- **74280** (*Radiologic examination, colon, including scout abdominal radiograph(s) and delayed image(s), when performed; double-contrast (eg, high density barium and air) study, including glucagon, when administered*).

Survey Process

The ACR surveyed a total of 1500 members (a random sample of 750 members and a separate random sample of 750 members who perform x-ray or gastrointestinal procedures).

Compelling Evidence:

The society is recommending compelling evidence for the entire family of codes to support the proposed wRVUs and times. The two codes identified on the screen, 74250 and 74270, are both CMS/Other, and were valued using flawed methodology. CPT code 74251 was most recently reviewed in July 1993, likely as part of the initial first 5-year review cycle. CPT code 74280 was most recently reviewed in September 2011, and since that time, there have been advances in technology which changed the typical patient. For all four codes in this family, there have been significant changes in the patient population and physician work over the past two decades as detailed below individually.

- **74250** – This is a CMS/Other code, and therefore, the times and values were established using a flawed methodology. Healthy, routine patients are increasingly evaluated with deep endoscopy and/or capsule endoscopy, while patients undergoing radiologic small bowel examinations are increasingly evaluated in the post-operative period to evaluate for both immediate and long-term surgical complications, frequently after multiple operations have been performed. This code is now more typically performed on a complicated patient in the hospital.
- **74251** – This code was most recently reviewed in July 1993, likely as part of the initial first 5-year review cycle. Since that time, healthy, routine patients are increasingly evaluated with deep endoscopy and/or capsule endoscopy, while patients undergoing radiologic small bowel examinations are increasingly evaluated in the post-operative period to evaluate for both immediate and long-term surgical complications, frequently after multiple operations have been performed. This code is now most often used for problem-solving chronic, unexplained symptoms when other investigations have been inconclusive, and is predominately performed in the inpatient setting (69% of claims).
- **74270** – This is a CMS/Other code, and therefore, the times and values were established using a flawed methodology. Many of these patients are now evaluated with CT and managed

accordingly. This code is now most frequently used to evaluate complex pre-operative anatomy, post-operative complications, or indeterminate CT findings.

- **74280** – This code was most recently reviewed in September 2011, and since that time, there have been advances in technology which changed the typical patient. Most patients are typically first evaluated by colonoscopy and, increasingly, CT colonography. This code is now used for patients who fail either or both of those procedures or to problem-solve inconclusive findings on an initial examination. While previously used as a screening exam for the colon, that indication is now less than 6% of the claims.

Work RVU Recommendation:

The expert panel recommends a work RVU of 1.04 for CPT code 74270, which is the 25th percentile survey value, and above the current CMS/Other value.

Time Recommendation:

The expert panel recommends the following median survey times: 4 minutes of pre-service time, 15 minutes of intra-service time, and 5 minutes of post-service time. This is a total time of 24 minutes compared to the existing CMS/Other total time of 14 minutes.

Key Reference Services

The most commonly chosen reference codes by survey participants are two CT of the abdomen procedures:

- **74160** (*Computed tomography, abdomen; with contrast material(s)*), chosen by 34% of respondents, and
- **74170** (*Computed tomography, abdomen; without contrast material, followed by contrast material(s) and further sections*), chosen by 28% of respondents.

The recommended wRVU and survey times are appropriate compared to the most commonly chosen key reference service, 74160 (*Computed tomography, abdomen; with contrast material(s)*), which has identical intra times and similar total times. The x-ray colon study is a more focused examination evaluating a specific problem in one specific organ. The CT abdomen with contrast includes a larger number of anatomic structures and a wider range of pathologic conditions, supported by the higher wRVU and IWPUT.

The recommended value and service times are also appropriately lower compared to the second key reference service, 74170 (*Computed tomography, abdomen; without contrast material, followed by contrast material(s) and further sections*), which has 3 minutes more intra-service time. Both examinations are tailored to examine one specific disease process or focused differential; however, the CT abdomen without and with contrast includes a larger number of anatomic structures, a wider range of potential pathologic conditions and review of two entire CT examinations.

CPT Code	Short Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT	% chosen
74270	X-ray, colon; single-contrast study	1.04	24	4	15	5	0.056	
74160	CT, abdomen; w/contrast	1.27	23	3	15	5	0.073	34%
74170	CT, abdomen; w/o & w/contrast	1.40	28	5	18	5	0.065	28%

MPC Codes

The surveyed code compares well with three other MPC codes:

- **76805** (*Ultrasound, pregnant uterus, real time with image documentation, fetal and maternal evaluation, after first trimester (> or = 14 weeks 0 days), transabdominal approach; single or first gestation*)
- **99213** (*Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: An expanded problem focused history; An expanded problem focused examination; Medical decision making of low complexity. Counseling and coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of low to moderate severity. Typically, 15 minutes are spent face-to-face with the patient and/or family.*)
- **70460** (*Computed tomography, head or brain; with contrast material(s)*)

Surveyed CPT code 74270 is bracketed by two radiology MPC codes, 76805 and 70460. It has identical intra-service time and similar total time to both CPT codes 76805 and 99213, but the invasive nature of this procedure accounts for the greater intensity and slightly higher wRVU and IWP/UT. CPT code 74270 has slightly more time but is less intense than 70460, which is a CT examination of the brain involving evaluation of a larger number of anatomic structures and consideration of a greater potential number of disease processes and complexity. The relationships are summarized in the following table.

CPT Code	Short Descriptor	wRVU	Total Time	Pre	Intra	Post	IWP/UT
99213	Office or OP visit for E&M of established pt w/MDM of low complexity. Typically, 15 minutes face-to-face with patient.	0.97	23	3	15	5	0.053
76805	US, pregnant uterus, real time w/img doc, fetal & maternal eval after first trimester, transabd. Approach; single gestation	0.99	26	5	15	6	0.050
74270	X-ray, colon; single-contrast study	1.04	24	4	15	5	0.056
70460	CT, head or brain; w/contrast	1.13	22	5	12	5	0.076

Summary

The survey results and comparison with applicable codes support the 25th percentile survey value for 74270 (*Radiologic examination, colon, including scout abdominal radiograph(s) and delayed image(s), when performed; single-contrast (eg, barium) study*). The recommendation maintains relativity within the lower gastrointestinal tract family and greater RBRVS.

CPT Code	Short Descriptor	wRVU	Total Time	Pre	Intra	Post	IWP/UT
74250	X-Ray, small intestine; single-contrast study	0.81	23	3	15	5	0.042
74270	X-ray, colon; single-contrast study	1.04	24	4	15	5	0.056
74251	X-ray, small intestine; double-contrast study	1.17	32	5	22	5	0.043
74280	X-ray, colon; double-contrast study	1.26	29	4	20	5	0.053

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 74270

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 102315

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The service described by CPT code 74270 is estimated to be provided 102,315 times nationally in a one-year period.

Specialty Diagnostic Radiology Frequency 97371 Percentage 95.16 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 34,105 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The service described by CPT code 74270 is estimated to be provided 34,105 times nationally in a one-year period to Medicare patients.

Specialty Diagnostic Radiology Frequency 32457 Percentage 95.16 %

Specialty Frequency Percentage %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Imaging

BETOS Sub-classification:

Standard imaging

BETOS Sub-classification Level II:

Contrast Gastrointestinal

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 74270

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION**

CPT Code: 74280 Tracking Number J11

Original Specialty Recommended RVU: **1.26**Presented Recommended RVU: **1.26**Global Period: XXX Current Work RVU: **0.99**RUC Recommended RVU: **1.26**

CPT Descriptor: Radiologic examination, colon, including scout abdominal radiograph(s) and delayed image(s), when performed; double-contrast (eg, high density barium and air) study, including glucagon, when administered

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 65-year-old male presents with a history of colon polyps and recent episodes of hematochezia. A double-contrast colon study is ordered following an incomplete colonoscopy.

Percentage of Survey Respondents who found Vignette to be Typical: 89%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review the reason for the examination and any pertinent clinical history. Confirm that double contrast examination is appropriate. Determine the type of contrast to use and if glucagon is indicated. Review any prior applicable plain film or imaging studies. Provide patient with examination instructions and confirm understanding.

Description of Intra-Service Work: Position the patient. Review the scout abdominal radiograph(s) to ensure the colon is clear of stool. Perform a digital rectal examination to assess for rectal mass or stricture. Insert the rectal tube. With the patient in decubitus position, start the administration of barium and some air under fluoroscopic visualization. Direct the patient to various positions to allow filling to the level of the cecum. Return the patient to the upright position and drain excess barium. Move the patient to the prone and supine positions to distribute air and barium along all mucosal surfaces. Take multiple spot views including a lateral rectosigmoid view, the splenic and hepatic flexures, the cecum, and ileocecal region. Assess for reflux of barium into the terminal ileum. Use paddle palpation to assist visualization of the terminal ileum and any overlapping colonic segments. Supervise the acquisition of overhead and decubitus films and post evacuation films obtained by the technologist. Compare the current imaging to all pertinent available prior studies. Dictate a report.

Description of Post-Service Work: Review, edit, and sign report for the medical record. Discuss the findings with the patient and referring provider as needed.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

CPT codes 74250 and 74270 were identified on the screen for CMS/Other codes with utilization over 30,000. The family was expanded to include three other x-ray codes pertaining to the lower gastrointestinal tract, 74251, 74260, and 74280. These codes were referred to the April 2018 CPT meeting. One of the codes, 74260

(*Duodenography, hypotonic*), was deleted, as it is an infrequently performed procedure. The descriptors for the remaining four codes were editorially revised to clarify the procedures, as shown below, and the family was surveyed for the October 2018 RUC.

- **74250** (*Radiologic examination, small intestine, including multiple serial images and scout abdominal radiograph(s), when performed; single-contrast (eg, barium) study*),
- **74251** (*Radiologic examination, small intestine, including multiple serial images and scout abdominal radiograph(s), when performed; double-contrast (eg, high-density barium and air via enteroclysis tube) study, including glucagon, when administered*),
- **74270** (*Radiologic examination, colon, including scout abdominal radiograph(s) and delayed image(s), when performed; single-contrast (eg, barium) study*), and
- **74280** (*Radiologic examination, colon, including scout abdominal radiograph(s) and delayed image(s), when performed; double-contrast (eg, high density barium and air) study, including glucagon, when administered*).

Survey Process

The ACR surveyed a total of 1500 members (a random sample of 750 members and a separate random sample of 750 members who perform x-ray or gastrointestinal procedures).

Compelling Evidence:

The society is recommending compelling evidence for the entire family of codes to support the proposed wRVUs and times. The two codes identified on the screen, 74250 and 74270, are both CMS/Other, and were valued using flawed methodology. CPT code 74251 was most recently reviewed in July 1993, likely as part of the initial first 5-year review cycle. CPT code 74280 was most recently reviewed in September 2011, and since that time, there have been advances in technology which changed the typical patient. For all four codes in this family, there have been significant changes in the patient population and physician work over the past two decades as detailed below individually.

- **74250** – This is a CMS/Other code, and therefore, the times and values were established using a flawed methodology. Healthy, routine patients are increasingly evaluated with deep endoscopy and/or capsule endoscopy, while patients undergoing radiologic small bowel examinations are increasingly evaluated in the post-operative period to evaluate for both immediate and long-term surgical complications, frequently after multiple operations have been performed. This code is now more typically performed on a complicated patient in the hospital.
- **74251** – This code was most recently reviewed in July 1993, likely as part of the initial first 5-year review cycle. Since that time, healthy, routine patients are increasingly evaluated with deep endoscopy and/or capsule endoscopy, while patients undergoing radiologic small bowel examinations are increasingly evaluated in the post-operative period to evaluate for both immediate and long-term surgical complications, frequently after multiple operations have been performed. This code is now most often used for problem-solving chronic, unexplained symptoms when other investigations have been inconclusive, and is predominately performed in the inpatient setting (69% of claims).
- **74270** – This is a CMS/Other code, and therefore, the times and values were established using a flawed methodology. Many of these patients are now evaluated with CT and managed accordingly. This code is now most frequently used to evaluate complex pre-operative anatomy, post-operative complications, or indeterminate CT findings.
- **74280** – This code was most recently reviewed in September 2011, and since that time, there have been advances in technology which changed the typical patient. Most patients are typically first evaluated by colonoscopy and, increasingly, CT colonography. This code is now used for patients who fail either or both of those procedures or to problem-solve inconclusive findings

on an initial examination. While previously used as a screening exam for the colon, that indication is now less than 6% of the claims.

Work RVU Recommendation:

The expert panel recommends a work RVU of 1.26 for CPT code 74280, which is the 25th percentile survey value, and above the current value.

Time Recommendation:

The expert panel recommends the following median survey times: 4 minutes of pre-service time, 20 minutes of intra-service time, and 5 minutes of post-service time. This is a total time of 29 minutes compared to the existing time of 32 minutes.

Key Reference Services

The most commonly chosen reference codes by survey participants are two CT of the abdomen procedures:

- **74170** (*Computed tomography, abdomen; without contrast material, followed by contrast material(s) and further sections*), chosen by 62% of respondents, and
- **74160** (*Computed tomography, abdomen; with contrast material(s)*), chosen by 23% of respondents.

While the survey respondents reported a greater intra-service and total time for 74280, there are periods of less intense work compared to the most commonly chosen key reference services, 74170 and 74160, resulting in an appropriately lower wRVU and IWPOT. The x-ray colon study is typically performed to evaluate for a specific disease process, while both of the CT procedures involve evaluation of a larger number of organs and consideration of a greater potential number of disease processes.

CPT Code	Short Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPOT	% chosen
74280	X-ray, colon; double-contrast study	1.26	29	4	20	5	0.053	
74160	CT, abdomen; w/contrast	1.27	23	3	15	5	0.073	23%
74170	CT, abdomen; w/o & w/contrast	1.40	28	5	18	5	0.065	62%

MPC Codes

The surveyed code compares well with three MPC codes:

- **70460** (*Computed tomography, head or brain; with contrast material(s)*)
- **70470** (*Computed tomography, head or brain; without contrast material, followed by contrast material(s) and further sections*)
- **99238** (*Hospital discharge day management; 30 minutes or less*)

Surveyed CPT code 74280 is bracketed by two radiology MPC codes, 70460 and 70470. Both MPC codes have appropriately higher IWPOT when considering the longer intra-service period of 74280, which contains periods of overall less intense work compared to a CT examination of the brain involving evaluation of a larger number of anatomic structures and consideration of a greater potential number of disease processes and complexity. The surveyed code has identical intra-service time and higher IWPOT compared to the hospital discharge management code, which accounts for the invasive nature of the colon procedure. The relationships are summarized in the following table.

CPT Code	Short Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
70460	CT, head or brain; w/contrast	1.13	22	5	12	5	0.076
74280	X-ray, colon; double-contrast study	1.26	29	4	20	5	0.053
70470	CT, head or brain; w/o & w/contrast	1.27	25	5	15	5	0.070
99238	Hospital discharge day mngmt; 30 mins or less	1.28	38	8	20	10	0.044

Summary

The survey results and comparison with applicable codes support the 25th percentile survey value for 74280 (*Radiologic examination, colon, including scout abdominal radiograph(s) and delayed image(s), when performed; double-contrast (eg, high density barium and air) study, including glucagon, when administered*). The recommendation maintains relativity within the lower gastrointestinal tract family and greater RBRVS.

CPT Code	Short Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
74250	X-Ray, small intestine; single-contrast study	0.81	23	3	15	5	0.042
74270	X-ray, colon; single-contrast study	1.04	24	4	15	5	0.056
74251	X-ray, small intestine; double-contrast study	1.17	32	5	22	5	0.043
74280	X-ray, colon; double-contrast study	1.26	29	4	20	5	0.053

SERVICES REPORTED WITH MULTIPLE CPT CODES

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

- Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 74280

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology	How often? Commonly
--------------------------------	---------------------

Specialty	How often?
-----------	------------

Specialty	How often?
-----------	------------

Estimate the number of times this service might be provided nationally in a one-year period? 36696

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The service described by CPT code 74280 is estimated to be provided 36,696 times nationally in a one-year period.

Specialty Diagnostic Radiology	Frequency 34988	Percentage 95.34 %
--------------------------------	-----------------	--------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?

12,232 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The service described by CPT code 74280 is estimated to be provided 12,232 times nationally in a one-year period to Medicare patients.

Specialty Diagnostic Radiology	Frequency 11663	Percentage 95.34 %
--------------------------------	-----------------	--------------------

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Imaging

BETOS Sub-classification:

Standard imaging

BETOS Sub-classification Level II:

Contrast Gastrointestinal

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 74280

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Non Facility Direct Practice Expense (PE) Inputs

CPT Long Descriptor:

74250	Radiologic examination, small intestine, including multiple serial images and scout abdominal radiograph(s), when performed; single-contrast (eg, barium) study
74251	Radiologic examination, small intestine, including multiple serial images and scout abdominal radiograph(s), when performed; double-contrast (eg, high-density barium and air via enteroclysis tube) study, including glucagon, when administered
74270	Radiologic examination, colon, including scout abdominal radiograph(s) and delayed image(s), when performed; single-contrast (eg, barium) study
74280	Radiologic examination, colon, including scout abdominal radiograph(s) and delayed image(s), when performed; double-contrast (eg, high density barium and air) study, including glucagon, when administered

Global Period: XXX Meeting Date: October 2018

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

The American College of Radiology (ACR) convened a consensus panel to finalize the practice expense data for the X-Ray Lower GI Tract code family, CPT codes 74250, 74251, 74270, and 74280.

2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here:

The society included the existing PE inputs for codes 74250, 74251, 74270 and 74280 on the spreadsheet to serve as a reference.

3. Is this code(s) typically billed with an E/M service?
Is this code(s) typically billed with the E/M service in the nonfacility?
(Please see provided data in PE Subcommittee folder)

No, these codes are not typically billed with an E/M service.

No, these codes are not typically billed with an E/M service in the nonfacility.

4. What specialty is the dominant provider in the nonfacility?
What percent of the time does the dominant provider provide the service(s) in the nonfacility?
Is the dominant provider in the nonfacility different then for the global?
(Please see provided data in PE Subcommittee folder)

Diagnostic Radiology is the dominant specialty in the nonfacilityfor CPT codes 74250, 74270, and 74280 (percentages below). No information available for CPT code 74251.

74250	74270	74280
82%	75%	80%

Diagnostic Radiology is the dominant specialty in the global for all four codes.

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:
N/A
6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), you must provide compelling evidence. Please explain if the increase can be entirely accounted for because of an increase in physician time.
N/A
7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here:
N/A
8. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? (please use this time rather than 5 minutes in your reference code)
The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:
N/A
9. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time*:

X-ray small intestine, single-contrast (74250)

Bring patient into x-ray room and have patient stand or lay on x-ray table as appropriate. Position patient for the first view at the direction of the physician. Step behind shielding to control panel. Set appropriate exposure parameters. Instruct patient to hold still. Take exposure for first view. Step from behind shielding. Review the image with the supervising physician and adjust patient positioning and parameters as needed. The above steps are repeated for all subsequent views to be obtained under supervision by the physician performing the procedure as needed to demonstrate the relevant anatomy and any pertinent pathology. For each image after the initial image, assist the supervising physician in administering oral contrast as needed to demonstrate pertinent anatomy and findings. All cassettes are taken to the image reader and run through reader. Check all images for adequate exposure, positioning, coverage, etc. Discuss with the radiologist and repeat any views as needed.

X-ray small intestine, double-contrast (74251)

Bring patient into x-ray room and have patient stand or lay on x-ray table as appropriate. Place the enteroclysis tube if indicated. Position patient for the first view at the direction of the physician. Step behind shielding to control panel. Set appropriate exposure parameters. Instruct patient to hold still. Take exposure for first view. Step from behind shielding. Review the image with the supervising physician and adjust patient positioning and parameters as needed. The above steps are repeated for all subsequent views to be obtained under supervision by the physician performing the procedure as needed to demonstrate the relevant anatomy and any pertinent pathology. For each image after the initial image, assist the supervising physician in administering oral contrast as needed to demonstrate pertinent anatomy and findings. All cassettes are taken to the image reader and run through reader. Check all

images for adequate exposure, positioning, coverage, etc. Discuss with the radiologist and repeat any views as needed.

X-ray colon, single-contrast (74270)

Bring patient into x-ray room and have patient stand or lay on x-ray table as appropriate. Place the rectal tube. Position patient for the first view at the direction of the physician. Step behind shielding to control panel. Set appropriate exposure parameters. Instruct patient to hold still. Take exposure for first view. Step from behind shielding. Review the image with the supervising physician and adjust patient positioning and parameters as needed. The above steps are repeated for all subsequent views to be obtained under supervision by the physician performing the procedure as needed to demonstrate the relevant anatomy and any pertinent pathology. For each image after the initial image, assist the supervising physician in administering rectal contrast as needed to demonstrate pertinent anatomy and findings. All cassettes are taken to the image reader and run through reader. Check all images for adequate exposure, positioning, coverage, etc. Discuss with the radiologist and repeat any views as needed.

X-ray colon, double contrast (74280)

Bring patient into x-ray room and have patient stand or lay on x-ray table as appropriate. Place the rectal tube and connect the tubing to air insufflation device. Position patient for the first view at the direction of the physician. Step behind shielding to control panel. Set appropriate exposure parameters. Instruct patient to hold still. Take exposure for first view. Step from behind shielding. Review the image with the supervising physician and adjust patient positioning and parameters as needed. The above steps are repeated for all subsequent views to be obtained under supervision by the physician performing the procedure as needed to demonstrate the relevant anatomy and any pertinent pathology. For each image after the initial image, assist the supervising physician in administering rectal contrast and insufflation as needed to demonstrate pertinent anatomy and findings. All cassettes are taken to the image reader and run through reader. Check all images for adequate exposure, positioning, coverage, etc. Discuss with the radiologist and repeat any views as needed.

10. If you have used a percentage of the physician intra-service work time other than 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.
N/A
11. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities:
N/A
12. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at <http://www.bls.gov>.
N/A
13. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here:
N/A
14. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here:
N/A

15. List all the equipment included in your recommendation and the equipment formula chosen (see document titled “Calculating equipment time”). If you have selected “other formula” for any of the equipment please explain here:

- **Technologist PACS Workstation Proxy (ED050)** –PACS formula; Equals total service period time
- **Professional PACS Workstation (ED053)** – Equals physician work intra time + 1/2 physician work pre-time
- **Room, basic radiology (EL012)** – Highly technical formula

16. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here:

N/A

17. If there is any other item on your spreadsheet that needs further explanation please include here:

We have included two additional supply items not currently in the existing codes:

- **Gloves, non-sterile (SB022)** – 2 pairs, one for the tech and one for the radiologist
- **Underpad 2ft x 3ft (Chux) (SB044)** – included only for CPT codes 74270 and 74280. Used as a barrier between the patient and the table.

18. Please include an explanation of each line item:

N/A

AMA/Specialty Society RVS Update Committee Summary of Recommendations
High Volume Growth

October 2018

Myocardial PET

In January 2017, CPT code 78492 was identified via the High Volume Growth screen with total Medicare utilization over 10,000 which increased by at least 100% from 2009 through 2014. The RUC recommended referring this code to the CPT Editorial Panel to undergo substantive descriptor changes to reflect newer technology aspects such as wall motion, ejection fraction, flow reserve, and technology updates for hardware and software. In May 2018 the CPT Editorial Panel approved deletion of a Category III code, addition of six Category I codes, and revision of three codes to separately identify component services included for myocardial imaging using positron emission tomography.

In October 2018, the RUC pre-facilitated this tab and thoroughly discussed the issues surrounding the survey of this family of services. The RUC recognized significant problems, such as these services are essentially incremental studies, of myocardial PET metabolic, myocardial PET perfusion, with or without CT studies. However, the surveyed work RVUs fell between non-consistent increments and the physician time increments were only 0, 2, 3 or 5 minutes different. Noting that if these were stand-alone services, the differences would most likely be larger, like 5 or 10 minutes. Likewise, the difference of work was also not consistent. The RUC explored various alternative accepted methodologies and alternative methodologies and nothing produced an appropriate valuation of these services. The RUC also noted there are limited crosswalk codes to develop work RVUs for these services. Due to the survey outcome and concern with relativity among this family of services the RUC recommends resurveying these services for January 2019. The specialty societies indicated they will request via the Research Subcommittee to resurvey using an arrayed surveyed tool. Therefore, the respondents will be presented with a table throughout the survey with the physician time questions and the work RVU question on the same page, to value the family consistently. The specialty societies will also request to include additional explanatory language. **The RUC recommends resurveying these services for January 2019.**

Practice Expense:

The Practice Expense Subcommittee made minor modifications to the direct practice expense inputs to include additional wipes for cleaning the room twice. The RUC will make any changes to the clinical staff time that are linked to physician time in January 2019.

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
Radiology Nuclear Medicine Cardiovascular System Myocardial perfusion (<u>SPECT and PET</u>) and cardiac blood pool imaging studies may be performed at rest and/or during stress. When performed during exercise and/or pharmacologic stress, the appropriate stress testing code from the 93015-93018 series should be reported in addition to 78451-78454, 78472-, 78491, 78430, 78492, 78431, 78432, 78433. PET can be performed on either a dedicated PET machine (<u>which uses a PET source for attenuation correction</u>) or a combination PET/CT camera (78429, 78430, 78431, 78433). A cardiac PET study performed on a PET/CT camera includes examination of the CT transmission images for review of anatomy in the field of view.				
▲ 78459	K1	Myocardial imaging, positron emission tomography (PET), metabolic evaluation <u>study (including ventricular wall motion(s), and/or ejection fraction(s), when performed); single study;</u> (For myocardial perfusion study, see 78491-78492) (78460-78465 have been deleted. To report, see 78451-78454)	XXX	Resurvey for January 2019
● 78429	K2	with concurrently acquired computed tomography transmission scan (For CT coronary calcium scoring, use 75571) (CT performed for other than attenuation correction and anatomical localization is reported using the appropriate site specific CT code with modifier 59)	XXX	Resurvey for January 2019
▲ 78491	K3	Myocardial imaging, positron emission tomography, perfusion; <u>study (including ventricular wall motion(s), and/or ejection fractions(s), when performed); single study, at rest or stress (exercise or pharmacologic)</u>	XXX	Resurvey for January 2019

AMA/Specialty Society RVS Update Committee Summary of Recommendations
High Volume Growth

October 2018

Long-Term EEG Monitoring

In January 2017, CPT code 95951 was identified via the High-Volume Growth screen with total Medicare utilization of 10,000 or more and increased by at least 100% from 2009 through 2014. The RUC recommended that this service be referred to the CPT Editorial Panel for needed changes, including code deletions, revision of code descriptors, and the addition of new codes to this family. Revisions to this family of codes are needed to capture that video is now an element of most long-term EEG monitoring tests and to better differentiate inpatient and ambulatory monitoring services. In May 2018, the CPT Editorial Panel approved the revision of one code, deletion of five codes, and addition of twenty-three codes for reporting long-term EEG professional and technical services.

Thirteen new codes were created for reporting the technical component of long-term EEG services (95700 – 95716) and 10 new codes were created for reporting the professional component of long-term EEG services (95717 – 95726). The Long-Term EEG codes are diagnostic services primarily used to evaluate patients with intractable epilepsy as well as patients with new-onset seizures to determine if spells are seizures, to characterize seizure type, and to localize seizure focus for pre-surgical evaluation. The new professional services code set is used to report the professional service of reviewing, analyzing, interpreting and reporting the results of the continuous recording of EEG or EEG with simultaneous video recording with recommendations based on the findings. The professional code set is divided into **2 groups** defined by the timing of the physician report generation and the ability of the physician to access the EEG (and video) data during the recording period.

- **Codes 95717 – 95720** are reported for services when the physician has access to EEG and video (when recorded) data throughout the recording and review, analysis and report generation of collected data occurs at specific time intervals such as 2-12 or 12-26 hours). While the entire code set is *site of service agnostic*:
 - The 2-12-hour codes are typically for day-time testing, done in an outpatient clinic or physician office setting for 8 hours,
 - The 12-26-hour codes are typically provided in the inpatient hospital epilepsy monitoring unit or intensive care unit.
- **Codes 95721 – 95726** are reported for services when the physician does NOT have access to EEG and video (when recorded) data during the recording period and review, analysis, and report generation occurs at the conclusion of a multiple day study. There is not site of service designation for 95721 – 95726 but they will typically be used for ambulatory services where the recording takes place in the patient's home or outside a facility.

Reporting of these services

At the October 2018 RUC meeting, a RUC member inquired whether this new family of long-term EEG services would typically be reported with CPT code 95957 *Digital analysis of electroencephalogram (EEG) (eg, for epileptic spike analysis)*. The specialties noted that the current codes for reporting long-term EEG are not typically reported with code 95957. Also, code 95957 should not be reported with this new family of service per the CPT introductory language:

Use of automated spike and seizure detection and trending software is included in 95700-95726, when performed. Do not report 95957 for use of automated software.

95717 Electroencephalogram, continuous recording, physician or other qualified health care professional review of recorded events, analysis of spike and seizure detection, interpretation, and report, 2-12 hours of EEG recording; without video

The RUC reviewed the survey results from 133 physicians and agreed on the following physician time components: 8 minutes of pre-service time, 28 minutes of intra-service time and 10 minutes of immediate post-service time. The specialties noted that the typical amount of monitoring time for this service is 8 hours. For this service, the physician has access to EEG data throughout the recording period and review and analysis of collected data occurs at specific time intervals.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the respondents appropriately valued the physician work involved in performing this service at the 25th percentile work RVU of 2.00. To justify a work RVU of 2.00, the RUC compared the surveyed code to MPC Code 99204 *Office or other outpatient visit for the evaluation and management of a new patient, ...* (work RVU =2.43, intra-service time of 30 minutes and total time of 45 minutes) and noted that the reference code has slightly more intra-service time and both services have similar total times, whereas the reference code is a slightly more intense service to perform. The RUC also compared the surveyed code to MPC code 74178 *Computed tomography, abdomen and pelvis; without contrast material in one or both body regions, followed by contrast material(s) and further sections in one or both body regions* (work RVU =2.01, intra-service time of 30 minutes, total time of 40 minutes) and noted that the survey code has slightly less intra-service time and more total time — also both services involve a similar amount of physician work. **The RUC recommends a work RVU of 2.00 for CPT code 95717.**

95718 Electroencephalogram, continuous recording, physician or other qualified health care professional review of recorded events, analysis of spike and seizure detection, interpretation, and report, 2-12 hours of EEG recording; with video (VEEG)

The RUC reviewed the survey results from 149 physicians and agreed on the following physician time components: 10 minutes of pre-service time, 35 minutes of intra-service time and 10 minutes of immediate post-service time. The specialties noted that the typical amount of monitoring time for this service is 8 hours. For this service, the physician has access to EEG and video (when recorded) data throughout the recording period and review and analysis of collected data occurs at specific time intervals.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the respondents appropriately valued the physician work involved in performing this service at the 25th percentile work RVU of 2.50. To justify a work RVU of 2.50, the RUC compared the survey code to CPT Code 75573 *Computed tomography, heart, with contrast material, for evaluation of cardiac structure and morphology in the setting of congenital heart disease (including 3D image postprocessing, assessment of LV cardiac function, RV structure and function and evaluation of*

venous structures, if performed) (work RVU = 2.55, intra-service time of 30 minutes, total time of 60 minutes) and noted that the survey code involves more intra-service time, whereas the reference code involves more total time and slightly more intensity. The RUC also compared the survey code to MPC code 99204 *Office or other outpatient visit for the evaluation and management of a new patient, ...* (work RVU = 2.43, intra-service time of 30 minutes and total time of 45 minutes) and noted that the survey code involves somewhat more intraservice time and it would be appropriate to value the survey code somewhat higher than the reference code. The specialty noted and the RUC agreed that video EEG is a more intense service to perform than EEG without video. **The RUC recommends a work RVU of 2.50 for CPT code 95718.**

95719 Electroencephalogram, continuous recording, physician or other qualified health care professional review of recorded events, analysis of spike and seizure detection, each increment of greater than 12 hours, up to 26 hours of EEG recording, interpretation and report after each 24-hour period; without video

The RUC reviewed the survey results from 133 physicians and agreed on the following physician time components: 10 minutes of pre-service time, 40 minutes of intra-service time and 10 minutes of immediate post-service time. For this service, the physician has access to EEG data throughout the recording period and review and analysis of collected data occurs at specific time intervals

The RUC reviewed the survey respondents' estimated physician work values and agreed that the respondents appropriately valued the physician work involved in performing this service at the 25th percentile work RVU of 3.00. To justify a work RVU of 3.00, the RUC compared the survey code to top key reference code 99223 *Initial hospital care, per day, for the evaluation and management of a patient, ...* (work RVU = 3.86, intra-service time of 55, total time of 90 minutes) and noted that the survey code involves less intra-service time and total time, though is a somewhat more intense service to perform. One-hundred percent of the survey respondents that selected code 99223 as their key reference service indicated that the survey code was at least as intense as the reference code and a majority felt that they survey code was a more intense service to perform. The RUC also compared the survey code to CPT code 44405 *Colonoscopy through stoma; with transendoscopic balloon dilation* (work RVU = 3.23, intra-service time of 38 minutes) and noted that the survey code involves slightly more intra-service time and slightly lower amount of physician work. **The RUC recommends a work RVU of 3.00 for CPT code 95719.**

95720 Electroencephalogram, continuous recording, physician or other qualified health care professional review of recorded events, analysis of spike and seizure detection, each increment of greater than 12 hours, up to 26 hours of EEG recording, interpretation and report after each 24-hour period; with video (VEEG)

The RUC reviewed the survey results from 152 physicians and agreed on the following physician time components: 10 minutes of pre-service time, 55 minutes of intra-service time and 10 minutes of immediate post-service time. The typical patient for code 95720 is for a pre-surgical evaluation, which often includes the withdrawal of anti-seizure medications to invoke seizures and identify the seizure focus (requiring detailed review as this is the principal determinant for the site for surgical brain resection). For this service, the physician has access to EEG and video (when recorded) data throughout the recording period and review and analysis of collected data occurs at specific time intervals.

The RUC reviewed the survey respondents' estimated physician work values and agreed that an appropriate value is between the 25th percentile work RVU of 3.50 and median work RVU of 5.00. To find an appropriate work RVU crosswalk, the RUC compared the surveyed code to CPT code 99223 *Initial hospital care, per day, for the evaluation and management of a patient, ...* (work RVU = 3.86, intra-service time of 55, total

time of 90 minutes) and noted that both services typically involve an identical amount of intra-service time; although the reference code involves more total time, the survey code is a more intense service to perform given the intensity involved in making an appropriate reading/diagnosis prior to neurosurgery. The typical patient for this service is a candidate for epilepsy surgery and the long-term EEG physician report will inform the neurosurgeon on whether epilepsy surgery is appropriate. The RUC agreed that both services involve a very similar total amount of physician work. Therefore, the RUC recommends a direct work RVU crosswalk from code 99223 to code 95720. The RUC also compared the survey code to CPT code 99236 *Observation or inpatient hospital care, for the evaluation and management of a patient including admission and discharge on the same date, ...* (work RVU = 4.20, intra-service time of 55 minutes, total time of 94 minutes) and noted that although both service have identical intra-service time, the reference code involves more total time, justifying a somewhat lower value for the survey code. The specialty noted and the RUC agreed that video EEG is a more intense service to perform than EEG without video. **The RUC recommends a work RVU of 3.86 for CPT code 95720.**

95721 Electroencephalogram, continuous recording, physician or other qualified health care professional review of recorded events, analysis of spike and seizure detection, interpretation, and summary report, complete study; greater than 36 hours, up to 60 hours of EEG recording, without video

The RUC reviewed the survey results from 133 physicians and agreed on the following physician time components: 10 minutes of pre-service time, 65 minutes of intra-service time and 10 minutes of immediate post-service time. For this service, the physician does not have access to EEG data during the recording period and the review and analysis occurs at the conclusion of the multiple day study.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the respondents appropriately valued the physician work involved in performing this service at the 25th percentile work RVU of 3.86. To justify a work RVU of 3.86, the RUC compared the survey code to MPC code 99337 *Domiciliary or rest home visit for the evaluation and management of an established patient, ...* (work RVU = 3.58, intra-service time of 60 minutes) and noted that the survey code involves more intra-service time and more physician work. The specialty noted and the RUC agreed that video EEG is a more intense service to perform than EEG without video. **The RUC recommends a work RVU of 3.86 for CPT code 95721.**

95722 Electroencephalogram, continuous recording, physician or other qualified health care professional review of recorded events, analysis of spike and seizure detection, interpretation, and summary report, complete study; greater than 36 hours, up to 60 hours of EEG recording, with video (VEEG)

The RUC reviewed the survey results from 145 physicians and agreed on the following physician time components: 10 minutes of pre-service time, 80 minutes of intra-service time and 10 minutes of immediate post-service time. For this service, the physician does not have access to EEG and video data during the recording period and the review and analysis occurs at the conclusion of the multiple day study.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the respondents appropriately valued the physician work involved in performing this service at the 25th percentile work RVU of 4.70. To justify a work RVU of 4.70, the RUC compared the survey code to CPT Code 31653 *Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with endobronchial ultrasound (EBUS) guided transtracheal and/or transbronchial sampling (eg, aspiration[s]/biopsy[ies]), 3 or more mediastinal and/or hilar lymph node*

stations or structures (work RVU = 4.96, intra-service time of 75 minutes) and noted that the survey code involves more intra-service time, whereas the reference code involves more total time and both services involve a similar amount of physician work. The specialty noted and the RUC agreed that video EEG is a more intense service to perform than EEG without video. **The RUC recommends a work RVU of 4.70 for CPT code 95722.**

95723 Electroencephalogram, continuous recording, physician or other qualified health care professional review of recorded events, analysis of spike and seizure detection, interpretation, and summary report, complete study; greater than 60 hours, up to 84 hours of EEG recording, without video

The RUC reviewed the survey results from 132 physicians and agreed on the following physician time components: 10 minutes of pre-service time, 90 minutes of intra-service time and 10 minutes of immediate post-service time. For this service, the physician does not have access to EEG data during the recording period and the review and analysis occurs at the conclusion of the multiple day study.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the respondents appropriately valued the physician work involved in performing this service at the 25th percentile work RVU of 4.75. To justify a work RVU of 4.75, the RUC compared the survey code to CPT Code 77772 *Remote afterloading high dose rate radionuclide interstitial or intracavitary brachytherapy, includes basic dosimetry, when performed; over 12 channels* (work RVU= 5.40, intra-service time of 100 minutes and total time of 124 minutes) and noted that the survey code involves less intra-service and total time and a work value of 4.75 for the survey code would have appropriate relativity with the reference code. **The RUC recommends a work RVU of 4.75 for CPT code 95723.**

95724 Electroencephalogram, continuous recording, physician or other qualified health care professional review of recorded events, analysis of spike and seizure detection, interpretation, and summary report, complete study; greater than 60 hours, up to 84 hours of EEG recording, with video (VEEG)

The RUC reviewed the survey results from 147 physicians and agreed on the following physician time components: 10 minutes of pre-service time, 110 minutes of intra-service time and 10 minutes of immediate post-service time. For this service, the physician does not have access to EEG and video data during the recording period and the review and analysis occurs at the conclusion of the multiple day study.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the respondents appropriately valued the physician work involved in performing this service at the 25th percentile work RVU of 6.00. To justify a work RVU of 6.00, the RUC compared the survey code to top key reference code 95965 *Magnetoencephalography (MEG), recording and analysis; for spontaneous brain magnetic activity (eg, epileptic cerebral cortex localization)* (work RVU= 7.99, intra-service time of 180 minutes) and noted that the survey code involves much less intra-service and total time and a work value of 6.00 for the survey code would have relativity to the reference code. The specialty noted and the RUC agreed that video EEG is a more intense service to perform than EEG without video. **The RUC recommends a work RVU of 6.00 for CPT code 95724.**

95725 Electroencephalogram, continuous recording, physician or other qualified health care professional review of recorded events, analysis of spike and seizure detection, interpretation, and summary report, complete study; greater than 84 hours of EEG recording, without video

The RUC reviewed the survey results from 124 physicians and agreed on the following physician time components: 10 minutes of pre-service time, 110 minutes of intra-service time and 10 minutes of immediate post-service time. For this service, the physician does not have access to EEG data during the recording period and the review and analysis occurs at the conclusion of the multiple day study.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the respondents somewhat overvalued the work involved in performing this service, with a 25th percentile work RVU of 6.50. To find an appropriate work RVU crosswalk, the RUC compared the survey code to CPT code 77772 *Remote afterloading high dose rate radionuclide interstitial or intracavitary brachytherapy, includes basic dosimetry, when performed; over 12 channels* (work RVU = 5.40, intra-service time of 100 minutes, total time of 124 minutes) and noted that the survey code involves somewhat more intra-service time and total time, whereas the reference code is a somewhat more intense service to perform. The RUC agreed that both services involve a very similar total amount of physician work. Therefore, the RUC recommends a direct work RVU crosswalk from code 77772 to code 95725. The RUC noted that it would be appropriate rank order to value code 95725 at lower value than code 95724, even though both services have identical times, as the typical patient for this service without video is less intense and complex. **The RUC recommends a work RVU of 5.40 for CPT code 95725.**

95726 Electroencephalogram, continuous recording, physician or other qualified health care professional review of recorded events, analysis of spike and seizure detection, interpretation, and summary report, complete study; greater than 84 hours of EEG recording, with video (VEEG)

The RUC reviewed the survey results from 142 physicians and agreed on the following physician time components: 10 minutes of pre-service time, 140 minutes of intra-service time and 10 minutes of immediate post-service time. For this service, the physician does not have access to EEG and video data during the recording period and the review and analysis occurs at the conclusion of the multiple day study.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the respondents appropriately valued the physician work involved in performing this service at the 25th percentile work RVU of 7.58. To justify a work RVU of 7.58, the RUC compared the survey code to CPT code to top key reference code 95965 *Magnetoencephalography (MEG), recording and analysis; for spontaneous brain magnetic activity (eg, epileptic cerebral cortex localization)* (work RVU = 7.99, intra-service time of 180 minutes) and noted that the survey code involves much less intra-service and total time and a work value of 7.58 for the survey code would have relativity to the reference code. The specialty noted and the RUC agreed that video EEG is a more intense service to perform than EEG without video. **The RUC recommends a work RVU of 7.58 for CPT code 95726.**

Practice Expense

The Practice Expense (PE) Subcommittee reviewed the direct PE inputs for CPT codes 95700-95716, which are PE only codes used to describe the technical work performed by a Registered Electroencephalographic Technologist (REETG). The specialty societies conducted a PE survey. The time from the survey was used for the direct PE inputs for code 95700 and the clinical staff time other than the monitoring time for continuous and intermittent monitoring codes. The survey was also used for the typical length of monitoring (8 hours or 24 hours). The specialty society

explained that the technologists misunderstood the question on total monitoring time to imply checking for events rather than the actual monitoring, so the expert panel determined the monitoring time for continuous and intermittent monitoring codes. The PE Subcommittee also reviewed the minimal direct practice expense inputs for equipment used by the physician to perform CPT codes 95717-95726 in the non-facility setting. Claims data indicates that the site of the typical patient remains the facility setting, however in the non-facility setting the service is typically performed in an Independent Diagnostic Testing Facility (IDTF). At the IDTF or physicians' office the patient stays at the location for the 2-12 hours test and takes the equipment home and is monitored remotely by staff at the IDTF or physicians' office for the 12-26 hour test.

PE for Physician Work Services CPT codes 95717-95726

The only change was to remove equipment item EQ013, *EEG analysis software* from all the codes. The only direct practice expense input associated with the physician work only services is equipment item EQ016, *EEG review station, ambulatory* which is used by the physician.

Compelling Evidence for CPT codes 95700-95716

In January 2017, CPT code 95951 *Monitoring for localization of cerebral seizure focus by cable or radio, 16 or more channel telemetry, combined electroencephalographic (EEG) and video recording and interpretation (eg, for presurgical localization), each 24 hours* was identified via the High-Volume Growth screen with total Medicare utilization of 10,000 or more and increased by at least 100% from 2009 through 2014. Since the service was last reviewed the technical work has had many changes in that the monitoring can be with or without video, and or with or without two different types of monitoring, or with no monitoring at all. The New CPT codes define continuous, intermittent and unmonitored as the following:

- Unmonitored: Services that have no real-time monitoring by an EEG technologist(s) during the continuous recording. If the criteria for intermittent or continuous monitoring are not met, then the study is an unmonitored study.
- Intermittent monitoring (remote or on-site): Requires an EEG technologist(s) to perform and document real-time review of data at least every two hours during the entire recording period to assure the integrity and quality of the recording (ie, EEG, VEEG), identify the need for maintenance, and, when necessary, notify the physician or other qualified health care professional of clinical issues. For intermittent monitoring, a single EEG technologist may monitor a maximum of 12 patients concurrently. If the number of intermittently monitored patients exceeds 12, then all the studies are reported as unmonitored.
- Continuous real-time monitoring (remote or on-site): Requires all elements of intermittent monitoring. In addition, the EEG technologist(s) performs and documents real-time concurrent monitoring of the EEG data and video (when performed), during the entire recording period. The EEG technologist(s) identifies when events occur and notifies, as instructed, the physician or other qualified health care professional. For continuous monitoring, a single EEG technologist may monitor a maximum of four patients concurrently. If the number of concurrently monitored patients exceeds four, then all of the studies are reported as either unmonitored or intermittent studies. If there is a break in the real-time monitoring of the EEG recording, the study is an intermittent study.

For many years CPT code 95951 was predominantly an inpatient service, however over the more recent years there are now varying patient populations some still requiring the inpatient stays for medication withdrawal and other studies that could be conducted in an Independent Diagnostic Testing Facility (IDTF) or in the patients' home with monitoring through advanced technologies. The specialty society presented the following practice expense compelling evidence arguments:

1. Technique (there are now varying levels of monitoring, whereas previously there was only monitored or unmonitored)
2. Site of service (due to population shift services are now performed in the outpatient/ambulatory setting, and patients' homes and not exclusively in the inpatient setting)
3. Technology changes and advancements (improved technology has created more options for remote/ambulatory monitoring of patients in various settings; increased remote video capabilities.)

Set-up and Take-down

95700 Electroencephalogram (EEG) continuous recording, with video when performed, set-up, patient education, and take down when performed, administered in-person by EEG technologist, minimum of 8 channels

This service encompasses both the set-up and take-down of the supplies, equipment and clinical staff time to perform any of the EEG monitoring services. This service includes all the supplies needed for monitoring regardless of the length of the service. The PE Subcommittee first consolidated and reduced the amount of staff time for clinical activity CA013, *Prepare room, equipment and supplies* because the PE Subcommittee agreed that in the typical office setting this would be done during the service period (pre-service (of service period)). The Subcommittee maintained 45 minutes of clinical staff time for clinical activity, CA016 *Prepare, set-up and start IV, initial positioning and monitoring of patient* because this is when the technologist applies the electrodes. Additional consolidation and reductions were made for clinical activities, CA011, *Provide education/obtain consent* (in the service period (post-service (of service period))), CA024, *Clean room/equipment by clinical staff* and CA035, *Review home care instructions, coordinate visits/prescriptions*. In supplies the PE Subcommittee adjusted the quantity or removed a number of items, most significantly, the PE Subcommittee removed two supply items for SD054, *electrode, EEG, tin cup (12 pack uou)* because it was established that the electrodes are reusable.

Unmonitored (13+ patients monitored)

95705 Electroencephalogram (EEG) without video, review of data, technical description by EEG technologist, 2-12 hours; unmonitored

95708 Electroencephalogram (EEG) without video, review of data, technical description by EEG technologist, each increment of 12-26 hours; unmonitored

95711 Electroencephalogram with video (VEEG), review of data, technical description by EEG technologist, 2-12 hours; unmonitored

95714 Electroencephalogram with video (VEEG), review of data, technical description by EEG technologist, each increment of 12-26 hours; unmonitored

The PE Subcommittee discussed that there is REEGT involved with the unmonitored codes. The technologist performing clinical activity, CA021 *Perform procedure/service---NOT directly related to physician work time* is performing activities other than monitoring such as review history, maintenance during patient session, patient/family education, internal communication and preparing the data (line 55 on the PE spreadsheet). The technologist performs clinical activity, CA038 *Coordinate post-procedure services* to retrieve and manage the data. The PE Subcommittee reduced the times, 22 min for the 2-12 hour codes and 44 minutes for the 12-26 hour code respectively by 50% to 11 and 22 minutes, in order to account for partial automation of this task. The associated equipment time related to this clinical activity is ED050, *Technologist PACS workstation*. The equipment time remains 100%. Only one of the following pieces of equipment is used for each code for the entire test. For both non-video unmonitored codes equipment item, EQ014, *EEG monitor, digital, portable*, is used. For the 2-12 hour video unmonitored code where the patient stays in the office, equipment item, EQ017, *EEG, digital, prolonged testing system (computer w-remote camera)* is used. For the 12-26 code video

unmonitored codes where the patient takes the equipment home, new equipment item, *EEG, digital, prolonged testing system with remote video, for patient's home use* is used.

1. EQ015 EEG recorder, ambulatory
2. EQ014 EEG monitor, digital, portable
3. NEW EQUIP EEG, digital, prolonged testing system with remote video, for patient's home use
4. EQ017 EEG, digital, prolonged testing system (computer w-remote camera)

Intermittent (Up to 12 patients monitored)

95706 Electroencephalogram (EEG) without video, review of data, technical description by EEG technologist, 2-12 hours; with intermittent monitoring and maintenance

95709 Electroencephalogram (EEG) without video, review of data, technical description by EEG technologist, each increment of 12-26 hours; with intermittent monitoring and maintenance

95712 Electroencephalogram with video (VEEG), review of data, technical description by EEG technologist, 2-12 hours; with intermittent monitoring, and maintenance

95715 Electroencephalogram with video (VEEG), review of data, technical description by EEG technologist, each increment of 12-26 hours; with intermittent monitoring, and maintenance

The PE Subcommittee discussed that there are two REEGT involved with the intermittent monitoring codes. The first technologist performing clinical activity, CA021 *Perform procedure/service---NOT directly related to physician work time* is doing the monitoring (line 54 on the PE spreadsheet) and the second technologist performing clinical activity, CA021 *Perform procedure/service---NOT directly related to physician work time* is performing other activities such as review history, maintenance during patient session, patient/family education, internal communication and preparing the data (line 55 on the PE spreadsheet). The survey results indicated that the typical number of patients monitored is 12 patients. This is also the maximum allowed based on CPT coding before an unmonitored code should be used. The specialty societies' expert panel determined that the number of hours monitored for the 2-12 hour codes 95706 and 95712, are typically for 8 hours. 8 hours or 480 minutes divided by 12 patients is 40 minutes of monitoring time. The 12-26 hour codes 95709 and 95715, are typically for 24 hours. 24 hours or 1440 minutes divided by 12 patients is 120 minutes of monitoring time. The technologist performs clinical activity, CA038 *Coordinate post-procedure services* to retrieve and manage the data. The PE Subcommittee reduced the times, 22 min for the 2-12 hour codes and 44 minutes for the 12-26 hour code respectively by 50% to 11 and 22 minutes, in order to account for partial automation of this task. The associated equipment time related to this clinical activity is ED050, *Technologist PACS workstation*. The equipment time remains 100%. Only one of the following pieces of equipment is used for each code for the entire monitoring time. For both non-video intermittent codes equipment item, EQ014, *EEG monitor, digital, portable*, is used. For the 2-12 hour video intermittent code where the patient stays in the office to be monitored equipment item, EQ017, *EEG, digital, prolonged testing system (computer w-remote camera)* is used. For the 12-26 hour video intermittent code where the patient takes the equipment home, new equipment item, *EEG, digital, prolonged testing system with remote video, for patient's home use* is used.

5. EQ015 EEG recorder, ambulatory
6. EQ014 EEG monitor, digital, portable

7. NEW EQUIP EEG, digital, prolonged testing system with remote video, for patient's home use
8. EQ017 EEG, digital, prolonged testing system (computer w-remote camera)

Continuous (Up to 4 patients monitored)

95707 Electroencephalogram (EEG) without video, review of data, technical description by EEG technologist, 2-12 hours; with continuous, real-time monitoring and maintenance

95710 Electroencephalogram (EEG) without video, review of data, technical description by EEG technologist, each increment of 12-26 hours; with continuous, real-time monitoring and maintenance

95713 Electroencephalogram with video (VEEG), review of data, technical description by EEG technologist, 2-12 hours; with continuous, real-time monitoring and maintenance

95716 Electroencephalogram with video (VEEG), review of data, technical description by EEG technologist, each increment of 12-26 hours; with continuous, real-time monitoring and maintenance

The PE Subcommittee discussed that there are two REEGT involved with the continuous monitoring codes. The first technologist performing clinical activity, CA021 *Perform procedure/service---NOT directly related to physician work time* is doing the monitoring (line 54 on the PE spreadsheet) and the second technologist performing clinical activity, CA021 *Perform procedure/service---NOT directly related to physician work time* is performing other activities such as review history, maintenance during patient session, patient/family education, internal communication and preparing the data (line 55 on the PE spreadsheet). The survey results indicated that the typical number of patients monitored is 3 patients. The PE Subcommittee discussed that the survey respondents underestimated or were unrepresentative of the typical testing site. The members thought that at most IDTF that specialize in long-term EEG monitoring the facility would certainly be monitoring the max number of 4 patients based on CPT coding. Four patients are the maximum allowed based on CPT coding before an intermittent code should be used. The specialty societies' expert panel determined that the number of hours monitored for the 2-12 hour codes 95707 and 95713, are typically for 8 hours. 8 hours or 480 minutes divided by 4 patients is 120 minutes of monitoring time. The 12-26 hour codes 95710 and 95716, are typically for 24 hours. 24 hours or 1440 minutes divided by 4 patients is 360 minutes of monitoring time. The technologist performs clinical activity, CA038 *Coordinate post-procedure services* to retrieve and manage the data. The PE Subcommittee reduced the times, 22 min for the 2-12 hour codes and 44 minutes for the 12-26 hour code respectively by 50% to 11 and 22 minutes, in order to account for partial automation of this task. The associated equipment time related to this clinical activity is ED050, *Technologist PACS workstation*. The equipment time remains 100%. Only one of the following pieces of equipment is used for each code for the entire monitoring time. For both non-video continuous codes equipment item, EQ014, *EEG monitor, digital, portable*, is used. For the 2-12 hour video continuous code where the patient stays in the office to be monitored equipment item, EQ017, *EEG, digital, prolonged testing system (computer w-remote camera)* is used. For the 12-26 hour video continuous code where the patient takes the equipment home, new equipment item, *EEG, digital, prolonged testing system with remote video, for patient's home use* is used.

1. EQ015 EEG recorder, ambulatory
2. EQ014 EEG monitor, digital, portable
3. NEW EQUIP EEG, digital, prolonged testing system with remote video, for patient's home use
4. EQ017 EEG, digital, prolonged testing system (computer w-remote camera)

Work Neutrality

The RUC's recommendation for these codes will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

New Technology/New Services

Codes 95700-95726 will be placed on the New Technology/New Services list and be re-reviewed by the RUC in three years to ensure correct valuation and utilization assumptions.

Affirmation of RUC Recommendations

The RUC affirmed the recent RUC recommendations for CPT codes 95812 and 95813. The relativity within the family remains correct.

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
Surgery Nervous System Skull, Meninges, and Brain Craniectomy or Craniotomy 61533 <i>Craniotomy with elevation of bone flap; for subdural implantation of an electrode array, for long-term seizure monitoring</i> (For continuous EEG monitoring, see 95950-95954 <u>95700-95726</u>) Medicine Neurology and Neuromuscular Procedures <i>Neurologic services are...</i>				
<i>In addition, services...</i> The <u>electroencephalogram (EEG)</u> , <u>video-electroencephalogram (VEEG)</u> , autonomic function, evoked potential, reflex tests, <u>electromyography (EMG)</u> , <u>nerve conduction velocity (NCV)</u> , and <u>magnetoencephalography (MEG)</u> services (95812-95829, 95700-95726 , and 95860-95967) include recording, interpretation, and report by a physician or other qualified health care professional. For interpretation only, use modifier 26 <u>with codes 95812-95829, 95860-95967</u> . For interpretation only for long-term EEG services, report codes <u>95717, 95718, 95719, 95720, 95721, 95722, 95723, 95724, 95725, 95726</u> . For EMG guidance, see 95873, 95874. Codes 95812-95822 95950-95953 and 95956 and <u>95700-95726</u> use EEG/VEEG recording time as a basis for code use. Recording time is when the recording is underway and <u>diagnostic EEG</u> data is being collected. Recording time excludes set up and take down time. <u>If diagnostic EEG recording is disrupted, recording time stops until diagnostic EEG recording is resumed.</u> Codes 95961-95962 use physician or other qualified health care professional attendance time as a basis for code use. (Do not report codes 95860-95875 in addition to 96000-96004) Routine Electroencephalography (EEG) <i>EEG codes 95812-95822...</i>

Special EEG Tests

Codes 95950-95953 and 95956 are used per 24 hours of recording. For recording more than 12 hours, do not use modifier 52. For recording 12 hours or less, use modifier 52. Codes 95951 and 95956 are used for recordings in which interpretations can be made throughout the recording time, with interventions to alter or end the recording or to alter the patient care during the recordings as needed.

Codes 95961 and 95962 use physician or other qualified health care professional time as a basis for unit of service. Report 95961 for the first hour of attendance. Use modifier 52 with 95961 for 30 minutes or less. Report 95962 for each additional hour of attendance. Codes 95961, 95962 may be reported with 95700-95726 when functional cortical or subcortical mapping is performed with long-term EEG monitoring.

Codes 95700-95726 are long-term continuous recording services for electroencephalography (EEG), which are performed to differentiate seizures from other abnormalities, determine type or location of seizures, monitor treatment of seizures and status epilepticus, establish if the patient is a candidate for epilepsy surgery and/or screen for adverse change in critically ill patients.

The set of codes that describe long-term continuous recording EEG services (95700-95726) is divided into two major groups: (1) technical services; and (2) professional services. Codes 95700-95726 may be reported for any site of service. The technical component of the services is reported with 95700-95716. The professional component of the services is reported with 95717-95726. Diagnostic EEG recording time of less than two hours (ie, one minute, up to one hour and 59 minutes) is not separately reported as a long-term EEG service.

Long-term continuous recording EEG services (95700-95726) are different than routine EEGs (95812, 95813, 95816, 95819, 95822). Routine EEGs capture brain wave activity within a short duration of testing, defined as less than two hours. Long-term continuous recording EEGs capture brain wave activity for durations of time equal to or greater than two hours. The length of recording is based on a number of factors including the clinical indication for the test and the frequency of seizures.

Use of automated spike and seizure detection and trending software is included in 95700-95726, when performed. Do not report 95957 for use of automated software.

Definitions

EEG technologist: An individual who is qualified by education, training, licensure/certification/regulation (when applicable) in seizure recognition. An EEG technologist(s) performs EEG set-up, take down when performed, patient education, technical description, maintenance and seizure recognition when within his or her scope of practice and is allowed by law, regulation, and facility policy (when applicable).

Unmonitored: Services that have no real-time monitoring by an EEG technologist(s) during the continuous recording. If the criteria for intermittent or continuous monitoring are not met, then the study is an unmonitored study.

Intermittent monitoring (remote or on-site): Requires an EEG technologist(s) to perform and document real-time review of data at least every two hours during the entire recording period to assure the integrity and quality of the recording (ie, EEG, VEEG), identify the need for maintenance, and, when necessary, notify the physician or other qualified health care professional of clinical issues. For intermittent monitoring, a single EEG technologist may monitor a maximum of 12 patients concurrently. If the number of intermittently monitored patients exceeds 12, then all of the studies are reported as unmonitored.

Continuous real-time monitoring (may be provided remotely): Requires all elements of intermittent monitoring. In addition, the EEG technologist(s) performs and documents real-time concurrent monitoring of the EEG data and video (when performed), during the entire recording period. The EEG technologist(s) identifies when events occur and notifies, as instructed, the physician or other qualified health care professional. For continuous monitoring, a single EEG technologist may monitor a maximum of four patients concurrently. If the number of concurrently monitored patients exceeds four, then all of the studies are reported as either unmonitored or intermittent studies. If there is a break in the real-time monitoring of the recording, the study is an intermittent study.

Technical description: The EEG technologist(s)'s written documentation of the reviewed EEG/VEEG data including technical interventions. The technical description is based on the EEG technologist(s)'s review of data and includes the following required elements: uploading and/or transferring EEG/VEEG data from EEG equipment to a server or storage device; reviewing raw EEG/VEEG data and events and automated detection as well as patient activations; and annotating, editing, and archiving EEG/VEEG data for review by the physician or other qualified health care professional. For unmonitored services, the EEG technologist(s) annotates the recording for review by the physician or other qualified health care professional and creates a single summary.

