RUC Referrals to CPT Editoral Panel - Outstanding Issues

		Screen	RUC Meeting	Specialty Society:	CPT Meeting
0191T	**Insertion of anterior segment aqueous drainage device, without extraocular reservoir, internal approach, into the trabecular meshwork; initial insertion**	High Volume Category III Codes	January 2020	AAO	October 2020

Background: At the April 2019 RUC meeting under new business, Doctor Smith referred the issues of examining Category III codes with high volume to the Relativity Assessment Workgroup. The Workgroup identified code 0191T. In January 2020, the RUC recommended that the specialty societies develop a coding application for Category I status for the October 2020 CPT meeting.

		Screen	RUC Meeting	Specialty Society:	CPT Meeting
01936	**Anesthesia for percutaneous image guided procedures on the spine and spinal cord; therapeutic**	High Volume Growth4	October 2019	ASA	May 2020

Background: This service was identifed on the high volume growth screen, services with total Medicare utilization of 10,000 or more that have increased by at least 100% from 2009 through 2014. In April 2017, the Workgroup noted it was concerned that this service may still be reported inappropriately as the top surgical services reported with 01936 (22513, 22514, 62322, 62323, 63650, 64483 and 64490) utilization does not show significant increases and some of these services indicate that moderate sedation is included. The Workgroup noted that ASA has provided significant education on the correct reporting of this service, however can not reach all other providers of this service or physicians who request the anesthesia service. The Workgroup recommends reviewing 01936 after two years of utilization data are available including the utilization for the top surgical services reported with 01936 (October 2019). In October 2019, the Workgroup recommended that this service be referred to CPT to create more granular codes.

		Screen	RUC Meeting	Specialty Society:	CPT Meeting
0376T	**Insertion of anterior segment aqueous drainage device, without extraocular reservoir, internal approach, into the trabecular meshwork; each additional device insertion (List separately in addition to code for primary procedure)**	High Volume Category III Codes	January 2020	AAO	October 2020

Background: At the April 2019 RUC meeting under new business, Doctor Smith referred the issues of examining Category III codes with high volume to the Relativity Assessment Workgroup. The Workgroup identified code 0191T. In January 2020, the RUC recommended that the specialty societies develop a coding application for Category I status for the October 2020 CPT meeting.

		Screen	RUC Meeting	Specialty Society:	CPT Meeting
0446T	**Creation of subcutaneous pocket with insertion of implantable interstitial glucose sensor, including system activation and patient training**	CMS Request - Final Rule for 2020	January 2020	AACE, ES	Time uncertain

Background: In the CY 2020 Final Rule, CMS sought information from stakeholders on the resources involved in furnishing the services described by Category III codes 0446T, 0447T and 0448T. CMS was specifically seeking recommendations, including the work RVUs, work time, and direct PE inputs, associated with the resources involved in inserting and removing the device, as well as the resource costs of the implantable device and disposable supplies. The Agency expressed concern for the immediate needs of Medicare beneficiaries with diabetes and stated that “the contractor pricing for these services has contributed to significant confusion in the community with regards to Medicare payment rules for these kinds of monitoring systems.” Under existing policies of CMS, any recommendations submitted by February 10, 2020 would be considered for CY 2021 Physician Payment Schedule rulemaking. Accordingly, codes 0446T, 0447T and 0448T were placed on the RUC agenda for the January 2020 meeting. The specialty societies initially requested referral to the CPT Editorial Panel for Category III codes 0446T, 0447T and 0448T. These services were only approved by the FDA in June 2018 and have not yet been widely adopted, therefore a survey may not yield an accurate recommendation to CMS for consideration. It was also understood that this technology would be significantly revised over the next twelve months, which would result in the revision of these services and/or the development of additional codes for consideration. At the RUC meeting, however, the specialties indicated that they had reconsidered their request for referral because their discussions with the manufacturer indicated that it intended to convert the codes to Category I at some point in the future when the data and literature were available to support such an application.The RUC recommends that the codes remain contractor priced and that CPT codes 0446T, 0447T and 0448T be referred to the CPT Editorial Panel time uncertain.

		Screen	RUC Meeting	Specialty Society:	CPT Meeting
0447T	**Removal of implantable interstitial glucose sensor from subcutaneous pocket via incision**	CMS Request - Final Rule for 2020	January 2020	AACE, ES	Time uncertain

Background: In the CY 2020 Final Rule, CMS sought information from stakeholders on the resources involved in furnishing the services described by Category III codes 0446T, 0447T and 0448T. CMS was specifically seeking recommendations, including the work RVUs, work time, and direct PE inputs, associated with the resources involved in inserting and removing the device, as well as the resource costs of the implantable device and disposable supplies. The Agency expressed concern for the immediate needs of Medicare beneficiaries with diabetes and stated that "the contractor pricing for these services has contributed to significant confusion in the community with regards to Medicare payment rules for these kinds of monitoring systems." Under existing policies of CMS, any recommendations submitted by February 10, 2020 would be considered for CY 2021 Physician Payment Schedule rulemaking. 37220	**Revascularization, endovascular, open or percutaneous, iliac artery, unilateral, initial vessel; with transluminal angioplasty**	High Volume Growth1	January 2019	SVS, ACS, SIR, ACR, ACC	October 2020

Background: In October 2018, 37225, 37227 and 37229 services were identified by the PE High Cost Supplies screen for services with non-facility Medicare utilization over 10,000, not reviewed in the last five years and include a supply item greater than $500. The RUC requests an action plan for the January 2019 on how to address these services. The Workgroup reviewed the action plan for these services, noting that CMS repriced these supply items for 2019. The specialty societies indicated that they agreed these supply items were essential to perform CPT codes 37225, 37227 and 37229 and that the current repricing was appropriate. The Workgroup noted that CPT code 37229 was identified on the High Volume Growth screen at this meeting and the Workgroup agreed with the specialty societies to refer this entire family of services to CPT for revision to accommodate new technologies.

37221 **Revascularization, endovascular, open or percutaneous, iliac artery, unilateral, initial vessel; with transluminal stent placement(s), includes angioplasty within the same vessel, when performed**

49565	**Repair recurrent incisional or ventral hernia; reducible**	Site of Service Anomaly - 2019	January 2020	ACS, SAGES	May 2020

Background: In October 2019, the Relativity Assessment Workgroup identified CPT code 49565 as performed less than 50% of the time in the inpatient setting yet included inpatient hospital Evaluation and Management services within the global period with 2018e Medicare utilization over 5,000. The RUC recommended this service be surveyed for January 2020. In January 2020, the specialty societies requested that CPT code 49565 be referred to the May 2020 CPT Editorial Panel to update the descriptor to current standard of practice and typical patient presentation; for example, mesh insertion and removal, and size and number or defects. The RUC questioned if CPT codes 49560, 49561, 49566 and/or 49568 are considered part of this family of services. The specialty society indicated they will define the family of services on the correct coding application (CCA). The RUC recommends that these services be referred to the May 2020 CPT Editorial Panel.

64448	**Injection(s), anesthetic agent(s) and/or steroid; femoral nerve, continuous infusion by catheter (including catheter placement)**	Site of Service Anomaly / High Volume Growth1 / CMS Fastest Growing / High Volume Growth2	October 2018	ASA	After Imaging Guidance Workgroup is complete

Background: During the October 2018 RUC presentation of the Somatic Nerve Injection family of services, the specialty societies stated that codes 64415, 64416, 64417, 64446, 66447, and 64448 were reported with code 76942 Ultrasonic guidance for needle placement (eg, biopsy, aspiration, injection, localization device), imaging supervision and interpretation more than 50 percent of the time. Specifically, 76 percent with 64415, 85 percent with 64416, 68 percent with 64417, 77 percent with 64446, 77 percent with 64447, and 79 percent with 64448. The societies indicated they would submit a code change application to bundle 76942 into codes 64415, 64416, 64417, 64446, 64447, and 64448 for the 2021 cycle. This overlap was accounted for in the above RUC recommendations for these services. The RUC refers CPT codes 64415, 64416, 64417, 64446, 64447 and 64448 to be bundled with ultrasound guidance, CPT code 76942 to the CPT Editorial Panel for CPT 2021. In September 2019, this issue was postponed until until after the CPT Imaging Guidance Workgroup completes its work.

64615	**Chemodenervation of muscle(s); muscle(s) innervated by facial, trigeminal, cervical spinal and accessory nerves, bilateral (eg, for chronic migraine)**	High Volume Growth6	January 2020	AAN, AANEM, AAPM&R, NANS	October 2020

Background: In October 2019, the Workgroup identified this service with Medicare utilization of 10,000 or more and has increased by at least 100% from 2013 through 2018e. The Workgroup requests action plans for review at the January 2020 Relativity Assessment Workgroup meeting. In January 2020, the RUC recommended to refer to CPT to clarify this service and make the code more granular to what is being performed. This service was originally surveyed by various specialties, some of which may no longer be typically providing this service.

		Screen	RUC Meeting	Specialty Society:	CPT Meeting
66174	**Transluminal dilation of aqueous outflow canal; without retention of device or stent**	New Technology/ New Service	January 2020	AAO	May 2020

Background: In January 2020, the RUC reviewed these services and recommends to refer to CPT May 2020. CPT 66174 to revise the descriptor and add exclusionary parentheticals. CPT 66175 should be maintained given it has very low utilization.

		Screen	RUC Meeting	Specialty Society:	CPT Meeting
66175	**Transluminal dilation of aqueous outflow canal; with retention of device or stent**	New Technology/ New Service	January 2020	AAO	May 2020

Background: In January 2020, the RUC reviewed these services and recommends to refer to CPT May 2020. CPT 66174 to revise the descriptor and add exclusionary parentheticals. CPT 66175 should be maintained given it has very low utilization.

		Screen	RUC Meeting	Specialty Society:	CPT Meeting
67141	**Prophylaxis of retinal detachment (eg, retinal break, lattice degeneration) without drainage, 1 or more sessions; cryotherapy, diathermy**	Harvard Valued - Utilization over 30,000-Part4	January 2020	AAO, ASRS	May 2020

Background: CPT code 67145 was identified in October 2019 as Harvard Valued utilization over 30,000. The Workgroup requested action plans to examine this service. In January 2020, the RUC recommended to refer to CPT May 2020. The RUC agreed with the specialty societies and recommends that CPT 67145 as well as its parent code CPT 67141 be referred to CPT for a descriptor and global period change. The codes should both be edited to remove the reference to "1 or more sessions" so that the services may be valued as a 010-day procedure versus the current 090-day global.

		Screen	RUC Meeting	Specialty Society:	CPT Meeting
67145	**Prophylaxis of retinal detachment (eg, retinal break, lattice degeneration) without drainage, 1 or more sessions; photocoagulation (laser or xenon arc)**	Harvard Valued - Utilization over 30,000-Part4	January 2020	AAO, ASRS	May 2020

Background: CPT code 67145 was identified in October 2019 as Harvard Valued utilization over 30,000. The Workgroup requested action plans to examine this service. In January 2020, the RUC recommended to refer to CPT May 2020. The RUC agreed with the specialty societies and recommends that CPT 67145 as well as its parent code CPT 67141 be referred to CPT for a descriptor and global period change. The codes should both be edited to remove the reference to "1 or more sessions" so that the services may be valued as a 010-day procedure versus the current 090-day global.

72275	**Epidurography, radiological supervision and interpretation**	Different Performing Specialty from Survey3	January 2020	ASA, AAPM, AAMPR, NASS	May 2020

Background: In October 2019, this service was identified on the Different Performing Specialty from Survey screen. In January 2020, the RUC recommended to Refer to CPT May 2020 to revise the descriptor.

		Screen	RUC Meeting	Specialty Society:	CPT Meeting
74301	**Cholangiography and/or pancreatography; additional set intraoperative, radiological supervision and interpretation (List separately in addition to code for primary procedure)**	CMS-Other - Utilization over 30,000-Part3	January 2019	ACR	February 2020

Background: This service was identified with 74300. In January 2019, the RUC recommended to refer this code to CPT for deletion.

		Screen	RUC Meeting	Specialty Society:	CPT Meeting
76377	**3D rendering with interpretation and reporting of computed tomography, magnetic resonance imaging, ultrasound, or other tomographic modality with image postprocessing under concurrent supervision; requiring image postprocessing on an independent workstation**	CMS Request - Final Rule for 2020	January 2020	ACR, ASNR, SIR	May 2020

Background: In the Final Rule for the CY 2020 Medicare Physician Fee Schedule, CMS nominated CPT code 76377 3D rendering with interpretation and reporting of computed tomography, magnetic resonance imaging, ultrasound, or other tomographic modality with image postprocessing under concurrent supervision; requiring image postprocessing on an independent workstation as potentially misvalued. The Agency views CPT code 76377 to be part of the same family as CPT code 76376 3D rendering with interpretation and reporting of computed tomography, magnetic resonance imaging, ultrasound, or other tomographic modality with image postprocessing under concurrent supervision; not requiring image postprocessing on an independent workstation, which was recently reviewed at the April 2018 RUC meeting. CMS requested that CPT code 76376 also be reviewed to maintain relativity within the code family. The specialty societies disagreed with CMS' rationale for the nomination of CPT code 76377 as potentially misvalued and the specialties do not believe that CPT codes 76376 and 76377 are in the same code family, although the descriptors are similar. The societies noted that the two codes are different because they are utilized on different patient populations (as evidenced by the ICD-10 diagnoses.) They also noted that the technical and professional resources required for 76376 and 76377 are significantly different. For these reasons, the specialty societies recommended, and the RUC agreed to refer CPT codes 76377 and 76376 to the CPT Editorial Panel for further review and potential revision. The specialty societies noted that they will determine the family of services including whether the codes remain a family, based on the recommendations of the CPT Editorial Panel.

		Screen	RUC Meeting	Specialty Society:	CPT Meeting
76942	**Ultrasonic guidance for needle placement (eg, biopsy, aspiration, injection, localization device), imaging supervision and interpretation**	CMS-Other - Utilization over 500,000 / CMS Request - Final Rule for 2014 / High Volume Growth3	April 2014	AACE, AAOS, AAPMR, ACR, ACRh, APMA, ASA, ASBS, ASIPP, AUA, SIR, TES	After Imaging Guidance Workgroup is complete

Background: During the October 2018 RUC presentation of the Somatic Nerve Injection family of services, the specialty societies stated that codes 64415, 64416, 64417, 64446, 66447, and 64448 were reported with code 76942 Ultrasonic guidance for needle placement (eg, biopsy, aspiration, injection, localization device), imaging supervision and interpretation more than 50 percent of the time. Specifically, 76 percent with 64415, 85 percent with 64416, 68 percent with 64417, 77 percent with 64446, 77 percent with 66447, and 79 percent with 64448. The societies indicated they would submit a code change application to bundle 76942 into codes 64415, 64416, 64417, 64446, 64447, and 64448 for the 2021 cycle. This overlap was accounted for in the above RUC recommendations for these services. The RUC refers CPT codes 64415, 64416, 64417, 64446, 64447 and 64448 to be bundled with ultrasound guidance, CPT code 76942 to the CPT Editorial Panel for CPT 2021. In September 2019, this issue was postponed until the Feb 2020 CPT meeting.

		Screen	RUC Meeting	Specialty Society:	CPT Meeting
76970	**Ultrasound study follow-up (specify)**	High Volume Growth1 / CMS-Other - Utilization over 20,000	October 2019	ACS, ACR, AACE	February 2020

Background: In October 2018, the Workgroup discussed future screens and recommends lowering the threshold and examining the list of CMS/Other source codes with Medicare utilization over 20,000. The Workgroup recommends that the specialty societies submit an action plans to be presented at the October 2019 meeting. In October 2019, the RUC referred this issue to CPT for deletion.

		Screen	RUC Meeting	Specialty Society:	CPT Meeting
76998	**Ultrasonic guidance, intraoperative**	CMS-Other - Utilization over 20,000	October 2019	STS, AATS, ACS, ASBrS, AUA, AVLS, SCAI, SIR, SVS	February 2020

Background: In October 2018, the Workgroup discussed future screens and recommends lowering the threshold and examining the list of CMS/Other source codes with Medicare utilization over 20,000. In October 2019, the RUC refers this issued to CPT Editorial Panel (May 2020) to more accurately differentiate physician work as multiple specialties currently use this code and to clarify correct coding.

		Screen	RUC Meeting	Specialty Society:	CPT Meeting
80500	**Clinical pathology consultation; limited, without review of patient's history and medical records**	CMS-Other - Utilization over 20,000	October 2019	CAP	October 2020

Background: In October 2018, the Workgroup discussed future screens and recommends lowering the threshold and examining the list of CMS/Other source codes with Medicare utilization over 20,000. In October 2019, the RUC referred this issue to CPT to define this service more specifically, currently the descriptor is vague.

		Screen	RUC Meeting	Specialty Society:	CPT Meeting
90785	**Interactive complexity (List separately in addition to the code for primary procedure)**	CMS High Expenditure Procedural Codes1 / High Volume Growth6	January 2020	APA, APA (HCPAC), NASW	May 2020

Background: In October 2019, the Workgroup identified this service with Medicare utilization of 10,000 or more and has increased by at least 100% from 2013 through 2018e. The Workgroup requests action plans for review at the January 2020 Relativity Assessment Workgroup meeting. In January 2020, the RUC recommended to refer to CPT to modify the parenthetical to reflect all services that may not be reported with code 90785.

		Screen	RUC Meeting	Specialty Society:	CPT Meeting
92065	**Orthoptic and/or pleoptic training, with continuing medical direction and evaluation**	Harvard Valued - Utilization over 30,000-Part4	January 2020	AAO, AOA (optometry)	May 2020

Background: This service was identified in October 2019 as Harvard Valued utilization over 30,000. The Workgroup requested action plans to examine this service. In January 2020, the RUC recommended that this service be referred to CPT May 2020. This service with an “and/or” connector should be two different codes given their different patient populations and techniques used for the treatment. For that reason, this code should go back to CPT for a descriptor edit as well as creation of separate codes.

		Screen	RUC Meeting	Specialty Society:	CPT Meeting
93656	**Comprehensive electrophysiologic evaluation including transseptal catheterizations, insertion and repositioning of multiple electrode catheters with induction or attempted induction of an arrhythmia including left or right atrial pacing/recording when necessary, right ventricular pacing/recording when necessary, and His bundle recording when necessary with intracardiac catheter ablation of atrial fibrillation by pulmonary vein isolation**	Codes Reported Together 75% or More-Part1 / High Volume Growth6	January 2020	ACC, HRS	May 2020

Background: In October 2019, the Workgroup identified this service with Medicare utilization of 10,000 or more and has increased by at least 100% from 2013 through 2018e. The Workgroup requests action plans for review at the January 2020 Relativity Assessment Workgroup meeting. In January 2020, the RUC recommended to refer to CPT May 2020 for revision and bundle. Technology and clinical practice have changed since these codes were written in 2011. Based on the billed together data for these and related codes, the specialties recommended referral to CPT to update code descriptors and likely bundle services now commonly performed together, such as 3D mapping.

		Screen	RUC Meeting	Specialty Society:	CPT Meeting
95943	**Simultaneous, independent, quantitative measures of both parasympathetic function and sympathetic function, based on time-frequency analysis of heart rate variability concurrent with time-frequency analysis of continuous respiratory activity, with mean heart rate and blood pressure measures, during rest, paced (deep) breathing, Valsalva maneuvers, and head-up postural change**	Codes Reported Together 75% or More-Part1 / Contractor Priced High Volume	January 2020	AAN, AANEM	May 2020

Background: In January 2018, a RUC member suggested to review high volume contractor priced codes. AMA Staff identifiedcode 95943 as acontractor-priced Category I CPT codes that has 2017 estimated Medicare utilization over 10,000. The Workgroup determined that there are various reasons in which these codes have been recommended to be contractor priced and the specialty societies should submit action plans for the October 2018 meeting indicating whether these services should be reviewed for physician work/practice expense by the RUC. In October 2018, the RUC determined that this service is performed by many specialties and the utilization is high enough to survey. Survey for January 2019. In January 2019, a RUC member provided background that when this Category I code was created at the CPT Editorial Panel it was created to differentiate the service from tilt table testing. The device manufacturer brought the code forward for a series of maneuvers that are different than those performed using a tilt table. The RUC member suggested that in the years since the code was created it has proven that it does not meet the criteria for a Category I code. The RUC member explained the service is not widely performed and that 100 internists performing the service is not “frequency consistent with the intended clinical use”. The code describes common measures and if the service was consistent with current medical practice the volume would be much higher. The RUC recommends CPT code 95943 be referred to the CPT Editorial Panel for deletion. During the re-run of screens in June 2019, AMA staff noted that 95921 is still being reported by Internal Medicine and Family Practice physicians but was surveyed by Neurology and AANEM. AMA staff noted that CPT code 95943 may or may not be the appropriate code that should be reported instead of 95921 by IM and Family Practice and should not be deleted until the RAW discusses further in October 2019. In January 2020, the RUC confirmed to refer to CPT to delete code 95943.

		Screen	RUC Meeting	Specialty Society:	CPT Meeting
G0396	**Alcohol and/or substance (other than tobacco) abuse structured assessment (e.g., audit, dast), and brief intervention 15 to 30 minutes**	CMS-Other - Utilization over 30,000	January 2018	AAFP, ASA, ASAM	October 2020

Background: At the April 2019 RUC meeting under new business, Doctor Smith referred the issues of examining Category III codes with high volume to the Relativity Assessment Workgroup. The Workgroup identified code 0191T. In January 2020, the RUC recommended that the specialty societies develop a coding application for Category I status for the October 2020 CPT meeting.

RUC Recommendations to Develop CPT Assistant Articles - Outstanding Issues

		Screen:	RUC Meeting:	RUC Rec:	Specialty Society:	CPT Asst Status:
95921	**Testing of autonomic nervous system function; cardiovagal innervation (parasympathetic function), including 2 or more of the following: heart rate response to deep breathing with recorded R-R interval, Valsalva ratio, and 30:15 ratio**	Different Performing Specialty from Survey / Codes Reported Together 75% or More-Part1 / Different Performing Specialty from Survey3	January 2020	Refer to CPT Assistant. 0.90	AAFP, AAN, AANEM, ACNS, ACP	

Background: In February 2008, this service was identified via the High Volume Growth screen. The RUC recommended that a CPT Assistant be published on correct coding; and review in two years (April 2010). In April 2010, the RUC recommended that the specialties submit a code change proposal to create two codes that bundle 95925 with 95926 and 95928 with 95929 when the services are performed on the same date. For code pair 95921/95922, the RUC acknowledged that the rational for increased utilization remains unclear. Thus, the dominant specialties for these two codes (Family Medicine and Internal Medicine) are requested to provide the following information regarding 95921 and 95922: A. What are the clinically appropriate scenarios for reporting each service? B. What is the description of the service? C. What are the clinically appropriate scenarios when these services are reported on the same date? In December 2008, a CPT Assistant article was published to correct inappropriate reporting by clarifying that a tilt table is required in the provision of the service. However, Medicare claims data indicate that the attempted coding education was not effective. The RUC recommended referral to CPT to revise the descriptor to include the use of a tilt table and refer those who do not use a tilt table in autonomic testing to use an unlisted code. In January 2020, the RUC recommended to refer codes 95921-95924 to CPT Assistant in 2020 to clarify correct coding on how to report these services. RAW to review the specialty mix again in 3 years of those reporting the services (October 2023).

		Screen:	RUC Meeting:	RUC Rec:	Specialty Society:	CPT Asst Status:
95922	**Testing of autonomic nervous system function; vasomotor adrenergic innervation (sympathetic adrenergic function), including beat-to-beat blood pressure and R-R interval changes during Valsalva maneuver and at least 5 minutes of passive tilt**	High Volume Growth1 / CMS Fastest Growing / Different Performing Specialty from Survey / Codes Reported Together 75% or More-Part1	January 2020	Refer to CPT Assistant. 0.96	AAFP, AAN, AANEM, ACNS, ACP	Dec 2008

Background: In February 2008, this service was identified via the High Volume Growth screen. The RUC recommended that a CPT Assistant be published on correct coding; and review in two years (April 2010). In April 2010, the RUC recommended that the specialties submit a code change proposal to create two codes that bundle 95925 with 95926 and 95928 with 95929 when the services are performed on the same date. For code pair 95921/95922, the RUC acknowledged that the rational for increased utilization remains unclear. Thus, the dominant specialties for these two codes (Family Medicine and Internal Medicine) are requested to provide the following information regarding 95921 and 95922: A. What are the clinically appropriate scenarios for reporting each service? B. What is the description of the service? C. What are the clinically appropriate scenarios when these services are reported on the same date? In December 2008, a CPT Assistant article was published to correct inappropriate reporting by clarifying that a tilt table is required in the provision of the service. However, Medicare claims data indicate that the attempted coding education was not effective. The RUC recommended referral to CPT to revise the descriptor to include the use of a tilt table and refer those who do not use a tilt table in autonomic testing to use an unlisted code. In January 2020, the RUC recommended to refer codes 95921-95924 to CPT Assistant in 2020 to clarify correct coding on how to report these services. 99492	Initial psychiatric collaborative care management, first 70 minutes in the first calendar month of behavioral health care manager activities, in consultation with a psychiatric consultant, and directed by the treating physician or other qualified health care professional, with the following required elements: outreach to and engagement in treatment of a patient directed by the treating physician or other qualified health care professional; initial assessment of the patient, including administration of validated rating scales, with the development of an individualized treatment plan; review by the psychiatric consultant with modifications of the plan if recommended; entering patient in a registry and tracking patient follow-up and progress using the registry, with appropriate documentation, and participation in weekly caseload consultation with the psychiatric consultant; and provision of brief interventions using evidence-based techniques such as behavioral activation, motivational interviewing, and other focused treatment strategies.	Jan 2017	Psychiatric Collaborative Care Management Services	20	CPT 2018	October 2022	In January 2020, the RUC identifiedPsychiatric Collaborative Care Management Services (CPT codes 99492, 99493 and 99494) via the work neutrality process. These codes show a 468% increase in work RVUs for 2018. In reviewing the utilization data for these services, it appears one independent clinic is performing most of these services in the pediatric population. The Workgroup recommends that CMS investigate the reporting of services by this specific independent clinic. The specialty society indicated, and the Workgroup agreed, that a new CPT Assistant article on the appropriate usage of these codes be developed in 2020. This family is also scheduled on the new technology/new services list for review at the October 2020 Relativity Assessment Workgroup meeting. The Workgroup recommends	☐

99493	Subsequent psychiatric collaborative care management, first 60 minutes in a subsequent month of behavioral health care manager activities, in consultation with a psychiatric consultant, and directed by the treating physician or other qualified health care professional, with the following required elements: tracking patient follow-up and progress using the registry, with appropriate documentation; participation in weekly caseload consultation with the psychiatric consultant; ongoing collaboration with and coordination of the patient's mental health care with the treating physician or other qualified health care professional and any other treating mental health providers; additional review of progress and recommendations for changes in treatment, as indicated, including medications, based on recommendations provided by the psychiatric consultant; provision of brief interventions using evidence-based techniques such as behavioral activation, motivational interviewing, and other focused treatment strategies; monitoring of patient outcomes using validated rating scales; and relapse prevention planning with patients as they achieve remission of symptoms and/or other treatment goals and are prepared for discharge from active treatment.	Jan 2017	Psychiatric Collaborative Care Management Services	20	CPT 2018	October 2022	In January 2020, the RUC identifiedPsychiatric Collaborative Care Management Services (CPT codes 99492, 99493 and 99494) via the work neutrality process. These codes show a 468% increase in work RVUs for 2018. In reviewing the utilization data for these services, it appears one independent clinic is performing most of these services in the pediatric population. The Workgroup recommends that CMS investigate the reporting of services by this specific independent clinic. The specialty society indicated, and the Workgroup agreed, that a new CPT Assistant article on the appropriate usage of these codes be developed in 2020. This family is also scheduled on the new technology/new services list for review at the October 2020 Relativity Assessment Workgroup meeting. The Workgroup recommends	☐

The Workgroup recommended that these services be reviewed in 2 year after additional utilization data is available (October 2018). In October 2018, the RUC recommended to remove from list , no demonstrated technology diffusion that impacts work or practice expense.	☑

New Technology/Services Timeline

1. Code is identified as a new technology/service at the RUC meeting in which it is initially reviewed.
2. Code is flagged in the next version of the RUC database with date to be reviewed
3. Code will be reviewed in 5 years (depending on what meeting in the CPT/RUC cycle it is initially reviewed) after at least three years of data are available.

AMA/Specialty Society RVS Update Committee Summary of Recommendations

January 2020

Tissue Expander, Other Than Breast – Tab 4

In February 2019, the CPT Editorial Panel approved the deletion of two codes and revisions to seventeen codes to provide descriptor clarification of any overlap in physician work for breast reconstruction services. In the CPT coding changes application, the specialty stated that this change is editorial and does not involve a change in work. At the April 2019 RUC meeting, the RUC agreed that the seventeen breast reconstruction services should be surveyed for the October 2019 RUC meeting. Codes 11960, 19316, 19350, 19355, and 19396 were also included as being part of the same code family. Based on the change in the typical patient for CPT code 11971 and multiple Harvard valued codes, the RUC agreed that all twenty-two of these services be surveyed, contrary to the specialty initial recommendation that these changes are editorial only and do not require surveying. At that time, the RUC had recommended surveying all twenty-two codes for the October 2019 RUC meeting.

At the October 2019 RUC meeting, the specialty elected to survey two of the codes and send a third code to CPT for revision. The specialty noted that the designation of a single 22 code family was too expansive, and that the family categorization should be more granular than surgical procedures for the repair and/or reconstruction of the same anatomic region. The specialties proposed 8 families of services to the RUC noting that this categorization assigns similar procedures together and ensures that the survey process is effective. The RUC concurred with the more granular classification of families that group analogous procedures together. Furthermore, the specialty indicated, and the RUC agreed, that three of the code families, autologous reconstruction, nipple procedures and moulage formation were not identified by any RAW screens, had no change to their work from CPT revisions and had no obvious flaws to their valuation (i.e., a site of service valuation issue), and therefore would not need to be reviewed at this time. The RUC agreed that, although the specialty societies had conducted surveys of code 11970 and 11971 for October 2019, these services should be resurveyed with their newly identified respective code families. The *Tissue Expander, Other Than Breast* code family was one of the code families identified by the RUC for review for the January 2020 RUC meeting.

Compelling Evidence

The RUC reviewed and accepted compelling evidence that the original valuation of CPT code 11960 was based on flawed methodology when it was reviewed in 1995 which resulted in the service having a negative IWPUT. The value of the service did not appropriately take into context the times assigned to the service in 1995. In addition, the RUC reviewed and accepted compelling evidence based on a change in patient population. The specialty society noted that much of the orthopedic surgery and hand surgery utilization for this service is potentially miscoding and the most common diagnoses in the claims data is now neuropathy. The specialty believed that this was due to miscoding for a carpal tunnel procedure using a balloon that is completely different than the intended placement of a tissue expander with post-operative expansion for recruitment of soft tissue. A code change application was presented at the September 2019 CPT Editorial Panel meeting to add parentheticals directing appropriate usage and to prevent the usage of the code for a carpal tunnel procedure, which was supported both by hand surgery and orthopedic surgery. The same parenthetical also limited the coding of 11960 *Insertion of tissue expander(s) for other than breast, including subsequent expansion* with 11971

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Removal of tissue expander(s) without insertion of prosthesis since placement of a new expander would inherently include the work of removal of a prior expander if present.

11960 *Insertion of tissue expander(s) for other than breast, including subsequent expansion*
The RUC reviewed the survey results from 31 plastic surgeons and recommends: 33 minutes of pre-service evaluation time, 3 minutes for pre-service positioning time, 15 minutes for pre-service scrub/dress/wait, 90 minutes for intra-service time, 20 minutes for immediate post-time, 0.5 99238 discharge visit, 7 99213 post-operative office visit and 2 99212 post-operative office visits. The first post-operative visit is to change dressings, remove the drain, evaluate the patient and review pain control. Visits two through eight of the post-operative visits are related to the incremental filling of the tissue expander typically starting at 3-4 weeks post-operative and occurring on a weekly basis. The specialty noted and the RUC agreed that the typical patient for this service (a scalp expansion) takes a particularly long time to expand as the skin is relatively inelastic. The specialty noted that the 7 visits for expansion are procedural visits which involve taking vital signs, talking about pain control, evaluating the soft tissues for further suitability for expansion. The procedure needs to be a sterile procedure, involving prepping, draping, scrub/dress/wait time for each of the 7 post-operative procedural visits which supports these visits being approximately the same amount of work as 99213 office visits.

The RUC reviewed the survey 25th percentile work RVU of 12.40 and agreed that this value appropriately accounts for physician work involved when performing this service. To justify a work RVU of 12.40, the RUC compared the survey code to CPT code 28046 *Radical resection of tumor (eg, sarcoma), soft tissue of foot or toe; less than 3 cm* (work RVU= 12.38, intra-service time of 90 minutes, total time of 334 minutes) and noted that both services have an identical amount of intra-service time and the survey code involves somewhat more total time. The RUC also compared the survey code to CPT code 25575 *Open treatment of radial AND ulnar shaft fractures, with internal fixation, when performed; of radius AND ulna* (work RVU= 12.29, intra-service time of 90 minutes, total time of 342 minutes) and noted that both services have an identical amount of intra-service time and the survey code involves somewhat more total time. **The RUC recommends a work RVU of 12.40 for CPT code 11960.**

Practice Expense
The Practice Expense Subcommittee changed the exam table to a power table, which is typical for this specialty. The Subcommittee also removed a redundant suture removal kit. **The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
Surgery **Integumentary System** **Introduction**				
▲11960	A1	Insertion of tissue expander(s) for other than breast, including subsequent expansion (Do not report 11960 in conjunction with 11971, 29848, 64702-64726) ~~*(For breast reconstruction with tissue expander(s), use 19357)*~~ *(For insertion of tissue expander(s) in breast reconstruction, use 19357)*	090	12.40
Repair - Complex *13160* *Secondary closure of surgical wound or dehiscence, extensive or complicated* (Do not report 13160 in conjunction with 11960) *(For packing or simple secondary wound closure, see 12020, 12021)*

CPT Descriptor: Insertion of tissue expander(s) for other than breast, including subsequent expansion

---

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 67 year old male with a history of traumatic scalp loss and unstable skin graft to his cranium presents for reconstruction. There is not sufficient scalp for primary reconstruction. Tissue expansion is planned to recruit additional scalp and allow for excision of the previous skin graft.

Percentage of Survey Respondents who found Vignette to be Typical: 93%

Site of Service (Complete for 010 and 090 Globals Only)
Percent of survey respondents who stated they perform the procedure; In the hospital 83% , In the ASC 16%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 38% , Overnight stay-less than 24 hours 53% , Overnight stay-more than 24 hours 7%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 43%

Description of Pre-Service Work:
Orders for preoperative medications are written, and laboratory results, imaging, and patient photographs, are reviewed. The planned procedure and postoperative management are reviewed with the patient and the patient's family. A narcotics prescription review is performed. The patient's history and physical are updated. The operative site is marked, including both the incision and area of dissection, and reviewed with the patient. Informed consent is obtained. The length and type of anesthesia are reviewed with the anesthesiologist. The availability of all required supplies and instruments are verified including the tissue expanders. The patient is transferred from the gurney and positioned on the operating room table. Bony prominences are padded, and thermal regulation drapes are applied. The position of the extremities and head is assessed and adjusted, as needed based on the surgical site. The surgeon scrubs and gowns. The surgical site is prepped and draped. A surgical time-out is performed with the operating surgical team.

Description of Intra-Service Work: A small access incision is made along the scalp and subgaleal dissection is performed to create a pocket for the tissue expander. The pocket is extended toward the defect to be later reconstructed but without violation into the defect. Due to the small access incision, dissection of the pocket requires careful dissection. The galea is scored to allow for better expansion. The pocket is irrigated with saline and hemostasis. The access incision is then reprepped to minimize contaimination. A sterile expander is then obtained and voided of air. The expander is placed into the pocket with a separate pocket created for the expander port behind the ear. A surgical drain is placed. The incisions are closed in multiple layers and post-operative dressings are placed.

Description of Post-Service Work: Discharge medications are reconciled and prescriptions are written. There is a discussion with the family and patient regarding the procedure and findings. There is reiteration of the convalescence, precautions, follow up appointments, expected postoperative course, signs and symptoms of complications. Instructions, appropriate discharge timing, follow up, and precautions are discussed with the postoperative nursing team. A surgical report is prepared for the chart and dictated to the medical record. Post-operative orders are written. Discharge planning is supervised and instructions given.

Post Op Visit 1: 99212

The patient's convalescence to that point is reviewed and discussed. The dressings are removed and the surgical site is evaluated. The drain output is assessed, and the drain suture and drain are removed, if appropriate. Pain control and antibiotic usage is reviewed. Patient and family questions and concerns are addressed. Ongoing care is reiterated. The recipient site wound is redressed.

Post Op Visits 2 - 8: 99213

Each of these visits is related to the incremental filling of the tissue expander typically starting at 3-4 weeks post-operative and occuring on a weekly basis. At each visit, the surgical site is evaluated for infection and skin compromise. Overall patient recovery is reviewed including signs of infection, pain control, and general recovery. If the surgical site is healing appropriate and the skin is not compromised, then an expansion is performed. For each expansion, the patient is positionined appropriately in the office chair. The fill port for the expander is prepped and draped. A sterile set-up for expansion is prepared including the filling of a syringe with sterile normal saline from an IV bag. A time-out is performed. The fill port is then accessed and the saline is slowly injected into the expander which starts to strech the overlying soft tissues. The amount injected in a clinic visit is determined by the site, laxity of the tissues, appearance of the overlying skin, and patient tolerance. The needle used to acces the fill port is removed, compression is held on the site, and a dressing is placed. This procedure is repeated weekly until the desired amount of expansion has been achieved.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	0%	40%	40%	20%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	20%	30%	50%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	50%	30%	20%
Physical effort required	0%	30%	70%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	30%	70%

2nd Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	0%	50%	37%	13%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	38%	25%	37%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	87%	13%	0%
Physical effort required	13%	37%	50%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	38%	12%	50%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

In February 2019, the CPT Editorial Panel approved the deletion of two codes and revisions to seventeen other codes related to breast reconstruction. After further review by the RUC, attention was paid to code 11960 due to the proximity of the code in the CPT book to codes included in the CPT changes for breast reconstruction although 11960 is a procedure completely unrelated to breast reconstruction. ASPS review of CPT code 11960 after the April 2019 RUC meeting identified two issues. First, the primary service had transitioned to Hand/Ortho and the primary diagnosis was now neuropathy. ASPS believed this was due to miscoding for a carpal tunnel procedure using a balloon that is completely different than the intended placement of a tissue expander with post-operative expansion for recruitment of soft tissue. A Code Change Application was presented at the September 2019 CPT Editorial Panel Meeting to add parentheticals directing appropriate usage and to prevent the usage of the code for a carpal tunnel procedure. The same parenthetical also limited the coding of 11960 with 11971 (removal of tissue expander(s) without insertion of prosthesis) since placement of a new expander would inherently include the work of removal of a prior expander if present. In addition, 11960 was potentially misvalued with a negative IWPUT. It was previous discussed that after the CPT Editorial Panel Meeting, 11960 would be resurveyed. Up until 2014, the primary specialty that has used this code has been plastic surgery. On review of the RUC database for both orthopedic and plastic surgery, the volume of hand surgery has increased since 2013 with orthopedics becoming the primary specialty in 2014. With the changes made at CPT to prevent the in appropriate usage in carpal tunnel surgery, plastic surgery is expected to become the dominant specialty again. The CPT changes made are outlined below:

CPT 11960	Descriptor
Previous	Insertion of tissue expander(s) for other than breast, including subsequent expansion (For breast reconstruction with tissue expander(s), use 19357)
Updated	Insertion of tissue expander(s) for other than breast, including subsequent expansion (Do not report 11960 in conjunction with 11971, 29848, 64702-64726) (For insertion of tissue expander(s) in breast reconstruction, use 19357)

Code 11960 was last RUC surveyed in August 1995.

Compelling Evidence

We believe there is compelling evidence for this code due to flawed methodology and a previous negative IWPUT. The negative IWPUT was generated based on previous survey data and still persists despite increased wRVU over time.

Survey Sample and Process

A survey request was sent to a random selection of members from the American Society of Plastic Surgeons who have self-identified as reconstructive surgeons.

Recommendation

We are recommending a work RVU of 14.00, the survey 50th percentile based on comparison to other similarly valued codes. We are cognizant of the potential concerns of misuse for this code given the recent history of being used inappropriately in carpal tunnel syndrome as previously highlighted to the RUC. Although we led changes to the code through the CPT Editorial process to prevent this misuse, it is understandable the concerns may still exist moving forward. However, this code was previously misvalued as evidenced by a negative IWPUT and even with attribution of the decreased post-operative times from our survey compared to current, the 50th percentile recommendation matches best with comparative codes.

Pre-time Package 3-FAC (Straightforward Patient/Difficult Procedure)

We have selected pre-time package 3-FAC as it is the lowest package for a patient undergoing general anesthesia.

Evaluation time – We are recommending 33 minutes of evaluation time which is the package time, but a decrease of 4 minutes from our survey data.

Positioning time – We are recommending the 3 minutes of positioning time that is part of the package which is a decrease of 12 minutes from our survey time.

Scrub, Dress, Wait time – We are recommending 15 minutes of scrub, dress and wait time which matches the package and our survey results.

Post-time Package 9A (General Anes or Complex Reg Blk/Straightforward Procedure)

The recommended time has been reduced to 20 minutes which is a decrease of 10 minutes from the post package time selected to match our survey time.

Key Reference Codes

CPT	DESCRIPTOR	IWPUT	wRVU	TOTAL TIME	PRE	INTRA	POST	99238	99214	99213	99212
64912	Nerve repair; with nerve allograft, each nerve, first strand (cable)	**0.072**	**12.00**	**272**	58	**90**	20	0.5		3	1
11960	Insertion of tissue expander(s) for other than breast, including subsequent expansion	**0.052**	**14.00**	**357**	51	**90**	20	0.8		7	1
64911	Nerve repair; with autogenous vein graft (includes harvest of vein graft), each nerve	**0.077**	**14.00**	**292**	58	**110**	20	0.5		3	1

Overall, both KRCs are borderline matches compared to CPT 11960. The intra-time is the same as Code 64912 and 20 minutes less than Code 64911. However, the total time for CPT 11960 is much greater than the total time for the KRCs by 85 minutes and 65 minutes respectively. We believe part of this poor matching is due to lack of any codes with the same post-time procedural component that matches what is required of tissue expansion.

MPC Comparison Codes:

There are a limited number of MPC codes with an intra-time of 90 that also have significant post-time. In order to identify two MPC codes for comparison, the RUC database was searched for MPC, 90 day global, IT 75-105, and TT 325-385.

CPT	DESCRIPTOR	IWPUT	wRVU	TOTAL TIME	PRE	INTRA	POST	99238	99232	99231	99213	99212
11960	Insertion of tissue expander(s) for other than breast, including subsequent expansion	**0.052**	**14.00**	**357**	51	**90**	20	0.5			7	1
63047	Laminectomy, facetectomy and foraminotomy (unilateral or bilateral with decompression of spinal cord, cauda equina and/or nerve root[s], [eg, spinal or lateral recess stenosis]), single vertebral segment; lumbar	**0.0774**	**15.37**	**362**	75	**90**	30	1	1	1	3	
37215	Transcatheter placement of intravascular stent(s), cervical carotid artery, open or percutaneous, including angioplasty, when performed, and radiological supervision and interpretation; with distal embolic protection	**0.1057**	**17.75**	**337**	80	**103**	30	1	1		2	

Code 11960 with an wRVU at the 25th percentile (wRVU 12.40) demonstrates that the code is likely still undervalued based on current times. While the intra-times and total times are very similar, Code 11960 has significantly lower wRVUs, -2.97 and -5.35wRVU, compared to MPC 63407 and MPC 37125. Even at the 50% percentile (14.00 wRVU), Code 11960 would still have lower wRVU compared to the two selected MPC codes, but the fit would be better given the difference in total times is outpatient compared to partial inpatient care.

Comparisons to other recently valued codes in the RUC database:

Searching the RUC database for codes that are RUC surveyed < 10yrs, 90 day global, IT=90, TT 327-387 – there are 4 codes. Code 11960 at the 50th percentile (wRVU 14.00), would still be **4th highest out of 5** as noted in the table below. Comparison code 65285 is the code most similar to 11960 given the same intratime, post-time, and number of post-operative visits. At the 50% percentile, code 11960 is still -1.36 wRVU less than 65285 which has similar post-operative visits.

CPT	DESCRIPTOR	IWPUT	wRVU	TOTAL TIME	PRE	INTRA	POST	99238	99232	99231	99213	99212
28046	Radical resection of tumor (eg, sarcoma), soft tissue of foot or toe; less than 3 cm	**0.0510**	**12.38**	**334**	56	**90**	25	1		1	3	1
11960	Insertion of tissue expander(s) for other than breast, including subsequent expansion	**0.052**	**14.00**	**357**	51	**90**	20	0.5			7	1
65285	Repair of laceration; cornea and/or sclera, perforating, with reposition or resection of uveal tissue	**0.0743**	**15.36**	**353**	60	**90**	30	0.5			6	1
63047	Laminectomy, facetectomy and foraminotomy (unilateral or bilateral with decompression of spinal cord, cauda equina and/or nerve root[s], [eg, spinal or lateral recess stenosis]), single vertebral segment; lumbar	**0.0774**	**15.37**	**362**	75	**90**	30	1	1	1	3

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 11960

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Plastic Surgeons How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 2400
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. 3x the Medicare Population

Specialty Plastic Surgeons Frequency 2280 Percentage 95.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 800
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC Database

Specialty Plastic Surgeons Frequency 760 Percentage 95.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: 01/2020

CPT Code	Long Descriptor	Global Period
11960	Insertion of tissue expander(s) for other than breast, including subsequent expansion	090

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
11960	A 67 year old male with a history of traumatic scalp loss and unstable skin graft to his cranium presents for reconstruction. There is not sufficient scalp for primary reconstruction. Tissue expansion is planned to recruit additional scalp and allow for excision of the previous skin graft.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   Our specialty formed a panel of experts to develop practice expense recommendations for this family of codes. The panel was comprised of our RUC Advisors and multiple clinical experts who practice in the areas of general plastic surgery and breast reconstruction. The expert panel members also practice in settings that vary by size, geography, and represent both private and academic settings.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code, but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here (*for service reviewed prior to the implementation of clinical activity codes, detail is not provided in the RUC database, please contact Samantha Ashley at samantha.ashley@ama-assn.org for PE spreadsheets for your reference codes*):

   We used existing PE inputs from the RUC database for 11960.

3. Is this code(s) typically reported with an E/M service?

   No

4. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:

   We are only requesting PE subcommittee standards for clinical activities.

5. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies for the **code family**, please provide compelling evidence (please see *PE compelling evidence guidelines*) Please explain if the increase can be entirely accounted for because of an increase in physician time:

   We are requesting an INCREASE in practice expense. This increase is based on the addition of the tissue expansion kits (SA 108) that were not previously included in the PE. We believe this lack of inclusion is consistent with flawed methodology as the appropriate kit required for tissue expansion was not included in the previous valuation nor are there the typical supplies that would have been used for the expansion. We have also

add the use of a camera for post-operative photographs which is standard of care for most reconstructive procedures. The addition of a camera is a change in technology and we believe also meets compelling evidence.

We have changed the PE recommendations for this code to follow the same principles of standardization that we used for the other four families of codes being evaluated due to the significant variability in the post-op supplies and practice expense likely due to the various times and settings in which those decisions were made. Given the similarity in post-op visit supplies for these visits, we have elected to standardize all of the practice expenses associated with each code. We believe this standardization is important in keeping consistency within the RUC valuation process. Standardization for these codes includes:

1)Using the standard clinical staff times for the pre-times and 90 day globals, discharge (x38) days, and with the number of post-op clinic visits/times pending final approval at the RUC.
2)Requesting one pack, post-op incision care (suture) per code
3)Requesting the standard Minimum Supply Package for Visits (Multi-speciality), a standard table, and an exam light for all post-operative visits with the number of post-op clinic visits/times pending final approval at the RUC
4)Requesting 20 minutes of a camera, digital system, 12 megapixel (medical grade) to account for two 10 minutes session of post-operative photographs obtained during the global period.

In addition, for this code we have include the kit, tissue expansion (SA 108) for the 7 post-op visits involving the actual tissue expansion. We have deleted all other supplies.

6. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see second worksheet in PE spreadsheet workbook*), please explain the difference here:

N/A

7. Please provide a brief description of the clinical staff work for the following:
   a. Pre-Service period:

In the pre-service period, clinical staff work includes completing pre-service diagnostic and referral forms, coordinating pre-surgery services, scheduling space and equipment in the facility, providing pre-service education/obtaining consent, and completing pre-procedure phone calls/prescriptions.

   b. Service period (includes pre, intra and post):

For this facility-only based procedure, the only post period is the 6 minutes alloted in the standards for assisting in same-day discharge management including coordination of post-operative appointments.

   c. Post-service period:

In the post-service period, clinical staff work includes the standard activities involved in any post-operative E&M visit including rooming the patient, gowning, reviewing current medications/allergies in EHR, obtaining vital signs, acting as chaperone due to sensitive areas being examined, assisting with wound care, coordination of care, and cleaning of the room.

For the visits involving tissue expansion, the clinical staff work includes all of the above along with gathering of the appropriate supplies need for the expansion procedure and providing assistance to the physician during the procedure while also acting as a chaperone if needed.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

8. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see second worksheet in PE spreadsheet workbook*):
   N/A

9. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.
   N/A

INVOICES

10. ☐ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

11. ☐ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

12. If you wish to include a supply that is not on the list (*please see fourth worksheet in PE spreadsheet workbook*) please provide a paid invoice. Identify and explain the invoice here:
    N/A

13. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation. Please include the description, CMS supply code, unit, item quantity and unit price (if available). See documents two and three under PE reference materials on the RUC Collaboration Website for information on the contents of kits, packs and trays.

DESCRIPTION	Code	Unit	Item Qty	Unit price
pack, minimum multi-specialty visit	**SA048**	**pack**		**2.1122**
paper, exam table		foot	7	
gloves, non-sterile		pair	2	
gown, patient		item	1	
pillow case		item	1	
cover, thermometer probe		item	1	

DESCRIPTION	Code	Unit	Item Qty	Unit price
pack, post-op incision care (suture)	**SA054**	**pack**		**4.8353**
kit, suture removal		kit	1	
povidone soln (Betadine)		ml	10	
gauze, sterile 4in x 4in		item	2	

gloves, sterile	pair	1
steri-strip (6 strip uou)	item	2
swab-pad, alcohol	item	2
tape, surgical paper 1in (Micropore)	inch	12
tincture of benzoin, swab	item	1

We have selected to use SA108 (Kit, tissue expansion) to cover the supplies involved with filling a tissue expander during a clinic visit. This was the item used during the previous PE valuation and we assumed that it contained the appropriate items as the title of the kit is very clear about usage. However, the itemization of this kit is not available online nor through AMA staff (via email discussion). Thus, we were asked to provide a list of what we believe should be in that kit below:

SJ041	povidone soln (Betadine)	ml	0.137
SB007	drape, sterile barrier 16in x 29in	item	0.502
SB024	gloves, sterile	pair	0.875
SB001	cap, surgical	item	0.6745
	250ml bag of saline		
SD212	tubing, sterile, connecting (fluid administration)	item	1.54
SC049	stop cock, 3-way	item	1.1075
SC056	syringe 50-60ml	item	1.0055
SC030	needle, 19-25g, butterfly	item	0.669
SG021	bandage, strip 0.75in x 3in (Bandaid)	item	0.2265

14. If you wish to include an equipment item that is not on the list (*please see fifth worksheet in PE spreadsheet workbook*) please provide a paid invoice. Identify and explain the invoice here:

15. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

16. List all the equipment included in your recommendation and the equipment formula chosen *(*please see document titled *Calculating equipment time).* If you have selected "other formula" for any of the equipment please explain here:

EF023 table, exam – standard formula
EQ168 light, exam – standard formula

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

ED005 camera, digital system, 12 megapixel (medical grade) – other formula

It is standard in plastic surgery practices to use a medical grade (12 megapixel) camera for photograph as most offices also have a standard photo suite for professional grade images.

20 min total usage at 10min per post-operative session x 2 session.

17. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail/explanation, please include here:

PROFESSIONAL LIABILITY INSURANCE (PLI) INFORMATION

18. If this is a PE only code please select a crosswalk based on a similar specialty mix:

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING

During and immediately following the review of this tab at the PE Subcommittee meeting please revise the PE spreadsheet and summary of recommendation (PE SOR) documents based on modifications made during the meeting. Please submit the revised documents electronically to Samantha Ashley at samantha.ashley@ama-assn.org immediately following the close of business the same day that the tab is reviewed. On the PE spreadsheet, please highlight the cells and/or use red font to show the changes made during the PE Subcommittee meeting (if you have provided any of this highlighting based on changes from the reference code prior to the PE Subcommittee meeting please remove it, so not to be confused with changes made during the meeting). In addition to those revisions please also provide an itemized list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below (e.g. clinical activity CA010 *obtain vital signs* was reduced from 5 minutes to 3 minutes).

AMA/Specialty Society RVS Update Committee Summary of Recommendations
Site of Service /090-Day Post-Operative Visits

January 2020

Breast Implant/Expander Placement – Tab 5

In February 2019, the CPT Editorial Panel approved the deletion of two codes and revisions to seventeen codes to provide descriptor clarification of any overlap in physician work for breast reconstruction services. In the CPT coding changes application, the specialty stated that this change is editorial and does not involve a change in work. At the April 2019 RUC meeting, the RUC agreed that the seventeen breast reconstruction services should be surveyed for the October 2019 RUC meeting. Codes 11960, 19316, 19350, 19355, and 19396 were also included as being part of the same code family. Based on the change in the typical patient for CPT code 11971 and multiple Harvard valued codes, the RUC agreed that all twenty-two of these services be surveyed, contrary to the specialty initial recommendation that these changes are editorial only and do not require surveying. At that time, the RUC had recommended surveying all twenty-two codes for the October 2019 RUC meeting.

At the October 2019 RUC meeting, the specialty elected to survey two of the codes and send a third code to CPT for revision. The specialty noted that the designation of a single 22 code family was too broad, and that the family categorization should be more granular than surgical procedures for the repair and/or reconstruction of the same anatomic region. The specialties proposed 8 families of services to the RUC noting that this categorization assign similar procedures together and ensures that the survey process is effective. The RUC concurred with the more granular classification of families that group analogous procedures together. Furthermore, the specialty indicated, and the RUC agreed, that three of the code families, autologous reconstruction, nipple procedures and moulage formation were not identified by any RAW screens, had no change to their work from CPT revisions and had no obvious flaws to their valuation (i.e., a site of service valuation issue), and therefore would not need to be reviewed at this time. The RUC agreed that, although the specialty societies had conducted surveys of code 11970 and 11971 for October 2019, these services should be resurveyed with their newly identified respective code families. In October 2019, the RUC reviewed these family of services with the specialty societies and agreed that these services would be surveyed for physician work and practice expense in January 2020. The *Breast Implant/Expander Placement* code family was one of the code families identified by the RUC for review for the January 2020 RUC meeting.

In addition, codes 19340 and 19357 were identified via the Site of Service Anomaly screen. Services performed less than 50% of the time in the inpatient setting yet include inpatient hospital Evaluation and Management services within the global period and 2018e Medicare utilization over 5,000. Code 19357 was also identified via the 090-Day Global Codes with >6 office visits based on 2018 estimated Medicare utilization > 1,000 screen.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

11970 ***Replacement of tissue expander with permanent implant***
The RUC reviewed the survey results from 43 plastic surgeons and recommends: 40 minutes of pre-service evaluation time, 10 minutes for pre-service positioning time, 12 minutes for pre-service scrub/dress/wait, 60 minutes for intra-service time, 20 minutes for immediate post-time, 0.5 99238 discharge visit, 1 99213 post-operative office visit and 2 99212 post-operative office visits. The evaluation is spent setting and marking the patient in an upright position to evaluate breast shape and measure base dimensions. Additional time is also required to review choice of implants with the patient. Ten minutes of positioning time are necessary to account for the time involved in securing arms and assessing the position of the head and neck and making any adjustments to allow for sitting upright intra-operatively. The RUC noted that the current times for this service are over 25 years old from the Harvard study and not valid for comparison. The IWPUT 0.041 for the current times is inappropriately low for this relatively intense major surgical procedure, which strongly implies the current times are inflated relative to the current work RVU and not valid for comparison to the new times.

The RUC reviewed the survey 25th percentile work RVU of 10.26 and agreed that this value overstates the amount of physician work involved. To determine an appropriate work RVU, the RUC compared the survey code to CPT code 26262 *Radical resection of tumor, distal phalanx of finger* (work RVU= 8.29, intra-service time of 60 minutes, total time of 212 minutes) and noted that both services involve identical intra-service times and similar total times and the survey code was slightly less intense. The RUC also compared the survey code to MPC code 50590 *Lithotripsy, extracorporeal shock wave* (work RVU of 9.77, intra-service time of 60 minutes, total time of 207 minutes) and noted that both services have identical intra-service times and similar total times, however the reference code is a more intense service to perform. Following the review of these and other reference codes, the RUC agreed that it would be appropriate to maintain the current value of 8.01 for the survey code. **The RUC recommends a work RVU of 8.01 for CPT code 11970.**

19325 ***Breast augmentation with implant***
The RUC reviewed the survey results from 45 plastic surgeons and recommends: 40 minutes of pre-service evaluation time, 10 minutes for pre-service positioning time, 12 minutes for pre-service scrub/dress/wait, 60 minutes for intra-service time, 20 minutes for immediate post-time, 0.5 99238 discharge visit and 4 99212 post-operative office visits. The evaluation is spent setting and marking the patient in an upright position to evaluate breast shape and measure base dimensions. Ten minutes of positioning time are necessary to account for the time involved in securing arms and assessing the position of the head and neck and making any adjustments to allow for sitting upright intra-operatively. The RUC noted that the drop in intra-service time and total time does not necessarily warrant a change in value for the survey code. The RUC noted that the current times for this service are over 25 years old from the Harvard study and not valid for comparison. The IWPUT 0.052 for the current times is low for this relatively intense major surgical procedure, which strongly implies the current times are inflated relative to the current work RVU and not valid for comparison to the new times.

The RUC reviewed the survey 25th percentile work RVU of 10.00 and agreed that this value overstates the amount of physician work involved. Therefore, the RUC compared the survey code to CPT code 37761 *Ligation of perforator vein(s), subfascial, open, including ultrasound guidance, when performed, 1 leg* (work RVU= 9.13, intra-service time of 60 minutes, total time of 224) and noted that both services have an identical amount of intra-service time and similar total time. The RUC also compared the survey code to MPC code 33207 *Insertion of new or replacement of permanent pacemaker with transvenous electrode(s); ventricular* (work RVU= 7.80, intra-service time of 60 minutes, total time of 233.5

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

minutes) and noted that although both services have identical intra-service time, the survey code is a more intense service to perform. Following the review of these and other reference codes, the RUC agreed that it would be appropriate to maintain the current value of 8.64 for the survey code. The RUC also noted that although 19325 has the same intra-service time as 11970, it also includes the additional work of creating a pocket versus 11970 where there already is an expander and the pocket has already been created prior to this procedure. CPT code 19325 also includes more total time and it is appropriate to value this as somewhat higher. **The RUC recommends a work RVU of 8.64 for CPT code 19325.**

19340 ***Insertion of breast implant on same day of mastectomy (ie, immediate)***
The RUC reviewed the survey results from 44 plastic surgeons and recommends: 40 minutes of pre-service evaluation time, 10 minutes for pre-service positioning time, 14 minutes for pre-service scrub/dress/wait, 80 minutes for intra-service time, 20 minutes for immediate post-time, 0.5 99238 discharge visit, 2 99213 post-operative office visit and 2 99212 post-operative office visits. The evaluation is spent setting and marking the patient in an upright position to evaluate breast shape and measure base dimensions. Ten minutes of positioning time are necessary to account for the time involved in securing arms and assessing the position of the head and neck and making any adjustments to allow for sitting upright intra-operatively.

The RUC reviewed the survey 25th percentile work RVU of 14.25 and agreed that this value overstates the amount of physician work involved. The RUC agreed that a direct crosswalk to CPT code 36831 *Thrombectomy, open, arteriovenous fistula without revision, autogenous or nonautogenous dialysis graft (separate procedure)* (work RVU= 11.00, intra-service time of 85 minutes, total time of 248, RUC reviewed in 2013) would be appropriate, noting that both services involve an identical amount of physician work and similar times and therefore should be valued the same. The RUC agreed with the specialty that the work for 19342 to 19340 are similar and should be valued the same. CPT code 19342 is a more intense service as it also involves the additional work to recreate the mastectomy defect; this is appropriately reflected in the higher IWPUT relative to 19340 (0.079 vs. 0.072). The RUC also reviewed reference codes 64910 *Nerve repair; with synthetic conduit or vein allograft (eg, nerve tube), each nerve* (work RVU= 10.52, intra-service time of 75 minutes, total time of 257 minutes) and code 36821 *Arteriovenous anastomosis, open; direct, any site (eg, Cimino type) (separate procedure)* (work RVU= 11.90, intra-service time of 75 minutes, total time of 233 minutes) and agreed that they appropriately bracketed the recommended times and value for survey code 19340. **The RUC recommends a work RVU of 11.00 for CPT code 19340.**

19342 ***Insertion or replacement of implant on separate day from mastectomy***
The RUC reviewed the survey results from 43 plastic surgeons and recommends: 40 minutes of pre-service evaluation time, 10 minutes for pre-service positioning time, 12 minutes for pre-service scrub/dress/wait, 80 minutes for intra-service time, 20 minutes for immediate post-time, 0.5 99238 discharge visit, 1 99213 post-operative office visit and 3 99212 post-operative office visits. The evaluation is spent setting and marking the patient in an upright position to evaluate breast shape and measure base dimensions. Ten minutes of positioning time are necessary to account for the time involved in securing arms and assessing the position of the head and neck and making any adjustments to allow for sitting upright intra-operatively.

The RUC reviewed the survey 25th percentile work RVU of 14.39 and agreed that this value overstates the amount of physician work involved. The RUC agreed that a direct crosswalk to CPT code 36831 *Thrombectomy, open, arteriovenous fistula without revision, autogenous or*

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

nonautogenous dialysis graft (separate procedure) (work RVU= 11.00, intra-service time of 85 minutes, total time of 248, RUC reviewed in 2013) would be appropriate, noting that both services involve an identical amount of physician work and similar times and therefore should be valued the same. The RUC agreed with the specialty that the work for 19342 to 19340 are similar and should be valued the same. CPT code 19342 is a more intense service as it also involves the additional work to recreate the mastectomy defect; this is appropriately reflected in the higher IWPUT relative to 19340 (0.079 vs. 0.072). The RUC also reviewed reference codes 64910 *Nerve repair; with synthetic conduit or vein allograft (eg, nerve tube), each nerve* (work RVU= 10.52, intra-service time of 75 minutes, total time of 257 minutes) and code 36821 *Arteriovenous anastomosis, open; direct, any site (eg, Cimino type) (separate procedure)* (work RVU= 11.90, intra-service time of 75 minutes, total time of 233 minutes) and agreed that they appropriately bracket the recommended times and value for survey code 19340. **The RUC recommends a work RVU of 11.00 for CPT code 19342.**

19357 *Tissue expander placement in breast reconstruction, including subsequent expansion(s)*
The RUC reviewed the survey results from 44 plastic surgeons and recommends: 40 minutes of pre-service evaluation time, 10 minutes for pre-service positioning time, 15 minutes for pre-service scrub/dress/wait, 90 minutes for intra-service time, 23 minutes for immediate post-time, 0.5 99238 discharge visit, 5 99213 post-operative office visit and 2 99212 post-operative office visits. The evaluation is spent setting and marking the patient in an upright position to evaluate breast shape and measure base dimensions. Ten minutes of positioning time are necessary to account for the time involved in securing arms and assessing the position of the head and neck and making any adjustments to allow for sitting upright intra-operatively. The first post-operative visit is to change dressings, remove the drain and evaluate the patient. Visits two through six of the post-operative visits are related to the incremental filling of the tissue expander typically starting at 3-4 weeks post-operative and occurring on a weekly basis. The seventh visit would typically occur one month following the completion of the expansion.

The RUC reviewed the survey 25th percentile work RVU of 17.95 and agreed that this value overstates the amount of physician work involved. The RUC agreed that a direct crosswalk to CPT code 65285 *Repair of laceration; cornea and/or sclera, perforating, with reposition or resection of uveal tissue* (work RVU= 15.36, intra-service time of 90 minutes, total time of 353 minutes, last reviewed in 2011). The RUC noted that both services have identical intra-service times, similar total times and involve the same amount of physician work. The RUC also compared this code to MPC code 19303 *Mastectomy, simple, complete* (work RVU= 15.00, intra-service time of 90 minutes, total time of 283) and noted that both services involve identical intra-service time, though the survey code involves much more total time. The RUC also compared this code to non-breast tissue expander code 11960 reviewed at this meeting and noted that 19357 is more intense and complex to perform due to the additional more intense work of going beneath the muscle which is not required for the typical patient for 11960. **The RUC recommends a work RVU of 15.36 for CPT code 19357.**

Practice Expense
The Practice Expense Subcommittee made a revision to account for the reduction in discharge time to a half-day discharge. The Practice Expense Subcommittee changed the exam table to a power table for each code which is typical for this specialty. **The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Work Neutrality
The RUC's recommendation for these codes will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
Repair (Closure) **Other Flaps and Grafts**				
●*15769*		*Grafting of autologous soft tissue, other, harvested by direct excision (eg, fat, dermis, fascia)* *(For injection[s] of platelet-rich plasma, use 0232T)*		
●*15771*		*Grafting of autologous fat harvested by liposuction technique to trunk, breasts, scalp, arms, and/or legs; 50cc or less injectate* *(Report 15771 only once per session)*		
+●*15772*		*each additional 50cc injectate, or part thereof (List separately in addition to code for primary procedure)* *(Use 15772 in conjunction with 15771)*		
Breast **Repair and/or Reconstruction**				
		Breast reconstruction is performed to repair defects due to congenital anomaly or loss of breast tissue after a surgical excision. The goal of breast reconstruction is to correct the anatomic defect and to restore form and breast symmetry. A breast can be reconstructed using a single technique or a combination of techniques, and each technique can stand alone. Additionally, both breasts may be reconstructed at the same time, but may use different techniques or a combination of techniques. In many instances breast reconstruction requires more than one planned procedure or may require revisions. The native breast may be altered using different techniques. The breast and breast mound can be lifted with a mastopexy (19316), reduced in volume with a breast reduction (19318), or augmented with a breast implant (19325). Post-mastectomy breast reconstruction may be performed using a variety of techniques. An implant-based reconstruction involves placement of a device filled with fluid (eg, saline, silicone gel) to provide volume to the breast. In immediate reconstruction, an implant is placed primarily at the time of a mastectomy (19340). In delayed reconstruction, an implant is placed at any date separate from the mastectomy (19342). This includes placement of		

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

any new implant or replacement of an existing implant within the mastectomy defect or reconstructed breast. The removal of an intact breast implant for replacement is included in 19342.

