Subject: RUC Recommendations

Dear Administrator Verma:

The American Medical Association (AMA)/Specialty Society RVS Update Committee (RUC) submits the enclosed recommendations for work relative values and direct practice expense inputs to the Centers for Medicare and Medicaid Services (CMS). These recommendations relate to new and revised codes for *CPT 2021*, as well as to existing services identified by the RUC's Relativity Assessment Workgroup and CMS.

Enclosed are the RUC recommendations for all the CPT codes reviewed at the January 15-18, 2020 RUC meeting.

CPT 2021 New and Revised Codes – *January 2020 RUC Submission*

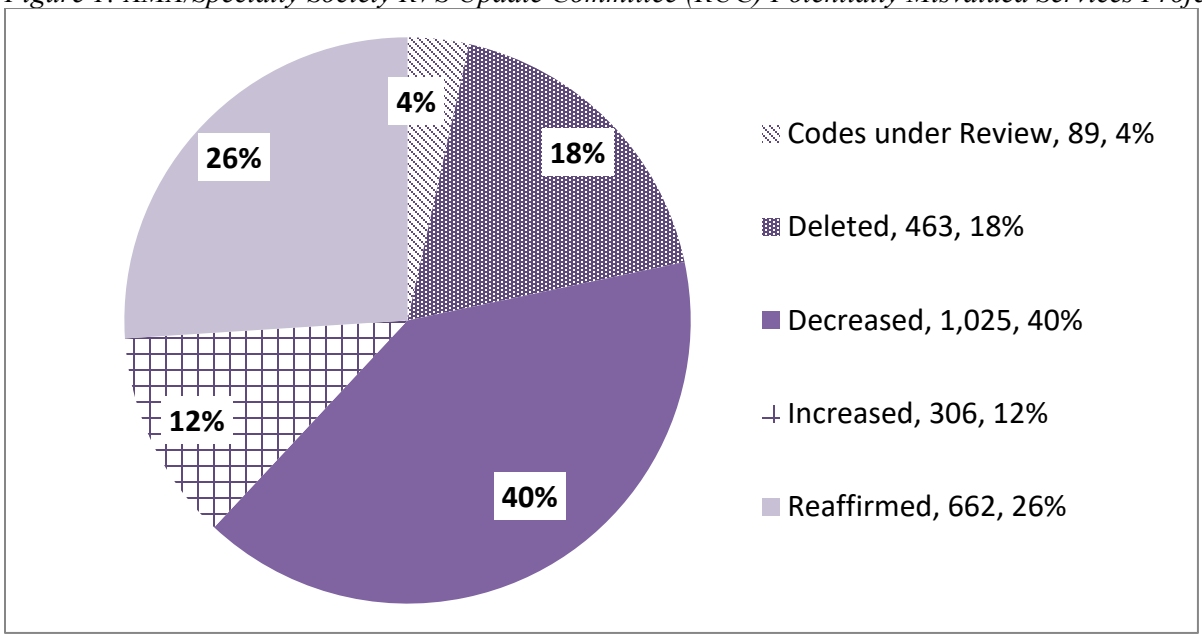
The enclosed binder contains RUC recommendations, including those for new and revised CPT codes. The RUC considered 54 new/revised/related family CPT codes at the January 2020 meeting. The RUC recommends that 8 codes be referred to the CPT Editorial Panel. The RUC submits work value and/or practice expense inputs for 46 new/revised/related family CPT codes from the January 2020 meeting.

CPT 2021 New and Revised Codes – *Entire CPT 2021 Cycle*

The total number of coding changes for the entire *CPT 2021* cycle is 190, including 78 additions, 60 revisions, and 35 deletions. In addition, 17 new codes were identified as part of the family for review in relationship to the new/revised codes. Of the 155 new/revised/related family CPT codes, 52 services are not payable on the RBRVS or do not require physician work (eg, laboratory services and vaccines), and accordingly, the RUC does not submit any information on these codes. The RUC refers 8 codes to the CPT Editorial Panel.

The RUC submits work value and/or practice expense inputs for 95 new/revised/related family CPT codes for the 2021 Medicare Physician Payment Schedule.

Existing Services Identified by RUC and CMS for Review



In addition to the new/revised CPT code submission, the RUC submits recommendations for 20 services identified by the RUC or CMS as potentially misvalued and reviewed at the January 2020 RUC meeting. The RUC recommends work relative values for 11 codes, direct practice expense inputs only for one code, referral to CPT for 7 codes and no specific recommendation on the valuation of one code (GPC1X).

The RUC recommendations are in addition to the 35 recommendations for existing services submitted to CMS following the RUC's April and October 2019 meetings.

RUC Progress in Identifying and Reviewing Potentially Misvalued Codes

Since 2006, the RUC has identified 2,545 potentially misvalued services through objective screening criteria and has completed review of 2,456 of these services. The RUC has recommended that over half of the services identified be decreased or deleted (Figure 1). The RUC has worked vigorously over the past several years to identify and address mis-valuations in the RBRVS through provision of revised physician time data and resource recommendations to CMS. The RUC looks forward to working with CMS on a concerted effort to address potentially misvalued services. *A detailed report of the RUC's progress is appended to this letter (attachment 01).*

Figure 1: AMA/Specialty Society RVS Update Committee (RUC) Potentially Misvalued Services Project

CMS to Review Unexplained Claims

The RUC identified Psychiatric Collaborative Care Management Services (CPT codes 99492, 99493 and 99494) via the work neutrality (CPT 2018) screen. These services showed a 468% increase in work RVUs for 2018. Therefore, the specialty societies submitted an action plan for the Relativity Assessment Workgroup to discuss. In reviewing the utilization data for these services, it appears one independent clinic is performing most of these services in the pediatric population. **The RUC recommends that CMS investigate the reporting of services by this specific independent clinic.** *Please see attachment 02 which indicates all the 2018 Medicare claims reported by one specific independent clinic*.

Request for CMS to Delete G-Codes

The RUC identified International Normalized Ratio (INR) Monitoring (CPT codes 93792 and 93793) via the work neutrality (CPT 2018) screen. CMS created G0248 *Demonstration, prior to initiation of home inr monitoring, for patient with either mechanical heart valve(s), chronic atrial fibrillation, or venous thromboembolism who meets medicare coverage criteria, under the direction of a physician; includes:*

face-to-face demonstration of use and care of the inr monitor, obtaining at least one blood sample, provision of instructions for reporting home inr test results, and documentation of patient's ability to perform testing and report results, G0249 *Provision of test materials and equipment for home inr monitoring of patient with either mechanical heart valve(s), chronic atrial fibrillation, or venous thromboembolism who meets medicare coverage criteria; includes: provision of materials for use in the home and reporting of test results to physician; testing not occurring more frequently than once a week; testing materials, billing units of service include 4 tests* and G0250 *Physician review, interpretation, and patient management of home inr testing for patient with either mechanical heart valve(s), chronic atrial fibrillation, or venous thromboembolism who meets medicare coverage criteria; testing not occurring more frequently than once a week; billing units of service include 4 tests* to describe these services before 93792 *Patient/caregiver training for initiation of home international normalized ratio (INR) monitoring under the direction of a physician or other qualified health care professional, face-to-face, including use and care of the INR monitor, obtaining blood sample, instructions for reporting home INR test results, and documentation of patient's/caregiver's ability to perform testing and report results* and 93793 *Anticoagulant management for a patient taking warfarin, must include review and interpretation of a new home, office, or lab international normalized ratio (INR) test result, patient instructions, dosage adjustment (as needed), and scheduling of additional test(s), when performed* were developed. These services showed a 314% increase in work RVUs for 2018. The Relativity Assessment Workgroup noted that 93792 and 93793 were new codes and an increase was expected as these services were not specifically described before. The Relativity Assessment Workgroup also noted that the RUC recommended that CMS delete G0248, G0249 and G0250 at that time. CMS did not delete these G codes for CY2018. **The RUC continues to recommend that CMS delete G0248, G0249 and G0250.**

Practice Expense Subcommittee

The attached materials include direct expense input (medical staff, supplies and equipment) recommendations for each code reviewed. As a reminder, cost estimates for proposed new clinical staff types, medical supplies and medical equipment (not listed as part of the CMS labor, supply, and equipment lists) are based on provided source(s), such as paid invoices and may not reflect the wholesale prices, quantity, cash discounts, prices for used equipment or any other factors that may alter the cost estimates. The RUC shares this information with CMS without making specific recommendations on the pricing.

Immunization Administration

The RUC requests that CMS correct the practice expense RVUs for immunization administration to be resource-based. We have found that although CMS has published the RUC recommended direct practice expense inputs for immunization administration codes 90460, 90471 and 90473, the published PE RVU of 0.22 in the nonfacility setting is not accurate for those direct practice expense inputs. Rather than implementing the direct practice expense input RUC recommendations made in 2009 to develop the PE RVUs, CMS crosswalked or more accurate for PE RVUs, hardcoded, the PE RVU for 90460, 90471 and 90473 from CPT code 90471, which is hardcoded from **CPT code 96372 *Therapeutic, prophylactic, or diagnostic injection (specify substance or drug); subcutaneous or intramuscular (formerly CPT code 90772 and then 90782).*** The direct practice expense inputs used to develop the PE RVU for CPT code 96372 results in a PE RVU of 0.22 which greatly underestimates the resources needed to provide immunization services in the office setting. This is also true of immunization administration add-on codes 90461, 90472 and 90474. These three codes have a published PE RVU of 0.20 in the nonfacility setting which is not accurate for the published direct practice expense inputs for those codes. Although these three codes are clearly hardcoded to the PE RVUs of another code it is difficult to determine exactly which code the codes are hardcoded to. For all 6 codes the result is approximately 60 percent reduction in

PE RVUs resulting in payment substantially lower than current Centers for Disease Control and Prevention (CDC) regional maximum charges. Historically, when crosswalks are utilized it is only for work values, not PE relative value units. The use of a crosswalk for practice expense RVUs means that the codes are not resource based because they do not account for the appropriate clinical staff time, supplies and equipment to furnish the services. Appropriate payment for immunization administration is critical in maintaining high immunization rates in the United States as well as having the capacity to respond quickly to vaccine preventable disease outbreaks. Finally, it should be noted that CMS has already validated the RUC-recommended values for CPT code 90460. CMS used the RUC-recommended values for CPT code 90460 to value the fast-tracked H1N1 immunization administration code (90470) for 2010—as both codes were reviewed during the same RUC meeting (October 2009). **Accordingly, CMS should use the RUC recommended resource-based direct practice inputs to develop the PE RVU for CPT codes 90460, 90461, 90471, 90472, 90473 and 90474. The RUC recommendations for all six CPT codes are attached to this letter.** *(See attachments 03a and 03b).*

Utilization Assumption Corrections

Dilation of Urinary Tract (CPT codes 50436, 50437)
In January 2015, the RUC referred CPT code 50395 *Introduction of guide into renal pelvis and/or ureter with dilation to establish nephrostomy tract, percutaneous*, which was identified as part of the family of other genitourinary catheter procedures that were being reviewed at the time, to the CPT Editorial Panel to clear up confusion with overlap in physician work with 50432 *Placement of nephrostomy catheter, percutaneous, including diagnostic nephrostogram and/or ureterogram when performed, imaging guidance (eg, ultrasound and/or fluoroscopy) and all associated radiological supervision and interpretation*. In September 2017, the CPT Editorial Panel deleted CPT code 50395 nephrostomy tract code and created two new codes (50436 and 50437) to report (1) dilation of an existing tract, and (2) establishment of new percutaneous access to the collecting system for an endourologic procedure including imaging guidance (eg, ultrasound and/or fluoroscopy), all associated radiological supervision and interpretation, as well as post procedure tube placement when performed. Imaging was also bundled into the new codes included in those codes. In February 2018, the RUC submitted recommendations for CPT Codes 50436 and 50437 along with codes 50432, 50433 and 74485. In the CY2019 MPFS Final Rule, CMS rejected the RUC recommendations for 50436 and 50437 and instead opted to assign both services much lower work values:

Code	Long Descriptor	February 2018 RUC Recommended Work RVU	CY2019 CMS Finalized Work RVU
50436	Dilation of existing tract, percutaneous, for an endourologic procedure including imaging guidance (eg, ultrasound and/or fluoroscopy) and all associated radiological supervision and interpretation, as well as post procedure tube placement, when performed;	3.37	2.78
50437	Dilation of existing tract, percutaneous, for an endourologic procedure including imaging guidance (eg, ultrasound and/or fluoroscopy) and all associated radiological supervision and interpretation, as well as post procedure tube placement, when performed; including new access into the renal collecting system	5.44	4.85

In November 2018, AMA RUC staff discovered that CMS erroneously double-counted the utilization for new codes that had image guidance bundled, in both this Dilation of Urinary Tract code family and in the Fine Needle Aspiration code family causing the Agency to incorrectly believe that the RUC was recommending large increases in physician work for both families of services, when in fact the RUC was recommending a work savings for each family. This is made clear by reviewing the large year over year volume increases for all of the new codes in the "CY 2017 Utilization Data Crosswalk to CY 2019" CMS CY2019 Final Rule spreadsheet, where the Agency had 5,528 utilization for new code 50436 and 913 utilization for new code 50437. Whereas, these services were collectively replacing deleted code 50395, which only had a utilization of 3,022. CMS had accidentally also included roughly 2,500 utilization from the bundled imaging code, 74485 *Dilation of ureter(s) or urethra, radiological supervision and interpretation*, resulting in a double counting of the procedure. This error made it appear like the RUC was recommending a work RVU pool that was roughly twice as high as was the case.

The RUC recommendations for codes 50436 and 50437 are more appropriate than the current CMS values as the current CMS values create rank order anomalies. The RUC recommendations are strongly supported by the RUC recommendations for CY2019, which the RUC is resubmitting to the Agency along with the multispecialty letter concerning this issue submitted to CMS in January 2019 *(attachments 04a and 04b)*. **The RUC recommends for CMS to reconsider their CY2019 Medicare Physician Fee Schedule Final Rule decision for code 50436 and 50437 considering this new information.**

Enclosed Recommendations and Supporting Materials:

Included in these binders and on the enclosed USB drive are:

- RUC Recommendation Status Report for New and Revised Codes
- RUC Recommendation Status Report for 2,545 services identified to date by the Relativity Assessment Workgroup and CMS as potentially misvalued. In addition, a spreadsheet containing the codes specific to this submission is included.
- RUC Referrals to the CPT Editorial Panel – both for CPT nomenclature revisions and *CPT Assistant* articles.
- Physician Time File: A list of the physician time data for each of the CPT codes reviewed at the January 2020 RUC meeting.
- Pre-Service and Post-Service Time Packages Definitions: The RUC developed physician pre-service and post-service time packages which have been incorporated into these recommendations. The intent of these packages is to streamline the RUC review process as well as create standard pre-service and post-service time data for all codes reviewed by the RUC.
- PLI Crosswalk Table: The RUC has committed to selecting appropriate professional liability insurance crosswalks for new and revised codes and existing codes under review. We have provided a PLI Crosswalk Table listing the reviewed code and its crosswalk code for easy reference. We hope that the provision of this table will assist CMS in reviewing and implementing the RUC recommendations.

- BETOS Assignment Table: The RUC, for each meeting, provides CMS with suggested BETOS classification assignments for new/revised codes. Furthermore, if an existing service is reviewed and the specialty believes the current assignment is incorrect, this table will reflect the desired change.

- Utilization Crosswalk Table: A table estimating the flow of claims data from existing codes to the new/revised codes. This information is used to project the work relative value savings to be included in the 2021 conversion factor increase.

- New Technology List and Flow Chart: In April 2006, the RUC adopted a process to identify and review codes that represent new technology or services that have the potential to change in value. To date, the RUC has identified 676 of these procedures through the review of new CPT codes. A table of these codes identified as new technology services and the date of review is enclosed, as well as a flow chart providing a detailed description of the process to be utilized to review these services.

- RUC Recommendations on Modifications to Visits in the Global Period – February 2020.

We appreciate your consideration of these RUC recommendations. If you have any questions regarding the attached materials, please contact Sherry Smith at (312) 464-5604.

Sincerely,

Peter K. Smith, MD

The RUC Relativity Assessment Workgroup Progress Report

In 2006, the AMA/Specialty Society RVS Update Committee (RUC) established the Five-Year Identification Workgroup (now referred to as the Relativity Assessment Workgroup) to identify potentially misvalued services using objective mechanisms for reevaluation prior to the next Five-Year Review. Since the inception of the Relativity Assessment Workgroup, the Workgroup and the Centers for Medicare and Medicaid Services (CMS) have identified more than 2,500 services through 20 different screening criteria for further review by the RUC. Additionally, the RUC charged the Workgroup with maintaining the "new technology" list of services that will be re-reviewed by the RUC as reporting and cost data become available.

To provide Medicare with reliable data on how physician work has changed over time, the RUC, with more than 300 experts in medicine and research, are examining 2,545 potentially misvalued services accounting for $45 billion in Medicare spending. The update committee has recommended reductions and deletions to 1,488 services, redistributing $5 billion annually. Here are the outcomes for the committee's review of 2,545 codes:

Potentially Misvalued Services Project

Source: American Medical Association

New Technology

As the RUC identifies new technology services that should be re-reviewed, a list of these services is maintained and forwarded to CMS. Currently, codes are identified as new technology based on recommendations from the appropriate specialty society and consensus among RUC members at the time of the RUC review for these services. RUC members consider several factors to evaluate potential new technology services, including: recent FDA-approval, newness or novelty of the service, use of an existing service in a new or novel way, and migration of the service from a Category III to Category I CPT® code. The Relativity Assessment Workgroup maintains and develops all standards and procedures associated with the list, which currently contains 676 services. In September 2010, the re-review cycle began and since then the RUC has recommended 48 services to be re-examined. The remaining services

are rarely performed (i.e., less than 500 times per year in the Medicare population) and will not be further examined. The Workgroup will continue to review the remaining 214 services every October after three years of Medicare claims data is available for each service.

Methodology Improvements
The RUC implemented process improvements to methodology following its October 2013 meeting. The process improvements are designed to strengthen the RUC's primary mission of providing the final RVS update recommendations to the Centers for Medicare and Medicaid Services.

In the area of methodology, the RUC is continuously improving its processes to ensure that it is best utilizing reliable, extant data. At its most recent meeting, the RUC increased the minimum number of respondents required for each survey of commonly performed codes:

- For services performed 1 million or more times per year in the Medicare population, at least 75 physicians must complete the survey.
- For services performed from 100,000 to 999,999 times annually, at least 50 physicians will be required.

Further strengthening its methodology, the RUC also announced that specialty societies will move to a centralized online survey process, which will be coordinated by the AMA and will utilize external expertise to ensure survey and reporting improvements.

Site of Service Anomalies
The Workgroup initiated its effort by reviewing services with anomalous sites of service when compared to Medicare utilization data. Specifically, these services are performed less than 50% of the time in the inpatient setting, yet include inpatient hospital Evaluation and Management services within their global period.

The RUC identified 194 services through the site of service anomaly screen. The RUC required the specialties to resurvey 129 services to capture the appropriate physician work involved. These services were reviewed by the RUC between April 2008 and February 2011. CMS implemented 124 of these recommendations in the 2009, 2010 and 2011 Medicare Physician Payment Schedules. The RUC submitted another five recommendations as well as re-reviewed and submitted 44 recommendations to previously reviewed site of service identified codes to CMS for the 2012 Medicare Physician Payment Schedule.

Of the remaining 65 services that were not re-surveyed, the RUC modified the discharge day management for 46 services, maintained three codes and removed two codes from the screen as the typical patient was not a Medicare beneficiary and would be an inpatient. The CPT® Editorial Panel deleted 14 codes. The RUC completed review of services under this initial screen.

During this review, the RUC uncovered several services that are reported in the outpatient setting, yet, according to several expert panels and survey data from physicians who perform the procedure, the service, typically requires a hospital stay of greater than 23 hours. The RUC maintains that physician work that is typically performed, such as visits on the date of service and discharge work the following day, should be included within the overall valuation. Subsequent observation day visits and discharge day management service are appropriate proxies for this work.

The RUC will reassess the data each year going forward to determine if any new site of service anomalies arise. In 2015, the RUC identified three services in which the Medicare data from 2011-2013 indicated it was performed less than 50% of the time in the inpatient setting, yet included inpatient hospital Evaluation and Management services within the global period. These services were referred to CPT and recommendations were submitted to CMS for the 2018 Medicare Physician Payment Schedule.

In 2016, the RUC identified one site of service anomaly CPT code and submitted the recommendation to CMS for the 2019 Medicare Physician Payment Schedule. In 2017, the RUC identified one site of service anomaly CPT code which was revised at the CPT Editorial Panel and the RUC submitted recommendations for the 2020 Medicare Physician Payment Schedule.

In 2018, the RUC also performed a site-of-service anomaly screen based on the review of three years of data (2015, 2016 and 2017e) for services with utilization over 10,000 in which a service is typically performed in the inpatient hospital setting, yet only a half discharge day management (99238) is included. One service was identified via this screen and another identified for the outpatient site of service anomaly screen. The RUC submitted this recommendation for the 2021 Medicare Physician Payment Schedule.

In 2019, the RUC lowered the threshold for site-of-service anomalies based on the review of three years of data (2016, 2017 and 2018e) for services with utilization over 5,000 in the outpatient setting more than 50% of the time but includes inpatient hospital Evaluation and Management services within the global period. The RUC identified nine services, expanding to 10 services to include the family of services. The RUC referred three codes to the CPT Editorial Panel for revision and submitted seven recommendations for the 2021 Medicare Physician Payment Schedule.

High Volume Growth

The Workgroup assembled a list of all services with a total Medicare utilization of 1,000 or more that have increased by at least 100% from 2004 through 2006. The query initially resulted in the identification of 81 services, but was expanded by 16 services to include the family of services, totaling 97 services. Specialty societies submitted comments to the Workgroup in April 2008 to provide rationales for the growth in reporting. Following this review, the RUC required the specialties to survey 35 services to capture the appropriate work effort and/or direct practice expense inputs. These services were reviewed by the RUC between February 2009 and April 2010.

The RUC recommended removing 15 services from the screen as the volume growth did not impact the resources required to provide these services. The CPT® Editorial Panel deleted 34 codes. The RUC submitted 44 recommendations to CMS for services for the 2012-2017 Medicare Physician Payment Schedules and four recommendations for the CPT 2020 Medicare Physician Payment Schedule. The RUC completed review of services under this first iteration of the high growth screen.

In April 2013, the RUC assembled a list of all services with a total Medicare utilization of 10,000 or more that have increased by at least 100% from 2006 through 2011. The query resulted in the identification of 40 services and expanded to 62 services to include the appropriate family of services. The RUC recommended removing three services from the screen as the volume growth did not impact the resources required to provide these services. The RUC recommended review of two services after an additional utilization data is collected. The CPT® Editorial Panel deleted ten codes and the RUC submitted recommendations for 47 services for the 2015-2019 Medicare Physician Payment Schedule.

In October 2015, the RUC ran this screen again for services based on Medicare utilization of 10,000 or more that have increased by at least 100% from 2008 through 2013. The query resulted in the identification of 19 services and expanded to 31 services to include the appropriate family of services. The RUC recommended removing one service from the screen as the volume growth did not impact the resources required to provide these services. The RUC will review three services after an additional utilization data is collected. The CPT Editorial Panel deleted 12 codes and the RUC submitted recommendations for 15 services for the 2017-2020 Medicare Physician Payment Schedules.

In October 2016, the RUC ran this screen for its fourth iteration and the query resulted in the identification of 12 services, which was expanded to 46 services. The RUC recommended removing two services from the screen as the volume growth did not impact the resources required to provide these services. The CPT Editorial Panel deleted three services. The RUC submitted recommendations for 38 services for the 2019-2020 Medicare Physician Payment Schedules. The RUC referred one service to CPT for revision and will review one service for the 2022 Medicare Physician Payment Schedule.

In October 2018, the RUC ran this query for its fifth iteration for services with 2017e Medicare utilization of 10,000 or more that has increased by at least 100% from 2012 through 2017. Eleven (11) codes were identified. The RUC recommended removing two services from the screen as the volume growth was appropriate. The CPT Editorial Panel deleted one code. The RUC referred one code to the CPT Editorial Panel for revision and submitted recommendations for seven services for the 2020-2021 Medicare Physician Payment Schedule.

In October 2019, the RUC completed its sixth iteration of this screen for services with 2018e Medicare utilization of over 10,000 that have increased by at least 100% from 2013 through 2018. The RUC identified 12 services. The RUC removed three services from the screen as the volume growth did not impact the resources required to provide these services. The RUC referred four codes to the CPT Editorial Panel for revision and will review one code after additional utilization data is available. The RUC submitted recommendations for one service for the 2021 Medicare Physician Payment Schedule and will review the remaining three service for the 2022 Medicare Physician Payment Schedule.

CMS Fastest Growing

In 2008, CMS developed the Fastest Growing Screen to identify all services with growth of at least 10% per year over the course of three years from 2005-2007. Through this screen, CMS identified 114 fastest growing services and the RUC added 69 services to include the family of services, totaling 183. The RUC required the specialties to survey 72 services to capture the appropriate work effort and/or direct practice expense inputs. These services were reviewed by the RUC from February 2008 through April 2010 and submitted to CMS for the Medicare Physician Payment Schedule.

The RUC recommended removing 27 services from the screen as the volume growth did not impact the resources required to provide the service. The CPT® Editorial Panel deleted 43 codes. The RUC submitted 41 recommendations to CMS for the 2012-2019 Medicare Physician Payment Schedules. The RUC completed review of services under this screen.

High IWPUT

The Workgroup assembled a list of all services with a total Medicare utilization of 1,000 or more that have an intra-service work per unit of time (IWPUT) calculation greater than 0.14, indicating an outlier intensity. The query resulted in identification of 32 services. Specialty societies submitted comments to the Workgroup in April 2008 for these services. As a result of this screen, the RUC has reviewed and submitted recommendations to CMS for 28 codes, removing four services from the screen as the IWPUT was considered appropriate. The RUC completed review of services under this screen.

Services Surveyed by One Specialty – Now Performed by a Different Specialty

In October 2009, services that were originally surveyed by one specialty, but now performed predominantly by other specialties were identified and reviewed. The RUC identified 21 services by this screen, adding 19 services to address various families of codes. The majority of these services required clarification within CPT®. The CPT® Editorial Panel deleted 18 codes. The RUC submitted 22 recommendations for physician work and practice expense to CMS for the 2011-2014 Medicare Physician Payment Schedules. The RUC completed review of services under this screen.

In April 2013, the RUC queried the top two dominant specialties performing services based on Medicare utilization more than 1,000 and compared it to who originally surveyed the service. Two services were identified and the RUC recommended that one be removed from the screen since the specialty societies currently performing this service indicated that the service is appropriate and recommended that the other code be referred to CPT® to be revised. The RUC completed review of services under this screen.

In October 2019, the RUC queried the top two dominant specialties performing services based on Medicare utilization more than 1,000 and compared it to who originally surveyed the service. Two services were identified, and the RUC referred them to the CPT Editorial Panel for revision and the CPT Assistant for education.

Harvard Valued

Utilization over 1 Million

CMS requested that the RUC pay specific attention to Harvard valued codes that have a high utilization. The RUC identified nine Harvard valued services with high utilization (performed over 1 million times per year). The RUC also incorporated an additional 12 Harvard valued codes within the initial family of services identified. The CPT® Editorial Panel deleted one code. The RUC submitted 20 relative value work recommendations to CMS for the 2011 and 2012 Medicare Physician Payment Schedules. The RUC completed review of services under this screen.