Maintenance of long-term EEG equipment: Performed by the EEG technologist(s) and involves ensuring the integrity and quality of the recording(s) (eg, camera position, electrode placement, and impedances).

Set-up: Performed in person by the EEG technologist(s) and includes preparing supplies and equipment; and securing electrodes using the 10/20 system. Code 95700 is reported only once per recording period on the date set-up was performed. 'In person', means that the EEG technologist(s) must be physically present with the patient.

Technical Component Services: Code 95700 describes any long-term continuous EEG/VEEG recording, set-up, take down when performed, and patient/caregiver education by the EEG technologist(s). To report 95700, the set-up must include a minimum of eight channels of EEG. Services with fewer than eight channels may be reported using 95999. Channels of 8-15 are typically used for neonates and when electrodes cannot be placed on certain regions of the scalp that are sterile. Twenty or more channels are typically used for children and adults. If set-up is performed by someone who does not meet the definition of an EEG technologist(s), report 95999.

Codes 95705-95716 describe monitoring, maintenance, review of data, and creating a summary technical description. These codes are divided into four groups based on duration and whether video is utilized. Key elements in determining the appropriate technical code (95705-95716) for long-term EEG continuous recording are: (1) whether diagnostic video recording is captured in conjunction and simultaneously with the EEG service, which is referred to as video-EEG (VEEG); and (2) the level of technician monitoring for the study (ie unmonitored, intermittently monitored or continuously monitored). Codes 95711, 95712, 95713, 95714, 95715, 95716 are reported if diagnostic video of the patient is recorded at a minimum of 80% of the time of the entire long-term VEEG service, concurrent with diagnostic EEG recording (ie, the entire study is reported as an EEG without video if concurrent diagnostic video occurs less than 80% of the entire study). Diagnostic EEG recording is an essential component of all long-term EEG services. If diagnostic EEG recording stops, timing stops until diagnostic EEG is resumed.

Codes 95705, 95706, 95707, 95711, 95712, 95713 are reported when total diagnostic recording time is between two and 12 hours, or to capture the final increment of a multi-day service when the final increment extends 2-12 hours beyond time reported by the appropriate greater than 12 hours up to 26 hour code(s) (95708, 95709, 95710, 95714, 95715, 95716). A maximum of one 2-12 hour code may be reported for an entire long-term EEG service. For example, if the testing lasts 48 hours, but diagnostic recording occurs only the initial 11 hours and the final 11 hours of the

testing period, a single greater than 12 hours up to 26 hours technical service is reported rather than two 2-12 hour services for the 48 hour service. (See the Long-Term EEG Monitoring table).

Professional Component Services: Codes 95717-95726 describe the professional services performed by a physician or other qualified health care professional for reviewing, analyzing, interpreting, and reporting the results of the continuous recording EEG/VEEG with recommendations based on the findings of the studies. These codes do not include any E/M services, which may be separately reported.

Codes 95719, 95720 are used for greater than 12 hours (ie, 12 hours and 1 minute) up to 26 hours of recording. Code selection for professional interpretation for long-term EEG is based on: (1) length of the recording being interpreted; and (2) when the physician or other qualified healthcare professional reports are generated (ie, whether diagnostic interpretations and reports are made daily during the study, or whether the entire professional interpretation is performed after the entire study is completed). Codes 95717, 95718, 95719, 95720 are reported when: (1) daily professional reports are generated during the long-term recording, even if the entire study extends over multiple days; or (2) the time of recording for the entire study is between 2 hours and 36 hours. Codes 95717, 95718 are reported once for each 2-12 hour recording, and are reported a maximum of one time for an entire long-term EEG service. Codes 95719, 95720 are reported once for each greater than 12 hours up to 26-hour recording period. Studies lasting 26-36 hours or longer are reported using building blocks, and are reported using one or more of the greater than 12 hours up to 26-hour code with one 2-12 hour code. The recorded data is reviewed, interpreted, and reported daily by the physician or other qualified health care professional, and summary reports are made for the entire multiple-day study. The summary reports are included in each code (95717-95726) and are not separately reported (See the Long-term EEG Monitoring table).

For codes 95721-95726, the entire professional interpretation (including retrospective daily reports and a summary report) is made after the entire study is recorded and downloaded at the completion of the study. When the entire professional interpretation is provided for a multiple-day study that is greater than 36 hours, codes 95721-95726 are used to report the entire professional service, with the appropriate code determined by the span of diagnostic recording time as defined by the codes. A single code (95721-95726) is reported for the multiple day study. For example, a long-term EEG recording that spans three days with a total of 50 hours of VEEG recording would be reported with 95722. Sixty hours and one minute of diagnostic VEEG recording is reported with 95724. (See the Long-Term EEG Monitoring table).

<u>Long-Term EEG Monitoring Table</u>					
Duration of Long-Term EEG/VEEG Recording	Professional		Technical		
	<i>With report each 24 hours</i>	<i>With report at conclusion of entire recording period)</i>	<i>Unmonitored</i>	<i>Intermittent</i>	<i>Continuous</i>

Duration of LTEEG Professional Service	2 to 12 hours recording <i>Typical 8 hours</i>	12 to 26 hours recording <i>Typical 24 hours</i>	36 to 60 hours recording <i>Typical 2 Days</i>	60 to 84 hours recording <i>Typical 3 Days</i>	Greater than 84 hours recording <i>Typical 4 Days</i>
Recording Type	Reports are Generated Daily (physician access to data throughout recording)		Entire LTEEG Report is Retroactively Generated (physician access to data at end of recording)		
EEG alone	95X14	95X16*	95X18	95X20	95X22
EEG w/ VIDEO	95X15	95X17*	95X19	95X21	95X23

*95X16 and 95X17 are reported for each 24-hour recording period. Additional units are reported for each 24-hour period

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS SUMMARY OF RECOMMENDATION

CPT Code: 95717 Tracking Number M16

Original Specialty Recommended RVU: **2.00**Presented Recommended RVU: **2.00**

Global Period: XXX Current Work RVU:

RUC Recommended RVU: **2.00**

CPT Descriptor: Electroencephalogram, continuous recording, physician or other qualified health care professional review of recorded events, analysis of spike and seizure detection, interpretation, and report, 2-12 hours of EEG recording; without video

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: An 8-year-old male with a history of absence seizures reports seizure freedom for the past year. A 24-hour EEG without video is ordered to confirm seizure freedom and assist physician to determine if medications can be reduced or withdrawn. The patient removes the electrode wires after 10 hours.

Percentage of Survey Respondents who found Vignette to be Typical: 81%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The physician or other qualified health care professional reviews indication for continuous EEG recording and results of prior EEGs if available, communicates with referring physician to clarify the reason for referral and EEG technologist to determine the appropriate activation techniques (hyperventilation, photic stimulation).

Description of Intra-Service Work: The physician or other qualified health care professional reviews patient log of previous seizures, EEG technologist log that includes clinical history, medication history, brain imaging findings if applicable, patient alertness and orientation during awake state and other EEG technologist notes/observations. In addition, seizure detection software is reviewed to identify time of possible seizures or events. The EEG recording is reviewed for artifacts, background activity, normal variants, sleep stages, interictal epileptiform abnormalities and/or ictal patterns suggestive of clinical or subclinical seizures. The field potential of each type of epileptiform activity is analyzed to determine localization. For each seizure or event, acquired EEG data is reviewed and the EEG recording before, during, and after the event is annotated, describing EEG findings for each recorded event. ECG is reviewed and interpretation is made. Relevant sections of EEG are annotated to be archived by EEG technologists. A report is prepared that contains interpretation of EEG background activity, interictal/ ictal abnormalities, localization of the seizures or events, and clinical correlation of findings.

Description of Post-Service Work: EEG report is finalized and uploaded into the EMR, EEG findings are discussed with patient's family and communicated to the referring physician.

Modifier -51 Exempt Status

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:

Is this new/revised procedure considered to be a new technology or service? Yes

TOP KEY REFERENCE SERVICE:

<u>Key CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
95811	XXX	2.60	RUC Time

CPT Descriptor Polysomnography; age 6 years or older, sleep staging with 4 or more additional parameters of sleep, with initiation of continuous positive airway pressure therapy or bilevel ventilation, attended by a technologist

SECOND HIGHEST KEY REFERENCE SERVICE:

<u>Key CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
95957	XXX	1.98	RUC Time

CPT Descriptor Digital analysis of electroencephalogram (EEG) (eg, for epileptic spike analysis)

KEY MPC COMPARISON CODES:

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

<u>MPC CPT Code 1</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>	<u>Most Recent Medicare Utilization</u>
95805	XXX	1.20	RUC Time	3,624

CPT Descriptor 1 Multiple sleep latency or maintenance of wakefulness testing, recording, analysis and interpretation of physiological measurements of sleep during multiple trials to assess sleepiness.

<u>MPC CPT Code 2</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>	<u>Most Recent Medicare Utilization</u>
99204	XXX	2.43	RUC Time	10,292,014

CPT Descriptor 2 Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 45 minutes are spent face-to-face with the patient and/or family.

<u>Other Reference CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
		0.00	

CPT Descriptor**RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:**

Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by percent distribution) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Top Key Reference Code: 20 % of respondents: 15.0 %

Number of respondents who choose 2nd Key Reference Code: 18 % of respondents: 13.5 %

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background:

In October 2016, 95951 was identified under the CMS High Volume screen, as services with total Medicare utilization of 10,000 or more that has increased by at least 100% from 2009 through 2014. As a result, the specialty societies (AAN, ACNS, NAEC) presented an Action Plan to the RAW at the January 2017 *recommending that 95951 and the family of long term monitoring codes (95950, 95951, 95953, 95956) be referred to the CPT Editorial Panel for needed changes, including code deletions, revision of code descriptors, and the addition of new codes to this family.* The medical specialties societies assert the 95951 utilization increase was partially due to incorrect coding, as the existing CPT code language for the long term monitoring family of codes is unclear (as it relates to the use of video and attended vs. unattended requirements.) The specialty societies also acknowledge that since the last review of 95951 was in August 1995 the family of codes should be revised to more accurately capture the services provided.

The specialty societies presented code change applications at the following CPT meetings: June 2017, September 2017, February 2018, and May 2018 when the Panel accepted the addition of 13 new codes for reporting the Technical Component of long-term EEG services (95700 – 95716) and 10 new codes for reporting the Professional Component of long-term EEG services (95717 – 95726.)

The physician services fall into 2 categories:

- 1.) Services where the physician has access to EEG and video (when recorded) data throughout the recording period and review and analysis of collected data occurs at specific time intervals such as 2-12 or 12 to 24 hours. These services are reported with 95717 – 95720.
- 2.) Services where the physician does not have access to EEG and video (when recorded) data during the recording period and the review and analysis occurs at the conclusion of the multiple day study. These services are reported with 95X18 – 95726.

Survey Sample and Process

A survey of physicians from the membership rosters of the American Academy of Neurology (AAN), American Clinical Neurophysiology Society (ACNS), and the National Association of Epilepsy Centers (NAEC) was conducted (2239 total members). There were 133 respondents for 95717, 81% of whom found the vignette to be typical and who performed a median of 20 services in the last year. An expert consensus panel (“panel”) composed of members of the participating societies familiar with the code in question and the RUC process reviewed the results. The panel confirmed the reliability of the survey.

Rationale for 95717:

The expert panel reviewed the entire new code family (95717 – 95726) of physician work services and kept the rank order of the family in mind when developing their recommendations. Factors that were taken into consideration were the inclusion or exclusion of video with the EEG recording, the typical vignette for each service, duration of the recording, and timing of report generation by the physician. The length of recording is based on a number of factors including the clinical indication for the test and the frequency of seizures. The expert panel believes that the 25th percentile work RVU and median physician time are an accurate representation of the intra service time and physician work associated with 95717.

Codes 95717 – 95720 involve physician review, with daily report generation even if the entire study extends over multiple days. 95717 is reported for a 2-12-hour EEG recoding *without* video. The 25th percentile RVU of 2.00 puts 95717 in the appropriate rank order within the code family as the panel is recommending 3.00 for 95X16, which is the physician service (and daily report generation) for a 24-hour recording without video. The 25th percentile is further supported given its relation to 95720 (recommended RVU of 4.50), the physician service for a 24-hour recoding *with* video, with daily report generation. The difference in patient vignette also supports the rank order of the family of codes.

Pre-service time: The expert panel agrees that the pre-service activities are consistent regardless of the duration of the long-term EEG recording period and the pre-service time should be the same for each code in the family 95717 – 95726. Upon reviewing the time survey data, the panel agrees the survey pre-service median time of 10 minute is an accurate reflection of those activities which includes review or prior EEG results and relevant patient notes to understand reason for EEG referral to identify the appropriate activation techniques. We are therefore recommending an increase from 8 minutes (survey median) to 10 minutes for the pre-service time to be consistent across the family.

Post service time: Similarly, the post service activities are consistent regardless of the duration of the long-term EEG recording period and the post-service time should be the same for each code in the family. The expert panel asserts the survey post-service median time of 10 minutes is an accurate reflection of those activities.

The panel further compared the survey 25th percentile wRVU and median times to the key reference services and other comparison codes to support the recommendations:

Key Reference Codes

15% of respondents chose 95811, wRVU of 2.60 and times of 15/35/15/65

14% of respondents chose 95957, wRVU of 1.98 and times 15/30/10/55

CPT	Descriptor	RVW	IWPUT	Total Time	PRE	INTRA	POST
95717	EEG, physician interpretation and report after each 2-12-hour period; without video	2.00	0.055	60	10	28	10
95811	Polysomnography; age 6 years or older, sleep staging with 4 or more additional parameters of sleep, with initiation of continuous positive airway pressure therapy or bilevel ventilation, attended by a technologist	2.60	0.0551	65	15	35	15
95957	Digital analysis of electroencephalogram (EEG) (eg, for epileptic spike analysis)	1.98	0.0957	55	15	30	10

MPC Comparison

CPT	Descriptor	RVW	IWPUT	Total Time	PRE	INTRA	POST
95805	Multiple sleep latency or maintenance of wakefulness testing, recording, analysis and interpretation of physiological measurements of sleep during multiple trials to assess sleepiness	1.20	0.0264	50	15	20	15
95717	EEG, physician interpretation and report after each 2-12-hour period; without video	2.00	0.055	48	10	28	10
99204	Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 45 minutes are spent face-to-face with the patient and/or family.	2.43	0.0698	45	5	30	10

Other Comparison Codes

The table below provides other comparison codes as support.

CPT	Descriptor	RVW	IWPUT	Total Time	PRE	INTRA	POST
95812	Electroencephalogram (EEG) extended monitoring; 41-60 minutes	1.08	0.0571	25	5	15	5
95957	Digital analysis of electroencephalogram (EEG) (eg, for epileptic spike analysis)	1.98	0.0473	55	15	30	10
95717	EEG, physician interpretation and report after each 2-12-hour period; without video	2.00	0.055	48	10	28	10

95812: Electroencephalogram (EEG) extended monitoring; 41-60 minutes. 95812 has a work RVU of 1.08 and work times of 5/15/5/25. 95812 is reported for a routine outpatient EEG with a short duration of testing (between 41 and 60 minutes) and was reviewed by the RUC in January 2016. The survey 25th percentile RVU of 2.00 and survey median time of 28 minutes places 95717 in proper rank order with the comparison code as the work involved in reviewing the

24-hour EEG recording is much greater than that of a 41-60-minute recording (also supported by the consistent ratio of both time and RVU between 95717 and the comparison code.)

95957: Digital analysis of electroencephalogram (EEG) (eg, for epileptic spike analysis). 95957 has a work RVU of 1.98 and work times of 15/30/10/55. 95957 is reported in addition to a long-term EEG monitoring code to capture the additional work associated with detailed analysis of spikes detected on the EEG recording. The code was reviewed by the RUC in January 2016. The survey 25th percentile RVU of 2.00 and survey median time of 28 minutes puts places 95717 in proper rank order when comparing the amount of data involved in the review of the 2-12-hour EEG recording and the sub-set of data reviewed with 95957.

Recommendations:

For 95717 the expert panel recommends a work RVU of 2.00; and a total time of 48 minutes (10 minutes pre /28 minutes intra /10 minutes post).

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 95956-52, 95953-52

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Neurology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 6369

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. We estimate the national utilization will be 3 times that of the Medicare utilization.

Specialty Neurology Frequency 6369 Percentage 100.00 %

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 2,123
 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. We estimate the specialty utilization based upon existing specialty break out in the RUC database.

Specialty Neurology	Frequency 2123	Percentage 100.00 %

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 95953

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION**

CPT Code: 95718 Tracking Number M17

Original Specialty Recommended RVU: **3.00**Presented Recommended RVU: **2.50**

Global Period: XXX Current Work RVU:

RUC Recommended RVU: **2.50**

CPT Descriptor: Electroencephalogram, continuous recording, physician or other qualified health care professional review of recorded events, analysis of spike and seizure detection, interpretation, and report, 2-12 hours of EEG recording; with video (VEEG)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: An 8-year-old male with a history of absence seizures reports seizure freedom for the past year. A 24-hour video EEG video is ordered to confirm seizure freedom and assist physician to determine if medications can be reduced or withdrawn. The study is concluded after 10 hours after sufficient data has been recorded.

Percentage of Survey Respondents who found Vignette to be Typical: 81%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The physician or other qualified health care professional reviews indication for continuous EEG recording and results of prior EEGs if available, communicates with referring physician to clarify the reason for referral and EEG technologist to determine the appropriate activation techniques (hyperventilation, photic stimulation).

Description of Intra-Service Work: The physician or other qualified health care professional reviews patient log of previous seizures, EEG technologist log that includes clinical history, medication history, brain imaging findings if applicable, patient alertness and orientation during awake state and other EEG technologist notes/observations. In addition, seizure detection software is reviewed to identify time of possible seizures or events. The EEG recording is reviewed for artifacts, background activity, normal variants, sleep stages, interictal epileptiform abnormalities and/or ictal patterns suggestive of clinical or subclinical seizures. The field potential of each type of epileptiform activity is analyzed to determine localization. For each seizure or event, acquired EEG and Video data is reviewed and the EEG recording and Video before, during, and after the event is annotated, describing EEG/Video findings for each recorded event. ECG is reviewed and interpretation is made. Relevant sections of EEG along with Video are annotated to be archived by EEG technologists. A report is prepared that contains interpretation of pertinent Video findings along with EEG background activity, interictal/ ictal abnormalities, localization of the seizures or events, and clinical correlation of findings.

Description of Post-Service Work: EEG report is finalized and uploaded into the EMR, Video-EEG findings are discussed with patient's family and with the referring physician in order to further determine the length of stay and/or medication adjustment/withdrawal.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

In October 2016, 95951 was identified under the CMS High Volume screen, as services with total Medicare utilization of 10,000 or more that has increased by at least 100% from 2009 through 2014. As a result, the specialty societies (AAN, ACNS, NAEC) presented an Action Plan to the RAW at the January 2017 recommending that 95951 and the family of long term monitoring codes (95950, 95951, 95953, 95956) be referred to the CPT Editorial Panel for needed changes, including code deletions, revision of code descriptors, and the addition of new codes to this family. The medical specialties societies assert the 95951 utilization increase was partially due to incorrect coding, as the existing CPT code language for the long term monitoring family of codes is unclear (as it relates to the use of video and attended vs. unattended requirements.) The specialty societies also acknowledge that since the last review of 95951 was in August 1995 the family of codes should be revised to more accurately capture the services provided.

The specialty societies presented code change applications at the following CPT meetings: June 2017, September 2017, February 2018, and May 2018 when the Panel accepted the addition of 13 new codes for reporting the Technical Component of long-term EEG services (95700 – 95716) and 10 new codes for reporting the Professional Component of long-term EEG services (95717 – 95726.)

The physician services fall into 2 categories:

- 1.) Services where the physician has access to EEG and video (when recorded) data throughout the recording period and review and analysis of collected data occurs at specific time intervals such as 2-12 or 12 to 24 hours. These services are reported with 95717 – 95720.
- 2.) Services where the physician does not have access to EEG and video (when recorded) data during the recording period and the review and analysis occurs at the conclusion of the multiple day study. These services are reported with 95721 – 95726.

Survey Sample and Process

A survey of physicians from the membership rosters of the American Academy of Neurology (AAN), American Clinical Neurophysiology Society (ACNS), and the National Association of Epilepsy Centers (NAEC) was conducted (2239 total members). There were 149 respondents for 95718, 79% of whom found the vignette to be typical and who performed a median of 50 services in the last year. An expert consensus panel (“panel”) composed of members of the participating societies familiar with the code in question and the RUC process reviewed the results. The panel confirmed the reliability of the survey.

Rationale for 95718:

The expert panel reviewed the entire new code family (95717 – 95726) of physician work services and kept the rank order of the family in mind when developing their recommendations. Factors that were taken into consideration were the inclusion or exclusion of video with the EEG recording, the typical vignette for each service, duration of the recording, and timing of report generation by the physician. The length of recording is based on a number of factors including the clinical indication for the test and the frequency of seizures. The expert panel believes that the median percentile work RVU and median physician time are an accurate representation of the intra service time and physician work associated with 95718.

Codes 95717 – 95720 involve physician review, with daily report generation even if the entire study extends over multiple days. 95718 is reported for a 2-12-hour EEG recording *with* video. The panel asserts that the 25th percentile RVU of 2.50 would create a rank order anomaly and instead is recommending the survey median of 3.00. The analysis of video time synced with the EEG recording requires additional work that is more accurately reflected in the IWP/UT with the median RVU. The median percentile is further supported when comparing it to 95719 (the physician service (and daily report generation) for a 24-hour recording without video, which we are also recommending 3.00 for. The expert panel asserts that a similar RVU for 95718 and 95719 is appropriate when considering the time and intensity of the two services in relation to each other.

Pre-service time: The expert panel agrees that the pre-service activities are consistent regardless of the duration of the long-term EEG recording period and the pre-service time should be the same for each code in the family 95717 – 95726. Upon reviewing the time survey data, the panel agrees the survey pre-service median time of 10 minute is an accurate reflection of those activities.

Post service time: Similarly, the post service activities are consistent regardless of the duration of the long-term EEG recording period and the post-service time should be the same for each code in the family. The expert panel asserts the survey post-service median time of 10 minutes is an accurate reflection of those activities.

The panel further compared the survey median percentile wRVU and median times to the key reference services and other comparison codes to support the recommendations:

Key Reference Codes

18% of respondents chose 99205, wRVU of 3.17 and times of 7/45/15/67

15% of respondents chose 99223, wRVU of 3.86 and times of 15/55/20/90

CPT	Descriptor	RVW	IWPUT	Total Time	PRE	INTRA	POST
95718	EEG, physician interpretation and report after each 2-12-hour period; with video	3.00	0.073	55	10	35	10
99205	Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 60 minutes are spent face-to-face with the patient and/or family.	3.17	0.0595	67	7	45	15
99223	Initial hospital care, per day, for the evaluation and management of a patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; and Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the problem(s) requiring admission are of high severity. Typically, 70 minutes are spent at the bedside and on the patient's hospital floor or unit.	3.86	0.0559	90	15	55	20

Other Comparison Codes

The table below provides other comparison codes as support.

CPT	Descriptor	RVW	IWPUT	Total Time	PRE	INTRA	POST
95812	Electroencephalogram (EEG) extended monitoring; 41-60 minutes	1.08	0.0571	25	5	15	5
95957	Digital analysis of electroencephalogram (EEG) (eg, for epileptic spike analysis)	1.98	0.0473	55	15	30	10
95718	EEG, physician interpretation and report after each 2-12-hour period; with video	3.00	0.073	55	10	35	10

95812: Electroencephalogram (EEG) extended monitoring; 41-60 minutes. 95812 has a work RVU of 1.08 and work times of 5/15/5/25. 95812 is reported for a routine outpatient EEG with a short duration of testing (between 41 and 60 minutes) and was reviewed by the RUC in January 2016. The survey 25th percentile RVU of 3.00 and survey median time of 40 minutes places 95719 in proper rank order with the comparison code as the work involved in reviewing the 24-hour EEG recording is much greater than that of a 41-61-minute recording (also supported by the consistent ratio of both time and RVU between 95719 and the comparison code.)

95957: Digital analysis of electroencephalogram (EEG) (eg, for epileptic spike analysis). 95957 has a work RVU of 1.98 and work times of 15/30/10/55. 95957 is reported in addition to a long-term EEG monitoring code to capture the additional work associated with detailed analysis of spikes detected on the EEG recording. The code was reviewed by the RUC in January 2016. The survey 25th percentile RVU and survey median time of 40 minutes puts places 95719 in proper rank order with the comparison code as the amount of data involved in the review of the 24-hour EEG recording is greater than that identified for additional spike detection (sub-set of data.)

Recommendations:

For 95718 the expert panel recommends a work RVU of 3.00; and a total time of 55 minutes (10 minutes pre /35 minutes intra /10 minutes post).

SERVICES REPORTED WITH MULTIPLE CPT CODES

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.

- ☐ Multiple codes are used to maintain consistency with similar codes.
☐ Historical precedents.
☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 95951-52

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
 If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Neurology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 72747

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. We estimate the national utilization will be 3 times that of the Medicare utilization.

Specialty Neurology Frequency 72747 Percentage 100.00 %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?

24,249 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. We estimate the specialty utilization based upon existing specialty break out in the RUC database.

Specialty Neurology Frequency 24249 Percentage 100.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

SUMMARY OF RECOMMENDATION**

CPT Code: 95719 Tracking Number M18

Original Specialty Recommended RVU: **3.00**Presented Recommended RVU: **3.00**

Global Period: XXX Current Work RVU:

RUC Recommended RVU: **3.00**

CPT Descriptor: Electroencephalogram, continuous recording, physician or other qualified health care professional review of recorded events, analysis of spike and seizure detection, each increment of greater than 12 hours, up to 26 hours of EEG recording, interpretation and report after each 24-hour period; without video

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A critically ill 56-year-old female with intracerebral hemorrhage has fluctuating mental status, with periods of unresponsiveness several times per day. A 24-hour EEG without video is ordered to determine if these episodes are epileptic seizures.

Percentage of Survey Respondents who found Vignette to be Typical: 79%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The physician or other qualified health care professional reviews indication for continuous EEG recording and results of prior EEGs if available, communicates with referring physician to clarify the reason for referral and EEG technologist to determine the appropriate activation techniques (photoc stimulation).

Description of Intra-Service Work: The physician or other qualified health care professional reviews EEG technologist log that includes clinical history, medication history including sedatives, brain imaging findings, patient alertness and orientation during awake state and other EEG technologist notes/observations. In addition, seizure detection software is reviewed to identify time of possible seizures or events. The EEG recording is reviewed for artifacts, background activity, normal variants, sleep stages, interictal epileptiform abnormalities and/or ictal patterns suggestive of clinical or subclinical seizures. The field potential of each type of epileptiform activity is analyzed to determine localization. For each seizure or event, acquired EEG is reviewed and the EEG recording before, during, and after the event is annotated, describing EEG findings for each recorded event. ECG is reviewed and interpretation is made. Relevant sections of EEG are annotated to be archived by EEG technologists. Each 24 hours the physician or QHP prepares a report that contains interpretation of EEG background activity, interictal/ ictal abnormalities, localization of the seizures or events, and clinical correlation of findings.

Description of Post-Service Work: EEG report is finalized and uploaded into the EMR, EEG findings are discussed with patient's family and communicated to the referring physician.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background:

In October 2016, 95951 was identified under the CMS High Volume screen, as services with total Medicare utilization of 10,000 or more that has increased by at least 100% from 2009 through 2014. As a result, the specialty societies (AAN, ACNS, NAEC) presented an Action Plan to the RAW at the January 2017 recommending that 95951 and the family of long term monitoring codes (95950, 95951, 95953, 95956) be referred to the CPT Editorial Panel for needed changes, including code deletions, revision of code descriptors, and the addition of new codes to this family. The medical specialties societies assert the 95951 utilization increase was partially due to incorrect coding, as the existing CPT code language for the long term monitoring family of codes is unclear (as it relates to the use of video and attended vs. unattended requirements.) The specialty societies also acknowledge that since the last review of 95951 was in August 1995 the family of codes should be revised to more accurately capture the services provided.

The specialty societies presented code change applications at the following CPT meetings: June 2017, September 2017, February 2018, and May 2018 when the Panel accepted the addition of 13 new codes for reporting the Technical Component of long-term EEG services (95700 – 95716) and 10 new codes for reporting the Professional Component of long-term EEG services (95717 – 95726.)

The physician services fall into 2 categories:

- 1.) Services where the physician has access to EEG and video (when recorded) data throughout the recording period and review and analysis of collected data occurs at specific time intervals such as 2-12 or 12 to 24 hours. These services are reported with 95717 – 95720.
- 2.) Services where the physician does not have access to EEG and video (when recorded) data during the recording period and the review and analysis occurs at the conclusion of the multiple day study. These services are reported with 95721 – 95726.

Survey Sample and Process

A survey of physicians from the membership rosters of the American Academy of Neurology (AAN), American Clinical Neurophysiology Society (ACNS), and the National Association of Epilepsy Centers (NAEC) was conducted (2239 total members). There were 133 respondents for 95719, 79% of whom found the vignette to be typical and who performed a median of 24 services in the last year. An expert consensus panel (“panel”) composed of members of the participating societies familiar with the code in question and the RUC process reviewed the results. The panel confirmed the reliability of the survey.

Rationale for 95719:

The expert panel reviewed the entire new code family (95717 – 95726) of physician work services and kept the rank order of the family in mind when developing their recommendations. Factors that were taken into consideration were the inclusion or exclusion of video with the EEG recording, the typical vignette for each service, duration of the recording, and timing of report generation by the physician. The length of recording is based on a number of factors including the clinical indication for the test and the frequency of seizures. The expert panel believes that the 25th percentile work RVU and median physician time are an accurate representation of the intra service time and physician work associated with 95719.

The code involves the physician review of a 24-hour EEG recoding *without* video, with daily report generation even if the entire study extends over multiple days. The 25th percentile RVU of 3.00 puts 95719 in the appropriate rank order within the code family as the panel is recommending 2.00 for 95717, which is the physician service for a 2-12 hour recording without video. The 25th percentile is further supported given its relation to 95720 (recommended RVU of 4.50), the physician service for a 24-hour recoding *with* video, with daily report generation.

Pre-service time: The expert panel agrees that the pre-service activities are consistent regardless of the duration of the long-term EEG recording period and the pre-service time should be the same for each code in the family 95717 –

95726. Upon reviewing the time survey data, the panel agrees the survey pre-service median time of 10 minute is an accurate reflection of those activities.

Post service time: Similarly, the post service activities are consistent regardless of the duration of the long term EEG recording period and the post-service time should be the same for each code in the family. The expert panel asserts the survey post-service median time of 10 minutes is an accurate reflection of those activities.

The panel further compared the survey 25th percentile wRVU and median times to the key reference services and other comparison codes to support the recommendations:

Key Reference Codes

20% of respondents chose 99223, wRVU 3.86 and times of 15/55/20/90

19% of respondents chose 99291, wRVU of 4.50 and times 15/40/15/70

CPT	Descriptor	RVW	IWPUT	Total Time	PRE	INTRA	POST
95719	EEG, physician interpretation and report after each 24-hour period; without video	3.00	0.064	60	10	40	10
99223	Initial hospital care, per day, for the evaluation and management of a patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; and Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the problem(s) requiring admission are of high severity. Typically, 70 minutes are spent at the bedside and on the patient's hospital floor or unit.	3.86	0.0559	90	15	55	20
99291	Critical care, evaluation and management of the critically ill or critically injured patient; first 30-74 minutes	4.50	0.0957	70	15	40	15

MPC Comparison

CPT	Descriptor	RVW	IWPUT	Total Time	PRE	INTRA	POST
99204	Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 45 minutes are spent face-to-face with the patient and/or family.	2.43	0.0698	45	5	30	10
95719	EEG, physician interpretation and report after each 24-hour period; without video	3.00	0.064	60	10	40	10
99223	Initial hospital care, per day, for the evaluation and management of a patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; and Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the problem(s) requiring admission are of high severity. Typically, 70 minutes are spent at the bedside and on the patient's hospital floor or unit.	3.86	0.0559	90	15	55	20

Other Comparison Codes

The table below provides other comparison codes as support.

CPT	Descriptor	RVW	IWPUT	Total Time	PRE	INTRA	POST
95812	Electroencephalogram (EEG) extended monitoring; 41-60 minutes	1.08	0.0571	25	5	15	5
95957	Digital analysis of electroencephalogram (EEG) (eg, for epileptic spike analysis)	1.98	0.0473	55	15	30	10
95719	EEG, physician interpretation and report after each 24-hour period; without video	3.00	0.0640	60	10	40	10

95812: Electroencephalogram (EEG) extended monitoring; 41-60 minutes. 95812 has a work RVU of 1.08 and work times of 5/15/5/25. 95812 is reported for a routine outpatient EEG with a short duration of testing (between 41 and 60 minutes) and was reviewed by the RUC in January 2016. The survey 25th percentile RVU of 3.00 and survey median time of 40 minutes places 95719 in proper rank order with the comparison code as the work involved in reviewing the 24-hour EEG recording is much greater than that of a 41-61-minute recording (also supported by the consistent ratio of both time and RVU between 95719 and the comparison code.)

95957: Digital analysis of electroencephalogram (EEG) (eg, for epileptic spike analysis). 95957 has a work RVU of 1.98 and work times of 15/30/10/55. 95957 is reported in addition to a long-term EEG monitoring code to capture the additional work associated with detailed analysis of spikes detected on the EEG recording. The code was reviewed by the RUC in January 2016. The survey 25th percentile RVU and survey median time of 40 minutes puts places 95719 in proper rank order with the comparison code as the amount of data involved in the review of the 24-hour EEG recording is greater than that identified for additional spike detection (sub-set of data.)

Recommendations:

For 95719 the expert panel recommends a work RVU of 3.00; and a total time of 60 minutes (10 minutes pre /40 minutes intra /10 minutes post).

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 95950, 95953, 95956

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Neurology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 13236

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. We estimate the national utilization will be 3 times that of the Medicare utilization.

Specialty Neurology Frequency 13236 Percentage 100.00 %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 4,412

If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. We estimate the specialty utilization based upon existing specialty break out in the RUC database.

Specialty Neurology Frequency 4412 Percentage 100.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 95953

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION**

CPT Code: 95720 Tracking Number M19

Original Specialty Recommended RVU: **4.50**Presented Recommended RVU: **4.50**

Global Period: XXX Current Work RVU:

RUC Recommended RVU: **3.86**

CPT Descriptor: Electroencephalogram, continuous recording, physician or other qualified health care professional review of recorded events, analysis of spike and seizure detection, each increment of greater than 12 hours, up to 26 hours of EEG recording, interpretation and report after each 24-hour period; with video (VEEG)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 40-year-old female with intractable epilepsy is admitted to the epilepsy monitoring unit for seizure characterization and pre-surgical evaluation. Anti-epileptic medications are withdrawn. Continuous video EEG recording is ordered to localize site of seizure onset.

Percentage of Survey Respondents who found Vignette to be Typical: 88%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The physician or other qualified health care professional reviews indication for continuous Video-EEG recording and results of prior EEGs if available, communicates with referring physician to clarify the indications for referral, and communicates with the EEG technologist to determine the appropriate routine activation techniques (photic stimulation, hyperventilation), the frequency at which they are performed (upon admission and/or daily) including and other activation techniques (sleep deprivation).

Description of Intra-Service Work: The physician or other qualified health care professional reviews patient log, EEG technologist log, EEG technologist technical description summary, nurses' notes and other medical team notes if appropriate. Seizure detection software is reviewed to identify possible seizures and/or spells. The EEG recording is reviewed for artifacts, background activity, sleep stages, and interictal epileptiform abnormalities. The field potential of each type of epileptiform activity is analyzed to determine localization. For each seizure or event, the video and EEG data is reviewed during the entire event to make correlations of changes in video and EEG to localize the site of seizure onset. Nursing or EEG technologist interaction with the patient during the seizure (nursing ictal and postictal assessment) is reviewed for language, motor and memory assessment, including vital signs. The recording before, during, and after each event, is annotated describing clinical and EEG findings and their relative timing. Clinical and EEG findings are correlated to determine localization of each seizure. Seizure features are compared to determine if seizures arise from multiple locations. Relevant sections of EEG and video are annotated to be archived by EEG technologists. Any electrode or recording issues, and any required modification to recording (eg, additional electrodes, or changes to seizure or spike detection parameters), are communicated to the EEG technologist when necessary. Each 24 hours the physician or QHP prepares a written report that contains interpretation of EEG background activity, interictal abnormalities, detailed description of electrographic seizure onset, evolution and offset in relation to detailed description of clinical manifestations based on Video data interpretation. Based on these data, localization of the seizures or events, and clinical correlation of findings are reported.

Description of Post-Service Work: EEG report is finalized and uploaded into the EMR. Video-EEG findings are discussed with the referring physician in order to further determine the length of stay and/or medication adjustment/withdrawal. A compilation of the video-EEG recording results from seizures recorded over days is compared to history, examination, imaging, and neuropsychological findings, and the compilation of these video-EEG results is used to write a report recommending to the neurosurgeon the specific region of cerebral cortex to resect as a treatment for medically intractable seizures.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUP analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background:

In October 2016, 95951 was identified under the CMS High Volume screen, as services with total Medicare utilization of 10,000 or more that has increased by at least 100% from 2009 through 2014. As a result, the specialty societies (AAN, ACNS, NAEC) presented an Action Plan to the RAW at the January 2017 *recommending that 95951 and the family of long term monitoring codes (95950, 95951, 95953, 95956) be referred to the CPT Editorial Panel for needed changes, including code deletions, revision of code descriptors, and the addition of new codes to this family.* The medical specialties societies assert the 95951 utilization increase was partially due to incorrect coding, as the existing CPT code language for the long term monitoring family of codes is unclear (as it relates to the use of video and attended vs. unattended requirements.) The specialty societies also acknowledge that since the last review of 95951 was in August 1995 the family of codes should be revised to more accurately capture the services provided.

The specialty societies presented code change applications at the following CPT meetings: June 2017, September 2017, February 2018, and May 2018 when the Panel accepted the addition of 13 new codes for reporting the Technical Component of long-term EEG services (95700 – 95716) and 10 new codes for reporting the Professional Component of long-term EEG services (95717 – 95726.)

The physician services fall into 2 categories:

- 1.) Services where the physician has access to EEG and video (when recorded) data throughout the recording period and review and analysis of collected data occurs at specific time intervals such as 2-12 or 12 to 24 hours. These services are reported with 95717 – 95720.
- 2.) Services where the physician does not have access to EEG and video (when recorded) data during the recording period and the review and analysis occurs at the conclusion of the multiple day study. These services are reported with 95721 – 95726.

Survey Sample and Process

A survey of physicians from the membership rosters of the American Academy of Neurology (AAN), American Clinical Neurophysiology Society (ACNS), and the National Association of Epilepsy Centers (NAEC) was conducted (2239 total members). There were 152 respondents for 95720, 88% of whom found the vignette to be typical and who performed a median of 100 services in the last year. An expert consensus panel (“panel”) composed of members of the participating societies familiar with the code in question and the RUC process reviewed the results. The panel confirmed the reliability of the survey.

Rationale for 95720:

The expert panel reviewed the entire new code family (95717 – 95726) of physician work services and kept the rank order of the family in mind when developing their recommendations. Factors that were taken into consideration were the inclusion or exclusion of video with the EEG recording, the typical vignette for each service, duration of the recording, and timing of report generation by the physician. The length of recording is based on a number of factors including the clinical indication for the test and the frequency of seizures. The expert panel believes that the median percentile work RVU and median physician time are an accurate representation of the intra service time and physician work associated with 95720.

Codes 95717 – 95720 involve physician review, with daily report generation even if the entire study extends over multiple days. 95720 is reported for a 24-hour EEG recording *with* video. The panel asserts that the 25th percentile RVU would create a rank order anomaly and instead is recommending a work RVU of 4.50 using a crosswalk code to support that recommendation. The 25th percentile RVU does not accurately reflect the work associated with reviewing the 24-hour recording (with video) given the acuity of the typical patient and the additional work involved when video is correlated with the EEG. The vignette for 95720 is for a pre-surgical evaluation, which often includes the withdrawal of anti-seizure medications to invoke seizures and identify the seizure focus (requiring detailed review as this is the principal determinant for the site for surgical brain resection.) The simultaneous review of video (with the EEG recording) and increased frequency of events given the typical patient, further supports the RVU recommendation, and fits the rank order of the family. An RVU of 4.50 is supported by crosswalk code 99184 (work RVU of 4.50 and times of 30/60/20/110) given the nearly identical intra-service times and IWP/UTs of 95720 and comparison code 99184.

Pre-service time: The expert panel agrees that the pre-service activities are consistent regardless of the duration of the long-term EEG recording period and the pre-service time should be the same for each code in the family 95717 –

95726. Upon reviewing the time survey data, the panel agrees the survey pre-service median time of 10 minute is an accurate reflection of those activities.

Post service time: Similarly, the post service activities are consistent regardless of the duration of the long-term EEG recording period and the post-service time should be the same for each code in the family. The expert panel asserts the survey post-service median time of 10 minutes is an accurate reflection of those activities.

The panel further compared the recommended RVU of 4.50 and median times to the key reference services and other comparison codes to support the recommendations:

Key Reference Codes

22% of respondents chose 99476, wRVU of 6.75 and times of 20/65/20/105

16% of respondents chose 99291, wRVU of 4.50 and times of 15/40/15/70

CPT	Descriptor	RVW	IWPUT	Total Time	PRE	INTRA	POST
95720	EEG, physician interpretation and report after each 24-hour period; with video	4.50	0.055	75	10	55	10
99291	Critical care, evaluation and management of the critically ill or critically injured patient; first 30-74 minutes	4.50	0.0957	70	15	40	15
99476	Subsequent inpatient pediatric critical care, per day, for the evaluation and management of a critically ill infant or young child, 2 through 5 years of age	6.75	0.0901	105	20	65	20

MPC Comparison

CPT	Descriptor	RVW	IWPUT	Total Time	PRE	INTRA	POST
99223	Initial hospital care, per day, for the evaluation and management of a patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; and Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the problem(s) requiring admission are of high severity. Typically, 70 minutes are spent at the bedside and on the patient's hospital floor or unit.	3.86	0.0559	90	15	55	20
95720	EEG, physician interpretation and report after each 24-hour period; with video	4.50	0.055	75	10	55	10
99291	Critical care, evaluation and management of the critically ill or critically injured patient; first 30-74 minutes	4.50	0.0957	70	15	40	15

Other Comparison Codes

The table below provides other comparison codes as support.

CPT	Descriptor	RVW	IWPUT	Total Time	PRE	INTRA	POST
95957	Digital analysis of electroencephalogram (EEG) (eg, for epileptic spike analysis)	1.98	0.0473	55	15	30	10
95720	EEG, physician interpretation and report after each 24-hour period; with video	4.50	0.055	75	10	55	10

CPT	Descriptor	RVW	IWPUT	Total Time	PRE	INTRA	POST
99184	Initiation of selective head or total body hypothermia in the critically ill neonate, includes appropriate patient selection by review of clinical, imaging and laboratory data, confirmation of esophageal temperature probe location, evaluation of amplitude EEG, supervision of controlled hypothermia, and assessment of patient tolerance of cooling	4.50	0.0563	110	30	60	20

95957: Digital analysis of electroencephalogram (EEG) (eg, for epileptic spike analysis). 95957 has a work RVU of 1.98 and work times of 15/30/10/55. 95957 is reported in addition to a long-term EEG monitoring code to capture the additional work associated with detailed analysis of spikes detected on the EEG recording during a pre-surgical evaluation. The code was reviewed by the RUC in January 2016. The recommended RVU of 4.50 survey median time of 55 minutes puts places 95720 in proper rank order with the comparison code and is supported by the consistent ratio of both time and RVU between 95720 and 95957.)

99184: Initiation of selective head or total body hypothermia in the critically ill neonate, includes appropriate patient selection by review of clinical, imaging and laboratory data, confirmation of esophageal temperature probe location, evaluation of amplitude EEG, supervision of controlled hypothermia, and assessment of patient tolerance of cooling. 99184 has a work RVU of 4.50 and times of 30/50/20/110. The code was reviewed by the RUC in January 2014. The panel asserts crosswalk code strongly 99184 supports the recommended RVU of 4.50 given the nearly identical intra-service times and IWPUTs of 95720 and 99184.

Recommendations:

For 95720 the expert panel recommends a work RVU of 4.50; and a total time of 75 minutes (10 minutes pre /55 minutes intra /10 minutes post).

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 95950, 95951

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Neurology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 290985

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. We estimate the national utilization will be 3 times that of the Medicare utilization.

Specialty Neurology Frequency 290985 Percentage 100.00 %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?

96,995 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. We estimate the specialty utilization based upon existing specialty break out in the RUC database.

Specialty Neurology Frequency 96995 Percentage 100.00 %

Specialty Frequency Percentage %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION**

CPT Code: 95721 Tracking Number M20

Original Specialty Recommended RVU: **3.86**Presented Recommended RVU: **3.86**

Global Period: XXX Current Work RVU:

RUC Recommended RVU: **3.86**

CPT Descriptor: Electroencephalogram, continuous recording, physician or other qualified health care professional review of recorded events, analysis of spike and seizure detection, interpretation, and summary report, complete study; greater than 36 hours, up to 60 hours of EEG recording, without video

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 14-year-old male with a history of absence seizures experiences staring spells nearly daily. 48-hour EEG without video recordings is ordered to determine if the patients staring spells are seizures.

Percentage of Survey Respondents who found Vignette to be Typical: 82%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The physician or other qualified health care professional reviews indication for continuous EEG recording and results of prior EEGs if available, communicates with referring physician to clarify the indications for referral and EEG technologist to determine the appropriate activation techniques (photoc stimulation, hyperventilation).

Description of Intra-Service Work: The physician or other qualified health care professional reviews patient log, EEG technologist log, EEG technologist technical description summary, including medication history. Seizure detection software is reviewed to identify possible seizures and/or spells. The EEG recording is reviewed for artifacts, background activity, sleep stages and interictal epileptiform abnormalities. The field potential of each type of epileptiform activity is analyzed to determine localization. For each seizure or event EEG data is reviewed during the entire event to make correlations of changes and EEG to localize the site of seizure onset. The recording before, during, and after each event, is annotated describing EEG findings. Clinical and EEG findings are correlated to determine localization of each seizure. Seizure features are compared to determine if seizures arise from multiple locations. ECG is reviewed and interpretation is made. Relevant sections of EEG are annotated to be archived by EEG technologists. At the end of 48 hours of testing, the physician or QHP prepares a written report that contains interpretation of EEG background activity, interictal abnormalities, detailed description of electrographic seizure onset, evolution and offset and clinical correlation of findings for each 24 hours of recording.

Description of Post-Service Work: EEG report is finalized and uploaded into the EMR. EEG findings are discussed with the referring physician

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background:

In October 2016, 95951 was identified under the CMS High Volume screen, as services with total Medicare utilization of 10,000 or more that has increased by at least 100% from 2009 through 2014. As a result, the specialty societies (AAN, ACNS, NAEC) presented an Action Plan to the RAW at the January 2017 *recommending that 95951 and the family of long term monitoring codes (95950, 95951, 95953, 95956) be referred to the CPT Editorial Panel for needed changes, including code deletions, revision of code descriptors, and the addition of new codes to this family.* The medical specialties societies assert the 95951 utilization increase was partially due to incorrect coding, as the existing CPT code language for the long term monitoring family of codes is unclear (as it relates to the use of video and attended vs. unattended requirements.) The specialty societies also acknowledge that since the last review of 95951 was in August 1995 the family of codes should be revised to more accurately capture the services provided.

The specialty societies presented code change applications at the following CPT meetings: June 2017, September 2017, February 2018, and May 2018 when the Panel accepted the addition of 13 new codes for reporting the Technical Component of long-term EEG services (95700 – 95716) and 10 new codes for reporting the Professional Component of long-term EEG services (95717 – 95726.)

The physician services fall into 2 categories:

- 1.) Services where the physician has access to EEG and video (when recorded) data throughout the recording period and review and analysis of collected data occurs at specific time intervals such as 2-12 or 12 to 24 hours. These services are reported with 95717 – 95720.
- 2.) Services where the physician does not have access to EEG and video (when recorded) data during the recording period and the review and analysis occurs at the conclusion of the multiple day study. These services are reported with 95721 – 95726.

Survey Sample and Process

A survey of physicians from the membership rosters of the American Academy of Neurology (AAN), American Clinical Neurophysiology Society (ACNS), and the National Association of Epilepsy Centers (NAEC) was conducted (2239 total members). There were 133 respondents for 95721, 82% of whom found the vignette to be typical and who performed a median of 15 services in the last year. An expert consensus panel (“panel”) composed of members of the participating societies familiar with the code in question and the RUC process reviewed the results. The panel confirmed the reliability of the survey.

Rationale for 95721:

The expert panel reviewed the entire new code family (95717 – 95726) of physician work services and kept the rank order of the family in mind when developing their recommendations. Factors that were taken into consideration were the inclusion or exclusion of video with the EEG recording, the typical vignette for each service, duration of the recording, and timing of report generation by the physician. The length of recording is based on a number of factors including the clinical indication for the test and the frequency of seizures. The expert panel believes that the 25th percentile work RVU and median physician time are an accurate representation of the intra service time and physician work associated with 95721.

When reviewing the survey data for services with a single review and report generation at the conclusion of the recording period (95721 – 95726) the expert panel looked to 24-hour recoding with daily review codes (95719-without video and 95720-with video) to establish rank order. **The panel noted that the IWPUT from the 25% percentile RVU of 3.86 and median time of 65 minutes supports the assertion that the physician work of codes 95721 – 95726 (review and report generation at the conclusion of the study) is typically less intense than the work of codes 95717 – 95720 (daily review and report generation). The survey patient vignettes also support this assertion.**

95721 involves a *single physician review and report generation at the conclusion* of a 36-60-hour EEG recoding *without* video. The 25 percentile RVU of 3.86 puts 95721 in the appropriate rank order within the code family as the panel is recommending 3.00 for 95719, which is the physician service for a 24-hour recording without video. The 25th percentile is further supported when comparing to MPC code 99223 which has the same work RVU and nearly identical IWPUTs.

Pre-service time: The expert panel agrees that the pre-service activities are consistent regardless of the duration of the long-term EEG recording period and the pre-service time should be the same for each code in the family 95717 –

95726. Upon reviewing the time survey data, the panel agrees the survey pre-service median time of 10 minute is an accurate reflection of those activities.

Post service time: Similarly, the post service activities are consistent regardless of the duration of the long-term EEG recording period and the post-service time should be the same for each code in the family. The expert panel asserts the survey post-service median time of 15 minutes is not an accurate reflection of time required for those activities. We are therefore recommending a decrease from 15 minutes (survey median) to 10 minutes for the post-service time to be consistent across the family.

The panel further compared the survey 25th percentile wRVU, and median intra times to the key reference services and MPC codes to support the recommendations:

Key Reference Codes

21% of respondents chose 99291, wRVU of 4.50 and times 15/40/15/70

18% of respondents chose 99476, wRVU of 6.75 and times 20/65/10/105

CPT	Descriptor	RVW	IWPUT	Total Time	PRE	INTRA	POST
95721	EEG, physician interpretation and report at conclusion of recording, 36-60 hours, without video	3.86	0.052	90	10	65	10
99291	Critical care, evaluation and management of the critically ill or critically injured patient; first 30-74 minutes	4.50	0.0957	70	15	40	15
99476	Subsequent inpatient pediatric critical care, per day, for the evaluation and management of a critically ill infant or young child, 2 through 5 years of age	6.75	0.0901	105	20	65	20

MPC Comparison

CPT	Descriptor	RVW	IWPUT	Total Time	PRE	INTRA	POST
95810	Polysomnography; age 6 years or older, sleep staging with 4 or more additional parameters of sleep, attended by a technologist	2.50	0.050	66.5	15	36.5	15
95721	EEG, physician interpretation and report at conclusion of recording, 36-60 hours, without video	3.86	0.052	90	10	65	10
99223	Initial hospital care, per day, for the evaluation and management of a patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; and Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the problem(s) requiring admission are of high severity. Typically, 70 minutes are spent at the bedside and on the patient's hospital floor or unit.	3.86	0.0559	90	15	55	20

Recommendations:

For 95721 the expert panel recommends a work RVU of 3.86; and a total time of 85 minutes (10 minutes pre /65 minutes intra /10 minutes post).

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 95953

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION**

CPT Code: 95722 Tracking Number M21

Original Specialty Recommended RVU: **4.70**Presented Recommended RVU: **4.70**

Global Period: XXX Current Work RVU:

RUC Recommended RVU: **4.70**

CPT Descriptor: Electroencephalogram, continuous recording, physician or other qualified health care professional review of recorded events, analysis of spike and seizure detection, interpretation, and summary report, complete study; greater than 36 hours, up to 60 hours of EEG recording, with video (VEEG)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 35-year-old male with a history of focal epilepsy has episodes of amnesia nearly daily. 48-hour EEG with video recordings is ordered to determine if the patient's amnesic episodes are seizures and to determine the clinical manifestations of the seizures.

Percentage of Survey Respondents who found Vignette to be Typical: 93%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The physician or other qualified health care professional reviews indication for continuous Video-EEG recording and results of prior EEGs if available, communicates with referring physician to clarify the indications for referral and EEG technologist to determine the appropriate activation techniques (photic stimulation, hyperventilation).

Description of Intra-Service Work: The physician or other qualified health care professional reviews patient log, EEG technologist log, EEG technologist technical description summary, including medication history. Seizure detection software is reviewed to identify possible seizures and/or spells. The EEG recording is reviewed for artifacts, background activity, sleep stages and interictal epileptiform abnormalities. The field potential of each type of epileptiform activity is analyzed to determine localization. For each seizure or event Video and EEG data is reviewed during the entire event to make correlations of changes and EEG to localize the site of seizure onset. The recording before, during, and after each event, is annotated describing EEG findings. Clinical and EEG findings are correlated to determine localization of each seizure. Seizure features are compared to determine if seizures arise from multiple locations. Relevant sections of EEG and Video are annotated to be archived by EEG technologists. At the end of the 48 hours of testing the physician or QHP prepares a written report that contains interpretation of pertinent Video findings along with EEG background activity, interictal abnormalities, detailed description of electrographic seizure onset, evolution and offset and clinical correlation of findings for each 24 hours of recording.

Description of Post-Service Work: EEG report is finalized and uploaded into the EMR. Video EEG findings are discussed with the referring physician.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background:

In October 2016, 95951 was identified under the CMS High Volume screen, as services with total Medicare utilization of 10,000 or more that has increased by at least 100% from 2009 through 2014. As a result, the specialty societies (AAN, ACNS, NAEC) presented an Action Plan to the RAW at the January 2017 *recommending that 95951 and the family of long term monitoring codes (95950, 95951, 95953, 95956) be referred to the CPT Editorial Panel for needed changes, including code deletions, revision of code descriptors, and the addition of new codes to this family.* The medical specialties societies assert the 95951 utilization increase was partially due to incorrect coding, as the existing CPT code language for the long term monitoring family of codes is unclear (as it relates to the use of video and attended vs. unattended requirements.) The specialty societies also acknowledge that since the last review of 95951 was in August 1995 the family of codes should be revised to more accurately capture the services provided.

The specialty societies presented code change applications at the following CPT meetings: June 2017, September 2017, February 2018, and May 2018 when the Panel accepted the addition of 13 new codes for reporting the Technical Component of long-term EEG services (95700 – 95716) and 10 new codes for reporting the Professional Component of long-term EEG services (95717 – 95726.)

The physician services fall into 2 categories:

- 1.) Services where the physician has access to EEG and video (when recorded) data throughout the recording period and review and analysis of collected data occurs at specific time intervals such as 2-12 or 12 to 24 hours. These services are reported with 95717 – 95720.
- 2.) Services where the physician does not have access to EEG and video (when recorded) data during the recording period and the review and analysis occurs at the conclusion of the multiple day study. These services are reported with 95721 – 95726.

Survey Sample and Process

A survey of physicians from the membership rosters of the American Academy of Neurology (AAN), American Clinical Neurophysiology Society (ACNS), and the National Association of Epilepsy Centers (NAEC) was conducted (2239 total members). There were 145 respondents for 95722, 93% of whom found the vignette to be typical and who performed a median of 50 services in the last year. An expert consensus panel (“panel”) composed of members of the participating societies familiar with the code in question and the RUC process reviewed the results. The panel confirmed the reliability of the survey.

Rationale for 95722

The expert panel reviewed the entire new code family (95717 – 95726) of physician work services and kept the rank order of the family in mind when developing their recommendations. Factors that were taken into consideration were the inclusion or exclusion of video with the EEG recording, the typical vignette for each service, duration of the recording, and timing of report generation by the physician. The length of recording is based on a number of factors including the clinical indication for the test and the frequency of seizures. The expert panel believes that the 25th percentile work RVU and median physician time are an accurate representation of the intra service time and physician work associated with 95722.

When reviewing the survey data for services with a single review and report generation at the conclusion of the recording period (95721 – 95726) the expert panel looked to 24-hour recoding with daily review codes (95719-without video and 95720-with video) to establish rank order. **The panel noted that the IWPUR from the 25% percentile RVU of 4.70 and median time of 80 minutes supports the assertion that the physician work of codes 95721 – 95726 (review and report generation at the conclusion of the study) is typically less intense than the work of codes 95717 – 95720 (daily review and report generation). The survey patient vignettes also support this assertion.**

95722 involves a *single physician review and report generation at the conclusion* of 36-60-hour EEG recoding, *with* video. The 25 percentile RVU of 4.70 puts 95722 in the appropriate rank order within the code family as the panel is recommending 4.50 for 95720, which is the physician service for a 24-hour recording with video. The recommendation also maintains a consistent IWPUR for those codes with the physician review and report at the conclusion of the recording. The 25th percentile is further supported when comparing the intra service time and IWPUR of 95X22 to key reference service 99291 (also an MPC code) in relation to each other.

Pre-service time: The expert panel agrees that the pre-service activities are consistent regardless of the duration of the long-term EEG recording period and the pre-service time should be the same for each code in the family 95717 –

95726. Upon reviewing the time survey data, the panel agrees the survey pre-service median time of 12 minute is not an accurate reflection of those activities. We are therefore recommending a decrease from 12 minutes (survey median) to 10 minutes for the pre-service time to be consistent across the family.

Post service time: Similarly, the post service activities are consistent regardless of the duration of the long-term EEG recording period and the post-service time should be the same for each code in the family. The expert panel asserts the survey post-service median time of 15 minutes is not an accurate reflection of time required for those activities. We are therefore recommending a decrease from 15 minutes (survey median) to 10 minutes for the post-service time to be consistent across the family.

The panel further compared the survey 25th percentile wRVU and median intra times to the key reference services and MPC codes to support the recommendations:

Key Reference Codes

36% of respondents chose 95965, wRVU of 7.99 and times 20/180/30/230

19% of respondents chose 99291, wRVU of 4.50 and times 15/40/15/70

CPT	Descriptor	RVW	IWPUT	Total Time	PRE	INTRA	POST

95722	EEG, physician interpretation and report at conclusion of recording, 36-60 hours, with video	4.70	0.053	100	10	80	10
95965	Magnetoencephalography (MEG), recording and analysis; for spontaneous brain magnetic activity (eg, epileptic cerebral cortex localization)	7.99	0.0382	230	20	180	30

MPC Comparison

CPT	Descriptor	RVW	IWPUT	Total Time	PRE	INTRA	POST
99223	Initial hospital care, per day, for the evaluation and management of a patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; and Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the problem(s) requiring admission are of high severity. Typically, 70 minutes are spent at the bedside and on the patient's hospital floor or unit.	3.86	0.0559	90	15	55	20
95722	EEG, physician interpretation and report at conclusion of recording, 36-60 hours, with video	4.70	0.053	100	10	80	10
99291	Critical care, evaluation and management of the critically ill or critically injured patient; first 30-74 minutes	4.50	0.0957	70	15	40	15

Recommendations:

For 95722 the expert panel recommends a work RVU of 4.70; and a total time of 100 minutes (10 minutes pre /80 minutes intra /10 minutes post).

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS SUMMARY OF RECOMMENDATION

CPT Code: 95723 Tracking Number M22

Original Specialty Recommended RVU: **4.75**Presented Recommended RVU: **4.75**

Global Period: XXX Current Work RVU:

RUC Recommended RVU: **4.75**

CPT Descriptor: Electroencephalogram, continuous recording, physician or other qualified health care professional review of recorded events, analysis of spike and seizure detection, interpretation, and summary report, complete study; greater than 60 hours, up to 84 hours of EEG recording, without video

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 14-year-old male with a history of absence seizures experiences staring spells 2-3 times per week. 72-hour EEG without video recordings is ordered to determine if the patients staring spells are seizures.