A breast implant cannot always be placed due to the lack of an adequate skin envelope. Code 19357 describes insertion of a tissue expander which is a device that is surgically implanted to create an adequate sized pocket for subsequent insertion of a permanent implant. A tissue expander is an inflatable device placed beneath the skin and chest muscle, into which saline is injected over a period of weeks in the office to create the implant pocket. The tissue expander is eventually removed and may be replaced with a permanent breast implant (11970). Placement of either a breast implant (19340, 19342) or tissue expander (19357) may be reported separately when performed with flap reconstruction (19361, 19364, 19366, 19367, 19368,19369).

Code 11970 describes the removal of a tissue expander with concurrent insertion of a permanent breast implant. Code 11970 includes removal of the expander, minor revisions to the breast capsule and placement of the new breast implant. Code19370 may be reported in addition to 11970 if more extensive capsular revision is performed. Code 11971 describes the removal of a tissue expander without replacement of an expander or implant.

Autologous breast reconstruction involves harvesting a flap of skin, subcutaneous fat and/or muscle from one area of the body and relocating the tissue to the anterior chest to create a new breast mound. Flap reconstruction may be performed at the time of mastectomy or in a delayed fashion depending on patient preference and other oncologic treatments.

Code 19361 describes breast reconstruction with a flap composed of the latissimus dorsi muscle including some of the overlying skin and subcutaneous fat to reconstruct the breast mound. This flap is left on its vascular pedicle and tunneled beneath the armpit skin to the anterior chest to rebuild the breast. The blood supply to the flap is left attached to its origin in the axilla. To give the breast mound additional volume, a tissue expander or permanent breast implant may be placed beneath the latissimus flap. Placement of either a breast implant (19340, 19342) or tissue expander (19357) may be reported separately.

Code 19364 describes a microsurgical free tissue transfer of skin, and subcutaneous fat and/or muscle for breast reconstruction. This code includes the flap harvest, microsurgical anastomosis of one artery and two veins with use of an operating microscope, flap inset as a breast mound, and donor site closure. Typical free flaps include free transverse rectus abdominis myocutaneous (fTRAM), deep inferior epigastric perforator (DIEP), superficial inferior epigastric artery (SIEA), or gluteal artery perforator (GAP) flaps.

Code 19367 describes a single pedicled transverse rectus abdominis myocutaneous (TRAM) flap, where skin, subcutaneous fat, and a large portion of the rectus abdominis muscle from the lower abdomen is moved beneath the upper abdominal wall skin up to the chest to rebuild the breast. The blood supply to the flap is left attached to its origin in the abdomen.

Code 19368 describes "supercharging" of a single pedicled TRAM flap. This is typically performed to increase blood flow in TRAM flaps with marginal circulation to ensure flap survival. In addition to the standard unipedicle TRAM procedure, the inferior epigastric artery and/or veins are also anastomosed to recipient vessels in the chest using microsurgical techniques.

Code 19369 describes a bipedicled TRAM flap in which skin, subcutaneous fat and both rectus muscles are harvested for the reconstruction of a single breast. The dual blood supply to the flap is left attached to its origins in the abdomen.

Secondary and ancillary breast reconstruction procedures include nipple reconstruction (19350), implant adjustments through revisions to the breast capsule (19370), or removal of the entire breast capsule via a complete capsulectomy (19371) to achieve correct breast tissue positioning. In addition,

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

procedures may be performed on the contralateral breast to create symmetry (19316, 19318, 19325). Removal of an intact breast implant without replacement is reported with 19328. Removal of a ruptured breast implant, including the implant contents, is reported with 19330. A complete capsulectomy (19371) includes removal of the breast implant and all intracapsular contents.

Code 19380 describes a revision of a reconstructed breast, including significant excision of tissue re-advancement or re-inset of flaps. For autologous reconstruction, this code is inclusive of revisions of the flap position on the chest wall, removal of portions of the flap (via direct excision or liposuction), re-shaping of the flap, or scar revisions. However, if a limited procedure is performed with a defined code (eg, scar revision) then the more specific code should be used. The placement of a new implant (19342) or autologous fat grafting for increased volume (*15771, 15772*) may be separately reportable. For implant-based reconstruction, 19380 is inclusive of revisions to the skin and capsule when performed together. The exchange for a new or different size/shape/type of implant (19342) or autologous fat grafting for increased volume/contour irregularities *(15771, 15772*) may be separately reportable. Nipple reconstruction is reported with 19350 and includes local flaps (14000,14001), areolar skin grafting (15100, 15200, 15201), and subsequent tattooing (11920, 11921, 11922).

Code 19396 describes the formation of a moulage cast of a patient's chest defect. The mold is used to fabricate a specific, custom made implant that fits the patient's defect.

(To report bilateral procedures, report modifier 50 with the procedure code)

(For biological implant for soft tissue and/or breast implant reinforcement, use 15777 in conjunction with the primary procedure)

CPT Descriptor: Replacement of tissue expander with permanent implant

---

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 35-year-old female with a history of right breast cancer who has previously undergone mastectomy and placement of a tissue expander with subsequent expansion now presents for removal of the tissue expander and replacement with a breast implant.

Percentage of Survey Respondents who found Vignette to be Typical: 88%

Site of Service (Complete for 010 and 090 Globals Only)
Percent of survey respondents who stated they perform the procedure; In the hospital 37% , In the ASC 58%, In the office 5%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 75% , Overnight stay-less than 24 hours 25% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 25%

Description of Pre-Service Work: Orders for preoperative medications are written, and laboratory results, imaging, and patient photographs, are reviewed. The planned procedure and postoperative management are reviewed with the patient and the patient's family. Post-operative functional and aesthetic expectations are reviewed. The patient's history and physical are updated with reconciliation of medications/allergies. Post-operative pain control is reviewed and a narcotics controlled substance review is performed. NPO status is confirmed. The operative site is marked sitting upright to evaluate breast shape and measure base dimensions of the breast. The decision between silicone and saline implants is again reviewed with confirmation of patient choice for implant type. Informed consent is obtained. The length and type of anesthesia are reviewed with the anesthesiologist. Surgeon changes into scrub clothes. The availability of all required supplies and instruments are verified. Confirmation of the ability for the operating room bed to sit upright is performed. The patient is transferred from the gurney and positioned on the operating room table. A patient verification procedure is performed. Bony prominences are padded, and thermal regulation drapes are applied. The arms are secured in a position to allow for sitting upright. The position of the head/neck is assessed and adjusted, as needed based on the need to sit up intra-operatively. A neck roll is placed to support the head. The surgeon monitors and assists with prepping including waiting for the prep to dry. The surgeon scrubs and gowns. Surgical drapes are placed. A pre-incision surgical time-out is performed with the operating surgical team.

Description of Intra-Service Work: An incision is performed on the breast followed by a meticulous dissection of the subcutaneous tissues. Hemostasis is obtained. The surgeon performs a capsulotomy to enter the implant pocket, and the tissue expander is then punctured, the saline evacuated, and the device removed from the patient. The surgeon then inspects the surface of the pocket to assess for any abnormalities. The surgeon then places an implant sizer into the pocket and provisionally closes the wound. The surgeon then raises the operating table to assess the shape of the breast under the effects of gravity and to assess the size and symmetry of the implant sizer when compared to the contralateral breast. The volume in the sizer is adjusted based on the desired outcome. Minor capsule work to improve the shape of the pocket may be performed. The patient is then returned to the supine position. The breast incision is then reopened and the implant sizer removed. If the sizer placed originally is determined to be of inappropriate size or contour, then another sizer is opened, and this portion of the case is repeated. Once the appropriate implant is identified, the implant is opened and soaked in reconstituted antibiotic. A closed suction drain is placed if deemed appropriate. The implant pocket is irrigated copiously after removal of the sizer. The operative team then changes their gloves and the patient's chest is painted with betadine paint. The implant is placed into the pocket making sure that it is in the appropriate orientation and using a no skin touch

technique. The pocket is irrigated once again. The patient is raised on the table again to make sure that the implant demonstrates reasonable position and contour. The patient is returned to the supine position, the previous mastectomy scar is excised, and the wound is closed in a layered fashion.

Description of Post-Service Work: The chest is cleaned. A dressing is applied to the incision. A surgical bra is placed on the patient. The operative report is dictated. The postoperative orders are written.

Discharge Management Visit: Discharge medications are reconciled and prescriptions are written. There is a discussion with the family and patient regarding the procedure and findings. There is reiteration of the convalescence, precautions, follow up appointments, expected postoperative course, signs and symptoms of complications. Instructions, appropriate discharge timing, follow up, and precautions are discussed with the postoperative nursing team.

Post op visit 1: 99213
This visit typically occurs at one week post-operatively. The patient's convalescence to that point is reviewed and discussed. The patient's pain control and use of antibiotics are discussed. Refills are provided if indicated. The dressing from the operative site is removed. The drain output is assessed, and the drain suture and drain are removed, if appropriate. The breast wound is inspected and palpated. The integrity and viability of the mastectomy site/breast skin is assessed. The position of the implant is assessed as are both the cosmesis of the implant and breast symmetry. Patient and family questions and concerns are addressed. Ongoing care is reiterated and the anticipated timing of additional surgeries reviewed. Limitations of post-surgical activity are clearly reviewed. The wound is redressed, and the patient is placed back into her surgical bra.

Post op visit 2: 99212
This visit typically occurs at two to four weeks post-operatively. The patient's convalescence to that point is reviewed. The breast wound is inspected and palpated. The integrity and viability of the soft tissues are assessed. The position of the implant is assessed with particular attention to the inframammary fold as are both the cosmesis of the implant and breast symmetry. Patient and family questions and concerns are addressed. The wound is redressed and the patient is placed back into her surgical bra. Referrals to physical therapy are made if needed. Ongoing care is reiterated as well as slowly lifting the post-operative restrictions.

Post op visit 3: 99212
This visit typically occurs at three months post-operatively. The patient's convalescence to that point is reviewed and at this point, the patient should be back to normal activity. The surgical site is evaluated. The position of the implant is assessed as are both the cosmesis of the implant and breast symmetry. Patient and family questions and concerns are addressed. At this visit, the most time is spent evalutating the reconstructive outcome with the patient including patient-reported outcomes. Persistent deformities or areas of patient concern are systmetically addressed by the surgeon. The next stages of reconstruction are discussed including any necessary revisions and the timing of nipple reconstruction.

SURVEY DATA

RUC Meeting Date (mm/yyyy)	01/2020					
Presenter(s):	Mark Villa, MD Jeffrey Kozlow, MD					
Specialty Society(ies):	American Society of Plastic Surgeons					
CPT Code:	11970					
Sample Size:	1000	**Resp N:**	43			
Description of Sample:	A random sample of membership who have self-identified as reconstructive surgeons.					
		Low	**25th pctl**	**Median***	**75th pctl**	**High**

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	14%	21%	36%	29%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	14%	21%	65%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	29%	43%	28%
Physical effort required	7%	0%	93%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	29%	70%	64%

2nd Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	0%	33%	25%	42%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	17%	8%	75%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	8%	17%	75%
Physical effort required	8%	25%	67%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	25%	75%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

In February 2019, the CPT Editorial Panel approved the deletion of two codes and editorial revisions to seventeen other codes including CPT 11970. The change made to 11970 was updating the term "prosthesis" to "implant".

CPT 11970	Descriptor

Previous	Replacement of tissue expander with permanent prosthesis
Updated	Replacement of tissue expander with permanent implant

After the April 2019 RUC meeting, the decision was made to survey 11971 (Removal of tissue expander without insertion of implant) due to a negative IWPUT. Code 11970 was included in survey at that time as a potential family with planned presentation at the October RUC meeting. Although a survey was performed and a SOR for 11970 was submitted, after the overall discussion and agreement to develop different families, 11970 was never formally presented. During the October 2019 RUC meeting, it was agreed upon that 11970 would be re-surveyed along with codes 19325, 19340, 19342, and 19357 as part of the "Implant/Expander Placement" family.

Compelling Evidence

We are requesting current value.

Survey Sample and Process

A survey request was sent to a random selection of members from the American Society of Plastic Surgeons who have self-identified as reconstructive surgeons.

Recommendation

We are recommending a work RVU of 8.01 which is the current value and below the 25th percentile on the survey.

Pre-time Package 3-FAC (Straightforward Patient/Difficult Procedure)

We have selected pre-time package 3-FAC as it is the lowest package for a patient undergoing general anesthesia.

Evaluation time – We are recommending 40 minutes of evaluation time which is an increase of 7 minutes from the package time, however, it is a decrease of 5 minutes from our survey data. The additional 7 minutes of pre-time for this case is spent in setting and marking the patient in an upright position to evaluate breast shape and measure base dimensions. Additional time is also required to review choice of implants with the patient.

Positioning time – We are recommending 10 minutes of positioning time which is an increase in 7 minutes from the pre-service package time. We believe there is extra time involved in securing arms and assessing the position of the head and neck and making any adjustments to allow for sitting upright intra-operatively which is not typically required for most procedures. This is supported by our median survey time.

Scrub, Dress, Wait time – We are recommending 12 minutes of scrub, dress and wait time which is a decrease in 3 minutes from the selected pre-service package time based on our survey median.

Post-time Package 9A (General Anes or Complex Reg Blk/Straightforward Procedure)

The recommended time has been reduced to 20 minutes which is a decrease of 10 minutes from the post package time selected to match our survey time.

Key Reference Codes

CPT Code: 11970

CPT	DESCRIPTOR	IWPUT	wRVU	TOTAL TIME	PRE	INTRA	POST	99238	99213	99212
11970	Replacement of tissue expander with permanent implant	**0.063**	**8.01**	**216**	**62**	**60**	**20**	0.5	1	2
15260	Full thickness graft, free, including direct closure of donor site, nose, ears, eyelids, and/or lips; 20 sq cm or less	**0.0563**	**11.64**	**273**	**28**	**100**	**30**		5	
64912	Nerve repair; with nerve allograft, each nerve, first strand (cable)	**0.072**	**12.00**	**272**	58	**90**	20	0.5	3	1

Code 11970 with an wRVU at the current value of 8.01 is an acceptable, but difficult comparison with the KRCs selected by our surgeons. Code 11970 as surveyed for this meeting has a significantly shorter intra-time and total time than either KRC. The intra-time differences are 40 and 30 minutes while the total times differences are 57 and 56 minutes. The wRVU for 11970 at current level is also appropriately lower than both KRCs.

MPC Comparison Codes:

CPT	DESCRIPTOR	IWPUT	wRVU	TOTAL TIME	PRE	INTRA	POST	99238	99213	99212
24076	Excision, tumor, soft tissue of upper arm or elbow area, subfascial (eg, intramuscular); less than 5 cm	**0.0432**	**7.41**	**229**	68	**60**	20	0.5	2	1
11970	Replacement of tissue expander with permanent implant	**0.063**	**8.01**	**216**	**62**	**60**	**20**	0.5	1	2
50590	Lithotripsy, extracorporeal shock wave	**0.0908**	**9.77**	**207**	51	**60**	15	0.5	2	1

Code 11970 with an wRVU at current value (8.01) demonstrates reasonable similarity to the two KRC codes selected for comparison although there is an inverse relationship of total time to wRVU across the three codes. All three codes have the same intra-time. Code 11970 has 13 minutes less total time compared to MPC 24076, but is +0.60 greater wRVU. However, Code 11970 has 9 minutes more of total time compared to MPC 50590, but is -1.76 less wRVU.

Additional MPC Codes:

In order to evaluate all relevant MPC codes, a search of the RUC data base for MPC, 90 day global, IT 60, TT 200-230, identified four codes. Code 11970 at current value (wRVU 8.01) would rank **2nd highest out of 5** total codes.

CPT	DESCRIPTOR	IWPUT	wRVU	TOTAL TIME	PRE	INTRA	POST	99238	99213	99212
64708	Neuroplasty, major peripheral nerve, arm or leg, open; other than specified	**0.0314**	**6.36**	**220**	55	**60**	15	0.5	1	3
52630	Transurethral resection; residual or regrowth of obstructive prostate tissue including control of postoperative bleeding, complete (vasectomy, meatotomy, cystourethroscopy, urethral calibration and/or dilation, and internal urethrotomy are included)	**0.0371**	**6.55**	**222**	53	**60**	35	0.5	1	2
24076	Excision, tumor, soft tissue of upper arm or elbow area, subfascial (eg, intramuscular); less than 5 cm	**0.0432**	**7.41**	**229**	68	**60**	15	0.5	2	1
11970	Replacement of tissue expander with permanent implant	**0.063**	**8.01**	**216**	**62**	**60**	**20**	0.5	1	2
50590	Frag kidney stone	**0.0908**	**9.77**	**207**	51	**60**	15		2	1

Comparisons to other recently valued codes in the RUC database:

Searching the RUC database for codes that are RUC surveyed in the last 10 years, 90 day global, IT 60, TT 200-230 reveals 24 codes. Code 11970 at the current value (wRVU = 8.01) would **rank 11th highest out of 25 codes.** A rank ordered table of these codes and wRVUs is below:

CPT CODE	33273	52630	21931	27043	26480	27619	49587	21014	25073
RVU	6.50	6.55	6.88	6.88	6.90	6.91	7.08	7.13	7.13

RVU	9.13	9.77	10.00	10.08	10.08	10.13	12.85		

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 11970

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Plastic Surgery How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 9000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. We believe, based on the patient population, this will be 3x the medicare usage.

Specialty Plastic Surgery Frequency 9000 Percentage 100.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 3,000
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC Database

Specialty Plastic Surgery Frequency 3000 Percentage 100.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Major procedure

BETOS Sub-classification Level II:
Breast

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 11970

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

CPT Descriptor: Breast augmentation with implant

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 21-year-old female presents with left mammary hypoplasia. She desires symmetry with the contralateral breast and an augmentation mammoplasty using the appropriate saline filled breast prosthesis in a submuscular position is planned.

Percentage of Survey Respondents who found Vignette to be Typical: 87%

Site of Service (Complete for 010 and 090 Globals Only)
Percent of survey respondents who stated they perform the procedure; In the hospital 27% , In the ASC 67%, In the office 6%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 75% , Overnight stay-less than 24 hours 25% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 67%

Description of Pre-Service Work: Orders for preoperative medications are written, and laboratory results, imaging, and patient photographs, are reviewed. The planned procedure and postoperative management are reviewed with the patient and the patient's family. Post-operative functional and aesthetic expectations are reviewed. The patient's history and physical are updated with reconciliation of medications/allergies. Post-operative pain control is reviewed and a narcotics controlled substance review is performed. NPO status is confirmed. The operative site is marked sitting upright to evaluate breast shape and measure base dimensions of the breast. The decision between silicone and saline implants is again reviewed with confirmation of patient choice for implant type. Informed consent is obtained. The length and type of anesthesia are reviewed with the anesthesiologist. Surgeon changes into scrub clothes. The availability of all required supplies and instruments are verified. Confirmation of the ability for the operating room bed to sit upright is performed. The patient is transferred from the gurney and positioned on the operating room table. A patient verification procedure is performed. Bony prominences are padded, and thermal regulation drapes are applied. The arms are secured in a position to allow for sitting upright. The position of the head/neck is assessed and adjusted, as needed based on the need to sit up intra-operatively. A neck roll is placed to support the head. The surgeon monitors and assists with prepping including waiting for the prep to dry. The surgeon scrubs and gowns. Surgical drapes are placed. A pre-incision surgical time-out is performed with the operating surgical team

Description of Intra-Service Work: An incision is performed on the breast followed by a meticulous dissection of the subcutaneous tissues to identify the inferior and lateral borders of the pectoralis major muscle. The pectoralis majory muscle is then elevated off the chest wall. Chest wall perforators are cauterized while preserve the native blood supply to the muscle. The inferior insertion on the ribs are transected to allow for a inferior pole fullness. Hemostasis is obtained. The surgeon then places an implant sizer into the pocket and provisionally closes the wound. The surgeon then raises the operating table to assess the shape of the breast under the effects of gravity and to assess the size and symmetry of the implant sizer when compared to the contralateral breast. The volume in the sizer is adjusted based on the desired outcome. The patient is then returned to the supine position. The breast incision is then reopened and the implant sizer removed. If the sizer placed originally is determined to be of inappropriate size or contour, then another sizer is opened, and this portion of the case is repeated. Once the appropriate implant is identified, the selected implant is opened and soaked in reconstituted antibiotic. A closed suction drain is placed if deemed appropriate. The implant pocket is irrigated copiously after removal of the sizer. The operative team then changes their gloves and the patient's chest is painted with betadine paint. The implant is placed into the pocket making sure that it is in the appropriate orientation and using a no skin touch

technique. The pocket is irrigated once again. The patient is raised on the table again to make sure that the implant demonstrates reasonable position and contour. The patient is returned to the supine position and the wound is closed in a layered fashion

Description of Post-Service Work: The chest is cleaned. A dressing is applied to the incision. A surgical bra is placed on the patient. The operative report is dictated. The postoperative orders are written.

Discharge Management Visit: Discharge medications are reconciled and prescriptions are written. There is a discussion with the family and patient regarding the procedure and findings. There is reiteration of the convalescence, precautions, follow up appointments, expected postoperative course, signs and symptoms of complications. Instructions, appropriate discharge timing, follow up, and precautions are discussed with the postoperative nursing team.

Post op visit 1: 99212
This visit typically occurs at one week post-operatively. The patient's convalescence to that point is reviewed and discussed. The patients pain control and use of antibiotics are discussed. Refills are provided if indicated. The dressing from the operative site is removed. The drain output is assessed, and the drain suture and drain are removed, if appropriate. The breast surgical site is inspected and palpated. The integrity and viability of the soft tissues are assessed. The position and shape of the breast are assessed for both cosmesis and breast symmetry. Patient and family questions and concerns are addressed. Limitations of post-surgical activity are clearly reviewed. The wound is redressed, and the patient is placed back into her surgical bra.

Post op visit 2: 99212
This visit typically occurs at two weeks post-operatively. The patient's convalescence to that point is reviewed. If the drain was not removed at the initial postoperative visit, the drain output is assessed, and the drain suture and drain are removed, if appropriate. The breast surgical site is inspected and palpated. The integrity and viability of the soft tissues are assessed. The position and shape of the breast are assessed for both cosmesis and breast symmetry. Patient and family questions and concerns are addressed. The wound is redressed and the patient is placed back into her surgical bra.

Post op visit 3: 99212
This visit typically occurs at one month post-operatively. The patient's convalescence to that point is reviewed. The breast surgical site is inspected and palpated. The breast surgical site is inspected and palpated. The integrity of the soft tissues are assessed. The position and shape of the breast are assessed for both cosmesis and breast symmetry. As the initial swelling is now partially resolved, the aesthetic outcome comes into focus and expectations moving forward are reviewed in detail. Patient and family questions and concerns are addressed. Referrals to physical therapy are made if needed. Ongoing care is reiterated as well as slowly lifting the post-operative restrictions.

Post op visit 4: 99212
This visit typically occurs at three months post-operatively. The patient's convalescence to that point is reviewed and at this point, the patient should be back to normal activity. The breast surgical site is inspected and palpated. The integrity of the soft tissues are assessed. The position and shape are assessed for both cosmesis and breast symmetry. The implant at this point has likely changed some in position as the soft tissues settle. Patient and family questions and concerns are addressed. At this visit, the most time is spent evalutating the outcome with the patient including patient-reported outcomes. Persistent deformities or areas of patient concern are systmetically addressed by the surgeon.

SURVEY DATA

RUC Meeting Date (mm/yyyy)	01/2020

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	30%	30%	20%	20%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	20%	50%	30%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	50%	30%	20%
Physical effort required	10%	30%	60%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	10%	30%	60%

2nd Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	0%	11%	44%	44%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	22%	78%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	0%	22%	78%
Physical effort required	0%	11%	89%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	0%	100%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

In February 2019, the CPT Editorial Panel approved the deletion of two codes and revisions to seventeen other codes related to breast reconstruction including 19325. The descriptor for 19325 was updated to reflect current language and ease of understanding by surgeons and coders. In addition, related code 19324 (mammoplasty, augmentation, without

prothetic implant) was deleted due to low volume and unclear indications. The parenthetical previously associated with both 19324 and 19325 was updated to direct use of 15X01 and 15X02 for fat grafting.

CPT 19325	Descriptor
Previous	Mammaplasty, augmentation; with prosthetic implant (for flap or fat graft use also appropriate number)
Updated	Breast augmentation with implant (for fat grafting performed in conjunction with 19325, see 15X01, 15X02)

During the October 2019 RUC meeting, it was agreed upon that 19325 would be surveyed along with codes 11970, 19340, 19342, and 19357 as part of the "Implant/Expander Placement" family.

Compelling Evidence

We are requesting current value for this code.

Survey Sample and Process

A survey request was sent to a random selection of members from the American Society of Plastic Surgeons who have self-identified as reconstructive surgeons.

Recommendation

We are recommending a work RVU of 8.64, the current value for the code and below the survey 25th percentile.

Pre-time Package 3-FAC (Straightforward Patient/Difficult Procedure)

We have selected pre-time package 3-FAC as it is the lowest package for a patient undergoing general anesthesia.

Evaluation time – We are recommending 40 minutes of evaluation time which is an increase of 7 minutes from the package time, however, it is a decrease of 4 minutes from our survey data. The additional 7 minutes of pre-time for this case is spent in setting and marking the patient in an upright position to evaluate breast shape and measure base dimensions.

Positioning time – We are recommending 10 minutes of positioning time which is an increase in 7 minutes from the pre-service package time. We believe there is extra time involved in securing arms and assessing the position of the head and neck and making any adjustments to allow for sitting upright intra-operatively which is not typically required for most procedures. This is supported by our median survey time.

Scrub, Dress, Wait time – We are recommending 12 minutes of scrub, dress and wait time which is a decrease in 3 minutes from the selected pre-service package time based on our survey median.

Post-time Package 9A (General Anes or Complex Reg Blk/Straightforward Procedure)

The recommended time has been reduced to 20 minutes which is a decrease of 10 minutes from the post package time selected to match our survey time.

Key Reference Codes

CPT	DESCRIPTOR	IWPUT	wRVU	TOTAL TIME	PRE	INTRA	POST	99238	99214	99213	99212
19325	Breast augmentation with implant	**0.096**	**8.64**	**216**	62	**60**	20	0.5			4
64910	Nerve repair; with synthetic conduit or vein allograft (eg, nerve tube), each nerve	**0.0661**	**10.52**	**257**	58	**75**	20	0.5		3	1
15260	Full thickness graft, free, including direct closure of donor site, nose, ears, eyelids, and/or lips; 20 sq cm or less	**0.0563**	**11.64**	**273**	28	**100**	30			5	

Code 19325 with an wRVU at current value (8.64) demonstrates marginal similarity to the selected KRC codes. Code 19325 has 53 and 40 minutes less intra-time and 41 and 57 minutes less total time compared to the respective KRCs. However, code 19930 also has significantly lower wRVU.

MPC Comparison Codes:

CPT	DESCRIPTOR	IWPUT	wRVU	TOTAL TIME	PRE	INTRA	POST	99238	99232	99213	99212
33207	Insertion of new or replacement of permanent pacemaker with transvenous electrode(s); ventricular	**0.0470**	**7.80**	**233.5**	42.5	**60**		1	1	1	
19325	Breast augmentation with implant	**0.096**	**8.64**	**225**	62	**60**	20	0.5			4
50590	Lithotripsy, extracorporeal shock wave	**0.0908**	**9.77**	**207**	51	**60**	15	0.5		2	1

Code 19325 with an wRVU at current value (8.64) demonstrates reasonable similarity to the two KRC codes selected for comparison although there is an inverse relationship of total times to wRVUs. Code 19325 has the same intra-time as both MPC codes with slightly different total times. The wRVU at current value for code 19325 fits in between the two selected codes. As seen on the table below with all the possible MPC codes, we opted to not use 49507 as it was RUC-CMS revised.

SEE NEXT PAGE

Additional MPC Codes:

In order to compare to all of the appropriate MPC codes, a search of the RUC data base for MPC, 90 day global, IT 50-70, TT 205-245, provided nine codes. Code 19325 at current value (wRVU = 8.64) would rank **3rd out of 10 codes**. Of note, three of the MPC codes with a lower wRVU are all in the same soft tissue excision. A table including the relevant MPC codes is below:

CPT	DESCRIPTOR	IWPUT	wRVU	TOTAL TIME	PRE	INTRA	POST	99238	99232	99213	99212
64708	Neuroplasty, major peripheral nerve, arm or leg, open; other than specified	**0.0314**	**6.36**	**220**	55	**60**	15	0.5		3	1
52630	Transurethral resection; residual or regrowth of obstructive prostate tissue including control of postoperative bleeding, complete (vasectomy, meatotomy, cystourethroscopy, urethral calibration and/or dilation, and internal urethrotomy are included) (RUC-CMS Revised)	**0.0371**	**6.55**	**222**	53	**60**	35	0.5		1	2
26113	Excision, tumor, soft tissue, or vascular malformation, of hand or finger, subfascial (eg, intramuscular); 1.5 cm or greater	**0.0449**	**7.13**	**214**	60	**58**	15	0.5		2	1
24076	Excision, tumor, soft tissue of upper arm or elbow area, subfascial (eg, intramuscular); less than 5 cm	**0.0432**	**7.41**	**229**	68	**60**	20	0.5		2	1
21556	Excision, tumor, soft tissue of neck or anterior thorax, subfascial (eg, intramuscular); less than 5 cm	**0.0455**	**7.66**	**234**	68	**60**	25	0.5		2	1
26735	Open treatment of phalangeal shaft fracture, proximal or middle phalanx, finger or thumb, includes internal fixation, when performed, each	**0.0372**	**7.42**	**237**	60	**60**	20	0.5		2	2
33207	Insertion of new or replacement of permanent pacemaker with transvenous electrode(s); ventricular	**0.0470**	**7.80**	**233.5**	42.5	**60**		1	1	1	
19325	Breast augmentation with implant	**0.096**	**8.64**	**225**	62	**60**	20	0.5			4
49507	Repair initial inguinal hernia, age 5 years or older; incarcerated or strangulated (RUC-CMS Revised)	**0.0711**	**9.09**	**231**	63	**70**	40	0.5		1	1
50590	Lithotripsy, extracorporeal shock wave	**0.0908**	**9.77**	**207**	51	**60**	15	0.5		2	1

Comparisons to other recently valued codes in the RUC database:

Searching the RUC database for codes that are RUC surveyed in the last 10 years, 90 day global, IT 50-70, TT 205-245 reveals 38 codes. Code 19370 at the 25th percentile (wRVU = 10.00) would **rank 17th highest out of 39 codes.**

Narrowing the search for codes that are RUC surveyed in the last 10 years, 90 day global, IT 60, TT 60, and TT 215-235 reveals 15 codes. Code 19370 at the25th percentile (wRVU = 10.00) would **rank 5th highest of 16 codes**. It is important to note that within the codes with lower wRVU, seven are all from the same soft tissue excision family. A rank ordered list of the codes and wRVUs is below:

CPT CODE	52630	26480	27619	49587	21014	25073	28041	23076	24076
wRVU	6.55	6.90	6.91	7.08	7.13	7.13	7.13	7.41	7.41
CPT CODE	21556	28298	19325	37761	24164	43284	66174		
wRVU	7.66	7.75	8.64	9.13	10.00	10.13	12.85		

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 19325

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Plastic Surgery How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 1800
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. We believe utilization is 3x the medicare population.

Specialty Plastic Surgery Frequency 1800 Percentage 100.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 600
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC Database

Specialty Plastic Surgery Frequency 600 Percentage 100.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Major procedure

BETOS Sub-classification Level II:
Breast

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 19325

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

CPT Descriptor: Insertion of breast implant on same day of mastectomy (ie, immediate)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 50-year-old female with a newly diagnosed breast carcinoma decides to undergo unilateral breast reconstruction utilizing a breast implant immediately following her mastectomy (same operative session, but mastectomy performed by another surgeon). After the mastectomy is completed, her skin envelope is adequate for an immediate implant based reconstruction.

Percentage of Survey Respondents who found Vignette to be Typical: 94%

Site of Service (Complete for 010 and 090 Globals Only)
Percent of survey respondents who stated they perform the procedure; In the hospital 77% , In the ASC 18%, In the office 5%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 12% , Overnight stay-less than 24 hours 68% , Overnight stay-more than 24 hours 20%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 40%

Description of Pre-Service Work: Orders for preoperative medications are written, and laboratory results, imaging, and patient photographs are reviewed. The planned procedure and postoperative management are reviewed with the patient and the patient's family. Post-operative functional and aesthetic expectations are reviewed. The patient's history and physical are updated with reconciliation of medications/allergies. Post-operative pain control is reviewed and a narcotics controlled substance review is performed. NPO status is confirmed. The operative site is marked sitting upright to evaluate breast shape and identify the planned mastectomy incisions and breast footprint. The patient decision between saline and silicone implants is confirmed. Informed consent is obtained. The length and type of anesthesia are reviewed with the anesthesiologist. Surgeon changes into scrub clothes. The availability of all required supplies and instruments are verified including implants. Confirmation of the ability for the operating room bed to sit upright is performed. The patient is transferred from the gurney and positioned on the operating room table. A patient verification procedure is performed. Bony prominences are padded, and thermal regulation drapes are applied. The arms are secured in a position to allow for sitting upright. The position of the head/neck is assessed and adjusted, as needed based on the need to sit up intra-operatively. A neck roll is placed to support the head. The surgeon monitors and assists with prepping including waiting for the prep to dry. The surgeon scrubs and gowns. Surgical drapes are placed. A pre-incision surgical time-out is performed with the operating surgical team.

Description of Intra-Service Work: Following the completion of a mastectomy, the surgeon assesses the viability of the mastectomy skin flaps and excises any obviously non-viable tissue or skin. Assuming a viable skin envelope remains, the surgeon elevates the pectoralis major muscle off the chest wall by dissecting along the lateral edge of the muscle and developing a plane of dissection under the pectoralis major. The pectoralis minor muscle is identified and separated from the pectoralis major, leaving it attached to the chest wall. Perforating vessels from the chest wall to the muscle are cauterized. The dissection is carried superiorly to the level of the clavicle, inferiorly to the origin of the muscle, and medially to the lateral sternal border. The medial row of perforating vessels supplying the pectoralis muscle may require cauterization, however, the thoracoacromial pedicle to the pectoralis major is kept intact. At the lateral border of the pectoralis muscle, the serratus anterior muscle is incised and elevated off the chest wall for a short distance. In cases requiring the use of an acellular dermal matrix inferiorly, the pectoralis major muscle may be divided inferiorly off the costal margin to allow for placement of the acellular dermal matrix. The lower lateral border of the pectoralis muscle is then sutured to the lateral chest wall or acellular dermal matrix to complete the pcoket. The width of the subpectoral

pocket is measured, and the proper implant sizer is selected. It is placed into the pocket and filled to the intended volume. The soft tissues are tailor tacked closed. The patient is transitioned to a sitting position and revisions are performed to the pocket, sizer volume/shape, and soft tissues until the desired result is achieved. The mastectomy skin flaps are evaluated again with regard to viability and any clearly non-viable skin is removed. The patient is returned to the supine position and the sizers are removed. The subpectoral pocket is rinsed with antibiotic irrigation and meticulous hemostasis is achieved. After preparing the skin, the selected implant is obtained and placed in the pocket with a no skin touch technique. The pectoralis muscle is sewn to the serratus or acellular demral matrix. Drains are placed in the wound and brought out through separate stab incisions and secured with sutures. Any additional skin revisions are performed to optimize the shape of the breast. The skin edges are then closed in layers. Sterile dressings are then applied

Description of Post-Service Work: The chest is cleaned. A dressing is applied to the incision. A surgical bra is placed on the patient. The operative report is dictated. The postoperative orders are written. Medications for overnight observation or admission are written. There is a discussion with the family and patient regarding the procedure and findings. There is reiteration of the convalescence, precautions, follow up appointments, expected postoperative course, signs and symptoms of complications. Instructions, appropriate discharge timing, follow up, and precautions are discussed with the postoperative nursing team.

Discharge Management Visit: The patient is typically (88% based on survey) is monitored until the next day. The patient is re-examined for surgical site complications and orders are advanced for the day. Discharge medications are reconciled and prescriptions are written. There is reiteration of the convalescence, precautions, follow up appointments, expected postoperative course, signs and symptoms of complications. Instructions, appropriate discharge timing, follow up, and precautions are reviewed

Post op visit 1: 99213
This visit typically occurs at one week post-operatively. The patient's convalescence to that point is reviewed and discussed. The patients pain control and use of antibiotics are discussed. Refills are provided if indicated. The dressing from the operative site is removed. The drain output is assessed, and the drain suture and drain are removed, if appropriate. The breast surgical site is inspected and palpated. The integrity and viability of the soft tissues are assessed. The position and shape of the implant/breast are assessed for both cosmesis and breast symmetry. Patient and family questions and concerns are addressed. Ongoing care is reiterated and the anticipated timing of additional surgeries reviewed. Limitations of post-surgical activity are clearly reviewed. The wound is redressed, and the patient is placed back into her surgical bra.

Post op visit 2: 99212
This visit typically occurs at two weeks post-operatively. The patient's convalescence to that point is reviewed. If the drain was not removed at the initial postoperative visit, the drain output is assessed, and the drain suture and drain are removed, if appropriate. The breast surgical site is inspected and palpated. The integrity and viability of the soft tissues are assessed. The position and shape of the implant/breast are assessed for both cosmesis and breast symmetry. Patient and family questions and concerns are addressed. The wound is redressed and the patient is placed back into her surgical bra.

Post op visit 3: 99212
This visit typically occurs at one month post-operatively. The patient's convalescence to that point is reviewed. The breast surgical site is inspected and palpated. The breast surgical site is inspected and palpated. The integrity and viability of the soft tissues are assessed. The position and shape of the implant/breast are assessed for both cosmesis and breast symmetry. As the initial swelling is now partially resolved, the aesthetic outcome comes into focus and expectations moving forward are reviewed in detail. Patient and family questions and concerns are addressed. Referrals to physical therapy are made if needed. Ongoing care is reiterated as well as slow lifting of post-operative restrictions.

Post op visit 4: 99213
This visit typically occurs at three months post-operatively. The patient's convalescence to that point is reviewed and at this point, the patient should be back to normal activity. The breast surgical site is inspected and palpated. The integrity and viability of the soft tissues are assessed. The position and shape of the implant/breast assessed for both cosmesis and breast symmetry. Patient and family questions and concerns are addressed. At this visit, the most time is spent evalutating the reconstructive outcome with the patient including patient-reported outcomes. Persistent deformities or areas of patient concern are systmetically addressed by the surgeon. The next stages of reconstruction are discussed including any necessary revisions and the timing of nipple reconstruction.

SURVEY DATA

RUC Meeting Date (mm/yyyy)	01/2020					
Presenter(s):	Mark Villa, MD, Jeffrey Kozlow, MD

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	0%	30%	40%	30%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	50%	50%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	10%	40%	50%
Physical effort required	10%	40%	50%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and	0%	30%	70%

judgment of physician
- Estimated risk of malpractice suit with poor outcome

2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	63%	37%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	50%	50%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	13%	75%	12%
Physical effort required	38%	50%	12%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	12%	63%	13%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

In February 2019, the CPT Editorial Panel approved the deletion of two codes and revisions to seventeen other codes related to breast reconstruction including 19340. The changes made to 19340 were made to clarify the definition of "immediate" to reflect the relationship to the timing of the mastectomy. Although in plastic surgery text, the terms immediate versus delayed have general been in relationship to a mastectomy, the previous code descriptor included other scenarios that caused confusion with surgeons and coders.

CPT 19340	Descriptor
Previous	Immediate insertion of breast prosthesis following mastopexy, mastectomy, or in reconstruction

Updated	Insertion of breast implant on the same day of mastectomy (ie, immediate)

During the October 2019 RUC meeting, it was agreed upon that 19340 would be surveyed along with codes 11970, 19325, 19342, and 19357 as part of the "Implant/Expander Placement" family. It was also included on the RAW screen of codes between 5,000 and 9,999 with site of service change.

Compelling Evidence

We are requesting a value that is less than current value.

Survey Sample and Process

A survey request was sent to a random selection of members from the American Society of Plastic Surgeons who have self-identified as reconstructive surgeons.

Recommendation

We are recommending a work RVU of 12.00 which is below both the current value and survey 25th percentile. This recommendation is made ultimately based on a cross-walk to 45172 from our search of recently valued codes.

It is important to note that the decrease in intra-time from current was seen across this family of surveyed codes and is significantly different than previous survey of this code. In addition, the NEJM paper by Chan et al from April 2019 suggested that RUC surveyed plastic surgery times may be lower than actual times from NSQIP. Code 19340 was one of the codes for which the NSQIP data was used and the data from NSQIP was provide by AMA staff to all advisors via email on 4/18/19. In NSQIP, 19340 had an average time intra-time of 145.2 minutes which is significantly greater than the 80 minutes from the current survey and is closer, but still greater, then the previous survey value from October 2009 of 120 minutes. We believe this difference is problematic when evaluating this code and code family as it an unexplained finding.

We have also included a full discharge day, 99238, based our recommendations from our survey and the response that 88% of patients stay overnight.

Pre-time Package 3-FAC (Straightforward Patient/Difficult Procedure)

We have selected pre-time package 3-FAC as it is the lowest package for a patient undergoing general anesthesia.

Evaluation time – We are recommending 40 minutes of evaluation time which is an increase of 7 minutes from the package time, however, it is a decrease of 20 minutes from our survey data. The additional 7 minutes of pre-time for this case is spent in setting and marking the patient in an upright position to evaluate breast shape and measure base dimensions.

Positioning time – We are recommending 10 minutes of positioning time which is an increase in 7 minutes from the pre-service package time. We believe there is extra time involved in securing arms and assessing the position of the head and neck and making any adjustments to allow for sitting upright intra-operatively which is not typically required for most procedures. This is supported by our median survey time.

Scrub, Dress, Wait time – We are recommending 14 minutes of scrub, dress and wait time which is 1 minute less than the package and matches our survey results.

Post-time Package 9A (General Anes or Complex Reg Blk/Straightforward Procedure)

The recommended time has been reduced to 20 minutes which is a decrease of 10 minutes from the post package time selected to match our survey time.

Key Reference Codes

CPT	DESCRIPTOR	IWPUT	wRVU	TOTAL TIME	PRE	INTRA	POST	99238	99214	99213	99212

19340	Insertion of breast implant on same day of mastectomy (ie, immediate)	**0.077**	**12.00**	**280**	64	**80**	20	1		2	2
19303	Mastectomy, simple, complete	**0.1018**	**15.00**	**283**	58	**90**	30	0.5	1	2	
15736	Muscle, myocutaneous, or fasciocutaneous flap; upper extremity	**0.0634**	**17.04**	**396**	72	**150**	30	1	1	3	1

Code 19340 with an wRVU = 12.00 is a poor comparison to the KRCs. Code 19340 has 10 minutes less intra time-time and 3 minutes less total time compared to KRC 19303, but has -3.00 wRVU. The comparison of code 19340 at 12.00 wRVU with KRC 15736 is difficult due to the significantly less intra-time (70 minutes) and total time (106 minutes) between the codes.

MPC Comparison Codes:

CPT	DESCRIPTOR	IWPUT	wRVU	TOTAL TIME	PRE	INTRA	POST	99238	99232	99231	99214	99213	99212
60220	Total thyroid lobectomy, unilateral; with or without isthmusectomy (RUC-CMS Revised)	**0.0710**	**11.19**	**267**	72	**90**	40	0.5				2	
19340	Insertion of breast implant on same day of mastectomy (ie, immediate)	**0.077**	**12.00**	**280**	64	**80**	20	1				2	2
58720	Salpingo-oophorectomy, complete or partial, unilateral or bilateral (separate procedure)	**0.0621**	**12.16**	**309**	52	**90**	30	0.5	1	1		1	1

Additional MPC Codes:

Searching the RUC data base for MPC, 90 day global, IT 75-85, TT 250-310 results in 6 code. Code 19370 at the recommend value of 12.00 wRVU would **rank 3rd highest out of 7 codes** as demonstrated in the table below:

CPT	DESCRIPTOR	IWPUT	wRVU	TOTAL TIME	PRE	INTRA	POST	99238	99232	99231	99214	99213	99212
15576	Formation of direct or tubed pedicle, with or without transfer; eyelids, nose, ears, lips, or intraoral	**0.0484**	**9.37**	**271**	70	**90**	30	0.5				2	1
21015	Radical resection of tumor (eg, sarcoma), soft tissue of face or scalp; less than 2 cm	**0.0527**	**9.89**	**277**	68	**75**	30					3	2
21025	Excision of bone (eg, for osteomyelitis or bone abscess); mandible	**0.0530**	**10.03**	**283**	85	**90**	30					2	2
60220	Total thyroid lobectomy, unilateral; with or without isthmusectomy (RUC-CMS Revised)	**0.0710**	**11.19**	**267**	72	**90**	40	0.5				2	
19340	Insertion of breast implant on same day of mastectomy (ie, immediate)	**0.077**	**12.00**	**280**	64	**80**	20	1				2	2
58720	Salpingo-oophorectomy, complete or partial, unilateral or bilateral (separate procedure)	**0.0621**	**12.16**	**309**	52	**90**	30	0.5	1	1		1	1
19303	Mastectomy, simple, complete	**0.1018**	**15.00**	**283**	58	**90**	30	0.5			1	2	

Comparisons to other recently valued codes in the RUC database:

Searching the RUC database for codes that are RUC surveyed in the last 10 years, 90 day global, IT 75-85, TT 270-290 reveals 8 codes. Code 19340 at the recommend value of 12.00 wRVU would **rank 3rd highest out of 9 codes**. Of note, all of the 8 identified codes have an intratime of 75 minutes compared to Code 19340 which would have 80 minutes. In addition, all six of the codes with lower wRVU are from the same family (soft tissue excision codes). A rank ordered table of these codes and wRVUs is below:

CPT Code	27048	21932	21015	23073	24073	26117	19340	45172	67043

RVU	8.85	9.82	9.89	10.13	10.13	10.13	12.00	12.13	17.40

Cross-walk for recommendation:

Based on these results, we have recommended a wRVU of 12.00 for code 19340 based on comparison to 45172. Code 19340 has 10 less minutes of total time, but 5 minutes more of intra-time. At wRVU 12.00, it has the same IWPUT.

CPT	DESCRIPTOR	IWPUT	wRVU	TOTAL TIME	PRE	INTRA	POST	99238	99231	99213	99212
19340	Insertion of breast implant on same day of mastectomy (ie, immediate)	**0.077**	**12.00**	**280**	64	**80**	20	1		2	2
45172	Excision of rectal tumor, transanal approach; including muscularis propria (ie, full thickness)	**0.077**	**12.13**	**290**	65	**75**	20	1	1	2	1

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☒ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☒ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☒ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. Based on the code descriptor, this code is performed directly following a mastectomy. The mastectomy is typically performed by a breast surgeon, surgical oncologist, or general surgeon. The immediate reconstruction is then performed by a plastic surgeon. 19303 (wRVU 15.00) is used to report the mastectomy and 19340 is used to report the implant reconstruction. Both codes have 90 day global periods.

		wRVU	Global	pre	intra	post	x38	x14	x13	x12
3.										
4.	19340 -	12.00	90d	64	80	136	1		2	2

CPT Descriptor: Insertion or replacement of breast implant on separate day from mastectomy

---

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 50-year-old female with a history of right breast cancer and previous implant-based breast reconstruction develops breast asymmetry due to weight loss and desires replacement with a smaller implant

Percentage of Survey Respondents who found Vignette to be Typical: 79%

Site of Service (Complete for 010 and 090 Globals Only)
Percent of survey respondents who stated they perform the procedure; In the hospital 58% , In the ASC 37%, In the office 5%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 52% , Overnight stay-less than 24 hours 44% , Overnight stay-more than 24 hours 4%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 50%

Description of Pre-Service Work: Orders for preoperative medications are written, and laboratory results, imaging, and patient photographs, are reviewed. The planned procedure and postoperative management are reviewed with the patient and the patient's family. Post-operative functional and aesthestic expectations are reviewed. The patient's history and physical are updated with reconciliation of medications/allergies. Post-operative pain control is reviewed and a narcotics controlled substance review is performed. NPO status is confirmed. The operative site is marked sitting upright to indetify the footprint of the breast and planned re-creation of the mastectomy defect. Informed consent is obtained. The length and type of anesthesia are reviewed with the anesthesiologist. Surgeon changes into scrub clothes. The availability of all required supplies and instruments are verified including implants. Confirmation of the ability for the operating room bed to sit upright is performed. The patient is transferred from the gurney and positioned on the operating room table. A patient verification procedure is performed. Bony prominences are padded, and thermal regulation drapes are applied. The arms are secured in a position to allow for sitting upright. The position of the head/neck is assessed and adjusted, as needed based on the need to sit up intra-operatively. A neck roll is placed to support the head. The surgeon monitors and assists with prepping including waiting for the prep to dry. The surgeon scrubs and gowns. Surgical drapes are placed. A pre-incision surgical time-out is performed with the operating surgical team.

Description of Intra-Service Work: The mastectomy incision is re-opened and the previous mastectomy flaps are elevated to the footprint of the breaset. Assuming a viable skin envelope remains, the surgeon elevates the pectoralis major muscle off the chest wall by dissecting along the lateral edge of the muscle and developing a plane of dissection under the pectoralis major. The pectoralis minor muscle is identified and separated from the pectoralis major, leaving it attached to the chest wall. Perforating vessels from the chest wall to the muscle are cauterized. The dissection is carried superiorly to the level of the clavicle, inferiorly to the origin of the muscle, and medially to the lateral sternal border. The medial row of perforating vessels supplying the pectoralis muscle may require cauterization, however, the thoracoacromial pedicle to the pectoralis major is kept intact. At the lateral border of the pectoralis muscle, the serratus anterior muscle is incised and elevated off the chest wall for a short distance. In cases requiring the use of an acellular dermal matrix inferiorly, the pectoralis major muscle may be divided inferiorly off the costal margin to allow for placement of the acellular dermal matrix. The lower lateral border of the pectoralis muscle is then sutured to the lateral chest wall or acellular dermal matrix to complete the pcoket. The width of the subpectoral pocket is measured, and the proper implant sizer is selected. It is placed into the pocket and filled to the intended volume. The soft tissues are tailor tacked closed. The patient is transitioned to a sitting position and revisions are performed to the pocket, sizer volume/shape, and soft tissues until the desired result is achieved. The mastectomy skin flaps are evaluated again with regard to viability and any clearly non-viable skin is

removed. The patient is returned to the supine position and the sizers are removed. The subpectoral pocket is rinsed with antibiotic irrigation and meticulous hemostasis is achieved. After preparing the skin, the selected implant is obtained and placed in the pocket with a no skin touch technique. The pectoralis muscle is sewn to the serratus or acellular demral matrix. Drains are placed in the wound and brought out through separate stab incisions and secured with sutures. Any additional skin revisions are performed to optimize the shape of the breast. The skin edges are then closed in layers.

Description of Post-Service Work: The chest is cleaned. A dressing is applied to the incision. A surgical bra is placed on the patient. The operative report is dictated. The postoperative orders are written. Medications for overnight observation or admission are written. There is a discussion with the family and patient regarding the procedure and findings. There is reiteration of the convalescence, precautions, follow up appointments, expected postoperative course, signs and symptoms of complications. Instructions, appropriate discharge timing, follow up, and precautions are discussed with the postoperative nursing team.

Post op visit 1: 99213
This visit typically occurs at one week post-operatively. The patient's convalescence to that point is reviewed and discussed. The patient's pain control and use of antibiotics are discussed. Refills are provided if indicated. The dressing from the operative site is removed. The drain output is assessed, and the drain suture and drain are removed, if appropriate. The breast surgical site is inspected and palpated. The integrity and viability of the soft tissues are assessed. The position and shape of the implant/breast are assessed for both cosmesis and breast symmetry. Patient and family questions and concerns are addressed. Ongoing care is reiterated and the anticipated timing of additional surgeries reviewed. Limitations of post-surgical activity are clearly reviewed. The wound is redressed, and the patient is placed back into her surgical bra.

Post op visit 2: 99212
This visit typically occurs at two weeks post-operatively. The patient's convalescence to that point is reviewed. If the drain was not removed at the initial postoperative visit, the drain output is assessed, and the drain suture and drain are removed, if appropriate. The breast surgical site is inspected and palpated. The integrity and viability of the soft tissues are assessed. The position and shape of the implant/breast are assessed for both cosmesis and breast symmetry. Patient and family questions and concerns are addressed. The wound is redressed and the patient is placed back into her surgical bra.

Post op visit 3: 99212
This visit typically occurs at one month post-operatively. The patient's convalescence to that point is reviewed. The breast surgical site is inspected and palpated. The breast surgical site is inspected and palpated. The integrity and viability of the soft tissues are assessed. The position and shape of the implant/breast are assessed for both cosmesis and breast symmetry. As the initial swelling is now partially resolved, the aesthetic outcome comes into focus and expectations moving forward are reviewed in detail. Patient and family questions and concerns are addressed. Referrals to physical therapy are made if needed. Ongoing care is reiterated as well as slowly lifting the post-operative restrictions.

Post op visit 4: 99212
This visit typically occurs at three months post-operatively. The patient's convalescence to that point is reviewed and at this point, the patient should be back to normal activity. The breast surgical site is inspected and palpated. The integrity and viability of the soft tissues are assessed. The position and shape of the implant/breast assessed for both cosmesis and breast symmetry. Patient and family questions and concerns are addressed. At this visit, the most time is spent evalutating the reconstructive outcome with the patient including patient-reported outcomes. Persistent deformities or areas of patient concern are systmetically addressed by the surgeon. The next stages of reconstruction are discussed including any necessary revisions and the timing of nipple reconstruction.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	13%	25%	50%	12%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	50%	50%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	0%	50%	50%
Physical effort required	13%	50%	37%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	50%	50%

2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	67%	16%	17%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	17%	68%	16%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	17%	50%	33%
Physical effort required	0%	33%	67%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	33%	67%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

In February 2019, the CPT Editorial Panel approved the deletion of two codes and revisions to seventeen other codes related to breast reconstruction including 19342. The changes made to 19342 were made to clarify the definition of "delayed" to reflect the relationship to the timing of the mastectomy. Although in plastic surgery text, the terms immediate versus delayed have general been in relationship to a mastectomy, the previous code descriptor included

other scenarios that caused confusion with surgeons and coders. In addition, a parenthetical was added to prevent unbundling with 19328 (removal of intact breast implant) since the work of 19328 would be included if placing a new implant.

CPT 19342	Descriptor
Previous	Delayed insertion of breast prosthesis following mastopexy, mastectomy, or in reconstruction
Updated	Insertion of breast implant on day separate from mastectomy

During the October 2019 RUC meeting, it was agreed upon that 19342 would be surveyed along with codes 11970, 19325, 19340, and 19357 as part of the "Implant/Expander Placement" family.

Compelling Evidence

We are recommending current value.

Survey Sample and Process

A survey request was sent to a random selection of members from the American Society of Plastic Surgeons who have self-identified as reconstructive surgeons.

Recommendation

We are recommending a work RVU of 12.63 which is current value.

Pre-time Package 3-FAC (Straightforward Patient/Difficult Procedure)

We have selected pre-time package 3-FAC as it is the lowest package for a patient undergoing general anesthesia

Evaluation time – We are recommending 40 minutes of evaluation time which is an increase of 7 minutes from the package time, however, it is a decrease of 15 minutes from our survey data. The additional 7 minutes of pre-time for this case is spent in setting and marking the patient in an upright position to evaluate breast shape and measure base dimensions. Additional time is also required to review choice of implants with the patient.

Positioning time – We are recommending 10 minutes of positioning time which is an increase in 7 minutes from the pre-service package time. We believe there is extra time involved in securing arms and assessing the position of the head and neck and making any adjustments to allow for sitting upright intra-operatively which is not typically required for most procedures. This is supported by our median survey time.

Scrub, Dress, Wait time – We are recommending 12 minutes of scrub, dress and wait time which is a decrease in 3 minutes from the selected pre-service package time based on our survey median.

Post-time Package 9A (General Anes or Complex Reg Blk/Straightforward Procedure)

The recommended time has been reduced to 20 minutes which is a decrease of 10 minutes from the post package time selected to match our survey time.

Key Reference Codes

CPT	DESCRIPTOR	IWPUT	wRVU	TOTAL TIME	PRE	INTRA	POST	99238	99214	99213	99212
19342	Insertion or replacement of breast implant on separate day from mastectomy	0.121	12.63	252	62	80	20	0.5		1	3
19303	Mastectomy, simple, complete	0.1018	15.00	283	58	90	30	0.5	1	2	
15736	Muscle, myocutaneous, or fasciocutaneous flap; upper extremity	0.0634	17.04	396	72	150	30	0.5	1	3	1

Code 19342 with an wRVU at current value demonstrates similar, but lower intra-time and total time compared to KRC 19303 with a disproportionate decrease in wRVU. Code 19432 is a poor comparison to KRC 15736 due to significantly decreased intra-time and total time

MPC Comparison Codes:

CPT	DESCRIPTOR	IWPUT	wRVU	TOTAL TIME	PRE	INTRA	POST	99238	99232	99213	99212
36821	Arteriovenous anastomosis, open; direct, any site (eg, Cimino type) (separate procedure)	0.1038	11.90	233	75	75	25	0.5		1	1
19342	Insertion or replacement of breast implant on separate day from mastectomy	0.121	12.63	252	62	80	20	0.5			1
52601	Transurethral electrosurgical resection of prostate, including control of postoperative bleeding, complete (vasectomy, meatotomy, cystourethroscopy, urethral calibration and/or dilation, and internal urethrotomy are included)	0.1143	13.16	236	51	75	25	1	1	2	

Search of the database for MPC, 90-day global, IT 75-85, and TT 232-272 reveals only two codes. Code 19342 has an increased intra-time of 5 minutes compared to both codes and an increased total time of 19 and 16 minutes respectively compared to MPC 36821 and MPC 52601. At the current value of 12.63 wRVU, it fits well in between these two MPC codes.

Comparisons to other recently valued codes in the RUC database:

Searching the RUC database for codes that are RUC surveyed in the last 10 years, 90 day global, IT 75-85, TT 232-272 reveals 9 codes. Code 19342 at the recommend value of 12.63 wRVU would **rank 3rd highest out of 10 codes**. A rank ordered list of the code and wRVUs is below.

CPT Code	28299	28297	26117	15120	64910	36831	36821	19342	52601	29828
RVU	9.29	9.29	10.13	10.15	10.52	11.00	11.90	12.63	13.16	13.16

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.

☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 19342

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Plastic Surgeons How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 13500
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. We estimate utilzation to be 3x the medicare volume.

Specialty Plastic Surgeons Frequency 13500 Percentage 100.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 4,500
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC Database

Specialty Plastic Surgeons Frequency 4500 Percentage 100.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Major procedure

BETOS Sub-classification Level II:
Breast

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 19342

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

CPT Descriptor: Tissue expander placement in breast reconstruction, including subsequent expansion(s)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 50-year-old female presents with breast cancer involving the right breast. Her oncologic surgeon has recommended a mastectomy together with a sentinel lymph node biopsy. After discussion, she wishes to proceed with a unilateral implant based breast reconstruction. Due to lack of skin envelope following the mastectomy, the decision is made to place a tissue expander first to allow for later implant placement.

Percentage of Survey Respondents who found Vignette to be Typical: 96%

Site of Service (Complete for 010 and 090 Globals Only)
Percent of survey respondents who stated they perform the procedure; In the hospital 87% , In the ASC 9%, In the office 2%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 3% , Overnight stay-less than 24 hours 67% , Overnight stay-more than 24 hours 30%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 40%

Description of Pre-Service Work: Orders for preoperative medications are written, and laboratory results, imaging, and patient photographs, are reviewed. The planned procedure and postoperative management are reviewed with the patient and the patient's family. Post-operative functional and aesthetic expectations are reviewed. The patient's history and physical are updated with reconciliation of medications/allergies. Post-operative pain control is reviewed and a narcotics controlled substance review is performed. NPO status is confirmed. The operative site is marked sitting upright to evaluate breast shape and identify the planned revisions to the capsule. Informed consent is obtained. The length and type of anesthesia are reviewed with the anesthesiologist. Surgeon changes into scrub clothes. The availability of all required supplies and instruments are verified including the patient's current implant size/shape in case needed. Confirmation of the ability for the operating room bed to sit upright is performed. The patient is transferred from the gurney and positioned on the operating room table. A patient verification procedure is performed. Bony prominences are padded, and thermal regulation drapes are applied. The arms are secured in a position to allow for sitting upright. The position of the head/neck is assessed and adjusted, as needed based on the need to sit up intra-operatively. A neck roll is placed to support the head. The surgeon monitors and assists with prepping including waiting for the prep to dry. The surgeon scrubs and gowns. Surgical drapes are placed. A pre-incision surgical time-out is performed with the operating surgical team.

Description of Intra-Service Work: Following the completion of a mastectomy, the surgeon assesses the viability of the mastectomy skin flaps and excises any obviously non-viable tissue or skin. Assuming a viable skin envelope remains, the surgeon elevates the pectoralis major muscle off the chest wall by dissecting along the lateral edge of the muscle and developing a plane of dissection under the pectoralis major. The pectoralis minor muscle is identified and separated from the pectoralis major, leaving it attached to the chest wall. Perforating vessels from the chest wall to the muscle are cauterized. The dissection is carried superiorly to the level of the clavicle, inferiorly to the origin of the muscle, and medially to the lateral sternal border. The medial row of perforating vessels supplying the pectoralis muscle may require cauterization, however, the thoracoacromial pedicle to the pectoralis major is kept intact. At the lateral border of the pectoralis muscle, the serratus anterior muscle is incised and elevated off the chest wall for a short distance. The width of the subpectoral pocket is measured, and the proper sized tissue expander is chosen. It is opened and rinsed with antibiotic irrigation. The air is removed from the expander. The subpectoral pocket is rinsed with antibiotic irrigation and meticulous hemostasis is achieved. The tissue expander is placed in the pocket making sure the orientation is correct and that it lays flat against the chest wall with minimal wrinkling. If a remote port is used, a separate subcutaneous pocket is developed. In

cases requiring the use of an acellular dermal matrix inferiorly, the pectoralis major muscle may be divided inferiorly off the costal margin to allow for placement of the acellular dermal matrix. The lower lateral border of the pectoralis muscle is then sutured to the lateral chest wall or acellular dermal matrix to completely cover and secure the expander with care not to puncture the expander. Drains are placed in the wound and brought out through separate stab incisions and secured with sutures. The mastectomy skin flaps are evaluated again with regard to viability and any clearly non-viable skin is removed. The skin edges are then closed in layers, again with care not to injure the underlying expander. The tissue expander port is then accessed and saline may be infused into the expander to start the fill process, but care is taken to avoid any tension on the muscle or mastectomy flaps. The skin flaps are assessed for tension during and after final wound closure, and additional sterile saline may be added or removed from the expander, as necessary.

Description of Post-Service Work: The chest is cleaned. A sterile dressing is applied to the incision. A surgical bra is placed on the patient. The operative report is dictated. The postoperative orders are written. Medications for overnight observation or admission are written. There is a discussion with the family and patient regarding the procedure and findings. There is reiteration of the convalescence, precautions, follow up appointments, expected postoperative course, signs and symptoms of complications. Instructions, appropriate discharge timing, follow up, and precautions are discussed with the postoperative nursing team.

Discharge Management Visit: The patient is typically (97% based on survey) is monitored until the next day. The patient is re-examined for surgical site complications and orders are advance for the day. Discharge medications are reconciled and prescriptions are written. There is reiteration of the convalescence, precautions, follow up appointments, expected postoperative course, signs and symptoms of complications. Instructions, appropriate discharge timing, follow up, and precautions are reviewed.

Post Op Visit 1: 99212
This visit occurs one week post-op. The patient's convalescence to that point is reviewed and discussed. The dressings are removed and the surgical site is evaluated. The drain output is assessed, and the drain suture and drain are removed, if appropriate. Pain control and antibiotic usage is reviewed. Patient and family questions and concerns are addressed. Ongoing care is reiterated. The recipient site wound is redressed.

Post Op Visits 2 - 6: 99213 x 5
Each of these visits is related to the incremental filling of the tissue expander typically starting at 3-4 weeks post-operative and occuring on a weekly basis. At each visit, the surgical site is evaluated for infection and skin compromise. Overall patient recovery is reviewed including signs of infection, pain control, and general recovery. If the surgical site is healing appropriate and the skin is not compromised, then an expansion is performed. For each expansion, the patient is positionined appropriately in the office chair. The fill port for the expander is prepped and draped. A sterile set-up for expansion is prepared including the filling of a syringe with sterile normal saline from an IV bag. A time-out is performed. The fill port is then accessed and the saline is slowly injected into the expander which starts to strech the overlying soft tissues. The amount injected in a clinic visit is determined by the site, laxity of the tissues, appearance of the overlying skin, and patient tolerance. The needle used to access the fill port is removed, compression is held on the site, and a dressing is placed. This procedure is repeated weekly until the desired amount of expansion has been achieved. Typical expanion reqiures 5 visits.

Post-op Visit 7: 99212
This visit occurs one month following the completion of expansion. The patient's convalescne to this point is reviewed and disucssed. The results of the expansion are evaluted. The skin is evaluted for compromise. Post-operative restrictions are lifted and any physical therapy or other need are address. Plans for future surgery to remove the expander and replace it with a breast implant are made.

SURVEY DATA

RUC Meeting Date (mm/yyyy)	01/2020					
Presenter(s):	Mark Villa, MD, Jeffrey Kozlow, MD

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	0%	33%	25%	42%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	8%	34%	58%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	0%	42%	58%
Physical effort required	0%	34%	66%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	8%	42%	50%

2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	13%	62%	25%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	50%	50%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	25%	50%	50%
Physical effort required	25%	0%	75%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	38%	62%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

In February 2019, the CPT Editorial Panel approved the deletion of two codes and revisions to seventeen other codes related to breast reconstruction including 19357. The changes made to 19357 removed the previous parent/child nomenclature within the section of the CPT book and removed "immediate or delayed" since there are no other alternative timings.

CPT 19357	Descriptor
Previous	Breast reconstruction, immediate or delayed, with tissue expander, including subsequent expansion
Updated	Tissue expander placement in breast reconstruction, including subsequent expansion(s)

During the October 2019 RUC meeting, it was agreed upon that 19357 would be surveyed along with codes 11970, 19325, 19340, and 19342 as part of the "Implant/Expander Placement" family. It was also included on the RAW screen of codes between 5,000 and 9,999 with site of service change and the RAW screen of codes with > 1000 utilization and >6 office visits. The code has previously been surveyed for the Feb 2010 RUC meeting.

Compelling Evidence

We are not requesting an increase in wRVU.

Survey Sample and Process

A survey request was sent to a random selection of members from the American Society of Plastic Surgeons who have self-identified as reconstructive surgeons.

Recommendation

We are recommending a work RVU of 17.95, the survey 25th percentile, which is a decrease from current value of 18.50.