Utilization over 100,000

The RUC continued to review Harvard valued codes with significant utilization. The Relativity Assessment Workgroup expanded the review of Harvard codes to those with utilization over 100,000 which totaled 38 services. The RUC expanded this screen by 101 codes to include the family of services, totaling 139 services. The CPT® Editorial Panel deleted 27 codes. The RUC submitted 112 recommendations to CMS for the 2011-2014 Medicare Physician Payment Schedules. The RUC completed review of services under this screen.

Utilization over 30,000

In April 2011, the RUC continued to identify Harvard valued codes with utilization over 30,000, based on 2009 Medicare claims data. The RUC determined that the specialty societies should survey the remaining 36 Harvard codes with utilization over 30,000 for September 2011. The RUC expanded the screen to include the family of services, totaling 65 services. The CPT® Editorial Panel deleted 12 codes. The RUC submitted recommendations for 53 services for the 2013-2014 Medicare Physician Payment Schedules. The RUC completed review of services under this screen.

In October 2015, the RUC reran this screen on Harvard valued services with 2014e Medicare utilization over 30,000. Seven services were identified and expanded to nine codes to include the family of services. The CPT Editorial Panel deleted two codes. The RUC submitted recommendations for 7 services for the 2018-2019 Medicare Physician Payment Schedules. The RUC completed review of services under this screen.

In October 2018, the RUC reran this screen on Harvard valued services with 2017e Medicare utilization over 30,000. One service was identified. The RUC submitted this recommendation for the 2021 Medicare Physician Payment Schedule. The RUC completed review of services under this screen.

In October 2019, the RUC reran this screen on Harvard valued services with 2018e Medicare utilization over 30,000. Three services were identified. The RUC referred two services to the CPT Editorial Panel for revision and will review one service for the 2022 Medicare Physician Payment Schedule.

Medicare Allowed Charges >$10 million
In June 2012, CMS identified 16 services that were Harvard valued with annual allowed charges (2011 data) > $10 million. The RUC expanded this screen to 33 services to include the proper family of services. The RUC removed two services from review as the allowed charges are approximately $1 million and did not meet the screen criteria. The CPT® Editorial Panel deleted one service. The RUC submitted recommendations for 30 services for the 2013-2017 Medicare Physician Payment Schedules. The RUC completed review of services under this screen.

CMS/Other

Utilization over 500,000
In April 2011, the RUC identified 410 codes with a source of "CMS/Other." CMS/Other codes are services which were not reviewed by the Harvard studies or the RUC and were either gap filled, most often via crosswalk by CMS or were part of a radiology fee schedule. "CMS/Other" source codes would not have been flagged in the Harvard only screens, therefore the RUC recommended that a list of all CMS/Other codes be developed and reviewed. The RUC established the threshold for CMS/Other source codes with Medicare utilization of 500,000 or more, which resulted in 19 codes. The RUC expanded this screen to 21 services to include the proper family of services. The CPT® Editorial Panel deleted three services. The RUC submitted recommendations for 16 services for the 2013-2015 Medicare Physician Payment Schedules. The RUC removed one service from the screen and will review one service once new codes go into effect and additional data are available.

Utilization over 250,000
In April 2013, the RUC lowered the threshold to the CMS/Other source codes with Medicare utilization of 250,000 or more, which resulted in 26 services and was expanded to 52 services to include the family of services. The CPT Editorial Panel deleted 11 codes identified under this screen. The RUC removed nine services and submitted 32 recommendations to CMS for the 2015-2019 Medicare Physician Payment Schedules. The RUC completed review of services under this screen.

Utilization over 100,000
In October 2016, the RUC lowered the threshold to the CMS/Other source codes with Medicare utilization of 100,000 or more, which resulted in 27 services and was expanded to 41 services to include the family of services. The RUC referred two codes to CPT for deletion and submitted recommendations for 39 services for the 2019 Medicare Physician Payment Schedule. The RUC completed review of services under this screen.

Utilization over 30,000
In October 2017, the RUC lowered the threshold to the CMS/Other source codes with Medicare utilization of 30,000 or more, which resulted in 34 services and was expanded to 55 services to include the family of services. The CPT Editorial Panel deleted 10 codes. The submitted recommendations for 45 services for the 2019-2020 Medicare Physician Payment Schedules. The RUC completed review of services under this screen.

In October 2018, the RUC reran this screen for CMS/Other source codes with 2017e Medicare utilization over 30,000, which resulted in seven services and expanded to 15 services. The RUC referred one code to the CPT Editorial Panel for revision and the CPT Editorial Panel deleted another code. The RUC submitted recommendations for 13 services for the 2020-21 Medicare Physician Payment Schedules.

Utilization over 20,000
In October 2019, the RUC lowered the threshold for this screen of CMS/Other source codes with 2018e Medicare utilization over 20,000, which resulted in nine services and expanded to 10 to include the family of services. The RUC referred three codes to the CPT Editorial Panel for revision. CPT deleted two codes. The RUC removed one service from this screen and will review one service after additional utilization data is available. The RUC submitted recommendations for three services for the 2021 Medicare Physician Payment Schedule.

Bundled CPT® Services

Reported 95% or More Together
The Relativity Assessment Workgroup solicited data from CMS regarding services inherently performed by the same physician on the same date of service (95% of the time) in an attempt to identify pairings of services that should be bundled together. The CPT® Editorial Panel deleted 31 individual component codes and replaced them with 53 new codes that describe bundles of services. The RUC then surveyed and reviewed work and practice costs associated with these services to account for any efficiencies achieved through the bundling. The RUC completed review of all services under this screen.

Reported 75% or More Together
In February 2010, the Workgroup continued review of services provided on the same day by the same provider, this time lowering the threshold to 75% or more together. The Relativity Assessment Workgroup again analyzed the Medicare claims data and found 151 code pairs which met the threshold. The Workgroup then collected these code pairs into similar "groups" to ensure that the entire family of services would be coordinated under one code bundling proposal. The grouping effort resulted in 20 code groups, totaling 80 codes, and were sent to specialty societies to solicit action plans for consideration at the April 2010 RUC meeting. Resulting from the Relativity Assessment Workgroup review, 81 additional codes were added for review as part of the family of services to ensure duplication of work and practice expense was mitigated throughout the entire set of services. Of the 161 total codes under review, the CPT® Editorial Panel deleted 35 individual component codes and replaced the component coding with 126 new and/or revised codes that described the bundles of services. The RUC will review two services after additional utilization data is available.

In August 2011, the Joint CPT®/RUC Workgroup on Codes Reported Together Frequently reconvened to perform its third cycle of analysis of code pairs reported together with 75% or greater frequency. The Workgroup reviewed 30 code pair groups and recommended code bundling for 64 individual codes. In October 2012, the CPT® Editorial Panel started the review of code bundling solutions. Of the 153 total codes under review, the CPT® Editorial Panel deleted 50 services. The RUC has submitted 103 code recommendations for the 2014-2019 Medicare Physician Payment Schedules. The RUC completed review of all services under this screen.

In January and April 2015, the Joint CPT/RUC Workgroup on Codes Reported Together Frequently reconvened to perform its fourth cycle analysis of code pairs reported together with 75% or greater frequency. The Workgroup reviewed 8 code pair groups and recommended code bundling for 18 individual codes. In October 2015, the CPT Editorial Panel started review of the code bundling solutions. Of the 75 total codes under review, the CPT Editorial Panel deleted 26 services. The RUC submitted 47 code recommendations for the 2017-2019 Medicare Physician Payment Schedules and will review the two services after additional utilization data is available.

In October 2017 the Relativity Assessment Workgroup performed the fifth cycle analysis of code pairs reported together with 75% or greater frequency. Only groups that totaled allowed charges of $5 million or more were included. As with previous iterations, any code pairs in which one of the codes was either

below 1,000 in Medicare claims data and/or contained at least one ZZZ global service were removed. Based on these criteria four groups or 8 codes were identified. The Relativity Assessment Workgroup determined two groups totaling four codes require code bundling solutions. Of the 12 total codes under review, the CPT Editorial Panel deleted one service. The RUC submitted 11 code recommendations for the 2020 and 2021 Medicare Physician Payment Schedules. The RUC completed review of all services under this screen.

Low Value/Billed in Multiple Units
CMS has requested that services with low work RVUs that are commonly billed with multiple units in a single encounter be reviewed. CMS identified services that are reported in multiples of five or more per day, with work RVUs of less than or equal to 0.50 RVUs.

In October 2010, the Workgroup reviewed 12 CMS identified services and determined that six of the codes were improperly identified as the services were either not reported in multiple units or were reported in a few units and that was considered in the original valuation. The RUC submitted recommendations for the remaining six services for the 2012 Medicare Physician Payment Schedule. The RUC completed review of services under this screen.

Low Value/High Volume Codes
CMS has requested that services with low work RVUs and high utilization be reviewed. CMS has requested that the RUC review 24 services that have low work RVUs (less than or equal to 0.25) and high utilization. The RUC questioned the criteria CMS used to identify these services as it appeared some codes were missing from the screen criteria indicated. The RUC identified codes with a work RVU ranging from 0.01 - 0.50 and Medicare utilization greater than one million. In February 2011, the RUC reviewed the codes identified by this criteria and added 5 codes, totaling 29. The RUC submitted 24 recommendations to CMS for the 2012 Medicare Physician Payment Schedule and five recommendations to CMS for the 2013 Medicare Physician Payment Schedule. The RUC completed review of services under this screen.

Multi-Specialty Points of Comparison List
CMS requested that services on the Multi-Specialty Points of Comparison (MPC) list should be reviewed. CMS prioritized the review of the MPC list to 33 codes, ranking the codes by allowed service units and charges based on CY 2009 claims data as well as those services reviewed by the RUC more than six years ago. The RUC expanded the list to 182 services to include additional codes as part of a family (over 100 of these codes are part of the review of GI endoscopy codes). The CPT® Editorial Panel deleted 25 codes. The RUC submitted recommendations for 157 codes for the 2012-2015 Medicare Physician Payment Schedules. The RUC completed review of services under this screen.

CMS High Expenditure Procedural Codes
In the Proposed Rule for 2012, CMS requested that the RUC review a list of 70 high Medicare Physician Payment Schedule expenditure procedural codes representing services furnished by an array of specialties. CMS selected these codes since they have not been reviewed for at least 6 years, and in many cases the last review occurred more than 10 years ago.

The RUC reviewed the 70 services identified and expanded the list to 145 services to include additional codes as part of the family. The CPT® Editorial Panel deleted 20 codes. The RUC submitted 125 recommendations to CMS for the 2013-2019 Medicare Physician Payment Schedules. The RUC completed review of services under the first iteration of this screen.

In the Final Rule for 2016, CMS requested that the RUC review a list of 103 high Medicare Physician Payment Schedule high expenditure services across specialties with Medicare allowed charges of $10 million or more. CMS identified the top 20 codes by specialty in terms of allowed charges, excluding 010 and 090-day global services, anesthesia and Evaluation and Management services and services reviewed since CY 2010.

The RUC expanded the list of services to 238 services to include additional codes as part of the family. The CPT Editorial Panel deleted 30 codes. The RUC submitted 208 recommendations to CMS for the 2017-2019 Medicare Physician Payment Schedules. The RUC completed review of services under this screen.

Services with Stand-Alone PE Procedure Time
In June 2012, CMS proposed adjustments to services with stand-alone procedure time assumptions used in developing non-facility PE RVUs. These assumptions are not based on physician time assumptions. CMS prioritized CPT® codes that have annual Medicare allowed charges of $100,000 or more, include direct equipment inputs that amount to $100 or more, and have PE procedure times greater than five minutes for review. The RUC reviewed 27 services identified through this screen and expanded to 29 services to include additional codes as part of the family. The CPT® Editorial Panel deleted 11 codes. The RUC submitted 18 recommendations for the 2014-2015 Medicare Physician Payment Schedules. The RUC completed review of services under this screen.

Pre-Time Analysis
In January 2014, the RUC reviewed codes that were RUC reviewed prior to April 2008, with pre-time greater than pre-time package 4 *Facility - Difficult Patient/Difficult Procedure* (63 minutes) for services with 2012 Medicare Utilization over 10,000. The screen identified 19 services with more pre-service time than the longest standardized pre-service package and was expanded to 24 to include additional codes as part of the family. The RUC reviewed these services and referred three services to the CPT® Editorial Panel for revision. The CPT Editorial Panel deleted one service and will review three services for CPT 2018. The RUC reviewed 18 services and noted that they were all originally valued by magnitude estimation and therefore readjustments in pre-service time categories did not alter the work values. Additionally, crosswalk references for each service were presented validating the pre-time adjustments. The RUC noted that this screen was useful, however did not reveal any large outliers and therefore the utilization threshold does not need to be lowered to identify more services. The RUC submitted 20 recommendations for the 2016 Medicare Physician Payment Schedule. The RUC completed review of services under this screen.

Post-Operative Visits
010-Day Global Codes
In January 2014, the RUC reviewed all 477, 010-day global codes to determine any outliers. Many 010-day global period services only include one post-operative office visit. The Relativity Assessment Workgroup pared down the list to 19 services with >1.5 office visits and 2012 Medicare utilization > 1,000. The RUC reviewed the 19 services, which was expanded to 21 services for additional codes in the family of services, identified via this screen. The RUC referred two codes to the CPT Editorial Panel for revision. The RUC submitted recommendations for 21 services for the 2015-2017 Medicare Physician Payment Schedule. The RUC has completed review of the services under this screen.

In October 2019, the identified five 010-day global period services more than one office visit based on 2018e Medicare utilization over 1,000. The RUC submitted three recommendations for the 2021 Medicare Physician Payment Schedule and will submit the remaining two for the 2022 Medicare Physician Payment Schedule.

090-Day Global Codes
In January 2014, the RUC reviewed all 3,788, 090-day global codes to determine any outliers. Based on 2012 Medicare utilization data, 10 services were identified, that were reported at least 1,000 times per year and included more than six office visits. The RUC expanded the services identified in this screen to 38 to include additional codes as part of the family. The CPT® Editorial Panel deleted 8 services. The RUC submitted recommendations for 30 services for the 2015-2017 Medicare Physician Payment Schedule. The RUC has completed review of the services under this screen.

In October 2019, the identified three 090-day global period services more than six office visits based on 2018e Medicare utilization over 1,000. The RUC submitted recommendations for these three services for the 2021 Medicare Physician Payment Schedule. The RUC has completed review of the services under this screen.

High Level E/M in Global Period
In October 2015, the RUC reviewed all services with Medicare utilization greater than 10,000 that have a level 4 (99214) or level 5 (99215) office visit included in the global period. There were no codes with volume greater than 10,000 that had a level 5 office visits included. Seven services were identified that have a level 4 office visit included. The RUC expanded the list of services to 11 services to include additional codes as part of the family. The RUC confirmed that the level 4 post-operative visits were appropriate and well-defined for four services. The CPT Editorial Panel deleted one code. The RUC submitted recommendations for 10 services for the 2017-2018 Medicare Physician Payment Schedules. The RUC noted that this screen will be complete after these services are reviewed because the RUC has more rigorously questioned level 4 office visits in the global period in recent years and will continue this process going forward. The RUC has completed review of the services under this screen.

000-Day Global Services Reported with an E/M with Modifier 25
In the NPRM for 2017 CMS identified 83 services with a 000-day global period billed with an E/M 50 percent of the time or more, on the same day of service, same patient, by the same physician, that have not been reviewed in the last five years with Medicare utilization greater than 20,000.

The RUC commented that it appreciated CMS' identification of an objective screen and reasonable query. However, based on further analysis of the codes identified, it appears only 19 services met the criteria for this screen and have not been reviewed to specifically address an E/M performed on the same date. There were 38 codes that did not meet the screen criteria; they were either reviewed in the last 5 years and/or are not typically reported with an E/M. For 26 codes, the summary of recommendation (SOR), RUC rationale or practice expense inputs submitted specifically states that an E/M is typically reported with these services and the RUC accounted for this in its valuation.

The RUC requested that CMS remove 64 services that did not meet the screen criteria or which have already been valued as typically being reported with an E/M service. The RUC requested that CMS condense and finalize the list of services for this screen to the 19 remaining services.

In the Final Rule for 2017, CMS did finalize the list of 000-day global services reported with an E/M to the 19 services that truly met the criteria. The RUC recommended that two additional codes be removed from this screen as the specialty societies discovered that in fact an E/M as typical was considered in the survey process. Additional codes were added as part of the family of codes identified, totaling 22. The CPT Editorial Panel deleted one code and the RUC submitted 21 recommendations for the 2019 Medicare Physician Payment Schedule. The RUC has completed review of the services under this screen.

Negative IWPUT
In October 2017, the RUC identified 22 services with a negative IWPUT and Medicare utilization over 10,000 for all services or over 1,000 for Harvard valued and CMS/Other source codes. The RUC expanded the services identified in this screen to 56 services to include additional codes as part of the family. The CPT Editorial Panel deleted 15 services. The RUC submitted 41 recommendations for the 2019-2020 Medicare Physician Payment Schedules. The RUC has completed review of the services under this screen.

Contractor Priced with High Volume
In April 2018, the RUC identified five contractor-priced Category I CPT codes that have 2017 estimated Medicare utilization over 10,000. The RUC expanded the services identified in this screen to seven to include additional codes as part of a family. The RUC referred two codes to the CPT Editorial Panel for deletion. The RUC submitted four recommendations for the 2020-2021 Medicare Physician Payment Schedule. The RUC will review the remaining service after two years of additional data is available.

CPT Modifier -51 Exempt List
In April 2018, the RUC identified seven services on the CPT Modifier -51 *Multiple Procedures* exempt list with 2017 estimated Medicare utilization over 10,000. The RUC examined the data provided on the percentage reported alone, physician pre and intra time and determined that this is an appropriate screen. The RUC recommended that four services be removed from the Modifier -51 exempt list and that three services remain on the list as they are separate and distinct services. The RUC notes that the CPT Editorial Panel will be reexamining this list in February 2019. The RUC has completed review of the services under this screen.

Public Comment Requests
In 2011, CMS announced that due to the ongoing identification of potentially misvalued services by CMS and the RUC, the Agency will no longer conduct a separate Five-Year Review. CMS will now call for public comments on an annual basis as part of the comment process on the Final Rule each year.

Final Rule for 2013
In the Final Rule for the 2013 Medicare Physician Payment Schedule, the public and CMS identified 35 potentially misvalued services, which was expanded to 39 services to include the entire code family. The RUC reviewed these services and recommended that eight services be removed from review as two G-codes lacked specialty society interest and six services are not potentially misvalued since there is no reliable way to determine an incremental difference from open thoracotomy to thorascopic procedures. The CPT Editorial Panel deleted two services. The RUC submitted recommendations for 29 services for the 2014-2019 Medicare Physician Payment Schedules. The RUC has completed review of the services under this screen.

Final Rule for 2014
CMS did not receive any publicly nominated potentially misvalued codes for inclusion in the Proposed Rule for 2014. To broaden participation in the process of identifying potentially misvalued codes, CMS sought the input of Medicare contractor medical directors (CMDs). The CMDs have identified over a dozen services which CMS is proposing as potentially misvalued. The RUC reviewed these services and appropriate families, totaling 90 services. The CPT® Editorial Panel deleted 11 services. The RUC submitted recommendations to CMS for 79 services for the 2015-2018 Medicare Physician Payment Schedules. The RUC has completed review of the services under this screen.

Final Rule for 2015
In the Final Rule for 2015 the public and CMS nominated 26 services as potentially misvalued, which the RUC expanded to 53 services to include additional codes as part of this family. The CPT Editorial Panel

deleted 16 services. The RUC submitted 37 recommendations for the 2016-2019 Medicare Physician Payment Schedules. The RUC has completed review of the services under this screen.

Final Rule for 2016
In the Final Rule for 2016 the public and CMS nominated 25 services as potentially misvalued, which the RUC expanded to 53 services to include an additional code as part of the family. The CPT Editorial Panel deleted eight services. The RUC submitted 45 recommendations for the 2017-2019 Medicare Physician Payment Schedules. The RUC has completed review of the services under this screen.

Final Rule for 2017
In the Final Rule for 2017 there were no public nominations for services in which the RUC was not already addressing.

Final Rule for 2018
In the Final Rule for 2018 the public and CMS nominated six services as potentially misvalued, which the RUC expanded to nine services. The RUC submitted nine recommendations for the 2019-2020 Medicare Physician Payment Schedules. The RUC has completed review of the services under this screen.

Final Rule for 2019
In the Final Rule for 2019 the public and CMS nominated nine services as potentially misvalued, which was expanded to 12 services as part of the family. The CPT Editorial Panel deleted two services. The RUC will submit 10 recommendations for the 2021 Medicare Physician Payment Schedule. The RUC has completed review of the services under this screen.

Work Neutrality
For every CPT code recommendation and family, the RUC submits utilization assumptions based on the specialty societies estimate for the next year of Medicare utilization. Starting with CPT 2009, the Relativity Assessment Workgroup began assessing all services for work neutrality. In 2012, the RUC confirmed that the RUC and specialty societies work neutrality calculation expectation is a zero change target. However, if actual work RVUs turn out to be 10% or greater than the former work RVUs for the family, the family should undergo review by the Relativity Assessment Workgroup. Three code families have been identified for re-examination, one from CPT 2009, CPT 2011 and CPT 2012. Two families were determined to have correct utilization assumptions after re-evaluating the coding structure and initial assumptions. The CPT 2012 family went through revisions at the CPT Editorial Panel as well as extensive educational efforts were engaged. However, after continued examination this family will be resurveyed for the 2022 Medicare Physician Payment Schedule.

Three additional code families were identified for re-examination from CPT 2018. One family appears to possibly be due to miscoding. All three families will be re-examined after additional utilization data are available.

Other Issues
In addition to the above screening criteria, the Relativity Assessment Workgroup performed an exhaustive search of the RUC database for services indicated by the RUC to be re-reviewed at a later date. Three codes were found that had not yet been re-reviewed. The RUC recommended a work RVU decrease for two codes and to maintain the work RVU for another code. CMS also identified 72 services that required further practice expense review. The RUC submitted practice expense recommendations on 67 services and the CPT® Editorial Panel deleted 5 services. The RUC also reviewed special requests for 19 audiology and speech-language pathology services. The RUC submitted recommendations for 10 services for the 2010 Medicare Physician Payment Schedule and the remaining nine services for the 2011 Medicare Physician Payment Schedule.

CMS Requests and RUC Relativity Assessment Workgroup Code Status

Total Number of Codes Identified*	**2,545**
Codes Completed	**2,456**
Work and PE Maintained	662
Work Increased	306
Work Decreased	844
Direct Practice Expense Revised (beyond work changes)	181
Deleted from CPT®	463
Codes Under Review	**89**
Referred to CPT® Editorial Panel or CPT Assistant	54
RUC to Review for *CPT 2022*	16
RUC to review future review after additional data obtained	19

**The total number of codes identified will not equal the number of codes from each screen as some codes have been identified in more than one screen.*

The RUC's efforts for 2009-2020 have resulted in more than $5 billion in annual redistribution within the Medicare Physician Payment Schedule.

All 2018 Medicare Claims from:

Texas – locality 18
Place of Service – Independent Clinic (Medicare Place of Service Code 49)
Specialty – Pediatrics (Medicare Specialty Code 37)

AMA/Specialty Society RVS Update Committee
Summary of Recommendations

October 2009

Immunization Administration

The CPT Editorial Panel revised the reporting of immunization administration in the pediatric population in order to better align the service with the evolving best practice model of delivering combination vaccines. This revision in the reporting of immunization administration will then permit a more accurate reflection of the physician work involved, reducing barriers to the spread of technology and allowing positive change in the practice of medicine. The CPT nomenclature needs to be kept up-to-date with the reporting of services associated with vaccine delivery, which has changed due to the licensure of additional combination vaccines as well as those with more components. The two new immunization administration codes will more accurately reflect the service as currently delivered.

The specialty society presented compelling evidence that the physician time has changed in performing these services by providing rationale for an increasing frequency of counseling necessary to convince parents to 1) immunize their children at all; and 2) to persuade them of the safety and efficacy of component vaccines. Increased attention to vaccine safety on the Internet and in other media has driven anxiety and have necessitated additional physician involvement and discussion with parents. The RUC agreed that this increased physician work should be recognized.

The specialty society presented that the typical patient receives two vaccinations in one visit. However, based upon the age of the patient and specific vaccines available, some visits require only 90460, some visits require one or more units of 90460 and one or more units of 90461. It was noted that higher multiples of reporting of these codes would occur at infrequent visits (primarily 2 month, 6 months, and 4 years of age) and any payor concern regarding coding and valuation with these outlier visits may be addressed with a limit on the number of 90461 units allowed.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

90460 Immunization Administration through 18 years of age via any route of administration, with counseling by physician or other qualified health care profession; first vaccine/toxoid component

The RUC recommends that the survey intra-service time of 7 minutes should be reflected as the total time. Pre-service time, as described in the original SOR, is described in the preventive medicine services and the post-service descriptions reflect activities performed by clinical staff. The RUC agreed that the valuation for this service falls between the range of a 99211 (Work RVU=0.17) and the survey median of 0.25, and determined that considering that more than one unit is often coded, a value of 0.20 would be appropriate. 99401 *Preventive Counseling, 15 minutes* (work RVU = 0.48) is a reasonable comparison. Using the ratio of time of 7 minutes/15 minutes, a value of 0.20 is reasonable. In addition, the committee considered that they typical patient may receive two units of this service 0.40 total with 14 minutes of counseling, which is comparable to a 99212 (work RVU = 0.48 and 16 minutes of total time). **The RUC recommends a work value of 0.20 and physician intra-service time of 7 minutes for 90460.**

90461 – Immunization Administration through 18 years of age via any route of administration, with counseling by physician or other qualified health profession; each additional vaccine/toxoid component (List separately in addition to code for primary procedure)

The RUC understands that additional counseling is required to describe the additional vaccines and to address concern related to media reports of component vaccines. The survey indicated that this additional counseling requires 5 minutes of physician time. The RUC determined that the survey's 25th percentile work RVU of 0.16 is appropriate and reflects a proper rank order relationship with 99401 *Preventive Counseling* as described above and also in relationship to other counseling services, such as 99407 *Smoking Cessation (5/15 or 1/3 of 0.50).* **The RUC recommends a work value of 0.16 and a physician intra-service time of 5 minutes for 90461.**

Practice Expense – The RUC recommends the direct expense inputs of18 minutes clinical staff time, supplies and equipment for 90460 and no direct inputs for 90461 The individual inputs are described in the attached handout.