Percentage of Survey Respondents who found Vignette to be Typical: 84%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The physician or other qualified health care professional reviews indication for continuous EEG recording and results of prior EEGs if available, communicates with referring physician to clarify the indications for referral and EEG technologist to determine the appropriate activation techniques (photoc stimulation, hyperventilation).

Description of Intra-Service Work: The physician or other qualified health care professional reviews patient log, EEG technologist log, EEG technologist technical description summary, including medication history. Seizure detection software is reviewed to identify possible seizures and/or spells. The EEG recording is reviewed for artifacts, background activity, sleep stages and interictal epileptiform abnormalities. The field potential of each type of epileptiform activity is analyzed to determine localization. For each seizure or event the EEG data is reviewed during the entire event to make correlations of changes and EEG to localize the site of seizure onset. The recording before, during, and after each event, is annotated describing EEG findings. Clinical and EEG findings are correlated to determine localization of each seizure. Seizure features are compared to determine if seizures arise from multiple locations. ECG is reviewed and interpretation is made. Relevant sections of EEG are annotated to be archived by EEG technologists. At the end of 72 hours of testing, the physician or QHP prepares a written report that contains interpretation of EEG background activity, interictal abnormalities, detailed description of electrographic seizure onset, evolution and offset and clinical correlation of findings for each 24 hours of recording.

Description of Post-Service Work: EEG report is finalized and uploaded into the EMR. EEG findings are discussed with the referring physician.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background:

In October 2016, 95951 was identified under the CMS High Volume screen, as services with total Medicare utilization of 10,000 or more that has increased by at least 100% from 2009 through 2014. As a result, the specialty societies (AAN, ACNS, NAEC) presented an Action Plan to the RAW at the January 2017 recommending that 95951 and the

family of long term monitoring codes (95950, 95951, 95953, 95956) be referred to the CPT Editorial Panel for needed changes, including code deletions, revision of code descriptors, and the addition of new codes to this family. The medical specialties societies assert the 95951 utilization increase was partially due to incorrect coding, as the existing CPT code language for the long term monitoring family of codes is unclear (as it relates to the use of video and attended vs. unattended requirements.) The specialty societies also acknowledge that since the last review of 95951 was in August 1995 the family of codes should be revised to more accurately capture the services provided.

The specialty societies presented code change applications at the following CPT meetings: June 2017, September 2017, February 2018, and May 2018 when the Panel accepted the addition of 13 new codes for reporting the Technical Component of long-term EEG services (95700 – 95716) and 10 new codes for reporting the Professional Component of long-term EEG services (95717 – 95726.)

The physician services fall into 2 categories:

- 1.) Services where the physician has access to EEG and video (when recorded) data throughout the recording period and review and analysis of collected data occurs at specific time intervals such as 2-12 or 12 to 24 hours. These services are reported with 95717 – 95720.
- 2.) Services where the physician does not have access to EEG and video (when recorded) data during the recording period and the review and analysis occurs at the conclusion of the multiple day study. These services are reported with 95721 – 95726.

Survey Sample and Process

A survey of physicians from the membership rosters of the American Academy of Neurology (AAN), American Clinical Neurophysiology Society (ACNS), and the National Association of Epilepsy Centers (NAEC) was conducted (2239 total members). There were 132 respondents for 95723, 84% of whom found the vignette to be typical and who performed a median of 10 services in the last year. An expert consensus panel (“panel”) composed of members of the participating societies familiar with the code in question and the RUC process reviewed the results. The panel confirmed the reliability of the survey.

Rationale for 95723

The expert panel reviewed the entire new code family (95717 – 95726) of physician work services and kept the rank order of the family in mind when developing their recommendations. Factors that were taken into consideration were the inclusion or exclusion of video with the EEG recording, the typical vignette for each service, duration of the recording, and timing of report generation by the physician. The length of recording is based on a number of factors including the clinical indication for the test and the frequency of seizures. The expert panel believes that the 25th percentile work RVU and median physician time are an accurate representation of the intra service time and physician work associated with 95723.

When reviewing the survey data for services with a single review and report generation at the conclusion of the recording period (95721 – 95726) the expert panel looked to 24-hour recoding with daily review codes (95X16-without video and 95720-with video) to establish rank order. **The panel noted that the IWPOT from the 25% percentile RVU of 4.75 and median time of 90 minutes supports the assertion that the physician work of codes 95721 – 95726 (review and report generation at the conclusion of the study) is typically less intense than the work of codes 95717 – 95720 (daily review and report generation). The survey patient vignettes also support this assertion.**

95723 involves a *single physician review and report generation at the conclusion* of a 60-84-hour EEG recoding *without* video. The 25th percentile RVU of 4.75 puts 95723 in the appropriate rank order within the code family and maintains a consistent IWPOT for those codes with the physician review and report at the conclusion of the recording. The 25th percentile is further supported when comparing the intra service time and IWPOT of 95723 to MPC code 99291 in relation to each other.

Pre-service time: The expert panel agrees that the pre-service activities are consistent regardless of the duration of the long-term EEG recording period and the pre-service time should be the same for each code in the family 95717 – 95726. Upon reviewing the time survey data, the panel agrees the survey pre-service median time of 12 minute is not an accurate reflection of those activities. We are therefore recommending a decrease from 12 minutes (survey median) to 10 minutes for the pre-service time to be consistent across the family.

Post service time: Similarly, the post service activities are consistent regardless of the duration of the long-term EEG recording period and the post-service time should be the same for each code in the family. The expert panel asserts the survey post-service median time of 15.5 minutes is not an accurate reflection of time required for those activities. We

are therefore recommending a decrease from 15.5 minutes (survey median) to 10 minutes for the post-service time to be consistent across the family.

The panel further compared the survey 25th percentile wRVU and median intra times to the key reference services and MPC codes to support the recommendations:

Key Reference Codes

30% of respondents chose 95965, wRVU of 7.99 and times 20/180/30/230

21% of respondents chose 99476, wRVU of 6.75 and times 20/65/10/105

CPT	Descriptor	RVW	IWPUT	Total Time	PRE	INTRA	POST
95723	EEG, physician interpretation and report at conclusion of recording, 60-84 hours, without video	4.75	0.048	110	10	90	10
99476	Subsequent inpatient pediatric critical care, per day, for the evaluation and management of a critically ill infant or young child, 2 through 5 years of age	6.75	0.0901	105	20	65	20
95965	Magnetoencephalography (MEG), recording and analysis; for spontaneous brain magnetic activity (eg, epileptic cerebral cortex localization)	7.99	0.0382	230	20	180	30

MPC Comparison

CPT	Descriptor	RVW	IWPUT	Total Time	PRE	INTRA	POST
99291	Critical care, evaluation and management of the critically ill or critically injured patient; first 30-74 minutes	4.50	0.0957	70	15	40	15
95723	EEG, physician interpretation and report at conclusion of recording, 60-84 hours, without video	4.75	0.048	110	10	90	10
36475	Endovenous ablation therapy of incompetent vein, extremity, inclusive of all imaging guidance and monitoring, percutaneous, radiofrequency; first vein treated	5.30	0.096	94	34	45	15

Recommendations:

For 95723 the expert panel recommends a work RVU of 4.75; and a total time of 110 minutes (10 minutes pre /90 minutes intra /10 minutes post).

SERVICES REPORTED WITH MULTIPLE CPT CODES

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

- Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is

involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 95953

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Neurology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 17889

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. We estimate the national utilization will be 3 times that of the Medicare utilization.

Specialty Neurology Frequency 17889 Percentage 100.00 %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 5,963

If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. We estimate the specialty utilization based upon existing specialty break out in the RUC database.

Specialty Neurology Frequency 5963 Percentage 100.00 %

Specialty Frequency Percentage %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 95953

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION**

CPT Code: 95724 Tracking Number M23

Original Specialty Recommended RVU: **6.00**Presented Recommended RVU: **6.00**

Global Period: XXX Current Work RVU:

RUC Recommended RVU: **6.00**

CPT Descriptor: Electroencephalogram, continuous recording, physician or other qualified health care professional review of recorded events, analysis of spike and seizure detection, interpretation, and summary report, complete study; greater than 60 hours, up to 84 hours of EEG recording, with video (VEEG)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 35-year-old male with a history of focal epilepsy has episodes of amnesia 2-3 times per week. 72-hour EEG with video recordings is ordered to determine if the patient's amnesic episodes are seizures and to determine the clinical manifestations of the seizures.

Percentage of Survey Respondents who found Vignette to be Typical: 93%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The physician or other qualified health care professional reviews indication for continuous Video-EEG recording and results of prior EEGs if available, communicates with referring physician to clarify the indications for referral and EEG technologist to determine the appropriate activation techniques (photic stimulation, hyperventilation).

Description of Intra-Service Work: The physician or other qualified health care professional reviews patient log, EEG technologist log, EEG technologist technical description summary, including medication history. Seizure detection software is reviewed to identify possible seizures and/or spells. The EEG recording is reviewed for artifacts, background activity, sleep stages and interictal epileptiform abnormalities. The field potential of each type of epileptiform activity is analyzed to determine localization. For each seizure or event Video and EEG data is reviewed during the entire event to make correlations of changes and EEG to localize the site of seizure onset. The recording before, during, and after each event, is annotated describing EEG findings. Clinical and EEG findings are correlated to determine localization of each seizure. Seizure features are compared to determine if seizures arise from multiple locations. Relevant sections of EEG and Video are annotated to be archived by EEG technologists. At the end of the 72 hours of testing the physician or QHP prepares a written report that contains interpretation of pertinent Video findings along with EEG background activity, interictal abnormalities, detailed description of electrographic seizure onset, evolution and offset and clinical correlation of findings for each 24 hours of recording.

Description of Post-Service Work: EEG report is finalized and uploaded into the EMR. Video EEG findings are discussed with the referring physician.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background:

In October 2016, 95951 was identified under the CMS High Volume screen, as services with total Medicare utilization of 10,000 or more that has increased by at least 100% from 2009 through 2014. As a result, the specialty societies (AAN, ACNS, NAEC) presented an Action Plan to the RAW at the January 2017 *recommending that 95951 and the family of long term monitoring codes (95950, 95951, 95953, 95956) be referred to the CPT Editorial Panel for needed changes, including code deletions, revision of code descriptors, and the addition of new codes to this family.* The medical specialties societies assert the 95951 utilization increase was partially due to incorrect coding, as the existing CPT code language for the long term monitoring family of codes is unclear (as it relates to the use of video and attended vs. unattended requirements.) The specialty societies also acknowledge that since the last review of 95951 was in August 1995 the family of codes should be revised to more accurately capture the services provided.

The specialty societies presented code change applications at the following CPT meetings: June 2017, September 2017, February 2018, and May 2018 when the Panel accepted the addition of 13 new codes for reporting the Technical Component of long-term EEG services (95700 – 95716) and 10 new codes for reporting the Professional Component of long-term EEG services (95717 – 95726.)

The physician services fall into 2 categories:

- 1.) Services where the physician has access to EEG and video (when recorded) data throughout the recording period and review and analysis of collected data occurs at specific time intervals such as 2-12 or 12 to 24 hours. These services are reported with 95717 – 95720.
- 2.) Services where the physician does not have access to EEG and video (when recorded) data during the recording period and the review and analysis occurs at the conclusion of the multiple day study. These services are reported with 95721 – 95726.

Survey Sample and Process

A survey of physicians from the membership rosters of the American Academy of Neurology (AAN), American Clinical Neurophysiology Society (ACNS), and the National Association of Epilepsy Centers (NAEC) was conducted (2239 total members). There were 147 respondents for 95724, 93% of whom found the vignette to be typical and who performed a median of 30 services in the last year. An expert consensus panel (“panel”) composed of members of the participating societies familiar with the code in question and the RUC process reviewed the results. The panel confirmed the reliability of the survey.

Rationale for 95724

The expert panel reviewed the entire new code family (95717 – 95726) of physician work services and kept the rank order of the family in mind when developing their recommendations. Factors that were taken into consideration were the inclusion or exclusion of video with the EEG recording, the typical vignette for each service, duration of the recording, and timing of report generation by the physician. The length of recording is based on a number of factors including the clinical indication for the test and the frequency of seizures. The expert panel believes that the 25th percentile work RVU and median physician time are an accurate representation of the intra service time and physician work associated with 95724.

When reviewing the survey data for services with a single review and report generation at the conclusion of the recording period (95721 – 95726) the expert panel looked to 24-hour recoding with daily review codes (95X16-without video and 95720-with video) to establish rank order. **The panel noted that the IWPOT from the 25% percentile RVU of 6.00 and median time of 110 minutes supports the assertion that the physician work of codes 95721 – 95726 (review and report generation at the conclusion of the study) is typically less intense than the work of codes 95717 – 95720 (daily review and report generation). The survey patient vignettes also support this assertion.**

95724 involves a *single physician review and report generation at the conclusion* of 60-84-hour EEG recoding, *with* video. The 25 percentile RVU of 6.00 puts 95724 in the appropriate rank order within the code family and maintains a consistent IWPOT for those codes with the physician review and report at the conclusion of the recording. The 25th percentile is further supported when comparing the intra service time, RVU and IWPOT of 95724 to MPC code 99223 in relation to each other.

Pre-service time: The expert panel agrees that the pre-service activities are consistent regardless of the duration of the long-term EEG recording period and the pre-service time should be the same for each code in the family 95717 – 95726. Upon reviewing the time survey data, the panel agrees the survey pre-service median time of 15 minute is not an

accurate reflection of those activities. We are therefore recommending a decrease from 15 minutes (survey median) to 10 minutes for the pre-service time to be consistent across the family.

Post service time: Similarly, the post service activities are consistent regardless of the duration of the long-term EEG recording period and the post-service time should be the same for each code in the family. The expert panel asserts the survey post-service median time of 20 minutes is not an accurate reflection of time required for those activities. We are therefore recommending a decrease from 20 minutes (survey median) to 10 minutes for the post-service time to be consistent across the family.

The panel further compared the survey 25th percentile wRVU and median intra times to the key reference services and MPC codes to support the recommendations:

Key Reference Codes

46% of respondents chose 95965, wRVU of 7.99 and times 20/180/30/230

20% of respondents chose 99476, wRVU of 6.75 and times 20/65/20/105

CPT	Descriptor	RVW	IWPUT	Total Time	PRE	INTRA	POST
95724	EEG, physician interpretation and report at conclusion of recording, 60-84 hours, with video	6.00	0.050	130	10	110	10
99476	Subsequent inpatient pediatric critical care, per day, for the evaluation and management of a critically ill infant or young child, 2 through 5 years of age	6.75	0.0901	105	20	65	20
95965	Magnetoencephalography (MEG), recording and analysis; for spontaneous brain magnetic activity (eg, epileptic cerebral cortex localization)	7.99	0.0382	230	20	180	30

MPC Comparison

CPT	Descriptor	RVW	IWPUT	Total Time	PRE	INTRA	POST
99223	Initial hospital care, per day, for the evaluation and management of a patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; and Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the problem(s) requiring admission are of high severity. Typically, 70 minutes are spent at the bedside and on the patient's hospital floor or unit.	3.86	0.0559	90	15	55	20
99291	Critical care, evaluation and management of the critically ill or critically injured patient; first 30-74 minutes	4.50	0.0957	70	15	40	15
95724	EEG, physician interpretation and report at conclusion of recording, 60-84 hours, with video	6.00	0.050	130	10	110	10

Recommendations:

For 95724 the expert panel recommends a work RVU of 6.00; and a total time of 130 minutes (10 minutes pre /110 minutes intra /10 minutes post).

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 95953, 95951

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Neurology How often? Commonly

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 95953

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS SUMMARY OF RECOMMENDATION

CPT Code: 95725 Tracking Number M24

Original Specialty Recommended RVU: **6.50**Presented Recommended RVU: **6.50**

Global Period: XXX Current Work RVU:

RUC Recommended RVU: **5.40**

CPT Descriptor: Electroencephalogram, continuous recording, physician or other qualified health care professional review of recorded events, analysis of spike and seizure detection, interpretation, and summary report, complete study; greater than 84 hours of EEG recording, without video

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 14-year-old male with a history of absence seizures experiences staring spells approximately once a week. 96-hour EEG without video recordings is ordered to determine if the patient's staring spells are seizures.

Percentage of Survey Respondents who found Vignette to be Typical: 79%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The physician or other qualified health care professional reviews indication for continuous EEG recording and results of prior EEGs if available, communicates with referring physician to clarify the indications for referral and EEG technologist to determine the appropriate activation techniques (photoc stimulation, hyperventilation).

Description of Intra-Service Work: The physician or other qualified health care professional reviews patient log, EEG technologist log, EEG technologist technical description summary, including medication history. Seizure detection software is reviewed to identify possible seizures and/or spells. The EEG recording is reviewed for artifacts, background activity, sleep stages and interictal epileptiform abnormalities. The field potential of each type of epileptiform activity is analyzed to determine localization. For each seizure or event EEG data is reviewed during the entire event to make correlations of changes and EEG to localize the site of seizure onset. The recording before, during, and after each event, is annotated describing EEG findings. Clinical and EEG findings are correlated to determine localization of each seizure. Seizure features are compared to determine if seizures arise from multiple locations. ECG is reviewed and interpretation is made. Relevant sections of EEG are annotated to be archived by EEG technologists. At the end of 96 hours of testing, the physician or QHP prepares a written report that contains interpretation of EEG background activity, interictal abnormalities, detailed description of electrographic seizure onset, evolution and offset and clinical correlation of findings for each 24 hours of recording.

Description of Post-Service Work: EEG report is finalized and uploaded into the EMR. EEG findings are discussed with the referring physician.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background:

In October 2016, 95951 was identified under the CMS High Volume screen, as services with total Medicare utilization of 10,000 or more that has increased by at least 100% from 2009 through 2014. As a result, the specialty societies (AAN, ACNS, NAEC) presented an Action Plan to the RAW at the January 2017 recommending that 95951 and the

family of long term monitoring codes (95950, 95951, 95953, 95956) be referred to the CPT Editorial Panel for needed changes, including code deletions, revision of code descriptors, and the addition of new codes to this family. The medical specialties societies assert the 95951 utilization increase was partially due to incorrect coding, as the existing CPT code language for the long term monitoring family of codes is unclear (as it relates to the use of video and attended vs. unattended requirements.) The specialty societies also acknowledge that since the last review of 95951 was in August 1995 the family of codes should be revised to more accurately capture the services provided.

The specialty societies presented code change applications at the following CPT meetings: June 2017, September 2017, February 2018, and May 2018 when the Panel accepted the addition of 13 new codes for reporting the Technical Component of long-term EEG services (95700 – 95716) and 10 new codes for reporting the Professional Component of long-term EEG services (95717 – 95726.)

The physician services fall into 2 categories:

- 1.) Services where the physician has access to EEG and video (when recorded) data throughout the recording period and review and analysis of collected data occurs at specific time intervals such as 2-12 or 12 to 24 hours. These services are reported with 95717 – 95720.
- 2.) Services where the physician does not have access to EEG and video (when recorded) data during the recording period and the review and analysis occurs at the conclusion of the multiple day study. These services are reported with 95721 – 95726.

Survey Sample and Process

A survey of physicians from the membership rosters of the American Academy of Neurology (AAN), American Clinical Neurophysiology Society (ACNS), and the National Association of Epilepsy Centers (NAEC) was conducted (2239 total members). There were 124 respondents for 95725, 79% of whom found the vignette to be typical and who performed a median of 1 service in the last year. An expert consensus panel (“panel”) composed of members of the participating societies familiar with the code in question and the RUC process reviewed the results. The panel confirmed the reliability of the survey.

Rationale for 95725

The expert panel reviewed the entire new code family (95717 – 95726) of physician work services and kept the rank order of the family in mind when developing their recommendations. Factors that were taken into consideration were the inclusion or exclusion of video with the EEG recording, the typical vignette for each service, duration of the recording, and timing of report generation by the physician. The length of recording is based on a number of factors including the clinical indication for the test and the frequency of seizures. The expert panel believes that the 25th percentile work RVU and median physician time are an accurate representation of the intra service time and physician work associated with 95725.

When reviewing the survey data for services with a single review and report generation at the conclusion of the recording period (95721 – 95726) the expert panel looked to 24-hour recoding with daily review codes (95719-without video and 95720-with video) to establish rank order. **The panel noted that the IWPOT from the 25% percentile RVU of 6.50 and median time of 110 minutes supports the assertion that the physician work of codes 95721 – 95726 (review and report generation at the conclusion of the study) is typically less intense than the work of codes 95717 – 95720 (daily review and report generation). The survey patient vignettes also support this assertion.**

95725 involves a *single physician review and report generation at the conclusion* of EEG recording greater than 84 hours, *without* video. The 25 percentile RVU of 6.50 puts 95725 in the appropriate rank order within the code family and maintains a consistent IWPOT for those codes with the physician review and report at the conclusion of the recording. The 25th percentile is further supported when comparing the intra service time and IWPOT of 95725 to MPC code 99476 in relation to each other.

Pre-service time: The expert panel agrees that the pre-service activities are consistent regardless of the duration of the long-term EEG recording period and the pre-service time should be the same for each code in the family 95717 – 95726. Upon reviewing the time survey data, the panel agrees the survey pre-service median time of 15 minute is not an accurate reflection of those activities. We are therefore recommending a decrease from 15 minutes (survey median) to 10 minutes for the pre-service time to be consistent across the family.

Post service time: Similarly, the post service activities are consistent regardless of the duration of the long-term EEG recording period and the post-service time should be the same for each code in the family. The expert panel asserts the survey post-service median time of 20 minutes is not an accurate reflection of time required for those activities. We are

therefore recommending a decrease from 20 minutes (survey median) to 10 minutes for the post-service time to be consistent across the family.

The panel further compared the survey 25th percentile wRVU and median intra times to the key reference services and MPC codes to support the recommendations:

Key Reference Codes

45% of respondents chose 95965, wRVU of 7.99 and times 20/180/30/230

25% of respondents chose 99476, wRVU of 6.75 and times 20/65/10/105

CPT	Descriptor	RVW	IWPUT	Total Time	PRE	INTRA	POST
95725	EEG, physician interpretation and report at conclusion of recording, > 84 hours, without video	6.50	0.055	130	10	110	10
99476	Subsequent inpatient pediatric critical care, per day, for the evaluation and management of a critically ill infant or young child, 2 through 5 years of age	6.75	0.0901	105	20	65	20
95965	Magnetoencephalography (MEG), recording and analysis; for spontaneous brain magnetic activity (eg, epileptic cerebral cortex localization)	7.99	0.0382	230	20	180	30

MPC Comparison

CPT	Descriptor	RVW	IWPUT	Total Time	PRE	INTRA	POST
99291	Critical care, evaluation and management of the critically ill or critically injured patient; first 30-74 minutes	4.50	0.0957	70	15	40	15
90960	End-stage renal disease (ESRD) related services monthly, for patients 20 years of age and older; with 4 or more face-to-face visits by a physician or other qualified health care professional per month	5.18	0.0405	128		128	
95725	EEG, physician interpretation and report at conclusion of recording, > 84 hours, without video	6.50	0.055	130	10	110	10

Recommendations:

For **95725** the expert panel recommends a work RVU of 6.50; and a total time of 130 minutes (10 minutes pre /110 minutes intra /10 minutes post).

SERVICES REPORTED WITH MULTIPLE CPT CODES

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

- Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is

involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 95953

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Neurology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 17667

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. We estimate the national utilization will be 3 times that of the Medicare utilization.

Specialty Neurology Frequency 17667 Percentage 100.00 %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 5,889

If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. We estimate the specialty utilization based upon existing specialty break out in the RUC database.

Specialty Neurology Frequency 5889 Percentage 100.00 %

Specialty Frequency Percentage %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 95953

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION**

CPT Code: 95726 Tracking Number M25

Original Specialty Recommended RVU: **7.58**Presented Recommended RVU: **7.58**

Global Period: XXX Current Work RVU:

RUC Recommended RVU: **7.58**

CPT Descriptor: Electroencephalogram, continuous recording, physician or other qualified health care professional review of recorded events, analysis of spike and seizure detection, interpretation, and summary report, complete study; greater than 84 hours of EEG recording, with video (VEEG)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 35-year-old male with a history of focal epilepsy has episodes of amnesia approximately once per week. A 96-hour EEG with video recordings is ordered to determine if the patient's amnestic episodes are seizures and to determine the clinical manifestations of the seizures.

Percentage of Survey Respondents who found Vignette to be Typical: 92%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The physician or other qualified health care professional reviews indication for continuous Video-EEG recording and results of prior EEGs if available, communicates with referring physician to clarify the indications for referral and EEG technologist to determine the appropriate activation techniques (photic stimulation, hyperventilation).

Description of Intra-Service Work: The physician or other qualified health care professional reviews patient log, EEG technologist log, EEG technologist technical description summary, including medication history. Seizure detection software is reviewed to identify possible seizures and/or spells. The EEG recording is reviewed for artifacts, background activity, sleep stages and interictal epileptiform abnormalities. The field potential of each type of epileptiform activity is analyzed to determine localization. For each seizure or event Video and EEG data is reviewed during the entire event to make correlations of changes and EEG to localize the site of seizure onset. The recording before, during, and after each event, is annotated describing EEG findings. Clinical and EEG findings are correlated to determine localization of each seizure. Seizure features are compared to determine if seizures arise from multiple locations. Relevant sections of EEG and Video are annotated to be archived by EEG technologists. At the end of the 96-hour period of testing, the physician or QHP prepares a written report that contains interpretation of pertinent Video findings along with EEG background activity, interictal abnormalities, detailed description of electrographic seizure onset, evolution and offset and clinical correlation of findings for each 24 hours of recording.

Description of Post-Service Work: EEG report is finalized and uploaded into the EMR. EEG findings are discussed with the referring physician.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background:

In October 2016, 95951 was identified under the CMS High Volume screen, as services with total Medicare utilization of 10,000 or more that has increased by at least 100% from 2009 through 2014. As a result, the specialty societies (AAN, ACNS, NAEC) presented an Action Plan to the RAW at the January 2017 *recommending that 95951 and the family of long term monitoring codes (95950, 95951, 95953, 95956) be referred to the CPT Editorial Panel for needed changes, including code deletions, revision of code descriptors, and the addition of new codes to this family.* The medical specialties societies assert the 95951 utilization increase was partially due to incorrect coding, as the existing CPT code language for the long term monitoring family of codes is unclear (as it relates to the use of video and attended vs. unattended requirements.) The specialty societies also acknowledge that since the last review of 95951 was in August 1995 the family of codes should be revised to more accurately capture the services provided.

The specialty societies presented code change applications at the following CPT meetings: June 2017, September 2017, February 2018, and May 2018 when the Panel accepted the addition of 13 new codes for reporting the Technical Component of long-term EEG services (95700 – 95716) and 10 new codes for reporting the Professional Component of long-term EEG services (95717 – 95726.)

The physician services fall into 2 categories:

- 1.) Services where the physician has access to EEG and video (when recorded) data throughout the recording period and review and analysis of collected data occurs at specific time intervals such as 2-12 or 12 to 24 hours. These services are reported with 95717 – 95720.
- 2.) Services where the physician does not have access to EEG and video (when recorded) data during the recording period and the review and analysis occurs at the conclusion of the multiple day study. These services are reported with 95721 – 95726.

Survey Sample and Process

A survey of physicians from the membership rosters of the American Academy of Neurology (AAN), American Clinical Neurophysiology Society (ACNS), and the National Association of Epilepsy Centers (NAEC) was conducted (2239 total members). There were 142 respondents for 95726, 92% of whom found the vignette to be typical and who performed a median of 21 services in the last year. An expert consensus panel (“panel”) composed of members of the participating societies familiar with the code in question and the RUC process reviewed the results. The panel confirmed the reliability of the survey.

Rationale for 95726

The expert panel reviewed the entire new code family (95717 – 95726) of physician work services and kept the rank order of the family in mind when developing their recommendations. Factors that were taken into consideration were the inclusion or exclusion of video with the EEG recording, the typical vignette for each service, duration of the recording, and timing of report generation by the physician. The length of recording is based on a number of factors including the clinical indication for the test and the frequency of seizures. The expert panel believes that the 25th percentile work RVU and median physician time are an accurate representation of the intra service time and physician work associated with 95726.

When reviewing the survey data for services with a single review and report generation at the conclusion of the recording period (95721 – 95726) the expert panel looked to 24-hour recoding with daily review codes (95719-without video and 95720-with video) to establish rank order. **The panel noted that the IWPUT from the 25% percentile RVU of 7.58 and median time of 140 minutes supports the assertion that the physician work of codes 95721 – 95726 (review and report generation at the conclusion of the study) is typically less intense than the work of codes 95717 – 95720 (daily review and report generation). The survey patient vignettes also support this assertion.**

95726 involves a *single physician review and report generation at the conclusion* of an EEG recording greater than 84 hours, *with* video. The 25 percentile RVU of 7.58 puts 95726 in the appropriate rank order within the code family and maintains a consistent IWPUT for those codes with the physician review and report at the conclusion of the recording. The 25th percentile is further supported when comparing the intra service time and IWPUT of 95726 to key reference service 99476 in relation to each other.

Pre-service time: The expert panel agrees that the pre-service activities are consistent regardless of the duration of the long-term EEG recording period and the pre-service time should be the same for each code in the family 95717 – 95726. Upon reviewing the time survey data, the panel agrees the survey pre-service median time of 15 minute is not an

accurate reflection of those activities. We are therefore recommending a decrease from 15 minutes (survey median) to 10 minutes for the pre-service time to be consistent across the family.

Post service time: Similarly, the post service activities are consistent regardless of the duration of the long-term EEG recording period and the post-service time should be the same for each code in the family. The expert panel asserts the survey post-service median time of 25 minutes is not an accurate reflection of time required for those activities. We are therefore recommending a decrease from 25 minutes (survey median) to 10 minutes for the post-service time to be consistent across the family.

The panel further compared the survey 25th percentile wRVU and median intra times to the key reference services and MPC codes to support the recommendations:

Key Reference Codes

68% of respondents chose 95965, wRVU of 7.99 and times 20/180/30/230

10% of respondents chose 99476, wRVU of 6.75 and times 20/65/20/105

CPT	Descriptor	RVW	IWPUT	Total Time	PRE	INTRA	POST
99476	Subsequent inpatient pediatric critical care, per day, for the evaluation and management of a critically ill infant or young child, 2 through 5 years of age	6.75	0.0901	105	20	65	20
95726	EEG, physician interpretation and report at conclusion of recording, > 84 hours, with video	7.58	0.051	160	10	140	10
95965	Magnetoencephalography (MEG), recording and analysis; for spontaneous brain magnetic activity (eg, epileptic cerebral cortex localization)	7.99	0.0382	230	20	180	30

MPC Comparison

CPT	Descriptor	RVW	IWPUT	Total Time	PRE	INTRA	POST
99223	Initial hospital care, per day, for the evaluation and management of a patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; and Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the problem(s) requiring admission are of high severity. Typically, 70 minutes are spent at the bedside and on the patient's hospital floor or unit.	3.86	0.0559	90	15	55	20
99291	Critical care, evaluation and management of the critically ill or critically injured patient; first 30-74 minutes	4.50	0.0957	70	15	40	15
95726	EEG, physician interpretation and report at conclusion of recording, > 84 hours, with video	7.58	0.051	160	10	140	10

Recommendations:

For 95726 the expert panel recommends a work RVU of 7.58; and a total time of 160 minutes (10 minutes pre /140 minutes intra /10 minutes post).

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 95951, 95953

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Neurology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 27738

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. We estimate the national utilization will be 3 times that of the Medicare utilization.

Specialty Neurology Frequency 27738 Percentage 100.00 %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 9,246

If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. We estimate the specialty utilization based upon existing specialty break out in the RUC database.

Specialty Neurology Frequency 9246 Percentage 100.00 %

Specialty Frequency Percentage %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Tests

BETOS Sub-classification:

Other tests

BETOS Sub-classification Level II:

Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 95953

5		Vignette Used In Survey	A 44-year-old male with a history of tonic-clonic seizures reports seizure freedom for the past year. A 72-hour EEG with 20 channels is ordered to confirm seizure freedom and assist physician to determine if medications can be reduced or withdrawn entirely.		A 36-year-old female with a known seizure disorder reports feeling dizzy and disoriented. A 10-hour EEG without video and with continuous monitoring is ordered to evaluate effect of recent medication changes.		A 65-year-old female post cardiac arrest was placed in a medically induced coma. A 48-hour continuously monitored EEG without video is ordered to evaluate level of medication induced coma.		A newborn female has atypical movements. A continuously monitored 8-hour video EEG is ordered to evaluate for seizures.		A 5-year-old autistic male is having sudden head drops and is unresponsive for a few seconds after the event. The events occur several times per week. A 72-hour video EEG with continuous monitoring to capture the event(s) is ordered.

30		In office or remote, real-time EEG monitoring with or without video May include: Review patient clinical history, current medications, and prior monitoring notes (follow up on notes from previous sessions) Confirm camera is displaying live view, when used Review any patient events from prior monitoring Review EEG recording for quality Look for events that might require physician notification Check electrode impedances for quality Document findings and notes for current session Ensure patient is still in camera view, when used			17	30	21	40	21	38	20	44
31		Per expert panel row 31 times are for monitoring. Row 30 times represent the technologist that checks electrodes and camera positioning and does not include the actual monitoring time. We have added the times for monitoring based on the survey results of how many patients were monitored for each code and based on the CPT code time. For 2-12 hour codes, the assumption is the study is typically 8 hours. For the 12 to 26 hour code, the assumption is the study is typically 24 hours.			160	160	480	480	240	240	480	480
32		Maintenance during patient session (do not include initial set-up) May include: Contact/initiate on-call maintenance support, if needed Repair electrodes, video, laptop, or other faulty equipment, if needed Validate repairs are complete, if needed • New electrode placement, if needed Check electrode impedances for quality of each new EEG electrode, if needed Reposition/reactivate/reset video equipment, when used Reposition/reactivate/reset laptop/computer and internet connections, when used			10	20	14	26	15	28	14	30
33		May include: Continued education/instruction/counseling if electrodes stop recording or patient event occurs. Continued education/instruction/counseling if video stop recording or patient event occurs			5	10	5	10	7	10	7	10

5	A 48-year-old male has daily intermittent mental status changes. An 8-hour intermittently monitored EEG without video is ordered to evaluate for subclinical seizures.		A 54-year-old male previously presented in non-convulsive status epilepticus. A 48-hour EEG intermittently monitored, without video, is ordered to evaluate that non-convulsive seizures have resolved.		A 13-year-old autistic male has frequent episodes of eyelid flutter. An 8-hour video EEG with intermittent monitoring is ordered to evaluate for absence seizures.		A 15-year-old female is experiencing episodes described as collapsing with convulsions. Episodes have occurred during school where she reports feeling stressed. A 72-hour video EEG with intermittent monitoring is ordered to determine if the patient is having non-epileptic or epileptic seizures.		An 8-year-old male with a history of absence seizures reports seizure freedom for the past year. A 24-hour unmonitored EEG without video is ordered to confirm seizure freedom and assist physician to determine if medications can be reduced or withdrawn. The patient removes the electrode wires after 10 hours.		A 25-year-old male in a motorcycle accident two years ago was placed on anticonvulsant medication prophylactically. An unmonitored 24-hour EEG without video is ordered to evaluate prior to medication ween.		A 15-year-old female has frequent jerking movements in the morning. An 8-hour video EEG, unmonitored, is ordered to evaluate for juvenile myoclonic epilepsy.		A 30-year-old male presents with known seizure disorder. A 24-hour EEG, unmonitored, is ordered to evaluate break through seizures.

	A	Tab 13 Longterm_EEG_Direct_PE_summary data revised 9-25-2018 v1c1	D	
1		CPT Code	95X01	
2		Short Description	EEG Set Up	
3		Global Period	XXX	
4		CPT Descriptor	Electroencephalogram (EEG) continuous recording, with video when performed, set-up, patient education, and take down when performed, administered in-person by EEG technologist, minimum of 8 channels	
5		Vignette Used In Survey	A 44-year-old male with a history of tonic-clonic seizures reports seizure freedom for the past year. A 72-hour EEG with 20 channels is ordered to confirm seizure freedom and assist physician to determine if medications can be reduced or withdrawn entirely.	
6		Total: Typical patient question	139	
7		Percentage of Survey Respondents who found Vignette to be typical	83%	
8			25th Percentile	Median
9		Total: Performance Rate Completed on survey	51	
10		Performance Rate	3	30
11		what percent were performed in physician office	60%	100%
12		what percent were performed in patient home	40%	0%
13	CMS	Start: When appointment for procedure is made		
14	CA005	Call patient to confirm they have completed all pre-procedure activities Sanitize & prepare any equipment that needs to be sanitized prior to each procedure. Collect supplies to complete setup (paste, gauze, solvent, electrodes, etc.), Test equipment Load equipment and supplies into vehicle	3	10
15	CA013 in pre service	Equipment and supplies preparation	6	15
16		Other Clinical Activity not listed above	0	0
17		End: Patient arrives at office, IDTF or clinical staff arrives at patient home to set-up for procedure		
18		Start: Patient arrives at office, IDTF or clinical staff arrives at patient home to set-up for procedure		
19	CA011	Patient/family education - Explain service and set-up process Ensure consent signed Answer patient and family questions regarding the procedure, logs, operation of equipment and how to get technical assistance	7	13
20	CA010	Patient Preparation May include: Blood Pressure was reply to detail in survey Obtain Vital Signs	0	2
21	CA013 in pre service	Room, equipment and supplies set-up - Scout living area(s) to locate optimal placement of cameras Set-up room Set-up equipment and supplies Set-up video equipment, tripod, laptop/computer and internet connections, when used Check/test and/or reposition/reactivate/reset video equipment, laptop/computer and internet connections, when used	5	10
22	CA016	Prepare and position patient - Clean skin/scalp Measure and mark head for EEG electrodes Apply and secure EEG electrodes with protective material for long term use Position patient • Position EEG wires, EEG monitor and belt Check/test and/or reposition/reattach EEG monitor, wires and belt Check impedances of each EEG electrode	22	45
23		Other Clinical Activity not listed above	0	0
24		Start: Patient EEG monitoring ends or clinical staff arrives at patient home for take down activities.		
25	CA011 place in post service	Patient/family education - Review documented events with patient to gather additional context and/or notes Explain how the electrodes will be removed Answer patient and family questions on use of EEG and video data, explain what will happen next regarding physician review and interpretation	7	10
26	CA034	Room, equipment and supplies take down - Take down equipment Collodion, electrode and wire removal and clean patient Disconnect cameras, when used Clean room Disinfect equipment and supplies	13	22
27		Other Clinical Activity not listed above	0	2
28		End: Patient leaves the office, IDTF or clinical staff leaves patient home after take down activities complete

43		Archiving workstation (for data archive, storage and review)		1	1	
44		Audio devices, microphones		1	3	
45		Patient monitoring status		1	1	
46	Other equipment not listed (provide details)					
47	HOT SPOT INTERNET DEVICE, EMERGENCY EEG RESTART KITS (INCLUDING SD CARDS, HEX DRIVERS, BATTERIES), CAR KITS (INCLUDING SNOW SHOVELS, WARNING TRIANGLES, TIRE CHAINS), GPS, COMPANY WORK VEHICLE, COMPANY CELL PHONE, MATS TO PROTECT WORK AREAS, SHOE COVERS, PERSONAL PROTECTIVE EQUIPMENT (FULL GOWNS, FACE MASKS, SAFETY GOGGLES)				1	
48	2 iterations of video equipment needed - video recorded from 2 vantage points, and 2nd set of equipment as backup of this very necessary component. EEG analysis equipment is considered routine state of the art at this point; mathematic computer support adds additional precision to EEG evaluation, and can speed up review of a 24 hour monitoring.				1	
49	Our equipment in addition to listed above also has blue tooth and hot spot to provide internet, several power cords				1	
50						

Specialties: American Academy of Neurology (AAN), American Clinical Neurophysiology Society (ACNS), American Society of Electroneurodiagnostic Technologists (ASET) and American Board of Registration of Electroencephalographic and Evoked Potential Technologists (ABRN)

**AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Non Facility Direct Practice Expense (PE) Inputs**

Meeting Date: October 2018 Revised 10-4-18

CPT code	CPT Long Descriptor	Global Period
95X01 95700	Electroencephalogram (EEG) continuous recording, with video when performed, set-up, patient education, and take down when performed, administered in-person by EEG technologist, minimum of 8 channels	XXX

- Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel: The joint societies including the American Academy of Neurology (AAN), the American Clinical Neurophysiology Society (ACNS), the American Society of Electroneurodiagnostic Technologists (ASET) and American Board of Registration of Electroencephalographic and Evoked Potential Technologists (ABRN) surveyed members totaling 5532. We received responses from 139 to 33 completing various aspects of the detailed PE survey tool that was approved by research. Additionally, the AMA staff performed a webinar for any available and interested members of the EEG technologist community, the webinar was recorded and made available for anyone taking the PE survey.

We have included the results of the survey in a separate file attached. The consensus panel reviewed the median and 25th percentile times and the median ~~or average results~~ of the survey for supplies and equipment.

A consensus panel consisting of EEG technologists, and physicians reviewed the survey data and reference code comparisons noted below to come up with the final recommendations presented in the PE worksheet. In some instances, we accepted the survey median ~~or average supply~~ and when survey results did not agree with the consensus panels expert opinion, we used ~~the existing inputs~~ the consensus panel.

- You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here: CPT 95950 and 95953, 95956 (presented February 2010) as references plus survey data, reviewed by consensus of experts.
- Is this code(s) typically billed with an E/M service? No
Is this code(s) typically billed with the E/M service in the nonfacility? No
(Please see provided data in PE Subcommittee folder)
- What specialty is the dominant provider in the nonfacility? Neurology
What percent of the time does the dominant provider provide the service(s) in the nonfacility?
Is the dominant provider in the nonfacility different then for the global? No
(Please see provided data in PE Subcommittee folder)
95950 – Neurology – 74%
95951 – IDTF – 51%
95953 – Neurology – 91%
95956 – Neurology – 51%

Specialties: American Academy of Neurology (AAN), American Clinical Neurophysiology Society (ACNS), American Society of Electroneurodiagnostic Technologists (ASET) and American Board of Registration of Electroencephalographic and Evoked Potential Technologists (ABRN)

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time: [N/A](#)
6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), you must provide compelling evidence. Please explain if the increase can be entirely accounted for because of an increase in physician time. [N/A](#)
7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here: [N/A](#)
8. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time*:

Equipment and supplies preparation:

- Sanitize & prepare equipment
- Collect supplies to complete setup (paste, gauze, solvent, electrodes, etc.)
- Test equipment

Patient/family education:

- Explain service and set-up process
- Ensure consent signed
- Answer patient and family questions regarding the procedure, logs, operation of equipment and how to get technical assistance

Patient Preparation

- Obtain Vital Signs, blood pressure, 2 minutes.

Room, equipment and supplies set-up:

- Set-up room, set-up equipment and supplies, set-up video equipment, tripod, laptop/computer and internet connections (when used), check/test and/or reposition/reactivate/reset video equipment (when used), laptop/computer and internet connections (when used)

Prepare and position patient

- Clean skin/scalp
- Measure and mark head for EEG electrodes
- Apply and secure EEG electrodes with protective material for long term use
- Position patient
- position EEG wires, EEG monitor and belt,
- Check/test and/or reposition/reattach EEG monitor, wires and belt, check impedances of each EEG electrode

Patient/family education (after set-up):

- Review documented events with patient to gather additional context and/or note
- Explain how the electrodes will be removed
- Answer patient and family questions on use of EEG and video data
- Explain what will happen next regarding physician review and interpretation
- Remove electrodes: remove collodion, electrodes and wires, clean patient

Data retrieval and management:

Specialties: American Academy of Neurology (AAN), American Clinical Neurophysiology Society (ACNS), American Society of Electroneurodiagnostic Technologists (ASET) and American Board of Registration of Electroencephalographic and Evoked Potential Technologists (ABRN)

- Merge EEG and Video files by automated program, confirm transfer of data, delete from laptop/computer if necessary

Room, equipment and supplies take down:

- Take down equipment, disconnect cameras (when used)
 - Clean room, disinfect equipment and supplies
9. If you have used a percentage of the physician intra-service work time other than 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived. N/A
 10. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities: N/A
 11. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at <http://www.bls.gov>. N/A
 12. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here: N/A
 13. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here: N/A
 14. List all the equipment included in your recommendation and the equipment formula chosen (see document titled “Calculating equipment time”). If you have selected “other formula” for any of the equipment please explain here:

Code	Equipment
EQ047	Air compressor, safety
EF009	Chair, medical recliner
NEW Equipment	EEG, digital, prolonged testing system, with video, ambulatory

15. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here:
16. If there is any other item on your spreadsheet that needs further explanation please include here:
17. Please include an explanation of each line item:

Lines 11 & 12 of the PE survey – We acknowledge an anomaly in the survey results stating that 100% of these patients for this scenario are in the physician’s office setting, we do not agree with this portion of the survey as we believe there is closer to 50-50 percentage of IDTF and physician office use.

CPT Codes 95706, 95709, 95712, 95715

Specialties: American Academy of Neurology (AAN), American Clinical Neurophysiology Society (ACNS), American Society of Electroneurodiagnostic Technologists (ASET) and American Board of Registration of Electroencephalographic and Evoked Potential Technologists (ABRN)

**AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Non Facility Direct Practice Expense (PE) Inputs**

Meeting Date: October 2018 Revised 10-22-18

CPT code	CPT Long Descriptor	Global Period
95706	Electroencephalogram (EEG) without video, review of data, technical description by EEG technologist, 2-12 hours; with intermittent monitoring and maintenance	XXX
95709	Electroencephalogram (EEG) without video, review of data, technical description by EEG technologist, each increment of 12-26 hours; with intermittent monitoring and maintenance	XXX
95712	Electroencephalogram with video (VEEG), review of data, technical description by EEG technologist, 2-12 hours; with intermittent monitoring, and maintenance	XXX
95715	Electroencephalogram with video (VEEG), review of data, technical description by EEG technologist, each increment of 12-26 hours; with intermittent monitoring and maintenance	XXX

- Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel: The joint societies including the American Academy of Neurology (AAN), the American Clinical Neurophysiology Society (ACNS), the American Society of Electroneurodiagnostic Technologists (ASET) and American Board of Registration of Electroencephalographic and Evoked Potential Technologists (ABRN) surveyed members totaling 5532. We received responses from 139 to 33 completing various aspects of the detailed PE survey tool that was approved by research. Additionally, the AMA staff performed a webinar for any available and interested members of the EEG technologist community, the webinar was recorded and made available for anyone taking the PE survey.

We have included the results of the survey in a separate file attached. The consensus panel reviewed the median and 25th percentile times and the median results of the survey for supplies and equipment.

A consensus panel consisting of EEG technologists, and physicians reviewed the survey data and reference code comparisons noted below to come up with the final recommendations presented in the PE worksheet. In some instances, we accepted the survey median supply and when survey results did not agree with the consensus panels expert opinion, we used the existing inputs.

Upon further review (and discussion with AMA RUC staff) we observed that the minutes for monitoring did not make sense and re-ran the analysis removing those responses that indicated a 0 for the number of monitored patients. Those technologists that responded 0 noted in the comments that they did not personally monitor, rather were the technologist assigned to set up / take down, or to troubleshoot to. Therefore, removing the 0 responses gave us a realistic number of patients that were monitored.

Specialties: American Academy of Neurology (AAN), American Clinical Neurophysiology Society (ACNS), American Society of Electroneurodiagnostic Technologists (ASET) and American Board of Registration of Electroencephalographic and Evoked Potential Technologists (ABRN)

We also carefully reviewed the questions and it appeared to us that the technologists misunderstood the question on monitoring for the time period to mean checking rather than the actual monitoring. We did not see any fields where they would have put the time for the actual monitoring. Therefore, we believe this element was missing after looking at all the other clinical activity times. We added row 54 on the PE spreadsheet and calculated the monitoring times based on the typical time and the number of patients that were monitored per the re-run data. In comparing the monitoring time of RUC reviewed code 95956, plus the additional activities for a 24 hour service, we feel the total time is now appropriate.

2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here: [CPT 95950 and 95953, 95956 \(presented February 2010\) as references plus survey data, reviewed by consensus of experts.](#)
3. Is this code(s) typically billed with an E/M service? **No**
Is this code(s) typically billed with the E/M service in the nonfacility? **No**
(Please see provided data in PE Subcommittee folder)
 - [95950 – Neurology – 74%](#)
 - [95951 – IDTF – 51%](#)
 - [95953 – Neurology – 91%](#)
 - [95956 – Neurology – 51%](#)
4. What specialty is the dominant provider in the nonfacility? [Neurology](#)
What percent of the time does the dominant provider provide the service(s) in the nonfacility?
Is the dominant provider in the nonfacility different then for the global? **No**
(Please see provided data in PE Subcommittee folder)
5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:
Compelling Evidence for Tab 13 Long Term EEG Codes 95X01 to 95X13 (see [Compelling Evidence handout](#))
 - [Technique \(there are now varying levels of monitoring, whereas previously there was only monitored or unmonitored\)](#)
 - [Site of service \(due to population shift services are now performed in the outpatient / ambulatory setting, and patients' homes and not exclusively in the inpatient\)](#)
 - [Technology changes and advancements \(improved technology has created more options for remote / ambulatory monitoring of patients in various settings; increased remote video capabilities.\)](#)
6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), you must provide compelling evidence. Please explain if the increase can be entirely accounted for because of an increase in physician time. [N/A](#)
7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here:

CPT Codes 95706, 95709, 95712, 95715

Specialties: American Academy of Neurology (AAN), American Clinical Neurophysiology Society (ACNS), American Society of Electroneurodiagnostic Technologists (ASET) and American Board of Registration of Electroencephalographic and Evoked Potential Technologists (ABRN)

8. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time*:

Row 54 on spreadsheet CAO21:

Actual monitoring time (do not include initial set-up)

(95706 - 40 minutes, 95709 – 120 minutes, 95712 – 40 minutes, 95715 – 120 minutes)

Explanation of monitoring minutes:

2-12-hour codes we assume **8 hours** is the typical length of service.

- Intermittent: Per survey data 12 is the typical number of patients monitored so we divide the 480 minutes by 12 which equals 40 minutes of monitoring.

12-16-hour codes we assume **24 hours** is the typical length of service.

- Intermittent: Per survey data 12 is the typical number of patients monitored so we divide the 1440 minutes by 12 which equals get 120 minutes of monitoring

Row 55 on PE spreadsheet total times:

- 95706 – ~~93~~ **57** minutes
- 95709 – ~~115~~ ~~79~~ **50** minutes
- 95712 – ~~96~~ **61** minutes
- 95715 – ~~146~~ ~~100~~ **70** minutes

CAO21 activities are broken out as follows:

In office or remote, real-time EEG monitoring with or without video

(95706 - ~~23~~ **10 minutes, 95709 – ~~24~~ **10** minutes, 95712 – ~~20~~ **10** minutes, 95715 – ~~30~~ **10** minutes)**

- Review patient clinical history, current medications, and prior monitoring notes (follow up on notes from previous sessions)

Maintenance during patient session (do not include initial set-up) only included for 2-12 hour codes

(95706 - 20 minutes, 95709 – 0 minutes, 95712 – 21 minutes, 95715 – 0 minutes)

- Contact/initiate on-call maintenance support, if needed
- Repair electrodes, video (when used), laptop, or other faulty equipment, if needed
- Validate repairs are complete, if needed
- New electrode placement, if needed
- Check electrode impedances for quality of each new EEG electrode, if needed
- Reposition/reactivate/reset video equipment, when used
- Reposition/reactivate/reset laptop/computer and internet connections, when used

Patient/family education

(95706 - ~~13~~ **0 minutes, 95709 – ~~12~~ **0** minutes, 95712 – ~~15~~ **0** minutes, 95715 – ~~15~~ **0** minutes)**

Internal communication

(95706 - ~~10~~ **0 minutes, 95709 – ~~10~~ **0** minutes, 95712 – ~~10~~ **0** minutes, 95715 – ~~11~~ **0** minutes)**

CPT Codes 95706, 95709, 95712, 95715

Specialties: American Academy of Neurology (AAN), American Clinical Neurophysiology Society (ACNS), American Society of Electroneurodiagnostic Technologists (ASET) and American Board of Registration of Electroencephalographic and Evoked Potential Technologists (ABRN)

Prepare data (when done during patient session

(95706 - 27 minutes, 95709 – 40 minutes, 95712 – 30 minutes, 95715 – 60 minutes)

- Review and prepare data for physician
- Annotate EEG and/or VEEG
- Note spike generator location
- Document technologist initial notes
- Send all data to physician for reading

Row 89 on PE spreadsheet CA038:

Data retrieval and management: (95706 - ~~22~~ 11 minutes, 95709 – 44 22 minutes, 95712 – ~~22~~ 11 minutes, 95715 – 44-22minutes) EXPERT PANEL consistent with current codes

Original recommendation based on EXPERT PANEL consistent with current code (95950) – reduced by 50% taking partial automation of the activity into consideration.

- Merge EEG and Video files (partially automated program), confirm transfer of data, delete from laptop/computer if necessary.
- *Associated Equipment time (Row 145 – EQ050) remains 44 and 22 minutes based on crosswalk to activities for RUC reviewed code 95950.*

9. If you have used a percentage of the physician intra-service work time other than 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived. N/A
10. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities: N/A
11. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at <http://www.bls.gov>. N/A
12. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here: N/A
13. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here: N/A
14. List all the equipment included in your recommendation and the equipment formula chosen (see document titled “Calculating equipment time”). If you have selected “other formula” for any of the equipment please explain here:
95706 –
95709 –

CPT Codes 95706, 95709, 95712, 95715

CPT Codes 95707, 95710, 95713, 95716

Specialties: American Academy of Neurology (AAN), American Clinical Neurophysiology Society (ACNS), American Society of Electroneurodiagnostic Technologists (ASET) and American Board of Registration of Electroencephalographic and Evoked Potential Technologists (ABRN)

Row 54 on spreadsheet CA021:

Actual monitoring time (do not include initial set-up)

(95707 - 120 minutes, 95710 – 360 minutes, 95713 – 120 minutes, 95716 – 360 minutes)

Explanation of monitoring minutes:

2-12-hour codes we assume 8 hours is the typical length of service.

- Continuous: 4 patients is the typical number of patients monitored. 8 times 60 minutes = 480 minutes, divide the 480 by 4 which equals 120 minutes of monitoring.

12-16-hour codes we assume 24 hours is the typical length of service.

- Continuous: 4 patients is the typical number of patients monitored. 24 times 60 minutes = 1440 minutes, divide the 1440 by 4 which equals 360 minutes of monitoring.

Row 55 on PE spreadsheet CA021 total times:

- 95707 – ~~100~~ 60 minutes
- 95710 – ~~126~~ 50 minutes
- 95713 – ~~120~~ 72 minutes
- 95716 – ~~152~~ 65 minutes

CA021 activities are broken out as follows:

In office or remote, real-time EEG monitoring with or without video

(95707 – ~~30~~ 10 minutes, 95710 – ~~40~~ 10 minutes, 95713 – ~~38~~ 10 minutes, 95716 – 44 10 minutes)

- Review patient clinical history, current medications, and prior monitoring notes (follow up on notes from previous sessions)

Maintenance during patient session (do not include initial set-up)

(95707 - 20 minutes, 95710 – 0 minutes, 95713 – 28 minutes, 95716 – 0 minutes)

- Contact/initiate on-call maintenance support, if needed
- Repair electrodes, video (when used), laptop, or other faulty equipment, if needed,
- Validate repairs are complete, if needed
- New electrode placement, if needed
- Check electrode impedances for quality of each new EEG electrode, if needed
- Reposition/reactivate/reset video equipment (when used)
- Reposition/reactivate/reset laptop/computer and internet connections (when used)

Patient/family education

**AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Non Facility Direct Practice Expense (PE) Inputs**

Meeting Date: October 2018 Revised 10-4-18

CPT code	CPT Long Descriptor	Global Period
95705	Electroencephalogram (EEG) without video, review of data, technical description by EEG technologist, 2-12 hours; unmonitored	XXX
95708	Electroencephalogram (EEG) without video, review of data, technical description by EEG technologist, each increment of 12-26 hours; unmonitored	XXX
95711	Electroencephalogram with video (VEEG), review of data, technical description by EEG technologist, 2-12 hours; unmonitored	XXX
95714	Electroencephalogram with video (VEEG), review of data, technical description by EEG technologist, each increment of 12-26 hours; unmonitored	XXX

- Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel: The joint societies including the American Academy of Neurology (AAN), the American Clinical Neurophysiology Society (ACNS), the American Society of Electroneurodiagnostic Technologists (ASET) and American Board of Registration of Electroencephalographic and Evoked Potential Technologists (ABRN) surveyed members totaling 5532. We received responses from 139 to 33 completing various aspects of the detailed PE survey tool that was approved by research. Additionally, the AMA staff performed a webinar for any available and interested members of the EEG technologist community, the webinar was recorded and made available for anyone taking the PE survey.

We have included the results of the survey in a separate file attached. The consensus panel reviewed the median and 25th percentile times and the median results of the survey for supplies and equipment.

A consensus panel consisting of EEG technologists, and physicians reviewed the survey data and reference code comparisons noted below to come up with the final recommendations presented in the PE worksheet. In some instances, we accepted the survey median supply and when survey results did not agree with the consensus panels expert opinion, we used the existing inputs.

Upon further review (and discussion with AMA RUC staff) we observed that the minutes for monitoring did not make sense and re-ran the analysis removing those responses that indicated a 0 for the number of monitored patients. Those technologists that responded 0 noted in the comments that they did not personally monitor, rather were the technologist assigned to set up / take down, or to troubleshoot to. Therefore, removing the 0 responses gave us a realistic number of patients that were monitored.

We also carefully reviewed the questions and it appeared to us that the technologists misunderstood the question on monitoring for the time period to mean checking rather than the actual monitoring. We did not see any fields where they would have put the time for the actual monitoring. Therefore, we believe this element was missing after looking at all the other clinical activity times. We added row 54 on the PE spreadsheet and calculated the monitoring times based

Specialties: American Academy of Neurology (AAN), American Clinical Neurophysiology Society (ACNS), American Society of Electroneurodiagnostic Technologists (ASET) and American Board of Registration of Electroencephalographic and Evoked Potential Technologists (ABRN)

on the typical time and the number of patients that were monitored per the re-run data. In comparing the monitoring time of RUC reviewed code 95956, plus the additional activities for a 24 hour service, we feel the total time is now appropriate.

2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here: [CPT 95950 and 95953, 95956 \(presented February 2010\) as references plus survey data, reviewed by consensus of experts.](#)
3. Is this code(s) typically billed with an E/M service? **No**
Is this code(s) typically billed with the E/M service in the nonfacility? **No**
(Please see provided data in PE Subcommittee folder)
4. What specialty is the dominant provider in the nonfacility? [Neurology](#)
What percent of the time does the dominant provider provide the service(s) in the nonfacility?
Is the dominant provider in the nonfacility different then for the global? **No**
(Please see provided data in PE Subcommittee folder)
[95950 – Neurology – 74%](#)
[95951 – IDTF – 51%](#)
[95953 – Neurology – 91%](#)
[95956 – Neurology – 51%](#)
5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:
Compelling Evidence for Tab 13 Long Term EEG Codes 95X01 to 95X13 (see Compelling Evidence handout)
 - Technique (there are now varying levels of monitoring, whereas previously there was only monitored or unmonitored)
 - Site of service (due to population shift services are now performed in the outpatient / ambulatory setting, and patients' homes and not exclusively in the inpatient)
 - Technology changes and advancements (improved technology has created more options for remote / ambulatory monitoring of patients in various settings; increased remote video capabilities.)
6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), you must provide compelling evidence. Please explain if the increase can be entirely accounted for because of an increase in physician time. [N/A](#)
7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here: [N/A](#)
8. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time*:

Specialties: American Academy of Neurology (AAN), American Clinical Neurophysiology Society (ACNS), American Society of Electroneurodiagnostic Technologists (ASET) and American Board of Registration of Electroencephalographic and Evoked Potential Technologists (ABRN)

Row 55 CA021 on PE spreadsheet times:

- 95705 – 30 minutes
- 95708 – 34 minutes
- 95711 – 30 minutes
- 95714– 35 minutes

Prepare data (when done during patient session):

- Review and prepare data for physician
- Annotate EEG and/or VEEG
- Note spike generator location
- Prepare technical description
- Send all data to physician for reading

Row 89 on PE spreadsheet CA038:

Data retrieval and management: (95705 - ~~22~~ 11 minutes, 95708 – 44 22 minutes, 95711 – ~~22~~ 11 minutes, 95714 –44 22 minutes) Original recommendation based on EXPERT PANEL consistent with current code (95950) – reduced by 50% taking partial automation of the activity into consideration.