It is important to note that the decrease in intra-time from current was seen across this family of surveyed codes and is significantly different than previous surveys. In addition, the NEJM paper by Chan et al from April 2019 suggested that plastic surgery times may be lower than actual. Code 19357 was one of the codes for which the NSQIP data was used and the data from NSQUIP was provide by AMA staff to all advisors via email on 4/18/19. In NSQUIP, 19357 had an average time of 143.9 minutes which is significantly greater than the 90 minutes from the current survey and is closer, but still greater, then the previous survey value from Feb 2010 of 110 minutes. We believe this difference is problematic when evaluating this code and code family as it an unexplained finding.

In addition, we have also included a full discharge day, 99238, based our recommendations from our survey and the response that 88% of patients stay overnight.

Finally, the survey results for post-op visits were 99213 x 4, 99212 x2, and 99212.5 indicated a tie between the level for the last visit. Due to the similarity of most post-op visits for filling of the tissue expander, we selected a post-op clinic panel of 99213 x 5 and 99212 x 2.

Pre-time Package 3-FAC (Straightforward Patient/Difficult Procedure)

We have selected pre-time package 3-FAC as it is the lowest package for a patient undergoing general anesthesia.

Evaluation time – We are recommending 40 minutes of evaluation time which is an increase of 7 minutes from the package time, however, it is a decrease of 20 minutes from our survey data. The additional 7 minutes of pre-time for this case is spent in setting and marking the patient in an upright position to evaluate breast shape and measure base dimensions.

Positioning time – We are recommending 10 minutes of positioning time which is an increase in 7 minutes from the pre-service package time. We believe there is extra time involved in securing arms and assessing the position of the head and neck and making any adjustments to allow for sitting upright intra-operatively which is not typically required for most procedures. This is supported by our median survey time.

Scrub, Dress, Wait time – We are recommending 15 minutes of scrub, dress and wait time which matches the package and our survey results.

Post-time Package 9A (General Anes or Complex Reg Blk/Straightforward Procedure)

The recommended time has been reduced to 23 minutes which is a decrease of 7 minutes from the post package time selected to match our survey time.

Key Reference Codes

CPT	DESCRIPTOR	IWPUT	wRVU	TOTAL TIME	PRE	INTRA	POST	99238	99214	99213	99212	99231	99232	99233
19357	Tissue expander placement in breast reconstruction, including subsequent expansion(s)	**0.101**	**17.95**	**363**	65	**90**	23	1		5	2			
15738	Muscle, myocutaneous, or fasciocutaneous flap; lower extremity	**0.0472**	**19.04**	**516**	70	**150**	30	1		4	1	1	1	
35301	Thromboendarterectomy, including patch graft, if performed; carotid, vertebral, subclavian, by neck incision	**0.1040**	**21.16**	**404**	75	**120**	30	1		2			1	1

Overall, both KRCs are poor matches compared to CPT 19357 with both having increased intra time and total time compared to Code 19357. We believe part of this poor matching is due to lack of any codes with the same outpatient post-time procedural component that matches what is required of tissue expander.

MPC Comparison Codes:

CPT	DESCRIPTOR	IWPUT	wRVU	TOTAL TIME	PRE	INTRA	POST	99238	99232	99231	99213	99212
63047	Laminectomy, facetectomy and foraminotomy (unilateral or bilateral with decompression of spinal cord, cauda equina and/or nerve root[s], [eg, spinal or lateral recess stenosis]), single vertebral segment; lumbar	**0.0774**	**15.37**	**362**	75	**90**	30	1	1	1	3	
37215	Transcatheter placement of intravascular stent(s), cervical carotid artery, open or percutaneous, including angioplasty, when performed, and radiological supervision and interpretation; with distal embolic protection	**0.1057**	**17.75**	**337**	80	**103**	30	1	1		2	
19357	Tissue expander placement in breast reconstruction, including subsequent expansion(s)	**0.107**	**17.95**	**363**	65	**90**	23	1			4	3

Compared to the selected MPC codes, Code 19357 at the 25th percentile (wRVU 17.95) is valued reasonably given the limitation of finding other codes that have the same post-op procedural component of filling a tissue expander. Code 19357 at the 25th (17.95) has the same intra-time and total time than MPC 63047, but has more wRVU which we believe is appropriate due to the increased complexity of the post-operative visits which are procedural. Code 19357 at the 25th percentile compared to MPC 37215 has less intra-time, but greater total time with a slightly increased wRVU that is appropriate.

There were no additional MPC codes that would be relevant as it required an expansion of the search criteria in the RUC database to MPC, 90 day global IT 75-105, and TT 333-393 to identify the second MPC code.

Comparisons to other recently valued codes in the RUC database:

Searching the RUC database for codes that are RUC surveyed in the last 10 years, 90 day global, IT 90, TT 333-393 – there are 4 codes and at 25th percentile, 19357 would rank **1st highest out of 5**. However, it matches well with 27446 with the same intra-time and slightly greater total time which is reflected in the increased wRVU. In addition, 19357 has the procedural component in the post-operative E&M visits.

CPT	DESCRIPTOR	IWPUT	wRVU	TOTAL TIME	PRE	INTRA	POST	99238	99232	99231	99213	99212
28046	Radical resection of tumor (eg, sarcoma), soft tissue of foot or toe; less than 3 cm	**0.0510**	**12.38**	**334**	56	**90**	25	1		2	3	1
65285	Repair of laceration; cornea and/or sclera, perforating, with reposition or resection of uveal tissue (RUC-CMS Revised)	**0.0743**	**15.36**	**353**	75	**90**	30	0.5			6	1
63047	Laminectomy, facetectomy and foraminotomy (unilateral or bilateral with decompression of spinal cord, cauda equina and/or nerve root[s], [eg, spinal or lateral recess stenosis]), single vertebral segment; lumbar	**0.0774**	**15.37**	**362**	75	**90**	30	1	1	1	3	
27446	Arthroplasty, knee, condyle and plateau; medial OR lateral compartment	**0.1088**	**17.48**	**345**	75	**90**	20	1	1	1	2	1
19357	Tissue expander placement in breast reconstruction, including subsequent expansion(s)	**0.107**	**17.95**	**363**	65	**90**	23	1			4	3

Billed Together Data:

Based on the billed together data provided by AMA staff earlier this year, code 19357 was billed 51.04% of the time with code 15777 [Implantation of biologic implant (eg, acellular dermal matrix) for soft tissue reinforcement (ie, breast, trunk) (List separately in addition to code for primary procedure)]. This is an expected finding given the usage of acellular dermal matrix in some tissue expander based breast reconstructions for lower pole definition and to prevent lateral migration of the tissue expander when the mastectomy pocket is wide. 15777 is an add-on code intended for this usage, thus, there is no duplication of work. In addition, usage of ADM in tissue expander breast reconstruction continues to change over time and after a likely peak in usage is now likely going trend downward.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☒ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☒ Other reason (please explain) As outlined in the previous section, the billed together list showed that 51.04% of the time, 19357 was reported with 15777, thus we answered question #1 as "yes". Code 15777 was specifically designed as an add-on code for the use of acellular dermal matrix in the breast or trunk. When 15777 was valued by the RUC in 2011, the survey included a breast tissue expander patient.

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. Both the placement of the tissue expander and the placement of the ADM are performed by the same surgeon. Code 15777 currently is a RUC valued, ZZZ code, with 5 minute of pretime and 45 minute of intratime only.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 19357

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Plastic Surgeons How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 20100
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. We believe the utilzation is 3x the medicare volume.

Specialty Plastic Surgeons Frequency 20100 Percentage 100.00 %

FACILITY DIRECT PE INPUTS

CPT CODE(S): 11970
SPECIALTY SOCIETY(IES): ASPS
PRESENTER(S): Mark Villa, MD
Jeffrey Kozlow, MD

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: 01/2020

CPT Code	Long Descriptor	Global Period
11970	Replacement of tissue expander with permanent implant	090

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
11970	A 35-year-old female with a history of right breast cancer who has previously undergone mastectomy and placement of a tissue expander with subsequent expansion now presents for removal of the tissue expander and replacement with a breast implant.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   Our specialty formed a panel of experts to develop practice expense recommendations for this family of codes. The panel was comprised of our RUC Advisors and multiple clinical experts who practice in the areas of general plastic surgery and breast reconstruction. The expert panel members also practice in settings that vary by size, geography, and represent both private and academic settings.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code, but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here (*for service reviewed prior to the implementation of clinical activity codes, detail is not provided in the RUC database, please contact Samantha Ashley at samantha.ashley@ama-assn.org for PE spreadsheets for your reference codes*):

   We used existing PE inputs from the RUC database for this family of codes (11970, 19325, 19340, 19342, 19357).

3. Is this code(s) typically reported with an E/M service?

   No

4. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:

   We are only requesting PE subcommittee standards for clinical activities.

5. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies for the **code family**, please provide compelling evidence (please see *PE compelling evidence guidelines*) Please explain if the increase can be entirely accounted for because of an increase in physician time:

   Across the four families of breast-specific codes being evaluated, there is currently significant variability in the post-op supplies and practice expense likely due to the various times and settings in which those decisions were made. Given the similarity in post-op visit supplies across these four families of breast related procedures (Implant/Expander Placement, Implant/Expander Removal, Secondary Revisions, and Lift/Reduction), we have elected to standardize all of the practice expenses associated with each code. We

believe this standardization is important in keeping consistency within the RUC valuation process. Standardization for these codes includes:

1)Using the standard clinical staff times for the pre-times and 90 day globals, discharge (x38) days, and with the number of post-op clinic visits/times pending final approval at the RUC.
2)Requesting one pack, post-op incision care (suture) per code
3)Requesting the standard Minimum Supply Package for Visits (Multi-speciality), a standard table, and an exam light for all post-operative visits with the number of post-op clinic visits/times pending final approval at the RUC
4)Requesting 20 minutes of a camera, digital system, 12 megapixel (medical grade) for each code to account for two 10 minutes session of post-operative photographs obtained during the global period.

We are requesting an overall decrease for the code family and a decrease for this code individually.

6. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see second worksheet in PE spreadsheet workbook*), please explain the difference here:

7. Please provide a brief description of the clinical staff work for the following:
   a. Pre-Service period:

In the pre-service period, clinical staff work includes completing pre-service diagnostic and referral forms, coordinating pre-surgery services, scheduling space and equipment in the facility, providing pre-service education/obtaining consent, and completing pre-procedure phone calls/prescriptions.

   b. Service period (includes pre, intra and post):

For this facility-only based procedure, the only post period is the 6 minutes allotted in the standards for assisting in same-day discharge management including coordination of post-operative appointments.

   c. Post-service period:

In the post-service period, clinical staff work includes the standard activities involved in any post-operative E&M visit including rooming the patient, gowning, reviewing current medications/allergies in EHR, obtaining vital signs, acting as chaperone due to sensitive areas being examined, assisting with wound care, coordination of care, and cleaning of the room.

8. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see second worksheet in PE spreadsheet workbook*):

9. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

INVOICES

10. ☐ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

11. ☐ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

12. If you wish to include a supply that is not on the list (*please see fourth worksheet in PE spreadsheet workbook*) please provide a paid invoice. Identify and explain the invoice here:

13. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation. Please include the description, CMS supply code, unit, item quantity and unit price (if available). See documents two and three under PE reference materials on the RUC Collaboration Website for information on the contents of kits, packs and trays.

DESCRIPTION	Code	Unit	Item Qty	Unit price
pack, minimum multi-specialty visit	**SA048**	**pack**		**2.1122**
paper, exam table		foot	7	
gloves, non-sterile		pair	2	
gown, patient		item	1	
pillow case		item	1	
cover, thermometer probe		item	1	

DESCRIPTION	Code	Unit	Item Qty	Unit price
pack, post-op incision care (suture)	**SA054**	**pack**		**4.8353**
kit, suture removal		kit	1	
povidone soln (Betadine)		ml	10	
gauze, sterile 4in x 4in		item	2	
gloves, sterile		pair	1	
steri-strip (6 strip uou)		item	2	
swab-pad, alcohol		item	2	
tape, surgical paper 1in (Micropore)		inch	12	
tincture of benzoin, swab		item	1	

14. If you wish to include an equipment item that is not on the list (*please see fifth worksheet in PE spreadsheet workbook*) please provide a paid invoice. Identify and explain the invoice here:

15. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitude D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?

c. Does the computer include code specific software that is typically used to provide the service(s)?

16. List all the equipment included in your recommendation and the equipment formula chosen *(*please see document titled *Calculating equipment time).* If you have selected "other formula" for any of the equipment please explain here:

EF023 table, exam – standard formula
EQ168 light, exam – standard formula
ED005 camera, digital system, 12 megapixel (medical grade) – other formula

It is standard in plastic surgery practices to use a medical grade (12 megapixel) camera for photograph as most offices also have a standard photo suite for professional grade images.

20 min total usage at 10min per post-operative session x 2 session.

17. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail/explanation, please include here:

PROFESSIONAL LIABILITY INSURANCE (PLI) INFORMATION

18. If this is a PE only code please select a crosswalk based on a similar specialty mix:

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING

During and immediately following the review of this tab at the PE Subcommittee meeting please revise the PE spreadsheet and summary of recommendation (PE SOR) documents based on modifications made during the meeting. Please submit the revised documents electronically to Samantha Ashley at samantha.ashley@ama-assn.org immediately following the close of business the same day that the tab is reviewed. On the PE spreadsheet, please highlight the cells and/or use red font to show the changes made during the PE Subcommittee meeting (if you have provided any of this highlighting based on changes from the reference code prior to the PE Subcommittee meeting please remove it, so not to be confused with changes made during the meeting). In addition to those revisions please also provide an itemized list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below (e.g. clinical activity CA010 *obtain vital signs* was reduced from 5 minutes to 3 minutes).

If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code, but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here (*for service reviewed prior to the implementation of clinical activity codes, detail is not provided in the RUC database, please contact Samantha Ashley at samantha.ashley@ama-assn.org for PE spreadsheets for your reference codes*):

   We used existing PE inputs from the RUC database for this family of codes (11970, 19325, 19340, 19342, 19357).

3. Is this code(s) typically reported with an E/M service?

   No

4. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:

   We are only requesting PE subcommittee standards for clinical activities.

5. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies for the **code family**, please provide compelling evidence (please see *PE compelling evidence guidelines*) Please explain if the increase can be entirely accounted for because of an increase in physician time:

   Across the four families of breast-specific codes being evaluated, there is currently significant variability in the post-op supplies and practice expense likely due to the various times and settings in which those decisions were made. Given the similarity in post-op visit supplies across these four families of breast related procedures (Implant/Expander Placement, Implant/Expander Removal, Secondary Revisions, and Lift/Reduction), we have elected to standardize all of the practice expenses associated with each code. We

believe this standardization is important in keeping consistency within the RUC valuation process. Standardization for these codes includes:

1)Using the standard clinical staff times for the pre-times and 90 day globals, discharge (x38) days, and with the number of post-op clinic visits/times pending final approval at the RUC.
2)Requesting one pack, post-op incision care (suture) per code
3)Requesting the standard Minimum Supply Package for Visits (Multi-speciality), a standard table, and an exam light for all post-operative visits with the number of post-op clinic visits/times pending final approval at the RUC
4)Requesting 20 minutes of a camera, digital system, 12 megapixel (medical grade) for each code to account for two 10 minutes session of post-operative photographs obtained during the global period.

We are requesting an overall decrease for the code family and a decrease for this code individually.

6. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see second worksheet in PE spreadsheet workbook*), please explain the difference here:

7. Please provide a brief description of the clinical staff work for the following:
   a. Pre-Service period:

In the pre-service period, clinical staff work includes completing pre-service diagnostic and referral forms, coordinating pre-surgery services, scheduling space and equipment in the facility, providing pre-service education/obtaining consent, and completing pre-procedure phone calls/prescriptions.

   b. Service period (includes pre, intra and post):

For this facility-only based procedure, the only post period is the 12 minutes allotted in the standards for assisting in same-day discharge management including coordination of post-operative appointments.

   c. Post-service period:

In the post-service period, clinical staff work includes the standard activities involved in any post-operative E&M visit including rooming the patient, gowning, reviewing current medications/allergies in EHR, obtaining vital signs, acting as chaperone due to sensitive areas being examined, assisting with wound care, coordination of care, and cleaning of the room.

8. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see second worksheet in PE spreadsheet workbook*):

9. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

CPT Code	Long Descriptor	Global Period
19342	Insertion or replacement of breast implant on separate day from mastectomy	090

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
19342	A 50-year-old female with a history of right breast cancer and previous implant-based breast reconstruction develops breast asymmetry due to weight loss and desires replacement with a smaller implant .

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   Our specialty formed a panel of experts to develop practice expense recommendations for this family of codes. The panel was comprised of our RUC Advisors and multiple clinical experts who practice in the areas of general plastic surgery and breast reconstruction. The expert panel members also practice in settings that vary by size, geography, and represent both private and academic settings.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code, but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here (*for service reviewed prior to the implementation of clinical activity codes, detail is not provided in the RUC database, please contact Samantha Ashley at samantha.ashley@ama-assn.org for PE spreadsheets for your reference codes*):

   We used existing PE inputs from the RUC database for this family of codes (11970, 19325, 19340, 19342, 19357).

3. Is this code(s) typically reported with an E/M service?

   No

4. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:

   We are only requesting PE subcommittee standards for clinical activities.

5. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies for the **code family**, please provide compelling evidence (please see *PE compelling evidence guidelines*) Please explain if the increase can be entirely accounted for because of an increase in physician time:

   Across the four families of breast-specific codes being evaluated, there is currently significant variability in the post-op supplies and practice expense likely due to the various times and settings in which those decisions were made. Given the similarity in post-op visit supplies across these four families of breast related procedures (Implant/Expander Placement, Implant/Expander Removal, Secondary Revisions, and Lift/Reduction), we have elected to standardize all of the practice expenses associated with each code. We

believe this standardization is important in keeping consistency within the RUC valuation process. Standardization for these codes includes:

1)Using the standard clinical staff times for the pre-times and 90 day globals, discharge (x38) days, and with the number of post-op clinic visits/times pending final approval at the RUC.
2)Requesting one pack, post-op incision care (suture) per code
3)Requesting the standard Minimum Supply Package for Visits (Multi-speciality), a standard table, and an exam light for all post-operative visits with the number of post-op clinic visits/times pending final approval at the RUC
4)Requesting 20 minutes of a camera, digital system, 12 megapixel (medical grade) for each code to account for two 10 minutes session of post-operative photographs obtained during the global period.

We are requesting an overall decrease for the code family and a decrease for this code individually.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: 01/2020

CPT Code	Long Descriptor	Global Period
19357	Tissue expander placement in breast reconstruction, including subsequent expansion(s)	090

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
19357	A 50-year-old female presents with breast cancer involving the right breast. Her oncologic surgeon has recommended a mastectomy together with a sentinel lymph node biopsy. After discussion, she wishes to proceed with a unilateral implant based breast reconstruction. Due to lack of skin envelope following the mastectomy, the decision is made to place a tissue expander first to allow for later implant placement.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   Our specialty formed a panel of experts to develop practice expense recommendations for this family of codes. The panel was comprised of our RUC Advisors and multiple clinical experts who practice in the areas of general plastic surgery and breast reconstruction. The expert panel members also practice in settings that vary by size, geography, and represent both private and academic settings.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code, but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here (*for service reviewed prior to the implementation of clinical activity codes, detail is not provided in the RUC database, please contact Samantha Ashley at samantha.ashley@ama-assn.org for PE spreadsheets for your reference codes*):

   We used existing PE inputs from the RUC database for this family of codes (11970, 19325, 19340, 19342, 19357).

3. Is this code(s) typically reported with an E/M service?

   No

4. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:

   We are only requesting PE subcommittee standards for clinical activities.

5. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies for the **code family**, please provide compelling evidence (please see *PE compelling evidence guidelines*) Please explain if the increase can be entirely accounted for because of an increase in physician time:

   Across the four families of breast-specific codes being evaluated, there is currently significant variability in the post-op supplies and practice expense likely due to the various times and settings in which those decisions were made. Given the similarity in post-op visit supplies across these four families of breast related

procedures (Implant/Expander Placement, Implant/Expander Removal, Secondary Revisions, and Lift/Reduction), we have elected to standardize all of the practice expenses associated with each code. We believe this standardization is important in keeping consistency within the RUC valuation process. Standardization for these codes includes:
1)Using the standard clinical staff times for the pre-times and 90 day globals, discharge (x38) days, and with the number of post-op clinic visits/times pending final approval at the RUC.
2)Requesting one pack, post-op incision care (suture) per code
3)Requesting the standard Minimum Supply Package for Visits (Multi-speciality), a standard table, and an exam light for all post-operative visits with the number of post-op clinic visits/times pending final approval at the RUC
4)Requesting 20 minutes of a camera, digital system, 12 megapixel (medical grade) for each code to account for two 10 minutes session of post-operative photographs obtained during the global period.

In addition, for this code we have include the kit, tissue expansion (SA 108) for the 5 post-op visits involving the actual tissue expansion.

We are requesting an overall decrease for the code family and a decrease for this code individually.

6. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see second worksheet in PE spreadsheet workbook*), please explain the difference here:

7. Please provide a brief description of the clinical staff work for the following:
   a. Pre-Service period:

In the pre-service period, clinical staff work includes completing pre-service diagnostic and referral forms, coordinating pre-surgery services, scheduling space and equipment in the facility, providing pre-service education/obtaining consent, and completing pre-procedure phone calls/prescriptions.

   b. Service period (includes pre, intra and post):

For this facility-only based procedure, the only post period is the 12 minutes allotted in the standards for assisting in same-day discharge management including coordination of post-operative appointments.

   c. Post-service period:

In the post-service period, clinical staff work includes the standard activities involved in any post-operative E&M visit including rooming the patient, gowning, reviewing current medications/allergies in EHR, obtaining vital signs, acting as chaperone due to sensitive areas being examined, assisting with wound care, coordination of care, and cleaning of the room.

For the visits involving tissue expansion, the clinical staff work includes all of the above along with gathering of the appropriate supplies need for the expansion procedure and providing assistance to the physician during the procedure while also acting as a chaperone.

8. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see second worksheet in PE spreadsheet workbook*):

Tissue Expansion Kit

We have selected to use SA108 (Kit, tissue expansion) to cover the supplies involved with filling a tissue expander during a clinic visit. This was the item used during the previous PE valuation and we assumed that it contained the appropriate items as the title of the kit is very clear about usage. However, the itemization of this kit is not available online nor through AMA staff (via email discussion). Thus, we were asked to provide a list of what we believe should be in that kit below:

SJ041	povidone soln (Betadine)	ml	0.137
SB007	drape, sterile barrier 16in x 29in	item	0.502
SB024	gloves, sterile	pair	0.875
SB001	cap, surgical	item	0.6745
	250ml bag of saline		
SD212	tubing, sterile, connecting (fluid administration)	item	1.54
SC049	stop cock, 3-way	item	1.1075
SC056	syringe 50-60ml	item	1.0055
SC030	needle, 19-25g, butterfly	item	0.669
SG021	bandage, strip 0.75in x 3in (Bandaid)	item	0.2265

14. If you wish to include an equipment item that is not on the list (*please see fifth worksheet in PE spreadsheet workbook*) please provide a paid invoice. Identify and explain the invoice here:

15. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

16. List all the equipment included in your recommendation and the equipment formula chosen *(*please see document titled *Calculating equipment time).* If you have selected "other formula" for any of the equipment please explain here:

AMA/Specialty Society RVS Update Committee Summary of Recommendations

January 2020

Breast Implant/Expander Removal – Tab 6

In February 2019, the CPT Editorial Panel approved the deletion of two codes and revisions to seventeen codes to provide descriptor clarification of any overlap in physician work for breast reconstruction services. In the CPT coding changes application, the specialty stated that this change is editorial and does not involve a change in work. At the April 2019 RUC meeting, the RUC agreed that the seventeen breast reconstruction services should be surveyed for the October 2019 RUC meeting. Codes 11960, 19316, 19350, 19355, and 19396 were also included as being part of the same code family. Based on the change in the typical patient for CPT code 11971 and multiple Harvard valued codes, the RUC agreed that all twenty-two of these services be surveyed, contrary to the specialty initial recommendation that these changes are editorial only and do not require surveying. At that time, the RUC had recommended surveying all twenty-two codes for the October 2019 RUC meeting.

At the October 2019 RUC meeting, the specialty elected to survey two of the codes and send a third code to CPT for revision. The specialty noted that the designation of a single 22 code family was too broad, and that the family categorization should be more granular than surgical procedures for the repair and/or reconstruction of the same anatomic region. The specialties proposed 8 families of services to the RUC noting that this categorization assign similar procedures together and ensures that the survey process is effective. The RUC concurred with the more granular classification of families that group analogous procedures together. Furthermore, the specialty indicated, and the RUC agreed, that three of the code families, autologous reconstruction, nipple procedures and moulage formation were not identified by any RAW screens, had no change to their work from CPT revisions and had no obvious flaws to their valuation (i.e., a site of service valuation issue), and therefore would not need to be reviewed at this time. The RUC agreed that, although the specialty societies had conducted surveys of code 11970 and 11971 for October 2019, these services should be resurveyed with their newly identified respective code families. In October 2019, the RUC reviewed these family of services with the specialty societies and agreed that these services should be surveyed for physician work and practice expense in January 2020. The *Breast Implant/Expander Removal* code family was one of the code families identified by the RUC for review for the January 2020 RUC meeting.

Compelling Evidence

The RUC reviewed and accepted compelling evidence that the original valuation of CPT code 11971 was based on flawed methodology when it was reviewed in 1995 which resulted in the service having a negative IWPUT. The value of the service was not changed to appropriately account for the times newly assigned to the service in 1995. This code was last reviewed with hundreds of other services during the first Five-Year Review prior to the creation of the IWPUT metric, so it may not have been as apparent at the time that the assigned value was lower than the sum of the post-operative visits that were bundled into the service.

The RUC also reviewed and accepted compelling evidence based on change in patient population for all three services in this family, 11971, 19328 and 19330 based on a change in patient population. The number of patients that are eligible for breast reconstruction has changed. Twenty

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

or thirty years ago, the patient did not have a BMI under 30 and nor major comorbidities. Now, breast reconstruction is appropriately provided to a much broader patient population, including many more oncology patients, due to advancements in care and surgical technique over the past few decades. With the increased access to breast reconstruction, patients with more comorbidities require management of the infected or otherwise complicated breast implant. The change in patient expectations has significantly increased the work intensity of the procedure not only intra-operatively, but also in the pre- and post- periods due to the elevated complexity of discussions with the patient. In addition, the patient population for code 11971 changed since this service was reviewed in 1995 for this service from scalp expansion for a pediatric patient to a breast procedure for an adult.

Furthermore, the old descriptor for CPT code 19330 was inappropriately vague, "Removal of mammary implant material", which the specialty noted some providers may have interpreted that under the old coding structure they may report separately for removal of ruptured contents (i.e., silicone gel).

11971 ***Removal of tissue expander without insertion of implant***
The RUC reviewed the survey results from 56 plastic surgeons and recommends: 40 minutes of pre-service evaluation time, 10 minutes for pre-service positioning time, 10 minutes for pre-service scrub/dress/wait, 45 minutes for intra-service time, 20 minutes for immediate post-time, 0.5 99238 discharge visit, 1 99213 post-operative office visit and 3 99212 post-operative office visits. The evaluation is spent setting and marking the patient in an upright position to evaluate breast shape and measure base dimensions. Additional time is also required to review choice of implants with the patient. Ten minutes of positioning time are necessary to account for the time involved in securing arms and assessing the position of the head and neck and making any adjustments to allow for sitting upright intra-operatively. The RUC noted that the existing times and values for 11971 created a negative IWPUT of -0.041, which strongly indicates either the current times are highly inflated relative to the current work RVU and not valid for comparison to the new times and value. In addition, the physician work for the modern typical patient for 11971, an adult female patient with a history of breast cancer who is having breast tissue expanders removed, is also greater than the removal of a scalp expander from a pediatric patient. Removing a breast tissue expander also involves the more intense work of going beneath the muscle, which is was not required for the historic typical patient.

The RUC reviewed the survey 25th percentile work RVU of 7.02 and agreed that this value appropriately accounts for physician work involved when performing this service. To justify a work RVU of 7.02, the RUC compared the survey code to MPC code 26615 *Open treatment of metacarpal fracture, single, includes internal fixation, when performed, each bone* (work RVU= 7.07, intra-service time of 45 minutes, total time 217 minutes) and note that both services involve identical intra-service times and similar total times. The RUC also compared the survey code to CPT code 28645 *Open treatment of metatarsophalangeal joint dislocation, includes internal fixation, when performed* (work RVU= 7.44, intra-service time of 45 minutes, total time of 217 minutes) and noted that both services have identical intra-service time and very similar total times. **The RUC recommends a work RVU of 7.02 for CPT code 11971.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

19328 ***Removal of intact-breast implant***
The RUC reviewed the survey results from 56 plastic surgeons and recommends: 40 minutes of pre-service evaluation time, 10 minutes for pre-service positioning time, 10 minutes for pre-service scrub/dress/wait, 45 minutes for intra-service time, 20 minutes for immediate post-time, 0.5 99238 discharge visit, 1 99213 post-operative office visit and 2 99212 post-operative office visits. The evaluation is spent setting and marking the patient in an upright position to evaluate breast shape and measure base dimensions. Additional time is also required to review choice of implants with the patient. Ten minutes of positioning time are necessary to account for the time involved in securing arms and assessing the position of the head and neck and making any adjustments to allow for sitting upright intra-operatively. Code 19328 is more intense intraoperatively relative to family code 11971 since it is typically a more chronic infection that requires additional work in removing the chronic inflammatory tissue as well as additional effort is required to score what is now a well formed scar capsule in order to promote healing. Therefore, the intraoperative work is greater and more intense. This is supported by the survey data where the respondents indicated a higher work RVU for 19328 compared to 11971.

The RUC noted that the current times for this service are over 25 years old from the Harvard study and not valid for comparison. During the initial Harvard study, only overall post-operative time data was surveyed; data on the number and level of hospital and office post-operative visits were not collected. These times were "converted" to E/M visit codes by a CMS contractor for practice expense RVU review using an algorithm some years after the original Harvard study. Thus, this is the first time the RUC has had the opportunity to review the hospital and office visits for code 19328 and the first time survey data was collected on the number and level of post-operative visits, making comparison between historic Harvard times and modern RUC times precarious at best.

The RUC reviewed the survey 25th percentile work RVU of 7.44 and agreed that this value appropriately accounts for physician work involved when performing this service. To justify a work RVU of 7.44, the RUC compared the survey code to CPT code 28291 *Hallux rigidus correction with cheilectomy, debridement and capsular release of the first metatarsophalangeal joint; with implant* (work RVU= 8.01, intra-service time of 50 minutes, total time of 215 minutes) and noted that the reference code involves more intra-service and total time, supporting a somewhat lower valuation for the survey code. The RUC also compared the survey code to MPC code 67904 *Repair of blepharoptosis; (tarso) levator resection or advancement, external approach* (work RVU= 7.97, intra-service time of 45 minutes, total time of 185 minutes) and noted that both services have identical intra-service times and similar total times, whereas the reference code is slightly more intense intra-operatively. **The RUC recommends a work RVU of 7.44 for CPT code 19328.**

19330 ***Removal of ruptured breast implant, including implant contents (eg, saline, silicone gel)***
The RUC reviewed the survey results from 56 plastic surgeons and recommends: 40 minutes of pre-service evaluation time, 10 minutes for pre-service positioning time, 10 minutes for pre-service scrub/dress/wait, 75 minutes for intra-service time, 20 minutes for immediate post-time, 0.5 99238 discharge visit, 1 99213 post-operative office visit and 2 99212 post-operative office visits. The evaluation is spent setting and marking the patient in an upright position to evaluate breast shape and measure base dimensions. Additional time is also required to review choice of implants with the patient. Ten minutes of positioning time are necessary to account for the time involved in securing arms and assessing the position of the head and neck and making any adjustments to allow for sitting upright intra-operatively.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

The RUC noted that the current times for this service are over 25 years old from the Harvard study and not valid for comparison. During the initial Harvard study, only overall post-operative time data was surveyed; data on the number and level of hospital and office post-operative visits were not collected. These times were "converted" to E/M visit codes by a CMS contractor for practice expense RVU review using an algorithm some years after the original Harvard study. Thus, this is the first time the RUC has had the opportunity to review the hospital and office visits for code 19328 and also the first time survey data was collected on the number and level of post-operative visits, making comparison between historic Harvard times and modern RUC times precarious at best.

The RUC reviewed the survey 25th percentile work RVU of 9.00 and agreed that this value appropriately accounts for physician work involved when performing this service. To justify a work RVU of 9.00, the RUC compared the survey code to CPT code 36821 *Arteriovenous anastomosis, open; direct, any site (eg, Cimino type) (separate procedure)* (work RVU= 11.90, intra-service time of 75 minutes, total time of 233) and noted that both services have identical intra-service time and very similar total times, though the reference code is somewhat more intense for the surgeon intra-operatively. The RUC also compared the survey code to MPC code 21015 *Radical resection of tumor (eg, sarcoma), soft tissue of face or scalp; less than 2 cm* (work RVU= 9.89, intra-service time of 75 minutes, total time of 277 minutes) and noted that both services have identical intra-service time, whereas the reference code involves more total time — the lower value for the survey code has appropriate rank order with the reference code. **The RUC recommends a work RVU of 9.00 for CPT code 19330.**

Practice Expense
The Practice Expense Subcommittee changed the exam table to a power table for each code which is typical for this specialty. **The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.**

RUC Recommendation for New CPT Parenthetical
The RUC noted that the CPT introductory materials state that 19330 and 19371 should not be reported together as 19371 includes the removal of the breast implant and all intracapsular contents:

> "Removal of a ruptured breast implant, including the implant contents, is reported with 19330. A complete capsulectomy (19371) includes removal of the breast implant and all intracapsular contents."

The RUC recommends for this also to be clearly stated in a parenthetical under the codes to further emphasize that these services should never be reported together.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
Repair (Closure) **Other Flaps and Grafts**				
●*15769*		*Grafting of autologous soft tissue, other, harvested by direct excision (eg, fat, dermis, fascia)* *(For injection[s] of platelet-rich plasma, use 0232T)*		
●*15771*		*Grafting of autologous fat harvested by liposuction technique to trunk, breasts, scalp, arms, and/or legs; 50cc or less injectate* *(Report 15771 only once per session)*		
✚●*15772*		*each additional 50cc injectate, or part thereof (List separately in addition to code for primary procedure)* *(Use 15772 in conjunction with 15771)*		
Breast **Repair and/or Reconstruction**				
		Breast reconstruction is performed to repair defects due to congenital anomaly or loss of breast tissue after a surgical excision. The goal of breast reconstruction is to correct the anatomic defect and to restore form and breast symmetry. A breast can be reconstructed using a single technique or a combination of techniques, and each technique can stand alone. Additionally, both breasts may be reconstructed at the same time, but may use different techniques or a combination of techniques. In many instances breast reconstruction requires more than one planned procedure or may require revisions. The native breast may be altered using different techniques. The breast and breast mound can be lifted with a mastopexy (19316), reduced in volume with a breast reduction (19318), or augmented with a breast implant (19325). Post-mastectomy breast reconstruction may be performed using a variety of techniques. An implant-based reconstruction involves placement of a device filled with fluid (eg, saline, silicone gel) to provide volume to the breast. In immediate reconstruction, an implant is placed primarily at the time of a mastectomy (19340). In delayed reconstruction, an implant is placed at any date separate from the mastectomy (19342). This includes placement of any new implant or replacement of an existing implant within the mastectomy defect or reconstructed breast. The removal of an intact breast implant for replacement is included in 19342. A breast implant cannot always be placed due to the lack of an adequate skin envelope. Code 19357 describes insertion of a tissue expander which is a device that is surgically implanted to create an adequate sized pocket for subsequent insertion of a permanent implant. A tissue expander is an		

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

inflatable device placed beneath the skin and chest muscle, into which saline is injected over a period of weeks in the office to create the implant pocket. The tissue expander is eventually removed and may be replaced with a permanent breast implant (11970). Placement of either a breast implant (19340, 19342) or tissue expander (19357) may be reported separately when performed with flap reconstruction (19361, 19364, 19366, 19367, 19368,19369).

Code 11970 describes the removal of a tissue expander with concurrent insertion of a permanent breast implant. Code 11970 includes removal of the expander, minor revisions to the breast capsule and placement of the new breast implant. Code19370 may be reported in addition to 11970 if more extensive capsular revision is performed. Code 11971 describes the removal of a tissue expander without replacement of an expander or implant.

Autologous breast reconstruction involves harvesting a flap of skin, subcutaneous fat and/or muscle from one area of the body and relocating the tissue to the anterior chest to create a new breast mound. Flap reconstruction may be performed at the time of mastectomy or in a delayed fashion depending on patient preference and other oncologic treatments.

Code 19361 describes breast reconstruction with a flap composed of the latissimus dorsi muscle including some of the overlying skin and subcutaneous fat to reconstruct the breast mound. This flap is left on its vascular pedicle and tunneled beneath the armpit skin to the anterior chest to rebuild the breast. The blood supply to the flap is left attached to its origin in the axilla. To give the breast mound additional volume, a tissue expander or permanent breast implant may be placed beneath the latissimus flap. Placement of either a breast implant (19340, 19342) or tissue expander (19357) may be reported separately.

Code 19364 describes a microsurgical free tissue transfer of skin, and subcutaneous fat and/or muscle for breast reconstruction. This code includes the flap harvest, microsurgical anastomosis of one artery and two veins with use of an operating microscope, flap inset as a breast mound, and donor site closure. Typical free flaps include free transverse rectus abdominis myocutaneous (fTRAM), deep inferior epigastric perforator (DIEP), superficial inferior epigastric artery (SIEA), or gluteal artery perforator (GAP) flaps.

Code 19367 describes a single pedicled transverse rectus abdominis myocutaneous (TRAM) flap, where skin, subcutaneous fat, and a large portion of the rectus abdominis muscle from the lower abdomen is moved beneath the upper abdominal wall skin up to the chest to rebuild the breast. The blood supply to the flap is left attached to its origin in the abdomen.

Code 19368 describes "supercharging" of a single pedicled TRAM flap. This is typically performed to increase blood flow in TRAM flaps with marginal circulation to ensure flap survival. In addition to the standard unipedicle TRAM procedure, the inferior epigastric artery and/or veins are also anastomosed to recipient vessels in the chest using microsurgical techniques.

Code 19369 describes a bipedicled TRAM flap in which skin, subcutaneous fat and both rectus muscles are harvested for the reconstruction of a single breast. The dual blood supply to the flap is left attached to its origins in the abdomen.

Secondary and ancillary breast reconstruction procedures include nipple reconstruction (19350), implant adjustments through revisions to the breast capsule (19370), or removal of the entire breast capsule via a complete capsulectomy (19371) to achieve correct breast tissue positioning. In addition, procedures may be performed on the contralateral breast to create symmetry (19316, 19318, 19325). Removal of an intact breast implant without replacement is reported with 19328. Removal of a ruptured breast implant, including the implant contents, is reported with 19330. A complete capsulectomy (19371) includes removal of the breast implant and all intracapsular contents.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Code 19380 describes a revision of a reconstructed breast, including significant excision of tissue re-advancement or re-inset of flaps. For autologous reconstruction, this code is inclusive of revisions of the flap position on the chest wall, removal of portions of the flap (via direct excision or liposuction), re-shaping of the flap, or scar revisions. However, if a limited procedure is performed with a defined code (eg, scar revision) then the more specific code should be used. The placement of a new implant (19342) or autologous fat grafting for increased volume (*15771, 15772*) may be separately reportable. For implant-based reconstruction, 19380 is inclusive of revisions to the skin and capsule when performed together. The exchange for a new or different size/shape/type of implant (19342) or autologous fat grafting for increased volume/contour irregularities *(15771, 15772*) may be separately reportable. Nipple reconstruction is reported with 19350 and includes local flaps (14000,14001), areolar skin grafting (15100, 15200, 15201), and subsequent tattooing (11920, 11921, 11922).

Code 19396 describes the formation of a moulage cast of a patient's chest defect. The mold is used to fabricate a specific, custom made implant that fits the patient's defect.

(To report bilateral procedures, report modifier 50 with the procedure code)

(For biological implant for soft tissue and/or breast implant reinforcement, use 15777 in conjunction with the primary procedure)

CPT Descriptor: Removal of tissue expander without insertion of implant

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 35-year-old female with a history of right breast cancer who has previously undergone mastectomy and placement of a tissue expander developed an infection at the breast reconstruction site requiring tissue expander removal.

Percentage of Survey Respondents who found Vignette to be Typical: 93%

Site of Service (Complete for 010 and 090 Globals Only)
Percent of survey respondents who stated they perform the procedure; In the hospital 71% , In the ASC 22%, In the office 7%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 30% , Overnight stay-less than 24 hours 40% , Overnight stay-more than 24 hours 30%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 29%

Description of Pre-Service Work: Orders for preoperative medications are written, and laboratory results, imaging, and patient photographs, are reviewed. The anticipated sequence of the planned procedure and postoperative management are reviewed with the patient and the patient's family. Post-operative functional and aesthestic and funcitonal expectations are reviewed. The patient's history and physical are updated with reconciliation of medications/allergies. Post-operative pain control is reviewed and a narcotics controlled substance review is performed. NPO status is confirmed. The operative site is marked in an upright position to confirm location of relevant anatomy. The volume contained in tissue expander is reviewed. Informed consent is obtained. The length and type of anesthesia are reviewed with the anesthesiologist. Planned airway management and procedure reviewed with OR staff. Surgeon changes into scrub clothes. The availability of all required supplies and instruments are verified. The patient is transferred from the gurney and positioned on the operating room table. A patient verification procedure is performed. Bony prominences are padded, and thermal regulation drapes are applied. The arms are secured in a position to allow for sitting upright. The position of the head/neck is assessed with placement of a transverse shoulder roll to provide neck extension. The surgeon monitors and assists with prepping including waiting for the prep to dry. The surgeon scrubs and gowns. Surgical drapes are placed. A pre-incision surgical time-out is performed with the operating surgical team.

Description of Intra-Service Work: An incision is performed on the breast followed by a meticulous dissection of the subcutaneous tissues. Hemostasis is obtained. The surgeon performs a capsulotomy to enter the implant pocket, and the tissue expander is then punctured, the saline evacuated, and the device removed from the patient. The surgeon then inspects the surface of the pocket to assess for any abnormalities. A curette is used to debride the inside of the tissue expander pocket. The surgeon then uses electrocautery to perform hemostasis within the pocket followed by high pressure irrigation to ensure the cleanliness of the expander pocket. The surgeon then marks and carefully excises the excess skin on the chest wall to ensure a smooth contour. The skin is provisionally closed, and the surgeon sits the patient up on the operating table to assess under the effects of gravity that enough skin has been removed. The patient is then returned to the supine position. A closed suction drain is placed and careful hemostasis performed. The implant pocket is irrigated copiously. The wound is closed in a layered fashion.

Description of Post-Service Work: The chest is cleaned. A dressing is applied to the incision followed by a compressive dressing. The operative report is dictated. The postoperative orders are written.

Discharge Management Visit: The patient is typically (70% based on survey) monitored until the next day. The patient is re-examined for surgical site complications and orders are advanced for the day. Discharge medications are reconciled and prescriptions are written. There is a discussion with the family and patient regarding the procedure and findings. There is reiteration of the convalescence, precautions, follow up appointments, expected postoperative course, signs and symptoms of complications. Instructions, appropriate discharge timing, follow up, and precautions are discussed with the postoperative nursing team.

Post op visit 1: 99213
This visit typically occurs at one week post-operatively. The patient's convalescence to that point is reviewed and discussed. The patients pain control and use of antibiotics are discussed. The dressing from the operative site is removed. The drain output is assessed, and the drain suture and drain are removed, if appropriate. The breast wound is inspected and palpated. The integrity and viability of the breast skin flaps are assessed. Antibiotic management plan is reviewed. Patient and family questions and concerns are addressed. Ongoing care is reiterated and the anticipated timing of additional surgeries reviewed. Limitations of post-surgical activity are clearly reviewed. The wound is redressed.

Post op visit 2: 99212
This visit typically occurs at two weeks post-operatively. If the drain was not removed at the initial postoperative visit, the drain output is assessed, and the drain suture and drain are removed, if appropriate. The breast wound is inspected and palpated. The contour of the healing breast skin is assessed. Antibiotic management plan is reviewed. Patient and family questions and concerns are addressed. Ongoing care is reiterated and the anticipated timing of additional surgeries reviewed. The wound is redressed, with home care instructions provided.

Post op visit 3: 99212
This visit typically occurs at 6 weeks post-operatively. The patient's convalescence to that point is reviewed. The wounds are inspected and palpated. The contour of the chest is assessed. Antibiotics are likely discontinued. Shoulder range of motion is evaluated and physical therapy reviewed. The possibility of revisionary or additional surgeries is discussed. Patient and family questions and concerns are addressed.

Post op visit 4: 99212
This visit typically occurs at three months post-operatively. The patient's convalescence to that point is reviewed. The wounds are inspected and palpated. Patient and family questions and concerns are addressed. Revisionary or additional surgeries are discussed and planned.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	18%	24%	47%	11%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	41%	18%	51%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	35%	35%	30%
Physical effort required	6%	47%	47%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality	12%	18%	70%

- Outcome depends on the skill and judgment of physician
- Estimated risk of malpractice suit with poor outcome

2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	50%	25%	25%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	13%	25%	62%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	25%	50%	25%
Physical effort required	0%	67%	33%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	25%	75%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

In February 2019, the CPT Editorial Panel approved the deletion of two codes and editorial revisions to seventeen other codes including CPT 11971. The change made to 11971 was updating the term "prostheses" to "implant" along with adding parentheticals to prevent unbundling of 11970 (replacement of tissue expander with permanent implant) which inherently includes 11971 as part of the work.

CPT 11971	Descriptor
Previous	Removal of tissue expander without insertion of prosthesis
Updated	Removal of tissue expander without insertion of implant (For removal of breast tissue expander and replacement with breast implant, use 11970) (Do not report 11971 with 11970)

During the April 2019 RUC meeting, CPT 11971 was identified as potentially having a change in work due to the vignette for the typical patient changing from a pediatric patient with a pigmented hairy nevus of the scalp to an adult female patient with a history of breast cancer who is having breast tissue expanders removed and replacement with a permanent implant. In addition, 11971 has a previous negative IWPUT suggested misvaluation. At that time, the decision was to survey 11970 and 11971 together with planned presentation at the October RUC meeting. Although a survey was performed and a SOR for 11971 was submitted, after the overall discussion and agreement to develop different families, 11971 was never formally presented. During the October 2019 RUC meeting, it was agreed upon that 111971 would be re-surveyed along with codes 19328 and 19330 as part of the "Implant/Expander Removal" family.

Code 11971 was previously RUC valued in August 1995.

Compelling Evidence

The negative IWPUT for this code indicates flawed methodology during the previous survey. In addition, the change in typical patient population from a pediatric scalp lesion patient to an adult breast reconstruction patient, is compelling evidence.

Survey Sample and Process

A survey request was sent to a random selection of members from the American Society of Plastic Surgeons who have self-identified as reconstructive surgeons.

Recommendation

We are recommending a work RVU of 7.02, the survey 25th percentile.

Pre-time Package 3-FAC (Straightforward Patient/Difficult Procedure)

We have selected pre-time package 3-FAC as it is the lowest package for a patient undergoing general anesthesia.

Evaluation time – We are recommending 40 minutes of evaluation time which is an increase of 7 minutes from the package time, however, it is a decrease of 1 minutes from our survey data. The additional 7 minutes of pre-time for this case is spent in setting and marking the patient in an upright position to evaluate breast shape and measure base dimensions.

Positioning time – We are recommending 10 minutes of positioning time which is an increase in 7 minutes from the pre-service package time. We believe there is extra time involved in securing arms and assessing the position of the head and neck and making any adjustments to allow for sitting upright intra-operatively which is not typically required for most procedures. This is supported by our median survey time and consistent with previous times related to breast surgery.

Scrub, Dress, Wait time – We are recommending 10 minutes of scrub, dress and wait time which is 5 minutes less than the package, but matches our survey results.

Post-time Package 9A (General Anes or Complex Reg Blk/Straightforward Procedure)

The recommended time has been reduced to 20 minutes which is a decrease of 10 minutes from the post package time selected to match our survey time.

Key Reference Codes

CPT	DESCRIPTOR	IWPUT	wRVU	TOTAL TIME	PRE	INTRA	POST	99238	99213	99212
11971	Removal of tissue expander without insertion of implant	0.037	7.02	234	60	45	20	1	1	3
21556	Excision, tumor, soft tissue of neck or anterior thorax, subfascial (eg, intramuscular); less than 5 cm	0.0455	7.66	234	68	60	25	0.5	2	1
14060	Adjacent tissue transfer or rearrangement, eyelids, nose, ears and/or lips; defect 10 sq cm or less	0.0899	9.23	183	30	60	15		2	2

Code 11971 with an wRVU at the 25th percentile (7.02) demonstrates an good similarity to one (KRC 21556) of the KRC codes selected but is less relative to the second (KRC 14060) for comparison. Code 11971 has a shorter intra-time of 45 minutes compared to 60 minutes for both KRC 21556 and KRC 14060. Code 11971 has the same total time to KRC 21556, but a lower wRVU which could reflect the decrease intra-time. However, code 11971 has a longer total time (~51 minutes), but a wRVU that is significantly lower with -2.21 wRVU less.

MPC Comparison Codes

CPT	DESCRIPTOR	IWPUT	wRVU	TOTAL TIME	PRE	INTRA	POST	99238	99213	99212
25076	Excision, tumor, soft tissue of forearm and/or wrist area, subfascial (eg, intramuscular); less than 3 cm	0.0497	6.74	206	60	45	20	0.5	2	1
11971	Removal of tissue expander without insertion of implant	0.037	7.02	234	60	45	20	1	1	3
26615	Open treatment of metacarpal fracture, single, includes internal fixation, when performed, each bone	0.0443	7.07	217	55	45	20	0.5	2	2

Compared to the selected MPC codes, Code 11971 at the 25th percentile (wRVU 7.02) is very appropriately comparable. The intratimes are the same (45 min) and the total times for Code 11971 is slightly higher than both KRC codes (28 and 17 minutes). Code 11971 at the 25th percentile is between the two selected MPC codes despite the slightly higher total time.

Additional MPC Codes:

In order to compare to all of the appropriate MPC codes, a search of the RUC data base for MPC, 90 day global, IT 40-50, TT 204-264, provided three codes. Code 11971 at the 25th percentile (wRVU = 7.02) would be **2nd lowest out of 4** total codes. However, it is important to note that code 11971 is not uncommonly performed in a hospital with additional inpatient E&M. Our survey suggests that 11971 is performed in a hospital 71% of the time with 30% of total patients staying overnight more than 24hrs with an additional 40% of patients staying overnight less than 24 hours (typically for antibiotics). This is supported as well by utilization from the 2018 RUC claims database which demonstrates 32.24% of patients had an inpatient hospital as a place of service and 52.24% had an outpatient hospital (on campus) place of service. In comparison, the other MPC codes include two hand fracture codes with 11.55% and 15.18% inpatient place of service (likely due to associated trauma and not the surgery itself) and a tumor excision codes with only 1.25% inpatient place of service. Thus, it is very appropriate for 11971 to be at the higher end of valuation within this context. A table including the relevant MPC codes is below:

CPT	DESCRIPTOR	IWPUT	wRVU	TOTAL TIME	PRE	INTRA	POST	99238	99213	99212	2018 Inpatient Place of Service (%)
26765	Open treatment of distal phalangeal fracture, finger or thumb, includes internal fixation, when performed, each	**0.0174**	**5.86**	**217**	55	**45**	20	0.5	2	2	11.55%
25076	Excision, tumor, soft tissue of forearm and/or wrist area, subfascial (eg, intramuscular); less than 3 cm	**0.0497**	**6.74**	**206**	60	**45**	20	0.5	2	1	1.25%
11971	Removal of tissue expander without insertion of implant	**0.039**	**7.02**	**234**	60	**45**	20	1.0	1	3	32.24%
26615	Open treatment of metacarpal fracture, single, includes internal fixation, when performed, each bone	**0.0443**	**7.07**	**217**	55	**45**	20	0.5	2	2	15.18%

Comparisons to other recently valued codes in the RUC database:

Searching the RUC database for codes that are RUC surveyed in the last 10 years, 90 day global, IT 40-50, TT 204-264 reveals 11 codes (the same search as our MPC identification search). Code 11971 at the 25th percentile (wRVU = 7.02) would rank **9th highest out of 12 codes**. A rank ordered table of these codes and wRVUs is below:

CPT Code	25076	28122	28289	11971	28120	28292	65780	28291	45171	67255	67036	66183
RVU	6.74	6.76	6.90	7.02	7.31	7.44	7.81	8.01	8.03	8.38	12.13	13.20

Reducing the search to only the exact same IT and a more narrow total time range by searching for codes that are RUC surveyed in the last 10 years, 90 day global, IT 45 TT 214-254 reveals 3 codes. Code 11971 at the 25th percentile (wRVU 7.02) would **rank 2nd highest out of 4 codes**. A rank ordered table of these codes and wRVUs is below:

CPT Code	28122	28289	11971	67255
RVU	6.76	6.90	7.02	8.38

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the

provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 11971

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Plastic Surgery How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 3000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. We belive the utilization is 3x the medicare volume.

Specialty Plastic Surgery Frequency 3000 Percentage 100.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,000
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC Database

Specialty Plastic Surgery Frequency 950 Percentage 95.00 %

Specialty Frequency 0 Percentage 0.00 %

CPT Descriptor: Removal of intact breast implant

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 60-year-old female with a history of implant-based breast reconstruction develops an acute infection of the implant requiring explantation.

Percentage of Survey Respondents who found Vignette to be Typical: 91%

Site of Service (Complete for 010 and 090 Globals Only)
Percent of survey respondents who stated they perform the procedure; In the hospital 68% , In the ASC 25%, In the office 7%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 45% , Overnight stay-less than 24 hours 26% , Overnight stay-more than 24 hours 29%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 24%

Description of Pre-Service Work: Orders for preoperative medications are written, and laboratory results, imaging, and patient photographs, are reviewed. The planned procedure and postoperative management are reviewed with the patient and the patient's family. Post-operative functional and aesthestic expectations are reviewed. The patient's history and physical are updated with reconciliation of medications/allergies. Post-operative pain control is reviewed and a narcotics controlled substance review is performed. NPO status is confirmed. The operative site is marked sitting upright to evaluate breast shape an mark the anatomic landmarks of the breast. Informed consent is obtained. The length and type of anesthesia are reviewed with the anesthesiologist. Surgeon changes into scrub clothes. The availability of all required supplies and instruments are verified including the patient's current implant size/shape in case needed. Confirmation of the ability for the operating room bed to sit upright is performed. The patient is transferred from the gurney and positioned on the operating room table. A patient verification procedure is performed. Bony prominences are padded, and thermal regulation drapes are applied. The arms are secured in a position to allow for sitting upright. The position of the head/neck is assessed and adjusted, as needed based on the need to sit up intra-operatively. A neck roll is placed to support the head. The surgeon monitors and assists with prepping including waiting for the prep to dry. The surgeon scrubs and gowns. Surgical drapes are placed. A pre-incision surgical time-out is performed with the operating surgical team.

Description of Intra-Service Work: The pre-selected access incision for removal of the breast implant is made. Dissection is performed through the breast tissue down to the implant capsule. The capsule is incised and the intact breast implant is removed. The pocket is evaluated and the capsule is scored to promote healing. The pocket is irrigated and hemostasis is assured. The patient is then sat up to assess the contour of the remaining breast/mastectomy skin. Revisions to the residual soft tissues are made to optimize the residual contours. The patient is returned to the supine position. A drain is placed. The capsule is sutured closed and the surgical incision is repaired in multiple layers.

Description of Post-Service Work: The chest is cleaned. Sterile bandages and a compressive dressing are placed. A surgical bra is placed on the patient. The operative report is dictated. The postoperative orders are written.

Discharge Management Visit: The patient is typically (55% based on survey) monitored until the next day. The patient is re-examined for surgical site complications and orders are advanced for the day.Discharge medications are reconciled and prescriptions are written. There is a discussion with the family and patient regarding the procedure and findings. There is reiteration of the convalescence, precautions, follow up appointments, expected postoperative course, signs and symptoms

of complications. Instructions, appropriate discharge timing, follow up, and precautions are discussed with the postoperative nursing team.

Post op visit 1: 99213
This visit typically occurs at one week post-operatively. The patient's convalescence to that point is reviewed and discussed. The patients pain control and use of antibiotics are discussed. The dressing from the operative site is removed. The drain output is assessed, and the drain suture and drain are removed, if appropriate. The breast wound is inspected and palpated. The integrity and viability of the breast skin flaps are assessed. Antibiotic management plan is reviewed. Patient and family questions and concerns are addressed. Ongoing care is reiterated and the anticipated timing of additional surgeries reviewed. Limitations of post-surgical activity are clearly reviewed. The wound is redressed.

Post op visit 2: 99212
This visit typically occurs at two to three weeks post-operatively. If the drain was not removed at the initial postoperative visit, the drain output is assessed, and the drain suture and drain are removed, if appropriate. The breast wound is inspected and palpated. The contour of the healing breast skin is assessed. Antibiotic management plan is reviewed. Patient and family questions and concerns are addressed. Ongoing care is reiterated and the anticipated timing of additional surgeries reviewed. The wound is redressed, with home care instructions provided.

Post op visit 3: 99212
This visit typically occurs at two to three months post-operatively. The patient's convalescence to that point is reviewed. The wounds are inspected and palpated. The resultant soft tissue envelope after removal of the implant is evaluated. Patient and family questions and concerns are addressed. Revisionary or additional surgeries are discussed and planned.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	20%	27%	47%	60%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	47%	20%	33%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	27%	53%	20%
Physical effort required	13%	40%	47%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and	20%	27%	53%

judgment of physician
- Estimated risk of malpractice suit with poor outcome

2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	50%	17%	33%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	8%	50%	42%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	46%	36%	18%
Physical effort required	0%	55%	45%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	33%	67%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

In February 2019, the CPT Editorial Panel approved the deletion of two codes and revisions to seventeen other codes related to breast reconstruction including 19328. The change made to 19328 was updating the term "mammary" to "breast". Parentheticals were added to distinguish between reporting removal of a breast implant versus removal of a tissue expander. In additional, reciprocal parentheticals were added to prevent unbundling of 19370 (Revision of peri-implant capsule, breast, including capsulotomy, capsulorrhaphy, and/or partial capsulectomy) with 19328 for either access through the capsule to remove the implant or for the scoring of any capsule that is performed after implant removal to improve healing.

CPT 19328	Descriptor
Previous	Removal of intact mammary implant
Updated	Removal of intact breast implant (Do not report 19328 for removal of tissue expander) (Do not report 19328 in conjunction with 19370) (For removal of tissue expander with placement of breast implant, use 11970) (For removal of tissue expander without replacement, use 11971)

During the October 2019 RUC meeting, it was agreed upon that 19328 would be surveyed along with codes 11971 and 19328 as part of the "Implant/Expander Removal" family.

Code 19328 is a Harvard valued code.

Compelling Evidence

We believe there is compelling evidence for this code based on a change in patient population. Over the 27 years since the publication of the Harvard Phase III values, there have been significant changes in the population of patients who have breast implants requiring removal. With the increased access to breast reconstruction, patients with more comorbidities require management of the infected or otherwise complicated breast implant. The change in patient expectations has significantly increased the work intensity of the procedure not only intra-operatively, but also in the pre- and post-periods due to the elevated complexity of discussions with the patient. This is highlighted by the recent media focus related to breast implants. Given that all of these current issues were not present during the Harvard valuation, we believe the methodology at that time may be flawed.

Survey Sample and Process

A survey request was sent to a random selection of members from the American Society of Plastic Surgeons who have self-identified as reconstructive surgeons.

Recommendation

We are recommending a work RVU of 7.02 which is below the survey 25th percentile, but equal to the recommended wRVU for 11971 which is a similar procedure conceptually.

Pre-time Package 3-FAC (Straightforward Patient/Difficult Procedure)

We have selected pre-time package 3-FAC as it is the lowest package for a patient undergoing general anesthesia.

Evaluation time – We are recommending 40 minutes of evaluation time which is an increase of 7 minutes from the package time, however, it is a decrease of 1 minutes from our survey data. The additional 7 minutes of pre-time for this case is spent in setting and marking the patient in an upright position to evaluate breast shape and measure base dimensions.

Positioning time – We are recommending 10 minutes of positioning time which is an increase in 7 minutes from the pre-service package time. We believe there is extra time involved in securing arms and assessing the position of the head and neck and making any adjustments to allow for sitting upright intra-operatively which is not typically required for most procedures. This is supported by our median survey time and consistent with previous times related to breast surgery.

Scrub, Dress, Wait time – We are recommending 10 minutes of scrub, dress and wait time which is 5 minutes less than the package time, but matches the survey results.

Post-time Package 9A (General Anes or Complex Reg Blk/Straightforward Procedure)

The recommended time has been reduced to 20 minutes which is a decrease of 10 minutes from the post package time selected to match our survey time.

Key Reference Codes

CPT	DESCRIPTOR	IWPUT	wRVU	TOTAL TIME	PRE	INTRA	POST	99238	99213	99212
19328	Removal of intact breast implant	0.048	7.02	218	60	45	20	1	1	2
21556	Excision, tumor, soft tissue of neck or anterior thorax, subfascial (eg, intramuscular); less than 5 cm	0.0455	7.66	234	68	60	25	0.5	2	1
14060	Adjacent tissue transfer or rearrangement, eyelids, nose, ears and/or lips; defect 10 sq cm or less	0.0899	9.23	183	30	60	15		2	2

Code 19328 with an wRVU at the recommended value of 7.04 demonstrates some similarity to the selected KRC codes. Code 19328 has 15 minutes less of intra-time compared to both KRCs. Code 19328 has 16 minute less intra-time compared to KRC 21556 and is slightly lower valued. However, it has 35 minutes of additional total time compared to KRC 14060, but a much lower wRVU with a difference of -2.19wRVU.

MPC Comparison Codes

In order to try and identify appropriate MPC codes, a search of the RUC data base for MPC, 90 day global, IT 40-50, TT 188-248 was performed and identified four codes. All four codes had a wRVU less than our recommended value so the two highest codes were selected as MPC codes

CPT	DESCRIPTOR	IWPUT	wRVU	TOTAL TIME	PRE	INTRA	POST	99238	99213	99212
25076	Excision, tumor, soft tissue of forearm and/or wrist area, subfascial (eg, intramuscular); less than 3 cm	0.0467	6.74	206	60	45	20	0.5	2	1
19328	Removal of intact breast implant	0.048	7.02	218	60	45	20	1	1	2
26615	Open treatment of metacarpal fracture, single, includes internal fixation, when performed, each bone	0.0443	7.07	217	55	45	20	0.5	2	2

Compared to the selected MPC codes, Code 19328 at the 25th percentile (wRVU 7.44) is reasonably valued. The intra-times are the same (45 min) for all three codes. Code 19328 at has +1 and +16 minutes of additional total time compared to both MPC codes. The recommended wRVU is between these codes. Based on the intensity of these procedures along with the fact that it is not uncommon for patients undergoing removal of a breast implant to require additional inpatient E&M for IV antibiotics (survey results report 29% of patients are admitted over 24hrs and review of 2018 RUC utilization for 19328 has a 13% inpatient place of service), these comparisons are reasonable.

Additional MPC Codes:

In order to try and identify appropriate MPC codes, a search of the RUC data base for MPC, 90 day global, IT 40-50, TT 188-248 was performed and identified four codes. Code 11971 at the recommended value (wRVU = 7.02) would be **ranked 2st highest out of 5** total codes. However, it is important to note that code 19328 is not uncommonly performed in a hospital with additional inpatient E&M. Our survey suggests that 19328 is performed in a hospital 68% of the time with 29% of total patients spending more than one night (typically for antibiotics). This is supported by utilization from the 2018 RUC claims database which demonstrates 13.04% of patients had an inpatient hospital as a place of service and 65.15% had an outpatient hospital (on campus) place of service. In comparison, the other MPC codes include two hand fracture codes with 11.55% and 15.18% inpatient place of service (likely due to associated trauma and not the surgery itself) and two tumor excision codes with 0.38% and 1.25% inpatient place of service, respectively. Thus, it is very appropriate for 19328 to be at the high end of valuation within this context since the additional required inpatient E&M days are not just a rare event. A table including the relevant MPC codes is below:

CPT	DESCRIPTOR	IWPUT	wRVU	TOTAL TIME	PRE	INTRA	POST	99238	99213	99212	2018 Inpatient Place of Service (%)
26765	Open treatment of distal phalangeal fracture, finger or thumb, includes internal fixation, when performed, each	**0.0174**	**5.86**	**217**	55	**45**	20	0.5	2	2	11.55%
26116	Excision, tumor, soft tissue, or vascular malformation, of hand or finger, subfascial (eg, intramuscular); less than 1.5 cm	**0.0492**	**6.74**	**201**	60	**45**	15	0.5	2	1	0.38%
25076	Excision, tumor, soft tissue of forearm and/or wrist area, subfascial (eg, intramuscular); less than 3 cm	**0.0497**	**6.74**	**206**	60	**45**	20	0.5	2	1	1.25%
19328	Removal of intact breast implant	**0.048**	**7.02**	**218**	60	**45**	20	1		1	13.04%
26615	Open treatment of metacarpal fracture, single, includes internal fixation, when performed, each bone	**0.0443**	**7.07**	**217**	55	**45**	20	0.5	2	2	15.18%

Comparisons to other recently valued codes in the RUC database:

Searching the RUC database for codes that are RUC surveyed in the last 10 years, 90 day global, IT 40-50, TT 188-248 (the same criteria as our MPC search) reveals 13 codes. Code 19328 at the recommended value (wRVU = 7.02) would be ranked **9th highest out of 14 codes**. A rank ordered table of these codes and wRVUs is below:

CPT CODE	23071	25076	26116	28122	28289	19328	22869	29881	29880	28292	65780	28291	45171	67255
RVU	5.91	6.74	6.74	6.76	6.90	7.02	7.03	7.03	7.39	7.44	7.81	8.01	8.13	8.38

Reducing the search to only the exact same IT and a more narrow total time range by searching for codes that are RUC surveyed in the last 10 years, 90 day global, IT 45 TT 203-233 reveals 6 codes. Code 19328 at the recommended value (wRVU 7.02) would **rank 4th highest out of 7 codes**. A rank ordered table of these codes and wRVUs is below:

CPT CODE	25076	28122	28289	19328	28292	45171	67255
RVU	6.74	6.76	6.90	7.02	7.44	8.13	8.38

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 19328

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Plastic Surgery How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 8500
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. We believe utilization is 3x the medicare volume

Specialty Plastic Surgery Frequency 7650 Percentage 90.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 2,800
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC Database

Specialty Plastic Surgery Frequency 2520 Percentage 90.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Major procedure

BETOS Sub-classification Level II:
Breast

Professional Liability Insurance Information (PLI)

CPT Descriptor: Removal of ruptured breast implant, including implant contents (eg, saline, silicone gel)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 60-year-old female with a history of silicone implant-based breast reconstruction develops an implant rupture detected on imaging. Removal of the implant and implant material is recommended.

