AMA Personal Priorities in Transition Pilot

Welcome! The AMA's Personal Priorities in Transition Pilot is a guided, self-directed process to identify where COVID-19 may have impacted your medical school's curriculum and your preparation for residency.

Your program director invited you to participate in this pilot so that you can use the self-assessment to identify your unique strengths and potential gaps in experience. Then, using the results of the self-assessment, you can create your individualized learning plan to include important personal learning goals. After completion, you have the option to share your self-assessment and learning plan with your program director and/or with someone at your medical school.

Watch the videos from our coaches below before beginning the self-assessment and learning plan.

HEALTH SYSTEMS SCIENCE

The Third Pillar Of Medical Education

Applied in conjunction with the basic and clinical sciences, it provides a framework for understanding how system elements influence the care of individuals, giving physicians the tools they need to improve outcomes, identify and address the challenges patients face in navigating the health care system and take an active role in reshaping the system to achieve the Triple Aim.

InsideTheBoards' Health Systems Science podcast series, with support from the American Medical Association and Elsevier, seeks to broaden students' understanding of the nature of medicine, medical education, and what separates them from other human endeavors. Medicine is not a "pure science," a kind of "applied biology." Rather, it is fundamentally an art that uses science. As a discipline, Health Systems Science considers those ideas and concepts which are integral to medicine as a profession but don't fall under the domain of the clinical or basic sciences.

The National Board of Medical Examiners includes HSS topics in its USMLE Content Outline and even offers a dedicated Health Systems Science subject examination. Practically, each episode of the Health Systems Science series offers on-the-go learning by breaking down practice exam questions with expert guests.

Products in development

In production

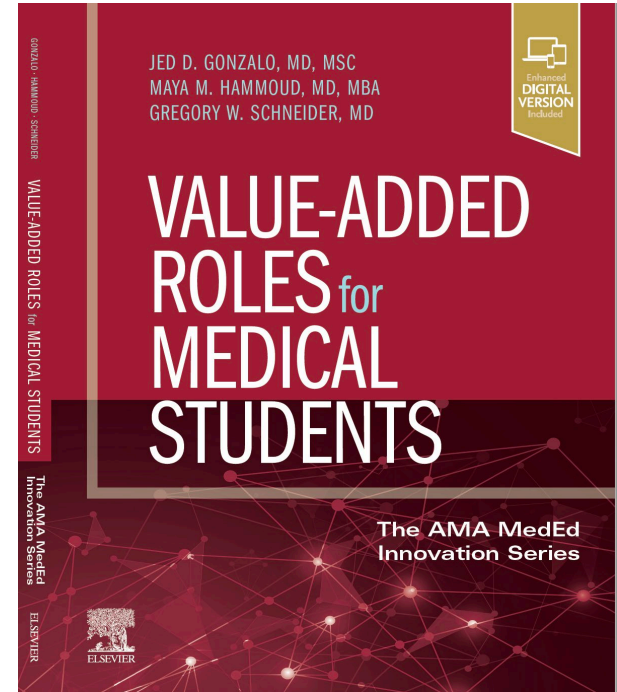

- Value-added Roles book
- Supplement to *Medical Teacher*

Forthcoming

- Telehealth educators' playbook
- EHR modules
- Coaching book
- AI in Med Ed NAM special publication

Launching

- Health Systems Science implementation book

Embedding Equity

- Diversity representatives at consortium events
- Collaborative efforts to promote holistic selection
- Combatting racism in med ed
 - Follow-up with participating institutions on progress since fall series
 - Webinar Feb 2021 (>1300 views)
 - Ongoing dissemination of [self-study guide](#) for combatting bias in med ed programs
- *Black Men in White Coats* virtual screenings initiative
- Bright Ideas in DEI Showcase at ChangeMedEd
- Collaborations with CHE
- AAMC DEI & anti-racism competencies
- Med Ed Director, Equity, Diversity & Inclusion

Reimagining Residency

Competency-based medical education

- Unified system of assessment
- Time-variable, competency-based advancement

Stanford
MEDICINE

Emergency Medicine

Mass General Brigham

Transitions

- Coaching across the UME-GME transition
- Improving the residency selection process

Learning environment

- Professional identity formation
- Understanding influences on well-being and development of clinical skills