- Merge EEG and Video files (partially automated program), confirm transfer of data, delete from laptop/computer if necessary.
- *Associated Equipment time (Row 145 – EQ050) remains 44 and 22 minutes based on crosswalk to activities for RUC reviewed code 95950.*

9. If you have used a percentage of the physician intra-service work time other than 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived. *N/A*
10. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities: *N/A*
11. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at <http://www.bls.gov>. *N/A*
12. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here: *N/A*
13. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here: *N/A*
14. List all the equipment included in your recommendation and the equipment formula chosen (see document titled “Calculating equipment time”). If you have selected “other formula” for any of the equipment please explain here:

CPT Codes 95705, 95708, 95711, 95714

Specialties: American Academy of Neurology (AAN), American Clinical Neurophysiology Society (ACNS), American Society of Electroneurodiagnostic Technologists (ASET) and American Board of Registration of Electroencephalographic and Evoked Potential Technologists (ABRN)

Code	Equipment	Codes used
ED050	Technologist PAC workstation for storing data	95705, 95708, 95711, 95714
EQ016	EEG review station, ambulatory	95705, 95708, 95711, 95714
EQ015	EEG recorder, ambulatory	95705, 95708
NEW Equipment	EEG, digital, prolonged testing system, with video, ambulatory	95711, 95714

15. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here: [N/A](#)

16. If there is any other item on your spreadsheet that needs further explanation please include here: [N/A](#)

17. Please include an explanation of each line item:

CPT Code: 95717 – 95726

Specialty Society: American Academy of Neurology (AAN), American Clinical Neurophysiology Society (ACNS),

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel: [An expert consensus panel \(“panel”\) composed of members of the participating societies familiar with the codes in question and the RUC process met via telephone calls and email exchanges to develop the recommendations.](#)
2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here: [As codes 95717 – 95726 are PC only codes, there are no clinical labor activities associated with the services, only the equipment used by the physician for the professional services. Code 95957 \(presented January 2016\) plus expert panel consensus was chosen for the reference code.](#)
3. Is this code(s) typically billed with an E/M service? [No](#)
Is this code(s) typically billed with the E/M service in the nonfacility? [No](#)
(Please see provided data in PE Subcommittee folder)
[95950 – Neurology – 74%](#)
[95951 – IDTF – 51%](#)
[95953 – Neurology – 91%](#)
[95956 – Neurology – 51%](#)
4. What specialty is the dominant provider in the nonfacility? [Neurology](#)
What percent of the time does the dominant provider provide the service(s) in the nonfacility?
Is the dominant provider in the nonfacility different then for the global? [No](#)
(Please see provided data in PE Subcommittee folder)
5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time: [N/A](#)
6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), you must provide compelling evidence. Please explain if the increase can be entirely accounted for because of an increase in physician time. [N/A](#)
7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here: [N/A](#)
8. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? (please use this time rather than 5 minutes in your reference code) [N/A](#)
The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here: [N/A](#)
9. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly*

CPT Code: 95717 – 95726

Specialty Society: American Academy of Neurology (AAN), American Clinical Neurophysiology Society (ACNS),

related to physician work time or Perform procedure/service---NOT directly related to physician work time: N/A

10. If you have used a percentage of the physician intra-service work time other than 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived. N/A
11. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities: N/A
12. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at <http://www.bls.gov>. N/A
13. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here: N/A
14. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here: N/A
15. List all the equipment included in your recommendation and the equipment formula chosen (see document titled “Calculating equipment time”). If you have selected “other formula” for any of the equipment please explain here:

EQ013	EEG analysis software
EQ016	EEG review station, ambulatory
16. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here: N/A
17. If there is any other item on your spreadsheet that needs further explanation please include here: N/A
18. Please include an explanation of each line item:

The equipment minutes for EQ013 (EEG analysis software) is equal to the physician intra service time for each code.

The equipment minutes for EQ016 (EEG review station, ambulatory) is equal to the total physician service time (including pre / intra / post) for each code as it is utilized for the duration of the service.

Compelling Evidence for Tab 13 Long Term EEG Codes 95700 to 95716 Practice Expense

1. Technique (there are now varying levels of monitoring, whereas previously there was only monitored or unmonitored)
2. Site of service (due to population shift services are now performed in the outpatient / ambulatory setting, and patients' homes and not exclusively in the inpatient)
3. Technology changes and advancements (improved technology has created more options for remote / ambulatory monitoring of patients in various settings; increased remote video capabilities.)

CPT code 95951 *Monitoring for localization of cerebral seizure focus by cable or radio, 16 or more channel telemetry, combined electroencephalographic (EEG) and video recording and interpretation (eg, for presurgical localization), each 24 hours* was brought forward through a RAW review. The joint societies recommended the family go back to CPT for revisions as the services have changed over time. Specifically, as evidenced by a split of PC and TC codes (because the professional services would not match the new possibilities of technical variations) in these services we will now have 13 new codes to describe the technical long-term EEG services. The technical services have had many changes in that the monitoring can be with or without video, and or with or without two different types of monitoring, or with no monitoring at all.

The New CPT codes define continuous, intermittent and unmonitored as the following:

Unmonitored: Services that have no real-time monitoring by an EEG technologist(s) during the continuous recording. If the criteria for intermittent or continuous monitoring are not met, then the study is an unmonitored study.

Intermittent monitoring (remote or on-site): Requires an EEG technologist(s) to perform and document real-time review of data at least every two hours during the entire recording period to assure the integrity and quality of the recording (ie, EEG, VEEG), identify the need for maintenance, and, when necessary, notify the physician or other qualified health care professional of clinical issues. For intermittent monitoring, a single EEG technologist may monitor a maximum of 12 patients concurrently. If the number of intermittently monitored patients exceeds 12, then all of the studies are reported as unmonitored.

Continuous real-time monitoring (may be provided remotely): Requires all elements of intermittent monitoring. In addition, the EEG technologist(s) performs and documents real-time concurrent monitoring of the EEG data and video (when performed), during the entire recording period. The EEG technologist(s) identifies when events occur and notifies, as instructed, the physician or other qualified health care professional. For continuous monitoring, a single EEG technologist may monitor a maximum of four patients concurrently. If the number of concurrently monitored patients exceeds four, then all of the studies are reported as either unmonitored or intermittent studies. If there is a break in the real-time monitoring of the EEG recording, the study is an intermittent study.

For many years CPT 95951 was predominantly an inpatient service, however over the more recent years there are now varying patient populations some still requiring the inpatient stays

for medication withdrawal and other studies that could be conducted in the patients' home with monitoring through advanced technologies.

We have referenced several guidelines from societies for your information.

<https://www.aset.org/i4a/pages/index.cfm?pageid=4190>

<https://www.acns.org/pdf/guidelines/Guideline-14-pocket-version.pdf>

[https://www.acns.org/UserFiles/file/Guideline Twelve Guidelines for Long Term.8.pdf](https://www.acns.org/UserFiles/file/Guideline%20Twelve%20Guidelines%20for%20Long%20Term.8.pdf)

Our compelling arguments are supported and identified in three of the PE approved arguments:

1. Technique (there are now varying levels of monitoring, whereas previously there was only monitored or unmonitored)
2. Site of service (due to population shift services are now performed in the outpatient / ambulatory setting, and patients' homes and not exclusively in the inpatient)
3. Technology changes and advancements (improved technology has created more options for remote / ambulatory monitoring of patients in various settings; increased remote video capabilities.)

We therefore request approval of compelling evidence for CPT codes 95700 to 95716.

AMA/Specialty Society RVS Update Committee Summary of Recommendations
****CMS Request - NPRM for 2016 and CMS High Expenditure Procedural Codes****

January 2016

Electroencephalogram (EEG)

Following publication of the 2014 Final Rule, the RUC solicited feedback from the specialties societies regarding CPT codes potentially impacted by the OPPS/ASC Payment Cap. Specialty societies indicated an interest in re-reviewing or validating a recent RUC review for PE only, for 58 of the 211 codes identified through the cap. The PE Subcommittee reviewed the codes identified by specialty societies, grouped by families, at the April 2014 RUC meeting and provide CMS with the recommendations as a sample subset of the codes impacted by the cap. CPT codes 95812 and 95813 were included in these recommendations. CMS chose not to implement the RUC recommendations for 2015, but has reviewed and accepted the recommendations with refinement for 2016. CMS expressed concern about the way the services were selected for review and limiting the review to PE only. The RUC understands CMS' concerns about implementing PE inputs without the corresponding work being reviewed. We analyzed the 58 services that the RUC submitted PE recommendations for and determined that one or more of the following is true of many of the codes: frequency less than 10,000; reviewed for work within the last five years; included in the list of proposed potentially misvalued codes identified through high expenditure by specialty screen that CMS included in the proposed rule for 2016. If you apply these criteria only 6 codes remain. The codes are 10021, 30903, 88333, 88334, 95812 and 95813.

In the NPRM for 2016 CMS re-ran the high expenditure services across specialties with Medicare allowed charges of \$10 million or more. CMS identified the top 20 codes by specialty in terms of allowed charges, excluding 010 and 090-day global services, anesthesia and Evaluation and Management services and services reviewed since CY 2010. CPT code 95957 was identified by this screen. This service was presented for review of physician work and practice expense at the January 2016 RUC meeting.

95812 Electroencephalogram (EEG) extended monitoring; 41-60 minutes

The RUC reviewed the survey results from 87 practicing neurologists and agreed with the following survey median physician time components: pre-service evaluation time of 5 minutes, intra-service time of 15 minutes and immediate post-service time of 5 minutes. The RUC discussed the inaccurate physician time currently assigned to the code (intra-service time= 55 minutes). The RUC noted that this past survey was conducted in May 1994 and appeared to, at the time, have significant issues. The CPT descriptor at the time for CPT code 95812 was *EEG monitoring; up to one hour*. It is clear from the survey time that the respondents were confused, as they assigned the entire monitoring time to physician work. After the direct practice expenses became resource-based in 1999, this time discrepancy would not have been allowed. Therefore, the RUC agreed that the current physician time for this service is inaccurate and thus should not be used to discount the current work value.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the survey's 25th percentile work RVU of 1.20 overestimates the physician work of this service. To determine an appropriate value, the RUC noted that there is no compelling evidence that the current value may be inaccurate and recommends the current work RVU of 1.08. To justify a work RVU of 1.08, the RUC compared the surveyed code to the top key reference code 95816 *Electroencephalogram (EEG); including recording awake and drowsy* (work RVU= 1.08, intra time= 15 minutes) and agreed that since both codes have identical intra-service time and comparable physician work, both services should be valued the same. The RUC also reviewed the second key reference code 95805 *Multiple sleep latency or maintenance of wakefulness testing, recording, analysis and interpretation of physiological measurements of sleep during multiple trials to assess sleepiness* (work RVU= 1.20, intra time= 20 minutes) and that since the reference code has 5 additional minutes of intra-service time compared to code 95812, the reference code is accurately valued higher. **The RUC recommends a work RVU of 1.08 for CPT code 95812.**

95813 *Electroencephalogram (EEG) extended monitoring; greater than 1 hour*

The RUC reviewed the survey results from 87 practicing neurologists and agreed with the following survey median physician time components: pre-service evaluation time of 5 minutes, intra-service time of 25 minutes and immediate post-service time of 5 minutes.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the survey's 25th percentile work RVU of 1.63, lower than the current value, is appropriate for this code. To justify a work RVU of 1.63, the RUC compared the surveyed code to MPC code 95805 *Multiple sleep latency or maintenance of wakefulness testing, recording, analysis and interpretation of physiological measurements of sleep during multiple trials to assess sleepiness* (work RVU= 1.20, intra time= 20 minutes) and agreed that since code 95813 has more intra-service time, it is appropriately valued higher than the reference code. The RUC also reviewed CPT codes 93295 *Interrogation device evaluation(s) (remote), up to 90 days; single, dual, or multiple lead implantable defibrillator system with interim analysis, review(s) and report(s) by a physician or other qualified health care professional* (work RVU= 1.29, intra time= 22.5) and 95908 *Nerve conduction studies; 3-4 studies* (work RVU= 1.25, intra time= 22 minutes) and agreed that since both these reference services have less intra-service time, the recommended value for 95813 is appropriately valued higher. **The RUC recommends a work RVU of 1.63 for CPT code 95813.**

95957 *Digital analysis of electroencephalogram (EEG) (eg, for epileptic spike analysis)*

The RUC reviewed the survey results from 54 practicing neurologists and agreed with the following survey median physician time components: pre-service evaluation time of 15 minutes, intra-service time of 30 minutes and immediate post-service time of 10 minutes. The RUC again noted the inaccurate current intra-service time of 60 minutes for this procedure. When this service was last reviewed in May 1994, this service was surveyed as an add-on code; however it was assigned a XXX global period when it was implemented in 1995. Therefore, the current time included pre- and post-service work and time in the intra-service period. Adjusting for these anomalies, the current survey, which separates these times out, represents only a minor reduction in total time. There exists no clinical basis to discount this minor reduction in time from the current work value.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the survey's 25th percentile work RVU of 2.00 slightly overestimates the physician work of this service. To determine an appropriate value, the RUC noted that there is no compelling evidence that the current value may be inaccurate and recommends the current work RVU of 1.98. To justify a work RVU of 1.98, the RUC compared the surveyed code to the top two key reference codes 95810 *Polysomnography; age 6 years or older, sleep staging with 4 or more additional parameters of sleep, attended by a technologist* (work RVU= 2.50, intra time= 36.5 minutes) and 95939 *Central motor evoked potential study (transcranial motor stimulation); in upper and lower limbs* (work RVU= 2.25, intra time= 30 minutes) and agreed that both services, with comparable physician time and work, provide accurate comparisons to ensure the recommended value is accurate. The RUC recommends a work RVU of 1.98 for CPT code 95957.

Practice Expense:

The RUC approved the direct practice expense inputs as modified by the Practice Expense Subcommittee.

Work Neutrality

The RUC's recommendation for these codes will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
95812	Electroencephalogram (EEG) extended monitoring; 41-60 minutes	XXX	1.08 (No Change)
95813	Electroencephalogram (EEG) extended monitoring; greater than 1 hour	XXX	1.63
95957	Digital analysis of electroencephalogram (EEG) (eg, for epileptic spike analysis)	XXX	1.98 (No Change)

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION**

CPT Code: 95812	Tracking Number	Original Specialty Recommended RVU: 1.08
		Presented Recommended RVU: 1.08
Global Period: XXX		RUC Recommended RVU: 1.08
CPT Descriptor: Electroencephalogram (EEG) extended monitoring: 41-60 minutes		

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A patient has had recurrent episodes of neurologic symptoms suspected to be seizures. An extended EEG to allow sleep without pharmacological sedation is performed.

Percentage of Survey Respondents who found Vignette to be Typical: 98%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Moderate Sedation

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 15%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 3%

Description of Pre-Service Work: Review relevant portions of the patient's medical record to determine if this type of EEG study is most appropriate for the patient. Review the results of any prior EEG tests performed. Instruct the technologist about any special techniques or montages required

Description of Intra-Service Work: Supervise the technologist's preparation and performance of the test. Review the recorded data including remontage and refilter as needed. Review the activation procedures performed including hyperventilation and photic stimulation. Assess the normal and abnormal findings. Interpret the findings considering the clinical context and determine clinical correlation of the findings based on the patient's history. Generate a diagnostic interpretation report with clinical correlations based on the test's findings.

Description of Post-Service Work: Make appropriate recommendations for further management and communicate with the referring physician.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

As part of the 2014 Proposed Rule, CMS identified several codes (including 95812) as potentially misvalued and proposed reductions to the codes as part of the OPPS / ASC payment cap policy proposal. The proposal was to limit the practice expense payment through the physician payment schedule at the lower of two facility payment schedules, either the OPPS or ASC payment schedule. The RUC solicited feedback from specialty societies who were given the opportunity to develop Practice Expense Recommendations at the April 2014 meeting. The AAN reviewed the Practice Expense inputs for 95812 at that time making downward adjustments due to implementation of electronic medical records and to align with other recently RUC reviewed EEG codes. The RUC accepted the specialty society recommendations. CMS had concerns about implementing PE inputs without the corresponding work being reviewed therefore the RUC requested the specialty society survey and submit recommendations for 95812 at the January 2016 meeting.

An expert consensus panel composed of members of the participating societies familiar with the code in question and the RUC process reviewed the results. The panel confirmed the reliability of the survey and feels the 25th percentile RVW of 1.20 does not accurately represent the physician work, therefore **recommends maintaining the existing RVW of 1.08**. This value is supported by the key reference service, 95816 (Electroencephalogram; including recording awake and drowsy) which was surveyed in 2012.

The panel agrees with the survey median pre-service time of 5 minutes as an accurate representation of the work performed. The survey median post-service time of 10 minutes exceeds the current time and the panel asserts is not an appropriate representation of the post-service, rather the current post-service time of 5 minutes should be maintained. The panel further asserts the survey population likely included the report generation time in their post-service estimation, which should be represented in the intra-service time. It is the recommendation of the panel that the 5 minutes estimated for report generation be moved from the post-service to intra-service time; which is supported by the 75th percentile at 20 minutes. **Therefore, the panel recommendation is 5 minutes pre-service / 20 minutes intra service / 5 minutes post service.**

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.

- ☐ Historical precedents.
☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 95812

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
 If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Neurology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 72435

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. This number is three times the 2014 medicare claims reporting data for 95812, which we feel accurately represents the national reporting of this code for one year.

Specialty Neurology Frequency 67365 Percentage 93.00 %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 24,145 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This number is the 2014 Medicare utilization from the RUC database.

Specialty Neurology Frequency 22455 Percentage 93.00 %

Specialty Frequency Percentage %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Tests

BETOS Sub-classification:

Other tests

BETOS Sub-classification Level II:

Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 95812

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS SUMMARY OF RECOMMENDATION

CPT Code: 95813	Tracking Number	Original Specialty Recommended RVU: 1.63
		Presented Recommended RVU: 1.63
Global Period: XXX		RUC Recommended RVU: 1.63

CPT Descriptor: Electroencephalogram (EEG) extended monitoring; greater than 1 hour.

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A patient reports recurrent episodes of staring and confusion multiple times a day. Outpatient EEG with extended monitoring is being performed to capture the spells.

Percentage of Survey Respondents who found Vignette to be Typical: 93%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Moderate Sedation

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 15%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 2%

Description of Pre-Service Work: Review relevant portions of the patient's medical record to determine that this procedure is medically necessary. Review the results of any prior EEG tests performed. Instruct the technologist about any special techniques or montages required.

Description of Intra-Service Work: Supervise the technologist's preparation and performance of the test. Review the 60 minutes or greater of recorded data assessing for background rhythm, and physiologic and abnormal wave form changes (e.g., sharp waves, spike waves, spindles) during wakefulness and sleep, while adjusting the montage and filter accordingly to reduce artifacts and optimize visualization of various wave forms. Review the wave form changes specifically in response to activation procedures performed. Assess the normal and abnormal findings. Interpret the findings considering the clinical context and determine clinical correlation of the findings based on the patient's history. Generate a diagnostic interpretation report with clinical correlations based on the test's findings

Description of Post-Service Work: Make appropriate recommendations for further management and communicate with the referring physician.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

As part of the 2014 Proposed Rule, CMS identified several codes (including 95813) as potentially misvalued and proposed reductions to the codes as part of the OP/PS / ASC payment cap policy proposal. The proposal was to limit the practice expense payment through the physician payment schedule at the lower of two facility payment schedules, either the OP/PS or ASC payment schedule. The RUC solicited feedback from specialty societies who were given the opportunity to develop Practice Expense Recommendations at the April 2014 meeting. The AAN reviewed the Practice Expense of 95813 at that time making downward adjustments to due to implementation of electronic medical records and to align with other recently RUC reviewed EEG codes. The RUC accepted the specialty society recommendations. CMS had concerns about implementing PE inputs without the corresponding work being reviewed therefore the RUC requested the specialty survey and submit recommendations for 95813 at the January 2016 meeting.

An expert consensus panel composed of members of the participating societies familiar with the code in question and the RUC process reviewed the results. The panel confirmed the reliability of the survey and feels the 25th percentile RVW of 1.63 is an accurate representation of the physician work, therefore **recommends the 25th percentile RVW of 1.63.**

The panel agrees with the survey median pre-service time of 5 minutes as an accurate representation of the work performed. The survey median post-service time of 10 minutes is a reduction from the current time which the panel feels could be further reduced as is not an appropriate representation of the post-service activities. The panel further asserts the survey population likely included the report generation time in their post-service estimation, which should be represented in the intra-service time. It is the recommendation of the panel that the 5 minutes estimated for report generation be included in the intra-service time; which is the current time of 30 minutes. **Therefore, the panel recommendation is 5 minutes pre-service / 30 minutes intra service / 5 minutes post service.**

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 95813

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Neurology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 66846

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. This number is three times the 2014 medicare claims reporting data for 95813, which we feel accurately represents the national reporting of this code for one year.

Specialty Neurology Frequency 64841 Percentage 97.00 %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?

22,282 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This number is the 2014 Medicare utilization from the RUC database.

Specialty Neurology Frequency 21614 Percentage 97.00 %

Specialty Frequency Percentage %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Tests

BETOS Sub-classification:

Other tests

BETOS Sub-classification Level II:

Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 95813

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS SUMMARY OF RECOMMENDATION

CPT Code: 95957	Tracking Number	Original Specialty Recommended RVU: 1.98
		Presented Recommended RVU: 1.98
Global Period: XXX		RUC Recommended RVU: 1.98

CPT Descriptor: Digital analysis of electroencephalogram (EEG) (eg, for epileptic spike analysis)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A patient with intractable localization-related epilepsy is undergoing presurgical evaluation for resection of the epileptogenic region. Previous (separately reported) EEGs interpreted visually and using automated spike detection suggest right hemispheric onsets. In order to localize the seizure focus with greater accuracy, EEG digital analysis of the previously obtained EEGs is ordered using a 3D single dipole source localization analysis of averaged epileptogenic spikes.

Percentage of Survey Respondents who found Vignette to be Typical: 83%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Moderate Sedation

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 19%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 4%

Description of Pre-Service Work: Identify portions of previously performed EEG recordings suitable for analysis based on the presence of sufficient epileptic spikes and relative absence of confounding factors such as muscle activity.

Description of Intra-Service Work: The physician reviews each spike's time markings and categories as have been separated and flagged by the EEG technologist. Outlier spikes are reviewed. For each outlier, the physician decides whether to change the spike's category or eliminate it. Spikes in each final category are averaged together. The physician reviews a three-dimensional map of the spike generator location for each spike category that has been co-registered onto the patient's MRI image or displayed in a similar manner so as to correlate the locations with the patient's anatomical structures. Assess the statistical quality of the analysis, and assure that the locations determined are clinically reliable. Review the patient's medical records for clinical correlations with MRI, PET, MEG, video-EEG recordings, neuropsychometric testing, seizure semiology, and other clinical relevant information. Determine if additional mappings are necessary for additional review. Review the technologist's report that identifies location of each identified epileptic spike generators. Compose a report interpreting the meaning of these results in the clinical context of the patient's presentation.

Description of Post-Service Work: Generate digital analysis findings for presentation at surgical case conference. Make appropriate recommendations for further management, e.g. impact on location of proposed surgical cortical resection. Communicate with the referring physician and surgeon.

SURVEY DATA

RUC Meeting Date (mm/yyyy)	01/2016				
Presenter(s):	Marianna Spanaki, MD, PhD, MBA; Marc R. Nuwer, MD, PhD

Modifier -51 Exempt Status

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:

Is this new/revised procedure considered to be a new technology or service? No

TOP KEY REFERENCE SERVICE:

<u>Key CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
95810	XXX	2.50	RUC Time

CPT Descriptor Polysomnography; age 6 years or older, sleep staging with 4 or more additional parameters of sleep, attended by a technologist

SECOND HIGHEST KEY REFERENCE SERVICE:

<u>Key CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
95939	XXX	2.25	RUC Time

CPT Descriptor Central motor evoked potential study (transcranial motor stimulation); in upper and lower limbs

KEY MPC COMPARISON CODES:

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

<u>MPC CPT Code 1</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>	<u>Most Recent Medicare Utilization</u>
95861	XXX	1.54	RUC Time	33,081

CPT Descriptor 1 Needle electromyography; 2 extremities with or without related paraspinal areas.

<u>MPC CPT Code 2</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>	<u>Most Recent Medicare Utilization</u>
99215	XXX	2.11	RUC Time	9,240,506

CPT Descriptor 2 Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 40 minutes are spent face-to-face with the patient and/or family.

<u>Other Reference CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
99223	XXX	2.00	RUC Time

CPT Descriptor Subsequent hospital care, per day, for the evaluation and management of a patient, which requires at least 2 of these 3 key components: A detailed interval history; A detailed examination; Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the

patient is unstable or has developed a significant complication or a significant new problem. Typically, 35 minutes are spent at the bedside and on the patient's hospital floor or unit.

RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:

Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by the mean) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Top Key Reference Code: 21 % of respondents: 38.8 %

Number of respondents who choose 2nd Key Reference Code: 9 % of respondents: 16.6 %

Ref Code****2nd Key
Ref Code****Time Segment (Mean)**

Overall intensity/complexity	1.29	1.33
------------------------------	------	------

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

As part of the NPRM for 2016 CMS ran a high expenditure screen across specialties with Medicare allowed charges of \$10 million or more. CMS identified the top 20 codes by specialty in terms of allowed charges. Code 95957 was identified in this screen prompting the specialty societies to survey and develop recommendations for the January 2016 meeting.

An expert consensus panel composed of members of the participating societies familiar with the code in question and the RUC process reviewed the results. The panel confirmed the reliability of the survey and feels the 25th percentile RVW of 2.00 is slightly high representation of the physician work, therefore **recommends maintaining the existing RVW of 1.98**. This value is supported by crosswalk comparison to Subsequent Hospital Care code 99223 which has a work RVW of 2.00 and pre / intra / post-times of 10 / 30 / 15 with an IWP/UT of 0.0480.

The panel agrees with the survey median pre-service time of 15 minutes as well as the survey median intra-service time of 30 minutes and the survey median post-service time of 10 minutes, therefore recommends **15 minutes pre-service / 30 minutes intra service / 10 minutes post service**. This recommendation is a reduction to intra-service time of 30 minutes, however an increase to both the pre and post service time. The panel asserts that the current pre / intra / post-service times are not an accurate reflection of the actual service times, specifically as there is no pre or post time currently assigned to the service. The current time allocations across pre / intra / post services times are incorrect due to flawed methodology used to establish time in 1994 when the code was established.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 95957

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Neurology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 166,785

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. This number is three times the 2014 medicare claims reporting data for 95957, which we feel accurately represents the national reporting of this code for one year.

Specialty Neurology Frequency 156778 Percentage 94.00 %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?

55,595 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This number is the 2014 Medicare utilization from the RUC database.

Specialty Neurology Frequency 52260 Percentage 94.00 %

Specialty Frequency Percentage %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Tests

BETOS Sub-classification:

Other tests

BETOS Sub-classification Level II:

Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 95957

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation
Non Facility Direct Inputs**

CPT Long Descriptor:

Electroencephalogram (EEG) extended monitoring; 41-60 minutes

Global Period: XXX Meeting Date: January 2016

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:

Advisors and subject matter experts from AAN and ACNS met by phone and via email to review the inputs and make recommendations

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale:

The PE inputs for 95812 were reviewed and accepted by the RUC in April of 2014, however were reduced as part of the PE Refinement process by CMS in the 2016 Final Rule. The revised PE inputs for 95812 were used as starting point, with adjustments made to reaffirm the inputs previously approved by the RUC which the specialty societies feel accurately reflect the service. The CMS rationale for reducing clinical labor inputs for “assist physician in performing procedure” was to “*refine clinical labor time to match physician intra-service time.*” The specialty society expert panel disagrees as a portion of 95812 is performed and attended by the technologist without the physician present and exceeds the physician time; therefore the clinical labor and physician times are not congruent.

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:

The specialty societies are reaffirming the PE inputs approved by the PE Subcommittee at the April 2014 meeting. The current inputs reflect PE refinements implemented by CMS as part of the 2016 Final Rule. The societies disagree with the CMS rationale and are requesting the previously RUC approved inputs.

5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

Review requisition. Assess for special needs. Give patient/family member instructions for test preparation (e.g. hair preparation instructions, etc.) and what to expect on the day of testing. Prepare room, supplies, and equipment.

Intra-Service Clinical Labor Activities:

Greet and gown patient. Explain procedure. Take a brief history. Have patient use the bathroom; position patient for testing. Measure precise head positions and glue on 25-33 electrodes. Check impedances, and correct impedance problems. Calibrate system. Coach patient on how to relax during the testing, and readjust patient position to minimize muscle tension. Record EEG for 50 minutes. Troubleshoot as needed. Monitor continuously for abnormalities. Adjust filters, montages as needed to define better any abnormalities. Hyperventilate patient for 3 minutes, and observe post-hyperventilation state for another 3 minutes. Position photic stimulator, and deliver photic stimulation at 10 frequencies. Document activation techniques and events. Remove electrodes. Wash paste out of patient's hair at each electrode site. Review results. Complete worksheets and technical interpretation. Release patient. Give discharge instructions.

Post-Service Clinical Labor Activities:

Prepare technical and coding worksheet reports. Complete Medical Record and EEG log book. Transfer file onto storage disk. Transfer file onto physician's review station. Restock supplies and clean electrodes.

**AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation
Non Facility Direct Inputs**

CPT Long Descriptor:

Electroencephalogram (EEG) extended monitoring; greater than 1 hour

Global Period: XXX Meeting Date: January 2016

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:

Advisors and subject matter experts from AAN and ACNS met by phone and via email to review the inputs and make recommendations

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale:

The PE inputs for 95813 were reviewed and accepted by the RUC in April of 2014, however were reduced as part of the PE Refinement process by CMS in the 2016 Final Rule. The revised PE inputs for 95813 were used as starting point, with adjustments made to reaffirm the inputs previously approved by the RUC which the specialty societies feel accurately reflect the service. The CMS rationale for reducing clinical labor inputs for “assist physician in performing procedure” was to “*refine clinical labor time to match physician intra-service time.*” The specialty society expert panel disagrees as a portion of 95813 is performed and attended by the technologist without the physician present and exceeds the physician time; therefore the clinical labor and physician times are not congruent.

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:

The specialty societies are reaffirming the PE inputs approved by the PE Subcommittee at the April 2014 meeting. The current inputs reflect PE refinements implemented by CMS as part of the 2016 Final Rule. The societies disagree with the CMS rationale and are requesting the previously RUC approved inputs.

5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

Review requisition. Assess for special needs. Give patient/family member instructions for test preparation (e.g. hair preparation instructions, etc.) and what to expect on the day of testing. Prepare

room, supplies, and equipment.

Intra-Service Clinical Labor Activities:

Greet and gown patient. Explain procedure. Take a brief history. Have patient use the bathroom; position patient for testing. Measure precise head positions and glue on 25-33 electrodes. Check impedances, and correct impedance problems. Calibrate system. Coach patient on how to relax during the testing, and readjust patient position to minimize muscle tension. Record EEG for 80 minutes. Troubleshoot as needed. Monitor continuously for abnormalities. Adjust filters, montages as needed to define better any abnormalities. Hyperventilate patient for 3 minutes, and observe post-hyperventilation state for another 3 minutes. Position photic stimulator, and deliver photic stimulation at 10 frequencies. Document activation techniques and events. Remove electrodes. Wash paste out of patient's hair at each electrode site. Review results. Complete worksheets and technical interpretation. Release patient. Give discharge instructions

Post-Service Clinical Labor Activities:

Prepare technical and coding worksheet reports. Complete Medical Record and EEG log book. Transfer file onto storage disk. Transfer file onto physician's review station. Restock supplies and clean electrodes.

**AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation
Non Facility Direct Inputs**

CPT Long Descriptor:

Digital analysis of electroencephalogram (EEG) (eg, for epileptic spike analysis)

Global Period: XXX Meeting Date: January 2016

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:

Advisors and subject matter experts from AAN and ACNS met by phone and via email to review the inputs and make recommendations

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale:

We used the existing PE inputs for 95957, as a starting point and made updates to reflect new time standards and change in technology since that time.

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:

The expert panel recommends an intra service time of 111 minutes for the clinical labor activities which is an increase from the current inputs of 30 minutes intra time. Please note the recommended *total* clinical labor time is an increase of 6 minutes (105 – 111). The recommendation of 111 minutes was arrived at by polling active US members of the National Association of Epilepsy Centers on the typical amount of minutes the technologist spends on activities for code 95957. The mean response was 111 minutes, 22 for pre-service activities and 89 minutes for intra-service activities.

The expert panel asserts the existing clinical labor inputs are incorrect due to flawed methodology used to establish clinical labor minutes in 1994 when the code was established. Inputs from existing routine electroencephalogram codes were extrapolated to develop the breakout of minutes based upon the accepted practice in use at that time. This is no longer accurate as the work involved in the digital analysis of an EEG is inherently different from that of a routine EEG.

All supply inputs as well as clinical labor minutes allocated to patient interaction (75 minutes) have been removed as the patient is not present for the service. The reduction in minutes does not signify activities that are no longer performed by the technologist, rather the original inputs were incorrect.

5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

- Import into the analysis system the EEG recordings identified by the physician as suitable for analysis based on the presence of sufficient epileptic spikes and lack of confounding factors.
- Identify that the EEGs were recorded in a manner technically compatible with the dipole analysis software.
- Obtain medical records for use in the clinical correlation.
- Locate, select and obtain digital access to the patient's brain MRI images for co-registration.

Intra-Service Clinical Labor Activities:

- Using spike detection software, run an initial dipole analysis on the averaged spikes in each category.
- Separate and identify each spike's time markings and category for physician review.
- Identify outlier spikes through goodness of fit routines.
- After physician review of outliers, run additional dipole analysis. A three-dimensional map of the spike generator location is created for each spike category.
- Each spike generator location and its dipole direction is co-registered onto the patient's MRI image or displayed in a similar manner so as to correlate the locations with the patient's anatomical structures.
- This process is typically repeated at least one additional time pending physician review and request for additional mappings in order to complete additional review.
- Initiate a template report indicating the location of the identified epileptic spike generators.

Post-Service Clinical Labor Activities:

No post service activities

AMA/Specialty Society RVS Update Committee Summary of Recommendations
Work Neutrality (CPT 2016)

October 2018

Intravascular Ultrasound

Each year AMA staff reviews the utilization assumptions for work neutrality when the Medicare Utilization data for that year/cycle is available. Any code family that has an increase in work RVUs over 10% of what was estimated is reviewed by the RAW to determine what is occurring to impact claims. Intravascular ultrasound, CPT codes 37252 and 37253 were reviewed at the January 2015 meeting and assumed to be a savings. The codes have had a 44% increase in work RVUs over the old codes from 2015 to 2016 and the utilization was double from that of the coding structure, not considering the radiological activities. In April 2018, the RUC had a robust discussion regarding these services, noting that physician work is identical regardless whether the procedure is performed for a diagnostic or therapeutic indication. The RUC indicated that this is a process issue. The utilization of the bundling of these services was underestimated. Therefore, the RUC recommended that these services be surveyed for October 2018, noting that there must be something driving the increased utilization. The RUC indicated that the specialty societies should research why there was such an increase in the utilization (possible compelling evidence).

Compelling Evidence

The specialty societies are recommending maintaining the current work RVUs for CPT codes 37252 and 37253. The specialties societies indicated that while there was a reduction in work RVUs with the original bundling in 2014, there was an overall increase in utilization offsetting the projected work savings. The increase in utilization came from the concurrent CMS decision to price these services in the non-facility setting and to expand coverage to venous disease. The RUC agreed that the site of service changes (migrating into the office setting) for these services and change in patient population (venous disease) constitute compelling evidence to allow for the observed growth. The RUC noted that these services are performed approximately 35,000 in the Medicare 2017 estimated utilization data. Likewise, the *Physician and Other Supplier Data for CY 2016* indicates that 11% of the utilization for CPT code 37252 are performed by 10 specific individuals and 18% of the utilization of CPT code 37253 are performed by 10 specific individuals. The claims for these services in the office appear to be highly concentrated in relatively few offices. Due these reasons, the RUC determined there is compelling evidence explaining the growth of these services. The specialty presented new survey data that support the current valuation of these services. **The RUC recommends that if CMS is concerned about the unanticipated increase in utilization of these services, the Agency should explore the reporting of CPT codes 37252 and 37253 with specific practices.**

37252 Intravascular ultrasound (noncoronary vessel) during diagnostic evaluation and/or therapeutic intervention, including radiological supervision and interpretation; initial noncoronary vessel (List separately in addition to code for primary procedure)

The RUC reviewed the survey results from 103 physicians and determined that the survey 25th percentile and current work RVU of 1.80 appropriately accounts for the work required to perform this service. The RUC confirmed that this service includes the work of both the IVUS intervention and radiological supervision and interpretation. The survey also supported the current physician time of 1 minute evaluation pre-service time, 20 minutes intra-service time and 1 minute immediate post-service time. The specialty reported that during the 1 minute of pre-service time, the physician assesses the approach to the procedure, ensures appropriate equipment is available and often discusses with the patient what will be happening during the procedure. The 1 minute of post-service time include the dictation and review of the final operative report and discussion of the results of the procedure with the patient and referring physician.

The RUC compared the surveyed code to the key reference services indicated by the survey respondents. CPT code 92978 *Endoluminal imaging of coronary vessel or graft using intravascular ultrasound (IVUS) or optical coherence tomography (OCT) during diagnostic evaluation and/or therapeutic intervention including imaging supervision, interpretation and report; initial vessel (List separately in addition to code for primary procedure)* (work RVU = 1.80 and intra-service time of 25 minutes) and 92979 *Endoluminal imaging of coronary vessel or graft using intravascular ultrasound (IVUS) or optical coherence tomography (OCT) during diagnostic evaluation and/or therapeutic intervention including imaging supervision, interpretation and report; each additional vessel (List separately in addition to code for primary procedure)* (work RVU = 1.44 and 25 minutes intra-service time). The RUC indicated that although CPT code 37252 has 3 minutes less total time compared to 92978, it is more intense service, warranting the same work value. **The RUC recommends a work RVU of 1.80 for CPT code 37252.**

37253 Intravascular ultrasound (noncoronary vessel) during diagnostic evaluation and/or therapeutic intervention, including radiological supervision and interpretation; each additional noncoronary vessel (List separately in addition to code for primary procedure)

The RUC reviewed the survey results from 73 physicians and determined that the survey 25th percentile and current work RVU of 1.44 appropriately accounts for the work required to perform this service. The RUC confirmed that this service includes the work of both the IVUS intervention and radiological supervision and interpretation. The survey also supported the current physician time of 20 minutes intra-service time and 1 minute immediate post-service time. The specialty society explained and the RUC agreed that the intra-service time for intravascular ultrasound of the initial noncoronary vessel, CPT code 37252, and each additional vessel, CPT code 37253 are the same because the catheter is already inserted and some of the work that is performed in CPT code 37252 is not replicated. Therefore, where some time is saved with the catheter already in place, is then replaced by the additional time for the work on the additional vessel.

The specialty reported that the 1 minute of post-service time include the dictation and review of the final operative report and discussion of the results of the procedure with the patient and referring physician. The RUC confirmed that the additional minute of post-service time is not duplicative as the previously obtained images are re-reviewed for accuracy and dictated into the final operative report. This post-service work is necessary for each additional vessel, just as it is for the initial vessel.

The RUC compared the surveyed code to the key reference services indicated by the survey respondents. CPT code 92978 *Endoluminal imaging of coronary vessel or graft using intravascular ultrasound (IVUS) or optical coherence tomography (OCT) during diagnostic evaluation and/or therapeutic intervention including imaging supervision, interpretation and report; initial vessel (List separately in addition to code for primary procedure)* (work RVU = 1.80 and intra-service time of 25 minutes) and 92979 *Endoluminal imaging of coronary vessel or graft using intravascular ultrasound (IVUS) or optical coherence tomography (OCT) during diagnostic evaluation and/or therapeutic intervention including imaging supervision, interpretation and report; each additional vessel (List separately in addition to code for primary procedure)* (work RVU = 1.44 and 25 minutes intra-service time). The RUC noted that the intensity and complexity to perform these services are similar warranting a similar work RVU. **The RUC recommends a work RVU of 1.80 for CPT code 37252.**

Practice Expense

The Practice Expense Subcommittee modified the direct practice expense inputs and reduced the clinical staff time by 1 minute and confirmed that this service is performed in an angiography room. The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
37252	Intravascular ultrasound (noncoronary vessel) during diagnostic evaluation and/or therapeutic intervention, including radiological supervision and interpretation; initial noncoronary vessel (List separately in addition to code for primary procedure)	ZZZ	1.80
37253	Intravascular ultrasound (noncoronary vessel) during diagnostic evaluation and/or therapeutic intervention, including radiological supervision and interpretation; each additional noncoronary vessel (List separately in addition to code for primary procedure)	ZZZ	1.44

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION**

CPT Code: 37252	Tracking Number	Original Specialty Recommended RVU: 1.80
		Presented Recommended RVU: 1.80
Global Period: ZZZ	Current Work RVU: 1.80	RUC Recommended RVU: 1.80

CPT Descriptor: Intravascular ultrasound (noncoronary vessel) during diagnostic evaluation and/or therapeutic intervention, including radiological supervision and interpretation; initial noncoronary vessel

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: During a lower extremity endovascular arterial revascularization, a 70-year-old male with a complex lesion requires intravascular ultrasound to facilitate treatment of an initial vessel. Note: This is an add-on service. Only consider the additional work related to the intravascular ultrasound of the initial vessel.

Percentage of Survey Respondents who found Vignette to be Typical: 78%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is;
Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The risks, benefits, potential complications, and alternatives to the procedure are discussed with the patient and informed consent is obtained.

Description of Intra-Service Work: The patient undergoes lower extremity angiography from a common femoral access for the evaluation and treatment of peripheral arterial disease (reported separately). The intravascular ultrasound catheter is introduced over a guidewire and the area of interest is evaluated. The catheter is advanced, images are taken, color flow is assessed, and plaque morphology is evaluated. After all appropriate data are collected and recorded, the catheter is removed. Endovascular intervention is performed (reported separately), and the catheter is reinserted to assess technical adequacy. The intravascular ultrasound images are reviewed along with any additional information to be dictated into the final operative report.

Description of Post-Service Work: The final operative report is dictated, reviewed, and signed. Results of the procedure are discussed with the patient and the referring physician.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

In the NPRM for 2015 MPFS (July 2014), a stakeholder requested that CMS establish non-facility PE RVUs for CPT codes 37250 and 37251. In September 2014, the RUC recommended to refer this issue to CPT. At the October 2014 CPT meeting, CPT codes 37250 and 37251 (and the corresponding S&I codes 75945 and 75946) were deleted and new bundled codes were developed to describe Intravascular Ultrasound (IVUS); 37252 bundled 37250 and 75945; 37253

bundled 37251 and 75946. These recommendations for these newly bundled services represented a reduction in wRVUs compared to how the service was formerly reported with component coding. Future utilization was projected based on available Medicare claims data and estimates of future utilization in the non-facility setting.

In January 2018 the RAW identified these two services as not meeting the work neutrality projections. The specialties agreed to analyze the utilization data for the following RUC/RAW meeting. At the April 2018 RUC meeting, the specialty societies noted that the reported together data indicates that there is not one service or family dominating utilization with these services. The specialties agreed that they underestimated the number of services performed in the non-facility setting.

The RAW recommended at the April 2018 meeting that these services be surveyed for October 2018, noting that there must be something driving the increased utilization. The RAW indicated that the specialty societies should research why there was such an increase in the utilization (possible compelling evidence). Additionally, the RAW believed that the vignette for 37253 may need to be changed based Medicare ICD-10 data that shows the typical diagnosis is venous.

The multispecialty groups conducted a physician work surveys for CPT Codes 37252 and 37253. The specialties revised the vignette for CPT Code 37253 to reflect the ICD10 data in the RUC database.

Vignette Error

The vignettes in the RUC database for 37252 is incorrect.. Code 37252 should say single vessel: *A 70-year-old male undergoes lower extremity endovascular arterial revascularization. He has a complex lesion that requires intravascular ultrasound to facilitate treatment of a single second vessel.* AMA staff have confirmed there is an error in the database and will update it in the next version of the database.

Work Neutrality

Utilization and budget neutrality estimates for the 2015 SORs were made using 2013 Medicare PFS utilization from the RUC database when the service was only provided in the facility. We believe that work neutrality should only have been measured for facility work RVUs and that adding a site of service per CMS request (ie, office) is not part of work neutrality. This was not a case of taking one code and splitting it into multiple codes. Instead, four codes were bundled into two codes and reduced work RVUs were recommended based on the survey 25th percentile and not based on a reduction in work.

Compelling Evidence

While there was a reduction in work RVUs with the original bundling in 2014, there was an overall increase in utilization offsetting the projected work neutrality. The increase in utilization came from the concurrent CMS decision to price these services in the non facility setting and to expand coverage to venous disease. We believe the site of service changes (migrating into the office setting) for these services and change in patient population (venous disease) constitute compelling evidence to allow for the observed growth.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 37252

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty vascular surgery How often? Commonly

Specialty cardiology How often? Commonly

Specialty interventional radiology How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. A national estimate is not available

Specialty	Frequency	Percentage	%
Specialty	Frequency	Percentage	%
Specialty	Frequency	Percentage	%

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 32,209

If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Current RUC database (2017 utilization data)

Specialty vascular surgery	Frequency 13206	Percentage 41.00 %
Specialty cardiology	Frequency 10307	Percentage 32.00 %
Specialty interventional radiology	Frequency 5154	Percentage 16.00 %

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Imaging

BETOS Sub-classification:

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 37252

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION**

CPT Code: 37253	Tracking Number	Original Specialty Recommended RVU: 1.44
		Presented Recommended RVU: 1.44
Global Period: ZZZ	Current Work RVU: 1.44	RUC Recommended RVU: 1.44

CPT Descriptor: Intravascular ultrasound (noncoronary vessel) during diagnostic evaluation and/or therapeutic intervention, including radiological supervision and interpretation; each additional noncoronary vessel (List separately in addition to code for primary procedure)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: During a venogram, a 40-year-old female with a suspected central venous lesion requires intravascular ultrasound to facilitate treatment of an additional vessel. Note: This is an add-on service. Only consider the additional work related to the intravascular ultrasound of an additional vessel.

Percentage of Survey Respondents who found Vignette to be Typical: 84%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: There is no additional preservice work for an additional vessel.

Description of Intra-Service Work: The patient undergoes lower extremity angiography from a common femoral access for the evaluation and treatment of peripheral arterial disease (reported separately). The intravascular ultrasound catheter is introduced over a guidewire and the area of interest in the additional vessel is evaluated. The catheter is advanced, images are taken, color flow is assessed, and plaque morphology is evaluated. After all appropriate data are collected and recorded, the catheter is removed. Endovascular intervention is performed (reported separately), and the catheter is reinserted to assess technical adequacy. The intravascular ultrasound images are reviewed along with any additional information to be dictated into the final operative report.

Description of Post-Service Work: The final operative report is dictated, reviewed, and signed. Results of the procedure are discussed with the patient and the referring physician.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

In the NPRM for 2015 MPFS (July 2014), a stakeholder requested that CMS establish non-facility PE RVUs for CPT codes 37250 and 37251. In September 2014, the RUC recommended to refer this issue to CPT. At the October 2014 CPT meeting, CPT codes 37250 and 37251 (and the corresponding S&I codes 75945 and 75946) were deleted and new bundled codes were developed to describe Intravascular Ultrasound (IVUS); 37252 bundled 37250 and 75945; 37253

bundled 37251 and 75946. These recommendations for these newly bundled services represented a reduction in wRVUs compared to how the service was formerly reported with component coding. Future utilization was projected based on available Medicare claims data and estimates of future utilization in the non-facility setting.

In January 2018 the RAW identified these two services as not meeting the work neutrality projections. The specialties agreed to analyze the utilization data for the following RUC/RAW meeting. At the April 2018 RUC meeting, the specialty societies noted that the reported together data indicates that there is not one service or family dominating utilization with these services. The specialties agreed that they underestimated the number of services performed in the non-facility setting.

The RAW recommended at the April 2018 meeting that these services be surveyed for October 2018, noting that there must be something driving the increased utilization. The RAW indicated that the specialty societies should research why there was such an increase in the utilization (possible compelling evidence). Additionally, the RAW believed that the vignette for 37253 may need to be changed based Medicare ICD-10 data that shows the typical diagnosis is venous.

The multispecialty groups conducted a physician work surveys for CPT Codes 37252 and 37253. The specialties revised the vignette for CPT Code 37253 to reflect the ICD10 data in the RUC database.

Work Neutrality

Utilization and budget neutrality estimates for the 2015 SORs were made using 2013 Medicare PFS utilization from the RUC database when the service was only provided in the facility. We believe that work neutrality should only have been measured for facility work RVUs and that adding a site of service per CMS request (ie, office) is not part of work neutrality. This was not a case of taking one code and splitting it into multiple codes. Instead, four codes were bundled into two codes and reduced work RVUs were recommended based on the survey 25th percentile and not based on a reduction in work.

Compelling Evidence

While there was a reduction in work RVUs with the original bundling in 2014, there was an overall increase in utilization offsetting the projected work neutrality. The increase in utilization came from the concurrent CMS decision to price these services in the non facility setting and to expand coverage to venous disease. We believe the site of service changes (migrating into the office setting) for these services and change in patient population (venous disease) constitute compelling evidence to allow for the observed growth.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 37253

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty vascular surgery How often? Commonly

Specialty cardiology How often? Commonly

Specialty interventional radiology How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. A national estimate is not available

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 38,310

If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Current RUC database (2017 utilization data).

Specialty vascular surgery	Frequency 16857	Percentage 44.00 %
----------------------------	-----------------	--------------------

Specialty cardiology	Frequency 11494	Percentage 30.00 %
----------------------	-----------------	--------------------

Specialty interventional radiology	Frequency 5747	Percentage 15.00 %
------------------------------------	----------------	--------------------

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Imaging

BETOS Sub-classification:

Imaging/procedure

BETOS Sub-classification Level II:

Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 37253

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Non Facility Direct Practice Expense (PE) Inputs

Global Period: ZZZ

Meeting Date: October 2018

CPT Long Descriptor:

37252 Intravascular ultrasound (noncoronary vessel) during diagnostic evaluation and/or therapeutic intervention, including radiological supervision and interpretation; initial noncoronary vessel (List separately in addition to code for primary procedure)

37253 Intravascular ultrasound (noncoronary vessel) during diagnostic evaluation and/or therapeutic intervention, including radiological supervision and interpretation; each additional noncoronary vessel (List separately in addition to code for primary procedure)

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

SVS, SIR, ACC, SCAI and ACPH convened a panel that included a number of experts to evaluate the direct practice expense inputs for these IVUS procedures.

2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here:

CPT Codes 37252 and 37253 are existing CPT codes. As such, we included the current direct practice expense inputs on the PE spreadsheet.

**3. Is this code(s) typically billed with an E/M service?
Is this code(s) typically billed with the E/M service in the nonfacility?
(Please see provided data in PE Subcommittee folder)**

Codes not typically billed with E/M

- 37252 – 3%
- 37253 – 5%

Code not typically billed with E/M service in the NF

- 37252 – 5%
- 37243 – 7%

4. **What specialty is the dominant provider in the nonfacility?
What percent of the time does the dominant provider provide the service(s) in the nonfacility?
Is the dominant provider in the nonfacility different then for the global?
(Please see provided data in PE Subcommittee folder)**

NF (All, global and 26)

- 37252 – 41% Vascular Surgery
- 37253 – 44% Vascular Surgery

NF (Global and TC)

- 37252 – 51% Vascular Surgery
- 37253 – 35% Vascular Surgery

5. **If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:**

N/A

6. **If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), you must provide compelling evidence. Please explain if the increase can be entirely accounted for because of an increase in physician time.**

N/A

7. **If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here:**

N/A

8. **How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? (please use this time rather than 5 minutes in your reference code)
The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:**

N/A

- 9. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time or Perform procedure/service---NOT directly related to physician work time*:**

Clinical staff utilized during the intraservice time are one Angio tech (L041A) and one Nurse (L037D)/Tech (L041A) Blend at (25%/75%). The Angio tech is scrubbed in to the procedure and functions as a hip-to-hip assistant during the entire procedure. The nurse/tech blend performs both imaging duties and assists with retrieving product and plays a supportive role during the procedure. In addition, this staff member monitors and supports the patient.

- 10. If you have used a percentage of the physician intra-service work time other than 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.**

Acquire Images (75%) and Circulator (25%) – current interventional model for the second clinical staff. The nurse tech blend performs both imaging duties and assists with retrieving product and plays a supportive role during the procedure.

- 11. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities:**

N/A

- 12. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at <http://www.bls.gov>.**

N/A

- 13. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here:**

N/A

- 14. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here:**

N/A

- 15. List all the equipment included in your recommendation and the equipment formula chosen (see document titled “Calculating equipment time”). If you have selected “other formula” for any of the equipment please explain here:**

ES047	IVUS system	Default
EL011	room, angiography	Highly Technical
ED050	Technologist PACS workstation	PACS

- 16. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here:**

N/A

- 17. If there is any other item on your spreadsheet that needs further explanation please include here:**

N/A

- 18. Please include an explanation of each line item:**

SD173	guidewire, low profile (SpartaCore)	Stiff supportive guidewire required for safe introduction and guidance of IVUS catheter.
SD304	IVUS catheter	Disposable catheter has integrated ultrasound transducer to capture images.
SD305	IVUS Catheter Sterile Cover	Cover for wire exiting IVUS catheter and junction box with IVUS module.

AMA/Specialty Society RVS Update Committee Summary of Recommendations
CMS/Other Source – Medicare Utilization Over 30,000

October 2018
X-Ray Exam – Neck (PE Only)

In April 2018, the Practice Expense (PE) Subcommittee noted that the Medicare non-facility reported together data show multiple codes are reported on the same day. The specialty societies did not think the codes reported together in the non-facility setting were clinically appropriate, and they requested additional time to review the non-facility data. Further, the PE Subcommittee and the specialty society agreed additional analysis of local and regional variations was necessary. The PE Subcommittee and the specialty societies also agreed to review the practice expense inputs again at the October 2018 PE Subcommittee meeting and remove any staff time, supplies, and equipment found to be duplicative.

At the October 2018 RUC meeting, the specialty society presented information that, because 70360 is a relatively low-volume code, particularly in the non-facility setting, miscoding by a small number of providers in one locality is having an outsized impact on the reported together data. The specialty reviewed information provided by AMA staff and confirmed that CPT code 70360 is being reported together with either 74240 *Radiologic examination, gastrointestinal tract, upper; with or without delayed images, without KUB*, 74230 *Swallowing function, with cineradiography/videoradiography*, or 72040 *Radiologic examination, spine, cervical; 2 or 3 views* inappropriately. Further, data from the *Physician/Other Supplier Data for CY 2016* indicate that the majority of the reported together claims are from the state of Texas and may indicate regional miscoding. The specialty society explained that, given the miscoding, it would be inappropriate to remove any clinical staff time and it is appropriate to affirm the direct practice expense reviewed and approved by the PE Subcommittee at the April 2018 RUC meeting. **The RUC reaffirms its recommendations from April 2018 and suggests that CMS address any potential miscoding via its Medicare contractor in Texas.**

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
70360	Radiologic examination; neck, soft tissue	XXX	0.17 (April 2018 RUC Recommendation)

**AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Non Facility Direct Practice Expense (PE) Inputs**

CPT Long Descriptor:

70360	Radiologic examination; neck, soft tissue
--------------	---

Global Period: XXX Meeting Date: April 2018

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

The American College of Radiology (ACR), American Society of Neuroradiology (ASNR), American Academy of Family Physicians (AAFP), and American College of Physicians (ACP) convened a consensus panel to finalize the practice expense data for the X-Ray exam neck code, CPT code 70360.

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code.** You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here:

The societies included the existing PE inputs for code 70360 on the spreadsheet to serve as a reference.

3. Is this code(s) typically billed with an E/M service?
Is this code(s) typically billed with the E/M service in the nonfacility?
(Please see provided data in PE Subcommittee folder)

No, this code is not typically billed with an E/M service.
Yes, this code is typically billed with an E/M service in the nonfacility.

4. What specialty is the dominant provider in the nonfacility?
What percent of the time does the dominant provider provide the service(s) in the nonfacility?
Is the dominant provider in the nonfacility different than for the global?
(Please see provided data in PE Subcommittee folder)

Nonfacility: Diagnostic Radiology at 20%

Diagnostic Radiology is also the dominant specialty in the global.

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:
N/A
6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), you must provide compelling evidence. Please explain if the increase can be entirely accounted for because of an increase in physician time.
N/A
7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here:

N/A

8. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time*:
Bring patient into x-ray room and have patient sit/lie on x-ray table or stand as appropriate. Place first cassette behind patient's neck. Position patient's anatomy for the AP view. Step behind shielding to control panel. Set appropriate exposure parameters. Instruct patient to hold still. Take exposure for first view. Step from behind shielding. Take first cassette from behind patient and place second cassette as needed. Position patient's anatomy for lateral view. Step behind shielding to control panel. Set appropriate exposure parameters. Instruct patient to hold still. Take exposure for second view. Step from behind shielding. Take second cassette out behind patient. The above steps are repeated for any additional views to be obtained. All cassettes are then taken to the image reader. Run all cassettes through reader. Check all images for adequate exposure, positioning, coverage, etc. Repeat any views as needed.
9. If you have used a percentage of the physician intra-service work time other than 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.
N/A
10. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities:
N/A
11. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at <http://www.bls.gov>.
N/A
12. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here:
N/A
13. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here:
N/A
14. List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here:
- **Technologist PACS Workstation Proxy (ED050)** –PACS formula; Equals total service period time
 - **Professional PACS Workstation (ED053)** – Equals physician work intra time + 1/2 physician work pre-time
 - **Room, basic radiology (EL012)** – Highly technical formula
15. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here:

N/A

16. If there is any other item on your spreadsheet that needs further explanation please include here:

N/A

17. Please include an explanation of each line item:

RUC Rec April 2018

X-Ray Exam Neck

AMA/Specialty Society RVS Update Committee Summary of Recommendations
CMS/Other Source – Medicare Utilization Over 30,000

April 2018

X-Ray Exam - Neck

In October 2017, the Relativity Assessment Workgroup requested that AMA staff compile a list of CMS/Other codes with Medicare utilization of 30,000 or more. In January 2018, the RUC recommended to crosswalk these services like other recent similar radiology recommendations for April 2018, if approved by the Research Subcommittee.

In February, the Research Subcommittee approved for the specialties to utilize a crosswalk methodology to make physician work and physician time recommendations in lieu of conducting a RUC survey. The Research Subcommittee had reviewed the recommendation made by the specialty societies to crosswalk times and values for these identified codes to other codes performed by the specialty societies. On the Research Subcommittee conference call, the specialty societies explained that when determining an appropriate crosswalk, they tried to find RUC reviewed codes that were similar in service and time, performed on similar anatomical site, required similar number of views and required similar patient positions. The Research Subcommittee agreed that the methodology employed by the specialty was appropriate for these services, noting past precedent of the Research Subcommittee approving a similar request for X-ray codes in April 2017 and in 2010. As part of its discussion, the Subcommittee noted that it would not recommend for the specialty to propose using lower work RVU crosswalks to justify maintaining the value of higher work RVU codes.

The Research Subcommittee approved the crosswalk/reference code methodology as proposed by the specialty societies to be appropriate for codes 70210, 70220, 70250, 70260, 70360, 72170, 72190.

70360 Radiologic examination; neck, soft tissue

CPT code 70360 is an x-ray procedure used to assess the airway and soft tissues of the neck, with potential evaluation of foreign bodies. A 2-view exam is typical. The RUC reviewed the descriptions of work and the expert panel recommendations and agreed on the following physician time components: pre-service time of 1 minute, intra-service time of 3 minutes and post-service time of 1 minute.