PLI Crosswalk – The new codes could be crosswalked to the existing immunization and administration codes, 90471 and 90472.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

CPT Code (•New)	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
Codes 90465-490460 and 90461 must be reported in addition to the vaccine and toxoid code(s) 90476-90749. Report codes 90460 and 90461 only when the physician or qualified health care professional provides face-to-face counseling of the patient and family during the administration of a vaccine. For immunization administration of any vaccine that is not accompanied by face-to-face physician or qualified health care professional counseling to the patient/family or for administration of vaccines to patients over 18 years of age, report codes 90471-90474. If a significant separately identifiable Evaluation and Management service (eg, office or other outpatient services, preventive medicine services) is performed, the appropriate E/M service code should be reported in addition to the vaccine and toxoid administration codes. A component refers to all antigens in a vaccine that prevent disease(s) caused by one organism (see codes 90460 and 90461). Combination vaccines are those vaccines that contain multiple vaccine components. (For allergy testing, see 95004 et seq) (For skin testing of bacterial, viral, fungal extracts, see 86485-86580) (90465-90468 have been deleted. To report, see 90460, 90461)

---

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 15-year-old patient receives the Human Papilloma virus (HPV) vaccine from her physician. The ordering physician discusses the risks of the vaccine and the disease for which it provides protection. The parent/guardian is given the CDC vaccine information statement (VIS). The parent/guardian consents and the nurse prepares the vaccine. The patient receives the vaccine by a single injection, and the nurse charts the required information and accesses and enters the vaccine data into the statewide immunization registry. The patient is discharged home after the nurse confirms that there are no serious immediate reactions.

Percentage of Survey Respondents who found Vignette to be Typical: 95%

Site of Service (Complete for 010 and 090 Globals Only)
Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Kept overnight (less than 24 hours) 0% , Admitted (more than 24 hours) 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Moderate Sedation
Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No
Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting? No
Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Is moderate sedation inherent in your reference code (Office setting)? No
Is moderate sedation inherent in your reference code (Hospital/ASC setting)? No

Description of Pre-Service Work:

Description of Intra-Service Work: The physician discusses the specific risks/benefits of the first vaccine component including the risks associated with this component and the risk of not receiving it to include both health risk from the preventable disease and the social concerns related to school mandates for vaccines. The physician then discusses the benefit of being immunized for this disease. The parent ‘s questions regarding the safety of the inactive ingredients in the vaccine such as preservatives and the likelihood of this vaccine causing injury, including brain damage, and/or the disease for which it is providing protection against are addressed. After further discussion, the parent then agrees with need for immunization. The physician then discusses the care plan for the child in the days to follow specific to the anticipated or possible side effects of the first vaccine component: soreness and pain at the injection site, fever, and other side effects. The physician reviews the signs or symptoms that warrant a call back.

Description of Post-Service Work:

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The American Academy of Pediatrics (AAP) Committee on Coding and Nomenclature reviewed the 90460 survey results. Given the robustness and validity of the data, the AAP recommends the survey median work relative value units of 0.25 and the pre-, intra-, and post-service times of 3 minutes, 7 minutes, and 2 minutes, respectively.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☒ Other reason (please explain) Immunizations are typically administered during the same patient encounter as a separately reported Preventive Medicine Service

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. A 15-year old patient receives the Human Papilloma virus (HPV) vaccine from her physician. The ordering physician discusses the risks of the vaccine and the disease for which it provides protection. The parent/guardian is given the CDC vaccine information sheet (VIS).The parent/guardian consents and the nurse prepares the vaccine. The patient receives the vaccine by a single injection, and the nurse charts the required information and accesses and enters the vaccine data into the statewide immunization registry. The patient is discharged home after the nurse confirms that there are no serious immediate reactions. This service is typically provided in conjunction with a separately reported Preventive Medicine Service.

6.	90460	Imm admin; first component	XXX	0.25	3	7	2

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 90465-90468

How often do physicians <u>in your specialty</u> perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pediatrics How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 52232422
If the recommendation is from multiple specialties, please provide the frequency and <u>percentage</u> for each specialty. Please explain the rationale for this estimate. This estimate is based on a birth cohort managed by pediatricians of 2,843,045 patients and adherence to the ACIP/AAP/AAFP Recommended Immunization Schedule.

Specialty Pediatrics Frequency 52232422 Percentage 100.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,033 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Source: 2007 Medicare claims data for code 90465. NOTE: This is a pediatric service not typically provided to Medicare patients.

Specialty Pediatrics Frequency 1033 Percentage 100.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Professional Liability Insurance Information (PLI)

Does the reference CPT code selected for physician work serve as a reasonable reference for PLI crosswalk? (ie. similar work RVU, and specialty) No

If no, please select another crosswalk and provide a brief rationale. 90471 the exisitng immunization administration code

Indicate what risk factor the new/revised code should be assigned to determine PLI relative value. Non-Surgical

Modifier -51 Exempt Status

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:
Is this new/revised procedure considered to be a new technology or service? No

KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
96370	ZZZ	0.18	**RUC Time**

CPT Descriptor Subcutaneous infusion for therapy or prophylaxis (specify substance or drug); each additional hour (List separately in addition to code for primary procedure)

KEY MPC COMPARISON CODES:
Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
13102	ZZZ	1.24	**RUC Time**	11,931

CPT Descriptor 1 Repair, complex, trunk; each additional 5 cm or less (List separately in addition to code for primary procedure)

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
13122	ZZZ	1.44	**RUC Time**	13,490

CPT Descriptor 2 Repair, complex, scalp, arms, and/or legs; each additional 5 cm or less (List separately in addition to code for primary procedure)

Other Reference CPT Code	Global	Work RVU	Time Source
96375	ZZZ	0.10	**RUC Time**

CPT Descriptor Therapeutic, prophylactic, or diagnostic injection (specify substance or drug); each additional sequential intravenous push of a new substance/drug (List separately in addition to code for primary procedure)

RELATIONSHIP OF CODE BEING REVIEWED TO KEY REFERENCE SERVICE(S):
Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by the mean) of the service you are rating to the key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Key Reference Code: 35 **% of respondents:** 44.8 **%**

TIME ESTIMATES (Median)	**CPT Code: 90461**	**Key Reference CPT Code:** 96370	**Source of Time RUC Time**
Median Pre-Service Time	0.00	0.00	
Median Intra-Service Time	5.00	5.00	
Median Immediate Post-service Time	0.00	0.00	
Median Critical Care Time	0.0	0.00	
Median Other Hospital Visit Time	0.0	0.00	
Median Discharge Day Management Time	0.0	0.00	
Median Office Visit Time	0.0	0.00	
Prolonged Services Time	0.0	0.00	
Median Total Time	**5.00**	**5.00**	

Other time if appropriate

INTENSITY/COMPLEXITY MEASURES (Mean)	**(of those that selected Key Reference code)**	
Mental Effort and Judgment (Mean)		
The number of possible diagnosis and/or the number of management options that must be considered	2.03	1.94
The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed	3.49	2.71
Urgency of medical decision making	2.69	2.89
Technical Skill/Physical Effort (Mean)		
Technical skill required	1.34	1.54
Physical effort required	1.26	1.29
Psychological Stress (Mean)		
The risk of significant complications, morbidity and/or mortality	3.60	2.80
Outcome depends on the skill and judgment of physician	2.77	2.91
Estimated risk of malpractice suit with poor outcome	4.49	2.83

INTENSITY/COMPLEXITY MEASURES	**CPT Code**	**Reference Service 1**
Time Segments (Mean)		
Pre-Service intensity/complexity	1.20	1.37
Intra-Service intensity/complexity	3.57	2.80
Post-Service intensity/complexity	1.89	2.00

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The American Academy of Pediatrics (AAP) Committee on Coding and Nomenclature reviewed the 90461 survey results. Given the robustness and validity of the data, the AAP recommends the survey median work relative value units of 0.18 and the intra-service time of 5 minutes. The AAP recommends the 25th percentiles for the pre- and post-service work times of 1 minute each. Although 9046X2 is a "ZZZ" code (and "ZZZ" codes do not typically

include pre- or post-service times), the AAP recommends pre- and post-service times of 1 minute each due to the additional pre- and post-service associated with each additional (ie, unique) vaccine component administered.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☒ Other reason (please explain) Immunizations are typically administered during the same patient encounter as a separately reported Preventive Medicine Service

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. A four-month old patient receives the diphtheria, tetanus, pertussis, Hemophilus influenza type b, inactivated polio (DTaP-Hib-IPV) combination vaccine from her physician. The ordering physician discusses the risks of each additional vaccine component (eg, tetanus) and the diseases for which each additional vaccine component provides protection. The parent/guardian is given the CDC vaccine information sheet (VIS) for each additional vaccine component. The parent/guardian consents for each of the additional vaccine components. The nurse charts the required information and enters data into the statewide immunization registry for each additional vaccine component.

3.
4. This service is typically provided in conjunction with a separately reported Preventive Medicine Service.

5. CPT Code	Descriptor	Global Period	2009 wRVUs	Pre-Time	Intra-Time	Post-Time
6.						
7. 99391	Prev med serv	XXX	1.02	2	20	4

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 90465-90468

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pediatrics How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 49457611
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. This estimate is based on a birth cohort managed by pediatricians of 2,843,045 patients and adherence to the ACIP/AAP/AAFP Recommended Immunization Schedule.

Specialty Pediatrics Frequency 49457611 Percentage 100.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 38 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Source: 2007 Medicare claims data for code 90466. NOTE: This is a pediatric service not typically provided to Medicare patients.

Specialty Pediatrics Frequency 38 Percentage 100.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Professional Liability Insurance Information (PLI)

Does the reference CPT code selected for physician work serve as a reasonable reference for PLI crosswalk? (ie. similar work RVU, and specialty) No

If no, please select another crosswalk and provide a brief rationale. 90472 - existing immunization administration code

Indicate what risk factor the new/revised code should be assigned to determine PLI relative value. Non-Surgical

Attestation Statement

This form needs to be completed by any **RUC Advisor** whose specialty society is developing a recommendation to be reviewed by the RUC.

As a RUC Advisor, I attest that the integrity of the RUC survey and summary of recommendation forms are based on accurate and complete data to the best of my knowledge. As a RUC advisor, I acknowledge that violations would be addressed by the executive committee (i.e., RUC Chair , AMA Representative and Alternate AMA Representative.)

Non Facility Direct Inputs

CPT Long Descriptor:
Immunization administration through 18 years of age via any route of administration, with counseling by physician or other qualified health care professional; first vaccine/toxoid component

Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:
The American Academy of Pediatrics (AAP) Committee on Coding and Nomenclature developed the direct practice expense input recommendations for code 90460 using the February 2005 and February 2008 RUC-approved recommendations for code 90465.

Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

Clinical staff prepares patient chart with appropriate CDC vaccine information statement (VIS)

Intra-Service Clinical Labor Activities:

- **Clinical staff provides patient/parent with appropriate VIS**
- **Clinical staff follows up on physician's vaccine counseling session with patient/parent and obtains actual consent signature**
- **Clinical staff prepares vaccine, instructs the parent on proper positioning of the patient, selects and prepares the injection site, and administers the vaccine**
- **Clinical staff comforts the patient and directs the patient/parent to remain in the office after the service for about 20 minutes to watch for immediate reactions**
- **Clinical staff cleans room/equipment**
- **Clinical staff enters vaccine information into the patient medical record to include the vaccine type, lot number, site, date of administration, and date of VIS as required by federal law. A final check of the patient is done to confirm that there are no serious immediate reactions and final questions are answered.**
- **Clinical staff enters data into the state online immunization information system (registry) and maintains the vaccine refrigerator/freezer temperature log**

Post-Service Clinical Labor Activities:

There is a phone call to answer questions/concerns that arise concerning vaccine component reactions that may appear within a few days of the administration

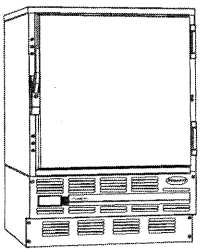
List Price Schedule

Contact Follett or your local representative for net price quotation information.

REF series undercounter refrigerators

Medical-grade stainless steel undercounter refrigerators with external temperature display. Model REF5 fits below a standard 36" (915mm) high counter. Model REF4-ADA fits below 34" (864mm) high counter.



Model number	Cubic Capacity	Width in (mm)	Depth in (mm)	Height in (mm)	Ship wt lb (kg)	List price
REF5	4.8	23.75 (604)	28.5 (724)	34.00 (864)	175 (79)	$3,315
REF4-ADA	4.0	23.75 (604)	28.5 (724)	31.25 (794)	175 (79)	3,315

Note: Above models available in 115/60 electrical configuration only.

REF series undercounter refrigerator accessories

Model number	Description	Ship wt lb (kg)	List price
00112185	Temperature alarm	5 (2)	$575
00158014	Omnicell* compatible door bracket	5 (2)	65
00114702	Pyxis* compatible door bracket	5 (2)	145
00130112	REF Controller programming key, display in degrees Fahrenheit	1 (1)	20
00131722	REF Controller programming key, display in degrees Celsius	1 (1)	20
00131748	Epoxy-coated cut-away shelf	7 (4)	70

FZR series undercounter freezers

Medical-grade -20°C (-4°F) stainless steel undercounter freezers with external temperature display. Model FZR5 fits below a standard 36" (915mm) high counter. Model FZR4-ADA fits below 34" (864mm) high counter.

Model number	Cubic Capacity	Width in (mm)	Depth in (mm)	Height in (mm)	Ship wt lb (kg)	List price
FZR	4.2	23.75 (604)	28.5 (724)	34.00 (864)	175 (79)	$5,180
FZR4-ADA	3.5	23.75 (604)	28.5 (724)	31.25 (794)	175 (79)	5,180

Note: Above models available in 115/60 electrical configuration only.

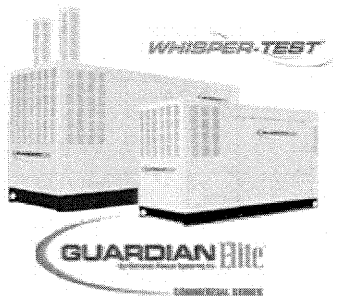
R18FFTHLOCK



Both a thermometer and lock will be mounted to R17
For a larger image, click on the photo above

R-18FFTHLOCK is a large all-refrigerator (no freezer section) that provides plenty of capacity, lots of shelf space and is frost-free, using a dynamic system with fan forced cooling. R-18FFTHLOCK features a reversible door,a lock approved by most local health departments and a mounted external digital thermometer. Ideal for hospitals, laboratories and homes.

Capacity	17.6 c.f.
Dimensions	67 1/2" × 30" × 30 1/2" (H x W x D)
Defrost Type	Frost-Free
Body Color	White
Door Color	White
Lock Type	Side
Door Swing	Reversible
Shipping Weight	230 lbs.
UPC Code	761101011394
Features	• All refrigerator • Fully frost-free • Dynamic system with fan forced cooling • Interior light • Reversible doors • Adjustable shelves • Door storage • Vegetable crisper • U.L. approved • Energy efficient • Lock and thermometer • 100% CFC free • 115 volt • 60 cycle
Options Available	Side lock or Key Pad lock
List Price	$2260
MSRP	$1585

Guardian® Elite Commercial Series 18 – 150 kW

Starting under $16,500

GUARDIAN® is now doing to the commercial market what it has already done to the residential market... making standby power reliable, yet affordable. Protect your revenue stream by investing in a GUARDIAN Elite™ Commercial Series automatic standby generator. Our GUARDIAN Elite Commercial generators are ideal for a broad range of enterprises, including restaurants, convenience stores, supermarkets, banks, fitness centers, hotels, and retail outlets.

All Elite Commercial models are available in both single and three-phase configurations. They run on either natural gas or LPV, feature automotive style, liquid-cooled engines and GUARDIAN's exclusive Whisper-Test™ feature. Our 18, 25, 35 and 45 kW premium models come standard with higher displacement, low speed engines and aluminum enclosures. Aluminum enclosures are optional on the 60 kW and larger models.

Whisper Quiet Operation

GUARDIAN's exclusive Whisper-Test low speed exercise feature makes our GUARDIAN Elite products the quietest liquid-cooled generators on the market. Whisper-Test reduces noise by 50% during the generator's weekly self-test cycle allowing for near silent operation that satisfies all known sound ordinances.

Affordable Revenue Protection

During a utility outage, a GUARDIAN Elite will protect your revenue stream and prevent expensive losses by keeping your business... in business. Not only are our products engineered for reliability and long life, our volume production and short lead times make GUARDIAN Elite products an even better value.

- **Value Models:** The most affordable protection in the industry for large homes and small to mid-sized businesses
- **Premium Models:** Larger, more powerful engines operate at 1800 RPM for ultra-quiet operation and standard aluminum enclosures provide superior corrosion protection for coastal areas and harsh environments.
- **Superior Paint:** Tough, textured powder coat paint finish for unmatched durability and all weather protection
- **UL Listed:** For safety and certified power ratings
- **Clean Burning Fuel:** Natural gas or LPV

Temperature Guard products alert key personnel to problems before damage can occur.

Common Configurations of Healthcare Solutions:

In the Healthcare market, our Temperature Guard devices are used to protect and monitor everything from pharmaceutical goods such as vaccines, immunizations, and medications to blood and tissue storage.

Below are example quotes for common configurations of our Temperature Guard systems based on goals and the quantity and type of cold storage equipment devices that require monitoring.

Please call our sales team for a customized quote for your application.

Goals for Your Organization	Equipment to Monitor	Example
• Protect immunization inventory by monitoring the temperature and doors of the vaccine storage refrigerators 24 hours a day, 365 days a year and receiving **alarm telephone calls** in the event of a problem • Fix problems before any damage is done by effectively alerting onsite staff to refrigerator temperature or refrigerator door problems with **local alarming**	2 Full Size Refrigerators (fridge and freezer)	PDF
• Protect immunization inventory by monitoring the temperature and doors of the vaccine storage refrigerators 24 hours a day, 365 days a year and receiving **alarm telephone calls** in the event of a problem • Fix problems before any damage is done by effectively alerting onsite staff to refrigerator temperature or refrigerator door problems with **local alarming** • Automatically **record temperature logs on a computer** and allow remote viewing of current temperature readings • Further protect vaccines with **email alarming**	2 Full Size Refrigerators (fridge and freezer)	PDF

ADDITIONAL COMMENTS

This quote is a complete system that allows the Springfield County Health Department to monitor, alarm, and log the temperature inside both compartments (refrigerator and freezer) of two full size refrigerators.

The temperature sensors will go inside the refrigerator and freezer compartments and relate the temperature to the VM500-5-DCP-E.

The door sensors will go on the doors of the refriegator and freezer compartments and relate their open/closed state to the VM500-5-DCP-E.

The Data Capture software will run on a computer that is on the network and collect the temperature readings and door status from the VM500-5-DCP-E.

These readings are archived on the computer and reports and graphs can be run at any time for any specified date range.

If the temperature of any of the compartments goes out of range for too long or the doors are left open for too long, the VM500-5-DCP-E will call up to four (4) telephone numbers with a detailed alarm message.
The VM500-5-DCP-E will also alarm locally with its alarm buzzer and show the current status on its screen.
The Data Capture software will send alarm email messages out to a list of recipients.

Refrigerator/Freezer Guard VM500-5

Key Points
- Easy to use refrigerator alarm and freezer alarm system
- Monitor the temperature of up to eight refrigerators, freezers, or coolers
- Receive telephone alert calls
- Programmable time delay for each sensor to minimize "nuisance calls"
- Refrigerator Door Alarms
- Ethernet Data Logging Package Available

Base Model Only $445.00

Ordering Information

With the feature rich VM500-5, you can quickly and easily set up a temperature monitor and alarm system.

You need a temperature alarm and monitor for your refrigerators, freezers, or coolers and be immediately notified any time, day or night, if any fail.

The Refrigerator/Freezer Guard sounds an audible alarm and alerts one or more designated person(s) at a specified phone or pager number. It will call up to four phone numbers or pagers to notify key personnel of a problem. Call anytime and hear the temperature of any refrigerator/freezer.

With the advanced VM500-5-DCP-E model, in addition to the above features, you can set up a distributed data logging and monitoring and alarming system.

By adding the Ethernet Data Collection Package to your VM500-05 you have a digital data logger and remote temperature alarm system.

Our free Data Capture software runs 24/7/365 automatically collecting temperature readings and creating temperature logs from your device(s) down the hall or around the world.

If there is a problem with a freezer, alarm emails can be sent detailing the problem.

With a couple of clicks, the data can be graphed and printed or exported to an Excel spread sheet.

Download and try the Data Capture Program for FREE!

Popular Applications for the Refrigerator/Freezer Guard

- Vaccine Temperature Monitoring and Alarming
- Medication Temperature Monitoring and Alarming
- Walk In Cooler Temperature Monitoring and Alarming
- Cold Chain Monitoring and Alarming
- -80°C Freezer Monitoring and Alarming
- Laboratory Equipment Monitoring and Alarming
- Hundreds of other applications are possible with the versatile Refrigerator/Freezer Guard

Key Features

- Continuous Temperature Monitoring and Alarming
- Easy to use remote monitor and temperature alarm system.
- Programmable high and low temperature alarm limits for each refrigerator/freezer/cooler.
- Programmable alarm time delay for each refrigerator/freezer/cooler.
- Recordable identification message for each refrigerator/freezer/cooler unit.
- Field correctable temperature readings.
- Record a message to indicate the location of the Refrigerator/Freezer Guard.
- LCD displays real time data.
- Uses existing phone line, no need for a second phone line.
- Ethernet Data Collection Package Available. Includes free software and Ethernet cable.
- NIST traceable certificates available for VM500-5, VM500-5-DCP-E unit as well as all temperature sensors.

Maximum Fridges, Freezers, or Coolers	Battery Backup	Power Alarm	Door Alarm	Telephone/Pager Alert Calls

included

Temperature Sensors (details)

included

(-55°F to 96°F) Temperature Sensor in Vial	ACI/1K-2W-BP-V	$29.95
(-55°F to 96°F) Temperature Sensor Probe Only	ACI/1K-2W-BP	$22.50
(-148°F to 96°F) Temperature Sensor in Vial	ACI/1K-2W-LTS-V	$97.40
(-148°F to 96°F) Temperature Sensor Probe Only	ACI/1K-2W-LTS	$89.95
(-55°F to 96°F) Stainless Plate Temperature Sensor	ACI/1K-2W-SP	$27.50

Door Sensors (details)

included

Door Sensor (Plastic, Adhesive Backed)	DR-1035W	$19.95

Sensor Extension Wire

(2)

Standard Accuracy 250ft spool	WIR-I-22-250	29.50

Battery Backup Options (four hour battery is standard)

20 Hour battery backup	B20	$47.50
30 Hour battery backup	B30	$66.50

Options

(1)

Unit mounted in enclosure with smoked cover	CAB PC 303018T	$179.95
International Power Supply	PS-MULTIPLUG	$28.00

(1)

NIST traceable certificate for VM500 unit	add -NIST to part #	$25.00

(4)

NIST traceable certificate for temperature senor	add -NIST to part #	$25.00

To order a Refrigerator/Freezer Guard with Ethernet Data Collection Package and NIST traceable certificate, specify the part number VM500-5-DCP-E-NIST.
To order a -148°F Temperature Sensor in Vial with NIST traceable certificate, specify part number ACI/1K-2W-LTS-V-NIST.

Specifications

- Maximum Temperature Sensor Range: -148°F to 96°F, -100°C to 35°C
- Measurement resolution 1°
- Sensor Type: 1000 Ohm Platinum (.00385 TCR)
- 0.5a 125vac alarm relay output
- Internal alarm buzzer: (85dB)
- Program four twenty-digit alarm telephone callout phone numbers
- Rechargeable four hour battery backup included
- Plug-in wall transformer, splitter and telephone extension cable included
- FCC Approved and Registered
- Operating Temperature Range 32°F to 125°F
- Enclosure Dimensions: 8.790" x 4.620" x 2.255"

Direct Practice Expense Inputs Recommendation
Immunization Administration
February 2008

The Immunization Administration services (90465-90474) were requested by CMS to be reviewed because the American Academy of Pediatrics provided evidence that suggested that additional practice expense items associated with these services, that have traditionally been assigned to the indirect costs, are now needed to be categorized as direct practice expense items. These items include dedicated refrigeration equipment and vaccine registry data entry and other required documentation.

The RUC considered the request from the American Academy of Pediatrics to move specific items currently considered in CMS' PE methodology as indirect practice expenses to direct practice expenses. This movement of indirect expenses to direct expenses has never been recommended by the RUC in the past and members believed this would set a precedent for the future if recommended. The issue involves only the pediatrics vaccine codes (90465-8, 90471-4). The practice expense changes, the specialty explained, are due to new regulations that require specific additional equipment such as: a dedicated full size vaccine refrigerator, a dedicated under counter freezer, temperature control devices and alarms, as well as a dedicated back-up generator. The specialty also explained additional clinical labor time was necessary for ordering and managing the inventory logs of the vaccines, vaccine registry input and audits.

Recommended Additional Clinical Labor to Existing Practice Expense Inputs
The RUC revised the original specialty recommendation of clinical staff time allowing registry data entry. The RUC recognized that these additional expenses are necessary and are being incurred, but not currently accounted for in the direct practice expense inputs. Members agreed with some of the additional clinical labor requested and referenced the regulatory clinical labor time allotted for MQSA by this committee in August 2003 for screening mammography code 77057, 4 minutes for the initial first injection code and 1 minute for any additional injection. **The RUC recommends 4 minutes of additional clinical labor time for the first immunization injection (codes 90471, 90473, 90465, and 90467), and 1 minute for each additional injection (90472, 90474, 90466, and 90468)**

Recommended Additional Equipment to Existing Practice Expense Inputs
The RUC agreed to the specialty requested refrigerators and freezer and not the backup generator. These costs were explained not to be indirect but specific to these vaccine procedures. The RUC and the CMS representative considered how to allocate the refrigerator/freezer expense per vaccine administrative service. It considered the minutes of refrigerator/freezer expense per vaccine and recommends the total vaccine clinical staff time as the time of refrigerator/freezer use, rather than just the intra-service clinical staff time used in CMS' PE methodology. Only one control device is used and recommended per vaccine. **These additions to the direct practice expense inputs for these immunization administration codes are attached and are recommended by the RUC.**

AMA/Specialty Society RVS Update Committee Summary of Recommendations
Codes Reported Together 75% or More

January 2018

Dilation of Urinary Tract

In October 2014, the CPT Editorial Panel deleted six codes and created 12 codes to describe genitourinary catheter procedures and bundle inherent imaging services. These codes were most recently reviewed by the RUC in January 2015. In January 2015, the specialty societies indicated that CPT code 50395 *Introduction of guide into renal pelvis and/or ureter with dilation to establish nephrostomy tract, percutaneous*, which was identified as part of the family, will be referred to the CPT Editorial Panel to clear up any confusion with overlap in physician work with 50432 *Placement of nephrostomy catheter, percutaneous, including diagnostic nephrostogram and/or ureterogram when performed, imaging guidance (eg, ultrasound and/or fluoroscopy) and all associated radiological supervision and interpretation*. The RUC recommended CPT code 50395 be referred to the CPT Editorial Panel. In September 2017, the CPT Editorial Panel deleted CPT code 50395 nephrostomy tract code and created two new codes to report dilation of existing tract, and establishment of new access to the collecting system, including percutaneous, for an endourologic procedure including imaging guidance (eg, ultrasound and/or fluoroscopy), all associated radiological supervision and interpretation, as well as post procedure tube placement when performed. Imaging is also now included in those codes.

Compelling Evidence
The specialty societies presented compelling evidence for CPT code 74485. The prior methodology for valuing this code is unknown and considered flawed, as the source is CMS/Other. In addition, the patient population for the use of this code has changed. In the past this code was mainly used by interventional radiologists for the dilation of a nephrostomy tract prior to nephrolithotomy. Dilation of nephrostomy tract is now part of CPT code 50436. Dilation of the lower urinary tract (urethra or lower ureter) is now the primary use of CPT code 74485 representing a substantial change in patient population. The RUC approved compelling evidence based on change in patient population and a flawed previous methodology.

