT of an X-ray code by 30-50%. Moreover, time is only measured on surveys in whole integer values, so surveyed physicians are not afforded the opportunity to differentiate between services that take 2.5 minutes and those that take 3.5 minutes. Rather, both of these codes frequently end up at 3 minutes, even though one or the other is clearly more difficult. And that 1 minute differential at 0.16-0.30 RVUs is actually very large. So considering time per view as a ratio falls apart and becomes invalid. Lastly, not all of the X-ray services are performed exclusively by radiology. Times across multiple different X-ray codes vary depending on the surveyed specialties (e.g. podiatry and orthopedics). This inherent variability means time is not a consistent factor for assessment of relativity. Therefore, broad comparisons across different codes or code families within the X-ray modality using only time as a variable are fundamentally flawed.

Number of views:
The number of views in a typical exam is a reasonable way to compare different X-ray codes; however, it is more accurate in ordering the relative value of codes in a family (e.g. spine) than across different body regions. Frequently, the number of views is also a reasonable metric for complexity of an exam in the same body region. For example, a 2-3 view cervical spine is going to be performed on a different patient and for different reasons than a 6-view cervical spine. In a 6-view example, the patient is being assessed during twisting or bending maneuvers so that dynamic joints or instability can be assessed. A 2-3 view cervical spine is more often a patient with isolated symptoms and an unknown diagnosis as opposed to a known complex clinical process like dynamic or post-operative instability.

Body region:
The skeleton can be separated into two different regions; the appendicular skeleton and axial skeleton. Appendicular structures include the appendages like arms, legs, wrists, ankles, hands, feet, and digits. These appendicular structures tend to not have as many overlapping structures on single plane images even though the wrist and ankle are somewhat complex joints. The axial skeleton includes the skull, spine, and pelvis, as well as the chest and abdomen. When interpreting X-rays of axial body parts there are numerous overlapping structures, multiple organ systems, and generally higher risk of consequential injury, especially in the spine. From this standpoint, axial X-ray exams are considered in general to be more difficult to interpret than appendicular X-ray exams, and so should be valued higher for equivalent views or times with few exceptions (e.g. single view intra-operative or post-operative images). To use the example above, a 2-3 view cervical spine is more difficult to interpret and takes more skill than a 2-3 view elbow, and should be valued higher.

Clinical context:
The complexity of X-rays also varies with the clinical indications and typical patient population. An example of this would be the cervical and lumbar spine radiographs. Although the cervical spine may be a more complex anatomic site than the lumbar spine, the typical clinical scenarios these are ordered for contribute to complexity for both of these exams. The cervical spine may be typically ordered in an outpatient setting to assess for osteoarthritis or other arthritic changes. There is a large number of abnormalities found on these X-rays in this patient population. Often, multiple levels within the spinal canal are compromised, as well as multiple facet joints. In addition, patients with rheumatoid arthritis often have atlantoaxial instability, with subluxation of the cervical spine that can lead to neurologic compromise. The sheer number of levels which may be involved in the cervical spine along with complexity of pathology increase the technical skill and judgement. On the other hand, the typical patient population evaluated with a lumbar spine radiograph is trauma in which there is concern for fracture. It is critical for the physician to find the fracture in the acute setting to direct appropriate treatment and workup which results in increased psychological stress.

As expected, services provided in an ER tend to be more stressful and have more potential negative consequences for inaccurate or delayed diagnoses than outpatient X-ray services. However, if a complex disease process is the typical indication for a particular X-ray code, then it is also logical that the required technical skill and intensity of providing that service is higher than for another X-ray code with similar total time or total views performed in a different setting.

Conclusion:
X-ray codes should be assessed using three primary variables: Number of views, body region, and clinical context. Neither time nor IWPUT are useful for the reasons outlined above. The current proposals from the RUC to CMS explicitly address these variables and have ordered the codes appropriately.

No single variable provides enough information to be used to accurately assess relativity within the X-ray modality, rather all three variables used together provide enough information to ensure proper relativity among and within X-ray code families.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

CPT codes 70210 *(Radiologic examination, sinuses, paranasal, less than 3 views)* and 70220 *(Radiologic examination, sinuses, paranasal, complete, minimum of 3 views)* were identified by the CMS/Other Source – Utilization over 30,000 screen. These codes were initially addressed at the April 2018 RUC meeting via a crosswalk methodology approved by the Research Subcommittee. Following review by the Centers for Medicare and Medicaid Services for CY2019, the specialties agreed to survey this family for the January 2019 RUC meeting.

Survey Process

The American College of Radiology randomly surveyed 750 members (a random sample of 375 members and a separate random sample of 375 members who perform radiography, musculoskeletal, or neurointerventional procedures). The American Society of Neuroradiology surveyed a random sample of 1,816 members. The American Academy of Family Physicians surveyed a random sample of 1,000 members.

Compelling Evidence

The societies are requesting compelling evidence for CPT code 70210 to support the proposed work RVU and times. This code is CMS/Other and was previously valued using flawed methodology.

Work RVU Recommendation

The specialties recommend a work RVU of 0.20 for CPT code 70210, which is the 25th percentile survey value.

Time Recommendation

The specialties recommend the median survey times: 1 minute of pre-service time, 3 minutes of intra-service time, and 1 minute of post-service time for CPT code 70210.

Key Reference Services

The most commonly chosen reference codes by survey participants:

- **71046** *(Radiologic examination, chest; 2 views)*, chosen by 29% of respondents, and
- **71101** *(Radiologic examination, ribs, unilateral; including posteroanterior chest, minimum of 3 views)*, chosen by 15% respondents.

CPT code 70210 compares favorably to the two KRS codes, 71046 and 71101. All three codes have similar intra-service and total times, with slightly different work RVUs.

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT
70210	**Radiologic examination,**	**0.20**	**1**	**3**	**1**	**5**	**0.0517**

	sinuses, paranasal, less than 3 views						
71046	Radiologic examination, chest; 2 views	0.22	1	4	1	6	0.0438
71101	Radiologic examination, ribs, unilateral; including posteroanterior chest, minimum of 3 views	0.27	1	5	1	7	0.0450

MPC Codes

The recommended times and value for 70210 compare well with three MPC codes, 92567 *(Tympanometry (impedance testing))*, 70355 *(Orthopantogram (eg, panoramic x-ray))*, and 96401 *(Chemotherapy administration, subcutaneous or intramuscular; non-hormonal anti-neoplastic)*. CPT code 92567 has one more minute of intra-service time, with identical pre and post service times. This code is less intense than 70210 which is accurately reflected in the identical RVUs. Similarly, 70355 is a single view orthopantogram and is less intense work compared to 70210 which is typically 2 views of the paranasal sinuses. 70355 has two more minutes of intra-service time but no pre-service time and has the same RVU as the recommendation for 70210. Chemotherapy administration, 96401, has more pre and post service time but identical intra-service time compared to 70210. 96401 is less intense work and compares well just slightly above the recommended RVU value for 70210.

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT
70210	**Radiologic examination, sinuses, paranasal, less than 3 views**	**0.20**	**1**	**3**	**1**	**5**	**0.0517**
92567	Tympanometry (impedance testing)	0.20	1	4	1	6	0.0388
70355	Orthopantogram (eg, panoramic x-ray)	0.20		5	1	6	0.0355
96401	Chemotherapy administration	0.21	4	3	2	9	0.0252

Summary of Recommendation

Our specialties recommend 0.20 RVUs, with service period times of 1, 3, and 1 minutes for CPT code 70210.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☒ Other reason (please explain) CPT code 70210 is typically billed with an E/M code.

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 70210

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Commonly

Specialty Family Medicine How often? Commonly

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 118413
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by code 70210 provided nationally in a one-year period is estimated to be 118,413.

Specialty Diagnostic Radiology Frequency 38440 Percentage 32.46 %

Specialty Family Medicine Frequency 24610 Percentage 20.78 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 39,471
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please

explain the rationale for this estimate. The specialties estimate that CPT code 70210 will be provided 39,471 times to Medicare patients nationally in a one-year period.

Specialty Diagnostic Radiology Frequency 12815 Percentage 32.46 %

Specialty Family Medicine Frequency 8203 Percentage 20.78 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Imaging

BETOS Sub-classification:
Standard imaging

BETOS Sub-classification Level II:
Musculoskeletal

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 70210

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

Percentage of Survey Respondents who found Vignette to be Typical: 98%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review the reason for the examination and any pertinent clinical history. Review any prior applicable plain film or imaging studies.

Description of Intra-Service Work: Supervise technologist performing the examination. Interpret the examination and compare the findings to previous studies, if applicable. Interpretation includes evaluation of the sinuses for air-fluid levels or opacification, pattern of sinus opacification, erosions and skull abnormalities. Dictate report for the medical record.

Description of Post-Service Work: The final report is reviewed and signed, and findings are communicated to the referring physician as needed.

SURVEY DATA

RUC Meeting Date (mm/yyyy)	01/2019				
Presenter(s):	Kurt Schoppe, MD; Daniel Wessell, MD; Lauren Golding, MD; Gregory Nicola, MD; Melissa Chen, MD, Megan Adamson, MD				
Specialty(s):	American College of Radiology, American Academy of Family Physicians, American Society of Neuroradiology				
CPT Code:	70220				
Sample Size:	3566	**Resp N:**	41	**Response:** 1.1 %	
Description of Sample:	The ACR surveyed a total of 750 members (a random sample of 375 members and a separate random sample of 375 members who perform radiography, musculoskeletal, or neurointerventional procedures). The ASNR surveyed a random sample of 1,816 members. The AAFP surveyed a random sample of 1,000 members.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	29%	57%	14%	0%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	14%	71%	14%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	29%	43%	29%
Physical effort required	14%	86%	0%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	29%	57%	14%

2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	71%	14%	14%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	14%	57%	29%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	57%	43%
Physical effort required	0%	86%	14%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	14%	43%	43%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

CPT codes 70210 *(Radiologic examination, sinuses, paranasal, less than 3 views)* and 70220 *(Radiologic examination, sinuses, paranasal, complete, minimum of 3 views)* were identified by the CMS/Other Source – Utilization over 30,000 screen. These codes were initially addressed at the April 2018 RUC meeting via a crosswalk methodology approved by the Research Subcommittee. Following review by the Centers for Medicare and Medicaid Services for CY2019, the specialties agreed to survey this family for the January 2019 RUC meeting.

Survey Process

The American College of Radiology randomly surveyed 750 members (a random sample of 375 members and a separate random sample of 375 members who perform radiography, musculoskeletal, or neurointerventional procedures). The American Society of Neuroradiology surveyed a random sample of 1,816 members. The American Academy of Family Physicians surveyed a random sample of 1,000 members.

Work RVU Recommendation

The specialties recommend a work RVU of 0.22 for CPT code 70220, which is the 25th percentile survey value. This is reduction in value from 0.25 work RVU.

Time Recommendation

The specialties recommend median survey times of 1 minute of pre-service time, 4 minutes of intra-service time, and 1 minute of post-service for CPT code 70220.

Key Reference Services

The most commonly chosen reference codes by survey participants:

- **71046** *(Radiologic examination, chest; 2 views)*, chosen by 17% of respondents, and
- **71101** *(Radiologic examination, ribs, unilateral; including posteroanterior chest, minimum of 3 views)*, chosen by 17% respondents.

CPT code 70220 compares favorably to the two KRS codes, 71046 and 71101. All three codes have similar or identical intra-service and total times, with slightly different work RVUs and IWPUTs.

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT
70220	**Radiologic examination, sinuses, paranasal, complete, minimum of 3 views**	**0.22**	**1**	**4**	**1**	**6**	**0.0438**
71046	Radiologic examination, chest; 2 views	0.22	1	4	1	6	0.0438
71101	Radiologic examination, ribs, unilateral; including posteroanterior chest, minimum of 3 views	0.27	1	5	1	7	0.0450

MPC Code

The recommended times and value for 70220 compare well with 72081 *(Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); one view)* and 93922 *(Limited bilateral noninvasive physiologic studies of upper or lower extremity arteries, (eg, for lower extremity: ankle/brachial indices at distal posterior tibial and anterior tibial/dorsalis pedis arteries plus bidirectional, Doppler waveform recording and analysis at 1-2 levels, or ankle/brachial indices at distal posterior tibial and anterior tibial/dorsalis pedis arteries plus volume plethysmography at 1-2 levels, or ankle/brachial indices at distal posterior tibial and anterior tibial/dorsalis pedis arteries with, transcutaneous oxygen tension measurement at 1-2 levels))*. 70220 has one minute less intra-service time and four minutes less total time than 93922, and accounting for the lower intensity of work associated with 93922, the recommended RVU of 0.22 for 70220 compares well with 0.25 RVU for 93922. With one minute more intra-service time and identical intensity, 0.26 RVU for 72081 compares well with the 0.22 recommended RVU for 70220.

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT
70220	**Radiologic examination, sinuses, paranasal, complete, minimum of 3 views**	**0.22**	**1**	**4**	**1**	**6**	**0.0438**
93922	Limited bilateral noninvasive physiologic studies of upper or lower extremity arteries	0.25	3	5	2	10	0.0276
72081	X-ray spine (scoliosis eval); one view	0.26	1	5	1	7	0.0430

Summary of Recommendation

The specialties recommend 0.22 RVUs, with service period times of 1, 4, and 1 minutes for CPT code 70220.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☒ Other reason (please explain) CPT code 70220 is typically billed with an E/M code.

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 70220

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Commonly

Specialty Family Medicine How often? Commonly

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 209880
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by code 70220 provided nationally in a one-year period is estimated to be 209,880.

Specialty Diagnostic Radiology Frequency 126675 Percentage 60.35 %

Specialty Family Medicine Frequency 25506 Percentage 12.15 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 69,960
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The specialties estimate that CPT code 70220 will be provided 69,960 times to Medicare patients nationally in a one-year period.

Specialty Diagnostic Radiology Frequency 42225 Percentage 60.35 %

Specialty Family Medicine Frequency 8500 Percentage 12.14 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment
Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Imaging

BETOS Sub-classification:
Standard imaging

BETOS Sub-classification Level II:
Musculoskeletal

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 70220

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

CPT Code: 70210, 70220
Specialty Society: ACR, ASNR, AAFP

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Non Facility Direct Practice Expense (PE) Inputs

CPT Long Descriptor:

70210	Radiologic examination, sinuses, paranasal, less than 3 views
70220	Radiologic examination, sinuses, paranasal, complete, minimum of 3 views

Global Period: XXX Meeting Date: January 2019

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   The American College of Radiology (ACR), American Society of Neuroradiology (ASNR), and American Academy of Family Physicians (AAFP) convened a consensus panel to finalize the practice expense data for the X-Ray exam sinuses code family, CPT codes 70210 and 70220.

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code.** You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here:

   The societies included the existing PE inputs for codes 70210 and 70220 on the spreadsheet to serve as a reference.

3. Is this code(s) typically billed with an E/M service?
   Is this code(s) typically billed with the E/M service in the nonfacility?
   (Please see provided data in PE Subcommittee folder)

   CPT code 70210 is typically billed with an E/M.
   Both CPT codes 70210 and 70220 are typically billed with an E/M in the nonfacility.

4. What specialty is the dominant provider in the nonfacility?
   What percent of the time does the dominant provider provide the service(s) in the nonfacility?
   Is the dominant provider in the nonfacility different then for the global?

	Nonfacility		Global	
70210	FAMILY MEDICINE	30%	DIAGNOSTIC RADIOLOGY	33%
70220	DIAGNOSTIC RADIOLOGY	25%	DIAGNOSTIC RADIOLOGY	60%

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:
   N/A

6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), you must provide compelling evidence. Please explain if the increase can be entirely accounted for because of an increase in physician time.
   N/A

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here:
   N/A

8. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? (please use this time rather than 5 minutes in your reference code)
   The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

9. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

   Bring patient into x-ray room and have patient sit/lie on x-ray table or stand as appropriate. Place first cassette behind patient's head. Position patient's anatomy for the frontal sinus (PA Waters) view. Step behind shielding to control panel. Set appropriate exposure parameters. Instruct patient to hold still. Take exposure for first view. Step from behind shielding. Take first cassette from behind patient and place second cassette as needed. Position patient's anatomy for lateral sinus view. Step behind shielding to control panel. Set appropriate exposure parameters. Instruct patient to hold still. Take exposure for second view. Step from behind shielding. Take second cassette out behind patient. The above steps are repeated for any additional views to be obtained (typical additional views would be modified Waters and AP). All cassettes are then taken to the image reader. Run all cassettes through reader. Check all images for adequate exposure, positioning, coverage, etc. Repeat any views as needed.

10. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.
    N/A

11. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities:
    N/A

12. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.
    N/A

13. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here:
    N/A

14. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here:
    N/A

15. List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here:

    - **Technologist PACS Workstation Proxy (ED050)** –PACS formula; Equals total service period time
    - **Professional PACS Workstation (ED053)** – Equals physician work intra time + 1/2 physician work pre-time
    - **Room, basic radiology (EL012)** – Highly technical formula

16. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here:
    The following clinical staff times were increased to the standard/baseline minutes:
    - CA013 – Prepare room, equipment, and supplies (2 mins is standard)
    - CA016 – Prepare, set up and start IV, initial positioning and monitoring of patient (2 mins is standard)
    - CA024 – Clean room/equipment by clinical staff (3 mins is standard)
    - CA030 **–** Technologist QC's images in PACS, checking for all images, reformats, and dose page (2 mins is baseline)
    - CA031 – Review examination with interpreting MD/DO (2 mins is baseline)
    - CA032 – Scan exam documents into PACS. Complete exam in RIS system to populate images into work queue. (1 min is baseline)

17. If there is any other item on your spreadsheet that needs further explanation please include here:
    N/A

18. Please include an explanation of each line item:
    N/A

AMA/Specialty Society RVS Update Committee Summary of Recommendations
NPRM for 2019

January 2019

X-Ray Exam – Skull – Tab 25

In October 2017, the RAW requested that AMA staff compile a list of CMS/Other codes with Medicare utilization of 30,000 or more. CPT code 70250 was identified by this screen and CPT code 70260 was added as part of the family. In January 2018, the RUC recommended to crosswalk these services like other recent similar radiology recommendations for April 2018. The RUC used a similar cross-walking methodology as it did for CY 2019 codes that were rejected in the NRPM for 2019, for seven X-ray codes that were reviewed at the April 2018 meeting for CY 2020. (CPT codes 70210, 70220, 70250, 70260, 70360, 72170 and 72190). The RUC requested that the specialties survey these seven services and review them again at the January 2019 RUC meeting (CY 2020 cycle).

70250 ***Radiologic examination, skull; less than 4 views***
The RUC reviewed the survey results from 43 radiologists and determined that the survey 25th percentile work RVU of 0.20 accurately reflects the physician work necessary for this service and falls below the existing value. The RUC recommends 1 minute pre-service time, 3 minutes intra-service time, and 1 minute immediate post-service time.

The RUC compared CPT code 70250 to both the top key reference service 71046 *Radiologic examination, chest; 2 views* (work RVU = 0.22, 4 minutes intra-service time) and the second highest key reference service 73562 *Radiologic examination, knee; 3 views* (work RVU = 0.18, 4 minutes intra-service time) and agreed that these codes appropriately bracket the survey code. The RUC noted that the intra-service time for the survey code is one minute less with a slightly lower RVU and thus is appropriately valued relative to the chest X-ray reference code. In comparison to code 73562, the survey code has one minute less intra-service time and the physician work is more intense due to the complexity of the anatomy being studied. The survey code involves an axial structure, as opposed to the knee, with many overlapping structures in the skull and skull base, thus the complexity and technical skill is slightly higher than for the knee. The survey code is appropriately valued higher than the second KRS and other X-ray codes valued at 0.18 due to the greater complexity reflected clinically in the work required for the study of the skull. For additional support, the RUC compared CPT code 70250 to MPC code 70355 *Orthopantogram (eg, panoramic x-ray)* (work RVU = 0.20, 5 minutes intra-service time), which is also the third-highest chosen key reference service, and noted that the codes have similar total time and identical amount of physician work.

The RUC concluded that CPT code 70250 should be valued at the 25th percentile work RVU as supported by the survey. **The RUC recommends a work RVU of 0.20 for CPT code 70250.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

70260 ***Radiologic examination, skull; complete, minimum of 4 views***
The RUC reviewed the survey results from 43 radiologists and determined that the survey 25th percentile work RVU of 0.29 accurately reflects the physician work necessary for this service and is lower than the current value. The RUC recommends 1 minute pre-service time, 4 minutes intra-service time, and 1 minute immediate post-service time.

The RUC compared CPT code 70260 to the second highest key reference code 73522 *Radiologic examination, hips, bilateral, with pelvis when performed; 3-4 views* (work RVU = 0.29, 5 minutes intra-service time) and noted that the intra-service time for the survey code is one minute less and the physician work is more intense due to the complexity of the anatomy being studied. The RUC also compared CPT code 70260 to MPC code 72081 *Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); one view* (work RVU = 0.26, 5 minutes intra-service time) and noted similarly that the intra-service time for the survey code is one minute less and the physician work is more intense due to the complexity of the anatomy being studied and the greater number of views, therefore the survey code is appropriately valued higher than the comparison code.

To further justify a work RVU of 0.29, the RUC compared the survey code to CPT code 71047 *Radiologic examination, chest; 3 views* (work RVU = 0.27, 4 minutes intra-service time) and CPT code 74021 *Radiologic examination, abdomen; 3 or more views* (work RVU = 0.27, 4 minutes intra-service time) and noted that although these services have identical service times, the survey code involves a slightly greater intensity of physician work, due to the greater number of views and greater complexity of the skull study, supporting a higher valuation.

The RUC concluded that CPT code 70260 should be valued at the 25th percentile work RVU as supported by the survey. **The RUC recommends a work RVU of 0.29 for CPT code 70260.**

Practice Expense
These services were reviewed and approved by the PE Subcommittee in April 2018. **The RUC recommends the direct practice expense inputs as affirmed by the Practice Expense Subcommittee.**

Work Neutrality
The RUC's recommendation for this code will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
70250	Radiologic examination, skull; less than 4 views	XXX	0.20
70260 **(f)**	Radiologic examination, skull; complete, minimum of 4 views	XXX	0.29

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Specialty Society Additional Rationale
X-Ray Valuation - Principles

The absolute RVUs of individual codes within the X-ray modality are relatively small; however, there are important differences comparing across these codes and code families that are important to consider when assessing their relative value within the modality and the larger fee schedule.

The codes within the X-ray modality cannot be placed in a simple ascending order, but rather should be placed on a spectrum with consideration to three primary variables:
1. **Number of views**
2. **Body area**
3. **Clinical context** (pathology and patient population)

What should not be considered when valuing the X-ray codes are derived measures of work and intensity. For example, IWPUT was not designed to accurately measure intensity at this range of the fee schedule. IWPUT was designed to assess intra-service work in 90-day global codes with more than 10 times the intra-service time that these codes possess. Additionally, small changes in pre-service or post-service time at this end of the fee schedule can change the IWPUT of an X-ray code by 30-50%. Moreover, time is only measured on surveys in whole integer values, so surveyed physicians are not afforded the opportunity to differentiate between services that take 2.5 minutes and those that take 3.5 minutes. Rather, both of these codes frequently end up at 3 minutes, even though one or the other is clearly more difficult. And that 1 minute differential at 0.16-0.30 RVUs is actually very large. So considering time per view as a ratio falls apart and becomes invalid. Lastly, not all of the X-ray services are performed exclusively by radiology. Times across multiple different X-ray codes vary depending on the surveyed specialties (e.g. podiatry and orthopedics). This inherent variability means time is not a consistent factor for assessment of relativity. Therefore, broad comparisons across different codes or code families within the X-ray modality using only time as a variable are fundamentally flawed.

Number of views:
The number of views in a typical exam is a reasonable way to compare different X-ray codes; however, it is more accurate in ordering the relative value of codes in a family (e.g. spine) than across different body regions. Frequently, the number of views is also a reasonable metric for complexity of an exam in the same body region. For example, a 2-3 view cervical spine is going to be performed on a different patient and for different reasons than a 6-view cervical spine. In a 6-view example, the patient is being assessed during twisting or bending maneuvers so that dynamic joints or instability can be assessed. A 2-3 view cervical spine is more often a patient with isolated symptoms and an unknown diagnosis as opposed to a known complex clinical process like dynamic or post-operative instability.

Body region:
The skeleton can be separated into two different regions; the appendicular skeleton and axial skeleton. Appendicular structures include the appendages like arms, legs, wrists, ankles, hands, feet, and digits. These appendicular structures tend to not have as many overlapping structures on single plane images even though the wrist and ankle are somewhat complex joints. The axial skeleton includes the skull, spine, and pelvis, as well as the chest and abdomen. When interpreting X-rays of axial body parts there are numerous overlapping structures, multiple organ systems, and generally higher risk of consequential injury, especially in the spine. From this standpoint, axial X-ray exams are considered in general to be more difficult to interpret than appendicular X-ray exams, and so should be valued higher for equivalent views or times with few exceptions (e.g. single view intra-operative or post-operative images). To use the example above, a 2-3 view cervical spine is more difficult to interpret and takes more skill than a 2-3 view elbow, and should be valued higher.

Clinical context:
The complexity of X-rays also varies with the clinical indications and typical patient population. An example of this would be the cervical and lumbar spine radiographs. Although the cervical spine may be a more complex anatomic site than the lumbar spine, the typical clinical scenarios these are ordered for contribute to complexity for both of these exams. The cervical spine may be typically ordered in an outpatient setting to assess for osteoarthritis or other arthritic changes. There is a large number of abnormalities found on these X-rays in this patient population. Often, multiple levels within the spinal canal are compromised, as well as multiple facet joints. In addition, patients with rheumatoid arthritis often have atlantoaxial instability, with subluxation of the cervical spine that can lead to neurologic compromise. The sheer number of levels which may be involved in the cervical spine along with complexity of pathology increase the technical skill and judgement. On the other hand, the typical patient population evaluated with a lumbar spine radiograph is trauma in which there is concern for fracture. It is critical for the physician to find the fracture in the acute setting to direct appropriate treatment and workup which results in increased psychological stress.

As expected, services provided in an ER tend to be more stressful and have more potential negative consequences for inaccurate or delayed diagnoses than outpatient X-ray services. However, if a complex disease process is the typical indication for a particular X-ray code, then it is also logical that the required technical skill and intensity of providing that service is higher than for another X-ray code with similar total time or total views performed in a different setting.

Conclusion:
X-ray codes should be assessed using three primary variables: Number of views, body region, and clinical context. Neither time nor IWPUT are useful for the reasons outlined above. The current proposals from the RUC to CMS explicitly address these variables and have ordered the codes appropriately.

No single variable provides enough information to be used to accurately assess relativity within the X-ray modality, rather all three variables used together provide enough information to ensure proper relativity among and within X-ray code families.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:70250 Tracking Number

Original Specialty Recommended RVU: **0.20**
Presented Recommended RVU: **0.20**
RUC Recommended RVU: **0.20**

Global Period: XXX Current Work RVU: **0.24**

CPT Descriptor: Radiologic examination, skull; less than 4 views

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 75-year-old woman with abrasion to scalp with concern for retained foreign objects.

Percentage of Survey Respondents who found Vignette to be Typical: 86%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review the reason for the examination and any pertinent clinical history. Review any prior applicable plain film or imaging studies.

Description of Intra-Service Work: Supervise technologist performing the examination. Interpret the examination and compare the findings to previous studies, if applicable. Interpretation includes evaluation of the cranial sutures, bones and soft tissues. Assess the integrity and morphology of the bones. Evaluate for foreign bodies. Assess shunt position and settings, if present. Dictate report for the medical record.

Description of Post-Service Work: The final report is reviewed and signed, and findings are communicated to the referring physician as needed.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	38%	63%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	13%	50%	38%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	13%	88%	0%
Physical effort required	0%	75%	25%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	13%	50%	38%

2nd Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	0%	100%	0%	0%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	20%	80%	0%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	0%	100%	0%
Physical effort required	0%	100%	0%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	100%	0%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

The X-ray skull CPT code 70250 *(Radiologic examination, skull; less than 4 views)* was identified by the CMS/Other Source – Utilization over 30,000 screen. The family was expanded to include CPT code 70260 *(Radiologic examination, skull; complete, minimum of 4 views).*
This code family was initially addressed at the April 2018 RUC meeting via a crosswalk methodology approved by the Research Subcommittee. Following review by the Centers for Medicare and Medicaid Services for CY2019, the specialties agreed to survey this family for the January 2019 RUC meeting.

Survey Process

The American College of Radiology randomly surveyed 1,750 members (a random sample of 875 members and a separate random sample of 875 members who perform radiography, musculoskeletal, or neurointerventional procedures). The American Society of Neuroradiology surveyed a random sample of 1,818 members.

Work RVU recommendation

The specialties recommend the 25th percentile survey work RVU of 0.20 for CPT code 70250, which is lower than the current value of 0.24 work RVU.

Time Recommendation

The specialties recommend the median survey times: 1 minute of pre-service time, 3 minutes of intra service time, and 1 minute of post service time for CPT code 70250.

Key Reference Services

The most commonly chosen reference codes by survey participants are:

- **71046** *(Radiologic examination, chest; 2 views)*, chosen by 19% of respondents,
- **73562** *(Radiologic examination, knee; 3 views*), chosen by 12% of respondents, and
- **70355** *(Orthopantogram (eg, panoramic x-ray))*, chosen by 9% of respondents.

Our recommended work RVU of 0.20 compares well to the two most commonly chosen key reference services, falling equidistant between 71046 *(Radiologic examination, chest; 2 views)* and 73562 *(Radiologic examination, knee; 3 views*). CPT code 70250 has a near identical intra-service time to the comparison studies, varying by only one minute, and a slightly higher IWPUT than the comparisons due to the complexity of the anatomy being studied. Moreover, the patient population for 70250 tends to be more complex than those in the KRS, as 70250 is typically performed in a hospital setting. CPT code 70250 also compares well to the third KRS, 70355 *(Orthopantogram (eg, panoramic x-ray))*, which has a similar total time and identical work RVU.

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT
73562	Radiologic examination, knee; 3 views	0.18	1	4	1	6	0.0338
70250	**Radiologic examination, skull; less than 4 views**	**0.20**	**1**	**3**	**1**	**5**	**0.0517**
70355	Orthopantogram (eg, panoramic x-ray)	0.20		5	1	6	0.0355
71046	Radiologic examination, chest; 2 views	0.22	1	4	1	6	0.0438

MPC Codes

CPT code 70250 compares well to two MPC codes, 70355 *(Orthopantogram (eg, panoramic x-ray))*, which is also the third-highest chosen key reference code, and 92567 *(Tympanometry (impedance testing))*. CPT codes 70250, 70355, and 92567 all have similar total times and identical work RVUs.

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT
70250	**Radiologic examination, skull; less than 4 views**	**0.20**	**1**	**3**	**1**	**5**	**0.0517**
92567	Tympanometry (impedance testing)	0.20	1	4	1	6	0.0388
70355	Orthopantogram (eg, panoramic x-ray)	0.20		5	1	6	0.0355

Summary of Recommendations

Our specialties recommend the 25th percentile survey value of 0.20 RVU, which is lower than the current value of 0.24 RVU, with service period times of 1, 3, and 1 minutes for CPT code 70250.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 70250

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 139430
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The service described by CPT code 70250 is estimated to be provided 139,430 times nationally in a one-year period.

Specialty Diagnostic Radiology Frequency 99755 Percentage 71.54 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 46,475
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The service described by CPT code 70250 is estimated to be provided 46,475 times nationally in a one-year period to Medicare patients.

Specialty Diagnostic Radiology Frequency 33250 Percentage 71.54 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment
Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Imaging

BETOS Sub-classification:
Standard imaging

BETOS Sub-classification Level II:
Musculoskeletal

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 70250

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

Global Period: XXX Current Work RVU: **0.34** RUC Recommended RVU: **0.29**

CPT Descriptor: Radiologic examination, skull; complete, minimum of 4 views

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 76-year-old woman with shunt with need to assess shunt placement and settings.

Percentage of Survey Respondents who found Vignette to be Typical: 86%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review the reason for the examination and any pertinent clinical history. Review any prior applicable plain film or imaging studies.

Description of Intra-Service Work: Supervise technologist performing the examination. Interpret the examination and compare the findings to previous studies, if applicable. Interpretation includes evaluation of the cranial sutures, bones and soft tissues. Assess the integrity and morphology of the bones. Evaluate for foreign bodies. Assess shunt position and settings, if present. Dictate report for the medical record.

Description of Post-Service Work: The final report is reviewed and signed, and findings are communicated to the referring physician as needed.

• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	50%	50%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

The X-ray skull CPT code 70250 *(Radiologic examination, skull; less than 4 views)* was identified by the

CMS/Other Source – Utilization over 30,000 screen. The family was expanded to include CPT code 70260 *(Radiologic examination, skull; complete, minimum of 4 views).* This code family was initially addressed at the April 2018 RUC meeting via a crosswalk methodology approved by the Research Subcommittee. Following review by the Centers for Medicare and Medicaid Services for CY2019, the specialties agreed to survey this family for the January 2019 RUC meeting.

Survey Process

The American College of Radiology randomly surveyed 1,750 members (a random sample of 875 members and a separate random sample of 875 members who perform radiography, musculoskeletal, or neurointerventional procedures). The American Society of Neuroradiology surveyed a random sample of 1,818 members.

Work RVU recommendation

The specialties recommend the 25th percentile survey work RVU of 0.29 for CPT code 70260, which is lower than the current value of 0.34 work RVU.

Time Recommendation

The specialties recommend the survey median intra- and post-service times of 4 minutes and 1 minute, respectively. We recommend 1 minute of pre-service time, which is a reduction from the survey median time, but is typical for recently-reviewed X-ray procedures. This is a total recommended time of 6 minutes (1 pre, 4 intra, 1 post) for CPT code 70260.

Key Reference Services

The most commonly chosen reference codes by survey participants are:

- **72083** *(Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); 4 or 5 views),* chosen by 21% of respondents, and
- **73522** *(Radiologic examination, hips, bilateral, with pelvis when performed; 3-4 views),* chosen by 14% of respondents.

Our recommended work RVU of 0.29 compares well to the most commonly chosen key reference services, with a value below that of 72083 *(Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); 4 or 5 views)* and identical to 73522 *(Radiologic examination, hips, bilateral, with pelvis when performed; 3-4 views).* The IWPUT for 72060 is slightly higher than both KRS due to the complexity of the anatomy being studied. Moreover, the patient population for 70260 tends to be more complex than those in the KRS, as 70260 is typically performed in a hospital setting.

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT
70260	**Radiologic examination, skull; complete, minimum of 4 views**	**0.29**	**1**	**4**	**1**	**6**	**0.0613**
73522	Radiologic examination, hips, bilateral, with pelvis when performed; 3-4 views	0.29	1	5	1	7	0.0490
72083	Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); 4 or 5	0.35	1	7	1	9	0.0436

	views						

MPC Code

Our proposed MPC code, 72081 *(Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); one view)*, has similar intra-service time and slightly lower work RVU, which is appropriate given the fewer views compared with 70260.

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT
72081	Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); one view	0.26	1	5	1	7	0.0430
70260	**Radiologic examination, skull; complete, minimum of 4 views**	**0.29**	**1**	**4**	**1**	**6**	**0.0613**

Summary of Recommendations

Our specialties recommend the 25th percentile survey value of 0.29 RVUs, which is lower than the current value of 0.34 RVU, with service period times of 1, 4, and 1 minutes for CPT code 70260.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 10,830
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The service described by CPT code 70260 is estimated to be provided 10,830 times nationally in a one-year period to Medicare patients.

Specialty Diagnostic Radiology Frequency 8275 Percentage 76.40 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Imaging

BETOS Sub-classification:
Standard imaging

BETOS Sub-classification Level II:
Musculoskeletal

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 70260

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

CPT Code: 70250, 70260
Specialty Society: ACR, ASNR

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Non Facility Direct Practice Expense (PE) Inputs

CPT Long Descriptor:

70250	Radiologic examination, skull; less than 4 views
70260	Radiologic examination, skull; complete, minimum of 4 views

Global Period: XXX Meeting Date: January 2019

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   The American College of Radiology (ACR) and American Society of Neuroradiology (ASNR) convened a consensus panel to finalize the practice expense data for the X-ray exam skull code family, CPT codes 70250 and 70260.

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code.** You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here:

   The societies included the existing PE inputs for codes 70250 and 70260 on the spreadsheet to serve as a reference.

3. Is this code(s) typically billed with an E/M service?
   Is this code(s) typically billed with the E/M service in the nonfacility?
   (Please see provided data in PE Subcommittee folder)

   These codes are not typically billed with an E/M service in the nonfacility or in the global.

4. What specialty is the dominant provider in the nonfacility?
   What percent of the time does the dominant provider provide the service(s) in the nonfacility?
   Is the dominant provider in the nonfacility different then for the global?
   (Please see provided data in PE Subcommittee folder)

	Nonfacility		Global	
70250	PORTABLE XRAY SUPPLIER	48%	DIAGNOSTIC RADIOLOGY	72%
70260	DIAGNOSTIC RADIOLOGY	42%	DIAGNOSTIC RADIOLOGY	76%

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:
   N/A

6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), you must provide compelling evidence. Please explain if the increase can be entirely accounted for because of an increase in physician time.
   N/A

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here:
   N/A

8. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? (please use this time rather than 5 minutes in your reference code)
   The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here: We are not requesting time for obtaining vital signs.

9. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

   Bring patient into x-ray room and have patient sit/lie on x-ray table or stand as appropriate. Place first cassette behind patient's skull. Position patient's anatomy for the AP skull (Towne) view. Step behind shielding to control panel. Set appropriate exposure parameters. Instruct patient to hold still. Take exposure for first view. Step from behind shielding. Take first cassette from behind patient and place second cassette as needed. Position patient's anatomy for lateral skull view. Step behind shielding to control panel. Set appropriate exposure parameters. Instruct patient to hold still. Take exposure for second view. Step from behind shielding. Take second cassette out behind patient. The above steps are repeated for any additional views to be obtained (typical additional views would be PA Caldwell and submentovertex). All cassettes are then taken to the image reader. Run all cassettes through reader. Check all images for adequate exposure, positioning, coverage, etc. Repeat any views as needed.

10. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.
    N/A

11. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities:
    N/A

12. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.
    N/A

13. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here:
    N/A

14. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here:
    N/A

15. List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here:
    - **Technologist PACS Workstation Proxy (ED050)** –PACS formula; Equals total service period time
    - **Professional PACS Workstation (ED053)** – Equals physician work intra time + 1/2 physician work pre-time
    - **Room, basic radiology (EL012)** – Highly technical formula

16. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here:
    The following clinical staff times were increased to the standard/baseline minutes:
    - CA013 – Prepare room, equipment, and supplies (2 mins is standard)
    - CA016 – Prepare, set up and start IV, initial positioning and monitoring of patient (2 mins is standard)
    - CA024 – Clean room/equipment by clinical staff (3 mins is standard)
    - CA030 **–** Technologist QC's images in PACS, checking for all images, reformats, and dose page (2 mins is baseline)
    - CA031 – Review examination with interpreting MD/DO (2 mins is baseline)
    - CA032 – Scan exam documents into PACS. Complete exam in RIS system to populate images into work queue. (1 min is baseline)

17. If there is any other item on your spreadsheet that needs further explanation please include here:
    N/A

17. Please include an explanation of each line item:
    N/A

AMA/Specialty Society RVS Update Committee Summary of Recommendations
NPRM for 2019

January 2019

X-Ray Exam – Neck – Tab 26

In October 2017, the RAW requested that AMA staff compile a list of CMS/Other codes with Medicare utilization of 30,000 or more. In January 2018, the RUC recommended to crosswalk these services like other recent similar radiology recommendations for April 2018. The RUC used a similar cross-walking methodology as it did for CY 2019 codes that were rejected in the NRPM for 2019, for seven X-ray codes that were reviewed at the April 2018 meeting for CY 2020. (CPT codes 70210, 70220, 70250, 70260, 70360, 72170 and 72190). The RUC requested that the specialties survey these seven services and review them again at the January 2019 RUC meeting (CY 2020 cycle).

Compelling Evidence
The specialty societies presented compelling evidence based on flawed methodology. CPT code 70360 is CMS/Other sourced as identified by the screen. Therefore, how the times and values were established is unknown or flawed. The RUC accepted compelling evidence for this code based on flawed methodology.

70360 ***Radiologic examination; neck, soft tissue***
The RUC reviewed the survey results from 64 radiologists and family physicians and determined that the survey 25th percentile work RVU of 0.20 accurately reflects the physician work necessary for this service. CPT code 70360 is an X-ray procedure used to assess the airway and soft tissues of the neck, with potential evaluation of foreign bodies. A 2-view exam is typical. The RUC recommends 1 minute pre-service time, 3 minutes intra-service time, and 1 minute immediate post-service time.

The RUC compared CPT code 70360 to the top key reference service 71046 *Radiologic examination, chest; 2 views* (work RVU = 0.22, 4 minutes intra-service time) and noted that the intra-service time for the survey code is one minute less and the complexity in evaluating structures of the neck (esophagus, trachea, cervical skeleton, epiglottis, sinuses, cervical spine, etc.) on two views is comparable to the evaluation of the thoracic structures (heart, lung, mediastinum, pleura, thoracic spine, etc.) on two views (PA and lateral) if not slightly more intense, justifying the slightly higher value for the survey code. The RUC also compared CPT code 70360 to CPT code 73562 *Radiologic examination, knee; 3 views* (work RVU = 0.18, 4 minutes intra-service time) and noted that the anatomic region of the knee is less complex than the neck, where subtle soft tissue findings may be a clue to underlying pathology such as airway compromise, therefore the survey code involves a slightly greater intensity of physician work, supporting a higher valuation.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

For additional support, the RUC compared CPT code 70360 to CPT code 74018 *Radiologic examination, abdomen; 1 view* (work RVU = 0.18, 3 minutes intra-service time, 5 minutes total time) and noted that both studies have identical intra-service and total times, while the survey code has more views and is more intense. The RUC concluded that CPT code 70360 should be valued at the 25th percentile work RVU as supported by the survey. **The RUC recommends a work RVU of 0.20 for CPT code 70360.**

Practice Expense

These services were reviewed and approved by the PE Subcommittee in October 2018. **The RUC recommends the direct practice expense inputs as affirmed by the Practice Expense Subcommittee.**

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
70360	Radiologic examination; neck, soft tissue	XXX	0.20

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Specialty Society Additional Rationale
X-Ray Valuation - Principles

The absolute RVUs of individual codes within the X-ray modality are relatively small; however, there are important differences comparing across these codes and code families that are important to consider when assessing their relative value within the modality and the larger fee schedule.

The codes within the X-ray modality cannot be placed in a simple ascending order, but rather should be placed on a spectrum with consideration to three primary variables:
1. **Number of views**
2. **Body area**
3. **Clinical context** (pathology and patient population)

What should not be considered when valuing the X-ray codes are derived measures of work and intensity. For example, IWPUT was not designed to accurately measure intensity at this range of the fee schedule. IWPUT was designed to assess intra-service work in 90-day global codes with more than 10 times the intra-service time that these codes possess. Additionally, small changes in pre-service or post-service time at this end of the fee schedule can change the IWPUT of an X-ray code by 30-50%. Moreover, time is only measured on surveys in whole integer values, so surveyed physicians are not afforded the opportunity to differentiate between services that take 2.5 minutes and those that take 3.5 minutes. Rather, both of these codes frequently end up at 3 minutes, even though one or the other is clearly more difficult. And that 1 minute differential at 0.16-0.30 RVUs is actually very large. So considering time per view as a ratio falls apart and becomes invalid. Lastly, not all of the X-ray services are performed exclusively by radiology. Times across multiple different X-ray codes vary depending on the surveyed specialties (e.g. podiatry and orthopedics). This inherent variability means time is not a consistent factor for assessment of relativity. Therefore, broad comparisons across different codes or code families within the X-ray modality using only time as a variable are fundamentally flawed.

Number of views:
The number of views in a typical exam is a reasonable way to compare different X-ray codes; however, it is more accurate in ordering the relative value of codes in a family (e.g. spine) than across different body regions. Frequently, the number of views is also a reasonable metric for complexity of an exam in the same body region. For example, a 2-3 view cervical spine is going to be performed on a different patient and for different reasons than a 6-view cervical spine. In a 6-view example, the patient is being assessed during twisting or bending maneuvers so that dynamic joints or instability can be assessed. A 2-3 view cervical spine is more often a patient with isolated symptoms and an unknown diagnosis as opposed to a known complex clinical process like dynamic or post-operative instability.

Body region:
The skeleton can be separated into two different regions; the appendicular skeleton and axial skeleton. Appendicular structures include the appendages like arms, legs, wrists, ankles, hands, feet, and digits. These appendicular structures tend to not have as many overlapping structures on single plane images even though the wrist and ankle are somewhat complex joints. The axial skeleton includes the skull, spine, and pelvis, as well as the chest and abdomen. When interpreting X-rays of axial body parts there are numerous overlapping structures, multiple organ systems, and generally higher risk of consequential injury, especially in the spine. From this standpoint, axial X-ray exams are considered in general to be more difficult to interpret than appendicular X-ray exams, and so should be valued higher for equivalent views or times with few exceptions (e.g. single view intra-operative or post-operative images). To use the example above, a 2-3 view cervical spine is more difficult to interpret and takes more skill than a 2-3 view elbow, and should be valued higher.

Clinical context:
The complexity of X-rays also varies with the clinical indications and typical patient population. An example of this would be the cervical and lumbar spine radiographs. Although the cervical spine may be a more complex anatomic site than the lumbar spine, the typical clinical scenarios these are ordered for contribute to complexity for both of these exams. The cervical spine may be typically ordered in an outpatient setting to assess for osteoarthritis or other arthritic changes. There is a large number of abnormalities found on these X-rays in this patient population. Often, multiple levels within the spinal canal are compromised, as well as multiple facet joints. In addition, patients with rheumatoid arthritis often have atlantoaxial instability, with subluxation of the cervical spine that can lead to neurologic compromise. The sheer number of levels which may be involved in the cervical spine along with complexity of pathology increase the technical skill and judgement. On the other hand, the typical patient population evaluated with a lumbar spine radiograph is trauma in which there is concern for fracture. It is critical for the physician to find the fracture in the acute setting to direct appropriate treatment and workup which results in increased psychological stress.

As expected, services provided in an ER tend to be more stressful and have more potential negative consequences for inaccurate or delayed diagnoses than outpatient X-ray services. However, if a complex disease process is the typical indication for a particular X-ray code, then it is also logical that the required technical skill and intensity of providing that service is higher than for another X-ray code with similar total time or total views performed in a different setting.

Conclusion:
X-ray codes should be assessed using three primary variables: Number of views, body region, and clinical context. Neither time nor IWPUT are useful for the reasons outlined above. The current proposals from the RUC to CMS explicitly address these variables and have ordered the codes appropriately.

No single variable provides enough information to be used to accurately assess relativity within the X-ray modality, rather all three variables used together provide enough information to ensure proper relativity among and within X-ray code families.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:70360 Tracking Number

Original Specialty Recommended RVU: **0.20**
Presented Recommended RVU: **0.20**
RUC Recommended RVU: **0.20**

Global Period: XXX Current Work RVU: **0.17**

CPT Descriptor: Radiologic examination; neck, soft tissue

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 60-year-old woman who swallowed a foreign object presents with globus sensation.

Percentage of Survey Respondents who found Vignette to be Typical: 88%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review the reason for the examination and any pertinent clinical history. Review any prior applicable plain film or imaging studies.

Description of Intra-Service Work: Supervise technologist performing the examination. Interpret the examination and compare the findings to previous studies, if applicable. Interpretation includes evaluation of all soft tissues of the neck including the prevertebral soft tissues and epiglottis. Assess patency of pharynx, larynx and trachea. Evaluate the integrity of the bones. Evaluate for foreign bodies. Dictate report for the medical record.

Description of Post-Service Work: The final report is reviewed and signed, and findings are communicated to the referring physician as needed.

SURVEY DATA

RUC Meeting Date (mm/yyyy)	01/2019		
Presenter(s):	Kurt Schoppe, MD; Daniel Wessell, MD; Lauren Golding, MD; Gregory Nicola, MD; Melissa Chen, MD; Megan Adamson, MD		
Specialty(s):	American College of Radiology, American Society of Neuroradiology, American Academy of Family Physicians		
CPT Code:	70360		
Sample Size:	3565	**Resp N:** 64	**Response:** 1.7 %
Description of Sample:	The ACR surveyed a total of 750 members (a random sample of 375 members and a separate random sample of 375 members who perform radiography, musculoskeletal, or neurointerventional procedures). The ASNR surveyed a random sample of 1,815 members. The AAFP surveyed a random sample of 1,000 members.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	4%	15%	67%	15%	0%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	37%	48%	15%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	7%	70%	22%

Physical effort required	7%	89%	4%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	22%	48%	30%

2nd Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	0%	67%	33%	0%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	67%	33%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	17%	67%	17%
Physical effort required	0%	83%	17%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	83%	17%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

The CPT code for soft tissue X-ray of the neck, 70360 *(Radiologic examination; neck, soft tissue),* was identified by the CMS/Other Source – Utilization over 30,000 screen, and this code was initially addressed at the April 2018 RUC meeting via a crosswalk methodology approved by the Research Subcommittee. Following review by the Centers for Medicare and Medicaid Services for CY2019, the specialties agreed to survey this code for the January 2019 RUC meeting.

Survey Process

The American College of Radiology randomly surveyed 750 members (a random sample of 375 members and a separate random sample of 375 members who perform radiography, musculoskeletal, or neurointerventional procedures). The American Society of Neuroradiology surveyed a random sample of 1,815 members. The American Academy of Family Physicians surveyed a random sample of 1,000 members.

Compelling Evidence

The societies are requesting compelling evidence for CPT code 70360 to support the proposed work RVUs and times. This code is CMS/Other and was previously valued using flawed methodology.

Work RVU Recommendation

The expert panel recommends a work RVU of 0.20 for CPT code 70360, which is the 25th percentile survey value.

Time Recommendation

The specialties recommend 1 minute of pre-service time, 3 minutes of intra service time, and 1 minute of post service time for CPT code 70360.

Key Reference Services

The most commonly chosen reference codes by survey participants:

- **71046** *(Radiologic examination, chest; 2 views),* chosen by 42% of respondents,
- **74019** *(Radiologic examination, abdomen; 2 views),* chosen by 9% of respondents, and
- **73562** *(Radiologic examination, knee; 3 views),* chosen by 9% respondents.

A plurality of respondents (42%) chose code 71046 *(radiological examination, chest; 2 views)* as a reference code with similar intra-service time. The complexity in evaluating the thoracic structures (heart, lung, mediastinum, pleura, thoracic spine, etc.) on 2 views (PA and lateral) is comparable to evaluation of the structures of the neck (esophagus, trachea, cervical skeleton, epiglottis, sinuses, cervical spine, etc.) on 2 views.

Similarly, the evaluation of an abdominal x-ray, 2 views (CPT code 74019) is comparable to the evaluation of a neck x-ray with similar intra-service times.

CPT code 73562 has similar intra-service time. However, the anatomic region of the knee is slightly less complex than the neck, where subtle soft tissue findings may be a clue to underlying pathology such as airway compromise. Therefore, CPT code 73562 has a lower IWPUT.

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT

73562	Radiologic examination, knee; 3 views	0.18	1	4	1	6	0.0338
70360	**Radiologic examination; neck, soft tissue**	**0.20**	**1**	**3**	**1**	**5**	**0.0517**
71046	Radiologic examination, chest; 2 views	0.22	1	4	1	6	0.0438
74019	Radiologic examination, abdomen; 2 views	0.23	1	4	1	6	0.0463

MPC Code

The recommended times and value for CPT code 70360 compare well with MPC code 72081 *(Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); one view).*

CPT code 72081 is a one-view exam encompassing a broader area spanning the skull base to the sacrum, and therefore has a longer intra-service time. The evaluation for foreign object or airway narrowing in CPT code 70360 is more intense and complex than evaluation of curvature of the spine on a single view. Therefore, 72081 has a lower IWPUT.

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT
70360	**Radiologic examination; neck, soft tissue**	**0.20**	**1**	**3**	**1**	**5**	**0.0517**
72081	Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); one view	0.26	1	5	1	7	0.0430

Summary of Recommendation

Our expert panel recommends 0.20 RVU with service period times of 1, 3, and 1 minutes for CPT code 70360.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☒ Other reason (please explain) CPT code 70360 may be reported with 70100 (Radiologic examination, mandible; partial, less than 4 views), 72040 (Radiologic examination, spine, cervical; 2 or 3 views), 74230 (Swallowing function, with cineradiography/videoradiography), 74240 (Radiologic examination, gastrointestinal tract, upper; with or without delayed images, without KUB). It is also reported with an E/M code 74% of the time.

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 70360

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Commonly

Specialty Family Medicine How often? Sometimes

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 211300
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The number of services described by CPT code 70360 provided nationally in a one-year period is estimated to be 211,300.

Specialty Diagnostic Radiology Frequency 143800 Percentage 68.05 %

Specialty Family Medicine Frequency 11600 Percentage 5.48 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 70,430
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. CPT code 70360 is estimated to be provided 70,430 times to Medicare patients nationally in a one-year period.

Specialty Diagnostic Radiology Frequency 47940 Percentage 68.06 %

Specialty Family Medicine Frequency 3865 Percentage 5.48 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Imaging

BETOS Sub-classification:
Standard imaging

BETOS Sub-classification Level II:

Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 70360

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

CPT Code: 70360
Specialty Society: ACR, ASNR, AAFP

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Non Facility Direct Practice Expense (PE) Inputs

CPT Long Descriptor:

70360	Radiologic examination; neck, soft tissue

Global Period: XXX Meeting Date: January 2019

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   The American College of Radiology (ACR), American Society of Neuroradiology (ASNR), and American Academy of Family Physicians (AAFP) convened a consensus panel to finalize the practice expense data for the X-ray exam of the neck code, 70360.

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code.** You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here:

   The societies included the existing PE inputs for code 70360 on the spreadsheet to serve as a reference.

3. Is this code(s) typically billed with an E/M service?
   Is this code(s) typically billed with the E/M service in the nonfacility?
   (Please see provided data in PE Subcommittee folder)

   No, this code is not typically billed with an E/M service.
   Yes, this code is typically billed with an E/M service in the nonfacility.

4. What specialty is the dominant provider in the nonfacility?
   What percent of the time does the dominant provider provide the service(s) in the nonfacility?
   Is the dominant provider in the nonfacility different then for the global?
   (Please see provided data in PE Subcommittee folder)

	Nonfacility		Global	
70360	DIAGNOSTIC RADIOLOGY	20%	DIAGNOSTIC RADIOLOGY	68%

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:
   N/A

6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), you must provide compelling evidence. Please explain if the increase can be entirely accounted for because of an increase in physician time.
   N/A

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here:
   N/A

8. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? (please use this time rather than 5 minutes in your reference code)
   The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here: We are not requesting any time for obtaining vital signs.

9. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

   Bring patient into x-ray room and have patient sit/lie on x-ray table or stand, as appropriate. Place first cassette behind patient's neck. Position patient's anatomy for the AP view. Step behind shielding to control panel. Set appropriate exposure parameters. Instruct patient to hold still. Take exposure for first view. Step from behind shielding. Take first cassette from behind patient and place second cassette as needed. Position patient's anatomy for lateral view. Step behind shielding to control panel. Set appropriate exposure parameters. Instruct patient to hold still. Take exposure for second view. Step from behind shielding. Take second cassette out behind patient. The above steps are repeated for any additional views to be obtained. All cassettes are then taken to the image reader. Run all cassettes through reader. Check all images for adequate exposure, positioning, coverage, etc. Repeat any views as needed.

10. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.
    N/A

11. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities:
    N/A

12. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.
    N/A

13. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here:
    N/A

14. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here:
    N/A

15. List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here:

- **Technologist PACS Workstation Proxy (ED050)** –PACS formula; Equals total service period time
- **Professional PACS Workstation (ED053)** – Equals physician work intra time + 1/2 physician work pre-time
- **Room, basic radiology (EL012)** – Highly technical formula

AMA/Specialty Society RVS Update Committee Summary of Recommendations
NPRM for 2019

January 2019

X-Ray Exam – Spine – Tab 27

In October 2016, the Relativity Assessment Workgroup expanded the CMS/Other Source codes screen, lowering the Medicare utilization threshold from 250,000 to 100,000 based on 2015 Medicare utilization data. Two X-ray codes of the spine (72020 and 72070) were identified by this screen and the family was expanded to include ten additional X-ray codes of the spine (72040, 72050, 72052, 72072, 72074, 72080, 72100, 72110, 72114, and 72120). The Workgroup recommended that the specialty societies survey these services for April 2017, with a strong recommendation that the Research Subcommittee consider the specialty societies request to allow direct crosswalks to similar services for physician work and time. In February, the Research Subcommittee approved for the specialties to utilize a crosswalk methodology to make physician work and physician time recommends in lieu of conducting a RUC survey. In the NPRM for 2019, CMS disagreed with the RUC recommended work RVUs for 20 CPT codes included in the X-Ray Spine, X-Ray Sacrum, X-Ray Elbow-Forearm, X-Ray Heel and X-Ray Toe code families. CMS proposed the same work RVU of 0.23 for all 20 services based on a utilization-weighted average. The RUC recommended for CMS to maintain the CY 2018 work RVU for all 20 services on an interim basis and requested that the specialties survey all 20 services and review them again at the January 2019 RUC meeting (CY 2020 cycle).

Compelling Evidence
The specialty societies presented compelling evidence based on flawed methodology. CPT codes 72020, 72072, 72074, and 72080 are CMS/Other sourced.. Therefore, how the times and values were established is unknown or flawed. The RUC accepted compelling evidence based on flawed methodology.

Complexity
The RUC recognizes the need to maintain relativity within families across the X-ray modality. The spine family in particular raises questions about relativity and complexity. The RUC noted that the complexity argument appears to be based not only on the number of views or the complexity of the body area but a *combination* of anatomic site (e.g., cervical, thoracic or lumbar), views and total time. The RUC discussed appendicular and axial structures and agreed that axial X-rays are more complex. Axial X-rays are typically more complex studies than appendicular X-rays due to the increased number of overlapping soft tissue and bony structures and the increasing severity of pathology which can involve the spinal canal and spinal cord, resulting in increased mental effort and judgement, as well as psychological stress. The synthesis of the information in multiple views are needed to be able to recognize anatomic variants, congenital abnormalities and, most importantly, pathology. This is also the reason that the single view X-ray codes in the axial skeleton tend to have a lower complexity, relative to their multiple view counterparts, because the information required and the clinical indications for these exams are extremely specific. For example, a single view

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

of a spine level is most typically used to assess positioning of hardware in the spine after surgery. This is contrasted with a cervical spine, 2-3 view radiograph. The 3 views are vital in order to adequately assess the relationships of the articulations including the facet joints, the disc spaces, the alignment of the vertebral bodies, spinous processes, and the craniocervical junction.

The complexity of X-rays also varies with the clinical indications and typical patient population. An example of this would be the cervical and lumbar spine radiographs. Although the cervical spine may be a more complex anatomic site than the lumbar spine, the typical clinical scenarios these are ordered for contribute to complexity for both of these exams. The cervical spine may be typically ordered in an outpatient setting to assess for osteoarthritis or other arthritic changes. There is a large number of abnormalities found on these X-rays in this patient population. Often, multiple levels within the spinal canal are compromised, as well as multiple facet joints. In addition, patients with rheumatoid arthritis often have atlantoaxial instability, with subluxation of the cervical spine that can lead to neurologic compromise. The sheer number of levels which may be involved in the cervical spine along with complexity of pathology increase the technical skill and judgement. On the other hand, the typical patient population evaluated with a lumbar spine radiograph is trauma in which there is concern for fracture. It is critical for the physician to find the fracture in the acute setting to direct appropriate treatment and workup which results in increased psychological stress. As expected, services provided in an ER tend to be more stressful and have more potential negative consequences for inaccurate or delayed diagnoses than outpatient X-ray services. However, if a complex disease process is the typical indication for a particular X-ray code, then it is also logical that the required technical skill and intensity of providing that service is higher than for another X-ray code with similar total time or total views performed in a different setting.

72020 ***Radiologic examination, spine, single view, specify level***
The RUC reviewed the survey results from 79 radiologists and orthopaedic surgeons and determined that the survey 25th percentile work RVU of 0.16 accurately reflects the physician work necessary for this service. CPT code 72020 is an X-ray procedure most often used to check for vertebral alignment or for pre- and post-surgical assessment of the cervical spine. The RUC agreed on the following physician time components: pre-service time of 1 minute, intra-service time of 3 minutes and post-service time of 1 minute.

The RUC compared CPT code 72020 to the top key reference service 73120 *Radiologic examination, hand; 2 views* (work RVU = 0.16, 4 minutes intra-service time, 6 minutes total time) and noted that the physician work is valued the same despite the differences in number of views and intra-service time. The spine is a more complex anatomic structure than the hand, accounting for the slightly higher intensity. To further justify the recommendation, the RUC noted that there are multiple other CPT codes for X-ray exams with work RVU = 0.16, 3 minutes intra-service time, 5 minutes total time: 73060, 73100, 73551, 73560, 73565, 73590, 73600, and 73620. The RUC concluded that CPT code 72020 should be valued at the 25th percentile work RVU as supported by the survey. This recommendation for the base code in the series maintains rank order and relativity within the X-ray spine family. **The RUC recommends a work RVU of 0.16 for CPT code 72020.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

72040 ***Radiologic examination, spine, cervical; 2 or 3 views***
The RUC reviewed the survey results from 79 radiologists and orthopaedic surgeons and determined that the survey 25th percentile work RVU of 0.22 accurately accounts for the physician work to perform this service and reflects the current value. CPT code 72040 is used to evaluate for injury, assess for degenerative changes and causes of neck pain, check alignment after reduction, or may be used for surgical planning. Three views are typical for this exam, which would include an anteroposterior, lateral and open mouth odontoid view to assess the craniocervical articulations. The RUC agreed on the following physician time components: pre-service time of 1 minute, intra-service time of 3 minutes and post-service time of 1 minute.

The RUC compared CPT code 72040 to the top key reference service 73562 *Radiologic examination, knee; 3 views* (work RVU = 0.18, 4 minutes intra-service time, 6 minutes total time) and noted that the anatomic area of the reference service is less complex, which accounts for the differences in intensity and physician work. The appendicular X-rays are typically less complex than the axial X-rays, which include the chest, abdomen and spine regions. The axial X-rays are more complex because of the increased overlapping soft tissue and bony structures which need to be assessed. For additional support, the RUC compared the survey code to MPC code 72081 *Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); one view* (work RVU = 0.26, 5 minutes intra-service time, 7 minutes total time) and noted that the comparison code is a one-view exam primarily used to assess spinal curvature and vertebral alignment in outpatients with scoliosis. It has 2 minutes more intra-service time than the survey code which is appropriate for evaluating a larger section of the spine. Dedicated evaluation of the cervical spine is slightly more complex than scoliotic evaluation of the spine which explains the higher intensity for the survey code. The RUC concluded that CPT code 72040 should be valued at the 25th percentile work RVU, which maintains the current value, as supported by the survey. This recommendation maintains rank order and relativity within the X-ray spine family. **The RUC recommends a work RVU of 0.22 for CPT code 72040.**

72050 ***Radiologic examination, spine, cervical; 4 or 5 views***
The RUC reviewed the survey results from 79 radiologists and orthopaedic surgeons and determined that the survey 25th percentile work RVU of 0.27 accurately reflects the physician work necessary for this service. CPT code 72050 is a more comprehensive radiograph to evaluate for injury or assess for degenerative changes and causes for neuropathy. Five views are typical for this code, which would include an anteroposterior, lateral, open mouth odontoid view and bilateral oblique views to assess the neural foramina. The RUC agreed on the following physician time components: pre-service time of 1 minute, intra-service time of 4 minutes and post-service time of 1 minute.

The RUC compared CPT code 72050 to the top key reference service 72083 *Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); 4 or 5 views* (work RVU = 0.35, 7 minutes intra-service time, 9 minutes total time) and noted the similar amount of views but higher intra-service time of the reference code due to the large anatomic region evaluated. The survey code has greater intensity due to the increased complexity and intensity of work related to the evaluation of more complex articulations in the cervical spine. For additional support, the RUC compared the survey code to MPC code 72081 *Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); one view* (work RVU = 0.26, 5 minutes

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

intra-service time, 7 minutes total time) and noted similarly that the intensity is greater for the survey code given that the dedicated evaluation of the cervical spine is a more complex anatomic region compared to 72081. The RUC concluded that CPT code 72050 should be valued at the 25th percentile work RVU as supported by the survey. This recommendation maintains rank order and relativity within the X-ray spine family. **The RUC recommends a work RVU of 0.27 for CPT code 72050.**

72052 ***Radiologic examination, spine, cervical; 6 or more views***
The RUC reviewed the survey results from 78 radiologists and determined that the survey 25th percentile work RVU of 0.30 accurately reflects the physician work necessary for this service. CPT code 72052 is a more comprehensive radiograph to evaluate for injury or assess for degenerative changes and causes for neuropathy. Seven views would be typical for this code, which includes AP, lateral, open mouth odontoid view, bilateral oblique views of the neural foramina, lateral flexion and extension views. The RUC agreed on the following physician time components: pre-service time of 1 minute, intra-service time of 5 minutes and post-service time of 1 minute.

The RUC compared CPT code 72052 to the second key reference service 72083 *Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); 4 or 5 views* (work RVU = 0.35, 7 minutes intra-service time, 9 minutes total time) and noted that the reference service has more intra-service and total time because of the larger anatomic region assessed. However, evaluation of the cervical spine is more complex than scoliotic assessment, therefore, the survey code involves more intense physician work. For additional support, the RUC compared the survey code to both MPC codes 72081 *Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); one view* (work RVU = 0.26, 5 minutes intra-service time, 7 minutes total time) and 70355 *Orthopantogram (eg, panoramic x-ray)* (work RVU = 0.20, 5 minutes intra-service time, 6 minutes total time) and noted that the comparison codes have identical intra-service times and similar or identical total times compared to the survey code. However, the intensity is higher for 72052 because it assesses a more complex anatomic region. The RUC concluded that CPT code 72052 should be valued at the 25th percentile work RVU as supported by the survey. This recommendation maintains rank order and relativity within the X-ray spine family. **The RUC recommends a work RVU of 0.30 for CPT code 72052.**

72070 ***Radiologic examination, spine; thoracic, 2 views***
The RUC reviewed the survey results from 79 radiologists and orthopaedic surgeons and determined that the survey 25th percentile work RVU of 0.20 accurately reflects the physician work necessary for this service. CPT Code 72070 is used to evaluate for injury or assess for degenerative changes and causes for neuropathy or back pain. The RUC agreed on the following physician time components: pre-service time of 1 minute, intra-service time of 3 minutes and post-service time of 1 minute.

The RUC compared CPT code 72070 to the top key reference service 71046 *Radiologic examination, chest; 2 views* (work RVU = 0.22, 4 minutes intra-service time, 6 minutes total time) and noted that the reference service has slightly more intra-service time because of the larger anatomic region assessed. The spine is a more complex anatomic structure, therefore the survey code has higher intensity. For additional support, the RUC compared the survey code to both MPC codes 72081 *Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and*

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

sacral spine if performed (eg, scoliosis evaluation); one view (work RVU of 0.26, 5 minutes intra-service time, 7 minutes total time) and 70355 *Orthopantogram (eg, panoramic x-ray)* (work RVU of 0.20, 5 minutes intra-service time, 6 minutes total time) and noted that the comparison codes are single-view exams that have slightly higher intra-service times and total times comparable to the survey code. The complex anatomic region assessed by survey code compared to code 70355 accounts for the higher intensity and similar work valuation despite differences in time. The dedicated views of the thoracic spine is a more complex study than code 72081 which assesses scoliotic curvature on a single view, resulting in higher intensity for the survey code. The RUC concluded that CPT code 72070 should be valued at the 25th percentile work RVU as supported by the survey. This recommendation maintains rank order and relativity within the X-ray spine family. **The RUC recommends a work RVU of 0.20 for CPT code 72070.**

72072 ***Radiologic examination, spine; thoracic, 3 views***
The RUC reviewed the survey results from 78 radiologists and determined that the survey 25th percentile work RVU of 0.23 accurately reflects the physician work necessary for this service. CPT code 72072 is used to evaluate for injury or assess for degenerative changes and causes for neuropathy or back pain. The RUC agreed on the following physician time components: pre-service time of 1 minute, intra-service time of 3 minutes and post-service time of 1 minute.

The RUC compared CPT code 72072 to both MPC codes 72081 *Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); one view* (work RVU = 0.26, 5 minutes intra-service time, 7 minutes total time) and 70355 *Orthopantogram (eg, panoramic x-ray)* (work RVU = 0.20, 5 minutes intra-service time, 6 minutes total time) and agreed that these codes appropriately bracket the survey code. However, the survey code is more intense than both comparison codes because it assesses a more complex anatomic region than 70355, and it evaluates for potentially more complex pathology when compared to 72081. In addition, CPT code 72072 is typically performed in the ER and inpatient setting more frequently than 72081, and therefore, has a more complex patient population. The RUC concluded that CPT code 72072 should be valued at the 25th percentile work RVU as supported by the survey. This recommendation maintains rank order and relativity within the X-ray spine family. **The RUC recommends a work RVU of 0.23 for CPT code 72072.**

72074 ***Radiologic examination, spine; thoracic, minimum of 4 views***
The RUC reviewed the survey results from 78 radiologists and determined that the survey 25th percentile work RVU of 0.25 accurately reflects the physician work necessary for this service. CPT code 72074 is used to evaluate for injury or assess for degenerative changes and causes for neuropathy or back pain. The typical number of views for this is 4 views; anteroposterior, lateral, flexion and extension views. The RUC agreed on the following physician time components: pre-service time of 1 minute, intra-service time of 4 minutes and post-service time of 1 minute.

The RUC compared CPT code 72074 to the second highest key reference service 73522 *Radiologic examination, hips, bilateral, with pelvis when performed; 3-4 views* (work RVU = 0.29, 5 minutes intra-service time, 7 minutes total time) and noted that the reference code has slightly more intra-service and total time. However, evaluation of the hips is less complex than evaluation of the spine because of the potential consequences of missing subtle spine injury or stenosis that may lead to spinal cord injury, thus the intensity of the survey code is slightly higher. For additional

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

support, the RUC compared the survey code to MPC code 72081 *Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); one view* (work RVU = 0.26, 5 minutes intra-service time, 7 minutes total time) and noted that the physician work values are similar with one minute more intra-service and total time for the comparison code. However, the survey code is more complex with concern for potential injury or stenosis and is more commonly performed in the ER and inpatient, with more complex patients, and therefore, has a higher intensity than the comparison code. The RUC concluded that CPT code 72074 should be valued at the 25th percentile work RVU as supported by the survey. This recommendation maintains rank order and relativity within the X-ray spine family. **The RUC recommends a work RVU of 0.25 for CPT code 72074.**

72080 ***Radiologic examination, spine; thoracolumbar junction, minimum of 2 views***
The RUC reviewed the survey results from 79 radiologists and orthopaedic surgeons and determined that the survey 25th percentile work RVU of 0.21 accurately reflects the physician work necessary for this service. CPT code 72080 is used to evaluate spinal hardware, evaluate for spine injury, assess for degenerative changes and causes for neuropathy. Two views would be typical for this exam, which would include an anteroposterior and lateral view. The RUC agreed on the following physician time components: pre-service time of 1 minute, intra-service time of 3 minutes and post-service time of 1 minute.

The RUC compared CPT code 72080 to the top key reference service 71046 *Radiologic examination, chest; 2 views* (work RVU = 0.22, 4 minutes intra-service time, 6 minutes total time) and noted the similar times and physician work valuation while the survey code assesses a more complex anatomic region and therefore, has a slightly higher intensity than the reference service. For further support, the RUC compared the CPT code 72080 to CPT code 71100 *Radiologic examination, ribs, unilateral; 2 views* (work RVU = 0.22, 4 minutes intra-service time, 6 minutes total time) and noted that both services are 2 views and cover the similar anatomic regions, with one focused on the thoracic region and the other the lower thoracic and upper lumbar region. The services have similar times and amount of physician work and should therefore be valued similarly. The RUC concluded that CPT code 72080 should be valued at the 25th percentile work RVU as supported by the survey. This recommendation maintains rank order and relativity within the X-ray spine family. **The RUC recommends a work RVU of 0.21 for CPT code 72080.**

72100 ***Radiologic examination, spine, lumbosacral; 2 or 3 views***
The RUC reviewed the survey results from 80 radiologists and orthopaedic surgeons and determined that the survey 25th percentile work RVU of 0.22 accurately accounts for the physician work to perform this service and reflects the current value. CPT code 72100 is used to evaluate for spine injury, assess for degenerative changes and causes for neuropathy and back pain. Three views are typical for this exam, which would include an anteroposterior, lateral and coned view of the lumbosacral junction. The RUC agreed on the following physician time components: pre-service time of 1 minute, intra-service time of 3 minutes and post-service time of 1 minute.

The RUC compared CPT code 72100 to the second highest key reference service 73562 *Radiologic examination, knee; 3 views* (work RVU = 0.18, 4 minutes intra-service time, 6 minutes total time) and noted the similar intra-service and total times, that the anatomic area of the reference service is less complex, which accounts for the differences in intensity and physician work. The appendicular x-rays are typically less complex

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

than the axial x-rays, which include the chest, abdomen and spine regions. The axial x-rays are more complex because of the increased overlapping soft tissue and bony structures which need to be assessed. For additional support, the RUC compared the survey code to MPC code 72081 *Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); one view* (work RVU of 0.26, 5 minutes intra-service time, 7 minutes total time) and noted that the acuity of the patient for the survey code is more complex. The comparison code has slightly more intra-service and total times, along with a higher work value, compared to the survey code. However, the work associated with 72100 is more complex and performed more frequently in the ER and inpatient setting than the comparison code, resulting in a higher intensity. The RUC concluded that CPT code 72040 should be valued at the 25th percentile work RVU, which maintains the current value, as supported by the survey. This recommendation maintains rank order and relativity within the X-ray spine family. **The RUC recommends a work RVU of 0.22 for CPT code 72100.**

72110 ***Radiologic examination, spine, lumbosacral; minimum of 4 views***
The RUC reviewed the survey results from 80 radiologists and orthopaedic surgeons and determined that the survey 25th percentile work RVU of 0.26 accurately accounts for the physician work to perform this service. CPT code 72110 is used to evaluate for spine injury, assess for degenerative changes and causes for neuropathy. Five views are typical for this exam which would include anteroposterior, lateral, coned-in view of the lumbosacral junction, and oblique views to evaluate the bilateral foramina. The RUC agreed on the following physician time components: pre-service time of 1 minute, intra-service time of 4 minutes and post-service time of 1 minute.

The RUC compared CPT code 72110 to the second highest key reference service 73522 *Radiologic examination, hips, bilateral, with pelvis when performed; 3-4 views* (work RVU = 0.29, 5 minutes intra-service time, 7 minutes total time) and noted that the reference code has slightly more intra-service and total time. However, the intensity of the survey code is slightly higher because hip assessment is less complex than the spine due to the potential consequences of missing subtle spine injury or stenosis that may lead to spinal cord injury. For additional support, the RUC compared the survey code to MPC code 72081 *Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); one view* (work RVU of 0.26, 5 minutes intra-service time, 7 minutes total time) and noted that the physician work values are identical with one minute less intra-service and total time for the survey code. However, the survey code is more complex and performed more frequently in the ER and inpatient setting than the comparison code, yielding a higher intensity. The RUC concluded that CPT code 72110 should be valued at the 25th percentile work RVU as supported by the survey. This recommendation maintains rank order and relativity within the X-ray spine family. **The RUC recommends a work RVU of 0.26 for CPT code 72110.**

72114 ***Radiologic examination, spine, lumbosacral; complete, including bending views, minimum of 6 views***
The RUC reviewed the survey results from 80 radiologists and orthopaedic surgeons and determined that the survey 25th percentile work RVU of 0.30 accurately accounts for the physician work to perform this service. CPT code 72114 is used to evaluate for spine injury, evaluate spine alignment and instability, assess for degenerative changes and causes for neuropathy. Seven views are typical for this exam, which would include, anteroposterior, lateral, coned-in view of the lumbosacral junction, oblique views to assess the neural foramina, bending and extension views. The

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

RUC agreed on the following physician time components: pre-service time of 1 minute, intra-service time of 5 minutes and post-service time of 1 minute.