The RUC agreed with the specialty societies that the current work RVU of 0.17 for CPT code 70360 should be maintained. The RUC compared the code under review to CPT code 74018 *Radiologic examination, abdomen; 1 view* (work RVU = 0.18, 1 minute pre-service time, 3 minutes intra-service time, 1 minute post-service time) and noted that both services should be valued similarly as both studies have identical intra-service and total times. Although the number of views varies with respect to the reference code, the RUC agreed that the magnitude of work is similar and the work RVUs are nearly identical. For additional support, the RUC compared CPT code 70360 to three other radiology codes: CPT code 73080

Radiologic examination, elbow; complete, minimum of 3 views (work RVU = 0.17, 1 minute pre-service time, 3 minutes intra-service time, 1 minute post-service time); *73610 Radiologic examination, ankle; complete, minimum of 3 views* (work RVU = 0.17, 1 minute pre-service time, 3 minutes intra-service time, 1 minute post-service time) and *73630 Radiologic examination, foot; complete, minimum of 3 views* (work RVU = 0.17, 1 minute pre-service time, 3 minutes intra-service time, 1 minute post-service time) and noted that the physician work and times are identical while acknowledging that these codes apply to the extremities unlike CPT code 70360 which is an axillary skeletal radiograph. **The RUC recommends a work RVU of 0.17 for CPT code 70360.**

Practice Expense

The Practice Expense (PE) Subcommittee noted that the non-facility billed together data show that multiple codes are billed on the same day. The specialty societies did not think that the codes billed together in the non-facility setting were clinically appropriate and they requested additional time to review the non-facility data. Further, the PE Subcommittee and the specialty society agreed that further analysis of local and regional variations is necessary. The PE Subcommittee and the specialty societies agreed to review the practice expense inputs again at the next PE Subcommittee meeting and remove any staff time, supplies and equipment that is found to be duplicative. The RUC recommends the direct practice expense inputs as submitted by the specialty society. **The RUC recommends that the direct practice expense inputs be accepted as Interim and revisited at the October 2018 RUC meeting.**

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
70360	Radiologic examination; neck, soft tissue	XXX	0.17 (No Change)

February 19, 2018

Margie Andreae, MD, Chair
 AMA/RUC Research Subcommittee
 American Medical Association
 330 N. Wabash Ave.
 Chicago, IL 60611

Dear Dr. Andreae,

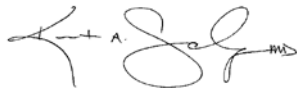

The seven codes listed below were identified by the CMS/Other >30,000 screen. At the January 2018 RUC meeting, the Relativity Assessment Workgroup agreed with the societies' recommendation to use a direct crosswalk methodology to value these codes. The American College of Radiology, American Society of Neuroradiology, American Academy of Orthopaedic Surgeons, and American Academy of Family Physicians believe the existing values for these services are accurate and propose the following crosswalks to existing RUC surveyed codes.

Code	Descriptor	Work RVU	Crosswalk Code	Crosswalk Descriptor	Crosswalk Work RVU
70210	Radiologic examination, sinuses, paranasal, less than 3 views	0.17	74018	Radiologic examination, abdomen; 1 view	0.18
70220	Radiologic examination, sinuses, paranasal, complete, minimum of 3 views	0.25	74019	Radiologic examination, abdomen; 2 views	0.23
70250	Radiologic examination, skull; less than 4 views	0.24	74019	Radiologic examination, abdomen; 2 views	0.23
70260	Radiologic examination, skull; complete, minimum of 4 views	0.34	74022	Radiologic examination, abdomen; complete acute abdomen series, including supine, erect, and/or decubitus views, single view chest	0.32
70360	Radiologic examination; neck, soft tissue	0.17	74018	Radiologic examination, abdomen; 1 view	0.18
72170	Radiologic examination, pelvis; 1 or 2 views	0.17	73552	Radiologic examination, femur; minimum 2 views	0.18
72190	Radiologic examination, pelvis; complete, minimum of 3 views	0.21	73502	Radiologic examination, hip, unilateral, with pelvis when performed; 2-3 views	0.22

Most of these codes currently lack vignettes and work descriptors. In the accompanying document we provide vignettes and work descriptors for the Committee's consideration.

Should you have any questions, please feel free to contact ACR RUC staff, Stephanie Le, at 800-227-5463, ext. 4584 or via email sle@acr.org.

Sincerely,

Kurt Schoppe, MD

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION**

CPT Code: 70360	Tracking Number	Original Specialty Recommended RVU: 0.17
		Presented Recommended RVU: 0.17
Global Period: XXX	Current Work RVU: 0.17	RUC Recommended RVU: 0.17

CPT Descriptor: Radiologic examination; neck, soft tissue

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 60- year-old woman who swallowed a foreign object presents with globus sensation.

Percentage of Survey Respondents who found Vignette to be Typical:

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review the reason for the examination and any pertinent clinical history. Review any prior applicable plain film or imaging studies.

Description of Intra-Service Work: Supervise technologist performing the examination. Interpret the examination and compare the findings to previous studies, if applicable. Interpretation includes evaluation of all soft tissues of the neck including the prevertebral soft tissues and epiglottis. Assess patency of pharynx, larynx and trachea. Evaluate the integrity of the bones. Evaluate for foreign bodies. Dictate report for the medical record.

Description of Post-Service Work: The final report is reviewed and signed, and findings are communicated to the referring physician as needed.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

The CPT code for soft tissue x-ray of the neck, 70360 (*Radiologic examination; neck, soft tissue*), was identified by the CMS/Other Source – Utilization over 30,000 screen.

At the January 2018 RUC meeting, the Relativity Assessment Workgroup recommended that the societies use a direct crosswalk methodology to value this code. The specialty societies believe that maintaining value with work RVU of 0.17 is supported by the proposed crosswalk, CPT code 74018 (*Radiologic examination, abdomen; 1 view*).

Recommended Crosswalk

CPT code 70360 (*Radiologic examination; neck, soft tissue*) is an X-ray procedure used to assess the airway and soft tissues of the neck, with potential evaluation of foreign bodies. The specialties propose a crosswalk to CPT code 74018 (*Radiologic examination, abdomen; 1 view*), which has identical total times and a higher wRVU. The magnitude of work is the same despite the different number of views of the exam.

Work RVU Recommendation

The specialties recommend the existing work RVU of 0.17 for CPT code 70360.

Pre, Intra, and Post Service Times

The specialties recommend 1 minute of pre-service time, 3 minutes of intra service time, and 1 minute of post service time for CPT code 70360. The recommended pre-service, intra-service, and post-service times are strongly supported by the crosswalk, CPT code 74018.

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT
70360	X-Ray; neck, soft tissue	0.17	1	3	1	5	0.042
74018	X-Ray, abdomen; 1 view	0.18	1	3	1	5	0.045

MPC Codes

The recommended times and value for 70360 compare well with two other MPC codes:

- 92567 (*Tympanometry (impedance testing)*), and
- 96401 (*Chemotherapy administration, subcutaneous or intramuscular; non-hormonal anti-neoplastic*)

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT
70360	X-Ray; neck, soft tissue	0.17	1	3	1	5	0.042
92567	Tympanometry (impedance testing)	0.20	1	4	1	6	0.039
96401	Chemo admin, subcut. or intramusc; non-hormonal anti-neoplastic	0.21	4	3	2	9	0.025

Summary of Recommendation for CPT Code 70360

Our expert panel recommends maintaining the current value of 70360 at 0.17 RVU with service period times of 1, 3, and 1 minutes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.

- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. CPT code 70360 may be reported with 70100 (Radiologic examination, mandible; partial, less than 4 views), 72040 (Radiologic examination, spine, cervical; 2 or 3 views), 74230 (Swallowing function, with cineradiography/videoradiography), 74240 (Radiologic examination, gastrointestinal tract, upper; with or without delayed images, without KUB).

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 70360

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Commonly

Specialty Family Medicine How often? Commonly

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 216000

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The number of services described by CPT code 70360 provided nationally in a one-year period is estimated to be 216,000.

Specialty Diagnostic Radiology Frequency 143159 Percentage 66.27 %

Specialty Family Medicine Frequency 11548 Percentage 5.34 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 72,000

If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. CPT code 70360 is estimated to be provided 72,000 times to Medicare patients nationally in a one -year period.

Specialty Diagnostic Radiology Frequency 47720 Percentage 66.27 %

Specialty Family Medicine Frequency 3849 Percentage 5.34 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Imaging

BETOS Sub-classification:
Standard imaging

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 70360

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Non Facility Direct Practice Expense (PE) Inputs**

CPT Long Descriptor:

70360	Radiologic examination; neck, soft tissue
--------------	---

Global Period: XXX Meeting Date: April 2018

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

The American College of Radiology (ACR), American Society of Neuroradiology (ASNR), American Academy of Family Physicians (AAFP), and American College of Physicians (ACP) convened a consensus panel to finalize the practice expense data for the X-Ray exam neck code, CPT code 70360.

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code.** You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here:

The societies included the existing PE inputs for code 70360 on the spreadsheet to serve as a reference.

3. Is this code(s) typically billed with an E/M service?
Is this code(s) typically billed with the E/M service in the nonfacility?
(Please see provided data in PE Subcommittee folder)

No, this code is not typically billed with an E/M service.
Yes, this code is typically billed with an E/M service in the nonfacility.

4. What specialty is the dominant provider in the nonfacility?
What percent of the time does the dominant provider provide the service(s) in the nonfacility?
Is the dominant provider in the nonfacility different than for the global?
(Please see provided data in PE Subcommittee folder)

Nonfacility: Diagnostic Radiology at 20%

Diagnostic Radiology is also the dominant specialty in the global.

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:
N/A
6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), you must provide compelling evidence. Please explain if the increase can be entirely accounted for because of an increase in physician time.
N/A
7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here:

N/A

8. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time*:
Bring patient into x-ray room and have patient sit/lie on x-ray table or stand as appropriate. Place first cassette behind patient's neck. Position patient's anatomy for the AP view. Step behind shielding to control panel. Set appropriate exposure parameters. Instruct patient to hold still. Take exposure for first view. Step from behind shielding. Take first cassette from behind patient and place second cassette as needed. Position patient's anatomy for lateral view. Step behind shielding to control panel. Set appropriate exposure parameters. Instruct patient to hold still. Take exposure for second view. Step from behind shielding. Take second cassette out behind patient. The above steps are repeated for any additional views to be obtained. All cassettes are then taken to the image reader. Run all cassettes through reader. Check all images for adequate exposure, positioning, coverage, etc. Repeat any views as needed.
9. If you have used a percentage of the physician intra-service work time other than 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.
N/A
10. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities:
N/A
11. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at <http://www.bls.gov>.
N/A
12. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here:
N/A
13. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here:
N/A
14. List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here:
 - **Technologist PACS Workstation Proxy (ED050)** –PACS formula; Equals total service period time
 - **Professional PACS Workstation (ED053)** – Equals physician work intra time + 1/2 physician work pre-time
 - **Room, basic radiology (EL012)** – Highly technical formula
15. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here:

N/A

16. If there is any other item on your spreadsheet that needs further explanation please include here:

N/A

17. Please include an explanation of each line item:

N/A

AMA/Specialty Society RVS Update Committee Summary of Recommendations
CMS/Other Source – Medicare Utilization Over 30,000

October 2018

CT – Orbit/Ear/Fossa

In October 2017, the RAW requested that AMA staff compile a list of CMS/Other codes with Medicare utilization of 30,000 or more. CPT code 70480 was identified as part of this screen and the code family was expanded to include two other computed tomography codes pertaining to the orbit, fossa, sella, and/or ear, CPT codes 70481 and 70482. In January 2018, the RUC recommended to survey these services for October 2018.

70480 Computed tomography, orbit, sella, or posterior fossa or outer, middle, or inner ear; without contrast material

The RUC reviewed the survey results from 42 radiologists and neuroradiologists and determined that the current work RVU of 1.28, which is also the survey 25th percentile, appropriately accounts for the physician work involved to perform this service. CPT code 70480 is used to investigate diverse causes for hearing loss and vertigo and in assessing for temporal bone fractures or facial nerve injury in the setting of trauma, assessment of the ossicular chain, epitympanum, oval window, round window, cochlea, vestibular aqueduct, and semicircular canals for causes of congenital and acquired hearing loss. The code includes axial, sagittal, and coronal reconstructed images with uniquely thin slices (less than 1 mm). In addition to these planes, oblique, coronal, and sagittal reconstructions are also created for the evaluation of the cochlea and semicircular canals to be carefully assessed. The RUC recommends 4 minutes pre-service time, 15 minutes intra-service time and 3 minutes immediate post-service time for CPT code 70480. Although the total time is decreasing by 3 minutes without a change in work RVUs, the source of the code is CMS/Other so the methodology that produced the original times was flawed.

Importantly, the RUC noted that this family of CT codes will not have the normal step-up in times and work RVU related to the use of contrast as is the case for most other radiology code families due to differences in anatomy and typical diagnosis for the three codes in this family. The without IV contrast code, code 70480, is fundamentally different work than the with IV contrast codes 70481 and 70482. This is supported by the claims where the most commonly reported diagnosis for CPT code 70480 is hearing loss, while the most commonly reported diagnosis for both CPT codes 70481 and 70482 is orbital disorders. The 70480 code involves the detailed assessment of thin sections, 0.625 mm slices, of the complex temporal bone anatomy including the external auditory canal, middle ear cavity, inner ear structures, cranial nerves, and vascular structures which are in close proximity to each other. The 70481 and 70482 codes involve the evaluation of the orbit, including the globe, extraocular muscles, lacrimal glands, optic nerve sheath/complex, adjacent skull base foramen, and adjacent spaces and sinuses. Since the work is completely different, this family of codes will not have the typical increase in times that is seen in other radiology code families. The without IV contrast code 70480 should be viewed as a uniquely separate procedure from codes 70481 and 70482.

The RUC compared CPT code 70480 to the top key reference service CPT code 70542 *Magnetic resonance (eg, proton) imaging, orbit, face, and/or neck; with contrast material(s)* (work RVU = 1.62 and 20 minutes intra-service time), which is an MRI of a similar region as the survey code (orbit, face, and/or neck) with contrast, and noted that the reference code has a higher intra-service time and work RVU, with a slightly lower IWP/UT. This is supported by the intensity/complexity survey results in which respondents felt that CPT code 70480 was identical or more complex than CPT code 70542. Although magnetic resonance imaging is a technically challenging modality, specialized anatomic knowledge is needed to evaluate the compact and complex area in code 70480. The RUC also compared the survey code to the second key reference service CPT code 70490 *Computed tomography, soft tissue neck; without contrast material* (work RVU = 1.28 and 15 minutes intra-service time) and noted that the reference code has the same intra-service time, identical work RVU, and slightly lower IWP/UT in comparison to the survey code. The intensity/complexity survey results support the IWP/UT differential as most respondents felt that CPT code 70480 was slightly more intense and complex than CPT code 70490. Although the neck anatomy is complex, the lack of intravenous contrast in code 70490 limits the assessment of the region. In contrast, the middle and inner ear structures are bony structures that can be evaluated without IV contrast.

For additional support, the RUC referenced MPC code 70470 *Computed tomography, head or brain; without contrast material, followed by contrast material(s) and further sections* (work RVU = 1.27 and 15 minutes intra-service time) and noted that the comparison code has identical intra-service time, nearly identical RVUs, and a lower IWP/UT. CPT code 70480 is more intense with more complex anatomic structures to evaluate compared to code 70470, which accounts for the differences in IWP/UT.

The RUC concluded that CPT code 70480 should maintain its current value as supported by the survey 25th percentile. Further, relativity is maintained across the family of RUC-reviewed CT and neuroimaging codes. **The RUC recommends a work RVU of 1.28 for CPT code 70480.**

70481 *Computed tomography, orbit, sella, or posterior fossa or outer, middle, or inner ear; with contrast material(s)*

The RUC reviewed the survey results from 42 radiologists and neuroradiologists and determined that a work RVU of 1.13, below the survey 25th percentile, appropriately values this service. The RUC recommends a direct work RVU crosswalk to the second highest key reference service CPT code 70487 *Computed tomography, maxillofacial area; with contrast material(s)* (work RVU = 1.13 and 12 minutes intra-service time). CPT code 70481 has similarly intense physician work with clinical concern for orbital pathology compared to the crosswalk code which typically involves evaluation of a patient with facial cellulitis or dental infection. The RUC recommends the median survey times of 4 minutes pre-service time, 13 minutes intra-service time and 3 minutes immediate post-service time.

Unlike CPT code 70480, in which bony structures are primarily being evaluated without contrast, CPT code 70481 is typically ordered to evaluate the orbital structures. Contrast is needed to evaluate the soft tissues for abnormal nerve enhancement, muscle enhancement, rim-enhancing fluid collections, and enhancing lesions in the globe. For this service, axial, coronal, and sagittal reconstructed thin slices are evaluated to assess structures that may be a few millimeters in size. In addition, sagittal oblique images for each orbit are created to assess structures in the orientation of the orbit in the skull.

For additional support, the RUC referenced MPC code 70460 *Computed tomography, head or brain; with contrast material(s)* (work RVU = 1.13 and 12 minutes intra-service time) and noted that the comparison code has identical physician work and nearly identical intra-service time and IWPUT. The RUC concluded that CPT code 70481 should be valued below the survey 25th percentile work RVU as supported by a crosswalk to CPT code 70487. **The RUC recommends a work RVU of 1.13 for CPT code 70481.**

70482 Computed tomography, orbit, sella, or posterior fossa or outer, middle, or inner ear; without contrast material, followed by contrast material(s) and further sections

The RUC reviewed the survey results from 42 radiologists and neuroradiologists and determined a work RVU of 1.27, below the survey 25th percentile appropriately values this service. The RUC recommends a direct work RVU crosswalk to the second highest key reference service CPT code 70488 *Computed tomography, maxillofacial area; without contrast material, followed by contrast material(s) and further sections* (work RVU = 1.27 and 15 minutes intra-service time). The crosswalk code covers similar anatomic regions compared to CPT code 70482 and has identical physician work and intra-service time which is why it was selected as an appropriate crosswalk. The RUC recommends the median survey times of 4 minutes pre-service time, 15 minutes intra-service time and 4 minutes immediate post-service time.

Similar to CPT code 70481, CPT code 70482 typically involves the evaluation of axial, coronal, and sagittal reconstructed thin slices. In addition, sagittal oblique images for each orbit are created to allow for assessment of the optic nerve in continuity. Not only is it important to assess the orbital structures, but also the adjacent skull base foramen and spaces which may be a dangerous conduit to the intracranial compartment in a multitude of disease processes such as infection, trauma or tumor.

For additional support, the RUC referenced MPC code 74170 *Computed tomography, abdomen; without contrast material, followed by contrast material(s) and further sections* (work RVU = 1.40 and 18 minutes intra-service time) and noted that the survey code and the MPC code have similar intra-service times, but the survey code has a higher IWPUT. This higher IWPUT is expected given the dangers of missing pathology in and around the orbits given the close proximity to the brain. The RUC concluded that CPT code 70482 should be valued below the survey 25th percentile work RVU as supported by a crosswalk to CPT code 70488. Further, relativity within the contrast codes of this family is maintained, and across the family of RUC-reviewed CT codes. **The RUC recommends a work RVU of 1.27 for CPT code 70482.**

Practice Expense:

The RUC recommends the practice expenses as submitted by the specialty societies and approved by the PE Subcommittee.

Work Neutrality

The RUC's recommendation for this code will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
70480	Computed tomography, orbit, sella, or posterior fossa or outer, middle, or inner ear; without contrast material	XXX	1.28 (No change)
(f)70481	Computed tomography, orbit, sella, or posterior fossa or outer, middle, or inner ear; with contrast material(s)	XXX	1.13
(f)70482	Computed tomography, orbit, sella, or posterior fossa or outer, middle, or inner ear; without contrast material, followed by contrast material(s) and further sections	XXX	1.27

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION**

CPT Code: 70480	Tracking Number	Original Specialty Recommended RVU: 1.28
		Presented Recommended RVU: 1.28
Global Period: XXX	Current Work RVU: 1.28	RUC Recommended RVU: 1.28

CPT Descriptor: Computed tomography, orbit, sella, or posterior fossa or outer, middle, or inner ear; without contrast material

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 76-year-old woman presents with conductive hearing loss.

Percentage of Survey Respondents who found Vignette to be Typical: 88%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review the reason for the examination and any pertinent clinical history. Review any prior imaging studies. Determine the appropriate CT protocol for the examination, confirm that noncontrast-only images are indicated, and determine the need for additional 2D reconstructions. Communicate protocol to the CT technologists.

Description of Intra-Service Work: Determine whether contrast-enhanced sequences are necessary. Interpret detailed thin section slices through the temporal bones, evaluating the integrity of the horizontal, superior, and posterior semicircular canals, cochlea, modiolus, vestibular aqueduct, inner auditory canals, and course of the facial nerve. Assess the mineralization of the temporal bone. Assess the epitympanum and hypotympanum and the integrity and positioning of the ossicles. Evaluate the orbits (globe, lens, lacrimal glands, optic nerves, extraocular muscles, intraconal fat). Assess the facial soft tissues including the retromaxillary fat. Assess the cavernous, precavernous spaces, infraorbital foramen, supraorbital foramen, optic canal, and pterygopalatine fossa. Assess the bony structures including the facial bones and skull base. Evaluate the visualized brain/brainstem. Assess for bony erosion and fractures in the case of trauma. Evaluate the paranasal sinuses and mastoid air cells. Compare the current imaging to all pertinent available prior studies. Dictate a report.

Description of Post-Service Work: Review, edit, and sign report for the medical record. Communicate the findings with referring provider and/or patient as needed.

SURVEY DATA

RUC Meeting Date (mm/yyyy)	10/2018				
Presenter(s):	Kurt Schoppe, MD; Daniel Wessell, MD; Lauren Golding, MD; Gregory Nicola, MD; Melissa Chen, MD				
Specialty(s):	American College of Radiology, American Society of Neuroradiology				
CPT Code:	70480				
Sample Size:	2562	Resp N:	42	Response: 1.6 %	
Description of Sample:	The ACR surveyed a total of 750 members (a random sample of 375 members and a separate random sample of 375 members who perform CT and neuro imaging procedures). The ASNR performed a random sample of 1812 of its membership.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUR analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

CPT code 70480 was identified on the screen for CMS/Other codes with utilization over 30,000. The code family was expanded to include two other computed tomography codes pertaining to the orbit, fossa, sella, and/or ear, CPT codes 70481 and 70482. The descriptors for these three codes are shown below.

- **70480** (*Computed tomography, orbit, sella, or posterior fossa or outer, middle, or inner ear; without contrast material*),
- **70481** (*Computed tomography, orbit, sella, or posterior fossa or outer, middle, or inner ear; with contrast material(s)*),
- **70482** (*Computed tomography, orbit, sella, or posterior fossa or outer, middle, or inner ear; without contrast material, followed by contrast material(s) and further sections*)

This family of CT codes will not have the normal step-up in times and work RVU as other family of codes that is typical of radiology because of the different anatomy, and therefore type of work that is typical for the 70480 code compared to the 70481 and 70482 codes. The without IV contrast code, 70480, is fundamentally different work than the with IV contrast codes, 70481 and 70482. This is supported by the claims database where the most commonly billed diagnosis for 70480 is hearing loss, while the most commonly billed diagnosis for both 70481 and 70482 is orbital disorders. The 70480 code involves the detailed assessment of thin sections, 0.625 mm slices, of the complex temporal bone anatomy including the external auditory canal, middle ear cavity, inner ear structures, cranial nerves, and vascular structures which are in close proximity to each other. The 70481 and 70482 codes involve the evaluation of the orbit, including the globe, extraocular muscles, lacrimal glands, optic nerve sheath/complex, adjacent skull base foramen, and adjacent spaces and sinuses. Since the work is completely different, this family of codes will not have the typical increase in times that is seen in other radiology code families. The without IV contrast code, 70480, should be viewed as a uniquely separate procedure from 70481 and 70482.

Survey Process

The specialties surveyed a total of 2,562 members. The ACR surveyed a total of 750 members (a random sample of 375 members and a separate random sample of 375 members who perform CT and neuro imaging procedures). The ASNR performed a random sample of 1,812 of its membership.

Although these codes have been previously valued under flawed methodology of CMS/Other, we will not be seeking compelling evidence argument.

CPT code 70480 is an invaluable tool in investigating diverse causes for hearing loss and vertigo. It is an important tool in assessing for temporal bone fractures or facial nerve injury in the setting of trauma, assessment of the ossicular chain, epitympanum, oval window, round window, cochlea, vestibular aqueduct, and semicircular canals for causes of congenital and acquired hearing loss. The 70480 code includes axial, sagittal, and coronal reconstructed images with uniquely thin slices (less than 1 mm). In addition to these planes, oblique, coronal, and sagittal reconstructions are also created for the evaluation of the cochlea and semicircular canals to be carefully assessed. A combination of its utility (as a positive and negative predictor of pathology), intensity, and the amount of technical training necessary to accurately interpret leads us to believe that this procedure would be appropriately valued at 1.28 work RVU.

Work RVU Recommendation:

The expert panel recommends a work RVU of 1.28 for CPT code 70480, which is the 25th percentile survey value and equal to the current CMS/Other value.

Time Recommendation:

The expert panel recommends the following median survey times: 4 minutes of pre-service time, 15 minutes of intra-service time, and 3 minutes of post-service time. This is a total time of 22 minutes.

Key Reference Services

The most commonly chosen reference codes by survey participants include an MRI of a similar region of the surveyed code (orbit, face, and/or neck) with contrast and a CT soft tissue neck without contrast procedure.

- **70542** (*Magnetic resonance (eg, proton) imaging, orbit, face, and/or neck; with contrast material(s)*), chosen by 21% of respondents, and
- **70490** (*Computed tomography, soft tissue neck; without contrast material*), chosen by 17% of respondents.

Our recommendation compares well to the most commonly chosen key reference service, 70542, which has a higher intra service time and work RVU, with a slightly lower IWPUT. This is supported by the intensity/complexity survey results in which respondents felt that 70480 was identical or more complex than 70542. Although magnetic resonance imaging is a technically challenging modality, specialized anatomic knowledge is needed to evaluate the compact and complex area in 70480.

The second key reference code, 70490, has the same intraservice time, identical wRVU, and slightly lower IWPUT in comparison to the surveyed code. The intensity/complexity survey results support the IWPUT differential as most respondents felt that 70480 was slightly more intense and complex than 70490. Although the neck anatomy is complex, the lack of intravenous contrast in 70490 limits the assessment of the region. In contrast, the middle and inner ear structures are bony structures that can be evaluated without IV contrast.

The relationships are summarized in the following table:

CPT Code	Short Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT	% chosen
70480	CT, orbit, sella, posterior fossa or ear; w/o contrast	1.28	22	4	15	3	0.075	
70490	CT, soft tissue neck; w/o contrast	1.28	25	5	15	5	0.070	17%
70542	MRI, orbit, face, and/or neck; w/contrast	1.62	30	5	20	5	0.070	21%

MPC Codes

Our recommendation compares favorably to two radiology MPC codes 70460 (*Computed tomography, head or brain; with contrast material(s)*) and 70470 (*Computed tomography, head or brain; without contrast material, followed by contrast material(s) and further sections*). 70470 has identical intraservice times, nearly identical RVUs, and a lower IWPUT. CPT code 70480 is more intense with more complex anatomic structures to evaluate compared to 70470, which accounts for the differences in IWPUT. 70460 has lower total times and nearly proportionate lower RVU in comparison to 70480.

The relationships are summarized in the following table:

CPT Code	Short Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
70460	CT, head or brain; w/contrast	1.13	22	5	12	5	0.076
70470	CT, head or brain; w/o and w/contrast	1.27	25	5	15	5	0.070
70480	CT, orbit, sella, posterior fossa or ear; w/o contrast	1.28	22	4	15	3	0.075

Summary

In summary, our expert panel recommends maintaining the current value of **70480** at 1.28 RVUs, with median service period times of 4, 15, and 3 minutes. We believe this compares favorably with the most commonly chosen key reference service, 70542, as well as MPC code 70470. Relativity is maintained across the family of RUC-reviewed CT and Neuro imaging codes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.

- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 70480

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 162150

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The service described by CPT code 70480 is estimated to be provided 162,150 times nationally in a one-year period.

Specialty Diagnostic Radiology Frequency 143795 Percentage 88.68 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 54,050

If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The service described by CPT code 70480 is estimated to be provided 54,050 times nationally in a one-year period to Medicare patients.

Specialty Diagnostic Radiology Frequency 47932 Percentage 88.68 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Imaging

BETOS Sub-classification:
Advanced imaging

BETOS Sub-classification Level II:
CAT/CT/CTA: Brain/Head/Neck

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 70480

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 70-year-old woman presents with eye swelling.

Percentage of Survey Respondents who found Vignette to be Typical: 90%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review the reason for the examination and any pertinent clinical history. Review any prior imaging studies. Determine the appropriate CT protocol for the examination, confirm that contrast administration is indicated, and determine the need for additional 2D reconstructions. Communicate protocol to the CT technologists.

Description of Intra-Service Work: Interpret the images, which are optimized for evaluation of the orbits (globe, lens, lacrimal glands, optic nerves, extraocular muscles, intraconal fat). Assess the facial soft tissues including the retromaxillary fat. Assess the cavernous, precavernous spaces, infraorbital foramen, supraorbital foramen, optic canal, and pterygopalatine fossa. Evaluate the integrity of the horizontal, superior, and posterior semicircular canals, cochlea, modiolus, vestibular aqueduct, inner auditory canals, and course of the facial nerve. Assess the mineralization of the temporal bone. Assess the epitympanum and hypotympanum and the integrity and positioning of the ossicles. Assess the bony structures including the facial bones and skull base. Evaluate the visualized brain/brainstem. Assess for bony erosion and fractures in the case of trauma. Evaluate the paranasal sinuses and mastoid air cells. Assess for rim-enhancing fluid collections including periosteal abscess, masses, and perineural enhancement. Compare the current imaging to all pertinent available prior studies. Dictate a report.

Description of Post-Service Work: Review, edit, and sign report for the medical record. Communicate the findings with referring provider and/or patient as needed.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

CPT code 70480 was identified on the screen for CMS/Other codes with utilization over 30,000. The code family was expanded to include two other computed tomography codes pertaining to the orbit, fossa, sella, and/or ear, CPT codes 70481 and 70482. The descriptors for these three codes are shown below.

- **70480** (*Computed tomography, orbit, sella, or posterior fossa or outer, middle, or inner ear; without contrast material*),
- **70481** (*Computed tomography, orbit, sella, or posterior fossa or outer, middle, or inner ear; with contrast material(s)*),
- **70482** (*Computed tomography, orbit, sella, or posterior fossa or outer, middle, or inner ear; without contrast material, followed by contrast material(s) and further sections*)

This family of CT codes will not have the normal step-up in times and work RVU as other family of codes that is typical of radiology because of the different anatomy, and therefore type of work that is typical for the 70480 code compared to the 70481 and 70482 codes. The without IV contrast code, 70480, is fundamentally different work than the with IV contrast codes, 70481 and 70482. This is supported by the claims database where the most commonly billed diagnosis for 70480 is hearing loss, while the most commonly billed diagnosis for both 70481 and 70482 is orbital disorders. The 70480 code involves the detailed assessment of thin sections, 0.625 mm slices, of the complex temporal bone anatomy including the external auditory canal, middle ear cavity, inner ear structures, cranial nerves, and vascular structures which are in close proximity to each other. The 70481 and 70482 codes involve the evaluation of the orbit, including the globe, extraocular muscles, lacrimal glands, optic nerve sheath/complex, adjacent skull base foramen, and adjacent spaces and sinuses. Since the work is completely different, this family of codes will not have the typical increase in times that is seen in other radiology code families. The without IV contrast code, 70480, should be viewed as a uniquely separate procedure from 70481 and 70482.

Survey Process

The specialties surveyed a total of 2,562 members. The ACR surveyed a total of 750 members (a random sample of 375 members and a separate random sample of 375 members who perform CT and neuro imaging procedures). The ASNR performed a random sample of 1,812 of its membership.

Although these codes have been previously valued under flawed methodology of CMS/Other, we will not be seeking compelling evidence argument.

After pre-facilitation meeting, we are recommending to crosswalk the 70481 code to CPT code 70487 (*Computed tomography, maxillofacial area; with contrast material(s)*).

Unlike the 70480 code, in which bony structures are primarily being evaluated without contrast, CPT code 70481 is typically ordered to evaluate the orbital structures. Contrast is needed to evaluate the soft tissues for abnormal nerve enhancement, muscle enhancement, rim-enhancing fluid collections, and enhancing lesions in the globe. 70481 is an important tool in investigating diverse causes for visual changes, eye pain, and orbital swelling, as well as the extent of involvement of known infectious/inflammatory/neoplastic processes of the eye. Additionally, it is also important to assess subtle enhancement in the adjacent skull base foramen and spaces which may be a potential route of disease spread into the intracranial compartment. For 70481, axial, coronal, and sagittal reconstructed thin slices are evaluated to assess structures that may be a few millimeters in size. In addition, sagittal oblique images for each orbit are created to assess structures in the orientation of the orbit in the skull. Not only is a positive result significant, a negative result is also pertinent in patient management, in relieving patient anxiety, and in providing assurance to the ordering physician. A combination of its utility (as a positive and negative predictor of pathology), intensity, and the amount of technical training necessary to accurately interpret leads us to believe that this procedure would be appropriately valued at 1.13 work RVU.

Work RVU Recommendation:

After pre-facilitation, the expert panel recommends a work RVU of 1.13 for CPT code 70481 which has been cross-walked to 70487, (*Computed tomography, maxillofacial area; with contrast material(s)*), one of the commonly chosen key reference services.

Time Recommendation:

The expert panel recommends the following median survey times: 4 minutes of pre-service time, 13 minutes of intra-service time, and 3 minute of post-service time. This is a total time of 20 minutes.

Key Reference Services

The most commonly chosen reference codes by survey participants include a CT of soft tissue neck with contrast and a CT of maxillofacial area with contrast procedure.

- **70491** (*Computed tomography, soft tissue neck; with contrast material(s)*), chosen by 29% of respondents, and
- **70487** (*Computed tomography, maxillofacial area; with contrast material(s)*), chosen by 26% of respondents.

Our recommendation is supported by both of the key reference services. 70491 (CT soft tissue neck without contrast) has slightly higher intraservice time and wRVU. CPT code 70481 is performed in the ER and inpatient setting at a higher percentage of time compared to 70491, and therefore, the patient population is more complex, which justifies the slightly higher IWPUR.

The second most commonly chosen KRS, 70487, was last reviewed by the RUC in April 2014. 70481 is similarly intense work with clinical concern for orbital pathology compared to 70487, which typically involves evaluation of a patient with facial cellulitis or dental infection. This is why 70487 was selected as an appropriate crosswalk for the recommend RVU.

The relationships are summarized in the following table:

CPT Code	Short Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUR	% chosen
70481	CT, orbit, sella, posterior fossa or ear; w/contrast	1.13	20	4	13	3	0.075	
70487	CT, maxillofacial; w/contrast	1.13	22	5	12	5	0.076	26%
70491	CT, soft tissue neck; w/contrast	1.38	27	5	17	5	0.068	29%

MPC Codes

The surveyed code compares well with MPC code 70460 (*Computed tomography, head or brain; with contrast material(s)*) with similar times, work RVU's and IWPUR.

The relationship is summarized in the following table:

CPT Code	Short Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
70460	CT, head or brain; w/contrast	1.13	22	5	12	5	0.076
70481	CT, orbit, sella, posterior fossa or ear; w/contrast	1.13	20	4	13	3	0.075

Summary

The recommended value of 1.13 for **70481** (*Computed tomography, orbit, sella, or posterior fossa or outer, middle, or inner ear; with contrast material(s)*) is below the 25th percentile survey value, and supported by the KRS and MPC code comparisons.

SERVICES REPORTED WITH MULTIPLE CPT CODES

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

- Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the

provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 70481

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 29943

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The service described by CPT code 70481 is estimated to be provided 29,943 times nationally in a one-year period.

Specialty Diagnostic Radiology Frequency 28730 Percentage 95.94 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 9,981

If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The service described by CPT code 70481 is estimated to be provided 9,981 times nationally in a one-year period to Medicare patients.

Specialty Diagnostic Radiology Frequency 9577 Percentage 95.95 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Imaging

BETOS Sub-classification:

Advanced imaging

BETOS Sub-classification Level II:

CAT/CT/CTA: Brain/Head/Neck

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 70481

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 78-year-old woman presents with an orbital mass.

Percentage of Survey Respondents who found Vignette to be Typical: 90%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review the reason for the examination and any pertinent clinical history. Review any prior imaging studies. Determine the appropriate CT protocol for the examination, confirm that imaging before and after contrast administration is indicated, and determine the need for additional 2D reconstructions. Communicate protocol to the CT technologists.

Description of Intra-Service Work: Interpret the images, which are optimized for evaluation of the orbits (globe, lens, lacrimal glands, optic nerves, extraocular muscles, intraconal fat). Assess the facial soft tissues including the retromaxillary fat. Assess the cavernous, precavernous spaces, infraorbital foramen, supraorbital foramen, optic canal, and pterygopalatine fossa. Evaluate the integrity of the horizontal, superior, and posterior semicircular canals, cochlea, modiolus, vestibular aqueduct, inner auditory canals, and course of the facial nerve. Assess the mineralization of the temporal bone. Assess the epitympanum and hypotympanum and the integrity and positioning of the ossicles. Assess the bony structures including the facial bones and skull base. Evaluate the visualized brain/brainstem. Assess for bony erosion and fractures in the case of trauma. Evaluate the paranasal sinuses and mastoid air cells. Assess for rim-enhancing fluid collections including periosteal abscess, masses, and perineural enhancement. Compare the current imaging to all pertinent available prior studies. Dictate a report.

Description of Post-Service Work: Review, edit, and sign report for the medical record. Communicate the findings with referring provider and/or patient as needed.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

CPT code 70480 was identified on the screen for CMS/Other codes with utilization over 30,000. The code family was expanded to include two other computed tomography codes pertaining to the orbit, fossa, sella, and/or ear, CPT codes 70481 and 70482. The descriptors for these three codes are shown below.

- **70480** (*Computed tomography, orbit, sella, or posterior fossa or outer, middle, or inner ear; without contrast material*),
- **70481** (*Computed tomography, orbit, sella, or posterior fossa or outer, middle, or inner ear; with contrast material(s)*),
- **70482** (*Computed tomography, orbit, sella, or posterior fossa or outer, middle, or inner ear; without contrast material, followed by contrast material(s) and further sections*)

This family of CT codes will not have the normal step-up in times and work RVU as other family of codes that is typical of radiology because of the different anatomy, and therefore type of work that is typical for the 70480 code compared to the 70481 and 70482 codes. This is supported by the claims database where the most commonly billed diagnosis for 70480 is hearing loss, while the most commonly billed diagnosis for both 70481 and 70482 is orbital disorders. The 70480 code involves the detailed assessment of thin sections, 0.625 mm slices, of the complex temporal bone anatomy including the external auditory canal, middle ear cavity, inner ear structures, cranial nerves, and vascular structures which are in close proximity to each other. The 70481 and 70482 codes involve the evaluation of the orbit, including the globe, extraocular muscles, lacrimal glands, optic nerve sheath/complex, adjacent skull base foramen, and adjacent spaces and sinuses. Since the work is completely different, this family of codes will not have the typical increase in times that is seen in other radiology code families. The without IV contrast code, 70480, should be viewed as a uniquely separate procedure from 70481 and 70482.

Survey Process

The specialties surveyed a total of 2,562 members. The ACR surveyed a total of 750 members (a random sample of 375 members and a separate random sample of 375 members who perform CT and neuro imaging procedures). The ASNR performed a random sample of 1,812 of its membership.

Although these codes have been previously valued under flawed methodology of CMS/Other, we will not be seeking compelling evidence argument.

After pre-facilitation meeting, we are recommending to crosswalk the 70482 code to CPT code 70488 (*Computed tomography, maxillofacial area; without contrast material, followed by contrast material(s) and further sections*).

CPT code 70482 is an important tool in investigating diverse causes for visual changes, eye pain, and orbital swelling, as well as the extent of involvement of known infectious/inflammatory/ neoplastic processes of the eye. Similarly to 70481, 70482 typically involves the evaluation of axial, coronal, and sagittal reconstructed thin slices. In addition, sagittal oblique images for each orbit are created to allow for assessment of the optic nerve in continuity. Not only is it important to assess the orbital structures, but also the adjacent skull base foramen and spaces which may be a dangerous conduit to the intracranial compartment in a multitude of disease processes such as infection, trauma or tumor. Not only is a positive result significant, a negative result is also pertinent in patient management in relieving patient anxiety, and in providing assurance to ordering physicians. A combination of its utility (as a positive and negative predictor of pathology), intensity, and the amount of technical training necessary to accurately interpret leads us to believe that this procedure would be appropriately valued at 1.27 work RVU.

Work RVU Recommendation:

The expert panel recommends a work RVU of 1.27 for CPT code 70482, which is cross-walked to CPT code 70488 and is one of the commonly chosen Key Reference Services.

Time Recommendation:

The expert panel recommends the following median survey times: 4 minutes of pre-service time, 15 minutes of intra-service time, and 4 minutes of post-service time. This is a total time of 23 minutes.

Key Reference Services

The most commonly chosen reference codes by survey participants include a CT of soft tissue neck without and with contrast and a CT of maxillofacial area without and with contrast procedure.

- **70492** (*Computed tomography, soft tissue neck; without contrast material followed by contrast material(s) and further sections*), chosen by 31% of respondents, and
- **70488** (*Computed tomography, maxillofacial area; without contrast material, followed by contrast material(s) and further sections*), chosen by 24% of respondents.

Our recommendation is comparable to both of the most commonly chosen KRS. The second most commonly chosen KRS, 70488 has the same intraservice time and covers similar anatomic regions compared to 70482, which is why it was selected as a crosswalk. While survey respondents indicated 70482 has more complexity and intensity than 70488, the latter code has similar times and remains an appropriate comparison.

The relationships are summarized in the following table:

CPT Code	Short Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT	% chosen
70482	CT, orbit, sella, posterior fossa or ear; w/o and w/contrast	1.27	23	4	15	4	0.073	
70488	CT, maxillofacial; w/o and w/contrast	1.27	25	5	15	5	0.070	24%
70492	CT, soft tissue neck; w/o & w/contrast	1.62	30	5	20	5	0.070	31%

MPC Code

The surveyed code compares well with MPC code 74170 (*Computed tomography, abdomen; without contrast material, followed by contrast material(s) and further sections*). The surveyed code and the MPC have similar intra-service times, but the surveyed code has a higher IWPUT. This higher IWPUT is expected given the dangers of missing pathology in and around the orbits given the close proximity to the brain.

The relationships are summarized in the following table:

CPT Code	Short Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
70482	CT, orbit, sella, posterior fossa or ear; w/o and w/contrast	1.27	23	4	15	4	0.073
74170	CT abd w/o & w/contrast	1.40	28	5	18	5	0.065

Summary

The cross-walked value and comparison with applicable codes support 1.27, which is below the 25th percentile for **70482**, (*Computed tomography, orbit, sella, or posterior fossa or outer, middle, or inner ear; without*

contrast material, followed by contrast material(s) and further sections). Relativity within the contrast codes of this family is maintained, and across the family of RUC-reviewed CT codes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
☐ Multiple codes are used to maintain consistency with similar codes.
☐ Historical precedents.
☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 70482

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 15600

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The service described by CPT code 70482 is estimated to be provided 15,600 times nationally in a one-year period.

Specialty Diagnostic Radiology Frequency 15087 Percentage 96.71 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 5,200

If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The service described by CPT code 70482 is estimated to be provided 5,200 times nationally in a one-year period to Medicare patients.

Specialty Diagnostic Radiology Frequency 5029 Percentage 96.71 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Imaging

BETOS Sub-classification:

Advanced imaging

BETOS Sub-classification Level II:

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 70482

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Non Facility Direct Practice Expense (PE) Inputs

CPT Long Descriptor:

70480	Computed tomography, orbit, sella, or posterior fossa or outer, middle, or inner ear; without contrast material
70481	Computed tomography, orbit, sella, or posterior fossa or outer, middle, or inner ear; with contrast material(s)
70482	Computed tomography, orbit, sella, or posterior fossa or outer, middle, or inner ear; without contrast material, followed by contrast material(s) and further sections

Global Period: XXX Meeting Date: October 2018

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

The American College of Radiology (ACR) and the American Society of Neuroradiology (ASNR) convened a consensus panel to finalize the practice expense data for the CT orbit/sella/fossa/ear code family, CPT codes 70480, 70481, and 70482.

2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here:

The society included the existing PE inputs for codes 70480, 70481, and 70482 on the spreadsheet to serve as a reference.

3. Is this code(s) typically billed with an E/M service?
Is this code(s) typically billed with the E/M service in the nonfacility?
(Please see provided data in PE Subcommittee folder)

These codes are not typically billed with an E/M service.
These codes are not typically billed with an E/M service in the nonfacility.

4. What specialty is the dominant provider in the nonfacility?
What percent of the time does the dominant provider provide the service(s) in the nonfacility?
Is the dominant provider in the nonfacility different then for the global?
(Please see provided data in PE Subcommittee folder)

Diagnostic radiology is the dominant provider in the nonfacility for this code family and has the following time percentages for each code:

70480: 60%

70481: 76%

70482: 74%

Diagnostic radiology is also the dominant provider in the global for this code family.

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:
 - **Prepare room, equipment, supplies (CA013)** – 2 minutes is the standard for most exams; however, we are requesting 4 minutes for 70481 and 70482 to allow additional time for the technologist to set up the contrast injector and prepare the contrast materials for injection. This is consistent with the recently reviewed codes, CT neck and CT chest.
 - **Prepare, set up and start IV, initial positioning and monitoring of patient (CA016)** - 2 minutes is standard for non-contrast codes and consistent with prior CT exams. We recommended 5 minutes for the codes involving contrast (70481 and 70482) to allow for time for positioning the patient with the IV, connecting the patient to the contrast injector, and ensuring there are no impediments to table motion during the exam. This is consistent with the recently reviewed codes, CT neck and CT chest.
6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), you must provide compelling evidence. Please explain if the increase can be entirely accounted for because of an increase in physician time.
N/A
7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here:
N/A
8. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time*:
Bring patient into CT room and assist patient onto CT table. Position patient's anatomy for anatomic coverage and comfort. If contrast is required, prepare injector, perform a test injection if needed, and ensure free movement of IV tubing with CT gantry motion. Step behind shielding to control panel. Set appropriate exposure parameters. Instruct patient to hold still. Obtain scout image. Confirm appropriate patient positioning to ensure adequate coverage of anatomic region and potential pathology. Adjust patient positioning if needed. Set acquisition parameters. Instruct patient to hold still. Obtain axial images. Confirm appropriate imaging coverage. For the without followed by with contrast material examination, the process above is repeated to obtain axial images with contrast. The images are checked for quality and above steps are repeated for any additional covered needed. Special reformatted images are performed by the technologist for these sets of codes. In addition to the typical coronal and sagittal reformations that are performed, additional reformatted planes are created. For the 70480 code, the technologist selects the plane that is parallel to the axis of the petrous bone to create reconstructions. Then the technologist creates an additional reformat that is orthogonal to this plane. This has to be performed for both sides of the temporal bone. For the 70481 and 70482 codes, the technologist creates sagittal reformats along the axis of the optic nerve on both sides. Send the images from the console to the image archive.
9. If you have used a percentage of the physician intra-service work time other than 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.
N/A
10. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities:
N/A

11. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at <http://www.bls.gov>.
N/A
12. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here:
N/A
13. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here:
14. List all the equipment included in your recommendation and the equipment formula chosen (see document titled “Calculating equipment time”). If you have selected “other formula” for any of the equipment please explain here:
 - **Technologist PACS Workstation Proxy (ED050)** –PACS formula; Equals total service period time
 - **Professional PACS Workstation (ED053)** – Equals physician work intra time + 1/2 physician work pre-time
 - **Room, CT (EL007)** – Highly technical formula
15. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here:
N/A
16. If there is any other item on your spreadsheet that needs further explanation please include here:
N/A
17. Please include an explanation of each line item:
N/A

AMA/Specialty Society RVS Update Committee Summary of Recommendations
CMS/Other Source – Medicare Utilization Over 30,000

October 2018

X-Ray Exam – Clavicle/Shoulder (PE Only)

At the April 2018 RUC meeting, the PE Subcommittee noted that the Medicare non-facility reported together data show that multiple codes are reported on the same day. The specialty societies did not think that the codes reported together in the non-facility setting were clinically appropriate and they requested additional time to review the non-facility data. Further, the PE Subcommittee and the specialty society agreed that further analysis of local and regional variations is necessary. The PE Subcommittee and the specialty societies agreed to review the practice expense inputs again at the October 2018 PE Subcommittee meeting and remove any staff time, supplies and equipment that is found to be duplicative.

At the October 2018 RUC meeting the specialty reviewed information provided by AMA staff confirming that CPT codes 73010 *Radiologic examination; scapula, complete* and 73050 *Radiologic examination; acromioclavicular joints, bilateral, with or without weighted distraction* from the family of services reviewed at the April 2018 RUC meeting are reported together with code 73030 *Radiologic examination, shoulder; complete, minimum of 2 views* more than fifty percent. Starting with the spreadsheet that was reviewed and approved at the April 2018 meeting, the specialty society removed the duplicative time for clinical activities, CA013 *Prepare room, equipment and supplies* and CA024 *Clean room/equipment by clinical staff*. These reductions are in addition to changes that were made at the April 2018 RUC meeting to account for services with only one view. In April, the PE Subcommittee also ensured that the specialties recommendation did not include any duplicative PE inputs for codes 73010, 73020, 73030 and 73050 which are typically reported with and Evaluation and Management (E/M) service in the non-facility setting. CPT code 73000 is not typically reported with an evaluation and management service in the non-facility setting.

The PE Subcommittee reviewed and approved the direct practice expense inputs as submitted by the specialty society without modification.

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
73000	Radiologic examination; clavicle, complete	XXX	0.16 (April 2018 RUC Recommendation)
73010	Radiologic examination; scapula, complete	XXX	0.17 (April 2018 RUC Recommendation)
73020	Radiologic examination, shoulder; 1 view	XXX	0.15 (April 2018 RUC Recommendation)
(f)73030	Radiologic examination, shoulder; complete, minimum of 2 views	XXX	0.18 (April 2018 RUC Recommendation).
(f)73050	Radiologic examination; acromioclavicular joints, bilateral, with or without weighted distraction	XXX	0.18 (April 2018 RUC Recommendation)

**AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Non Facility Direct Practice Expense (PE) Inputs**

CPT Long Descriptor:

73000	Radiologic examination; clavicle, complete
73010	Radiologic examination; scapula, complete
73020	Radiologic examination, shoulder; 1 view
73030	Radiologic examination, shoulder; complete, minimum of 2 views
73050	Radiologic examination; acromioclavicular joints, bilateral, with or without weighted distraction

Global Period: XXX Meeting Date: April 2018

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

The American College of Radiology (ACR) and American Academy of Orthopaedic Society (AAOS) convened a consensus panel to finalize the practice expense data for the X-Ray exam of the clavicle and shoulder code family, CPT codes 73000, 73010, 73020, 73030, and 73050.

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code.** You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here:

The societies included the existing PE inputs for codes 73000, 73010, 73020, 73030, and 73050 on the spreadsheet to serve as a reference.

3. Is this code(s) typically billed with an E/M service?

Codes 73010 and 73050 are typically billed with an E/M service; 54% and 64%, respectively. Codes 73000, 73020 and 73030 are not; 27%, 22% and 36%, respectively.

Is this code(s) typically billed with the E/M service in the nonfacility?

Codes 73010, 73020, 73030 and 73050 are typically billed with the E/M service in the nonfacility; 77%, 56%, 64% and 76%, respectively. Code 73000 is not typically billed at 49%.

At the October 2018 RUC meeting, duplicative time for clinical activities, CA013 Prepare room, equipment and supplies and CA024 Clean room/equipment by clinical staff was removed.

4. What specialty is the dominant provider in the nonfacility?
What percent of the time does the dominant provider provide the service(s) in the nonfacility?
Is the dominant provider in the nonfacility different then for the global?
(Please see provided data in PE Subcommittee folder)

Orthopedic Surgery is the dominant provider in the nonfacility for all codes in this family.

73000: 56%

73010: 72%

73020: 52%

73030: 55%

73050: 65%

Diagnostic Radiology is the dominant provider for the global for CPT codes 73000, 73020, and 73030. Orthopedic Surgery is the dominant provider for the global for CPT codes 73010 and 73050.

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:
N/A
6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), you must provide compelling evidence. Please explain if the increase can be entirely accounted for because of an increase in physician time.

For CPT code 73030 (*Radiologic examination, shoulder; complete, minimum of 2 views*), we are requesting 2 additional minutes for the technologist to perform the examination (CA021: Perform procedure/service---NOT directly related to physician work time). While this is a minimum 2 view code, typical clinical practice currently is a three view exam (AP, Grashey plus a transscapular-Y or axillary view). The two additional minutes (6 minutes total) is consistent with the 2 minutes per view that we have typically recommended for extremity codes

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here:
8. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time*:

Bring patient into x-ray room and have patient sit/lie on x-ray table or stand as appropriate. Place first cassette behind patient's clavicle, shoulder or acromioclavicular joint. Position patient's anatomy for the first view. Step behind shielding to control panel. Set appropriate exposure parameters. Instruct patient to hold still. Take exposure for first view. Step from behind shielding. Take first cassette from behind patient and place second cassette as needed. Position patient's anatomy for second view. Step behind shielding to control panel. Set appropriate exposure parameters. Instruct patient to hold still. Take exposure for second view. Step from behind shielding. Take second cassette out behind patient. The above steps are repeated for any additional views to be obtained. All cassettes are then taken to the image reader. Run all three cassettes through reader. Check all images for adequate exposure, positioning, coverage, etc. Repeat any views as needed. Typical number of views for 73000 would be 2 (AP and up-angled), for 73010 would be 2 (AP and Lateral), for 73020 would be 1 (AP), for 73030 would be 3 (AP, Grashey and trans-scapular Y or axillary) and for 73050 would be 3 (AP and up-angled of affected side with AP contralateral comparison view).

9. If you have used a percentage of the physician intra-service work time other than 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.
N/A
10. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities:

N/A

11. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at <http://www.bls.gov>.

N/A

12. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here:

N/A

13. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here:

N/A

14. List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here:

- **Technologist PACS Workstation Proxy (ED050)** –PACS formula; Equals total service period time
- **Professional PACS Workstation (ED053)** – Equals physician work intra time + 1/2 physician work pre-time
- **Room, basic radiology (EL012)** – Highly technical formula

15. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here:

N/A

16. If there is any other item on your spreadsheet that needs further explanation please include here:

N/A

17. Please include an explanation of each line item:

N/A

April RUC Rec
X-Ray Exam Clavicle-
Shoulder (PE Only)

AMA/Specialty Society RVS Update Committee Summary of Recommendations
CMS/Other Source – Medicare Utilization Over 30,000

April 2018

X-Ray Exam – Clavicle/ Shoulder

In October 2017, the RAW requested that AMA staff compile a list of CMS/Other codes with Medicare utilization of 30,000 or more. In January 2018, the RUC recommended to survey these services for April 2018.

73000 Radiologic examination; clavicle, complete

The RUC reviewed the survey results from 82 physicians and agreed with the following physician time components: pre-service time of 1 minute, intra-service time of 3 minutes and post-service time of 1 minute, for a combined total of 5 minutes. The RUC determined that the current work RVU of 0.16, which is also the survey 25th percentile, appropriately accounts for the physician work involved to perform this service. The RUC noted that codes 73000, 73010, and 73020 require the same physician time, however, they are recommending slight differences in work values based on intensity and complexity. To justify the work RVU of 0.16, the RUC reviewed the top key reference code *73060 Radiologic examination; humerus, minimum of 2 views* (work RVU= 0.16, pre-service time of 1 minute, intra-service time of 3 minutes, and post-service time of 1 minute), and noted that both services require identical times, as well as the same amount of physician work, and therefore should be valued identically. To further justify a recommended work RVU of 0.16, the RUC reviewed the second key MPC comparison code *73120 Radiologic examination, hand; 2 views* (work RVU= 0.16, pre-service time of 1 minute, intra-service time of 4 minutes, and post-service time of 1 minute), and found that the survey code is appropriately valued because both codes require similar physician work and time, and should therefore be valued similarly. **The RUC recommends a work RVU of 0.16 for CPT code 73000.**

73010 Radiologic examination; scapula, complete

The RUC reviewed the survey results from 82 physicians and agreed with the following physician time components: pre-service time of 1 minute, intra-service time of 3 minutes and post-service time of 1 minute, for a combined total of 5 minutes. The RUC determined that the current work RVU of 0.17, which is also the survey 25th percentile, appropriately accounts for the physician work involved to perform this service. The RUC noted that codes 73000, 73010, and 73020 require the same physician time, however, they are recommending slight differences in work values based on intensity and complexity. To justify the work RVU of 0.17, the RUC reviewed the top key reference service code *73610 Radiologic examination, ankle; complete, minimum of 3 views* (work RVU= 0.17, pre-service time of 1 minute, intra-service time of 3 minutes, and post-service time of 1 minute), and noted that both services require an identical amount of work and times and should be valued similarly. To further justify a work RVU of 0.17, the RUC reviewed the second key reference code *73060 Radiologic examination; humerus, minimum of 2 views* (work RVU= 0.16, pre-service time of 1 minute, intra-service time of 3 minutes, and post-service time of 1 minute), and found that the survey

code is appropriately valued because it is more intense and complex to perform as indicated by 100% of the survey respondents, and should therefore be valued similarly due to both requiring the same physician time to perform. **The RUC recommends a work RVU of 0.17 for CPT code 73010.**

73020 Radiologic examination, shoulder; 1 view

The RUC reviewed the survey results from 82 physicians and agreed with the following physician time components: pre-service time of 1 minute, intra-service time of 3 minutes and post-service time of 1 minute, for a combined total of 5 minutes. The RUC determined that a work RVU of 0.15, which is the current value and below the survey 25th percentile, appropriately accounts for the physician work involved to perform this service. The RUC noted that codes 73000, 73010, and 73020 require the same physician time, however, they are recommending slight differences in work values based on intensity and complexity. To justify the work RVU of 0.15, the RUC reviewed top key reference code 73060 *Radiologic examination; humerus, minimum of 2 views* (work RVU= 0.16, pre-service time of 1 minute, intra-service time of 3 minutes, and post-service time of 1 minute), and noted that both services require identical time and should be valued similarly. To further justify a work RVU of 0.15, the RUC reviewed MPC code 93042 *Rhythm ECG, 1-3 leads; interpretation and report only* (work RVU= 0.15, pre-service time of 2 minutes, intra-service time of 3 minutes, and post-service time of 2 minutes), and found that the survey code is appropriately valued because both codes require an identical amount of physician work and identical intra-service times, further justifying a work RVU of 0.15 for the survey code. **The RUC recommends a work RVU of 0.15 for CPT code 73020.**

73030 Radiologic examination, shoulder; complete, minimum of 2 views

The RUC reviewed the survey results from 82 physicians and agreed with the following physician time components: pre-service time of 1 minute, intra-service time of 4 minutes and post-service time of 1 minute, for a combined total of 6 minutes. The RUC determined that a work RVU of 0.18, which is the current value and at the survey 25th percentile, appropriately accounts for the physician work involved to perform this service. To justify the work RVU of 0.18, the RUC compared the survey code to the top key reference code 73562 *Radiologic examination, knee; 3 views* (work RVU= 0.18, pre-service time of 1 minute, intra-service time of 4 minutes, and post-service time of 1 minute), and noted that both services require identical times and should be valued identically. To further justify a work RVU of 0.18, the RUC reviewed code 73552 *Radiologic examination, femur; minimum 2 views* (work RVU= 0.18, pre-service time of 1 minute, intra-service time of 4 minutes, and post-service time of 1 minute), and found that the survey code is appropriately valued because it requires identical intra-service and total times, further supporting a work value of 0.18 for the survey code. **The RUC recommends a work RVU of 0.18 for CPT code 73030.**

73050 Radiologic examination; acromioclavicular joints, bilateral, with or without weighted distraction

The RUC reviewed the survey results from 75 physicians and agreed with the following physician time components: pre-service time of 1 minute, intra-service time of 4 minutes and post-service time of 1 minute, for a combined total of 6 minutes. The RUC determined that a work RVU of 0.18, which is below the current value and at the survey 25th percentile, appropriately accounts for the physician work involved to perform this service. To justify the work RVU of 0.18, the RUC compared the survey code to code 73562 *Radiologic examination, knee; 3 views* (work RVU= 0.18, pre-service time of 1 minute, intra-service time of 4 minutes, and post-service time of 1 minute), and noted that both services require

identical times and should be valued identically. To further justify a work RVU of 0.18, the RUC reviewed code 73552 *Radiologic examination, femur; minimum 2 views* (work RVU= 0.18, pre-service time of 1 minute, intra-service time of 4 minutes, and post-service time of 1 minute), and found that the survey code is appropriately valued because it requires identical intra-service and total times, which further supports a recommended work value of 0.18 for the survey code. **The RUC recommends a work RVU of 0.18 for CPT code 73050.**

Practice Expense

The Practice Expense (PE) Subcommittee removed 1 minute of clinical staff time for clinical activity, prepare, set-up and start IV, initial positioning and monitoring of patient (CA016). The PE Subcommittee noted that the non-facility billed together data show that multiple codes are billed on the same day. The specialty societies did not think that the codes billed together in the non-facility setting were clinically appropriate and they requested additional time to review the non-facility data. Further, the PE Subcommittee and the specialty society agreed that further analysis of local and regional variations is necessary. The PE Subcommittee and the specialty societies agreed to review the practice expense inputs again at the next PE Subcommittee meeting and remove any staff time, supplies and equipment that is found to be duplicative. The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee. **The RUC recommends that the direct practice expense inputs be accepted as Interim and revisited at the October 2018 RUC meeting.**

Work Neutrality

The RUC's recommendation for these codes will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
73000	Radiologic examination; clavicle, complete	XXX	0.16 (No Change)
73010	Radiologic examination; scapula, complete	XXX	0.17 (No Change)
73020	Radiologic examination, shoulder; 1 view	XXX	0.15 (No Change)

73030(f)	Radiologic examination, shoulder; complete, minimum of 2 views	XXX	0.18 (No Change)
73050(f)	Radiologic examination; acromioclavicular joints, bilateral, with or without weighted distraction	XXX	0.18

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION**

CPT Code: 73000	Tracking Number	Original Specialty Recommended RVU: 0.16
		Presented Recommended RVU: 0.16
Global Period: XXX	Current Work RVU: 0.16	RUC Recommended RVU: 0.16

CPT Descriptor: Radiologic examination; clavicle, complete

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 65-year-old woman has clavicular pain after a fall. A radiological examination is performed to evaluate for clavicle fracture.