Percentage of Survey Respondents who found Vignette to be Typical: 93%

Site of Service (Complete for 010 and 090 Globals Only)
Percent of survey respondents who stated they perform the procedure; In the hospital 52% , In the ASC 41%, In the office 7%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 72% , Overnight stay-less than 24 hours 24% , Overnight stay-more than 24 hours 4%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 63%

Description of Pre-Service Work: Orders for preoperative medications are written, and laboratory results, imaging, and patient photographs, are reviewed. The planned procedure and postoperative management are reviewed with the patient and the patient's family. Post-operative functional and aesthetic expectations are reviewed. The patient's history and physical are updated with reconciliation of medications/allergies. Post-operative pain control is reviewed and a narcotics controlled substance review is performed. NPO status is confirmed. The operative site is marked sitting upright to evaluate breast shape and mark the appropriate anatomic landmarks. Informed consent is obtained. The length and type of anesthesia are reviewed with the anesthesiologist. Surgeon changes into scrub clothes. The availability of all required supplies and instruments are verified. Confirmation of the ability for the operating room bed to sit upright is performed. The patient is transferred from the gurney and positioned on the operating room table. A patient verification procedure is performed. Bony prominences are padded, and thermal regulation drapes are applied. The arms are secured in a position to allow for sitting upright. The position of the head/neck is assessed and adjusted, as needed based on the need to sit up intra-operatively. A neck roll is placed to support the head. The surgeon monitors and assists with prepping including waiting for the prep to dry. The surgeon scrubs and gowns. Surgical drapes are placed. A pre-incision surgical time-out is performed with the operating surgical team.

Description of Intra-Service Work: The pre-selected access incision for removal of the breast implant is made. Dissection is performed through the breast tissue down to the implant capsule. The capsule is incised and the ruptured breast implant is removed. Due to the implant rupture, there is free silicone gel in the extracapsular, intracapsular, or both spaces that requires separate removal to ensure adequate debridement. The pocket is evaluated and the capsule is scored to promote healing. The pocket is irrigated and hemostasis is assured. The patient is then sat up to assess the contour of the remaining breast/mastectomy skin. Revisions to the residual soft tissues are made to optimize the residual contours. The patient is returned to the supine position. A drain is placed. The capsule is sutured closed and the surgical incision is repaired in multiple layers.

Description of Post-Service Work: The chest is cleaned. Sterile bandages and a compressive dressing are placed. A surgical bra is placed on the patient. The operative report is dictated. The postoperative orders are written.

Discharge Management Visit: Discharge medications are reconciled and prescriptions are written. There is a discussion with the family and patient regarding the procedure and findings. There is reiteration of the convalescence, precautions,

follow up appointments, expected postoperative course, signs and symptoms of complications. Instructions, appropriate discharge timing, follow up, and precautions are discussed with the postoperative nursing team.

Post op visit 1: 99213
This visit typically occurs at one week post-operatively. The patient's convalescence to that point is reviewed and discussed. The patients pain control is discussed. The dressing from the operative site is removed. The drain output is assessed, and the drain suture and drain are removed, if appropriate. The breast is inspected and palpated. The integrity and viability of the soft tissues are assessed. Pathology is reviewed. Patient and family questions and concerns are addressed. Ongoing care is reiterated and the anticipated timing of additional surgeries reviewed. Limitations of post-surgical activity are clearly reviewed. The wound is redressed.

Post op visit 2: 99212
This visit typically occurs at two to three weeks post-operatively. If the drain was not removed at the initial postoperative visit, the drain output is assessed, and the drain suture and drain are removed, if appropriate. The breast is inspected and palpated. The contour of the healing breast skin is assessed. Patient and family questions and concerns are addressed. Ongoing care is reiterated and the anticipated timing of additional surgeries reviewed. The wound is redressed, with home care instructions provided.

Post op visit 3: 99212
This visit typically occurs at two to three months post-operatively. The patient's convalescence to that point is reviewed. The wounds are inspected and palpated. The resultant soft tissue envelope after removal of the implant is evaluated. Patient and family questions and concerns are addressed. Revisionary or additional surgeries are discussed and planned.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	0%	19%	25%	56%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	13%	19%	68%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	0%	21%	79%
Physical effort required	0%	23%	77%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	27%	73%

2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	27%	64%	9%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	9%	36%	65%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	18%	45%	37%
Physical effort required	0%	10%	90%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	9%	27%	64%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

In February 2019, the CPT Editorial Panel approved the deletion of two codes and revisions to seventeen other codes related to breast reconstruction including 19330. The changes made to 19330 included clarification that both the implant and the implant contents were included in the code to avoid potential unbundling. The descriptor was updated to switch

the term "mammary" to "breast". Parentheticals were added to distinguish between reporting removal of a breast implant versus removal of a tissue expander. In additional, parentheticals were added related to the placement of a new implant.

CPT 19330	Descriptor
Previous	Removal of mammary implant material
Updated	Removal of ruptured breast implant including implant contents (eg, saline, silicone gel) (Do not report 19330 for removal of ruptured tissue expander) (For removal of ruptured tissue expander with placement of breast implant, use 11970) (For removal of ruptured tissue expander without replacement, use 11971) (For placement of new breast implant during same operative session, use 19342)

During the October 2019 RUC meeting, it was agreed upon that 19330 would be surveyed along with codes 11971 and 19328 as part of the "Implant/Expander Removal" family.

Compelling Evidence

We believe there is compelling evidence for this code based on a change in patient population. Over the 27 years since the publication of the Harvard Phase III values, there have been significant changes in the population of patients who have breast implants requiring removal. With the increased access to breast reconstruction, patients with more comorbidities require management of the infected or otherwise complicated breast implant. The change in patient expectations has significantly increased the work intensity of the procedure not only intra-operatively, but also in the pre- and post-periods due to the elevated complexity of discussions with the patient. This is highlighted by the recent media focus related to textured breast implants.

In addition, the technology related to breast implants has changed as we are now using 4th and 5th generation implants compared to the 1st and 2nd generation implants available during the Harvard valuation process. In addition, the potential risks of ruptured breast implants and the challenges in surgical removal of silicone were surfacing right around the time of the Harvard valuation. We are still managing many of these old ruptured implants now 20+ years later with increased complexity. Given that all of these current issues were not present during the Harvard valuation, we believe the methodology for valuation of this code at that time may be flawed.

Finally, the revisions to this code, while intended to be instructional, may have changed interpretation compared to the previous more ambiguous descriptor which allowed the implant removal itself to be separately reported. It is now clearly included in the descriptor which may have cause previous flawed methodology in the previous valuation.

Survey Sample and Process

A survey request was sent to a random selection of members from the American Society of Plastic Surgeons who have self-identified as reconstructive surgeons.

Recommendation

We are recommending a work RVU of 9.00, the survey 25th percentile.

Pre-time Package 3-FAC (Straightforward Patient/Difficult Procedure)

We have selected pre-time package 3-FAC as it is the lowest package for a patient undergoing general anesthesia.

Evaluation time – We are recommending 40 minutes of evaluation time which is an increase of 7 minutes from the package time, however, it is a decrease of 2 minutes from our survey data. The additional 7 minutes of pre-time for this case is spent in setting and marking the patient in an upright position to evaluate breast shape and measure base dimensions.

Positioning time – We are recommending 10 minutes of positioning time which is an increase in 7 minutes from the pre-service package time. We believe there is extra time involved in securing arms and assessing the position of the head and

neck and making any adjustments to allow for sitting upright intra-operatively which is not typically required for most procedures. This is supported by our median survey time and consistent with previous times related to breast surgery.

Scrub, Dress, Wait time – We are recommending 10 minutes of scrub, dress and wait time which is 5 minutes less than the package time, but matches the survey results.

Post-time Package 9A (General Anes or Complex Reg Blk/Straightforward Procedure)

The recommended time has been reduced to 20 minutes which is a decrease of 10 minutes from the post package time selected to match our survey time.

Key Reference Codes

CPT	DESCRIPTOR	IWPUT	wRVU	TOTAL TIME	PRE	INTRA	POST	99238	99213	99212
19330	Removal of ruptured breast implant, including implant contents (eg, saline, silicone gel)	0.064	9.00	229	60	75	20	0.5	1	2
15260	Full thickness graft, free, including direct closure of donor site, nose, ears, eyelids, and/or lips; 20 sq cm or less	0.0563	11.64	273	28	100	30		5	
64912	Nerve repair; with nerve allograft, each nerve, first strand (cable)	0.0715	12.00	272	58	90	20	0.5	3	1

Code 19330 with an wRVU at the 25th percentile (9.00) demonstrates marginal similarity to the selected KRC codes. Code 19330 has 25 and 15 minutes less intra-time and 44 and 43 minutes less total time compared to the respective KRCs. However, code 19930 also has -25% lower wRVU which is very similar to the percent differences in both intra and total times making the comparison have some validity.

MPC Comparison Codes:

CPT	DESCRIPTOR	IWPUT	wRVU	TOTAL TIME	PRE	INTRA	POST	99238	99213	99212
49505	Repair initial inguinal hernia, age 5 years or older; reducible	0.0645	7.96	198	50	70	20	0.5	1	1
19330	Removal of ruptured breast implant, including implant contents (eg, saline, silicone gel)	0.064	9.00	229	60	75	20	0.5	1	2
36821	Arteriovenous anastomosis, open; direct, any site (eg, Cimino type) (separate procedure)	0.1038	11.90	233	75	75	25	0.5	1	1

In order to identify an MPC code that was lower than the recommended wRVU and an IT 65-85, it was required that we lower the total time for eligible MPC codes to use 49505. As identified in the next section, we opted not to use 49507 as it was RUC-CMS revised. Compared to the selected MPC codes, Code 19330 at the 25th percentile (wRVU 9.00) is valued appropriately if not possibly low. Code 19330 at the 25th percentile (wRVU 9.00) has +5 additional minutes of intra-time and +33 additional minutes of intra-time with a +1.04 wRVU compared to MPC 49505. Code 19330 at the 25th percentile has the same intra-time and -4 less minutes total time compared to MPC 36821 but is -2.90 less wRVU.

Additional MPC Codes:

In order to compare to all of the appropriate MPC codes, a search of the RUC data base for MPC, 90 day global, IT 65-85, TT 194-264, provided four codes. Code 19330 at the 25th percentile (wRVU = 9.00) would be **ranked 4th highest out of 5** total codes. When compared to the other three MPC codes with similar total times (+/- 7 minutes), it would be ranked 4th out of 4 codes with comparative wRVU difference of -0.09, -2.90, and -4.16wRVU which all suggest that even at the 25th percentile, 19330 may be undervalued.

CPT	DESCRIPTOR	IWPUT	wRVU	TOTAL TIME	PRE	INTRA	POST	99238	99213	99212
49505	Repair initial inguinal hernia, age 5 years or older; reducible	**0.0645**	**7.96**	**198**	50	**70**	20	0.5	1	1
19330	Removal of ruptured breast implant, including implant contents (eg, saline, silicone gel)	**0.064**	**9.00**	**229**	60	**75**	20	0.5	1	2
49507	Repair initial inguinal hernia, age 5 years or older; incarcerated or strangulated (RUC-CMS Revised)	**0.0711**	**9.09**	**231**	63	**70**	40	0.5	1	1
36821	Arteriovenous anastomosis, open; direct, any site (eg, Cimino type) (separate procedure)	**0.1038**	**11.90**	**233**	75	**75**	25	0.5	1	1
52601	Transurethral electrosurgical resection of prostate, including control of postoperative bleeding, complete (vasectomy, meatotomy, cystourethroscopy, urethral calibration and/or dilation, and internal urethrotomy are included)	**0.1143**	**13.16**	**236**	51	**75**	45	0.5	2	

Comparisons to other recently valued codes in the RUC database:

Searching the RUC database for codes that are RUC surveyed in the last 10 years, 90 day global, IT 65-85, TT 204-254 reveals 9 codes. Code 19330 at the 25th percentile (wRVU = 9.00) would be ranked **8th highest out of 9 codes**. A rank ordered table of these codes and wRVUs is below:

CPT Code	38531	19330	49507	43285	36831	36821	58541	29828	52601
RVU	6.74	9.00	9.09	10.47	11.00	11.90	12.29	13.16	13.16

Medicare Units of Service Provided on Same Date:

AMA staff provided the units of service data on the same date data from 2017 prior to the meeting. Code 19330 had a mean number of units of 1.55 and median number of units of 2. The 25th percentile for units was 1 and the 75% percentile for units was 2. Given that many women may have bilateral implants and given the high rate of rupture seen in the 1st and 2nd generation implants previously placed prior to 1992, it is expected that many women would have two rupture implants that need to be removed.

Billed Together Data:

Based on the billed together data provided by AMA prior to this meeting from the 2017 Medicare 5% file, code 19330 was billed 55% of the time with code 19371 (old descriptor - Periprosthetic capsulectomy, breast). If both codes were reported on the same breast, with the revisions to 19371 to include "peri-implant capsulectomy, breast, complete, including removal of all intra-capsular contents", we would expect these two codes to be used together very rarely since most ruptured implants are intracapsular ruptures and thus the removal of the implant and contents would now be bundled with 19371.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.

☐ Historical precedents.
☒ Other reason (please explain) The answer at the end of our additional comments section is reflective of the billed together data provided by the AMA. However, with the revision to 19371 to include "peri-implant capsulectomy, breast, complete, including removal of all intra-capsular contents", we would expect these two codes to be used together rarely since most ruptured implants are intracapsular ruptures and thus the removal of the rupture implant and contents would now be bundled with 19371.

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. see above

---

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 19330

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Plastic Surgery How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 6000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. We believe utilization is 3x the medicare volume.

Specialty Plastic Surgery Frequency 5400 Percentage 90.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 2,000
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC Database

Specialty Plastic Surgery Frequency 1800 Percentage 90.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

FACILITY DIRECT PE INPUTS

CPT CODE(S): 11971
SPECIALTY SOCIETY(IES): ASPS
PRESENTER(S): Mark Villa, MD
Jeffrey Kozlow, MD

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: 01/2020

CPT Code	Long Descriptor	Global Period
11971	Removal of tissue expander without insertion of implant	090

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
11971	A 35-year-old female with a history of right breast cancer who has previously undergone mastectomy and placement of a tissue expander developed an infection at the breast reconstruction site requiring tissue expander removal.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   Our specialty formed a panel of experts to develop practice expense recommendations for this family of codes. The panel was comprised of our RUC Advisors and multiple clinical experts who practice in the areas of general plastic surgery and breast reconstruction. The expert panel members also practice in settings that vary by size, geography, and represent both private and academic settings.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code, but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here (*for service reviewed prior to the implementation of clinical activity codes, detail is not provided in the RUC database, please contact Samantha Ashley at samantha.ashley@ama-assn.org for PE spreadsheets for your reference codes*):

   We used existing PE inputs from the RUC database for this family of codes (11971, 19328, amd 19330).

3. Is this code(s) typically reported with an E/M service?

   No

4. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:

   We are only requesting PE subcommittee standards for clinical activities.

5. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies for the **code family**, please provide compelling evidence (please see *PE compelling evidence guidelines*) Please explain if the increase can be entirely accounted for because of an increase in physician time:

   Across the four families of breast-specific codes being evaluated, there is currently significant variability in the post-op supplies and practice expense likely due to the various times and settings in which those decisions were made. Given the similarity in post-op visit supplies across these four families of breast related procedures (Implant/Expander Placement, Implant/Expander Removal, Secondary Revisions, and Lift/Reduction), we have elected to standardize all of the practice

expenses associated with each code. We believe this standardization is important in keeping consistency within the RUC valuation process. Standardization for these codes includes:

1)Using the standard clinical staff times for the pre-times and 90 day globals, discharge (x38) days, and with the number of post-op clinic visits/times pending final approval at the RUC.
2)Requesting one pack, post-op incision care (suture) per code
3)Requesting the standard Minimum Supply Package for Visits (Multi-speciality), a standard table, and an exam light for all post-operative visits with the number of post-op clinic visits/times pending final approval at the RUC
4)Requesting 20 minutes of a camera, digital system, 12 megapixel (medical grade) for each code to account for two 10 minutes session of post-operative photographs obtained during the global period.

We are requesting an overall decrease for the code family and a decrease for this code individually.

6. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see second worksheet in PE spreadsheet workbook*), please explain the difference here:

7. Please provide a brief description of the clinical staff work for the following:
   a. Pre-Service period:

In the pre-service period, clinical staff work includes completing pre-service diagnostic and referral forms, coordinating pre-surgery services, scheduling space and equipment in the facility, providing pre-service education/obtaining consent, and completing pre-procedure phone calls/prescriptions.

   b. Service period (includes pre, intra and post):

For this facility-only based procedure, the only post period is the 6 minutes allotted in the standards for assisting in same-day discharge management including coordination of post-operative appointments.

   c. Post-service period:

In the post-service period, clinical staff work includes the standard activities involved in any post-operative E&M visit including rooming the patient, gowning, reviewing current medications/allergies in EHR, obtaining vital signs, acting as chaperone due to sensitive areas being examined, assisting with wound care, coordination of care, and cleaning of the room.

8. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see second worksheet in PE spreadsheet workbook*):

9. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

INVOICES

10. ☐ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

11. ☐ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

12. If you wish to include a supply that is not on the list (*please see fourth worksheet in PE spreadsheet workbook*) please provide a paid invoice. Identify and explain the invoice here:

13. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation. Please include the description, CMS supply code, unit, item quantity and unit price (if available). See documents two and three under PE reference materials on the RUC Collaboration Website for information on the contents of kits, packs and trays.

DESCRIPTION	Code	Unit	Item Qty	Unit price
pack, minimum multi-specialty visit	**SA048**	**pack**		**2.1122**
paper, exam table		foot	7	
gloves, non-sterile		pair	2	
gown, patient		item	1	
pillow case		item	1	
cover, thermometer probe		item	1	

DESCRIPTION	Code	Unit	Item Qty	Unit price
pack, post-op incision care (suture)	**SA054**	**pack**		**4.8353**
kit, suture removal		kit	1	
povidone soln (Betadine)		ml	10	
gauze, sterile 4in x 4in		item	2	
gloves, sterile		pair	1	
steri-strip (6 strip uou)		item	2	
swab-pad, alcohol		item	2	
tape, surgical paper 1in (Micropore)		inch	12	
tincture of benzoin, swab		item	1	

14. If you wish to include an equipment item that is not on the list (*please see fifth worksheet in PE spreadsheet workbook*) please provide a paid invoice. Identify and explain the invoice here:

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

15. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

16. List all the equipment included in your recommendation and the equipment formula chosen *(*please see document titled *Calculating equipment time).* If you have selected "other formula" for any of the equipment please explain here:

EF023 table, exam – standard formula
EQ168 light, exam – standard formula
ED005 camera, digital system, 12 megapixel (medical grade) – other formula

It is standard in plastic surgery practices to use a medical grade (12 megapixel) camera for photograph as most offices also have a standard photo suite for professional grade images.

20 min total usage at 10min per post-operative session x 2 session.

17. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail/explanation, please include here:

We are eliminating the non-facility expenses for this code as we believe that any non-facility utilization is not clinically same as the work being valued. We are recommending facility only valuation.

PROFESSIONAL LIABILITY INSURANCE (PLI) INFORMATION

18. If this is a PE only code please select a crosswalk based on a similar specialty mix:

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING

During and immediately following the review of this tab at the PE Subcommittee meeting please revise the PE spreadsheet and summary of recommendation (PE SOR) documents based on modifications made during the meeting. Please submit the revised documents electronically to Samantha Ashley at samantha.ashley@ama-assn.org immediately following the close of business the same day that the tab is reviewed. On the PE spreadsheet, please highlight the cells and/or use red font to show the changes made during the PE Subcommittee meeting (if you have provided any of this highlighting based on changes from the reference code prior to the PE Subcommittee meeting please remove it, so not to be confused with changes made during the meeting). In addition to those revisions please also provide an itemized list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below (e.g. clinical activity CA010 *obtain vital signs* was reduced from 5 minutes to 3 minutes).

11. ☐ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

12. If you wish to include a supply that is not on the list (*please see fourth worksheet in PE spreadsheet workbook*) please provide a paid invoice. Identify and explain the invoice here:

13. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation. Please include the description, CMS supply code, unit, item quantity and unit price (if available). See documents two and three under PE reference materials on the RUC Collaboration Website for information on the contents of kits, packs and trays.

DESCRIPTION	Code	Unit	Item Qty	Unit price
pack, minimum multi-specialty visit	**SA048**	**pack**		**2.1122**
paper, exam table		foot	7	
gloves, non-sterile		pair	2	
gown, patient		item	1	
pillow case		item	1	
cover, thermometer probe		item	1	

DESCRIPTION	Code	Unit	Item Qty	Unit price
pack, post-op incision care (suture)	**SA054**	**pack**		**4.8353**
kit, suture removal		kit	1	
povidone soln (Betadine)		ml	10	
gauze, sterile 4in x 4in		item	2	
gloves, sterile		pair	1	
steri-strip (6 strip uou)		item	2	
swab-pad, alcohol		item	2	
tape, surgical paper 1in (Micropore)		inch	12	
tincture of benzoin, swab		item	1	

14. If you wish to include an equipment item that is not on the list (*please see fifth worksheet in PE spreadsheet workbook*) please provide a paid invoice. Identify and explain the invoice here:

15. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitude D600), ED038?

a. If yes, please explain how the computer is used for this service(s).
b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
c. Does the computer include code specific software that is typically used to provide the service(s)?

16. List all the equipment included in your recommendation and the equipment formula chosen *(*please see document titled *Calculating equipment time).* If you have selected "other formula" for any of the equipment please explain here:

EF023 table, exam – standard formula
EQ168 light, exam – standard formula ED005
ED005 camera, digital system, 12 megapixel (medical grade) – other formula

It is standard in plastic surgery practices to use a medical grade (12 megapixel) camera for photograph as most offices also have a standard photo suite for professional grade images.

20 min total usage at 10min per post-operative session x 2 session.

17. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail/explanation, please include here:

PROFESSIONAL LIABILITY INSURANCE (PLI) INFORMATION

18. If this is a PE only code please select a crosswalk based on a similar specialty mix:

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING

During and immediately following the review of this tab at the PE Subcommittee meeting please revise the PE spreadsheet and summary of recommendation (PE SOR) documents based on modifications made during the meeting. Please submit the revised documents electronically to Samantha Ashley at samantha.ashley@ama-assn.org immediately following the close of business the same day that the tab is reviewed. On the PE spreadsheet, please highlight the cells and/or use red font to show the changes made during the PE Subcommittee meeting (if you have provided any of this highlighting based on changes from the reference code prior to the PE Subcommittee meeting please remove it, so not to be confused with changes made during the meeting). In addition to those revisions please also provide an itemized list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below (e.g. clinical activity CA010 *obtain vital signs* was reduced from 5 minutes to 3 minutes).

AMA/Specialty Society RVS Update Committee Summary of Recommendations

January 2020

Secondary Breast Mound Procedure – Tab 7

In February 2019, the CPT Editorial Panel approved the deletion of two codes and revisions to seventeen codes to provide descriptor clarification of any overlap in physician work for breast reconstruction services. In the CPT coding changes application, the specialty stated that this change is editorial and does not involve a change in work. At the April 2019 RUC meeting, the RUC agreed that the seventeen breast reconstruction services should be surveyed for the October 2019 RUC meeting. Codes 11960, 19316, 19350, 19355, and 19396 were also included as being part of the same code family. Based on the change in the typical patient for CPT code 11971 and multiple Harvard valued codes, the RUC agreed that all twenty-two of these services be surveyed, contrary to the specialty initial recommendation that these changes are editorial only and do not require surveying. At that time, the RUC had recommended surveying all twenty-two codes for the October 2019 RUC meeting.

At the October 2019 RUC meeting, the specialty elected to survey two of the codes and send a third code to CPT for revision. The specialty noted that the designation of a single 22 code family was too broad, and that the family categorization should be more granular than surgical procedures for the repair and/or reconstruction of the same anatomic region. The specialties proposed 8 families of services to the RUC noting that this categorization assign similar procedures together and ensures that the survey process is effective. The RUC concurred with the more granular classification of families that group analogous procedures together. Furthermore, the specialty indicated, and the RUC agreed, that three of the code families, autologous reconstruction, nipple procedures and moulage formation were not identified by any RAW screens, had no change to their work from CPT revisions and had no obvious flaws to their valuation (i.e., a site of service valuation issue), and therefore would not need to be reviewed at this time. The RUC agreed that, although the specialty societies had conducted surveys of code 11970 and 11971 for October 2019, these services should be resurveyed with their newly identified respective code families. In October 2019, the RUC reviewed these family of services with the specialty societies and agreed that these services should be surveyed for physician work and practice expense in January 2020. The *Breast Implant/Expander Placement* code family was one of the code families identified by the RUC for review for the January 2020 RUC meeting.

Compelling Evidence

The RUC reviewed and accepted compelling evidence based on change in procedure technique for all three services in this family. Code 19370 was revised by CPT where it now includes multiple different elements of work on the capsule that previously were not part of the code including partial capsulectomy and capsulorrhaphy. The work of suturing the capsule, tightening the capsule and/or removing a section of it is additional work that was not previously described by the old code descriptor. When this code was originally valued, there were fewer maneuvers performed relative to the modern typical patient and procedure. The inclusion of these maneuvers adds work that is now inclusive in the code descriptor. Code 19371 was revised by CPT where it now includes additional elements of work, the removal of all capsule contents, that was not previously part of the descriptor. Code 19380 was previously extremely vague, “revision of reconstructed breast” — now this service has been formally defined in detail. The descriptor revisions describe separate maneuvers were previously vague.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

The RUC also reviewed and accepted compelling evidence based on change in patient population for all three services in this family, 19370, 19371 and 19380 based on a change in patient population. The number of patients that are eligible for breast reconstruction has changed. Twenty or thirty years ago, patients would only be typically undergoing this procedure if the patient did not have a BMI under 30 and nor major comorbidities. Now, breast reconstruction is appropriately provided to a much broader patient population, including many more oncology patients, due to advancements in care and surgical technique over the past few decades. With the increased access to breast reconstruction, patients with more comorbidities require management of the infected or otherwise complicated breast implant. The change in patient expectations has significantly increased the work intensity of the procedure not only intra-operatively, but also in the pre- and post- periods due to the elevated complexity of discussions with the patient.

19370 ***Revision of peri-implant capsule, breast, including capsulotomy, capsulorrhaphy, and/or partial capsulectomy***
The RUC reviewed the survey results from 42 plastic surgeons and recommends: 40 minutes of pre-service evaluation time, 10 minutes for pre-service positioning time, 15 minutes for pre-service scrub/dress/wait, 78 minutes for intra-service time, 24 minutes for immediate post-time, 0.5 99238 discharge visit and 3 99213 post-operative office visits. The evaluation is spent in part in setting and marking the patient in an upright position to evaluate breast shape and measure base dimensions. Additional time is also required to review choice of implants with the patient. Ten minutes of positioning time are necessary to account for the time involved in securing arms and assessing the position of the head and neck and making any adjustments to allow for sitting upright intra-operatively.

The RUC noted that the current times for this service are over 25 years old from the Harvard study and not valid for comparison. The IWPUT for the current times and work RVU (0.046) is inappropriately low for this intense major surgical procedure, which strongly implies the current total times are inflated relative to the current work RVU and not valid for comparison to the new times. During the initial Harvard study, only overall post-operative time was surveyed; data on the number and level of hospital and office post-operative visits were not collected. These times were "converted" to E/M visit codes by a CMS contractor for practice expense RVU review using an algorithm some years after the original Harvard study. Thus, this is the first time the RUC reviewed the hospital and office visits for code 19370 and the first time survey data was collected on the number and level of post-operative visits, making comparison between historic Harvard times and modern RUC times precarious at best.

The RUC reviewed the survey 25th percentile work RVU of 10.00 and agreed that this value appropriately accounts for physician work involved when performing this service. To justify a work RVU of 10.00, the RUC compared the survey code to CPT code 36831 *Thrombectomy, open, arteriovenous fistula without revision, autogenous or nonautogenous dialysis graft (separate procedure)* (work RVU= 11.00, intra-service time of 85 minutes, total time of 248, RUC reviewed in 2013) and noted that the reference code involves somewhat more intra-service time and similar total time, and a value of 10.00 for the survey code would value it appropriately relative to this reference service. The RUC also reviewed reference codes 64910 *Nerve repair; with synthetic conduit or vein allograft (eg, nerve tube), each nerve* (work RVU= 10.52, intra-service time of 75 minutes, total time of 257 minutes) and code 36821 *Arteriovenous anastomosis, open; direct, any site (eg, Cimino type) (separate procedure)* (work RVU= 11.90, intra-service time of 75 minutes, total time of 233 minutes) and agreed that although these services both have 3 minutes less intra-service time relative to the survey code, both of them are somewhat more intense to perform. **The RUC recommends a work RVU of 10.00 for CPT code 19370.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

19371 ***Peri-implant capsulectomy, breast, complete, including removal of all intra-capsular contents***
The RUC reviewed the survey results from 42 plastic surgeons and recommends: 40 minutes of pre-service evaluation time, 10 minutes for pre-service positioning time, 15 minutes for pre-service scrub/dress/wait, 90 minutes for intra-service time, 25 minutes for immediate post-time, 0.5 99238 discharge visit, 2 99213 post-operative office visits and 1 99212 post-operative office visit. The evaluation is spent setting and marking the patient in an upright position to evaluate breast shape and measure base dimensions. Additional time is also required to review choice of implants with the patient. Ten minutes of positioning time are necessary to account for the time involved in securing arms and assessing the position of the head and neck and making any adjustments to allow for sitting upright intra-operatively.

The specialty noted that the work of removal of intra-capsular contents, which was newly added to the code descriptor was formerly reported by many providers separately with either code 19328 or 19330. In the 2017 Medicare reported together data, CPT code 19371 was reported with these services 14.5 percent of the time and 15 percent of the time, respectively.

The RUC noted that the current times for this service are over 25 years old from the Harvard study and not valid for comparison. The IWPUT for the current times and work RVU (0.039) is inappropriately low for this intense major surgical procedure, which strongly implies the current total times are inflated relative to the current work RVU and not valid for comparison to the new times. During the initial Harvard study, only overall post-operative time were surveyed; data on the number and level of hospital and office post-operative visits were not collected. These times were "converted" to E/M visit codes by a CMS contractor for practice expense RVU review using an algorithm some years after the original Harvard study. Thus, this is the first time the RUC has had the opportunity to review the hospital and office visits for code 19371 and the first time survey data was collected on the number and level of post-operative visits, making comparison between historic Harvard times and modern RUC times precarious at best.

The RUC reviewed the survey 25th percentile work RVU of 10.81 and agreed that this value appropriately accounts for physician work involved when performing this service. To justify work a work RVU of 10.81, the RUC compared the survey code to MPC code 60220 *Total thyroid lobectomy, unilateral; with or without isthmusectomy* (work RVU= 11.19, intra-service time of 90 minutes, total time of 267 minutes) and noted that both services have identical intra-service times and very similar total times, whereas the reference code is slightly more intense intra-operatively. The RUC also compared the survey code to CPT code 36831 *Thrombectomy, open, arteriovenous fistula without revision, autogenous or nonautogenous dialysis graft (separate procedure)* (work RVU= 11.00, intra-service time of 85 minutes, total time of 248, RUC reviewed in 2013), noting that both services involve a similar amount of physician work and similar times and therefore should be valued similarly. The RUC also reviewed reference codes 64910 *Nerve repair; with synthetic conduit or vein allograft (eg, nerve tube), each nerve* (work RVU= 10.52, intra-service time of 75 minutes, total time of 257 minutes) and 36821 *Arteriovenous anastomosis, open; direct, any site (eg, Cimino type) (separate procedure)* (work RVU= 11.90, intra-service time of 75 minutes, total time of 233 minutes) and agreed that they appropriately bracket the recommended value for survey code 19371. **The RUC recommends a work RVU of 10.81 for CPT code 19371.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

19380 ***Revision of reconstructed breast (eg, significant removal of tissue, re-advancement and/or re-inset of flaps in autologous reconstruction or significant capsular revision combined with soft tissue excision in implant-based reconstruction)***
The RUC reviewed the survey results from 41 plastic surgeons and recommends: 40 minutes of pre-service evaluation time, 10 minutes for pre-service positioning time, 15 minutes for pre-service scrub/dress/wait, 120 minutes for intra-service time, 25 minutes for immediate post-time, 0.5 99238 discharge visit, 2 99213 post-operative office visits and 2 99212 post-operative office visits. The evaluation is spent setting and marking the patient in an upright position to evaluate breast shape and measure base dimensions. Additional time is also required to review choice of implants with the patient. Ten minutes of positioning time are necessary to account for the time involved in securing arms and assessing the position of the head and neck and making any adjustments to allow for sitting upright intra-operatively.

The RUC noted that the current times for this service are over 25 years old from the Harvard study and not valid for comparison. The IWPUT for the current times and work RVU (0.049) is inappropriately low for this intense major surgical procedure, which strongly implies the current total times are inflated relative to the current work RVU and not valid for comparison to the new times. During the initial Harvard study, only overall post-operative time were surveyed; data on the number and level of hospital and office post-operative visits were not collected. These times were "converted" to E/M visit codes by a CMS contractor for practice expense RVU review using an algorithm some years after the original Harvard study. Thus, this is the first time the RUC has had the opportunity to review the hospital and office visits for code 19380 and the first time survey data was collected on the number and level of post-operative visits, making comparison between historic Harvard times and modern RUC times precarious at best.

The RUC reviewed the survey 25th percentile work RVU of 12.00 and agreed that this value appropriately accounts for physician work involved when performing this service. To justify a work RVU of 12.00, the RUC compared the survey code to CPT code 64569 *Revision or replacement of cranial nerve (eg, vagus nerve) neurostimulator electrode array, including connection to existing pulse generator* (work RVU=11.00, intra-service time of 120 minutes, total time of 312 minutes) and noted that both services have identical intra-service times, similar total times, though the survey code is a more intense intraoperative service for the physician. The RUC also compared the survey code to MPC code 52649 *Laser enucleation of the prostate with morcellation, including control of postoperative bleeding, complete (vasectomy, meatotomy, cystourethroscopy, urethral calibration and/or dilation, internal urethrotomy and transurethral resection of prostate are included if performed)* (work RVU= 14.56, intra-service time of 120 minutes, total time of 279 minutes) and noted that both services have identical intra-service time, whereas the reference code is a somewhat more intense service to perform. Following the review of these and other reference codes, the RUC agreed that the survey 25th percentile work RVU of 12.00 is appropriate. **The RUC recommends a work RVU of 12.00 for CPT code 19380.**

Practice Expense
The Practice Expense Subcommittee had changed the exam table to a power table for each code which is typical for this specialty. **The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
Repair (Closure) **Other Flaps and Grafts**				
●*15769*		*Grafting of autologous soft tissue, other, harvested by direct excision (eg, fat, dermis, fascia)* *(For injection[s] of platelet-rich plasma, use 0232T)*		
●*15771*		*Grafting of autologous fat harvested by liposuction technique to trunk, breasts, scalp, arms, and/or legs; 50cc or less injectate* *(Report 15771 only once per session)*		
✚●*15772*		*each additional 50cc injectate, or part thereof (List separately in addition to code for primary procedure)* *(Use 15772 in conjunction with 15771)*		
Breast **Repair and/or Reconstruction**				
		Breast reconstruction is performed to repair defects due to congenital anomaly or loss of breast tissue after a surgical excision. The goal of breast reconstruction is to correct the anatomic defect and to restore form and breast symmetry. A breast can be reconstructed using a single technique or a combination of techniques, and each technique can stand alone. Additionally, both breasts may be reconstructed at the same time, but may use different techniques or a combination of techniques. In many instances breast reconstruction requires more than one planned procedure or may require revisions. The native breast may be altered using different techniques. The breast and breast mound can be lifted with a mastopexy (19316), reduced in volume with a breast reduction (19318), or augmented with a breast implant (19325). Post-mastectomy breast reconstruction may be performed using a variety of techniques. An implant-based reconstruction involves placement of a device filled with fluid (eg, saline, silicone gel) to provide volume to the breast. In immediate reconstruction, an implant is placed primarily at the time of a mastectomy (19340). In delayed reconstruction, an implant is placed at any date separate from the mastectomy (19342). This includes placement of any new implant or replacement of an existing implant within the mastectomy defect or reconstructed breast. The removal of an intact breast implant for replacement is included in 19342. A breast implant cannot always be placed due to the lack of an adequate skin envelope. Code 19357 describes insertion of a tissue expander which is a device that is surgically implanted to create an adequate sized pocket for subsequent insertion of a permanent implant. A tissue expander is an		

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

inflatable device placed beneath the skin and chest muscle, into which saline is injected over a period of weeks in the office to create the implant pocket. The tissue expander is eventually removed and may be replaced with a permanent breast implant (11970). Placement of either a breast implant (19340, 19342) or tissue expander (19357) may be reported separately when performed with flap reconstruction (19361, 19364, 19366, 19367, 19368,19369).

Code 11970 describes the removal of a tissue expander with concurrent insertion of a permanent breast implant. Code 11970 includes removal of the expander, minor revisions to the breast capsule and placement of the new breast implant. Code19370 may be reported in addition to 11970 if more extensive capsular revision is performed. Code 11971 describes the removal of a tissue expander without replacement of an expander or implant.

Autologous breast reconstruction involves harvesting a flap of skin, subcutaneous fat and/or muscle from one area of the body and relocating the tissue to the anterior chest to create a new breast mound. Flap reconstruction may be performed at the time of mastectomy or in a delayed fashion depending on patient preference and other oncologic treatments.

Code 19361 describes breast reconstruction with a flap composed of the latissimus dorsi muscle including some of the overlying skin and subcutaneous fat to reconstruct the breast mound. This flap is left on its vascular pedicle and tunneled beneath the armpit skin to the anterior chest to rebuild the breast. The blood supply to the flap is left attached to its origin in the axilla. To give the breast mound additional volume, a tissue expander or permanent breast implant may be placed beneath the latissimus flap. Placement of either a breast implant (19340, 19342) or tissue expander (19357) may be reported separately.

Code 19364 describes a microsurgical free tissue transfer of skin, and subcutaneous fat and/or muscle for breast reconstruction. This code includes the flap harvest, microsurgical anastomosis of one artery and two veins with use of an operating microscope, flap inset as a breast mound, and donor site closure. Typical free flaps include free transverse rectus abdominis myocutaneous (fTRAM), deep inferior epigastric perforator (DIEP), superficial inferior epigastric artery (SIEA), or gluteal artery perforator (GAP) flaps.

Code 19367 describes a single pedicled transverse rectus abdominis myocutaneous (TRAM) flap, where skin, subcutaneous fat, and a large portion of the rectus abdominis muscle from the lower abdomen is moved beneath the upper abdominal wall skin up to the chest to rebuild the breast. The blood supply to the flap is left attached to its origin in the abdomen.

Code 19368 describes "supercharging" of a single pedicled TRAM flap. This is typically performed to increase blood flow in TRAM flaps with marginal circulation to ensure flap survival. In addition to the standard unipedicle TRAM procedure, the inferior epigastric artery and/or veins are also anastomosed to recipient vessels in the chest using microsurgical techniques.

Code 19369 describes a bipedicled TRAM flap in which skin, subcutaneous fat and both rectus muscles are harvested for the reconstruction of a single breast. The dual blood supply to the flap is left attached to its origins in the abdomen.

Secondary and ancillary breast reconstruction procedures include nipple reconstruction (19350), implant adjustments through revisions to the breast capsule (19370), or removal of the entire breast capsule via a complete capsulectomy (19371) to achieve correct breast tissue positioning. In addition, procedures may be performed on the contralateral breast to create symmetry (19316, 19318, 19325). Removal of an intact breast implant without replacement is reported with 19328. Removal of a ruptured breast implant, including the implant contents, is reported with 19330. A complete capsulectomy (19371) includes removal of the breast implant and all intracapsular contents.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Code 19380 describes a revision of a reconstructed breast, including significant excision of tissue re-advancement or re-inset of flaps. For autologous reconstruction, this code is inclusive of revisions of the flap position on the chest wall, removal of portions of the flap (via direct excision or liposuction), re-shaping of the flap, or scar revisions. However, if a limited procedure is performed with a defined code (eg, scar revision) then the more specific code should be used. The placement of a new implant (19342) or autologous fat grafting for increased volume (*15771, 15772*) may be separately reportable. For implant-based reconstruction, 19380 is inclusive of revisions to the skin and capsule when performed together. The exchange for a new or different size/shape/type of implant (19342) or autologous fat grafting for increased volume/contour irregularities *(15771, 15772*) may be separately reportable. Nipple reconstruction is reported with 19350 and includes local flaps (14000,14001), areolar skin grafting (15100, 15200, 15201), and subsequent tattooing (11920, 11921, 11922).

Code 19396 describes the formation of a moulage cast of a patient's chest defect. The mold is used to fabricate a specific, custom made implant that fits the patient's defect.

(To report bilateral procedures, report modifier 50 with the procedure code)

(For biological implant for soft tissue and/or breast implant reinforcement, use 15777 in conjunction with the primary procedure)

▲19370	A10	~~Open periprosthetic capsulotomy, breast~~ Revision of ~~periprosthetic~~ peri-implant capsule, breast, including capsulotomy, capsulorrhaphy, and/or partial capsulectomy (Do not report 19370 in conjunction with 19328 for removal and replacement of same implant to access capsule) (For removal and replacement with new implant, use 19342)	090	10.00
▲19371	A11	~~Periprosthetic~~ Peri-implant capsulectomy, breast, complete, including removal of all intra-capsular contents (Do not report 19371 in conjunction with 19328) (Do not report 19371 in conjunction with 19370 in same breast) (For removal and replacement with new implant, use 19342)	090	10.81

CPT Descriptor: Revision of peri-implant capsule, breast, including capsulotomy, capsulorrhaphy, and/or partial capsulectomy

---

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 50-year-old female with a history of breast cancer who previously underwent a mastectomy with implant-based breast reconstruction later develops inferior lateral displacement of the implant resulting in asymmetry with the contralateral breast. Revision of the breast capsule including superior and medial capsulotomies combined with inferior and lateral capsulorrhaphies are planned.

Percentage of Survey Respondents who found Vignette to be Typical: 86%

Site of Service (Complete for 010 and 090 Globals Only)
Percent of survey respondents who stated they perform the procedure; In the hospital 48% , In the ASC 48%, In the office 4%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 85% , Overnight stay-less than 24 hours 15% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Orders for preoperative medications are written, and laboratory results, imaging, and patient photographs are reviewed. The planned procedure and postoperative management are reviewed with the patient and the patient's family. Post-operative functional and aesthestic expectations are reviewed. The patient's history and physical are updated with reconciliation of medications/allergies. Post-operative pain control is reviewed and a narcotics controlled substance review is performed. NPO status is confirmed. The operative site is marked sitting upright to evaluate breast shape and identify the planned revisions to the capsule. Informed consent is obtained. The length and type of anesthesia are reviewed with the anesthesiologist. Surgeon changes into scrub clothes. The availability of all required supplies and instruments are verified including the patient's current implant size/shape in case needed. Confirmation of the ability for the operating room bed to sit upright is performed. The patient is transferred from the gurney and positioned on the operating room table. A patient verification procedure is performed. Bony prominences are padded, and thermal regulation drapes are applied. The arms are secured in a position to allow for sitting upright. The position of the head/neck is assessed and adjusted, as needed based on the need to sit up intra-operatively. A neck roll is placed to support the head. The surgeon monitors and assists with prepping including waiting for the prep to dry. The surgeon scrubs and gowns. Surgical drapes are placed. A pre-incision surgical time-out is performed with the operating surgical team.

Description of Intra-Service Work: An incision is performed on the breast followed by a meticulous dissection of the subcutaneous tissues. Hemostasis is obtained. The surgeon performs a capsulotomy to enter the implant pocket. The current implant is carefully removed and placed in an antibiotic solution on the back table. The surgeon then inspects the surface of the pocket/capsule to assess for any abnormalities. Revisions to the capsule are then made including capsulotomies (incision through the capsule to allow for expansion), partial capsulectomies (excision of a portion of the capsule to allow for additional expansion), and/or capsulorrhaphies (suturing or tightening of the capsule to restrict and area). The surgeon then places an implant sizer matching the current implant into the pocket and provisionally closes the wound. After the back of the operating room table is raised, the surgeon assesses the shape of the breast under the effects of gravity. Subsequent further revisions are then made to the capsule until the desired outcome for breast shape is met. The breast incision is then reopened and the implant sizer removed. The implant pocket is irrigated copiously after removal of the sizer. A closed suction drain is placed if deemed appropriate. The operative team then changes their gloves and the patient's chest is painted with betadine paint. The previous implant is placed into the pocket making sure that it is in the

appropriate orientation and using a no-skin touch technique. The pocket is irrigated once again. The access incision in the capsule is reapproximated and the overlying soft tissues are closed in a layered fashion

Description of Post-Service Work: The chest is cleaned. A dressing is applied to the incision. A surgical bra is placed on the patient. The operative report is dictated. The postoperative orders are written.

Post op visit 1: 99213
This visit typically occurs at one week post-operatively. The patient's convalescence to that point is reviewed and discussed. The patients pain control and use of antibiotics are discussed. Refills are provided if indicated. The dressing from the operative site is removed. The drain output is assessed, and the drain suture and drain are removed, if appropriate. The breast wound is inspected and palpated. The integrity and viability of the breast skin flaps are assessed. The position of the implant is assessed as are both the cosmesis of the implant and breast symmetry. Patient and family questions and concerns are addressed. Ongoing care is reiterated and the anticipated timing of additional surgeries reviewed. Limitations of post-surgical activity are clearly reviewed. The wound is redressed, and the patient is placed back into her surgical bra.

Post op visit 2: 99213
This visit typically occurs at one month post-operatively. The patient's convalescence to that point is reviewed. The breast wound is inspected and palpated. The integrity and viability of the skin flaps is assessed. The position of the implant is assessed, with particular attention to the inframammary fold, as are both the cosmesis of the implant and breast symmetry. As the initial swelling is now partially resolved, the aesthetic outcome comes into focus and expectations moving forward are reviewed in detail. Patient and family questions and concerns are addressed. Referrals to physical therapy are made if needed. Ongoing care is reiterated as well as slow lifting of post-operative restrictions.

Post op visit 3: 99213
This visit typically occurs at three months post-operatively. The patient's convalescence to that point is reviewed and at this point, the patient should be back to normal activity. The surgical site is evaluated. The position of the implant is assessed as are both the cosmesis of the implant and breast symmetry. Patient and family questions and concerns are addressed. At this visit, the most time is spent evalutating the reconstructive outcome with the patient including patient-reported outcomes. Persistent deformities or areas of patient concern are systmetically addressed by the surgeon. The next stages of reconstruction are discussed including any necessary revisions and the timing of nipple reconstruction

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	0%	15%	69%	16%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	8%	15%	77%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	0%	42%	58%
Physical effort required	0%	23%	77%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	23%	77%

2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	10%	60%	30%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	20%	80%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	20%	80%
Physical effort required	0%	10%	90%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	10%	90%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

In February 2019, the CPT Editorial Panel approved the deletion of two codes and revisions to seventeen other codes related to breast reconstruction including 19370. The descriptor for 19370 was updated to be inclusive of all the surgical maneuvers that can be performed to the capsule [the scar that forms around an implant] in order to improve the shape of the breast mound. The previous descriptor only included incising the capsule which created confusion among surgeons

and coders when the capsule was plicated (capsulorrhaphy) or partially excised as no other codes described these frequent maneuvers. In addition, a parenthetical was added to prevent unbundling for removal and then replacement of the implant in order to access the capsule since this would be necessary in order to revise the capsule. A second parenthetical related to the placement of new implant was also added.

CPT 19370	Descriptor
Previous	Open periprosthetic capsulotomy, breast
Updated	Revision of peri-implant capsule, breast, including capsulotomy, capsulorrhaphy, and/or partial capsulectomy (Do not report 19370 in conjunction with 19328 for removal and replacement of same implant to access capsule) (For removal and replacement with new implant, use 19342)

During the October 2019 RUC meeting, it was agreed upon that 19370 would be surveyed along with codes 19371 and 19380 as part of the "Secondary Breast Mound" family.

Code 19370 is a Harvard valued code.

Compelling Evidence

We believe there is compelling evidence for this code based on a change in patient population. Over the 27 years since the publication of the Harvard Phase III values, there have been significant changes in the population of patients seeking post-mastectomy breast reconstruction as well as in the techniques used. Not only are more women expecting to have breast reconstruction, but previous comorbidities no longer limit who is a candidate for breast reconstruction. There has been a significant increase in patient expectations to have a near-normal appearing breast reconstruction instead of an amorphous mound on the chest which used to be more acceptable. This change in patient expectations has significantly increased the work intensity of the procedure not only intra-operatively, but also in the pre- and post- periods due to the elevated complexity of discussions with the patient. This is highlighted by the recent media focus related to textured breast implants and including the role of the capsule.

In addition, the code descriptor now includes multiple different elements of work on the capsule that previously were not part of the code including partial capsulectomy and capsulorrhaphy. The inclusion of these maneuvers adds work that is now inclusive in the code. We believe this addition to the descriptor is equivalent to misleading vignette/survey assumptions in the previous Harvard valuation.

Survey Sample and Process

A survey request was sent to a random selection of members from the American Society of Plastic Surgeons who have self-identified as reconstructive surgeons.

Recommendation

We are recommending a work RVU of 10.00, the survey 25th percentile.

Pre-time Package 3-FAC (Straightforward Patient/Difficult Procedure)

We have selected pre-time package 3-FAC as it is the lowest package for a patient undergoing general anesthesia.

Evaluation time – We are recommending 40 minutes of evaluation time which is an increase of 7 minutes from the package time, however, it is a decrease of 5 minutes from our survey data. The additional 7 minutes of pre-time for this case is spent in setting and marking the patient in an upright position to evaluate breast shape and measure base dimensions.

Positioning time – We are recommending 10 minutes of positioning time which is an increase in 7 minutes from the pre-service package time. We believe there is extra time involved in securing arms and assessing the position of the head and neck and making any adjustments to allow for sitting upright intra-operatively which is not typically required for most procedures. This is supported by our median survey time and consistent with previous times related to breast surgery.

Scrub, Dress, Wait time – We are recommending 15 minutes of scrub, dress and wait time which matches our survey results and the package time. This is supported by our median survey time.

Post-time Package 9A (General Anes or Complex Reg Blk/Straightforward Procedure)

The recommended time has been reduced to 24 minutes which is a decrease of 6 minutes from the post package time selected to match our survey time.

Key Reference Codes

CPT	DESCRIPTOR	IWPUT	wRVU	TOTAL TIME	PRE	INTRA	POST	99238	99214	99213	99212
14060	Adjacent tissue transfer or rearrangement, eyelids, nose, ears and/or lips; defect 10 sq cm or less	**0.0899**	**9.23**	**183**	30	**60**	15			2	2
19370	Revision of peri-implant capsule, breast, including capsulotomy, capsulorrhaphy, and/or partial capsulectomy	**0.060**	**10.00**	**255**	65	**78**	24			3	
15260	Full thickness graft, free, including direct closure of donor site, nose, ears, eyelids, and/or lips; 20 sq cm or less	**0.0563**	**11.64**	**273**	28	**100**	30			5	

Code 19370 with an wRVU at the 25th percentile demonstrates reasonable similarity to the two KRC codes selected for comparison. Code 19370 has a longer intra-time and total time (18 and 72 minutes, respectively) compared to Code 14060 which is reflected in the increased wRVU. Code 19370 has a shorter intra-time and total time (22 and 18 minutes, respectively) compared to Code 15260 which is reflected in the decreased wRVU.

MPC Comparison Codes

CPT	DESCRIPTOR	IWPUT	wRVU	TOTAL TIME	PRE	INTRA	POST	99238	99213	99212
21015	Radical resection of tumor (eg, sarcoma), soft tissue of face or scalp; less than 2 cm	**0.0527**	**9.89**	**277**	68	**75**	30	0.5	3	1
19370	Revision of peri-implant capsule, breast, including capsulotomy, capsulorrhaphy, and/or partial capsulectomy	**0.060**	**10.00**	**255**	65	**78**	24	0.5	3	
36821	Arteriovenous anastomosis, open; direct, any site (eg, Cimino type) (separate procedure)	**0.1038**	**11.90**	**233**	75	**75**	25	0.5	1	1

There are a limited number of MPC codes with intra-times near 75 minutes without going to either 60 minutes or 90 minutes. Code 19370 with an wRVU at the 25th percentile demonstrates good similarity to the two MPC codes selected for comparison. The intra-times for the KRCs are nearly identical with Code 19370. Code 19370 at the 25th percentile (wRVU = 10.00) has 22 less minutes of total time compared to Code 21015 with a slightly increased wRVU (+0.11). However, Code 19370 at the 25th percentile (wRVU = 10.00) has 22 minutes more total time compared to code 38683 with a notable decreased in wRVU (-1.90).

Additional MPC Codes:

As noted above, the MPC list is limited in the number of codes with an intra-time that is between, but not equal to 60 or 90 minutes. Searching the RUC data base for MPC, 90 day global, IT 70-85, TT 230-280, there are only four codes. Code 19370 at the 25th percentile (wRVU = 10.00) would be **3rd lowest out of 5** total codes. In addition, all four of the MPC codes have lower intra-times and three of the four (including both with significantly higher wRVUs) have shorter total times. A table with these results is below:

CPT	DESCRIPTOR	IWPUT	wRVU	TOTAL TIME	PRE	INTRA	POST	99238	99213	99212
49507	Repair initial inguinal hernia, age 5 years or older; incarcerated or strangulated	**0.0711**	**9.09**	**231**	63	**70**	40	0.5	1	1
21015	Radical resection of tumor (eg, sarcoma), soft tissue of face or scalp; less than 2 cm	**0.0527**	**9.89**	**277**	68	**75**	30	0.5	3	1
19370	Revision of peri-implant capsule, breast, including capsulotomy, capsulorrhaphy, and/or partial capsulectomy	**0.060**	**10.00**	**255**	65	**78**	24	0.5	3	
36821	Arteriovenous anastomosis, open; direct, any site (eg, Cimino type) (separate procedure)	**0.1038**	**11.90**	**233**	75	**75**	25	0.5	1	1
52601	Transurethral electrosurgical resection of prostate, including control of postoperative bleeding, complete (vasectomy, meatotomy, cystourethroscopy, urethral calibration and/or dilation, and internal urethrotomy are included)	**0.1143**	**13.16**	**236**	51	**75**	45	0.5	2	

Comparisons to other recently valued codes in the RUC database:

Searching the RUC database for codes that are RUC surveyed in the last 10 years, 90 day global, IT 70-85, TT 240-270 reveals 6 codes. Code 19370 at the 25th percentile (wRVU = 10.00) would be the **5th highest of 7 codes**. A rank ordered table of these codes and wRVUs is below:

CPT CODE	28297	28299	19370	15120	64910	36831	29828
RVU	9.29	9.29	10.00	10.15	10.52	11.00	13.16

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 19370

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Plastic Surgery How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 6000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. We believe utlization is 3x the medicare volume.

Specialty Plastic Surgery Frequency 5700 Percentage 95.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 2,000
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC Database

Specialty Plastic Surgery Frequency 1900 Percentage 95.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Major procedure

BETOS Sub-classification Level II:
Breast

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 19370

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:19371 Tracking Number Original Specialty Recommended RVU: **10.81**
Presented Recommended RVU: **10.81**
Global Period: 090 Current Work RVU: **10.62** RUC Recommended RVU: **10.81**

CPT Descriptor: Peri-implant capsulectomy, breast, complete, including removal of all intra-capsular contents

---

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 60-year-old female with a history of implant-based breast reconstruction develops a grade IV capsular contracture. A complete capsulectomy with implant removal is recommended.

Percentage of Survey Respondents who found Vignette to be Typical: 88%

Site of Service (Complete for 010 and 090 Globals Only)
Percent of survey respondents who stated they perform the procedure; In the hospital 48% , In the ASC 50%, In the office 2%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 70% , Overnight stay-less than 24 hours 30% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 50%

Description of Pre-Service Work: Orders for preoperative medications are written, and laboratory results, imaging, and patient photographs, are reviewed. The planned procedure and postoperative management are reviewed with the patient and the patient's family. Post-operative functional and aesthetic expectations are reviewed. The patient's history and physical are updated with reconciliation of medications/allergies. Post-operative pain control is reviewed and a narcotics controlled substance review is performed. NPO status is confirmed. The operative site is marked sitting upright to evaluate breast shape and design incisions based on final desired outcome. Informed consent is obtained. The length and type of anesthesia are reviewed with the anesthesiologist. Surgeon changes into scrub clothes. The availability of all required supplies and instruments are verified. Confirmation of the ability for the operating room bed to sit upright is performed. The patient is transferred from the gurney and positioned on the operating room table. A patient verification procedure is performed. Bony prominences are padded, and thermal regulation drapes are applied. The arms are secured in a position to allow for sitting upright. The position of the head/neck is assessed and adjusted, as needed based on the need to sit up intra-operatively. A neck roll is placed to support the head. The surgeon monitors and assists with prepping including waiting for the prep to dry. The surgeon scrubs and gowns. Surgical drapes are placed. A pre-incision surgical time-out is performed with the operating surgical team.

Description of Intra-Service Work: An incision is performed on the breast followed by a meticulous dissection of the subcutaneous tissues. In order to try and remove the scarred capsule and the intra-capsular contents, the surgeon dissects the breast and/or pectoralis muscle off the anterior surface of the capsule while trying to avoid injury to the capsule. Once completely around the anterior surface, the posterior portion of the capsule is then elevated off the pectoralis muscle/ribs/chestwall (depending on previous location of the implant). The entire capsule is subsequently excised including any rememant segements in a piece-meal fashion. All excised capsule and any implant/implant contents within the capsule are sent for pathology. The pocket is irrigated with saline and hemostasis assured. The skin is then tailor tacked closed. After the back of the operating room table is raised, the surgeon assesses the shape of the breast under the effects of gravity. Minor revisions are then made to the soft tissue envelope until the desired outcome for residual breast shape is met. The patient is returned to the supine position. A closed suction drain is placed if deemed appropriate. The soft tisses and incision are closed in a layered fashion

Description of Post-Service Work: The chest is cleaned. A compressive dressing is applied to the incision. A surgical bra is placed on the patient. The operative report is dictated. The postoperative orders are written.

Post op visit 1: 99213
This visit typically occurs at one week post-operatively. The patient's convalescence to that point is reviewed and discussed. The patients pain control and use of antibiotics are discussed. Refills are provided if indicated. The dressing from the operative site is removed. The drain output is assessed, and the drain suture and drain are removed, if appropriate. The breast wound is inspected and palpated. The integrity and viability of the breast skin flaps are assessed. The residual shape and cosmesis of the breast is evaluated. Patient and family questions and concerns are addressed. Ongoing care is reiterated and the anticipated timing of additional surgeries reviewed. Limitations of post-surgical activity are clearly reviewed. The wound is redressed, and the patient is placed back into her surgical bra. Pathology findings are reviewed.

Post op visit 2: 99212
This visit typically occurs at one month post-operatively. The patient's convalescence to that point is reviewed. The breast wound is inspected and palpated. The integrity and viability of the skin flaps is assessed. As the initial swelling is now partially resolved, the aesthetic outcome comes into focus and expectations moving forward are reviewed in detail. Patient and family questions and concerns are addressed. Referrals to physical therapy are made if needed. Ongoing care is reiterated as well as slowly lifting post-operative restrictions.

Post op visit 3: 99213
This visit typically occurs at three months post-operatively. The patient's convalescence to that point is reviewed and at this point, the patient should be back to normal activity. The surgical site is evaluated. The final shape of the breast or breast defect is evaluated. Patient and family questions and concerns are addressed. At this visit, the most time is spent evalutating the outcome with the patient including patient-reported outcomes. Persistent deformities or areas of patient concern are systmetically addressed by the surgeon. The indication for additional surgeries or reconstruction are discussed with the patient.

Physical effort required	0%	0%	100%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	8%	92%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

In February 2019, the CPT Editorial Panel approved the deletion of two codes and revisions to seventeen other codes related to breast reconstruction including 19371. The descriptor for 19371 was updated to include the removal of all of the contents (i.e. the implant and any implant fill material) within the caspule (the scar that forms around an implant) as inclusive with the procedure and prevent duplication of work. The previous descriptor only included excising the entire

capsule which created confusion among surgeons and coders related to the management of the intracapsular contents and specifically a ruptured implant. In some situations, 19330 was used in addition to code 19371 despite it otherwise being impossible to perform a complete capsulectomy and not remove all of the intracapsular contents. In addition, the word "complete" was added to distinguish the work from excision of a smaller portion of the capsule which is now clearly described as part of 19370 (Revision of peri-implant capsule, breast, including capsulotomy, capsulorrhaphy, and/or partial capsulectomy). Parentheticals were added to prevent unbundling with 19371 and 19328 (Removal of intact breast implant). An additional parenthetical prevents reporting 19371 and 19370 in the same breast since a complete capsulectomy would no longer allow for a capsular revision procedure. A third parenthetical related to the placement of new implant was also added.

CPT 19371	Descriptor
Previous	Periprosthetic capsulectomy, breast
Updated	Peri-implant capsulectomy, breast, complete, including removal of all intra-capsular contents (Do not report 19371 in conjunction with 19328) (Do not report 19371 in conjunction with 19370 in same breast) (For removal and replacement with new implant, use 19342)

During the October 2019 RUC meeting, it was agreed upon that 19371 would be surveyed along with codes 19370 and 19380 as part of the "Secondary Breast Mound" family.

Code 19371 is a Harvard valued code.

Compelling Evidence

We believe there is compelling evidence for this code based on a change in patient population. Over the 27 years since the publication of the Harvard Phase III values, there have been significant changes in the population of patients seeking post-mastectomy breast reconstruction as well as in the techniques used. Not only are more women expecting to have breast reconstruction, but previous comorbidities no longer limit who is a candidate for breast reconstruction. There has been a significant increase in patient expectations to have a near-normal appearing breast reconstruction instead of an amorphous mound on the chest which used to be more acceptable. This change in patient expectations has significantly increased the work intensity of the procedure not only intra-operatively, but also in the pre- and post- periods due to the elevated complexity of discussions with the patient. This is highlighted by the recent media focus related to breast implants and including the role of the capsule. The recommend procedure now for many patients with breast implant concerns is a complete capsulectomy.

In addition, the code descriptor now includes an additional element of work, the removal of all capsule contents, that was not previously part of the descriptor. While these revisions were intended to be instructional, we believe this addition to the descriptor is equivalent to misleading vignette/survey assumptions in the previous Harvard valuation.

Survey Sample and Process

A survey request was sent to a random selection of members from the American Society of Plastic Surgeons who have self-identified as reconstructive surgeons.

Recommendation

We are recommending a work RVU of 10.81, the survey 25th percentile.

Although there was a decrease in times based on the survey, we believe that the 25th percentile for wRVU is still very appropriate for this code based on the comparison with both MPC and recently RUC reviewed codes. In addition, the IWPUT at the 25th percentile also better matches with the codes in this family.

Pre-time Package 3-FAC (Straightforward Patient/Difficult Procedure)

We have selected pre-time package 3-FAC as it is the lowest package for a patient undergoing general anesthesia.

Evaluation time – We are recommending 40 minutes of evaluation time which is an increase of 7 minutes from the package time, however, it is a decrease of 4 minutes from our survey data. The additional 7 minutes of pre-time for this case is spent in setting and marking the patient in an upright position to evaluate breast shape and measure base dimensions.

Positioning time – We are recommending 10 minutes of positioning time which is an increase in 7 minutes from the pre-service package time. We believe there is extra time involved in securing arms and assessing the position of the head and neck and making any adjustments to allow for sitting upright intra-operatively which is not typically required for most procedures. This is supported by our median survey time.

Scrub, Dress, Wait time – We are recommending 15 minutes of scrub, dress and wait time which matches our survey results and the package time. This is supported by our median survey time.

Post-time Package 9A (General Anes or Complex Reg Blk/Straightforward Procedure)

The recommended time has been reduced to 25 minutes which is a decrease of 5 minutes from the post package time selected to match our survey time.

Key Reference Codes

CPT	DESCRIPTOR	IWPUT	wRVU	TOTAL TIME	PRE	INTRA	POST	99238	99214	99213	99212
19371	Peri-implant capsulectomy, breast, complete, including removal of all intra-capsular contents	0.066	10.81	261	65	90	25	0.5		2	1
15260	Full thickness graft, free, including direct closure of donor site, nose, ears, eyelids, and/or lips; 20 sq cm or less	0.0563	11.64	273	28	100	30			5	
64912	Nerve repair; with nerve allograft, each nerve, first strand (cable)	0.0715	12.00	272	58	90	20	0.5		3	1

Code 19371 with an wRVU at the 25th percentile (10.81) demonstrates reasonable similarity to the two KRC codes selected for comparison. Code 19371 has a shorter total time compared to both Code 15260 and Code 64912 (12 and 11 minutes respectively). Code 19371 has an intra-time that is 10 minutes less than Code 15260 and equal to Code 64912. Despite these similarities in times, Code 19371 has an wRVU value that is less than both KRC which have greater or equal times.

MPC Comparison Codes

CPT	DESCRIPTOR	IWPUT	wRVU	TOTAL TIME	PRE	INTRA	POST	99238	99232	99213	99212
15576	Formation of direct or tubed pedicle, with or without transfer; eyelids, nose, ears, lips, or intraoral	0.0484	9.37	271	70	90	30	0.5		0	1
19371	Peri-implant capsulectomy, breast, complete, including removal of all intra-capsular contents	0.066	10.81	261	65	90	25	0.5		2	1
60220	Total thyroid lobectomy, unilateral; with or without isthmusectomy	0.0710	11.19	267	72	90	40	0.5		2	

Code 19371 with an wRVU at the 25th percentile (wRVU = 10.81) demonstrates good similarity to the two MPC codes selected for comparison. The intra-times for the selected MPCs are exactly identical with Code 19370. The total time for Code 19371 is 10 minutes less than Code 15576 and 6 minutes less than Code 60220. The work wRVU at the 25th percentile is in between the two selected MPC codes.

Additional MPC Codes:

There is only one additional MPC code with a 90-day global, IT 90, and TT 240-280. MPC Code 53440 has the same intra-time and 13 less minutes of total time compared to Code 13971, but the MPC Code 53440 has a significantly increased wRVU of 13.36 (+2.55 wRVU compared to Code 19371). Within this range of MPC codes, Code 19371 would **rank 3rd highest out of 4 codes**.