The RUC compared CPT code 72114 to the both key reference services 72083 *Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); 4 or 5 views* (work RVU = 0.35, 7 minutes intra-service time, 9 minutes total time) and 72084 *Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); minimum of 6 views* (work RVU = 0.41, 8 minutes intra-service time, 10 minutes total time) and noted that the reference services have higher intra-service times because of the larger anatomic regions covered. However, the complexity of assessing dedicated views of the lumbosacral spine, represented by the survey code, is higher compared to either of the reference codes. CPT code 72114 shows more detailed views of the spinal canal, neural foramina and dynamic stability, whereas 72083 and 72084 capture a larger view to assess the alignment of the spine and potential congenital anomalies contributing to curvature of the spine.

For additional support, the RUC compared the survey code to both MPC codes 72081 *Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); one view* (work RVU = 0.26, 5 minutes intra-service time, 7 minutes total time) and 70355 *Orthopantogram (eg, panoramic x-ray)* (work RVU of 0.20, 5 minutes intra-service time, 6 minutes total time) and noted that the comparison codes have the same intra-service time as the survey code, with similar or identical total times, but all have varying physician work valuations. MPC code 70355 covers a less complex anatomic region, which accounts for the lower amount of physician work and intensity. MPC code 72081 is a one view exam of the entire spine used to assess for scoliosis, requiring less intense work compared to the survey code, which has a minimum of 6 views. The RUC also noted an appropriate comparison between the survey code and CPT code 72082 *Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); 2 or 3 views* (work RVU = 0.31, 6 minutes intra-service time, 8 minutes total time) with similar intra-service and total times and physician work. Both exams are multi-view examinations of complex anatomic regions. CPT code 72082 typically involves anteroposterior and lateral views of the thoracic and lumbar spine obtained on four images. Two images are stitched together to form the anteroposterior view and the other two stitched together to form the lateral view. CPT code 72114 typically consists of anteroposterior, lateral, bilateral oblique and bending views of the lumbosacral spine. The RUC concluded that CPT code 72114 should be valued at the 25th percentile work RVU as supported by the survey. This recommendation maintains rank order and relativity within the X-ray spine family. **The RUC recommends a work RVU of 0.30 for CPT code 72114.**

72120 ***Radiologic examination, spine, lumbosacral; bending views only, 2 or 3 views***
The RUC reviewed the survey results from 80 radiologists and orthopaedic surgeons and determined that the survey 25th percentile work RVU of 0.22 accurately accounts for the physician work to perform this service and reflects the current value. CPT code 72120 is used to evaluate the dynamic spine alignment and instability. Three views are typical for this code, which includes a view in flexion, neutral and extension position. The RUC agreed on the following physician time components: pre-service time of 1 minute, intra-service time of 3 minutes and post-service time of 1 minute.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

The RUC compared CPT code 72120 to the second highest key reference service 74019 *Radiologic examination, abdomen; 2 views* (work RVU = 0.23, 4 minutes intra-service time, 6 minutes total time) and noted the similar times and amount of physician work, but the anatomic region of the reference code is less complex, therefore the survey code yields a higher intensity. For additional support, the RUC compared the survey code to MPC code 72081 *Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); one view* (work RVU of 0.26, 5 minutes intra-service time, 7 minutes total time) and noted that the comparison code has a slightly higher intra-service time and amount of physician work because it covers a larger anatomic region. However, 72081 is a single view exam used to assess spine alignment, and is less complex than dedicated views assessing the stability of the lumbosacral spine, resulting in lower intensity compared to the survey code. The RUC also compared CPT code 72120 to CPT code 71100 *Radiologic examination, ribs, unilateral; 2 views* (work RVU = 0.22, 4 minutes intra-service time, 6 minutes total time) and noted that both services should be valued similarly as both services have similar intra-service and total times, while studies of the spine are typically more intense to perform. In addition, both exams have similar numbers of views and cover similar anatomic regions, with one focused on the thoracic region and the other the lower thoracic and upper lumbar region. The RUC concluded that CPT code 72120 should be valued at the 25th percentile work RVU, which maintains the current value, as supported by the survey. This recommendation maintains rank order and relativity within the X-ray spine family. **The RUC recommends a work RVU of 0.22 for CPT code 72120.**

Practice Expense

These services were reviewed and approved by the PE Subcommittee in April 2017. **The RUC recommends the direct practice expense inputs as affirmed by the Practice Expense Subcommittee.**

Specialty Society Additional Rationale
X-Ray Valuation - Principles

The absolute RVUs of individual codes within the X-ray modality are relatively small; however, there are important differences comparing across these codes and code families that are important to consider when assessing their relative value within the modality and the larger fee schedule.

The codes within the X-ray modality cannot be placed in a simple ascending order, but rather should be placed on a spectrum with consideration to three primary variables:
1. **Number of views**
2. **Body area**
3. **Clinical context** (pathology and patient population)

What should not be considered when valuing the X-ray codes are derived measures of work and intensity. For example, IWPUT was not designed to accurately measure intensity at this range of the fee schedule. IWPUT was designed to assess intra-service work in 90-day global codes with more than 10 times the intra-service time that these codes possess. Additionally, small changes in pre-service or post-service time at this end of the fee schedule can change the IWPUT of an X-ray code by 30-50%. Moreover, time is only measured on surveys in whole integer values, so surveyed physicians are not afforded the opportunity to differentiate between services that take 2.5 minutes and those that take 3.5 minutes. Rather, both of these codes frequently end up at 3 minutes, even though one or the other is clearly more difficult. And that 1 minute differential at 0.16-0.30 RVUs is actually very large. So considering time per view as a ratio falls apart and becomes invalid. Lastly, not all of the X-ray services are performed exclusively by radiology. Times across multiple different X-ray codes vary depending on the surveyed specialties (e.g. podiatry and orthopedics). This inherent variability means time is not a consistent factor for assessment of relativity. Therefore, broad comparisons across different codes or code families within the X-ray modality using only time as a variable are fundamentally flawed.

Number of views:
The number of views in a typical exam is a reasonable way to compare different X-ray codes; however, it is more accurate in ordering the relative value of codes in a family (e.g. spine) than across different body regions. Frequently, the number of views is also a reasonable metric for complexity of an exam in the same body region. For example, a 2-3 view cervical spine is going to be performed on a different patient and for different reasons than a 6-view cervical spine. In a 6-view example, the patient is being assessed during twisting or bending maneuvers so that dynamic joints or instability can be assessed. A 2-3 view cervical spine is more often a patient with isolated symptoms and an unknown diagnosis as opposed to a known complex clinical process like dynamic or post-operative instability.

Body region:
The skeleton can be separated into two different regions; the appendicular skeleton and axial skeleton. Appendicular structures include the appendages like arms, legs, wrists, ankles, hands, feet, and digits. These appendicular structures tend to not have as many overlapping structures on single plane images even though the wrist and ankle are somewhat complex joints. The axial skeleton includes the skull, spine, and pelvis, as well as the chest and abdomen. When interpreting X-rays of axial body parts there are numerous overlapping structures, multiple organ systems, and generally higher risk of consequential injury, especially in the spine. From this standpoint, axial X-ray exams are considered in general to be more difficult to interpret than appendicular X-ray exams, and so should be valued higher for equivalent views or times with few exceptions (e.g. single view intra-operative or post-operative images). To use the example above, a 2-3 view cervical spine is more difficult to interpret and takes more skill than a 2-3 view elbow, and should be valued higher.

Clinical context:
The complexity of X-rays also varies with the clinical indications and typical patient population. An example of this would be the cervical and lumbar spine radiographs. Although the cervical spine may be a more complex anatomic site than the lumbar spine, the typical clinical scenarios these are ordered for contribute to complexity for both of these exams. The cervical spine may be typically ordered in an outpatient setting to assess for osteoarthritis or other arthritic changes. There is a large number of abnormalities found on these X-rays in this patient population. Often, multiple levels within the spinal canal are compromised, as well as multiple facet joints. In addition, patients with rheumatoid arthritis often have atlantoaxial instability, with subluxation of the cervical spine that can lead to neurologic compromise. The sheer number of levels which may be involved in the cervical spine along with complexity of pathology increase the technical skill and judgement. On the other hand, the typical patient population evaluated with a lumbar spine radiograph is trauma in which there is concern for fracture. It is critical for the physician to find the fracture in the acute setting to direct appropriate treatment and workup which results in increased psychological stress.

As expected, services provided in an ER tend to be more stressful and have more potential negative consequences for inaccurate or delayed diagnoses than outpatient X-ray services. However, if a complex disease process is the typical indication for a particular X-ray code, then it is also logical that the required technical skill and intensity of providing that service is higher than for another X-ray code with similar total time or total views performed in a different setting.

Conclusion:
X-ray codes should be assessed using three primary variables: Number of views, body region, and clinical context. Neither time nor IWPUT are useful for the reasons outlined above. The current proposals from the RUC to CMS explicitly address these variables and have ordered the codes appropriately.

No single variable provides enough information to be used to accurately assess relativity within the X-ray modality, rather all three variables used together provide enough information to ensure proper relativity among and within X-ray code families.

CPT Descriptor: Radiologic examination, spine, single view, specify level

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: An elderly patient is status post spinal fixation surgery. An immediate post-operative radiograph of the spine is ordered to evaluate the hardware and establish a baseline for comparison.

Percentage of Survey Respondents who found Vignette to be Typical: 95%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review the reason for the examination and any pertinent clinical history. Review any prior applicable plain film or imaging studies.

Description of Intra-Service Work: The technologist performing the examination is supervised, and the radiographs of the spine are interpreted. Examination findings are compared to previous studies, if applicable. A report is dictated for the patient's medical record.

Description of Post-Service Work: The final report is reviewed and signed, and findings are communicated to the referring physician as needed

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

Two X-ray codes of the spine (72020 and 72070) were identified by the CMS/Other codes with utilization >100,000 screen. The specialties expanded the family to include ten additional X-ray codes of the spine (72040, 72050, 72052, 72072, 72074, 72080, 72100, 72110, 72114, and 72120). This code family was initially addressed at the April 2017 RUC meeting via a crosswalk methodology approved by the Research Subcommittee. Following review by the Centers for Medicare and Medicaid Services for CY2019, the specialties agreed to survey this code for the January 2019 RUC meeting.

Survey Process

The American College of Radiology randomly surveyed 4,000 members (a random sample of 2,000 members and a separate random sample of 2,000 members who perform radiography, musculoskeletal, or neurointerventional procedures). The American Society of Neuroradiology surveyed a random sample of 3,420 members. The American Academy of Orthopaedic Surgeons surveyed a random sample of 750 members.

Compelling Evidence

The societies are requesting compelling evidence for CPT code 72020 to support the proposed work RVUs and times. This code is CMS/Other and was previously valued using flawed methodology.

Work RVU Recommendation

The specialties recommend a work RVU of 0.16 for CPT code 72020, which is the 25th percentile survey value.

Time Recommendation

The specialties recommend the survey median times of 1 minute pre-service, 3 minutes intra-service, and 1 minute post-service. This is a total recommended time of 5 minutes for CPT code 72020.

Key Reference Services

The most commonly chosen reference codes by survey participants:

- **73120** *(Radiologic examination, hand; 2 views)*, chosen by 23% of respondents, and
- **72081** *(Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); one view)*, chosen by 20% of respondents.

CPT code 72020 *(Radiologic examination, spine, single view, specify level)* is an X-ray procedure most often used to check for vertebral alignment or for pre- and post-surgical assessment of the cervical spine.

Our recommended work RVU of 0.16 compares favorably to the most commonly chosen key references services. The work is similar to 73120 despite the number of views being slightly different. The spine is a more complex anatomic structure than the hand, accounting for the slightly higher IWPUT. A larger anatomic region is typically assessed in 72081, which accounts for the increase in time with an IWPUT in similar range.

The relationships are summarized in the following table:

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT
72020	**Radiologic examination, spine, single view, specify level**	**0.16**	**1**	**3**	**1**	**5**	**0.0384**
73120	Radiologic examination, hand; 2 views	0.16	1	4	1	6	0.0288
72081	Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); one view	0.26	1	5	1	7	0.0430

MPC Codes

The surveyed code compares well with two MPC codes:

- 72081 *(Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); one view))* and
- 70355 *(Orthopantogram (eg, panoramic x-ray)).*

CPT code 72081, which is the second KRS, is also a one-view exam. It is primarily used to assess spinal curvature and vertebral alignment in outpatients with scoliosis. The MPC code has 2 more minutes of intra-service time than CPT code 72020, which is appropriate for evaluating a larger section of the spine. CPT code 70355 code is a one-view examination that evaluates both the mandible and the maxilla, and is familiar to radiologists. It is primarily used to assess for mandible fractures, temporomandibular joint disease or for dental abscess. This MPC code has 2 more minutes of intra time, similar total time, and a slightly higher work RVU.

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT
72020	**Radiologic examination, spine, single view, specify level**	**0.16**	**1**	**3**	**1**	**5**	**0.0384**
70355	Orthopantogram (eg, panoramic x-ray)	0.20		5	1	6	0.0355
72081	Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); one view	0.26	1	5	1	7	0.0430

Summary of Recommendations

The specialties recommend the survey 25th percentile work RVU of 0.16, with service period times of 1, 3, and 1 minutes for CPT code 72020. This recommendation maintains rank order and relativity within the X-ray spine family.

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT	Typ # of Views
72020	**Radiologic examination, spine, single view, specify level**	**0.16**	**1**	**3**	**1**	**5**	**0.0384**	**1**
72070	Radiologic examination, spine; thoracic, 2 views	0.20	1	3	1	5	0.0517	2
72040	Radiologic examination, spine, cervical; 2 or 3 views	0.22	1	3	1	5	0.0584	3
72080	Radiologic examination, spine; thoracolumbar junction, minimum of 2 views	0.21	1	3	1	5	0.0551	2
72100	Radiologic examination, spine, lumbosacral; 2 or 3 views	0.22	1	3	1	5	0.0584	3
72120	Radiologic examination, spine, lumbosacral; bending views only, 2 or 3 views	0.22	1	3	1	5	0.0584	3
72072	Radiologic examination, spine; thoracic, 3 views	0.23	1	3	1	5	0.0617	3
72074	Radiologic examination, spine; thoracic, minimum of 4 views	0.25	1	4	1	6	0.0513	4
72110	Radiologic examination, spine, lumbosacral; minimum of 4 views	0.26	1	4	1	6	0.0538	5
72050	Radiologic examination, spine, cervical; 4 or 5 views	0.27	1	4	1	6	0.0563	5
72052	Radiologic examination, spine, cervical; 6 or more views	0.30	1	5	1	7	0.0510	7

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 72020

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Orthopedic Surgery How often? Commonly

Specialty Diagnostic Radiology How often? Commonly

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 476811
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by code 72020 provided nationally in a one-year period is estimated to be 476,811.

Specialty Orthopedic Surgery Frequency 38607 Percentage 8.09 %

Specialty Diagnostic Radiology Frequency 374529 Percentage 78.54 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 158,937 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The 2017 Medicare data estimates the CPT code 72020 is billed approximately158,937 times in total for Medicare patients nationally in a one-year period.

Specialty Orthopedic Surgery Frequency 12869 Percentage 8.09 %

Specialty Diagnostic Radiology Frequency 124843 Percentage 78.54 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

CPT Descriptor: Radiologic examination, spine, cervical; 2 or 3 views

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: An elderly patient presents with cervical pain and no history of trauma. Rule out arthritis.

Percentage of Survey Respondents who found Vignette to be Typical: 96%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review the reason for the examination and any pertinent clinical history. Review any prior applicable plain film or imaging studies.

Description of Intra-Service Work: The technologist performing the examination is supervised, and the radiographs of the spine are interpreted. Examination findings are compared to previous studies, if applicable. A report is dictated for the patient's medical record.

Description of Post-Service Work: The final report is reviewed and signed, and findings are communicated to the referring physician as needed.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	0%	53%	47%	0%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	87%	13%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	0%	67%	33%

Physical effort required	0%	100%	0%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	47%	53%

2nd Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	29%	71%	0%	0%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	29%	71%	0%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	21%	79%	0%
Physical effort required	21%	79%	0%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	7%	93%	0%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

Two X-ray codes of the spine (72020 and 72070) were identified by the CMS/Other codes with utilization

>100,000 screen. The specialties expanded the family to include ten additional X-ray codes of the spine (72040, 72050, 72052, 72072, 72074, 72080, 72100, 72110, 72114, and 72120). This code family was initially addressed at the April 2017 RUC meeting via a crosswalk methodology approved by the Research Subcommittee. Following review by the Centers for Medicare and Medicaid Services for CY2019, the specialties agreed to survey this code for the January 2019 RUC meeting.

Survey Process

The American College of Radiology randomly surveyed 4,000 members (a random sample of 2,000 members and a separate random sample of 2,000 members who perform radiography, musculoskeletal, or neurointerventional procedures). The American Society of Neuroradiology surveyed a random sample of 3,420 members. The American Academy of Orthopaedic Surgeons surveyed a random sample of 750 members.

Work RVU Recommendation

The specialties recommend maintaining the current work RVU of 0.22 for CPT code 72040, which is also the 25th percentile survey value.

Time Recommendation

The specialties recommend the survey median times of 1 minute pre-service, 3 minutes intra-service, and 1 minute post-service. This is a total recommended time of 5 minutes for CPT code 72040.

Key Reference Services

The most commonly chosen reference codes by survey participants:

- **73562** *(Radiologic examination, knee; 3 views)*, chosen by 19% of respondents, and
- **72082** *(Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); 2 or 3 views)*, chosen by 18% of respondents.

CPT code 72040 *(Radiologic examination, spine, cervical; 2 or 3 views)* is an invaluable tool to evaluate for injury, assess for degenerative changes and causes of neck pain, check alignment after reduction, or may be used for surgical planning. Three views is typical for this exam, which would include an AP, lateral and open mouth odontoid view to assess the craniocervical articulations.

Our recommended work RVU of 0.22 compares favorably to the most commonly chosen key references services. The intra-service time for the first KRS code, 73562, is similar to CPT code 72040, however the anatomic area is less complex, which accounts for the differences in IWPUT. The appendicular x-rays are typically less complex than the axial x-rays, which include the chest, abdomen and spine regions. The axial x-rays are more complex because of the increased overlapping soft tissue and bony structures which need to be assessed. The second KRS code, 72082, covers a larger anatomic region and is therefore associated with a higher intra-service time. The work of evaluating the cervical spine (72040), a dedicated region of the spine is more complex and intense because there is better delineation of the anatomy with the smaller field of view than scoliotic evaluation of the entire spine, which is assessing the alignment of the spine. CPT code 72082 and has an appropriately higher IWPUT.

The relationships are summarized in the following table:

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT

73562	Radiologic examination, knee; 3 views	0.18	1	4	1	6	0.0338
72040	**Radiologic examination, spine, cervical; 2 or 3 views**	**0.22**	**1**	**3**	**1**	**5**	**0.0584**
72082	Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); 2 or 3 views	0.31	1	6	1	8	0.0442

MPC Codes

The surveyed code compares well with two MPC codes:

- 72081 *(Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); one view))* and
- 70355 *(Orthopantogram (eg, panoramic x-ray)).*

CPT code 72081 is a one-view exam primarily used to assess spinal curvature and vertebral alignment in outpatients with scoliosis. The MPC code has 2 more minutes of intra-service time than CPT code 72040, which is appropriate for evaluating a larger section of the spine. Dedicated evaluation of the cervical spine is slightly more complex than scoliotic evaluation of the spine, which explains the difference in IWPUT. CPT code 70355 code is a one-view examination that evaluates both the mandible and the maxilla, and is familiar to radiologists. It is primarily used to assess for mandible fractures, temporomandibular joint disease or for dental abscess. The anatomic region is less complex than the spine and, therefore, has a lower IWPUT.

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT
70355	Orthopantogram (eg, panoramic x-ray)	0.20		5	1	6	0.0355
72040	**Radiologic examination, spine, cervical; 2 or 3 views**	**0.22**	**1**	**3**	**1**	**5**	**0.0584**
72081	Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); one view	0.26	1	5	1	7	0.0430

Summary of Recommendations

The specialties recommend the survey 25th percentile work RVU of 0.22, which is also the current value, with service period times of 1, 3, and 1 minutes for CPT code 72040. This recommendation maintains rank order and relativity within the X-ray spine family.

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT	Typ # of

								Views
72020	Radiologic examination, spine, single view, specify level	0.16	1	3	1	5	0.0384	1

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☒ Other reason (please explain) CPT code 72040 is typically billed with an E/M code.

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in

the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

Specialty Diagnostic Radiology How often? Commonly

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 1926021
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by code 72040 provided nationally in a one-year period is estimated to be 1,926,021.

Specialty Orthopedic Surgery Frequency 358196 Percentage 18.59 %

Specialty Diagnostic Radiology Frequency 1092688 Percentage 56.73 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 642,007 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The 2017 Medicare data estimates the CPT code 72040 is billed approximately 642,007 times in total for Medicare patients nationally in a one-year period.

Specialty Orthopedic Surgery Frequency 119399 Percentage 18.59 %

Specialty Diagnostic Radiology Frequency 364229 Percentage 56.73 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	11%	84%	5%	0%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	11%	84%	5%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	5%	89%	5%

Physical effort required	16%	79%	5%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	5%	74%	21%

2nd Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	15%	54%	31%	0%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	8%	54%	38%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	15%	38%	46%
Physical effort required	15%	62%	23%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	15%	38%	46%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

Two X-ray codes of the spine (72020 and 72070) were identified by the CMS/Other codes with utilization >100,000 screen. The specialties expanded the family to include ten additional X-ray codes of the spine

(72040, 72050, 72052, 72072, 72074, 72080, 72100, 72110, 72114, and 72120). This code family was initially addressed at the April 2017 RUC meeting via a crosswalk methodology approved by the Research Subcommittee. Following review by the Centers for Medicare and Medicaid Services for CY2019, the specialties agreed to survey this code for the January 2019 RUC meeting.

Survey Process

The American College of Radiology randomly surveyed 4,000 members (a random sample of 2,000 members and a separate random sample of 2,000 members who perform radiography, musculoskeletal, or neurointerventional procedures). The American Society of Neuroradiology surveyed a random sample of 3,420 members. The American Academy of Orthopaedic Surgeons surveyed a random sample of 750 members.

Work RVU Recommendation

The specialties recommend a work RVU of 0.27 for CPT code 72050, which is the 25th percentile survey value. This is a reduction in value from the current 0.31 work RVU.

Time Recommendation

The specialties recommend the survey median times of 1 minute pre-service, 4 minutes intra-service, and 1 minute post-service. This is a total recommended time of 6 minutes for CPT code 72050.

Key Reference Services

The most commonly chosen reference codes by survey participants:

- **72083** *(Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); 4 or 5 views),* chosen by 24% of respondents, and
- **72082** *(Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); 2 or 3 views),* chosen by 16% of respondents.

CPT code 72050 *(Radiologic examination, spine, cervical; 4 or 5 views)* is a more comprehensive radiograph to evaluate for injury or assess for degenerative changes and causes for neuropathy. Five views are typical for this code, which would include an AP, lateral, open mouth odontoid view and bilateral oblique views to assess the neural foramina.

Our recommended work RVU of 0.27 compares favorably to the most commonly chosen key reference services. CPT codes 72082 and 72083 have a higher intra-service time because of the large anatomic region evaluated. The IWPUT is higher for 72050 because of the increased complexity and intensity of work related to the evaluation of more complex articulations in the cervical spine.

The relationships are summarized in the following table:

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT
72050	**Radiologic examination, spine, cervical; 4 or 5 views**	**0.27**	**1**	**4**	**1**	**6**	**0.0563**
72082	Radiologic examination, spine, entire thoracic and lumbar,	0.31	1	6	1	8	0.0442

	including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); 2 or 3 views						
72083	Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); 4 or 5 views	0.35	1	7	1	9	0.0436

MPC Codes

The surveyed code compares well with two MPC codes:

- 72081 *(Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); one view))* and
- 70355 *(Orthopantogram (eg, panoramic x-ray)).*

Although the intra-service time for CPT code 72050 is similar to the intra-service times of the two MPC codes, the IWPUT is higher for 72050 given that the dedicated evaluation of the cervical spine is a more complex anatomic region compared to both 70355 and 72081.

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT
70355	Orthopantogram (eg, panoramic x-ray)	0.20		5	1	6	0.0355
72081	Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); one view	0.26	1	5	1	7	0.0430
72050	**Radiologic examination, spine, cervical; 4 or 5 views**	**0.27**	**1**	**4**	**1**	**6**	**0.0563**

Summary of Recommendations

The specialties recommend the survey 25th percentile work RVU of 0.27—a reduction from 0.31 RVU—with service period times of 1, 4, and 1 minutes for CPT code 72050. This recommendation maintains rank order and relativity within the X-ray spine family.

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT	Typ # of Views
72020	Radiologic examination, spine, single view, specify level	0.16	1	3	1	5	0.0384	1

72070	Radiologic examination, spine; thoracic, 2 views	0.20	1	3	1	5	0.0517	2
72040	Radiologic examination, spine, cervical; 2 or 3 views	0.22	1	3	1	5	0.0584	3
72080	Radiologic examination, spine; thoracolumbar junction, minimum of 2 views	0.21	1	3	1	5	0.0551	2
72100	Radiologic examination, spine, lumbosacral; 2 or 3 views	0.22	1	3	1	5	0.0584	3
72120	Radiologic examination, spine, lumbosacral; bending views only, 2 or 3 views	0.22	1	3	1	5	0.0584	3
72072	Radiologic examination, spine; thoracic, 3 views	0.23	1	3	1	5	0.0617	3
72074	Radiologic examination, spine; thoracic, minimum of 4 views	0.25	1	4	1	6	0.0513	4
72110	Radiologic examination, spine, lumbosacral; minimum of 4 views	0.26	1	4	1	6	0.0538	5
72050	**Radiologic examination, spine, cervical; 4 or 5 views**	**0.27**	**1**	**4**	**1**	**6**	**0.0563**	**5**
72052	Radiologic examination, spine, cervical; 6 or more views	0.30	1	5	1	7	0.0510	7
72114	Radiologic examination, spine, lumbosacral; complete, including bending views, minimum of 6 views	0.30	1	5	1	7	0.0510	7

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 72050

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Commonly

Specialty Orthopedic Surgery How often? Commonly

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 1181307
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by code 72050 provided nationally in a one-year period is estimated to be 1,181,307

Specialty Diagnostic Radiology Frequency 824889 Percentage 69.82 %

Specialty Orthopedic Surgery Frequency 134730 Percentage 11.40 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 393,769 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The 2017 Medicare data estimates the CPT code 72050 is billed approximately 393,769 times in total for Medicare patients nationally in a one-year period.

Specialty Diagnostic Radiology Frequency 274963 Percentage 69.82 %

Specialty Orthopedic Surgery Frequency 44910 Percentage 11.40 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

Physical effort required	9%	64%	27%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	45%	55%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

Two X-ray codes of the spine (72020 and 72070) were identified by the CMS/Other codes with utilization >100,000 screen. The specialties expanded the family to include ten additional X-ray codes of the spine

(72040, 72050, 72052, 72072, 72074, 72080, 72100, 72110, 72114, and 72120). This code family was initially addressed at the April 2017 RUC meeting via a crosswalk methodology approved by the Research Subcommittee. Following review by the Centers for Medicare and Medicaid Services for CY2019, the specialties agreed to survey this code for the January 2019 RUC meeting.

Survey Process

The American College of Radiology randomly surveyed 4,000 members (a random sample of 2,000 members and a separate random sample of 2,000 members who perform radiography, musculoskeletal, or neurointerventional procedures). The American Society of Neuroradiology surveyed a random sample of 3,420 members.

Work RVU Recommendation

The specialties recommend the survey 25th percentile work RVU of 0.30 for CPT code 72052. This will maintain appropriate rank order within the X-ray spine family.

Time Recommendation

The specialties recommend the survey median times of 1 minute pre-service, 5 minutes intra-service, and 1 minute post-service. This is a total recommended time of 7 minutes for CPT code 72052.

Key Reference Services

The most commonly chosen reference codes by survey participants:

- **72084** *(Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); minimum of 6 views)*, chosen by 35% of respondents, and
- **72083** *(Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); 4 or 5 views)*, chosen by 14% of respondents.

CPT code 72052 *(Radiologic examination, spine, cervical; 6 or more views)* is a more comprehensive radiograph to evaluate for injury or assess for degenerative changes and causes for neuropathy. Seven views would be typical for this code, which includes AP, lateral, open mouth odontoid view, bilateral oblique views of the neural foramina, lateral flexion and extension views.

Our recommendation of work RVU of 0.30 compares favorably to the most commonly chosen key reference codes. CPT code 72083 has more slightly more intra-service time because of the larger anatomic region assessed. However, evaluation of the cervical spine is more complex than scoliotic assessment and, therefore, CPT code 72052 a higher IWPUT. CPT code 72084 covers a larger anatomic region and subsequently has a higher intra-service time. CPT code 72052 includes detailed assessment of the craniocervical junction, facet and uncovertebral joints in addition to dynamic alignment changes and as such and therefore has a higher IWPUT.

The relationships are summarized in the following table:

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT
72052	**Radiologic examination, spine, cervical; 6 or more views**	**0.30**	**1**	**5**	**1**	**7**	**0.0510**
72083	Radiologic examination, spine, entire thoracic and lumbar,	0.35	1	7	1	9	0.0436

	including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); 4 or 5 views						
72084	Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); minimum of 6 views	0.41	1	8	1	10	0.0456

MPC Codes

The surveyed code compares well with two MPC codes:

- 72081 *(Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); one view))* and
- 70355 *(Orthopantogram (eg, panoramic x-ray)).*

The chosen MPC codes have identical intra-service times and similar total times compared to CPT code 72052. However, the IWPUT is higher for CPT code 72052 because it assesses a more complex anatomic region.

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT
70355	Orthopantogram (eg, panoramic x-ray)	0.20		5	1	6	0.0355
72081	Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); one view	0.26	1	5	1	7	0.0430
72052	**Radiologic examination, spine, cervical; 6 or more views**	**0.30**	**1**	**5**	**1**	**7**	**0.0510**

Summary of Recommendations

The specialties recommend the survey 25th percentile work RVU of 0.30, with service period times of 1, 5, and 1 minutes for CPT code 72052. This recommendation maintains rank order and relativity within the X-ray spine family.

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT	Typ # of Views
72020	Radiologic examination, spine, single view, specify level	0.16	1	3	1	5	0.0384	1

72070	Radiologic examination, spine; thoracic, 2 views	0.20	1	3	1	5	0.0517	2
72040	Radiologic examination, spine, cervical; 2 or 3 views	0.22	1	3	1	5	0.0584	3
72080	Radiologic examination, spine; thoracolumbar junction, minimum of 2 views	0.21	1	3	1	5	0.0551	2
72100	Radiologic examination, spine, lumbosacral; 2 or 3 views	0.22	1	3	1	5	0.0584	3
72120	Radiologic examination, spine, lumbosacral; bending views only, 2 or 3 views	0.22	1	3	1	5	0.0584	3
72072	Radiologic examination, spine; thoracic, 3 views	0.23	1	3	1	5	0.0617	3
72074	Radiologic examination, spine; thoracic, minimum of 4 views	0.25	1	4	1	6	0.0513	4
72110	Radiologic examination, spine, lumbosacral; minimum of 4 views	0.26	1	4	1	6	0.0538	5
72050	Radiologic examination, spine, cervical; 4 or 5 views	0.27	1	4	1	6	0.0563	5
72052	**Radiologic examination, spine, cervical; 6 or more views**	**0.30**	**1**	**5**	**1**	**7**	**0.0510**	**7**
72114	Radiologic examination, spine, lumbosacral; complete, including bending views, minimum of 6 views	0.30	1	5	1	7	0.0510	7

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 72052

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 273420
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by code 72052 provided nationally in a one-year period is estimated to be 273,420.

Specialty Diagnostic Radiology Frequency 201175 Percentage 73.57 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 91,140
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The 2017 Medicare data estimates the CPT code 72052 is billed approximately 91,140 times in total for Medicare patients nationally in a one-year period.

Specialty Diagnostic Radiology Frequency 67058 Percentage 73.57 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Imaging

BETOS Sub-classification:
Standard imaging

BETOS Sub-classification Level II:
Musculoskeletal

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 72052

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

Original Specialty Recommended RVU: **0.22**
Presented Recommended RVU: **0.20**
RUC Recommended RVU: **0.20**

Global Period: XXX Current Work RVU: **0.22**

CPT Descriptor: Radiologic examination, spine; thoracic, 2 views

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: An elderly patient presents with back pain and no recent history of trauma. Frontal and lateral views of the thoracic spine are obtained to evaluate for degenerative osteoarthritis.

Percentage of Survey Respondents who found Vignette to be Typical: 95%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review the reason for the examination and any pertinent clinical history. Review any prior applicable plain film or imaging studies.

Description of Intra-Service Work: The technologist performing the examination is supervised, and the radiographs of the spine are interpreted. Examination findings are compared to previous studies, if applicable. A report is dictated for the patient's medical record.

Description of Post-Service Work: The final report is reviewed and signed, and findings are communicated to the referring physician as needed.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	22%	59%	15%	4%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	15%	74%	11%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	11%	78%	11%

Physical effort required	0%	96%	4%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	30%	56%	15%

2nd Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	20%	80%	0%	0%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	13%	87%	0%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	20%	80%	0%
Physical effort required	20%	80%	0%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	20%	80%	0%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

Two X-ray codes of the spine (72020 and 72070) were identified by the CMS/Other codes with utilization >100,000 screen. The specialties expanded the family to include ten additional X-ray codes of the spine (72040, 72050, 72052, 72072, 72074, 72080, 72100, 72110, 72114, and 72120). This code family was initially addressed at the April 2017 RUC meeting via a crosswalk methodology approved by the Research Subcommittee. Following review by the Centers for Medicare and Medicaid Services for CY2019, the specialties agreed to survey this code for the January 2019 RUC meeting.

Survey Process

The American College of Radiology randomly surveyed 4,000 members (a random sample of 2,000 members and a separate random sample of 2,000 members who perform radiography, musculoskeletal, or neurointerventional procedures). The American Society of Neuroradiology surveyed a random sample of 3,420 members. The American Academy of Orthopaedic Surgeons surveyed a random sample of 750 members.

Work RVU Recommendation

The specialties recommend the survey 25th percentile work RVU of 0.20 for CPT code 72070. This will maintain appropriate rank order within the X-ray spine family.

Time Recommendation

The specialties recommend the survey median times of 1 minute pre-service, 3 minutes intra-service, and 1 minute post-service. This is a total recommended time of 5 minutes for CPT code 72070.

Key Reference Services

The most commonly chosen reference codes by survey participants:

- **71046** *(Radiologic examination, chest; 2 views)*, chosen by 34% of respondents, and
- **72082** *(Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); 2 or 3 views)*, chosen by 19% of respondents.

CPT Code 72070 *(Radiologic examination, spine; thoracic, 2 views)* is an invaluable tool to evaluate for injury or assess for degenerative changes and causes for neuropathy or back pain.

The work RVU of 0.20 compares favorably to the most commonly chosen key reference service, CPT code 71046. 71046 has slightly more intra-service time because of the larger anatomic region assessed. The spine is a more complex anatomic structure; and therefore CPT code 72070 has a slightly higher IWPUT. 72082 has more intra-service time, which is related to the larger anatomic region assessed. Dedicated evaluation of the thoracic spine is slightly more complex than scoliotic assessment of the spine, and therefore, CPT code 72070 has a slightly higher IWPUT.

The relationships are summarized in the following table:

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT
72070	**Radiologic examination, spine;**	**0.20**	**1**	**3**	**1**	**5**	**0.0517**

	thoracic, 2 views						
71046	Radiologic examination, chest; 2 views	0.22	1	4	1	6	0.0438
72082	Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); 2 or 3 views	0.31	1	6	1	8	0.0442

MPC Codes

The surveyed code compares well with two MPC codes:

- 72081 *(Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); one view))* and
- 70355 *(Orthopantogram (eg, panoramic x-ray)).*

Both MPC codes, 72081 and 70355, are single-view exams that have slightly higher intra-service times and total times compared to CPT code 72070. However, the complex anatomic region assessed by CPT code 72070 compared to 70355 accounts for the higher IWPUT. The dedicated views of the thoracic spine in 72070 is a more complex study than 72081 which assesses scoliotic curvature on a single view.

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT
70355	Orthopantogram (eg, panoramic x-ray)	0.20		5	1	6	0.0355
72070	**Radiologic examination, spine; thoracic, 2 views**	**0.20**	**1**	**3**	**1**	**5**	**0.0517**
72081	Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); one view	0.26	1	5	1	7	0.0430

Summary of Recommendations

The specialties recommend a work RVU of 0.20, with service period times of 1, 3, and 1 minutes for CPT code 72070. This recommendation maintains rank order and relativity within the X-ray spine family.

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT	Typ # of

								Views
72020	Radiologic examination, spine, single view, specify level	0.16	1	3	1	5	0.0384	1
72070	**Radiologic examination, spine; thoracic, 2 views**	**0.20**	**1**	**3**	**1**	**5**	**0.0517**	**2**
72040	Radiologic examination, spine, cervical; 2 or 3 views	0.22	1	3	1	5	0.0584	3
72080	Radiologic examination, spine; thoracolumbar junction, minimum of 2 views	0.21	1	3	1	5	0.0551	2
72100	Radiologic examination, spine, lumbosacral; 2 or 3 views	0.22	1	3	1	5	0.0584	3
72120	Radiologic examination, spine, lumbosacral; bending views only, 2 or 3 views	0.22	1	3	1	5	0.0584	3
72072	Radiologic examination, spine; thoracic, 3 views	0.23	1	3	1	5	0.0617	3
72074	Radiologic examination, spine; thoracic, minimum of 4 views	0.25	1	4	1	6	0.0513	4
72110	Radiologic examination, spine, lumbosacral; minimum of 4 views	0.26	1	4	1	6	0.0538	5
72050	Radiologic examination, spine, cervical; 4 or 5 views	0.27	1	4	1	6	0.0563	5
72052	Radiologic examination, spine, cervical; 6 or more views	0.30	1	5	1	7	0.0510	7
72114	Radiologic examination, spine, lumbosacral; complete, including bending views, minimum of 6 views	0.30	1	5	1	7	0.0510	7

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☒ Other reason (please explain) CPT code 72070 is typically reported with an E/M code.