50436 ***Dilation of existing tract, percutaneous, for an endourologic procedure including imaging guidance (eg, ultrasound and/or fluoroscopy) and all associated radiological supervision and interpretation, as well as post procedure tube placement, when performed;***
The RUC reviewed the survey results from 73 interventional radiologists, radiologists and urologists and agreed on the following physician time components: 18 minutes for pre-service evaluation time, 1 minutes for pre-service positioning time, 6 minutes for pre-service scrub/dress/wait, 30 minutes for intra-service time and 15 minutes for immediate post-time. Image guidance previously separately reported with CPT code 74485 has been bundled into this new service.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the respondents somewhat overvalued the work involved in performing this service, with a 25th percentile work RVU of 4.00. The RUC noted that the current value of 3.37 for deleted code 50395 *Introduction of guide into renal pelvis and/or ureter with dilation to establish nephrostomy tract, percutaneous*, which is being bundled with 74485 to create this new CPT code, would be appropriate. To justify a work RVU of 3.37, the RUC compared the survey code to MPC code 52287 *Cystourethroscopy, with injection(s) for chemodenervation of the bladder* (work RVU= 3.20, intra-service time of 21 minutes, total time of 58 minutes), and noted that the survey code involves more intra-service and total time, though with somewhat less work intensity per minute, it is appropriate for the survey code to only be valued somewhat higher. The RUC also compared the survey code to reference code 52214 *Cystourethroscopy, with fulguration (including cryosurgery or laser surgery) of trigone, bladder neck, prostatic fossa, urethra, or periurethral glands* (work RVU= 3.50, intra-service time of 30 minutes, total time of 79 minutes) and noted that both services have identical intra-service time, whereas the reference code involves somewhat more total time. **The RUC recommends a work RVU of 3.37 for CPT code 50436.**

50437 ***Dilation of existing tract, percutaneous, for an endourologic procedure including imaging guidance (eg, ultrasound and/or fluoroscopy) and all associated radiological supervision and interpretation, as well as post procedure tube placement, when performed; including new access into the renal collecting system***

The RUC reviewed the survey results from 68 interventional radiologists, radiologists and urologists and agreed on the following physician time components: 18 minutes for pre-service evaluation time, 1 minutes for pre-service positioning time, 6 minutes for pre-service scrub/dress/wait, 60 minutes for intra-service time and 15 minutes for immediate post-time. The specialties recommended and the RUC agreed that the survey 75th percentile intra-service time better represents the additional time needed to introduce the guidewire into the renal pelvis and/or ureter, above and beyond the work involved in perform 50436. Image guidance previously separately reported with CPT code 74485 has been bundled into this new service.

The RUC reviewed the survey 25th percentile work RVU of 5.44 and agreed that this value appropriately accounts for the physician work involved. To justify a work RVU of 5.44, the RUC compared the survey code to MPC code 52235 *Cystourethroscopy, with fulguration (including cryosurgery or laser surgery) and/or resection of; MEDIUM bladder tumor(s) (2.0 to 5.0 cm)* (work RVU= 5.44, intra-service time of 45 minutes, total time of 94 minutes) and noted that the survey code involves more intra-service and total time, though is a somewhat less intense service. To further support a value of 5.44, the RUC compared the survey code to 2nd key reference code 50694 *Placement of ureteral stent, percutaneous, including diagnostic nephrostogram and/or ureterogram when performed, imaging guidance (eg, ultrasound and/or fluoroscopy), and all associated radiological supervision and interpretation; new access, without separate nephrostomy catheter* (work RVU= 5.25, intra-service time of 62 minutes, total time of 111 minutes) and noted that although the reference code involves somewhat more total time, both services have very similar intra-service times and 87 percent of the survey respondents that selected this reference code indicated that the survey code was more a more intense service. **The RUC recommends a work RVU of 5.44 for CPT code 50437.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

52334 ***Cystourethroscopy with insertion of ureteral guide wire through kidney to establish a percutaneous nephrostomy, retrograde***
The RUC reviewed the survey results from 46 interventional radiologists and urologists and agreed on the following physician time components: 18 minutes for pre-service evaluation time, 6 minutes for pre-service positioning time, 6 minutes for pre-service scrub/dress/wait, 30 minutes for intra-service time and 15 minutes for immediate post-time. The specialties noted and the RUC agreed that the 6 minutes of positioning time was appropriate as this service is performed with the patient in the dorsal lithotomy position, which is the standard RUC pre-service time package addition for urologic procedures.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the respondents somewhat overvalued the work involved in performing this service, with a 25th percentile work RVU of 4.21. To find an appropriate work RVU crosswalk, the RUC compared the survey code to deleted family code 50395 *Introduction of guide into renal pelvis and/or ureter with dilation to establish nephrostomy tract, percutaneous* (work RVU = 3.37, intra-service time of 30 minutes), and noted that both services involve an identical amount of intra-service time and the same amount of physician work. Therefore, the RUC recommends a direct work RVU crosswalk of CPT code 52234 to CPT code 50395. To further justify a work RVU of 3.37, the RUC compared the survey code to reference code 52214 *Cystourethroscopy, with fulguration (including cryosurgery or laser surgery) of trigone, bladder neck, prostatic fossa, urethra, or periurethral glands* (work RVU= 3.50, intra-service time of 30 minutes, total time of 79 minutes) and noted that both services have identical intra-service time, whereas the reference code involves slightly more total time. **The RUC recommends a work RVU of 3.37 for CPT code 52334.**

74485 ***Dilation of ureter(s) or urethra, radiological supervision and interpretation***
The RUC reviewed the survey results from 44 interventional radiologists, radiologists and urologists and agreed on the following physician time components: 3 minutes for pre-service time, 20 minutes for intra-service time and 5 minutes for immediate post-time. The RUC agreed that the previous times were erroneous as the prior methodology for valuing this code is unknown and considered flawed, as the source is CMS/Other.

The RUC reviewed the survey median work RVU of 0.83 and agreed that this value appropriately accounts for the physician work involved. To justify a work RVU of 0.83, the RUC compared the survey code to MPC code 76816 *Ultrasound, pregnant uterus, real time with image documentation, follow-up (eg, re-evaluation of fetal size by measuring standard growth parameters and amniotic fluid volume, re-evaluation of organ system(s) suspected or confirmed to be abnormal on a previous scan), transabdominal approach, per fetus* (work RVU= 0.85, intra-service time of 15 minutes) and noted that the survey code involves more intra-service time and a similar amount of physician work. **The RUC recommends a work RVU of 0.83 for CPT code 74485.**

Affirmation of Current Values
The RUC affirmed the current values for CPT codes 50432 and 50433. These codes had been recently reviewed by the RUC in January 2015. The relativity within the family remains correct.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Practice Expense
The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.

Work Neutrality
The RUC's recommendation for this code family will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
Urinary System **Kidney** **Incision**				
50080		*Percutaneous nephrostolithotomy or pyelostolithotomy, with or without dilation, endoscopy, lithotripsy, stenting, or basket extraction; up to 2 cm*		
50081		*over 2 cm*		
		(For establishment of nephrostomy without nephrostolithotomy, see 50040, ~~50395,~~ 50432, 50433, 52334)		
		(For fluoroscopic guidance, see 76000~~, 76001~~)		
		(Do not report 50080, 50081 in conjunction with 50436, 50437 when performed by the same provider)		
Introduction **Renal Pelvis Catheter Procedures** *Internally Dwelling*				
50384		*Removal (via snare/capture) of internally dwelling ureteral stent via percutaneous approach, including radiological supervision and interpretation*		
		(For bilateral procedure, use modifier 50)		
		(Do not report 50382, 50384 in conjunction with ~~50395~~ 50436, 50437)		

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

(For removal of an internally dwelling ureteral stent via a transurethral approach, use 50386)

Other Introduction (Injection/Change/Removal) Procedures

Percutaneous genitourinary procedures are performed with imaging guidance (eg, fluoroscopy and/or ultrasound). Diagnostic nephrostogram and/or ureterogram are typically performed with percutaneous genitourinary procedures and are included in 50436, 50437, 50432, 50433, 50434, 50435, 50693, 50694, 50695.

Code ~~50395~~50436 describes enlargement of an existing percutaneous tract to the renal collecting system to accommodate large instruments used in an ~~endoscopic~~ endourologic procedure~~and~~. Code 50436 includes pre-dilation urinary tract imaging, post-procedure nephrostomy tube placement, when performed, and includes all radiological supervision and interpretation and imaging guidance (eg, ultrasound, fluoroscopy). Code ~~50395~~50436 may ~~should~~ not be ~~used to~~ reported with 50432, 50433, 52334 for ~~used to report a~~ basic dilation of a percutaneous tract during ~~for~~ initial placement of a catheter or device.

Code 50437 includes all elements of 50436, but also includes new~~de novo~~ access into the renal collecting system performed ~~on the same day~~ in the same session when a pre-existing tract is not present.

Codes 50430 and 50431 are diagnostic procedure codes that include injection(s) of contrast material, all associated radiological supervision and interpretation, and procedural imaging guidance (eg, ultrasound and/or fluoroscopy). Code 50430 also includes accessing the collecting system and/or associated ureter with a needle and/or catheter. Codes 50430 or 50431 may not be reported together with 50432, 50433, 50434, 50435, 50693, 50694, 50695.

Codes 50432, 50433, 50434, 50435 represent therapeutic procedures describing catheter placement or exchange, and include the elements of access, drainage catheter manipulations, and imaging guidance (eg, ultrasonography and/or fluoroscopy), as well as diagnostic imaging supervision and interpretation, when performed.

Code 50433 describes percutaneous nephrostomy with the additional accessing of the ureter/bladder to ultimately place a nephroureteral catheter (a single transnephric catheter with nephrostomy and ureteral components that allows drainage internally, externally, or both).

For codes 50430, 50431, 50432, 50433, 50434, 50435, 50606, 50693, 50694, 50695, 50705, and 50706, the renal pelvis and its associated ureter are considered a single entity for reporting purposes. Codes 50430, 50431, 50432, 50433, 50434, 50435, 50606,50693, 50694, 50695, 50705, and 50706 may be reported once for each renal collecting system/ureter accessed (eg, two separate codes would be reported for bilateral nephrostomy tube placement or for unilateral duplicated collecting system/ureter requiring two separate procedures.)

50391 Instillation(s) of therapeutic agent into renal pelvis and/or ureter through established nephrostomy, pyelostomy or ureterostomy tube (eg, anticarcinogenic or antifungal agent)

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

~~**D**50395~~	-	~~*Introduction of guide into renal pelvic and/or ureter with dilation to establish nephrstomy tract percutaneous*~~ (50395 has been deleted. To report, see 50436, 50437)	000	N/A (2018 work RVU = 3.37)

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:50436 Tracking Number T1 Original Specialty Recommended RVU: **3.37**
Presented Recommended RVU: **3.37**
Global Period: 000 Current Work RVU: RUC Recommended RVU: **3.37**

CPT Descriptor: Dilation of existing tract, percutaneous, for an endourologic procedure including imaging guidance (eg, ultrasound and/or fluoroscopy) and all associated radiological supervision and interpretation, as well as post procedure tube placement, when performed;

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 65-year-old male patient presents with a symptomatic right renal pelvic stone confirmed by prior imaging. A percutaneous right renal pelvic 8 Fr nephrostomy tube has been previously placed. Dilation of the percutaneous tract is scheduled prior to endoscopic stone removal (reported separately).

Percentage of Survey Respondents who found Vignette to be Typical: 92%

Site of Service (Complete for 010 and 090 Globals Only)
Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The patient's medical history including physical examination and laboratory studies are reviewed and consent is obtained. Relevant preoperative imaging studies are retrieved and reviewed. A "time out" is performed. The patient is placed prone on the fluoro compatible OR table. Position to ensure that fluoro and endourologic equipment are compatible with room set up. Sterile prep and drape, gown and glove.

Description of Intra-Service Work: Through existing nephroureteral access perform and interpret antegrade nephroureterogram. Fluroscopically introduce 2 stiff wires into the urinary bladder. Skin incision is made. Fluroscopically position 10mm tract dilation balloon and dilate the tract. Over the balloon, fluroscopically advance the 30 French tract sheath to secure access for the distinct and separate work of the endourologic proceudure in question. Following the endourologic procedure, fluroscopically advance a post procedure nephrostomy tube into place. Perform and interpret post procedure nephroureterogram. The catheter is connected to a gravity drainage bag. Sterile dressings are applied.

Description of Post-Service Work: The patient is transported to the recovery room for hemodynamic monitoring, recovery, and pain control. Postoperative orders are entered. Findings discussed with patient and family. Surgical procedure and image interpretation reports are created for the patient's medical record.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity		5%	43%	48%	5%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	62%	38%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	10%	52%	38%

Physical effort required	10%	67%	24%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	10%	48%	43%

2nd Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	0%	27%	67%	7%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	7%	33%	60%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	0%	33%	67%
Physical effort required	0%	47%	53%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	33%	67%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

The CPT Editorial Panel created two codes to report dilation of existing tract, and establishment of new access to the collecting system, including percutaneous, for an endourologic procedure including imaging guidance (eg, ultrasound and/or fluoroscopy) and all associated radiological supervision and interpretation, as well as post procedure tube placement when performed. Imaging is included into these new codes.

CPT Codes 52234 and 74485 were included in the family and surveyed by the specialties.

CPT Codes 50432 and 50433 were also included in the family. The specialty societies are requesting the RUC re-affirm the values of these two recently RUC reviewed codes (January 2015).

Recommendation
After a comprehensive of the survey data, the consenus panel is recommending a wRVU of 3.37 for CPT Code 50436. New code 50436 is currently reported with CPT Codes 50395 and 74485. The specialty societies believe a value of 3.37, which is the current value of 50395, will maintain relativity within this dilation of urinary tract family of services. Although time and wRVU comparisons to the KRS are difficult, survey respondents did rate the reference code 50436 of similar or greater overall intensity/complexity. Proposed 50436 values are well bracketed by MPC codes 52287 (also a GU code) and 37191. We note that the current time in the RUC databse for CPT Code 50395 is Harvard and should not be used as a direct comparator to the surveyed times.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 50395 + 74485

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Interventional Radiology How often? Commonly

Specialty Radiology How often? Commonly

Specialty Urology How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period?
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. A national number is not known.

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 2,720 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The current RUC database states that CPT Code 50395 was reported approximatley 3000 times in 2016. We estimate that 90% of those procedures would be reported as new code 50X39.

Specialty Radiology Frequency 2000 Percentage 73.52 %

Specialty Interventional Radiology Frequency 600 Percentage 22.05 %

Specialty Urology Frequency 150 Percentage 5.51 %

Do many physicians perform this service across the United States? Yes

CPT Descriptor: Dilation of existing tract, percutaneous, for an endourologic procedure including imaging guidance (eg, ultrasound and/or fluoroscopy) and all associated radiological supervision and interpretation, as well as post procedure tube placement, when performed; including new access into the renal collecting system
(For nephrostolithotomy, see 50080, 50081)
(For retrograde percutaneous nephrostomy, use 52334)
(For endoscopic surgery, see 50551-50561)
(Do not report 50436, 50437 in conjunction with 50080, 50081, 50382, 50384, 50430, 50431, 50432, 50433, 52334, 74485)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 57-year-old female presents with symptomatic chronic right renal pelvic calculi. Access to the right renal collecting system and dilation of the urinary tract is scheduled prior to endoscopic stone removal (reported separately).

Percentage of Survey Respondents who found Vignette to be Typical: 85%

Site of Service (Complete for 010 and 090 Globals Only)
Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The patient's medical history including physical examination and laboratory studies are reviewed and consent is obtained. Relevant preoperative diagnostic imaging studies are retrieved and reviewed. A "time out" is performed. The patient is placed prone on the fluoro compatible OR table. Position to ensure that ultrasound, fluoro, and endourologic equipment are compatible with room set up. Sterile prep and drape, gown and glove.

Description of Intra-Service Work: A small skin incision is made. Using US and fluoroscopy to target the area of stone disease within the collecting system, a needle is inserted through a calyceal approach. The needle placement is confirmed by performing and interpreting an antegrade nephrostogram. 018 wire is fluoroscopically placed down the ureter. Dilator system introduced so that a larger stiff 035 wire can be placed in the urinary bladder. An 8FR sheath is placed so that an additional stiff 035 wire can be placed in the urinary bladder. Skin incision is expanded. Fluroscopically position 10mm tract dilation balloon and dilate the tract. Over the balloon, fluroscopically advance the 30 French tract sheath to secure access for the distinct and separate work of the endourologic proceudure in question. Following the endourologic procedure, fluroscopically advance a post procedure nephrostomy tube into place. Perform and interpret post procedure nephroureterogram. The catheter is connected to a gravity drainage bag. Sterile dressings are applied.

Description of Post-Service Work: The patient is transported to the recovery room for hemodynamic monitoring, recovery, and pain control. Postoperative orders are entered. Findings discussed with patient and family. Surgical procedure and image interpretation reports are created for the patient's medical record.

• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	17%	83%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

The CPT Editorial Panel created two codes to report dilation of existing tract, and establishment of new access to the collecting system, including percutaneous, for an endourologic procedure including imaging guidance (eg, ultrasound and/or fluoroscopy) and all associated radiological supervision and interpretation, as well as post procedure tube placement when performed. Imaging is included into these new codes.

CPT Codes 52234 and 74485 were included in the family and surveyed by the specialties.

CPT Codes 50432 and 50433 were also included in the family. The specialty societies are requesting the RUC re-affirm the values of these two recently RUC reviewed codes (January 2015).

Survey respondents chose 50695 as the top KRS and 50694 as the second highest KRS. These are both similar codes involving the urinary collecting system. Intraservice time and wRVU are higher for 50695 compared to the reference code 50437. Intraservice time for 50694 is higher than the reference code with slightly lower wRVU than requested for 50437. Survey respondents tended to score 50437 of higher overall complexity and intensity compared to the KRSs. The expert panel feels that the requested times and wRVU values (25th percentile from survey) are appropriate based the survey and KRS comparisons. Clinically this makes sense as 50437 describes the work of creating a percutaneous renal access 3-4 times larger that of the KRSs. Furthermore the requested values for 50437 are well supported by MPC codes 37191 and 52235. In fact the requested wRVU for 50437 is the same as the wRVU for 52235 (also a code describing work with the GU system) with the same intraservice time.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 50395 + 74485 + 50432

- Review the medical record including preoperative laboratory results.
- Write preoperative orders (to be sent or faxed to the hospital).
- Review surgical procedure and postoperative recovery in and out of hospital with patient and /or family. Answer patient and / or family questions.
- Insure that the informed consent has been completed and is present in the medical record.
- Change into scrubs.
- Place lubrication jelly into the urethra.
- Wait 10
- Wash and disinfect hands, put on sterile surgical gown.
- Prepare the genitalia with standard prep solution and place sterile drapes.
- Inspect and assemble the endoscopic equipment.
- Position patient onto the endoscopic table and move into dorsal lithotomy position.
- Perform the initial time out / briefing with the surgical team.

Description of Intra-Service Work:
- Perform cystoscopy, assess ureteral orifice
- Perform retrograde pyelogram to delineate anatomy
- Through a ureteral catheter Insert Lawson retrograde nephrostomy puncture wire
- The puncture wire is passed through the muscle and the skin is “tented”
- The skin is incised and the needle is delivered

- A 22 G and 18 G needle dilator are placed over the puncture wire, which is advanced through the skin, subcutaneous fat, abdominal wall musculature, and perinephric fat until it reached the renal parenchyma
- After the catheter dilation up to 12 Fr is performed, a safety guidewire is placed.
- A percutaneous nephrostomy balloon dilation catheter is placed over the guide wire and the tract is dilated.
- A Nephrostomy tube is then placed and the balloon dilation catheter is removed.

Description of Post-Service Work:

- Move the patient off of the treatment table and transport to the recovery area
- Discuss the patient's postoperative care with patient and/or family
- Write prescriptions
- Dictate the operative note
- Schedule follow-up appointment

Physical effort required	0%	63%	38%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	75%	25%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

The CPT Editorial Panel created two codes to report dilation of existing tract, and establishment of new access to the collecting system, including percutaneous, for an endourologic procedure including imaging guidance (eg, ultrasound

and/or fluoroscopy) and all associated radiological supervision and interpretation, as well as post procedure tube placement when performed. Imaging is included into these new codes.

CPT Codes 52234 and 74485 were included in the family and surveyed by the specialties.

CPT Codes 50432 and 50433 were also included in the family. The specialty societies are requesting the RUC re-affirm the values of these two recently RUC reviewed codes (January 2015).

Crosswalk Recommendation
After a comprehensive review of the survey data the consensus panel is recommending a cross-walk value for CPT Code 52334. The median surveyed intra times are the same for codes 50436 and 52234. To maintain relativity within this dilation of urinary tract family and the broader fee schedule, the consensus panel believes a crosswalk to the value for CPT Code 50436 is more appropriate than the median or 25th survey statistic.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) CPT Code 52334

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Urology How often? Sometimes

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period?
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. A national number is not known.

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 417
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The current RUC database states that CPT Code 52334 was performed 417 times for Medicare patients in 2016. We do not suspect the utilization to dramatically change.

Specialty Urology Frequency 400 Percentage 95.92 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Minor procedure

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 74445

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:74485 Tracking Number T6 Original Specialty Recommended RVU: **0.83**
Presented Recommended RVU: **0.83**
Global Period: XXX Current Work RVU: **0.54** RUC Recommended RVU: **0.83**

CPT Descriptor: Dilation of ureter(s) or urethra, radiological supervision and interpretation
(Do not report 74485 in conjunction with 50436, 50437)
(For dilation of ureter without radiological guidance, use 52341, 52344)
(For change of nephrostomy or pyelostomy tube, use 50435)
(For dilation of a nephrostomy tract for endourologic procedure, see 50436, 50437)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 66 year old male with a ureteral stricture undergoes dilation of the ureter with imaging. Radiologic supervision and interpretation of images is done during and immediately following dilation.

Percentage of Survey Respondents who found Vignette to be Typical: 91%

Site of Service (Complete for 010 and 090 Globals Only)
Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The physician reviews the patient's medical and surgical history including prior imaging studies to become familiar with the patient's urologic pathology and anatomy.

Description of Intra-Service Work: Pre- and Post- dilation imaging is interpreted making note of response to treatment, potential complication, and fluoroscopy time.

Description of Post-Service Work: Based on pertinent patient information and using direct comparison to other available imaging the report is dictated into PACS and the permanent medical record. The physician communicates pertinent findings to the referring physician when appropriate.

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	13%	88%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

The CPT Editorial Panel created two codes to report dilation of existing urinary tract, and establishment of new access to the collecting system, including percutaneous, for an endourologic procedure including imaging guidance (eg, ultrasound and/or fluoroscopy) and all associated radiological supervision and interpretation, as well as post procedure tube placement when performed. Imaging is included into these new codes.

CPT Codes 52234 and 74485 were included in the family and surveyed by the specialties.

CPT Codes 50432 and 50433 were also included in the family. The specialty societies are requesting the RUC re-affirm the values of these two recently RUC reviewed codes (January 2015).

Compelling Evidence

AUA, ACR and SIR feels that there is compelling evidence for CPT 74485. The prior methodology for valuing this code is unknown and considered flawed, as the source is CMS/Other. There is a difference between the work and time values currently listed for this code compared with the survey responses. We believe this indicates both that the prior work and time values were incorrectly assigned. In addition, the patient population for the use of this code has changed. In the past this code was mainly used by interventional radiologists for the dilation of a nephrostomy tract prior to nephrolithotomy. Dilation of nephrostomy tract is now part of CPT 50436. Dilation of the lower urinary tract (urethra or lower ureter) is now the primary use of CPT 74485 representing a substantial change in patient population.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 74485

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Interventional Radiology How often? Commonly

Specialty Radiology How often? Commonly

Specialty Urology How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period?
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. A national number is not known.

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 100
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The 2016 Medicare utilization rate for CPT Code 74485 in the current RUC database is 2,837. After 74485 is bundled into the two new urinary tract codes, we anticipate the utilization for this code will dramatically decrease. We anticipate the Medicare utilization for this code will be less than 100.

Specialty Urology Frequency 60 Percentage 60.00 %

Specialty Radiology Frequency 30 Percentage 30.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Minor procedure

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 74450

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Facility Direct Practice Expense (PE) Inputs

Meeting Date: January 2018

Global Period: 000

50436 *Dilation of existing tract, percutaneous, for an endourologic procedure including imaging guidance (eg, ultrasound and/or fluoroscopy) and all associated radiological supervision and interpretation, as well as post procedure tube placement, when performed;*

50437 *Dilation of existing tract, percutaneous, for an endourologic procedure including imaging guidance (eg, ultrasound and/or fluoroscopy) and all associated radiological supervision and interpretation, as well as post procedure tube placement, when performed; including new access into the renal collecting system*

52334 *Cystourethroscopy with insertion of ureteral guide wire through kidney to establish a percutaneous nephrostomy, retrograde*

50432 *Placement of nephrostomy catheter, percutaneous, including diagnostic nephrostogram and/or ureterogram when performed, imaging guidance (eg, ultrasound and/or fluoroscopy) and all associated radiological supervision and interpretation*

50433 *Placement of nephroureteral catheter, percutaneous, including diagnostic nephrostogram and/or ureterogramwhen performed, imaging guidance (eg, ultrasound and/or fluoroscopy) and all associated radiological supervision and interpretation, new access*

Global Period: XXX

74485 *Dilation of ureter(s) or urethra, radiological supervision and interpretation*

---

1. **Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:**

   SIR, ACR and AUA convened a panel that included a number of experts familiar with these Dilation of Urinary Tract Services to evaluate the direct practice expense inputs for this family of codes.

2. **You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here:**

   New Codes 50436 and 50437 – we included CPT Code 50431 (Injection procedure for antegrade nephrostogram and/or ureterogram, complete diagnostic procedure including imaging guidance (eg, ultrasound and fluoroscopy) and all associated radiological supervision and interpretation; existing

access) as a reference code. CPT Code 50431 was recently reviewed by the RUC/PE Subcommittee and is part of the Genitourinary family of services.

CPT Code 52334 – we included the current direct practice expense inputs

3. **Is this code(s) typically billed with an E/M service?**

   No

4. **If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:**

   The societies are recommending extensive use of clinical time in the Facility setting.

5. **If you are requesting an increase over the current total cost for clinical staff time (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), total cost of supplies, and/or total cost of equipment you must provide compelling evidence:**

   N/A

6. **If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here:**

   N/A

7. **Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:***

   N/A

8. **If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.**

   N/A

9. **If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities:**

   N/A

10. **If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.**

    N/A

11. **If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here:**

N/A

12. **If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here:**

    N/A

13. **List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here:**

    N/A

14. **If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here:**

    N/A

15. **If there is any other item on your spreadsheet that needs further explanation please include here:**

    N/A

CPT Code(s): 50436, 50437, 52334, 74485, 50432 and 50433
Specialty Society(s): SIR, ACR and AUA

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Non-Facility Direct Practice Expense (PE) Inputs

Meeting Date: January 2018

Global Period: XXX

74485 *Dilation of ureter(s) or urethra, radiological supervision and interpretation*

Global Period: 000

50432 *Placement of nephrostomy catheter, percutaneous, including diagnostic nephrostogram and/or ureterogram when performed, imaging guidance (eg, ultrasound and/or fluoroscopy) and all associated radiological supervision and interpretation*

50433 *Placement of nephroureteral catheter, percutaneous, including diagnostic nephrostogram and/or ureterogramwhen performed, imaging guidance (eg, ultrasound and/or fluoroscopy) and all associated radiological supervision and interpretation, new access*

---

1. **Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:**

   SIR, ACR and AUA convened a panel that included a number of experts familiar with these Dilation of Urinary Tract Services to evaluate the direct practice expense inputs for this family of codes.