CPT	DESCRIPTOR	IWPUT	wRVU	TOTAL TIME	PRE	INTRA	POST	99238	99232	99213	99212
15576	Formation of direct or tubed pedicle, with or without transfer; eyelids, nose, ears, lips, or intraoral	**0.0484**	**9.37**	**271**	70	**90**	30	0.5		0	1

Comparisons to other recently valued codes in the RUC database:

Searching the RUC database for codes that are RUC surveyed in the last 10 years, 90-day global, IT 90, TT 240-280 (the same search used to identify MCP codes) – there are 20 additional codes. Code 19371 at the 25th percentile (10.81), **would rank 20th highest out of 21 codes**.

CPT CODE	64568	19371	63655	26260	60220	49521	63664	49652	64912	36830	36818

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.

- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 19371

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Plastic Surgery How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 20000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. We believe utilization is 3x the medicare volume.

Specialty Plastic Surgery Frequency 19000 Percentage 95.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 6,500
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC Database

Specialty Plastic Surgery Frequency 6175 Percentage 95.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Major procedure

BETOS Sub-classification Level II:
Breast

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 19371

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

SUMMARY OF RECOMMENDATION

CPT Code:19380 Tracking Number Original Specialty Recommended RVU: **12.00**
Presented Recommended RVU: **12.00**
Global Period: 090 Current Work RVU: **10.41** RUC Recommended RVU: **12.00**

CPT Descriptor: Revision of reconstructed breast (eg, significant removal of tissue, re-advancement and/or re-inset of flaps in autologous reconstruction or significant capsular revision combined with soft tissue excision in implant-based reconstruction)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 50-year-old female with a history of right breast cancer who previously underwent a mastectomy with immediate TRAM reconstruction presents four months later for revision due to asymmetry and disproportion of the reconstructed breast. A revision of the right breast reconstruction including re-elevation and inset of the flap, lateral liposuction, and excision of redundant skin is planned.

Percentage of Survey Respondents who found Vignette to be Typical: 88%

Site of Service (Complete for 010 and 090 Globals Only)
Percent of survey respondents who stated they perform the procedure; In the hospital 51% , In the ASC 46%, In the office 3%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 57% , Overnight stay-less than 24 hours 38% , Overnight stay-more than 24 hours 5%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 33%

Description of Pre-Service Work: Orders for preoperative medications are written, and laboratory results, imaging, and patient photographs, are reviewed. The planned procedure and postoperative management are reviewed with the patient and the patient's family. Post-operative functional and aesthetic expectations are reviewed. The patient's history and physical are updated with reconciliation of medications/allergies. Post-operative pain control is reviewed and a narcotics controlled substance review is performed. NPO status is confirmed. The operative site is marked sitting upright to evaluate breast shape and design incisions based on the final desired outcome. Careful measurements are made to optimize symmetry. Informed consent is obtained. The length and type of anesthesia are reviewed with the anesthesiologist. Surgeon changes into scrub clothes. The availability of all required supplies are verified including back-up implants if patient has previous implants in case of injury. Confirmation of the ability for the operating room bed to sit upright is performed. The patient is transferred from the gurney and positioned on the operating room table. A patient verification procedure is performed. Bony prominences are padded, and thermal regulation drapes are applied. The arms are secured in a position to allow for sitting upright. The position of the head/neck is assessed and adjusted, as needed based on the need to sit up intra-operatively. A neck roll is placed to support the head. The surgeon monitors and assists with prepping including waiting for the prep to dry. The surgeon scrubs and gowns. Surgical drapes are placed. A pre-incision surgical time-out is performed with the operating surgical team.

Description of Intra-Service Work: The marked incisions are made on the breast. The previous mastectomy flaps are re-raised off of the previous TRAM flap up to the clavicle. The superior pole of the TRAM is is elevated off the chest wall and suspension sutures are placed to elevate the flap and improve the area of deficiency. Addition portions of the skin are then de-epithelialized in order to bury the flap under the residual native mastectomy skin. The planned excision of native mastectomy skin in order to tighten the skin envelope is tailor tacked closed. Tumescent anesthesia is infiltrated into the lateral breast. After waiting for the hemostatic effects of the epinephrine, liposuction is performed of the lateral side of the breast to decrease the volume in that area. After the back of the operating room table is raised, the surgeon assesses the shape of the breast under the effects of gravity. Subsequent further revisions are then made until the desired outcome for residual breast shape is met. The patient is returned to the supine position. The surgical incisions are opened and the

viability of the previous TRAM is evaluated. The surgical site is irrigated with saline and hemostasis assured. A closed suction drain is placed if deemed appropriate. The soft tisses and incisions are closed in a layered fashion

Description of Post-Service Work: The chest is cleaned. A compressive dressing is applied to the incision. A surgical bra is placed on the patient. The operative report is dictated. The postoperative orders are written.

Post op visit 1: 99213
This visit typically occurs at one week post-operatively. The patient's convalescence to that point is reviewed and discussed. The patients pain control and use of antibiotics are discussed. Refills are provided if indicated. The dressing from the operative site is removed. The drain output is assessed, and the drain suture and drain are removed, if appropriate. The breast surgical site is inspected and palpated. The integrity and viability of the soft tissues are assessed. The position and shape of the breast are assessed for both cosmesis and breast symmetry. Patient and family questions and concerns are addressed. Ongoing care is reiterated and the anticipated timing of additional surgeries reviewed. Limitations of post-surgical activity are clearly reviewed. The wound is redressed, and the patient is placed back into her surgical bra.

Post op visit 2: 99212
This visit typically occurs at two weeks post-operatively. The patient's convalescence to that point is reviewed. If the drain was not removed at the initial postoperative visit, the drain output is assessed, and the drain suture and drain are removed, if appropriate. The breast surgical site is inspected and palpated. The integrity and viability of the soft tissues are assessed. The position and shape of the breast are assessed for both cosmesis and breast symmetry. Patient and family questions and concerns are addressed. The wound is redressed and the patient is placed back into her surgical bra.

Post op visit 3: 99212
This visit typically occurs at one month post-operatively. The patient's convalescence to that point is reviewed. The breast surgical site is inspected and palpated. The breast surgical site is inspected and palpated. The integrity and viability of the soft tissues are assessed. The position and shape of the breast are assessed for both cosmesis and breast symmetry. As the initial swelling is now partially resolved, the aesthetic outcome comes into focus and expectations moving forward are reviewed in detail. Patient and family questions and concerns are addressed. Referrals to physical therapy are made if needed. Ongoing care is reiterated as well as slowly lifting post-operative restrictions.

Post op visit 4: 99213
This visit typically occurs at three months post-operatively. The patient's convalescence to that point is reviewed and at this point, the patient should be back to normal activity. The breast surgical site is inspected and palpated. The integrity and viability of the soft tissues are assessed. The position and shape are assessed for both cosmesis and breast symmetry. Patient and family questions and concerns are addressed. At this visit, the most time is spent evalutating the reconstructive outcome with the patient including patient-reported outcomes. Persistent deformities or areas of patient concern are systmetically addressed by the surgeon. The next stages of reconstruction are discussed including any necessary revisions and the timing of nipple reconstruction.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	0%	90%	59%	32%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	29%	71%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	0%	33%	77%
Physical effort required	0%	14%	76%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	23%	77%

2nd Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	0%	8%	38%	54%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	0%	10000%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	0%	15%	85%
Physical effort required	0%	0%	100%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	15%	85%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

In February 2019, the CPT Editorial Panel approved the deletion of two codes and revisions to seventeen other codes related to breast reconstruction including 19380. The descriptor for 19380 was updated to provide specific guidance in usage of a code that was otherwise vague. Code 19380 is a unique code in that it is used to describe procedures that may be performed on a reconstructed breast that may be similar to procedures on a native breast, but of lower complexity

(e.g. lifting of a reconstructed breast or reduction of a reconstructed breast due). In addition, the code is intended to be inclusive of a number of surgical maneuvers that could potentially be reported separately, but if reported separately would inappropriately include times for duplicate work. It includes revisions on autologous, implant, and combined (autologous and implant) reconstructions. Additional parentheticals were added to limit unbundling of the potential other maneuvers that could be reported if performed in isolation, but are included in 19380 when performed together on the same breast.

CPT 19380	Descriptor
Previous	Revision of reconstructed breast
Updated	Revision of reconstructed breast (eg, significant removal of tissue, re-advancement and/or re-inset of flaps in autologous reconstruction or significant capsular revision combined with soft tissue excision in implant-based reconstruction) (Do not report 19380 in conjunction with 12031, 12032, 12033, 12034, 12035, 12036, 12037, 13100, 13101, 13102, 15877, 19316, 19318, 19370, for the same breast)

During the October 2019 RUC meeting, it was recommended that 19380 be surveyed along with codes 19370 and 19371 as part of the "Secondary Breast Mound" family. As 19380 includes the work of 19371 when combined with other non-capsular soft tissue revisions, there is a hierarchical relationship between the codes.

Code 19380 is a Harvard valued code.

Compelling Evidence

We believe there is compelling evidence for this code based on both a change in patient population and flawed methodology. Over the 27 years since the publication of the Harvard Phase III values, there have been significant changes in the population of patients seeking post-mastectomy breast reconstruction as well as in the techniques used including various flap reconstruction, combined implant/flap procedures, or implant procedure with complex soft tissue reconstructions. Not only are more women expecting to have breast reconstruction, but previous comorbidities no longer limit who is a candidate for breast reconstruction. There has been a significant increase in patient expectations to have a near-normal appearing breast reconstruction instead of an amorphous mound on the chest which used to be more acceptable. This change in patient expectations has significantly increased the work intensity of the procedure not only intra-operatively, but also in the pre- and post- periods due to the elevated complexity of discussions with the patient.

We also believe there is previous flawed methodology related to unknown interpretations of a vague descriptor of "revision of reconstructed breast" during the Harvard Phase III valuation. The usage of this code may have changed over time given the lack of a formal definition and shifting forms of breast reconstruction. While the code is now formally defined, it is unclear what the Harvard valuation participants interpreted "revision of reconstructed breast" to mean given the differences in options for reconstruction over the intervening 27 years. We believe this addition to the descriptor is equivalent to misleading vignette/survey assumptions in the previous Harvard valuation.

Survey Sample and Process

A survey request was sent to a random selection of members from the American Society of Plastic Surgeons who have self-identified as reconstructive surgeons.

Recommendation

We are recommending a work RVU of 12.00, the survey 25th percentile.

Pre-time Package 3-FAC (Straightforward Patient/Difficult Procedure)

We have selected pre-time package 3-FAC as it is the lowest package for a patient undergoing general anesthesia.

Evaluation time – We are recommending 40 minutes of evaluation time which is an increase of 7 minutes from the package time, however, it is a decrease of 5 minutes from our survey data. The additional 7 minutes of pre-time for this case is spent in setting and marking the patient in an upright position to evaluate breast shape and measure base dimensions.

Positioning time – We are recommending 10 minutes of positioning time which is an increase in 7 minutes from the pre-service package time. We believe there is extra time involved in securing arms and assessing the position of the head and neck and making any adjustments to allow for sitting upright intra-operatively which is not typically required for most procedures. This is supported by our median survey time.

Scrub, Dress, Wait time – We are recommending 15 minutes of scrub, dress and wait time which matches our survey results and the package time. This is supported by our median survey time.

Post-time Package 9A (General Anes or Complex Reg Blk/Straightforward Procedure)

The recommended time has been reduced to 25 minutes which is a decrease of 5 minutes from the post package time selected to match our survey time.

Clinic Visits:

Our survey results indicated that the typical patient has four post-operative visits. This included 99213 x 2, 99212 x 1, and a fourth visit with the survey split between 99213 and 99212. We recommend that this fourth post-operative visit also be at the level of 99212.

Key Reference Codes

CPT	DESCRIPTOR	IWPUT	wRVU	TOTAL TIME	PRE	INTRA	POST	99238	99214	99213	99212
15260	Full thickness graft, free, including direct closure of donor site, nose, ears, eyelids, and/or lips; 20 sq cm or less	**0.0563**	**11.64**	**273**	28	**100**	30			5	
19380	Revision of reconstructed breast (eg, significant removal of tissue, re-advancement and/or re-inset of flaps in autologous reconstruction or significant capsular revision combined with soft tissue excision in implant-based reconstruction)	**0.055**	**12.00**	**307**	65	**120**	25	0.5		2	2
64912	Nerve repair; with nerve allograft, each nerve, first strand (cable)	**0.0715**	**12.00**	**272**	58	**90**	20	0.5		3	1

Code 19380 with an wRVU at the 25th percentile demonstrates reasonable comparison to the two KRC codes selected for comparison. Code 19380 has a longer intra-time (20 and 30 minutes, respectively) and a longer total time (34 and 35 minutes, respectively) compared to KRC Code 15260 and Code 64912. The 25th percentile wRVU is slightly higher than CPT 15260, but also has additional intra-time and total time. Code 19380 at the 25th percentile has exactly the same wRVU to CPT 64912 despite having significantly longer intra-time and total-time.

MPC Comparison Codes

There are only 5 MPC codes with an intra-time of 120 minutes and a 90-day global period. Three of these five codes are RUC-CMS revised as well. Increasing the intra-time range to 100-140 minutes yields only one additional MPC code with an intra-time of 103 minutes. Thus, there is a limited number of potential comparison MPC codes and all of them have significantly higher wRVU than 19380 at the 25th (wRVU 12.00) or 50th percentile (wRVU 12.87). We ultimately selected the lowest two available MPC codes with an intra-time of 120 minutes although they do not clearly bracket code 19380.

CPT	DESCRIPTOR	IWPUT	wRVU	TOTAL TIME	PRE	INTRA	POST	99238	99232	99214	99213	99212
19380	Revision of reconstructed breast (eg, significant removal of tissue, re-advancement and/or re-inset of flaps in autologous reconstruction or significant capsular revision combined with soft tissue excision in implant-based reconstruction)	**0.055**	**12.00**	**307**	65	**120**	25	0.5			2	2
52649	Laser enucleation of the prostate with morcellation, including control of postoperative bleeding, complete (vasectomy, meatotomy, cystourethroscopy, urethral calibration and/or dilation, internal urethrotomy and transurethral resection of prostate are included if performed)	**0.0831**	**14.56**	**279**	53	**120**	25	0.5			2	1
54410	Removal and replacement of all component(s) of a multi-component, inflatable penile prosthesis at the same operative session	**0.0751**	**15.18**	**329**	65	**120**	40	0.5			3	1

Additional MPC Codes:

As noted above, the MPC list is limited in the number of codes with an intra-time that is near 120 minutes. Searching the RUC database for MPC, 90 day global, IT 100-140, TT 277-337 yields only four comparison codes. At both the 25th percentile and 50th percentile, Code 19380 at the would be 5th lowest out of 5 codes. In addition, the other four MPC codes would be higher by a significant difference in wRVU. A table demonstrating the four possible MPC codes similar to 19380 is below:

CPT	DESCRIPTOR	IWPUT	wRVU	TOTAL TIME	PRE	INTRA	POST	99238	99232	99214	99213	99212
19380	Revision of reconstructed breast (eg, significant removal of tissue, re-advancement and/or re-inset of flaps in autologous reconstruction or significant capsular revision combined with soft tissue excision in implant-based reconstruction)	**0.055**	**12.00**	**307**	65	**120**	25	0.5			2	2
52649	Laser enucleation of the prostate with morcellation, including control of postoperative bleeding, complete (vasectomy, meatotomy, cystourethroscopy, urethral calibration and/or dilation, internal urethrotomy and transurethral resection of prostate are included if performed)	**0.0831**	**14.56**	**279**	53	**120**	25	0.5			2	1

Comparisons to other recently valued codes in the RUC database:

Searching the RUC database for codes that are RUC surveyed in the last 10 years, 90 day global, IT 120, TT 287-327 reveals 7 codes. Code 19380 at both the 25th percentile (wRUV 12.00) and 50th percentile (wRVU 12.87) would **rank 8th highest out of 9 codes.** A rank-order table with these codes and wRVUs is below:

CPT CODE	64569	19380	49654	36825	36833	49653	60500	15733
RVU	11.00	12.00	13.76	14.17	14.50	14.94	15.60	15.68

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 19380

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Plastic Surgery How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 22000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. We believe utilization is 3x the medicare volume.

Specialty Plastic Surgery Frequency 22000 Percentage 100.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 7,265
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC Database

Specialty Plastic Surgery Frequency 7265 Percentage 100.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment
Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Major procedure

BETOS Sub-classification Level II:
Breast

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 19380

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

SS Rec Summary

INSTRUCTIONS

Insert information and data into all applicable cells except IWPUT and TOTAL TIME. These cells will automatically calculate.

Hide columns and rows that do not contain data.

1st REF = Top Key Reference code data

2st REF = Second Highest Key Reference code data

CURRENT = Current data (Harvard or RUC) for code being surveyed. If this is a new code, this row will be blank.

SVY = Survey data - as it appears on the Summary of Recommendation form.

REC = Specialty Society recommended data as it appears on the Summary of Recommendation form.

ISSUE: Secondary Breast Mount Procedure

FACILITY DIRECT PE INPUTS

CPT CODE(S): 19370
SPECIALTY SOCIETY(IES): ASPS
PRESENTER(S): Mark Villa, MD
Jeffrey Kozlow, MD

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: 01/2020

CPT Code	Long Descriptor	Global Period
19370	Revision of peri-implant capsule, breast, including capsulotomy, capsulorrhaphy, and/or partial capsulectomy	090

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
19370	A 50-year-old female with a history of breast cancer who previously underwent a mastectomy with implant-based breast reconstruction later develops inferior lateral displacement of the implant resulting in asymmetry with the contralateral breast. Revision of the breast capsule including superior and medial capsulotomies combined with inferior and lateral capsulorrhaphies are planned.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   Our specialty formed a panel of experts to develop practice expense recommendations for this family of codes. The panel was comprised of our RUC Advisors and multiple clinical experts who practice in the areas of general plastic surgery and breast reconstruction. The expert panel members also practice in settings that vary by size, geography, and represent both private and academic settings.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code, but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here (*for service reviewed prior to the implementation of clinical activity codes, detail is not provided in the RUC database, please contact Samantha Ashley at samantha.ashley@ama-assn.org for PE spreadsheets for your reference codes*):

   We used existing PE inputs from the RUC database for this family of codes (19370, 19371, 19380).

3. Is this code(s) typically reported with an E/M service?

   No

4. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:

   We are only requesting PE subcommittee standards for clinical activities.

5. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies for the **code family**, please provide compelling evidence (please see *PE compelling evidence guidelines*) Please explain if the increase can be entirely accounted for because of an increase in physician time:

   Across the four families of breast-specific codes being evaluated, there is currently significant variability in the post-op supplies and practice expense likely due to the various times and settings in which those decisions were made. Given the similarity in post-op visit supplies across these four families of breast related procedures (Implant/Expander Placement, Implant/Expander Removal,

Secondary Revisions, and Lift/Reduction), we have elected to standardize all of the practice expenses associated with each code. We believe this standardization is important in keeping consistency within the RUC valuation process. Standardization for these codes includes:

1)Using the standard clinical staff times for the pre-times and 90 day globals, discharge (x38) days, and with the number of post-op clinic visits/times pending final approval at the RUC.
2)Requesting one pack, post-op incision care (suture) per code
3)Requesting the standard Minimum Supply Package for Visits (Multi-speciality), a standard table, and an exam light for all post-operative visits with the number of post-op clinic visits/times pending final approval at the RUC
4)Requesting 20 minutes of a camera, digital system, 12 megapixel (medical grade) for each code to account for two 10 minutes session of post-operative photographs obtained during the global period.

We are requesting an overall decrease for the code family and a decrease for this code individually.

6. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see second worksheet in PE spreadsheet workbook*), please explain the difference here:

7. Please provide a brief description of the clinical staff work for the following:
   a. Pre-Service period:

In the pre-service period, clinical staff work includes completing pre-service diagnostic and referral forms, coordinating pre-surgery services, scheduling space and equipment in the facility, providing pre-service education/obtaining consent, and completing pre-procedure phone calls/prescriptions.

   b. Service period (includes pre, intra and post):

For this facility-only based procedure, the only post period is the 6 minutes allotted in the standards for assisting in same-day discharge management including coordination of post-operative appointments.

   c. Post-service period:

In the post-service period, clinical staff work includes the standard activities involved in any post-operative E&M visit including rooming the patient, gowning, reviewing current medications/allergies in EHR, obtaining vital signs, acting as chaperone due to sensitive areas being examined, assisting with wound care, coordination of care, and cleaning of the room.

8. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see second worksheet in PE spreadsheet workbook*):

9. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

INVOICES

10. ☐ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

11. ☐ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

12. If you wish to include a supply that is not on the list (*please see fourth worksheet in PE spreadsheet workbook*) please provide a paid invoice. Identify and explain the invoice here:

13. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation. Please include the description, CMS supply code, unit, item quantity and unit price (if available). See documents two and three under PE reference materials on the RUC Collaboration Website for information on the contents of kits, packs and trays.

DESCRIPTION	Code	Unit	Item Qty	Unit price
pack, minimum multi-specialty visit	**SA048**	**pack**		**2.1122**
paper, exam table		foot	7	
gloves, non-sterile		pair	2	
gown, patient		item	1	
pillow case		item	1	
cover, thermometer probe		item	1	

DESCRIPTION	Code	Unit	Item Qty	Unit price
pack, post-op incision care (suture)	**SA054**	**pack**		**4.8353**
kit, suture removal		kit	1	
povidone soln (Betadine)		ml	10	
gauze, sterile 4in x 4in		item	2	
gloves, sterile		pair	1	
steri-strip (6 strip uou)		item	2	
swab-pad, alcohol		item	2	
tape, surgical paper 1in (Micropore)		inch	12	
tincture of benzoin, swab		item	1	

14. If you wish to include an equipment item that is not on the list (*please see fifth worksheet in PE spreadsheet workbook*) please provide a paid invoice. Identify and explain the invoice here:

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

15. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

16. List all the equipment included in your recommendation and the equipment formula chosen *(*please see document titled *Calculating equipment time).* If you have selected "other formula" for any of the equipment please explain here:

EF023 table, exam – standard formula
EQ168 light, exam – standard formula
ED005 camera, digital system, 12 megapixel (medical grade) – other formula

It is standard in plastic surgery practices to use a medical grade (12 megapixel) camera for photograph as most offices also have a standard photo suite for professional grade images.

20 min total usage at 10min per post-operative session x 2 session.

17. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail/explanation, please include here:

PROFESSIONAL LIABILITY INSURANCE (PLI) INFORMATION

18. If this is a PE only code please select a crosswalk based on a similar specialty mix:

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING

During and immediately following the review of this tab at the PE Subcommittee meeting please revise the PE spreadsheet and summary of recommendation (PE SOR) documents based on modifications made during the meeting. Please submit the revised documents electronically to Samantha Ashley at samantha.ashley@ama-assn.org immediately following the close of business the same day that the tab is reviewed. On the PE spreadsheet, please highlight the cells and/or use red font to show the changes made during the PE Subcommittee meeting (if you have provided any of this highlighting based on changes from the reference code prior to the PE Subcommittee meeting please remove it, so not to be confused with changes made during the meeting). In addition to those revisions please also provide an itemized list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below (e.g. clinical activity CA010 *obtain vital signs* was reduced from 5 minutes to 3 minutes).

It is standard in plastic surgery practices to use a medical grade (12 megapixel) camera for photograph as most offices also have a standard photo suite for professional grade images.

20 min total usage at 10min per post-operative session x 2 session.

17. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail/explanation, please include here:

PROFESSIONAL LIABILITY INSURANCE (PLI) INFORMATION

18. If this is a PE only code please select a crosswalk based on a similar specialty mix:

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING

During and immediately following the review of this tab at the PE Subcommittee meeting please revise the PE spreadsheet and summary of recommendation (PE SOR) documents based on modifications made during the meeting. Please submit the revised documents electronically to Samantha Ashley at samantha.ashley@ama-assn.org immediately following the close of business the same day that the tab is reviewed. On the PE spreadsheet, please highlight the cells and/or use red font to show the changes made during the PE Subcommittee meeting (if you have provided any of this highlighting based on changes from the reference code prior to the PE Subcommittee meeting please remove it, so not to be confused with changes made during the meeting). In addition to those revisions please also provide an itemized list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below (e.g. clinical activity CA010 *obtain vital signs* was reduced from 5 minutes to 3 minutes).

FACILITY DIRECT PE INPUTS

CPT CODE(S): 19380
SPECIALTY SOCIETY(IES): ASPS
PRESENTER(S): Mark Villa, MD
Jeffrey Kozlow, MD

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: 01/2020

CPT Code	Long Descriptor	Global Period
19380	Revision of reconstructed breast (eg, significant removal of tissue, re-advancement and/or re-inset of flaps in autologous reconstruction or significant capsular revision combined with soft tissue excision in implant-based reconstruction)	090

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
19380	A 50-year-old female with a history of right breast cancer who previously underwent a mastectomy with immediate TRAM reconstruction presents four months later for revision due to asymmetry and disproportion of the reconstructed breast. A revision of the right breast reconstruction including re-elevation and inset of the flap, lateral liposuction, and excision of redundant skin is planned.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   Our specialty formed a panel of experts to develop practice expense recommendations for this family of codes. The panel was comprised of our RUC Advisors and multiple clinical experts who practice in the areas of general plastic surgery and breast reconstruction. The expert panel members also practice in settings that vary by size, geography, and represent both private and academic settings.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code, but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here (*for service reviewed prior to the implementation of clinical activity codes, detail is not provided in the RUC database, please contact Samantha Ashley at samantha.ashley@ama-assn.org for PE spreadsheets for your reference codes*):

   We used existing PE inputs from the RUC database for this family of codes (19370, 19371, 19380).

3. Is this code(s) typically reported with an E/M service?

   No

4. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:

   We are only requesting PE subcommittee standards for clinical activities.

5. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies for the **code family**, please provide compelling evidence (please see *PE compelling evidence guidelines*) Please explain if the increase can be entirely accounted for because of an increase in physician time:

   Across the four families of breast-specific codes being evaluated, there is currently significant variability in the post-op supplies and practice expense likely due to the various times and settings

in which those decisions were made. Given the similarity in post-op visit supplies across these four families of breast related procedures (Implant/Expander Placement, Implant/Expander Removal, Secondary Revisions, and Lift/Reduction), we have elected to standardize all of the practice expenses associated with each code. We believe this standardization is important in keeping consistency within the RUC valuation process. Standardization for these codes includes:

1)Using the standard clinical staff times for the pre-times and 90 day globals, discharge (x38) days, and with the number of post-op clinic visits/times pending final approval at the RUC.
2)Requesting one pack, post-op incision care (suture) per code
3)Requesting the standard Minimum Supply Package for Visits (Multi-speciality), a standard table, and an exam light for all post-operative visits with the number of post-op clinic visits/times pending final approval at the RUC
4)Requesting 20 minutes of a camera, digital system, 12 megapixel (medical grade) for each code to account for two 10 minutes session of post-operative photographs obtained during the global period.

We are requesting an overall decrease for the code family and a decrease for this code individually.

6. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see second worksheet in PE spreadsheet workbook*), please explain the difference here:

7. Please provide a brief description of the clinical staff work for the following:
   a. Pre-Service period:

In the pre-service period, clinical staff work includes completing pre-service diagnostic and referral forms, coordinating pre-surgery services, scheduling space and equipment in the facility, providing pre-service education/obtaining consent, and completing pre-procedure phone calls/prescriptions.

   b. Service period (includes pre, intra and post):

For this facility-only based procedure, the only post period is the 6 minutes allotted in the standards for assisting in same-day discharge management including coordination of post-operative appointments.

   c. Post-service period:

In the post-service period, clinical staff work includes the standard activities involved in any post-operative E&M visit including rooming the patient, gowning, reviewing current medications/allergies in EHR, obtaining vital signs, acting as chaperone due to sensitive areas being examined, assisting with wound care, coordination of care, and cleaning of the room.

8. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see second worksheet in PE spreadsheet workbook*):

9. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

INVOICES

10. ☐ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

11. ☐ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

12. If you wish to include a supply that is not on the list (*please see fourth worksheet in PE spreadsheet workbook*) please provide a paid invoice. Identify and explain the invoice here:

13. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation. Please include the description, CMS supply code, unit, item quantity and unit price (if available). See documents two and three under PE reference materials on the RUC Collaboration Website for information on the contents of kits, packs and trays.

DESCRIPTION	Code	Unit	Item Qty	Unit price
pack, minimum multi-specialty visit	**SA048**	**pack**		**2.1122**
paper, exam table		foot	7	
gloves, non-sterile		pair	2	
gown, patient		item	1	
pillow case		item	1	
cover, thermometer probe		item	1	

DESCRIPTION	Code	Unit	Item Qty	Unit price
pack, post-op incision care (suture)	**SA054**	**pack**		**4.8353**
kit, suture removal		kit	1	
povidone soln (Betadine)		ml	10	
gauze, sterile 4in x 4in		item	2	
gloves, sterile		pair	1	
steri-strip (6 strip uou)		item	2	
swab-pad, alcohol		item	2	
tape, surgical paper 1in (Micropore)		inch	12	
tincture of benzoin, swab		item	1	

14. If you wish to include an equipment item that is not on the list (*please see fifth worksheet in PE spreadsheet workbook*) please provide a paid invoice. Identify and explain the invoice here:

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

15. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

16. List all the equipment included in your recommendation and the equipment formula chosen *(*please see document titled *Calculating equipment time).* If you have selected "other formula" for any of the equipment please explain here:

EF023 table, exam – standard formula
EQ168 light, exam – standard formula
ED005 camera, digital system, 12 megapixel (medical grade) – other formula

It is standard in plastic surgery practices to use a medical grade (12 megapixel) camera for photograph as most offices also have a standard photo suite for professional grade images.

20 min total usage at 10min per post-operative session x 2 session.

17. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail/explanation, please include here:

AMA/Specialty Society RVS Update Committee Summary of Recommendations

January 2020

Breast Lift/Reduction – Tab 8

In February 2019, the CPT Editorial Panel approved the deletion of two codes and revisions to seventeen codes to provide descriptor clarification of any overlap in physician work for breast reconstruction services. In the CPT coding changes application, the specialty stated that this change is editorial and does not involve a change in work. At the April 2019 RUC meeting, the RUC agreed that the seventeen breast reconstruction services should be surveyed for the October 2019 RUC meeting. Codes 11960, 19316, 19350, 19355, and 19396 were also included as being part of the same code family. Based on the change in the typical patient for CPT code 11971 and multiple Harvard valued codes, the RUC agreed that all twenty-two of these services be surveyed, contrary to the specialty initial recommendation that these changes are editorial only and do not require surveying. At that time, the RUC had recommended surveying all twenty-two codes for the October 2019 RUC meeting.

At the October 2019 RUC meeting, the specialty elected to survey two of the codes and send a third code to CPT for revision. The specialty noted that the designation of a single 22 code family was too broad, and that the family categorization should be more granular than surgical procedures for the repair and/or reconstruction of the same anatomic region. The specialties proposed 8 families of services to the RUC noting that this categorization assign similar procedures together and ensures that the survey process is effective. The RUC concurred with the more granular classification of families that group analogous procedures together. Furthermore, the specialty indicated, and the RUC agreed, that three of the code families, autologous reconstruction, nipple procedures and moulage formation were not identified by any RAW screens, had no change to their work from CPT revisions and had no obvious flaws to their valuation (i.e., a site of service valuation issue), and therefore would not need to be reviewed at this time. In October 2019, the RUC reviewed these family of services with the specialty societies and agreed that these services should be surveyed for physician work and practice expense in January 2020. The *Breast Lift/Reduction* code family was one of the code families identified by the RUC for review for the January 2020 RUC meeting.

19316 *Mastopexy*
The RUC reviewed the survey results from 97 plastic surgeons and recommends: 40 minutes of pre-service evaluation time, 10 minutes for pre-service positioning time, 14 minutes for pre-service scrub/dress/wait, 120 minutes for intra-service time, 20 minutes for immediate post-time, 0.5 99238 discharge visit, 2 99213 post-operative office visit and 2 99212 post-operative office visits. The evaluation is spent setting and marking the patient in an upright position to evaluate breast shape and measure base dimensions. Additional time is also required to review choice of implants with the patient. Ten minutes of positioning time are necessary to account for the time involved in securing arms and assessing the position of the head and neck and making any adjustments to allow for sitting upright intra-operatively.

The RUC reviewed the survey 25th percentile work RVU of 15.15 and agreed that this value overstates the amount of physician work involved. The RUC compared the survey code to CPT code 64569 *Revision or replacement of cranial nerve (eg, vagus nerve) neurostimulator electrode array, including connection to existing pulse generator* (work RVU=11.00, intra-service time of 120 minutes, total time of 312 minutes) and noted

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

that both services have identical intra-service times, similar total times and the survey code is a slightly more intense intraoperative service for the physician. The RUC also compared the survey code to MPC code 52649 *Laser enucleation of the prostate with morcellation, including control of postoperative bleeding, complete (vasectomy, meatotomy, cystourethroscopy, urethral calibration and/or dilation, internal urethrotomy and transurethral resection of prostate are included if performed)* (work RVU= 14.56, intra-service time of 120 minutes, total time of 279 minutes) and noted that both services have identical intra-service time, whereas the reference code is a more intense service to perform. Following the review of these and other reference codes, the RUC agreed that it would be appropriate to maintain the current value of 11.09 for the survey code. **The RUC recommends a work RVU of 11.09 for CPT code 19316.**

19318 *Breast reduction*

The RUC reviewed the survey results from 180 plastic surgeons and recommends: 40 minutes of pre-service evaluation time, 10 minutes for pre-service positioning time, 15 minutes for pre-service scrub/dress/wait, 180 minutes for intra-service time, 25 minutes for immediate post-time, 0.5 99238 discharge visit, 2 99213 post-operative office visit and 2 99212 post-operative office visits. The evaluation is spent setting and marking the patient in an upright position to evaluate breast shape and measure base dimensions. Additional time is also required to review choice of implants with the patient. Ten minutes of positioning time are necessary to account for the time involved in securing arms and assessing the position of the head and neck and making any adjustments to allow for sitting upright intra-operatively. This service is typically performed bilaterally in the Medicare population, though the multiple procedure reduction applies.

The RUC reviewed the survey 25th percentile work RVU of 17.60 and agreed that this value overstates the amount of physician work involved. The RUC compared the survey code to top key reference code 15736 *Muscle, myocutaneous, or fasciocutaneous flap; upper extremity* (work RVU=17.04, intra-service time of 150 minutes, total time of 396 minutes) and noted that the survey code involves more intra-service time and both services involve similar intensity (72 percent of survey respondents that selected the reference code said the survey code had either identical or somewhat more intensity than the reference code). However, the reference code involves 29 more minutes of total time than the survey code, making it warranted to value the survey code somewhat less. The RUC also compared the survey code to CPT code 42420 *Excision of parotid tumor or parotid gland; total, with dissection and preservation of facial nerve* (work RVU= 19.53, intra-service time of 180, total time of 383) and noted that although both services have identical intra-service times, the reference code involves more intraoperative intensity and also more total time. Following the review of these and other reference codes, the RUC agreed that it would be appropriate to maintain the current value of 16.03 for the survey code. When comparing 19318 *Breast reduction* to 19316 *Mastopexy*, breast reduction is more intense physician work because of the additional time and intensity involved in removing tissue and having to shape the breast that was reduced in size. **The RUC recommends a work RVU of 16.03 for CPT code 19318.**

Practice Expense

The Practice Expense Subcommittee had changed the exam table to a power table for each code which is typical for this specialty. **The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
Repair (Closure) **Other Flaps and Grafts**				
●*15769*		*Grafting of autologous soft tissue, other, harvested by direct excision (eg, fat, dermis, fascia)* *(For injection[s] of platelet-rich plasma, use 0232T)*		
●*15771*		*Grafting of autologous fat harvested by liposuction technique to trunk, breasts, scalp, arms, and/or legs; 50cc or less injectate* *(Report 15771 only once per session)*		
+●*15772*		*each additional 50cc injectate, or part thereof (List separately in addition to code for primary procedure)* *(Use 15772 in conjunction with 15771)*		
Breast **Repair and/or Reconstruction**				
		Breast reconstruction is performed to repair defects due to congenital anomaly or loss of breast tissue after a surgical excision. The goal of breast reconstruction is to correct the anatomic defect and to restore form and breast symmetry. A breast can be reconstructed using a single technique or a combination of techniques, and each technique can stand alone. Additionally, both breasts may be reconstructed at the same time, but may use different techniques or a combination of techniques. In many instances breast reconstruction requires more than one planned procedure or may require revisions. The native breast may be altered using different techniques. The breast and breast mound can be lifted with a mastopexy (19316), reduced in volume with a breast reduction (19318), or augmented with a breast implant (19325). Post-mastectomy breast reconstruction may be performed using a variety of techniques. An implant-based reconstruction involves placement of a device filled with fluid (eg, saline, silicone gel) to provide volume to the breast. In immediate reconstruction, an implant is placed primarily at the time of a mastectomy (19340). In delayed reconstruction, an implant is placed at any date separate from the mastectomy (19342). This includes placement of any new implant or replacement of an existing implant within the mastectomy defect or reconstructed breast. The removal of an intact breast implant for replacement is included in 19342.		

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

A breast implant cannot always be placed due to the lack of an adequate skin envelope. Code 19357 describes insertion of a tissue expander which is a device that is surgically implanted to create an adequate sized pocket for subsequent insertion of a permanent implant. A tissue expander is an inflatable device placed beneath the skin and chest muscle, into which saline is injected over a period of weeks in the office to create the implant pocket. The tissue expander is eventually removed and may be replaced with a permanent breast implant (11970). Placement of either a breast implant (19340, 19342) or tissue expander (19357) may be reported separately when performed with flap reconstruction (19361, 19364, 19366, 19367, 19368,19369).

Code 11970 describes the removal of a tissue expander with concurrent insertion of a permanent breast implant. Code 11970 includes removal of the expander, minor revisions to the breast capsule and placement of the new breast implant. Code19370 may be reported in addition to 11970 if more extensive capsular revision is performed. Code 11971 describes the removal of a tissue expander without replacement of an expander or implant.

Autologous breast reconstruction involves harvesting a flap of skin, subcutaneous fat and/or muscle from one area of the body and relocating the tissue to the anterior chest to create a new breast mound. Flap reconstruction may be performed at the time of mastectomy or in a delayed fashion depending on patient preference and other oncologic treatments.

Code 19361 describes breast reconstruction with a flap composed of the latissimus dorsi muscle including some of the overlying skin and subcutaneous fat to reconstruct the breast mound. This flap is left on its vascular pedicle and tunneled beneath the armpit skin to the anterior chest to rebuild the breast. The blood supply to the flap is left attached to its origin in the axilla. To give the breast mound additional volume, a tissue expander or permanent breast implant may be placed beneath the latissimus flap. Placement of either a breast implant (19340, 19342) or tissue expander (19357) may be reported separately.

Code 19364 describes a microsurgical free tissue transfer of skin, and subcutaneous fat and/or muscle for breast reconstruction. This code includes the flap harvest, microsurgical anastomosis of one artery and two veins with use of an operating microscope, flap inset as a breast mound, and donor site closure. Typical free flaps include free transverse rectus abdominis myocutaneous (fTRAM), deep inferior epigastric perforator (DIEP), superficial inferior epigastric artery (SIEA), or gluteal artery perforator (GAP) flaps.

Code 19367 describes a single pedicled transverse rectus abdominis myocutaneous (TRAM) flap, where skin, subcutaneous fat, and a large portion of the rectus abdominis muscle from the lower abdomen is moved beneath the upper abdominal wall skin up to the chest to rebuild the breast. The blood supply to the flap is left attached to its origin in the abdomen.

Code 19368 describes "supercharging" of a single pedicled TRAM flap. This is typically performed to increase blood flow in TRAM flaps with marginal circulation to ensure flap survival. In addition to the standard unipedicle TRAM procedure, the inferior epigastric artery and/or veins are also anastomosed to recipient vessels in the chest using microsurgical techniques.

Code 19369 describes a bipedicled TRAM flap in which skin, subcutaneous fat and both rectus muscles are harvested for the reconstruction of a single breast. The dual blood supply to the flap is left attached to its origins in the abdomen.

Secondary and ancillary breast reconstruction procedures include nipple reconstruction (19350), implant adjustments through revisions to the breast capsule (19370), or removal of the entire breast capsule via a complete capsulectomy (19371) to achieve correct breast tissue positioning. In addition, procedures may be performed on the contralateral breast to create symmetry (19316, 19318, 19325). Removal of an intact breast implant without

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

replacement is reported with 19328. Removal of a ruptured breast implant, including the implant contents, is reported with 19330. A complete capsulectomy (19371) includes removal of the breast implant and all intracapsular contents.

Code 19380 describes a revision of a reconstructed breast, including significant excision of tissue re-advancement or re-inset of flaps. For autologous reconstruction, this code is inclusive of revisions of the flap position on the chest wall, removal of portions of the flap (via direct excision or liposuction), re-shaping of the flap, or scar revisions. However, if a limited procedure is performed with a defined code (eg, scar revision) then the more specific code should be used. The placement of a new implant (19342) or autologous fat grafting for increased volume (*15771, 15772*) may be separately reportable. For implant-based reconstruction, 19380 is inclusive of revisions to the skin and capsule when performed together. The exchange for a new or different size/shape/type of implant (19342) or autologous fat grafting for increased volume/contour irregularities *(15771, 15772*) may be separately reportable. Nipple reconstruction is reported with 19350 and includes local flaps (14000,14001), areolar skin grafting (15100, 15200, 15201), and subsequent tattooing (11920, 11921, 11922).

Code 19396 describes the formation of a moulage cast of a patient's chest defect. The mold is used to fabricate a specific, custom made implant that fits the patient's defect.

(To report bilateral procedures, report modifier 50 with the procedure code)

(For biological implant for soft tissue and/or breast implant reinforcement, use 15777 in conjunction with the primary procedure)

CPT Descriptor: Mastopexy

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 35-year-old female with a history of right breast cancer treated with a mastectomy and reconstruction has asymmetry due to ptosis of the contralateral breast and a history of multiple pregnancies with breast feeding. She desires to undergo a contralateral breast lift to improve the symmetry between her native breast and breast reconstruction.

Percentage of Survey Respondents who found Vignette to be Typical: 93%

Site of Service (Complete for 010 and 090 Globals Only)
Percent of survey respondents who stated they perform the procedure; In the hospital 30% , In the ASC 65%, In the office 4%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 70% , Overnight stay-less than 24 hours 27% , Overnight stay-more than 24 hours 3%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 33%

Description of Pre-Service Work: Orders for preoperative medications are written, and laboratory results, imaging, and patient photographs are reviewed. The planned procedure and postoperative management are reviewed with the patient and the patient's family. Post-operative functional and aesthestic expectations are reviewed. The patient's history and physical are updated with reconciliation of medications/allergies. Post-operative pain control is reviewed and a narcotics controlled substance review is performed. NPO status is confirmed. The operative site is marked sitting upright to evaluate breast shape and to mark the planned skin/breast resections with care taken to measure for symmetry Informed consent is obtained. The length and type of anesthesia are reviewed with the anesthesiologist. Surgeon changes into scrub clothes. The availability of all required supplies and instruments are verified. Confirmation of the ability for the operating room bed to sit upright is performed. The patient is transferred from the gurney and positioned on the operating room table. A patient verification procedure is performed. Bony prominences are padded, and thermal regulation drapes are applied. The arms are secured in a position to allow for sitting upright. The position of the head/neck is assessed and adjusted, as needed based on the need to sit up intra-operatively. A neck roll is placed to support the head. The surgeon monitors and assists with prepping including waiting for the prep to dry. The surgeon scrubs and gowns. Surgical drapes are placed. A pre-incision surgical time-out is performed with the operating surgical team.

Description of Intra-Service Work: After the induction of general anesthesia, the previously applied markings for surgery (done in the standing position prior to surgery) are reinforced. Then the final skin preparation and draping is accomplished. The surgeon makes the incisions for the de-epithelialized portion of the pedicle and proceeds to de-epithelialize the skin of the pedicle with extreme care to maintain a pedicle adequate to preserve the blood supply to the nipple/areolar complex. The native breast skin flaps are elevated to the boundaries of the breast. Portions of both subcutaneous and glandular tissue are excised as necessary to allow for appropriate repositioning of the nipple areolar complex. Meticulous hemostasis is assured. The surgeon checks the nipple-areolar complex for viability. He or she then tailor-tacks the skin of the breast and evaluates the shape of the breast in the upright position to insure symmetry, making any additional revisions necessary. The surgical site is irrigated. Drains are placed as indicated. The skin flaps are then closed in multiple layers. The patient is returned to the upright position and the new nipple-areolar position is marked. The skin is excised and the viable nipple areolar complex is brought out through the marked area and sewn into place.

Description of Post-Service Work: The chest is cleaned. Surgical dressings are applied. A surgical bra is placed on the patient. The operative report is dictated. The postoperative orders are written.

Post op visit 1: 99213
This visit typically occurs at one week post-operatively. The patient's convalescence to that point is reviewed and discussed. The patients pain control and narcotic usage is reviewed. Refills are provided if indicated. The dressing from the operative site is removed. The drain output is assessed, and the drain suture and drain are removed, if appropriate. The breast surgical site is inspected and palpated. The integrity and viability of the soft tissues are assessed. The viability of the nipple-areolar complex is evaluated. The position and shape of the breast are assessed for both cosmesis and breast symmetry. Patient and family questions and concerns are addressed. Ongoing care is reiterated and the anticipated timing of additional surgeries reviewed. Limitations of post-surgical activity are clearly reviewed. The wound is redressed, and the patient is placed back into her surgical bra.

Post op visit 2: 99212
This visit typically occurs at two weeks post-operatively. The patient's convalescence to that point is reviewed. If the drain was not removed at the initial postoperative visit, the drain output is assessed, and the drain suture and drain are removed, if appropriate. The breast surgical site is inspected and palpated. The integrity and viability of the soft tissues are assessed including viability of the nipple-areolar complex. The position and shape of the breast are assessed for both cosmesis and breast symmetry. Patient and family questions and concerns are addressed. The wound is redressed and the patient is placed back into her surgical bra.

Post op visit 3: 99212
This visit typically occurs at one month post-operatively. The patient's convalescence to that point is reviewed. The breast surgical site is inspected and palpated. The integrity and viability of the soft tissues are assessed including the nipple-areolar complex. The position and shape of the breast are assessed for both cosmesis and breast symmetry. As the initial swelling is now partially resolved, the aesthetic outcome comes into focus and expectations moving forward are reviewed in detail. Patient and family questions and concerns are addressed. Referrals to physical therapy are made if needed. Ongoing care is reiterated as well as slowly lifting the post-operative restrictions.

Post op visit 4: 99213
This visit typically occurs at three months post-operatively. The patient's convalescence to that point is reviewed and at this point, the patient should be back to normal activity. The breast surgical site is inspected and palpated. The integrity and viability of the soft tissues are assessed. The position and shape are assessed for both cosmesis and breast symmetry. Patient and family questions and concerns are addressed. At this visit, the most time is spent evalutating the reconstructive outcome with the patient including patient-reported outcomes. Persistent deformities or areas of patient concern are systmetically addressed by the surgeon. Recommendations related to future mammograms are reviewed.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	11%	29%	44%	15%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	32%	32%	35%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	6%	18%	76%
Physical effort required	9%	50%	61%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	9%	26%	65%

2nd Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	16%	48%	26%	6%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	42%	35%	23%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	13%	61%	26%
Physical effort required	13%	45%	62%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	10%	35%	55%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

In February 2019, the CPT Editorial Panel approved the deletion of two codes and revisions to seventeen other codes related to breast reconstruction. Although no CPT descriptor changes were made to code 19316, during the October 2019 RUC meeting, it was agreed upon that 19316 would be surveyed along with code 19318 as part of the "Breast Lift/Reduction" family.

Code 19316 is a Harvard valued code.

Compelling Evidence

We are requesting current value.

Survey Sample and Process

A survey request was sent to a random selection of members from the American Society of Plastic Surgeons who have self-identified as reconstructive surgeons.

Recommendation

We are recommending a work RVU of 11.09 which is current value and below the 25th percentile from our survey

Pre-time Package 3-FAC (Straightforward Patient/Difficult Procedure)

We have selected pre-time package 3-FAC as it is the lowest package for a patient undergoing general anesthesia.

Evaluation time – We are recommending 40 minutes of evaluation time which is an increase of 7 minutes from the package time, however, it is a decrease of 5 minutes from our survey data. The additional 7 minutes of pre-time for this case is spent in setting and marking the patient in an upright position to evaluate breast shape and measure base dimensions.

Positioning time – We are recommending 10 minutes of positioning time which is an increase in 7 minutes from the pre-service package time. We believe there is extra time involved in securing arms and assessing the position of the head and neck and making any adjustments to allow for sitting upright intra-operatively which is not typically required for most procedures. This is supported by our median survey time.

Scrub, Dress, Wait time – We are recommending 14 minutes of scrub, dress and wait time which is 1 minutes less than the package, but matches the survey results.

Post-time Package 9A (General Anes or Complex Reg Blk/Straightforward Procedure)

The recommended time has been reduced to 20 minutes which is a decrease of 10 minutes from the post package time selected to match our survey time.

Key Reference Codes

CPT	DESCRIPTOR	IWPUT	wRVU	TOTAL TIME	PRE	INTRA	POST	99238	99214	99213	99212
19316	Mastopexy	**0.049**	**11.09**	**301**	64	**120**	20	0.5		2	2
19303	Mastectomy, simple, complete	**0.102**	**15.00**	**283**	58	**90**	30	0.5	1	2	
15736	Muscle, myocutaneous, or fasciocutaneous flap; upper extremity	**0.063**	**17.04**	**293**	72	**150**	30	0.5	1	3	1

At current wRVU value of 11.09, the KRCs are both marginal matches. Compared to KRC 19303, Code 19316 has 30 minutes greater intra-time and 28 minutes greater total time, but 19316 is -3.91 wRVU lower despite being a procedure also performed on the breast and taking longer. Compared to KRC 15736, Code 19316 has 30 minutes less intra-time and 8 minutes more total time, but is -5.95 wRVU lower.

MPC Comparison Codes

There are only 5 MPC codes with an intra-time of 120 minutes and a 90-day global period. Three of these five codes are RUC-CMS revised as well. Increasing the intra-time range to 100-140 minutes yields only one additional MPC code with an intra-time of 103 minutes. Thus, there is a limited number of potential comparison MPC codes in this range. We ultimately selected the lowest two available MPC codes with an intra-time of 120 minutes and total time between 271-331, although they do not clearly bracket code 19316.

CPT	DESCRIPTOR	IWPUT	wRVU	TOTAL TIME	PRE	INTRA	POST	99238	99232	99214	99213	99212
19316	Mastopexy	0.049	11.09	301	64	120	20	0.5			2	2
52649	Laser enucleation of the prostate with morcellation, including control of postoperative bleeding, complete (vasectomy, meatotomy, cystourethroscopy, urethral calibration and/or dilation, internal urethrotomy and transurethral resection of prostate are included if performed) (RUC-CMS Revised)	0.0831	14.56	279	53	120	25	0.5			2	1
54410	Removal and replacement of all component(s) of a multi-component, inflatable penile prosthesis at the same operative session (RUC-CMS Revised)	0.0751	15.18	329	65	120	40	0.5			3	1

Additional MPC Codes:

As noted above, the MPC list is limited in the number of codes with an intra-time that is near 120 minutes. Searching the RUC database for MPC, 90 day global, IT 100-140, TT 271-331 yields only three MPC comparison codes all of which are RUC-CMS revised. At current wRVU of 11.09 wRVU, Code 19316 at the would be **4th highest out of 4 codes.** In addition, Code 19316 at current value (11.09) would be significantly lower in wRVU ranging from -3.47 to -4.51wRVU despite no difference in intra-time and difference in total time within 10%. A table demonstrating the three possible MPC codes similar to 19316 is below.

CPT	DESCRIPTOR	IWPUT	wRVU	TOTAL TIME	PRE	INTRA	POST	99238	99232	99214	99213	99212
19316	Mastopexy	0.049	11.09	301	64	120	20	0.5		2	2	
52649	Laser enucleation of the prostate with morcellation, including control of postoperative bleeding, complete (vasectomy, meatotomy, cystourethroscopy, urethral calibration and/or dilation, internal urethrotomy and transurethral resection of prostate are included if performed) (RUC-CMS Revised)	0.0831	14.56	279	53	120	25	0.5			2	1
54410	Removal and replacement of all component(s) of a multi-component, inflatable penile prosthesis at the same operative session (RUC-CMS Revised)	0.0751	15.18	329	65	120	40	0.5			3	1
60500	Parathyroidectomy or exploration of parathyroid(s); (RUC-CMS Revised)	0.0860	15.60	313	72	120	40	0.5			2	1

Comparisons to other recently valued codes in the RUC database:

Searching the RUC database for codes that are RUC surveyed in the last 10 years, 90 day global, IT 120, TT 281-321 reveals 8 codes. Code 19316 at current value (wRVU 11.09) would **rank 8th highest out of 9 codes**. A rank ordered table of these codes and wRVUs is below:

CPT CODE	64569	19316	36819	49654	36825	36833	49653	60500	15733
RVU	11.00	11.09	13.29	13.76	14.17	14.50	14.94	15.60	15.68

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 19316

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Plastic Surgeons How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 8700
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. 3x the Medicare population

Specialty Plastic Surgeons Frequency 6960 Percentage 80.00 %

Specialty General Surgeons Frequency 1740 Percentage 20.00 %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 2,907
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC Database

Specialty Plastic Surgeons Frequency 2325 Percentage 79.97 %

Specialty General Sugeons Frequency 581 Percentage 19.98 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Major procedure

BETOS Sub-classification Level II:
Breast

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 19316

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

CPT Descriptor: Breast reduction

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 35-year-old female presents with symptomatic macromastia including neck pain, back pain, bra strap grooving, and intertriginous rashes that are recalcitrant to non-operative interventions. She elects to undergo a breast reduction procedure.

Percentage of Survey Respondents who found Vignette to be Typical: 98%

Site of Service (Complete for 010 and 090 Globals Only)
Percent of survey respondents who stated they perform the procedure; In the hospital 48% , In the ASC 49%, In the office 3%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 45% , Overnight stay-less than 24 hours 53% , Overnight stay-more than 24 hours 2%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 44%

Description of Pre-Service Work: Orders for preoperative medications are written, and laboratory results, imaging, and patient photographs are reviewed. The planned procedure and postoperative management are reviewed with the patient and the patient's family. Post-operative functional and aesthetic expectations are reviewed. The patient's history and physical are updated with reconciliation of medications/allergies. Post-operative pain control is reviewed and a narcotics controlled substance review is performed. NPO status is confirmed. The operative site is marked sitting upright to evaluate breast shape and mark the skin and parenchymal resections with careful measuring to ensure symmetry. Informed consent is obtained. The length and type of anesthesia are reviewed with the anesthesiologist. Surgeon changes into scrub clothes. The availability of all required supplies and instruments are verified. Confirmation of the ability for the operating room bed to sit upright is performed. The patient is transferred from the gurney and positioned on the operating room table. A patient verification procedure is performed. Bony prominences are padded, and thermal regulation drapes are applied. The arms are secured in a position to allow for sitting upright. The position of the head/neck is assessed and adjusted, as needed based on the need to sit up intra-operatively. A neck roll is placed to support the head. The surgeon monitors and assists with prepping including waiting for the prep to dry. The surgeon scrubs and gowns. Surgical drapes are placed. A pre-incision surgical time-out is performed with the operating surgical team.

Description of Intra-Service Work: After the satisfactory induction of general anesthesia, the previously applied markings for surgery (done in the standing position prior to surgery) are reinforced. Then the final skin preparation and draping is accomplished. The incisions for the de-epithelialized portion of the dermoglandular pedicle are made and the skin of the pedicle is de-epithelialized taking extreme care to provide an adequate base for the pedicle to maintain the blood supply to the nipple/areola complex. The native breast skin flaps are elevated to the boundaries of the breast. An appropriate amount of breast tissue remote from the pedicle is then excised to significantly reduce the size and volume of the breast with all resected tissue weighed. Meticulous hemostasis is performed, and the nipple-areolar complex is checked for viability. The skin flaps are tailor-tacked closed and the shape of the breast is evaluated in the upright position to insure symmetry with additional revisions made as necessary. The surgical site is irrigated. Drains are placed as indicated. The skin is then closed in multiple layers. The patient is returned to the upright position and the new nipple-areolar position is marked. The skin is excised and the viable nipple areolar complex is brought out through the marked area and sewn into place.

Description of Post-Service Work: The chest is cleaned. Surgical dressings are applied. A surgical bra is placed on the patient. The operative report is dictated. The postoperative orders are written.

Post op visit 1: 99213
This visit typically occurs at one week post-operatively. The patient's convalescence to that point is reviewed and discussed. The patients pain control and narcotic usage is reviewed. Refills are provided if indicated. The dressing from the operative site is removed. The drain output is assessed, and the drain suture and drain are removed, if appropriate. The breast surgical site is inspected and palpated. The integrity and viability of the soft tissues are assessed. The viabilty of the nipple-areolar complex is evaluated. The position and shape of the breast are assessed for both cosmesis and breast symmetry. Patient and family questions and concerns are addressed. Ongoing care is reiterated and the anticipated timing of additional surgeries reviewed. Limitations of post-surgical activity are clearly reviewed. The wound is redressed, and the patient is placed back into her surgical bra.

Post op visit 2: 99212
This visit typically occurs at two weeks post-operatively. The patient's convalescence to that point is reviewed. If the drain was not removed at the initial postoperative visit, the drain output is assessed, and the drain suture and drain are removed, if appropriate. The breast surgical site is inspected and palpated. The integrity and viability of the soft tissues are assessed including viability of the nipple-areolar complex. The position and shape of the breast are assessed for both cosmesis and breast symmetry. Patient and family questions and concerns are addressed. The wound is redressed and the patient is placed back into her surgical bra.

Post op visit 3: 99212
This visit typically occurs at one month post-operatively. The patient's convalescence to that point is reviewed. The breast surgical site is inspected and palpated. The breast surgical site is inspected and palpated. The integrity and viability of the soft tissues are assessed including the nipple-areolar complex. The position and shape of the breast are assessed for both cosmesis and breast symmetry. As the initial swelling is now partially resolved, the aesthetic outcome comes into focus and expectations moving forward are reviewed in detail. Patient and family questions and concerns are addressed. Referrals to physical therapy are made if needed. Ongoing care is reiterated as well as slowly lessening the post-operative restrictions.

Post op visit 4: 99213
This visit typically occurs at three months post-operatively. The patient's convalescence to that point is reviewed and at this point, the patient should be back to normal activity. The breast surgical site is inspected and palpated. The integrity and viability of the soft tissues are assessed. The position and shape are assessed for both cosmesis and breast symmetry. Patient and family questions and concerns are addressed. At this visit, the most time is spent evalutating the reconstructive outcome with the patient including patient-reported outcomes. Persistent deformities or areas of patient concern are systmetically addressed by the surgeon. Recommendations related to future mammograms are reviewed.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	6%	32%	40%	20%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	28%	38%	34%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	15%	45%	40%
Physical effort required	0%	36%	64%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	6%	43%	51%

2nd Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	7%	47%	37%	10%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	24%	41%	35%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	17%	57%	26%
Physical effort required	3%	27%	70%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	10%	33%	57%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

In February 2019, the CPT Editorial Panel approved the deletion of two codes and revisions to seventeen other codes related to breast reconstruction. The descriptor for 19318 was changed to reflect common terminology in the description of the procedure to make it easier to understand.

CPT 19318	Descriptor
Previous	Reduction mammaplasty
Updated	Breast reduction

Although no CPT descriptor changes were made to code 19316, during the October 2019 RUC meeting, it was agreed upon that 19318 would be surveyed along with code 19316 as part of the "Breast Lift/Reduction" family.

Code 19318 was previously RUC valued in August 2015.

Compelling Evidence

We are requesting current value.

Survey Sample and Process

A survey request was sent to a random selection of members from the American Society of Plastic Surgeons who have self-identified as reconstructive surgeons.

Recommendation

We are recommending a work RVU of 16.03, the current value and below the survey 25th percentile.

Pre-time Package 3-FAC (Straightforward Patient/Difficult Procedure)

We have selected pre-time package 3-FAC as it is the lowest package for a patient undergoing general anesthesia.

Evaluation time – We are recommending 40 minutes of evaluation time which is an increase of 7 minutes from the package time, however, it is a decrease of 5 minutes from our survey data. The additional 7 minutes of pre-time for this case is spent in setting and marking the patient in an upright position to evaluate breast shape and measure base dimensions.

Positioning time – We are recommending 10 minutes of positioning time which is an increase in 7 minutes from the pre-service package time. We believe there is extra time involved in securing arms and assessing the position of the head and neck and making any adjustments to allow for sitting upright intra-operatively which is not typically required for most procedures. This is supported by our median survey time.

Scrub, Dress, Wait time – We are recommending 15 minutes of scrub, dress and wait time which is the same as the package and matches the survey results.

Post-time Package 9A (General Anes or Complex Reg Blk/Straightforward Procedure)

The recommended time has been reduced to 25 minutes which is a decrease of 5 minutes from the post package time selected to match our survey time.

Key Reference Codes

CPT	DESCRIPTOR	IWPUT	wRVU	TOTAL TIME	PRE	INTRA	POST	99238	99214	99213	99212	99231	99232
19318	Breast reduction	0.059	16.03	367	65	180	25	0.5		2	2		
15736	Muscle, myocutaneous, or fasciocutaneous flap; upper extremity	0.0634	17.04	396	72	150	30	0.5		3	1		
15738	Muscle, myocutaneous, or fasciocutaneous flap; lower extremity	0.0472	19.04	516	70	150	30	1		4	1	2	2

Both KRCs selected in the survey are from the muscle flap family. Code 19318 compared to KRC 15736 has 30 minutes more intra-time, but 29 minutes less total time. Code 19318 at current value (16.03) is lower than KRC 15736 by -0.99 wRVU but is not unreasonable with more intra-time, but less total time. Code 19318 compared to KRC 15738 is less appropriate since although code 19318 has 30 minutes more intra-time, but 148 minutes less total time with -3.01 wRVU difference. This still fits compared to the KRCs although due to the significant time differences, the comparison is more difficult.

MPC Comparison Codes

There are no MPC codes with an intra-time of 180 or even 150 that are also outpatient procedures. Review of the any MPC with an IT 150-210 revealed nine codes which had total times ranging from 448-776 minutes which were all much higher than code 19318. Thus, we had to decrease the IT range to 120 minutes which was 60 minutes below the median survey time to identify suitable MPC codes with total times that were close to code 19318. Searching the RUC database for MPC, 90 day global, IT 120-180, TT 307-427 yields only four possible MPC comparison codes all of which have only 120 minutes of intra-time. In addition, two of the four MPC codes were RUC-CMS Revised. We selected the two closest MPC codes for comparison.

CPT	DESCRIPTOR	IWPUT	wRVU	TOTAL TIME	PRE	INTRA	POST	99238	99232	99231	99213	99212
60500	Parathyroidectomy or exploration of parathyroid(s) (RUC-CMS Revised)	0.0860	15.60	313	72	120	40	0.5			2	1
19318	Breast reduction	0.059	16.03	367	65	180	25	0.5			2	2
58150	Total abdominal hysterectomy (corpus and cervix), with or without removal of tube(s), with or without removal of ovary(s)	0.0712	17.31	394	60	120	30	1	1	3	2	

Compared to the selected MPC codes, 19318 at the 25th percentile is a reasonable match although as noted above, the ability to match MPC with this code is challenging. Code 19318 has 60 minutes greater intra-time and 54 minutes greater total time compared to MPC 60500 with a resultant higher wRVU as would be expected. Code 19318 has 60 minutes greater intra-time and 27 minute less total time than MPC 58150. Code 19318 at current value would be less than 58150 which is reasonable due to the lower total time.

Additional MPC Codes:

As noted above, there were limited relevant MPC codes due to the longer intra-time, but lower total time for code 19318. The additional MPC code that was identified in our search (MPC 54410) has been added to the table below and is lower in wRVU, intra-time, and total time compared to 19318. At current value, code 19318 would rank **3rd highest of 5 codes** on this list which trends with the total times appropriately. These codes are listed in the table below:

CPT	DESCRIPTOR	IWPUT	wRVU	TOTAL TIME	PRE	INTRA	POST	99238	99233	99232	99231	99213	99212
54410	Removal and replacement of all component(s) of a multi-component, inflatable penile prosthesis at the same	0.0751	15.18	329	65	120	40	0.5				3	1

	operative session (RUC-CMS Revised)												
60500	Parathyroidectomy or exploration of parathyroid(s) (RUC-CMS Revised)	**0.0860**	**15.60**	**313**	72	**120**	40	0.5				2	1
19318	Breast reduction	**0.059**	**16.09**	**367**	65	**180**	25	0.5				2	2
58150	Total abdominal hysterectomy (corpus and cervix), with or without removal of tube(s), with or without removal of ovary(s)	**0.0712**	**17.31**	**394**	60	**120**	30	1			3	2	
35301	Thromboendarterectomy, including patch graft, if performed; carotid, vertebral, subclavian, by neck incision	**0.1040**	**21.16**	**404**	75	**120**	30	1	1	1		2	

Comparisons to other recently valued codes in the RUC database:

Searching the RUC database for codes that are RUC surveyed in the last 10 years, 90 day global, IT 150-210 TT 337-397 revealed four codes. At current value, code 19318 would **rank 5th highest of the 5 codes.** The results are presented in the table below.

CPT	DESCRIPTOR	IWPUT	wRVU	TOTAL TIME	PRE	INTRA	POST	99238	99232	99231	99214	99213	99212
19318	Breast reduction	0.059	16.09	367	65	180	25	0.5				2	2
49655	Laparoscopy, surgical, repair, incisional hernia (includes mesh insertion, when performed); incarcerated or strangulated	**0.0786**	**16.84**	**344**	70	**150**	50	0.5				2	1
15736	Muscle, myocutaneous, or fasciocutaneous flap; upper extremity	**0.0634**	**17.04**	**396**	72	**150**	30	0.5			1	3	1
35188	Repair, acquired or traumatic arteriovenous fistula; head and neck	**0.0755**	**18.00**	**380**	63	**150**	30	1	1	1		1	1
42420	Excision of parotid tumor or parotid gland; total, with dissection and preservation of facial nerve	**0.0779**	**19.53**	**383**	72	**180**	50	0.5				2	1

Medicare Units of Service Provided on Same Date:

AMA staff provided the units of service data on the same date data from 2017 prior to the meeting. Code 19318 had a mean number of units of 1.65 and median number of units of 2. The 25th percentile for units was 1 and the 75% percentile for units was 2. Since the majority of breast reductions (19318) are performed for women with bilateral symptomatic macromastia, this distribution of mean units of service should be expected as a breast reduction would commonly be performed on both breasts.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.

☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 19318

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Plastic Surgeons How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 23000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. 3x the Medicare population

Specialty Plastic Surgeons Frequency 23000 Percentage 100.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 7,666
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC Database

Specialty Plastic Surgeons Frequency 7666 Percentage 100.00 %

Specialty General Surgeons Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Major procedure

BETOS Sub-classification Level II:
Breast

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 19318

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

SS Rec Summary

INSTRUCTIONS

Insert information and data into all applicable cells except IWPUT and TOTAL TIME. These cells will automatically calculate.

