### **Pathology and Laboratory**

#### **Molecular Pathology**

#### **Tier 1 Molecular Pathology Procedures**

#### **Typical Patient (81191)**

A ~~41~~-year-old female presents with an abdominal mass, which is tentatively identified as an infantile fibrosarcoma on resection. NTRK1 gene fusion analysis is requested to confirm the diagnosis. A sample of formalin-fixed, paraffin-embedded (FFPE) tumor tissue is submitted for NTRK1 gene fusion analysis.

**Revise the typical patient for code 81191 to indicate the patient was a 4-year-old.**