2. **You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here:**

   CPT Code 74485 – we included the current direct practice expense inputs

   CPT Codes 50432 and 50433 – We are asking the PE subcommittee (and RUC) to re-affirm the inputs for these recently reviewed (January 2015) services. We have included their current direct practice expense inputs.

3. **Is this code(s) typically billed with an E/M service?**

   No

4. **What specialty is the dominant provider in the nonfacility? What percent of the time does the dominant provider provide the service(s) in the nonfacility? Is the dominant provider in the nonfacility different then for the global? (please see provided data in PE Subcommittee folder)**

Urology

5. **If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:**

   N/A

6. **If you are requesting an increase over the current total cost for clinical staff time (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), total cost of supplies, and/or total cost of equipment you must provide compelling evidence:**

   We are recommending assist physician tech time at 100% of physician times.

7. **If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here:**

   The original recommendations included 5 minutes of PRE TIME for "Other Clinical Activity: *Retrieve prior imaging exams, hang for MD review, verify orders, review chart to incorporate relevant clinical information, confirm contrast protocol with interpreting MD".* We have split that 5 minutes into 3 minutes for CA006 *confirm availability of prior images/studies* and 2 minutes for CA007 *review patient clinical extant information and questionnaire.*

   The original recommendations included 2 minutes of INTRA TIME for "*hang and process films*". We have included that in CA030 *tech QCs images in PACS, checking for all images, reformats and dose page.*

8. **Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:***

   Pre-Service Clinical Labor Activities:

   Confirm availability of prior images/studies -

   Review patient clinical extant information and questionnaire -

   Intra-Service Clinical Labor Activities:

   Prepare room, equipment, supplies after consulting with MD

   Prepare and position patient on table

   Assist physician (100% - hip to hip) – The Radiologic Technologist is scrubbed into the procedure and is sterile to assist in the procedure.

   Clean room/equipment by physician staff – Radiologic technologist cleans room and equipment.

   Technologist archives and QC's images to/in PACS, checking for all images and dose page

Review examination with interpreting MD to determine which images to send to PACS and to review documents.

Exam documents scanned into PACS. Exam completed in RIS system to generate billing process and to populate images into Radiologist work queue

Post-Service Clinical Labor Activities:

N/A

9. **If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.**

   N/A

10. **If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities:**

    N/A

11. **If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.**

    N/A

12. **If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here:**

    N/A

13. **If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here:**

    N/A

14. **List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here:**

    ED053 Professional PACS Workstation – "Other" formula *Half pre physician times and all of intra physician times

    ED050 PACS Workstation Proxy – "PACS" formula

EL014 room, radiographic-fluoroscopic – "Default" formula

15. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here:

N/A

16. If there is any other item on your spreadsheet that needs further explanation please include here:

CPT Codes 50432 and 50433 – We are asking the PE Subcommittee to re-affirm the inputs for CPT Codes 50432 and 50433, which were included as part of the family for the two new dilation of urinary tract procedures. The direct practice expense inputs for CPT Codes 50432 and 50433 were recently established by the PE subcommittee (January 2015).

Chicago, IL 60611-5885

Re: Tab 9 Genitourinary Catheter Procedures

Dear Dr. Levy:

Attached are the RUC recommendations for Tab 9 Genitourinary Catheter Procedures. They include recommendations for 5039X1-4, 5039X13, 5039X5, 506XX6, 507XX11, 507XX12, 5069X7, 5069X8 and 5069X9.

CPT Code 50391 *Instillation(s) of therapeutic agent into renal pelvis and/or ureter through established nephrostomy, pyelostomy or ureterostomy tube (eg, anticarcinogenic or antifungal agent)* is an existing stand-alone therapeutic code utilized for the administration of therapeutic agents (i.e. chemotherapeutic drugs) into the renal pelvis through an existing nephrostomy tube. This code does not describe introduction/exchange/removal of catheters within the renal pelvis and should not be considered part of the family of codes under current consideration.

CPT Code 50396 *Manometric studies through nephrostomy or pyelostomy tube, or indwelling ureteral catheter* is an existing stand-alone diagnostic code utilized for measuring urinary tract flow rates through an existing nephrostomy tube. This code does not describe introduction/exchange/removal of catheters within the renal pelvis and should not be considered part of the family of codes under consideration.

The specialty societies are going to recommend CPT Code 50395 be referred to CPT to revise the nomenclature. There is concern about perceived confusion with the overlap in the X3 and 50395 descriptors.

We look forward to presenting our recommendations later this month in San Diego. If you have any questions, please don't hesitate to contact me at jerryn@tampabay.com.

Regards,

Gerald Niedzwiecki, MD
SIR RUC Advisor

AMA/Specialty Society RVS Update Committee Summary of Recommendations
Codes Reported 75% or More screen

January 2015

Genitourinary Catheter Procedures

In October 2012, the Joint CPT/RUC Workgroup on Codes Reported Together identified the following code pairs as billed together 75% or more of the time: 50392 and 74475, 50393 and 74480, 50394 and 74425, 50398 and 75984. At the October 2014 CPT meeting, the specialties submitted a Code Change Proposal to bundle codes per the workgroup's request, and also refined the descriptors for injection and aspiration procedures to better delineate surgical access requirements.

Prior to valuing these services, the specialty societies noted that for two of these new services, 50430 and 50431, there is compelling evidence that the current component codes used to report these services are potentially misvalued. The specialties brought forth the following compelling evidence arguments:

Change in technique and technology

- Virtually all the medical devices currently used in the genitourinary catheter procedures have been developed since the current codes were adopted. Advances in understanding of anatomy and avoidance of complications (especially genitourinary sepsis) have led to the development of much less aggressive and safer guidewire-based methods which involve more steps and more effort, skill and physician time such as micropuncture access with gradual stepwise transition to heavy-duty guidewires, tract dilation and placement of nephrostomy catheters over a wire and use of real-time ultrasound guidance for needle access.

Change in patient population

- The population of patients treated with the genitourinary catheter procedures currently described by the family of codes being replaced by the new family of codes has changed considerably. Previously virtually all genitourinary catheter procedures were used for basic relief of urinary obstruction either acutely or chronically, but as a result of major advances in urologic surgery, patients with malignancies, stone disease and other problems are now being managed with innovative reconstructive techniques including the regular need for and use of catheter based procedures, including urinary drainage.

After hearing these arguments, the RUC agreed that there is compelling evidence that the current work values for 50430 and 50431 are potentially misvalued.

50430 Injection procedure for antegrade nephrostogram and/or ureterogram, complete diagnostic procedure including imaging guidance (eg, ultrasound and fluoroscopy) and all associated radiological supervision and interpretation; new access
The RUC reviewed the survey results for 45 interventional radiologists and recommends the following physician time components: pre-service time of 36 minutes, intra-service time of 35 minutes and post-service time of 20 minutes.

To determine an appropriate work value for 50430, the RUC reviewed the survey respondents' estimated physician work values and agreed with the specialty societies that the survey 25th percentile work RVU of 3.15 is appropriate. To justify a work RVU of 3.15, the RUC compared the surveyed code to the top two key reference services chosen: CPT code 32557 *Pleural drainage, percutaneous, with insertion of indwelling catheter; with imaging guidance* (work RVU= 3.12, intra time= 30 minutes) and CPT code 49405 *Image-guided fluid collection drainage by catheter (eg, abscess, hematoma, seroma, lymphocele, cyst); visceral (eg, kidney, liver, spleen, lung/mediastinum), percutaneous* (work RVU= 4.25, intra time= 40 minutes). The RUC noted that both services provide comparable physician work and the recommended work value of 3.15 appropriately places 50430 in rank order betweeen these two reference services. **The RUC recommends a work RVU of 3.15 for CPT code 50430.**

50431 Injection procedure for antegrade nephrostogram and/or ureterogram, complete diagnostic procedure including imaging guidance (eg, ultrasound and fluoroscopy) and all associated radiological supervision and interpretation; existing access
The RUC reviewed the survey results for 45 interventional radiologists and recommends the following physician time components: pre-service time of 25 minutes, intra-service time of 15 minutes and post-service time of 15 minutes.

To determine an appropriate work value for 50431, the RUC reviewed the survey respondents' estimated physician work values and agreed with the specialty societies that the survey 25th percentile work RVU of 1.42 is appropriate. To justify a work RVU of 1.42, the RUC compared the surveyed code to the second highest chosen key reference code 49083 *Abdominal paracentesis (diagnostic or therapeutic); with imaging guidance* (work RVU= 2.00) and noted that the reference code has slightly more total time than 50431, 60 minutes compared to 55 minutes, and is valued appropriately higher. The RUC also reviewed reference code 64445 *Injection, anesthetic agent; sciatic nerve, single* (work RVU= 1.48, intra time= 15 minutes) and MPC code 52000 *Cystourethroscopy (separate procedure)* (work RVU= 2.23, intra time= 15 minutes) and noted that both services provide comparable physician work and the recommended work value of 1.42 appropriately places 50431 relative to these two reference services. **The RUC recommends a work RVU of 1.42 for CPT code 50431.**

50432 Placement of nephrostomy catheter, percutaneous, including diagnostic nephrostogram and/or ureterogram when performed, imaging guidance (eg, ultrasound and/or fluoroscopy) and all associated radiological supervision and interpretation
The RUC reviewed the survey results for 45 interventional radiologists and recommends the following physician time components: pre-service time of 39 minutes, intra-service time of 48 minutes and post-service time of 20 minutes.

To determine an appropriate work value for 50432, the RUC reviewed the survey respondents' estimated physician work values and agreed with the specialty societies that the survey 25th percentile work RVU of 4.70 is appropriate. To justify a work RVU of 4.70, the RUC compared the surveyed code to the top two key reference services chosen: CPT code 49407 *Image-guided fluid collection drainage by catheter (eg, abscess, hematoma, seroma, lymphocele, cyst); peritoneal or retroperitoneal, transvaginal or transrectal* (work RVU= 4.50, intra time= 45 minutes) and CPT code 49405 *Image-guided fluid collection drainage by catheter (eg, abscess, hematoma, seroma, lymphocele, cyst); visceral (eg, kidney, liver, spleen, lung/mediastinum), percutaneous* (work RVU= 4.25, intra time= 40 minutes). The RUC agreed that considering the similarities in physician work and time, these two reference services are appropriately valued analogous to 50432.

Finally, the RUC noted that physician work involved in 50432 is the work involved in 50430 plus the work of re-accessing a system in a peripheral calyx. Therefore, the physician is accessing the system twice in 50432 and justifies a work RVU 1.55 difference greater than 50430. **The RUC recommends a work RVU of 4.70 for CPT code 50432.**

50433 Placement of nephroureteral catheter, percutaneous, including diagnostic nephrostogram and/or ureterogram when performed, imaging guidance (eg, ultrasound and/or fluoroscopy) and all associated radiological supervision and interpretation; new access
The RUC reviewed the survey results for 46 interventional radiologists and recommends the following physician time components: pre-service time of 39 minutes, intra-service time of 60 minutes and post-service time of 20 minutes.

To determine an appropriate work value for 50433, the RUC reviewed the survey respondents' estimated physician work values and agreed with the specialty societies that neither the 25th percentile (work RVU= 5.00) nor the median work RVU (work RVU= 6.20) accurately values 50433. To determine a more accurate value, the RUC reviewed CPT code 52351 *Cystourethroscopy, with ureteroscopy and/or pyeloscopy; diagnostic* (work RVU= 5.75) and noted that both codes have similar physician work and nearly identical total time. Given these similarities, the RUC recommends a work RVU of 5.75, which is a direct crosswalk to CPT code 52351. To justify this value, the RUC compared 50433 to CPT code 52342 *Cystourethroscopy; with treatment of ureteropelvic junction stricture (eg, balloon dilation,*

laser, electrocautery, and incision) (work RVU= 5.85, intra time= 60 minutes) and noted that since both codes have identical intra-service time and comparable physician work, the recommended value is appropriately valued analogous to this reference code.

Finally, the RUC noted that the work involved in 50433 contains the physician work of 50432 plus the additional work of transversing the ureter and placing the catheter into the bladder and having it then travel externally to the patient. The RUC agreed that the additional incremental work of 1.05 above the recommended value of 4.70 for CPT code 50432 is accurate. **The RUC recommends a work RVU of 5.75 for CPT code 50433.**

50434 Convert nephrostomy catheter to nephroureteral catheter, percutaneous, including diagnostic nephrostogram and/or ureterogram when performed, imaging guidance (eg, ultrasound and/or fluoroscopy) and all associated radiological supervision and interpretation; via pre-existing nephrostomy tract
The RUC reviewed the survey results for 45 interventional radiologists and recommends the following physician time components: pre-service time of 36 minutes, intra-service time of 45 minutes and post-service time of 20 minutes.

To determine an appropriate work value for 50434, the RUC reviewed the survey respondents' estimated physician work values and agreed with the specialty societies that the survey 25th percentile work RVU of 4.20 is appropriate. To justify a work RVU of 4.20, the RUC compared the surveyed code to MPC code 31628 *Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with transbronchial lung biopsy(s), single lobe* (work RVU= 3.80) and noted that since this reference code has 5 fewer minutes than the surveyed code, 40 minutes compared to 45 minutes, 50434 is appropriately valued higher. In addition, the RUC reviewed CPT code 49407 *Image-guided fluid collection drainage by catheter (eg, abscess, hematoma, seroma, lymphocele, cyst); peritoneal or retroperitoneal, transvaginal or transrectal* (work RVU= 4.50) and agreed that with identical intra-service time, these two codes should be valued similarly.

Finally, the RUC noted that the work involved in 50434 contains the physician work of 50431 plus the additional work of traversing the ureter with a new catheter analogous to 50433, where this new catheter extends from the bladder, through the ureter, is coiled in the kidney, and extends external to the patient. The RUC agreed that the additional work increment between this procedure and the injection procedure is accurate. **The RUC recommends a work RVU of 4.20 for CPT code 50434.**

50435 Exchange nephrostomy catheter, percutaneous, including diagnostic nephrostogram and/or ureterogram when performed, imaging guidance (eg, ultrasound and/or fluoroscopy) and all associated radiological supervision and interpretation
The RUC reviewed the survey results for 44 interventional radiologists and recommends the following physician time components: pre-service time of 20 minutes, intra-service time of 20 minutes and post-service time of 15 minutes.

To determine an appropriate work value for 50435, the RUC reviewed the survey respondents' estimated physician work values and agreed with the specialty societies that the survey 25th percentile work RVU of 2.00 is appropriate. To justify a work RVU of 2.00, the RUC compared the surveyed code to the key reference code 49452 *Replacement of gastro-jejunostomy tube, percutaneous, under fluoroscopic guidance including contrast injection(s), image documentation and report* (work RVU= 2.86, total time= 60 minutes) and noted that the reference code has slightly more total time compared to the surveyed code and is appropriately valued higher. The RUC also reviewed CPT code 47000 *Biopsy of liver, needle; percutaneous* (work RVU= 1.90, intra time= 20 minutes) and agreed that this reference code should be valued similarly to 50435. **The RUC recommends a work RVU of 2.00 for CPT code 50435.**

50693 Placement of ureteral stent, percutaneous, including diagnostic nephrostogram and/or ureterogram when performed, imaging guidance (eg, ultrasound and/or fluoroscopy) and all associated radiological supervision and interpretation; via a pre-existing nephrostomy tract
The RUC reviewed the survey results for 33 interventional radiologists and recommends the following physician time components: pre-service time of 39 minutes, intra-service time of 45 minutes and post-service time of 20 minutes.

To determine an appropriate work value for 50693, the RUC reviewed the survey respondents' estimated physician work values and agreed with the specialty societies that the survey median work RVU of 4.60 is appropriate. To justify a work RVU of 4.60, the RUC compared the surveyed code to CPT code 49407 *Image-guided fluid collection drainage by catheter (eg, abscess, hematoma, seroma, lymphocele, cyst); peritoneal or retroperitoneal, transvaginal or transrectal* (work RVU= 4.50) and noted that both services have identical intra-service time, 45 minutes, and should therefore be valued similarly. The RUC also reviewed CPT code 50385 *Removal (via snare/capture) and replacement of internally dwelling ureteral stent via transurethral approach, without use of cystoscopy, including radiological supervision and interpretation* (work RVU= 4.44, intra time= 45 minutes) and agreed that this reference code also provides an accurate anchor point to the recommended value.

Finally, the RUC noted that 50693 is analogous to the physician work involved in 50434. However, the placement of the ureteral catheter does not have external connections to the skin surface. Therefore, during deployment of the stent, there is significant risk of stent migration and malposition . This adds additional intensity compared to 50434 and the recommended value appropriately values the surveyed code above this reference code. **The RUC recommends a work RVU of 4.60 for CPT code 50693.**

50694 Placement of ureteral stent, percutaneous, including diagnostic nephrostogram and/or ureterogram when performed, imaging guidance (eg, ultrasound and/or fluoroscopy) and all associated radiological supervision and interpretation; new access, without separate nephrostomy catheter
The RUC reviewed the survey results for 33 interventional radiologists and recommends the following physician time components: pre-service time of 39 minutes, intra-service time of 62 minutes and post-service time of 20 minutes.

To determine an appropriate work value for 50694, the RUC reviewed the survey respondents' estimated physician work values and agreed with the specialty societies that the survey 25th percentile work RVU of 6.00 is appropriate. To justify a work RVU of 6.00, the RUC compared the surveyed code to the second highest chosen key reference code 36247 *Selective catheter placement, arterial system; initial third order or more selective abdominal, pelvic, or lower extremity artery branch, within a vascular family* (work RVU= 6.29) and agreed that since both services have comparable physician work and nearly identical intra-service time, 60 minutes compared to 62 minutes, both should be valued similarly. The RUC also reviewed CPT code 52342 *Cystourethroscopy; with treatment of ureteropelvic junction stricture (eg, balloon dilation, laser, electrocautery, and incision)* (work RVU= 5.85, intra time= 60 minutes) and agreed that both this reference code and 50694 should be valued similarly.

Finally, the RUC noted that 50694 is analogous to the physician work involved in 50693 except that there is not a pre-existing nephrostomy tract. Therefore, the additional work increment of placing the ureteral stent in a new access is accurately valued at 1.40 work RVUs. **The RUC recommends a work RVU of 6.00 for CPT code 50694.**

50695 Placement of ureteral stent, percutaneous, including diagnostic nephrostogram and/or ureterogram when performed, imaging guidance (eg, ultrasound and/or fluoroscopy) and all associated radiological supervision and interpretation; new access, with separate nephrostomy catheter
The RUC reviewed the survey results for 33 interventional radiologists and recommends the following physician time components: pre-service time of 39 minutes, intra-service time of 75 minutes and post-service time of 20 minutes.

To determine an appropriate work value for 50695, the RUC reviewed the survey respondents' estimated physician work values and agreed with the specialty societies that the survey median work RVU of 7.55 is appropriate. To justify a work RVU of 7.55, the RUC compared the surveyed code to the key reference code 36247 *Selective catheter placement, arterial system; initial third order or more selective abdominal, pelvic, or lower extremity artery branch, within a vascular family* (work RVU= 6.29) and noted that the surveyed code has more intra-service time compared to the reference code, 60 minutes compared to 75 minutes, and is therefore appropriately valued higher. The RUC also reviewed CPT code 20982 *Ablation therapy for reduction or eradication of 1 or more bone tumors (eg,*

metastasis) including adjacent soft tissue when involved by tumor extension, percutaneous, including imaging guidance when performed; radiofrequency (work RVU= 7.27, intra time= 80 minutes) and agreed that this reference code is accurately valued similar to the surveyed code.

Finally, the RUC noted that the work involved in 50695 contains the physician work of 50694 plus the additional work of placing a nephrostomy tube. The RUC agreed that the additional work increment involved in the tube placement is accurately valued at 1.55 work RVUs. **The RUC recommends a work RVU of 7.55 for CPT code 50695.**

CPT Referral:
The RUC had significant concerns regarding the global period used for the following CPT codes: 50606, 50705 and 50706. The specialties noted that this code is almost always billed with another code. Since it was designated by CPT as -51 modifier exempt, the RUC was concerned that the pre- and post-service work would be duplicative. The specialties suggested that the surveyees had assumed that the code was a stand-alone code, and therefore assigned it pre- and post-work. The specialty societies agreed with the RUC that these three codes should be referred to the CPT Editorial Panel. Following referral, new surveys can be conducted, this time as add-on procedures, with new recommendations presented at the April 2015 meeting. **The RUC recommends CPT codes 50606, 50705 and 50706 be referred to the February 2015 CPT Editorial Panel. Note: The CPT Editorial Panel converted these codes to add-on codes at the February 2015 RUC Meeting.**

In addition, prior to the meeting, the specialties indicated that CPT code 50395 *Introduction of guide into renal pelvis and/or ureter with dilation to establish nephrostomy tract, percutaneous*, which was identified as part of the family, will be referred to the CPT Editorial Panel to clear up any confusion with overlap in physician work with 50432. **The RUC recommends CPT code 50395 be referred to the CPT Editorial Panel.**

Not Part of Family:
The specialties noted that two CPT codes identified as part of the family, 50391 and 50396, are current stand-alone procedure that do not describe introduction/exchange/removal of catheters within the renal pelvis and should not be considered part of the family of codes under this tab. The RUC agreed that these two codes were not part of the current family under review.

New Technology:
The RUC recommends that this family of codes be placed on the New Technology list and be re-reviewed by the RUC in three years to ensure correct valuation and utilization assumptions.

Practice Expense:
The RUC reviewed and approved the direct practice expense inputs with the following modifications as approved by the Practice Expense Subcommittee:

- The clinical staff time for availability of prior images confirmed, was changed from 3 to 2 minutes for nonfacility setting to meet baseline standards for digital imaging (line 22).
- The clinical staff time for patient clinical information and questionnaire reviewed by technologist, order from physician confirmed and exam protocoled by radiologist, was changed from 0 to 2 minutes for nonfacility setting to meet baseline standards for digital imaging (line 23).
- The clinical staff time for obtain vital signs, was changed from 2 to 5 minutes for a standard level 2 (4-6 vitals) (line 29).
- The specialty had recommended 60 minutes (15 minutes of RN time per hour of monitoring) representing 4 hours of monitoring the patient after moderate sedation, however the PE Subcommittee determined that 15 minutes representing 1 hour of monitoring the patient after moderate sedation (line 43) was appropriate and moved the remaining 45 minutes of monitoring time to the appropriate line for monitoring the patient after procedure, not related to moderate sedation (line 44). The clinical staff type for monitoring the patient after procedure, not related to moderate sedation was changed from RN/LPN/MTA L037D to an RN L051A because that is the staff available in the office for these types of procedures (line 44).
- The clinical staff time for review examination with interpreting MD, was changed from 0 to 2 minutes for nonfacility setting to meet baseline standards for digital imaging (line 53).
- The clinical staff time for exam documents scanned into PACS. Exam completed in RIS system to generate billing process and to populate images into Radiologist work queue, was changed from 0 to 1 minute for nonfacility setting to meet baseline standards for digital imaging (line 54).
- The PE Subcommittee had a robust discussion about use of the angiography room for these services. Unfortunately, in error, the equipment list for the angiography room has not been included in the PE reference materials for a number of years. AMA staff tracked down a list from 2003 and the equipment appears to remain unrevised since that time. The specialty advisors reviewed the equipment list in detail and verified that the angiography room, and not a subset of mobile equipment, is needed for these services.
- The equipment minute calculations were updated to include the appropriate line items for PACS Workstation Proxy (ED050) (line 140).

CPT Code (●New)	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation

Urinary System
Kidney
Introduction
Other Introduction Injection/Change/Removal Procedures

Percutaneous genitourinary procedures are performed with imaging guidance (eg, fluoroscopy and/or ultrasound). Diagnostic nephrostogram and/or ureterogram are typically performed with percutaneous genitourinary procedures and are included in 50432, 50433, 50435, 50434, 50693, 50694, and 50695.

Codes 50430 and 50431 are diagnostic procedure codes that include the work of injection(s) of contrast material, all associated radiological supervision and interpretation, and procedural imaging guidance (eg, ultrasound and/or fluoroscopy). Code 50430 also includes the work of accessing the collecting system associated and/or associated ureter with a needle and/or catheter. Codes 50430 or 50431 may not be reported together with 50432, 50433, 50435, 50434, 50693, 50694, 50695.

Codes 50432, 50433, 50435, 50434 are therapeutic procedures describing the work of catheter placement or exchange, and include the elements of access, drainage catheter manipulations and imaging guidance (eg ultrasonography and/or fluoroscopy) as well as diagnostic imaging supervision and interpretation, when performed.

Code 50433 describes the work of percutaneous nephrostomy with the additional work of accessing the ureter/bladder to ultimately place a nephroureteral catheter (a single transnephric catheter with nephrostomy and ureteral components that allows drainage internally, externally, or both).

50390 *Aspiration and/or injection of renal cyst or pelvis by needle, percutaneous*

(For radiological supervision and interpretation, see 74425, 74470, 76942, 77002, 77012, 77021)

~~(For evaluation of fine needle aspirate, see 88172, 88173)~~

(For antegrade nephrostogram and/or antegrade pyelogram use 50430, 50431)

(For radiological supervision and interpretation, ~~see~~use74425~~,74475,74480~~)

Kidney
Endoscopy

For supplies and materials, use 99070)

50551 *Renal endoscopy through established nephrostomy or pyelostomy, with or without irrigation, instillation, or ureteropyelography, exclusive of radiologic service;*

50553 *with ureteral catheterization, with or without dilation of ureter*

(For image-guided[1] dilation of ureter without endoscopic guidance, see 50706)

50555 *with biopsy*

(For image-guided biopsy of ureter and/or renal pelvis without endoscopic guidance, see 50606)

50562 *with resection of tumor*

50570 *Renal endoscopy through nephrotomy or pyelotomy, with or without irrigation, instillation, or ureteropyelography, exclusive of radiologic service;*

50572 *with ureteral catheterization, with or without dilation of ureter*

(For image-guided[1] dilation of ureter without endoscopic guidance, see 50706)

50574 *with biopsy*

(For image-guided[1] biopsy of ureter and/or renal pelvis without endoscopic guidance, see 50606)

Ureter
Incision/Biopsy

Code 50606 is a an add-on code describing endoluminal biopsy (eg, brush) using non-endoscopic imaging guidance, and may be reported once per ureter per day. This code includes the work of the biopsy and the imaging guidance and radiological supervision and interpretation required to accomplish the biopsy. The biopsy may be performed through de novo transrenal access, an existing renal/ureteral access, transurethral access, an ileal conduit, or ureterostomy. The work to gain access may be separately reported. Diagnostic pyelography/ureterography is not included in the work of 50606 and may be separately reported. Other interventions or catheter placements performed at the same setting as the biopsy may be separately reported.