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 72070

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Orthopedic Surgery How often? Commonly

Specialty Diagnostic Radiology How often? Commonly

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 927471
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by code 72070 provided nationally in a one-year period is estimated to be 927,471.

Specialty Orthopedic Surgery Frequency 100514 Percentage 10.83 %

Specialty Diagnostic Radiology Frequency 591396 Percentage 63.76 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 309,157 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The 2017 Medicare data estimates the CPT code 72070 is billed approximately 309,157 times in total for Medicare patients nationally in a one-year period.

Specialty Orthopedic Surgery Frequency 33505 Percentage 10.83 %

Specialty Diagnostic Radiology Frequency 197132 Percentage 63.76 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Imaging

BETOS Sub-classification:
Standard imaging

BETOS Sub-classification Level II:
Musculoskeletal

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 72070

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

Presented Recommended RVU: **0.23**
RUC Recommended RVU: **0.23**

Global Period: XXX Current Work RVU: **0.22**

CPT Descriptor: Radiologic examination, spine; thoracic, 3 views

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: An elderly patient presents with worsening mid and upper back pain after a recent fall. Three views of the thoracic spine, including the cervicothoracic junction are requested to evaluate for a compression .

Percentage of Survey Respondents who found Vignette to be Typical: 97%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review the reason for the examination and any pertinent clinical history. Review any prior applicable plain film or imaging studies.

Description of Intra-Service Work: The technologist performing the examination is supervised, and the radiographs of the spine are interpreted. Examination findings are compared to previous studies, if applicable. A report is dictated for the patient’s medical record.

Description of Post-Service Work: The final report is reviewed and signed, and findings are communicated to the referring physician as needed

• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	40%	60%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

Two X-ray codes of the spine (72020 and 72070) were identified by the CMS/Other codes with utilization >100,000 screen. The specialties expanded the family to include ten additional X-ray codes of the spine

(72040, 72050, 72052, 72072, 72074, 72080, 72100, 72110, 72114, and 72120). This code family was initially addressed at the April 2017 RUC meeting via a crosswalk methodology approved by the Research Subcommittee. Following review by the Centers for Medicare and Medicaid Services for CY2019, the specialties agreed to survey this code for the January 2019 RUC meeting.

Survey Process

The American College of Radiology randomly surveyed 4,000 members (a random sample of 2,000 members and a separate random sample of 2,000 members who perform radiography, musculoskeletal, or neurointerventional procedures). The American Society of Neuroradiology surveyed a random sample of 3,420 members.

Compelling Evidence

The societies are requesting compelling evidence for CPT code 72072 to support the proposed work RVUs and times. This code is CMS/Other and was previously valued using flawed methodology.

Work RVU Recommendation

The specialties recommend a work RVU of 0.23 for CPT code 72072, which is the 25th percentile survey value.

Time Recommendation

The specialties recommend the survey median times of 1 minute pre-service, 3 minutes intra-service, and 1 minute post-service. This is a total recommended time of 5 minutes for CPT code 72072.

Key Reference Services

The most commonly chosen reference codes by survey participants:

- **72082** *(Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); 2 or 3 views),* chosen by 18% of respondents, and
- **73562** *(Radiologic examination, knee; 3 views),* chosen by 13% of respondents.

CPT code 72072 *(Radiologic examination, spine; thoracic, 3 views)* is an invaluable tool to evaluate for injury or assess for degenerative changes and causes for neuropathy or back pain.

The first KRS, 72082, has a higher intra-service time because of the larger anatomic region being assessed. However, the scoliotic assessment is slightly less complex than dedicated evaluation of the thoracic spine in which trauma or other bony pathology may be suspected. Therefore, CPT code 72082 has slightly lower IWPUT. In addition, CPT code 72072 is more commonly performed in the ER and inpatient setting than 72082, resulting in a more complex patient population. CPT codes 73562 and 72072 have similar intra-service and total times. However, the IWPUT for 73562 is slightly lower because the knee is a less complex anatomic region than the spine. The appendicular x-rays are typically less complex than the axial x-rays, which include the chest, abdomen and spine regions. The axial x-rays are more complex because of the increased overlapping soft tissue and bony structures which need to be assessed.

The relationships are summarized in the following table:

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT

73562	Radiologic examination, knee; 3 views	0.18	1	4	1	6	0.338
72072	**Radiologic examination, spine; thoracic, 3 views**	**0.23**	**1**	**3**	**1**	**5**	**0.0617**
72082	Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); 2 or 3 views	0.31	1	6	1	8	0.0442

MPC Codes

The surveyed code compares well with two MPC codes:

- 72081 *(Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); one view))* and
- 70355 *(Orthopantogram (eg, panoramic x-ray)).*

MPC code 70355 has a slightly higher intra-service time than CPT code 72072. However, CPT code 72072 assesses a more complex anatomic region than CPT code 70355, yielding a higher IWPUT. MPC code has more intra-service and total time, and a higher work RVU than CPT code 72072. However, CPT code 72072 has a higher IWPUT than 72081 because it evaluates for potentially complex pathology. In addition, CPT code 72072 is typically performed in the ER and inpatient setting more frequently than 72081, and therefore, has a more complex patient population.

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT
70355	Orthopantogram (eg, panoramic x-ray)	0.20		5	1	6	0.0355
72072	**Radiologic examination, spine; thoracic, 3 views**	**0.23**	**1**	**3**	**1**	**5**	**0.0617**
72081	Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); one view	0.26	1	5	1	7	0.0430

Summary of Recommendations

The specialties recommend the survey 25th percentile work RVU of 0.23, with service period times of 1, 3, and 1 minutes for CPT code 72072. This recommendation maintains rank order and relativity within the X-ray spine family.

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT	Typ # of Views
72020	Radiologic examination, spine, single view, specify level	0.16	1	3	1	5	0.0384	1

72070	Radiologic examination, spine; thoracic, 2 views	0.20	1	3	1	5	0.0517	2
72040	Radiologic examination, spine, cervical; 2 or 3 views	0.22	1	3	1	5	0.0584	3
72080	Radiologic examination, spine; thoracolumbar junction, minimum of 2 views	0.21	1	3	1	5	0.0551	2
72100	Radiologic examination, spine, lumbosacral; 2 or 3 views	0.22	1	3	1	5	0.0584	3
72120	Radiologic examination, spine, lumbosacral; bending views only, 2 or 3 views	0.22	1	3	1	5	0.0584	3
72072	**Radiologic examination, spine; thoracic, 3 views**	**0.23**	**1**	**3**	**1**	**5**	**0.0617**	**3**
72074	Radiologic examination, spine; thoracic, minimum of 4 views	0.25	1	4	1	6	0.0513	4
72110	Radiologic examination, spine, lumbosacral; minimum of 4 views	0.26	1	4	1	6	0.0538	5
72050	Radiologic examination, spine, cervical; 4 or 5 views	0.27	1	4	1	6	0.0563	5
72052	Radiologic examination, spine, cervical; 6 or more views	0.30	1	5	1	7	0.0510	7
72114	Radiologic examination, spine, lumbosacral; complete, including bending views, minimum of 6 views	0.30	1	5	1	7	0.0510	7

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 72072

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 592617
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by code 72072 provided nationally in a one-year period is estimated to be 592,617.

Specialty Diagnostic Radiology Frequency 535309 Percentage 90.32 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 197,539 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The 2017 Medicare data estimates the CPT code 72072 is billed approximately 197,539 times in total for Medicare patients nationally in a one-year period.

Specialty Diagnostic Radiology Frequency 178436 Percentage 90.32 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

Presented Recommended RVU: **0.25**
Global Period: XXX Current Work RVU: **0.22** RUC Recommended RVU: **0.25**

CPT Descriptor: Radiologic examination, spine; thoracic, minimum of 4 views

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: An elderly patient with a history of posterior spinal fixation presents with worsening pain. There is clinical concern for instability near the hardware. Thoracic spine radiographs with flexion and extension views are requested.

Percentage of Survey Respondents who found Vignette to be Typical: 95%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review the reason for the examination and any pertinent clinical history. Review any prior applicable plain film or imaging studies.

Description of Intra-Service Work: The technologist performing the examination is supervised, and the radiographs of the spine are interpreted. Examination findings are compared to previous studies, if applicable. A report is dictated for the patient's medical record.

Description of Post-Service Work: The final report is reviewed and signed, and findings are communicated to the referring physician as needed.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	25%	69%	6%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	19%	69%	13%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	6%	94%	0%

Physical effort required	13%	88%	0%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	13%	75%	13%

2nd Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	0%	83%	17%	0%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	8%	67%	25%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	8%	83%	8%
Physical effort required	0%	100%	0%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	8%	75%	17%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

Two X-ray codes of the spine (72020 and 72070) were identified by the CMS/Other codes with utilization >100,000 screen. The specialties expanded the family to include ten additional X-ray codes of the spine (72040, 72050, 72052, 72072, 72074, 72080, 72100, 72110, 72114, and 72120). This code family was initially addressed at the April 2017 RUC meeting via a crosswalk methodology approved by the Research Subcommittee. Following review by the Centers for Medicare and Medicaid Services for CY2019, the specialties agreed to survey this code for the January 2019 RUC meeting.

Survey Process

The American College of Radiology randomly surveyed 4,000 members (a random sample of 2,000 members and a separate random sample of 2,000 members who perform radiography, musculoskeletal, or neurointerventional procedures). The American Society of Neuroradiology surveyed a random sample of 3,420 members.

Compelling Evidence

The societies are requesting compelling evidence for CPT code 72074 to support the proposed work RVUs and times. This code is CMS/Other and was previously valued using flawed methodology.

Work RVU Recommendation

The specialties recommend a work RVU of 0.25 for CPT code 72074, which is the 25th percentile survey value.

Time Recommendation

The specialties recommend the survey median times of 1 minute pre-service, 4 minutes intra-service, and 1 minute post-service. This is a total recommended time of 6 minutes for CPT code 72074.

Key Reference Services

The most commonly chosen reference codes by survey participants:

- **72083** *(Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); 4 or 5 views)*, chosen by 21% of respondents, and
- **73522** *(Radiologic examination, hips, bilateral, with pelvis when performed; 3-4 views)*, chosen by 15% of respondents.

CPT code 72074 *(Radiologic examination, spine; thoracic, minimum of 4 views)* is an invaluable tool to evaluate for injury or assess for degenerative changes and causes for neuropathy or back pain. The typical number of views for this is 4 views AP, lateral, flexion and extension views.

The first KRS, 72083, has more intra-service time because of the larger anatomic region assessed. However, CPT code 72074 is more frequently performed in the inpatient/ER setting than CPT code 72083, yielding a more complex patient population, and accounting for the higher IWPUT. The second KRS, 73522, has similar intra-service and total times. However, evaluation of the hips is slightly less complex than evaluation of the spine because of the potential consequences of missing subtle spine injury or stenosis that may lead to spinal cord injury. The IWPUT for CPT code 73522 is therefore slightly lower.

The relationships are summarized in the following table:

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT
72074	**Radiologic examination, spine; thoracic, minimum of 4 views**	**0.25**	**1**	**4**	**1**	**6**	**0.0513**
73522	Radiologic examination, hips, bilateral, with pelvis when performed; 3-4 views	0.29	1	5	1	7	0.0490
72083	Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); 4 or 5 views	0.35	1	7	1	9	0.0436

MPC Codes

The surveyed code compares well with two MPC codes:

- 72081 *(Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); one view))* and
- 70355 *(Orthopantogram (eg, panoramic x-ray)).*

MPC code 70355 has a similar intra-service time and identical total time compared to CPT code 72074. However, the anatomic region for 70355 is less complex and intense than 72074, yielding a lower IWPUT. MPC code 72081 has similar intra-service and total times compared to CPT code 72074. Dedicated assessment of 72074, where there is concern for potential injury or stenosis, is more complex than 72081, which is also reflected in the site of service. CPT code 72081 is less commonly performed in the ER and inpatient compared to 72074, with less complex patients, and therefore, has a slightly lower IWPUT.

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT
70355	Orthopantogram (eg, panoramic x-ray)	0.20		5	1	6	0.0355
72074	**Radiologic examination, spine; thoracic, minimum of 4 views**	**0.25**	**1**	**4**	**1**	**6**	**0.0513**
72081	Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); one view	0.26	1	5	1	7	0.0430

Summary of Recommendations

The specialties recommend the survey 25th percentile work RVU of 0.25, with service period times of 1, 4, and 1 minutes for CPT code 72074. This recommendation maintains rank order and relativity within the X-ray spine family.

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT	Typ # of Views
72020	Radiologic examination, spine, single view, specify level	0.16	1	3	1	5	0.0384	1
72070	Radiologic examination, spine; thoracic, 2 views	0.20	1	3	1	5	0.0517	2

72110	Radiologic examination, spine, lumbosacral; minimum of 4 views	0.26	1	4	1	6	0.0538	5
72050	Radiologic examination, spine, cervical; 4 or 5 views	0.27	1	4	1	6	0.0563	5
72052	Radiologic examination, spine, cervical; 6 or more views	0.30	1	5	1	7	0.0510	7
72114	Radiologic examination, spine, lumbosacral; complete, including bending views, minimum of 6 views	0.30	1	5	1	7	0.0510	7

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and

accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 72074

SUMMARY OF RECOMMENDATION

CPT Code:72080 Tracking Number Original Specialty Recommended RVU: **0.22**
Presented Recommended RVU: **0.21**
Global Period: XXX Current Work RVU: **0.22** RUC Recommended RVU: **0.21**

CPT Descriptor: Radiologic examination, spine; thoracolumbar junction, minimum of 2 views

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: An elderly patient with history of spinal fixation surgery for prior compression fractures presents with back pain. Radiographs of the thoracolumbar spine are requested to evaluate the hardware and for degenerative disease.

Percentage of Survey Respondents who found Vignette to be Typical: 94%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review the reason for the examination and any pertinent clinical history. Review any prior applicable plain film or imaging studies.

Description of Intra-Service Work: The technologist performing the examination is supervised, and the radiographs of the spine are interpreted. Examination findings are compared to previous studies, if applicable. A report is dictated for the patient's medical record.

Description of Post-Service Work: The final report is reviewed and signed, and findings are communicated to the referring physician as needed.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	31%	44%	25%	0%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	19%	69%	13%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	19%	63%	19%

Physical effort required	0%	94%	6%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	25%	56%	19%

2nd Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	21%	64%	14%	0%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	21%	71%	7%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	29%	64%	7%
Physical effort required	29%	64%	7%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	29%	64%	7%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

Two X-ray codes of the spine (72020 and 72070) were identified by the CMS/Other codes with utilization >100,000 screen. The specialties expanded the family to include ten additional X-ray codes of the spine (72040, 72050, 72052, 72072, 72074, 72080, 72100, 72110, 72114, and 72120). This code family was initially addressed at the April 2017 RUC meeting via a crosswalk methodology approved by the Research Subcommittee. Following review by the Centers for Medicare and Medicaid Services for CY2019, the specialties agreed to survey this code for the January 2019 RUC meeting.

Survey Process

The American College of Radiology randomly surveyed 4,000 members (a random sample of 2,000 members and a separate random sample of 2,000 members who perform radiography, musculoskeletal, or neurointerventional procedures). The American Society of Neuroradiology surveyed a random sample of 3,420 members. The American Academy of Orthopaedic Surgeons surveyed a random sample of 750 members.

Work RVU Recommendation

The specialties recommend the survey 25th percentile work RVU of 0.21 for CPT code 72080. This will maintain appropriate rank order within the X-ray spine family.

Time Recommendation

The specialties recommend the survey median times of 1 minute pre-service, 3 minutes intra-service, and 1 minute post-service. This is a total recommended time of 5 minutes for CPT code 72080.

Key Reference Services

The most commonly chosen reference codes by survey participants:

- **71046** *(Radiologic examination, chest; 2 views)*, chosen by 20% of respondents, and
- **72082** *(Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); 2 or 3 views)*, chosen by 18% of respondents.

CPT code 72080 *(Radiologic examination, spine; thoracolumbar junction, minimum of 2 views)* is an invaluable tool to evaluate spinal hardware, evaluate for spine injury, assess for degenerative changes and causes for neuropathy. Two views would be typical for this exam, which would include an AP and lateral view.

The first KRS, 71046, has similar intra-service and total times, compared with CPT code 72080, which assesses a more complex anatomic region, and therefore, has a slightly higher IWPUT. The second KRS, 72082, has more intra-service time because of the larger anatomic area, but it is less frequently performed in the ER and inpatient compared to 72080. As a result, CPT code 72082, while it has a higher work RVU, has a less complex patient population, which is represented by the lower IWPUT.

The relationships are summarized in the following table:

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT
72080	**Radiologic examination, spine; thoracolumbar junction,**	**0.21**	**1**	**3**	**1**	**5**	**0.0551**

	minimum of 2 views						
71046	Radiologic examination, chest; 2 views	0.22	1	4	1	6	0.0438
72082	Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); 2 or 3 views	0.31	1	6	1	8	0.0442

MPC Codes

The surveyed code compares well with two MPC codes:

- 72081 *(Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); one view))* and
- 70355 *(Orthopantogram (eg, panoramic x-ray)).*

MPC code 70355 has more intra-service time and similar total time compared to CPT code 72080. However, it assesses a less complex anatomic region, and therefore, has a lower work RVU and IWPUT. MPC code 72081 also has more intra-service time and total time compared to CPT code 72080, along with a higher work RVU. However, the work associated with MPC code 72081 is less complex and performed less frequently in the ER and inpatient setting than CPT code 72080, yielding a lower IWPUT.

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT
70355	Orthopantogram (eg, panoramic x-ray)	0.20		5	1	6	0.0355
72080	**Radiologic examination, spine; thoracolumbar junction, minimum of 2 views**	**0.21**	**1**	**3**	**1**	**5**	**0.0551**
72081	Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); one view	0.26	1	5	1	7	0.0430

Summary of Recommendations

The specialties recommend the survey 25th percentile work RVU of 0.21, with service period times of 1, 3, and 1 minutes for CPT code 72080. This recommendation maintains rank order and relativity within the X-ray spine family.

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT	Typ # of Views
72020	Radiologic examination, spine, single view, specify level	0.16	1	3	1	5	0.0384	1

72070	Radiologic examination, spine; thoracic, 2 views	0.20	1	3	1	5	0.0517	2
72040	Radiologic examination, spine, cervical; 2 or 3 views	0.22	1	3	1	5	0.0584	3
72080	**Radiologic examination, spine; thoracolumbar junction, minimum of 2 views**	**0.21**	**1**	**3**	**1**	**5**	**0.0551**	**2**
72100	Radiologic examination, spine, lumbosacral; 2 or 3 views	0.22	1	3	1	5	0.0584	3
72120	Radiologic examination, spine, lumbosacral; bending views only, 2 or 3 views	0.22	1	3	1	5	0.0584	3
72072	Radiologic examination, spine; thoracic, 3 views	0.23	1	3	1	5	0.0617	3
72074	Radiologic examination, spine; thoracic, minimum of 4 views	0.25	1	4	1	6	0.0513	4
72110	Radiologic examination, spine, lumbosacral; minimum of 4 views	0.26	1	4	1	6	0.0538	5
72050	Radiologic examination, spine, cervical; 4 or 5 views	0.27	1	4	1	6	0.0563	5
72052	Radiologic examination, spine, cervical; 6 or more views	0.30	1	5	1	7	0.0510	7
72114	Radiologic examination, spine, lumbosacral; complete, including bending views, minimum of 6 views	0.30	1	5	1	7	0.0510	7

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☒ Other reason (please explain) CPT code 72080 is typically billed with an E/M code.

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 72080

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Orthopedic Surgery How often? Commonly

Specialty Diagnostic Radiology How often? Commonly

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 132243
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by code 72080 provided nationally in a one-year period is estimated to be 132,243

Specialty Orthopedic Surgery Frequency 31219 Percentage 23.60 %

Specialty Diagnostic Radiology Frequency 75915 Percentage 57.40 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 44,081
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The 2017 Medicare data estimates the CPT code 72080 is billed approximately 44,081 times in total for Medicare patients nationally in a one-year period.

Specialty Orthopedic Surgery Frequency 10406 Percentage 23.60 %

Specialty Diagnostic Radiology Frequency 25305 Percentage 57.40 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Imaging

BETOS Sub-classification:
Standard imaging

BETOS Sub-classification Level II:
Musculoskeletal

• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	38%	62%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

Two X-ray codes of the spine (72020 and 72070) were identified by the CMS/Other codes with utilization >100,000 screen. The specialties expanded the family to include ten additional X-ray codes of the spine

(72040, 72050, 72052, 72072, 72074, 72080, 72100, 72110, 72114, and 72120). This code family was initially addressed at the April 2017 RUC meeting via a crosswalk methodology approved by the Research Subcommittee. Following review by the Centers for Medicare and Medicaid Services for CY2019, the specialties agreed to survey this code for the January 2019 RUC meeting.

Survey Process

The American College of Radiology randomly surveyed 4,000 members (a random sample of 2,000 members and a separate random sample of 2,000 members who perform radiography, musculoskeletal, or neurointerventional procedures). The American Society of Neuroradiology surveyed a random sample of 3,420 members. The American Academy of Orthopaedic Surgeons surveyed a random sample of 750 members.

Work RVU Recommendation

The specialties recommend maintaining the current work RVU of 0.22 for CPT code 72100, which is also the 25th percentile survey value.

Time Recommendation

The specialties recommend the survey median times of 1 minute pre-service, 3 minutes intra-service, and 1 minute post-service. This is a total recommended time of 5 minutes for CPT code 72100.

Key Reference Services

The most commonly chosen reference codes by survey participants:

- **72082** *(Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); 2 or 3 views),* chosen by 24% of respondents, and
- **73562** *(Radiologic examination, knee; 3 views),* chosen by 16% of respondents.

CPT code 72100 *(Radiologic examination, spine, lumbosacral; 2 or 3 views)* is an invaluable tool to evaluate for spine injury, assess for degenerative changes and causes for neuropathy and back pain. Three views are typical for this exam, which would include an AP, lateral and coned view of the lumbosacral junction.

The first KRS, 72082, has more intra-service and total times, along with a higher work RVU, compared to CPT code 72100 because of the larger anatomic region assessed. However, its IWPUT is lower because the patient population is less complex, with the study less frequently performed in the ER and inpatient setting compared to CPT code 72100. The second KRS, 73562, has similar intra-service and total times, with a slightly lower work RVU, compared to CPT code 72100. CPT code 73562 assesses a less complex anatomic region, and therefore, has a lower IWPUT. The appendicular x-rays are typically less complex than the axial x-rays, which include the chest, abdomen and spine regions. The axial x-rays are more complex because of the increased overlapping soft tissue and bony structures which need to be assessed.

The relationships are summarized in the following table:

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT
73562	Radiologic examination, knee; 3	0.18	1	4	1	6	0.0338

	views						
72100	**Radiologic examination, spine, lumbosacral; 2 or 3 views**	**0.22**	**1**	**3**	**1**	**5**	**0.0584**
72082	Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); 2 or 3 views	0.31	1	6	1	8	0.0442

MPC Codes

The surveyed code compares well with two MPC codes:

- 72081 *(Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); one view))* and
- 70355 *(Orthopantogram (eg, panoramic x-ray)).*

MPC code 70355 has similar times and work RVU compared to CPT code 72100. However, it assesses a less complex anatomic region, and therefore, has a lower IWPUT. MPC code 72081 has slightly more intra-service and total times, along with a higher RVU, compared to CPT code 72100. However, the work associated with CPT code 72081 is less complex and performed less frequently in the ER and inpatient setting than CPT code 72100, yielding a lower IWPUT.

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT
70355	Orthopantogram (eg, panoramic x-ray)	0.20		5	1	6	0.0355
72100	**Radiologic examination, spine, lumbosacral; 2 or 3 views**	**0.22**	**1**	**3**	**1**	**5**	**0.0584**
72081	Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); one view	0.26	1	5	1	7	0.0430

Summary of Recommendations

The specialties recommend the survey 25th percentile work RVU of 0.22, which is also the current value, with service period times of 1, 3, and 1 minutes for CPT code 72100. This recommendation maintains rank order and relativity within the X-ray spine family.

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT	Typ # of Views
72020	Radiologic examination, spine, single view, specify level	0.16	1	3	1	5	0.0384	1

72070	Radiologic examination, spine; thoracic, 2 views	0.20	1	3	1	5	0.0517	2
72040	Radiologic examination, spine, cervical; 2 or 3 views	0.22	1	3	1	5	0.0584	3
72080	Radiologic examination, spine; thoracolumbar junction, minimum of 2 views	0.21	1	3	1	5	0.0551	2
72100	**Radiologic examination, spine, lumbosacral; 2 or 3 views**	**0.22**	**1**	**3**	**1**	**5**	**0.0584**	**3**
72120	Radiologic examination, spine, lumbosacral; bending views only, 2 or 3 views	0.22	1	3	1	5	0.0584	3
72072	Radiologic examination, spine; thoracic, 3 views	0.23	1	3	1	5	0.0617	3
72074	Radiologic examination, spine; thoracic, minimum of 4 views	0.25	1	4	1	6	0.0513	4
72110	Radiologic examination, spine, lumbosacral; minimum of 4 views	0.26	1	4	1	6	0.0538	5
72050	Radiologic examination, spine, cervical; 4 or 5 views	0.27	1	4	1	6	0.0563	5
72052	Radiologic examination, spine, cervical; 6 or more views	0.30	1	5	1	7	0.0510	7
72114	Radiologic examination, spine, lumbosacral; complete, including bending views, minimum of 6 views	0.30	1	5	1	7	0.0510	7

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☒ Other reason (please explain) CPT code 72100 is typically billed with an E/M code.

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 72100

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Orthopedic Surgery How often? Commonly

Specialty Diagnostic Radiology How often? Commonly

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 5654688
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by code 72100 provided nationally in a one-year period is estimated to be 5,654,688

Specialty Orthopedic Surgery Frequency 1199923 Percentage 21.21 %

Specialty Diagnostic Radiology Frequency 3233559 Percentage 57.18 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,884,896 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The 2017 Medicare data estimates the CPT code 72100 is billed approximately 1,884,896 times in total for Medicare patients nationally in a one-year period.

Specialty Orthopedic Surgery Frequency 399974 Percentage 21.21 %

Specialty Diagnostic Radiology Frequency 1077853 Percentage 57.18 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Imaging

BETOS Sub-classification:
Standard imaging

BETOS Sub-classification Level II:
Musculoskeletal

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 72100

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

CPT Descriptor: Radiologic examination, spine, lumbosacral; minimum of 4 views

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A patient presents with trauma to the lumbosacral spine from an auto accident.

Percentage of Survey Respondents who found Vignette to be Typical: 91%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review the reason for the examination and any pertinent clinical history. Review any prior applicable plain film or imaging studies.

Description of Intra-Service Work: The technologist performing the examination is supervised, and the radiographs of the spine are interpreted. Examination findings are compared to previous studies, if applicable. A report is dictated for the patient's medical record.

Description of Post-Service Work: The final report is reviewed and signed, and findings are communicated to the referring physician as needed.

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	6%	50%	44%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	6%	75%	19%
Physical effort required	0%	88%	13%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	63%	38%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

Two X-ray codes of the spine (72020 and 72070) were identified by the CMS/Other codes with utilization >100,000 screen. The specialties expanded the family to include ten additional X-ray codes of the spine (72040, 72050, 72052, 72072, 72074, 72080, 72100, 72110, 72114, and 72120). This code family was initially addressed at the April 2017 RUC meeting via a crosswalk methodology approved by the Research Subcommittee. Following review by the Centers for Medicare and Medicaid Services for CY2019, the specialties agreed to survey this code for the January 2019 RUC meeting.

Survey Process

The American College of Radiology randomly surveyed 4,000 members (a random sample of 2,000 members and a separate random sample of 2,000 members who perform radiography, musculoskeletal, or neurointerventional procedures). The American Society of Neuroradiology surveyed a random sample of 3,420 members. The American Academy of Orthopaedic Surgeons surveyed a random sample of 750 members.

Work RVU Recommendation

The specialties recommend a work RVU of 0.26 for CPT code 72110, which is the 25th percentile survey value.

Time Recommendation

The specialties recommend the survey median times of 1 minute pre-service, 4 minutes intra-service, and 1 minute post-service. This is a total recommended time of 6 minutes for CPT code 72110. This is a reduction in value from the current 0.31 work RVU.

Key Reference Services

The most commonly chosen reference codes by survey participants:

- **72083** *(Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); 4 or 5 views)*, chosen by 31% of respondents, and
- **73522** *(Radiologic examination, hips, bilateral, with pelvis when performed; 3-4 views)*, chosen by 20% of respondents.

CPT code 72110 *(Radiologic examination, spine, lumbosacral; minimum of 4 views)* is an invaluable tool to evaluate for spine injury, assess for degenerative changes and causes for neuropathy. Five views are typical for this exam which would include AP, lateral, coned-in view of the lumbosacral junction, and oblique views to evaluate the bilateral foramina.

The first KRS, 72083, has more intra-service and total times and a higher work RVU compared to CPT code 72110. However, the study is performed less frequently in the ER and inpatient setting, and therefore, has a less complex patient population with subsequently lower IWPUT. In addition, dedicated evaluation of the lumbosacral spine (CPT code 72110) where there is concern for potential injury or stenosis resulting in injury of the nerve roots is more intense than evaluation of scoliosis (CPT code 72083). The second KRS, 73522, has slightly higher intra-service and total times and work RVU. However, it assesses a slightly less complex anatomic structure and therefore has a lower IWPUT.

The relationships are summarized in the following table:

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT
72110	**Radiologic examination, spine, lumbosacral; minimum of 4 views**	**0.26**	**1**	**4**	**1**	**6**	**0.0538**
73522	Radiologic examination, hips, bilateral, with pelvis when performed; 3-4 views	0.29	1	5	1	7	0.0490
72083	Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); 4 or 5 views	0.35	1	7	1	9	0.0436

MPC Codes

The surveyed code compares well with two MPC codes:

- 72081 *(Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); one view))* and
- 70355 *(Orthopantogram (eg, panoramic x-ray)).*

MPC code 72081 has slightly work intra-service and total times, but identical work RVU. The work associated with 72081 is less complex and performed less frequently in the ER and inpatient setting than 72110, yielding a lower IWPUT. While MPC code 70355 has similar times, it assesses a less complex anatomic region, and therefore has lower work RVU and IWPUT than 72110.

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT
70355	Orthopantogram (eg, panoramic x-ray)	0.20		5	1	6	0.0355
72110	**Radiologic examination, spine, lumbosacral; minimum of 4 views**	**0.26**	**1**	**4**	**1**	**6**	**0.0538**
72081	Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); one view	0.26	1	5	1	7	0.0430

Summary of Recommendations

The specialties recommend the survey 25th percentile work RVU of 0.26—a reduction from 0.31 RVU—with service period times of 1, 4, and 1 minutes for CPT code 72110. This recommendation maintains rank order and relativity within the X-ray spine family.

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT	Typ # of

								Views
72020	Radiologic examination, spine, single view, specify level	0.16	1	3	1	5	0.0384	1
72070	Radiologic examination, spine; thoracic, 2 views	0.20	1	3	1	5	0.0517	2
72040	Radiologic examination, spine, cervical; 2 or 3 views	0.22	1	3	1	5	0.0584	3
72080	Radiologic examination, spine; thoracolumbar junction, minimum of 2 views	0.21	1	3	1	5	0.0551	2
72100	Radiologic examination, spine, lumbosacral; 2 or 3 views	0.22	1	3	1	5	0.0584	3
72120	Radiologic examination, spine, lumbosacral; bending views only, 2 or 3 views	0.22	1	3	1	5	0.0584	3
72072	Radiologic examination, spine; thoracic, 3 views	0.23	1	3	1	5	0.0617	3
72074	Radiologic examination, spine; thoracic, minimum of 4 views	0.25	1	4	1	6	0.0513	4
72110	**Radiologic examination, spine, lumbosacral; minimum of 4 views**	**0.26**	**1**	**4**	**1**	**6**	**0.0538**	**5**
72050	Radiologic examination, spine, cervical; 4 or 5 views	0.27	1	4	1	6	0.0563	5
72052	Radiologic examination, spine, cervical; 6 or more views	0.30	1	5	1	7	0.0510	7
72114	Radiologic examination, spine, lumbosacral; complete, including bending views, minimum of 6 views	0.30	1	5	1	7	0.0510	7

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☒ Other reason (please explain) CPT code 72110 is typically billed with an E/M code.

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 72110

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Orthopedic Surgery How often? Commonly

Specialty Diagnostic Radiology How often? Commonly

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 2,578,299
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by code 72110 provided nationally in a one-year period is estimated to be 2,578,299.

Specialty Orthopedic Surgery Frequency 226833 Percentage 8.79 %

Specialty Diagnostic Radiology Frequency 2190583 Percentage 84.96 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 859,433 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The 2017 Medicare data estimates the CPT code 72110 is billed approximately 859,433 times in total for Medicare patients nationally in a one-year period.

Specialty Orthopedic Surgery Frequency 75611 Percentage 8.79 %

Specialty Diagnostic Radiology Frequency 730194 Percentage 84.96 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Imaging

BETOS Sub-classification:
Standard imaging

BETOS Sub-classification Level II:
Musculoskeletal

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 72110

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

SUMMARY OF RECOMMENDATION

CPT Code:72114 Tracking Number

Original Specialty Recommended RVU: **0.32**
Presented Recommended RVU: **0.30**
RUC Recommended RVU: **0.30**

Global Period: XXX Current Work RVU: **0.32**

CPT Descriptor: Radiologic examination, spine, lumbosacral; complete, including bending views, minimum of 6 views

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A patient presents with trauma to the lumbosacral spine from an auto accident. There is clinical concern for instability.

Percentage of Survey Respondents who found Vignette to be Typical: 83%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review the reason for the examination and any pertinent clinical history. Review any prior applicable plain film or imaging studies.

Description of Intra-Service Work: The technologist performing the examination is supervised, and the radiographs of the spine are interpreted. Examination findings are compared to previous studies, if applicable. A report is dictated for the patient's medical record.

Description of Post-Service Work: The final report is reviewed and signed, and findings are communicated to the referring physician as needed.

• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	18%	64%	18%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

Two X-ray codes of the spine (72020 and 72070) were identified by the CMS/Other codes with utilization >100,000 screen. The specialties expanded the family to include ten additional X-ray codes of the spine

(72040, 72050, 72052, 72072, 72074, 72080, 72100, 72110, 72114, and 72120). This code family was initially addressed at the April 2017 RUC meeting via a crosswalk methodology approved by the Research Subcommittee. Following review by the Centers for Medicare and Medicaid Services for CY2019, the specialties agreed to survey this code for the January 2019 RUC meeting.

Survey Process

The American College of Radiology randomly surveyed 4,000 members (a random sample of 2,000 members and a separate random sample of 2,000 members who perform radiography, musculoskeletal, or neurointerventional procedures). The American Society of Neuroradiology surveyed a random sample of 3,420 members. The American Academy of Orthopaedic Surgeons surveyed a random sample of 750 members.

Work RVU Recommendation

The specialties recommend the survey 25th percentile work RVU of 0.30 for CPT code. This will maintain appropriate rank order with the X-ray spine family.

Time Recommendation

The specialties recommend the survey median times of 1 minute pre-service, 5 minutes intra-service, and 1 minute post-service. This is a total recommended time of 7 minutes for CPT code 72114.

Key Reference Services

The most commonly chosen reference codes by survey participants:

- **72084** *(Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); minimum of 6 views)*, chosen by 41% of respondents, and
- **72083** *(Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); 4 or 5 views)*, chosen by 14% of respondents.

CPT code 72114 *(Radiologic examination, spine, lumbosacral; complete, including bending views, minimum of 6 views)* is an invaluable tool to evaluate for spine injury, evaluate spine alignment and instability, assess for degenerative changes and causes for neuropathy. Seven views are typical for this exam, which would include, AP, Lateral, coned-in view of the lumbosacral junction, oblique views to assess the neural foramina, bending and extension views.

Both CPT code 72083 and CPT code 70284 have slightly higher intra-service times because of the larger anatomic regions covered. However, the complexity of assessing dedicated views of the lumbosacral spine, represented by CPT code 72114, is higher compared to CPT codes 72083 and 72084. CPT code 72114 shows more detailed views of the spinal canal, neural foramina and dynamic stability, whereas 72083 and 72084 capture a larger view to assess the alignment of the spine and potential congenital anomalies contributing to curvature of the spine.

The relationships are summarized in the following table:

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT
72114	**Radiologic examination, spine, lumbosacral; complete, including bending views, minimum of 6 views**	**0.30**	**1**	**5**	**1**	**7**	**0.0510**
72083	Radiologic examination, spine,	0.35	1	7	1	9	0.0436

	entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); 4 or 5 views						
72084	Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); minimum of 6 views	0.41	1	8	1	10	0.0456

MPC Codes

The surveyed code compares well with two MPC codes:

- 72081 *(Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); one view))* and
- 70355 *(Orthopantogram (eg, panoramic x-ray)).*

Both MPC codes 70355 and 72081 have the same intra-service time as CPT code 72114, with similar or identical total times, but all have varying work RVUs. CPT code 70355 covers a less complex anatomic region, which accounts for the lower work RVU and IWPUT. MPC code 72081 is a one view exam of the entire spine used to assess for scoliosis, requiring less intense work compared to CPT code 72114, which has a minimum of 6 views, yielding a lower work RVU and IWPUT.