Percentage of Survey Respondents who found Vignette to be Typical: 94%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review the provided clinical history. Review any prior applicable imaging studies.

Description of Intra-Service Work: Supervise the technologist performing the examination, evaluating the quality of the exam and obtaining additional views as necessary. Assess the clavicle and the surrounding soft tissue and osseous structures. Interpret the examination with comparison to relevant prior imaging if available. Dictate report for the medical record.

Description of Post-Service Work: The final report is reviewed and signed, and findings are communicated to the referring physician as needed.

SURVEY DATA

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

CPT codes 73000 [Radiologic examination; clavicle, complete], 73010 [Radiologic examination; scapula, complete], and 73020 [Radiologic examination, shoulder; 1 view] were identified for CMS-Other utilization

over 30,000. The American College of Radiology (ACR) and the American Academy of Orthopaedic Society (AAOS) agreed to survey the codes for the April 2018 RUC meeting and expanded the family to include CPT codes 73030 [*Radiologic examination; shoulder, complete, minimum of 2 views*] and 73050 [*Radiologic examination; acromioclavicular joints, bilateral, with or without weighted distraction*]. The societies convened an expert panel of physicians familiar with the services to review the survey data and provide the following recommendations.

Survey Process

The ACR surveyed a total of 1,750 members (a random sample of 875 from the entire membership and a separate random sample of 875 members who perform radiography, emergency/trauma, or musculoskeletal procedures). The AAOS surveyed a total random sample of 250 members.

Work RVU Recommendation:

The expert panel recommends a work RVU of 0.16 for CPT code 73000 which is the 25th percentile of the survey and the current value.

Time Recommendation:

The expert panel recommends the following median survey times: 1 minute of pre-service time, 3 minutes of intra-service time, and 1 minute of post-service time. This is a total time of 5 minutes which, is the same as the existing CMS/Other total time of 5 minutes.

Key Reference Services

The most commonly chosen reference code by survey participants, 73060 (*Radiologic examination; humerus, minimum of 2 views*), has the same service times and identical wRVU as the surveyed code and is also an examination requiring at least two radiographic views to evaluate a bone and the adjacent joints. The second most commonly chosen code, 73562 (*Radiologic examination, knee; 3 views*), has a higher wRVU and an additional one minute of intra-service time needed to evaluate the knee, which focuses on the joint and articulation between two bones.

CPT	Descriptor	RVU	Total Time	Pre	Intra	Post	IWPUT	% chosen
73000	Radiologic examination; clavicle, complete	0.16	5	1	3	1	0.038	
73060	Radiologic examination; humerus, minimum of 2 views	0.16	5	1	3	1	0.038	40%
73562	Radiologic examination, knee; 3 views	0.18	6	1	4	1	0.034	12%

MPC Codes

The surveyed code compares well with three other MPC codes, only one of which is performed by radiology:

- **90970** - *End-stage renal disease (ESRD) related services for dialysis less than a full month of service, per day; for patients 20 years of age and older*
- **73120** - *Radiologic examination, hand; 2 views*

- **99211** - Office or other outpatient visit for the evaluation and management of an established patient, that may not require the presence of a physician or other qualified health care professional. Usually, the presenting problem(s) are minimal. Typically, 5 minutes are spent performing or supervising these services.

The surveyed code wRVU is the same as MPC code 73120 and closely bracketed by the MPC codes 90970 and 99211. Code 90970 has similar intra-service time and 2.5 minutes less of total time, supporting the 0.02 lower wRVU. Code 73120 is a radiology code with 1 minute more intra-service time and the same wRVU. 73120 involves the evaluation of multiple bones and joints in the hand in two views, compared to the surveyed code, which involves fewer bones and joints, although it typically has three or more views for the complete examination. Code 99211 has 2 minutes more intra-service time and correspondingly has 0.02 more wRVU compared to the surveyed code. These three MPC codes are included in the following table for comparison and confirm the appropriateness of the recommended wRVU and times within the larger RBRVS.

CPT	Descriptor	RVU	Total Time	Pre	Intra	Post	IWPUT
90970	End-stage renal disease (ESRD) related services for dialysis less than a full month of service, per day; for patients 20 years of age and older	0.14	2.5		2.5		0.056
73000	Radiologic examination; clavicle, complete	0.16	5	1	3	1	0.038
73120	Radiologic examination, hand; 2 views	0.16	6	1	4	1	0.029
99211	Outpatient visit, established, level 1	0.18	7		5	2	0.027

Conclusion

The survey results, along with the applicable comparison codes, support the recommended value for 73000 [*Radiologic examination; clavicle, complete*] at the current value. Relativity within the X-ray clavicle/shoulder family is also maintained.

CPT	Descriptor	RVU	Total Time	Pre	Intra	Post	IWPUT
73020	Radiologic examination, shoulder; 1 view	0.15	5	1	3	1	0.035
73000	Radiologic examination; clavicle, complete	0.16	5	1	3	1	0.038
73010	Radiologic examination; scapula, complete	0.17	5	1	3	1	0.042
73030	Radiologic examination, shoulder; complete, minimum of 2 views	0.18	6	1	4	1	0.034
73050	Radiologic examination; acromioclavicular joints, bilateral, with or without weighted distraction	0.18	6	1	4	1	0.034

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 73000

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Commonly

Specialty Orthopedic Surgery How often? Commonly

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 295389

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by code 73000 provided nationally in a one-year period is estimated to be 295,389.

Specialty Diagnostic Radiology	Frequency 149291	Percentage 50.54 %
--------------------------------	------------------	--------------------

Specialty Orthopedic Surgery	Frequency 93122	Percentage 31.52 %
------------------------------	-----------------	--------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 98,463

If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The ACR estimates that CPT code 73000 will be provided 98,463 times to Medicare patients nationally in a one-year period.

Specialty Diagnostic Radiology	Frequency 49764	Percentage 50.54 %
--------------------------------	-----------------	--------------------

Specialty Orthopedic Surgery	Frequency 31041	Percentage 31.52 %
------------------------------	-----------------	--------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Imaging

BETOS Sub-classification:

Standard imaging

BETOS Sub-classification Level II:

Musculoskeletal

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 73000

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION**

CPT Code: 73010	Tracking Number	Original Specialty Recommended RVU: 0.17
		Presented Recommended RVU: 0.17
Global Period: XXX	Current Work RVU: 0.17	RUC Recommended RVU: 0.17

CPT Descriptor: Radiologic examination; scapula, complete

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 70-year-old woman has scapular pain after a motor vehicle collision. A radiological examination is performed to evaluate for scapular fracture.

Percentage of Survey Respondents who found Vignette to be Typical: 95%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review the provided clinical history. Review any prior applicable imaging studies.

Description of Intra-Service Work: Supervise the technologist performing the examination, evaluating the quality of the exam and obtaining additional views as necessary. Assess the scapula and the surrounding soft tissue and osseous structures. Interpret the examination with comparison to relevant prior imaging if available. Dictate report for the medical record.

Description of Post-Service Work: The final report is reviewed and signed, and findings are communicated to the referring physician as needed.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

CPT codes 73000 [Radiologic examination; clavicle, complete], 73010 [Radiologic examination; scapula, complete], and 73020 [Radiologic examination, shoulder; 1 view] were identified for CMS-Other utilization

over 30,000. The American College of Radiology (ACR) and the American Academy of Orthopaedic Society (AAOS) agreed to survey the codes for the April 2018 RUC meeting and expanded the family to include CPT codes 73030 [*Radiologic examination; shoulder, complete, minimum of 2 views*] and 73050 [*Radiologic examination; acromioclavicular joints, bilateral, with or without weighted distraction*]. The societies convened an expert panel of physicians familiar with the services to review the survey data and provide the following recommendations.

Survey Process

The ACR surveyed a total of 1,750 members (a random sample of 875 from the entire membership and a separate random sample of 875 members who perform radiography, emergency/trauma, or musculoskeletal procedures). The AAOS surveyed a total random sample of 250 members.

Work RVU Recommendation:

The expert panel recommends a work RVU of 0.17 for CPT code 73010, which is the 25th percentile of the survey and the current value.

Time Recommendation:

The expert panel recommends the following median survey times: 1 minute of pre-service time, 3 minutes of intra-service time, and 1 minute of post-service time. This is a total time of 5 minutes, which is the same as the existing CMS/Other total time of 5 minutes.

Key Reference Services

The most commonly chosen reference code by survey participants, 73610 (*Radiologic examination, ankle; complete, minimum of 3 views*), has the same service times and identical wRVU as the surveyed code and is also a complete radiographic examination requiring at least three views. The second most commonly chosen code, 73060 (*Radiologic examination; humerus, minimum of 2 views*), has the same service times and 0.01 lower wRVU because it is a two-view examination of one bone and the adjacent joints, compared to at least three views for the surveyed code.

CPT	Descriptor	RVU	Total Time	Pre	Intra	Post	IWPUT	% chosen
73060	Radiologic examination; humerus, minimum of 2 views	0.16	5	1	3	1	0.038	15%
73010	Radiologic examination; scapula, complete	0.17	5	1	3	1	0.042	
73610	Radiologic examination, ankle; complete, minimum of 3 views	0.17	5	1	3	1	0.042	21%

MPC Codes

The surveyed code compares well with three other MPC codes, none of which are performed by radiology:

- **90970** - *End-stage renal disease (ESRD) related services for dialysis less than a full month of service, per day; for patients 20 years of age and older*

- **99211** - Office or other outpatient visit for the evaluation and management of an established patient, that may not require the presence of a physician or other qualified health care professional. Usually, the presenting problem(s) are minimal. Typically, 5 minutes are spent performing or supervising these services.
- **96401** - Chemotherapy administration, subcutaneous or intramuscular; non-hormonal anti-neoplastic

The surveyed code wRVU is closely bracketed by the MPC codes 90970, 99211, and 96401. Code 90970 has the same intra-service time and 2 minutes less of total time supporting the 0.03 lower wRVU. Code 99211 has 2 minutes more intra-service time and supports the 0.01 higher wRVU. Code 96401 has the same intra-service time although 4 minutes more total time which supports the 0.04 higher wRVU. These three MPC codes are included in the following table for comparison and confirm the appropriateness of the recommended wRVU and times within the larger RBRVS.

CPT	Descriptor	RVU	Total Time	Pre	Intra	Post	IWPUT
90970	End-stage renal disease (ESRD) related services for dialysis less than a full month of service, per day; for patients 20 years of age and older	0.14	2.5		2.5		0.056
73010	Radiologic examination; scapula, complete	0.17	5	1	3	1	0.042
99211	Outpatient visit, established, level 1	0.18	7		5	2	0.027
96401	Chemotherapy admin., SC or IM, non-hormonal anti-neoplastic	0.21	9	4	3	2	0.025

Conclusion

The survey results and comparison with applicable codes support the recommended value for 73010 [*Radiologic examination; scapula, complete*] at the current value. Relativity within the X-ray clavicle/shoulder family is also maintained.

CPT	Descriptor	RVU	Total Time	Pre	Intra	Post	IWPUT
73020	Radiologic examination, shoulder; 1 view	0.15	5	1	3	1	0.035
73000	Radiologic examination; clavicle, complete	0.16	5	1	3	1	0.038
73010	Radiologic examination; scapula, complete	0.17	5	1	3	1	0.042
73030	Radiologic examination, shoulder; complete, minimum of 2 views	0.18	6	1	4	1	0.034
73050	Radiologic examination; acromioclavicular joints, bilateral, with or without weighted distraction	0.18	6	1	4	1	0.034

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
☒ Multiple codes allow flexibility to describe exactly what components the procedure included.
☐ Multiple codes are used to maintain consistency with similar codes.
☐ Historical precedents.
☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. CPT code 73010 is typically reported on the same date with CPT code 73030 (Radiologic examination, shoulder; complete, minimum of 2 views).
-

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 73010

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
 If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Commonly

Specialty Orthopedic Surgery How often? Commonly

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 159999

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by code 73010 provided nationally in a one-year period is estimated to be 159,999.

Specialty Diagnostic Radiology	Frequency 51833	Percentage 32.39 %
--------------------------------	-----------------	--------------------

Specialty Orthopedic Surgery	Frequency 81103	Percentage 50.68 %
------------------------------	-----------------	--------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 53,333

If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The ACR estimates that CPT code 73010 will be provided 53,333 times to Medicare patients nationally in a one-year period.

Specialty Diagnostic Radiology	Frequency 17278	Percentage 32.39 %
--------------------------------	-----------------	--------------------

Specialty Orthopedic Surgery

Frequency 27034

Percentage 50.68 %

Specialty

Frequency 0

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Imaging

BETOS Sub-classification:

Standard imaging

BETOS Sub-classification Level II:

Musculoskeletal

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 73010

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION**

CPT Code: 73020	Tracking Number	Original Specialty Recommended RVU: 0.15
		Presented Recommended RVU: 0.15
Global Period: XXX	Current Work RVU: 0.15	RUC Recommended RVU: 0.15

CPT Descriptor: Radiologic examination, shoulder; 1 view

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 65-year-old woman presents after shoulder dislocation. A single view radiological examination is performed to evaluate glenohumeral joint alignment.

Percentage of Survey Respondents who found Vignette to be Typical: 87%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review the provided clinical history. Review any prior applicable imaging studies.

Description of Intra-Service Work: Supervise the technologist performing the examination, evaluating the quality of the exam and obtaining additional views as necessary. Assess the shoulder joint and the surrounding soft tissue and osseous structures. Interpret the examination with comparison to relevant prior imaging if available. Dictate report for the medical record.

Description of Post-Service Work: The final report is reviewed and signed, and findings are communicated to the referring physician as needed.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

CPT codes 73000 [*Radiologic examination; clavicle, complete*], 73010 [*Radiologic examination; scapula, complete*], and 73020 [*Radiologic examination, shoulder; 1 view*] were identified for CMS-Other utilization over 30,000. The American College of Radiology (ACR) and the American Academy of Orthopaedic Society (AAOS) agreed to survey the codes for the April 2018 RUC meeting and expanded the family to include CPT codes 73030 [*Radiologic examination; shoulder, complete, minimum of 2 views*] and 73050 [*Radiologic examination; acromioclavicular joints, bilateral, with or without weighted distraction*]. The societies convened an expert panel of physicians familiar with the services to review the survey data and provide the following recommendations.

Survey Process

The ACR surveyed a total of 1,750 members (a random sample of 875 from the entire membership and a separate random sample of 875 members who perform radiography, emergency/trauma, or musculoskeletal procedures). The AAOS surveyed a total random sample of 250 members.

Work RVU Recommendation:

The expert panel recommends a work RVU of 0.15 for CPT code 73020, which is the current value of this code.

Time Recommendation:

The expert panel recommends the following median survey times: 1 minute of pre-service time, 3 minutes of intra-service time, and 1 minute of post-service time. This is a total time of 5 minutes, which is the same as the existing CMS/Other total time of 5 minutes.

Key Reference Services

The most commonly chosen reference code by survey participants, 73060 (*Radiologic examination; humerus, minimum of 2 views*), has the same service times and 0.01 higher wRVU compared to the surveyed code which requires evaluation of a single bone and the adjacent joints while the surveyed code is a single-view examination focused on a joint and the included bones. The second most commonly chosen reference code, 71045 (*Radiologic examination, chest; single view*), has the same service times and 0.03 higher wRVU because it is a two-view examination of a more complex area, the chest, compared to the single view of one joint for the surveyed code.

CPT	Descriptor	RVU	Total Time	Pre	Intra	Post	IWPUT	% chosen
73020	Radiologic examination, shoulder; 1 view	0.15	5	1	3	1	0.035	
73060	Radiologic examination; humerus, minimum of 2 views	0.16	5	1	3	1	0.038	35%
71045	Radiologic examination, chest; single view	0.18	5	1	3	1	0.045	12%

MPC Codes

The surveyed code compares well with three other MPC codes, only one of which is performed by radiology:

- **90970** - *End-stage renal disease (ESRD) related services for dialysis less than a full month of service, per day; for patients 20 years of age and older*
- **93042** - *Rhythm ECG, 1-3 leads; interpretation and report only*
- **73120** - *Radiologic examination, hand; 2 views*

Code 93042 has an identical wRVU and intra-service time compared to the surveyed code. Additionally, the surveyed code is closely bracketed by the MPC codes 90970 and 73120. Code 90970 has 2.5 minutes less of total time and has a wRVU that is lower by 0.01. Code 73120 is a radiology code with 1 minute more intra-service time and 0.01 higher wRVU, which involves evaluation of multiple bones and joints in the hand with two views compared to the surveyed code, which involves fewer bones and joints and a single view of the shoulder. These three MPC codes are included in the following table for comparison and confirm the appropriateness of the recommended wRVU and times within the larger RBRVS.

CPT	Descriptor	RVU	Total Time	Pre	Intra	Post	IWPUT
90970	End-stage renal disease (ESRD) related services for dialysis less than a full month of service, per day; for patients 20 years of age and older	0.14	2.5		2.5		0.056
73020	Radiologic examination, shoulder; 1 view	0.15	5	1	3	1	0.035
93042	Rhythm ECG, 1-3 leads; interpretation and report only	0.15	7	2	3	2	0.020
73120	Radiologic examination, hand; 2 views	0.16	6	1	4	1	0.289

Conclusion

The survey results and comparison with applicable codes support the recommended value for 73020 [*Radiologic examination, shoulder; 1 view*] at the current value. Relativity within the X-ray clavicle/shoulder family is also maintained.

CPT	Descriptor	RVU	Total Time	Pre	Intra	Post	IWPUT
73020	Radiologic examination, shoulder; 1 view	0.15	5	1	3	1	0.035
73000	Radiologic examination; clavicle, complete	0.16	5	1	3	1	0.038
73010	Radiologic examination; scapula, complete	0.17	5	1	3	1	0.042
73030	Radiologic examination, shoulder; complete, minimum of 2 views	0.18	6	1	4	1	0.034
73050	Radiologic examination; acromioclavicular joints, bilateral, with or without weighted distraction	0.18	6	1	4	1	0.034

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 73020

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Commonly

Specialty Orthopedic Surgery How often? Commonly

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 413151

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by code 73020 provided nationally in a one-year period is estimated to be 413,151.

Specialty Diagnostic Radiology Frequency 225081 Percentage 54.47 %

Specialty Orthopedic Surgery Frequency 92187 Percentage 22.31 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 137,717 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The ACR estimates that CPT code 73020 will be provided 137,717 times to Medicare patients nationally in a one-year period.

Specialty Diagnostic Radiology Frequency 75027 Percentage 54.47 %

Specialty Orthopedic Surgery Frequency 30729 Percentage 22.31 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUR analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

CPT codes 73000 [*Radiologic examination; clavicle, complete*], 73010 [*Radiologic examination; scapula, complete*], and 73020 [*Radiologic examination, shoulder; 1 view*] were identified for CMS-Other utilization over 30,000. The American College of Radiology (ACR) and the American Academy of Orthopaedic Society (AAOS) agreed to survey the codes for the April 2018 RUC meeting and expanded the family to include CPT codes 73030 [*Radiologic examination; shoulder, complete, minimum of 2 views*] and 73050 [*Radiologic examination; acromioclavicular joints, bilateral, with or without weighted distraction*]. The societies convened an expert panel of physicians familiar with the services to review the survey data and provide the following recommendations.

Survey Process

The ACR surveyed a total of 1,750 members (a random sample of 875 from the entire membership and a separate random sample of 875 members who perform radiography, emergency/trauma, or musculoskeletal procedures). The AAOS surveyed a total random sample of 250 members.

Work RVU Recommendation:

The expert panel recommends a work RVU of 0.18 for CPT code 73030, which is the 25th percentile of the survey and the current value.

Time Recommendation:

The expert panel recommends the following median survey times: 1 minute of pre-service time, 4 minutes of intra-service time, and 1 minute of post-service time. This is a total time of 6 minutes which is 1 minute less than the existing total time of 7 minutes.

Key Reference Services

The most commonly chosen reference code by survey participants, 73562 (*Radiologic examination, knee; 3 views*), has identical service times as well as wRVU compared to the surveyed code. Both examinations review multiple views of a complex articulating joint and the adjacent bones. The second most commonly chosen code, 73564 (*Radiologic examination, knee; complete, 4 or more views*), has one minute more of intra-service time and 0.04 higher wRVU to account for the additional time and intensity of intra-service work required for the additional view for that particular examination.

CPT	Descriptor	RVU	Total Time	Pre	Intra	Post	IWPUT	% chosen
73030	Radiologic examination, shoulder; complete, minimum of 2 views	0.18	6	1	4	1	0.034	
73562	Radiologic examination, knee; 3 views	0.18	6	1	4	1	0.034	29%
73564	Radiologic examination, knee; complete, 4 or more views	0.22	7	1	5	1	0.035	13%

MPC Codes

The surveyed code compares well with three other MPC codes, only one of which is performed by radiology:

- **93042** - *Rhythm ECG, 1-3 leads; interpretation and report only*
- **70355** - *Orthopantomogram (eg, panoramic x-ray)*
- **96401** - *Chemotherapy administration, subcutaneous or intramuscular; non-hormonal anti-neoplastic*

The surveyed code wRVU is closely bracketed by the MPC codes 93042, 70355, and 96401. Code 93042 has one minute less intra-service time which supports the 0.03 lower wRVU. Code 70355 is a radiology code that

involves evaluation of the oral cavity and has one minute more of intra-service time. The identical total times for 70355 and the surveyed code support the 0.02 higher wRVU for 70355. Code 96401 has 1 minute less intra-service time, although 3 additional minutes is allocated to total time for the procedure which supports the slightly higher wRVU. These three MPC codes are included in the following table for comparison and confirm the appropriateness of the recommended wRVU and times within the larger RBRVS.

CPT	Descriptor	RVU	Total Time	Pre	Intra	Post	IWPUT
93402	Rhythm ECG, 1-3 leads; interpretation and report only	0.15	7	2	3	2	0.020
73030	Radiologic examination, shoulder; complete, minimum of 2 views	0.18	6	1	4	1	0.034
70355	Orthopantomogram (eg, panoramic x-ray)	0.20	6		5	1	0.036
96401	Chemotherapy admin., SC or IM, non-hormonal anti-neoplastic	0.21	9	4	3	2	0.025

Conclusion

The survey results and comparison with applicable codes support the recommended value for 73030 [*Radiologic examination; shoulder, complete, minimum of 2 views*] at the current value. Relativity within the X-ray clavicle/shoulder family is also maintained.

CPT	Descriptor	RVU	Total Time	Pre	Intra	Post	IWPUT
73020	Radiologic examination, shoulder; 1 view	0.15	5	1	3	1	0.035
73000	Radiologic examination; clavicle, complete	0.16	5	1	3	1	0.038
73010	Radiologic examination; scapula, complete	0.17	5	1	3	1	0.042
73030	Radiologic examination, shoulder; complete, minimum of 2 views	0.18	6	1	4	1	0.034
73050	Radiologic examination; acromioclavicular joints, bilateral, with or without weighted distraction	0.18	6	1	4	1	0.034

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 73030

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Commonly

Specialty Orthopedic Surgery How often? Commonly

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 7721139

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by code 73030 provided nationally in a one-year period is estimated to be 7,721,139.

Specialty Diagnostic Radiology	Frequency 3882509	Percentage 50.28 %
--------------------------------	-------------------	--------------------

Specialty Orthopedic Surgery	Frequency 2496242	Percentage 32.32 %
------------------------------	-------------------	--------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 2,573,713 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The ACR estimates that CPT code 73030 will be provided 2,573,713 times to Medicare patients nationally in a one-year period.

Specialty Diagnostic Radiology	Frequency 1294170	Percentage 50.28 %
--------------------------------	-------------------	--------------------

Specialty Orthopedic Surgery	Frequency 832081	Percentage 32.32 %

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

CPT codes 73000 [*Radiologic examination; clavicle, complete*], 73010 [*Radiologic examination; scapula, complete*], and 73020 [*Radiologic examination, shoulder; 1 view*] were identified for CMS-Other utilization over 30,000. The American College of Radiology (ACR) and the American Academy of Orthopaedic Society (AAOS) agreed to survey the codes for the April 2018 RUC meeting and expanded the family to include CPT codes 73030 [*Radiologic examination; shoulder, complete, minimum of 2 views*] and 73050 [*Radiologic examination; acromioclavicular joints, bilateral, with or without weighted distraction*]. The societies convened an expert panel of physicians familiar with the services to review the survey data and provide the following recommendations.

Survey Process

The ACR surveyed a total of 1,750 members (a random sample of 875 from the entire membership and a separate random sample of 875 members who perform radiography, emergency/trauma, or musculoskeletal procedures). The AAOS surveyed a total random sample of 250 members.

Work RVU Recommendation:

The expert panel recommends a work RVU of 0.18 for CPT code 73050, which is the 25th percentile of the survey and below the current value of 0.20.

Time Recommendation:

The expert panel recommends the following median survey times: 1 minute of pre-service time, 4 minutes of intra-service time, and 1 minute of post-service time. This is a total time of 6 minutes which is the same as the existing CMS/Other total time.

Key Reference Services

The most commonly chosen reference code by survey participants, 73521 (*Radiologic examination, hips, bilateral, with pelvis when performed; 2 views*), has identical service times compared to the surveyed code. Both examinations review multiple views of joints and the adjacent bones; however, the hip joint is slightly more complex which requires greater intensity during the intra-service period. The second most commonly chosen code, 73565 (*Radiologic examination, knee; both knees, standing, anteroposterior*), has one minute less of intra-service time and correspondingly 0.02 lower wRVU. Both examinations compare bilateral joints, however, the reference code is a single view examination examining one joint while the surveyed code includes additional joints in the same field of view and may require weighted distraction which increases the time and intensity of intra-service evaluation.

CPT	Descriptor	RVU	Total Time	Pre	Intra	Post	IWPUT	% chosen
73565	Radiologic examination, knee; both knees, standing, anteroposterior	0.16	5	1	3	1	0.038	15%
73050	Radiologic examination; acromioclavicular joints, bilateral, with or without weighted distraction	0.18	6	1	4	1	0.034	
73521	Radiologic examination, hips, bilateral, with pelvis when performed; 2 views	0.22	6	1	4	1	0.044	21%

MPC Codes

The surveyed code compares well with three other MPC codes, only one of which is performed by radiology:

- **93042** - *Rhythm ECG, 1-3 leads; interpretation and report only*
- **70355** - *Orthopantomogram (eg, panoramic x-ray)*
- **96401** - *Chemotherapy administration, subcutaneous or intramuscular; non-hormonal anti-neoplastic*

Code 93042 has one minute less intra-service time which supports the 0.03 lower wRVU. Code 70355 is a radiology code that involves evaluation of the oral cavity and has one minute more of intra-service time and same total time which supports the 0.02 higher wRVU. Code 96401 has 1 minute less intra-service time although 3 minutes more of total time for the procedure which supports the slightly higher wRVU. These three MPC codes are included in the following table for comparison and confirm the appropriateness of the recommended wRVU and times within the larger RBRVS.

CPT	Descriptor	RVU	Total Time	Pre	Intra	Post	IWPUT
93042	Rhythm ECG, 1-3 leads; interpretation and report only	0.15	7	2	3	2	0.020
73050	Radiologic examination; acromioclavicular joints, bilateral, with or without weighted distraction	0.18	6	1	4	1	0.034
70355	Orthopantomogram (eg, panoramic x-ray)	0.20	6		5	1	0.036
96401	Chemotherapy admin., SC or IM, non-hormonal anti-neoplastic	0.21	9	4	3	2	0.025

Conclusion

The survey results and comparison with applicable codes support the recommended value for 73050 [*Radiologic examination; acromioclavicular joints, bilateral, with or without weighted distraction*] at the survey 25th percentile value. Relativity within the X-ray clavicle/shoulder family is also maintained.

CPT	Descriptor	RVU	Total Time	Pre	Intra	Post	IWPUT
73020	Radiologic examination, shoulder; 1 view	0.15	5	1	3	1	0.035
73000	Radiologic examination; clavicle, complete	0.16	5	1	3	1	0.038
73010	Radiologic examination; scapula, complete	0.17	5	1	3	1	0.042
73030	Radiologic examination, shoulder; complete, minimum of 2 views	0.18	6	1	4	1	0.034
73050	Radiologic examination; acromioclavicular joints, bilateral, with or without weighted distraction	0.18	6	1	4	1	0.034

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☒ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. CPT code 73050 is typically reported on the same date as CPT code 73030 (Radiologic examination, shoulder; complete, minimum of 2 views)

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 73050

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Commonly

Specialty Orthopedic Surgery How often? Commonly

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 30999

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by code 73050 provided nationally in a one-year period is estimated to be 30,999.

Specialty Diagnostic Radiology	Frequency 7098	Percentage 22.89 %
Specialty Orthopedic Surgery	Frequency 17682	Percentage 57.04 %
Specialty	Frequency 0	Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 10,333

If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The ACR estimates that CPT code 73050 will be provided 10,333 times to Medicare patients nationally in a one-year period.

Specialty Diagnostic Radiology	Frequency 2366	Percentage 22.89 %
Specialty Orthopedic Surgery	Frequency 5894	Percentage 57.04 %
Specialty	Frequency 0	Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Imaging

BETOS Sub-classification:

Standard imaging

BETOS Sub-classification Level II:

Musculoskeletal

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 73050

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Non Facility Direct Practice Expense (PE) Inputs**

CPT Long Descriptor:

73000	Radiologic examination; clavicle, complete
73010	Radiologic examination; scapula, complete
73020	Radiologic examination, shoulder; 1 view
73030	Radiologic examination, shoulder; complete, minimum of 2 views
73050	Radiologic examination; acromioclavicular joints, bilateral, with or without weighted distraction

Global Period: XXX Meeting Date: April 2018

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

The American College of Radiology (ACR) and American Academy of Orthopaedic Society (AAOS) convened a consensus panel to finalize the practice expense data for the X-Ray exam of the clavicle and shoulder code family, CPT codes 73000, 73010, 73020, 73030, and 73050.

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code.** You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here:

The societies included the existing PE inputs for codes 73000, 73010, 73020, 73030, and 73050 on the spreadsheet to serve as a reference.

3. Is this code(s) typically billed with an E/M service?

Codes 73010 and 73050 are typically billed with an E/M service; 54% and 64%, respectively. Codes 73000, 73020 and 73030 are not; 27%, 22% and 36%, respectively.

Is this code(s) typically billed with the E/M service in the nonfacility?

Codes 73010, 73020, 73030 and 73050 are typically billed with the E/M service in the nonfacility; 77%, 56%, 64% and 76%, respectively. Code 73000 is not typically billed at 49%.

4. What specialty is the dominant provider in the nonfacility?
What percent of the time does the dominant provider provide the service(s) in the nonfacility?
Is the dominant provider in the nonfacility different then for the global?
(Please see provided data in PE Subcommittee folder)

Orthopedic Surgery is the dominant provider in the nonfacility for all codes in this family.

73000: 56%

73010: 72%

73020: 52%

73030: 55%

73050: 65%

Diagnostic Radiology is the dominant provider for the global for CPT codes 73000, 73020, and 73030. Orthopedic Surgery is the dominant provider for the global for CPT codes 73010 and 73050.

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:

N/A

6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), you must provide compelling evidence. Please explain if the increase can be entirely accounted for because of an increase in physician time.

For CPT code 73030 (*Radiologic examination, shoulder; complete, minimum of 2 views*), we are requesting 2 additional minutes for the technologist to perform the examination (CA021: Perform procedure/service---NOT directly related to physician work time). While this is a minimum 2 view code, typical clinical practice currently is a three view exam (AP, Grashey plus a transscapular-Y or axillary view). The two additional minutes (6 minutes total) is consistent with the 2 minutes per view that we have typically recommended for extremity codes

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here:
8. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time*:

Bring patient into x-ray room and have patient sit/lie on x-ray table or stand as appropriate. Place first cassette behind patient's clavicle, shoulder or acromioclavicular joint. Position patient's anatomy for the first view. Step behind shielding to control panel. Set appropriate exposure parameters. Instruct patient to hold still. Take exposure for first view. Step from behind shielding. Take first cassette from behind patient and place second cassette as needed. Position patient's anatomy for second view. Step behind shielding to control panel. Set appropriate exposure parameters. Instruct patient to hold still. Take exposure for second view. Step from behind shielding. Take second cassette out behind patient. The above steps are repeated for any additional views to be obtained. All cassettes are then taken to the image reader. Run all three cassettes through reader. Check all images for adequate exposure, positioning, coverage, etc. Repeat any views as needed. Typical number of views for 73000 would be 2 (AP and up-angled), for 73010 would be 2 (AP and Lateral), for 73020 would be 1 (AP), for 73030 would be 3 (AP, Grashey and trans-scapular Y or axillary) and for 73050 would be 3 (AP and up-angled of affected side with AP contralateral comparison view).

9. If you have used a percentage of the physician intra-service work time other than 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

N/A

10. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities:

N/A

11. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at <http://www.bls.gov>.
N/A
12. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here:
N/A
13. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here:
N/A
14. List all the equipment included in your recommendation and the equipment formula chosen (see document titled “Calculating equipment time”). If you have selected “other formula” for any of the equipment please explain here:
 - **Technologist PACS Workstation Proxy (ED050)** –PACS formula; Equals total service period time
 - **Professional PACS Workstation (ED053)** – Equals physician work intra time + 1/2 physician work pre-time
 - **Room, basic radiology (EL012)** – Highly technical formula
15. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here:
N/A
16. If there is any other item on your spreadsheet that needs further explanation please include here:
N/A
17. Please include an explanation of each line item:
N/A

AMA/Specialty Society RVS Update Committee Summary of Recommendations
****Codes Reported Together 75% or More****

October 2018

Urography

In October 2012, CPT code 74425 was identified as part of the family to bundle the genitourinary catheter procedures, which were surveyed for the January and April 2015 RUC meetings. The specialty societies noted that this service is now bundled into the new codes established for CPT 2016. While this code was not deleted, it was unclear what the typical vignette would be for this procedure once the majority of its utilization has migrated to the new codes. The RUC agreed with the specialty societies that two years of Medicare claims data should be reviewed prior to re-survey. The RUC recommended a delay to the survey of CPT code 74425 until at least two years of Medicare claims data was available (October 2018).

Compelling Evidence

The RUC reviewed the information provided by the specialty societies' indicating the physician work for CPT code 74425 was incorrectly determined based on CMS/Other valuation and currently lacks a vignette and typical patient. The patient population has changed as a result of code bundling in 2016. Previously, this procedure would have been most frequently performed for a patient requiring antegrade nephrostogram from a nephrostomy tube or needle placed percutaneously into the kidney to evaluate hydronephrosis, stricture, or stone disease in a patient with conventional anatomy. Utilization for this procedure has decreased and the patient population has changed. As a result of bundling, the typical patient is now one with an ileal conduit through which nephrostomy tubes have been placed for a post-operative obstruction. The RUC agreed that there is compelling evidence that the current work RVU for code 74425 is not accurate.

74425 Urography, antegrade (pyelostogram, nephrostogram, loopogram), radiological supervision and interpretation

The RUC reviewed the survey results from 107 physicians and agreed on the following physician time components: 5 minutes of pre-service time, 14 minutes of intra-service time, and 5 minutes of immediate post-service time. The RUC thoroughly reviewed the recommended work RVU of 0.51 and agreed that this value correctly estimates the amount of physician work involved. To justify a work RVU of 0.51, the RUC compared the survey code to KRS codes 74400 *Urography (pyelography), intravenous, with or without KUB, with or without tomography* (work RVU=0.49, pre-service time of 5 minutes, intra-service time of 15 minutes, and post-service time of 5 minutes) and 76942 *Ultrasonic guidance for needle placement (eg, biopsy, aspiration, injection, localization device), imaging supervision and interpretation* (work RVU=0.67, pre-service time of 7 minutes, intra-service time of 15 minutes, and post-service time of 5 minutes) and noted that the reference codes appropriately bracket the survey code for the amount of physician work involved. The survey code in comparison to top key reference code 74400 involves higher intensity and complexity, warranting a recommended work RVU of 0.51. Additionally, the RUC also reviewed MPC code 93224 *External electrocardiographic recording up to 48 hours by continuous rhythm recording and storage; includes recording, scanning analysis with report, review and interpretation by a physician or other qualified health care professional* (work RVU= 0.52, pre-service time of 2 minutes, intra-service time of 15

minutes, and post-service time of 7 minutes) and agreed that the relativity of both codes in terms of time and physician work further warrants a recommended work RVU of 0.51 for the survey code. **The RUC recommends a work RVU of 0.51 for CPT code 74425.**

Practice Expense

The Practice Expense Subcommittee made a one-minute change in equipment time to account for the highly technical equipment time formula for radiographic fluoroscopic room (EL014). The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.

Referral to CPT

Referred to CPT for editorial changes to the descriptor and vignette to clarify between pyelostogram, nephrostogram, and loopogram.

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
74425	Urography, antegrade (pyelostogram, nephrostogram, loopogram), radiological supervision and interpretation	XXX	0.51

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION**

CPT Code: 74425	Tracking Number	Original Specialty Recommended RVU: 0.51
		Presented Recommended RVU: 0.51
Global Period: XXX	Current Work RVU: 0.36	RUC Recommended RVU: 0.51

CPT Descriptor: Urography, antegrade (pyelostogram, nephrostogram, loopogram), radiological supervision and interpretation

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 70-year-old male with history of bladder cancer has had a cystectomy and bilateral uretero-ileal diversion with ileostomy. After the procedure, the patient has worsening abdominal pain with new intraabdominal fluid collections. Antegrade urography is performed to assess the integrity of the ureteral anastomoses and determine whether a urine leak is present.

Percentage of Survey Respondents who found Vignette to be Typical: 95%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Current patient symptoms are discussed. Pertinent labs, operative notes, clinic notes, and previous imaging are reviewed. Procedure discussed with patient and family.

Description of Intra-Service Work: Existing retrograde nephroureteral are examined. Fluoroscopic images of the abdomen and pelvis are obtained. Contrast is injected into the existing tubes under real time fluoroscopy. Spot and loop images are obtained in the supine position. Patient is moved into left and right oblique position, additional contrast is injected, and further imaging is obtained. All imaging is reviewed, compared to prior studies, and further imaging obtained as needed. The final report is created.

Description of Post-Service Work: Results are discussed with other involved physicians. Plans for further care and follow-up are discussed. Results and recommendations are discussed with the patient and family

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

The societies are recommending an increase in wRVU compared to current based on the following compelling evidence. First, incorrect assumptions were made in the CMS/Other valuation of this code that currently lacks a vignette and typical patient. Second, the patient population has changed as a result of code bundling in 2016. Previously, this procedure would have been most frequently performed for a patient requiring antegrade nephrostogram from a nephrostomy tube or needle placed percutaneously into the kidney to evaluate hydronephrosis, stricture, or stone disease in a patient with conventional anatomy. Utilization has markedly decreased and the patient population is now different. Based on claims data the societies believe that as a result of bundling the typical patient is now one with an ileal conduit through which nephrostomy tubes have been placed for a post operative obstruction. A multisociety survey resulted in 107 responses with a median intra-service time of 14 minutes, pre-service time of 5 minutes, and post-service time of 5 minutes. Based on a survey total time of 24 minutes (compared to 9 currently, or roughly 2.7 times current), the societies recommend an RVU of 0.51 (current RVU 0.39) based on 25th percentile of survey for code 74425.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 74425

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Radiology (IR) How often? Commonly

Specialty Urology How often? Commonly

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. A national frequency number is not known.

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 4,300

If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Current RUC database reports 4295 Medicare claims for 2017.

Specialty Radiology (IR)	Frequency 2925	Percentage 68.02 %
--------------------------	----------------	--------------------

Specialty Urology	Frequency 1335	Percentage 31.04 %
-------------------	----------------	--------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Imaging

BETOS Sub-classification:

Standard imaging

BETOS Sub-classification Level II:

Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 74425

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Non Facility Direct Practice Expense (PE) Inputs

Global Period: XXX

REVISED at MEETING

Meeting Date: October 2018

CPT Long Descriptor(s):

77445: Urography, antegrade (pyelostogram, nephrostogram, loopogram), radiological supervision and interpretation

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

SIR, ACR and AUA convened a panel that included a number of experts familiar with these services to evaluate the direct practice expense inputs for this urography procedure.

2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here:

We included the direct practice expense inputs for CPT Code 74400 *Urography (pyelography), intravenous, with or without KUB, with or without tomography* on the PE spreadsheet. This code was selected as the work reference code.

**3. Is this code(s) typically billed with an E/M service?
Is this code(s) typically billed with the E/M service in the nonfacility?
(Please see provided data in PE Subcommittee folder)**

Code not typically billed with E/M (5%)
Code not typically billed with E/M service in the NF (32%)

**4. What specialty is the dominant provider in the nonfacility?
What percent of the time does the dominant provider provide the service(s) in the nonfacility?
Is the dominant provider in the nonfacility different then for the global?
(Please see provided data in PE Subcommittee folder)**

NF (All, global and 26) – Radiology (59%)
NF (Global and TC) – Urology (84%)

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:

N/A

6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), you must provide compelling evidence. Please explain if the increase can be entirely accounted for because of an increase in physician time.

This CPT code was not previously priced in the nonfacility setting. The specialty societies feel that it is appropriate to develop clinical staff, supply and equipment inputs for the nonfacility setting due to a change in patient population that this CPT code will be utilized with. With the bundling of the genitourinary interventional code family, this CPT code should be utilized primarily in conjunction with diagnostic imaging of the postoperative genitourinary system without concomitant intervention. With this new expected utilization pattern, we feel it is appropriate to add inputs for the use of this code in an office setting where it may be appropriately utilized.

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here:

CPT Code 74400 currently has 10 minutes for “*Process films, hang films and review study with interpreting MD prior to patient discharge*”. We broke that up in the following way on the PE spreadsheet (for CPT Code 74400):

Technologist QC's images in PACS, checking for all images, reformats, and dose page	4
Review examination with interpreting MD/DO	3
Scan exam documents into PACS. Complete exam in RIS system to populate images into work queue.	3

8. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? (please use this time rather than 5 minutes in your reference code)

The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

N/A

9. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional--- directly related to physician work time or Perform procedure/service---NOT directly related to physician work time:*

The radiologic technologist is operating the fluoroscope and acquiring images throughout the procedure.

10. If you have used a percentage of the physician intra-service work time other than 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

We are recommending intra-service time ‘not related to physician work’

11. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities:

N/A

12. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at <http://www.bls.gov>.

N/A

13. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here:

N/A

14. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here:

N/A

15. List all the equipment included in your recommendation and the equipment formula chosen (see document titled “Calculating equipment time”). If you have selected “other formula” for any of the equipment please explain here:

EL014 room, radiographic-flouro – highly technical formula

ED050 Tech PACS workstation – PACS formula

ED053 Prof PACS workstation – Other formula. We used the guidelines for calculating the professional PACS (from physician work survey – half pre time + full intra time)

16. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here:

N/A

17. If there is any other item on your spreadsheet that needs further explanation please include here:

N/A

18. Please include an explanation of each line item:

drape, sterile, c-arm, fluoro	SB008	Required for sterile preparation of imaging equipment
disinfectant, surface (Envirocide, Sanizide)	SM013	For cleaning imaging equipment after usage.

AMA/Specialty Society RVS Update Committee Summary of Recommendations
****CMS/Other Source – Medicare Utilization Over 30,000****

October 2018

Abdominal Aortography

In October 2017, the RAW requested that AMA staff compile a list of CMS/Other codes with Medicare utilization of 30,000 or more. In January 2018, the RUC recommended to survey these services for October 2018.

Compelling Evidence

The specialty society presented compelling evidence for CPT codes 75625 and 75630 based on a flawed methodology that incorrect assumptions were made in the previous valuations. For CPT code 75625, CMS assigned a value and time in 1992 based on an unknown methodology. In 1992, the typical patient for an aortogram was a patient suspected of having aortoiliac occlusive disease. Imaging focused mainly on simple analog diagnostic films. Today, the patient population has changed. CTA and MRA have largely replaced diagnostic imaging for the vast majority of patients. Invasive catheter based imaging is reserved for the most complex patients. Improvements in technology including the transition from analog to digital imaging allow for the safer acquisition of significantly more and higher quality images of the aorta and iliac vessels. In 1995, code 75630 was not surveyed for time or work, but instead a non-dominant specialty, interventional radiology, recommended a work RVU based on the addition of two codes believed to represent the work of code 75630. Additionally, physician work has increased due to changes in technique, knowledge/technology, and patient population, and the dominant specialty has changed. For CPT code 75630, the typical patient for an aortogram with bilateral lower extremity angiogram in 1995 was a patient suspected of having atherosclerotic disease. Imaging focused mainly on simple analog diagnostic films. Today, the patient population has changed. CTA and MRA have largely replaced diagnostic imaging for the vast majority of patients. Invasive catheter based imaging is reserved for the most complex patients. Improvements in technology including the transition from analog to digital imaging allow for significantly more and higher quality images of the aorta, iliac and lower extremity vessels. The RUC agreed with the societies' compelling evidence based primarily on flawed methodology of CMS/Other source and change in patient population.

75625 Aortography, abdominal, by serialography, radiological supervision and interpretation

The RUC reviewed the survey results from 54 physicians and agreed on the following physician time components: 15 minutes of pre-service time, 30 minutes of intra-service time, and 15 minutes of immediate post-service time. The RUC thoroughly reviewed the recommended survey 25th percentile work RVU of 1.75 and agreed that this value correctly estimates the amount of physician work involved. To justify a work RVU of 1.75, the RUC compared the survey code to code 95924 *Testing of autonomic nervous system function; combined parasympathetic and sympathetic adrenergic function testing with at least 5 minutes of passive tilt* (work RVU= 1.73, pre-service time of 15 minutes, intra-service time of 30 minutes, and post-service time of 15 minutes) and noted that the reference code appropriately supports the survey code for physician work

involved. The survey code in comparison to reference code 95924 involves identical pre-, intra-, and post-service times, warranting a recommended work RVU of 1.75. **The RUC recommends a work RVU of 1.75 for CPT code 75625.**

75630 Aortography, abdominal plus bilateral iliofemoral lower extremity, catheter, by serialography, radiological supervision and interpretation

The RUC reviewed the survey results from 54 physicians and agreed on the following physician time components: 15 minutes of pre-service time, 35 minutes of intra-service time, and 15 minutes of immediate post-service time. The RUC thoroughly reviewed the recommended survey 25th percentile work RVU of 2.00 and agreed that this value correctly estimates the amount of physician work involved. To justify a work RVU of 2.00, the RUC compared the survey code to reference code 94002 *Ventilation assist and management, initiation of pressure or volume preset ventilators for assisted or controlled breathing; hospital inpatient/observation, initial day* (work RVU= 1.99, pre-service time of 15 minutes, intra-service time of 30 minutes, and post-service time of 15 minutes) and noted that the reference code appropriately brackets the survey code for the amount of physician work involved. The survey code in comparison to the reference codes involves 5 additional minutes of intra-service time, warranting a recommended work RVU of 2.00. Additionally, the RUC also reviewed MPC code 36456 *Partial exchange transfusion, blood, plasma or crystalloid necessitating the skill of a physician or other qualified health care professional, newborn* (work RVU=2.00, pre-service time of 15 minutes, intra-service time of 30 minutes, and post-service time of 15 minutes) and agreed that the relativity of both codes in terms of time and physician work further supports the recommended work RVU of 2.00 for CPT code 75630. **The RUC recommends a work RVU of 2.00 for CPT code 75630.**

Practice Expense

The RUC reviewed and approved the direct practice expense inputs as approved by the Practice Expense (PE) Subcommittee.

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
75625	Aortography, abdominal, by serialography, radiological supervision and interpretation	XXX	1.75
(f)75630	Aortography, abdominal plus bilateral iliofemoral lower extremity, catheter, by serialography, radiological supervision and interpretation	XXX	2.00

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION**

CPT Code: 75625	Tracking Number	Original Specialty Recommended RVU: 1.75
		Presented Recommended RVU: 1.75
Global Period: XXX	Current Work RVU: 1.14	RUC Recommended RVU: 1.75

CPT Descriptor: Aortography, abdominal, by serialography, radiological supervision and interpretation

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 65-year-old male presents with suspected atherosclerosis and claudication of his lower extremities. He has diminished femoral pulses. An aortogram with catheter in the aorta is performed to assess for aortoiliac occlusive disease.

Percentage of Survey Respondents who found Vignette to be Typical: 85%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is;
Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Based on the patient's symptoms, signs, physical findings, and any preprocedural studies, the area of potential disease is determined within the aorta or iliacs. Full visualization of the total region of the potentially affected aortic segment is ensured using angiographic imaging in the interventional suite. Consideration is given to the total length of expected imaging, the body habitus, limitation on movement due to underlying conditions, and positioning in order to ensure the best imaging of the abdominal aorta. In addition to assessing the affected limb(s), it is ensured that imaging equipment can be rotated to provide complete imaging from multiple angles prior to patient positioning. The risks due to the exposure to radiation and use of contrast dye or other potential imaging modality (eg, carbon dioxide) are discussed with the patient and family. The equipment being used, the close proximity of the image intensifier and potential for claustrophobia, prolonged immobility, and repositioning to ensure optimal imaging for interpretation are discussed.

Description of Intra-Service Work: X-ray is used to determine the best and safest access site for catheter positioning and contrast imaging. This requires static X-ray visualization of access site and anatomic landmarks to ensure direct anterior access to the access vessel. Upon access, multiple imaging angles are required to ensure complete visualization of the vasculature as this is a two-dimensional representation of a three-dimensional object. Due to the size and caliber of the abdominal aorta, power injection for contrast administration is used for angiography. Total dosage and dilution of contrast along with injection rate and pressure for injection are communicated and verified. Visualization of angiography of the abdominal aorta is then performed. During angiographic interpretation, different angles are required due to the course of the vasculature as well as interference from overlapping bowel and gas, other vessels and bony prominences. This requires prolonged visualization and interpretation due to multiple images. Magnified imaging is used, as necessary, for best visualization of potential vascular lesions as well as reformatting pixilation due to movement. Visualization of the vasculature above and below the area of potential disease is imperative to determine the best treatment modality and to ensure iatrogenic injury (wire manipulation, embolization) has not occurred beyond the location of disease, as well as to assess all levels of disease.

Description of Post-Service Work: All imaging studies are uploaded into the picture archiving and communication system. This includes reformatting due to movement or poor contrast flow into the affected region with peak opacification. Key

digital subtraction angiography images of areas of significant disease or for preoperative planning to be used intraoperatively are selected. Key images are copied and sent to the referring physician through a secure portal.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

In October 2017, the RAW requested that the AMA staff compile a list of CMS/Other codes with Medicare utilization of 30,000 or more. CPT Code 75625 was identified in this screen CPT code 75630 was added as part of the 'family'.

Compelling Evidence

We believe that there is compelling evidence to recommend an increase in the value for CPT code 75625 based on evidence that: (1) incorrect assumptions were made in the previous valuation; (2) physician work has increased due to changes in technique, knowledge/technology, and patient population; and (3) dominant specialty has changed.

- (1) Flawed methodology. CPT code 75625 has never been surveyed and is the result of CMS/other inputs. While this alone does not amount to compelling evidence, comparison of the survey time results and other RUC reviewed supervision and interpretation codes show that the existing value greatly underestimates the work of CPT code 75625.
- (2) Changes in physician work. We believe that there has been a change in physician work for CPT code 75625 since CMS assigned a value and time in 1992 due to changes in technique, technology, and patient population. In 1992, the typical patient for an aortogram was a patient suspected of having aortoiliac occlusive disease. Imaging focused mainly on simple analog diagnostic films. Today, the patient population has changed. CTA and MRA have largely replaced diagnostic imaging for the vast majority of patients. Invasive catheter based imaging is reserved for the most complex patients. Improvements in technology including the transition to analog to digital imaging allow for the safer acquisition of significantly more and higher quality images of the aorta and iliac vessels. Thus the changes in patient population, technique, and technology have resulted in a change in the complexity of physician work and total time since 1992 and constitutes compelling evidence for a change in value.
- (3) Change in dominant specialty: In 1992, diagnostic radiology was the dominant provider (84%). In 2017, Medicare data indicate that vascular surgery is 43% and cardiology is 35% of the claims, while diagnostic radiology is only 8% of Medicare claims. These changes in specialties providing this service is consistent with the change in technique, technology and patient described in item 2 above.

Recommendations

We are recommending the survey 25th percentile wRVU of 1.75 with 15 pre, 30 intra and 15 post for a total time of 60 minutes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION**

CPT Code: 75630	Tracking Number	Original Specialty Recommended RVU: 2.00
		Presented Recommended RVU: 2.00
Global Period: XXX	Current Work RVU: 1.79	RUC Recommended RVU: 2.00

CPT Descriptor: Aortography, abdominal plus bilateral iliofemoral lower extremity, catheter, by serialography, radiological supervision and interpretation

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 65-year-old male presents with suspected atherosclerosis and claudication of his lower extremities. He has diminished pedal pulses bilaterally. An aortogram with bilateral run-off with the catheter placement in the aorta is performed to assess for aortoiliac occlusive disease and bilateral peripheral arterial disease.

Percentage of Survey Respondents who found Vignette to be Typical: 91%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is;
Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Based on the patient's symptoms, signs, physical findings, and any preprocedural studies, the area of potential disease is determined within the aorta and iliofemoral arteries. Full visualization of the total region of the potentially affected aortic segment is ensured using angiographic imaging. Consideration is given to aorta and iliofemoral arteries, the body habitus, limitation on movement due to underlying conditions, and positioning in order to ensure the best imaging of the abdominal aorta and iliofemoral arteries. Imaging equipment is assessed to ensure proper function. The risks due to the exposure to radiation and use of contrast dye or other potential imaging modality (eg, carbon dioxide) are discussed with the patient and family. The equipment being used, the close proximity of the image intensifier and potential for claustrophobia, prolonged immobility, and repositioning to ensure optimal imaging for interpretation are discussed. Additional attention is given to ensure the ability of the bed to move under the imager to chase the dye bolus all the way down the legs without disruption.

Description of Intra-Service Work: X-ray is used to determine the best and safest access site for catheter positioning and contrast imaging of each limb. This requires static X-ray visualization of access site and anatomic landmarks to ensure direct anterior access to the access vessel. Upon access, multiple imaging angles are required to ensure complete visualization of the vasculature as this is a two-dimensional representation of a three-dimensional object. Due to the size and caliber of the abdominal aorta, power injection for contrast administration is used for angiography. Total dosage and dilution of contrast along with injection rate and pressure for injection are communicated and verified. Complete visualization of the aorta and iliofemoral arteries is performed; this requires a test run prior to angiographic imaging. During angiographic interpretation, additional images and different angles are required due to the course of the vasculature as well as interference from overlapping bowel and gas, other vessels and bony prominences. This requires prolonged visualization and interpretation due to multiple images. Magnified imaging is used, as necessary, for best visualization of potential vascular lesions as well as reformatting pixilation due to movement. Visualization of the vasculature above and below the area of potential disease is imperative to determine the best treatment modality and to ensure iatrogenic injury (wire manipulation, embolization) has not occurred beyond the location of disease, as well as to assess all levels of disease.

Description of Post-Service Work: All imaging studies are uploaded into the picture archiving and communication system. This includes reformatting due to movement or poor contrast flow into the affected region with peak opacification. Key digital subtraction angiography images of areas of significant disease or for preoperative planning to be used intraoperatively are selected. Key images are copied and sent to the referring physician through a secure portal.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

In October 2017, the RAW requested that the AMA staff compile a list of CMS/Other codes with Medicare utilization of 30,000 or more. CPT Code 75625 was identified in this screen CPT Code 75630 was added as part of the ‘family’.

Compelling Evidence

We believe that there is compelling evidence to recommend an increase in the value for CPT code 75630 based on evidence that: (1) the dominant specialty has changed; (2) incorrect assumptions were made in the previous valuation; and (3) physician work has increased due to changes in technique, knowledge/technology, and patient population.

- (1) Change in dominant specialty: In 1995, when code 75630 was last reviewed, the dominant specialty was diagnostic radiology (80%). Cardiology was 7% and interventional radiology was 5%. The 2017 Medicare data indicate that cardiology is 58%, vascular surgery is 27%, diagnostic radiology is 2% and interventional radiology is 1%. These changes in specialties providing this service is consistent with the change in technique, technology and patient described in item 3 below.
- (2) Flawed methodology: In 1995, code 75630 was not surveyed for time or work, but instead a non-dominant specialty (interventional radiology) recommended a work RVU based on the addition of two codes believed to represent the work of 75630.
- (3) Changes in physician work. We believe that there has been a change in physician work for CPT code 75630 since the previous review in 1995 due to changes in technique, technology, and patient population. In 1995, the typical patient for an aortogram with bilateral lower extremity angiogram was a patient suspected of having atherosclerotic disease. Imaging focused mainly on simple analog diagnostic films. Today, the patient population has changed. CTA and MRA have largely replaced diagnostic imaging for the vast majority of patients. Invasive catheter based imaging is reserved for the most complex patients. Improvements in technology including the transition from analog to digital imaging allow for significantly more and higher quality images of the aorta, iliac and lower extremity vessels. Thus the changes in patient population, technique, and technology have resulted in a change in the complexity of physician work and total time since 1995 and constitutes compelling evidence for a change in value.

Recommendations

We are recommending the survey 25th percentile wRVU of 2.00 with times of 15 pre, 35 intra and 15 post for a total of 65 minutes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 75630

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Non Facility Direct Practice Expense (PE) Inputs**

REVISED AT MEETING

Meeting Date: October 2018

Global Period: XXX

75625 Aortography, abdominal, by serialography, radiological supervision and interpretation

75630 Aortography, abdominal plus bilateral iliofemoral lower extremity, catheter, by
serialography, radiological supervision and interpretation

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

SVS, ACC, SCAI and SIR convened a panel that included a number of experts to evaluate the direct practice expense inputs for these aortography procedures.

2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here:

CPT Codes 75625 and 75630 are current CPT codes with direct practice expense inputs. As such, we included the existing direct practice expense inputs on the PE spreadsheet.

**3. Is this code(s) typically billed with an E/M service?
Is this code(s) typically billed with the E/M service in the nonfacility?
(Please see provided data in PE Subcommittee folder)**

Codes not typically billed with E/M

- 75625 – 1%
- 75630 – 2%

Code not typically billed with E/M service in the NF

- 75625 – 1%
- 75630 – 4%

- 4. What specialty is the dominant provider in the nonfacility?
What percent of the time does the dominant provider provide the service(s) in the nonfacility?
Is the dominant provider in the nonfacility different then for the global?
(Please see provided data in PE Subcommittee folder)**

NF (All, global and 26)

- 75625 – 45% Vascular Surgery
- 75630 – 36% Cardiology

NF (Global and TC)

- 75625 – 49% Vascular Surgery
- 75630 – 34% Vascular Surgery

- 5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:**

The specialties are recommending 4 minutes for CA030 *Technologist QC's images in PACS, checking for all images, reformats, and dose page.* The baseline time for this clinical activity is 2 minutes. These services require additional time to account for the technologist adjusting contrast levels for each image of numerous angiography runs in different projections. In addition, the “mask” image must be manually adjusted for each image to correct poor image quality related to patient motion respiration.