Ureter
Introduction
Other Introduction/Change/Removal Procedures

Codes 50693, 50694, 50695 are therapeutic procedure codes describing percutaneous placement of ureteral stents. These codes include the work of access, drainage, catheter manipulations, diagnostic nephrostogram and/or ureterogram when performed, imaging guidance (eg, ultrasonography and/or fluoroscopy), and all associated radiological supervision and interpretation. When a separate ureteral stent and a nephrostomy catheter are placed into a ureter and its associated renal pelvis during the same session through a new percutaneous renal access use 50695 to report the procedure.

50684 *Injection procedure for ureterography or ureteropyelography through ureterostomy or indwelling ureteral catheter*

(For radiological supervision and interpretation, use 74425)

(Do not report 50684 in conjunction with 50433, 50434, 50693-95)

50686 *Manometric studies through ureterostomy or indwelling ureteral catheter*

50688 *Change of ureterostomy tube or externally accessible ureteral stent via ileal conduit*

(If imaging guidance is performed, use 75984)

50690 *Injection procedure for visualization of ileal conduit and/ or ureteropyelography, exclusive of radiologic service*

(For radiological supervision and interpretation, use 74425)

Surgery
Urinary System
Ureter
Repair

Codes 50705, 50706 describe embolization or dilation of the ureter using non-endoscopic imaging guidance and each may be reported once per ureter per day. These codes include the work of catheter manipulations, contrast material injection(s) inherent to the intervention, imaging guidance (eg, fluoroscopy) and all associated radiologic supervision and interpretation. Access, and other therapeutic intervention(s) necessary for the introduction of needles, guide wires, and catheters into the kidney, renal pelvis, or ureter may be separately reported. Code 50705, 50706 are a add-on codes describing embolization and dilation of the ureter using non-endoscopic imaging guidance, and each may be reported once per ureter per day. These codes include the work of the embolization or dilation plus the imaging guidance and radiological supervision and interpretation required to accomplish the embolization or

dilation. These procedures may be performed through de novo transrenal access, an existing renal/ureteral access, transurethral access, an ileal conduit, or ureterostomy. The work to gain access may be separately reported. Diagnostic pyelography/ureterography is not included in the work of 50705 and 50706 and may be separately reported. Other interventions or catheter placements performed at the same setting as the embolization/dilation may be separately reported.

50951 *Ureteral endoscopy through established ureterostomy, with or without irrigation, instillation, or ureteropyelography, exclusive of radiologic service;*

50953 *with ureteral catheterization, with or without dilation of ureter*

(For image-guided[1] dilation of ureter without endoscopic guidance, see 50706)

50955 *with biopsy*

(For image-guided[1] biopsy of ureter and/or renal pelvis without endoscopic guidance, see 50606)

50961 *with removal of foreign body or calculus*

~~*(When procedures 50970-59080 provide a significant identifiable service, they may be added to 50600)*~~

50970 *Ureteral endoscopy through ureterotomy, with or without irrigation, instillation, or ureteropyelography, exclusive of radiologic service;*

50972 *with ureteral catheterization, with or without dilation of ureter*

(For image-guided[1] dilation of ureter without endoscopic guidance, see 50706)

50974 *with biopsy*

(For image-guided[1] biopsy of ureter and/or renal pelvis without endoscopic guidance, see 50606)

~~*50980* *with removal of foreign body or calculus*~~

Endoscopy—Cystoscopy, urethroscopy, cystourethroscopy

52005 *Cystourethroscopy, with ureteral catheterization, with or without irrigation, instillation, or ureteropyelography, exclusive of radiologic service;*

52007 *with brush biopsy of ureter and/or renal pelvis*

(For image-guided[1] biopsy of ureter and/or renal pelvis without endoscopic guidance, see 50606)

52341	*Cystourethroscopy; with treatment of ureteral stricture (eg, balloon dilation, laser, electrocautery, and incision)*			
52343	*with treatment of intra-renal stricture (eg, balloon dilation, laser, electrocautery, and incision)*			
	(Do not report 52341, 52342, 52343 in conjunction with 52000, 52351)			
	(For image-guided[1] dilation of ureter, ureteropelvic junction stricture without endoscopic guidance, see 50706)			
52344	*Cystourethroscopy with ureteroscopy; with treatment of ureteral stricture (eg, balloon dilation, laser, electrocautery, and incision)*			
52346	*with treatment of intra-renal stricture (eg, balloon dilation, laser, electrocautery, and incision)*			
	(For image-guided[1] dilation of ureter, ureteropelvic junction stricture without endoscopic guidance, see 50706)			
52354	*with biopsy and/or fulguration of ureteral or renal pelvic lesion*			
	(For image-guided[1] biopsy of ureter and/or renal pelvis without endoscopic guidance, see 50606)

CPT Descriptor: Placement of nephrostomy catheter, percutaneous, including diagnostic nephrostogram and/or ureterogram when performed, imaging guidance (eg, ultrasound and/or fluoroscopy) and all associated radiological supervision and interpretation

---

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 57-year-old female was diagnosed with a right renal urinary tract obstruction secondary to a ureteropelvic junction obstructing stone. Percutaneous nephrostomy catheter placement is requested to decompress the proximal collecting system.

Percentage of Survey Respondents who found Vignette to be Typical: 93%

Site of Service (Complete for 010 and 090 Globals Only)
Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Moderate Sedation
Is moderate sedation inherent to this procedure in the Hospital/ASC setting? Yes
Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 98%

Is moderate sedation inherent to this procedure in the office setting? Yes
Percent of survey respondents who stated moderate sedation is typical in the office setting? 95%

Description of Pre-Service Work: The patient's medical history, physical exam, and laboratory studies are reviewed and consent is obtained. Relevant preoperative diagnostic imaging studies are retrieved and reviewed. A time out is performed. The patient is placed prone on the angiographic table. Moderate conscious sedation is administered.

Description of Intra-Service Work: Ultrasound is used to identify a potential tract to the right renal collecting system. The right flank is prepared and draped in sterile fashion and local anesthetic is administered. A small skin incision is made. A 21-gauge needle is inserted into a right renal pelvis through a calyceal approach.. The needle placement is confirmed by injection of a tiny amount of contrast material under fluoroscopic guidance and acquired images demonstrate a lower pole access would be more advantageous for drain placement. A second 21-gauge needle is directly inserted into a lower pole calyx using combined direct ultrasound and fluoroscopic guidance. Needle placement is confirmed by injection of a contrast material under fluoroscopic guidance and permanent images are acquired. A urine sample from the renal pelvis is acquired and sent to the laboratory for analysis. The needle is exchanged over a wire for an intermediate introducer catheter under fluoroscopic guidance. Diagnostic nephrostogram and ureterogram images are acquired using digital spot film acquisition in multiple projections after injection of iodinated contrast material through the catheter. A heavy duty wire is advanced through the catheter, and the catheter is removed. The tract is serially dilated to 8 Fr, and an 8 Fr drainage catheter placed. The renal collecting system and catheter are irrigated with saline. The catheter is connected to gravity bag drainage and the catheter is anchored at the skin surface with a percu-stay device.

Description of Post-Service Work: Sterile dressings are applied. The patient is transported to the recovery room for hemodynamic monitoring, sedation recovery, and pain control. An interim surgical procedure note is created in the

permanent record. Percutaneous nephrostomy drainage procedure results and patient status are communicated to the patient's family. Permanent surgical procedure and image interpretation reports are created for the medical record and copies of the reports are sent to the patient's referring physician.

SURVEY DATA

Time Segment (Mean)		
Overall intensity/complexity	0.40	1.00

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

Background

The Joint CPT-RUC Workgroup identified codes 50392 and 74475, 50393 and 74480, 50394 and 74425, 50398 and 75984 and 50392 as codes reported together (Group 7). The specialties bundled codes per the workgroup's request, and refined the descriptors for injection and aspiration procedures to better delineate surgical access requirements. The CPT Editorial Panel deleted six CPT codes and created twelve codes to describe genitourinary catheter procedures and bundle inherent imaging services.

New GU Family

There are 12 new codes to describe genitourinary catheter procedures. These codes naturally fell into 3 subcategories (1) introduction injection/change/removal (X1, X2, X3, X4, X13 and X5), (2) ureter biospy/embolization/dilation (X6, X11, X12) and (3) ureteral stent (X7, X8 and X9). The codes were surveyed together as a family, to ensure appropriate relativity amongst all 12 codes. Below is an overview of the 12 new GU codes and how they relate to each other, the components included, etc.

	Via needle	Via existing cath
Nephrostogram	x1	x2
Neph tube placement	x3*	x5*
Nephroureteral tube placement	x4*	x13*
Ureteral stent- w/o neph tube	x8*	x7*
Ureteral stent- w/neph tube	x9*	x7*
** Includes nephrostogram if performed*		

Pre/Post Time

Below is a summary of the pre/post time packages selected for this family of codes. We adjusted the times down accordingly when the survey data were lower than the standard package.

PreTime Package 1A
We selected pre time package 1A straightforward patient/straightforward procedure w/o sedation for X5 *Exchange nephrostomy catheter, percutaneous, including diagnostic nephrostogram and/or ureterogram when performed, imaging guidance (eg, ultrasound and/or fluoroscopy) and all associated radiological supervision and interpretation.*

PreTime Package 2A
We selected pre time package 2A difficult patient/straightforward procedure w/o sedation for X2 *Injection procedure for antegrade nephrostogram and/or ureterogram, complete diagnostic procedure including imaging guidance (eg, ultrasound and fluoroscopy) and all associated radiological supervision and interpretation; existing access.*

PreTime Package 2B

We selected pre time package 2b difficult patient/straightforward procedure with sedation for the remaining introduction/injection/change/removal procedures (X1, X3, X4, X13). We also selected pre time package 2b difficult patient/straightforward procedure with sedation for the ureteral stent procedures (X7, X8, X9).

PreTime Package 4

The consensus panel believes the ureter biopsy/embolization/dilation codes (X6, X11, X12) codes represent difficult patients and difficult procedures (pre-time package 4). However, this group of codes is modifier 51 exempt and generally performed with another procedure (i.e. X1) so no Scrub/Dress/Wait or positioning time is recommended for these procedures. Also, because these procedures are performed with moderate sedation (not general anesthesia) we recommended pre service evaluation time equal to that of the 2B pre time package.

Post Time Package 7A

We selected post time package 7A Local anesthesia/straightforward procedures for X2 and X5.

Post Time Package 8A

We selected post time package 8A IV Sedation/ Straightforward Procedure for all the GU straightforward procedures with moderate sedation (X1, X3, X4, X13, X7, X8 and X9). Changed to be consisted with pre time above.

Post Time Package 8B

We selected post time package 8B IV Sedation/ Complex Procedure for the ureter biopsy/embolization/dilation codes (X6, X11, X12). This group of codes is modifier 51 exempt and generally performed with another procedure (i.e. X1) however there would still be post time specific to these codes (i.e. operative note, monitor/stabilize, communicate with patient/family, written post-operative note and post-operative orders/order entry).

Relativity

The consensus panel reviewed the recommendations to the reference service codes selected throughout the 12 surveyed codes and the MPCs. The panel believes the recommendations maintain relativity within (1) the new family of GU codes, (2) interventional radiology and (3) MPCs. Below is an outline of the comparisons:

	CPT Code	Work RVU	Total Time	Pre Time			Intra Time	Post Time	IWPUT
				Eval	Pos	SDW

Recommendations

The consensus panel reviewed the (1) RUC survey data, (2) the family relationship between the new codes, (2) the relativity to codes within interventional radiology specialty, (3) rank order within the Fee Schedule, (4) compelling evidence, (5) standard packages and (6) RUC guidelines and makes the following physician work recommendations:

	CPT Code	Work RVU	Total Time	Pre Time			Intra Time	Post Time	IWPUT
				Eval	Pos	SDW			
introduction injection/change/ removal	X1	3.15	91	30	1	5	35	20	0.056
	X2	1.42	55	18	1	6	15	15	0.041
	X3	4.70	107	33	1	5	48	20	0.072
	X4	5.75	119	33	1	5	60	20	0.075
	X13	4.20	101	30	1	5	45	20	0.067
	X5	2.00	55	13	1	6	20	15	0.079
ureteral stent	X7	4.60	104	33	1	5	45	20	0.074
	X8	6.30	121	33	1	5	62	20	0.081
	X9	7.55	134	33	1	5	75	20	0.084

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 50392, 74475, 50390 and 74425

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Interventional Radiology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period?
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. National frequency estimates are not available.

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?
20,817 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Best estimate available based on 2013 Medicare data, currently reported codes, new bundled coding structure and anticipated utilization

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Minor procedure

CPT Descriptor: Placement of nephroureteral catheter, percutaneous, including diagnostic nephrostogram and/or ureterogram when performed, imaging guidance (eg, ultrasound and/or fluoroscopy) and all associated radiological supervision and interpretation; new access

---

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 72-year-old female was diagnosed with a right urinary tract obstruction secondary to a stricture at the ureteropelvic junction. Percutaneous nephroureteral stent placement is requested to decompress the proximal collecting system.

Percentage of Survey Respondents who found Vignette to be Typical: 98%

Site of Service (Complete for 010 and 090 Globals Only)
Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Moderate Sedation
Is moderate sedation inherent to this procedure in the Hospital/ASC setting? Yes
Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 98%

Is moderate sedation inherent to this procedure in the office setting? Yes
Percent of survey respondents who stated moderate sedation is typical in the office setting? 94%

Description of Pre-Service Work: The patient's medical history, physical exam, and laboratory studies are reviewed and consent is obtained. Relevant preoperative diagnostic imaging studies are retrieved and reviewed. A time out is performed. The patient is placed prone on the angiographic table. Moderate conscious sedation is administered.

Description of Intra-Service Work: Ultrasound is used to identify a potential tract to the right renal collecting system. The right flank is prepared and draped in sterile fashion and local anesthetic is administered. A small skin incision is made. A 21-gauge needle is inserted into the right renal pelvis through a calyceal approach.. The needle placement is confirmed by injection of a tiny amount of contrast material under fluoroscopic guidance and acquired images demonstrate an upper pole access would be more advantageous for nephroureteral catheter placement. A second 21-gauge needle is directly inserted into an upper pole calyx under combined direct ultrasound and fluoroscopic guidance . Needle placement is confirmed by injection of a contrast material under fluoroscopic guidance and permanent images are acquired. A urine sample from the renal pelvis is acquired and sent to the laboratory for analysis. The needle is exchanged over wire for an intermediate introducer catheter under fluoroscopic guidance. Diagnostic nephrostogram and ureterogram images are acquired using digital spot film acquisition in multiple projections after injection of iodinated contrast material through the catheter. A hydrophilic wire is then manipulated through the UPJ stricture into the distal ureter and bladder. The intermediate catheter is advanced across the stricture and a second safety guidewire is inserted into the ureter. The intermediate catheter is removed over the wire. The parenchymal tract is serially dilated to 8 Fr. An 8 Fr nephroureteral stent is inserted with the distal pigtail in the bladder and the proximal pigtail in the renal pelvis. The wires and delivery system are removed. The catheter is connected to gravity bag drainage and the catheter is anchored at the skin surface with a percu-stay device.

Description of Post-Service Work: Sterile dressings are applied. The patient is transported to the recovery room for hemodynamic monitoring, sedation recovery, and pain control. An interim surgical procedure note is created in the permanent record. Percutaneous nephroureteral stent placement procedure results and patient status are communicated to the patient's family. Permanent surgical procedure and image interpretation reports are created for the medical record and copies of the reports are sent to the patient's referring physician.

Modifier -51 Exempt Status
Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:
Is this new/revised procedure considered to be a new technology or service? Yes

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
37191	000	4.71	**RUC Time**

CPT Descriptor Insertion of intravascular vena cava filter, endovascular approach including vascular access, vessel selection, and radiological supervision and interpretation, intraprocedural roadmapping, and imaging guidance (ultrasound and fluoroscopy), when performed

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
37211	000	8.00	**RUC Time**

CPT Descriptor Transcatheter therapy, arterial infusion for thrombolysis other than coronary, any method, including radiological supervision and interpretation, initial treatment day

KEY MPC COMPARISON CODES:
Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
37191	000	4.71	**RUC Time**	52,401

CPT Descriptor 1 Insertion of intravascular vena cava filter, endovascular approach including vascular access, vessel selection, and radiological supervision and interpretation, intraprocedural roadmapping, and imaging guidance (ultrasound and fluoroscopy), when performed

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
52352	000	6.75	**RUC Time**	19,892

CPT Descriptor 2 Cystourethroscopy, with ureteroscopy and/or pyeloscopy; with removal or manipulation of calculus (ureteral catheterization is included)

Other Reference CPT Code	Global	Work RVU	Time Source
		0.00	

CPT Descriptor

RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:

Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by the mean) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Top Key Reference Code: 9 **% of respondents:** 19.5 **%**

Number of respondents who choose 2nd Key Reference Code: 8 **% of respondents:** 17.3 **%**

TIME ESTIMATES (Median)	**CPT Code:** 50433	**Top Key Reference CPT Code:** 37191	**2nd Key Reference CPT Code:** **37211**
Median Pre-Service Time	39.00	38.00	48.00
Median Intra-Service Time	60.00	30.00	60.00
Median Immediate Post-service Time	20.00	15.00	30.00
Median Critical Care Time	0.0	0.00	0.00
Median Other Hospital Visit Time	0.0	0.00	0.00
Median Discharge Day Management Time	0.0	0.00	0.00

Median Total Time	**119.00**	**83.00**	**138.00**
Other time if appropriate			

INTENSITY/COMPLEXITY MEASURES *(of those that selected Key Reference codes)*	**Top Key Ref Code**	**2nd Key Ref Code**
Mental Effort and Judgment (Mean)		
The number of possible diagnosis and/or the number of management options that must be considered	0.25	0.33
The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed	0.38	0.00
Urgency of medical decision making	0.38	0.00
Technical Skill/Physical Effort (Mean)		
Technical skill required	0.75	0.33
Physical effort required	0.50	1.00
Psychological Stress (Mean)		
The risk of significant complications, morbidity and/or mortality	0.38	0.00
Outcome depends on the skill and judgment of physician	0.63	0.00

Estimated risk of malpractice suit with poor outcome	0.38	-1.33

INTENSITY/COMPLEXITY MEASURES	**Top Key Ref Code**	**2nd Key Ref Code**
Time Segment (Mean)		
Overall intensity/complexity	0.75	-0.67

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

Background

The Joint CPT-RUC Workgroup identified codes 50392 and 74475, 50393 and 74480, 50394 and 74425, 50398 and 75984 and 50392 as codes reported together (Group 7). The specialties bundled codes per the workgroup's request, and refined the descriptors for injection and aspiration procedures to better delineate surgical access requirements. The CPT Editorial Panel deleted six CPT codes and created twelve codes to describe genitourinary catheter procedures and bundle inherent imaging services.

Compelling Evidence

SIR/ACR believe that the current values for CPT codes used for the percutaneous, image guided genitourinary procedures newly described in Tab 9 are no longer rational or appropriate for the granular and more descriptive codes in this new group of codes. In our opinion, there have been significant changes in technique, knowledge and technology, patient population and physician time.

Technique, Knowledge and Technology

The codes currently used for this family of genitourinary procedures do not accurately reflect the techniques now used for image-guided, catheter-based genitourinary interventions. As an index example of these significant changes in technique, one of the most widely used of the current codes, 50392 "Introduction of intracatheter or catheter into renal pelvis for drainage and/or injection, percutaneous" describes the placement of a nephrostomy tube. This procedure was previously performed most commonly with a blind technique using anatomic landmarks or less commonly by marking the skin with ultrasound and using the "trocar" method in which the collecting system was first densely opacified by puncture with a needle, after which the nephrostomy was placed by directly sticking the collecting system with one-piece sharpened stylet/cannula/catheter set. Guidewires were infrequently used.

Virtually all the medical devices currently used in GU catheter procedures have been developed since the current codes were adopted. Advances in understanding of GU anatomy and avoidance of complications (especially genitourinary sepsis) have led to the development of much less aggressive and safer guidewire-based methods which involve more steps and more effort, skill and physician time such as micropuncture access with gradual stepwise transition to heavy-duty guidewires, tract dilation and placement of nephrostomy catheters over a wire and use of real-time ultrasound guidance for needle access. The collecting system is never distended to avoid septic complications. Additionally modern imaging guidance is used to more accurately avoid direct puncture of the renal pelvis, which can lead to urine leak and laceration of renal hilar vessels.

We would note that the example of 50392 is reflective of the majority of the existing codes for GU catheter procedures. Simply put, the new codes reflect new thinking and understanding as well as considerable improvements and advances in techniques which render the current values not appropriate for these new codes.

In another example, we can look at existing code 50393 Introduction of ureteral catheter or stent into ureter through renal pelvis for drainage and/or injection. Current methods utilize double-J internal stents designed specifically for placement via percutaneous methods. These stents were not available when the existing codes were proposed or adopted.

Some codes, for example, 507XX11 Ureteral embolization or occlusion and 506XX6 Endoluminal biopsy of ureter and/or renal pelvis, non-endoscopic describe procedures which did not exist previously and thus are new technology not able to be described at all under the old codes.

Patient Population

SIR/ACR assert that the population of patients treated with the GU catheter procedures currently described by the family of codes being replaced by the new family of codes has changed considerably. Previously virtually all GU catheter procedures were used for basic relief of urinary obstruction either acutely or chronically, but as a result of major advances in urologic surgery, patients with malignancies, stone disease and other problems are now being managed with innovative reconstructive techniques including the regular need for and use of catheter based procedures, including urinary drainage.

Examples of the significant change in the patient populations served by these procedures would be: 1) Percutaneous stone removal and extraction (percutanous nephrolithotomy) 2) Management of complex operative urinary diversion procedures such as ileal conduit diversion, Indiana pouch reservoirs and neobladder to urethra diversions. 3) Management of ureteral injuries and urinary leaks

An example of the change in patient populations can be seen in the management of stone disease. Previously, patients with urolithiasis were referred for nephrostomy and/or ureteral stent placement only if the collecting system was obstructed and dilated. Currently, one of the primary indications for access in patients with nephrolithiasis is the presence of staghorn calculi which produces nondilated collecting systems with complex occlusive inflammatory stone burden which resist guidewire passage and require far more skill and time to achieve satisfactory access for subsequent nephrolithotomy in the OR.

In the case of complex operative urinary diversion procedures, interventionalists are much more frequently involved in draining non-obstructed decompressed collecting systems and in intervening on ureteral strictures and urinary leaks.

New GU Family

There are 12 new codes to describe genitourinary catheter procedures. These codes naturally fell into 3 subcategories (1) introduction injection/change/removal (X1, X2, X3, X4, X13 and X5), (2) ureter biospy/embolization/dilation (X6, X11, X12) and (3) ureteral stent (X7, X8 and X9). The codes were surveyed together as a family, to ensure appropriate relativity amongst all 12 codes. Below is an overview of the 12 new GU codes and how they relate to each other, the components included, etc.

	Via needle	Via existing cath
Nephrostogram	x1	x2
Neph tube placement	x3*	x5*
Nephroureteral tube placement	x4*	x13*
Ureteral stent- w/o neph tube	x8*	x7*
Ureteral stent- w/neph tube	x9*	x7*
** Includes nephrostogram if performed*		

Pre/Post Time

Below is a summary of the pre/post time packages selected for this family of codes. We adjusted the times down accordingly when the survey data were lower than the standard package.

PreTime Package 1A
We selected pre time package 1A straightforward patient/straightforward procedure w/o sedation for X5 *Exchange nephrostomy catheter, percutaneous, including diagnostic nephrostogram and/or ureterogram when performed, imaging guidance (eg, ultrasound and/or fluoroscopy) and all associated radiological supervision and interpretation.*

PreTime Package 2A
We selected pre time package 2A difficult patient/straightforward procedure w/o sedation for X2 *Injection procedure for antegrade nephrostogram and/or ureterogram, complete diagnostic procedure including imaging guidance (eg, ultrasound and fluoroscopy) and all associated radiological supervision and interpretation; existing access.*

PreTime Package 2B
We selected pre time package 2b difficult patient/straightforward procedure with sedation for the remaining introduction/injection/change/removal procedures (X1, X3, X4, X13). We also selected pre time package 2b difficult patient/straightforward procedure with sedation for the ureteral stent procedures (X7, X8, X9).

PreTime Package 4

The consensus panel believes the ureter biopsy/embolization/dilation codes (X6, X11, X12) codes represent difficult patients and difficult procedures (pre-time package 4). However, this group of codes is modifier 51 exempt and generally performed with another procedure (i.e. X1) so no Scrub/Dress/Wait or positioning time is recommended for these procedures. Also, because these procedures are performed with moderate sedation (not general anesthesia) we recommended pre service evaluation time equal to that of the 2B pre time package.

Post Time Package 7A
We selected post time package 7A Local anesthesia/straightforward procedures for X2 and X5.

Post Time Package 8A
We selected post time package 8A IV Sedation/ Straightforward Procedure for all the GU straightforward procedures with moderate sedation (X1, X3, X4, X13, X7, X8 and X9). Changed to be consisted with pre time above.

Post Time Package 8B
We selected post time package 8B IV Sedation/ Complex Procedure for the ureter biopsy/embolization/dilation codes (X6, X11, X12). This group of codes is modifier 51 exempt and generally performed with another procedure (i.e. X1) however there would still be post time specific to these codes (i.e. operative note, monitor/stabilize, communicate with patient/family, written post-operative note and post-operative orders/order entry).

Relativity

The consensus panel reviewed the recommendations to the reference service codes selected throughout the 12 surveyed codes and the MPCs. The panel believes the recommendations maintain relativity within (1) the new family of GU codes, (2) interventional radiology and (3) MPCs. Below is an outline of the comparisons:

	CPT Code	Work RVU	Total Time	Pre Time			Intra Time	Post Time	IWPUT
				Eval	Pos	SDW

Recommendations

The consensus panel reviewed the (1) RUC survey data, (2) the family relationship between the new codes, (2) the relativity to codes within interventional radiology specialty, (3) rank order within the Fee Schedule, (4) compelling evidence, (5) standard packages and (6) RUC guidelines and makes the following physician work recommendations:

	CPT Code	Work RVU	Total Time	Pre Time			Intra Time	Post Time	IWPUT
				Eval	Pos	SDW			
introduction injection/change/ removal	X1	3.15	91	30	1	5	35	20	0.056
	X2	1.42	55	18	1	6	15	15	0.041
	X3	4.70	107	33	1	5	48	20	0.072
	X4	5.75	119	33	1	5	60	20	0.075
	X13	4.20	101	30	1	5	45	20	0.067
	X5	2.00	55	13	1	6	20	15	0.079
ureteral stent	X7	4.60	104	33	1	5	45	20	0.074
	X8	6.30	121	33	1	5	62	20	0.081
	X9	7.55	134	33	1	5	75	20	0.084

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 50393, 74480, 50390, 74425 and 76942

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Interventional Radiology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period?
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. National frequency estimates are not available.