Hide columns and rows that do not contain data.

1st REF = Top Key Reference code data

2st REF = Second Highest Key Reference code data

CURRENT = Current data (Harvard or RUC) for code being surveyed. If this is a new code, this row will be blank.

SVY = Survey data - as it appears on the Summary of Recommendation form.

REC = Specialty Society recommended data as it appears on the Summary of Recommendation form.

FACILITY DIRECT PE INPUTS

CPT CODE(S): 19316
SPECIALTY SOCIETY(IES): ASPS
PRESENTER(S): Mark Villa, MD
Jeffrey Kozlow, MD

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: 01/2020

CPT Code	Long Descriptor	Global Period
19316	Mastopexy	090

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
19316	A 35-year-old female with a history of right breast cancer treated with a mastectomy and reconstruction has asymmetry due to ptosis of the contralateral breast and a history of multiple pregnancies with breast feeding. She desires to undergo a contralateral breast lift to improve the symmetry between her native breast and breast reconstruction.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   Our specialty formed a panel of experts to develop practice expense recommendations for this family of codes. The panel was comprised of our RUC Advisors and multiple clinical experts who practice in the areas of general plastic surgery and breast reconstruction. The expert panel members also practice in settings that vary by size, geography, and represent both private and academic settings.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code, but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here (*for service reviewed prior to the implementation of clinical activity codes, detail is not provided in the RUC database, please contact Samantha Ashley at samantha.ashley@ama-assn.org for PE spreadsheets for your reference codes*):

   We used existing PE inputs from the RUC database for this family of codes (19316 and 19318).

3. Is this code(s) typically reported with an E/M service?

   No

4. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:

   We are only requesting PE subcommittee standards for clinical activities.

5. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies for the **code family**, please provide compelling evidence (please see *PE compelling evidence guidelines*) Please explain if the increase can be entirely accounted for because of an increase in physician time:

   Across the four families of breast-specific codes being evaluated, there is currently significant variability in the post-op supplies and practice expense likely due to the various times and settings in which those decisions were made. Given the similarity in post-op visit supplies across these four families of breast related procedures (Implant/Expander Placement, Implant/Expander Removal, Secondary Revisions, and Lift/Reduction), we have elected to standardize all of the practice

expenses associated with each code. We believe this standardization is important in keeping consistency within the RUC valuation process. Standardization for these codes includes:

1)Using the standard clinical staff times for the pre-times and 90 day globals, discharge (x38) days, and with the number of post-op clinic visits/times pending final approval at the RUC.
2)Requesting one pack, post-op incision care (suture) per code
3)Requesting the standard Minimum Supply Package for Visits (Multi-speciality), a standard table, and an exam light for all post-operative visits with the number of post-op clinic visits/times pending final approval at the RUC
4)Requesting 20 minutes of a camera, digital system, 12 megapixel (medical grade) for each code to account for two 10 minutes session of post-operative photographs obtained during the global period.

We are requesting an overall increase for the code family, however, this increase is only due to the potential increases in post-op clinical time and visits that will need to be evaluated by the RUC. If the previous times for clinical staff and equipment were used, then the changes based on the standardizations noted above would result in a decrease in the total cost.

6. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see second worksheet in PE spreadsheet workbook*), please explain the difference here:

7. Please provide a brief description of the clinical staff work for the following:
   a. Pre-Service period:

In the pre-service period, clinical staff work includes completing pre-service diagnostic and referral forms, coordinating pre-surgery services, scheduling space and equipment in the facility, providing pre-service education/obtaining consent, and completing pre-procedure phone calls/prescriptions.

   b. Service period (includes pre, intra and post):

For this facility-only based procedure, the only post period is the 6 minutes alloted in the standards for assisting in same-day discharge management including coordination of post-operative appointments.

   c. Post-service period:

In the post-service period, clinical staff work includes the standard activities involved in any post-operative E&M visit including rooming the patient, gowning, reviewing current medications/allergies in EHR, obtaining vital signs, acting as chaperone due to sensitive areas being examined, assisting with wound care, coordination of care, and cleaning of the room.

8. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see second worksheet in PE spreadsheet workbook*):

9. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

INVOICES

10. ☐ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

11. ☐ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

12. If you wish to include a supply that is not on the list (*please see fourth worksheet in PE spreadsheet workbook*) please provide a paid invoice. Identify and explain the invoice here:

13. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation. Please include the description, CMS supply code, unit, item quantity and unit price (if available). See documents two and three under PE reference materials on the RUC Collaboration Website for information on the contents of kits, packs and trays.

DESCRIPTION	Code	Unit	Item Qty	Unit price
pack, minimum multi-specialty visit	**SA048**	**pack**		**2.1122**
paper, exam table		foot	7	
gloves, non-sterile		pair	2	
gown, patient		item	1	
pillow case		item	1	
cover, thermometer probe		item	1	

DESCRIPTION	Code	Unit	Item Qty	Unit price
pack, post-op incision care (suture)	**SA054**	**pack**		**4.8353**
kit, suture removal		kit	1	
povidone soln (Betadine)		ml	10	
gauze, sterile 4in x 4in		item	2	
gloves, sterile		pair	1	
steri-strip (6 strip uou)		item	2	
swab-pad, alcohol		item	2	
tape, surgical paper 1in (Micropore)		inch	12	
tincture of benzoin, swab		item	1	

14. If you wish to include an equipment item that is not on the list (*please see fifth worksheet in PE spreadsheet workbook*) please provide a paid invoice. Identify and explain the invoice here:

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

15. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

16. List all the equipment included in your recommendation and the equipment formula chosen *(*please see document titled *Calculating equipment time).* If you have selected "other formula" for any of the equipment please explain here:

EF023 table, exam – standard formula
EQ168 light, exam – standard formula
ED005 camera, digital system, 12 megapixel (medical grade) – other formula

It is standard in plastic surgery practices to use a medical grade (12 megapixel) camera for photograph as most offices also have a standard photo suite for professional grade images.

20 min total usage at 10min per post-operative session x 2

17. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail/explanation, please include here:

PROFESSIONAL LIABILITY INSURANCE (PLI) INFORMATION

18. If this is a PE only code please select a crosswalk based on a similar specialty mix:

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING

During and immediately following the review of this tab at the PE Subcommittee meeting please revise the PE spreadsheet and summary of recommendation (PE SOR) documents based on modifications made during the meeting. Please submit the revised documents electronically to Samantha Ashley at samantha.ashley@ama-assn.org immediately following the close of business the same day that the tab is reviewed. On the PE spreadsheet, please highlight the cells and/or use red font to show the changes made during the PE Subcommittee meeting (if you have provided any of this highlighting based on changes from the reference code prior to the PE Subcommittee meeting please remove it, so not to be confused with changes made during the meeting). In addition to those revisions please also provide an itemized list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below (e.g. clinical activity CA010 *obtain vital signs* was reduced from 5 minutes to 3 minutes).

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: 01/2020

CPT Code	Long Descriptor	Global Period
19318	Breast Reduction	090

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
19318	A 35-year-old female presents with symptomatic macromastia including neck pain, back pain, bra strap grooving, and intriginous rashes that are recalcitrant to non-operative interventions. She elects to undergo a breast reduction procedure

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   Our specialty formed a panel of experts to develop practice expense recommendations for this family of codes. The panel was comprised of our RUC Advisors and multiple clinical experts who practice in the areas of general plastic surgery and breast reconstruction. The expert panel members also practice in settings that vary by size, geography, and represent both private and academic settings.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code, but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here (*for service reviewed prior to the implementation of clinical activity codes, detail is not provided in the RUC database, please contact Samantha Ashley at samantha.ashley@ama-assn.org for PE spreadsheets for your reference codes*):

   We used existing PE inputs from the RUC database for this family of codes (19316 and 19318).

3. Is this code(s) typically reported with an E/M service?

   No

4. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:

   We are only requesting PE subcommittee standards for clinical activities.

5. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies for the **code family**, please provide compelling evidence (please see *PE compelling evidence guidelines*) Please explain if the increase can be entirely accounted for because of an increase in physician time:

   Across the four families of breast-specific codes being evaluated, there is currently significant variability in the post-op supplies and practice expense likely due to the various times and settings in which those decisions were made. Given the similarity in post-op visit supplies across these four families of breast related procedures (Implant/Expander Placement, Implant/Expander Removal, Secondary Revisions, and Lift/Reduction), we have elected to standardize all of the practice expenses associated with each code. We believe this standardization is important in keeping consistency within the RUC valuation process. Standardization for these codes includes:

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

1)Using the standard clinical staff times for the pre-times and 90 day globals, discharge (x38) days, and with the number of post-op clinic visits/times pending final approval at the RUC.
2)Requesting one pack, post-op incision care (suture) per code
3)Requesting the standard Minimum Supply Package for Visits (Multi-speciality), a standard table, and an exam light for all post-operative visits with the number of post-op clinic visits/times pending final approval at the RUC
4)Requesting 20 minutes of a camera, digital system, 12 megapixel (medical grade) for each code to account for two 10 minutes session of post-operative photographs obtained during the global period.

We are requesting an overall increase for the code family, however, this increase is only due to the potential changes in post-op clinical time and visits that will need to be evaluated by the RUC. If the previous times for clinical staff and equipment were used, then the changes based on the standardizations noted above would result in a decrease in the total cost.

6. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see second worksheet in PE spreadsheet workbook*), please explain the difference here:

7. Please provide a brief description of the clinical staff work for the following:
   a. Pre-Service period:

In the pre-service period, clinical staff work includes completing pre-service diagnostic and referral forms, coordinating pre-surgery services, scheduling space and equipment in the facility, providing pre-service education/obtaining consent, and completing pre-procedure phone calls/prescriptions.

   b. Service period (includes pre, intra and post):

For this facility-only based procedure, the only post period is the 6 minutes allotted in the standards for assisting in same-day discharge management including coordination of post-operative appointments.

   c. Post-service period:

In the post-service period, clinical staff work includes the standard activities involved in any post-operative E&M visit including rooming the patient, gowning, reviewing current medications/allergies in EHR, obtaining vital signs, acting as chaperone due to sensitive areas being examined, assisting with wound care, coordination of care, and cleaning of the room.

8. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see second worksheet in PE spreadsheet workbook*):

9. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

AMA/Specialty Society RVS Update Committee Summary of Recommendations

January 2020

Femur Lengthening Device Procedures – Tab 9

In September 2019, the CPT Editorial Panel approved the addition of a code to report osteotomy, femur, and insertion of an externally controlled intramedullary lengthening device, including intraoperative imaging. The American Academy of Orthopaedic Surgeons expressed an interest in surveying the new CPT code 27X00 along with existing CPT codes 27465, 27466, and 27468 as part of the family. In January 2020, however, the specialty society indicated that the descriptors for both the new and existing codes needed to be further revised to better describe and distinguish the physician work involved in the procedures. The society requested referral to CPT and intends to submit a new code change application for the May 2020 CPT Editorial Panel meeting. A new coding proposal will be developed, and the full array of coding options will be determined including revising additional existing codes in the family as well as potentially requesting new codes. The specialty society will then survey the entire family for the October 2020 RUC meeting.

CMS questioned why the codes needed revision. The specialty society stated that there has been significant change in repair technique since the Harvard valuation of these codes and they would like to take this into account for the survey. For example, it would currently be difficult for a survey respondent to determine for a femur lengthening or shortening procedure, if a plate is used, if external fixation is used, or if an intramedullary nail is used; and there are different amounts of work involved for each technique. Referral would allow the society to create better descriptors that more clearly differentiate work. In addition, CPT codes 27466 and 27468 are Harvard-valued and do not have vignettes. The specialty society is requesting that CPT rescind new code 27X00 for CPT 2021 and they will develop a new coding proposal to incorporate all the revisions related to this family for CPT 2022.

The RUC concurred and recommends that CPT codes 27X00, 27465, 27466, and 27468 be referred to the May 2020 CPT Editorial Panel.

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
Femur (Thigh Region) and Knee Joint Repair, Revision, and/or Reconstruction				
(f) 27465	L1	*Osteoplasty, femur; shortening (excluding 64876)*	090	Refer to CPT May 2020
(f) 27466	L2	*lengthening*	090	Refer to CPT May 2020

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

(f) 27468	L3	*combined, lengthening and shortening with femoral segment transfer*	090	Refer to CPT May 2020
●27X00	L4	Osteotomy, femur, with insertion of an externally controlled intramedullary lengthening device, including intraoperative imaging, initial and subsequent alignment assessments, computations of adjustment schedules, and management of the intramedullary lengthening device (Do not report 27X00 in conjunction with 20696, 27450, 27466, 27506) (For removal of externally controlled intramedullary lengthening device, use 20680) (For revision of externally controlled intramedullary lengthening device, use 27599)	090	Refer to CPT May 2020

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Chicago, IL 60611-5885

Dear Dr. Smith,

The 2020 January RUC meeting agenda includes two tabs for limb lengthening procedures: Tab 9-Femur Lengthening Device Procedures and Tab 10-Tibia Lengthening Device Procedures. Tab 9 includes new CPT code 27X00, along with existing CPT codes 27465, 27466, and 27448. Tab 10 includes new CPT code 27X16 and existing CPT code 27715.

Codes 27X00 and 27X16 were approved at the September 2019 CPT Editorial Panel meeting and were placed on the RUC's Level of Interest (LOI) form for the January 2020 RUC meeting. The RUC included the existing codes 27465, 27466, 27468, and 27715 as family codes for survey. Upon reviewing the existing codes alongside the new codes, the AAOS RUC and CPT Advisors determined the descriptors for both the existing and new codes need to be further revised to better describe and distinguish the physician work involved in the operations.

The AAOS recommends that all the codes from Tabs 9 and 10 be referred back to CPT for revisions. The AAOS intends to submit an new code change application for the May 2020 CPT Editorial Panel meeting and bring back the entire family for survey for the September 2020 RUC meeting. We are still determining the full array of coding options which may include revising additional existing codes in the families, as well as potentially asking for new codes.

The AAOS is also separately requesting that CPT rescind the two new Category I codes (27X00 and 27X16) and one new Category III code (0X71T) from CPT 2021 so as to allow all the code changes to go into effect at the same time for the CPT 2022 codeset. We believe these actions will lead to more accurate coding and payment for limb lengthening procedures.

We respectfully request that the RUC approve referring this set of codes to the CPT Editorial Panel. Thank you for your attention to this matter and your assistance in allowing us to correctly describe and survey these procedures.

Sincerely,

William Creevy, MD
AAOS RUC Advisor

Hussein Elkousy, MD

AMA/Specialty Society RVS Update Committee Summary of Recommendations

January 2020

Tibia Lengthening Device Procedures – Tab 10

In September 2019, the CPT Editorial Panel approved the addition of a code to report osteotomy, tibia and fibula, and insertion of an externally controlled intramedullary lengthening device, including intraoperative imaging. The American Academy of Orthopaedic Surgeons expressed an interest in surveying the new CPT code 27X16 and existing CPT code 27715 as part of the family. In January 2020, however, the specialty society requested referral to CPT with the intent to submit a new code change application for the May 2020 CPT Editorial Panel meeting. The society indicated that the descriptors for both the new and existing code needed to be further revised to better describe and distinguish the physician work involved in the procedures. In particular, the society believed that clarification is needed for CPT code 27715 which entails shortening, lengthening, or combination, stating that it would be difficult to perform a survey until it is better defined.

It is the RUC's understanding that the specialty society will request that CPT rescind the new code for CPT 2021 and that the society will develop a new coding proposal to incorporate all the revisions related to this family, and the femur, for CPT 2022. The specialty society will then survey the entire family for the October 2020 RUC meeting. **The RUC concurred and recommends that CPT codes 27X16 and 27715 be referred to the May 2020 CPT Editorial Panel.**

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
Surgery **Musculoskeletal System** **Leg (Tibia and Fibula) and Ankle Joint** **Repair, Revision, and/or Reconstruction**				
(f) 27715	M1	*Osteoplasty, tibia and fibula, lengthening or shortening*	090	Refer to CPT May 2020

AMA/Specialty Society RVS Update Committee Summary of Recommendations
CMS Fastest Growing/ Harvard-Valued Annual Allowed Charges Greater than $10 million / Harvard Valued - Utilization over 30,000

January 2020

Shoulder Debridement – Tab 11

In October 2018, CPT code 29823 was identified as a Harvard valued service with 2017 Medicare utilization over 30,000 and an action plan was requested for January 2019. In January 2019, the RUC recommended to refer CPT code 29823 and family code 29822 for revision. The code descriptors for 29822 and 29823 were not clear (eg, limited versus extensive) and there were no guidelines to assist providers and coders with selecting the correct code. In September 2019, the CPT Editorial Panel approved revision of the two codes to clarify limited and extensive debridement by specifying the number of discrete structures debrided and providing examples of the structures.

29822 ***Arthroscopy, shoulder, surgical; debridement, limited, 1 or 2 discrete structures (eg, humeral bone, humeral articular cartilage, glenoid bone, glenoid articular cartilage, biceps tendon, biceps anchor complex, labrum, articular capsule, articular side of the rotator cuff, bursal side of the rotator cuff, subacromial bursa, foreign body[ies])***
The RUC reviewed the survey results from 54 orthopaedic surgeons and determined that the survey 25th percentile work RVU of 7.03 accurately reflects the physician work necessary to perform this service and is a reduction from the current Harvard-based work value. The RUC recommends 30 minutes pre-service evaluation time, 15 minutes pre-service positioning time, 15 minutes pre-service scrub/dress/wait time, 30 minutes intra-service time and 20 minutes immediate post-service time, 0.5 99238 discharge visit, 2-99213 office visits and 1-99212 office visit. The RUC noted that the additional 12 minutes of pre-service positioning time is necessary because the patient is initially placed supine, then rolled into the lateral decubitus position. Pads are placed to protect bony prominences. A shoulder boom is used to support the arm and allow the appropriate amount and angle of traction. Monitors and arthroscopic video equipment are also positioned with the assistance of the surgeon. The areas of trochar insertion need to be determined and marked and areas of prepping and draping identified. More sophisticated pumps for surgery require more set up time for the surgeon with more tubing to manage and more sophisticated monitors have more options for set up and positioning. With respect to office visits, the Harvard study did not survey for the level and number of post-operative visits but instead only for time. The Harvard survey data indicated that CPT code 29822 had 40 minutes of office visit time. This time was converted to E/M codes in 1997 by a CMS contractor to 3.5 x 99212 for code 29822. These visits underestimate the work (intensity/complexity) and time required for these patients postoperatively. *See attached additional rationale explaining how the different components of work (pre, intra, post) were developed during the Harvard study.*

The RUC discussed the significant reduction in intra-service time from 69 to 30 minutes. The RUC reiterated that the survey code had never been RUC-valued denoting that the current times are over 25 years old from the Harvard study and not valid for comparison. The specialty society stated that the reduction in intra-service time is a reflection that the surgeons are much more adept and have better equipment than when the procedure was first initiated in the 1980s. The RUC also noted that the total time for the entire 90-day global period was only 13 minutes less (204 versus 191).

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

The RUC compared CPT code 29822 to the top key reference code 29881 *Arthroscopy, knee, surgical; with meniscectomy (medial OR lateral, including any meniscal shaving) including debridement/shaving of articular cartilage (chondroplasty), same or separate compartment(s), when performed* (work RVU = 7.03 and 58 minutes pre-service time, 40 minutes intra-service time and 15 minutes immediate post-service time) and noted the similar amount of total time and physician work. The RUC further noted that the higher intra-service time for the key reference service is offset by the intensity of the survey code. CPT code 29822 is considered more intense, with over half of survey respondents that selected the reference code indicating that the survey code had more intensity/complexity overall relative to the key reference code. Most of the difference in intensity between the codes is due to the three-dimensional difficulties in operating on the shoulder versus the knee including a difference in the number of portals and use of a cannula in the shoulder scope. The survey procedure is greater in intensity due intrinsically to the differences between the shoulder arthroscopy versus the knee arthroscopy and the scoping involved.

For additional support, the RUC referenced the second key reference code 29880 *Arthroscopy, knee, surgical; with meniscectomy (medial AND lateral, including any meniscal shaving) including debridement/shaving of articular cartilage (chondroplasty), same or separate compartment(s), when performed* (work RVU = 7.39 and 58 minutes pre-service time, 45 minutes intra-service time and 15 minutes immediate post-service time) and noted that the reference code has more intra-service and total time than the survey code and is therefore appropriately valued higher. The RUC further noted that 70% of survey respondents that selected the second key reference code rated the survey code as more intense and complex, again justifying the higher IWPUT for the survey code (0.08) relative to the key reference service (.065). The RUC concluded that CPT code 29822 should be valued at the 25th percentile work RVU of 7.03 as supported by the survey and well-aligned with the key reference service codes. **The RUC recommends a work RVU of 7.03 for CPT code 29822.**

29823 ***Arthroscopy, shoulder, surgical; debridement, extensive, 3 or more discrete structures (eg, humeral bone, humeral articular cartilage, glenoid bone, glenoid articular cartilage, biceps tendon, biceps anchor complex, labrum, articular capsule, articular side of the rotator cuff, bursal side of the rotator cuff, subacromial bursa, foreign body[ies])***
The RUC reviewed the survey results from 54 orthopaedic surgeons and determined that the survey 25th percentile work RVU of 7.98 accurately reflects the physician work necessary to perform this service and is a reduction from the current Harvard-based work value. The RUC recommends 30 minutes pre-service evaluation time, 15 minutes pre-service positioning time, 15 minutes pre-service scrub/dress/wait time, 50 minutes intra-service time and 20 minutes immediate post-service time, 0.5 99238 discharge visit, 2-99213 office visits and 1-99212 office visit. The RUC noted that the additional 12 minutes of pre-service positioning time is necessary because the patient is initially placed supine, then rolled into the lateral decubitus position. Pads are placed to protect bony prominences. A shoulder boom is used to support the arm and allow the appropriate amount and angle of traction. Monitors and arthroscopic video equipment are also positioned with the assistance of the surgeon. The areas of trochar insertion need to be determined and marked and areas of prepping and draping identified. More sophisticated pumps for surgery require more set up time for the surgeon with more tubing to manage and more sophisticated monitors have more options for set up and positioning. The RUC also noted that the survey code is a more extensive procedure with 20 minutes more intra-service time than CPT code 29822. With respect to office visits, the Harvard study did not survey for the level and number of post-operative visits but instead only for time. The Harvard survey data indicate CPT code 29823 had 47 minutes of office visit time. This time was converted to E/M codes in 1997 by a CMS contractor to 4 x 99212 for

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

29823. These visits underestimate the work (intensity/complexity) and time required for these patients postoperatively. *See attached additional rationale explaining how the different components of work (pre, intra, post) were developed during the Harvard study.*

The RUC compared CPT code 29823 to the top key reference code 29880 *Arthroscopy, knee, surgical; with meniscectomy (medial AND lateral, including any meniscal shaving) including debridement/shaving of articular cartilage (chondroplasty), same or separate compartment(s), when performed* (work RVU = 7.39 and 58 minutes pre-service time, 45 minutes intra-service time and 15 minutes immediate post-service time) and noted that the survey code has 5 minutes more intra-service time yet similar intensity as the reference code (0.067 and 0.065 respectively). The RUC questioned the nearly identical intensity of the survey code and the key reference code. The specialty society acknowledged that the survey procedure is greater in intensity due intrinsically to the differences between the shoulder arthroscopy versus the knee arthroscopy and the scoping involved. MPC codes 67904 *Repair of blepharoptosis; (tarso) levator resection or advancement, external approach* (work RVU = 7.97) and 50590 *Lithotripsy, extracorporeal shock wave* (work RVU = 9.77) also reflect higher values, and the society chose to honor the survey and be consistent with its companion code 29822 in selecting the 25th percentile RVU recommendation. The RUC concurred and concluded that CPT code 29823 should be valued at the 25th percentile work RVU of 7.98 as supported by the survey. **The RUC recommends a work RVU of 7.98 for CPT code 29823.**

Work per Unit Time (WPUT)
The RUC notes that it is important to understand that intra-service work is only one component of the total work for a global code. CMS has recently accepted the RUC's rationale for E/M services that the intensity of the pre, intra, and post-service work is the same, and the same whether the work is face-to-face or non-face-to-face. This has resulted in a computation of work per unit time (WPUT) which was in fact a method that CMS (then HCFA) used for code comparison in the early years of the fee schedule.

The WPUT for CPT code 29822 is not different (0.037) for 204 minutes of work at the current 7.60 work RVUs compared to the Harvard manipulated data of 191 minutes at the proposed 7.03 work RVUs. Regarding CPT code 29823, the prior WPUT was lower than code 29822 which intuitively is incorrect but is explained by the fact that times (evaluation and immediate postop) were set lower by the Harvard algorithm. The newly proposed WPUT of 0.038 for 211 minutes at 7.98 work RVUs correctly aligns the WPUT for CPT code 29823 as slightly more intense/complex than 29822. Thus, contending that there really is no change in value for these two procedures - just a rearrangement of time.

The work per unit time for CPT codes 29822 (0.037) and 29823 (0.038) is lower than any of the recently reviewed office visit E/M codes which range from 0.039 to 0.043 WPUT except for 99211 for a nursing visit. Further, a review of the WPUT for RUC reviewed codes with similar total time indicates that the work per unit time for the two survey codes is not different (or less where appropriate) than other global codes with similar total times. *See attached additional rationale.*

Practice Expense
The PE Subcommittee reviewed the standard 90-day global inputs and replaced the staple removal kit with a suture removal kit (SA054 *pack, post-op incision care (suture)*). **The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Work Neutrality
The RUC's recommendation for these codes will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
Surgery **Musculoskeletal System** **Endoscopy/Arthroscopy**				
▲29822	N1	Arthroscopy, shoulder, surgical; debridement, limited, 1 or 2 discrete structures (eg, humeral bone, humeral articular cartilage, glenoid bone, glenoid articular cartilage, biceps tendon, biceps anchor complex, labrum, articular capsule, articular side of the rotator cuff, bursal side of the rotator cuff, subacromial bursa, foreign body[ies]) *(For open procedure, see specific open shoulder procedure performed)*	090	7.03
▲29823	N2	Arthroscopy, shoulder, surgical; debridement, extensive, 3 or more discrete structures (eg, humeral bone, humeral articular cartilage, glenoid bone, glenoid articular cartilage, biceps tendon, biceps anchor complex, labrum, articular capsule, articular side of the rotator cuff, bursal side of the rotator cuff, subacromial bursa, foreign body[ies]) *(For open procedure, see specific open shoulder procedure performed)*	090	7.98

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

29822, 29823 Rationale For Decrease In IST Without Commensurate Decrease In wRVU:

It is important to understand how the different components of work (pre, intra, post) were developed during the Harvard study. It is also important to understand that intraservice work is only one component of the total work for a global code.

Evaluation

Preservice evaluation time was never surveyed and instead computed for every code based on intraservice time (IST) of a family anchor code. If a code had 30 minutes IST it would automatically have much less evaluation time assigned than a code with 60 minutes of IST. We have since shown that preservice evaluation time is not dependent on IST, but instead dependent on the amount of data (imaging, labs) that need to be reviewed, the type of anesthesia (eg, general, MAC, local), the number of other providers that need to be consulted (eg, anesthesiologist, rad tech, consultant physicians). There is also the argument that the intensity of the evaluation work prior to surgery is not different than an E/M service, and although the E/M service codes have increased in value several times since 1992, the intensity of the evaluation work prior to surgery, 0.0224 (which was the intensity of an office E/M at the end of the Harvard study) has not changed.

The amount of time assigned to 29822 (24 minutes) and 29823 (23 minutes) was underestimated by Harvard's algorithm. The flaw in the system is evident by the fact that 29822's preservice evaluation time is greater than 29823—probably due to a different anchor code being used. The intensity of the evaluation work was and still is underestimated. The low intensity assigned to preservice evaluation artificially inflates the intraservice intensity (IWPUT).

Positioning

Similar to preservice evaluation time and work, the Harvard study assigned preservice positioning time (ie, they did not survey it). The general principle was to assign 0 minutes for positioning because it was determined that the derived time for evaluation would incorporate positioning. In fact, if you look at a list of all data from the Harvard study, most have 0 minutes assigned. More than 0 minutes for some procedures was adjudicated though a review by a technical advisory panel. This would account for the odd time of 9 minutes assigned to 29823. However, there is no difference in the positioning of the patient for either 29822 or 29823. Both procedures are surgical arthroscopies and the final total debridement work does not dictate the positioning. Instead, positioning is generally the same for any shoulder arthroscopy, with the possible exception of a procedure that may require more time for intraoperative repositioning.

Although Harvard underestimated or even dismissed the time for positioning, there is considerable work for these two services. The patient is initially placed supine for insertion of anesthesia lines, then rolled into the lateral decubitus position. Pads are placed to protect bony prominences. A shoulder boom is used to support the arm and allow the appropriate amount and angle of traction. Monitors, arthroscopic video equipment, and irrigation lines are positioned relative to the anesthesia lines, and relative to the providers in the room (anesthesiologist, surgeon, assistants). The areas of trochar insertion need to be determined and marked and areas of prepping and draping identified. More sophisticated pumps for surgery require more set up

time for the surgeon with more tubing to manage. Also, more sophisticated monitors have more options for set up and positioning.

The recommended time of 15 minutes is more than the Harvard study assignment and arguably more complex than the assignment of an intensity of 0.0224. Similar to the argument for evaluation intensity and the fact that although E/M intensities have increased, the intensity for positioning work prior to surgery is not less than the positioning work related to an E/M service (supine on an exam table), and although the E/M service codes have increased in value several times since 1992, the intensity of 0.0224 for positioning has not changed.

Scrub, dress, wait

The Harvard study assigned the time for scrub, dress, wait as 0 minutes for office procedures, 15 minutes for ASC procedures, and 25 minutes for hospital procedures. This was loosely related to scrubbing and gowning while local anesthesia, moderate sedation, or general anesthesia was initiated. Harvard assigned an intensity of 0.0081 (or one-third the original E/M intensity). This extremely low intensity discounts the fact that while the surgeon is scrubbing, gowning and waiting for anesthesia, they may be monitoring the anesthesiologists work, refining thoughts about the procedure, and other cognitive work. To put this in perspective, a low-level nursing visit includes 7 minutes for an RVW of 0.18, while 15 minutes at 0.0081 equals an RVW of 0.12.

Postoperative Work

Similar to the preservice evaluation time, the immediate postoperative time was calculated using an algorithm and intraoperative time of an anchor code. For 29822 and 29823, it is clear that the anchor codes were different because the Harvard assigned immediate postoperative time for 29823 is less than 29822 which intuitively does not make sense.

With respect to office visits, the Harvard study did not survey for visits (ie, E/M codes) but instead for total time. The Harvard survey data indicate 29822 had 40 minutes of office visit time and 29823 had 47 minutes of office visit time. These times were converted to E/M codes in 1997 by a CMS contractor to 3.5 x 99212 for 29822 and to 4 x 99212 for 29823. These visits underestimate the work (intensity/complexity) and time required for these patients postoperatively.

Work per Unit Time (WPUT)

CMS has recently accepted the RUC's rationale for E/M services that the intensity of the pre, intra, and post work is the same—and also the same whether the work is face to face or non-face to face. This has resulted in a computation of work per unit time (WPUT) which actually was something that CMS (then HCFA) used for code comparison in the early years of the fee schedule.

The WPUT for 29822 is actually not different (0.037) for 204 minutes of work at 7.60 work RVUs compared to the Harvard manipulated data of 191 minutes at 7.03 work RVUs. With regard to 29823, the prior WPUT was lower than 29822 which intuitively is incorrect but is explained by the fact that times (evaluation and immediate postop) were set lower by the Harvard algorithm. The new WPUT of 0.038 for 211 minutes at 7.98 work RVUs correctly

aligns the WPUT for 29823 as slightly more intense/complex than 29822. This is an argument that there really is no change in value for these two procedures—just a rearrangement of time.

In fact, the WPUT for 29822 (0.037) and 29823 (0.038) is lower than any of the recently reviewed office visit E/M codes except 99211 for a nursing visit as shown below.

CPT	Total time	WPUT
99211	7	0.026
29822	191	0.037
29823	211	0.038
99212	18	0.039
99214	49	0.039
99203	40	0.040
99215	70	0.040
99205	85	0.041
99202	22	0.042
99204	60	0.043
99213	30	0.043

The table below compares the WPUT for RUC reviewed codes with similar total time. This table indicates that the work per unit time is not different (or less where appropriate) than other global codes with similar total times.

RUC year	CPT	Descriptor	RVW	Total time	WPUT
2017	33275	Transcatheter removal of permanent leadless pacemaker, right ventricular, including imaging guidance (eg, fluoroscopy, venous ultrasound, ventriculography, femoral venography), when performed	8.59	188	0.046
	29822	Arthroscopy, shoulder, surgical; debridement, limited, 1 or 2 discrete structures (eg, humeral bone and articular cartilage, glenoid bone and articular cartilage, biceps and biceps anchor complex, labrum, articular capsule, articular side of the rotator cuff, bursal side of the rotator cuff, subacromial bursa, foreign bodies)	7.03	191	0.037
2004	58565	Hysteroscopy, surgical; with bilateral fallopian tube cannulation to induce occlusion by placement of permanent implants	7.12	191	0.037
2008	38542	Dissection, deep jugular node(s)	7.95	198	0.040
2005	49505	Repair initial inguinal hernia, age 5 years or older; reducible	7.96	198	0.040
2009	63663	Revision including replacement, when performed, of spinal neurostimulator electrode percutaneous array(s), including fluoroscopy, when performed	7.75	200	0.039
2005	57295	Revision (including removal) of prosthetic vaginal graft; vaginal approach	7.82	202	0.039
2009	45171	Excision of rectal tumor, transanal approach; not including muscularis propria (ie, partial thickness)	8.13	209	0.039
	29823	Arthroscopy, shoulder, surgical; debridement, extensive, 3 or more discrete structures (eg, humeral bone/humeral articular cartilage, glenoid bone/glenoid articular cartilage, biceps and biceps anchor complex, labrum, articular capsule, articular side of the rotator cuff, bursal side of the rotator cuff, subacromial bursa, foreign bodies)	7.98	211	0.038

2017	57240	Anterior colporrhaphy, repair of cystocele with or without repair of urethrocele, including cystourethroscopy, when performed	10.08	211	0.048
2017	57250	Posterior colporrhaphy, repair of rectocele with or without perineorrhaphy	10.08	211	0.048
2014	38570	Laparoscopy, surgical; with retroperitoneal lymph node sampling (biopsy), single or multiple	8.49	220	0.039

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:29822 Tracking Number Original Specialty Recommended RVU: **7.03**
Presented Recommended RVU: **7.03**
Global Period: 090 Current Work RVU: **7.60** RUC Recommended RVU: **7.03**

CPT Descriptor: Arthroscopy, shoulder, surgical; debridement, limited, 1 or 2 discrete structures (eg, humeral bone and articular cartilage, glenoid bone and articular cartilage, biceps and biceps anchor complex, labrum, articular capsule, articular side of the rotator cuff, bursal side of the rotator cuff, subacromial bursa, foreign bodies)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 50-year-old male presents with shoulder pain. He has failed treatment with physical therapy, anti-inflammatory medications, and a steroid injection. Magnetic resonance imaging (MRI) shows a tear of the biceps attachment at the superior labrum. A diagnosis of a symptomatic superior labrum anterior posterior (SLAP) tear is made. An arthroscopic limited debridement of the proximal biceps and its attachment is performed.

Percentage of Survey Respondents who found Vignette to be Typical: 81%

Site of Service (Complete for 010 and 090 Globals Only)
Percent of survey respondents who stated they perform the procedure; In the hospital 30% , In the ASC 70%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 100% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Write preadmission orders for preoperative medications, including antibiotics. Review results of preadmission testing including labs, X-rays, CT scans, and/or MRIs. Interview and examine patient to confirm that the medical status and physical findings have not changed; update and sign the H&P. Meet with patient and family to review planned procedure and post-operative management. Confirm, update or complete the informed consent. Confirm, sign and mark the operative site in the pre-operative holding area. Verify that all required instruments and supplies are available: shoulder arthroscopy set with probe, manual resection instruments, graspers, cannulae; Pump console and fluid management containers; Arthroscopy video tower with appropriate components (monitor, camera console, shaver console, light source console, image/video recording devices). Verify patient positioning components are available including traction device, beanbag, pillows for padding prominences. Positioning and equipment setup: Assist with placing monitors and arthroscopic video equipment in appropriate position. Examine the shoulder for range of motion and stability. Perform manipulation if needed. Assist with positioning the patient supine. Roll the patient into the lateral decubitus position and place pads to protect areas from pressure. Apply a shoulder boom to support the arm and allow the appropriate amount and angle of traction. Prior to the induction of anesthesia, complete a comprehensive timeout and checklist review with the surgical team. Indicate areas of skin to be prepped and mark surgical incisions. Scrub and gown. Assist with draping the shoulder and assembling sterile components of the shoulder positioner. Assist with organizing the cables for the shaver, camera, light source, pump, and suction. Perform a second brief time out with the surgical team.

Description of Intra-Service Work: Under anesthesia, a posterior portal is made to gain access to the glenohumeral joint. An anterior portal is created in the rotator interval and a cannula is inserted. The camera is maneuvered, and the humeral head rotation and position are altered in order to view all structures of the glenohumeral joint. The articular side of the subscapularis is assessed visually by internally and externally rotating the humeral head and is palpated with a probe assessing for partial tears. The anterior capsule, anterior glenohumeral ligaments, and rotator interval are assessed visually and palpated for tears or abrasions. The subscapularis fossa is assessed visually and using a probe to assess for loose bodies. The articular side of the supraspinatus and infraspinatus are visualized and palpated by taking the humeral head through forward flexion, internal, and external rotation to assess for undersurface tears. The articular cartilage of the humeral head and glenoid are visualized and palpated for chondral damage. The labrum is visualized and palpated

circumferentially to asses for tears. The long head of the biceps tendon is visualized and palpated at its insertion on the supraglenoid tubercle. The tendon is ramped into the joint to assess the extra-articular 3-5 cm for tears and to assess for medial subluxation. Arthroscopic images and videos are taken for documentation.
A partial tear of the attachment of the long head of the biceps to the superior labrum, indicative of a type I SLAP lesion, is noted. Through the anterior portal, manual resecting instruments and a shaver are used to debride torn or non-adherent tissue from the biceps tendon and superior labrum.
The arthroscope is then placed in the glenohumeral joint through the anterior portal. The same structures are assessed from a different vantage point in order to ensure that no pathology was missed.
The biceps and labrum are further debrided placing instruments through the posterior portal.
The arthroscope is placed in the subacromial space through the posterior portal. A lateral portal is created in the subacromial space. The bursal side of the rotator cuff is assessed by taking the humeral head through range of motion. A probe is used to palpate the bursal side of the rotator cuff. The arthroscope is moved to the lateral portal to insure full visualization. The arthroscope is removed, and the portals are closed with sutures. The portals are injected with Marcaine.

Description of Post-Service Work: Post Service - Facility
Application of a sterile bulky dressing. Remove the arm from the traction device, disassemble the shoulder positioner and holder. Remove the drapes. Start applying the shoulder sling/immobilizer while in lateral position and complete when supine. Assist with positioning patient supine. Wait for reversal of anesthesia and extubation. Assist with transfer of patient from OR table to a stretcher. Assist in transport of patient from operating room to the recovery room. Monitor patient stabilization in the recovery room.
Complete a careful neurologic and vascular examination in the recovery room. Write orders for PACU care. Enter a brief operative note and a full operative report in the medical record. Postoperative care is coordinated with recovery room nursing staff. Consultation with the family and patient regarding the surgery procedure and outcome., answer questions.
Review arthroscopic images with the family. Counsel patient and/or family regarding therapy protocol and activity limitations after discharge. Review post-operative instructions (e.g. wound care, pain medications). Write prescriptions for medications needed post-discharge. Check narcotic prescription registries. Complete medication reconciliation. Complete all appropriate medical records, including discharge summary and discharge instructions, and insurance forms. Coordinate post-operative appointment with patient and/or family and office staff. Call referring physician and/or send a copy of the operative note.

Post op visit #1:
History: Interview patient and obtain interval history. Assess pain control and response to current medication.
Examine surgical site: Removal of sling and dressings, Remove sutures, Redress wound with steri-strips, gauze, tape.
Examine the extremity: Assess circulation, sensation, and motor function of the operative extremity, Assess range of motion.
Review surgery and answer patient/family questions: Review arthroscopic images and videos, Review anatomy and pathology, Discuss wound care, Discuss future pain management, Discuss prognosis and expectations, Discuss plan for PT, work, activity restrictions, Discuss and arrange follow up plan and office visit.
Write prescription for PT and instruct on home exercise program
Document progress note in medical record
Write medication prescription
Check narcotic prescription registries
Complete medication reconciliation
Fill out work forms and activity restrictions
Communicate with PCP or referring physician

Post op visit #2:
History:Interview patient and obtain interval history, Assess pain control and response to current medication, Assess function, mobility and progress with PT.
Examine surgical site.
Examine the extremity: Assess neurovascular status; Assess swelling, range of motion and strength.
Review PT notes.
Review surgery and answer patient/family questions: Discuss pain management, Discuss patient progress and expectations, Discuss activity restrictions and plan for PT, Discuss plan for return to work, Discuss plan for follow up and arrange office visit
Write prescription for PT and instruct on home exercise program.
Document progress note in medical record.
Write medication prescription.

Check narcotic prescription registries.
Complete medication reconciliation.
Fill out work forms and activity restrictions.
Communicate with PCP or referring physician.

Post op visit #3:
History:Interview patient and obtain interval history, Assess pain control and response to current medication., Assess function, mobility and progress with PT
Examine surgical site
Examine the extremity: Assess neurovascular status, Assess swelling, range of motion and strength.
Review PT notes.
Review surgery and answer patient/family questions:
Discuss pain management: Discuss patient progress and expectations, Discuss activity restrictions and plan for home exercise program
Complete final PT forms or provide instructions and education on home exercise program
Document progress note in medical record.
Write medication prescription (non-opioid).
Complete medication reconciliation.
Give final instructions on resumption of full activity, home exercises, and future restrictions.
Complete all final discharge forms for return to activity and work.
Communicate with PCP or referring physician.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	4%	11%	30%	52%	4%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	30%	26%	44%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	11%	37%	52%
Physical effort required	7%	41%	52%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	11%	44%	44%

2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	30%	60%	10%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	60%	40%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	50%	50%
Physical effort required	0%	50%	50%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	40%	60%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

CPT 29822, Arthroscopy, shoulder, surgical; debridement, limited, 1 or 2 discrete structures (eg, humeral bone and articular cartilage, glenoid bone and articular cartilage, biceps and biceps anchor complex, labrum, articular capsule, articular side of the rotator cuff, bursal side of the rotator cuff, subacromial bursa, foreign bodies) was identified with CPT code 29823, Arthroscopy, shoulder, surgical; debridement, extensive, 3 or more discrete structures (eg, humeral bone/humeral articular cartilage, glenoid bone/glenoid articular cartilage, biceps and biceps anchor complex, labrum, articular capsule, articular side of the rotator cuff, bursal side of the rotator cuff, subacromial bursa, foreign bodies) at the January 2019 RAW meeting for high volume and a Harvard value. 29822 was also Harvard valued but Medicare utilization below the RAW's screen. However, because it was part of the family, the AAOS recommended that both 29822 and 29823 be referred to the CPT Editorial Panel for revised descriptors. The AAOS submitted revised descriptors and new typical patient vignettes at the September 2019 CPT Editorial Panel meeting and placed on the RUC's level of interest for the January 2019 meeting.

Survey Sample and Process

A survey request was sent to a random selection of members from the American Academy of Orthopaedic Surgeons, and included both 29822 and 29823. The total response rate was a robust response rate of 54 completed, non-conflicted surveys.

Work Recommendation

We recommend the survey 25th percentile work RVU of 7.03 for code 29822.

Time recommendation

An expert panel from the AAOS, and including relevant orthopaedic sub-specialties such as the American Shoulder and Elbow Society (ASES), the Arthroscopic Association of North America (AANA), and the American Orthopaedic Society of Sports Medicine (AOSSM) reviewed the survey data and felt the survey times and work RVUS were accurate and reasonable.

Pre-Service
We recommend Pre-Time Package of 3 (straightforward patient/difficult patient) with the following changes:
Evaluation: Subtract 3 minutes (total = 30) to be consistent with the survey median time.
Positioning: Add 12 minutes (total = 15). The patient is initially placed supine, then rolled into the lateral decubitus position. Pads are placed to protect bony prominences. A shoulder boom is used to support the arm and allow the appropriate amount and angle of traction. Monitors and arthroscopic video equipment is positioned.
Scrub, dress, wait: No change, package time and survey median is 15 minutes.

Intra-Service
We recommend an intra-time of 30 minutes which is the survey median.

Immediate Post-Service
We recommend Post-time Package 9a (General Anesthesia/Regional Block-Straightforward Procedure) with a reduction of 10 minutes (total=20) to be consistent with the survey median.

Post-Service Visits
We recommend a 0.5 discharge day visit, consistent with the Medicare data indicating 61% outpatient site-of-service. We recommend 2-99213 and 1-99212 post-operative office visits which were the median responses from the survey. This visit pattern is consistent with the Key Reference codes 29880 and 29881.

Total Time
We recommend a total time of 191 minutes. This total time is almost identical to 29881, a key reference service which has a total time of 194 minutes and also has a work RVU of 7.03 equal to the survey 25% work RVU.

Key Reference Codes

Summary

Code 29822 was surveyed for the January 2020 RUC meeting with 54 completed, non-conflicted respondents. We are recommending a work RVU of 7.03 with 30 minutes pre-service, 15 minutes pre-service positioning, and 15 minutes scrub, dress and wait, 30 minutes of intra-service time, 20 minutes immediate post-service time, 0.5 post-operative discharge, 2-99213, 1-99212, total time of 191, IWPUT of 0.080, and WPUT of 0.037.

We believe the recommended work RVU 0f 7.03, the survey 25th % work RVU, which is a reduction from the current, Harvard based work RVU is well aligned with the key reference service codes of 29880 and 29881. The WPUT for all three codes are nearly identical, and lower than the updated WPUTs for 99212, 99213, 99214, and 99215. In addition, the recommended total time for 29822 is very similar to 29881, and the slightly higher IWPUT is consistent with the survey intensity and complexity measures which showed survey respondents rating 29822 as requiring higher intensity and complexity than both of the key reference services, 29880 and 29881.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☒ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. Code 29822 is reported 63% with add-on code 29826 (work RVU 3.00 and intra-time of 40 minutes)

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 29822

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty orthopaedic surgery How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 0
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 11,398 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC database

Specialty orthopaedic surgery Frequency 11000 Percentage 96.50 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Major procedure

BETOS Sub-classification Level II:
Orthopedic - other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 29822

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:29823 Tracking Number Original Specialty Recommended RVU: **7.98**
Presented Recommended RVU: **7.98**
Global Period: 090 Current Work RVU: **8.36** RUC Recommended RVU: **7.98**

CPT Descriptor: Arthroscopy, shoulder, surgical; debridement, extensive, 3 or more discrete structures (eg, humeral bone/humeral articular cartilage, glenoid bone/glenoid articular cartilage, biceps and biceps anchor complex, labrum, articular capsule, articular side of the rotator cuff, bursal side of the rotator cuff, subacromial bursa, foreign bodies)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 50-year-old male presents with one year of shoulder pain. He has failed treatment with physical therapy, anti-inflammatory medications, and a steroid injection. Magnetic resonance imaging (MRI) shows chondral degeneration of the humeral head and the glenoid and a partial bursal surface tear of the supraspinatus tendon. A diagnosis of articular cartilage degeneration and a partial rotator cuff tear is made. An arthroscopic extensive debridement of these three structures is performed.

Percentage of Survey Respondents who found Vignette to be Typical: 93%

Site of Service (Complete for 010 and 090 Globals Only)
Percent of survey respondents who stated they perform the procedure; In the hospital 30% , In the ASC 70%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 100% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Write preadmission orders for preoperative medications, including antibiotics. Review results of preadmission testing including labs, X-rays, CT scans, and/or MRIs. Interview and examine patient to confirm that the medical status and physical findings have not changed; update and sign the H&P. Meet with patient and family to review planned procedure and post-operative management. Confirm, update or complete the informed consent. Confirm, sign and mark the operative site in the pre-operative holding area. Verify that all required instruments and supplies are available: shoulder arthroscopy set with probe, manual resection instruments, graspers, cannulae; Pump console and fluid management containers; Arthroscopy video tower with appropriate components (monitor, camera console, shaver console, light source console, image/video recording devices). Verify patient positioning components are available including traction device, beanbag, pillows for padding prominences. Positioning and equipment setup: Assist with placing monitors and arthroscopic video equipment in appropriate position. Examine the shoulder for range of motion and stability. Perform manipulation if needed. Assist with positioning the patient supine. Roll the patient into the lateral decubitus position and place pads to protect areas from pressure. Apply a shoulder boom to support the arm and allow the appropriate amount and angle of traction. Prior to the induction of anesthesia, complete a comprehensive timeout and checklist review with the surgical team. Indicate areas of skin to be prepped and mark surgical incisions. Scrub and gown. Assist with draping the shoulder and assembling sterile components of the shoulder positioner. Assist with organizing the cables for the shaver, camera, light source, pump, and suction. Perform a second brief time out with the surgical team.

Description of Intra-Service Work: Under anesthesia, a posterior portal is made to gain access to the glenohumeral joint. An anterior portal is created in the rotator interval and a cannula is inserted. The camera is maneuvered, and the humeral head rotation and position are altered in order to view all structures of the glenohumeral joint. The articular side of the subscapularis is assessed visually by internally and externally rotating the humeral head and is palpated with a probe assessing for partial tears. The anterior capsule, anterior glenohumeral ligaments, and rotator interval are assessed visually and palpated for tears or abrasions. The subscapularis fossa is assessed visually and using a probe to assess for loose bodies. The articular side of the supraspinatus and infraspinatus are visualized and palpated by taking the humeral head through forward flexion, internal, and external rotation to assess for undersurface tears. The articular cartilage of the

humeral head and glenoid are visualized and palpated for chondral damage. The labrum is visualized and palpated circumferentially to asses for tears. The long head of the biceps tendon is visualized and palpated at its insertion on the supraglenoid tubercle. The tendon is ramped into the joint to assess the extra-articular 3-5 cm for tears and to assess for medial subluxation. Arthroscopic images and videos are taken for documentation.
Chondral degeneration of the humeral head and glenoid are identified. Through the anterior portal, a probe is placed to measure and manipulate the chondral damage of the glenoid. Manual resecting instruments and a shaver are used to debride delaminating tissue from the glenoid to create smooth borders. The size, location, depth, and pattern of the lesion are noted before and after debridement. Arthroscopic images or videos are taken for documentation. Chondral degeneration of the humeral head is noted and is addressed with debridement using a shaver from the anterior portal. The humeral head is taken through a range of motion to allow the shaver access to the lesion. Delaminating chondral margins are debrided to a stable transition. The size, location, depth, and pattern of the lesion are noted before and after debridement. Arthroscopic images or videos are taken for documentation.
The arthroscope is then placed in the glenohumeral joint through the anterior portal. The same structures are assessed from a different vantage point in order to ensure that no pathology was missed.
The glenoid and humeral head articular cartilage are further debrided placing instruments through the posterior portal. Final image documentation is obtained.
The arthroscope is placed in the subacromial space through the posterior portal. A lateral portal is created in the subacromial space. The bursal side of the rotator cuff is assessed by taking the humeral head through range of motion. A probe is used to palpate the bursal side of the rotator cuff. A partial tear of the bursal side of the rotator cuff is identified. The tear is less than 50% thickness of the rotator cuff tendon. The arthroscope is moved to the lateral portal to insure full visualization with additional assessment of the lesion. A shaver is placed and used to debride the partial tear to a smooth transition. The size, location, depth, and pattern of the lesion are noted before and after debridement. Arthroscopic images or videos are taken for documentation. The arthroscope is removed, and the portals are closed with sutures. The portals are injected with Marcaine..

Description of Post-Service Work: Post Service - Facility
Application of a sterile bulky dressing. Remove the arm from the traction device, disassemble the shoulder positioner and holder. Remove the drapes. Start applying the shoulder sling/immobilizer while in latera position and complete when supine. Assist with positioning patient supine. Wait for reversal of anesthesia and extubation. Assist with transfer of patient from OR table to a stretcher. Assist in transport of patient from operating room to the recovery room. Monitor patient stabilization in the recovery room.
Complete a careful neurologic and vascular examination in the recovery room. Write orders for PACU care. Enter a brief operative note and a full operative report in the medical record. Postoperative care is coordinated with recovery room nursing staff. Consultation with the family and patient regarding the surgery procedure and outcome., answer questions.
Review arthroscopic images with the family. Counsel patient and/or family regarding therapy protocol and activity limitations after discharge. Review post-operative instructions (e.g. wound care, pain medications). Write prescriptions for medications needed post-discharge. Check narcotic prescription registries. Complete medication reconciliation. Complete all appropriate medical records, including discharge summary and discharge instructions, and insurance forms. Coordinate post-operative appointment with patient and/or family and office staff. Call referring physician and/or send a copy of the operative note.

Post op visit #1:
History: Interview patient and obtain interval history. Assess pain control and response to current medication.
Examine surgical site: Removal of sling and dressings, Remove sutures, Redress wound with steri-strips, gauze, tape.
Examine the extremity: Assess circulation, sensation, and motor function of the operative extremity, Assess range of motion.
Review surgery and answer patient/family questions:Review arthroscopic images and videos, Review anatomy and pathology, Discuss wound care, Discuss future pain management, Discuss prognosis and expectations, Discuss plan for PT, work, activity restrictions, Discuss and arrange follow up plan and office visit.
Write prescription for PT and instruct on home exercise program
Document progress note in medical record
Write medication prescription
Check narcotic prescription registries
Complete medication reconciliation
Fill out work forms and activity restrictions
Communicate with PCP or referring physician

Post op visit #2:

History:Interview patient and obtain interval history, Assess pain control and response to current medication, Assess function, mobility and progress with PT.
Examine surgical site.
Examine the extremity: Assess neurovascular status; Assess swelling, range of motion and strength.
Review PT notes.
Review surgery and answer patient/family questions: Discuss pain management, Discuss patient progress and expectations, Discuss activity restrictions and plan for PT, Discuss plan for return to work, Discuss plan for follow up and arrange office visit
Write prescription for PT and instruct on home exercise program.
Document progress note in medical record.
Write medication prescription.
Check narcotic prescription registries.
Complete medication reconciliation.
Fill out work forms and activity restrictions.
Communicate with PCP or referring physician.

Post op visit #3:
History:Interview patient and obtain interval history, Assess pain control and response to current medication., Assess function, mobility and progress with PT
Examine surgical site
Examine the extremity: Assess neurovascular status, Assess swelling, range of motion and strength.
Review PT notes.
Review surgery and answer patient/family questions:
Discuss pain management: Discuss patient progress and expectations, Discuss activity restrictions and plan for home exercise program
Complete final PT forms or provide instructions and education on home exercise program
Document progress note in medical record.
Write medication prescription (non-opioid).
Complete medication reconciliation.
Give final instructions on resumption of full activity, home exercises, and future restrictions.
Complete all final discharge forms for return to activity and work.
Communicate with PCP or referring physician.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	5%	32%	42%	21%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	5%	42%	53%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	11%	37%	53%
Physical effort required	5%	58%	37%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	5%	42%	53%

2nd Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	0%	22%	78%	0%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	56%	44%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	0%	33%	67%
Physical effort required	11%	44%	44%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	11%	33%	56%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

CPT code 29823, Arthroscopy, shoulder, surgical; debridement, extensive, 3 or more discrete structures (eg, humeral bone/humeral articular cartilage, glenoid bone/glenoid articular cartilage, biceps and biceps anchor complex, labrum, articular capsule, articular side of the rotator cuff, bursal side of the rotator cuff, subacromial bursa, foreign bodies) at the January 2019 RAW meeting for high volume and a Harvard value along with CPT 29822, Arthroscopy, shoulder, surgical; debridement, limited, 1 or 2 discrete structures (eg, humeral bone and articular cartilage, glenoid bone and articular cartilage, biceps and biceps anchor complex, labrum, articular capsule, articular side of the rotator cuff, bursal side of the rotator cuff, subacromial bursa, foreign bodies). 29822 was also Harvard valued but Medicare utilization below the RAW's screen. However, because it was part of the family, the AAOS recommended that both 29822 and 29823 be referred to the CPT Editorial Panel for revised descriptors. The AAOS submitted revised descriptors and new typical patient vignettes at the September 2019 CPT Editorial Panel meeting and placed on the RUC's level of interest for the January 2019 meeting.

Survey Sample and Process

A survey request was sent to a random selection of members from the American Academy of Orthopaedic Surgeons, and included both 29822 and 29823. The total response rate was a robust response rate of 54 completed, non-conflicted surveys.

Work Recommendation

We recommend the survey 25th percentile work RVU of 7.98 for code 29823.

Time recommendation

An expert panel from the AAOS, and including relevant orthopaedic sub-specialties such as the American Shoulder and Elbow Society (ASES), the Arthroscopic Association of North America (AANA), and the American Orthopaedic Society of Sports Medicine (AOSSM) reviewed the survey data and felt the survey times and work RVUS were accurate and reasonable.

Pre-Service
We recommend Pre-Time Package of 3 (straightforward patient/difficult patient) with the following changes:
Evaluation: Subtract 3 minutes (total = 30) to be consistent with the survey median time.
Positioning: Add 12 minutes (total = 15). The patient is initially placed supine, then rolled into the lateral decubitus position. Pads are placed to protect bony prominences. A shoulder boom is used to support the arm and allow the appropriate amount and angle of traction. Monitors and arthroscopic video equipment is positioned.
Scrub, dress, wait: No change, package time and survey median is 15 minutes.

Intra-Service
We recommend an intra-time of 50 minutes which was the survey median.

Immediate Post-Service
We recommend Post-time Package 9a (General Anesthesia/Regional Block-Straightforward Procedure) with a reduction of 10 minutes (total=20) to be consistent with the survey median.

Post-Service Visits
We recommend a 0.5 discharge day visit, consistent with the Medicare data indicating 61% outpatient site-of-service. We recommend 2-99213 and 1-99212 post-operative office visits which were the median responses from the survey. This visit pattern is consistent with the Key Reference codes 29880 and 29881.

Total Time
We are recommending a total time of 211 minutes.

Summary

Code 29823 was surveyed for the January 2020 RUC meeting with 54 completed, non-conflicted respondents. We are recommending a work RVU of 7.98 with 30 minutes pre-service, 15 minutes pre-service positioning, and 15 minutes scrub, dress and wait, 50 minutes of intra-service time, 20 minutes immediate post-service time, 0.5 post-operative discharge, 2-99213, 1-99212, total time of 191, IWPUT of 0.080, and WPUT of 0.037.

We believe the recommended work RVU 0f 7.98, the survey 25th % work RVU, which is a reduction from the current, Harvard based work RVU is well aligned with the key reference service codes of 29881 and 23430 with a higher work RVU and higher total time than 29881 and a lower work RVU and lower total time (although a higher intra-service time) than 23430. The WPUT for 29823 is lower than the updated WPUTs for 99212, 99213, 99214, and 99215.

In addition, the recommended work RVU and times are well aligned with MPC codes 67904 and 50590, and other recently surveyed surgical procedures such as 28291 and 45171 which have similar or slightly lower total and intra-service times but slightly higher work RVUs.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☒ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. Code 29823 is reported 72% with add-on code 29826 (work RVU=3.00 and intra-time = 40 min) and 54% with code 29827 (work RVU 15.59, pre-time 75, intra-time 120, immediate post-service time 40, .5 99238, 5-99212)

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 29823

How often do physicians <u>in your specialty</u> perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty orthopaedic surgery How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 0

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. national data not available

SPECIALTY SOCIETY(IES): AAOS
PRESENTER(S): Hussein Elkousy, MD

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: January 2020

CPT Code	Long Descriptor	Global Period
29822	Arthroscopy, shoulder, surgical; debridement, limited, 1 or 2 discrete structures (eg, humeral bone and articular cartilage, glenoid bone and articular cartilage, biceps and biceps anchor complex, labrum, articular capsule, articular side of the rotator cuff, bursal side of the rotator cuff, subacromial bursa, foreign bodies)	090
29823	Arthroscopy, shoulder, surgical; debridement, extensive, 3 or more discrete structures (eg, humeral bone/humeral articular cartilage, glenoid bone/glenoid articular cartilage, biceps and biceps anchor complex, labrum, articular capsule, articular side of the rotator cuff, bursal side of the rotator cuff, subacromial bursa, foreign bodies)	090

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
29822	A 50-year-old male presents with shoulder pain. He has failed treatment with physical therapy, anti-inflammatory medications, and a steroid injection. Magnetic resonance imaging (MRI) shows a tear of the biceps attachment at the superior labrum. A diagnosis of a symptomatic superior labrum anterior posterior (SLAP) tear is made. An arthroscopic limited debridement of the proximal biceps and its attachment is performed.
29823	A 50-year-old male presents with one year of shoulder pain. He has failed treatment with physical therapy, anti-inflammatory medications, and a steroid injection. Magnetic resonance imaging (MRI) shows chondral degeneration of the humeral head and the glenoid and a partial bursal surface tear of the supraspinatus tendon. A diagnosis of articular cartilage degeneration and a partial rotator cuff tear is made. An arthroscopic extensive debridement of these three structures is performed.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   An expert panel that included members of the AAOS and sub-specialties American Shoulder and Elbow Society (ASES), Arthroscopic Association of North America (AANA), and American Orthopaedic Society of Sports Medicine (AOSSM) reviewed PE inputs for 29822 and 29823

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code, but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here (*for service reviewed prior to the implementation of clinical activity codes, detail is not provided in the RUC database, please contact Samantha Ashley at samantha.ashley@ama-assn.org for PE spreadsheets for your reference codes*):

   The current codes are used as references.

3. Is this code(s) typically reported with an E/M service?

   No

4. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:

   N/A

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

5. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies for the **code family**, please provide compelling evidence (please see *PE compelling evidence guidelines*) Please explain if the increase can be entirely accounted for because of an increase in physician time:

N/A

6. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see second worksheet in PE spreadsheet workbook*), please explain the difference here:

N/A

7. Please provide a brief description of the clinical staff work for the following:
   a. Pre-Service period:

Complete pre-service diagnostic and referral forms	**5 minutes (standard)** Staff reviews all forms with patient and/or caregiver to ensure all relevant history and diagnostic information is included
Coordinate pre-surgery services (including test results)	**20 minutes (standard)** Staff coordinates collection and documentation of test results, patient specific information and other relevant patient information for surgical procedure including conducting requisite pre-surgery assessment with anesthesiologist. Staff coordinate requisite pre-surgery appointments and visits. Enter and record all clinical updates in EHR.
Schedule space and equipment in facility	**8 minutes (standard)** Staff interacts with facility to schedule space, supplies, equipment, and review checklists
Provide pre-service education/obtain consent	**20 minutes (standard)** Staff reviews procedure, complication risk, process of recovery, and answers patient/family questions. Staff conduct a pre-clearance assessment and final clearance for surgery
Complete pre-procedure phone calls and prescription	**7 minutes (standard)** Staff reviews preoperative medication changes, reviews patient medical status, confirms preoperative cleansing protocol, and answers final pre-admission questions.

   b. Service period (includes pre, intra and post):

6 minutes (standard)

Prior to discharge, office clinical staff will assist with necessary post-discharge care coordination, such as:

- Responding to patient/family questions about home activity restrictions/WB status, therapy questions
- Telephonic or electronic communication assistance with the office, and other necessary management assistance related to the hospitalization.

- Transitioning discharge information to the office medical record, including correspondence and imaging or lab results pending at discharge

c. Post-service period:

99 minutes – standard clinical staff time for <u>current</u> (2019/2020) office visit E/Ms
Clinical staff will greet the patient, provide gowning, and ensure that all appropriate medical records are available including interval imaging and labs, physical therapy reports, and chart notes from other physicians. Clinical staff will obtain vital signs, prepare the room and necessary supplies, assist with patient positioning for exam, review and document history, systems and medications. Clinical staff will assist the physician during the exam which may include wound and drain (if present) assessment, neurovascular assessment, and ROM assessment. Clinical staff will clean the room and answer any patient/family questions about home care including activity limitations and reinforcement of physical therapy activities. Clinical staff will assist the physician with orders for medication and physical therapy changes. Clinical staff will assist with answering patient, family, caregiver, therapist, other clinician questions and help process changes in care.

8. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see second worksheet in PE spreadsheet workbook*):

N/A

9. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

N/A

INVOICES

10. ☐ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

11. ☐ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

12. If you wish to include a supply that is not on the list (*please see fourth worksheet in PE spreadsheet workbook*) please provide a paid invoice. Identify and explain the invoice here:

N/A

13. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation. Please include the description, CMS supply code, unit, item quantity and unit price (if available). See documents two and three under PE reference materials on the RUC Collaboration Website for information on the contents of kits, packs and trays.

DESCRIPTION	Code	Unit	Item Qty	Unit price
pack, minimum multi-specialty visit	**SA048**	**pack**		**2.1122**

AMA/Specialty Society RVS Update Committee Summary of Recommendations

January 2020

Absorbable Nasal Implant Repair – Tab 12

In September 2019, the CPT Editorial Panel approved the addition of a code to report repair of nasal valve collapse with subcutaneous/submucosal lateral wall implant(s).

30468 ***Repair of nasal valve collapse with subcutaneous/submucosal lateral wall implant(s)***
The RUC reviewed the survey results from 168 otolaryngologists and determined that the survey 25th percentile work RVU of 2.80 accurately reflects the typical physician work necessary to perform this service. The RUC recommends 38 minutes of pre-service time, 20 minutes of intra-service time, and 15 minutes of immediate post-service time. Pre-time package 3 and post-time package 9A were selected due to this procedure currently being done predominantly in the hospital outpatient setting under general anesthesia. It is anticipated that over time this service may shift to primarily office-based and will be captured by the appropriate site of service screen as that transition occurs and requires revaluation.

The RUC compared the surveyed code to CPT code 45346 *Sigmoidoscopy, flexible; with ablation of tumor(s), polyp(s), or other lesion(s) (includes pre- and post-dilation and guide wire passage, when performed)* (work RVU= 2.81 and intra-service time of 20 minutes) and noted that both codes have identical intra-service time and should be valued similarly. Although reference code 45346 has less total time than the survey code, it is a more intense service. CPT code 30468 is more intense than CPT code 45346 due to the risk of cosmetic deformity. The placement of the nasal implant occurs in an area with exceedingly thin skin, where it is easy to puncture the skin during placement. If this occurs, the defect is very difficult to repair and often leads to lifelong scarring. The survey code requires more physician time and work than code 45346 and thus valued appropriately. Additionally, the RUC compared the survey code to the top key reference code 30140 *Submucous resection inferior turbinate, partial or complete, any method* (work RVU= 3.00 and intra-service time of 20 minutes), and noted that both codes have identical intra-service time and should be valued similarly. The majority of survey respondents rated the survey code somewhat more to much more intense/complex than top key reference code 30140, warranting the work value for the survey code. **The RUC recommends a work RVU of 2.80 for CPT code 30468.**

Practice Expense
The Practice Expense (PE) Subcommittee agreed with the specialty's recommendation to add a new supply "absorbable nasal implant and delivery device" kit needed for the procedure. The kit can be used bilaterally or unilaterally. The specialty society clarified that in the very unusual event of unilateral implantation, the second device would be discarded and not be used in another patient. **The RUC recommends the direct PE inputs as submitted by the specialty societies**.

