

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 1
(June 2021)

Introduced by: International Medical Graduates Section

Subject: ECFMG 2024 Accreditation Requirement for World Federation for Medical Education (WFME) Recognition

Referred to: Reference Committee C

1 Whereas, The exponential growth of the private sector medical schools, their varying quality of
2 medical education, clinical rotations, and accreditation requirements have become a severe
3 concern to ECFMG; and

5 Whereas, A standard global accreditation process would help ensure patient safety, good
6 quality clinical outcomes, and professional accountability; and

8 Whereas, There has always been a need for a transparent and rigorous method of accreditation
9 of medical schools, worldwide, to meet an internationally accepted standard; and

11 Whereas, After the international task force meeting in 2005, The World Health Organization
12 (WHO) and the World Federation for Medical Education (WFME) jointly published Guidelines for
13 Accreditation of Basic Medical Education¹, which formed the basis of the 2013 WHO policy
14 briefing on medical accreditation and the 2016 International Association Medical Regulatory
15 Authorities (IAMRA) statement on accreditation of medical education programs²; and

17 Whereas, In 2010, ECFMG stated that effective in 2023, applicants for ECFMG Certification
18 would be required to be a student or graduate of a medical school accredited by a WFME-
19 recognized accrediting agency³; and

21 Whereas, During the last ten years, of the 130 - 147 countries whose medical students apply for
22 ECFMG certification, there are 23 agencies that cover 46 countries for accreditation recognition
from the WFME only 23 countries have obtained WFME recognition status, and only 13 there
are 16 additional agencies in the cue for consideration more have applied⁴; and

26 Whereas, Because of the COVID-19 pandemic, the current deadline for implementing the
27 WFME based accreditation standards has been extended to 2024⁵. Given the time constraints,
28 it is unlikely that most countries will have their accrediting bodies obtain the WFME recognition
29 status by 2024; and

31 Whereas, One in four physicians in the U.S. is a graduate of an international medical school
32 who fills 54.6% of primary care specialty positions^{6,7} and fills in the physician workforce gaps
33 that would remain vacant; and

35 Whereas, IMG physicians have provided ongoing primary health care services to the American
36 people of equivalent quality to those who have completed medical school in the U.S.; and

38 Whereas, There is a predicted shortage of 21,400 to 55,200 primary care physicians and a total
39 physician shortfall of 54,100 to 139,000 by 2033, and the new prerequisites for WFME based

1 certification requirements will significantly limit the applicant pool for primary healthcare
2 positions, thus negatively impacting the health care of the nation; therefore, be it
3
4 RESOLVED, That the American Medical Association work with the state and specialty medical
5 associations and other stakeholders to change the ECFMG 2024 credentialing requirements
6 apprise them of the ECFMG requirements and the foreseeable shortage of IMG physicians in
7 underserved populations and primary health care settings to be prepared with alternative
8 options to assist IMG physicians in providing assistance with the foreseeable shortage of IMG
9 physicians in underserved populations and in primary health care settings. (Directive to Take
10 Action); and be it further

11
12 RESOLVED, That the AMA work with the Federation of State Medical Boards and ECFMG to
13 develop more robust communication channels with participating medical schools and explore
14 reasons for the low rate of accreditation and possible ways to address those barriers in meeting
15 accreditation requirements. (Directive to Take Action)