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 4,800
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Best estimate available based on 2013 Medicare data, currently reported codes, new bundled coding structure and anticipated utilization

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Minor procedure

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 50393

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

A	Administer moderate sedation/observe (wait) anesthesia care	0	5	0	10	0	0	0	0	5
B	Perform/ supervise patient positioning	1	1	1	1	3	3	0	1	1
C	Administer local/topical anesthesia	1	0	1	0	0	0	1	5	0
C	Observe (wait anesthesia care)	0	0	0	0	10	15	0	0	0
C	Dress and scrub for procedure	5	5	5	5	5	5	0	0	0

* Indicates packages that contain moderate sedation
**If the procedure does not require local anesthesia, 1 minute should be removed from pre-service time

1A Straightforward Patient/Straightforward Procedure (No sedation/anesthesia care)
1B* Straightforward Patient/Straightforward Procedure (With sedation/anesthesia care)
2A Difficult Patient/Straightforward Procedure (No sedation/anesthesia care)
2B* Difficult Patient/Straightforward Procedure (With sedation/anesthesia care)
3 Straightforward Patient/Difficult Procedure
4 Difficult Patient/Difficult Procedure
5 Procedure with minimal anesthesia care (If no anesthesia care deduct 1 minute)
6A Procedure with local/topical anesthesia care requiring wait time for anesthesia to take effect
6B Procedure with sedation

Additional Positioning Times for Spinal Surgical Procedures

SS1	Anterior Neck Surgery (Supine) (eg ACDF)	15 Minutes
SS2	Posterior Neck Surgery (Prone) (eg laminectomy)	25 Minutes
SS3	Posterior Thoracic/Lumbar (Prone) (eg laminectomy)	15 Minutes
SS4	Lateral Thoracic/Lumbar (Lateral) (eg corpectomy)	25 Minutes
SS5	Anterior Lumbar (Supine) (eg ALIF)	15 Minutes

Additional Positioning Times for Spinal Injection Procedures

SI1	Anterior Neck Injection (Supine) (eg discogram)	7 Minutes
SI2	Posterior Neck Injection (Prone) (eg facet)	5 Minutes
SI3	Posterior Thoracic/Lumbar (Prone) (eg epidural)	5 Minutes
SI4	Lateral Thoracic/Lumbar (Lateral) (eg discogram)	7 Minutes

Additional Positioning Times for Urological Procedures

U1	Dorsal Lithotomy	5 Minutes

Notes:

*Roll-over cells for additional detail where available

***Straightforward procedure: Integumentary, Non-incisional endoscopy, natural orifice**

*For building block IWPUT purposes whenever the procedure is on Appendix G – (Summary of CPT codes that include moderate (conscious) sedation) the IWPUT should be .0224 for the administration of moderate sedation line item because the physician is responsible for the administration of conscious sedation. If the procedure is one where conscious sedation is not inherent the same line item should have an IWPUT of .0081.

*Additional time may be justified for a straightforward patient undergoing a straightforward procedure (Package 1B), if the procedure is performed under general anesthesia and the surveys support

Detailed Description of Facility Based Post-Service Time Packages (Minutes)			
	8B IV Sedation/ Complex Procedure	**9A General Anesthesia or Complex Regional Block/ Straightforward Procedure**	**9B General Anesthesia or Complex Regional Block/Complex Procedure**
Total Post-Service Time	**28**	**30**	**33**

Attestation Statement

This form needs to be completed by any **RUC Advisor** whose specialty society is developing a recommendation to be reviewed by the RUC.

As a RUC Advisor, I attest that the integrity of the RUC survey, summary of recommendation forms and practice expense recommendations are based on accurate and complete data to the best of my knowledge. As a RUC advisor, I acknowledge that violations would be addressed by the executive committee (i.e., RUC Chair , AMA Representative and Alternate AMA Representative.)

50432	*Placement of nephrostomy catheter, percutaneous, including diagnostic nephrostogram and/or ureterogram when performed, imaging guidance (eg, ultrasound and/or fluoroscopy) and all associated radiological supervision and interpretation*
50433	*Placement of nephroureteral catheter, percutaneous, including diagnostic nephrostogram and/or ureterogram when performed, imaging guidance (eg, ultrasound and/or fluoroscopy) and all associated radiological supervision and interpretation; new access*
50434	*Convert nephrostomy catheter to nephroureteral catheter, percutaneous, including diagnostic nephrostogram and/or ureterogram when performed, imaging guidance (eg, ultrasound and/or fluoroscopy) and all associated radiological supervision and interpretation; via pre-existing nephrostomy tract*
50435	*Exchange nephrostomy catheter, percutaneous, including diagnostic nephrostogram and/or ureterogram when performed, imaging guidance (eg, ultrasound and/or fluoroscopy) and all associated radiological supervision and interpretation*
50606	*Endoluminal biopsy of ureter and/or renal pelvis, non-endoscopic, including imaging guidance (eg, ultrasound and/or fluoroscopy) and all associated radiological supervision and interpretation*
50705	*Ureteral embolization or occlusion, imaging guidance (eg, ultrasound and/or fluoroscopy) and all associated radiological supervision and interpretation*
50706	*Balloon dilation, ureteral stricture, imaging guidance (eg, ultrasound and/or fluoroscopy) and all associated radiological supervision and interpretation*
50693	*Placement of ureteral stent, percutaneous, including diagnostic nephrostogram and/or ureterogram when performed, imaging guidance (eg, ultrasound and/or fluoroscopy) and all associated radiological supervision and interpretation; via a pre-existing nephrostomy tract*
50694	*Placement of ureteral stent, percutaneous, including diagnostic nephrostogram and/or ureterogram when performed, imaging guidance (eg, ultrasound and/or fluoroscopy) and all associated radiological supervision and interpretation; new access, without separate nephrostomy catheter*
50695	*Placement of ureteral stent, percutaneous, including diagnostic nephrostogram and/or ureterogram when performed, imaging guidance (eg, ultrasound and/or fluoroscopy) and all associated radiological supervision and interpretation; new access, with separate nephrostomy catheter*

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:

SIR and ACR convened a panel that included a number of experts familiar with these services to evaluate the direct practice expense inputs for these newly created CPT codes.

CPT Codes X6, X11 and X12 will be included on the modifier 51/exempt list. As such, we have made recommendations taking this into account and backed out time for several pre/post service period activities. We would ask that a note be included in the RUC database that explains this and that these codes should not be used as PE crosswalks in the future (or non exempt codes).

2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison. You must provide an explanation for the selection of reference codes. Reference Code Rationale:

CPT code 50387 *Removal and replacement of externally accessible transnephric ureteral stent (eg, external/internal stent) requiring fluoroscopic guidance, including radiological supervision and interpretation* was included as a reference code. The direct practice expenses for CPT codes currently reported to describe these new procedures, (when priced in an office) were also included on the spreadsheet.

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:

The specialty societies are requesting additional 'clean room' time for X3, X4, X13, X5, X7, X8 and X9. These procedures generate external fluids, which require additional cleaning time. The clinical staff also needs time to clean the imaging equipment (in addition to the standard time to clean the angio room/equipment).

The specialty societies are recommending intra service/assist physician in performing procedure time based on the PE/RUC approved interventional procedure convention. That includes a scrubbed rad tech hip/hip assisting the MD, a rad tech doing the imaging (75%), a nurse blend circulator (25%) and a nurse to assist with sedation.

The specialty societies are recommending post procedure monitoring times consistent with the moderate sedation monitoring time workgroup recommendations. More specifically, the consensus panel is recommending four hours of post procedure monitoring for high-risk procedures (i.e. puncture of solid organ) for X1, X3, X4, X13, X7, X8 and X9. Consistent with the workgroup recommendations, we are requesting 15 minutes of RN time per hour (not blend).

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:

The specialty societies are requesting time to complete diagnostic forms for X3, X4, X13, X5, X7, X8 and X9. Specimens are generated to be sent to the laboratory for microbiology/pathology.

5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:
Availability of prior images confirmed and reviewed
Patient clinical information and questionnaire reviewed by technologist, order from physician confirmed and exam protocoled by radiologist

Intra-Service Clinical Labor Activities:
Prepare room, equipment, supplies
Patient is greeted, gowned and escorted into procedure room
Prepare and position patient prone on table / obtain vitals / set up IV / monitor patient
Sterile prep performed and draping of target site
Nurse administers conscious sedation *(excluding X2 and X5)*
Assist physician in performing procedure
Monitor pt. following service/check tubes, monitors, drains not related to moderate sedation
Clean room/equipment by physician staff
Complete diagnostic forms, lab & X-ray requisitions
Check dressings & wound/ home care instructions /coordinate office visits /prescriptions
Technologist QC's images in PACS, checking for all images, and dose page
Review examination with interpreting MD
Exam documents scanned into PACS. Exam completed in RIS system to generate billing process and to populate images into Radiologist work queue

Post-Service Clinical Labor Activities:
Conduct phone calls/call in prescriptions

CPT Code: 50430-50435, 50606, 50693-5, 50705-6
Specialty Societies: SIR and ACR

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation

Global Period: 000 **Meeting Date:** January 2015

CPT Long Descriptors:

CPT Code	CPT Descriptor
50430	*Injection procedure for antegrade nephrostogram and/or ureterogram, complete diagnostic procedure including imaging guidance (eg, ultrasound and fluoroscopy) and all associated radiological supervision and interpretation; new access*
50431	*Injection procedure for antegrade nephrostogram and/or ureterogram, complete diagnostic procedure including imaging guidance (eg, ultrasound and fluoroscopy) and all associated radiological supervision and interpretation; existing access*
50432	*Placement of nephrostomy catheter, percutaneous, including diagnostic nephrostogram and/or ureterogram when performed, imaging guidance (eg, ultrasound and/or fluoroscopy) and all associated radiological supervision and interpretation*
50433	*Placement of nephroureteral catheter, percutaneous, including diagnostic nephrostogram and/or ureterogram when performed, imaging guidance (eg, ultrasound and/or fluoroscopy) and all associated radiological supervision and interpretation; new access*
50434	*Convert nephrostomy catheter to nephroureteral catheter, percutaneous, including diagnostic nephrostogram and/or ureterogram when performed, imaging guidance (eg, ultrasound and/or fluoroscopy) and all associated radiological supervision and interpretation; via pre-existing nephrostomy tract*
50435	*Exchange nephrostomy catheter, percutaneous, including diagnostic nephrostogram and/or ureterogram when performed, imaging guidance (eg, ultrasound and/or fluoroscopy) and all associated radiological supervision and interpretation*
50606	*Endoluminal biopsy of ureter and/or renal pelvis, non-endoscopic, including imaging guidance (eg, ultrasound and/or fluoroscopy) and all associated radiological supervision and interpretation*
50705	*Ureteral embolization or occlusion, imaging guidance (eg, ultrasound and/or fluoroscopy) and all associated radiological supervision and interpretation*
50706	*Balloon dilation, ureteral stricture, imaging guidance (eg, ultrasound and/or fluoroscopy) and all associated radiological supervision and interpretation*
50693	*Placement of ureteral stent, percutaneous, including diagnostic nephrostogram and/or ureterogram when performed, imaging guidance (eg, ultrasound and/or fluoroscopy) and all associated radiological supervision and interpretation; via a pre-existing nephrostomy tract*
50694	*Placement of ureteral stent, percutaneous, including diagnostic nephrostogram and/or ureterogram when performed, imaging guidance (eg, ultrasound and/or fluoroscopy) and all associated radiological supervision and interpretation; new access, without separate nephrostomy catheter*
50695	*Placement of ureteral stent, percutaneous, including diagnostic nephrostogram and/or ureterogram when performed, imaging guidance (eg, ultrasound and/or fluoroscopy) and all associated radiological supervision and interpretation; new access, with separate nephrostomy catheter*

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:

SIR and ACR convened a panel that included a number of experts familiar with these services to evaluate the direct practice expense inputs for these newly created CPT codes.

2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison. You must provide an explanation for the selection of reference codes. Reference Code Rationale:

CPT code 50387 *Removal and replacement of externally accessible transnephric ureteral stent (eg, external/internal stent) requiring fluoroscopic guidance, including radiological supervision and interpretation* was included as a reference code. The direct practice expenses for CPT codes currently reported to describe these new procedures, (when priced in an office) were also included on the spreadsheet.

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:

We are including pre service minutes for various activities in these 000 codes. They are required/necessary steps for these new GU procedures.

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:

N/A

5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

- Complete pre-service diagnostic & referral forms
- Coordinate pre-surgery services
- Schedule space and equipment in facility
- Provide pre-service education/obtain consent
- Follow-up phone calls & prescriptions

Intra-Service Clinical Labor Activities:

N/A

Post-Service Clinical Labor Activities:

N/A

January 22, 2019

The Honorable Seema Verma
Administrator
Centers for Medicare & Medicaid Services
Department of Health and Human Services
7500 Security Boulevard
Baltimore, MD 21244-1850
Submitted electronically:

Re: Revisions to Payment Policies under the Physician Payment Schedule and Other Revisions to Part B for CY 2019

Dear Administrator Verma:

The undersigned specialty societies submit the following comments regarding an error in the 2019 Medicare Physician Fee Schedule (MFS). We believe the Centers for Medicare and Medicaid Services (CMS) erroneously double-counted the projected utilization for several new CPT Codes, thus resulting in inappropriate work relative value unit (wRVU) assignments. As such, we are respectfully requesting that CMS correct the error immediately and update the work RVUs, for claims processing starting in quarter two (2019).

Fine Needle Aspiration (FNA) (CPT codes 10021, 10004, 10005, 10006, 10007, 10008, 10009, 10010, 10011, 10012, 76492, 77002 and 77021)

CPT code 10021 was identified as part of the Centers for Medicare and Medicaid Services (CMS) OPPS/ASC cap payment proposal in the CMS Proposed Rule for CY2014. The proposal was to limit the practice expense payment through the physician payment schedule at the lower of two facility payment schedules, either the OPPS or ASC payment schedule. Although the CMS OPPS/ASC cap proposal was not implemented in the final rule for CY2014, the RUC forwarded a number of practice expense only recommendations for CY2015. In the CY2016 Medicare Physician Payment Schedule Final Rule, CMS noted concern about implementing practice expense inputs without the corresponding physician work being reviewed. The RUC identified CPT code 10021 as one of the services that CMS' request pertained to and requested that the specialties that perform this service submit recommendations for the January 2016 RUC meeting. The specialty societies provided two reasons why this issue needed to be referred to the CPT Editorial Panel prior to receiving a RUC survey. First, the codes needed clarifying language stating that they should be reported per lesion rather than for every pass on the same lesion. Second, CPT code 10022 is reported with 76942 *Ultrasonic guidance for needle placement (eg, biopsy, aspiration, injection, localization device), imaging supervision and interpretation* more than 75% of the time together and a bundled code solution will be developed. In June 2017, the CPT Editorial Panel deleted one code, revised one code and created 9 new codes to describe fine needle aspiration procedures with and without imaging. In October 2017 the RUC reviewed recommendations for CPT Codes 10021, 10004, 10005, 10006, 10007, 10008, 10009, 10010, 10011 and 10012.

Dilation of Urinary Tract (CPT codes 50436, 50437, 52334, and 74485)

In October 2014, the CPT Editorial Panel deleted six codes and created 12 codes to describe genitourinary catheter procedures and bundle inherent imaging services. Those codes were reviewed by the RUC in January 2015. The RUC also referred CPT code 50395 *Introduction of guide into renal pelvis and/or ureter with dilation to establish nephrostomy tract, percutaneous*, which was identified as part of the family, to the CPT Editorial Panel to clear up confusion with overlap in physician work with 50432 *Placement of nephrostomy catheter, percutaneous, including diagnostic nephrostogram and/or ureterogram when performed, imaging guidance (eg, ultrasound and/or fluoroscopy) and all associated radiological supervision and interpretation*. In September 2017, the CPT Editorial Panel deleted CPT code 50395 nephrostomy tract code and created two new codes to report (1) dilation of an existing tract, and (2) establishment of new percutaneous access to the collecting system for an endourologic procedure including imaging guidance (eg, ultrasound and/or fluoroscopy), all associated radiological supervision and interpretation, as well as post procedure tube placement when performed. Imaging is also now included in those codes. In January 2018 the RUC reviewed recommendations for CPT Codes 50436 and 50437.

CY2019 RUC Recommendations

CMS reviewed the RUC recommendations for both the FNA family and the urinary tract family for calendar year 2019. CMS refined many of the RUC recommended values for these services. See below:

CPT CODE	DESCRIPTOR	RUC Recommended RVU	CY 2019 RVU
10021	Fine needle aspiration biopsy without imaging guidance; first lesion	1.27	1.03
10004	Fine needle aspiration biopsy without imaging guidance; each additional lesion (List separately in addition to code for primary procedure)	0.80	0.80
10005	Fine needle aspiration biopsy, including ultrasound guidance; first lesion	1.63	1.46
10006	Fine needle aspiration biopsy, including ultrasound guidance; each additional lesion (List separately in addition to code for primary procedure)	1.00	1.00
10007	Fine needle aspiration biopsy, including fluoroscopic guidance; first lesion	1.81	1.81
10008	Fine needle aspiration biopsy, including fluoroscopic guidance; each additional lesion (List separately in addition to code for primary procedure)	1.18	1.18

CPT CODE	DESCRIPTOR	RUC Recommended RVU	CY 2019 RVU
10009	Fine needle aspiration biopsy, including CT guidance; first lesion	2.43	2.26
10010	Fine needle aspiration biopsy, including CT guidance; each additional lesion (List separately in addition to code for primary procedure)	1.65	1.65
10011	Fine needle aspiration biopsy, including MR guidance; first lesion	C	C
10012	Fine needle aspiration biopsy, including MR guidance; each additional lesion (List separately in addition to code for primary procedure)	C	C
50436	Dilation of existing tract, percutaneous, for an endourologic procedure including imaging guidance (eg, ultrasound and/or fluoroscopy) and all associated radiological supervision and interpretation, with postprocedure tube placement, when performed;	3.37	2.78
50437	Dilation of existing tract, percutaneous, for an endourologic procedure including imaging guidance (eg, ultrasound and/or fluoroscopy) and all associated radiological supervision and interpretation, with postprocedure tube placement, when performed; including new access into the renal collecting system	5.44	4.83

Projected Utilization

For these two code families (FNA and Urinary Tract), we believe CMS erroneously double-counted the utilization for new codes that had image guidance bundled, causing the Agency to incorrectly believe that the RUC was recommending large increases for both code families. We believe this is the principle reason why CMS rejected the RUC recommendations for many of the codes in these two families.

Specifically, in the CY2019 proposed rule, CMS indicated that based on their analysis, there was an approximate 20 percent increase in utilization for the new FNA codes. As such, the Agency could not support the RUC-recommended work RVUs. In the American Medical Association (AMA) comment letter, the AMA submitted analysis indicating a 15 percent *decrease* in utilization for the new FNA codes, and reiterated support for the RUC-recommended values. However, in the final rule, CMS maintained their proposed valuations for the FNA codes based on inaccurate utilization estimates. CMS included the below table in the final rule.

The aggregate utilization for codes 10004-10012 should have exactly equaled the utilization of delete code 10022 *FNA w/ guidance*. Instead, CMS doubled the utilization by adding the utilization of 10022 to the bundled utilization of each guidance code.

TABLE 12—FINE NEEDLE ASPIRATION WORK POOL COMPARISON

HCPCS code	Utilization source	Utilization destination	Work RVU source	Work pool source	Work RVU destination	Work pool destination	Work pool RVU change	Work pool % change

We believe this same flawed methodology also impacted the valuation of the dilation of urinary tract tab. In December 2018, the AMA requested that CMS reconsider their rejection of the RUC recommendations for CY2019. They declined to do so for CY2019, noting that their utilization projections in the NPRM addenda materials were available for public comment.

Correct Technical Error

The undersigned specialty societies request that CMS issue a technical correction to the utilization files and update the work RVUs, to reflect the RUC recommended values, for claims processing starting in quarter two (2019). We request these changes be effective January 1, 2019, which will allow providers the opportunity to reprocess claims from quarter one.

Thank you for addressing the error with these values. We understand that you may contact Mike Morrow at the AMA if you have any technical questions related to the utilization projections. Please don't hesitate to contact Stephanie Le at Sle@acr.org or Trisha Crishock at trishacrishock@gmail.com with any questions.

Sincerely,

The American Academy of Otolaryngology–Head and Neck Surgery (AAO-HNS)
The American Association of Clinical Endocrinologists (AACE)
The American College of Radiology (ACR)
The American Society for Clinical Pathology
The American Society of Cytopathology (ASC)
The American Urologic Association (AUA)
The Congress of American Pathologists (CAP)
The Society of Interventional Radiology (SIR)

The RUC Relativity Assessment Workgroup Progress Report

In 2006, the AMA/Specialty Society RVS Update Committee (RUC) established the Five-Year Identification Workgroup (now referred to as the Relativity Assessment Workgroup) to identify potentially misvalued services using objective mechanisms for reevaluation prior to the next Five-Year Review. Since the inception of the Relativity Assessment Workgroup, the Workgroup and the Centers for Medicare and Medicaid Services (CMS) have identified more than 2,500 services through 20 different screening criteria for further review by the RUC. Additionally, the RUC charged the Workgroup with maintaining the "new technology" list of services that will be re-reviewed by the RUC as reporting and cost data become available.

To provide Medicare with reliable data on how physician work has changed over time, the RUC, with more than 300 experts in medicine and research, are examining 2,545 potentially misvalued services accounting for $45 billion in Medicare spending. The update committee has recommended reductions and deletions to 1,488 services, redistributing $5 billion annually. Here are the outcomes for the committee's review of 2,545 codes:

Potentially Misvalued Services Project

Source: American Medical Association

New Technology

As the RUC identifies new technology services that should be re-reviewed, a list of these services is maintained and forwarded to CMS. Currently, codes are identified as new technology based on recommendations from the appropriate specialty society and consensus among RUC members at the time of the RUC review for these services. RUC members consider several factors to evaluate potential new technology services, including: recent FDA-approval, newness or novelty of the service, use of an existing service in a new or novel way, and migration of the service from a Category III to Category I CPT® code. The Relativity Assessment Workgroup maintains and develops all standards and procedures associated with the list, which currently contains 676 services. In September 2010, the re-review cycle began and since then the RUC has recommended 48 services to be re-examined. The remaining services

are rarely performed (i.e., less than 500 times per year in the Medicare population) and will not be further examined. The Workgroup will continue to review the remaining 214 services every October after three years of Medicare claims data is available for each service.

Methodology Improvements
The RUC implemented process improvements to methodology following its October 2013 meeting. The process improvements are designed to strengthen the RUC's primary mission of providing the final RVS update recommendations to the Centers for Medicare and Medicaid Services.

In the area of methodology, the RUC is continuously improving its processes to ensure that it is best utilizing reliable, extant data. At its most recent meeting, the RUC increased the minimum number of respondents required for each survey of commonly performed codes:

- For services performed 1 million or more times per year in the Medicare population, at least 75 physicians must complete the survey.
- For services performed from 100,000 to 999,999 times annually, at least 50 physicians will be required.

Further strengthening its methodology, the RUC also announced that specialty societies will move to a centralized online survey process, which will be coordinated by the AMA and will utilize external expertise to ensure survey and reporting improvements.

Site of Service Anomalies
The Workgroup initiated its effort by reviewing services with anomalous sites of service when compared to Medicare utilization data. Specifically, these services are performed less than 50% of the time in the inpatient setting, yet include inpatient hospital Evaluation and Management services within their global period.

The RUC identified 194 services through the site of service anomaly screen. The RUC required the specialties to resurvey 129 services to capture the appropriate physician work involved. These services were reviewed by the RUC between April 2008 and February 2011. CMS implemented 124 of these recommendations in the 2009, 2010 and 2011 Medicare Physician Payment Schedules. The RUC submitted another five recommendations as well as re-reviewed and submitted 44 recommendations to previously reviewed site of service identified codes to CMS for the 2012 Medicare Physician Payment Schedule.

Of the remaining 65 services that were not re-surveyed, the RUC modified the discharge day management for 46 services, maintained three codes and removed two codes from the screen as the typical patient was not a Medicare beneficiary and would be an inpatient. The CPT® Editorial Panel deleted 14 codes. The RUC completed review of services under this initial screen.

During this review, the RUC uncovered several services that are reported in the outpatient setting, yet, according to several expert panels and survey data from physicians who perform the procedure, the service, typically requires a hospital stay of greater than 23 hours. The RUC maintains that physician work that is typically performed, such as visits on the date of service and discharge work the following day, should be included within the overall valuation. Subsequent observation day visits and discharge day management service are appropriate proxies for this work.

The RUC will reassess the data each year going forward to determine if any new site of service anomalies arise. In 2015, the RUC identified three services in which the Medicare data from 2011-2013 indicated it was performed less than 50% of the time in the inpatient setting, yet included inpatient hospital Evaluation and Management services within the global period. These services were referred to CPT and recommendations were submitted to CMS for the 2018 Medicare Physician Payment Schedule.

In 2016, the RUC identified one site of service anomaly CPT code and submitted the recommendation to CMS for the 2019 Medicare Physician Payment Schedule. In 2017, the RUC identified one site of service anomaly CPT code which was revised at the CPT Editorial Panel and the RUC submitted recommendations for the 2020 Medicare Physician Payment Schedule.

In 2018, the RUC also performed a site-of-service anomaly screen based on the review of three years of data (2015, 2016 and 2017e) for services with utilization over 10,000 in which a service is typically performed in the inpatient hospital setting, yet only a half discharge day management (99238) is included. One service was identified via this screen and another identified for the outpatient site of service anomaly screen. The RUC submitted this recommendation for the 2021 Medicare Physician Payment Schedule.

In 2019, the RUC lowered the threshold for site-of-service anomalies based on the review of three years of data (2016, 2017 and 2018e) for services with utilization over 5,000 in the outpatient setting more than 50% of the time but includes inpatient hospital Evaluation and Management services within the global period. The RUC identified nine services, expanding to 10 services to include the family of services. The RUC referred three codes to the CPT Editorial Panel for revision and submitted seven recommendations for the 2021 Medicare Physician Payment Schedule.

High Volume Growth

The Workgroup assembled a list of all services with a total Medicare utilization of 1,000 or more that have increased by at least 100% from 2004 through 2006. The query initially resulted in the identification of 81 services, but was expanded by 16 services to include the family of services, totaling 97 services. Specialty societies submitted comments to the Workgroup in April 2008 to provide rationales for the growth in reporting. Following this review, the RUC required the specialties to survey 35 services to capture the appropriate work effort and/or direct practice expense inputs. These services were reviewed by the RUC between February 2009 and April 2010.

The RUC recommended removing 15 services from the screen as the volume growth did not impact the resources required to provide these services. The CPT® Editorial Panel deleted 34 codes. The RUC submitted 44 recommendations to CMS for services for the 2012-2017 Medicare Physician Payment Schedules and four recommendations for the CPT 2020 Medicare Physician Payment Schedule. The RUC completed review of services under this first iteration of the high growth screen.

In April 2013, the RUC assembled a list of all services with a total Medicare utilization of 10,000 or more that have increased by at least 100% from 2006 through 2011. The query resulted in the identification of 40 services and expanded to 62 services to include the appropriate family of services. The RUC recommended removing three services from the screen as the volume growth did not impact the resources required to provide these services. The RUC recommended review of two services after an additional utilization data is collected. The CPT® Editorial Panel deleted ten codes and the RUC submitted recommendations for 47 services for the 2015-2019 Medicare Physician Payment Schedule.

In October 2015, the RUC ran this screen again for services based on Medicare utilization of 10,000 or more that have increased by at least 100% from 2008 through 2013. The query resulted in the identification of 19 services and expanded to 31 services to include the appropriate family of services. The RUC recommended removing one service from the screen as the volume growth did not impact the resources required to provide these services. The RUC will review three services after an additional utilization data is collected. The CPT Editorial Panel deleted 12 codes and the RUC submitted recommendations for 15 services for the 2017-2020 Medicare Physician Payment Schedules.