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT
70355	Orthopantogram (eg, panoramic x-ray)	0.20		5	1	6	0.0355
72081	Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); one view	0.26	1	5	1	7	0.0430
72114	**Radiologic examination, spine, lumbosacral; complete, including bending views, minimum of 6 views**	**0.30**	**1**	**5**	**1**	**7**	**0.0510**

Summary of Recommendations

The specialties recommend the survey 25th percentile work RVU of 0.30, with service period times of 1, 5, and 1 minutes for CPT code 72114. This recommendation maintains rank order and relativity within the X-ray spine family.

CPT Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT	Typ # of Views
72020	Radiologic examination, spine, single view, specify level	0.16	1	3	1	5	0.0384	1
72070	Radiologic examination, spine; thoracic, 2 views	0.20	1	3	1	5	0.0517	2

72040	Radiologic examination, spine, cervical; 2 or 3 views	0.22	1	3	1	5	0.0584	3
72080	Radiologic examination, spine; thoracolumbar junction, minimum of 2 views	0.21	1	3	1	5	0.0551	2
72100	Radiologic examination, spine, lumbosacral; 2 or 3 views	0.22	1	3	1	5	0.0584	3
72120	Radiologic examination, spine, lumbosacral; bending views only, 2 or 3 views	0.22	1	3	1	5	0.0584	3

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☒ Other reason (please explain) CPT code 72114 is typically billed with an E/M code.

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 72114

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Commonly

Specialty Orthopedic Surgery How often? Commonly

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 294897
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by code 72114 provided nationally in a one-year period is estimated to be 294,897.

Specialty Diagnostic Radiology Frequency 183500 Percentage 62.22 %

Specialty Orthopedic Surgery Frequency 51175 Percentage 17.35 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 98,299
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The 2017 Medicare data estimates the CPT code 72114 is billed approximately 98,299 times in total for Medicare patients nationally in a one-year period.

Specialty Diagnostic Radiology Frequency 61167 Percentage 62.22 %

Specialty Orthopedic Surgery Frequency 17058 Percentage 17.35 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

SUMMARY OF RECOMMENDATION

CPT Code:72120 Tracking Number Original Specialty Recommended RVU: **0.22**
Presented Recommended RVU: **0.22**
Global Period: XXX Current Work RVU: **0.22** RUC Recommended RVU: **0.22**

CPT Descriptor: Radiologic examination, spine, lumbosacral; bending views only, 2 or 3 views

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A patient with known grade I spondylolisthesis from prior examinations. There is clinical concern for instability. Bending views are ordered to evaluate for abnormal movement.

Percentage of Survey Respondents who found Vignette to be Typical: 95%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review the reason for the examination and any pertinent clinical history. Review any prior applicable plain film or imaging studies.

Description of Intra-Service Work: The technologist performing the examination is supervised, and the radiographs of the lumbosacral spine are interpreted. Examination findings are compared to previous studies, if applicable. A report is dictated for the patient's medical record.

Description of Post-Service Work: The final report is reviewed and signed, and findings are communicated to the referring physician as needed.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	20%	70%	10%	0%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	20%	70%	10%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	15%	70%	15%

Physical effort required	10%	85%	5%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	85%	15%

2nd Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	15%	38%	31%	15%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	23%	38%	38%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	23%	38%	38%
Physical effort required	8%	85%	8%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	15%	54%	31%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

Two X-ray codes of the spine (72020 and 72070) were identified by the CMS/Other codes with utilization >100,000 screen. The specialties expanded the family to include ten additional X-ray codes of the spine

(72040, 72050, 72052, 72072, 72074, 72080, 72100, 72110, 72114, and 72120). This code family was initially addressed at the April 2017 RUC meeting via a crosswalk methodology approved by the Research Subcommittee. Following review by the Centers for Medicare and Medicaid Services for CY2019, the specialties agreed to survey this code for the January 2019 RUC meeting.

Survey Process

The American College of Radiology randomly surveyed 4,000 members (a random sample of 2,000 members and a separate random sample of 2,000 members who perform radiography, musculoskeletal, or neurointerventional procedures). The American Society of Neuroradiology surveyed a random sample of 3,420 members. The American Academy of Orthopaedic Surgeons surveyed a random sample of 750 members.

Work RVU Recommendation

The specialties recommend maintaining the current work RVU of 0.22 for CPT code 72120, which is also the 25th percentile survey value.

Time Recommendation

The specialties recommend the survey median times of 1 minute pre-service, 3 minutes intra-service, and 1 minute post-service. This is a total recommended time of 5 minutes for CPT code 72120.

Key Reference Services

The most commonly chosen reference codes by survey participants:

- **72082** *(Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); 2 or 3 views),* chosen by 25% of respondents, and
- **74019** *(Radiologic examination, abdomen; 2 views),* chosen by 16% of respondents.

CPT code 72120 *(Radiologic examination, spine, lumbosacral; bending views only, 2 or 3 views)* is an invaluable tool to evaluate the dynamic spine alignment and instability. Three views are typical for this code, which includes a view in flexion, neutral and extension position.

The first KRS, 72082, covers a larger anatomic region, justifying the higher times and work RVU. However, CPT code 72120 is a more complex exam then 72082 because it requires dynamic assessment of spine stability and the relationship of vertebral bodies with movement, resulting in the slightly higher IWPUT. The second KRS, 74019, has similar times and work RVU, but the anatomic region is less complex than CPT code 72120, yielding a lower IWPUT.

The relationships are summarized in the following table:

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT
72120	**Radiologic examination, spine, lumbosacral; bending views only, 2 or 3 views**	**0.22**	**1**	**3**	**1**	**5**	**0.0584**
74019	Radiologic examination,	0.23	1	4	1	6	0.0463

	abdomen; 2 views						
72082	Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); 2 or 3 views	0.31	1	6	1	8	0.0442

MPC Codes

The surveyed code compares well with two MPC codes:

- 72081 *(Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); one view))* and
- 70355 *(Orthopantogram (eg, panoramic x-ray)).*

MPC code 70355 is a one-view exam that has a slightly higher intra-service time, but covers a less complex anatomic region, accounting for the lower work RVU and IWPUT. MPC code 72081 has a slightly higher intra-service time and work RVU because it covers a larger anatomic region. However, 72081 is a single view exam used to assess spine alignment, and is less complex than dedicated views assessing the stability of the lumbosacral spine, resulting in the lower IWPUT compared to CPT code 72120.

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT
70355	Orthopantogram (eg, panoramic x-ray)	0.20		5	1	6	0.0355
72120	**Radiologic examination, spine, lumbosacral; bending views only, 2 or 3 views**	**0.22**	**1**	**3**	**1**	**5**	**0.0584**
72081	Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); one view	0.26	1	5	1	7	0.0430

Summary of Recommendations

The specialties recommend the survey 25th percentile work RVU of 0.22, which is also the current value, with service period times of 1, 3, and 1 minutes for CPT code 72120. This recommendation maintains rank order and relativity within the X-ray spine family.

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT	Typ # of Views
72020	Radiologic examination, spine, single view, specify level	0.16	1	3	1	5	0.0384	1

72070	Radiologic examination, spine; thoracic, 2 views	0.20	1	3	1	5	0.0517	2
72040	Radiologic examination, spine, cervical; 2 or 3 views	0.22	1	3	1	5	0.0584	3
72080	Radiologic examination, spine; thoracolumbar junction, minimum of 2 views	0.21	1	3	1	5	0.0551	2
72100	Radiologic examination, spine, lumbosacral; 2 or 3 views	0.22	1	3	1	5	0.0584	3
72120	**Radiologic examination, spine, lumbosacral; bending views only, 2 or 3 views**	**0.22**	**1**	**3**	**1**	**5**	**0.0584**	**3**
72072	Radiologic examination, spine; thoracic, 3 views	0.23	1	3	1	5	0.0617	3
72074	Radiologic examination, spine; thoracic, minimum of 4 views	0.25	1	4	1	6	0.0513	4
72110	Radiologic examination, spine, lumbosacral; minimum of 4 views	0.26	1	4	1	6	0.0538	5
72050	Radiologic examination, spine, cervical; 4 or 5 views	0.27	1	4	1	6	0.0563	5
72052	Radiologic examination, spine, cervical; 6 or more views	0.30	1	5	1	7	0.0510	7
72114	Radiologic examination, spine, lumbosacral; complete, including bending views, minimum of 6 views	0.30	1	5	1	7	0.0510	7

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☒ Other reason (please explain) CPT code 72120 is typically billed with an E/M code.

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in

the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

Practice Expense Summary of Recommendation (SOR)
Non Facility Direct Practice Expense (PE) Inputs

CPT Long Descriptor:

72020	Radiologic examination, spine, single view, specify level
72040	Radiologic examination, spine, cervical; 2 or 3 views
72050	Radiologic examination, spine, cervical; 4 or 5 views
72052	Radiologic examination, spine, cervical; 6 or more views
72070	Radiologic examination, spine; thoracic, 2 views
72072	Radiologic examination, spine; thoracic, 3 views
72074	Radiologic examination, spine; thoracic, minimum of 4 views
72080	Radiologic examination, spine; thoracolumbar junction, minimum of 2 views
72100	Radiologic examination, spine, lumbosacral; 2 or 3 views
72110	Radiologic examination, spine, lumbosacral; minimum of 4 views
72114	Radiologic examination, spine, lumbosacral; complete, including bending views, minimum of 6 views
72120	Radiologic examination, spine, lumbosacral; bending views only, 2 or 3 views

Global Period: XXX Meeting Date: January 2019

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   The American College of Radiology (ACR), American Academy of Orthopaedic Surgeons (AAOS), and the American Society of Neuroradiology (ASNR) convened a consensus panel to finalize the practice expense data for the x-ray spine, CPT codes 72020, 72040, 72050, 72052, 72070, 72072, 72074, 72080, 72100, 72110, 72114, and 72120.

2. You must provide reference code(s) for comparison on your spreadsheet. **If the codes you are making recommendations on are not new, you must use the current direct PE inputs as your reference code.** You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here:

   The societies included the existing PE inputs for code 72020, 72040, 72050, 72052, 72070, 72072, 72074, 72080, 72100, 72110, 72114, 72120 on the spreadsheet to serve as a reference.

3. Is this code(s) typically billed with an E/M service?
   Is this code(s) typically billed with the E/M service in the nonfacility?
   (Please see provided data in PE Subcommittee folder)

   These codes are not typically billed with an E/M service.
   CPT codes 72040, 72070, 72080, 72100, 72110, 72114, and 72120 are typically billed with an E/M in the nonfacility.

4. What specialty is the dominant provider in the nonfacility?
   What percent of the time does the dominant provider provide the service(s) in the nonfacility?
   Is the dominant provider in the nonfacility different then for the global?
   (Please see provided data in PE Subcommittee folder)

	Nonfacility		Global	
72020	INDEPENDENT DIAGNOSTIC TESTING FACILITY	29%	DIAGNOSTIC RADIOLOGY	79%
72040	ORTHOPEDIC SURGERY	35%	DIAGNOSTIC RADIOLOGY	57%
72050	DIAGNOSTIC RADIOLOGY	34%	DIAGNOSTIC RADIOLOGY	70%
72052	DIAGNOSTIC RADIOLOGY	36%	DIAGNOSTIC RADIOLOGY	74%
72070	DIAGNOSTIC RADIOLOGY	24%	DIAGNOSTIC RADIOLOGY	64%
72072	DIAGNOSTIC RADIOLOGY	52%	DIAGNOSTIC RADIOLOGY	90%
72074	DIAGNOSTIC RADIOLOGY	47%	DIAGNOSTIC RADIOLOGY	86%
72080	ORTHOPEDIC SURGERY	45%	DIAGNOSTIC RADIOLOGY	57%
72100	ORTHOPEDIC SURGERY	40%	DIAGNOSTIC RADIOLOGY	57%
72110	DIAGNOSTIC RADIOLOGY	30%	DIAGNOSTIC RADIOLOGY	66%
72114	DIAGNOSTIC RADIOLOGY	33%	DIAGNOSTIC RADIOLOGY	62%
72120	ORTHOPEDIC SURGERY	45%	DIAGNOSTIC RADIOLOGY	79%

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:
   N/A

6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), you must provide compelling evidence. Please explain if the increase can be entirely accounted for because of an increase in physician time.

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here: N/A

8. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? (please use this time rather than 5 minutes in your reference code)
   The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

9. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

   Spine, all study types
   Bring patient into x-ray room and have patient stand or lie on the x-ray table as appropriate. Place first cassette at patient's appropriate spine level. Position the patient's spine for the first view (typically an AP, lateral or bending view depending on study type). Stabilize spine with angle sponge/bolster to minimize motion as appropriate. Step behind shielding to control panel. Set

appropriate exposure parameters. Instruct patient to hold still. Take exposure for first view. Step from behind shielding. Take first cassette out from under spine. Repeat above steps as many times as necessary for the study type, starting with placing a new cassette for the next view. For example, a typical 3 view exam of the cervical spine would include AP, lateral and odontoid views; a typical 4 view exam at any level would include AP, lateral and bilateral oblique views; and a typical 6 view exam at any level would include AP, lateral, bilateral oblique, and flexion/extension views. Once all views have been obtained, take all cassettes to the image reader. Run all cassettes through the reader. Check images for adequate exposure, positioning, coverage, etc. Repeat any views as needed.

10. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.
    N/A

11. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities:
    N/A

12. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.
    N/A

13. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here:
    N/A

14. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here:
    N/A

15. List all the equipment included in your recommendation and the equipment formula chosen (see document titled “Calculating equipment time”). If you have selected “other formula” for any of the equipment please explain here:
    - **Technologist PACS Workstation Proxy (ED050)** –PACS formula; Equals total service period time
    - **Professional PACS Workstation (ED053)** – Equals physician work intra time + 1/2 physician work pre-time
    - **Room, basic radiology (EL012)** – Highly technical formula

16. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here:
    N/A

17. If there is any other item on your spreadsheet that needs further explanation please include here:
    N/A

18. Please include an explanation of each line item:
    N/A

AMA/Specialty Society RVS Update Committee Summary of Recommendations
NPRM for 2019

January 2019

X-Ray Exam – Pelvis – Tab 28

In October 2017, the RAW requested that AMA staff compile a list of CMS/Other codes with Medicare utilization of 30,000 or more. CPT code 72190 was identified by this screen and CPT code 72170 was added as part of the family. In January 2018, the RUC recommended to crosswalk these services like other recent similar radiology recommendations for April 2018. The RUC used a similar cross-walking methodology as it did for CY 2019 codes that were rejected in the NRPM for 2019, for 7 X-ray codes that were reviewed at the April 2018 meeting for CY 2020. (CPT codes 70210, 70220, 70250, 70260, 70360, 72170 and 72190). The RUC requested that the specialties survey these seven services and review them again at the January 2019 RUC meeting (CY 2020 cycle).

Compelling Evidence
The specialty societies presented compelling evidence based on flawed methodology for CPT code 72190 only. This code is CMS/Other sourced as identified by the screen. Therefore, how the times and values were established is unknown or flawed. The RUC accepted compelling evidence for 72190 based on flawed methodology.

72170 ***Radiologic examination, pelvis; 1 or 2 views***
The RUC reviewed the survey results from 54 radiologists and orthopaedic surgeons and determined that the current work RVU of 0.17, which falls below the survey 25th percentile, appropriately accounts for the physician work involved to perform this service. The RUC recommends 1 minute pre-service time, 4 minutes intra-service time, and 1 minute immediate post-service time.

The RUC noted that CPT code 72170 is in the family of X-ray codes used to evaluate the pelvis-only, distinct from the set of codes created for the hips in which the pelvis was bundled in and is typically performed as a one view pelvis radiograph. Thus, the survey code reflects lower intensity and less physician work when compared to both the top key reference service 73502 *Radiologic examination, hip, unilateral, with pelvis when performed; 2-3 views* (work RVU = 0.22, 4 minutes intra-service time) and the second highest key reference service 73522 *Radiologic examination, hips, bilateral, with pelvis when performed; 3-4 views* (work RVU = 0.29, 5 minutes intra-service time). A single view is typical for the survey code and therefore the key reference services will almost always include more views.

To further justify a work RVU of 0.17, the RUC compared CPT code 72170 to CPT code 73110 *Radiologic examination, wrist; complete, minimum of 3 views* (work RVU = 0.17, 4 minutes intra-service time) and noted that the studies should be valued similarly given the identical

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

service times and intensity of physician work despite the variance in views. Thus, the RUC agreed that the current work RVU of 0.17 for CPT code 72170 should be maintained. **The RUC recommends a work RVU of 0.17 for CPT code 72170.**

72190 *Radiologic examination, pelvis; complete, minimum of 3 views*
The RUC reviewed the survey results from 54 radiologists and orthopaedic surgeons and determined that the survey 25th percentile work RVU of 0.25 accurately reflects the physician work necessary for this service. CPT code 72190 is in the family of x-ray codes used to evaluate the pelvis-only. Typical number of views is a three-view exam. The RUC recommends 1 minute pre-service time, 5 minutes intra-service time, and 1 minute immediate post-service time. While questions were raised regarding the additional minute of intra-service time as compared to other X-ray codes, the RUC supports the validity of the survey data and relies upon the survey respondents to accurately account for the times involved in the service. The RUC further noted that the 0.08 RVU increment between the two codes in the family is appropriate recognizing that 3 views is typical for the survey code.

The RUC compared CPT code 72190 to both the top key reference service 73502 *Radiologic examination, hip, unilateral, with pelvis when performed; 2-3 views* (work RVU = 0.22, 4 minutes intra-service time) and the second highest key reference service 73552 *Radiologic examination, hips, bilateral, with pelvis when performed; 3-4 views* (work RVU = 0.29, 5 minutes intra-service time) and agreed that these codes appropriately bracket the survey code. The survey code is also bracketed by the two MPC codes 70355 *Orthopantogram (eg, panoramic x-ray)* (work RVU = 0.20, 5 minutes intra-service time) and 72081 *Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); one view* (work RVU = 0.26, 5 minutes intra-service time).

To further justify the recommendation, the RUC compared CPT code 72190 to MPC code 93922 *Limited bilateral noninvasive physiologic studies of upper or lower extremity arteries…* (work RVU = 0.25, 5 minutes intra-service time) and noted that the services have identical intra-service times and involve the same amount of physician work while the survey code has twice the intensity/complexity as the comparison code.

The RUC concluded that CPT code 72190 should be valued at the 25th percentile work RVU as supported by the survey. **The RUC recommends a work RVU of 0.25 for CPT code 72190.**

Practice Expense
These services were reviewed and approved by the PE Subcommittee in April 2018. **The RUC recommends the direct practice expense inputs as affirmed by the Practice Expense Subcommittee.**

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
72170 **(f)**	Radiologic examination, pelvis; 1 or 2 views	XXX	0.17 (No Change)
72190	Radiologic examination, pelvis; complete, minimum of 3 views	XXX	0.25

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Specialty Society Additional Rationale
X-Ray Valuation - Principles

The absolute RVUs of individual codes within the X-ray modality are relatively small; however, there are important differences comparing across these codes and code families that are important to consider when assessing their relative value within the modality and the larger fee schedule.

The codes within the X-ray modality cannot be placed in a simple ascending order, but rather should be placed on a spectrum with consideration to three primary variables:
1. **Number of views**
2. **Body area**
3. **Clinical context** (pathology and patient population)

What should not be considered when valuing the X-ray codes are derived measures of work and intensity. For example, IWPUT was not designed to accurately measure intensity at this range of the fee schedule. IWPUT was designed to assess intra-service work in 90-day global codes with more than 10 times the intra-service time that these codes possess. Additionally, small changes in pre-service or post-service time at this end of the fee schedule can change the IWPUT of an X-ray code by 30-50%. Moreover, time is only measured on surveys in whole integer values, so surveyed physicians are not afforded the opportunity to differentiate between services that take 2.5 minutes and those that take 3.5 minutes. Rather, both of these codes frequently end up at 3 minutes, even though one or the other is clearly more difficult. And that 1 minute differential at 0.16-0.30 RVUs is actually very large. So considering time per view as a ratio falls apart and becomes invalid. Lastly, not all of the X-ray services are performed exclusively by radiology. Times across multiple different X-ray codes vary depending on the surveyed specialties (e.g. podiatry and orthopedics). This inherent variability means time is not a consistent factor for assessment of relativity. Therefore, broad comparisons across different codes or code families within the X-ray modality using only time as a variable are fundamentally flawed.

Number of views:
The number of views in a typical exam is a reasonable way to compare different X-ray codes; however, it is more accurate in ordering the relative value of codes in a family (e.g. spine) than across different body regions. Frequently, the number of views is also a reasonable metric for complexity of an exam in the same body region. For example, a 2-3 view cervical spine is going to be performed on a different patient and for different reasons than a 6-view cervical spine. In a 6-view example, the patient is being assessed during twisting or bending maneuvers so that dynamic joints or instability can be assessed. A 2-3 view cervical spine is more often a patient with isolated symptoms and an unknown diagnosis as opposed to a known complex clinical process like dynamic or post-operative instability.

Body region:
The skeleton can be separated into two different regions; the appendicular skeleton and axial skeleton. Appendicular structures include the appendages like arms, legs, wrists, ankles, hands, feet, and digits. These appendicular structures tend to not have as many overlapping structures on single plane images even though the wrist and ankle are somewhat complex joints. The axial skeleton includes the skull, spine, and pelvis, as well as the chest and abdomen. When interpreting X-rays of axial body parts there are numerous overlapping structures, multiple organ systems, and generally higher risk of consequential injury, especially in the spine. From this standpoint, axial X-ray exams are considered in general to be more difficult to interpret than appendicular X-ray exams, and so should be valued higher for equivalent views or times with few exceptions (e.g. single view intra-operative or post-operative images). To use the example above, a 2-3 view cervical spine is more difficult to interpret and takes more skill than a 2-3 view elbow, and should be valued higher.

Clinical context:
The complexity of X-rays also varies with the clinical indications and typical patient population. An example of this would be the cervical and lumbar spine radiographs. Although the cervical spine may be a more complex anatomic site than the lumbar spine, the typical clinical scenarios these are ordered for contribute to complexity for both of these exams. The cervical spine may be typically ordered in an outpatient setting to assess for osteoarthritis or other arthritic changes. There is a large number of abnormalities found on these X-rays in this patient population. Often, multiple levels within the spinal canal are compromised, as well as multiple facet joints. In addition, patients with rheumatoid arthritis often have atlantoaxial instability, with subluxation of the cervical spine that can lead to neurologic compromise. The sheer number of levels which may be involved in the cervical spine along with complexity of pathology increase the technical skill and judgement. On the other hand, the typical patient population evaluated with a lumbar spine radiograph is trauma in which there is concern for fracture. It is critical for the physician to find the fracture in the acute setting to direct appropriate treatment and workup which results in increased psychological stress.

As expected, services provided in an ER tend to be more stressful and have more potential negative consequences for inaccurate or delayed diagnoses than outpatient X-ray services. However, if a complex disease process is the typical indication for a particular X-ray code, then it is also logical that the required technical skill and intensity of providing that service is higher than for another X-ray code with similar total time or total views performed in a different setting.

Conclusion:
X-ray codes should be assessed using three primary variables: Number of views, body region, and clinical context. Neither time nor IWPUT are useful for the reasons outlined above. The current proposals from the RUC to CMS explicitly address these variables and have ordered the codes appropriately.

No single variable provides enough information to be used to accurately assess relativity within the X-ray modality, rather all three variables used together provide enough information to ensure proper relativity among and within X-ray code families.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:72170 Tracking Number

Original Specialty Recommended RVU: **0.22**
Presented Recommended RVU: **0.17**
RUC Recommended RVU: **0.17**

Global Period: XXX Current Work RVU: **0.17**

CPT Descriptor: Radiologic examination, pelvis; 1 or 2 views

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 73-year-old female slips and falls and has pain over her superior pubic ramus. A radiological examination is performed to evaluate for fracture of the pelvis.

Percentage of Survey Respondents who found Vignette to be Typical: 94%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review the reason for the examination and any pertinent clinical history. Review any prior applicable plain film or imaging studies.

Description of Intra-Service Work: Supervise technologist performing the examination. Interpret the examination and compare the examination findings to previous studies, if applicable. Interpretation includes evaluation of fractures, dislocations, erosions, joint diseases including degenerative changes or erosions, bone lesions, and the included pelvis soft tissues. Dictate report for the medical record.

Description of Post-Service Work: The final report is reviewed and signed, and findings are communicated to the referring physician as needed.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	10%	60%	30%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	23%	57%	20%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	3%	87%	10%
Physical effort required	7%	90%	3%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	7%	70%	23%

2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	27%	55%	18%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	9%	91%	0%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	91%	9%
Physical effort required	18%	82%	0%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	18%	64%	18%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

The pelvis X-ray code, 72190 *(Radiologic examination, pelvis; complete, minimum of 3 views)* was identified by the CMS-Other - Utilization over 30,000 screen. The pelvis X-ray code, 72170 *(Radiologic examination, pelvis; 1 or 2 views)* is being reviewed as part of the family. This code family was initially addressed at the April 2018 RUC meeting via a crosswalk methodology approved by the Research Subcommittee. Following review by the Centers for Medicare and Medicaid Services for CY2019, the specialties agreed to survey this family for the January 2019 RUC meeting.

Survey Process

The American College of Radiology randomly surveyed 750 members (a random sample of 375 members and a separate random sample of 375 members who perform radiography or musculoskeletal procedures). The American Academy of Orthopaedic Surgeons surveyed a random sample of 750 members.

Work RVU Recommendations

The specialties recommend re-affirmation of the 2011 RUC approved work RVU of 0.17 for CPT code 72170. This is below the survey 25th percentile work RVU.

Time Recommendation

The specialties recommend the survey median intra-service time of 4 minutes. We recommend 1 minute of pre-service and 1 minute of post-service, which is a reduction from the survey median times, but is typical for recently-reviewed X-ray procedures. This is a total recommended time of 6 minutes (1 pre, 4 intra, 1 post) for CPT code 72170.

Key Reference Services

The most commonly chosen reference codes by survey participants:

- **73502** *(Radiologic examination, hip, unilateral, with pelvis when performed; 2-3 views)*, chosen by 56% of respondents, and
- **73522** *(Radiologic examination, hips, bilateral, with pelvis when performed; 3-4 views)*, chosen by 20% of respondents.

CPT code 72170 compares well with the most commonly chosen key reference service, 73502, having identical pre, intra, and post-service time, but slightly lower IWPUT and work RVU. This is because a single view is typical for 72170 and therefore the KRS 73502 will almost always have more views to review. 72170 also compares well with the second most commonly chosen key reference service, 73522. The 73522 code has 1 additional minute of intra-service time and higher IWPUT, resulting in appropriately higher work RVU because 73522 entails obtaining 3-4 views, more than the 1-2 views for 72170.

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT
72170	**Radiologic examination, pelvis; 1 or 2 views**	**0.17**	**1**	**4**	**1**	**6**	**0.0313**
73502	Radiologic examination, hip, unilateral, with pelvis when performed; 2-3 views	0.22	1	4	1	6	0.0438
73522	Radiologic examination, hips, bilateral, with pelvis when performed; 3-4 views	0.29	1	5	1	7	0.0490

MPC Codes

The surveyed code compares well with two MPC codes:

- 70355 *(Orthopantogram (eg, panoramic x-ray))* and
- 72081 *(Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); one view)*

The surveyed code compares well to these two MPC codes. It has one less minute of intra-service time compared with MPC code 70355, consistent with the slightly lower IWPUT and work RVU. The surveyed code has one less minute of intra-service time compared with MPC code 72081, accounting for the lower work RVU. MPC code 72081 includes imaging of a considerably larger amount of anatomy, extending from the skull through the sacral spine, accounting for the 1 minute of additional time, greater intensity, and higher work RVU.

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT
72170	**Radiologic examination, pelvis; 1 or 2 views**	**0.17**	**1**	**4**	**1**	**6**	**0.0313**
70355	Orthopantogram (eg, panoramic x-ray)	0.20		5	1	6	0.0355
72081	Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); one view	0.26	1	5	1	7	0.0430

Summary of Recommendations

The specialties recommend reaffirmation of the RUC 2011 approved work RVU of 0.17, with service period times of 1, 4, and 1 minutes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☒ Other reason (please explain) CPT code 72170 is typically billed with an E/M code.

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 72170

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Commonly

Specialty Orthopedic Surgery How often? Commonly

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 2442453
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by code 72170 provided nationally in a one-year period is estimated to be 2,442,453.

Specialty Diagnostic Radiology Frequency 1607300 Percentage 65.80 %

Specialty Orthopedic Surgery Frequency 558530 Percentage 22.86 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 814,151 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The service described by CPT code 72170 is estimated to be provided 814,151 times nationally in a one-year period to Medicare patients.

Specialty Diagnostic Radiology Frequency 535770 Percentage 65.80 %

Specialty Orthopedic Surgery Frequency 186180 Percentage 22.86 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Imaging

BETOS Sub-classification:
Standard imaging

BETOS Sub-classification Level II:
Musculoskeletal

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 72170

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	10%	55%	32%	3%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	6%	65%	29%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	84%	16%
Physical effort required	6%	94%	0%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	3%	61%	35%

2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	75%	25%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	83%	17%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	83%	17%
Physical effort required	0%	83%	17%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	83%	17%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

The pelvis x-ray code, 72190 *(Radiologic examination, pelvis; complete, minimum of 3 views)* was identified by the CMS-Other - Utilization over 30,000 screen. The pelvis X-ray code, 72170 *(Radiologic examination, pelvis; 1 or 2 views)* is being reviewed as part of the family. This code family was initially addressed at the April 2018 RUC meeting via a crosswalk methodology approved by the Research Subcommittee. Following review by the Centers for Medicare and Medicaid Services for CY2019, the specialties agreed to survey this family for the January 2019 RUC meeting.

Survey Process

The American College of Radiology randomly surveyed 750 members (a random sample of 375 members and a separate random sample of 375 members who perform radiography or musculoskeletal procedures). The American Academy of Orthopaedic Surgeons surveyed a random sample of 750 members.

Compelling Evidence

The societies are requesting compelling evidence for CPT code 72190 to support the proposed work RVUs and times. This code is CMS/Other and was previously valued using flawed methodology. Additionally, the patient population and physician work for this code has changed since as a result of the X-ray hip codes, with pelvis when performed, which were surveyed in 2015. X-rays of the pelvis, when performed with X-rays of the hip, are typically performed for patients with hip pain. These patients usually have chronic symptoms, and any significant abnormalities most likely involve the hip joints. In comparison, X-rays of the pelvis, when performed without X-rays of the hip, are typically performed in the trauma setting. The latter represents a more acute patient setting and requires evaluation for potentially subtle fractures of any of the pelvis skeletal structures.

Work RVU Recommendations

The specialties recommend a work RVU of 0.25 for CPT code 72190, which is the 25th percentile survey value.

Time Recommendation

The specialties recommend the survey median intra-service time of 5 minutes. We recommend 1 minute of pre-service and 1 minute of post-service, which is a reduction from the survey median times, but is typical for recently-reviewed X-ray procedures. This is a total recommended time of 7 minutes (1 pre, 5 intra, 1 post) for CPT code 72190.

Key Reference Services

The most commonly chosen reference codes by survey participants:

- **73522** *(Radiologic examination, hips, bilateral, with pelvis when performed; 3-4 views),* chosen by 57% of respondents, and
- **73502** *(Radiologic examination, hip, unilateral, with pelvis when performed; 2-3 views),* chosen by 22% of respondents.

CPT code 72190 is bracketed by the two most commonly chosen key reference services, and compares well with these. The most commonly chosen key reference service, 73522, also entails at least three views and an identical amount of time, although it has higher IWPUT given imaging of a larger amount of anatomy (the pelvis as well as the hips). The second most commonly chosen key reference service, 73502, has one minute less of intra-service time, though it may be performed using fewer views, accounting for the slightly lower work RVU.

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT

73502	Radiologic examination, hip, unilateral, with pelvis when performed; 2-3 views	0.22	1	4	1	6	0.0438
72190	**Radiologic examination, pelvis; complete, minimum of 3 views**	**0.25**	**1**	**5**	**1**	**7**	**0.0410**
73522	Radiologic examination, hips, bilateral, with pelvis when performed; 3-4 views	0.29	1	5	1	7	0.0490

MPC Codes

The surveyed code compares well with two MPC codes:

- 70355 *(Orthopantogram (eg, panoramic x-ray))* and
- 72081 *(Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); one view)*

The surveyed code is bracketed by these two MPC codes. It has identical intra-service time but one more minute of pre-service time than the MPC code 70355, as well as higher IWPUT accounting for the slightly higher work RVU. The surveyed code may contain 1 or 2 views, in comparison with the MPC code containing 1 view, and also covers an anatomically larger region, accounting for the higher IWPUT. The surveyed code has identical time with MPC code 72081, although slightly lower IWPUT, accounting for the slightly lower work RVU. The MPC code, 72081, includes imaging of a wider range of distinct anatomic regions, extending from the skull through the sacral spine, in comparison with overlapping anatomy between the multiple views of the surveyed code, accounting for the slightly higher IWPUT and work RVU.

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT
70355	Orthopantogram (eg, panoramic x-ray)	0.20		5	1	6	0.0355
72190	**Radiologic examination, pelvis; complete, minimum of 3 views**	**0.25**	**1**	**5**	**1**	**7**	**0.0410**
72081	Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); one view	0.26	1	5	1	7	0.0430

Summary of Recommendations

The specialties recommend the survey 25th percentile work RVU of 0.25, with service period times of 1, 5, and 1 minutes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☒ Other reason (please explain) CPT code 72190 is typically billed with an E/M code.

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 72190

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Commonly

Specialty Orthopedic Surgery How often? Commonly

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 164139
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by code 72190 provided nationally in a one-year period is estimated to be 164,139.

Specialty Diagnostic Radiology Frequency 95510 Percentage 58.18 %

Specialty Orthopedic Surgery Frequency 45230 Percentage 27.55 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 54,713
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The service described by CPT code 72190 is estimated to be provided 54,713 times nationally in a one-year period to Medicare patients.

Specialty Diagnostic Radiology Frequency 31835 Percentage 58.18 %

Specialty Orthopedic Surgery Frequency 15075 Percentage 27.55 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Imaging

BETOS Sub-classification:
Standard imaging

BETOS Sub-classification Level II:
Musculoskeletal

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 72190

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

CPT Code: 72170, 72190
Specialty Society(s): ACR, AAOS

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Non Facility Direct Practice Expense (PE) Inputs

CPT Long Descriptor:

72170	Radiologic examination, pelvis; 1 or 2 views
72190	Radiologic examination, pelvis; complete, minimum of 3 views

Global Period: XXX Meeting Date: January 2019

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   The American College of Radiology (ACR) and American Academy of Orthopaedic Society (AAOS) convened a consensus panel to finalize the practice expense data for the X-Ray exam pelvis code family, CPT codes 72170 and 72190.

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code.** You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here:

   The societies included the existing PE inputs for codes 72170 and 72190 on the spreadsheet to serve as a reference.

3. Is this code(s) typically billed with an E/M service?
   Is this code(s) typically billed with the E/M service in the nonfacility?
   (Please see provided data in PE Subcommittee folder)

   These codes are not typically billed with an E/M service.
   These codes are typically billed with an E/M service in the nonfacility.

4. What specialty is the dominant provider in the nonfacility?
   What percent of the time does the dominant provider provide the service(s) in the nonfacility?
   Is the dominant provider in the nonfacility different then for the global?
   (Please see provided data in PE Subcommittee folder)

	Nonfacility		Global	
72170	ORTHOPEDIC SURGERY	62%	DIAGNOSTIC RADIOLOGY	66%
72190	ORTHOPEDIC SURGERY	60%	DIAGNOSTIC RADIOLOGY	58%

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:
   N/A

6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), you must provide compelling evidence. Please explain if the increase can be entirely accounted for because of an increase in physician time.
   N/A

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here:
   N/A

8. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? (please use this time rather than 5 minutes in your reference code)
   The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here: We are not requesting time for obtaining vital signs.

9. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

   Bring patient into x-ray room and have patient stand/sit/lie on or adjacent to the x-ray table as appropriate. Place first cassette under patient's pelvis. Position the patient for the first view (typically the AP view). Stabilize pelvis with angle sponge to minimize motion. Step behind shielding to control panel. Set appropriate exposure parameters. Instruct patient to hold still. Take exposure for first view. Step from behind shielding. Take first cassette out from pelvis and place second cassette under the patient. Position patient for second view (typically an oblique view of one of the joints). Stabilize pelvis with angle sponge to minimize motion. Step behind shielding to control panel. Set appropriate exposure parameters. Instruct patient to hold still. Take exposure for second view. Step from behind shielding. Take second cassette out from under the pelvis. For the complete (minimum of 3 views) examination, the above process is repeated for each additional view (for example inlet/outlet, Judet, oblique, etc.) until the examination is complete. All cassettes are then taken to the image reader. Run all cassettes through reader. Check all images for adequate exposure, positioning, coverage, etc. Repeat any views as needed.

10. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.
    N/A

11. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities:
    N/A

12. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.
    N/A

13. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here:
    N/A

14. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here:
    N/A

15. List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here:
    - **Technologist PACS Workstation Proxy (ED050)** –PACS formula; Equals total service period time
    - **Professional PACS Workstation (ED053)** – Equals physician work intra time + 1/2 physician work pre-time
    - **Room, basic radiology (EL012)** – Highly technical formula

16. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here:
    For CPT code 72190, the following clinical staff times were increased to the standard/baseline minutes:
    - CA013 – Prepare room, equipment, and supplies (2 mins is standard)
    - CA016 – Prepare, set up and start IV, initial positioning and monitoring of patient (2 mins is standard)
    - CA024 – Clean room/equipment by clinical staff (3 mins is standard)
    - CA030 **–** Technologist QC's images in PACS, checking for all images, reformats, and dose page (2 mins is baseline)
    - CA031 – Review examination with interpreting MD/DO (2 mins is baseline)
    - CA032 – Scan exam documents into PACS. Complete exam in RIS system to populate images into work queue. (1 min is baseline)

17. If there is any other item on your spreadsheet that needs further explanation please include here:
    N/A

18. Please include an explanation of each line item:
    N/A

AMA/Specialty Society RVS Update Committee Summary of Recommendations
NPRM for 2019

January 2019

X-Ray Sacrum – Tab 29

In October 2016, the Relativity Assessment Workgroup expanded the CMS/Other Source codes screen, lowering the Medicare utilization threshold from 250,000 to 100,000 based on 2015 Medicare utilization data. CPT code 72220 was identified by this screen and the family was expanded to include sacroiliac X-ray codes 72200 and 72202. The Workgroup recommended that the specialty societies survey these services for April 2017, with a strong recommendation that the Research Subcommittee consider the specialty societies request to allow direct crosswalks to similar services for physician work and time. In February, the Research Subcommittee approved for the specialties to utilize a crosswalk methodology to make physician work and physician time recommends in lieu of conducting a RUC survey. In the NPRM for 2019, CMS disagreed with the RUC recommended work RVUs for 20 CPT codes included in the X-Ray Spine, X-Ray Sacrum, X-Ray Elbow-Forearm, X-Ray Heel and X-Ray Toe code families. CMS proposed the same work RVU of 0.23 for all 20 services based on a utilization-weighted average. The RUC recommended for CMS to maintain the CY 2018 work RVU for all 20 services on an interim basis and requested that the specialties survey all 20 services and review them again at the January 2019 RUC meeting (CY 2020 cycle).