CPT Descriptor: Repair of nasal valve collapse with subcutaneous/submucosal lateral wall implant(s)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 50-year-old male presents with chronic nasal obstruction affecting his activity level and sleep despite medical management. Exam reveals nasal valve collapse on normal inspiration relieved by Cottle maneuver. Patient undergoes bilateral absorbable nasal implants to support the upper and lower lateral nasal cartilages.

Percentage of Survey Respondents who found Vignette to be Typical: 98%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Meet with patients and family to describe and discuss in detail the planned procedure. Review and update the medical history. Perform a current physical exam. Reconcile medications and allergies. Address NPO status and timing. Discuss the patient's expected convalescence and educate the patient and caregivers regarding the signs and symptoms of the most common complications. Review and obtain informed consent. There is confirmation of site of proposed insertion, and a detailed description is given of the postoperative changes in the graft and incisions and the expected dynamic changes in cosmesis as the wound matures. In each subject, the nasal anatomy as well as the area of maximum lateral wall collapse during inspiration are examined and marked to identify the target implant location and cannula insertion trajectory. The area of maximum collapse is evaluated using the modified Cottle maneuver. The availability of all required instruments and supplies is verified. A timeout is performed with entire surgical team, including confirmation of the procedure, locations, allergies, antibiotic prophylaxis, anesthesia and fire risks, expected duration, and any concerns related to the procedure. Following induction of anesthesia, the patient is positioned. The surgeon scrubs, gowns and preps the patient for the procedure.

Description of Intra-Service Work: A very detailed proposed implant recipient site is carefully measured and marked. The target implant location is established to position the proximal tip of the implant adjacent and across the maxilla to provide cantilever support, and the main cylindrical body of the implant is positioned along a trajectory to support the upper and lower lateral cartilages crossing the area of maximum collapse. There is a device-specific disposable template that is utilized to insure proper placement. Additionally, the separate intranasal, intercartilaginous incision site is marked. The recipient site incision is injected with local anesthetic very slowly taking care to not expand the lateral nasal sidewall tissue or create a hematoma from the angular artery which is in this location, either of which would prohibit implant palpation and therefore placement. An intranasal, intercartilaginous incision is performed using the delivery tool taking care to not penetrate and disrupt the lower lateral cartilages. Careful dissection is then performed in a subperiosteal plane deep to the lateral nasal sidewall periosteal tissues along the entire lateral nasal sidewall up to the level of the medial canthus. The implant is then deployed into the dissected recipient bed. Once delivered, the end of the implant is positioned over and adjacent to the frontal process of the maxilla while the main body extends caudally toward the alar region. The delivery tool is retracted and removed while the implant is simultaneously held in place. The insertion site is sutured closed.

Description of Post-Service Work: The prepped areas of the donor and insertion sites are cleaned. The procedure is dictated. Discharge medications are reconciled. The prescription drug monitoring database is reviewed. Postoperative

orders, medications and instructions are written. There is a discussion with the family and patient regarding the procedure and findings. There is reiteration of the convalescence, precautions, follow up appointments, expected postoperative course, signs and symptoms of complications, and review of the written postoperative instructions. Instructions, appropriate discharge timing, follow up, and precautions are discussed with the postoperative nursing team.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	2%	19%	59%	20%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	31%	69%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	2%	27%	71%
Physical effort required	14%	54%	32%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and	4%	16%	80%

judgment of physician • Estimated risk of malpractice suit with poor outcome	

2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	44%	53%	3%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	6%	55%	39%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	6%	53%	41%
Physical effort required	10%	48%	42%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	28%	31%	41%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background:

In October 2019, the Academy brought forward a Code Change Application requesting the creation of a new code to report nasal valve repair procedure using a nasal implant. The physician work and technology required to perform the repair of nasal vestibular stenosis using a nasal implant that opens and stabilizes the nasal walls was not specifically described in any existing CPT code. The Panel accepted with modifications Option C of this request to establish codes 30468 which will be published in the 2021 edition of the CPT Book. Previously, this procedure was reported using an unlisted code, CPT 30999.

Survey Sample and Process:

A survey request was sent to a random selection of members from the American Academy of Otolaryngology – Head and Neck Surgery who self-designated as one or more of the following sub-specialties: General Otolaryngology, Rhinology or Facial Plastics.

Recommendation (Work and Intra Time):

We are recommending a work RVU of **2.80 and 20 minutes of intra service time**, based on our survey's 25th percentile.

Time package selection: We have selected pre-time package 3 and post-time package 9A due to this procedure currently being done predominantly in the hospital outpatient setting under general anesthesia. We anticipate over time this will shift to primarily office-based, and will be captured by the appropriate RAW screen(s) as that transition occurs and requires revaluation.

Pre-time Package 3-FAC (Straightforward Patient/Difficult Procedure)

Evaluation Time – We are recommending 25 minutes of evaluation time which is a decrease of 8 minutes from the pre-service package time based on our survey median.

Positioning Time – We are recommending 3 minutes of positioning time which is a decrease of 2 minutes from the median survey time, but consistent with the pre-service package time for this activity.

Scrub, Dress, Wait Time – We are recommending 10 minutes of scrub, dress and wait time which is a decrease of 5 minutes from the selected pre-service package time, based on our survey median.

This results in a total recommended pre time of 38 minutes, taking the lesser of surveyed time or the pre-service package time.

Post-time Package 9A (General Anesthesia or Complex Regional Block/ Straightforward Procedure)
Recommended time has been reduced to 15 minutes which is a decrease of 15 minutes from the post package time selected to match our survey time. ***This results in a total recommended post time of 15 minutes, taking the lesser of surveyed time or the pre-service package time.***

Supporting Reference Codes for the Recommended Value

CPT Code	Long Desc	Global	Work RVU	Intra Time	Total Time	IWPUT	Most Recent RUC Review
31574	Laryngoscopy, flexible; with injection(s) for augmentation (eg, percutaneous, transoral), unilateral	000	2.43	15	55	0.1108	2015-10
31240	Nasal/sinus endoscopy, surgical; with concha bullosa resection	000	2.61	20	73	0.0783	2017-1
31238	Nasal/sinus endoscopy, surgical; with control of nasal hemorrhage	000	2.74	25	53	0.0874	2017-1

31296	Nasal/sinus endoscopy, surgical; with dilation of frontal sinus ostium (eg, balloon dilation)	000	3.1	25	61	0.0946	2017-1
41530	Submucosal ablation of the tongue base, radiofrequency, 1 or more sites, per session	000	3.5	20	95	0.0982	2015-4

Intensity of Work

Review of IWPUT demonstrated that 30468 is similar to both our KRS Codes and MPC codes with a wRVU at the 25th percentile. In fact, respondents indicated this procedure is more intense and complex than both KRS codes, however, the recommendation of the WRVU at the 25th percentile results in a lower IWPUT than both of the selected KRS services.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 30999

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Otolaryngology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 11990
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The unspecified nature of J34.89, the ICD10 code used to report nasal valve compromise, has created great difficulty in capturing its prevalence. Nasal airway obstruction is a common complaint treated by otolaryngologists. It has been estimated that more than 20 million Americans are affected by nasal airway obstruction [value calculated based on 2014 US population estimate from US Census and World Bank data in conjunction with incidence numbers cited in: Stewart et al. Epidemiology and burden of nasal congestion. Intl J Gen Med. 2010; 3:37-45] with significant impact on quality of life. Nasal airway obstruction can result from blockages due to septal deviation, turbinate hypertrophy, sinus disease, and/or nasal valve compromise (NVC.)

A recent article found a prevalence of 1,273 (67%) for nasal valve compromise among a cohort of 1,906 patients presenting to otolaryngologists with a complaint of nasal airway obstruction. The prevalence was even higher (881 patients, 73% of individuals with nasal valve collapse) among patients with severe/ extreme nasal airway obstruction (1,211 patients, 63% of all patients) [Clark et al. ENT J. 2018; 97:173-176.] Septoplasty for septal deviation is a commonly performed procedure by otolaryngologists in the ambulatory setting.

In the group of 1,906 patients referenced above, 1,211 of these patients had severe/extreme nasal obstruction according to NOSE scores (see below, above literature for reference of the NOSE score and severity classification). From the total 1,906 patients presenting to otolaryngologists with nasal obstruction,1,453 had septal deviation, of which 965 of those patients with septal deviation also had severe/extreme nasal obstruction.

According to Claims Data the RUC Database, 24,063 septoplasties were performed in 2018. If we assume that all 24,063 septoplasties were done for any septal deviation, then (965/1453) X 24,063=15,981 patients in the annual ambulatory group may have had septal deviation and severe/extreme nasal obstruction. Of those patients with severe/extreme nasal obstruction, 166 had nasal valve stenosis and septal deviation, while 558 had nasal valve collapse and septal deviation in addition to inferior turbinate hypertrophy, resulting in a total of 724 patients with septal deviation and nasal valve stenosis with or without inferior turbinate hypertrophy. By measuring (724/965) x 15,981=11,990, we get the estimate of the total number of patients, per annum, who might be candidates for nasal valve surgery who present to otolaryngologists, with the primary complaint of nasal obstruction, and a measurement of severe/extreme on the nasal obstruction classification.

Specialty Otolaryngology Frequency 11990 Percentage 100.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 3,997
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This is approximately 1/3 of the national estimate oultined above.

Specialty Otolaryngology Frequency 3997 Percentage 100.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Minor procedure

BETOS Sub-classification Level II:
Musculoskeletal

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 30140

SPECIALTY SOCIETY(IES): AAOHNS

PRESENTER(S): Drs. Manes and Manning

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: January 2020

CPT Code	Long Descriptor	Global Period
30468	Repair of nasal valve collapse with subcutaneous/submucosal lateral wall implant(s)	000

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
30468	A 50-year-old male presents with chronic nasal obstruction affecting his activity level and sleep despite medical management. Exam reveals nasal valve collapse on normal inspiration relieved by Cottle maneuver. Patient undergoes bilateral absorbable nasal implants to support the upper and lower lateral nasal cartilages.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   Our specialty formed a panel of experts to develop practice expense recommendations for this family of codes. The panel was comprised of our RUC Advisor and multiple clinical experts who practice in the areas of general otolaryngology, rhinology and allergy. The expert panel members also practice across in settings that vary by size, geography, and represent both private and academic settings.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code, but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here (*for service reviewed prior to the implementation of clinical activity codes, detail is not provided in the RUC database, please contact Samantha Ashley at samantha.ashley@ama-assn.org for PE spreadsheets for your reference codes*):

   These are new codes, but we felt that CPT 31297 was most clinical similar and our surveyees also selected it as a KRS.

3. Is this code(s) typically reported with an E/M service?

   No.

4. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:

   We are recommending clinical staff pre-time above the standard for 000 globals of 0 minutes. This is consistent with the PE approved in the January 2017 for the FESS family of codes and October 2016 meeting for CPT 30140 Resection of Inferior Turbinate. The rationale for this time is that non-facility staff are essential to completing diagnostic and referral forms and providing education and consent to the patient prior to the procedure.

5. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies for the **code family**, please provide compelling evidence (please see *PE compelling evidence*

guidelines) Please explain if the increase can be entirely accounted for because of an increase in physician time:

N/A this is a new CPT code

The following new supplies were added to this code as compared to the comparison code's PE:
SA048 pack, minimum multi-specialty visit – *this was erroneously left out of the PE for comparator code 30140. Necessary to keep the area clean.*
SJ043 povidone swabsticks (3 pack uou) - *nasal vestibule swab to clean area before inject*
SB012 drape, sterile, for Mayo stand - *drape for mayo stand*
SB019 drape-towel, sterile 18in x 26in - *placed on SMR cart to work - load implant here*

The following new equipment was added to this code as compared to the comparison code's PE:
EF015 mayo stand - *Place instruments and implant on this during procedure*

6. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see second worksheet in PE spreadsheet workbook*), please explain the difference here:

N/A

7. Please provide a brief description of the clinical staff work for the following:
   a. Pre-Service period:

Complete pre-service diagnostic and referral forms
Provide pre-service education/obtain consent

   b. Service period (includes pre, intra and post):

Greet patient, provide gowning, ensure appropriate medical records are available
Obtain vital signs (3-5) - *heart rate, blood pressure, temperature, oxygen saturation*
Prepare room, equipment and supplies
Prepare, set-up and start IV, initial positioning and monitoring of patient
Sedate/apply anesthesia
Assist physician or other qualified healthcare professional---directly related to physician work time (100%)
Monitor patient following procedure/service, multitasking 1:4
Clean room/equipment by clinical staff
Clean surgical instrument package -
Check dressings, catheters, wounds
Review home care instructions, coordinate visits/prescriptions - *educate on what patient needs to do at home - activity, meds / confirm pharmacy, set up f/u appt.*

   c. Post-service period:

Conduct patient communications - *check in to see how the patient is doing.*

8. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see second worksheet in PE spreadsheet workbook*):

N/A

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

9. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

N/A

INVOICES

10. ☒ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

11. ☒ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

12. If you wish to include a supply that is not on the list (*please see fourth worksheet in PE spreadsheet workbook*) please provide a paid invoice. Identify and explain the invoice here:

Added new supply Absorbable nasal implant and deployment device kit needed for the procedure.

13. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation. Please include the description, CMS supply code, unit, item quantity and unit price (if available). See documents two and three under PE reference materials on the RUC Collaboration Website for information on the contents of kits, packs and trays.

14. If you wish to include an equipment item that is not on the list (*please see fifth worksheet in PE spreadsheet workbook*) please provide a paid invoice. Identify and explain the invoice here:

N/A

15. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

No Computer Listed for these procedures.

16. List all the equipment included in your recommendation and the equipment formula chosen *(*please see document titled *Calculating equipment time).* If you have selected "other formula" for any of the equipment please explain here:

We selected "other formula" for line 134, Chair with headrest, reclining, exam. The reason for this is that it is the default formula with the monitoring time added to it. The patient is in this chair for the entire procedure (pre/intra/post) as well as the one hour of monitoring time. ENT offices do not have waiting rooms or stretchers for monitoring, so the patient remains in the exam chair during this time.

17. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail/explanation, please include here:

N/A

30468	Repair of nasal valve collapse with subcutaneous/submucosal lateral wall implant(s)	000

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
30468	A 50-year-old male presents with chronic nasal obstruction affecting his activity level and sleep despite medical management. Exam reveals nasal valve collapse on normal inspiration relieved by Cottle maneuver. Patient undergoes bilateral absorbable nasal implants to support the upper and lower lateral nasal cartilages.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   Our specialty formed a panel of experts to develop practice expense recommendations for this family of codes. The panel was comprised of our RUC Advisor and multiple clinical experts who practice in the areas of general otolaryngology, rhinology and facial plastics. The expert panel members also practice across in settings that vary by size, geography, and represent both private and academic settings.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code, but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here (*for service reviewed prior to the implementation of clinical activity codes, detail is not provided in the RUC database, please contact Samantha Ashley at samantha.ashley@ama-assn.org for PE spreadsheets for your reference codes*):

   This is a new code, but we felt that CPT 30140 was most clinical similar and our surveyees also selected it as a KRS.

3. Is this code(s) typically reported with an E/M service?

   No.

4. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:

   We are recommending clinical staff pre-time above the standard for 000 globals of 0 minutes. This represents extensive use of clinical staff per the PE Subcommittee standards and is consistent with the PE approved in the January 2017 for the FESS family of codes and October 2016 meeting for CPT 30140 Resection of Inferior Turbinate. The rationale for this time is that staff are essential to scheduling and completing paperwork necessary to schedule these procedures in the facility setting. All new codes are consistent with these recommendations and include time for extensive use of clinical staff time in the pre-service as well.

AMA/Specialty Society RVS Update Committee Summary of Recommendations
CMS Request - NPRM for 2019

January 2020

Atrial Septostomy – Tab 13

Two transvenous septostomy codes, CPT code 92992 *Atrial septectomy or septostomy; transvenous method, balloon (eg, Rashkind type) (includes cardiac catheterization)* and CPT code 92993 *Atrial septectomy or septostomy; blade method (Park septostomy) (includes cardiac catheterization)* were nominated by the Society for Cardiovascular Angiography and Interventions as potentially misvalued in comments on the CY 2019 PFS Final Rule. These services are typically performed on pediatric patients, a non-Medicare population, and are contractor priced. The specialty society requested that these services be surveyed through the RUC process. In January 2019, the RUC identified the possibility that related imaging guidance may not be correctly bundled into CPT code 92992. Therefore, the RUC recommended that CPT code 92992 be referred to the CPT Editorial Panel for revision to bundle in all forms of imaging guidance typically used during the procedure. Additionally, the specialty societies indicated that CPT code 92993 is antiquated and rarely performed. The RUC recommended that CPT code 92993 be referred to the CPT Editorial Panel for revision or possible deletion. The RUC recommended that the codes be surveyed as 000-day global periods because these procedures do not provide definitive therapy; the patients requiring these procedures often remain critically ill after the lifesaving/temporizing procedures. In September 2019, the CPT Editorial Panel deleted two codes describing atrial septostomy and replaced them including a new section in CPT with extensive guidelines and new descriptors to better describe bundled services for transcatheter atrial septostomy (TAS) and transcatheter intracardiac shunt creation by stent placement (TIS).

33741 ***Transcatheter atrial septostomy (TAS) for congenital cardiac anomalies to create effective atrial flow, including all imaging guidance by the proceduralist, when performed, any method (eg, Rashkind, Sang-Park, balloon, cutting balloon, blade)***
Septostomy is a rare, lifesaving, emergent procedure performed by pediatric interventional cardiologists for infants with a severe form of congenital heart disease. The level of difficulty has increased due in part to its performance on extremely small newborns and neonates. With the increasing numbers of successful premature infants surviving to delivery, the average gestational age and size of the patient who receives the intervention has progressively decreased (smallest 1200 grams). This progression of increasingly more premature infants has complicated the procedure further due to the numerous other comorbidities that accompany extreme prematurity, namely, immature pulmonary development and an increased incidence of acute kidney injury and hepatic dysfunction. However, the available equipment for performance of an atrial septostomy has not changed in the roughly five decades since this procedure was first performed. The result is a transition of the procedure being performed at the bedside, to one that most often now requires performance in the cardiac catheterization lab.

The RUC reviewed the survey results from 56 interventional cardiologists and pediatric/congenital interventional cardiologists and determined that a direct work RVU crosswalk to CPT code 33340 *Percutaneous transcatheter closure of the left atrial appendage with endocardial implant, including fluoroscopy, transseptal puncture, catheter placement(s), left atrial angiography, left atrial appendage angiography, when performed,*

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

and radiological supervision and interpretation (work RVU = 14.00, 90 minutes intra-service time and 183.0 minutes total time) would accurately reflect the physician work necessary for this service and falls appropriately between the median and survey 25th percentile. The crosswalk was selected for the RVU only, not the service period times, because the value has been recently RUC-reviewed (2016) and CMS-accepted and is an understandable intracardiac procedure that crosses from the right to the left side of the heart.

The RUC recommends 20 minutes pre-service evaluation time, 15 minutes pre-service positioning time, 15 minutes pre-service scrub/dress/wait time, 55 minutes intra-service time and 45 minutes immediate post-service time. The RUC discussed the difference in intensity between the survey code (IWPUT = 0.220) and the proposed crosswalk (IWPUT = 0.136). The specialties explained that the crosswalk code is an elective/scheduled adult procedure while the survey code is an emergent life-saving procedure on a newborn resulting in significantly higher intensity for the survey code. The specialties further explained that there is an issue for pediatric intensivists who cannot report for critical care due to another provider from the same specialty also reporting critical care on same day. The RUC recommended revising the pre-service package in order to capture the intensity involved in the pre-service time; thus, the RUC recommended the pre-service times as indicated by the survey respondents.

The RUC compared CPT code 33741 to the top key reference code 93580 *Percutaneous transcatheter closure of congenital interatrial communication (ie, Fontan fenestration, atrial septal defect) with implant* (work RVU = 17.97, 30 minutes pre-service time, 120 minutes intra-service time and 60 minutes immediate post-service time) and noted the intra-service time is more than double that of the survey code justifying the higher value. However, the RUC also noted that the higher intra-service time for the key reference service is offset by the intensity of the survey code. CPT code 33741 is considered more intense, with 75% of survey respondents that selected the reference code indicating that the survey code had more overall intensity/complexity relative to the key reference code. As with the crosswalk code, the difference in intensity is attributed to the precarious size of the patient and the urgent nature of the survey procedure. Per the vignette for 93580, patients range from infants to adults whereas the typical patient for the survey code is a 1-day old premature infant.

The RUC also referenced the second key reference code 92920 *Percutaneous transluminal coronary angioplasty; single major coronary artery or branch* (work RVU = 9.85, 29 minutes pre-service time, 68 minutes intra-service time and 30 minutes immediate post-service time) noting that these are high intensity codes, so it is difficult to rely only on intra-service time. However, the typical patient for 92920 is an adult in contrast to the survey code's vignette for a 1-day-old premature infant. Thus, the total time and intensity of the reference code is much less than the survey code. It was noted that 43% of survey respondents that selected the second key reference code (12.5%) rated the survey code as more intense and complex, justifying a higher work value for the survey code. The key reference codes appropriately bracket the survey code and demonstrate that the crosswalk value will maintain relativity within the family.

For additional support, the RUC compared the survey code to CPT code 31601 *Tracheostomy, planned (separate procedure); younger than 2 years* (work RVU = 8.00, 60 minutes pre-service time, 45 minutes intra-service time and 30 minutes immediate post-service time) noting that septostomy is similar to a tracheostomy of the heart. For both procedures, the potential outcome is the same, in the absence of a hole successfully being made, the patient will die. However, whereas the physician typically has full visualization of an immobile operative field, the neck area, when performing a tracheostomy, for septostomy the physician must rely on imaging guidance to perform the procedure in the heart, which remains

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

constantly moving. Moreover, the comparator code is a planned procedure on a typical 18-month-old patient while the survey code is an emergency procedure on a premature infant, thus the value and intensity are appropriately higher for the survey code.

The RUC concluded that CPT code 33741 should be valued based on a direct work RVU crosswalk to CPT code 33340 which falls between the median and 25th percentile as supported by the survey. **The RUC recommends a work RVU of 14.00 for CPT code 33741.**

33745 ***Transcatheter intracardiac shunt (TIS) creation by stent placement for congenital cardiac anomalies to establish effective intracardiac flow, all imaging guidance by the proceduralist when performed, left and right heart diagnostic cardiac catherization for congenital cardiac anomalies, and target zone angioplasty, when performed (eg, atrial septum, Fontan fenestration, right ventricular outflow tract, Mustard/Senning/Warden baffles); initial intracardiac shunt***

Transcatheter intracardiac shunt creation by stent implant is a procedure performed predominantly by pediatric interventional cardiologists for infants and children with severe forms of congenital heart disease. It is a rare procedure performed roughly half as often as a septostomy. The new code provides treatment for a variety of congenital heart defects ranging from a premature infant with hypoplastic left heart syndrome with a restrictive atrial communication, to an older child/adult with late post-surgical complications of prior repair of congenital heart defects (Fontan, Mustard, Senning, Warden procedures, to name a few).

There is no similarity in the work captured with CPT code 33745 and that for CPT code 33741. The latter is a replacement of the original 2 atrial septostomy codes (balloon and blade methods). The two old septostomy codes were felt to be similar and could be captured with a single code. CPT code 33745 is a new code created with the initial thought having been to capture the work performed in premature infants who underwent atrial decompression of hypoplastic left heart syndrome, with placement of a stent in a very restrictive atrial communication. As the code was developed, the specialty had at least six different diagnoses/scenarios for which a stent was placed in various positions within the heart. Rather than create six different codes, the specialties broadened the description to capture all of them rather than have six different codes of similar work. The physician work described in 33745 was not captured in the previous codes.

The RUC reviewed the survey results from 54 interventional cardiologists and pediatric/congenital interventional cardiologists and determined that the survey 25th percentile work RVU of 20.00 accurately reflects the physician work necessary for this service. The RUC recommends 25 minutes pre-service evaluation time, 15 minutes pre-service positioning time, 15 minutes pre-service scrub/dress/wait time, 92 minutes intra-service time and 60 minutes immediate post-service time. The RUC recommended revising the pre-service time package to reflect the survey results.

The RUC questioned the high intensity of the survey code given that it is not an emergent procedure. The specialties explained that the primary issue of increased complexity/stress/risk is surrounding the fact that these are stents implanted inside the beating heart itself and not within a blood vessel as all other stent CPT codes. Unlike those other interventions, any error in the precise placement of the stent in these procedures results in a delivered stent loose within the heart and requires emergency surgery to retrieve.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

The RUC compared CPT code 33745 to the top key reference code 93581 *Percutaneous transcatheter closure of a congenital ventricular septal defect with implant* (work RVU = 24.39, 30 minutes pre-service time, 180 minutes intra-service time and 60 minutes immediate post-service time) and noted the intra-service time is nearly twice that of the survey code justifying the higher value. However, the RUC also noted that the higher intra-service time for the key reference service is offset by the intensity of the survey code. CPT code 33745 is considered more intense for the reasons, with 89% of survey respondents that selected the reference code indicating that the survey code had more overall intensity/complexity relative to the key reference code.

The RUC also referenced the second key reference code 93580 *Percutaneous transcatheter closure of congenital interatrial communication (ie, Fontan fenestration, atrial septal defect) with implant* (work RVU = 17.97 and 30 minutes pre-service time, 120 minutes intra-service time and 60 minutes immediate post-service time) and again noted that the higher intra-service time for the key reference service is offset by the intensity of the survey code. All the survey respondents that selected the second key reference code (26%) rated the survey code as more intense and complex, justifying the higher work value for the survey code. The RUC concluded that CPT code 33745 should be valued at the 25th percentile work RVU of 20.00 as supported by the survey and appropriately bracketed by the key reference service codes. **The RUC recommends a work RVU of 20.00 for CPT code 33745.**

33746 ***Transcatheter intracardiac shunt (TIS) creation by stent placement for congenital cardiac anomalies to establish effective intracardiac flow, all imaging guidance by the proceduralist when performed, left and right heart diagnostic cardiac catherization for congenital cardiac anomalies, and target zone angioplasty, when performed (eg, atrial septum, Fontan fenestration, right ventricular outflow tract, Mustard/Senning/Warden baffles); each additional intracardiac shunt location (List separately in addition to code for primary procedure)***
The RUC reviewed the survey results from 53 interventional cardiologists and pediatric/congenital interventional cardiologists and determined that the survey median work RVU of 10.50 accurately reflects the physician work necessary for this add-on service, which is needed under emergency circumstances. The RUC recommends 60 minutes intra-service time. As with the base code (33745), the primary issue of increased intensity/complexity surrounds the fact that these are stents implanted inside the beating heart itself and not within a blood vessel as all other stent CPT codes. Unlike those other interventions, any error in the precise placement of the stent in these procedures results in a delivered stent loose within the heart and requires emergency surgery to retrieve. CMS inquired whether, when it is determined that the second stent is needed, is it typically straddling a vessel. The specialties confirmed that the stent typically overhangs the heart, most commonly in a different site within the heart.

The RUC compared CPT code 33746 to the top key reference code 93592 *Percutaneous transcatheter closure of paravalvular leak; each additional occlusion device (List separately in addition to code for primary procedure)* (work RVU = 8.00 and 60 minutes intra-service time) and noted that the ZZZ codes have the same intra-service time but the survey code is valued higher due to the higher intensity of the code. For the reasons, the survey code is considered more intense with 74% of survey respondents that selected this reference code indicating that the survey code had more overall intensity/complexity relative to the key reference code.

For additional support, the RUC referenced the second key reference code 92998 *Percutaneous transluminal pulmonary artery balloon angioplasty; each additional vessel (List separately in addition to code for primary procedure)* (work RVU = 5.99 and 58 minutes intra-service time) and noted

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

the lesser intra-service time and physician work for the key reference service. The reference code is also much less intense than the survey code with 77% of survey respondents that selected the second key reference code (25%) rating the survey code as more intense and complex, again justifying the higher work value for the survey code. The RUC concluded that CPT code 33746 should be valued at the median work RVU of 10.50 as supported by the survey. **The RUC recommends a work RVU of 10.50 for CPT code 33746.**

Practice Expense
These services are facility-only and have no direct practice inputs. **The RUC recommends no direct practice inputs for CPT codes 33741, 33745, and 33746.**

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
Surgery **Cardiovascular System** **Heart and Pericardium** **Shunting Procedures** Codes 33741, 33745 are used to report creation of effective intracardiac blood flow in the setting of congenital heart defects. Code 33741 (transcatheter atrial septostomy) involves the percutaneous creation of improved atrial blood flow (eg, balloon/blade method), typically in infants ≤4 kg with congenital heart disease. Code 33745 is typically used for intracardiac shunt creation by stent placement to establish improved intracardiac blood flow (eg, atrial septum, Fontan fenestration, right ventricular outflow tract, Mustard/Senning/Warden baffles). Code 33746 is used to describe each additional intracardiac shunt creation by stent placement at a separate location during the same session as the primary intervention (33745). Code 33741 includes percutaneous access, placing the access sheath(s), advancement of the transcatheter delivery system and creation of effective intracardiac atrial blood flow. Codes 33741, 33745 include, when performed, ultrasound guidance for vascular access and fluoroscopic guidance for the intervention. Code 33745 additionally includes intracardiac stent placement, target zone angioplasty preceding or after stent implantation, and complete diagnostic right and left heart catheterization, when performed. Diagnostic cardiac catheterization is not typically performed at the same session as transcatheter atrial septostomy (33741) and, when performed, may be separately reported. Diagnostic cardiac catheterization is typically performed at the same session with 33745 and the code descriptor includes this work, when performed. Cardiovascular injection procedures for diagnostic angiography reported using 93563, 93565, 93566, 93567, 93568 are not typically performed at the same session as 33741. Although diagnostic angiography is typically performed during 33745, target vessels and chambers are highly variable and, when performed, for an evaluation separate and distinct from the shunt creation may be reported separately.				

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Codes 33745, 33746 are used to describe intracardiac stent placement. Multiple stents placed in a single location may only be reported with a single code. When additional, different intracardiac locations are treated in the same session, 33746 may be reported. Codes 33745, 33746 include any and all balloon angioplasty(ies) performed in the target lesion, including any pre-dilation (whether performed as a primary or secondary dilation), post-dilation following stent placement, or use of larger/smaller balloon to achieve therapeutic result. Angioplasty in a separate and distinct intracardiac lesion may be reported separately. Use 33746 in conjunction with 33745.

Diagnostic right and left heart catheterization codes 93451, 93452, 93453, 93456, 93458, 93460, 93530, 93531, 93532, 93533, should **not** be used in conjunction with 33741, 33745 to report:

1. Fluoroscopic guidance for the intervention, or

2. Limited hemodynamic and angiographic data used solely for purposes of accomplishing the intervention (eg, measurement of atrial pressures before and after septostomy, atrial injections to determine appropriate catheter position)

Diagnostic congenital right and left heart catheterization codes 93530, 93531, 93532, 93533 performed at the same session as 33741, may be separately reported, if:

1. No prior study is available, and a full diagnostic study is performed, or

2. A prior study is available, but as documented in the medical record:

   a. There is inadequate visualization of the anatomy and/or pathology, or

   b. The patient's condition with respect to the clinical indication has changed since the prior study, or

   c. There is a clinical change during the procedure that requires a more thorough evaluation

For same session diagnostic congenital catheterization services, the appropriate diagnostic cardiac catheterization code(s) for congenital anomalies 93530, 93531, 93532, 93533 may be reported by appending with modifier 59, indicating separate and distinct procedural service(s) from 33741. For same session diagnostic cardiac angiography for an evaluation separate and distinct from the shunt creation, report the appropriate contrast injection(s) performed 93563, 93565, 93566, 93567, 93568 may be reported by appending with modifier 59, indicating separate and distinct procedural service(s) from 33741, 33745.

33735 *Atrial septectomy or septostomy; closed heart (Blalock-Hanlon type operation)*

33736 *open heart with cardiopulmonary bypass*

(Do not report modifier 63 in conjunction with 33735, 33736)

33737 *open heart, with inflow occlusion*

~~(For transvenous method cardiac catheterization balloon atrial septectomy or septostomy (Rashkind type), use 92992)~~

~~(For blade method cardiac catheterization atrial septectomy or septostomy (Sang Park septostomy), use 92993)~~

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

●33741	P1	Transcatheter atrial septostomy (TAS) for congenital cardiac anomalies to create effective atrial flow, including all imaging guidance by the proceduralist, when performed, any method (eg, Rashkind, Sang-Park, balloon, cutting balloon, blade) (Do not report modifier 63 in conjunction with 33741) (For transseptal puncture, use 93462)	000	14.00
●33745	P2	Transcatheter intracardiac shunt (TIS) creation by stent placement for congenital cardiac anomalies to establish effective intracardiac flow, all imaging guidance by the proceduralist when performed, left and right heart diagnostic cardiac catherization for congenital cardiac anomalies, and target zone angioplasty, when performed (eg, atrial septum, Fontan fenestration, right ventricular outflow tract, Mustard/Senning/Warden baffles); initial intracardiac shunt	000	20.00
+●33746	P3	each additional intracardiac shunt location (List separately in addition to code for primary procedure) (Use 33746 in conjunction with 33745) (Do not report 33745, 33746 in conjunction with 93530, 93531, 93532, 93533)	ZZZ	10.50

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:33741 Tracking Number P1 Original Specialty Recommended RVU: **17.00**
Presented Recommended RVU: **14.00**
Global Period: 000 Current Work RVU: **N/A** RUC Recommended RVU: **14.00**

CPT Descriptor: Transcatheter atrial septostomy (TAS) for congenital cardiac anomalies to create effective atrial flow, including all itransmaging guidance by the proceduralist, when performed, any method (eg, Rashkind, Sang-Park, balloon, cutting balloon, blade)

(Do not report modifier 63 in conjunction with 33741)

(For transseptal puncture, use 93462)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 1-day-old premature male infant with transposition of the great arteries is severely cyanotic and in cardiogenic shock following delivery. He is felt to be too small and hemodynamically unstable to proceed for definitive surgical repair. He is taken to the cardiac catheterization lab for transcatheter palliative therapy prior to definitive repair.

Percentage of Survey Respondents who found Vignette to be Typical: 93%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review noninvasive work-up including echocardiogram, CXR, EKG, or any other pertinent studies and lab results. Based on available information, determine all potential components required for the procedure plus contingencies and backups. Ensure presence of all required components prior to procedure start. Perform and document a targeted history and physical exam. Provide a description of the procedure and expected results to the parents of the patient, a description of potential hazards and secure signature of informed consent for the procedure. Acquaint the patient or parents with the catheterization laboratory, if time permits. Conduct final procedural coordination with technicians, nurses, and the anesthesiology team. Don surgical scrubs & lead. Position patient. Prep, scrub, drape and wait. All necessary catheters, wires, and supplies are selected and assembled on the sterile table. Procedures are typically conducted under general anesthesia.

Description of Intra-Service Work: Cardiac catheterization during this procedure refers solely to the placement of a unique, therapeutic, septostomy catheter from the venous sheath into the right atrium, and further across to the left atrium. Any additional diagnostic right or left cardiac catheterization following the septostomy procedure is separately reportable. Local anesthetic may be used. Access is obtained percutaneously, typically into the femoral vein. Alternatively, the umbilical vein may be used.. Ultrasound evaluation and real time guidance may be used for percutaneous needle entry of the femoral vein. A thin guide wire is passed through the needle into the vessel. A venous sheath is placed, over a wire, into either the femoral or umbilical vein. The wire is removed and the sheath flushed.

The therapeutic septostomy catheter is passed through the sheath and directed from the venous system into the right atrium and across the restrictive atrial communication to the left atrium. This is performed under fluoroscopic and/or transthoracic echocardiographic guidance. Transthoracic echocardiographic guidance is typically performed by another provider, and additionally reportable. Often, the anatomy may be complicated and require the use of a diagnostic end hole catheter and

guide wire to help cross the atrial communication, and establish a secure wire position in the left heart. Typically, the wire is positioned in one of the left pulmonary veins. The guide catheter is then removed and, the septostomy catheter is advanced over the wire into the left atrium. Position is confirmed by transthoracic echocardiography as well as fluoroscopically. The balloon is inflated with a pre-determined amount of contrast and saline mixture, and then carefully but quickly pulled across to the right atrium under continuous fluoroscopic and/or echocardiographic observation. Once on the right side of the heart, the balloon is deflated so as not to obstruct the systemic venous return. A transthoracic echocardiogram is performed to evaluate adequacy of the communication. Often, the balloon is advanced across to the left side once again and the process repeated to further enlarge the communication. At times, the septal tissue is too thick and necessitates the use of a specialized septostomy blade catheter. Similar to the balloon method, the blade catheter is advanced into the left atrium, the cutting blade is then exposed, and the catheter pulled slowly across the atrial septum, creating an incision of the septal tissue. Alternatively, a static septoplasty may also be performed. This involves passage of a larger diameter, high pressure, angioplasty balloon catheter across the atrial communication and enlarging the communication by static inflation of the balloon to stretch/tear the communication to a larger size. Following the procedure, the catheter is removed and compression hemostasis achieved in the catheterization lab, and prior to being taken back to the intensive care unit. If the umbilical vein was used for the procedure, a guide wire is typically passed through the sheath, prior to removal, and the sheath exchanged for an umbilical venous catheter, to be used for ongoing inpatient care.

Description of Post-Service Work: Following catheterization, a brief procedure note is documented in the medical record. Once hemostasis of the catheterization site has been ensured, the patient is transported to the intensive care unit and a verbal report given to the accepting team. Medication reconciliation is performed in the EMR and post procedure orders are placed for nursing care. A detailed report is also documented, which includes a diagram of the congenital heart defect and description of the procedure performed. There is at least one physician bedside visit to assess the patient, including the catheterization sites, and discuss the findings with the patient and/or family.

Physical effort required	14%	71%	14%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	14%	29%	58%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

The two transvenous septostomy codes were nominated by SCAI as potentially misvalued in comments on the CY 2019 PFS final rule. These primarily pediatric services are currently carrier-priced which places an undue burden on pediatric interventional cardiologists and their patients' families. After attempting to survey these codes for the January 2019 meeting, the RUC decided it would be better for carrier pricing to be maintained while the codes went to CPT to address shortcomings in the inclusion of imaging guidance.

Septostomy is a lifesaving, emergent, procedure performed by pediatric interventional cardiologists for infants with a severe form of congenital heart disease. The difficulty is partly due to the performance on extremely small infants. With the increasing numbers of successful premature infants surviving to delivery, the average gestational age and size of the patient who receives the intervention has progressively decreased. This progression of increasingly more premature infants has complicated the procedure further due to the numerous other comorbidities that accompany extreme prematurity, namely, immature pulmonary development and an increased incidence of acute kidney injury and hepatic dysfunction. However, the available equipment for performance of an atrial septostomy has not changed in the roughly 5 decades since this procedure was first performed. The end result is a transition of the procedure being able to be performed largely at the bedside, to one that most often now requires performance in the catheterization lab. Last year, the original codes were re-surveyed, however, it was clearly evident that these changes in practice were no longer captured by the existing codes. Our specialty society pediatric interventional cardiology CPT work group discussed this issue extensively and decided patients and the community were best served by deleting the original codes and drafting 3 new codes to capture the existing patient population and work performed.

SCAI and ACC randomly surveyed pediatric and adult structural heart disease interventional cardiologists, as designated by membership rolls. The survey was completed by physicians who have experience with the service. The key reference code is 93580 for transcatheter closure of an atrial septal defect. It was selected by 43% of respondents. Most of these respondents indicated 33741 was more intense/complex overall. The second key reference code is 92920 for percutaneous transluminal coronary angioplasty. It was selected by 13% of respondents. Most of these respondents also indicated 33741 was more intense/complex overall.

The society reviewers reviewed the pre-service and post-service package times in comparison to the survey pre-service times and post-service times. We are proposing to use preservice package 4 for difficult patients under general anesthesia with time removed to align with the survey. We propose postservice package 9B for difficult patients under general anesthesia with time added/adjusted as follows to reflect work beyond the typical package:

Total Post-Service Time	**9B General Anesthesia or Complex Regional Block/Complex Procedure**	**Rec.**	**Rationale**
Total Post-Service Time	**33**	**45**	
Details:			
Application of Dressing	2	1	
Transfer of supine patient off table	1	3	One minute would be appropriate for elective, outpatient cases post conscious sedation. These procedures are performed on inpatient newborns, post general anesthesia, on a ventilator, and remaining in critical condition.
Operative Note	5	5	
Monitor patient recovery/stabilization	10	1	Patient is transferred urgently to the ICU who assume responsibility for further monitoring care.
Communication with patient and/or family	5	15	Communication with a parent is exceedingly difficult as it typically involves communication performed twice, first with the father who accompanied the infant, and a second time, with the mother who remains in the maternity ward. This latter is often performed in person and requires the physician to walk to the adult tower / women's hospital as the pediatric catheterization labs are never in those areas. Communication is also significantly more time consuming in discussion with parents of a critically ill infant than an elective, non-emergent situation with an adult patient.
Written post-operative note	5		The pediatric congenital catheterization report is significantly more complex and lengthier as compared to other postoperative reports as they also

		15	include a detailed, anatomically correct, drawing of the heart, description of all catheter and wire manipulations, the intervention, description of any and all angiography.
Post-Operative Orders and Order Entry	5	5	

For additional comparison, the societies identified MPC code 52352 for cystourethroscopy as a comparison. This code has 10 minutes less intraservice time and 8 minutes less total time. By magnitude estimation, we believe it is appropriate for 92992 for catheter work inside an infant's heart to have a work RVU significantly higher than 52352 which describes work performed the ureter and bladder.

The resulting high IWPUT (0.284) that would result from the proposed value was discussed by the ACC and SCAI physician reviewers. Other high IWPUT procedures were reviewed for comparison. Procedure code 58672 (Laparoscopy, surgical; with fimbrioplasty) has an IWPUT of 0.377. Both, septostomy (33741) and fimbrioplasty (58672), are performed primarily in non-Medicare populations. Both procedures are performed in exceedingly small spaces, typically only 1 cm in size. ACC and SCAI reviewers also compared septostomy (33741) to tracheostomy (31605), which has an IWPUT of 0.2768. Both procedures are typically performed under emergent conditions. In essence, septostomy is a "tracheostomy of the heart". For both procedures, the potential outcome is the same, in the absence of a hole successfully being made – the patient will die. However, whereas the operator typically has full visualization of a fairly immobile operative field, the neck area, when performing a tracheostomy, for septostomy the physician must rely on imaging guidance to perform the procedure in the heart, which remains constantly moving. I n reviewing other high IWPUT procedures, based on magnitude estimation, the societies believe the resulting high IWPUT of 0.284 that would result from the proposed value of 17.00 RVUs for 33741 is appropriate and relative.

Therefore, for code 33741 the societies **recommend the survey median percentile work RVU of 17.00 with 20 minutes preservice time (package 4 with 20 minutes removed from the preservice eval time, as well as, 5 minutes removed from the survey time for scrub, dress and wait to align it with the package time), 55 minutes intraservice time from the survey median and 45 minutes postservice time from package 9B with modification**. We believe these values are appropriate given the intensity of the work necessary for these fragile infant patients.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 92992

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Cardiology How often? Rarely

Specialty Interventional Cardiology How often? Rarely

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 1000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. 2012 Medicaid data in the RUC database inlcuded 263 units of service for 92992. Assuming that representing a third of services nationally, we estimate 1000 units of service.

Specialty Cardiology Frequency 500 Percentage 50.00 %

Specialty Interventional Cardiology Frequency 500 Percentage 50.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 40 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Fewer than 40 92992 services have been performed in FFS each year over the past decade.

Specialty Cardiology Frequency 20 Percentage 50.00 %

Specialty Interventional Cardiology Frequency 20 Percentage 50.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? No

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Major procedure

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 92992

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:33745 Tracking Number P2 Original Specialty Recommended RVU: **24.21**
Presented Recommended RVU: **20.00**
Global Period: 000 Current Work RVU: **N/A** RUC Recommended RVU: **20.00**

CPT Descriptor: Transcatheter intracardiac shunt (TIS) creation by stent placement for congenital cardiac anomalies to establish effective intracardiac flow, all imaging guidance by the proceduralist when performed, left and right heart diagnostic cardiac catherization for congenital cardiac anomalies, and target zone angioplasty, when performed (eg, atrial septum, Fontan fenestration, right ventricular outflow tract, Mustard/Senning/Warden baffles); initial intracardiac shunt

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 10-year-old male with hypoplastic left heart syndrome, status post Fontan procedure 7 years prior, develops worsening single ventricular function and increased pulmonary arterial and Fontan pressures. He is felt to be a poor (high-risk) candidate for surgical Fontan revision. He is taken to the cardiac catheterization lab for relief of the obstruction at the Fontan fenestration with stent implant.

Percentage of Survey Respondents who found Vignette to be Typical: 100%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review noninvasive work-up including echocardiogram, CXR, EKG, cardiac CT, MRI, or 3D priter model and review of any other pertinent studies and lab results. Based on available information, determine all potential components required for the procedure plus contingencies and backups. Ensure presence of all required components prior to procedure start. Perform and document a targeted history and physical exam. Provide a description of the procedure and expected results to the parents of the patient, a description of potential hazards and secure signature of informed consent for the procedure. Acquaint the patient or parents with the catheterization laboratory. Conduct final procedural coordination with technicians, nurses, and the anesthesiology team. Don surgical scrubs & lead. Position patient. Prep, scrub, drape and wait. All necessary catheters, wires, and supplies are selected and assembled on the sterile table. Procedures are typically conducted under general anesthesia.

Description of Intra-Service Work: Access is obtained percutaneously from two venous sites, (eg, internal jugular, subclavian, femoral vein), and a femoral artery. A sheath is initially placed in the veins and artery to establish secure access. Multiple sheath exchanges are often needed during the procedure to allow for maintaining as small of an introducer as possible for the majority of the procedure and yet facilitate the stenting procedure. Catheter introductions are then performed through these sheaths and manipulated into the necessary positions. Baseline pressures may be recorded and blood sampling may be conducted in each of the right and left heart structures to be used for planning of the intervention. Once baseline hemodynamic data is collected, the diagnostic catheter is removed and an angiographic catheter inserted and used for any additional necessary angiography of chambers or vessels (each separately reported). A wire is placed across the stenotic fenestration, into the atrium, and further directed into either the pulmonary vein, or ventricle to establish a secure position. The short sheath initially placed for the diagnostic portion is then exchanged over the wire for a larger, and longer therapeutic sheath, which is advanced into the atrium. Typically, the fenestration is too small to allow for passing the larger sheath into the atrium and may require performance of initial high-pressure target zone angioplasty with a small diameter angioplasty balloon to do so. Occasionally, the fenestration has completely closed and may require performance of a trans-septal perforation, and is additionally reportable (with use of code +93462). With the long sheath in the Fontan conduit, the angioplasty balloon catheter is advanced over the wire and partially across the fenestration. The balloon is

inflated to stretch the fenestration, then, as iut is deflated, the sheath is advanced over the deflating balloon, which acts as a dilator to allow the sheath to be advanced into the heart. Once the sheath is in position, the appropriate stent is prepped on the back table, mounted on an appropriate sized balloon (when performed), and delivered over the wire, up to the sheath tip. The entire system is then withdrawn partially so that the stent is centered over the fenestration. This procedure requires landing an intra-cardiac stent with precise positioning such that the distal half of the stent is free floating within the atrium, and the proximal half free floating in the Fontan conduit. The sheath is partially pulled back, exposing the distal half of the stent. The balloon is then slowly inflated, flaring the distal half of the stent open inside the atrium. The sheath is then withdrawn further, fully exposing the stent, which allows the proximal half to also be flared open, effectively “dog boning” the stent. The balloon is then further inflated as needed to adjust the central portion diameter to the desired size. The balloon catheter is then removed with great care so as not to dislodge the stent. A guide catheter is inserted and advanced carefully across the stent and used to remove the wire, after which, the catheter within the atrium is used to perform an angiogram and record pressures. The catheter is carefully removed from the heart and a final angiogram performed with an angiographic catheter in the Fontan conduit. Complete right and left heart catheterization is typically repeated following the intervention to establish new baseline measurements and further assess the intervention or if further intervention is needed. Following the completion of the procedure, all catheters and sheaths are removed and compression hemostasis achieved in the catheterization lab, prior to the patient being taken to recovery.

Description of Post-Service Work: Following catheterization, a brief procedure note is documented in the medical record. Once hemostasis of the catheterization site has been ensured, the patient is transported to the intensive care unit and a verbal report given to the accepting team. Medication reconciliation is performed in the EMR and post procedure orders are placed for nursing care. A detailed report is also documented, which includes a diagram of the congenital heart defect and description of the procedure performed. There is at least one physician bedside visit to assess the patient, including the catheterization sites, and discuss the findings with the patient and/or family

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	0%	11%	47%	42%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	5%	21%	74%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	11%	32%	57%
Physical effort required	11%	37%	53%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	5%	11%	84%

2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	0%	36%	64%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	7%	93%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	7%	93%
Physical effort required	0%	14%	86%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	7%	93%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

The atrial septostomy codes were nominated by SCAI as potentially misvalued in comments on the CY 2019 PFS final rule. These primarily pediatric services are currently carrier-priced which places an undue burden on pediatric interventional cardiologists and their patients' families. After attempting to survey these codes for the January 2019 meeting, the RUC decided it would be better for carrier pricing to be maintained while the codes went to CPT to address shortcomings in the inclusion of imaging guidance. That process also led to recognition of a shortcoming in these codes when a shunt is placed, resulting in 33745.

Transcatheter intracardiac shunt creation by stent implant is a procedure performed predominantly by pediatric interventional cardiologists for infants and children with severe forms of congenital heart disease. It is a service which has been provided regularly for over a decade, however, for which, there has never been an appropriate CPT code for reimbursement. The new code provides treatment for a variety of congenital heart defects ranging from a premature infant with hypoplastic left heart syndrome with a restrictive atrial communication, to an older child/adult with late post-surgical complications of prior repair of congenital heart defects (Fontan, Mustard, Senning, Warden procedures, to name a few).

There is no similarity in the work captured with 33745 and that for 33741. The latter is a replacement of the original 2 atrial septostomy codes (balloon and blade methods). These 2 old codes are now felt to be too similar and could be captured with a single code. The former, is a new code created with the initial thought having been to capture the work performed in premature infants who underwent atrial decompression of hypop465lastic left heart syndrome, with placement of a stent in a very restrictive atrial communication. As the code was developed, the specialty had at least 6 different diagnoses/scenarios for which a stent was placed in various positions within the heart, and broadened the description to capture all of them rather than have 6 different codes of similar work. Nothing described by this new code was in any way captured by the old septostomy codes and therefore last year's survey did not address this work in any way.

The primary issue of increased complexity/stress/risk is surrounding the fact that these are stents implanted inside the beating heart itself and not within a blood vessel as ALL other stent CPT codes are designed for. Unlike those other interventions, any error in the precise placement of the stent in these procedures results in a delivered stent loose within the heart and requiring emergent surgery to retrieve. This, with the understanding, that we often are performing these procedures precisely for the reason of avoiding surgery in a high surgical risk patient.

SCAI and ACC randomly surveyed pediatric and adult structural heart disease interventional cardiologists as designated by membership rolls. The survey was completed by physicians who have experience with the service. The key reference code is 93581 for percutaneous transcatheter closure of a congenital ventricular septal defect with implant. It was selected by 35% of respondents. Most of these respondents indicated 33745 was more intense/complex overall. The second key reference code is 93580 for percutaneous transcatheter closure of congenital interatrial communication with implant. It was selected by 26% of respondents. Most of these respondents also indicated 33745 was more intense/complex overall.

The society reviewers reviewed the pre-service and post-service package times in comparison to the survey pre-service times and post-service times. We are proposing to use preservice package 4 for difficult patients under general anesthesia with time removed to align with the survey. We propose postservice package 9B for difficult patients under general anesthesia with time added/adjusted as follows to reflect work beyond the typical package:

Total Post-Service Time	**9B General Anesthesia or Complex Regional Block/Complex Procedure**	**Rec.**	**Rationale**
Total Post-Service Time	**33**	**60**	
Details:			
Application of Dressing	2	2	
Transfer of supine patient off table	1	3	One minute would be appropriate for elective, outpatient cases post conscious sedation. These procedures are performed on inpatient newborns, post general anesthesia, on a ventilator, and remaining in critical condition.
Operative Note	5	5	
Monitor patient recovery/stabilization	10	5	Patient is transferred urgently to the ICU who assume responsibility for further monitoring care. Some stabilization is performed by proceduralist prior to transfer to inpatient room.
Communication with patient and/or family	5		Communication with a parent is exceedingly difficult as it typically involves communication performed twice, first with the father who accompanied the infant, and a second time, with the mother who

		15	remains in the maternity ward. This latter is often performed in person and requires the physician to walk to the adult tower / women's hospital as the pediatric catheterization labs are never in those areas. Communication is also significantly more time consuming in discussion with parents of a critically ill infant than an elective, non-emergent situation with an adult patient.
Written post-operative note	5	25	The pediatric congenital catheterization report is significantly more complex and lengthier as compared to other postoperative reports as they also include a detailed, anatomically correct, drawing of the heart, description of all catheter and wire manipulations, the intervention, description of any and all angiography. Additionally, for this service, extensively more historical information is added to the report, more diagnostic information as well which must be incorporated into the report. All hemodynamics are also reported on the anatomically correct heart drawing as well as in tabular format in the report body. Numerous angiographic descriptions must also be provided In detail.
Post-Operative Orders and Order Entry	5	5	

The resulting high IWPUT (0.247) that would result from the proposed value was discussed by the ACC and SCAI physician reviewers. Other high IWPUT procedures were reviewed for comparison. Procedure code 58672 (Laparoscopy, surgical; with fimbrioplasty) has an IWPUT of 0.377. Both, septostomy (33745) and fimbrioplasty (58672), are performed primarily in non-Medicare populations. Both procedures are performed in exceedingly small spaces, typically only 1 cm in size. ACC and SCAI reviewers also compared septostomy (33745) to tracheostomy (31605), which has an IWPUT of 0.2768. Both procedures are typically performed under emergent conditions. In essence, septostomy is a "tracheostomy of the heart". For both procedures, the potential outcome is the same, in the absence of a hole successfully being made – the patient will die. However, whereas the operator typically has full visualization of a fairly immobile operative field, the neck area, when performing a tracheostomy, for septostomy the physician must rely on imaging guidance to perform the procedure in the heart, which remains constantly moving. I n reviewing other high IWPUT procedures, based on magnitude estimation, the societies believe the resulting high IWPUT of 0.247 that would result from the proposed value of 24.21 RVUs for 33745 is appropriate and relative.

Therefore, for code 33745 the societies **recommend the survey median percentile work RVU of 24.21 with 25 minutes preservice time, 92 minutes intraservice time from the survey median, and 60 minutes postservice time from package 9B with modification**. We believe these values are appropriate given the intensity of the work necessary for these fragile infant patients.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 93799

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Cardiology How often? Rarely

Specialty Interventional Cardiology How often? Rarely

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 500
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. This service is performed roughly half as often as a septostomy.

Specialty Cardiology Frequency 250 Percentage 50.00 %

Specialty Interventional Cardiology Frequency 250 Percentage 50.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 20 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Fewer than 40 92992 services have been performed in FFS each year over the past decade This service is no more frequent than that, estimated to be performed about half as often by our panel.

Specialty Cardiology Frequency 10 Percentage 50.00 %

Specialty Interventional Cardiology Frequency 10 Percentage 50.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? No

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Major procedure

CPT Descriptor: Transcatheter intracardiac shunt (TIS) creation by stent placement for congenital cardiac anomalies to establish effective intracardiac flow, all imaging guidance by the proceduralist when performed, left and right heart diagnostic cardiac catherization for congenital cardiac anomalies, and target zone angioplasty, when performed (eg, atrial septum, Fontan fenestration, right ventricular outflow tract, Mustard/Senning/Warden baffles); each additional intracardiac shunt location (List separately in addition to code for primary procedure)
(Use 33746 in conjunction with 33745)
(Do not report 33745, 33746 in conjunction with 93530, 93531, 93532, 93533)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 5-day-old boy with hypoplastic left heart syndrome with mitral atresia, restrictive atrial septum, and pulmonary vein stenosis, and a high-risk surgical candidate. He develops worsening cardiac output, renal insufficiency, and progressive cyanosis. He is taken to the cardiac catheterization lab to improve the obligatory left to right shunting with stenting of the atrial septum as well as stent placement to relieve the pulmonary venous obstruction to the left atrium.

Percentage of Survey Respondents who found Vignette to be Typical: 92%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work:

Description of Intra-Service Work: Following completion of the initial stent deployment, a diagnostic guide catheter is used along with a soft guidewire, to selectively catheterize the second lesion. Typically, the more distal lesion is addressed first, so as not to risk causing dislodgement of the initial stent with any further catheter manipulation in the vicinity. However, if doing so, causes hemodynamic instability, the more proximal lesion may have to be addressed first, increasing the complexity of the subsequent stent delivery. To avoid significant torque on the catheter, which may cause propping open of one or more of the heart valves, a series of long sheaths and catheters may have to be used to safely access the second lesion. Once a guide catheter is placed into the second lesion, the soft guidewire is exchanged for a stiffer support wire, and the guide diagnostic guide catheter removed. A long sheath, or other appropriate delivery guide catheter is then inserted over the wire, and advanced into position across the second lesion. The second stent is prepped, and advanced over the wire, and into position across the lesion. Angiography is performed through the sheath to ensure proper positioning. Due to the position within a beating heart, this may require numerous fine adjustments and multiple angiograms. The balloon is then inflated, and the stent deployed. The balloon catheter is carefully removed, with extreme caution not to dislodge the stent. A post stent angiogram is performed to evaluate the position and rule out any adverse effects. A guide catheter is reinserted and used to carefully remove the support wire, again, taking care not to dislodge the stent in doing so. A final pressure gradient is typically measured as the remaining guide catheter is then removed from the heart. Following the completion of the procedure, all catheters and sheaths are removed and compression hemostasis achieved in the catheterization lab, prior to the patient being taken to recovery.

Description of Post-Service Work:

SURVEY DATA

RUC Meeting Date (mm/yyyy)	01/2020		
Presenter(s):	Sergio Bartakian, MD; Ed Toggart, MD; Richard Wright, MD; Edward Tuohy, MD

Physical effort required	0%	46%	56%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	15%	85%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

The atrial septostomy codes were nominated by SCAI as potentially misvalued in comments on the CY 2019 PFS final rule. These primarily pediatric services are currently carrier-priced which places an undue burden on pediatric interventional cardiologists and their patients' families. After attempting to survey these codes for the January 2019 meeting, the RUC decided it would be better for carrier pricing to be maintained while the codes went to CPT to address shortcomings in the

inclusion of imaging guidance. That process also led to recognition of a shortcoming in these codes when a shunt is placed, resulting in 33746.

Transcatheter intracardiac shunt creation by stent implant is a procedure performed predominantly by pediatric interventional cardiologists for infants and children with severe forms of congenital heart disease. It is a service which has been provided regularly for over a decade, however, for which, there has never been an appropriate CPT code for reimbursement. The new code provides treatment for a variety of congenital heart defects ranging from a premature infant with hypoplastic left heart syndrome with a restrictive atrial communication, to an older child/adult with late post-surgical complications of prior repair of congenital heart defects (Fontan, Mustard, Senning, Warden procedures, to name a few).

There is no similarity in the work captured with 33745 and that for 33741. The latter is a replacement of the original 2 atrial septostomy codes (balloon and blade methods). These 2 old codes are now felt to be too similar and could be captured with a single code. The former, is a new code created with the initial thought having been to capture the work performed in premature infants who underwent atrial decompression of hypoplastic left heart syndrome, with placement of a stent in a very restrictive atrial communication. As the code was developed, the specialty had at least 6 different diagnoses/scenarios for which a stent was placed in various positions within the heart, and broadened the description to capture all of them rather than have 6 different codes of similar work. Nothing described by this new code was in any way captured by the old septostomy codes and therefore last year's survey did not address this work in any way. This code is an add on code to be used with 33745.

SCAI and ACC randomly surveyed pediatric and adult structural heart disease interventional cardiologists as designated by membership rolls. The survey was completed by physicians who have experience with the service.

The key reference code is 93592 for percutaneous transcatheter closure of paravalvular leak. It was selected by 43% of respondents. Most of these respondents indicated 33746 was more intense/complex overall. The second key reference code is 92998 for percutaneous transluminal pulmonary artery balloon angioplasty. It was selected by 25% of respondents. Most of these respondents also indicated 33746 was more intense/complex overall.

Therefore, for code 33746 the societies **recommend the median work RVU of 10.50 with 0 minutes preservice time, 60 minutes intraservice time from the survey median and 0 minutes postservice time**. By magnitude estimation, this value is supported by first KRS, 93592.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 93799

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Cardiology How often? Rarely

Specialty Interventional Cardiology How often? Rarely

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 100
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. This procedure is extremely rare. It would be expected to be performed roughly 20% of the time after 93242.

Specialty Cardiology Frequency 50 Percentage 50.00 %

Specialty Interventional Cardiology Frequency 50 Percentage 50.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 4 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This procedure is extremely rare. It would be expected to be performed roughly 20% of the time after 93242.

Specialty Cardiology Frequency 2 Percentage 50.00 %

Specialty Interventional Cardiology Frequency 2 Percentage 50.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? No

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Major procedure

BETOS Sub-classification Level II:
Cardiovascular-Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 92992

SS Rec Summary

INSTRUCTIONS

Insert information and data into all applicable cells except IWPUT and TOTAL TIME. These cells will automatically calculate.

Hide columns and rows that do not contain data.

1st REF = Top Key Reference code data

2st REF = Second Highest Key Reference code data

CURRENT = Current data (Harvard or RUC) for code being surveyed. If this is a new code, this row will be blank.

SVY = Survey data - as it appears on the Summary of Recommendation form.

REC = Specialty Society recommended data as it appears on the Summary of Recommendation form.

Scott Manaker, MD
AMA/RVS Update PE Subcommittee
American Medical Association
330 N. Wabash Ave.
Chicago, IL 60611

RE: Tab 13 Atrial Septostomy

Dear Dr. Manaker:

Tab 13 on the January 2020 RUC agenda addresses the replacement of two codes describing atrial septostomy with three new CPT codes describing the bundled services for transcatheter atrial septostomy and transcatheter intracardiac shunt creation by stent placement. These two 33741, 33745 and one 33746 global procedures are provided exclusively in the facility setting. As such, we recommend no direct practice expense inputs for Tab 13.

Thank you for your consideration of this information as you prepare for the meeting. Please contact Claudia Vasquez at cvasquez@acc.org if you have any questions.

Sincerely,

Richard Wright, MD
ACC RUC Advisor

Edward Toggart, MD
SCAI RUC Advisor

AMA/Specialty Society RVS Update Committee Summary of Recommendations

January 2020

Computer-Aided Mapping of Cervix Uteri – Tab 14

In September 2019, the CPT Editorial Panel approved the addition of a code to report computer-aided mapping of cervix uteri during colposcopy.

57465 ***Computer-aided mapping of cervix uteri during colposcopy, including optical dynamic spectral imaging and algorithmic quantification of the acetowhitening effect (List separately in addition to code for primary procedure)***
The RUC reviewed the survey results from 47 gynecologists/obstetricians and determined that the survey median work RVU of 0.81 accurately reflects the typical physician work necessary for this service. The RUC recommends 15 minutes of intra-service time. During the procedure, the computer-aided spectral imaging system dynamically captures images of the cervix to record the intensity and spatial distribution of acetowhitening as it changes over time. The physician is continuously monitoring and evaluating changes and any morphological features, under full view and magnification with filters, and records his/her impression of the cervix. The physician reviews the areas that appear abnormal based on standard criteria in combination with the color map and points out these areas to the patient.

The RUC initially compared the survey code to both top key reference codes 58110 *Endometrial sampling (biopsy) performed in conjunction with colposcopy (List separately in addition to code for primary procedure)* (work RVU= 0.77 and intra-service time of 12 minutes) and 76802 *Ultrasound, pregnant uterus, real time with image documentation, fetal and maternal evaluation, first trimester (< 14 weeks 0 days), transabdominal approach; each additional gestation (List separately in addition to code for primary procedure)* (work RVU= 0.83 and intra-service time of 10 minutes) and noted that the survey code requires more physician time and work than both key reference services and thus valued appropriately. Most survey respondents also rated the survey code identical or somewhat more intense/complex than both key reference services. The RUC also compared the survey code to CPT code 95984 *Electronic analysis of implanted neurostimulator pulse generator/transmitter (eg, contact group[s], interleaving, amplitude, pulse width, frequency [Hz], on/off cycling, burst, magnet mode, dose lockout, patient selectable parameters, responsive neurostimulation, detection algorithms, closed loop parameters, and passive parameters) by physician or other qualified health care professional; with brain neurostimulator pulse generator/transmitter programming, each additional 15 minutes face-to-face time with physician or other qualified health care professional (List separately in addition to code for primary procedure)* (work RVU= 0.80 and intra-service time of 15 minutes) and noted that both codes have identical intra-service time and should be valued similarly. Additionally, the RUC compared the survey code to CPT code 76979 *Ultrasound, targeted dynamic microbubble sonographic contrast characterization (non-cardiac); each additional lesion with separate injection (List separately in addition to code for primary procedure)* (work RVU= 0.85 and intra-service time of 15 minutes) and noted that both codes have identical intra-service time. The survey code is appropriately bracketed relative to the physician work of reference codes 95984 and 76979.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

To further support a work RVU of 0.81 for the survey code, the RUC compared code 57465 to MPC comparison code 51797 *Voiding pressure studies, intra-abdominal (ie, rectal, gastric, intraperitoneal) (List separately in addition to code for primary procedure)* (work RVU= 0.80 and intra-service time of 15 minutes)**. The RUC recommends a work RVU of 0.81 for CPT code 57465.**

New Technology/New Services
The RUC recommends that CPT code 57465 be placed on the New Technology list and be re-reviewed by the RUC in three years to ensure correct valuation and utilization assumptions.

Practice Expense
The RUC recommends the direct practice expense inputs as submitted by the specialty societies.

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
Surgery

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:57465 Tracking Number Q1 Original Specialty Recommended RVU: **0.81**
Presented Recommended RVU: **0.81**
Global Period: ZZZ Current Work RVU: RUC Recommended RVU: **0.81**

CPT Descriptor: Computer-aided mapping of cervix uteri during colposcopy, including optical dynamic spectral imaging and algorithmic quantification of the acetowhitening effect (List separately in addition to code for primary procedure) (Use 57465 in conjunction with 57420, 57421, 57452, 57454, 57455, 57456, 57460, 57461)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 38-year-old female has an abnormal Papanicolaou smear with a high-risk human papillomavirus (HPV) positive test and requires colposcopy (separately reported). Dynamic spectral imaging for mapping of the cervix is used to identify abnormal areas for localizing biopsy sites.