In October 2016, the RUC ran this screen for its fourth iteration and the query resulted in the identification of 12 services, which was expanded to 46 services. The RUC recommended removing two services from the screen as the volume growth did not impact the resources required to provide these services. The CPT Editorial Panel deleted three services. The RUC submitted recommendations for 38 services for the 2019-2020 Medicare Physician Payment Schedules. The RUC referred one service to CPT for revision and will review one service for the 2022 Medicare Physician Payment Schedule.

In October 2018, the RUC ran this query for its fifth iteration for services with 2017e Medicare utilization of 10,000 or more that has increased by at least 100% from 2012 through 2017. Eleven (11) codes were identified. The RUC recommended removing two services from the screen as the volume growth was appropriate. The CPT Editorial Panel deleted one code. The RUC referred one code to the CPT Editorial Panel for revision and submitted recommendations for seven services for the 2020-2021 Medicare Physician Payment Schedule.

In October 2019, the RUC completed its sixth iteration of this screen for services with 2018e Medicare utilization of over 10,000 that have increased by at least 100% from 2013 through 2018. The RUC identified 12 services. The RUC removed three services from the screen as the volume growth did not impact the resources required to provide these services. The RUC referred four codes to the CPT Editorial Panel for revision and will review one code after additional utilization data is available. The RUC submitted recommendations for one service for the 2021 Medicare Physician Payment Schedule and will review the remaining three service for the 2022 Medicare Physician Payment Schedule.

CMS Fastest Growing

In 2008, CMS developed the Fastest Growing Screen to identify all services with growth of at least 10% per year over the course of three years from 2005-2007. Through this screen, CMS identified 114 fastest growing services and the RUC added 69 services to include the family of services, totaling 183. The RUC required the specialties to survey 72 services to capture the appropriate work effort and/or direct practice expense inputs. These services were reviewed by the RUC from February 2008 through April 2010 and submitted to CMS for the Medicare Physician Payment Schedule.

The RUC recommended removing 27 services from the screen as the volume growth did not impact the resources required to provide the service. The CPT® Editorial Panel deleted 43 codes. The RUC submitted 41 recommendations to CMS for the 2012-2019 Medicare Physician Payment Schedules. The RUC completed review of services under this screen.

High IWPUT

The Workgroup assembled a list of all services with a total Medicare utilization of 1,000 or more that have an intra-service work per unit of time (IWPUT) calculation greater than 0.14, indicating an outlier intensity. The query resulted in identification of 32 services. Specialty societies submitted comments to the Workgroup in April 2008 for these services. As a result of this screen, the RUC has reviewed and submitted recommendations to CMS for 28 codes, removing four services from the screen as the IWPUT was considered appropriate. The RUC completed review of services under this screen.

Services Surveyed by One Specialty – Now Performed by a Different Specialty

In October 2009, services that were originally surveyed by one specialty, but now performed predominantly by other specialties were identified and reviewed. The RUC identified 21 services by this screen, adding 19 services to address various families of codes. The majority of these services required clarification within CPT®. The CPT® Editorial Panel deleted 18 codes. The RUC submitted 22 recommendations for physician work and practice expense to CMS for the 2011-2014 Medicare Physician Payment Schedules. The RUC completed review of services under this screen.

In April 2013, the RUC queried the top two dominant specialties performing services based on Medicare utilization more than 1,000 and compared it to who originally surveyed the service. Two services were identified and the RUC recommended that one be removed from the screen since the specialty societies currently performing this service indicated that the service is appropriate and recommended that the other code be referred to CPT® to be revised. The RUC completed review of services under this screen.

In October 2019, the RUC queried the top two dominant specialties performing services based on Medicare utilization more than 1,000 and compared it to who originally surveyed the service. Two services were identified, and the RUC referred them to the CPT Editorial Panel for revision and the CPT Assistant for education.

Harvard Valued

Utilization over 1 Million

CMS requested that the RUC pay specific attention to Harvard valued codes that have a high utilization. The RUC identified nine Harvard valued services with high utilization (performed over 1 million times per year). The RUC also incorporated an additional 12 Harvard valued codes within the initial family of services identified. The CPT® Editorial Panel deleted one code. The RUC submitted 20 relative value work recommendations to CMS for the 2011 and 2012 Medicare Physician Payment Schedules. The RUC completed review of services under this screen.

Utilization over 100,000

The RUC continued to review Harvard valued codes with significant utilization. The Relativity Assessment Workgroup expanded the review of Harvard codes to those with utilization over 100,000 which totaled 38 services. The RUC expanded this screen by 101 codes to include the family of services, totaling 139 services. The CPT® Editorial Panel deleted 27 codes. The RUC submitted 112 recommendations to CMS for the 2011-2014 Medicare Physician Payment Schedules. The RUC completed review of services under this screen.

Utilization over 30,000

In April 2011, the RUC continued to identify Harvard valued codes with utilization over 30,000, based on 2009 Medicare claims data. The RUC determined that the specialty societies should survey the remaining 36 Harvard codes with utilization over 30,000 for September 2011. The RUC expanded the screen to include the family of services, totaling 65 services. The CPT® Editorial Panel deleted 12 codes. The RUC submitted recommendations for 53 services for the 2013-2014 Medicare Physician Payment Schedules. The RUC completed review of services under this screen.

In October 2015, the RUC reran this screen on Harvard valued services with 2014e Medicare utilization over 30,000. Seven services were identified and expanded to nine codes to include the family of services. The CPT Editorial Panel deleted two codes. The RUC submitted recommendations for 7 services for the 2018-2019 Medicare Physician Payment Schedules. The RUC completed review of services under this screen.

In October 2018, the RUC reran this screen on Harvard valued services with 2017e Medicare utilization over 30,000. One service was identified. The RUC submitted this recommendation for the 2021 Medicare Physician Payment Schedule. The RUC completed review of services under this screen.

In October 2019, the RUC reran this screen on Harvard valued services with 2018e Medicare utilization over 30,000. Three services were identified. The RUC referred two services to the CPT Editorial Panel for revision and will review one service for the 2022 Medicare Physician Payment Schedule.

Medicare Allowed Charges >$10 million
In June 2012, CMS identified 16 services that were Harvard valued with annual allowed charges (2011 data) > $10 million. The RUC expanded this screen to 33 services to include the proper family of services. The RUC removed two services from review as the allowed charges are approximately $1 million and did not meet the screen criteria. The CPT® Editorial Panel deleted one service. The RUC submitted recommendations for 30 services for the 2013-2017 Medicare Physician Payment Schedules. The RUC completed review of services under this screen.

CMS/Other

Utilization over 500,000
In April 2011, the RUC identified 410 codes with a source of "CMS/Other." CMS/Other codes are services which were not reviewed by the Harvard studies or the RUC and were either gap filled, most often via crosswalk by CMS or were part of a radiology fee schedule. "CMS/Other" source codes would not have been flagged in the Harvard only screens, therefore the RUC recommended that a list of all CMS/Other codes be developed and reviewed. The RUC established the threshold for CMS/Other source codes with Medicare utilization of 500,000 or more, which resulted in 19 codes. The RUC expanded this screen to 21 services to include the proper family of services. The CPT® Editorial Panel deleted three services. The RUC submitted recommendations for 16 services for the 2013-2015 Medicare Physician Payment Schedules. The RUC removed one service from the screen and will review one service once new codes go into effect and additional data are available.

Utilization over 250,000
In April 2013, the RUC lowered the threshold to the CMS/Other source codes with Medicare utilization of 250,000 or more, which resulted in 26 services and was expanded to 52 services to include the family of services. The CPT Editorial Panel deleted 11 codes identified under this screen. The RUC removed nine services and submitted 32 recommendations to CMS for the 2015-2019 Medicare Physician Payment Schedules. The RUC completed review of services under this screen.

Utilization over 100,000
In October 2016, the RUC lowered the threshold to the CMS/Other source codes with Medicare utilization of 100,000 or more, which resulted in 27 services and was expanded to 41 services to include the family of services. The RUC referred two codes to CPT for deletion and submitted recommendations for 39 services for the 2019 Medicare Physician Payment Schedule. The RUC completed review of services under this screen.

Utilization over 30,000
In October 2017, the RUC lowered the threshold to the CMS/Other source codes with Medicare utilization of 30,000 or more, which resulted in 34 services and was expanded to 55 services to include the family of services. The CPT Editorial Panel deleted 10 codes. The submitted recommendations for 45 services for the 2019-2020 Medicare Physician Payment Schedules. The RUC completed review of services under this screen.

In October 2018, the RUC reran this screen for CMS/Other source codes with 2017e Medicare utilization over 30,000, which resulted in seven services and expanded to 15 services. The RUC referred one code to the CPT Editorial Panel for revision and the CPT Editorial Panel deleted another code. The RUC submitted recommendations for 13 services for the 2020-21 Medicare Physician Payment Schedules.

Utilization over 20,000
In October 2019, the RUC lowered the threshold for this screen of CMS/Other source codes with 2018e Medicare utilization over 20,000, which resulted in nine services and expanded to 10 to include the family of services. The RUC referred three codes to the CPT Editorial Panel for revision. CPT deleted two codes. The RUC removed one service from this screen and will review one service after additional utilization data is available. The RUC submitted recommendations for three services for the 2021 Medicare Physician Payment Schedule.

Bundled CPT® Services

Reported 95% or More Together
The Relativity Assessment Workgroup solicited data from CMS regarding services inherently performed by the same physician on the same date of service (95% of the time) in an attempt to identify pairings of services that should be bundled together. The CPT® Editorial Panel deleted 31 individual component codes and replaced them with 53 new codes that describe bundles of services. The RUC then surveyed and reviewed work and practice costs associated with these services to account for any efficiencies achieved through the bundling. The RUC completed review of all services under this screen.

Reported 75% or More Together
In February 2010, the Workgroup continued review of services provided on the same day by the same provider, this time lowering the threshold to 75% or more together. The Relativity Assessment Workgroup again analyzed the Medicare claims data and found 151 code pairs which met the threshold. The Workgroup then collected these code pairs into similar "groups" to ensure that the entire family of services would be coordinated under one code bundling proposal. The grouping effort resulted in 20 code groups, totaling 80 codes, and were sent to specialty societies to solicit action plans for consideration at the April 2010 RUC meeting. Resulting from the Relativity Assessment Workgroup review, 81 additional codes were added for review as part of the family of services to ensure duplication of work and practice expense was mitigated throughout the entire set of services. Of the 161 total codes under review, the CPT® Editorial Panel deleted 35 individual component codes and replaced the component coding with 126 new and/or revised codes that described the bundles of services. The RUC will review two services after additional utilization data is available.

In August 2011, the Joint CPT®/RUC Workgroup on Codes Reported Together Frequently reconvened to perform its third cycle of analysis of code pairs reported together with 75% or greater frequency. The Workgroup reviewed 30 code pair groups and recommended code bundling for 64 individual codes. In October 2012, the CPT® Editorial Panel started the review of code bundling solutions. Of the 153 total codes under review, the CPT® Editorial Panel deleted 50 services. The RUC has submitted 103 code recommendations for the 2014-2019 Medicare Physician Payment Schedules. The RUC completed review of all services under this screen.

In January and April 2015, the Joint CPT/RUC Workgroup on Codes Reported Together Frequently reconvened to perform its fourth cycle analysis of code pairs reported together with 75% or greater frequency. The Workgroup reviewed 8 code pair groups and recommended code bundling for 18 individual codes. In October 2015, the CPT Editorial Panel started review of the code bundling solutions. Of the 75 total codes under review, the CPT Editorial Panel deleted 26 services. The RUC submitted 47 code recommendations for the 2017-2019 Medicare Physician Payment Schedules and will review the two services after additional utilization data is available.

In October 2017 the Relativity Assessment Workgroup performed the fifth cycle analysis of code pairs reported together with 75% or greater frequency. Only groups that totaled allowed charges of $5 million or more were included. As with previous iterations, any code pairs in which one of the codes was either

below 1,000 in Medicare claims data and/or contained at least one ZZZ global service were removed. Based on these criteria four groups or 8 codes were identified. The Relativity Assessment Workgroup determined two groups totaling four codes require code bundling solutions. Of the 12 total codes under review, the CPT Editorial Panel deleted one service. The RUC submitted 11 code recommendations for the 2020 and 2021 Medicare Physician Payment Schedules. The RUC completed review of all services under this screen.

Low Value/Billed in Multiple Units
CMS has requested that services with low work RVUs that are commonly billed with multiple units in a single encounter be reviewed. CMS identified services that are reported in multiples of five or more per day, with work RVUs of less than or equal to 0.50 RVUs.

In October 2010, the Workgroup reviewed 12 CMS identified services and determined that six of the codes were improperly identified as the services were either not reported in multiple units or were reported in a few units and that was considered in the original valuation. The RUC submitted recommendations for the remaining six services for the 2012 Medicare Physician Payment Schedule. The RUC completed review of services under this screen.

Low Value/High Volume Codes
CMS has requested that services with low work RVUs and high utilization be reviewed. CMS has requested that the RUC review 24 services that have low work RVUs (less than or equal to 0.25) and high utilization. The RUC questioned the criteria CMS used to identify these services as it appeared some codes were missing from the screen criteria indicated. The RUC identified codes with a work RVU ranging from 0.01 - 0.50 and Medicare utilization greater than one million. In February 2011, the RUC reviewed the codes identified by this criteria and added 5 codes, totaling 29. The RUC submitted 24 recommendations to CMS for the 2012 Medicare Physician Payment Schedule and five recommendations to CMS for the 2013 Medicare Physician Payment Schedule. The RUC completed review of services under this screen.

Multi-Specialty Points of Comparison List
CMS requested that services on the Multi-Specialty Points of Comparison (MPC) list should be reviewed. CMS prioritized the review of the MPC list to 33 codes, ranking the codes by allowed service units and charges based on CY 2009 claims data as well as those services reviewed by the RUC more than six years ago. The RUC expanded the list to 182 services to include additional codes as part of a family (over 100 of these codes are part of the review of GI endoscopy codes). The CPT® Editorial Panel deleted 25 codes. The RUC submitted recommendations for 157 codes for the 2012-2015 Medicare Physician Payment Schedules. The RUC completed review of services under this screen.

CMS High Expenditure Procedural Codes
In the Proposed Rule for 2012, CMS requested that the RUC review a list of 70 high Medicare Physician Payment Schedule expenditure procedural codes representing services furnished by an array of specialties. CMS selected these codes since they have not been reviewed for at least 6 years, and in many cases the last review occurred more than 10 years ago.

The RUC reviewed the 70 services identified and expanded the list to 145 services to include additional codes as part of the family. The CPT® Editorial Panel deleted 20 codes. The RUC submitted 125 recommendations to CMS for the 2013-2019 Medicare Physician Payment Schedules. The RUC completed review of services under the first iteration of this screen.

In the Final Rule for 2016, CMS requested that the RUC review a list of 103 high Medicare Physician Payment Schedule high expenditure services across specialties with Medicare allowed charges of $10 million or more. CMS identified the top 20 codes by specialty in terms of allowed charges, excluding 010 and 090-day global services, anesthesia and Evaluation and Management services and services reviewed since CY 2010.

The RUC expanded the list of services to 238 services to include additional codes as part of the family. The CPT Editorial Panel deleted 30 codes. The RUC submitted 208 recommendations to CMS for the 2017-2019 Medicare Physician Payment Schedules. The RUC completed review of services under this screen.

Services with Stand-Alone PE Procedure Time
In June 2012, CMS proposed adjustments to services with stand-alone procedure time assumptions used in developing non-facility PE RVUs. These assumptions are not based on physician time assumptions. CMS prioritized CPT® codes that have annual Medicare allowed charges of $100,000 or more, include direct equipment inputs that amount to $100 or more, and have PE procedure times greater than five minutes for review. The RUC reviewed 27 services identified through this screen and expanded to 29 services to include additional codes as part of the family. The CPT® Editorial Panel deleted 11 codes. The RUC submitted 18 recommendations for the 2014-2015 Medicare Physician Payment Schedules. The RUC completed review of services under this screen.

Pre-Time Analysis
In January 2014, the RUC reviewed codes that were RUC reviewed prior to April 2008, with pre-time greater than pre-time package 4 *Facility - Difficult Patient/Difficult Procedure* (63 minutes) for services with 2012 Medicare Utilization over 10,000. The screen identified 19 services with more pre-service time than the longest standardized pre-service package and was expanded to 24 to include additional codes as part of the family. The RUC reviewed these services and referred three services to the CPT® Editorial Panel for revision. The CPT Editorial Panel deleted one service and will review three services for CPT 2018. The RUC reviewed 18 services and noted that they were all originally valued by magnitude estimation and therefore readjustments in pre-service time categories did not alter the work values. Additionally, crosswalk references for each service were presented validating the pre-time adjustments. The RUC noted that this screen was useful, however did not reveal any large outliers and therefore the utilization threshold does not need to be lowered to identify more services. The RUC submitted 20 recommendations for the 2016 Medicare Physician Payment Schedule. The RUC completed review of services under this screen.

Post-Operative Visits
010-Day Global Codes
In January 2014, the RUC reviewed all 477, 010-day global codes to determine any outliers. Many 010-day global period services only include one post-operative office visit. The Relativity Assessment Workgroup pared down the list to 19 services with >1.5 office visits and 2012 Medicare utilization > 1,000. The RUC reviewed the 19 services, which was expanded to 21 services for additional codes in the family of services, identified via this screen. The RUC referred two codes to the CPT Editorial Panel for revision. The RUC submitted recommendations for 21 services for the 2015-2017 Medicare Physician Payment Schedule. The RUC has completed review of the services under this screen.

In October 2019, the identified five 010-day global period services more than one office visit based on 2018e Medicare utilization over 1,000. The RUC submitted three recommendations for the 2021 Medicare Physician Payment Schedule and will submit the remaining two for the 2022 Medicare Physician Payment Schedule.

090-Day Global Codes
In January 2014, the RUC reviewed all 3,788, 090-day global codes to determine any outliers. Based on 2012 Medicare utilization data, 10 services were identified, that were reported at least 1,000 times per year and included more than six office visits. The RUC expanded the services identified in this screen to 38 to include additional codes as part of the family. The CPT® Editorial Panel deleted 8 services. The RUC submitted recommendations for 30 services for the 2015-2017 Medicare Physician Payment Schedule. The RUC has completed review of the services under this screen.

In October 2019, the identified three 090-day global period services more than six office visits based on 2018e Medicare utilization over 1,000. The RUC submitted recommendations for these three services for the 2021 Medicare Physician Payment Schedule. The RUC has completed review of the services under this screen.

High Level E/M in Global Period
In October 2015, the RUC reviewed all services with Medicare utilization greater than 10,000 that have a level 4 (99214) or level 5 (99215) office visit included in the global period. There were no codes with volume greater than 10,000 that had a level 5 office visits included. Seven services were identified that have a level 4 office visit included. The RUC expanded the list of services to 11 services to include additional codes as part of the family. The RUC confirmed that the level 4 post-operative visits were appropriate and well-defined for four services. The CPT Editorial Panel deleted one code. The RUC submitted recommendations for 10 services for the 2017-2018 Medicare Physician Payment Schedules. The RUC noted that this screen will be complete after these services are reviewed because the RUC has more rigorously questioned level 4 office visits in the global period in recent years and will continue this process going forward. The RUC has completed review of the services under this screen.

000-Day Global Services Reported with an E/M with Modifier 25
In the NPRM for 2017 CMS identified 83 services with a 000-day global period billed with an E/M 50 percent of the time or more, on the same day of service, same patient, by the same physician, that have not been reviewed in the last five years with Medicare utilization greater than 20,000.

The RUC commented that it appreciated CMS' identification of an objective screen and reasonable query. However, based on further analysis of the codes identified, it appears only 19 services met the criteria for this screen and have not been reviewed to specifically address an E/M performed on the same date. There were 38 codes that did not meet the screen criteria; they were either reviewed in the last 5 years and/or are not typically reported with an E/M. For 26 codes, the summary of recommendation (SOR), RUC rationale or practice expense inputs submitted specifically states that an E/M is typically reported with these services and the RUC accounted for this in its valuation.

The RUC requested that CMS remove 64 services that did not meet the screen criteria or which have already been valued as typically being reported with an E/M service. The RUC requested that CMS condense and finalize the list of services for this screen to the 19 remaining services.

In the Final Rule for 2017, CMS did finalize the list of 000-day global services reported with an E/M to the 19 services that truly met the criteria. The RUC recommended that two additional codes be removed from this screen as the specialty societies discovered that in fact an E/M as typical was considered in the survey process. Additional codes were added as part of the family of codes identified, totaling 22. The CPT Editorial Panel deleted one code and the RUC submitted 21 recommendations for the 2019 Medicare Physician Payment Schedule. The RUC has completed review of the services under this screen.

Negative IWPUT
In October 2017, the RUC identified 22 services with a negative IWPUT and Medicare utilization over 10,000 for all services or over 1,000 for Harvard valued and CMS/Other source codes. The RUC expanded the services identified in this screen to 56 services to include additional codes as part of the family. The CPT Editorial Panel deleted 15 services. The RUC submitted 41 recommendations for the 2019-2020 Medicare Physician Payment Schedules. The RUC has completed review of the services under this screen.

Contractor Priced with High Volume
In April 2018, the RUC identified five contractor-priced Category I CPT codes that have 2017 estimated Medicare utilization over 10,000. The RUC expanded the services identified in this screen to seven to include additional codes as part of a family. The RUC referred two codes to the CPT Editorial Panel for deletion. The RUC submitted four recommendations for the 2020-2021 Medicare Physician Payment Schedule. The RUC will review the remaining service after two years of additional data is available.

CPT Modifier -51 Exempt List
In April 2018, the RUC identified seven services on the CPT Modifier -51 *Multiple Procedures* exempt list with 2017 estimated Medicare utilization over 10,000. The RUC examined the data provided on the percentage reported alone, physician pre and intra time and determined that this is an appropriate screen. The RUC recommended that four services be removed from the Modifier -51 exempt list and that three services remain on the list as they are separate and distinct services. The RUC notes that the CPT Editorial Panel will be reexamining this list in February 2019. The RUC has completed review of the services under this screen.

Public Comment Requests
In 2011, CMS announced that due to the ongoing identification of potentially misvalued services by CMS and the RUC, the Agency will no longer conduct a separate Five-Year Review. CMS will now call for public comments on an annual basis as part of the comment process on the Final Rule each year.

Final Rule for 2013
In the Final Rule for the 2013 Medicare Physician Payment Schedule, the public and CMS identified 35 potentially misvalued services, which was expanded to 39 services to include the entire code family. The RUC reviewed these services and recommended that eight services be removed from review as two G-codes lacked specialty society interest and six services are not potentially misvalued since there is no reliable way to determine an incremental difference from open thoracotomy to thorascopic procedures. The CPT Editorial Panel deleted two services. The RUC submitted recommendations for 29 services for the 2014-2019 Medicare Physician Payment Schedules. The RUC has completed review of the services under this screen.

Final Rule for 2014
CMS did not receive any publicly nominated potentially misvalued codes for inclusion in the Proposed Rule for 2014. To broaden participation in the process of identifying potentially misvalued codes, CMS sought the input of Medicare contractor medical directors (CMDs). The CMDs have identified over a dozen services which CMS is proposing as potentially misvalued. The RUC reviewed these services and appropriate families, totaling 90 services. The CPT® Editorial Panel deleted 11 services. The RUC submitted recommendations to CMS for 79 services for the 2015-2018 Medicare Physician Payment Schedules. The RUC has completed review of the services under this screen.

Final Rule for 2015
In the Final Rule for 2015 the public and CMS nominated 26 services as potentially misvalued, which the RUC expanded to 53 services to include additional codes as part of this family. The CPT Editorial Panel

deleted 16 services. The RUC submitted 37 recommendations for the 2016-2019 Medicare Physician Payment Schedules. The RUC has completed review of the services under this screen.

Final Rule for 2016
In the Final Rule for 2016 the public and CMS nominated 25 services as potentially misvalued, which the RUC expanded to 53 services to include an additional code as part of the family. The CPT Editorial Panel deleted eight services. The RUC submitted 45 recommendations for the 2017-2019 Medicare Physician Payment Schedules. The RUC has completed review of the services under this screen.

Final Rule for 2017
In the Final Rule for 2017 there were no public nominations for services in which the RUC was not already addressing.

Final Rule for 2018
In the Final Rule for 2018 the public and CMS nominated six services as potentially misvalued, which the RUC expanded to nine services. The RUC submitted nine recommendations for the 2019-2020 Medicare Physician Payment Schedules. The RUC has completed review of the services under this screen.

Final Rule for 2019
In the Final Rule for 2019 the public and CMS nominated nine services as potentially misvalued, which was expanded to 12 services as part of the family. The CPT Editorial Panel deleted two services. The RUC will submit 10 recommendations for the 2021 Medicare Physician Payment Schedule. The RUC has completed review of the services under this screen.

Work Neutrality
For every CPT code recommendation and family, the RUC submits utilization assumptions based on the specialty societies estimate for the next year of Medicare utilization. Starting with CPT 2009, the Relativity Assessment Workgroup began assessing all services for work neutrality. In 2012, the RUC confirmed that the RUC and specialty societies work neutrality calculation expectation is a zero change target. However, if actual work RVUs turn out to be 10% or greater than the former work RVUs for the family, the family should undergo review by the Relativity Assessment Workgroup. Three code families have been identified for re-examination, one from CPT 2009, CPT 2011 and CPT 2012. Two families were determined to have correct utilization assumptions after re-evaluating the coding structure and initial assumptions. The CPT 2012 family went through revisions at the CPT Editorial Panel as well as extensive educational efforts were engaged. However, after continued examination this family will be resurveyed for the 2022 Medicare Physician Payment Schedule.

Three additional code families were identified for re-examination from CPT 2018. One family appears to possibly be due to miscoding. All three families will be re-examined after additional utilization data are available.

Other Issues
In addition to the above screening criteria, the Relativity Assessment Workgroup performed an exhaustive search of the RUC database for services indicated by the RUC to be re-reviewed at a later date. Three codes were found that had not yet been re-reviewed. The RUC recommended a work RVU decrease for two codes and to maintain the work RVU for another code. CMS also identified 72 services that required further practice expense review. The RUC submitted practice expense recommendations on 67 services and the CPT® Editorial Panel deleted 5 services. The RUC also reviewed special requests for 19 audiology and speech-language pathology services. The RUC submitted recommendations for 10 services for the 2010 Medicare Physician Payment Schedule and the remaining nine services for the 2011 Medicare Physician Payment Schedule.

CMS Requests and RUC Relativity Assessment Workgroup Code Status

Total Number of Codes Identified*	**2,545**
Codes Completed	**2,456**
Work and PE Maintained	662
Work Increased	306
Work Decreased	844
Direct Practice Expense Revised (beyond work changes)	181
Deleted from CPT®	463
Codes Under Review	**89**
Referred to CPT® Editorial Panel or CPT Assistant	54
RUC to Review for *CPT 2022*	16
RUC to review future review after additional data obtained	19

**The total number of codes identified will not equal the number of codes from each screen as some codes have been identified in more than one screen.*

The RUC's efforts for 2009-2020 have resulted in more than $5 billion in annual redistribution within the Medicare Physician Payment Schedule.