Compelling Evidence
The specialty societies presented compelling evidence based on flawed methodology. This family of codes is CMS/Other sourced as identified by the screen. Therefore, how the times and values were established is unknown or flawed. The RUC accepted compelling evidence based on flawed methodology.

72200 ***Radiologic examination, sacroiliac joints; less than 3 views***
The RUC reviewed the survey results from 67 radiologists and rheumatologists and determined that the survey 25th percentile work RVU of 0.20 accurately reflects the physician work necessary for this service. The RUC recommends 1 minute pre-service time, 4 minutes intra-service time, and 1 minute immediate post-service time.

The RUC compared CPT code 72200 to the top key reference service 73522 *Radiologic examination, hips, bilateral, with pelvis when performed; 3-4 views* (work RVU = 0.29, 5 minutes intra-service time, 7 minutes total time) and noted that the survey code involves evaluation of bilateral diarthrodial joint articulations supporting the junction of the spine and pelvis and typically requires two views. Survey respondents appropriately assigned this code lesser intra-service time and intensity and a lower physician work valuation compared to the key reference service which is three or more views evaluating the bilateral hip joints. Evaluation of the bilateral sacroiliac joints and articulations are more complex compared to

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

the second highest key reference service 73562 *Radiologic examination, knee; 3 views* (work RVU = 0.18, 4 minutes intra-service time, 6 minutes total time) which involves evaluation of only one knee, thus the survey code is appropriately valued higher.

For additional support, the RUC noted that CPT code 72200 is bracketed by two MPC codes 93042 *Rhythm ECG, 1-3 leads; interpretation and report only* (work RVU = 0.15, 3 minutes intra-service time, 7 minutes total time) and 70355 *(Orthopantogram (eg, panoramic x-ray)* (work RVU = 0.20, 5 minutes intra-service time, 6 minutes total time). The ECG code has one minute less of total time with an appropriately lower amount of physician work and intensity. The panoramic code is a one-view examination that evaluates both the mandible and the maxilla and is familiar to radiologists. It is primarily used to assess for mandible fractures, temporomandibular joint disease or for dental abscess. This MPC code has 1 minute more of intra-service time with identical total time and the same amount of physician work.

The RUC concluded that CPT code 72200 should be valued at the 25th percentile work RVU as supported by the survey. **The RUC recommends a work RVU of 0.20 for CPT code 72200.**

72202 *Radiologic examination, sacroiliac joints; 3 or more views*

The RUC reviewed the survey results from 70 radiologists and rheumatologists and determined that the survey 25th percentile work RVU of 0.26 accurately reflects the physician work necessary for this service. The RUC recommends 1 minute pre-service time, 4 minutes intra-service time, and 1 minute immediate post-service time.

The RUC compared CPT code 72202 to the top key reference service 73522 *Radiologic examination, hips, bilateral, with pelvis when performed; 3-4 views* (work RVU = 0.29, 5 minutes intra-service time, 7 minutes total time) and noted that the survey code involves evaluation of bilateral diarthrodial joint articulations supporting the junction of the spine and pelvis and typically requires three views. Survey respondents appropriately assigned this code a lesser intra-service time and lower physician work valuation compared to the key reference service which is three or more views evaluating the bilateral hip joints. Evaluation of the bilateral sacroiliac joints and articulations is more complex compared to the second highest key reference service 73562 *Radiologic examination, knee; 3 views* (work RVU = 0.18, 4 minutes intra-service time, 6 minutes total time) which involves evaluation of only one knee. The additional view in this code compared to the survey code is appropriately reflected in the greater intensity and physician work valuation and maintains relativity in the family.

For additional support, the RUC noted that CPT code 72202 is bracketed by two MPC codes 70355 *(Orthopantogram (eg, panoramic x-ray)* (work RVU = 0.20, 5 minutes intra-service time, 6 minutes total time) and 72081 *Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); one view* (work RVU = 0.26, 5 minutes intra-service time, 7 minutes total time). The panoramic code is a one-view examination that evaluates both the mandible and the maxilla and is familiar to radiologists. It is primarily used to assess for mandible fractures, temporomandibular joint disease or for dental abscess. This MPC code has 1 more minute of intra-service time but identical total time. The spine code is also a one-view examination that covers a larger area although is a more focused examination compared to evaluation of the articulating SI joints in the surveyed code.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

The RUC noted the similar times and values to the pelvis (CPT codes 72170 and 72190) and concluded that CPT code 72202 should be valued at the 25th percentile work RVU as supported by the survey. **The RUC recommends a work RVU of 0.26 for CPT code 72202.**

72220 ***Radiologic examination, sacrum and coccyx, minimum of 2 views***
The RUC reviewed the survey results from 55 radiologists and rheumatologists and determined that the survey 25th percentile work RVU of 0.20 accurately reflects the physician work necessary for this service. The RUC recommends 1 minute pre-service time, 3 minutes intra-service time, and 1 minute immediate post-service time.

The RUC compared CPT code 72220 to the top key reference service 73522 *Radiologic examination, hips, bilateral, with pelvis when performed; 3-4 views* (work RVU = 0.29, 5 minutes intra-service time, 7 minutes total time) and noted that the survey code involves evaluation of the fused sacrum and coccyx forming the tail bone as well as the associated joint articulations and typically requires two views. Survey respondents appropriately assigned this code lesser intra-service time and intensity and a lower physician work valuation compared to the key reference service which is three or more views evaluating the bilateral hip joints. Evaluation of the sacrococcygeal structures and articulations is more complex compared to the second highest key reference service 73562 *Radiologic examination, knee; 3 views* (work RVU = 0.18, 4 minutes intra-service time, 6 minutes total time) which involves evaluation of only one knee.

For additional support, the RUC noted that CPT code 72220 is bracketed by two MPC codes 93042 *Rhythm ECG, 1-3 leads; interpretation and report only* (work RVU = 0.15, 3 minutes intra-service time, 7 minutes total time) and 70355 *(Orthopantogram (eg, panoramic x-ray)* (work RVU = 0.20, 5 minutes intra-service time, 6 minutes total time). The ECG code has identical intra-service time with an appropriately lower intensity due to the differences in physician work. The panoramic code is a one-view examination that evaluates both the mandible and the maxilla and is familiar to radiologists. It is primarily used to assess for mandible fractures, temporomandibular joint disease or for dental abscess. This MPC code has 2 more minutes of intra-service time and 1 more minute of total time, but identical physician work valuation.

The RUC concluded that CPT code 72220 should be valued at the 25th percentile work RVU as supported by the survey. **The RUC recommends a work RVU of 0.20 for CPT code 72220.**

Practice Expense
The Practice Expense Subcommittee made a single edit to line 52 to insert radiologic technologist. These services were reviewed and approved by the PE Subcommittee in April 2017. **The RUC recommends the direct practice expense inputs as affirmed by the Practice Expense Subcommittee.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
72200 **(f)**	Radiologic examination, sacroiliac joints; less than 3 views	XXX	0.20
72202 **(f)**	Radiologic examination, sacroiliac joints; 3 or more views	XXX	0.26
72220	Radiologic examination, sacrum and coccyx, minimum of 2 views	XXX	0.20

Specialty Society Additional Rationale
X-Ray Valuation - Principles

The absolute RVUs of individual codes within the X-ray modality are relatively small; however, there are important differences comparing across these codes and code families that are important to consider when assessing their relative value within the modality and the larger fee schedule.

The codes within the X-ray modality cannot be placed in a simple ascending order, but rather should be placed on a spectrum with consideration to three primary variables:
1. **Number of views**
2. **Body area**
3. **Clinical context** (pathology and patient population)

What should not be considered when valuing the X-ray codes are derived measures of work and intensity. For example, IWPUT was not designed to accurately measure intensity at this range of the fee schedule. IWPUT was designed to assess intra-service work in 90-day global codes with more than 10 times the intra-service time that these codes possess. Additionally, small changes in pre-service or post-service time at this end of the fee schedule can change the IWPUT of an X-ray code by 30-50%. Moreover, time is only measured on surveys in whole integer values, so surveyed physicians are not afforded the opportunity to differentiate between services that take 2.5 minutes and those that take 3.5 minutes. Rather, both of these codes frequently end up at 3 minutes, even though one or the other is clearly more difficult. And that 1 minute differential at 0.16-0.30 RVUs is actually very large. So considering time per view as a ratio falls apart and becomes invalid. Lastly, not all of the X-ray services are performed exclusively by radiology. Times across multiple different X-ray codes vary depending on the surveyed specialties (e.g. podiatry and orthopedics). This inherent variability means time is not a consistent factor for assessment of relativity. Therefore, broad comparisons across different codes or code families within the X-ray modality using only time as a variable are fundamentally flawed.

Number of views:
The number of views in a typical exam is a reasonable way to compare different X-ray codes; however, it is more accurate in ordering the relative value of codes in a family (e.g. spine) than across different body regions. Frequently, the number of views is also a reasonable metric for complexity of an exam in the same body region. For example, a 2-3 view cervical spine is going to be performed on a different patient and for different reasons than a 6-view cervical spine. In a 6-view example, the patient is being assessed during twisting or bending maneuvers so that dynamic joints or instability can be assessed. A 2-3 view cervical spine is more often a patient with isolated symptoms and an unknown diagnosis as opposed to a known complex clinical process like dynamic or post-operative instability.

Body region:
The skeleton can be separated into two different regions; the appendicular skeleton and axial skeleton. Appendicular structures include the appendages like arms, legs, wrists, ankles, hands, feet, and digits. These appendicular structures tend to not have as many overlapping structures on single plane images even though the wrist and ankle are somewhat complex joints. The axial skeleton includes the skull, spine, and pelvis, as well as the chest and abdomen. When interpreting X-rays of axial body parts there are numerous overlapping structures, multiple organ systems, and generally higher risk of consequential injury, especially in the spine. From this standpoint, axial X-ray exams are considered in general to be more difficult to interpret than appendicular X-ray exams, and so should be valued higher for equivalent views or times with few exceptions (e.g. single view intra-operative or post-operative images). To use the example above, a 2-3 view cervical spine is more difficult to interpret and takes more skill than a 2-3 view elbow, and should be valued higher.

Clinical context:
The complexity of X-rays also varies with the clinical indications and typical patient population. An example of this would be the cervical and lumbar spine radiographs. Although the cervical spine may be a more complex anatomic site than the lumbar spine, the typical clinical scenarios these are ordered for contribute to complexity for both of these exams. The cervical spine may be typically ordered in an outpatient setting to assess for osteoarthritis or other arthritic changes. There is a large number of abnormalities found on these X-rays in this patient population. Often, multiple levels within the spinal canal are compromised, as well as multiple facet joints. In addition, patients with rheumatoid arthritis often have atlantoaxial instability, with subluxation of the cervical spine that can lead to neurologic compromise. The sheer number of levels which may be involved in the cervical spine along with complexity of pathology increase the technical skill and judgement. On the other hand, the typical patient population evaluated with a lumbar spine radiograph is trauma in which there is concern for fracture. It is critical for the physician to find the fracture in the acute setting to direct appropriate treatment and workup which results in increased psychological stress.

As expected, services provided in an ER tend to be more stressful and have more potential negative consequences for inaccurate or delayed diagnoses than outpatient X-ray services. However, if a complex disease process is the typical indication for a particular X-ray code, then it is also logical that the required technical skill and intensity of providing that service is higher than for another X-ray code with similar total time or total views performed in a different setting.

Conclusion:
X-ray codes should be assessed using three primary variables: Number of views, body region, and clinical context. Neither time nor IWPUT are useful for the reasons outlined above. The current proposals from the RUC to CMS explicitly address these variables and have ordered the codes appropriately.

No single variable provides enough information to be used to accurately assess relativity within the X-ray modality, rather all three variables used together provide enough information to ensure proper relativity among and within X-ray code families.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:72200 Tracking Number

Original Specialty Recommended RVU: **0.20**
Presented Recommended RVU: **0.20**
RUC Recommended RVU: **0.20**

Global Period: XXX Current Work RVU: **0.17**

CPT Descriptor: Radiologic examination, sacroiliac joints; less than 3 views

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: An elderly patient with unilateral sacroiliac joint pain and suspected inflammatory arthritis. AP and an oblique view of the symptomatic sacroiliac joint are ordered.

Percentage of Survey Respondents who found Vignette to be Typical: 72%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review the reason for the examination and any pertinent clinical history. Review any prior applicable plain film or imaging studies.

Description of Intra-Service Work: The technologist performing the examination is supervised, and the radiographs of the sacroiliac joints are interpreted. Examination findings are compared to previous studies, if applicable. A report is dictated for the patient's medical record.

Description of Post-Service Work: The final report is reviewed and signed, and findings are communicated to the referring physician as needed.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	4%	88%	4%	4%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	19%	77%	4%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	4%	73%	23%
Physical effort required	0%	96%	4%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	15%	69%	15%

2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	54%	46%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	77%	23%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	69%	31%
Physical effort required	0%	92%	8%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	15%	62%	23%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

The sacrum and coccyx X-ray code, 72220 *(Radiologic examination, sacrum and coccyx, minimum of 2 views)* was identified by the CMS/Other Source – Utilization over 100,000 screen. The specialties expanded the family to include sacroiliac X-ray codes 72200 *(Radiologic examination, sacroiliac joints; less than 3 views)* and 72202 *(Radiologic examination, sacroiliac joints; 3 or more views).* This code family was initially addressed at the April 2017 RUC meeting via a crosswalk methodology approved by the Research Subcommittee. Following review by the Centers for Medicare and Medicaid Services for CY2019, the specialties agreed to survey this code for the January 2019 RUC meeting.

Survey Process

The American College of Radiology randomly surveyed 2,000 members (a random sample of 1,000 members and a separate random sample of 1,000 members who perform radiography or musculoskeletal procedures). The American College of Rheumatology surveyed a random sample of 1,000 members.

Compelling Evidence

The societies are requesting compelling evidence for CPT code 72200 to support the proposed work RVUs and times. This code is CMS/Other and was previously valued using flawed methodology.

Work RVU Recommendation

The specialties recommend a work RVU of 0.20 for CPT code 72200, which is the 25th percentile survey value.

Time Recommendation

The specialties recommend the survey median intra-time of 4 minutes. We recommend 1 minute of pre-service and 1 minute of post-service, which is a reduction from the survey median times, but is typical for recently reviewed X-ray procedures. This is a total recommended time of 6 minutes (1 pre, 4 intra, 1 post) for CPT code 72200.

Key Reference Services

The most commonly chosen reference codes by survey participants:

- **73522** *(Radiologic examination, hips, bilateral, with pelvis when performed; 3-4 views),* chosen by 39% of respondents, and
- **73562** *(Radiologic examination, knee; 3 views),* chosen by 19% respondents.

The surveyed code involves evaluation of bilateral diarthrodial joint articulations supporting the junction of the spine and pelvis and typically requires two views. Survey respondents appropriately assigned this code a lesser intra-service time, lower RVU and lower IWPUT compared to the commonly chosen key reference service, CPT code 73522, which is three or more views evaluating the bilateral hip joints. Evaluation of the bilateral sacroiliac joints and articulations is more complex compared to the second most commonly chosen key reference service, CPT code 73562, which involves evaluation of only one knee.

The relationships are summarized in the following table:

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT

73562	Radiologic examination, knee; 3 views	0.18	1	4	1	6	0.0338
72200	**Radiologic examination, sacroiliac joints; less than 3 views**	**0.20**	**1**	**4**	**1**	**6**	**0.0388**
73522	Radiologic examination, hips, bilateral, with pelvis when performed; 3-4 views	0.29	1	5	1	7	0.0490

MPC Codes

The surveyed code is bracketed by two MPC codes 93042 *(Rhythm ECG, 1-3 leads; interpretation and report only)* and 70355 *(Orthopantogram (eg, panoramic x-ray)).* The ECG code has one minute less of total time with an appropriately lower RVU and IWPUT. The panorex code is a one-view examination that evaluates both the mandible and the maxilla and is familiar to radiologists. It is primarily used to assess for mandible fractures, temporomandibular joint disease or for dental abscess. This MPC code has 1 more minute of intra-service time with identical total time and work RVU.

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT
93042	Rhythm ECG, 1-3 leads; interpretation and report only	0.15	2	3	2	7	0.0201
72200	**Radiologic examination, sacroiliac joints; less than 3 views**	**0.20**	**1**	**4**	**1**	**6**	**0.0388**
70355	Orthopantogram (eg, panoramic x-ray)	0.20		5	1	6	0.0355

Summary of Recommendations

The specialties recommend the survey 25th percentile work RVU of 0.20, with service period times of 1, 4, and 1 minutes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in

the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 72200

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Commonly

Specialty Rheumatology How often? Sometimes

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 45420
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by code 72200 provided nationally in a one-year period is estimated to be 45,420.

Specialty Diagnostic Radiology Frequency 30890 Percentage 68.00 %

Specialty Rheumatology Frequency 3410 Percentage 7.50 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 15,140
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The 2017 Medicare data estimates that CPT code 72200 is billed approximately 15,140 times in total for Medicare patients nationally in a one-year period.

Specialty Diagnostic Radiology Frequency 10300 Percentage 68.03 %

Specialty Rheumatology Frequency 1140 Percentage 7.52 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Imaging

BETOS Sub-classification:
Standard imaging

BETOS Sub-classification Level II:
Musculoskeletal

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 72200

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:72202 Tracking Number

Original Specialty Recommended RVU: **0.26**
Presented Recommended RVU: **0.26**
RUC Recommended RVU: **0.26**

Global Period: XXX Current Work RVU: **0.19**

CPT Descriptor: Radiologic examination, sacroiliac joints; 3 or more views

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: An elderly patient with bilateral sacroiliac joint pain and suspected ankylosing spondylitis. AP and bilateral oblique views of the sacroiliac joints are ordered.

Percentage of Survey Respondents who found Vignette to be Typical: 73%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review the reason for the examination and any pertinent clinical history. Review any prior applicable plain film or imaging studies.

Description of Intra-Service Work: The technologist performing the examination is supervised, and the radiographs of the sacroiliac joints are interpreted. Examination findings are compared to previous studies, if applicable. A report is dictated for the patient's medical record.

Description of Post-Service Work: The final report is reviewed and signed, and findings are communicated to the referring physician as needed.

Physical effort required	0%	100%	0%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	100%	0%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

The sacrum and coccyx X-ray code, 72220 *(Radiologic examination, sacrum and coccyx, minimum of 2 views)* was identified by the CMS/Other Source – Utilization over 100,000 screen. The specialties expanded the family to include sacroiliac X-ray codes 72200 *(Radiologic examination, sacroiliac joints; less than 3 views)* and 72202 *(Radiologic examination, sacroiliac joints; 3 or more views)*. This code family was initially addressed at the April 2017 RUC meeting via a crosswalk methodology approved by the Research Subcommittee. Following review by the Centers for Medicare and Medicaid Services for CY2019, the specialties agreed to survey this code for the January 2019 RUC meeting.

Survey Process

The American College of Radiology randomly surveyed 2,000 members (a random sample of 1,000 members and a separate random sample of 1,000 members who perform radiography or musculoskeletal procedures). The American College of Rheumatology surveyed a random sample of 1,000 members.

Compelling Evidence

The societies are requesting compelling evidence for CPT code 72202 to support the proposed work RVUs and times. This code is CMS/Other and was previously valued using flawed methodology.

Work RVU Recommendation

The specialties recommend a work RVU of 0.26 for CPT code 72202, which is the 25th percentile survey value.

Time Recommendation

The specialties recommend the survey median intra-time of 4 minutes. We recommend 1 minute of pre-service and 1 minute of post-service, which is a reduction from the survey median times, but is typical for recently reviewed X-ray procedures. This is a total recommended time of 6 minutes (1 pre, 4 intra, 1 post) for CPT code 72202.

Key Reference Services

The most commonly chosen reference codes by survey participants:

- **73522** *(Radiologic examination, hips, bilateral, with pelvis when performed; 3-4 views)*, chosen by 51% of respondents, and
- **73562** *(Radiologic examination, knee; 3 views)*, chosen by 9% respondents.

The surveyed code involves evaluation of bilateral diarthrodial joint articulations supporting the junction of the spine and pelvis and typically requires three views. Survey respondents appropriately assigned this code a lesser intra-service time and lower RVU compared to the commonly chosen key reference service, CPT code 73522, which is three or more views evaluating the bilateral hip joints. Evaluation of the bilateral sacroiliac joints and articulations is more complex compared to the second most commonly chosen key reference service, CPT code 73562, which involves evaluation of only one knee. The additional view in this code compared to 72202 *(Radiologic examination, sacroiliac joints; less than 3 views)* is appropriately reflected in the greater RVU and IWPUT and maintains relativity in the family.

The relationships are summarized in the following table:

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT
73562	Radiologic examination, knee; 3	0.18	1	4	1	6	0.0338

	views						
72202	**Radiologic examination, sacroiliac joints; 3 or more views**	**0.26**	**1**	**4**	**1**	**6**	**0.0538**
73522	Radiologic examination, hips, bilateral, with pelvis when performed; 3-4 views	0.29	1	5	1	7	0.0490

MPC Codes

The surveyed code is bracketed by two MPC codes 70355 *(Orthopantogram (eg, panoramic x-ray))* and 72081 (*Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); one view).* The panorex code is a one-view examination that evaluates both the mandible and the maxilla and is familiar to radiologists. It is primarily used to assess for mandible fractures, temporomandibular joint disease or for dental abscess. This MPC code has 1 more minute of intra-service time but identical total time. The spine code is also a one-view examination that covers a larger area although is a more focused examination compared to evaluation of the articulating SI joints in the surveyed code.

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT
70355	Orthopantogram (eg, panoramic x-ray)	0.20		5	1	6	0.0355
72202	**Radiologic examination, sacroiliac joints; 3 or more views**	**0.26**	**1**	**4**	**1**	**6**	**0.0538**
72081	Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); one view	0.26	1	5	1	7	0.0430

Summary of Recommendations

The specialties recommend the survey 25th percentile work RVU of 0.26, with service period times of 1, 4, and 1 minutes for CPT code 72202.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 72202

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Commonly

Specialty Rheumatology How often? Sometimes

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 105145
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by code 72202 provided nationally in a one-year period is estimated to be 105,145.

Specialty Diagnostic Radiology Frequency 90370 Percentage 85.94 %

Specialty Rheumatology Frequency 4145 Percentage 3.94 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 35,050
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The 2017 Medicare data estimates that CPT code 72202 is billed approximately 35,050 times in total for Medicare patients nationally in a one-year period.

Specialty Diagnostic Radiology Frequency 30125 Percentage 85.94 %

Specialty Rheumatology Frequency 1380 Percentage 3.93 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Imaging

BETOS Sub-classification:
Standard imaging

BETOS Sub-classification Level II:
Musculoskeletal

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 72202

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:72220 Tracking Number

Original Specialty Recommended RVU: **0.20**
Presented Recommended RVU: **0.20**
RUC Recommended RVU: **0.20**

Global Period: XXX Current Work RVU: **0.17**

CPT Descriptor: Radiologic examination, sacrum and coccyx, minimum of 2 views

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: An elderly patient presents with sacral/coccygeal pain after a fall and suspected fracture. AP, oblique and lateral views of the sacrum and coccyx are ordered.

Percentage of Survey Respondents who found Vignette to be Typical: 87%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review the reason for the examination and any pertinent clinical history. Review any prior applicable plain film or imaging studies.

Description of Intra-Service Work: The technologist performing the examination is supervised, and the radiographs of the sacrum and coccyx are interpreted. Examination findings are compared to previous studies, if applicable. A report is dictated for the patient's medical record.

Description of Post-Service Work: The final report is reviewed and signed, and findings are communicated to the referring physician as needed.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	13%	74%	9%	4%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	13%	78%	9%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	4%	74%	22%
Physical effort required	4%	87%	9%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	25%	65%	9%

2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	83%	17%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	100%	0%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	83%	17%
Physical effort required	0%	100%	0%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	67%	33%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

The sacrum and coccyx X-ray code, 72220 *(Radiologic examination, sacrum and coccyx, minimum of 2 views)* was identified by the CMS/Other Source – Utilization over 100,000 screen. The specialties expanded the family to include sacroiliac X-ray codes 72200 *(Radiologic examination, sacroiliac joints; less than 3 views)* and 72202 *(Radiologic examination, sacroiliac joints; 3 or more views).* This code family was addressed at the April 2017 RUC meeting via a crosswalk methodology approved by the Research Subcommittee. Following review by the Centers for Medicare and Medicaid Services for CY2019, the specialties agreed to survey this code for the January 2019 RUC meeting.

Survey Process

The American College of Radiology surveyed a total of 2,000 members (a random sample of 1,000 members and a separate random sample of 1,000 members who perform radiography or musculoskeletal procedures).

Compelling Evidence

The societies are requesting compelling evidence for CPT code 72220 to support the proposed work RVUs and times. This code is CMS/Other and was previously valued using flawed methodology.

Work RVU Recommendation

The specialties recommend a work RVU of 0.20 for CPT code 72220, which is the 25th percentile survey value.

Time Recommendation

The specialties recommend the median survey times of 1 minute of pre-service time, 3 minutes of intra service time and 1 minute of post service time for CPT code 72220.

Key Reference Services

The most commonly chosen reference codes by survey participants:

- **73522** *(Radiologic examination, hips, bilateral, with pelvis when performed; 3-4 views),* chosen by 42% of respondents, and
- **73562** *(Radiologic examination, knee; 3 views),* chosen by 11% respondents.

The surveyed code involves evaluation of the fused sacrum and coccyx forming the tail bone as well as the associated joint articulations and typically requires two views. Survey respondents appropriately assigned this code a lesser intra-service time, lower RVU and lower IWPUT compared to the commonly chosen key reference service, CPT code 73522, which is three or more views evaluating the bilateral hip joints. Evaluation of the sacrococcygeal structures and articulations is more complex compared to the second most commonly chosen key reference service, CPT code 73562, which involves evaluation of only one knee.

The relationships are summarized in the following table:

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT
73562	Radiologic examination, knee; 3 views	0.18	1	4	1	6	0.0338
72220	**Radiologic examination, sacrum and coccyx, minimum of 2 views**	**0.20**	**1**	**3**	**1**	**5**	**0.0417**
73522	Radiologic examination, hips, bilateral, with pelvis when performed; 3-4 views	0.29	1	5	1	7	0.0490

MPC Codes

The surveyed code is bracketed by two MPC codes 93042 *(Rhythm ECG, 1-3 leads; interpretation and report only)* and 70355 *Orthopantogram (eg, panoramic x-ray).* The ECG code has identical intra-service time with an appropriately lower IWPUT due to the differences in physician work. The panorex code is a one-view examination that evaluates both the mandible and the maxilla and is familiar to radiologists. It is primarily used to assess for mandible fractures, temporomandibular joint disease or for dental abscess. This MPC code has 2 more minutes of intra-service time and 1 more minute of total time, but identical work RVU.

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT
93042	Rhythm ECG, 1-3 leads; interpretation and report only	0.15	2	3	2	7	0.0201
72220	**Radiologic examination, sacrum and coccyx, minimum of 2 views**	**0.20**	**1**	**3**	**1**	**5**	**0.0417**
70355	Orthopantogram (eg, panoramic x-ray)	0.20		5	1	6	0.0355

Summary of Recommendations

The specialties recommend the survey 25th percentile work RVU of 0.20, with service period times of 1, 3, and 1 minutes for CPT code 72220.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in

the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 72220

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 358605
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by code 72220 provided nationally in a one-year period is estimated to be 358,605.

Specialty Diagnostic Radiology Frequency 270580 Percentage 75.45 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 119,535 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The 2017 Medicare data estimates that CPT code 72220 is billed approximately 119,535 times in total for Medicare patients nationally in a one-year period.

Specialty Diagnostic Radiology Frequency 90194 Percentage 75.45 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Imaging

BETOS Sub-classification:
Standard imaging

CPT Code: 72200, 72202, 72220
Specialty Society: ACR, ACRh

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SOR)
Non Facility Direct Practice Expense (PE) Inputs

CPT Long Descriptor:

72200	Radiologic examination, sacroiliac joints; less than 3 views
72202	Radiologic examination, sacroiliac joints; 3 or more views
72220	Radiologic examination, sacrum and coccyx, minimum of 2 views

Global Period: XXX Meeting Date: January 2019

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   The American College of Radiology (ACR) and the American College of Rheumatology (ACRh) convened a consensus panel to finalize the practice expense data for x-ray of the sacroiliac joints or x-ray of the sacrum, CPT codes 72200, 72202, and 72220.

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code.** You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here:

   The societies included the existing PE inputs for codes 72200, 72202, 72220 on the spreadsheet to serve as a reference.

3. Is this code(s) typically billed with an E/M service?
   Is this code(s) typically billed with the E/M service in the nonfacility?
   (Please see provided data in PE Subcommittee folder)

   These codes are not typically billed with an E/M service in the nonfacility or in the global.

4. What specialty is the dominant provider in the nonfacility?
   What percent of the time does the dominant provider provide the service(s) in the nonfacility?
   Is the dominant provider in the nonfacility different then for the global?
   (Please see provided data in PE Subcommittee folder)

	Nonfacility		Global	
72200	DIAGNOSTIC RADIOLOGY	28%	DIAGNOSTIC RADIOLOGY	68%
72202	DIAGNOSTIC RADIOLOGY	56%	DIAGNOSTIC RADIOLOGY	86%
72220	DIAGNOSTIC RADIOLOGY	30%	DIAGNOSTIC RADIOLOGY	76%

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:
   N/A

6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), you must provide compelling evidence. Please explain if the increase can be entirely accounted for because of an increase in physician time.

   The increase in aggregate cost is a result of the increase in physician time, per the multispecialty RUC survey. This correlates to the increase in professional PACS workstation time.

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here: N/A

8. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? (please use this time rather than 5 minutes in your reference code)
   The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:
   We are requesting 0 minutes for obtaining vital signs.

9. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

   72200: X-ray sacroiliac joints; less than 3 views
   Bring patient into x-ray room and have patient stand/sit/lie on or adjacent to the x-ray table as appropriate. Place first cassette under patient's sacroiliac joints. Position patient's sacroiliac joints for the first view (typically the AP view). Stabilize pelvis with angle sponge to minimize motion. Step behind shielding to control panel. Set appropriate exposure parameters. Instruct patient to hold still. Take exposure for first view. Step from behind shielding. Take first cassette out from under sacroiliac joints and place second cassette under patient's sacroiliac joints. Position patient's sacroiliac joints for second view (typically an oblique view of one of the joints). Stabilize pelvis with angle sponge to minimize motion. Step behind shielding to control panel. Set appropriate exposure parameters. Instruct patient to hold still. Take exposure for second view. Step from behind shielding. Take second cassette out from under sacroiliac joints. Both cassettes are then taken to the image reader. Run both cassettes through reader. Check all images for adequate exposure, positioning, coverage, etc. Repeat any views as needed.

   72202: X-ray sacroiliac joints; 3 or more views
   Bring patient into x-ray room and have patient stand/sit/lie on or adjacent to the x-ray table as appropriate. Place first cassette under patient's sacroiliac joints. Position patient's sacroiliac joints for the first view (typically the AP view). Stabilize pelvis with angle sponge to minimize motion. Step behind shielding to control panel. Set appropriate exposure parameters. Instruct patient to hold still. Take exposure for first view. Step from behind shielding. Take first cassette out from under sacroiliac joints and place second cassette under patient's sacroiliac joints. Position patient's sacroiliac joints for second view (typically an oblique view of one of the joints). Stabilize pelvis with angle sponge to minimize motion. Step behind shielding to control panel. Set appropriate exposure parameters. Instruct patient to hold still. Take exposure for second view. Step from behind shielding. Take second cassette out from under sacroiliac joints and place third cassette under patient's sacroiliac joints. Position patient's sacroiliac joints for third view (typically an oblique view of the other joint).

Stabilize pelvis with angle sponge to minimize motion. Step behind shielding to control panel. Set appropriate exposure parameters. Instruct patient to hold still. Take exposure for third view. Step from behind shielding. Take third cassette out from under sacroiliac joints. The above steps are repeated for any additional sacroiliac joints views to be obtained. All cassettes are then taken to the image reader. Run all three cassettes through reader. Check all images for adequate exposure, positioning, coverage, etc. Repeat any views as needed.

72220: X-ray sacrum and coccyx; minimum of 2 views
Bring patient into x-ray room and have patient stand/sit/lie on or adjacent to the x-ray table as appropriate. Place first cassette under patient's sacrum and coccyx. Position patient's sacrum and coccyx for the first view (typically the AP view). Stabilize pelvis with angle sponge to minimize motion. Step behind shielding to control panel. Set appropriate exposure parameters. Instruct patient to hold still. Take exposure for first view. Step from behind shielding. Take first cassette out from under sacrum and coccyx and place second cassette under patient's sacrum and coccyx. Position patient's sacrum and coccyx for second view (typically an outlet view to profile the superior sacrum). Stabilize pelvis with angle sponge to minimize motion. Step behind shielding to control panel. Set appropriate exposure parameters. Instruct patient to hold still. Take exposure for second view. Step from behind shielding. Take second cassette out from under sacrum and coccyx and place third cassette under patient's sacrum and coccyx. Position patient's sacrum and coccyx for third view (typically a lateral view). Stabilize pelvis with angle sponge to minimize motion. Step behind shielding to control panel. Set appropriate exposure parameters. Instruct patient to hold still. Take exposure for third view. Step from behind shielding. Take third cassette out from under sacrum and coccyx. The above steps are repeated for any additional sacrum and coccyx views to be obtained. All cassettes are then taken to the image reader. Run all three cassettes through reader. Check all images for adequate exposure, positioning, coverage, etc. Repeat any views as needed.

10. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.
    N/A

11. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities:
    N/A

12. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.
    N/A

13. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here:
    N/A

14. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here:
    N/A

15. List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here:
    - **Technologist PACS Workstation Proxy (ED050)** –PACS formula; Equals total service period time
    - **Professional PACS Workstation (ED053)** – Equals physician work intra time + 1/2 physician work pre-time
    - **Room, basic radiology (EL012)** – Highly technical formula

16. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here:
    N/A

17. If there is any other item on your spreadsheet that needs further explanation please include here:
    N/A

18. Please include an explanation of each line item:
    N/A

AMA/Specialty Society RVS Update Committee Summary of Recommendations
NPRM for 2019

January 2019

X-Ray Elbow /Forearm – Tab 30

In October 2016, the Relativity Assessment Workgroup expanded the CMS/Other Source codes screen, lowering the Medicare utilization threshold from 250,000 to 100,000 based on 2015 Medicare utilization data. The Workgroup recommended that the specialty societies survey these services for April 2017, with a strong recommendation that the Research Subcommittee consider the specialty societies request to allow direct crosswalks to similar services for physician work and time. In February, the Research Subcommittee approved for the specialties to utilize a crosswalk methodology to make physician work and physician time recommends in lieu of conducting a RUC survey. In the NPRM for 2019, CMS disagreed with the RUC recommended work RVUs for 20 CPT codes included in the X-Ray Spine, X-Ray Sacrum, X-Ray Elbow-Forearm, X-Ray Heel and X-Ray Toe code families. CMS proposed the same work RVU of 0.23 for all 20 services based on a utilization-weighted average. The RUC recommended for CMS to maintain the CY 2018 work RVU for all 20 services on an interim basis and requested that the specialties survey all 20 services and review them again at the January 2019 RUC meeting (CY 2020 cycle).

Compelling Evidence
The specialty societies presented compelling evidence based on flawed methodology. CPT code 73070 is CMS/Other sourced as identified by the screen. Therefore, how the times and values were established is unknown or flawed. The RUC accepted compelling evidence based on flawed methodology.