- 6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), you must provide compelling evidence. Please explain if the increase can be entirely accounted for because of an increase in physician time.**

N/A

- 7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here:**

N/A

- 8. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? (please use this time rather than 5 minutes in your reference code)**

The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

N/A

- 9. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional--- directly related to physician work time or Perform procedure/service---NOT directly related to physician work time*:**

A radiologic technologist is in the procedure room and assists in operating the C-arm, acquires images and circulates during critical times of the procedure.

- 10. If you have used a percentage of the physician intra-service work time other than 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.**

The intra-service time is not directly related to physician work time for these two services. We are recommending intra-service time 'perform procedure/service' consistent with other S&I codes.

- 11. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities:**

N/A

- 12. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at <http://www.bls.gov>.**

N/A

- 13. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here:**

N/A

- 14. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here:**

N/A

- 15. List all the equipment included in your recommendation and the equipment formula chosen (see document titled “Calculating equipment time”). If you have selected “other formula” for any of the equipment please explain here:**

EL011 room, angiography: “Other”

Followed “Rationale for Angiographic Room time Allocation”

To prevent double counting of room time between the procedure code and the S&I code the S&I code should receive a base time of 9 minutes for the room, and all other time will be allocated to the procedure code.

ED053 Professional PACS Workstation: “Other”

Followed “Guidelines for PACS Professional Workstation

Minutes equal to half the preservice physician work time and the full intraservice physician work time.

ED050 Technologist PACS workstation: “PACS” formula

- 16. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here:**

N/A

- 17. If there is any other item on your spreadsheet that needs further explanation please include here:**

N/A

- 18. Please include an explanation of each line item:**

drape, sterile, c-arm, fluoro	SB008	Required for sterile preparation of imaging equipment
disinfectant, surface (Envirocide, Sanizide)	SM013	For cleaning imaging equipment after usage.

AMA/Specialty Society RVS Update Committee Summary of Recommendations
CMS/Other Source – Medicare Utilization Over 30,000

October 2018

Angiography

In October 2017, the RAW requested that AMA staff compile a list of CMS/Other codes with Medicare utilization of 30,000 or more. In January 2018, the RUC recommended to survey these services for October 2018.

Compelling Evidence

The specialty society presented compelling evidence for CPT codes 75726 and 75774 based on a flawed methodology and a change in patient population. Code 75726 has not been previously surveyed and is the result of CMS/ Other inputs. There is no existing vignette or description of work to assess the specific physician activities or patient population that support current valuation. The patient population has also changed. In decades past, this code would have been used for atherosclerotic disorders. In current use, code 75726 used to evaluate bleeding visceral disorders and gastrointestinal neoplasms. Trans-arterial interventional oncologic treatments were not widely in use at the time of previous valuation. Additionally, code 75774 has not previously been surveyed and is the result of CMS/ Other inputs. There is no existing vignette or description of work to assess the specific physician activities or patient population that support current valuation. The patient population has also changed. Corresponding physician knowledge regarding the conditions being evaluated has changed. In decades past, this code would have been used for atherosclerotic disorders. In current use, code 75774 is performed to evaluate bleeding visceral disorders and gastrointestinal neoplasms. Trans-arterial interventional oncologic treatments were not widely in use at the time of previous valuation. New microcatheter construction has allowed access to arteries that were previously inaccessible. The RUC agreed with the societies' compelling evidence based primarily on flawed methodology and a change in patient population.

75726 Angiography, visceral, selective or supraseductive (with or without flush aortogram), radiological supervision and interpretation

The RUC reviewed the survey results from 107 physicians and agreed on the following physician time components: 15 minutes of pre-service time, 45 minutes of intra-service time, and 15 minutes of immediate post-service time. The RUC thoroughly reviewed the recommended work and agreed that the survey 25th percentile correctly estimates the amount of physician work involved. To justify a work RVU of 2.05, the RUC compared the survey code to CPT code 70554 *Magnetic resonance imaging, brain, functional MRI; including test selection and administration of repetitive body part movement and/or visual stimulation, not requiring physician or psychologist administration* (RVU= 2.11, pre-service time of 15 minutes, intra-service time of 35 minutes, and post-service time of 10 minutes) and noted that the survey code contains 10 minutes of additional intra-service time and 5 minutes of additional post-service time, justifying the higher work RVU for the survey code. The RUC also agreed that there is consistency within the family of codes and that the recommended work RVU for the survey code appropriately accounts for the amount of

physician work that is involved, further warranting a recommended work RVU of 2.05 for the survey code. **The RUC recommends a work RVU of 2.05 for CPT code 75726.**

75774 Angiography, selective, each additional vessel studied after basic examination, radiological supervision and interpretation (List separately in addition to code for primary procedure)

The RUC reviewed the survey results from 107 physicians and agreed on the following physician time components: 30 minutes of intra-service time. The RUC thoroughly reviewed the recommended work RVU of 1.01 and agreed that the survey 25th percentile value correctly estimates the amount of physician work involved. To justify a work RVU of 1.01, the RUC compared the survey code to code 99359 *Prolonged evaluation and management service before and/or after direct patient care; each additional 30 minutes (List separately in addition to code for prolonged service)* (work RVU= 1.00, intra-service time of 30 minutes) and noted that the survey code and reference code have identical intra-service times and comparable work values, warranting a recommended work RVU of 1.01 for the survey code. **The RUC recommends a work RVU of 1.01 for CPT code 75774.**

Practice Expense

The RUC reviewed and approved the direct practice expense inputs as approved by the Practice Expense (PE) Subcommittee.

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
75726	Angiography, visceral, selective or supraseductive (with or without flush aortogram), radiological supervision and interpretation	XXX	2.05
75774	Angiography, selective, each additional vessel studied after basic examination, radiological supervision and interpretation (List separately in addition to code for primary procedure)	ZZZ	1.01

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION**

CPT Code: 75726	Tracking Number	Original Specialty Recommended RVU: 2.05
		Presented Recommended RVU: 2.05
Global Period: XXX	Current Work RVU: 1.14	RUC Recommended RVU: 2.05

CPT Descriptor: Angiography, visceral, selective or supraseductive (with or without flush aortogram), radiological supervision and interpretation

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 76-year-old female presents with acute upper lower gastrointestinal bleeding. Arteriogram with catheter placement in the superior mesenteric artery is performed.

Percentage of Survey Respondents who found Vignette to be Typical: 65%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Pertinent imaging, notes, and labs are reviewed as it pertains to prior radiation and contrast exposure. The risks and benefits of iodinated contrast are discussed with patient and family. The risks and benefits of ionizing radiation are discussed with patient and family. Imaging alternatives are reviewed. Pertinent imaging related details are reviewed with staff. Imaging equipment function confirmed. Contrast dilution confirmed. Ability to achieve desired imaging angles confirmed based on area of interest, body habitus, associated external wires, IVs, tubes, and other monitoring devices.

Description of Intra-Service Work: Survey fluoroscopy of the abdomen and pelvis is performed to identify clips, oral contrast, and other pertinent anatomy. Separate surgical procedure is begun. Fluoroscopy is used to position the patient for initial aortogram (catheter placement is a separate procedure). Desired rate of contrast flow and volume of contrast to be injected is determined. Magnification and filters are adjusted to optimize imaging. From review of the aortogram, visceral artery flow and anatomy is reviewed so that the appropriately shaped selective catheter can be requested for separate surgical procedure. After the work of the separately reportable selective catheterization, the table is moved to position for initial selective DSA. Magnification and filters are adjusted to optimize imaging. Based on mesenteric flow and imaging findings the rate and volume of contrast is chosen for selective DSA. Imaging is reviewed and DSA is repeated to include the entire SMA territory as it is typically too large to cover in a one sequence. DSA imaging is reviewed. Native unsubtracted images are reviewed to differentiate bowel gas motion and vascular anatomy. Additional oblique and magnified DSA is performed as based on these initial interpretations. Rate and volume of injection may be modified to optimize the exam. Imaging is compared to any prior studies for final interpretation and report creation.

Description of Post-Service Work: Subtracted and unsubtracted images are selected for archiving and imaging is reformatted to adjust for motion and bowel gas. Imaging is archived to PACS and key findings are annotated. Key images are flagged and sent to other involved physicians as needed.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

In October 2017, the RAW requested that AMA staff compile a list of CMS/Other codes with Medicare utilization of 30,000 or more. CPT Codes 75726 and 75774 were recommended for survey.

Compelling Evidence

We believe that there is compelling evidence to recommend an increase in the value for CPT code 75726. First, incorrect assumptions were made in the previous valuation. 75726 has not previously been surveyed and is the result of CMS/Other inputs. There is no existing vignette or description of work to assess the specific physician activities or patient population that support current valuation. The CMS/other time is significantly underestimated. The patient population has also changed. In decades past, this code would have been used for atherosclerotic disorders. In current use, 75726 used to evaluate bleeding visceral disorders and gastrointestinal neoplasms. Transarterial interventional oncologic treatments were not widely in use at the time of previous valuation.

Vignette

The rationale for low percentage agreement is consistent with the ICD data for the code which does not have a "typical" response. The ICD10 data are spread out over many different diagnoses.

Recommendations

We are recommending the 25th survey percentile wRVU of 2.05 with times of 15, 45 and 15 (total 75).

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 75726

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. A national estimate is not available

Specialty	Frequency	Percentage	%
Specialty	Frequency	Percentage	%
Specialty	Frequency	Percentage	%

If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Current RUC database (2017 utilization data)

Specialty interventional radiology	Frequency 38693	Percentage 92.00 %
Specialty vascular surgery	Frequency 2103	Percentage 5.00 %
Specialty cardiology	Frequency 1264	Percentage 3.00 %

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Imaging

Imaging/procedure

Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 75726

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION**

CPT Code: 75774	Tracking Number	Original Specialty Recommended RVU: 1.01
		Presented Recommended RVU: 1.01
Global Period: ZZZ	Current Work RVU: 0.36	RUC Recommended RVU: 1.01

CPT Descriptor: Angiography, selective, each additional vessel studied after basic examination, radiological supervision and interpretation (List separately in addition to code for primary procedure)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 74-year-old male who has just undergone a selective arteriogram of the superior mesenteric artery, also requires an additional arteriogram and a microcatheter is advanced into a proximal jejunal arterial branch and a super selective arteriogram is performed.

Percentage of Survey Respondents who found Vignette to be Typical: 84%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is;
Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work:

Description of Intra-Service Work: After subselective microcatheterization (separate surgical procedure) angle of imaging is chosen based on review of prior non-selective imaging and test injections of contrast. Filters and magnification are adjusted to optimize imaging. Desired rate and volume of contrast for angiography are determined. Initial DSA and unsubtracted angiogram are reviewed. Based on review of initial DSA it is typical to obtain imaging in at least one additional DSA sequence in a different view. Fluoroscopy used to reposition. Filters are adjusted. Magnification and rate/volume of contrast reconfirmed. Additional imaging reviewed. Pertinent DSA and unsubtracted images selected for transfer to PACS including reformatted images adjusting for motion/bowel gas. Additional imaging reviewed for final interpretation.

Description of Post-Service Work:

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

In October 2017, the RAW requested that AMA staff compile a list of CMS/Other codes with Medicare utilization of 30,000 or more. CPT Codes 75726 and 75774 were recommended for survey.

Compelling Evidence

We believe that there is compelling evidence to recommend an increase in the value for CPT code 75774. First, incorrect assumptions were made in the previous valuation. 75774 has not previously been surveyed and is the result of CMS/Other inputs. The CMS/other time is significantly underestimated. There is no existing vignette or description of work to assess the specific physician activities or patient population that support current valuation. The patient population has also changed. Corresponding physician knowledge regarding the conditions being evaluated has changed. In decades past, this code would have been used for atherosclerotic disorders. In current use, 75774 is performed to evaluate bleeding visceral disorders and gastrointestinal neoplasms. Transarterial interventional oncologic treatments were not widely in use at the time of previous valuation. New microcatheter construction has allowed access to arteries that were previously inaccessible.

Intensity/Complexity Measures

We included data for the key reference code, which represented 28 of the 31 responses. We did not include data points for the 2nd reference code as it was only one survey response.

Recommendations

We are recommending the survey's 25th percentile of 1.01 and 30 minutes of intra time for this add-on code.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. Use 75774 in addition to code for specific initial vessel studied

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 75774

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Interventional Radiology

How often? Commonly

Specialty Vascular Surgery How often? Sometimes

Specialty Cardiology How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. A national estimate is not available

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 75,000

If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Current RUC database (2017 utilization data)

Specialty interventional radiology	Frequency 52500	Percentage 70.00 %
------------------------------------	-----------------	--------------------

Specialty vascular surgery	Frequency 11000	Percentage 14.66 %
----------------------------	-----------------	--------------------

Specialty cardiology	Frequency 9200	Percentage 12.26 %
----------------------	----------------	--------------------

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Imaging

BETOS Sub-classification:

Imaging/procedure

BETOS Sub-classification Level II:

Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 75774

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Non Facility Direct Practice Expense (PE) Inputs**

REVISED AT MEETING

Meeting Date: October 2018

Global Period: XXX

75726 Angiography, visceral, selective or supraselective (with or without flush aortogram), radiological supervision and interpretation

Global Period: ZZZ

75774 Angiography, selective, each additional vessel studied after basic examination, radiological supervision and interpretation (List separately in addition to code for primary procedure)

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

SIR and SVS convened a panel that included a number of experts to evaluate the direct practice expense inputs for these angiography procedures.

2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here:

CPT Codes 75726 and 75774 are current CPT codes with direct practice expense inputs. As such, we included the existing direct practice expense inputs on the PE spreadsheet.

**3. Is this code(s) typically billed with an E/M service?
Is this code(s) typically billed with the E/M service in the nonfacility?
(Please see provided data in PE Subcommittee folder)**

Codes not typically billed with E/M

- 75726 – 0%
- 75774 – 1%

Code not typically billed with E/M service in the NF

- 75726 – 0%
- 75774 – 4%

4. **What specialty is the dominant provider in the nonfacility?
What percent of the time does the dominant provider provide the service(s) in the nonfacility?
Is the dominant provider in the nonfacility different then for the global?
(Please see provided data in PE Subcommittee folder)**

NF (All, global and 26)

- 75726 – 58% Diagnostic Radiology
- 75774 – 36% Diagnostic Radiology

NF (Global and TC)

- 75726 – 51% Vascular Surgery
- 75774 – 45% Vascular Surgery

5. **If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:**

The specialties are recommending 4 minutes for CA030 *Technologist QC's images in PACS, checking for all images, reformats, and dose page.* The baseline time for this clinical activity is 2 minutes. These services require additional time to account for the technologist adjusting contrast levels for each image of numerous angiography runs in different projections. In addition, the “mask” image must be manually adjusted for each image to correct poor image quality related to patient motion respiration.

6. **If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), you must provide compelling evidence. Please explain if the increase can be entirely accounted for because of an increase in physician time.**

N/A

7. **If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here:**

N/A

8. **How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? (please use this time rather than 5 minutes in your reference code)**

The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

N/A

- 9. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time or Perform procedure/service---NOT directly related to physician work time*:**

A radiologic technologist is in the procedure room and assists in operating the C-arm, acquires images and circulates during critical times of the procedure.

- 10. If you have used a percentage of the physician intra-service work time other than 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.**

The intra-service time is not directly related to physician work time for these two services. We are recommending intra-service time 'perform procedure/service' consistent with other S&I codes.

- 11. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities:**

N/A

- 12. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at <http://www.bls.gov>.**

N/A

- 13. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here:**

N/A

- 14. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here:**

N/A

- 15. List all the equipment included in your recommendation and the equipment formula chosen (see document titled “Calculating equipment time”). If you have selected “other formula” for any of the equipment please explain here:**

EL011 room, angiography: “Other”

Followed “Rationale for Angiographic Room time Allocation”

To prevent double counting of room time between the procedure code and the S&I code the S&I code should receive a base time of 9 minutes for the room, and all other time will be allocated to the procedure code.

ED053 Professional PACS Workstation: “Other”

Followed “Guidelines for PACS Professional Workstation

Minutes equal to half the preservice physician work time and the full intraservice physician work time.

ED050 Technologist PACS workstation: “PACS” formula

- 16. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here:**

N/A

- 17. If there is any other item on your spreadsheet that needs further explanation please include here:**

N/A

- 18. Please include an explanation of each line item:**

drape, sterile, c-arm, fluoro	SB008	Required for sterile preparation of imaging equipment
disinfectant, surface (Envirocide, Sanizide)	SM013	For cleaning imaging equipment after usage.

AMA/Specialty Society RVS Update Committee Summary of Recommendations
CMS/Other Source – Medicare Utilization Over 30,000

October 2018

X-Ray Exam Specimen

At the April 2018 meeting, the RUC inquired whether this service is typically performed with a placement of localization device service (i.e., CPT codes 19281-19288) on the same patient, same date of service and by the same provider, noting that any overlapping work that is typically performed with another service should be removed from the survey code. The specialty expert panel asserted that the survey code was typically performed alone — the RUC wanted to confirm this by reviewing the Medicare claims data. There are different localization device CPT codes for each imaging modality. As reviewing the relationship between a single code and multiple codes is a relatively more complex and nuanced scenario, the specialty requested and the RUC agreed that more time was necessary to properly summarize and interpret the data. The RUC agreed that AMA staff will research the current reported together data for this code and will be brought back at the October 2018 RUC meeting.

Compelling Evidence

The specialty society presented compelling evidence for CPT code 76098 based on a flawed methodology with inadequate time assigned to the code under the CMS/Other value and a change in population due to the bundling with biopsy code 19081 in 2014. It is now typical for the survey code to be performed in patients undergoing lumpectomy, mastectomy, or surgical excision in the operating room. As the RUC has noted previously during review of other services, codes with the CMS/Other designation were never surveyed by the RUC or any other stakeholder; their physician time and work were assigned by CMS in rulemaking over 20 years ago using an unknown methodology. The specialty society also noted that an increase in value for this code is justified by the survey data, comparisons with the key reference services, and to maintain relativity with other diagnostic imaging services. The RUC reaffirmed the societies' compelling evidence based on previously unknown and flawed methodology.

76098 Radiological examination, surgical specimen

The RUC reviewed the survey results from 49 physicians and agreed on the following physician time components: 3 minutes of pre-service time, 5 minutes of intra-service time, and 3 minutes of immediate post-service time. When this code was originally presented in April 2018, there were concerns regarding whether this service is typically performed with a needle localization procedure by the same radiologist on the same day. After review of reported together data, CPT code 76098 is typically performed 63% of the time with one type of needle localization on the same day (CPT codes 19281-19288). The RUC agreed to reduce 4 minutes from the original pre-service time of 7 minutes presented at the April 2018 RUC meeting, totaling to 3 minutes of pre-service time for an accurate representation of the work performed for code 76098 and to be consistent with the specialty's recommended crosswalk.

The RUC thoroughly reviewed the physician work required to perform CPT code 76098 and determined to crosswalk the physician work value to code 72082 *Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); 2 or 3 views* (work RVU=0.31, pre-service time of 1 minute, intra-service time of 6 minutes, post-service time of 1 minute, and total time of 8 minutes). The RUC agreed with the recommended crosswalk code 72082 and work RVU of 0.31, which falls between the survey 25th percentile work RVU of 0.17 and the survey median work RVU of 0.40. Additionally, the RUC referenced the key MPC comparator codes 76857 *Ultrasound, pelvic (nonobstetric), real time with image documentation; limited or follow-up (eg, for follicles* (work RVU= 0.50, pre-service time of 5 minutes, intra-service time of 7 minutes, and post-service time of 5 minutes) and 93922 *Limited bilateral noninvasive physiologic studies of upper or lower extremity arteries, (eg, for lower extremity: ankle/brachial indices at distal posterior tibial and anterior tibial/dorsalis pedis arteries plus bidirectional, Doppler waveform recording and analysis at 1-2 levels, or ankle/brachial indices at distal posterior tibial and anterior tibial/dorsalis pedis arteries plus volume plethysmography at 1-2 levels, or ankle/brachial indices at distal posterior tibial and anterior tibial/dorsalis pedis arteries with, transcutaneous oxygen tension measurement at 1-2 levels)* (work RVU= 0.25, pre-service time of 3 minutes, intra-service time of 5 minutes, and post-service time of 2 minutes) and noted that both MPC codes bracket the recommended work RVU for the survey code. Code 76098 has 1 additional minute of post-service time than MPC code 93922 and a higher intensity, warranting the recommended work RVU of 0.31 for code 76098. **The RUC recommends a work RVU of 0.31 for CPT code 76098.**

Practice Expense

The RUC affirmed the direct practice expense inputs as submitted by the specialty society at the April 2018 RUC Meeting.

Subject: ACR Request for X-Ray Specimen Billed Together Methodology To Be Reviewed by Research

Dear Dr. Smith,

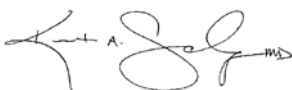

The ACR would like to have the following issue sent to the Research Subcommittee for further consideration:

At the April 2018 RUC meeting, the ACR presented time and value recommendations for CPT code 76098 (*Radiological examination, surgical specimen*). Our recommendations were ultimately accepted by the RUC panel at the meeting. However, concern arose regarding the billed together data provided by the AMA; specifically, whether or not it is appropriate to combine multiple similar codes when determining billed together status. The ACR noted that adding individual billed together rates will result in double counting when three or more of those codes are billed together, rendering the data inaccurate unless this overlap is accounted for. Additionally, the ACR expressed concern that this method of determining billed together status reflects a change in RUC procedure and should be validated through the Research Subcommittee before establishing precedent. Since this was a complex, multi-code issue, the RUC decided to revisit this issue at the October 2018 RUC meeting where AMA staff could present their research on this matter.

After performing our own analyses, the ACR would like the RUC to consider whether combining multiple codes is an appropriate method of calculating billed together data for all specialties at the RUC. The potential for overlap in data occurring with the additive calculation method for billed together data is one issue that could result in invalid billed together data for any specialty using this technique. Additionally, there will rarely be universal agreement on which codes are “similar enough” to combine, which presents another layer of complexity and subjectivity. We would like the RUC to consider providing a clear, cross-specialty procedural standard for calculating billed together data, as it is imperative to establish an accurate precedent for interpreting billed together data moving forward.

Thank you for your consideration of our request.

Sincerely,

Kurt A. Schoppe, MD
ACR RUC Advisor

AMA Staff Provided Following Information to ACR in June 2018:

For X-ray specimen, please see following analysis regarding how often 76098 is on the same claim as one or more of the codes in the range 19281-19288 (same provider, same beneficiary, same day):

This was regarding how often CPT 76098 was performed with any code in the 19281-19288 range – on the same day, for the same beneficiary, by the same provider. All sites of service were considered and TC-only utilization of 76098 was excluded. The results:

- *There were 2,730 occurrences of 76098 and 76098/26 on the 2016 5% file. There was one duplicate record where the global and PC-only were provided on the same bene/date/npi, leaving 2,729 unique occurrences of 76098+76098/26.*
- *There were 2,943 occurrences of 19281-19288 on the 2016 5% file. There were 235 duplicate records where more than one of these services was provided on the same bene/date/npi, leaving 2,708 unique occurrences of codes in the 19281-19288 range.*

Matching these two sets of services, there were 1,731 occurring on the same bene/date/npi. In percentage terms, a code in the 19281-19288 range was provided for 63% (1,731/2,729) of the unique occurrences of 76098+76098/26

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION**

CPT Code: 76098	Tracking Number	Original Specialty Recommended RVU: 0.40
		Presented Recommended RVU: 0.31
Global Period: XXX	Current Work RVU: 0.40	RUC Recommended RVU: 0.31

CPT Descriptor: Radiological examination, surgical specimen

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 65-year-old female was recently diagnosed with invasive breast cancer following image-guided biopsy and clip placement. Needle localization was performed prior to lumpectomy. A specimen x-ray is obtained during surgery to ensure that the tumor, localization wire, and/or biopsy clip were appropriately removed.

Percentage of Survey Respondents who found Vignette to be Typical: 94%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is;
Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review clinical history; review initial diagnostic images and localization images obtained prior to surgery to determine type and number of mass(es), calcifications, or other lesion(s) expected to be present within the surgically excised tissue specimen. Also, evaluate the accuracy and method of localization and the type and number of needle biopsy clip marker(s), radioactive or other localizing seed(s), and/or localizing wire(s) expected to be present in the surgically excised tissue specimen.

Description of Intra-Service Work: Evaluate the specimen x-ray for presence of needle biopsy clip marker(s) from initial histologic diagnosis, radioactive or other localizing seed(s), and/or localizing wire(s). In the case of wire localization, evaluate the integrity of the wire(s) and measure the length of the wire(s) in the excised tissue, ensuring there is no fracture or partial loss of the wire(s), which could remain in the body. Note if expected mass(es), calcifications, or other lesion(s) are present within the specimen. Dictate the report including pertinent positives or negatives.

Description of Post-Service Work: Communicate findings with the surgeon in the operating room real time prior to wound closure. Sign the dictated report.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

CPT code 76098 (*Radiological examination, surgical specimen*) was identified as potentially mis-valued through the CMS/Other - Utilization over 30,000 screen.

When this code was originally presented in April 2018, there were concerns regarding whether 76098 is typically performed with a needle localization procedure by the same radiologist on the same day. Our initial recommendation was based on the fact that 76098 does not meet billed together criteria with any single other code, however we were informed of AMA data showing that if the billed together frequency for multiple codes in the range of 19281-19288 were added together, then 76098 may meet billed together criteria. The ACR had some concerns that the AMA data does not account for double counting when more than two of these procedures were performed together on the same day. The RUC agreed to accept an interim value of 0.40 RVU based on survey times and bring the code back in October once the billed together data had been reviewed in more detail.

Survey Process

The ACR surveyed a total of 750 members (a random sample of 375 members and a separate random sample of 375 members who perform radiography, mammography, or women's imaging procedures).

Work RVU Recommendation:

We recommend a work RVU of 0.31, which falls between the 25th percentile survey value of 0.17 RVU and the median survey value of 0.40 RVU. We propose 72082 (*Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); 2 or 3 views*) as a crosswalk.

Compelling Evidence

We are requesting an increase in value for CPT code 76098 based on flawed methodology with inadequate time assigned to the code under the existing CMS/Other value.

Additionally, there has been a change in patient population since 76098 was originally valued, substantiating the increased time reflected by our survey values. When previously valued, the specimen radiograph was typically obtained after a stereotactic biopsy by the same technologist and interpreted by the same radiologist that performed the biopsy. The post-biopsy specimen radiograph was bundled with the biopsy code 19081 (*Biopsy, breast, with placement of breast localization device(s) (eg, clip, metallic pellet), when performed, and imaging of the biopsy specimen, when performed, percutaneous; first lesion, including stereotactic guidance*)) in 2014. It is now typical for 76098 to be performed in patients undergoing lumpectomy, mastectomy, or surgical excision in the operating room. If a needle localization has been performed prior to the specimen radiograph, these procedures are typically separated by several hours and multiple intervening patients. Therefore, pre-service work now needs to be accounted for in this code, as described in the description of work: "review clinical history, review initial diagnostic images and localization images obtained prior to surgery to determine type and number of mass(es), calcifications, or other lesion(s) expected to be present within the surgically excised tissue specimen. Also, evaluate the accuracy and method of localization and the type and number of needle biopsy clip marker(s), radioactive or other localizing seed(s), and/or localizing wire(s) expected to be present in the surgically excised tissue specimen."

Time Recommendation:

We recommend the following times: 3 minutes pre-service, 5 minutes intra-service, and 3 minutes post-service. This is a total time of 11 minutes compared to the existing CMS/Other time of 5 minutes.

Our research colleagues at the Harvey L. Neiman Health Policy Institute examined the 5% file and calculated the percentage of unique occurrences of 76098 billed with any of the needle localization codes. They found that double-counting combinations of codes accounted for about 6% of the total percentage, however 76098 is still performed with any one of the needle localization codes more than 50% of the time, at around 63%. The ACR agrees that, for this particular code, it is appropriate to combine the billed together rates for the range of needle localization codes since these procedures are essentially the same other than modality used for image guidance.

Since we accept that 76098 is typically performed with another procedure on the same day by the same radiologist, we recommend adjusting the pre-service time to account for some overlap of work. We recommend decreasing the survey pre-service time of 7 minutes to 3 minutes. These specimen radiographs are performed hours after the needle localization procedure and the radiologist has typically done other needle localizations, other biopsies, and seen other diagnostic patients in the interim. While there is some familiarity with the patient's history and prior imaging, the pre-service work is not entirely duplicative. The pre-service activities in the description of work must still be performed or at least refreshed at the time the specimen radiograph is interpreted: Review clinical history; review initial diagnostic images and localization images obtained prior to surgery to determine type and number of mass(es), calcifications, or other lesion(s) expected to be present within the surgically excised tissue specimen. Also, evaluate the accuracy and method of localization and the type and number of needle biopsy clip marker(s), radioactive or other localizing seed(s), and/or localizing wire(s) expected to be present in the surgically excised tissue specimen. We feel that 3 minutes of pre-service time accurately captures the amount of unique work performed for this code.

Key Reference Services

Our recommendation compares favorably with the key reference services selected by the survey respondents. In the table below, the two most common key reference services are compared with the recommendation for 76098 (*Radiological examination, surgical specimen*), which account for 49% of the survey respondents.

77065 (*Diagnostic mammography, including CAD, unilateral*) has longer total and intra-service times and is appropriately valued higher at 0.81 RVU compared to the recommended value of 0.31 RVU for 76098.

71045 (*Radiologic exam, chest single view*) has significantly less time than the survey times for 76098, supporting the flawed methodology of the existing CMS/Other value of 0.16 RVU.

CPT Code	Short Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT	% chosen
71045	Radiologic exam, chest single view	0.18	5	1	3	1	0.045	20%
76098	Radiological examination, surgical specimen	0.31	11	3	5	3	0.035	
77065	Diagnostic mammography, including CAD, unilateral	0.81	21	5	10	6	0.056	29%

MPC Codes

Our recommendation compares favorably in rank order with multiple other MPC codes, one of which is also a radiology exam:

- **76857** (*Ultrasound, pelvic (nonobstetric), real time with image documentation; limited or follow-up (eg, for follicles)*).
- **93922** (*Limited bilateral noninvasive physiologic studies of upper or lower extremity arteries, (eg, for lower extremity: ankle/brachial indices at distal posterior tibial and anterior tibial/dorsalis pedis arteries plus bidirectional, Doppler waveform recording and analysis at 1-2 levels, or ankle/brachial indices at distal posterior tibial and anterior tibial/dorsalis pedis arteries plus volume plethysmography at 1-2 levels, or ankle/brachial indices at distal posterior tibial and anterior tibial/dorsalis pedis arteries with, transcutaneous oxygen tension measurement at 1-2 levels)*);
- **99281** (*Emergency department visit for the evaluation and management of a patient, which requires these 3 key components: A problem focused history; A problem focused examination; and Straightforward medical decision making. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are self limited or minor.*); and,

CPT code 76857 has more total time than 76098 (17 minutes compared to 11 minutes) with additional minutes in the intra-service period specifically. 76857 is appropriately valued higher at 0.50 RVU compared to our recommendation of 0.31 for 76098.

Additionally, 76098 compares well with two non-radiology MPC codes. 76098 has the same intra-service time as 93922, but 1 more minute of pre- and post-service time and has a higher intensity, which justifies the higher recommended value of 0.31 RVU compared to 0.25 RVU of 93922. As well, there is slightly more total time in 99281 (13 minutes compared to 11 minutes in 76098) and this code has 2 more minutes of intra-service time (7 minutes compared to 5 minutes) and describes an emergency room encounter. These two factors justify the higher valuation and IWPUT of 99281 relative to 76098.

The table below provides comparison between the MPC codes and the recommendation for 76098.

CPT Code	Short Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
93922	Limited bilateral noninvasive physiologic studies of upper or lower extremity arteries	0.25	10	3	5	2	0.028
76098	X-Ray, surgical specimen	0.31	11	3	5	3	0.035
99281	ER Visit	0.45	13	2	7	4	0.045
76857	US, pelvic (nonobstetric), w/img documentation; limited or follow-up	0.50	17	5	7	5	0.039

Among codes with 5 minutes of intraservice time and greater than 7 minutes total time, the recommended crosswalk value of 0.31 RVU for 76098 compares well. 93018 (*Cardiovascular stress test using maximal or submaximal treadmill or bicycle exercise, continuous electrocardiographic monitoring, and/or pharmacological stress; interpretation and report only*) is the most similar with the same total time of 11 minutes and an RVU of 0.30.

CPT Code	Short Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
93018	Cardiovascular stress test	0.30	11	2	5	4	0.033
71048	X-Ray, chest; 4 or more views	0.31	7	1	5	1	0.053
76098	X-Ray, surgical specimen	0.31	11	3	5	3	0.035

93293	Transtelephonic rhythm strip pacemaker evaluation(s)	0.31	13	3	5	5	0.026
72114	X-Ray, spine, lumbosacral; min of 6 views	0.32	8	1	5	2	0.051
74022	X-Ray, abdomen; single view chest	0.32	7	1	5	1	0.055
72052	X-Ray, spine, cervical; 6 or more views	0.36	8	1	5	2	0.059

Conclusion

The survey results and comparison with applicable codes support increasing the existing value for 76098 (*Radiological examination, surgical specimen*) to 0.31 RVU, with service period times of 3, 5, and 3 minutes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☒ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☒ Other reason (please explain) Separate procedures performed at different times.

- Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. see above discussion

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 76098

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 176115

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by code 76098 provided nationally in a one-year period is estimated to be 176,115.

Specialty Diagnostic Radiology

Frequency 142610

Percentage 80.97 %

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 58,705
 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The ACR estimates that CPT code 76098 will be provided 58,705 times to Medicare patients nationally in a one-year period.

Specialty Diagnostic Radiology	Frequency 47537	Percentage 80.97 %

**AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Non Facility Direct Practice Expense (PE) Inputs**

CPT Long Descriptor:

76098	Radiological examination, surgical specimen
--------------	---

Global Period: XXX Meeting Date: April 2018

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

The American College of Radiology (ACR) convened a consensus panel to finalize the practice expense data for the surgical specimen x-ray code, CPT code 76908.

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code.** You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here:

The society included the existing PE inputs for code 76098 on the spreadsheet to serve as a reference.

3. Is this code(s) typically billed with an E/M service?
Is this code(s) typically billed with the E/M service in the nonfacility?
(Please see provided data in PE Subcommittee folder)

No, this code is not typically billed with an E/M service in the global or nonfacility.

4. What specialty is the dominant provider in the nonfacility?
What percent of the time does the dominant provider provide the service(s) in the nonfacility?
Is the dominant provider in the nonfacility different then for the global?
(Please see provided data in PE Subcommittee folder)

Diagnostic Radiology is the dominant provider for this procedure in the nonfacility at 78%.
Diagnostic Radiology is also the dominant provider for this procedure for the global.

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:

N/A

6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), you must provide compelling evidence. Please explain if the increase can be entirely accounted for because of an increase in physician time.

We are asking for additional pre-service time to schedule space and equipment in facility, complete pre-procedure phone calls, and confirm availability of prior images/studies. When 76098 was previously valued, the specimen radiograph was typically obtained after a stereotactic biopsy by the same technologist and radiologist that performed the biopsy. The post-biopsy specimen radiograph was bundled with the biopsy code (19081) in 2014. It is now typical for 76098 to be performed in patients undergoing lumpectomy, mastectomy, or surgical excision in the operating room. The technologist must

coordinate with the OR ahead of time to ensure that staff and the mammography unit will be available when the specimen is removed. The technologist must review prior imaging and patient history in order to know what the surgeon is looking for in the specimen (biopsy clip, localization wire, calcifications, etc.). The technologist receives a phone call from OR staff when the surgeon is ready for the specimen to be imaged. These services are not included in the existing PE for 76098.

Additionally, equipment costs have increased because this code is being updated with the modern PE inputs for Mammography equipment. It is typical for the specimen radiograph to be acquired on a diagnostic mammography unit in the office setting, so those inputs were included in this code (mirrored from the diagnostic mammography codes).

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here:

N/A

8. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time*:

Arrive in the OR, receive the specimen, and confirm with surgeon what he/she is looking for to ensure adequate tissue removal. Transport specimen to the mammography room. Position specimen on the mammography unit in appropriate orientation with laterality markers. Step behind shielding to control panel. Set appropriate exposure parameters. Take exposure. Review the image on the monitor, checking for adequate exposure, coverage, etc. and repeat if necessary.

9. If you have used a percentage of the physician intra-service work time other than 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

N/A

10. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities:

N/A

11. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at <http://www.bls.gov>.

N/A

12. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here:

N/A

13. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here:

14. List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here:

- **Technologist PACS Workstation Proxy (ED050)** –PACS formula; Equals total service period time

- **PACS Mammo Workstation (ED054)** – Equals physician work pre and intra time
- **Room, digital mammography (breakdown of items below)** – all use the highly technical formula
 - a. **Densitometer (EL020)**
 - b. **2D Selenia Dimensions Mammography System (EL021)**
 - c. **Mammo Accreditation Phantom (EL022)**
 - d. **Cenova 2D Tower System (EL023)**
 - e. **Image Checker CAD (9.4) License for One FFDM (EL024)**
 - f. **MRS V7 SQL Reporting System (EL025)**
 - g. **Worksheet Printing (EL026)**
 - h. **Site License (EL027)**

15. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here:

N/A

16. If there is any other item on your spreadsheet that needs further explanation please include here:

N/A

17. Please include an explanation of each line item:

AMA/Specialty Society RVS Update Committee Summary of Recommendations
CMS Request

October 2018

Remote Interrogation Device Evaluation(s) (PE Only)

The RUC reviewed the Cardiac Electrophysiology Device Monitoring Services in January 2017. The specialty society submitted practice expense inputs for CPT code 93299 and the PE Subcommittee and RUC accepted the society recommendations. CMS proposed to implement the RUC recommendation for 2018 in the July 2017 Proposed Rule. CMS received comments from the RUC and national specialty societies supporting the CMS proposal. Another commenter supported national pricing and noted the significant variation in contractor pricing and unfair variation in patient co-pays throughout the country. CMS received a comment from Medtronic that complained that implementation of resource-based relative values would lead to a significant reduction in payment in some geographic areas. The average allowed charge for CPT code 99299 was \$88 in 2017, while the resource-based practice expense would lead to a \$27 national payment rate. In the Final Rule, CMS chose to continue contractor pricing, noting the Medtronic rationale as the reason (resource based inputs lead to lower payment than contractor pricing). It is highly unusual for a code with significant volume (2017 = 468,596) to be contractor priced. AMA staff contacted CMS stating that if CMS believes that there are inaccuracies in the direct practice expense inputs submitted in February 2017, the RUC would be willing to re-examine this code in October 2018.

CMS initially proposed to accept the RUC's recommended practice expense inputs for CPT 93299, and to price the code nationally under the PFS. However, after receiving several comments expressing concern about the payment rate of approximately \$27 for this code. As stated in the Final Rule, the Agency was persuaded by these commenters that this payment rate might not sufficiently address the needs of local populations, supply costs, and practice patterns. At least one other commenter expressed support for national pricing of CPT code 93299, but urged additional research so that the code can be adequately valued. The practice expense inputs for CPT code 93299, as stated by the RUC, were based on a crosswalk from CPT 93296, but CMS questioned the appropriateness of this crosswalk, especially because 93299 is a service for up to 30 days and CPT code 93296 is for up to 90 days of remote monitoring.

The specialty societies requested and the RUC agreed to add family codes 93297 and 93298 to be reviewed for practice expense only. These codes are currently work only codes and 93299 is meant to serve as the catch-all for both types of 30-day remote monitoring services. The RUC is unclear why the code family was designed this way, it may have been a way to allow for the possibility that the technical work would be provided by vendors, but that is not how the service is being provided. In the decade since these codes were created, it has become clear that implantable cardiovascular monitor (ICM) and implantable loop recorder (ILR) services are very different services and the PE cannot be appropriately captured for both services in a single technical code. CPT code 93297 is related to the remote monitoring of physiological measures obtained from implantable pacemakers and defibrillators related to heart failure that come at an interval of every 30 days. CPT code 93298 refers to subcutaneous wireless remote monitors that provide data at more frequent interval, requiring more clinical staff work. The specialty society provided recommendations for direct PE inputs for both 93297 and 93298 that align with each of the services.

Compelling Evidence

PE inputs for 93297-93299 were last evaluated by the RUC in 2017 when work and PE for the large family of cardiac device monitoring services were all revalued. Updating the family of 21 codes with work, PE or both was a daunting task. At that time, the specialty societies identified code 93296 that also describes the technical component of remote monitoring services as a comparison code for PE and recommended it be used as a crosswalk. Stakeholder comments and CMS's decision to maintain contractor pricing for the service suggested that a value for 93299 based on 93296 was incorrect and based on incorrect assumptions. With the ability to focus on this single code rather than a large family, the specialty has been able to better quantify the clinical staff time necessary to perform the technical components of the services. The specialty explained and the PE Subcommittee agreed that compelling evidence had been met based on a flawed crosswalk and that additional data is available.

To better scrutinize the inputs that were a straight crosswalk when these codes were reviewed in January 2017 the specialty society engaged industry and obtained data from one manufacturer that sells the vast majority of ILR devices. It was important to engage industry for these services because there is no single product or electronic record that all practices use, however one consistent work item is that the technologists at each practice log onto the industry server to do their clinical work. Each night the device equipment in the office communicates wirelessly with the patient's device and the data gets uploaded to the industry server. The staff are notified if there is an abnormality and staff would log onto the server to check the abnormality. The data collected on the server includes the number of device-generated event notifications per month, the number of patient-generated manual event transmissions per month, and the amount of time a technologist is logged into the system and engaging with the monitoring reports. That data indicates that over the course of a month, a technologist interacts with patient monitoring reports 1.63 times a month to process device-generated notifications for 17 minutes, 1.74 times a month to process patient-generated notifications for 19 minutes, and once a month to generate a monthly report for 14 minutes. That is 50 minutes per month for alerts and report work. Additionally, the clinical staff engages with the patient throughout the month to perform education about the device and re-education protocols after the initial enrollment (11 minutes), troubleshoot non-connective monitoring hardware (4 minutes), and request manual transmission(s) to incorporate additional device data into reports (11 minutes). That is 26 minutes per month for patient interaction. The table below outlines this time:

Activity	93298/93299	93297
Automated alert transmissions	17	
Technician requested transmissions	11	
Patient-initiated transmissions	19	11
Monthly report	14	14
Education/re-education	11	11
Troubleshooting	4	4
Sum	76	40

While acknowledging that extant data is often used to determine practice expense, some PE Subcommittee members expressed concern about data obtained from industry sources. There is concern that the goal of industry to sell the product does not align with the interests of the RUC process. RUC members wanted assurance that when industry data is used it is the full data set and not a favorable subset. The specialty society assured the

Subcommittee and the RUC that the data obtained is unbiased and not used for sales purposes. The industry server collects data to assist in the monitoring process and is representative of many more patients in various regions of the country than an expert panel could be

The PE Subcommittee reviewed and approved the direct practice expense inputs as submitted by the specialty society without modification.

New Technology/New Services

CPT codes 93297-93299 will be placed on the New Technology/New Services list and be re-reviewed by the RUC in three years to ensure correct valuation and utilization assumptions.

Referral to CPT

The specialty society intends to submit a coding proposal to the CPT Editorial Panel to delete CPT code 93299, as it will no longer be necessary to have a separate code for practice expense once CPT codes 93297 and 93298 are allocated direct practice expense inputs in 2020. **The RUC recommends that CPT code 93299 be referred to CPT for deletion.**

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
93297 (f)	Interrogation device evaluation(s), (remote) up to 30 days; implantable cardiovascular monitor system, including analysis of 1 or more recorded physiologic cardiovascular data elements from all internal and external sensors, analysis, review(s) and report(s) by a physician or other qualified health care professional	XXX	0.52 (Reviewed for PE Only)
93298 (f)	Interrogation device evaluation(s), (remote) up to 30 days; implantable loop recorder system, including analysis of recorded heart rhythm data, analysis, review(s) and report(s) by a physician or other qualified health care professional	XXX	0.52 (Reviewed for PE Only)
93299	Interrogation device evaluation(s), (remote) up to 30 days; implantable cardiovascular physiologic monitor system or subcutaneous cardiac rhythm monitor system, remote data acquisition(s), receipt of transmissions and technician review, technical support and distribution of results	XXX	0.00 (PE Only)

Global Period: XXX Meeting Date: October 2018

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

The ACC and HRS utilized a consensus panel process to develop recommended inputs. As noted in the cover sheet for these codes, CMS opted to allow carrier pricing after hearing concerns from stakeholders that the RUC-recommended inputs would underpay in comparison. ACC and HRS are revisiting the inputs after the RAW executed a screen of carrier-priced codes with utilization over 10,000. To better scrutinize the inputs that were a straight crosswalk when these codes were reviewed in January 2017 as part of a large family, we engaged industry to see whether some information may be available the inform recommendations.

2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here:

93296 is the 90-day remote pacemaker and ICD device monitoring technical code that has similarities to this service.

3. Is this code(s) typically billed with an E/M service? no
Is this code(s) typically billed with the E/M service in the nonfacility? no
(Please see provided data in PE Subcommittee folder)
4. What specialty is the dominant provider in the nonfacility? cardiology, cardiac EP
What percent of the time does the dominant provider provide the service(s) in the nonfacility? 45%, 44%
Is the dominant provider in the nonfacility different then for the global? no
(Please see provided data in PE Subcommittee folder)
5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:
6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), you must provide compelling evidence. Please explain if the increase can be entirely accounted for because of an increase in physician time.

The PE for this code is currently contained in 93299 that was originally meant to be a catch-all for both types of 30-day remote monitoring services. In the following decade, it has become clear that ICM and ILR services are different and cannot be appropriately captured in a single technical code. We present recommendations for incorporating direct PE inputs to both 93297 and 93298 that align with each of those services. We have not been able to identify exactly why they were designed that way in 2007. It

could have been to allow for the possibility that the technical work would be provided by vendors, but that is not how the service is being provided. It would have also be somewhat in parallel with other remote monitoring/diagnostic services, such as Holter monitors, to compartmentalize these aspects. Regardless, we thought it made sense to create PE inputs for each code directly since 93299 is an awkward mix of technical work of two different services that both happen to have a 30-day interval.

Compelling Evidence

PE inputs for 93297-93299 were last evaluated by the RUC in 2016/2017 when work and PE for the large family of cardiac device monitoring services were all revalued. Updating that family of 21 codes with work, PE or both was a daunting task. As is still the case, 93299 was carrier priced at that time. Societies identified code 93296 that also describes the technical component of remote monitoring services as a comparison code and recommended it be used as a crosswalk. Stakeholder comments and CMS's decision to maintain carrier pricing for the service suggested that a value for 93299 based on 93296 was incorrect and based on incorrect assumptions. With the ability to focus on this single code rather than a large family, we have been able to better quantify the clinical staff time necessary to perform the technical components of 93299/93298/93297 and agree that the current valuation was based on a "flawed crosswalk" and "analysis of additional data."

93298

We were able to obtain data from one manufacturer that sells the vast majority of ILR devices on the number of device-generated event notifications per month, the number of patient-generated manual event transmissions per month, and the amount of time a technologist is logged into the system and engaging with the monitoring reports. That data indicates that over the course of a month, a technologist interacts with patient monitoring reports 1.63 times a month to process device-generated notifications for 17 minutes, 1.74 times a month to process patient-generated notifications for 19 minutes, and once a month to generate a monthly report for 14 minutes. That is 50 minutes per month for alerts and report work.

Additionally, the clinical staff engages with the patient throughout the month to perform education about the device and re-education protocols after the initial enrollment (11 minutes), troubleshoot non-connective monitoring hardware (4 minutes), and request manual transmission(s) to incorporate additional device data into reports (11 minutes). That is a separate and additional 26 minutes.

Activity	93298/93299	93297
Automated alert transmissions	17	
Technician requested transmissions	11	
Patient-initiated transmissions	19	11
Monthly report	14	14
Education/re-education	11	11
Troubleshooting	4	4
Sum	76	40

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here: n/a
8. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? (please use this time rather than 5 minutes in your reference code) 0

The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here: no vital signs are obtained

9. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time*:

The electrodiagnostic technologist educates the patient about the device and transmittal protocols, troubleshoots hardware/connectivity issues, receives and reviews remote transmissions, distributes results, and prepares a report.

10. If you have used a percentage of the physician intra-service work time other than 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived. n/a
11. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities: n/a
12. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at <http://www.bls.gov>. n/a
13. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here: n/a
14. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here: n/a
15. List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here:

EQ198: default formula

16. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here:
17. If there is any other item on your spreadsheet that needs further explanation please include here:
18. Please include an explanation of each line item:

Line 52, CA021: clinical staff assists the patient, processes remote transmissions, and creates reports as described in Question 6.

Line 102, SK057: paper is used to print reports to facilitate interpretation

Line 112, EQ198: a pacemaker follow-up system is used by the clinical staff

The PE for this code is currently contained in 93299 that was originally meant to be a catch-all for both types of 30-day remote monitoring services. In the following decade, it has become clear that ICM and ILR services are different and cannot be appropriately captured in a single technical code. We present recommendations for incorporating direct PE inputs to both 93297 and 93298 that align with each of

those services. We have not been able to identify exactly why they were designed that way in 2007. It could have been to allow for the possibility that the technical work would be provided by vendors, but that is not how the service is being provided. It would have also be somewhat in parallel with other remote monitoring/diagnostic services, such as Holter monitors, to compartmentalize these aspects. Regardless, we thought it made sense to create PE inputs for each code directly since 93299 is an awkward mix of technical work of two different services that both happen to have a 30-day interval.

Compelling Evidence

PE inputs for 93297-93299 were last evaluated by the RUC in 2016/2017 when work and PE for the large family of cardiac device monitoring services were all revalued. Updating that family of 21 codes with work, PE or both was a daunting task. As is still the case, 93299 was carrier priced at that time. Societies identified code 93296 that also describes the technical component of remote monitoring services as a comparison code and recommended it be used as a crosswalk. Stakeholder comments and CMS's decision to maintain carrier pricing for the service suggested that a value for 93299 based on 93296 was incorrect and based on incorrect assumptions. With the ability to focus on this single code rather than a large family, we have been able to better quantify the clinical staff time necessary to perform the technical components of 93299/93298/93297 and agree that the current valuation was based on a "flawed crosswalk" and "analysis of additional data."

93297

We were able to obtain data from one manufacturer quantifying ILR notifications, transmissions, and reports. Such information was not available for ICM. Should that change we will update these recommendations accordingly.

The expert panel considered that the data for ILR direct PE, being informed by data based on 18 months of monitoring services, to be accurate and in alignment with their clinical experience. Applying that clinical experience, the expert panel believes it would be appropriate to the ILR clinical staff and equipment time for ICM PE from the following components: 14 minutes for a monthly report, 11 minutes for a once a month average patient-generated notification (this is an expert panel recommendation), 4 minutes for troubleshooting non-connective monitoring hardware, and 11 minutes to perform education about the device and re-education protocols after initial enrollment for a sum of 40 minutes. This results in clinical staff time of about half what we recommend for ILRs.

Sum	76	40

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here: n/a
8. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? (please use this time rather than 5 minutes in your reference code) 0
The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here: Vitals are not obtained.

9. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time*:

The electrodiagnostic technologist educates the patient about the device and transmittal protocols, troubleshoots hardware/connectivity issues, receives and reviews remote transmissions, distributes results, and prepares a report.

10. If you have used a percentage of the physician intra-service work time other than 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived. n/a
11. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities: n/a
12. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at <http://www.bls.gov>. n/a
13. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here: n/a
14. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here: n/a
15. List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here:

EQ198: Default formula

16. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here: n/a
17. If there is any other item on your spreadsheet that needs further explanation please include here: n/a
18. Please include an explanation of each line item:

Line 52, CA021: clinical staff assists the patient, processes remote transmissions, and creates reports as described in Question 6.

Line 102, SK057: paper is used to print reports to facilitate interpretation

Line 112, EQ198: a pacemaker follow-up system is used by the clinical staff

CPT Code: 93298, 93297, 93299
Specialty Society: HRS, ACC

**AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Non Facility Direct Practice Expense (PE) Inputs**

CPT Long Descriptor: **93299** Interrogation device evaluation(s), (remote) up to 30 days; implantable cardiovascular physiologic monitor system or subcutaneous cardiac rhythm monitor system, remote data acquisition(s), receipt of transmissions and technician review, technical support and distribution of results

Global Period: XXX Meeting Date: October 2018

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

The ACC and HRS utilized a consensus panel process to develop recommended inputs. As noted in the cover sheet for these codes, CMS opted to allow carrier pricing after hearing concerns from stakeholders that the RUC-recommended inputs would underpay in comparison. ACC and HRS are revisiting the inputs after the RAW executed a screen of carrier-priced codes with utilization over 10,000. To better scrutinize the inputs that were a straight crosswalk when these codes were reviewed in January 2017 as part of a large family, we engaged industry to see whether some information may be available the inform recommendations.

2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here:

93296 is the 90-day remote pacemaker and ICD device monitoring technical code that has similarities to this service.

3. Is this code(s) typically billed with an E/M service? no
Is this code(s) typically billed with the E/M service in the nonfacility? no
(Please see provided data in PE Subcommittee folder)
4. What specialty is the dominant provider in the nonfacility? cardiology, cardiac EP
What percent of the time does the dominant provider provide the service(s) in the nonfacility? 44%, 39%
Is the dominant provider in the nonfacility different then for the global? no
(Please see provided data in PE Subcommittee folder)
5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:
6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), you must provide compelling evidence. Please explain if the increase can be entirely accounted for because of an increase in physician time. We have not been able to identify exactly why they were designed that way in 2007. It could have been to allow for the possibility that the technical work would be provided by vendors, but that is not how the service is being provided. It would have also be somewhat in parallel with other remote monitoring/diagnostic services, such as Holter monitors, to compartmentalize these aspects. Regardless, we thought it made sense to create PE inputs for each code directly since 93299 is an awkward mix of technical work of two different services that both happen to have a 30-day interval.

Compelling Evidence

PE inputs for 93297-93299 were last evaluated by the RUC in 2016/2017 when work and PE for the large family of cardiac device monitoring services were all revalued. Updating that family of 21 codes with work, PE or both was a daunting task. As is still the case, 93299 was carrier priced at that time. Societies identified code 93296 that also describes the technical component of remote monitoring services as a comparison code and recommended it be used as a crosswalk. Stakeholder comments and CMS's decision to maintain carrier pricing for the service suggested that a value for 93299 based on 93296 was incorrect and based on incorrect assumptions. With the ability to focus on this single code rather than a large family, we have been able to better quantify the clinical staff time necessary to perform the technical components of 93299/93298/93297 and agree that the current valuation was based on a "flawed crosswalk" and "analysis of additional data."

93299

93299 is a technical code meant to capture the PE for remote monitoring of implantable cardiac monitors (93297) and implantable loop recorders (93298). Both are 30-day codes. But in the decade since these codes were created we now see a bifurcation in the way each is used and the amount of PE each requires. We are presenting recommendations to create direct PE inputs for both 30-day remote interrogation codes. Unless/until a change is made to 93299 at CPT, since 93298 is the service typically and most commonly (54%) billed with 93299, we recommend the same inputs for 93298 be applied to 93299.

AMA/Specialty Society RVS Update Committee Summary of Recommendations
Surveyed by one Specialty and Now Performed by a Different Specialty

October 2018

Open Wound Debridement

In October 2017, the RUC identified CPT code 97598 as originally surveyed by one specialty (podiatry and physical therapy) but now performed by a different specialty (general surgery, family medicine, internal medicine). In January 2018, the RUC recommended to survey CPT code 97598 and added CPT code 97597 as a family code.

Compelling Evidence

The specialty societies presented compelling evidence based on a flawed survey methodology and a change in both the provider and typical patient population. The first point of compelling evidence was a flawed survey method. When CPT code 97597 was surveyed in 2010, it was an XXX code and the Reference Service List (RSL) included both XXX and ZZZ codes, including physical therapy modality services not requiring constant patient contact and E/M and other services not familiar to physical therapists. It was not until after the survey that the HCPAC recommended and the CMS agreed to assign this service a 000-day global period. It is possible that survey respondents were not clear about the components of work in a 000-day global procedure code, because the XXX survey template did not capture the preservice evaluation, positioning, and scrub/dress/wait times and only asked for total pre-service time. For these reasons, the RUC agreed that the survey method was flawed.

The second point of compelling evidence was based on different patient population and different providers. For CPT 2011, codes 11040 and 11041 were deleted, and the descriptors for codes 97597 and 97598 were revised to add "open wound" and delete "without anesthesia." Prior to these code deletions and revisions, CPT codes 97597 and 97598 were *wound cleansing* codes performed by physical therapists. But once the code descriptors changed, patients who would have previously been reported with *excisional debridement* codes now became part of the code 97597 and 97598 population. Hence, the dramatic increase in utilization in 2011 for codes 97597 and 97598 (ie, shift of work from 11040 and 11041). In addition, since the procedure is now for an *open wound*, the descriptor changes resulted in a dramatic decrease in physical therapist utilization (from 40% to 2%). Therefore, the specialties believe, and RUC agrees, there was a change in the typical patient for CPT codes 97597 and 97598 to include patients that previously would have undergone excisional debridement of partial and full thickness skin (ie., former CPT codes 11040 and 11041).

Finally, utilization estimates and work neutrality calculations were flawed, because the values developed for the revised CPT codes 97597 and 97598 in 2010 were based on the surveying specialty estimates of utilization for deleted CPT codes 11040 and 11041 that would be reported with revised codes 97597 and 97598. However, the surveying specialties and the HCPAC did not anticipate the dramatic shift in reporting for the

revised codes. Thus, the calculations that reduced the HCPAC-facilitated work RVUs were flawed, and these values were then further reduced by CMS. The RUC approved compelling evidence based on change in provider and patient population and flawed survey methodology.

97597 Debridement (eg, high pressure waterjet with/without suction, sharp selective debridement with scissors, scalpel and forceps), open wound, (eg, fibrin, devitalized epidermis and/or dermis, exudate, debris, biofilm), including topical application(s), wound assessment, use of a whirlpool, when performed and instruction(s) for ongoing care, per session, total wound(s) surface area; first 20 sq cm or less

The RUC reviewed the survey results from 139 family physicians, general surgeons, and podiatrists and determined that the survey 25th percentile work RVU of 0.88 appropriately accounts for the physician work involved to perform this service. The specialties selected pre-service time package 5, *Procedure with minimal anesthesia care*, which is consistent with the patient and procedure and was deemed to be typical. The RUC recommends the following physician time components: 9 minutes of pre-service time (7 minutes evaluation time, 1 minute positioning time, 1 minute scrub/dress/wait), 15 minutes of intra-service time, and 5 minutes of immediate post-service time. The RUC noted that the survey code is a 000-day global and not typically reported with an E/M on the same day.

To justify a work RVU of 0.88, the RUC compared the survey code to the following 000-day global codes: CPT code 11305 *Shaving of epidermal or dermal lesion, single lesion, scalp, neck, hands, feet, genitalia; lesion diameter 0.5 cm or less* (work RVU = 0.80 and 14 minutes intra-service time), CPT code 11301 *Shaving of epidermal or dermal lesion, single lesion, trunk, arms or legs; lesion diameter 0.6 to 1.0 cm* (work RVU = 0.90 and 15 minutes intra-service time), and CPT code 36470 *Injection of sclerosant; single incompetent vein (other than telangiectasia)* (work RVU = 0.75 and 15 minutes intra-service time). The RUC also noted that the IWPUR for the survey code (0.039) is similar to other debridement codes (eg, 11000, 11042). The RUC concluded that CPT code 97597 should be valued at the 25th percentile work RVU as supported by the survey, similar 000-day global codes, and similar debridement codes. **The RUC recommends a work RVU of 0.88 for CPT code 97597.**

97598 Debridement (eg, high pressure waterjet with/without suction, sharp selective debridement with scissors, scalpel and forceps), open wound, (eg, fibrin, devitalized epidermis and/or dermis, exudate, debris, biofilm), including topical application(s), wound assessment, use of a whirlpool, when performed and instruction(s) for ongoing care, per session, total wound(s) surface area; each additional 20 sq cm, or part thereof (List separately in addition to code for primary procedure)

The RUC reviewed the survey results from 58 family physicians and general surgeons and determined that the survey 25th percentile work RVU of 0.50 accurately reflects the physician work necessary for this service. CPT code 97598 is an add-on code used for patients requiring debridement of more than 20 sq cm; typically involving multiple wounds. The RUC recommends 20 minutes of intra-service time. This additional time represents the additional documentation, repositioning, re-draping, and anesthetic with larger and multiple wounds. The RUC agreed that, the total time for the additional 20 sq cm (20 minutes) will be greater than the intra-time for the typical patient with a single, initial 20 sq cm or less wound (15 minutes) that is reported with code 97597.