Percentage of Survey Respondents who found Vignette to be Typical: 79%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: N/A

Description of Intra-Service Work:
The physician performs a routine colposcopy (separately reported procedure) which includes observation of the cervical color and various morphological characteristics, and a baseline image of the cervix is captured. The computer aided spectral imaging system dynamically captures images of the cervix to record the intensity and spatial distribution of acetowhitening as it changes over time. The physician is continuously monitoring and evaluating changes and any morphological features, under full view and magnification with filters, and records his/her impression of the cervix.

The color-coded map is then displayed over the cervix and the physician reviews the areas that appear abnormal based on standard criteria in combination with the color map. Areas that are red, yellow or white on the map's color scale (ranging from cyan, blue, green, red, yellow and white) indicate significant acetowhitening and are more closely associated with high-grade lesions. These areas are checked against direct visualization and the physician uses the acetowhitening video playback and dynamic curve chart for concurrence. Areas on the color map that are confirmed by observation and video playback are annotated with circular marks to document and guide where biopsies will be taken. The Physician points out these areas to the patient. A report is written.

Description of Post-Service Work: N/A

SURVEY DATA

RUC Meeting Date (mm/yyyy)	01/2020					
Presenter(s):	Jon Hathaway, MD, PhD and Mitch Schuster, MD, MBA					
Specialty Society(ies):	ACOG

Modifier -51 Exempt Status
Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:
Is this new/revised procedure considered to be a new technology or service? Yes

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
58110	ZZZ	0.77	**RUC Time**

CPT Descriptor Endometrial sampling (biopsy) performed in conjunction with colposcopy (List separately in addition to code for primary procedure)

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
76802	ZZZ	0.83	**RUC Time**

CPT Descriptor Ultrasound, pregnant uterus, real time with image documentation, fetal and maternal evaluation, first trimester (< 14 weeks 0 days), transabdominal approach; each additional gestation (List separately in addition to code for primary procedure)

KEY MPC COMPARISON CODES:
Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
51797	ZZZ	0.80	**RUC Time**	117,137

CPT Descriptor 1 Voiding pressure studies, intra-abdominal (ie, rectal, gastric, intraperitoneal) (List separately in addition to code for primary procedure)

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
64480	ZZZ	1.20	**RUC Time**	19,578

CPT Descriptor 2 Injection(s), anesthetic agent and/or steroid, transforaminal epidural, with imaging guidance (fluoroscopy or CT); cervical or thoracic, each additional level (List separately in addition to code for primary procedure)

Other Reference CPT Code	Global	Work RVU	Time Source
		0.00	

CPT Descriptor

RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:

Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by percent distribution) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Top Key Reference Code: 19 **% of respondents:** 40.4 **%**

Number of respondents who choose 2nd Key Reference Code: 7 **% of respondents:** 14.8 **%**

TIME ESTIMATES (Median)

	CPT Code: 57465	Top Key Reference CPT Code: 58110	2nd Key Reference CPT Code: **76802**
Median Pre-Service Time	0.00	0.00	0.00

Other time if appropriate			

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	5%	29%	57%	10%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	10%	38%	52%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	10%	33%	57%
Physical effort required	10%	52%	38%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	14%	57%	29%

2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	13%	63%	25%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	13%	50%	38%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	13%	63%	25%
Physical effort required	0%	50%	50%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	13%	38%	50%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) We believe an unlisted code may have been used to report this service. However, that was not included on the CCA.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Gynecology How often? Sometimes

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 40000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The CCA estimated this procedure was performed 40,000 times in the U.S. 2017. Source: User data in DYSIS Medical Customer Relationship Management (CRM) System

Specialty Obstetrician/Gynecologists Frequency 35000 Percentage 87.50 %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. A national Medicare number is not known.

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Imaging

BETOS Sub-classification:
Imaging/procedure

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 58110

PRESENTER(S): Jon Hathaway, MD, PhD, Mitch Schuster, MD

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: January 2020

CPT Code	Long Descriptor	Global Period
57465	Computer-aided mapping of cervix uteri during colposcopy, including optical dynamic spectral imaging and algorithmic quantification of the acetowhitening effect (List separately in addition to code for primary procedure) (Use 57465 in conjunction with 57420, 57421, 57452, 57454, 57455, 57456, 57460, 57461)	ZZZ

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
57465	A 38-year-old female has an abnormal Papanicolaou smear with a high-risk human papillomavirus (HPV) positive test and requires colposcopy (separately reported). Dynamic spectral imaging for mapping of the cervix is used to identify abnormal areas for localizing biopsy sites.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   The specialty society convened a consensus panel with experts who are familiar with the procedure and the RUC/PE process.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code, but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here (*for service reviewed prior to the implementation of clinical activity codes, detail is not provided in the RUC database, please contact Samantha Ashley at samantha.ashley@ama-assn.org for PE spreadsheets for your reference codes*):

   The specialty societies selected CPT Code 58110 as the PE reference code. (CPT Code 58110 is also the key reference code for the physician work recommendations.) The direct practice expense inputs for the reference code are included on the spreadsheet.

3. Is this code(s) typically reported with an E/M service?
   Is this code(s) typically reported with the E/M service in the nonfacility?
   (Please see provided data titled *Medicare Same Day NF EM Billed Together - NF Dom Spec* in the RUC Review Resource Materials)

   This is a new service. We do not believe it is reported with an E/M.

4. What specialty is the dominant provider in the nonfacility?
   What percent of the time does the dominant provider provide the service(s) in the nonfacility?
   Is the dominant provider in the nonfacility different than for the global?
   (Please see provided data titled *Medicare Same Day NF EM Billed Together - NF Dom Spec* in the RUC Review Resource Materials)

   This is a new service. We believe gynecology will be dominant in the NF setting.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:

N/A

6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies for the **code family**, please provide compelling evidence (please see *PE compelling evidence guidelines*) Please explain if the increase can be entirely accounted for because of an increase in physician time:

N/A

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see second worksheet in PE spreadsheet workbook*), please explain the difference here:

N/A

8. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

N/A

9. Please provide a brief description of the clinical staff work for the following:
    a. Pre-Service period:

    b. Service period (includes pre, intra and post):

Assist physician performing procedure – 100%

    c. Post-service period:

10. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

Assist physician performing procedure – 100%

11. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

N/A

12. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see second worksheet in PE spreadsheet workbook*):

N/A

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

13. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

N/A

INVOICES

14. ☐ X Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

15. ☐ X Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

16. If you wish to include a supply that is not on the list (*please see fourth worksheet in PE spreadsheet workbook*) please provide a paid invoice. Identify and explain the invoice here:

An invoice has been included for a new supply item "computer aided spectral imaging system (colposcopy) Disposable Speculum". The per unit cost is $5.80. The invoice included the unit cost of $145 for a box of 25.

17. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation. Please include the description, CMS supply code, unit, item quantity and unit price (if available). See documents two and three under PE reference materials on the RUC Collaboration Website for information on the contents of kits, packs and trays.

18. If you wish to include an equipment item that is not on the list (*please see fifth worksheet in PE spreadsheet workbook*) please provide a paid invoice. Identify and explain the invoice here:

An invoice has been included for a new equipment item "computer aided spectral imaging system (colposcopy)".

19. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

N/A

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

20. List all the equipment included in your recommendation and the equipment formula chosen *(*please see document titled *Calculating equipment time).* If you have selected "other formula" for any of the equipment please explain here:

EQ168	light, exam	"Other Formula"	Add-On Code, included just CA018 in formula
EF031	table, power	"Other Formula"	Add-On Code, included just CA018 in formula
NEW	computer aided spectral imaging system (colposcopy)	"Other Formula"	Add-On Code, included just CA018 formula

21. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail/explanation, please include here:

PROFESSIONAL LIABILITY INSURANCE (PLI) INFORMATION

22. If this is a PE only code please select a crosswalk based on a similar specialty mix:

N/A

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING

During and immediately following the review of this tab at the PE Subcommittee meeting please revise the PE spreadsheet and summary of recommendation (PE SOR) documents based on modifications made during the meeting. Please submit the revised documents electronically to Samantha Ashley at samantha.ashley@ama-assn.org immediately following the close of business the same day that the tab is reviewed. On the PE spreadsheet, please highlight the cells and/or use red font to show the changes made during the PE Subcommittee meeting (if you have provided any of this highlighting based on changes from the reference code prior to the PE Subcommittee meeting please remove it, so not to be confused with changes made during the meeting). In addition to those revisions please also provide an itemized list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below (e.g. clinical activity CA010 *obtain vital signs* was reduced from 5 minutes to 3 minutes).

AMA/Specialty Society RVS Update Committee Summary of Recommendations

January 2020

Dilation of Eustachian Tube – Tab 15

In September 2019, the CPT Editorial Panel created two new codes to describe the dilation of the eustachian tube via surgical nasopharyngoscopy, unilateral and bilateral.

69705 ***Nasopharyngoscopy, surgical, with dilation of eustachian tube (ie, balloon dilation); unilateral***
The RUC reviewed the survey results from 192 otolaryngologists and determined that the survey median work RVU of 3.00 appropriately accounts for the work required to perform this procedure. The RUC recommends 30 minutes pre-service evaluation time, 3 minutes positioning time, 10 minutes scrub, dress, wait time, 20 minutes intra-service time and 15 minutes immediate post-service time. This service utilizes a rigid endoscope to guide a balloon dilation system through the nose, put the balloon into the eustachian tube orifice, inflate the balloon and dilate the eustachian tube. This service is typically not going to be performed with other services. This eustachian tube procedure is distinct and not typically associated with other procedures either balloon or non-balloon. The specialty society confirmed the pre-service evaluation time requires 30 minutes, which includes many tasks such as meeting with patients and family to describe and discuss in detail the planned procedure, reviewing and updating the medical history, performing a current physical exam, reconciling medications and allergies, addressing nothing by mouth (NPO) status and timing, discussing the patient's expected convalescence and educating the patient and caregivers regarding the signs and symptoms of the most common complications, reviewing and obtaining informed consent, providing a detailed description of the postoperative changes in eustachian tube function and the expected dynamic changes in nasal and eustachian tube function changes as the wound matures, verifying the availability of all required instruments and supplies, ensuring that the endoscopes, suction, source for insufflation, and video recording equipment are available and functioning properly and reviewing radiographic images. The pre-service positioning decreased to 3 minutes in accordance with the package and other similar services. The 10 minutes of scrub, dress and wait time includes spraying topical anesthesia and decongestant first and waiting for that to take effect, then allowing the physician to put pledgets with topical anesthesia and decongestant in the nose to sit and take effect as well. The physician will then start the procedure using the endoscope to remove the initial pledgets and place more pledgets further in the posterior nasal cavity and nasopharynx which was inaccessible at first because the physician had to decongest the anterior part of the nasal cavity. The physician will also inject anesthesia in the middle turbinate all for decongestant and to eliminate bleeding.

The RUC compared CPT code 69705 to the top key reference service 31297 *Nasal/sinus endoscopy, surgical, with dilation (eg, balloon dilation); sphenoid sinus ostium* (work RVU = 2.44, 20 minutes intra-service time and 56 minutes total time) and noted that 69705 requires more physician work and total time. The survey respondents also noted that 69705 is somewhat more intense than 31297. The specialty society indicated that the sphenoid sinus is located straight on, the physician uses one zero-degree rigid endoscope. However, with 69705, the physician starts with a zero-degree rigid endoscope and then switches to a 30-degree rigid endoscope. Manipulation of the hands is more complicated because what the physician is seeing is not straight ahead. Regarding dilation, when the physician dilates a sphenoid sinus, he/she places the balloon in the sphenoid

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

ostium and the physician can see the edge of the proximal part of the balloon. However, in the eustachian tube, the physician cannot visually see the dilation, the balloon opening, thus 69705 appropriately has a higher RVU then 31297. The number of dilations vary for both procedures, the eustachian tube is typically 2 dilations and the sphenoid are 1-2 dilations, but it varies.

The RUC compared code 69705 to the second top key reference service 31296 *Nasal/sinus endoscopy, surgical, with dilation (eg, balloon dilation); frontal sinus ostium* (work RVU = 3.10, 25 minutes intra-service time and 61 minutes total time), which requires 5 more minutes of intra-service time but less total time. However, the survey respondents noted that 69705 is identical or somewhat more intense than CPT code 31296. For CPT code 69705, the area of the eustachian tube orifice opens into the nasopharynx which is only 4mm away from the carotid artery. The physician must always be cognizant of the proximity to the carotid artery, which reinforces the intensity of this procedure. The RUC also noted that codes 31296 and 31297 are office-based procedures that require less tasks to complete. CPT code 69705, performed in the hospital setting, will require a variety of additional pre-service tasks such as nothing by mouth (NPO) status and timing, updating current physician exam, etc. The RUC notes that 69705 maintains the relativity of physician work, time and intensity to the recently valued nasal sinus endoscopy with balloon dilation codes 31296-31298.

The RUC compared 69705 to similar service 30140 *Submucous resection inferior turbinate, partial or complete, any method* (work RVU = 3.00, 20 minutes intra-service time and 78 minutes total time), which requires the same physician work and exact same time elements, thus supporting the relativity of this service. Lastly, the RUC referenced MPC code 31500 *Intubation, endotracheal, emergency procedure* (work RVU = 3.00 and 10 minutes intra-service time and 32 minutes total time), which requires the same amount of physician work as 69705, but much less total time and is a much more intense procedure. **The RUC recommends a work RVU of 3.00 for CPT code 69705.**

69706 ***Nasopharyngoscopy, surgical, with dilation of eustachian tube (ie, balloon dilation); bilateral***
The RUC reviewed the survey results from 192 otolaryngologists and determined that the survey median work RVU of 4.27 appropriately accounts for the work required to perform this procedure. The RUC recommends 30 minutes pre-service evaluation time, 3 minutes positioning time, 10 minutes scrub, dress, wait time, 30 minutes intra-service time and 15 minutes immediate post-service time. The RUC agreed with the pre-service time and activities as discussed in code 69705. The specialty societies clarified that the pre-service time is replicated from 69705 because the physician is completely removing the scope and inserting it into the other nostril. The RUC noted that the survey respondents may have underestimated the intra-service time for this bilateral service compared to the unilateral code, they indicated 20 minutes intra-service time for 69705 but only 10 additional minutes when performed bilaterally in code 69706. The RUC noted that if this service was described by one code but performed bilaterally and reported with the bilateral procedure modifier-50, the work RVUs would be 4.50. However, due to practice expense issues to ensure the correct inputs for the balloon were captured, two codes were created.

The RUC compared 69706 to key reference service 31298 *Nasal/sinus endoscopy, surgical, with dilation (eg, balloon dilation); frontal and sphenoid sinus ostia* (work RVU = 4.50, 40 minutes intra-service time and 76 minutes total time) and determined that 31298 requires slightly more physician intra-service time, but both require the same total time. Additionally, 69706 is more intense to perform because the physician must always be cognizant of the proximity to the carotid artery only 4mm away and the manipulation of the scopes to access the eustachian tube is also much more intense than that of the straight on access to the frontal and sphenoid sinuses.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

The RUC referenced similar service 31254 *Nasal/sinus endoscopy, surgical with ethmoidectomy; partial (anterior)* (work RVU = 4.27, 30 minutes intra-service time and 83 minutes total time), which requires similar time and the same physician work. For additional support, the RUC referenced code 43243 *Esophagogastroduodenoscopy, flexible, transoral; with injection sclerosis of esophageal/gastric varices* (work RVU = 4.27, 30 minutes intra-service time and 81 minutes total time). **The RUC recommends a work RVU of 4.27 for CPT code 69706.**

RUC Database Flag
The Committee recommends that the RUC flag CPT code 69706 as "do not use to validate work" since the survey respondents may have underestimated the intra-service time.

Practice Expense
The PE Subcommittee recommends two new supply items, the *kit, eustachian tube procedure* and *eustachian tube balloon*. The specialty societies confirmed that one eustachian balloon and one kit, which includes an insufflator, is used for both the unilateral and bilateral procedure, codes 69705 and 69706, a second separate eustachian balloon is not used for the bilateral procedure. The PE Subcommittee modified the clinical staff time to increase to reflect the standard inputs. **The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.**

New Technology/New Service
The RUC recommends that CPT codes 69705 and 69706 be placed on the New Technology list and be re-reviewed by the RUC in three years to ensure correct valuation and utilization assumptions.

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
Auditory System **Middle Ear** **Other Procedures**				
●69705	R1	Nasopharyngoscopy, surgical, with dilation of eustachian tube (ie, balloon dilation); unilateral	000	3.00
●69706	R2	bilateral (Do not report 69705, 69706 in conjunction with 31231, 92511)	000	4.27
Special Otorhinolaryngologic Services *92511* *Nasopharyngoscopy with endoscope (separate procedure)* *(Do not report 92511 in conjunction with 31575, 43197, 43198)* (For nasopharyngoscopy, surgical, with dilation of eustachian tube, see 69705, 69706)				

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:69705 Tracking Number Original Specialty Recommended RVU: **3.00**
Presented Recommended RVU: **3.00**
Global Period: 000 Current Work RVU: **N/A** RUC Recommended RVU: **3.00**

CPT Descriptor: Nasopharyngoscopy, surgical, with dilation of eustachian tube (ie, balloon dilation); unilateral

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 45-year-old female with adult life-long history of difficulty equalizing her left ear with altitude changes develops a left middle ear effusion after a flight. Despite medical management over three months, her left middle ear effusion persists with a type B tympanogram and conductive hearing loss. She is scheduled for surgical nasopharyngoscopy with left eustachian tube dilation.

Percentage of Survey Respondents who found Vignette to be Typical: 88%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Meet with patients and family to describe and discuss in detail the planned procedure. Review and update the medical history. Perform a current physical exam. Reconcile medications and allergies. Address NPO status and timing. Discuss the patient's expected convalescence and educate the patient and caregivers regarding the signs and symptoms of the most common complications. Review and obtain informed consent. There is confirmation of proposed site of surgery, and a detailed description is given of the postoperative changes in eustachian tube function and the expected dynamic changes in nasal and eustachian tube function changes as the wound matures. The availability of all required instruments and supplies is verified, and the physician ensures that the endoscopes, suction, source for insufflation, and video recording equipment are available and functioning properly. Radiographic images are reviewed. A timeout is performed with entire surgical team, including confirmation of the procedure, locations, allergies, antibiotic prophylaxis, anesthesia and fire risks, expected duration, and any concerns related to the procedure. Following induction of anesthesia, the patient is positioned. The physician washes hands and dons proper gloves, gown, and personal protective equipment. The patient is draped. Topical decongestant and anesthetic sprays are applied to the nostrils followed by a wait time for them to take effect. Pledgets soaked in decongestant and anesthesia are placed in the nasal cavity followed by a wait time for them to take effect.

Description of Intra-Service Work: Previously placed pledgets are removed. Under endoscopic visualization, pledgets soaked in decongestant and anesthesia are placed in the nasopharynx followed by a wait time for them to take effect. Pledgets are removed, and an intranasal anesthetic/vasoconstrictive agent is injected into the middle turbinate followed by a wait time for this to take effect. The guide catheter is held by the proximal hub and under endoscopic visualization, the guide catheter is inserted through the nose on the side to be treated and near the orifice of the eustachian tube. It is then rotated and stabilized so that the tip angle is aligned with the trajectory of the eustachian tube. The balloon catheter is advanced through the guide into the eustachian tube. The balloon is inflated to the desired pressure while monitoring the diameter, shape, and position of the balloon under endoscopic visualization while monitoring for any signs of bleeding from the internal carotid artery. Additional inflation is performed, followed by balloon deflation, retraction into the guide catheter, and removal along with the entire system.

Description of Post-Service Work: The patient’s nose and face are cleaned. The patient is monitored during awakening from anesthesia.. The examination and any still images are saved on the digital recording system. The procedure note is

dictated, and findings communicated to the referring physician. Discharge medications are reconciled. The prescription drug monitoring database is reviewed. Postoperative orders, medications and instructions are written. There is a discussion with the family and patient regarding the procedure and findings. There is reiteration of the convalescence, precautions, follow up appointments, expected postoperative course, signs and symptoms of complications, and review of the written postoperative instructions. Instructions, appropriate discharge timing, follow up, and precautions are discussed with the postoperative nursing team.

Physical effort required	3%	74%	23%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	11%	44%	45%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background:

In October 2019, the Academy brought forward a Code Change Application requesting the creation of two new codes to report unilateral and bilateral dilation of the eustachian tube via surgical nasopharyngoscopy. The Panel accepted with modifications on-site Option B of this request to establish codes 69705 and 69706 which will be published in the 2021 edition of the CPT Book. Previously, these procedures were reported using an unlisted code, CPT 69799.

Survey Sample and Process:

A survey request was sent to a random selection of members from the American Academy of Otolaryngology – Head and Neck Surgery who self-designated as one or more of the following sub-specialties: General Otolaryngology, Rhinology or Otology.

Recommendation (Work and Intra Time):

We are recommending a work RVU of **3.00 and 20 minutes of intra service time**, based on our survey's 50th percentile.

Time package selection: We have selected pre-time package 3 and post-time package 9A due to this procedure currently being done predominantly in the hospital outpatient setting. This represents a straightforward patient/difficult procedure because this is typically done under general anesthesia. Additionally, this is a much more invasive procedure than its comparator KRS codes which have office-based packages. We anticipate over time this may shift to primarily office-based, and will be captured by the appropriate RAW screen(s) as that transition occurs and requires revaluation.

Pre-time Package 3-FAC (Straightforward Patient/Difficult Procedure)

Evaluation Time – We are recommending 30 minutes of evaluation time which is a decrease of 3 minutes from the pre-service package time based on our survey median.

Positioning Time – We are recommending 3 minutes of positioning time which is a decrease of 7 minutes from the median survey time, but consistent with the pre-service package time for this activity.

Scrub, Dress, Wait Time – We are recommending 10 minutes of scrub, dress and wait time which is a decrease of 5 minutes from the selected pre-service package time, based on our survey median.

This results in a total recommended pre time of 43 minutes, taking the lesser of surveyed time or the pre-service package time.

Post-time Package 9A (General Anes or Complex Reg Blk/Straightforward Procedure)

Recommended time has been reduced to 15 minutes which is a decrease of 15 minutes from the post package time selected to match our survey time. ***This results in a total recommended post time of 15 minutes, taking the lesser of surveyed time or the pre-service package time.***

Supporting Reference Codes for the Recommended Value

CPT Code	Long Desc	Global	Work RVU	Intra Time	Total Time	IWPUT	Most Recent RUC Review

31254	Nasal/sinus endoscopy, surgical with ethmoidectomy; partial (anterior)	000	4.27	30	83	0.1075	2017-01
31298	Nasal/sinus endoscopy, surgical; with dilation of frontal and sphenoid sinus ostia (eg, balloon dilation)	000	4.5	40	76	0.0941	2017-01

Intensity of Work

Review of IWPUT demonstrated that 679XX is similar to both our KRS Codes and MPC codes with a wRVU at the 50th percentile. In fact, this procedure occurs right next to corotid artery which presents a high risk of perforation which could cause the patient to bleed out.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.

- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 69799

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Otolaryngology How often? Sometimes

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 23067
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. This estimate is three times the Medicare estimated frequency oulinted via the methodology below.

Specialty Otolaryngology Frequency 23067 Percentage 100.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 7,689
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. An analysis was performed to determine the prevalence of this disease specific to this procedure and in adherence to the on label indications of the technologies described by the proposed new code.

Methodology: The current primary treatment option for patients with chronic eustachian tube dysfunction and/or chronic otitis media that is unresponsive to medical therapy is tympanostomy with pressure equalization tube placement. According to Claims Data the RUC Database, CPT 69433 (Tympanostomy requiring insertion of ventilating tube, local or topical anesthesia) was reported 48,586 times in 2018, and CPT 69436 (Tympanostomy requiring insertion of ventilating tube, general anesthesia) was reported 15,378 times in 2018. If we assume that the patients requiring general anesthesia had more severe disease, complicated anatomy, or other complicating patient factors, then this likely represents the same patients that would be considered for CPT 69705, Nasopharyngoscopy, surgical, with dilation of eustachian tube (ie, balloon dilation). Even if all of these patients underwent CPT 69705 instead of pressure equalization tube placement, then the approximate number of cases of the new for this procedure would equal 15,378. Given that this can be done unilaterally or bilaterally, we expect the total volume of the procedure to be equally divided between the new unilateral code XX and the bilateral code X1. While not all of these 15,378 patients will choose to undergo this procedure or would be candiates for it, this number of 15,378 is still a reasonable estimate; given that some of the patients that underwent CPT 69433 under local anesthesia may instead be candidates for CPT 69705 or X1 and also choose to undergo this surgical balloon dilation of eustachian tube (which is typically performed under general anesthesia).

Specialty Otolaryngology Frequency 7689 Percentage 100.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 31297

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:69706 Tracking Number Original Specialty Recommended RVU: **4.27**
Presented Recommended RVU: **4.27**
Global Period: 000 Current Work RVU: **N/A** RUC Recommended RVU: **4.27**

CPT Descriptor: Nasopharyngoscopy, surgical, with dilation of eustachian tube (ie, balloon dilation); bilateral

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 56-year-old male with adult life-long history of difficulty equalizing his ears with flights develops an upper respiratory infection and subsequent middle ear effusion bilaterally. Despite medical management over three months, his middle ear effusions persist with type B tympanograms, and conductive hearing loss. He is scheduled for surgical nasopharyngoscopy with bilateral eustachian tube dilation.

Percentage of Survey Respondents who found Vignette to be Typical: 88%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Meet with patients and family to describe and discuss in detail the planned procedure. Review and update the medical history. Perform a current physical exam. Reconcile medications and allergies. Address NPO status and timing. Discuss the patient's expected convalescence and educate the patient and caregivers regarding the signs and symptoms of the most common complications. Review and obtain informed consent. There is confirmation of proposed site of surgery, and a detailed description is given of the postoperative changes in eustachian tube function and the expected dynamic changes in nasal and eustachian tube function changes as the wound matures. The availability of all required instruments and supplies is verified, and the physician ensures that the endoscopes, suction, source for insufflation, and video recording equipment are available and functioning properly. Radiographic images are reviewed. A timeout is performed with entire surgical team, including confirmation of the procedure, locations, allergies, antibiotic prophylaxis, anesthesia and fire risks, expected duration, and any concerns related to the procedure. Following induction of anesthesia, the patient is positioned. The physician washes hands and dons proper gloves, gown, and personal protective equipment. The patient is draped. Topical decongestant and anesthetic sprays are applied to the nostrils followed by a wait time for them to take effect. Pledgets soaked in decongestant and anesthesia are placed in each nasal cavity followed by a wait time for them to take effect.

Description of Intra-Service Work: Previously placed pledgets are removed. Under endoscopic visualization, pledgets soaked in decongestant and anesthesia are placed in the nasopharynx followed by a wait time for them to take effect. Pledgets are removed, and an intranasal anesthetic/vasoconstrictive agent is injected into the middle turbinate followed by a wait time for this to take effect. The guide catheter is held by the proximal hub and under endoscopic visualization, the guide catheter is inserted through the nose on the side to be treated and near the orifice of the eustachian tube. It is then rotated and stabilized so that the tip angle is aligned with the trajectory of the eustachian tube. The balloon catheter is advanced through the guide into the eustachian tube. The balloon is inflated to the desired pressure while monitoring the diameter, shape, and position of the balloon under endoscopic visualization while monitoring for any signs of bleeding from the internal carotid artery. Additional inflation is performed, followed by balloon deflation, retraction into the guide catheter, and removal along with the entire system. The entire procedure is then repeated on the contralateral side.

Description of Post-Service Work: The patient’s nose and face are cleaned. The patient is monitored during awakening from anesthesia. The examination and any still images are saved on the digital recording system. The procedure note is

dictated, and findings communicated to the referring physician. Discharge medications are reconciled. The prescription drug monitoring database is reviewed. Postoperative orders, medications and instructions are written. There is a discussion with the family and patient regarding the procedure and findings. There is reiteration of the convalescence, precautions, follow up appointments, expected postoperative course, signs and symptoms of complications, and review of the written postoperative instructions. Instructions, appropriate discharge timing, follow up, and precautions are discussed with the postoperative nursing team.

• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	14%	42%	44%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background:

In October 2019, the Academy brought forward a Code Change Application requesting the creation of two new codes to report unilateral and bilateral dilation of the eustachian tube via surgical nasopharyngoscopy. The Panel accepted with modifications on-site Option B of this request to establish codes 69705 and 69706 which will be published in the 2021 edition of the CPT Book. Previously, these procedures were reported using an unlisted code, CPT 69799.

Survey Sample and Process:

A survey request was sent to a random selection of members from the American Academy of Otolaryngology – Head and Neck Surgery who self-designated as one or more of the following sub-specialties: General Otolaryngology, Rhinology or Otology.

Recommendation (Work and Intra Time):

We are recommending a work RVU of **4.27 and 30 minutes of intra service time**, based on our survey's 50th percentile.

Time package selection: We have selected pre-time package 3 and post-time package 9A due to this procedure currently being done predominantly in the hospital outpatient setting. This represents a straightforward patient/difficult procedure because this is typically done under general anesthesia. Additionally, this is a much more invasive procedure than its comparator KRS codes which have office-based packages. We anticipate over time this may shift to primarily office-based, and will be captured by the appropriate RAW screen(s) as that transition occurs and requires revaluation.

Pre-time Package 3-FAC (Straightforward Patient/Difficult Procedure)

Evaluation Time – We are recommending 30 minutes of evaluation time which is a decrease of 3 minutes from the pre-service package time based on our survey median.

Positioning Time – We are recommending 3 minutes of positioning time which is a decrease of 7 minutes from the median survey time, but consistent with the pre-service package time for this activity.

Scrub, Dress, Wait Time – We are recommending 10 minutes of scrub, dress and wait time which is a decrease of 5 minutes from the selected pre-service package time, based on our survey median.

This results in a total recommended pre time of 43 minutes, taking the lesser of surveyed time or the pre-service package time.

Post-time Package 9A (General Anes or Complex Reg Blk/Straightforward Procedure)

Recommended time has been reduced to 15 minutes which is a decrease of 15 minutes from the post package time selected to match our survey time. ***This results in a total recommended post time of 15 minutes, taking the lesser of surveyed time or the pre-service package time.***

Intensity of Work

Review of IWPUT demonstrated that 679X1 is similar to both our KRS Codes and MPC codes with a wRVU at the 50th percentile. In fact, this procedure occurs right next to corotid artery which presents a high risk of perforation which could cause the patient to bleed out.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 69799

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Otolaryngology How often? Sometimes

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 23067
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. This estimate is three times the Medicare estimated frequency oulinted via the methodology below.

Specialty Otolaryngology Frequency 23067 Percentage 100.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 7,689
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. An analysis was performed to determine the prevalence of this disease specific to this procedure and in adherence to the on label indications of the technologies described by the proposed new code.

Methodology: The current primary treatment option for patients with chronic eustachian tube dysfunction and/or chronic otitis media that is unresponsive to medical therapy is tympanostomy with pressure equalization tube placement. According to Claims Data the RUC Database, CPT 69433 (Tympanostomy requiring insertion of ventilating tube, local or topical anesthesia) was reported 48,586 times in 2018, and CPT 69436 (Tympanostomy requiring insertion of ventilating tube, general anesthesia) was reported 15,378 times in 2018. If we assume that the patients requiring general anesthesia had more severe disease, complicated anatomy, or other complicating patient factors, then this likely represents the same patients that would be considered for CPT 69705 / X1, Nasopharyngoscopy, surgical, with dilation of eustachian tube (ie, balloon dilation). Even if all of these patients underwent this procedure instead of pressure equalization tube placement, then the approximate number of cases of the new for this procedure would equal 15,378. Given that this can be done unilaterally or bilaterally, we expect the total volume of the procedure to be equally divided between the new unilateral code XX and the bilateral code X1. While not all of these patients will choose to undergo this procedure or would be candiates for it, this is still a reasonable estimate; given that some of the patients that underwent CPT 69433 under local anesthesia may instead be candidates for CPT 69705 or X1 and also choose to undergo this surgical balloon dilation of eustachian tube (which is typically performed under general anesthesia).

Specialty Otolaryngology Frequency 7689 Percentage 100.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

NON- FACILITY DIRECT PE INPUTS

CPT CODE(S): 69705 & 69706
SPECIALTY SOCIETY(IES): AAOHNS
PRESENTER(S): Drs. Manes and Manning

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: January 2020

CPT Code	Long Descriptor	Global Period
69705	Nasopharyngoscopy, surgical, with dilation of eustachian tube (ie, balloon dilation); unilateral	000
69706	Nasopharyngoscopy, surgical, with dilation of eustachian tube (ie, balloon dilation); bilateral	000

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
69705	A 45-year-old female with adult life-long history of difficulty equalizing her left ear with altitude changes develops a left middle ear effusion after a flight. Despite medical management over three months, her left middle ear effusion persists with a type B tympanogram and conductive hearing loss. She is scheduled for surgical nasopharyngoscopy with left eustachian tube dilation.
69706	A 56-year-old male with adult life-long history of difficulty equalizing his ears with flights develops an upper respiratory infection and subsequent middle ear effusion bilaterally. Despite medical management over three months, his middle ear effusions persist with type B tympanograms, and conductive hearing loss. He is scheduled for surgical nasopharyngoscopy with bilateral eustachian tube dilation.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   Our specialty formed a panel of experts to develop practice expense recommendations for this family of codes. The panel was comprised of our RUC Advisor and multiple clinical experts who practice in the areas of general otolaryngology, rhinology and otology. The expert panel members also practice across in settings that vary by size, geography, and represent both private and academic settings.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code, but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here (*for service reviewed prior to the implementation of clinical activity codes, detail is not provided in the RUC database, please contact Samantha Ashley at samantha.ashley@ama-assn.org for PE spreadsheets for your reference codes*):

   These are new codes, but we felt that CPT 31297 was most clinical similar and our surveyees also selected it as a KRS.

3. Is this code(s) typically reported with an E/M service?

   No.

4. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:

   We are recommending clinical staff pre-time above the standard for 000 globals of 0 minutes. This is consistent with the PE approved in the January 2017 for the FESS family of codes and October 2016.

CPT CODE(S): 69705 & 69706
SPECIALTY SOCIETY(IES): AAOHNS
PRESENTER(S): Drs. Manes and Manning

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

The rationale for this time is that non-facility staff are essential to completing diagnostic and referral forms and providing education and consent to the patient prior to the procedure. Additionally, the RUC has approved these minutes in the past for similar codes, as the time represents staff work that occurs in order for the procedure to take place.

5. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies for the **code family**, please provide compelling evidence (please see *PE compelling evidence guidelines*) Please explain if the increase can be entirely accounted for because of an increase in physician time:

N/A these are new CPT codes

New equipment recommended over comparator code:
ES041 PROXY endoscope, rigid, sinoscopy (30 degrees) – *added second scope required for procedure*

6. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see second worksheet in PE spreadsheet workbook*), please explain the difference here:

N/A

7. Please provide a brief description of the clinical staff work for the following:
   a. Pre-Service period:

Complete pre-service diagnostic and referral forms
Provide pre-service education/obtain consent

   b. Service period (includes pre, intra and post):

Greet patient, provide gowning, ensure appropriate medical records are available
Obtain vital signs (3-5) Obtain pulse, BP and oxygen saturation
Prepare room, equipment and supplies Requires setup of appropriate supplies by staff
Setup scope (nonfacility setting only) – *two scopes used, 0 degree and 30 degree rigid*
Prepare, set-up and start IV, initial positioning and monitoring of patient - Patient must be positioned in the seated position, with chair reclined at approximately a 20 degree angle
Sedate/apply anesthesia
Assist physician or other qualified healthcare professional---directly related to physician work time (100%)
Monitor patient following procedure/service, multitasking 1:4
Clean room/equipment by clinical staff
Clean scopes - *two scopes used, 0 degree and 30 degree rigid*
Clean surgical instrument package - *nasal spec, bayonettes, freer*
Complete post-procedure diagnostic forms, lab and x-ray requisitions
Review home care instructions, coordinate visits/prescriptions

   c. Post-service period:

Conduct patient communications

8. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see second worksheet in PE spreadsheet workbook*):

N/A

CPT CODE(S): 69705 & 69706

PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

9. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

N/A

INVOICES

10. ☒ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

11. ☒ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

12. If you wish to include a supply that is not on the list (*please see fourth worksheet in PE spreadsheet workbook*) please provide a paid invoice. Identify and explain the invoice here:

Added two new supplies, the Eustachian Tube kit and the balloon itself.

13. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation. Please include the description, CMS supply code, unit, item quantity and unit price (if available). See documents two and three under PE reference materials on the RUC Collaboration Website for information on the contents of kits, packs and trays.

14. If you wish to include an equipment item that is not on the list (*please see fifth worksheet in PE spreadsheet workbook*) please provide a paid invoice. Identify and explain the invoice here:

N/A

15. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

No Computer Listed for these procedures.

16. List all the equipment included in your recommendation and the equipment formula chosen *(*please see document titled *Calculating equipment time).* If you have selected "other formula" for any of the equipment please explain here:

We selected "other formula" for line 144, Chair with headrest, reclining, exam. The reason for this is that it is the default formula with the monitoring time added to it. The patient is in this chair for the entire procedure (pre/intra/post) as well as the one hour of monitoring time. ENT offices do not have waiting rooms or stretchers for monitoring, so the patient remains in the exam chair during this time.

17. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail/explanation, please include here:

SPECIALTY SOCIETY(IES):__AAOHNS_____
PRESENTER(S):__Drs. Manes and Manning

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

13. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation. Please include the description, CMS supply code, unit, item quantity and unit price (if available). See documents two and three under PE reference materials on the RUC Collaboration Website for information on the contents of kits, packs and trays.

14. If you wish to include an equipment item that is not on the list (*please see fifth worksheet in PE spreadsheet workbook*) please provide a paid invoice. Identify and explain the invoice here:

N/A

15. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

N/A Facility

16. List all the equipment included in your recommendation and the equipment formula chosen *(*please see document titled *Calculating equipment time).* If you have selected "other formula" for any of the equipment please explain here:

N/A Facility

17. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail/explanation, please include here:

N/A

PROFESSIONAL LIABILITY INSURANCE (PLI) INFORMATION

18. If this is a PE only code please select a crosswalk based on a similar specialty mix:

31297

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING

During and immediately following the review of this tab at the PE Subcommittee meeting please revise the PE spreadsheet and summary of recommendation (PE SOR) documents based on modifications made during the meeting. Please submit the revised documents electronically to Samantha Ashley at samantha.ashley@ama-assn.org immediately following the close of business the same day that the tab is reviewed. On the PE spreadsheet, please highlight the cells and/or use red font to show the changes made during the PE Subcommittee meeting (if you have provided any of this highlighting based on changes from the reference code prior to the PE Subcommittee meeting please remove it, so not to be confused with changes made during the meeting). In addition to those revisions please also provide an itemized list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below (e.g. clinical activity CA010 *obtain vital signs* was reduced from 5 minutes to 3 minutes).

AMA/Specialty Society RVS Update Committee Summary of Recommendations

January 2020

Medical Physics Dose Evaluation (PE Only) – Tab 16

In May 2019, the CPT Editorial Panel created a new practice expense only code to describe medical physics dose evaluation for radiation exposure that exceeds the institutional review threshold. The service describes the work of clinical staff performing an evaluation following the procedure where the threshold of exposure was met. The service recreates the procedure to accurately determine organ specific doses resulting from radiation exposure during the procedure. If the site, state or equipment requirements determines that the threshold was met, the physician or office staff contact the physicist and request the service.

At the October 2019 RUC meeting, the Practice Expense (PE) Subcommittee reviewed the PE recommendations for new CPT code 76145. The clinical activities associated with the service involve high amounts of clinical staff time, and the Subcommittee had concerns that there may be overlap between some of the categories. The PE Subcommittee considered the time elements of the *Medical Physicist* (L152A) clinical staff and was unable to make a recommendation to the RUC based on the specialty society expert panel proposal. The PE Subcommittee instead requested that the specialty societies conduct a PE survey to obtain data that would drive the Subcommittee's decisions. The PE Subcommittee cited two primary reasons that a PE survey is necessary to appropriately review and determine accurate direct practice expense inputs for this service. First, this is a new service with a high amount of clinical staff time and, because there are no other similar services, there are no appropriate reference codes to compare the clinical staff activities and times. Second, the service is stand-alone, meaning that the medical physicist works independently from a physician and there are no elements of the practice expense that are informed by time from a physician work survey. Following the meeting the specialty societies developed a PE survey which was reviewed and approved by the Research Subcommittee.

At the January 2020 RUC meeting the PE Subcommittee reviewed the results of the practice expense survey. The PE Subcommittee noted that the specialty societies included facility-based providers in addition to non-facility based providers in their survey sample, as recommended by the PE Subcommittee and approved by the RUC Research Subcommittee in October 2019. The PE spreadsheet includes the original consensus panel October 2019 recommendations, the median survey results and the January 2020 consensus panel recommendations. The recommended times are consistent with the survey median times. No reference code is included as there are no similar services in radiology or cardiology. There was a total of 41 responses to the PE survey. A PE Subcommittee member inquired about the expected use of the service and the specialty societies explained that, although it is not a common service, the specialty estimates that it is done 16,000 times per year. This is based on interventional, long-duration procedures, including both in the facility and non-facility settings. It is expected to be utilized for exposure during fluoroscopic-guided interventions only and not for any other imaging modality. The evaluation is on a per procedure basis and is not a lifetime cumulative dose. The Subcommittee also inquired about how the equipment time and the specialties explained that the time was calculated based on the component times of the survey, crosschecked with survey responses. Equipment items, *computer, desktop, w-monitor* (ED021) and *Technologist PACS workstation* (ED050) are used at the same time and unavailable for other use during the times indicated on the PE spreadsheet. The PACS workstation generally cannot have software such as spreadsheets and word processing, so both machines are required during the service. Some PE Subcommittee members

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

were concerned about the granularity of the practice expense survey as well as concerned about overlap in the physicist work, especially in clinical activities, CA012 *Review requisition, assess for special needs*, CA014 *Confirm order, protocol exam* and CA021 *Perform procedure/service---NOT directly related to physician work time*. The expert panel explained that some of the descriptions of work are similar not because of overlap but rather because certain similar tasks must be done multiple times. The presenters explained that the PE Survey was intentionally explicit to avoid overlap. For example, the for clinical activity CA012, the medical physicist reviews information in PACS multiple times over several days. The specialty also clarified that it is critical to do a detailed review of the case, protocol the exam and confirm the order for each individual case because the reference radiation dose level is different for each patient and each institution. The specialty also clarified that the reference levels are intentionally broad so the medical physicist might be contacted to do an initial investigation and may determine that the service does not need to be performed, in fact, in roughly 95% of inquiries the medical physicist determines that the service is not necessary and the code is not utilized. For clinical activity CA014, the physicists looks at the images in the medical record and determines if there is enough information, whereas the clinical activity CA021 only occurs after CA014, likely on a different day and that is when the calculations are done and the medical physicist physically goes to the angiography lab and determines in retrospect the positioning of the patient. This step is critical in calculating the dose to the skin. The physicist will also spend time during CA021 talking to the technicians and doing measurement in the angiography room to determine dose indices. Clinical activity CA034 is distinct from other clinical activities as it is the final documentation of the different calculations across the days. This is when the medical physicist formalizes and describes the dose as well as determines assumptions about overlap of imaging fields to find the maximum dose for the patient. So that the physician can be confident about the safety of future treatment options for the patient, the report includes dose effect metrics regarding what the dosage means for the patient. Each patient is unique just by the fact of getting to the stage were this service is needed, so there is no possibility for a template report.

The PE Subcommittee asked for additional clarification about the context in which this service would be provided. The specialties explained that the code is used in cases where the dose of radiation was delivered in a complex procedure and there was not an option for the interventional radiologist to do something different or terminate the procedure. Often the patients have a high body mass index, and this amplifies the dose. The code is not performed because of an error on the physician's part— rather typically the procedure had to be completed knowing there could be adverse consequences and complications to the patient. The valuable information obtained through this evaluation is important to the physician, patient and family for continuity of care and future treatment decisions. The radiation safety committee for the state and the hospital are all interested in this information. Also, the Joint Commission needs to know that the provider has a policy in place to do this evaluation if necessary. Finally, the PE Subcommittee questioned if equipment item, ER050 *phantom, solid water calibration check* is essential to this procedure. The presenters explained that the equipment is used for a crucial step in the procedure in the angiography room to double check calculations and validate the work that has been done. The presenters added that a full hour in the angiography room, also indicated by the survey respondents, using ER050 *phantom, solid water calibration check* to validate the work, is reasonable and expected. The presenters also confirmed that this is not routine quality improvement work. The PE Subcommittee ultimately decided that however the time is apportioned, the aggregate median time of the survey is accurate for an evaluation of this complexity. **The RUC recommends the direct practice expense inputs as submitted by the specialty society.**

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: January 2020

CPT Code	Long Descriptor	Global Period
76145	Medical physics dose evaluation for radiation exposure that exceeds institutional review threshold, including report	XXX

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
76145	A 62-year-old female undergoes a fluoroscopically guided interventional radiology procedure utilizing multiple projections and imaging sequences exceeding the facility's established threshold for radiation air kerma from one or more procedures. A patient-specific peak organ dose calculation is requested.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

The multispecialty group (ACR, SIR, ACC) conducted a practice expense survey of applicable membership subsets. They convened a consensus panel, which included a number of experts familiar with the service to evaluate the survey results. The consensus panel then developed consensus direct practice expense recommendations.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code, but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here (*for service reviewed prior to the implementation of clinical activity codes, detail is not provided in the RUC database, please contact Samantha Ashley at samantha.ashley@ama-assn.org for PE spreadsheets for your reference codes*):

The specialties included the original consensus panel October 2019 recommendations, the median survey results and the January 2020 consensus panel recommendations. The specialties did not include a reference code, as there were no similar services in radiology or cardiology.

3. Is this code(s) typically reported with an E/M service?
Is this code(s) typically reported with the E/M service in the nonfacility?
(Please see provided data titled *Medicare Same Day NF EM Billed Together - NF Dom Spec* in the RUC Review Resource Materials)

N/A

4. What specialty is the dominant provider in the nonfacility?
What percent of the time does the dominant provider provide the service(s) in the nonfacility?
Is the dominant provider in the nonfacility different than for the global?
(Please see provided data titled *Medicare Same Day NF EM Billed Together - NF Dom Spec* in the RUC Review Resource Materials)

N/A

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:

CA014 – Confirm order, protocol exam
Standard - 1 minute
Survey median – 45 minutes
The consensus panel supports the survey median of 45 minutes for this task.
Confirm availability of case details in EHR, including machine dose index or air kerma reports and procedural documentation. Review patient specific information to confirm that detailed measurement calculation by a medical physicist is indicated and appropriate for this specific patient or case. Review patient record to determine if there are other radiological procedures (including at other facilities) that may have contributed dose to the patient.

CA031 – Review examination with interpreting MD/DO
Standard – 2 minutes
Survey median – 20 minutes
The consensus panel supports the survey median of 20 minutes for this task.
Discuss service/findings with physician who performed the interventional procedure and staff (technical, RSO).

6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies for the **code family**, please provide compelling evidence (please see *PE compelling evidence guidelines*) Please explain if the increase can be entirely accounted for because of an increase in physician time:

N/A

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see second worksheet in PE spreadsheet workbook*), please explain the difference here:

N/A

8. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

N/A

9. Please provide a brief description of the clinical staff work for the following:
    a. Pre-Service period:

N/A

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

b. Service period (includes pre, intra and post):

CA012 Review requisition, assess for special needs
Review request verify that the institutional review threshold has been exceeded. Ascertain if adverse skin or other organ injuries have been reported, consistent with typical time-dose response effects

CA014 Confirm order, protocol exam (See Q5)
CA021 Perform procedure/service---NOT directly related to physician work time (See Q10)
CA031 Review examination with interpreting MD/DO (See Q5)

CA034 Document procedure (nonPACS) (e.g. mandated reporting, registry logs, EEG file, etc.)
The report will typically include a tabulation of the input calculation data for each imaging segment (and sub-segments if there is a significant change in x-ray parameter(s), resultant organ dose for each segment and total peak organ dose for all segments for the maximally exposed tissue. Further, there will be a review of he anticipated tissue response based on time/dose/effect literature.

c. Post-service period:

N/A

10. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

(a) Detailed review of the case in the electronic medical records (EMR)

(b) Interview physician(s), technologists and/or other staff

(c) Review each exposure

(d) Estimate the peak organ dose

Note: Starts with the recorded cumulative reference air kerma ($K_{a,r}$) which is then corrected for geometric factors, most importantly the distance from the IRP to the patient; x-ray beam directions during the procedure(s), dosimetric factors, including backscatter; and other factors, including the presence of the patient table and support pad.

(e) Verify the recorded reference air kerma, entrance skin air kerma, and other radiation parameters input to the calculation by independent radiation exposure measurements in the procedural room using the same equipment and techniques.

Note: Individual measurements must be repeated for each individual exposure set during the original procedure.

IMPORTANT: The specialties will use the titles of these specific tasks throughout the PE SOR and the PE spreadsheet. For example CA021a (in question 20 below) would be the time associated with (a) detailed review of the case in the electronic medical records above.

11. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

N/A

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

12. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see second worksheet in PE spreadsheet workbook*):

N/A

13. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

N/A

INVOICES

14. ☐ X Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

15. ☐ X Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

16. If you wish to include a supply that is not on the list (*please see fourth worksheet in PE spreadsheet workbook*) please provide a paid invoice. Identify and explain the invoice here:

N/A

17. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation. Please include the description, CMS supply code, unit, item quantity and unit price (if available). See documents two and three under PE reference materials on the RUC Collaboration Website for information on the contents of kits, packs and trays.

18. If you wish to include an equipment item that is not on the list (*please see fifth worksheet in PE spreadsheet workbook*) please provide a paid invoice. Identify and explain the invoice here:

Radiation Dosimetry Kit This equipment is a comprehensive radiation dose and beam-energy measuring instrument. This is needed for the medical physicist to calculate the relationship between the dose index display on the interventional system and the actual absorbed dose to the patient's organ of interest. Two invoices were included. The societies are recommending $17,182.50, the average of the two invoices.

19. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).

b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
c. Does the computer include code specific software that is typically used to provide the service(s)?

Yes, the specialties are recommending minutes for ED021.

a) The physicist uses the computer to review the requisition, confirm the order, protocol the exam, review the EMR and generate the report.
b) The computer is an integral component of this service. It is also used for other services.
c) Special software is not typically used to provide this service.

20. List all the equipment included in your recommendation and the equipment formula chosen *(*please see document titled *Calculating equipment time).* If you have selected "other formula" for any of the equipment please explain here:

The specialties are recommending the "other" equipment formula for all 5 pieces of equipment:

ED021	Computer, desktop, w-monitor	CA012, CA014, CA021a, CA034	18+45+20+20=85
ED050	Technologist PACS workstation	CA014, CA021a, c, e	45+20+30+60=155
EL011	Room, angiography	CA021e	60
ER050	Phantom, solid water calibration check	CA021e	60
NEW	Radiation Dose Kit	CA021e	60

21. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail/explanation, please include here:

Below are additional data points from the practice expense survey.

Vignette Typical: 85%
Service Performance Rate: Past Year (88%)
Physicist Perform Procedure: 98%
Specialty Response Rate (SRR): ACR (49%), AAPM (42%), ACC (2%), SIR (7%)
Site of Service (SOS): NF (12%), F (88%)

Place of Service
It is important to note that the SRR and SOS responses noted above may not fully represent the spectrum of responses collected. More specifically, if a medical physicist completed the survey they might indicate ACR as the specialty they were completing the survey for because they are members of ACR. However, their practice focus for this work might be cardiology. Also, they might be employed by a facility but contract with a NF. The consensus panel reviewed the responses and believes the data are representative of the new service.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

CA021 Formula
The specialty included a formula in cell 052 to help the PE see what was included. The formula includes the median times for the 5 tasks included in Question 10.

When will this code be used?
Radiation exposures that exceed institutional thresholds most often occur in connection with diagnostic/interventional imaging procedures that:

- have a high degree of complexity
- require enhanced image quality to visualize anatomic and/or contrast enhanced features (and thus elevated dose to create the images)
- involve lengthy imaging times (often with cine-radiographic techniques)
- are undertaken to diagnose and or treat severe conditions such that limiting the use of ionizing radiation to restrict dose would lead to a serious adverse outcome.
- are performed on a patient with a high BMI
- occur in a series of procedures to the same anatomical area.

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING

During and immediately following the review of this tab at the PE Subcommittee meeting please revise the PE spreadsheet and summary of recommendation (PE SOR) documents based on modifications made during the meeting. Please submit the revised documents electronically to Samantha Ashley at samantha.ashley@ama-assn.org immediately following the close of business the same day that the tab is reviewed. On the PE spreadsheet, please highlight the cells and/or use red font to show the changes made during the PE Subcommittee meeting (if you have provided any of this highlighting based on changes from the reference code prior to the PE Subcommittee meeting please remove it, so not to be confused with changes made during the meeting). In addition to those revisions please also provide an itemized list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below (e.g. clinical activity CA010 *obtain vital signs* was reduced from 5 minutes to 3 minutes).

CPT Code 76145 Practice Expense Survey

1	Physician Name:	I am completing the survey for:	
2	Medical Physicist Name:	ACR AAPM ACC SIR	
NEW CODE	CPT Code **76145:** *Medical physics dose evaluation for radiation exposure that exceeds institutional review threshold, including report*		
3	Have you performed this service in the past year?	YES	NO
	If not, have you performed the service in the last two years?	YES	NO
Please circle all Sites of Service you have performed this procedure in: Office (Non Facility) Hospital Outpatient (Facility) Hospital Inpatient (Facility) ASC (Facility) **If you have performed the service in more than one setting, one of which is an Office (NF) setting, please complete this survey with Office Setting Data.*			
4	Is the following vignette typical for this service? *A 62-year-old female undergoes a fluoroscopically guided interventional radiology procedure utilizing multiple projections and imaging sequences exceeding the facility's established threshold for radiation air kerma from one or more procedures. A patient-specific peak organ dose calculation is requested.*	YES	NO
	If not, please describe a typical vignette for this service.		
5	Have you ever started 76145 and then stopped before you completed the final report? *If so, please provide details:*	YES	NO
6	Does a physicist perform this procedure 100% of the time?	YES	NO
7	Does a dosimetrist ever perform this service? *If so, please provide details:*	YES	NO

Direct Practice Expense Inputs – Clinical Time

"Clinical" activities are those needed for the service versus those needed to run the office.
DO NOT INCLUDE time for administrative scheduling, data entry, billing etc.
Please include the **typical** time for each task. Typical is defined as greater than 50% of the time.

Does a medical physicist perform the following tasks during this service?	**YES or NO**	**If yes, for how many minutes?**
PRE-SERVICE		
Review requisition and assess for special needs *i.e. review request verify that the institutional review threshold has been exceeded. Ascertain if adverse skin or other organ injuries have been reported, consistent with typical time-dose response effects.*		
Confirm order *i.e. confirm availability of case details in EHR, including machine dose index or air kerma reports and procedural documentation*		
Protocol exam *i.e. review patient specific information to confirm that detailed measurement calculation by a medical physicist is indicated and appropriate for this specific patient or case. Review patient record to determine if there are other radiological procedures (including at other facilities) that may have contributed dose to the patient*		

CPT Code 76145 Practice Expense Survey

Perform procedure/service		
Detailed review of the case in the electronic medical records (EMR)		
Interview physician(s), technologists and/or other staff		
Literature review for any special measurements that may be needed to evaluate the case		
Review each exposure		
Estimate the peak organ dose *Note: Starts with the recorded cumulative reference air kerma ($K_{a,r}$) which is then corrected for geometric factors, most importantly the distance from the IRP to the patient; x-ray beam directions during the procedure(s), dosimetric factors, including backscatter; and other factors, including the presence of the patient table and support pad.*		
Verify the recorded reference air kerma, entrance skin air kerma, and other radiation parameters input to the calculation by independent radiation exposure measurements in the procedural room using the same equipment and techniques. *Note: Individual measurements must be repeated for each individual exposure set during the original procedure.*		
*What is the **TYPICAL** number of exposures you calculate per case?*		
Other Task:		
Other Task:		
Discuss service/findings with **physician** who performed the **interventional** procedure

AMA/Specialty Society RVS Update Committee Summary of Recommendations
High Volume Growth / CPT Assistant Analysis 2018

January 2020

Ophthalmic Ultrasound Anterior Segment – Tab 17

CPT code 76513 was initially identified for review based on volume growth. Volume has remained flat at approximately 27,000 since 2014. The increased volume prior to 2014 was attributed to improved equipment. In October 2018, a list of RUC referrals for CPT Assistant articles from 2013-2016 were reviewed and seventeen codes were identified. Action plans were requested for January 2019 and the RUC subsequently recommended that code 76513 be surveyed for April 2019. At the April 2019 RUC meeting, the specialty societies requested to refer this service to the CPT Editorial Panel for revision. In preparing to survey, it was found that the procedure was typically performed bilaterally. The specialties noted their intent to submit a code change application with a change to the descriptor to include "unilateral or bilateral" for the September 2019 CPT Editorial Panel meeting, thus the RUC recommended referral. In September 2019, the CPT Editorial Panel approved revision of the code for anterior segment ophthalmic ultrasound to clarify that it is reported for either unilateral or bilateral.

CPT codes 76510, 76511, 76512 and 76514 were initially included as part of the family with CPT code 76513 to be surveyed for the January 2020 RUC meeting. However, the specialty societies asserted that CPT code 76513 is not part of a family with any of the other codes in the Diagnostic Ultrasound, Head and Neck section of CPT. The other ophthalmic ultrasound codes in that section (CPT 76510-76512, 76514-76529) are used to image other anatomic sites in the eye (cornea, retina, axial length) for other diagnoses (corneal thickness, retinal pathology, pre-cataract surgery lens implant calculations, foreign body localization). In contrast, CPT code 76513 is used to image the anterior segment (anterior chamber, angle, iris, and posterior chamber). The societies affirmed that current values should be maintained for those codes which were suggested as potentially being part of the same family, CPT codes 76510, 76511, 76512 and 76514. These codes have all been surveyed within the last three years. All have also been converted from unilateral to bilateral and reduced in their payments to eliminate any duplication with a provided office visit whether they are performed together or not. The RUC agreed with the specialty societies' assessment of the code family and the surveying of only CPT code 76513.

76513 ***Ophthalmic ultrasound, diagnostic; anterior segment ultrasound, immersion (water bath) B-scan or high resolution biomicroscopy, unilateral or bilateral***
The RUC reviewed the survey results from 33 ophthalmologists and retina specialists and determined that the survey 25th percentile work RVU of 0.60 accurately reflects the physician work necessary for this service. CPT code 76513 is typically used to identify the etiology of a persistent narrow angle in the face of a patent peripheral iridotomy. It differentiates between normal and abnormal anatomic variability and pathologic posterior iris and ciliary body lesions including detachments, inflammatory conditions, and tumors. It is typically performed on the same day as an Evaluation and Management (E/M) office visit. The RUC recommends 3 minutes pre-service time, 10 minutes intra-service time and 2 minutes immediate post-service time. The 10-minute median intra-service time is consistent with the physician acquiring the image as well as performing the interpretation. Physicians typically acquire the image to ensure that all quadrants are completely visualized to rule out any pathology that is

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

unknown and invisible prior to imaging. The survey pre-service time was reduced from 6 to 3 minutes and the survey post-service time from 6 to 2 minutes because the service is typically performed with an office or eye visit code. In addition to reviewing prior test results and the referring physician notes, the physician typically adjusts the ultrasound machine settings after the technician has turned it on, positions the patient, anesthetizes the cornea and applies ultrasonic gel as part of the pre-service work. Two minutes is required for post-service work which includes irrigating the cornea, instructing the patient on lubricants and symptoms suggestive of corneal injury, reviewing the results with the patient, and dictating a report for the EHR and referring physician.

The RUC noted that CPT code 76513 has never been RUC surveyed, thus the current times are CMS/Other and not valid for comparison. In this case, the code was crosswalked to one of the other ultrasound codes when it was first created and valued. The CMS/Other time source makes it impossible to compare the current numbers to the times and values derived from the survey results. The RUC further noted the significant reduction in utilization that is expected from the revised code (a 26 percent reduction in utilization) because it now includes both unilateral and bilateral. The current code was typically reported twice but now will only be reported once whether performed unilaterally or bilaterally. Based on the current frequency of billing two units, AMA analysis suggests that the code descriptor change along with the recommended new work value will result in an approximate 33% reduction in payment.

The RUC compared CPT code 76513 to the top key reference code 76512 *Ophthalmic ultrasound, diagnostic; B-scan (with or without superimposed non-quantitative A-scan)* (work RVU = 0.56, 3 minutes pre-service time, 11 minutes intra-service time and 2 minutes immediate post-service time) and noted that the survey code has one minute less intra-service time and slightly higher intensity. Sixty percent of respondents that selected the reference code ranked the survey code as more intense and complex relative to the key reference service. The reason this procedure is more intense than other retinal ultrasounds is because the potential diagnoses are more diverse, including the possibility of a tumor hidden behind the iris, and the entire 360 degrees of the ciliary body must be imaged. Imaging the anterior segment is more challenging than imaging the retina more posteriorly, requiring greater technical skill and patient cooperation.

For additional support, the RUC referenced CPT code 74210 *Radiologic examination, pharynx and/or cervical esophagus, including scout neck radiograph(s) and delayed image(s), when performed, contrast (eg, barium) study* (work RVU = 0.59, 3 minutes pre-service time, 10 minutes intra-service time and 2 minutes immediate post-service time) noting that the codes have identical times and nearly identical work values. The RUC concluded that CPT code 76513 should be valued at the 25th percentile work RVU of 0.60 as supported by the survey. **The RUC recommends a work RVU of 0.60 for CPT code 76513.**

Affirmations

The RUC affirms the October 2016 RUC recommendations for CPT codes 76510, 76511 and 76512, and affirms the current 2020 work RVU of 0.14 for CPT code 76514.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Practice Expense
The Practice Expense Subcommittee had an extensive discussion about the potential for duplication or overlap between different clinical staff and the physician as well as discussing the need for the new supply item, ClearScan ultrasound probe cover (water-filled condom covers). Ultimately, the Subcommittee accepted the original spreadsheet for CPT code 76513 and made no changes. The Subcommittee reviewed and affirmed the inputs from October 2016 for the other four codes without modification. **The RUC recommends the direct practice expense inputs for CPT code 76513 as submitted by the specialty society and recommends the direct practice expense inputs as affirmed by the Practice Expense Subcommittee for CPT codes 76510, 76511, 76512 and 76514.**

Work Neutrality
The RUC's recommendation for these codes will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

Peter Smith, MD Chair, Relative Value Scale Update Committee (RUC)
American Medical Association (AMA) AMA Plaza
330 N. Wabash Ave., Suite 39300
Chicago, IL 60611-5885

Dear Dr. Smith,

The Academy affirms that current values should be maintained for those codes other than 76513 that are in the Diagnostic Ultrasound, Head and Neck section of CPT and which were suggested as potentially part of the same family: 76510-76512, 76514. We remind the RUC and CMS that codes listed in the same section of the CPT book are not necessarily in the same family. Regarding the current review of CPT 76513, the codes that were originally suggested as being part of the family have all been surveyed within the last 3 years. All have also been converted from unilateral to bilateral and reduced in their payments to eliminate any duplication with a provided office visit whether they are done together or not.

CPT 76513 is not part of a family with any of the other codes in the Diagnostic Ultrasound, Head and Neck section of CPT. The other ophthalmic ultrasound codes in that section are used to image other anatomic sites in the eye: cornea (76514), retina (76510-12), axial length (76516), 76519) or the thyroid (76536). In contrast, 76513 is used to image the anterior segment (anterior chamber, angle, iris, and posterior chamber).

The other codes in this section are performed for other diagnoses as well: corneal thickness to assess endothelial function and/or glaucoma risk (76514), retinal pathology (76510-12), pre-cataract surgery lens implant calculations (76516, 76519), foreign body localization (76529), and thyroid pathology (76536). Once again, in contrast 76513 is used to detect pathology in the anterior segment and the relationships between the iris, cornea, anterior chamber angle, and anterior/posterior chamber.

The other procedures in this section that were suggested as part of the same family are also typically performed by different specialties within ophthalmology: 76510-76512 by retina, 76513 by glaucoma and oncology, 76514 by cornea and comprehensive.

Finally, the other procedures in this section of CPT utilize different ultrasound imaging equipment that is not transferrable between procedures and are typically performed by different subspecialties within ophthalmology.

All of these factors mean that the services vary in both physician work as well as their practice expense.

Code (RUC)	wRVU	peRVU	Total RVU	Pre-	Intra	Post	Total Time
76510 (10/16)	.70	1.84	2.56	3	2	2	20
76511 (10/16)	.64	1.09	1.75	3	2	2	15
76512 (10/16)	.56	.91	1.49	3	2	2	16
76514 (10/17)	.14	.18	.34	1	1	1	5

We are happy to discuss this family and more importantly provide a review of the recommendations now presented for CPT 76513 (Tab 17) at the upcoming January 2020 meeting.

Sincerely,

David B. Glasser, MD, Advisor

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:76513 Tracking Number S4 Original Specialty Recommended RVU: **0.60**
Presented Recommended RVU: **0.60**
Global Period: XXX Current Work RVU: **0.66** RUC Recommended RVU: **0.60**

CPT Descriptor: Ophthalmic ultrasound, diagnostic; anterior segment ultrasound, immersion (water bath) B-scan or high resolution biomicroscopy, unilateral or bilateral

---

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 56-year-old woman with narrow anterior chamber angles after laser peripheral iridotomies has bilateral anterior segment ultrasound biomicroscopy performed.

Percentage of Survey Respondents who found Vignette to be Typical: 82%

Site of Service (Complete for 010 and 090 Globals Only)
Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 100%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Prior images are studied. The referring physician's clinical impression is assessed. The ultrasound machine icalibration and settings are checked. Explain the nature of the test to the patient and sign consent The patient is placed in a supine position on the examination table. A topical anesthetic is applied. Once the cornea is anesthetized, ultrasound gel is applied to the cornea.

Description of Intra-Service Work: The ultrasound probe is placed on the cornea and manipulated to visualize the iris, iris insertion, anterior chamber angle, posterior chamber, and ciliary body for 360 degrees. Direct the technician to capture and save multiple images to document peripheral iris anatomy in all quadrants and any pathology present. Evaluate the nature of any lesions. Correlate ultrasound findings with clinical presentation and formulate clinical diagnosis.

Description of Post-Service Work: Irrigate the cornea to remove the ultrasound gel. Provide lubricants and instruct patient to call for symptoms of corneal irritation or prolonged decrease in visual acuity. Review results with patient. Enter key findings into the EHR and dictate a report for the medical record and the referring physician, including interpretation, diagnosis, and recommendation for further follow-up and treatment.