73070 ***Radiologic examination, elbow; 2 views***
The RUC reviewed the survey results from 51 physicians and agreed on the following physician time components: 1 minute of pre-service time, 3 minutes of intra-service time, and 1 minute of immediate post-service time. The RUC thoroughly reviewed the recommended work and agreed that the survey 25th percentile work RVU of 0.16, correctly estimates the amount of physician work involved for this service. To justify a work RVU of 0.16, the RUC compared the survey code to CPT code 73060 *Radiologic examination; humerus, minimum of 2 views* (work RVU= 0.16, intra-service time of 3 minutes, total time of 5 minutes) and noted that both services have identical times and involve an identical intensity of physician work. The RUC also compared the survey code to CPT code 73100 *Radiologic examination, wrist; 2 views* (work RVU= 0.16, intra-service time of 3 minutes, total time of 5 minutes) and noted that both services have identical times and involve identical physician work intensity. This recommendation maintains rank order and relativity within the X-ray elbow/forearm family. **The RUC recommends a work RVU of 0.16 for CPT code 73070.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

73080 ***Radiologic examination, elbow; complete, minimum of 3 views***
The RUC reviewed the survey results from 51 physicians and agreed on the following physician time components: 1 minute of pre-service time, 3 minutes of intra-service time, and 1 minute of immediate post-service time. The RUC thoroughly reviewed the recommended work and agreed that the current work RVU of 0.17, which is also below the survey 25th percentile, correctly estimates the amount of physician work involved for this service. To justify a work RVU of 0.17, the RUC compared the survey code to CPT code 73610 *Radiologic examination, ankle; complete, minimum of 3 views* (work RVU= 0.17, intra-service time of 3 minutes, total time of 5 minutes) and 73630 *Radiologic examination, foot; complete, minimum of 3 views* (work RVU= 0.17, intra-service time of 3 minutes, total time of 5 minutes) and noted that all three services have identical times, views and intensity and should be valued the same. This recommendation maintains rank order and relativity within the X-ray elbow/forearm family. **The RUC recommends a work RVU of 0.17 for CPT code 73080.**

73090 ***Radiologic examination; forearm, 2 views***
The RUC reviewed the survey results from 51 physicians and agreed on the following physician time components: 1 minute of pre-service time, 3 minutes of intra-service time, and 1 minute of immediate post-service time. The RUC thoroughly reviewed the recommended work and agreed that the current and survey 25th percentile work RVU of 0.16, correctly estimates the amount of physician work involved for this service. To justify a work RVU of 0.16, the RUC compared the survey code to CPT code 73060 *Radiologic examination; humerus, minimum of 2 views* (work RVU= 0.16, intra-service time of 3 minutes, total time of 5 minutes) and noted that both services have identical times and involve an identical intensity of physician work. The RUC also compared the survey code to CPT code 73100 *Radiologic examination, wrist; 2 views* (work RVU= 0.16, intra-service time of 3 minutes, total time of 5 minutes) and noted that both services have identical times and involve identical physician work intensity. The recommendation also fits well into the rank order for the family of upper extremity X-Ray codes, justifying the recommended work RVU for the survey code. **The RUC recommends a work RVU of 0.16 for CPT code 73090.**

Practice Expense
These services were reviewed by the PE Subcommittee in April 2017. **The RUC recommends the direct practice expense inputs as affirmed by the Practice Expense Subcommittee.**

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
73070	Radiologic examination, elbow; 2 views	XXX	0.16

Specialty Society Additional Rationale
X-Ray Valuation - Principles

The absolute RVUs of individual codes within the X-ray modality are relatively small; however, there are important differences comparing across these codes and code families that are important to consider when assessing their relative value within the modality and the larger fee schedule.

The codes within the X-ray modality cannot be placed in a simple ascending order, but rather should be placed on a spectrum with consideration to three primary variables:
1. **Number of views**
2. **Body area**
3. **Clinical context** (pathology and patient population)

What should not be considered when valuing the X-ray codes are derived measures of work and intensity. For example, IWPUT was not designed to accurately measure intensity at this range of the fee schedule. IWPUT was designed to assess intra-service work in 90-day global codes with more than 10 times the intra-service time that these codes possess. Additionally, small changes in pre-service or post-service time at this end of the fee schedule can change the IWPUT of an X-ray code by 30-50%. Moreover, time is only measured on surveys in whole integer values, so surveyed physicians are not afforded the opportunity to differentiate between services that take 2.5 minutes and those that take 3.5 minutes. Rather, both of these codes frequently end up at 3 minutes, even though one or the other is clearly more difficult. And that 1 minute differential at 0.16-0.30 RVUs is actually very large. So considering time per view as a ratio falls apart and becomes invalid. Lastly, not all of the X-ray services are performed exclusively by radiology. Times across multiple different X-ray codes vary depending on the surveyed specialties (e.g. podiatry and orthopedics). This inherent variability means time is not a consistent factor for assessment of relativity. Therefore, broad comparisons across different codes or code families within the X-ray modality using only time as a variable are fundamentally flawed.

Number of views:
The number of views in a typical exam is a reasonable way to compare different X-ray codes; however, it is more accurate in ordering the relative value of codes in a family (e.g. spine) than across different body regions. Frequently, the number of views is also a reasonable metric for complexity of an exam in the same body region. For example, a 2-3 view cervical spine is going to be performed on a different patient and for different reasons than a 6-view cervical spine. In a 6-view example, the patient is being assessed during twisting or bending maneuvers so that dynamic joints or instability can be assessed. A 2-3 view cervical spine is more often a patient with isolated symptoms and an unknown diagnosis as opposed to a known complex clinical process like dynamic or post-operative instability.

Body region:
The skeleton can be separated into two different regions; the appendicular skeleton and axial skeleton. Appendicular structures include the appendages like arms, legs, wrists, ankles, hands, feet, and digits. These appendicular structures tend to not have as many overlapping structures on single plane images even though the wrist and ankle are somewhat complex joints. The axial skeleton includes the skull, spine, and pelvis, as well as the chest and abdomen. When interpreting X-rays of axial body parts there are numerous overlapping structures, multiple organ systems, and generally higher risk of consequential injury, especially in the spine. From this standpoint, axial X-ray exams are considered in general to be more difficult to interpret than appendicular X-ray exams, and so should be valued higher for equivalent views or times with few exceptions (e.g. single view intra-operative or post-operative images). To use the example above, a 2-3 view cervical spine is more difficult to interpret and takes more skill than a 2-3 view elbow, and should be valued higher.

Clinical context:
The complexity of X-rays also varies with the clinical indications and typical patient population. An example of this would be the cervical and lumbar spine radiographs. Although the cervical spine may be a more complex anatomic site than the lumbar spine, the typical clinical scenarios these are ordered for contribute to complexity for both of these exams. The cervical spine may be typically ordered in an outpatient setting to assess for osteoarthritis or other arthritic changes. There is a large number of abnormalities found on these X-rays in this patient population. Often, multiple levels within the spinal canal are compromised, as well as multiple facet joints. In addition, patients with rheumatoid arthritis often have atlantoaxial instability, with subluxation of the cervical spine that can lead to neurologic compromise. The sheer number of levels which may be involved in the cervical spine along with complexity of pathology increase the technical skill and judgement. On the other hand, the typical patient population evaluated with a lumbar spine radiograph is trauma in which there is concern for fracture. It is critical for the physician to find the fracture in the acute setting to direct appropriate treatment and workup which results in increased psychological stress.

As expected, services provided in an ER tend to be more stressful and have more potential negative consequences for inaccurate or delayed diagnoses than outpatient X-ray services. However, if a complex disease process is the typical indication for a particular X-ray code, then it is also logical that the required technical skill and intensity of providing that service is higher than for another X-ray code with similar total time or total views performed in a different setting.

Conclusion:
X-ray codes should be assessed using three primary variables: Number of views, body region, and clinical context. Neither time nor IWPUT are useful for the reasons outlined above. The current proposals from the RUC to CMS explicitly address these variables and have ordered the codes appropriately.

No single variable provides enough information to be used to accurately assess relativity within the X-ray modality, rather all three variables used together provide enough information to ensure proper relativity among and within X-ray code families.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	84%	16%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	8%	84%	8%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	88%	12%
Physical effort required	0%	96%	4%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	8%	76%	16%

2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	75%	25%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	92%	8%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	75%	25%
Physical effort required	0%	92%	8%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	58%	42%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

Elbow x-ray code 73070 *(Radiologic examination, elbow; 2 views)* as well as forearm X-ray code, 73090 *(Radiologic examination; elbow; complete, minimum of 3 views)* were identified by the CMS/Other Source – Utilization over 100,000 screen. The specialties expanded the family to include the additional elbow code, 73080 *(Radiologic examination; elbow; complete, minimum of 3 views)*. This code family was initially addressed at the April 2017 RUC meeting via a crosswalk methodology approved by the Research Subcommittee. Following review by the Centers for Medicare and Medicaid Services for CY2019, the specialties agreed to survey this code for the January 2019 RUC meeting.

Survey Process

The American College of Radiology randomly surveyed 1,500 members (a random sample of 750 members and a separate random sample of 750 members who perform radiography or musculoskeletal procedures). The American Academy of Orthopaedic Surgeons surveyed a random sample of 750 members.

Compelling Evidence

The societies are requesting compelling evidence for CPT code 73070 to support the proposed work RVUs and times. This code is CMS/Other and was previously valued using flawed methodology.

Work RVU Recommendation

The specialties recommend a work RVU of 0.16 for CPT code 73070, which is the 25th percentile survey value.

Time Recommendation

The specialties recommend the survey median times of 1 minute of pre-service, 3 minutes of intra-service, and 1 minute of post-service. This is a total recommended time of 5 minutes for CPT code 73070.

Key Reference Services

The most commonly chosen reference codes by survey participants:

- **73120** *(Radiologic examination, hand; 2 views)*, chosen by 49% of respondents, and
- **73562** *(Radiologic examination, knee; 3 views)*, chosen by 24% respondents.

The recommendation for CPT code 73070 has identical RVU and one less intra-service minute compared to the most commonly chosen key reference service, CPT code 73120. The extra minute of intra-service time is likely due to the higher number of bones and joints to evaluate in 73120. The recommendation for 73070 has 0.02 less RVU and one less intra-service minute compared to the second most commonly chosen key reference service, CPT code 73562. Both key reference services compare well to the recommended values for CPT code 73070.

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT
73070	**Radiologic examination, elbow; 2 views**	**0.16**	**1**	**3**	**1**	**5**	**0.0384**
73120	Radiologic examination, hand; 2 views	0.16	1	4	1	6	0.0288
73562	Radiologic examination, knee; 3 views	0.18	1	4	1	6	0.0338

MPC Codes

Our proposed MPC, 70355 *(Orthopantogram (eg, panoramic x-ray))*, is a one-view exam that evaluates both the mandible and the maxilla. It is primarily used to assess for mandible fractures, temporomandibular joint disease or for dental abscess. This MPC code has 2 more minutes of intra-service time that is likely related to the need to evaluate each of the teeth and not just the osseous structures and joints.

We have also included 90970 *(End-stage renal disease (ESRD) related services for dialysis less than a full month of service, per day; for patients 20 years of age and older)*, as a non x-ray MPC with similar intra-service time and wRVU. Overall, our recommendation compares favorably to MPC codes 90970 and 70355.

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT
90970	ESRD home pt serv p day 20+	0.14		2.5		2.5	0.0560
73070	**Radiologic examination, elbow; 2 views**	**0.16**	**1**	**3**	**1**	**5**	**0.0384**
70355	Orthopantogram (eg, panoramic x-ray)	0.20		5	1	6	0.0355

Summary of Recommendations

The societies recommend 0.16 RVU with service period times of 1, 3, and 1 minute for CPT code 73070.

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT	RUC Mtg
73140	X-Ray, finger(s), minimum of 2 views	0.13	1	4	1	6	0.0213	Apr 2016
73070	**Radiologic examination, elbow; 2 views**	**0.16**	**1**	**3**	**1**	**5**	**0.0384**	**Jan 2019**
73100	X-Ray, wrist; 2 views	0.16	1	3	1	5	0.0384	Apr 2016
73120	X-Ray, hand; 2 views	0.16	1	4	1	6	0.0288	Apr 2016

73090	X-Ray; forearm, 2 views	0.16	1	3	1	5	0.0384	Jan 2019
73080	X-Ray, elbow; complete, minimum of 3 views	0.17	1	3	1	5	0.0417	Jan 2019
73110	X-Ray, wrist; complete, minimum of 3 views	0.17	1	4	1	6	0.0313	Apr 2016
73130	X-Ray, hand; minimum of 3 views	0.17	1	5	1	7	0.0250	Apr 2016

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☒ Other reason (please explain) CPT code 73070 is typically billed with an E/M code.

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 73070

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Commonly

Specialty Orthopedic Surgery How often? Commonly

Specialty Hand Surgery How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 685395
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by code 73070 provided nationally in a one-year period is estimated to be 685,395.

Specialty Diagnostic Radiology Frequency 336410 Percentage 49.08 %

Specialty Orthopedic Surgery Frequency 187580 Percentage 27.36 %

Specialty Hand Surgery Frequency 29080 Percentage 4.24 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 228,465 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The 2017 Medicare data estimates the CPT code 73070 is billed approximately 228,465 times in total for Medicare patients nationally in a one-year period.

Specialty Diagnostic Radiology Frequency 112135 Percentage 49.08 %

Specialty Orthopedic Surgery Frequency 62530 Percentage 27.36 %

Specialty Hand Surgery Frequency 9690 Percentage 4.24 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	68%	32%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	68%	32%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	63%	37%
Physical effort required	0%	79%	21%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	68%	32%

2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	90%	10%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	10%	80%	10%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	90%	10%
Physical effort required	0%	90%	10%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	10%	70%	20%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

Elbow x-ray code 73070 *(Radiologic examination, elbow; 2 views)* as well as forearm X-ray code, 73090 *(Radiologic examination; elbow; complete, minimum of 3 views)* were identified by the CMS/Other Source – Utilization over 100,000 screen. The specialties expanded the family to include the additional elbow code, 73080 *(Radiologic examination; elbow; complete, minimum of 3 views)*. This code family was initially addressed at the April 2017 RUC meeting via a crosswalk methodology approved by the Research Subcommittee. Following review by the Centers for Medicare and Medicaid Services for CY2019, the specialties agreed to survey this code for the January 2019 RUC meeting.

Survey Process

The American College of Radiology randomly surveyed 1,500 members (a random sample of 750 members and a separate random sample of 750 members who perform radiography or musculoskeletal procedures). The American Academy of Orthopaedic Surgeons surveyed a random sample of 750 members.

Work RVU Recommendation

The specialties recommend the current work RVU of 0.17 for CPT code 73080, which is below the 25th percentile survey value.

Time Recommendation

The specialties recommend the survey median times of 1 minute of pre-service, 3 minutes of intra-service, and 1 minute of post-service. This is a total recommended time of 5 minutes for CPT code 73080.

Key Reference Services

The most commonly chosen reference codes by survey participants:

- **73562** *(Radiologic examination, knee; 3 views)*, chosen by 37% respondents, and
- **73130** *(Radiologic examination, hand; minimum of 3 views)*, chosen by 20% respondents.

The survey times and RVU recommendation are supported by the key reference services. The recommendation for CPT code 73080 has one less intra-service minute and 0.01 less RVU compared to the most commonly chosen key reference service, CPT code 73562. The RVU recommendation is identical to the RVU for the second most commonly chosen KRS, CPT code 73130. All three of these exams are similar, involving assessment of a joint of similar complexity.

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT
73080	**Radiologic examination, elbow; complete, minimum of 3 views**	**0.17**	**1**	**3**	**1**	**5**	**0.0417**
73130	Radiologic examination, hand; 2 views	0.17	1	5	1	7	0.0250
73562	Radiologic examination, knee; 3 views	0.18	1	4	1	6	0.0338

MPC Codes

Our proposed MPC, 70355 *(Orthopantogram (eg, panoramic x-ray))*, is a one-view exam that evaluates both the mandible and the maxilla. It is primarily used to assess for mandible fractures, temporomandibular joint

disease or for dental abscess. This MPC code has 2 more minutes of intra-service time that is likely related to the need to evaluate each of the teeth and not just the osseous structures and joints.

We have also included 90970 *(End-stage renal disease (ESRD) related services for dialysis less than a full month of service, per day; for patients 20 years of age and older),* as a non x-ray MPC with similar intra-service time and wRVU. Overall, our recommendation compares favorably to MPC codes 90970 and 70355.

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT
90970	ESRD home pt serv p day 20+	0.14		2.5		2.5	0.0560
73080	**Radiologic examination, elbow; complete, minimum of 3 views**	**0.17**	**1**	**3**	**1**	**5**	**0.0417**
70355	Orthopantogram (eg, panoramic x-ray)	0.20		5	1	6	0.0355

Summary of Recommendations

The societies recommend 0.17 RVU with service period times of 1, 3, and 1 minute for CPT code 73080.

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT	RUC Mtg
73140	X-Ray, finger(s), minimum of 2 views	0.13	1	4	1	6	0.0213	Apr 2016
73070	Radiologic examination, elbow; 2 views	0.16	1	3	1	5	0.0384	Jan 2019
73100	X-Ray, wrist; 2 views	0.16	1	3	1	5	0.0384	Apr 2016

73060	X-Ray; humerus, minimum 2 views	0.16	1	3	1	5	0.0384	Sept 2014
73090	X-Ray; forearm, 2 views	0.16	1	3	1	5	0.0384	Jan 2019
73080	**X-Ray, elbow; complete, minimum of 3 views**	**0.17**	**1**	**3**	**1**	**5**	**0.0417**	**Jan 2019**
73110	X-Ray, wrist; complete, minimum of 3 views	0.17	1	4	1	6	0.0313	Apr 2016
73130	X-Ray, hand; minimum of 3 views	0.17	1	5	1	7	0.0250	Apr 2016

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☒ Other reason (please explain) CPT code 73080 is typically billed with an E/M code.

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 73080

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Commonly

Specialty Orthopedic Surgery How often? Commonly

Specialty Hand Surgery How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 1158975
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by code 73080 provided nationally in a one-year period is estimated to be 1,158,975.

Specialty Diagnostic Radiology Frequency 787110 Percentage 67.91 %

Specialty Orthopedic Surgery Frequency 175800 Percentage 15.16 %

Specialty Hand Surgery Frequency 42185 Percentage 3.63 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 386,325 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The 2017 Medicare data estimates the CPT code 73080 is billed approximately 386,325 times in total for Medicare patients nationally in a one-year period.

Specialty Diagnostic Radiology Frequency 262370 Percentage 67.91 %

Specialty Orthopedic Surgery Frequency 58600 Percentage 15.16 %

Specialty Hand Surgery Frequency 14060 Percentage 3.63 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Imaging

BETOS Sub-classification:
Standard imaging

BETOS Sub-classification Level II:
Musculoskeletal

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 73080

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:73090 Tracking Number

Original Specialty Recommended RVU: **0.16**
Presented Recommended RVU: **0.16**
RUC Recommended RVU: **0.16**

Global Period: XXX Current Work RVU: **0.16**

CPT Descriptor: Radiologic examination; forearm, 2 views

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: An elderly patient presents with history of a fall and pain in her forearm. AP and lateral views of the forearm are obtained to evaluate for fracture.

Percentage of Survey Respondents who found Vignette to be Typical: 92%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review the reason for the examination and any pertinent clinical history. Review any prior applicable plain film or imaging studies.

Description of Intra-Service Work: The technologist performing the examination is supervised, and the radiographs of the forearm are interpreted. Examination findings are compared to previous studies, if applicable. A report is dictated for the patient's medical record.

Description of Post-Service Work: The final report is reviewed and signed, and findings are communicated to the referring physician as needed.

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	11%	56%	33%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

Elbow x-ray code 73070 *(Radiologic examination, elbow; 2 views)* as well as forearm X-ray code, 73090 *(Radiologic examination; elbow; complete, minimum of 3 views)* were identified by the CMS/Other Source – Utilization over 100,000 screen. The specialties expanded the family to include the additional elbow code, 73080 *(Radiologic examination; elbow; complete, minimum of 3 views)*. This code family was initially addressed at the April 2017 RUC meeting via a crosswalk methodology approved by the Research Subcommittee. Following review by the Centers for Medicare and Medicaid Services for CY2019, the specialties agreed to survey this code for the January 2019 RUC meeting.

Survey Process

The American College of Radiology randomly surveyed 1,500 members (a random sample of 750 members and a separate random sample of 750 members who perform radiography or musculoskeletal procedures). The American Academy of Orthopaedic Surgeons surveyed a random sample of 750 members.

Work RVU Recommendation

The specialties recommend the 25th percentile survey work RVU of 0.16 for CPT code 73090, which is equal to the current value.

Time Recommendation

The specialties recommend the survey median times of 1 minute of pre-service, 3 minutes of intra-service, and 1 minute of post-service. This is a total recommended time of 5 minutes for CPT code 73090.

Key Reference Services

The most commonly chosen reference codes by survey participants:

- **73120** *(Radiologic examination, hand; 2 views)*, chosen by 53% of respondents, and
- **73562** *(Radiologic examination, knee; 3 views)*, chosen by 18% respondents.

The survey times and RVU recommendation are supported by the key reference services. The recommendation for CPT code 73090 has one less intraservice minute and the same RVU compared to the most commonly chosen key reference service, CPT code 73120. The recommendation for 73090 has one less minute of intraservice time and 0.02 less RVU than the second most commonly chosen KRS, CPT code 73562. The recommendation also fits well into the rank order for the family of upper extremity x-ray codes.

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT
73090	**Radiologic examination; forearm, 2 views**	**0.16**	**1**	**3**	**1**	**5**	**0.0384**
73120	Radiologic examination, hand; 2 views	0.16	1	4	1	6	0.0288
73562	Radiologic examination, knee; 3 views	0.18	1	4	1	6	0.0338

MPC Codes

Our proposed MPC, 70355 *(Orthopantogram (eg, panoramic x-ray))*, is a one-view exam that evaluates both the mandible and the maxilla. It is primarily used to assess for mandible fractures, temporomandibular joint

disease or for dental abscess. This MPC code has 2 more minutes of intra-service time that is likely related to the need to evaluate each of the teeth and not just the osseous structures and joints.

We have also included 90970 *(End-stage renal disease (ESRD) related services for dialysis less than a full month of service, per day; for patients 20 years of age and older)*, as a non x-ray MPC with similar intra-service time and wRVU. Overall, our recommendation compares favorably to MPC codes 90970 and 70355.

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT
90970	Esrd home pt serv p day 20+	0.14		2.5		2.5	0.0560
73090	**Radiologic examination; forearm, 2 views**	**0.16**	**1**	**3**	**1**	**5**	**0.0384**
70355	Orthopantogram (eg, panoramic x-ray)	0.20		5	1	6	0.0355

Summary of Recommendations

The societies recommend 0.16 RVU with service period times of 1, 3, and 1 minute for CPT code 73090.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.

- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 73090

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Commonly

Specialty Orthopedic Surgery How often? Commonly

Specialty Hand Surgery How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 706050
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by code 73090 provided nationally in a one-year period is estimated to be 706,050.

Specialty Diagnostic Radiology Frequency 529800 Percentage 75.03 %

Specialty Orthopedic Surgery Frequency 45485 Percentage 6.44 %

Specialty Hand Surgery Frequency 8780 Percentage 1.24 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 235,350 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The 2017 Medicare data estimates the CPT code 73090 is billed approximately 235,350 times in total for Medicare patients nationally in a one-year period.

Specialty Diagnostic Radiology Frequency 176600 Percentage 75.03 %

Specialty Orthopedic Surgery Frequency 15130 Percentage 6.42 %

Specialty Hand Surgery Frequency 2930 Percentage 1.24 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment
Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Imaging

BETOS Sub-classification:
Standard imaging

BETOS Sub-classification Level II:
Musculoskeletal

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 73090

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

CPT Code: 73070, 73080, 73090
Specialty Society: ACR, AAOS

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SOR)
Non Facility Direct Practice Expense (PE) Inputs

CPT Long Descriptor:

73070	Radiologic examination, elbow; 2 views
73080	Radiologic examination, elbow; complete, minimum of 3 views
73090	Radiologic examination; forearm, 2 views

Global Period: XXX Meeting Date: January 2019

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   The American College of Radiology (ACR) and American Academy of Orthopaedic Surgeons (AAOS) convened a consensus panel to finalize the practice expense data for the x-ray elbow/forearm, CPT codes 73070, 73080, 73090.

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code.** You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here:

   The societies included the existing PE inputs for code 73070, 73080, 73090 on the spreadsheet to serve as a reference.

3. Is this code(s) typically billed with an E/M service?
   Is this code(s) typically billed with the E/M service in the nonfacility?
   (Please see provided data in PE Subcommittee folder)

   No, CPT codes 73070, 73080, and 73090 are not typically billed with an E/M service.
   CPT codes 73070 and 73080 are typically billed with an E/M service in the nonfacility.

4. What specialty is the dominant provider in the nonfacility?
   What percent of the time does the dominant provider provide the service(s) in the nonfacility?
   Is the dominant provider in the nonfacility different then for the global?
   (Please see provided data in PE Subcommittee folder)

	Nonfacility		Global	
73070	ORTHOPEDIC SURGERY	51%	DIAGNOSTIC RADIOLOGY	49%
73080	ORTHOPEDIC SURGERY	39%	DIAGNOSTIC RADIOLOGY	68%
73090	PORTABLE XRAY SUPPLIER	26%	DIAGNOSTIC RADIOLOGY	75%

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:
   N/A

6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), you must provide compelling evidence. Please explain if the increase can be entirely accounted for because of an increase in physician time.

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here: N/A

8. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? (please use this time rather than 5 minutes in your reference code)
   The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here: We are not requesting time for obtaining vital signs.

9. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

   73070: X-ray, elbow; 2 views
   Bring patient into x-ray room and have patient stand/sit/lie on or adjacent to the x-ray table as appropriate. Place first cassette under patient's elbow. Position patient's elbow for the first view (typically the AP view). Step behind shielding to control panel. Set appropriate exposure parameters. Instruct patient to hold still. Take exposure for first view. Step from behind shielding. Take first cassette out from under elbow and place second cassette under patient's elbow. Position patient's elbow for second view (typically the lateral view). Step behind shielding to control panel. Set appropriate exposure parameters. Instruct patient to hold still. Take exposure for second view. Step from behind shielding. Take second cassette out from under elbow. Both cassettes are then taken to the image reader. Run both cassettes through reader. Check all images for adequate exposure, positioning, coverage, etc. Repeat any views as needed.

   73080: X-ray, elbow; min 3 views
   Bring patient into x-ray room and have patient stand/sit/lie on or adjacent to the x-ray table as appropriate. Place first cassette under patient's elbow. Position patient's elbow for the first view (typically the AP view). Step behind shielding to control panel. Set appropriate exposure parameters. Instruct patient to hold still. Take exposure for first view. Step from behind shielding. Take first cassette out from under elbow and place second cassette under patient's elbow. Position patient's elbow for second view (typically the oblique view). Step behind shielding to control panel. Set appropriate exposure parameters. Instruct patient to hold still. Take exposure for second view. Step from behind shielding. Take second cassette out from under elbow and place third cassette under patient's elbow. Position patient's elbow for third view (typically the lateral view). Step behind shielding to control panel. Set appropriate exposure parameters. Instruct patient to hold still. Take exposure for third view. Step from behind shielding. Take third cassette out from under elbow. The above steps are repeated for any additional elbow views to be obtained. All cassettes are then taken to the image reader. Run all three cassettes through reader. Check all images for adequate exposure, positioning, coverage, etc. Repeat any views as needed.

73090: X-ray; forearm, 2 views
Bring patient into x-ray room and have patient stand/sit/lie on or adjacent to the x-ray table as appropriate. Place first cassette under patient's forearm. Position patient's forearm for the first view (typically the AP view). Step behind shielding to control panel. Set appropriate exposure parameters. Instruct patient to hold still. Take exposure for first view. Step from behind shielding. Take first cassette out from under forearm and place second cassette under patient's forearm. Position patient's forearm for second view (typically the lateral view). Step behind shielding to control panel. Set appropriate exposure parameters. Instruct patient to hold still. Take exposure for second view. Step from behind shielding. Take second cassette out from under forearm. The above steps are repeated for any additional forearm views to be obtained. Both cassettes are then taken to the image reader. Run both cassettes through reader. Check all images for adequate exposure, positioning, coverage, etc. Repeat any views as needed.

10. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.
    N/A

11. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities:
    N/A

12. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.
    N/A

13. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here:
    N/A

14. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here:
    N/A

15. List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here:
    - **Technologist PACS Workstation Proxy (ED050)** –PACS formula; Equals total service period time
    - **Professional PACS Workstation (ED053)** – Equals physician work intra time + 1/2 physician work pre-time
    - **Room, basic radiology (EL012)** – Highly technical formula

16. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here:
    N/A

17. If there is any other item on your spreadsheet that needs further explanation please include here:
    N/A

18. Please include an explanation of each line item:
    N/A

AMA/Specialty Society RVS Update Committee Summary of Recommendations
NPRM for 2019

January 2019

X-Ray Heel – Tab 31

In October 2016, the Relativity Assessment Workgroup expanded the CMS/Other Source codes screen, lowering the Medicare utilization threshold from 250,000 to 100,000 based on 2015 Medicare utilization data. The Workgroup recommended that the specialty societies survey these services for April 2017, with a strong recommendation that the Research Subcommittee consider the specialty societies request to allow direct crosswalks to similar services for physician work and time. In February, the Research Subcommittee approved for the specialties to utilize a crosswalk methodology to make physician work and physician time recommends in lieu of conducting a RUC survey. In the NPRM for 2019, CMS disagreed with the RUC recommended work RVUs for 20 CPT codes included in the X-Ray Spine, X-Ray Sacrum, X-Ray Elbow-Forearm, X-Ray Heel and X-Ray Toe code families. CMS proposed the same work RVU of 0.23 for all 20 services based on a utilization-weighted average. The RUC recommended for CMS to maintain the CY 2018 work RVU for all 20 services on an interim basis and requested that the specialties survey all 20 services and review them again at the January 2019 RUC meeting (CY 2020 cycle).

73650 ***Radiologic examination; calcaneus, minimum of 2 views***
The RUC reviewed the survey results from 136 physicians and agreed on the following physician time components: 1 minute of pre-service time, 5 minutes of intra-service time, and 1 minute of immediate post-service time. The RUC thoroughly reviewed the recommended work and agreed that the current work value and the survey 25th percentile work RVU of 0.16, correctly estimates the amount of physician work involved for this service. To justify a work RVU of 0.16, the RUC compared the survey code to MPC code 93010 *Electrocardiogram, routine ECG with at least 12 leads; interpretation and report only* (work RVU= 0.17, intra-service time of 5 minutes, post-service time of 1 minute, and 6 minutes total time) and noted that the survey code involves evaluation of the calcaneus, soft tissues, and the adjacent bones with their complex articulations in two views and is most commonly performed in the setting of acute trauma. Both codes have identical intra-service time and a similar amount of physician work. The RUC also compared the survey code to MPC code 51741 *Complex uroflowmetry (eg, calibrated electronic equipment)* (work RVU= 0.17, intra-service time of 5 minutes, total time of 7 minutes) and noted that both services involve an identical amount of intra-service time and total time and a similar intensity of physician work. This recommendation maintains rank order and relativity with other X-ray codes. **The RUC recommends a work RVU of 0.16 for CPT code 73650.**

Practice Expense
These services were reviewed and approved by the PE Subcommittee in April 2017. **The RUC recommends the direct practice expense inputs as affirmed by the Practice Expense Subcommittee.**

Specialty Society Additional Rationale
X-Ray Valuation - Principles

The absolute RVUs of individual codes within the X-ray modality are relatively small; however, there are important differences comparing across these codes and code families that are important to consider when assessing their relative value within the modality and the larger fee schedule.

The codes within the X-ray modality cannot be placed in a simple ascending order, but rather should be placed on a spectrum with consideration to three primary variables:
1. **Number of views**
2. **Body area**
3. **Clinical context** (pathology and patient population)

What should not be considered when valuing the X-ray codes are derived measures of work and intensity. For example, IWPUT was not designed to accurately measure intensity at this range of the fee schedule. IWPUT was designed to assess intra-service work in 90-day global codes with more than 10 times the intra-service time that these codes possess. Additionally, small changes in pre-service or post-service time at this end of the fee schedule can change the IWPUT of an X-ray code by 30-50%. Moreover, time is only measured on surveys in whole integer values, so surveyed physicians are not afforded the opportunity to differentiate between services that take 2.5 minutes and those that take 3.5 minutes. Rather, both of these codes frequently end up at 3 minutes, even though one or the other is clearly more difficult. And that 1 minute differential at 0.16-0.30 RVUs is actually very large. So considering time per view as a ratio falls apart and becomes invalid. Lastly, not all of the X-ray services are performed exclusively by radiology. Times across multiple different X-ray codes vary depending on the surveyed specialties (e.g. podiatry and orthopedics). This inherent variability means time is not a consistent factor for assessment of relativity. Therefore, broad comparisons across different codes or code families within the X-ray modality using only time as a variable are fundamentally flawed.

Number of views:
The number of views in a typical exam is a reasonable way to compare different X-ray codes; however, it is more accurate in ordering the relative value of codes in a family (e.g. spine) than across different body regions. Frequently, the number of views is also a reasonable metric for complexity of an exam in the same body region. For example, a 2-3 view cervical spine is going to be performed on a different patient and for different reasons than a 6-view cervical spine. In a 6-view example, the patient is being assessed during twisting or bending maneuvers so that dynamic joints or instability can be assessed. A 2-3 view cervical spine is more often a patient with isolated symptoms and an unknown diagnosis as opposed to a known complex clinical process like dynamic or post-operative instability.

Body region:
The skeleton can be separated into two different regions; the appendicular skeleton and axial skeleton. Appendicular structures include the appendages like arms, legs, wrists, ankles, hands, feet, and digits. These appendicular structures tend to not have as many overlapping structures on single plane images even though the wrist and ankle are somewhat complex joints. The axial skeleton includes the skull, spine, and pelvis, as well as the chest and abdomen. When interpreting X-rays of axial body parts there are numerous overlapping structures, multiple organ systems, and generally higher risk of consequential injury, especially in the spine. From this standpoint, axial X-ray exams are considered in general to be more difficult to interpret than appendicular X-ray exams, and so should be valued higher for equivalent views or times with few exceptions (e.g. single view intra-operative or post-operative images). To use the example above, a 2-3 view cervical spine is more difficult to interpret and takes more skill than a 2-3 view elbow, and should be valued higher.

Clinical context:
The complexity of X-rays also varies with the clinical indications and typical patient population. An example of this would be the cervical and lumbar spine radiographs. Although the cervical spine may be a more complex anatomic site than the lumbar spine, the typical clinical scenarios these are ordered for contribute to complexity for both of these exams. The cervical spine may be typically ordered in an outpatient setting to assess for osteoarthritis or other arthritic changes. There is a large number of abnormalities found on these X-rays in this patient population. Often, multiple levels within the spinal canal are compromised, as well as multiple facet joints. In addition, patients with rheumatoid arthritis often have atlantoaxial instability, with subluxation of the cervical spine that can lead to neurologic compromise. The sheer number of levels which may be involved in the cervical spine along with complexity of pathology increase the technical skill and judgement. On the other hand, the typical patient population evaluated with a lumbar spine radiograph is trauma in which there is concern for fracture. It is critical for the physician to find the fracture in the acute setting to direct appropriate treatment and workup which results in increased psychological stress.

As expected, services provided in an ER tend to be more stressful and have more potential negative consequences for inaccurate or delayed diagnoses than outpatient X-ray services. However, if a complex disease process is the typical indication for a particular X-ray code, then it is also logical that the required technical skill and intensity of providing that service is higher than for another X-ray code with similar total time or total views performed in a different setting.

Conclusion:
X-ray codes should be assessed using three primary variables: Number of views, body region, and clinical context. Neither time nor IWPUT are useful for the reasons outlined above. The current proposals from the RUC to CMS explicitly address these variables and have ordered the codes appropriately.

No single variable provides enough information to be used to accurately assess relativity within the X-ray modality, rather all three variables used together provide enough information to ensure proper relativity among and within X-ray code families.

CPT Descriptor: Radiologic examination; calcaneus, minimum of 2 views

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: An elderly patient presents with a history of a fall from a ladder and heel pain. AP and Harris views of the calcaneus are obtained.

Percentage of Survey Respondents who found Vignette to be Typical: 77%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review the reason for the examination and any pertinent clinical history. Review any prior applicable plain film or imaging studies.

Description of Intra-Service Work: The technologist performing the examination is supervised, and the radiographs of the calcaneus are interpreted. Examination findings are compared to previous studies, if applicable. A report is dictated for the patient's medical record.

Description of Post-Service Work: The final report is reviewed and signed, and findings are communicated to the referring physician as needed.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

The heel X-ray code, 73650 *(Radiologic examination; calcaneus, minimum of 2 views)*, was initially identified by the CMS/Other Source – Utilization over 100,000 screen, and this code was initially addressed at the April

2017 RUC meeting via a crosswalk methodology approved by the Research Subcommittee. Following review by the Centers for Medicare and Medicaid Services for CY2019, the specialties agreed to survey this code for the January 2019 RUC meeting.

Survey Process

The American College of Radiology randomly surveyed 750 members (a random sample of 375 members and a separate random sample of 375 members who perform radiography or musculoskeletal procedures). The American Podiatric Medical Association surveyed a random sample of 2,274 members. The American Academy of Orthopaedic Surgeons surveyed a random sample of 200 members. The American Orthopaedic Foot and Ankle Society surveyed a random sample of 1,200 members.

Work RVU Recommendation

The expert panel recommends a work RVU of 0.16 for CPT code 73650, which is the survey 25th percentile value, and also the current value.

Time Recommendation

The expert panel recommends the median intra-service time of 5 minutes, and a reduction from both the median pre- and post-service time to 1 minute each, which is typical for recently-reviewed X-ray procedures. This is a total recommended time of 7 minutes for CPT code 73650, an increase from the existing CMS/Other time of 5 minutes.

Key Reference Services

The most commonly chosen reference codes by survey participants are two X-ray of the foot procedures:

- **73620** *(Radiologic examination, foot; 2 views)*, chosen by 49% of respondents, and
- **73630** *(Radiologic examination, foot; complete, minimum of 3 views)*, chosen by 32% of respondents.

The surveyed code involves evaluation of the calcaneus, soft tissues, and the adjacent bones with their complex articulations in two views, and is most commonly performed in the setting of acute trauma. It has two more minutes of intra-service time, and similar RVUs, compared to the most commonly chosen key reference service, code 73620, which is a two-view examination of the foot, and the second key reference service, code 73630, which is a three-view examination of the entire foot. The surveyed code involves a more focused anatomic area and, due to the longer time required to assess for subtle clinically important injuries, results in a lower overall intensity and IWPUT compared to the evaluation of the foot in two or three views.

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT
73620	Radiologic examination, foot; 2 views	0.16	1	3	1	5	0.0384
73650	**Radiologic examination; calcaneus, minimum of 2 views**	**0.16**	**1**	**5**	**1**	**7**	**0.0230**
73630	Radiologic examination, foot; complete, minimum of 3 views	0.17	1	3	1	5	0.0417

MPC Codes

The surveyed code compares well to two MPCs codes, 70355 *(Orthopantogram (eg, panoramic x-ray))* and 93010 *(Electrocardiogram, routine ECG with at least 12 leads; interpretation and report only).* CPT code 70355 is a one-view exam that evaluates both the mandible and the maxilla. It is primarily used to assess for mandible fractures, temporomandibular joint disease or for dental abscess. The ECG code involves review and

interpretation of a medical test with physician work that is similar to imaging review. Both MPC codes have identical intra-service times and similar total times.