The RUC compared CPT code 97598 to the top key reference service CPT code 11045 *Debridement, subcutaneous tissue (includes epidermis and dermis, if performed); each additional 20 sq cm, or part thereof (List separately in addition to code for primary procedure)* (work RVU = 0.50 and 15 minutes intra-service time) and noted the survey code has an identical value but an additional 5 minutes of intra-service time than the reference code. Conversely, the RUC compared CPT code 97598 to the second highest key reference service CPT code 11046 *Debridement, muscle and/or fascia (includes epidermis, dermis, and subcutaneous tissue, if performed); each additional 20 sq cm, or part thereof (List separately in addition to code for primary procedure)* (work RVU = 1.03 and 20 minutes intra-service time) and noted the survey code has identical intra-service time but a lower work value than the reference code. Most survey respondents found the intensity/complexity to be identical if not more complex than the top key reference service. Overall, the RUC determined that the recommendation of the survey 25th percentile was well supported by the key reference services.

The RUC also reviewed MPC code 15003 *Surgical preparation or creation of recipient site by excision of open wounds, burn eschar, or scar (including subcutaneous tissues), or incisional release of scar contracture, trunk, arms, legs; each additional 100 sq cm, or part thereof, or each additional 1% of body area of infants and children (List separately in addition to code for primary procedure)* (work RVU= 0.80 and 15 minutes intra-service time) and noted that the survey code was less intense and complex and therefore should be valued less. As further support, the RUC reviewed data for all ZZZ-day global codes with 15-20 minutes of intra-time that were recently reviewed by the RUC and finalized by CMS and noted these codes further supported the work RVU of 0.50 for 97598. The RUC concluded that CPT code 97598 should be valued at the 25th percentile work RVU as supported by the survey and other recently reviewed add-on codes. **The RUC recommends a work RVU of 0.50 for CPT code 97598.**

Practice Expense

The RUC recommends the direct practice expense inputs as submitted by the specialty society and approved by the Practice Expense Subcommittee.

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
(f) 97597	Debridement (eg, high pressure waterjet with/without suction, sharp selective debridement with scissors, scalpel and forceps), open wound, (eg, fibrin, devitalized epidermis and/or dermis, exudate, debris, biofilm), including topical application(s), wound assessment, use of a whirlpool, when performed and instruction(s) for ongoing care, per session, total wound(s) surface area; first 20 sq cm or less	000	0.88

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION**

CPT Code: 97597	Tracking Number	Original Specialty Recommended RVU: 1.00
		Presented Recommended RVU: 1.00
Global Period: 000	Current Work RVU: 0.51	RUC Recommended RVU: 0.88

CPT Descriptor: Debridement (eg, high pressure waterjet with/without suction, sharp selective debridement with scissors, scalpel and forceps), open wound, (eg, fibrin, devitalized epidermis and/or dermis, exudate, debris, biofilm), including topical application(s), wound assessment, use of a whirlpool, when performed and instruction(s) for ongoing care, per session, total wound(s) surface area; first 20 sq cm or less

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 60-year-old male presents with a neuropathic diabetic ulcer on the left plantar forefoot. The wound edges and the wound bed are viable with granulations, but covered with an adherent proteinaceous slough, fibrin, and debris. He undergoes debridement to the depth of dermis.

Percentage of Survey Respondents who found Vignette to be Typical: 94%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is;
Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review patient chart and referral from physician. Perform an updated history of medications with special attention to current blood thinners. Review pertinent past medical problems and any new problems that may have arisen since the previous visit. Position patient and remove existing dressings. Document wound status, classification, location, drainage, color, texture, temperature, vascularity, and size and depth of the area to be targeted for debridement. Inspect for and document sinus tracts, undermining, odor, and quality of the wound bed tissue. Inspect and palpate surrounding skin, wound edge, and exposed soft tissue. Administer topical or local anesthesia as needed.

Description of Intra-Service Work: Cleanse the wound thoroughly with copious irrigation. Remove proteinaceous slough, fibrin, and debris covering wound bed with curette, scalpel, and forceps or scissors until healthy tissue is visualized. Ensure hemostasis.

Description of Post-Service Work: Apply an appropriate surgical dressing. Provide for a moist healing environment to help assist with subsequent wound healing and granulation tissue formation. Determine type of padding and specific material needed to offload the ulcer area; cut pad to properly remove pressure; and apply padding. Instruct patient and/or caregiver on appropriate home care, including dressing changes, as necessary. Instruct on importance of controlling concomitant medical conditions. Enter patient progress notes in medical chart. Answer patient and/or family questions. Discuss (oral and written) patient progress with PCP/referring physician.

<u>Key CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
99213	XXX	0.97	RUC Time

CPT Descriptor Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: An expanded problem focused history; An expanded problem focused examination; Medical decision making of low complexity. Counseling and coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of low to moderate severity. Typically, 15 minutes are spent face-to-face with the patient and/or family.

KEY MPC COMPARISON CODES:

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

For CPT 2001, code 97601 was created to report "Removal of devitalized tissue from wound; selective debridement, without anesthesia." This was meant to replace G0169 that CMS created as a therapy service for purposes of the outpatient rehabilitation payment system for use by physical and occupational therapists. Physical therapists became the

dominant provider of 97601, while surgeons, podiatry and family medicine were the dominant providers of 11040 and 11041.

For CPT 2005, code 97601 (any size) was deleted and codes 97597 (< 20 sq cm) and 97598 (> 20 sq cm) were created to bundle the work described by 97601 plus code 97022 (whirlpool) which was typically reported with 97601. Physical therapists, the dominant provider of 97601 surveyed the two new XXX-global codes and the HCPAC recommended wRVUs were based on work neutrality:

Total wRVUs with CMS Values for Existing Code:

97597: 82,119 x **0.50** = 41,059

97022: 82,119 x 0.75 x **0.17** = 10,470 (75% of 97597 is billed with 97022 - originally billed separately)

Total wRVUs = **51,529**

Total wRVUs with HCPAC Recommended Values for New Codes:

97597: 61,589 x **0.58** = 35,721

97598: 20,530 x **0.80** = 16,424

Total wRVUs for new codes = **52,145**

For CPT 2011, codes 11040 and 11041 were deleted and codes 97597 and 97598 were revised.

From: "*Removal of devitalized tissues from wound(s), selective debridement, without anesthesia*" (global change from XXX to 000)

To: "*Debridement, open wound, first 20 sq cm or less*" and "*Debridement, open wound, each additional 20 sq cm*" (global change from XXX to ZZZ)

Because codes 97597 and 97598 were typically reported by physical therapy, podiatry, and family medicine, the surgical specialties did not participate in the survey of the revised codes.

Despite comparisons to reference codes that showed code 97597 was undervalued, the physical therapists and podiatry could offer no compelling evidence to support an increase in the wRVU. Therefore, the specialty societies and the HCPAC developed wRVUs for the revised codes that would ensure work neutrality, in conjunction with deleted codes 10040 and 10041. The HCPAC recommended 0.54 wRVU for 97597 and 0.40 wRVU for 97598. CMS disagreed and finalized 0.51 wRVU for 97597 and 0.24 wRVU for 97598.

In October 2017, the RUC identified 97598 as originally surveyed by one specialty (podiatry and physical therapy), but now typically performed by a different specialty (general surgery, family practice, internal medicine). In January 2018, the RUC recommended survey of 97598 and added 97597 as a family code.

Compelling Evidence

Flawed methodology – survey process

Code 97597 was surveyed in 2010 as an XXX code using an RSL that included both XXX and ZZZ codes, but no 000 global codes. In addition, physical therapy modality services not requiring constant patient contact and E/M and other services not familiar to physical therapists were included in the RSL. It was not until after the survey that the specialties and the HCPAC requested a change to a 000 global and CMS agreed. Because an XXX survey does not describe and differentiate pre, intra, and post-surgical work (eg, pre-service evaluation, positioning, and scrub/dress/wait or skin-to-skin work), it is possible that survey respondents were not clear about the components of work of a global procedure code. In fact, code 15003 *Surgical preparation of an open wound, add'l 100 sq cm* (global period ZZZ) was chosen as the key reference service by almost half of the 30 respondents, even though physical therapists and podiatrists never or very rarely report this service. **Therefore, we believe the survey methodology for 97597 was flawed.**

Different patient population

The RUC surgical specialties that chose not to survey the revised codes and the HCPAC members reviewing the revised codes did not appreciate the change in the code descriptors for 97597 and 97598 when 11040 and 11041 were deleted; especially, the revision to add "open wound" and delete "without anesthesia." These changes resulted in a dramatic change in physical therapist utilization (a decrease from 40% to 2%) and a dramatic decrease in total utilization (1.75 million claims for 11040, 11041, 97597, and 97598 to 1.17 million claims for 97597 and 97598). **Therefore, we**

believe there was a change in the typical patient for 97597 and 97598 to include patients that previously would have undergone excisional debridement of partial and full thickness skin requiring a local or topical anesthetic.

Flawed methodology – utilization and work neutrality calculations

Because the surveying specialties and the HCPAC could not anticipate the dramatic change in reporting for the revised codes, the calculations that further reduced the HCPAC facilitated wRVUs were flawed. The HCPAC values were then further reduced by CMS.

Recommendation – 97597

We recommend the survey median work RVU of 1.00 for code 97597.

Pre-Time: Package 5 - Procedure with minimal anesthesia care

Evaluation: The package time is recommended to review the patient chart; update history of medications with special attention to current blood thinners; remove existing dressings; document wound status, classification, location, drainage, color, texture, temperature, vascularity, and size and depth of the area to be targeted for debridement; inspect for and document sinus tracts, undermining, odor, and quality of the wound bed tissue; and inspect and palpate surrounding skin, wound edge, and exposed soft tissue.

Positioning: One minute is recommended to position and drape the patient.

Scrub/dress/wait: The package time of one minute is recommended for gowning, gloving, and applying topical or local anesthetic as needed.

Postservice time:

Post-time packages do not apply to office-based procedures. Five minutes is recommended for post-procedure work on the day of the procedure to apply an appropriate surgical dressing including padding and specific material needed to offload the ulcer area; instruct the patient and/or caregiver on appropriate home care, including dressing changes, as necessary; instruct on importance of controlling concomitant medical conditions; enter patient progress notes in medical chart; and answer patient and/or family questions.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 97597

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty podiatry How often? Commonly

Specialty general surgery How often? Commonly

Specialty family medicine How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. national utilization not available

SUMMARY OF RECOMMENDATION**

CPT Code: 97598	Tracking Number	Original Specialty Recommended RVU: 0.50
		Presented Recommended RVU: 0.50
Global Period: ZZZ	Current Work RVU: 0.24	RUC Recommended RVU: 0.50

CPT Descriptor: Debridement (eg, high pressure waterjet with/without suction, sharp selective debridement with scissors, scalpel and forceps), open wound, (eg, fibrin, devitalized epidermis and/or dermis, exudate, debris, biofilm), including topical application(s), wound assessment, use of a whirlpool, when performed and instruction(s) for ongoing care, per session, total wound(s) surface area; each additional 20 sq cm, or part thereof (List separately in addition to code for primary procedure)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 60-year-old female presents with chronic open wounds. She has just undergone debridement of the first 20 sq cm to the depth of dermis (reported separately with code 97597). She now undergoes debridement of an additional 20 sq cm of tissue to the depth of dermis from wounds that are granulating but covered with adherent, yellow proteinaceous slough and fibrous tissue. Note: This is an add-on service. Only consider the additional work related to debridement of an additional 20 sq cm of tissue.

Percentage of Survey Respondents who found Vignette to be Typical: 93%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is;
Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: N/A

Description of Intra-Service Work: [Note: When debridement greater than 20 sq cm is performed, more than one wound is typically involved.] Following debridement of the first 20 sq cm (reported separately with code 97597), addition debridement is performed, including: repositioning the patient as needed, administration of additional topical or local anesthesia as needed and additional wound cleansing, including removal of proteinaceous slough, fibrin, and debris covering the wound bed with curette, scalpel, and forceps or scissors until healthy tissue is visualized. Hemostasis is obtained and appropriate surgical dressings and padding as needed are applied.

Description of Post-Service Work: N/A

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

For CPT 2001, code 97601 was created to report "Removal of devitalized tissue from wound; selective debridement, without anesthesia." This was meant to replace G0169 that CMS created as a therapy service for purposes of the outpatient rehabilitation payment system for use by physical and occupational therapists. Physical therapists became the

dominant provider of 97601, while surgeons, podiatry and family medicine were the dominant providers of 11040 and 11041.

For CPT 2005, code 97601 (any size) was deleted and codes 97597 (< 20 sq cm) and 97598 (> 20 sq cm) were created to bundle the work described by 97601 plus code 97022 (whirlpool) which was typically reported with 97601. Physical therapists, the dominant provider of 97601 surveyed the two new XXX-global codes and the HCPAC recommended wRVUs were based on work neutrality:

Total wRVUs with CMS Values for Existing Code:

97597: $82,119 \times 0.50 = 41,059$

97022: $82,119 \times 0.75 \times 0.17 = 10,470$ (75% of 97597 is billed with 97022 - originally billed separately)

Total wRVUs = **51,529**

Total wRVUs with HCPAC Recommended Values for New Codes:

97597: $61,589 \times 0.58 = 35,721$

97598: $20,530 \times 0.80 = 16,424$

Total wRVUs for new codes = **52,145**

For CPT 2011, codes 11040 and 11041 were deleted and codes 97597 and 97598 were revised.

From: "*Removal of devitalized tissues from wound(s), selective debridement, without anesthesia*" (global change from XXX to 000)

To: "*Debridement, open wound, first 20 sq cm or less*" and "*Debridement, open wound, each additional 20 sq cm*" (global change from XXX to ZZZ)

Because codes 97597 and 97598 were typically reported by physical therapy, podiatry, and family medicine, the surgical specialties did not participate in the survey of the revised codes.

Despite comparisons to reference codes that showed code 97597 was undervalued, the physical therapists and podiatry could offer no compelling evidence to support an increase in the wRVU. Therefore, the specialty societies and the HCPAC developed wRVUs for the revised codes that would ensure work neutrality, in conjunction with deleted codes 10040 and 10041. The HCPAC recommended 0.54 wRVU for 97597 and 0.40 wRVU for 97598. CMS disagreed and finalized 0.51 wRVU for 97597 and 0.24 wRVU for 97598.

In October 2017, the RUC identified 97598 as originally surveyed by one specialty (podiatry and physical therapy), but now typically performed by a different specialty (general surgery, family practice, internal medicine). In January 2018, the RUC recommended survey of 97598 and added 97597 as a family code.

Compelling Evidence

Different patient population

The RUC surgical specialties that chose not to survey the revised codes and the HCPAC members reviewing the revised codes did not appreciate the change in the code descriptors for 97597 and 97598 when 11040 and 11041 were deleted; especially, the revision to add "open wound" and delete "without anesthesia." In fact, the RUC rationale states: "The HCPAC understands that this add-on code will seldom be reported as the total wound size for a majority of patients will be 20 square centimeters or less." However, these changes resulted in a dramatic change in physical therapist utilization (a decrease from 40% to 2%) and a dramatic decrease in total utilization (1.75 million claims for 11040, 11041, 97597, and 97598 to 1.17 million claims for 97597 and 97598). **Therefore, we believe there was a change in the typical patient for 97597 and 97598 to include patients that previously would have undergone excisional debridement of partial and full thickness skin (ie, 11040 and 11041).**

Flawed methodology – utilization and work neutrality calculations

Because the surveying specialties and the HCPAC could not anticipate the dramatic change in reporting for the revised codes, the calculations that further reduced the HCPAC facilitated wRVUs were flawed. The HCPAC values were then further reduced by CMS.

Recommendation – 97598

We recommend the survey 25th percentile work RVU of 0.50 and intra-service time of 20 minutes for code 97598.

Intra-service time: The typical patient undergoing debridement to the depth of dermis and a total surface area that is greater than 20 sq cm will typically have more than one open wound and require additional documentation, repositioning, re-draping, and anesthetic. Therefore, the total time for the additional 20 sq cm (20 minutes) will be greater than the intra-time for the initial 20 sq cm or less (15 minutes).

Key Reference Comparison

CPT	DESCRIPTION	RVW	IWPUT	TOT MIN	PRE	INTRA	POST

SERVICES REPORTED WITH MULTIPLE CPT CODES

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

- Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. Code 97598 is an add-on code and will always be reported with code 97597.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 97598

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty family medicine How often? Commonly

Specialty generally surgery How often? Commonly

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. national utilization not available

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Non Facility Direct Practice Expense (PE) Inputs

CPT	DESCRIPTOR	GLOBAL
97597	Debridement (eg, high pressure waterjet with/without suction, sharp selective debridement with scissors, scalpel and forceps), open wound, (eg, fibrin, devitalized epidermis and/or dermis, exudate, debris, biofilm), including topical application(s), wound assessment, use of a whirlpool, when performed and instruction(s) for ongoing care, per session, total wound(s) surface area; first 20 sq cm or less	000
97598	each additional 20 sq cm, or part thereof (List separately in addition to code for primary procedure)	ZZZ

Meeting Date: October, 2018

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel: [The APMA, ACS, and AAFP Advisors reviewed and updated the current PE inputs.](#)
2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here: [The current codes are used as references.](#)
3. Is this code(s) typically billed with an E/M service? [No](#)
Is this code(s) typically billed with the E/M service in the nonfacility? [No](#)
(Please see provided data in PE Subcommittee folder)
4. What specialty is the dominant provider in the nonfacility? [Podiatry](#)
What percent of the time does the dominant provider provide the service(s) in the nonfacility? [83% for code 97597 and 27% for code 97598](#)
Is the dominant provider in the nonfacility different then for the global? [Yes](#)
(Please see provided data in PE Subcommittee folder)
5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time: [N/A](#)
6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), you must provide compelling evidence. Please explain if the increase can be entirely accounted for because of an increase in physician time. [The total aggregate cost for 97597 is less than current cost. For code 97598, the total aggregate cost is greater, mostly due to an increase in time. However, two additional supply items have been added \(SB011 and SB024\) to account for the fact that when 97598 is reported, there will typically be more than one wound.](#)
7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here: [N/A](#)
8. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? (please use this time rather than 5 minutes in your reference code) [3 minutes](#)

The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here: **Three minutes for blood pressure, pulse, and weight.**

9. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time*: **For both codes, the clinical staff will circulate and provide clean supplies and instruments and retrieve used/contaminated supplies and instruments as needed.**
10. If you have used a percentage of the physician intra-service work time other than 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived. **N/A**
11. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities: **N/A**
12. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at <http://www.bls.gov>. **N/A**
13. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here: **N/A**
14. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here: **N/A**
15. List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here:

AMA/Specialty Society RVS Update Committee Summary of Recommendations
New Technology/New Services

October 2018

Transitional Care Management Services

In October 2017, the RUC reviewed codes that were flagged as new technology or services at the October 2012-April 2013 meetings, with three years of available Medicare claims data (2014, 2015 and preliminary 2016 data). The specialty societies requested and the RUC agreed that CPT codes 99495 and 99496 be resurveyed for physician work and practice expense.

Compelling Evidence

The specialty societies indicated there has been a change in physician work required to perform these services due to a diffusion of technology in which physicians now have the infrastructure and work flow established to provide these services. When the codes were initially surveyed, there was no standard infrastructure and work flow associated with transitional care management. There also has been a change in the patient population as this transitional care management intervention now starts within two days of the patients' hospital discharge and the time required to perform these services has increased. Accordingly, the number of days in which the service is provided is between 28 and 30, as opposed to before the codes when initial contact typically did not take place until 5-7 days after discharge, therefore the service was provided over 23-25 days. The time required to perform these services has increased because the patients' clinical conditions are more serious at two days after discharge (e.g., the likelihood of readmission is greatest in the first few days after discharge). The RUC accepted the compelling evidence that these services include new technology, a change in patient population and a change in physician time.

99495 Transitional Care Management Services with the following required elements: Communication (direct contact, telephone, electronic) with the patient and/or caregiver within 2 business days of discharge Medical decision making of at least moderate complexity during the service period Face-to-face visit, within 14 calendar days of discharge

The RUC reviewed the survey results from 206 physicians and determined that the survey median of 2.36 work RVU accurately accounts for the work required to perform this service. The RUC recommends 47 minutes of physician time. The RUC noted that the physician time has increased 7 minutes, which is reflected by the increase in physician work required. This service starts when the patient is discharged. The physician reporting this service does not typically report the hospital discharge day management service. The qualified health care provider or clinical staff contacts the patient two days from discharge, meets with the patient face-to-face within fourteen days of discharge and the duration of this service is for 30 days.

The RUC compared the surveyed code to the top key reference service chosen by the survey respondents, code 99214 *Office or other outpatient visit for the evaluation and management of an established patient*, (work RVU = 1.50, 25 minutes intra-service time, and 40 minutes total time) and agreed that the physician work, time and all intensity and complexity measures are higher for code 99495 than code 99214. The RUC compared code 99495 to second key reference service 99215 *Office or other outpatient visit for the evaluation and management of an established patient* (work RVU = 2.11 and 35 minutes intra-service time) and noted that the survey respondents indicated that CPT code 99495 is overall somewhat more intense than code 99215. For additional support the RUC referenced MPC codes 99310 *Subsequent nursing facility care, per day, for the evaluation and management of a patient* (work RVU = 2.35 and 35 minutes intra-service time, 70 minutes total time) and 99204 *Office or other outpatient visit for the evaluation and management of a new patient* (work RVU = 2.43 and 30 minutes intra-service, 45 minutes total time). Because hospitalized patients typically have new problems and medications upon discharge, they are more like new patients than established patients. This is reflected by the need to review the lengthy discharge summary with multiple new conditions and data, making the work more comparable to the work entailed with seeing a new patient (code 99204), rather than an established patient (code 99214). **The RUC recommends a work RVU of 2.36 for CPT code 99495.**

99496 Transitional Care Management Services with the following required elements: Communication (direct contact, telephone, electronic) with the patient and/or caregiver within 2 business days of discharge Medical decision making of high complexity during the service period Face-to-face visit, within 7 calendar days of discharge

The RUC reviewed the survey results from 201 physicians and determined that the survey median of 3.10 work RVU accurately accounts for the work required to perform this service. The RUC recommends 60 minutes of physician time. The RUC noted that the physician time has increased 10 minutes, which is reflected by the slight increase in physician work required. This service starts when the patient is discharged; the physician reporting this service does not typically report the hospital discharge day management service. The qualified health care provider or clinical staff contacts the patient within two days of discharge, sees the patient face-to-face within seven days of discharge and the duration of this service is for 30 days.

The RUC compared the surveyed code to the top key reference service chosen by the survey respondents, 99215 *Office or other outpatient visit for the evaluation and management of an established patient*, (work RVU = 2.11 and 35 minutes intra-service time, 55 minutes total time) and agreed that the physician work, time and all intensity and complexity measures are higher for code 99496 than code 99215, justifying a higher valuation for the survey code. The RUC also compared the surveyed code to the second key reference service 99205 *Office or other outpatient visit for the evaluation and management of a new patient* (work RVU = 3.17 and 45 minutes intra-service time, 67 minutes total time) and noted that the survey respondents indicated that CPT code 99496 is overall the same or somewhat more intense than code 99205, thus should be valued similarly. Reviewing the lengthy discharge summary, with multiple unexpected conditions and new data, is more comparable to the work entailed with seeing a new patient (CPT code 99205), rather than an established patient (CPT code 99215). For additional support the RUC referenced MPC code 99306 *Initial nursing facility care, per day, for the evaluation and management of a patient* (work RVU = 3.06 and 45 minutes intra-service time, 80 minutes total time) and code 90962 *End-stage renal disease (ESRD) related services monthly, for patients 20 years of age and*

older; with 1 face-to-face visit by a physician or other qualified health care professional per month (work RVU = 3.15 and 63 minutes intra/total time), which maintains the appropriate relativity among similar services. **The RUC recommends a work RVU of 3.10 for CPT code 99496.**

Practice Expense

The Practice Expense Subcommittee reviewed the direct practice expense inputs, accepted compelling evidence and modified a clinical staff activity to a more appropriate line. The PE Subcommittee removed 15 minutes of clinical staff time from the equipment time because the time for staff to perform clinical activity, CA035 *Review home care instructions, coordinate visits/prescriptions* was inappropriately included in the equipment time formula. The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
99495	Transitional Care Management Services with the following required elements: Communication (direct contact, telephone, electronic) with the patient and/or caregiver within 2 business days of discharge Medical decision making of at least moderate complexity during the service period Face-to-face visit, within 14 calendar days of discharge	XXX	2.36
99496	Transitional Care Management Services with the following required elements: Communication (direct contact, telephone, electronic) with the patient and/or caregiver within 2 business days of discharge Medical decision making of high complexity during the service period Face-to-face visit, within 7 calendar days of discharge	XXX	3.10

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS SUMMARY OF RECOMMENDATION

CPT Code: 99495	Tracking Number	Original Specialty Recommended RVU: 2.36
		Presented Recommended RVU: 2.36
Global Period: XXX	Current Work RVU: 2.11	RUC Recommended RVU: 2.36

CPT Descriptor: Transitional Care Management Services with the following required elements: Communication (direct contact, telephone, electronic) with the patient and/or caregiver within 2 business days of discharge; Medical decision making of at least moderate complexity during the service period; Face-to-face visit, within 14 calendar days of discharge

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: (Adult) An 84-year-old woman with hypertension and osteoarthritis is discharged from the hospital after a 1-week stay for congestive heart failure.

(Child) A 6 year old who is neurologically impaired and developmentally delayed and has a chronic seizure disorder is discharged from the hospital after an admission for breakthrough seizures.

Percentage of Survey Respondents who found Vignette to be Typical: 90%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital _____, In the ASC _____, In the office _____

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day _____, Overnight stay-less than 24 hours _____, Overnight stay-more than 24 hours _____

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day _____

Description of Pre-Service Work: (none)

Description of Intra-Service Work: These services are for an established patient whose medical and/or psychosocial problems require moderate or high complexity medical decision making during transitions in care from an inpatient hospital setting (including acute hospital, rehabilitation hospital, long-term acute care hospital), partial hospital, observation status in a hospital, or skilled nursing facility/nursing facility, to the patient's community setting (home, domiciliary, rest home, or assisted living). TCM commences upon the date of discharge and continues for the next 29 days.

TCM is comprised of one face-to-face visit within the specified timeframes, in combination with non- face-to-face services that may be performed by the physician or other qualified health care professional and/or licensed clinical staff under his/her direction.

Non-face-to-face services provided by clinical staff, under the direction of the physician or other qualified health care professional, may include:

- o communication (with patient, family members, guardian or caretaker, surrogate decision makers, and/or other professionals) regarding aspects of care;
- o communication with home health agencies and other community services utilized by the patient;
- o patient and/or family/caretaker education to support self-management, independent living, and activities of daily living;
- o assessment and support for treatment regimen adherence and medication management;
- o identification of available community and health resources;
- o facilitating access to care and services needed by the patient and/or family.

Non-face-to-face services provided by the physician or other qualified health care provider may include:

- o obtaining and reviewing the discharge information (eg, discharge summary, as available, or continuity of care documents);
- o reviewing need for or follow-up on pending diagnostic tests and treatments;
- o interaction with other qualified health care professionals who will assume or reassume care of the patient's system specific problems;
- o education of patient, family, guardian, and/or caregiver;
- o establishment or reestablishment of referrals and arranging for needed community resources;
- o assistance in scheduling any required follow-up with community providers and services.

Description of Post-Service Work: (none)

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:

Is this new/revised procedure considered to be a new technology or service? No

TOP KEY REFERENCE SERVICE:

<u>Key CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
99214	XXX	1.50	RUC Time

CPT Descriptor Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A detailed history; A detailed examination; Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 25 minutes are spent face-to-face with the patient and/or family.

SECOND HIGHEST KEY REFERENCE SERVICE:

<u>Key CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
99215	XXX	2.11	RUC Time

CPT Descriptor Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 40 minutes are spent face-to-face with the patient and/or family.

KEY MPC COMPARISON CODES:

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

<u>MPC CPT Code 1</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>	<u>Most Recent Medicare Utilization</u>
99310	XXX	2.35	RUC Time	1,385,036

CPT Descriptor 1 Subsequent nursing facility care, per day, for the evaluation and management of a patient, which requires at least 2 of these 3 key components: A comprehensive interval history; A comprehensive examination; Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. The patient may be unstable or may have developed a significant new problem requiring immediate physician attention. Typically, 35 minutes are spent at the bedside and on the patient's facility floor or unit.

<u>MPC CPT Code 2</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>	<u>Most Recent Medicare Utilization</u>
99204	XXX	2.43	RUC Time	10,292,014

CPT Descriptor 2 Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 45 minutes are spent face-to-face with the patient and/or family.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPOT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

NOTE: Whenever the term physician is used it encompasses physician and other qualified health professionals (QHPs).

The RUC placed codes 99495 and 99496 on the new technology/new services list when it first reviewed these codes in October 2012. These codes have also been identified on the high growth utilization screen. The surveying societies, the American College of Physicians (ACP), the American Academy of Family Physicians (AAFP), the American Geriatrics Societies (AGS), the American Academy of Neurology (AAN), and the American Osteopathic Association (AAO) met with the Research Subcommittee and obtained approval of a research tool that included surveys of physician work and clinical staff time. This approach was used because these codes describe team-based care and include face-to-face (FTF) and non-face-to-face (NFTF) services furnished by physicians and by clinical staff under physician supervision. These services are performed episodically during the service period, and the clinical staff services are typically furnished on dates and times other than the physician services.

Background

The survey was randomly distributed to members of the AGS, AAFP, AAN, ACP, and AOA. There were 206 respondents (close to double the 2012 survey respondents 110) for 99495, 90% of whom found the vignette to be typical, and who performed a median of 10 services in the last year.

The summary table includes the results from all respondents as well the specialty specific results. The surveying societies are recommending the median survey work value of 2.36.

Compelling Evidence

As noted, the TCM codes are being surveyed because they were placed on the new technology/new services list. At the time these codes were created, physicians had no experience with the codes even though they may have had experience with the service. In addition, the creation of these codes led physicians to develop the infrastructure and work flows to implement the codes as described. The expert panel believes this change fits into the following criterion for demonstrating compelling evidence:

Evidence that technology has changed physician work (ie, diffusion of technology)

In other words, there was great variability in how physicians were performing transition of care management and the creation of the TCM codes standardized that management and required change in office and physician workflow. The expert panel believes that the original survey results reflected the service as performed before the existence of the codes.

There is now experience with the physician work required to perform the service as described by the TCM codes, and the surveying specialties believe respondents were experienced in the service as described by the codes as opposed to how it was performed previously and that the median work RVUs and times reflect this experience. Specifically, unlike the previous survey, the respondents now have experience with not only the physician work associated with direct patient contact (both FTF and NFTF) but also with the physician work of care coordination and oversight of clinical staff services that are essential components to the service described by the codes.

Furthermore, the societies believe that an inherent presumption to placing codes on the new technology list is that the initial estimation of physician work may need to be revised – up or down - after there is more experience with performing the service.

In further support our compelling evidence arguments; in a recent article July 2018 published in JAMA and referenced below, they state, "Transitional care management services were associated with reduction in mortality and total Medicare costs in the month after they were furnished." This review was conducted during January 1, 2013 and December 31, 2015, the early years of TCM. As the benefits become apparent, the utilization has increased, as the Medicare data has shown. With the increased volume and published benefits more, people have implemented the TCM services and we believe created the infrastructure to perform TCM. This also leads us to the conclusion that another compelling evidence criterion was met as shown by physician work "technique" changes and in physician time as reflected with our survey data. Therefore, we do believe that we have met the compelling evidence criteria.

The JAMA article and study can be found here:

<https://jamanetwork.com/journals/jamainternalmedicine/fullarticle/2687989>

The accompanying editorial can be found here:

<https://jamanetwork.com/journals/jamainternalmedicine/fullarticle/2687985>

Rationale for 99495

A multi-specialty and multi-disciplinary expert panel (“panel”) reviewed the surveys and developed the following rationale for the recommended work values for 99495.

The panel kept in mind that the TCM codes do not include physician or clinical staff time or work performed for unrelated activities. For example, NTF and FTF care provided for an acute respiratory infection or abdominal pain that occurs during the month a TCM code is reported are not included in the TCM code and are reported separately.

The expert panel believes that the median work RVUs and physician time place each of the codes in proper rank order to established E/M and non-E/M services as well as to each other.

The TCM codes describe the physician work and clinical staff time required to provide TCM for patients discharged from a facility to a non-facility setting. The care begins immediately after the patient is discharged. There is no overlap with discharge care reported under 99238, 99239 or other facility discharge codes. The TCM codes require that:

- contact be made with the patient or caregiver within 2 business days of discharge,
- the patient be seen within 7 or 14 days of discharge (99496 and 99495, respectively), and
- Moderate complexity or high complexity medical decision making (99495 and 99496, respectively) be involved.

All the clinical staff time and physician NTF work related to TCM for a 30-day service period after discharge (i.e., the day of discharge through the next 29 days) and the clinical staff time and physician work related to an FTF visit are included in the TCM code. Because all FTF and NTF time is included in the service, all time is intraservice time, and there is no pre or post service time. Importantly, the total time includes all related clinical staff and physician time for 30 days after discharge.

The expert panel believes that much of the NTF care is delivered by clinical staff under physician supervision and that the FTF visit involves both care delivered by the physician and the clinical staff under supervision of the physician. It is critically important to understand that the FTF visit is not intended to meet the traditional requirements of other E/M services. The only requirement is for a certain level of medical decision making; TCM services are not intended to meet the history and physical examination requirements of current E/M services. For example, the visit (which could be a home visit) could consist primarily of evaluating the functional abilities of a patient and educating the patient and/or caregiver.

Reference Services

99495 – Key Reference and Proxy Services

21% of respondents chose 99214, wRVU 1.50 and times of 5/25/10/40

17% of respondents chose 99215, wRVU of 2.11 and times 5/35/15/55

47% of respondents chose 99214 as the proxy for the face-to-face visit

The expert panel noted that all the key reference services are MPC does.

Complexity/Intensity Measures

For 99495, respondents agreed that the service was clearly more complex and intense than 99214 and, slightly more complex and intense than 99215.

The expert panel noted that the respondents had significant experience performing both services and that the variation in median wRVU and times among specialties was small. We believe this data supports that people are doing this in a more consistent way than done previously.

Then the panel compared the survey median wRVUs and times to the key reference services.

Analysis

99495

The median total time for 99495 was 47 minutes, all of it intraservice, compared with the 25 and 35 minutes of intraservice time for 99214 and 99215 respectively. Even though the total time for 99495 is less than the total time for 99215, it is all intraservice time and is more intense and complex. The societies agree that the survey median of 47 minutes is based on more experience with the service described by 99495 and is a better estimate of time than the previous survey of 40 minutes. Specifically, unlike the previous survey, where the total time was 40 minutes, which is identical to 99214, the additional 7 minutes better accounts for the time of the NTF supervision of clinical staff which, while most intense between the time of discharge and the FTF visit, continues for 30 days.

Comparison of Survey Data to Comparator Codes:

The expert panel noted that all the comparator codes below, except for 90846, are MPC codes and, even though 90846 is not an MPC code, it was reviewed by the RUC in 2017.

CPT Code	Long Desc	Global	Work RVU	Pre Eval Time	Intra Time	Post Time	Total Time	MPC	2017 Utilization
99349	Home visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A detailed interval history; A detailed examination; Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are moderate to high severity. Typically, 40 minutes are spent face-to-face with the patient and/or family.	XXX	2.33	10	40	15	65	Yes	1167920
SYV Code 99495	Transitional Care Management Services with the following required elements: Communication (direct contact, telephone, electronic) with the patient and/or caregiver within 2 business days of discharge Medical decision making of at least moderate complexity during the service period Face-to-face visit, within 14 calendar days of discharge	XXX	2.36	0	47	0	40		576158
90846	Family psychotherapy (without the patient present), 50 minutes	XXX	2.4	0	50	0	50		22737
99204	Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 45 minutes are spent face-to-face with the patient and/or family.	XXX	2.43	5	30	10	45	Yes	10292014

CPT Code: 99495									
99222	Initial hospital care, per day, for the evaluation and management of a patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; and Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the problem(s) requiring admission are of moderate severity. Typically, 50 minutes are spent at the bedside and on the patient's hospital floor or unit.	XXX	2.61	15	40	20	75	Yes	6878065
90962	End-stage renal disease (ESRD) related services monthly, for patients 20 years of age and older; with 1 face-to-face visit by a physician or other qualified health care professional per month	XXX	3.15	0	63	0	63	Yes	205671

90846, Family psychotherapy (without the patient present), 50 minutes. 90846 has a work RVU of 2.4 and a total time of 50 minutes all of it intraservice. This code was reviewed by the RUC last year and the median work RVU and time for 99495 place it in proper rank order with 90846.

99349, Home visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A detailed interval history; A detailed examination; Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are moderate to high severity. Typically, 40 minutes are spent face-to-face with the patient and/or family. 99349 has a work RVU of 2.33 with times of 10/40/15/65. The expert panel believes that a work RVU of 2.36 with 47 minutes of intraservice time spent over a month caring for a patient recently discharged from the hospital, which can be reported for new or established patients, places 99495 in proper rank order with 99349.

99222, Initial hospital care, per day, for the evaluation and management of a patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; and Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the problem(s) requiring admission are of moderate severity. Typically, 50 minutes are spent at the bedside and on the patient's hospital floor or unit. which has a work RVU of 2.61 with times of 15/40/20/75. A work RVU of 2.36 for 99495 which requires moderate or complex medical decision making and has 47 minutes of intraservice time places 99495 in the proper rank order with 99222.

99204, Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 45 minutes are spent face-to-face with the patient and/or family. 99204 has a work RVU of 2.43 and times of 5/30/10/45 and the survey median work RVU and time place 99495 in proper rank order with 99204 which has less intra service and less total time but is only reported for new patients whereas 99495 can be reported for established patients.

90962, End-stage renal disease (ESRD) related services monthly, for patients 20 years of age and older; with 1 face-to-face physician visit per month, which has a work RVU of 3.15 and 63 minutes of total time, all of it intraservice. The expert panel noted that the survey median total time (47 minutes) and work RVU (2.36) are both exactly 75% of the time and work RVU for 90962 demonstrating that the median survey values place 99495 in proper rank order to 90962.

Comparison of 99495 Survey Median times and work RVUs to Current Times and work RVUs

Finally, the panel compared the median work RVUs and times for 99495 to the previous survey data and to each other.

99495 – The median survey time of 47 minutes is 17.5% higher than the time of 40 minutes established in 2013 and the median survey work RVU of 2.36 which is 12% higher than the work RVU of 2.11 established in 2013.

In summary, the expert panel recommends a work RVU of 2.36 and a total time of 47 minutes, all of it intraservice for 99495.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. (not applicable)

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 99495

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Internal Medicine How often? Sometimes

Specialty Family Medicine How often? Sometimes

Specialty Geriatric Medicine How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 2304632

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on 2017 Medicare claims data times 4

Specialty Internal Medicine	Frequency 996752	Percentage 43.24 %
Specialty Family Medicine	Frequency 857324	Percentage 37.20 %
Specialty Geriatric Medicine	Frequency 16592	Percentage 0.71 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?

576,158 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on 2017 Medicare claims data

Specialty Internal Medicine	Frequency 249188	Percentage 43.24 %
Specialty Family Medicine	Frequency 214331	Percentage 37.20 %
Specialty Geriatric Medicine	Frequency 4148	Percentage 0.71 %

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Evaluation Management

BETOS Sub-classification:

BETOS Sub-classification Level II:

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 99495

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS SUMMARY OF RECOMMENDATION

CPT Code: 99496	Tracking Number	Original Specialty Recommended RVU: 3.10
		Presented Recommended RVU: 3.10
Global Period: XXX	Current Work RVU: 3.05	RUC Recommended RVU: 3.10

CPT Descriptor: Transitional Care Management Services with the following required elements: Communication (direct contact, telephone, electronic) with the patient and/or caregiver within 2 business days of discharge Medical decision making of high complexity during the service period Face-to-face visit, within 7 calendar days of discharge

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: (Adult) A 93-year-old man is discharged after hospitalization for a myocardial infarction, complicated by hyperglycemia and delirium.

(Child) A 6-month-old child born at 25 weeks gestation with a diagnosis of chronic lung disease on home oxygen, diuretics, bronchodilators and high caloric formula is discharged from the hospital after admission for respiratory failure.

Percentage of Survey Respondents who found Vignette to be Typical: 94%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital _____, In the ASC _____, In the office _____

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day _____, Overnight stay-less than 24 hours _____, Overnight stay-more than 24 hours _____

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day _____

Description of Pre-Service Work: (none)

Description of Intra-Service Work: These services are for an established patient whose medical and/or psychosocial problems require high complexity medical decision making during transitions in care from an inpatient hospital setting (including acute hospital, rehabilitation hospital, long-term acute care hospital), partial hospital, observation status in a hospital, or skilled nursing facility/nursing facility, to the patient's community setting (home, domiciliary, rest home, or assisted living). TCM commences upon the date of discharge and continues for the next 29 days.

TCM is comprised of one face-to-face visit within the specified timeframes, in combination with non- face-to-face services that may be performed by the physician or other qualified health care professional and/or licensed clinical staff under his/her direction.

Non-face-to-face services provided by clinical staff, under the direction of the physician or other qualified health care professional, may include:

- o communication (with patient, family members, guardian or caretaker, surrogate decision makers, and/or other professionals) regarding aspects of care;
- o communication with home health agencies and other community services utilized by the patient;
- o patient and/or family/caretaker education to support self-management, independent living, and activities of daily living;
- o assessment and support for treatment regimen adherence and medication management;
- o identification of available community and health resources;
- o facilitating access to care and services needed by the patient and/or family.

Non-face-to-face services provided by the physician or other qualified health care provider may include:

- o obtaining and reviewing the discharge information (eg, discharge summary, as available, or continuity of care documents);
- o reviewing need for or follow-up on pending diagnostic tests and treatments;
- o interaction with other qualified health care professionals who will assume or reassume care of the patient's system specific problems;
- o education of patient, family, guardian, and/or caregiver;
- o establishment or reestablishment of referrals and arranging for needed community resources;
- o assistance in scheduling any required follow-up with community providers and services.

Description of Post-Service Work: (none)

TOP KEY REFERENCE SERVICE:

<u>Key CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
99215	XXX	2.11	RUC Time

CPT Descriptor Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 40 minutes are spent face-to-face with the patient and/or family.

SECOND HIGHEST KEY REFERENCE SERVICE:

<u>Key CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
99205	XXX	3.17	RUC Time

CPT Descriptor Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 60 minutes are spent face-to-face with the patient and/or family.

KEY MPC COMPARISON CODES:

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

<u>MPC CPT Code 1</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>	<u>Most Recent Medicare Utilization</u>
99306	XXX	3.06	RUC Time	1,381,549

CPT Descriptor 1 Initial nursing facility care, per day, for the evaluation and management of a patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; and Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the problem(s) requiring admission are of high severity. Typically, 45 minutes are spent at the bedside and on the patient's facility floor or unit.

<u>MPC CPT Code 2</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>	<u>Most Recent Medicare Utilization</u>
99205	XXX	3.17	RUC Time	2,894,800

CPT Descriptor 2 Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 60 minutes are spent face-to-face with the patient and/or family.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

NOTE: Whenever the term physician is used it encompasses physician and other qualified health professionals (QHPs).

The RUC placed codes 99495 and 99496 on the new technology/new services list when it first reviewed these codes in October 2012. These codes have also been identified on the high growth utilization screen. The surveying societies, the American College of Physicians (ACP), the American Academy of Family Physicians (AAFP), the American Geriatrics Societies (AGS), the American Academy of Neurology (AAN), and the American Osteopathic Association (AAO) met with the Research Subcommittee and obtained approval of a research tool that included surveys of physician work and clinical staff time. This approach was used because these codes describe team-based care and include face-to-face (FTF) and non-face-to-face (NFTF) services furnished by physicians and by clinical staff under physician supervision. These services are performed episodically during the service period, and the clinical staff services are typically furnished on dates and times other than the physician services.

Background

The survey was randomly distributed to members of the AGS, AAFP, AAN, ACP, and AOA. For 99496 there were 201 respondents (again close to double the 2012 survey respondents 110), 94% of whom found the vignette typical and who performed a median of 8 services in the last year.

The summary table includes the results from all respondents as well as the specialty specific results. The surveying specialties are recommending the median survey work value of 3.10.

Compelling Evidence

As noted, the TCM codes are being surveyed because they were placed on the new technology/new services list. At the time these codes were created, physicians had no experience with the codes even though they may have had experience with the service. In addition, the creation of these codes led physicians to develop the infrastructure and work flows to implement the codes as described. The expert panel believes this change fits into the following criterion for demonstrating compelling evidence:

Evidence that technology has changed physician work (ie, diffusion of technology)

In other words, there was great variability in how physicians were performing transition of care management and the creation of the TCM codes standardized that management and required change in office and physician workflow. The expert panel believes that the original survey results reflected the service as performed before the existence of the codes.

There is now experience with the physician work required to perform the service as described by the TCM codes, and the surveying specialties believe respondents were experienced in the service as described by the codes as opposed to how it was performed previously and that the median work RVUs and times reflect this experience. Specifically, unlike the previous survey, the respondents now have experience with not only the physician work associated with direct patient contact (both FTF and NFTF) but also with the physician work of care coordination and oversight of clinical staff services that are essential components to the service described by the codes.

Furthermore, the societies believe that an inherent presumption to placing codes on the new technology list is that the initial estimation of physician work may need to be revised – up or down - after there is more experience with performing the service.

In further support our compelling evidence arguments; in a recent article July 2018 published in JAMA and referenced below, they state, "Transitional care management services were associated with reduction in mortality and total Medicare costs in the month after they were furnished." This review was conducted during January 1, 2013 and December 31, 2015, the early years of TCM. As the benefits become apparent, the utilization has increased, as the Medicare data has shown. With the increased volume and published benefits more, people have implemented the TCM services and we believe created the infrastructure to perform TCM. This also leads us to the conclusion that another compelling evidence criterion was met as shown by physician work "technique" changes and in physician time as reflected with our survey data. Therefore, we do believe that we have met the compelling evidence criteria.

The JAMA article and study can be found here:

<https://jamanetwork.com/journals/jamainternalmedicine/fullarticle/2687989>

The accompanying editorial can be found here:

<https://jamanetwork.com/journals/jamainternalmedicine/fullarticle/2687985>

Rationale for 99496

A multi-specialty and multi-disciplinary expert panel (“panel”) reviewed the surveys and developed the following rationale for the recommended work values for 99496.

The panel kept in mind that the TCM codes do not include physician or clinical staff time or work performed for unrelated activities. For example, NFTF and FTF care provided for an acute respiratory infection or abdominal pain that occurs during the month a TCM code is reported are not included in the TCM code and are reported separately.

The expert panel believes that the median work RVUs and physician time place each of the codes in proper rank order to established E/M and non-E/M services as well as to each other.

The TCM codes describe the physician work and clinical staff time required to provide TCM for patients discharged from a facility to a non-facility setting. The care begins immediately after the patient is discharged. There is no overlap with discharge care reported under 99238, 99239 or other facility discharge codes. The TCM codes require that:

- contact be made with the patient or caregiver within 2 business days of discharge,
- the patient be seen within 7 or 14 days of discharge (99496 and 99495, respectively), and
- Moderate complexity or high complexity medical decision making (99495 and 99496, respectively) be involved.

All the clinical staff time and physician NFTF work related to TCM for a 30-day service period after discharge (i.e., the day of discharge through the next 29 days) and the clinical staff time and physician work related to an FTF visit are included in the TCM code. Because all FTF and NFTF time is included in the service, all time is intraservice time, and there is no pre or post service time. Importantly, the total time includes all related clinical staff and physician time for 30 days after discharge.

The expert panel believes that much of the NFTF care is delivered by clinical staff under physician supervision and that the FTF visit involves both care delivered by the physician and the clinical staff under supervision of the physician. It is critically important to understand that the FTF visit is not intended to meet the traditional requirements of other E/M services. The only requirement is for a certain level of medical decision making; TCM services are not intended to meet the history and physical examination requirements of current E/M services. For example, the visit (which could be a home visit) could consist primarily of evaluating the functional abilities of a patient and educating the patient and/or caregiver.

Reference Services

99496 – Key Reference and Proxy Services

21% of respondents chose 99215, wRVU of 2.11 and times of 5/35/15/55

18% of respondents chose 99205, wRVU of 3.17 and times of 7/45/15/67

52% of respondents chose 99215 as the proxy for the face-to-face visit

The expert panel noted that all the key reference services are MPC does.

Complexity/Intensity Measures

For 99496, respondents agreed that the service was much more complex and intense than 99215 and more similar to 99205 in complexity and intensity.

The expert panel noted that the respondents had significant experience performing both services and that the variation in median wRVU and times among specialties was small. We believe this data supports that people are doing this in a more consistent way than done previously.

Then the panel compared the survey median wRVUs and times to the key reference services.

Analysis

99496

The expert panel notes that the survey median (and total) time of 60 minutes is much longer than the intraservice and total time for 99215. More importantly, 60 minutes is just 7 minutes less than the total time for 99205 which has a work RVU of 3.17. This places the 3.10 survey median work RVU for 99496 in proper rank order to 99205.

Comparison of Survey Data to Comparator Codes

The expert panel noted that all the comparator codes below are MPC codes.

CPT Code	Long Desc	Global	Work RVU	Pre Eval Time	Intra Time	Post Time	Total Time	MPC	2017 Utilization
99204	Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 45 minutes are spent face-to-face with the patient and/or family.	XXX	2.43	5	30	10	45	Yes	10292014
99222	Initial hospital care, per day, for the evaluation and management of a patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; and Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the problem(s) requiring admission are of moderate severity. Typically, 50 minutes are spent at the bedside and on the patient's hospital floor or unit.	XXX	2.61	15	40	20	75	Yes	6878065
99496	Transitional Care Management Services with the following required elements: Communication (direct contact, telephone, electronic) with the patient and/or caregiver within 2 business days of discharge Medical decision making of high complexity during the service period Face-to-face visit, within 7 calendar days of discharge	XXX	3.10	0	60	0	60		546526
90962	End-stage renal disease (ESRD) related services monthly, for patients 20 years of age and older; with 1 face-to-face visit by a physician or other qualified health care professional per month	XXX	3.15	0	63	0	63	Yes	205671
99205	Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 60 minutes are spent face-to-face with the patient and/or family.	XXX	3.17	7	45	15	67	Yes	2894800

90962, End-stage renal disease (ESRD) related services monthly, for patients 20 years of age and older; with 1 face-to-face physician visit per month, which has a work RVU of 3.15 and 63 minutes of total time, all of it intraservice. The survey median

work RVU of 3.10 for 99496 which is 98% of 3.15 and the survey median time of 60 minutes which is 95% of 63 minutes, places it in proper rank order with 90962.

99205, Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 60 minutes are spent face-to-face with the patient and/or family. 99205 has a work RVU of 3.17 and times of 7/45/15/67. The survey median work RVU and times for 99496 place it in proper rank order with 99205 as 99496 has 7 fewer total minutes but 15 more intraservice minutes.

Comparison of 99495 and 99496 Survey Median times and work RVUs to Current Times and work RVUs

Finally, the panel compared the median work RVUs and times for 99495 and 99496 to the previous survey data and to each other.

99496 – The median survey time of 60 minutes is 20% higher than the time of 50 minutes established in 2013, and the median survey work RVU of 3.10 is 2% higher than the work RVU of 3.05 established in 2013.

The median survey time of 60 minutes for 99496 and the median survey work RVU of 3.10 are 28% and 31% more than the median survey time and work RVU of 99495 (47 minutes and 2.36) respectively. These comparisons support the current survey medians and demonstrate that those medians place these two codes in proper rank order with each other.

In summary, the expert panel recommends a work RVU of 3.10 with a total time of 60 minutes, all of it intraservice for 99496.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. (not applicable)

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 99496

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Internal Medicine

How often? Sometimes

Specialty Family Medicine

How often? Sometimes

Specialty Geriatric Medicine

How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 2186104

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on 2017 Medicare claims data times 4

Specialty Internal MedicineI	Frequency 996644	Percentage 45.58 %
Specialty Family Medicine	Frequency 826128	Percentage 37.78 %
Specialty Geriatric Medicine	Frequency 20112	Percentage 0.91 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 546,526 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. 2017 Medicare claims data

Specialty Internal Medicine	Frequency 249161	Percentage 45.58 %
Specialty Family Medicine	Frequency 206532	Percentage 37.78 %
Specialty Geriatric Medicine	Frequency 5028	Percentage 0.91 %

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Evaluation Management

**AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Non Facility Direct Practice Expense (PE) Inputs**

CPT Long Descriptor:

99495: Transitional Care Management Services with the following required elements: Communication (direct contact, telephone, electronic) with the patient and/or caregiver within 2 business days of discharge; Medical decision making of at least moderate complexity during the service period; Face-to-face visit, within 14 calendar days of discharge

99496: Transitional Care Management Services with the following required elements: Communication (direct contact, telephone, electronic) with the patient and/or caregiver within 2 business days of discharge; Medical decision making of high complexity during the service period; Face-to-face visit, within 7 calendar days of discharge

Global Period: **XXX** Meeting Date: **October 2018—REVISED 10-3-2018**

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

The joint societies requested the RUC create a workgroup to develop a PE survey tool to use with non-face-to-face (non-F2F) services, including the TCM codes CPT 99495 and 99496. We outlined concerns with prior surveys in our letter, specifically that prior surveys did not include any case managers' input directly.

Our societies collaborated by phone and email with the AMA staff and PE Subcommittee chair on several occasions and held multiple calls with the Research Subcommittee to define a non-F2F survey tool that would better reflect the details of the clinical staff activities that would be necessary for a productive PE Subcommittee discussion for non-F2F services. The Research Subcommittee approved a new non-F2F survey tool, and that survey was sent to case managers identified by physician respondents to the survey of physician work as well as physicians who indicated they did the work otherwise done by clinical staff. We received a total response of 33 completed PE surveys from 30 different sites across the US.

A joint consensus panel of experts from the surveying societies, including advisors and experts in TCM services, met by phone and email to review the survey results and develop the recommendations for inputs based on the survey responses. As we would do with any survey, the consensus panel reviewed, the number of participants, the number of sites and the 25th percentile, median, and all survey data collected below:

(Note this new survey did not ask the clinical staff performance rate and we recommend it be added to future non face to face services survey templates)

Clinical Intra Service Time 99495	Clinical Intra Service Time 99496	Clinical Performance Rate 99495	Clinical Performance Rate 99496	
15	10	Not asked	Not asked	Min
35	60			25th
60	90			Median
90	150			75th
180	180			Max
120	150			Mode
33	33			Total Count

Specialty Societies American Academy of Family Physicians, American Academy of Neurology, American College of Physicians, American Geriatrics Society, American Osteopathic Association

2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here:

The consensus panel of experts chose CPT 99214 as the comparison proxy code for the face-to-face visit included in code 99495 as it was chosen by the physician work survey respondents and it also maintains consistency with the original survey in 2012.

The consensus panel of experts chose CPT 99215 as the comparison proxy code for the face-to-face visit included in code 99496 as it was chosen by the physician work survey respondents and it also maintains consistency with the original survey in 2012.

3. Is this code(s) typically billed with an E/M service? **No**
Is this code(s) typically billed with the E/M service in the nonfacility? **No**
(Please see provided data in PE Subcommittee folder)
4. What specialty is the dominant provider in the nonfacility? **Internal Medicine**
What percent of the time does the dominant provider provide the service(s) in the nonfacility? **43% (99495) & 46% (99496)**
Is the dominant provider in the nonfacility different then for the global? **No**
(Please see provided data in PE Subcommittee folder)
5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time: **N/A**

If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), you must provide compelling evidence. Please explain if the increase can be entirely accounted for because of an increase in physician time.

Compelling Evidence

At the time these codes were created, physicians and clinical staff had no experience with the codes, even though they may have had experience with the service. In addition, the creation of these codes led physicians and clinical staff to develop the infrastructure and work flows to implement the codes as described. Additionally, when first surveyed by the specialty societies, these surveys were only distributed to physicians for input, and with this survey, we also surveyed their clinical case managers directly with an approved survey tool from the Research Subcommittee. The expert panel believes these changes fit into several of the following criteria for demonstrating compelling evidence:

- Evidence that technology has changed physician work and clinical staff time (ie, diffusion of technology)
- Documentation or other reliable data that there have been changes in the clinical staff time, to one or more of the following:
 - technique

Specialty Societies American Academy of Family Physicians, American Academy of Neurology, American College of Physicians, American Geriatrics Society, American Osteopathic Association

- knowledge/technology
- physician time

In other words, there was great variability in how physicians and case managers were performing transitional care management, and the creation of the TCM codes standardized that management and required change in office and physician workflow. The expert panel believes that the original survey results reflected the service as performed before the existence of the codes.

There is now experience with the physician work and clinical staff time required to perform the service as described by the TCM codes, and the surveying specialties believe respondents were experienced in the service as described by the codes as opposed to how it was performed previously and that the median survey times from the PE survey reflect this experience. Specifically, unlike the previous survey, the respondents now have experience with not only the clinical staff work associated with direct patient contact (both F2F and non-F2F) but also with the clinical staff work of care coordination that is an essential component to the service described by the codes.

This also leads us to the conclusion that another compelling evidence criterion was met as shown by “technique” changes and in clinical time as reflected with our survey data. Therefore, we do believe that we have met the compelling evidence criteria.

6. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here: **N/A**

7. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? (please use this time rather than 5 minutes in your reference code) **5 minutes**

The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

Vitals obtained;

Height

Weight

Heart Rate/Pulse

Blood Pressure

Respiration

8. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time*:

Service Period Clinical Labor Activities:

Assist physician during exam; since we are using the survey proxy visit the activities and time are pulled from the proxy code in these cases 99214 and 99215. The research committee suggested we not modify those times or inputs, therefore no further details are given as they crosswalk to the 99214 and 99215.

Specialty Societies American Academy of Family Physicians, American Academy of Neurology, American College of Physicians, American Geriatrics Society, American Osteopathic Association

9. If you have used a percentage of the physician intra-service work time other than 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived. *For the clinical staff time associated with the required FTF visit, the same proxy was chosen for 99214 and 99215; per Research Subcommittee, we did not survey the clinical staff time or activities associated with the visit; we surveyed the level of visit and are using those times as identified with no modifications.*

10. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities: **N/A**

Line 99 non-FTF services as outlined in detail below per the survey with survey responses.

Survey Details of Intra Service time for TCM services:

(Note: the below values are medians of the estimated percentages of the activities, therefore we would not expect the totals to add to 100%.)

Percentage Breakdown 99495	Communication (with patient, family members, guardian or caretaker, surrogate decision makers	Patient and/or family/caretaker education to support self-management, independent living,	Communication with home health agencies and other community services utilized by the patient; identification of available community and health resources; facilitating access to care and services needed by the patient and/or family	Other activities

11. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at <http://www.bls.gov>. **N/A**

Specialty Societies American Academy of Family Physicians, American Academy of Neurology, American College of Physicians, American Geriatrics Society, American Osteopathic Association

12. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here: **N/A**
13. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here: **N/A**
14. List all the equipment included in your recommendation and the equipment formula chosen (see document titled “Calculating equipment time”). If you have selected “other formula” for any of the equipment please explain here:
Selected default
 exam table EF023, otoscope-ophthalmoscope (wall unit) EQ189. Both equipment times were calculated by totaling the service period times (rows 34 – 68)
15. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here: **N/A**
16. If there is any other item on your spreadsheet that needs further explanation, please include here: **N/A**
18. Please include an explanation of each line item:

Demographics of the PE survey:

Of the 33 respondents from 30 different sites; 30 identified the clinical staff type as an RN with no additional details as to the provider of the service; 3 respondents identified the clinical staff type as a Medical/Technical Assistant (MTA).

Those taking the survey identified themselves as the following:

Total	Description
4	MD or DO
1	Nurse Practitioner