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT
73650	**Radiologic examination; calcaneus, minimum of 2 views**	**0.16**	**1**	**5**	**1**	**7**	**0.0230**
93010	Electrocardiogram, routine ECG with at least 12 leads	0.17		5	1	6	0. 0295
70355	Orthopantogram (eg, panoramic x-ray)	0.20		5	1	6	0.0355

Summary of Recommendation

Our expert panel recommends 0.16 RVU for CPT code 73650, with service period times of 1, 5, and 1 minutes. This valuation maintains relativity in the X-ray foot and ankle families.

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT	RUC Mtg
73660	Radiologic examination; toe(s), minimum of 2 views	0.13	1	5	1	7	0.0170	Jan 2019
73600	Radiologic examination, ankle; 2 views	0.16	1	3	1	5	0.0384	Sept 2014
73620	Radiologic examination, foot; 2 views	0.16	1	3	1	5	0.0384	Apr 2011
73650	**Radiologic examination; calcaneus, minimum of 2 views**	**0.16**	**1**	**5**	**1**	**7**	**0.0230**	**Jan 2019**
73610	Radiologic examination, ankle; complete, minimum of 3 views	0.17	1	3	1	5	0.0417	Oct 2009
73630	Radiologic examination, foot; complete, minimum of 3 views	0.17	1	3	1	5	0.0417	Oct 2009

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☒ Other reason (please explain) CPT code 73650 is typically billed with an E/M code.

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 73650

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Commonly

Specialty Orthopedic Surgery How often? Commonly

Specialty Podiatry How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 270550
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by code 73650 provided nationally in a one-year period is estimated to be 270,550.

Specialty Diagnostic Radiology Frequency 111400 Percentage 41.17 %

Specialty Orthopedic Surgery Frequency 57400 Percentage 21.21 %

Specialty Podiatry Frequency 62150 Percentage 22.97 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 90,180
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The 2017 Medicare data estimates the CPT code 73650 is billed approximately 90,180 times in total for Medicare patients nationally in a one-year period.

Specialty Diagnostic Radiology Frequency 37125 Percentage 41.16 %

Specialty Orthopedic Surgery Frequency 19140 Percentage 21.22 %

Specialty Podiatry Frequency 20720 Percentage 22.97 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment
Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Imaging

BETOS Sub-classification:
Standard imaging

BETOS Sub-classification Level II:
Musculoskeletal

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 73650

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

CPT Code: 73650
Specialty Society: ACR, AAOS, APMA, AOFAS

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SOR)
Non Facility Direct Practice Expense (PE) Inputs

CPT Long Descriptor:

73650	Radiologic examination; calcaneus, minimum of 2 views

Global Period: XXX Meeting Date: January 2019

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   The American College of Radiology (ACR), American Academy of Orthopaedic Surgeons (AAOS), American Podiatric Medical Association (APMA), American Orthopaedic Foot and Ankle Society (AOFAS) convened a consensus panel to finalize the practice expense data for the X-ray heel CPT code, 73650.

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code.** You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here:

   The societies included the existing PE inputs for code 73650 on the spreadsheet to serve as a reference.

3. Is this code(s) typically billed with an E/M service?
   Is this code(s) typically billed with the E/M service in the nonfacility?
   (Please see provided data in PE Subcommittee folder)

   No, this code is not typically billed with an E/M service.
   Yes, this code is typically billed with an E/M service in the nonfacility.

4. What specialty is the dominant provider in the nonfacility?
   What percent of the time does the dominant provider provide the service(s) in the nonfacility?
   Is the dominant provider in the nonfacility different then for the global?
   (Please see provided data in PE Subcommittee folder)

	Nonfacility		Global	
73650	PODIATRY	34%	DIAGNOSTIC RADIOLOGY	41%

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:
   N/A

6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), you must provide compelling evidence. Please explain if the increase can be entirely accounted for because of an increase in physician time.

   The increase in aggregate cost is a result of the increase in physician time, per the multispecialty RUC survey. This correlates to the increase in professional PACS workstation time.

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here: N/A

8. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? (please use this time rather than 5 minutes in your reference code)
   The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here: We are not requesting time for obtaining vital signs.

9. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

   Bring patient into x-ray room and have patient sit/lie on x-ray table or stand on imaging stand as appropriate. Place first cassette under patient's heel. Position patient's heel for the first view (typically the Harris view). Step behind shielding to control panel. Set appropriate exposure parameters. Instruct patient to hold still. Take exposure for first view. Step from behind shielding. Take first cassette out from under heel and place second cassette under patient's heel. Position patient's heel for second view (typically the lateral view). Step behind shielding to control panel. Set appropriate exposure parameters. Instruct patient to hold still. Take exposure for second view. Step from behind shielding. Take second cassette out from under heel. The above steps are repeated for any additional heel views to be obtained. All cassettes are then taken to the image reader. Run all three cassettes through reader. Check all images for adequate exposure, positioning, coverage, etc. Repeat any views as needed.

10. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.
    N/A

11. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities:
    N/A

12. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.
    N/A

13. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here:
    N/A

14. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here:
    N/A

15. List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here:
    - **Technologist PACS Workstation Proxy (ED050)** –PACS formula; Equals total service period time
    - **Professional PACS Workstation (ED053)** – Equals physician work intra time + 1/2 physician work pre-time
    - **Room, basic radiology (EL012)** – Highly technical formula

16. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here:
    N/A

17. If there is any other item on your spreadsheet that needs further explanation please include here:
    N/A

18. Please include an explanation of each line item:
    N/A

AMA/Specialty Society RVS Update Committee Summary of Recommendations
NPRM for 2019

January 2019

X-Ray Toe – Tab 32

In October 2016, the Relativity Assessment Workgroup expanded the CMS/Other Source codes screen, lowering the Medicare utilization threshold from 250,000 to 100,000 based on 2015 Medicare utilization data. The Workgroup recommended that the specialty societies survey these services for April 2017, with a strong recommendation that the Research Subcommittee consider the specialty societies request to allow direct crosswalks to similar services for physician work and time. In February, the Research Subcommittee approved for the specialties to utilize a crosswalk methodology to make physician work and physician time recommends in lieu of conducting a RUC survey. In the NPRM for 2019, CMS disagreed with the RUC recommended work RVUs for 20 CPT codes included in the X-Ray Spine, X-Ray Sacrum, X-Ray Elbow-Forearm, X-Ray Heel and X-Ray Toe code families. CMS proposed the same work RVU of 0.23 for all 20 services based on a utilization-weighted average. The RUC recommended for CMS to maintain the CY 2018 work RVU for all 20 services on an interim basis and requested that the specialties survey all 20 services and review them again at the January 2019 RUC meeting (CY 2020 cycle).

73660 ***Radiologic examination; toe(s), minimum of 2 views***
The RUC reviewed the survey results from 138 physicians and agreed on the following physician time components: 1 minute of pre-service time, 5 minutes of intra-service time, and 1 minute of immediate post-service time. The survey code involves evaluation of the bones, joints and soft tissues of a toe in two or more views. The RUC thoroughly reviewed the recommended work and agreed that the current work value and the survey 25th percentile work RVU of 0.13, correctly estimates the amount of physician work involved for this service. To justify a work RVU of 0.13, the RUC compared the survey code to MPC code 51741 *Complex uroflowmetry (eg, calibrated electronic equipment)* (work RVU= 0.17, intra-service time of 5 minutes, total time of 7 minutes) and noted that both services involve an identical amount of intra-service time and total time, whereas the survey code involves somewhat less physician work intensity. The RUC also compared the survey code to MPC code 93010 *Electrocardiogram, routine ECG with at least 12 leads; interpretation and report only* (work RVU= 0.17, intra-service time of 5 minutes, post-service time of 1 minute, and 6 minutes total time) and noted that both services involve identical intra-service time, though the reference code is a slightly more intense service to perform. The RUC also agreed that the recommended work valuation maintains relativity within the family of X-Ray foot and ankle codes. **The RUC recommends a work RVU of 0.13 for CPT code 73660.**

Practice Expense
These services were reviewed and approved by the PE Subcommittee in April 2017. **The RUC recommends the direct practice expense inputs as affirmed by the Practice Expense Subcommittee.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Specialty Society Additional Rationale
X-Ray Valuation - Principles

The absolute RVUs of individual codes within the X-ray modality are relatively small; however, there are important differences comparing across these codes and code families that are important to consider when assessing their relative value within the modality and the larger fee schedule.

The codes within the X-ray modality cannot be placed in a simple ascending order, but rather should be placed on a spectrum with consideration to three primary variables:
1. **Number of views**
2. **Body area**
3. **Clinical context** (pathology and patient population)

What should not be considered when valuing the X-ray codes are derived measures of work and intensity. For example, IWPUT was not designed to accurately measure intensity at this range of the fee schedule. IWPUT was designed to assess intra-service work in 90-day global codes with more than 10 times the intra-service time that these codes possess. Additionally, small changes in pre-service or post-service time at this end of the fee schedule can change the IWPUT of an X-ray code by 30-50%. Moreover, time is only measured on surveys in whole integer values, so surveyed physicians are not afforded the opportunity to differentiate between services that take 2.5 minutes and those that take 3.5 minutes. Rather, both of these codes frequently end up at 3 minutes, even though one or the other is clearly more difficult. And that 1 minute differential at 0.16-0.30 RVUs is actually very large. So considering time per view as a ratio falls apart and becomes invalid. Lastly, not all of the X-ray services are performed exclusively by radiology. Times across multiple different X-ray codes vary depending on the surveyed specialties (e.g. podiatry and orthopedics). This inherent variability means time is not a consistent factor for assessment of relativity. Therefore, broad comparisons across different codes or code families within the X-ray modality using only time as a variable are fundamentally flawed.

Number of views:
The number of views in a typical exam is a reasonable way to compare different X-ray codes; however, it is more accurate in ordering the relative value of codes in a family (e.g. spine) than across different body regions. Frequently, the number of views is also a reasonable metric for complexity of an exam in the same body region. For example, a 2-3 view cervical spine is going to be performed on a different patient and for different reasons than a 6-view cervical spine. In a 6-view example, the patient is being assessed during twisting or bending maneuvers so that dynamic joints or instability can be assessed. A 2-3 view cervical spine is more often a patient with isolated symptoms and an unknown diagnosis as opposed to a known complex clinical process like dynamic or post-operative instability.

Body region:
The skeleton can be separated into two different regions; the appendicular skeleton and axial skeleton. Appendicular structures include the appendages like arms, legs, wrists, ankles, hands, feet, and digits. These appendicular structures tend to not have as many overlapping structures on single plane images even though the wrist and ankle are somewhat complex joints. The axial skeleton includes the skull, spine, and pelvis, as well as the chest and abdomen. When interpreting X-rays of axial body parts there are numerous overlapping structures, multiple organ systems, and generally higher risk of consequential injury, especially in the spine. From this standpoint, axial X-ray exams are considered in general to be more difficult to interpret than appendicular X-ray exams, and so should be valued higher for equivalent views or times with few exceptions (e.g. single view intra-operative or post-operative images). To use the example above, a 2-3 view cervical spine is more difficult to interpret and takes more skill than a 2-3 view elbow, and should be valued higher.

Clinical context:
The complexity of X-rays also varies with the clinical indications and typical patient population. An example of this would be the cervical and lumbar spine radiographs. Although the cervical spine may be a more complex anatomic site than the lumbar spine, the typical clinical scenarios these are ordered for contribute to complexity for both of these exams. The cervical spine may be typically ordered in an outpatient setting to assess for osteoarthritis or other arthritic changes. There is a large number of abnormalities found on these X-rays in this patient population. Often, multiple levels within the spinal canal are compromised, as well as multiple facet joints. In addition, patients with rheumatoid arthritis often have atlantoaxial instability, with subluxation of the cervical spine that can lead to neurologic compromise. The sheer number of levels which may be involved in the cervical spine along with complexity of pathology increase the technical skill and judgement. On the other hand, the typical patient population evaluated with a lumbar spine radiograph is trauma in which there is concern for fracture. It is critical for the physician to find the fracture in the acute setting to direct appropriate treatment and workup which results in increased psychological stress.

As expected, services provided in an ER tend to be more stressful and have more potential negative consequences for inaccurate or delayed diagnoses than outpatient X-ray services. However, if a complex disease process is the typical indication for a particular X-ray code, then it is also logical that the required technical skill and intensity of providing that service is higher than for another X-ray code with similar total time or total views performed in a different setting.

Conclusion:
X-ray codes should be assessed using three primary variables: Number of views, body region, and clinical context. Neither time nor IWPUT are useful for the reasons outlined above. The current proposals from the RUC to CMS explicitly address these variables and have ordered the codes appropriately.

No single variable provides enough information to be used to accurately assess relativity within the X-ray modality, rather all three variables used together provide enough information to ensure proper relativity among and within X-ray code families.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:73660 Tracking Number

Original Specialty Recommended RVU: **0.15**
Presented Recommended RVU: **0.13**
RUC Recommended RVU: **0.13**

Global Period: XXX Current Work RVU: **0.13**

CPT Descriptor: Radiologic examination; toe(s), minimum of 2 views

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: An elderly patient sustained a crush injury to the great toe. AP, oblique and lateral views of the great toe are ordered.

Percentage of Survey Respondents who found Vignette to be Typical: 83%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review the reason for the examination and any pertinent clinical history. Review any prior applicable plain film or imaging studies.

Description of Intra-Service Work: The technologist performing the examination is supervised, and the radiographs of the toe(s) are interpreted. Examination findings are compared to previous studies, if applicable. A report is dictated for the patient's medical record.

Description of Post-Service Work: The final report is reviewed and signed, and findings are communicated to the referring physician as needed.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	9%	80%	12%	0%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	9%	84%	7%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	1%	87%	12%

Physical effort required	0%	91%	9%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	13%	77%	10%

2nd Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	3%	10%	84%	3%	0%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	29%	58%	13%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	10%	87%	3%
Physical effort required	10%	87%	3%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	16%	81%	3%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

The toe X-ray code, 73660 *(Radiologic examination; toe(s), minimum of 2 views)*, was identified by the CMS/Other Source – Utilization over 100,000 screen, and this code was initially addressed at the April 2017 RUC meeting via a crosswalk methodology approved by the Research Subcommittee. Following review by the Centers for Medicare and Medicaid Services for CY2019, the specialties agreed to survey this code for the January 2019 RUC meeting.

Survey Process

The American College of Radiology randomly surveyed 750 members (a random sample of 375 members and a separate random sample of 375 members who perform radiography or musculoskeletal procedures). The American Podiatric Medical Association surveyed a random sample of 2,274 members. The American Academy of Orthopaedic Surgeons surveyed a random sample of 200 members. The American Orthopaedic Foot and Ankle Society surveyed a random sample of 1,200 members.

Work RVU Recommendation

The expert panel recommends a work RVU of 0.13 for CPT code 73660, which is the median 25th percentile value, and the current value.

Time Recommendation

The expert panel recommends the median intra-service time of 5 minutes, and a reduction from both the median pre- and post-service time to 1 minute each, which is typical for recently-reviewed X-ray procedures. This is a total recommended time of 7 minutes for CPT code 73660, an increase from the existing CMS/Other time of 5 minutes.

Key Reference Services

The most commonly chosen reference codes by survey participants are two X-ray of the foot procedures:

- **73140** *(Radiologic examination, finger(s), minimum of 2 views)*, chosen by 50% of respondents, and
- **73620** *(Radiologic examination, foot; 2 views)*, chosen by 22% respondents.

The surveyed code involves evaluation of the bones, joints and soft tissues of a toe in two or more views and has one more minute of intra-service time compared to the most commonly chosen key reference service, code 73140, which is a two-view examination of the finger, an anatomically similar structure. Compared to the second key reference service, code 73620, which is a two-view examination of the entire foot, the surveyed code involves a smaller anatomic area and has less complexity compared to evaluating all of the structures in the foot, resulting in a lower RVU and IWPUT.

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT
73140	Radiologic examination, finger(s), minimum of 2 views	0.13	1	4	1	6	0.0213
73660	**Radiologic examination; toe(s), minimum of 2 views**	**0.13**	**1**	**5**	**1**	**7**	**0.0170**
73620	Radiologic examination, foot; 2 views	0.16	1	3	1	5	0.0384

MPC Codes

The surveyed code compares well with two MPC codes, 70355 *(Orthopantogram (eg, panoramic x-ray))* and 93010 *(Electrocardiogram, routine ECG with at least 12 leads; interpretation and report only*). CPT code 70355 is a one-view exam that evaluates both the mandible and the maxilla. It is primarily used to assess for mandible fractures, temporomandibular joint disease or for dental abscess. The ECG code involves review and interpretation of a medical test with physician work that is similar to imaging review. Both MPC codes have identical intra-service times and similar total times.

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT
73660	**Radiologic examination; toe(s), minimum of 2 views**	**0.13**	**1**	**5**	**1**	**7**	**0.0170**
93010	Electrocardiogram, routine ECG with at least 12 leads	0.17		5	1	6	0.0295
70355	Orthopantogram (eg, panoramic x-ray)	0.20		5	1	6	0.0355

Summary of Recommendation

Our expert panel recommends 0.13 RVU for CPT code 73660, with service period times of 1, 5, and 1 minutes. This valuation maintains relativity in the X-ray foot and ankle families.

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT	RUC Mtg
73660	**Radiologic examination; toe(s), minimum of 2 views**	**0.13**	**1**	**5**	**1**	**7**	**0.0170**	**Jan 2019**
73600	Radiologic examination, ankle; 2 views	0.16	1	3	1	5	0.0384	Sept 2014
73620	Radiologic examination, foot; 2 views	0.16	1	3	1	5	0.0384	Apr 2011
73650	Radiologic examination; calcaneus, minimum of 2 views	0.16	1	5	1	7	0.0230	Jan 2019

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.

- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☒ Other reason (please explain) CPT code 73660 is typically billed with an E/M code.

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 73660

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Commonly

Specialty Orthopedic Surgery How often? Commonly

Specialty Podiatry How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 356358
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by code 73660 provided nationally in a one-year period is estimated to be 356,358.

Specialty Diagnostic Radiology Frequency 231215 Percentage 64.88 %

Specialty Orthopedic Surgery Frequency 26070 Percentage 7.31 %

Specialty Podiatry Frequency 24155 Percentage 6.77 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 118,786 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The 2017 Medicare data estimates the CPT code 73660 is billed approximately 118,786 times in total for Medicare patients nationally in a one-year period.

Specialty Diagnostic Radiology Frequency 77070 Percentage 64.88 %

Specialty Orthopedic Surgery Frequency 8690 Percentage 7.31 %

Specialty Podiatry Frequency 8050 Percentage 6.77 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment
Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Imaging

BETOS Sub-classification:
Standard imaging

BETOS Sub-classification Level II:
Musculoskeletal

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 73660

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

CPT Code: 73660
Specialty Society: ACR, AAOS, APMA, AOFAS

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SOR)
Non Facility Direct Practice Expense (PE) Inputs

CPT Long Descriptor:

73660	Radiologic examination; toe(s), minimum of 2 views

Global Period: XXX Meeting Date: January 2019

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   The American College of Radiology (ACR), American Academy of Orthopaedic Surgeons (AAOS), American Podiatric Medical Association (APMA), and American Orthopaedic Foot and Ankle Society (AOFAS) convened a consensus panel to finalize the practice expense data for the x-ray toe(s) CPT code, 73660.

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code.** You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here:

   The societies included the existing PE inputs for code 73660 on the spreadsheet to serve as a reference.

3. Is this code(s) typically billed with an E/M service?
   Is this code(s) typically billed with the E/M service in the nonfacility?
   (Please see provided data in PE Subcommittee folder)

   No, this code is not typically billed with an E/M service.
   Yes, this code is typically billed with an E/M service in the nonfacility.

4. What specialty is the dominant provider in the nonfacility?
   What percent of the time does the dominant provider provide the service(s) in the nonfacility?
   Is the dominant provider in the nonfacility different then for the global?
   (Please see provided data in PE Subcommittee folder)

	Nonfacility		Global	
73660	DIAGNOSTIC RADIOLOGY	20%	DIAGNOSTIC RADIOLOGY	65%

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:
   N/A

6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), you must provide compelling evidence. Please explain if the increase can be entirely accounted for because of an increase in physician time.

   The increase in aggregate cost is a result of the increase in physician time, per the multispecialty RUC survey. This correlates to the increase in professional PACS workstation time.

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here: N/A

8. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? (please use this time rather than 5 minutes in your reference code)
   The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here: We are not requesting time for obtaining vital signs.

9. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

   Bring patient into x-ray room and have patient sit/lie on x-ray table or stand on imaging stand as appropriate. Place first cassette under patient's toe. Position patient's toe for the first view (typically the dorsoplantar view). Step behind shielding to control panel. Set appropriate exposure parameters. Instruct patient to hold still. Take exposure for first view. Step from behind shielding. Take first cassette out from under toe and place second cassette under patient's toe. Position patient's toe for second view (typically the oblique view). Step behind shielding to control panel. Set appropriate exposure parameters. Instruct patient to hold still. Take exposure for second view. Step from behind shielding. Take second cassette out from under toe and place third cassette under patient's toe. Position patient's toe for third view (typically the lateral view, which typically requires placing a positioning aid to eliminate overlap of toes). Step behind shielding to control panel. Set appropriate exposure parameters. Instruct patient to hold still. Take exposure for third view. Step from behind shielding. Take third cassette out from under toe. The above steps are repeated for any additional toes or views to be obtained. All cassettes are then taken to the image reader. Run all three cassettes through reader. Check all images for adequate exposure, positioning, coverage, etc. Repeat any views as needed.

10. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.
    N/A

11. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities:
    N/A

12. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.
    N/A

13. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here:
    N/A

14. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here:

N/A

15. List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here:
    - **Technologist PACS Workstation Proxy (ED050)** –PACS formula; Equals total service period time
    - **Professional PACS Workstation (ED053)** – Equals physician work intra time + 1/2 physician work pre-time
    - **Room, basic radiology (EL012)** – Highly technical formula

16. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here:
    N/A

17. If there is any other item on your spreadsheet that needs further explanation please include here:
    N/A

18. Please include an explanation of each line item:
    N/A

AMA/Specialty Society RVS Update Committee Summary of Recommendations
New Technology/New Services

January 2019

Corneal Hysteresis Determination – Tab 33

In 2005, the AMA RUC began the process of flagging services that represent new technology or new services as they were presented to the Committee. This service was flagged for CPT 2015 and reviewed at the October 2018 Relativity Assessment Workgroup meeting. The Workgroup indicated that the utilization is continuing to increase for these services. The RUC recommended that these services be resurveyed for physician work and practice expense for January 2019.

92145 ***Corneal hysteresis determination, by air impulse stimulation, unilateral or bilateral, with interpretation and report***
The RUC reviewed the survey responses from 30 ophthalmologists and optometrists and determined that the survey 25th percentile work RVU of 0.10 appropriately accounts for the work required to perform this service. The RUC recommends 1 minute evaluation pre-service time, 5 minutes intra-service time and 1 minute post-service time, which accounts for a reduction in the pre- and post-service time as indicated by the survey respondents because this service is typically reported with an Evaluation and Management (E/M) service on the same day. CPT code 92145 measures corneal resiliency to absorb and dissipate energy in response to an externally applied force (air) and the information is used to predict risk of the progression of glaucoma. The physician reviews approximately 12 data elements on the intra-ocular pressure, what the change would be, quality and reliability of the test and compares this data to other data about glaucoma, such as optical coherence tomography results, the physical examination of the nerve, the visual fields and corneal thickness.

The RUC compared the surveyed code to the second key reference service 92285 *External ocular photography with interpretation and report for documentation of medical progress (eg, close-up photography, slit lamp photography, goniophotography, stereo-photography)* (work RVU = 0.05, 5 minutes intra-service/total time) and agreed that more cognitive work is required to perform the interpretation work involved in CPT code 92145, whereas CPT code 92285, ocular photography, is primarily for documentation purposes. The RUC compared the surveyed code to similar service, CPT code 76514 *Ophthalmic ultrasound, diagnostic; corneal pachymetry, unilateral or bilateral (determination of corneal thickness)* (work RVU = 0.14 and 5 minutes total time) and determined that code 92145 is less intense and requires less physician work, thus valued appropriately at the survey 25th percentile. **The RUC recommends a work RVU of 0.10 for CPT code 92145.**

Practice Expense
The RUC recommends the direct practice expense inputs as submitted by the specialty society.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Work Neutrality
The RUC's recommendation for this code will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
92145	Corneal hysteresis determination, by air impulse stimulation, unilateral or bilateral, with interpretation and report	XXX	0.10

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:92145 Tracking Number Original Specialty Recommended RVU: **0.17**
Presented Recommended RVU: **0.17**
Global Period: XXX Current Work RVU: **0.17** RUC Recommended RVU: **0.10**

CPT Descriptor: Corneal hysteresis determination, by air impulse stimulation, unilateral or bilateral, with interpretation and report

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 50-year-old male with a family history of glaucoma, elevated intraocular pressure, central corneal thickness of 545 microns, and normal visual fields is being evaluated for glaucoma.

Percentage of Survey Respondents who found Vignette to be Typical: 93%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Explain the test to the patient. Enter an order into the medical record.

Description of Intra-Service Work: The physician reviews the readings collected by the technician, correlates the findings with other information, and generates an interpretation.

Description of Post-Service Work: Enter the findings into the medical record and discuss the implications with the patient.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	7%	31%	31%	31%	0%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	38%	38%	23%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	54%	46%	0%

Physical effort required	46%	54%	0%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	31%	54%	15%

2nd Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	10%	10%	40%	40%	0%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	20%	50%	30%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	40%	40%	20%
Physical effort required	10%	70%	20%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	10%	50%	40%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

CPT 92145 *Corneal hysteresis determination, by air impulse stimulation, unilateral or bilateral, with interpretation and report* was introduced in 2015 and is being surveyed as new technology with an increase in

utilization. This is a technique that measures corneal hysteresis (resiliency) in response to an externally-applied force. The information obtained can be used to predict risk of progression of glaucoma.

A random survey of the American Academy of Ophthalmology (AAO), the American Glaucoma Society (AGS), and the American Optometric Association (AOA) had 30 responses; 93% percent felt that the vignette was typical. The median WRVU was 0.26 WRVU and the 25th percentile 0.10. The survey medians were 3 minutes for pre-service time, 5.5 minutes for intra-service time, and 3.5 minutes for post-service time. The top key reference service, CPT 92132 *Scanning computerized ophthalmic diagnostic imaging, anterior segment, with interpretation and report, unilateral or* bilateral was chosen by 43% of the respondents. It was RUC reviewed in October 2015. It has a WRVU of 0.30 with times of 1/8/0 for the pre-, intra- and post-service work. The second key reference, CPT 92285 *External ocular photography with interpretation and report for documentation of medical progress (eg, close-up photography, slit lamp photography, goniophotography, stereo-photography)* was chosen by 33%. It was last RUC reviewed in October 2009, has 0.05 WRVU, and inra-service time of 5 minutes with no pre- or post-service time. Intensity and complexity metrics were similar for the surveyed code and both reference services.

The joint expert panel of the AAO, AOA, and AGS, which were familiar with the test and the RUC methodology, reviewed the survey results. The median intra-service time, at 5.5 minutes, was a half-minute greater than the current value of the code. Since this test is typically done on the same day as an office visit, we reduced the pre-service time from the survey value of 3 minutes to 1 minute to explain the test to the patient and enter an order into the record, neither of which would be part of the office visit work. Similarly, we reduced the post-service time from the survey value of 3.5 minutes to 1 minute to enter the report into the medical record. The amount and intensity of the work associated with the test have not changed despite the increase in utilization since its introduction 3 years ago. **Therefore, the panel recommends that the work value be maintained at 0.17 WRVU, between the survey's 25th percentile and median values**. The panel recommends a pre-service time of 1 minute, an intra-service time of 5 minutes, and a post-service time of 1 minute.

The recommended value is supported by many RUC-reviewed XXX codes across different specialties with work values between 0.17-0.20 RVU, total times between 5-10 minutes, and intra-service times at or close to 5 minutes. These include MPC 93010 *Electrocardiogram, routine ECG with at least 12 leads; interpretation and report only* (October 2012, 0.17, 0/5/1), MPC 51741 *Complex uroflowmetry (eg, calibrated electronic equipment)* (April 2010, 0.17, 0/5/2), CPT 51736 *Simple uroflowmetry (UFR) (eg, stop-watch flow rate, mechanical uroflowmeter)* (April 2010, 0.17, 0/5/2), CPT 51736 *Simple uroflowmetry (UFR) (eg, stop-watch flow rate, mechanical uroflowmeter)* (April 2010, 0.17, 0/5/2), CPT 77080 *Dual-energy X-ray absorptiometry (DXA), bone density study, 1 or more sites; axial skeleton (eg, hips, pelvis, spine)* (October 2013, 0.20, 2/5/2), CPT 93000 *Electrocardiogram, routine ECG with at least 12 leads; with interpretation and report* (October 2012, 0.17, 0/5/1), and CPT 99211 *Office or other outpatient visit…* (February 2006, 0.18, 0/5/2).

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.

☐ Historical precedents.
☒ Other reason (please explain) Billed with an office visit

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. E/M or the ophthalmalogic exam codes

3.	CPT Code	Pre-	Intra-	Post-	Total Time	Work RVU	Global Period
4.	92002	5	15	5	25	.88	XXX
5.	92004	5	25	10	40	1.82	XXX
6.	92012	5	15	5	25	.92	XXX

CPT Code: 92145
Specialty Society: American Academy of Ophthalmology

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Non-Facility Direct Practice Expense (PE) Inputs

CPT Long Descriptor: Corneal hysteresis determination, by air impulse stimulation, unilateral or bilateral, with interpretation and report

Global Period: 000 Meeting Date: January 2019

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   The Academy convenes a consensus subcommittee utilizing the appropriate subspecialty representatives who sit on our Health Policy Committee that oversees our activities at RUC and CPT. Additionally, we queried other physicians who have the appropriate expertise for this code. The consensus committee considered the survey data and PE details in order to determine clinical time and applicable standard packages were also applied. The physicians on the consensus panel familiar with the service provided input on whether or not any changes were needed for the existing supplies and equipment.

2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here: **Current code used as reference.**

3. Is this code(s) typically billed with an E/M service? **Yes.**

4. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time: **N/A**

5. If you are requesting an increase over the current total cost for clinical staff time (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), total cost of supplies, and/or total cost of equipment you must provide compelling evidence: **N/A**

6. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here: **N/A**

7. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities: **N/A**

8. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov. **N/A**

9. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here: **N/A**

10. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here: **N/A**

11. List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here:

    Ocular Response Analyzer: Standard formula used.
    Chair with headrest, exam, reclining: Standard formula used.
    Light, exam: standard formula used

12. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here: **N/A**

13. If there is any other item on your spreadsheet that needs further explanation please include here: **The hysteresis machine is typically housed in an imaging room, and Dr. Manaker and the PE Subcommittee have designated an exam light and chair as the proxy expenses of the imaging room. Hence, EF008 and EQ168 replace EL005 on the spreadsheet.**

14. Please include an explanation of each line item:

    35 – Provide education/obtain consent. One minute is utilized to provide education regarding the process of the test and how to perform during the test. This test is done by a separate technician in a separate room from the exam.
    37 – Prepare room, equipment, and supplies. Standard non-facility time input for preparing the room, equipment, and supplies. This is in addition to the office visit, because the test is done in a separate room by a separate technician.
    40 – Prepare, set-up and start IV, initial positioning and monitoring of patient. Standard non-facility time input for positioning the patient. This input represents a different technician positioning the patient at a different machine in a different room than the office visit.
    52 – Perform procedure/service – NOT directly related to physician work time. The technician performs this test and acquires the hysteresis data from one eye, then from the second. This test has not changed in technology or substance in the few years since it was last reviewed. Now the technician typically performs the same testing alone.
    112 – Ocular Response Analyzer – Standard formula is used to calculate equipment cost. (Of note, a clerical omission error was made in the previous spreadsheet's equipment calculations, and this has been corrected in our presentation)
    114 – Chair with headrest, exam, reclining - Standard formula is used to calculate equipment cost. This and 115 are placeholders for the ophthalmology imaging lane, reflecting the inability to use the imaging lane for any other purpose during this procedure.
    115 – Light, exam - Standard formula is used to calculate equipment cost. This and 115 are placeholders for the ophthalmology imaging lane, reflecting the inability to use the imaging lane for any other purpose during this procedure.

AMA/Specialty Society RVS Update Committee Summary of Recommendations
NPRM for 2019

January 2019

Septostomy – Tab 34

The Society for Cardiovascular Angiography and Interventions *(*SCAI) nominated two codes to CMS as potentially misvalued services. These services are typically performed on children, a non-Medicare population, and are currently contractor-priced. The RUC agreed with the specialty society and recommended to survey for January 2019.

92992 ***Atrial septectomy or septostomy; transvenous method, balloon (eg, Rashkind type) (includes cardiac catheterization)***
The RUC determined that the survey 25th percentile work RVU of 10.00 was too low and the median work RVU of 16.00 was somewhat high for this high intensity service compared to the key reference services. The RUC noted there were not adequate crosswalks for this 000-day global within physician service times, physician work and high intensity level. The RUC identified the possibility that related imaging guidance may not be correctly bundled into the code. Therefore, the RUC recommends that CPT code 92992 be referred to CPT for revision to bundle in all forms of imaging guidance typically used during the procedure. **The RUC recommends that CPT code 92992 remain contractor priced for another cycle and will review the revised service for the 2021 Medicare Physician Payment Schedule.**

92993 ***Atrial septectomy or septostomy; blade method (Park septostomy) (includes cardiac catheterization)***
The specialty societies indicated that CPT code 92993, atrial septostomy using the blade method, is antiquated and rarely performed. The RUC recommends that CPT code 92993 be referred to the CPT Editorial Panel for revision. **The RUC recommends that CPT code 92993 remain contractor priced for another cycle and will review the revised service for the 2021 Medicare Physician Payment Schedule.**

Refer to CPT
The RUC identified the possibility that related imaging guidance may not be correctly bundled into CPT code 92992. Therefore, the RUC recommends that CPT code 92992 be referred to the CPT Editorial Panel for revision to bundle in all forms of imaging guidance typically used during the procedure. Additionally, the specialty societies indicated that CPT code 92993 is antiquated and rarely performed. The RUC recommends that CPT code 92993 be referred to the CPT Editorial Panel for revision or possible deletion. Once these services return to the RUC for survey they should survey as a 000-day global period because these procedures do not provide definitive therapy, the patients requiring these procedures often remain critically ill after the life-saving/temporizing procedures.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
92992	Atrial septectomy or septostomy; transvenous method, balloon (eg, Rashkind type) (includes cardiac catheterization)	~~090~~ 000	Contractor Price Refer to CPT
92993	Atrial septectomy or septostomy; blade method (Park septostomy) (includes cardiac catheterization)	~~090~~ 000	Contractor Price Refer to CPT

AMA/Specialty Society RVS Update Committee Summary of Recommendations
Contactor Priced High Volume

January 2019

Heart Rate Test – Tab 35

In April 2018, the Relativity Assessment Workgroup identified contractor-priced Category I CPT codes that have 2017 estimated Medicare utilization over 10,000. The RUC determined that CPT code 95943 is performed by many specialties and the utilization is high enough to survey. The RUC recommended to survey this service for January 2019.

The RUC last considered this code in 2012. At that time, the American College of Physicians (ACP) and the American Academy of Family Physicians (AAFP) worked to obtain the equipment vendor's customer list to identify physicians who could accurately value this service. The ACP and AAFP also obtained random samples of physicians among their respective specialties. The specialties collected a total sample of 750 physicians and received approval from the Research Subcommittee to conduct a survey. At that time, only three partial responses were received, with no respondents indicating familiarity with the service. Given this lack of data, the RUC recommended carrier pricing for CPT code 95943.

As indicated in the RUC database, utilization for code 95943 was 31,418 in 2017 and information from the Medicare Physician and Other Supplier Public Use File identifies 100 internal medicine physicians and 98 family medicine physicians who are reporting the code to Medicare. For this utilization the RUC requires at least thirty completed surveys. ACP launched a survey of code 95493 on November 23, 2018 to 2000 ACP members. The ACP survey closed on December 17, 2018 with only 9 completed surveys 21 short of the required completed survey number. At the January 2019 RUC meeting ACP requested to re-survey with a targeted survey for presentation at the April 2019 RUC meeting.

The RUC discussed that according to the CPT Editorial Panel, a new or revised Category I code must satisfy all the following criteria:

- All devices and drugs necessary for performance of the procedure or service have received FDA clearance or approval when such is required for performance of the procedure or service;
- The procedure or service is performed by many physicians or other qualified health care professionals across the United States;
- The procedure or service is performed with frequency consistent with the intended clinical use (i.e., a service for a common condition should have high volume, whereas a service commonly performed for a rare condition may have low volume);
- The procedure or service is consistent with current medical practice;
- The clinical efficacy of the procedure or service is documented in literature that meets the requirements set forth in the CPT code change application.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

A RUC member provided background that when this Category I code was created at the CPT Editorial Panel it was created to differentiate the service from tilt table testing. The device manufacturer brought the code forward for a series of maneuvers that are different than those performed using a tilt table. The RUC member suggested that in the years since the code was created it has proven that it does not meet the criteria for a Category I code. The RUC member explained the service is not widely performed and that 100 internists performing the service is not "frequency consistent with the intended clinical use". The code describes common measures and if the service was consistent with current medical practice the volume would be much higher. **The RUC recommends CPT code 95943 be referred to the CPT Editorial Panel for deletion.**

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
95943	Simultaneous, independent, quantitative measures of both parasympathetic function and sympathetic function, based on time-frequency analysis of heart rate variability concurrent with time-frequency analysis of continuous respiratory activity, with mean heart rate and blood pressure measures, during rest, paced (deep) breathing, Valsalva maneuvers, and head-up postural change	XXX	Refer to CPT for Deletion

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.
